## NOTICE INVITING BIDS

1. **SUMMARY OF WORK:** This is the City of San Diego's (City) solicitation process to acquire Construction services for **Pure Water Program: Metro Biosolids Center Improvements**. For additional information refer to Attachment A.
2. **FULL AND OPEN COMPETITION:** This solicitation is subject to full and open competition and may be bid by Contractors on the City's approved Prequalified Contractors List. For information regarding the Contractors Prequalified list visit the City's web site: <http://www.sandiego.gov>.
3. **ESTIMATED CONSTRUCTION COST:** The City's estimated construction cost for this project is **\$35,500,000**.
4. **BID DUE DATE AND TIME ARE: APRIL 6, 2021 at 2:00 PM**
5. **PREVAILING WAGE RATES APPLY TO THIS CONTRACT:** Refer to Attachment D.
6. **LICENSE REQUIREMENT:** To be eligible for award of this contract, Prime contractor must possess the following licensing classification: **A**
7. **ESCROW BID DOCUMENT APPLY TO THIS CONTRACT:** Refer to Attachment H.
8. **SKILLED AND TRAINED WORKFORCE LABOR REQUIREMENTS:**

- 8.1. The Contractor and its subcontractors at every tier shall use a skilled and trained workforce to perform all work on the project or contract that falls within an apprenticeable occupation in the building and construction trades, as set forth in 8California Public Contract Code section 2601, including the exceptions in sections 2601(d)(5) and 2601 (d)(6). Contractor shall provide to the City a report demonstrating compliance with this section on a monthly basis, to be included with monthly pay requests. The City may withhold progress payments or retention in accordance with California Public Contract Code section 2602(b) if the Contractor fails to provide the monthly report required by this section, provides a report that is incomplete, or provides a report that does not demonstrate compliance with this section. Payment may be withheld until the Contractor provides a plan to achieve substantial compliance with this section prior to completion of the contract that is acceptable to the City, with respect to the relevant apprenticeable occupation.

This section references provisions of the California Public Contract Code for convenience only. The City is not electing to incorporate other provisions of Chapter 2.9 of the California Public Contract Code not referenced herein, including but not limited to provisions for State enforcement. Instead, failure to comply with this section is considered a material breach of this contract which could affect the Contractor's ability to perform future work for the City pursuant to Chapter 2, Article 2, Division 8 of the San Diego Municipal Code regarding debarment.

### 8.2. Submittal Requirements

Contracts must submit proof of a Commitment to Comply with Skilled and Trained Workforce Requirements at bid due date. Contractor and its subcontractors at every tier will use a skilled and trained workforce to perform all work on the project or a contract that falls within an apprenticeship occupation in the building and construction trades in accordance with Chapter 2.9 (commencing with Section 2600) of Part 1 of Division 2 of the Public Contract Code. City will monitor Contractor's compliance with these requirements and Contractor, on behalf of itself and its subcontractors at every tier, shall provide on a monthly basis a Skilled and Trained Workforce Certification Form and Skilled and Trained Workforce Monthly Compliance Report demonstrating compliance. If the monthly Skilled

and Trained Workforce Certification Form and Monthly Compliance Report are not provided within 30 days or if Contractor provides a report that is incomplete, City shall withhold further payments until a complete report is provided. If the Skilled and Trained Workforce Certification form does not establish compliance with Section 132354.7, City shall withhold further payments until Contractor provides a plan to achieve substantial compliance with the skilled and trained workforce requirements, with respect to the relevant apprenticeable occupation, prior to the completion of the project. Any withholding will be released for payment on the monthly estimate for partial payments next following the date that all the satisfactory compliance of the requirements for which the retention was made are submitted.

**9. VETERANS OUTREACH:**

Military veterans bring unique skills to City projects due to their mission-oriented training and experience, and dedication to the job. The City desires to facilitate the entry into the building and construction trades for veterans interested in careers in the industry. Within (30) days after notice that it is the apparent low bidder. Contractor shall contact "Helmets to Hardhats" or "UA Veterans in Piping" on behalf of itself and its subcontractors, for potential job referrals and employment of veterans on the project. Contractor may contact other veterans programs in its discretion, but if neither of the above referenced programs are contacted, the Contractor must receive prior written approval from the City that it is an equivalent veterans program. Contacting multiple veterans programs is highly encouraged, but not required. Within ninety (90) days after issuance of a Notice to Proceed for construction of the project. Contractor shall provide the City with a written report detailing the veterans programs contacted, opportunities offered by the Contractor and its subcontractors, applications received and for what construction trades, and how many veterans were hired through the programs. Hiring veterans to work on the project is not mandatory, but information received from the Contractor may be used by the City in the future to develop a veteran's outreach program for City contracting.

**10. BUSINESS COOPERATION TAX PROGRAM:**

You must exercise your right to obtain a California State of Board of Equalization (BOE) sub-permit for the jobsite and allocate all eligible Bradley-Burns Uniform Local Sales and Use Tax (Use Tax) to the City.

The Contractor and Subcontractors who meet the minimum California Department of Tax and Fee Administration (CDTFA) contract threshold (currently \$5M) and who are purchasing materials and/or fixtures over \$100,000 in value, must apply for a jobsite sub-permit (job-site specific sellers permit), prior to NTP. In addition, you will ensure that all eligible subcontractors will exercise their right to obtain this BOE sub-submit and allocate all eligible Use Tax to the City. The City will not issue a notice to proceed unless you and your eligible subcontractors have obtained this sub-permit from the BOE. If there is added work at a later date that meets this criteria the same process shall apply prior to purchasing material and/or fixtures for added work. And it will also be part of the close-out process (permit closeout). More information on obtaining this permit can be found by contacting the local BOE office.

**11. PROJECT LABOR AGREEMENT.** As a condition of final contract award, the Awarded Bidder must sign and execute a Letter of Assent to the Project Labor Agreement that the City has negotiated which is listed as Attachment A to the Project Labor Agreement. A copy of the Project Labor Agreement (PLA) is attached as Attachment I of this Contract Document. See also Attachment E SSP, Section 5-3.6, "Project Labor Agreement".

**12. SUBCONTRACTING PARTICIPATION PERCENTAGES:**

**12.1.** The City affirms that in any contract entered into pursuant to this advertisement, DBE firms will be afforded full opportunity to submit Bids in response to this invitation.

- 12.2.** This Federally assisted project includes subcontracting participation percentages for DBE participation. DBE goal commitments and Good Faith Efforts (GFE) shall be made prior to bidding. DBE commitments and GFE made after the Bid opening will not be considered for the Award of Contract.
- 12.3.** This project is subject to the federal equal opportunity regulations and the following requirements. The City reserves the right to audit the Contractor's compliance with the federal requirements set forth below.
- 12.4.** Following are federally subcontracting participation percentages for this contract. For the purpose of achieving the subcontractor participation percentage, Additive or Deductive, and Type II Allowance Bid Items will not be included in the calculation.
- 12.5. Environmental Protection Agency (EPA) -** In accordance with EPA's Program for Utilization of Small, Minority Disadvantaged and Women Business Enterprises in procurement under Federal assistance programs, the Contractor agrees to the applicable "fair share" objectives negotiated with EPA as follows:
- 12.6. California State Water Resources Control Board - Clean Water State Revolving Fund (CWSRF):**

	MBE*	WBE*
1. Construction	2%	1%
2. Supplies	1%	1%
3. Services	1%	1%
4. Equipment (combined in above)	1%	1%

Note: MBEs and WBEs must be certified by EPA, SBA, DOT or by state, local, Tribal, or private entities whose certification criteria match EPAs in order to be counted toward MBE/WBE accomplishments. MBEs and WBEs are a part of the larger universe of DBEs.

- 12.7.** If the Bidder fails any of the following conditions, the Bid **SHALL** be declared non-responsive:
  - 1. Submission of GFE documentation, as specified in Attachment D.
    - a) Submit Good Faith Effort (GFE) documentation, saved in searchable Portable Document Format (PDF), demonstrating the Bidder made a good faith effort to conduct outreach to and include DBE Subcontractors as required in this solicitation by 5 PM 4 Working Days after the Bid opening.
    - b) **All submittals in searchable PDF shall be submitted electronically within the prescribed time identified in the contract documents via PlanetBids by invitation to the point of contact named in the bid provided by the Contract Specialist to all bidders.**
  - 2. Attending one of the Pre-bid Meetings.

**13. MANDATORY ONLINE PRE-BID MEETING VIA GOTOMEETING:**

Bidders are required to attend a Pre-Bid Meeting. Two mandatory online pre-bid meetings will be held.

The **First** Meeting will be on: **Tuesday, February 23, 2021 at 10:00 AM** at GoToMeeting.

Please join the pre-bid meeting from your computer, tablet or smartphone.

<https://global.gotomeeting.com/join/192455973>

You can also dial in using your phone.

United States: +1 (312) 757-3121

Access Code: 192-455-973

The **Second** meeting will be on: **Thursday, February 25, 2021 at 10:00 AM** at GoToMeeting.

Please join the pre-bid meeting from your computer, tablet or smartphone.

<https://global.gotomeeting.com/join/350974797>

You can also dial in using your phone.

United States: +1 (571) 317-3122

Access Code: 350-974-797

New to GoToMeeting? Get the app now and be ready when your first meeting starts:

<https://global.gotomeeting.com/install/883640213>

**Please Note:** You will need to join the meeting with a computer, tablet or smartphone with the GoToMeetings App in place in order to sign in via the Chat feature as attendance at the meeting will be evidenced by the Chat sign-in. The Chat feature will also be used for attendees to ask any questions.

The purpose of the meetings is to discuss the scope of the project, submittal requirements, the pre-qualification process, the Project Labor Agreement requirements, OCIP requirements, and Equal Opportunity Contracting Program requirements and reporting procedures. Failure to attend **ONE** of the Mandatory Pre-Bid Meeting may result in the Bid being deemed non-responsive.

Upon entering the meeting, all attendees **must** use the chat feature to sign in with the following information: Name of firm, Attendee's name, Phone number, and Email address.

The GoToMeetings will open thirty minutes prior to the start times listed above to allow the attendees the opportunity to sign in by the deadline.

Bidders may not be admitted after the specified start time of the mandatory Pre-Bid Meeting.

**14. PRE-BID SITE VISIT:** Due to the current Covid-19 restrictions, the City of San Diego is unable to offer a formal site tour of the Metropolitan Biosolids Center plant. However, the City has prepared site videos to give potential bidders a better understanding of the current site conditions and highlight the key areas that will require work within the plant. Please use the following links below to access videos, a site map, and the corresponding narrative.

**Video Link:**

**Narrative and Site Map:**

[https://drive.google.com/drive/folders/17pHxBKx-XRh3K\\_iZs38aCJjgFmWR9V\\_K?usp=sharing](https://drive.google.com/drive/folders/17pHxBKx-XRh3K_iZs38aCJjgFmWR9V_K?usp=sharing)

**15. AWARD PROCESS:**

- 15.1.** The Award of this contract is contingent upon the Contractor's compliance with all conditions of Award as stated within these documents and within the Notice of Intent to Award.
- 15.2.** Upon acceptance of bids and determination of the apparent low bidder, the City will prepare the contract documents for execution within approximately 21 days of the date of the bid opening. The City will then award the contract upon receipt of properly signed Contract, bonds, and insurance documents.
- 15.3.** This contract will be deemed executed and effective only upon the signing of the Contract by the Mayor or his designee and approval as to form by the City Attorney's Office.
- 15.4.** The low Bid will be determined by the Base Bid.

**16. SUBMISSION OF QUESTIONS:**

- 16.1.** The Director (or Designee) of the Engineering & Capital Projects Department is the officer responsible for opening, examining, and evaluating the competitive Bids submitted to the City for the acquisition, construction and completion of any public improvement except when otherwise set forth in these documents. Any questions related to this solicitation shall be submitted to:

Rosa Riego at [RRiego@sandiego.gov](mailto:RRiego@sandiego.gov)

- 16.2.** Questions received less than 14 days prior to the date for opening of Bids may not be considered.
- 16.3.** Questions or clarifications deemed by the City to be material shall be answered via issuance of an addendum and posted to the City's online bidding service.
- 16.4.** Only questions answered by formal written addenda shall be binding. Oral and other interpretations or clarifications shall be without legal effect. It is the Bidder's responsibility to be informed of any addenda that have been issued and to include all such information in its Bid.

**17. PHASED FUNDING:** For Phased Funding Conditions, see Attachment B.

**18. OWNER CONTROLLED INSURANCE PROGRAM (OCIP):** The City has implemented an Owner Controlled Insurance Program (OCIP) for its Pure Water Projects. In this OCIP, the City furnishes Workers' Compensation, General, Excess, Pollution Liability and Builder's Risk insurance associated with construction of the Work, as detailed in Attachment E, Section 5 - LEGAL RELATIONS AND RESPONSIBILITIES. Bidders, as well as all of their subcontractors, with a subcontract amount of greater than one half of one percent of the Contractors bid amount shall complete OCIP credit worksheets. Bidders shall submit these OCIP credit worksheets, including OCIP credit worksheets obtained from all their subcontractors, within 10 Working Days of receipt by bidder of contract forms and Notice of Intent to Award. **Compliance with OCIP credit worksheet requirements shall be a condition for award.**

# INSTRUCTIONS TO BIDDERS

## 1. PREQUALIFICATION OF CONTRACTORS:

- 1.1. Contractors submitting a Bid must be pre-qualified for the total amount proposed, including all alternate items, prior to the date of submittal. Bids from contractors who have not been pre-qualified as applicable and Bids that exceed the maximum dollar amount at which contractors are pre-qualified may be deemed **non-responsive** and ineligible for award.
- 1.2. The completed application must be submitted online no later than 2 weeks prior to the bid opening.
- 1.3. **Joint Venture Bidders Cumulative Maximum Bidding Capacity:** For projects with an engineer's estimate of \$30,000,000 or greater, Joint Ventures submitting bids may be deemed responsive and eligible for award if the cumulative maximum bidding capacity of the individual Joint Venture entities is equal to or greater than the total amount proposed.
  - 1.3.1. Each of the entities of the Joint Venture must have been previously prequalified at a minimum of \$15,000,000.
  - 1.3.2. Bids submitted with a total amount proposed of less than \$30,000,000 are not eligible for Cumulative Maximum Bidding Capacity prequalification. To be eligible for award in this scenario, the Joint Venture itself or at least one of the Joint Venture entities must have been prequalified for the total amount proposed.
  - 1.3.3. Bids submitted by Joint Ventures with a total amount proposed of \$30,000,000 or greater on a project with an engineer's estimate of less than \$30,000,000 are not eligible for Cumulative Maximum Bidding Capacity prequalification.
  - 1.3.4. The Joint Venture designated as the Apparent Low Bidder shall provide evidence of its corporate existence and furnish good and approved bonds in the name of the Joint Venture within 14 Calendar Days of receipt by the Bidder of a form of contract for execution.
- 1.4. Complete information and links to the on-line prequalification application are available at:  
<http://www.sandiego.gov/cip/bidopps/prequalification>
- 1.5. Due to the City's responsibility to protect the confidentiality of the contractors' information, City staff will not be able to provide information regarding contractors' prequalification status over the telephone. Contractors may access real-time information about their prequalification status via their vendor profile on [PlanetBids™](#).

2. **ELECTRONIC FORMAT RECEIPT AND OPENING OF BIDS:** Bids will be received in electronic format (eBids) EXCLUSIVELY at the City of San Diego's electronic bidding (eBidding) site, at: <http://www.sandiego.gov/cip/bidopps/index.shtml> and are due by the date, and time shown on the cover of this solicitation.

- 2.1. **BIDDERS MUST BE PRE-REGISTERED** with the City's bidding system and possess a system-assigned Digital ID in order to submit and electronic bid.

- 2.2.** The City's bidding system will automatically track information submitted to the site including IP addresses, browsers being used and the URLs from which information was submitted. In addition, the City's bidding system will keep a history of every login instance including the time of login, and other information about the user's computer configuration such as the operating system, browser type, version, and more. Because of these security features, Contractors who disable their browsers' cookies will not be able to log in and use the City's bidding system.
- 2.3.** The City's electronic bidding system is responsible for bid tabulations. Upon the bidder's or proposer's entry of their bid, the system will ensure that all required fields are entered. **The system will not accept a bid for which any required information is missing.** This includes all necessary pricing, subcontractor listing(s) and any other essential documentation and supporting materials and forms requested or contained in these solicitation documents.
- 2.4. BIDS REMAIN SEALED UNTIL BID DEADLINE.** eBids are transmitted into the City's bidding system via hypertext transfer protocol secure (https) mechanism using SSL 128-256 bit security certificates issued from Verisign/Thawte which encrypts data being transferred from client to server. Bids submitted prior to the "Bid Due Date and Time" are not available for review by anyone other than the submitter who has until the "Bid Due Date and Time" to change, rescind or retrieve its proposal should it desire to do so.
- 2.5. BIDS MUST BE SUBMITTED BY BID DUE DATE AND TIME.** Once the bid deadline is reached, no further submissions are accepted into the system. Once the Bid Due Date and Time has lapsed, bidders, proposers, the general public, and City staff are able to immediately see the results on line. City staff may then begin reviewing the submissions for responsiveness, EOCP compliance and other issues. The City may require any Bidder to furnish statement of experience, financial responsibility, technical ability, equipment, and references.
- 2.6. RECAPITULATION OF THE WORK.** Bids shall not contain any recapitulation of the Work. Conditional Bids may be rejected as being non-responsive. Alternative proposals will not be considered unless called for.
- 2.7. BIDS MAY BE WITHDRAWN** by the Bidder only up to the bid due date and time.
- 2.7.1. Important Note:** Submission of the electronic bid into the system may not be instantaneous. Due to the speed and capabilities of the user's internet service provider (ISP), bandwidth, computer hardware and other variables, it may take time for the bidder's submission to upload and be received by the City's eBidding system. It is the bidder's sole responsibility to ensure their bids are received on time by the City's eBidding system. The City of San Diego is not responsible for bids that do not arrive by the required date and time.

- 2.8. ACCESSIBILITY AND AMERICANS WITH DISABILITIES ACT (ADA) COMPLIANCE:**  
To request a copy of this solicitation in an alternative format, contact the Engineering & Capital Projects Department Contract Specialist listed on the cover of this solicitation at least five (5) working days prior to the Bid/Proposal due date to ensure availability.

**3. ELECTRONIC BID SUBMISSIONS CARRY FULL FORCE AND EFFECT**

- 3.1.** The bidder, by submitting its electronic bid, acknowledges that doing so carries the same force and full legal effect as a paper submission with a longhand (wet) signature.
- 3.2.** By submitting an electronic bid, the bidder certifies that the bidder has thoroughly examined and understands the entire Contract Documents (which consist of the plans and specifications, drawings, forms, affidavits and the solicitation documents), and that by submitting the eBid as its bid proposal, the bidder acknowledges, agrees to and is bound by the entire Contract Documents, including any addenda issued thereto, and incorporated by reference in the Contract Documents.
- 3.3.** The Bidder, by submitting its electronic bid, agrees to and certifies under penalty of perjury under the laws of the State of California, that the certification, forms and affidavits submitted as part of this bid are true and correct.
- 3.4.** The Bidder agrees to the construction of the project as described in Attachment "A-Scope of Work" for the City of San Diego, in accordance with the requirements set forth herein for the electronically submitted prices. The Bidder guarantees the Contract Price for a period of 120 days from the date of Bid opening. The duration of the Contract Price guarantee shall be extended by the number of days required for the City to obtain all items necessary to fulfill all conditions precedent.

- 4. BIDS ARE PUBLIC RECORDS:** Upon receipt by the City, Bids shall become public records subject to public disclosure. It is the responsibility of the respondent to clearly identify any confidential, proprietary, trade secret or otherwise legally privileged information contained within the Bid. General references to sections of the California Public Records Act (PRA) will not suffice. If the Contractor does not provide applicable case law that clearly establishes that the requested information is exempt from the disclosure requirements of the PRA, the City shall be free to release the information when required in accordance with the PRA, pursuant to any other applicable law, or by order of any court or government agency, and the Contractor will hold the City harmless for release of this information.

**5. CONTRACTOR REGISTRATION AND ELECTRONIC REPORTING SYSTEM:**

- 5.1.** **Prior** to the Award of the Contract or Task Order, you and your Subcontractors and Suppliers must register with the City's web-based vendor registration and bid management system. For additional information go to:  
<http://www.sandiego.gov/purchasing/bids-contracts/vendorreg>
- 5.2.** The City may not award the contract until registration of all subcontractors and suppliers is complete. In the event this requirement is not met within the time frame specified in the Notice of Intent to Award letter, the City reserves the right to rescind the Notice of Award / Intent to Award and to make the award to the next responsive and responsible bidder / proposer.

- 6. JOINT VENTURE CONTRACTORS:** Provide a copy of the Joint Venture agreement and the Joint Venture license to the City within 14 Calendar Days after receiving the Contract forms.
- 7. INSURANCE REQUIREMENTS:**
- 7.1.** All certificates of insurance and endorsements required by the contract are to be provided upon issuance of the City's Notice of Intent to Award letter.
- 7.2.** Refer to sections 5-4, "INSURANCE" of the Supplementary Special Provisions (SSP) for the insurance requirements which must be met.
- 8. REFERENCE STANDARDS:** Except as otherwise noted or specified, the Work shall be completed in accordance with the following standards:

Title	Edition	Document Number

- 9. CITY'S RESPONSES AND ADDENDA:** The City, at its discretion, may respond to any or all questions submitted in writing via the City's eBidding web site in the **form of an addendum**. No other responses to questions, oral or written shall be of any force or effect with respect to this solicitation. The changes to the Contract Documents through addenda are made effective as though originally issued with the Bid. The Bidders shall acknowledge the receipt of Addenda at the time of bid submission.

**10. CITY'S RIGHTS RESERVED:** The City reserves the right to cancel the Notice Inviting Bids at any time, and further reserves the right to reject submitted Bids, without giving any reason for such action, at its sole discretion and without liability. Costs incurred by the Bidder(s) as a result of preparing Bids under the Notice Inviting Bids shall be the sole responsibility of each bidder. The Notice Inviting Bids creates or imposes no obligation upon the City to enter a contract.

**11. CONTRACT PRICING:** This solicitation is for a Lump Sum contract with Unit Price provisions as set forth herein. The Bidder agrees to perform construction services for the City of San Diego in accordance with these contract documents for the prices listed below. The Bidder further agrees to guarantee the Contract Price for a period of 120 days from the date of Bid opening. The duration of the Contract Price guarantee may be extended, by mutual consent of the parties, by the number of days required for the City to obtain all items necessary to fulfill all contractual conditions.

**12. SUBCONTRACTOR INFORMATION:**

**12.1. LISTING OF SUBCONTRACTORS.** In accordance with the requirements provided in the "Subletting and Subcontracting Fair Practices Act" of the California Public Contract Code, the Bidder shall provide the **NAME** and **ADDRESS** of each Subcontractor who will perform work, labor, render services or who specially fabricates and installs a portion [type] of the work or improvement, in an amount in excess of 0.5% of the Contractor's total Bid. The Bidder shall also state within the description, whether the subcontractor is a **CONSTRUCTOR, CONSULTANT** or **SUPPLIER**. The Bidder shall state the **DIR REGISTRATION NUMBER** for all subcontractors and shall further state within the description, the **PORTION** of the work which will be performed by each subcontractor under this Contract. The Contractor shall list only one Subcontractor for each portion of the Work. The **DOLLAR VALUE** of the total Bid to be performed shall be stated for all subcontractors listed. Failure to comply with this requirement may result in the Bid being rejected as **non-responsive** and ineligible for award. The Bidder's attention is directed to the Special Provisions - General; Paragraph 2-3, "Subcontracts", which stipulates the percent of the Work to be performed with the Bidders' own forces. The Bidder shall list all SLBE, ELBE, DBE, DVBE, MBE, WBE, OBE, SDB, WoSB, HUBZone, and SDVOSB Subcontractors for which Bidders are seeking recognition towards achieving any mandatory, voluntary (or both) subcontracting participation goals.

Additionally, pursuant to California Senate Bill 96 and in accordance with the requirements of Labor Code sections 1771.1 and 1725.5, by submitting a bid or proposal to the City, Contractor is certifying that he or she has verified that all subcontractors used on this public work project are registered with the California Department of Industrial Relations (DIR). **The Bidder shall provide the name, address, license number, DIR registration number of any Subcontractor – regardless of tier** - who will perform work, labor, render services or specially fabricate and install a portion [type] of the work or improvement pursuant to the contract.

**12.2. LISTING OF SUPPLIERS.** Any Bidder seeking the recognition of Suppliers of equipment, materials, or supplies obtained from third party Suppliers towards achieving any mandatory or voluntary (or both) subcontracting participation goals shall provide, at a minimum, the **NAME, LOCATION (CITY), DIR REGISTRATION NUMBER** and the **DOLLAR VALUE** of each supplier. The Bidder will be credited up to 60% of the amount to be paid to the Suppliers for materials and supplies unless vendor manufactures or substantially alters materials and supplies, in which case, 100% will be credited. The Bidder is to indicate

within the description whether the listed firm is a supplier or manufacturer. If no indication is provided, the listed firm will be credited at 60% of the listed dollar value for purposes of calculating the Subcontractor Participation Percentage.

- 12.3. LISTING OF SUBCONTRACTORS OR SUPPLIERS FOR ALTERNATES.** For subcontractors or suppliers to be used on additive or deductive alternate items, in addition to the above requirements, bidder shall further note "ALTERNATE" and alternate item number within the description.
- 13. SUBMITTAL OF "OR EQUAL" ITEMS:** See Section 4-6, "Trade Names" in The WHITEBOOK and as amended in the SSP.
- 14. AWARD:**
- 14.1.** The Award of this contract is contingent upon the Contractor's compliance with all condition's precedent to Award.
- 14.2.** Upon acceptance of a Bid, the City will prepare contract documents for execution within approximately 21 days of the date of the Bid opening and award the Contract approximately within 7 days of receipt of properly executed Contract, bonds, and insurance documents.
- 14.3.** This contract will be deemed executed and effective only upon the signing of the Contract by the Mayor or his designee and approval as to form the City Attorney's Office.
- 15. SUBCONTRACT LIMITATIONS:** The Bidder's attention is directed to Standard Specifications for Public Works Construction, Section 3-2, "SELF-PERFORMANCE" in The GREENBOOK and as amended in the SSP which requires the Contractor to self-perform not less than the specified amount. Failure to comply with this requirement shall render the bid **non-responsive** and ineligible for award.
- 16. AVAILABILITY OF PLANS AND SPECIFICATIONS:** Contract Documents may be obtained by visiting the City's website: <http://www.sandiego.gov/cip/>. Plans and Specifications for this contract are also available for review in the office of the City Clerk or Engineering & Capital Projects Department, Contracts Division.
- 17. ONLY ONE BID PER CONTRACTOR SHALL BE ACCEPTED:** No person, firm, or corporation shall be allowed to make, file, or be interested in more than one (1) Bid for the same work unless alternate Bids are called for. A person, firm or corporation who has submitted a sub-proposal to a Bidder, or who has quoted prices on materials to a Bidder, is not hereby disqualified from submitting a sub-proposal or quoting prices to other Bidders or from submitting a Bid in its own behalf. Any Bidder who submits more than one bid will result in the rejection of all bids submitted.
- 18. SAN DIEGO BUSINESS TAX CERTIFICATE:** The Contractor and Subcontractors, not already having a City of San Diego Business Tax Certificate for the work contemplated shall secure the appropriate certificate from the City Treasurer, Civic Center Plaza, First floor and submit to the Contract Specialist upon request or as specified in the Contract Documents. Tax Identification numbers for both the Bidder and the listed Subcontractors must be submitted on the City provided forms within these documents.

**19. BIDDER'S GUARANTEE OF GOOD FAITH (BID SECURITY) FOR DESIGN-BID-BUILD CONTRACTS:**

- 19.1.** For bids \$250,000 and above, bidders shall submit Bid Security at bid time. Bid Security shall be in one of the following forms: a cashier's check, or a properly certified check upon some responsible bank; or an approved corporate surety bond payable to the City of San Diego for an amount of not less than 10% of the total bid amount.
- 19.2.** This check or bond, and the monies represented thereby, will be held by the City as a guarantee that the Bidder, if awarded the contract, will in good faith enter into the contract and furnish the required final performance and payment bonds.
- 19.3.** The Bidder agrees that in the event of the Bidder's failure to execute this contract and provide the required final bonds, the money represented by the cashier's or certified check will remain the property of the City; and the Surety agrees that it will pay to the City the damages, not exceeding the sum of 10% of the amount of the Bid, that the City may suffer as a result of such failure.
- 19.4.** At the time of bid submission, bidders must upload and submit an electronic PDF copy of the aforementioned bid security. Whether in the form of a cashier's check, a properly certified check or an approved corporate surety bond payable to the City of San Diego, the bid security must be uploaded to the City's eBidding system. By 5PM, 3 working days after the bid opening date, all bidders must provide the City with the original bid security.
- 19.5.** Failure to submit the electronic version of the bid security at the time of bid submission AND failure to provide the original by 5PM, 3 working days after the bid opening date shall cause the bid to be rejected and deemed **non-responsive**.

Due to circumstances related to Covid-19, until further notice, all original bid bond submittals must be received by 5 PM, 3 working days after bid opening.

Upon circumstances returning to normal business as usual, the original bid bond shall once again be due by 5 PM the day after bid opening.

Original Bid Bond shall be submitted to:  
Engineering & Capital Projects Department, Contracts Division  
525 B Street, Suite 750 (7th Floor)  
San Diego, California, 92101  
To the Attention of the Contract Specialist on the Front Page of this solicitation.

**20. AWARD OF CONTRACT OR REJECTION OF BIDS:**

- 20.1.** This contract may be awarded to the lowest responsible and reliable Bidder.
- 20.2.** Bidders shall complete ALL eBid forms as required by this solicitation. Incomplete eBids will not be accepted.

- 20.3.** The City reserves the right to reject any or all Bids, to waive any informality or technicality in Bids received, and to waive any requirements of these specifications as to bidding procedure.
- 20.4.** Bidders will not be released on account of their errors of judgment. Bidders may be released only upon receipt by the City within 3 Working Days of the bid opening, written notice from the Bidder which shows proof of honest, credible, clerical error of a material nature, free from fraud or fraudulent intent; and of evidence that reasonable care was observed in the preparation of the Bid.
- 20.5.** A bidder who is not selected for contract award may protest the award of a contract to another bidder by submitting a written protest in accordance with the San Diego Municipal Code.
- 20.6.** The City of San Diego will not discriminate in the award of contracts with regard to race, religion creed, color, national origin, ancestry, physical handicap, marital status, sex or age.
- 20.7.** Each Bid package properly signed as required by these specifications shall constitute a firm offer which may be accepted by the City within the time specified herein.
- 20.8.** The City reserves the right to evaluate all Bids and determine the lowest Bidder on the basis of the base bid and any proposed alternates or options as detailed herein.

**21. BID RESULTS:**

- 21.1.** The availability of the bids on the City's eBidding system shall constitute the public announcement of the apparent low bidder. In the event that the apparent low bidder is subsequently deemed non-responsive or non-responsible, a notation of such will be made on the eBidding system. The new ranking and apparent low bidder will be adjusted accordingly.
- 21.2.** To obtain the bid results, view the results on the City's web site, or request the results by U.S. mail and provide a self-addressed, stamped envelope. If requesting by mail, be sure to reference the bid name and number. The bid tabulations will be mailed to you upon their completion. The results will not be given over the telephone.

**22. THE CONTRACT:**

- 22.1.** The Bidder to whom award is made shall execute a written contract with the City of San Diego and furnish good and approved bonds and insurance certificates specified by the City within 14 days after receipt by Bidder of a form of contract for execution unless an extension of time is granted to the Bidder in writing.
- 22.2.** If the Bidder takes longer than 14 days to fulfill these requirements, then the additional time taken shall be added to the Bid guarantee. The Contract shall be made in the form adopted by the City, which includes the provision that no claim or suit whatsoever shall be made or brought by Contractor against any officer, agent, or employee of the City for or on account of anything done or omitted to be done in connection with this contract, nor shall any such officer, agent, or employee be liable hereunder.

- 22.3.** If the Bidder to whom the award is made fails to enter into the contract as herein provided, the award may be annulled and the Bidder's Guarantee of Good Faith will be subject to forfeiture. An award may be made to the next lowest responsible and reliable Bidder who shall fulfill every stipulation embraced herein as if it were the party to whom the first award was made.
- 22.4.** Pursuant to the San Diego City Charter section 94, the City may only award a public works contract to the lowest responsible and reliable Bidder. The City will require the Apparent Low Bidder to (i) submit information to determine the Bidder's responsibility and reliability, (ii) execute the Contract in form provided by the City, and (iii) furnish good and approved bonds and insurance certificates specified by the City within 14 Days, unless otherwise approved by the City, in writing after the Bidder receives notification from the City, designating the Bidder as the Apparent Low Bidder and formally requesting the above mentioned items.
- 22.5.** The award of the Contract is contingent upon the satisfactory completion of the above-mentioned items and becomes effective upon the signing of the Contract by the Mayor or designee and approval as to form by the City Attorney's Office. If the Apparent Low Bidder does not execute the Contract or submit required documents and information, the City may award the Contract to the next lowest responsible and reliable Bidder who shall fulfill every condition precedent to award. A corporation designated as the Apparent Low Bidder shall furnish evidence of its corporate existence and evidence that the officer signing the Contract and bond for the corporation is duly authorized to do so.
- 23. EXAMINATION OF PLANS, SPECIFICATIONS, AND SITE OF WORK:** The Bidder shall examine carefully the Project Site, the Plans and Specifications, other materials as described in the Special Provisions, Section 3-9, "TECHNICAL STUDIES AND SUBSURFACE DATA", and the proposal forms (e.g., Bidding Documents). The submission of a Bid shall be conclusive evidence that the Bidder has investigated and is satisfied as to the conditions to be encountered, as to the character, quality, and scope of Work, the quantities of materials to be furnished, and as to the requirements of the Bidding Documents Proposal, Plans, and Specifications.
- 24. CITY STANDARD PROVISIONS:** This contract is subject to the following standard provisions. See The WHITEBOOK for details.
- 24.1.** The City of San Diego Resolution No. R-277952 adopted on May 20, 1991 for a Drug-Free Workplace.
- 24.2.** The City of San Diego Resolution No. R-282153 adopted on June 14, 1993 related to the Americans with Disabilities Act.
- 24.3.** The City of San Diego Municipal Code §22.3004 for Contractor Standards.
- 24.4.** The City of San Diego's Labor Compliance Program and the State of California Labor Code §§1771.5(b) and 1776.
- 24.5.** Sections 1777.5, 1777.6, and 1777.7 of the State of California Labor Code concerning the employment of apprentices by contractors and subcontractors performing public works contracts.

**24.6.** The City's Equal Benefits Ordinance (EBO), Chapter 2, Article 2, Division 43 of The San Diego Municipal Code (SDMC).

**24.7.** The City's Information Security Policy (ISP) as defined in the City's Administrative Regulation 90.63.

**25. PRE-AWARD ACTIVITIES:**

**25.1.** The contractor selected by the City to execute a contract for this Work shall submit the required documentation as specified herein and in the Notice of Intent To Award. Failure to provide the information as specified may result in the Bid being rejected as **non-responsive**.

**25.2.** The decision that bid is non-responsive for failure to provide the information required within the time specified shall be at the sole discretion of the City.

## PERFORMANCE BOND, LABOR AND MATERIALMEN'S BOND

---

### FAITHFUL PERFORMANCE BOND AND LABOR AND MATERIALMEN'S BOND:

PCL Construction Inc., a corporation, as principal, and ~~Federal Insurance Company, Travelers Casualty and Surety Company of America, Berkshire Hathaway Specialty Insurance Company, Liberty Mutual Insurance Company~~ a corporation authorized to do business in the State of California, as Surety, hereby obligate themselves, their successors and assigns, jointly and severally, to The City of San Diego a municipal corporation in the sum of **Forty Million Eighty Six Thousand Six Hundred Ninety Dollars and Zero Cents (\$40,086,690.00)** for the faithful performance of the annexed contract, and in the sum of **Forty Million Eighty Six Thousand Six Hundred Ninety Dollars and Zero Cents (\$40,086,690.00)** for the benefit of laborers and materialmen designated below.

#### Conditions:

If the Principal shall faithfully perform the annexed contract with the City of San Diego, California, then the obligation herein with respect to a faithful performance shall be void; otherwise, it shall remain in full force.

If the Principal shall promptly pay all persons, firms and corporations furnishing materials for or performing labor in the execution of this contract and shall pay all amounts due under the California Unemployment Insurance Act then the obligation herein with respect to laborers and materialmen shall be void; otherwise, it shall remain in full force.

The obligation herein with respect to laborers and materialmen shall inure to the benefit of all persons, firms and corporations entitled to file claims under the provisions of Article 2, Claimants, (iii) public works of improvement commencing with Civil Code Section 9100 of the Civil Code of the State of California.

Changes in the terms of the annexed contract or specifications accompanying same or referred to therein shall not affect the Surety's obligation on this bond, and the Surety hereby waives notice of same.

The Surety expressly agrees that the City of San Diego may reject any contractor or subcontractor which may be proposed by Surety in fulfillment of its obligations in the event of default by the Principal.

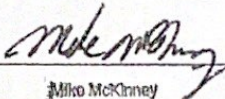

The Surety shall not utilize the Principal in completing the improvements and work specified in the Agreement in the event the City terminates the Principal for default.

CERTIFICATION

Resolutions adopted by the Boards of Directors of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, and PACIFIC INDEMNITY COMPANY on August 30, 2016; WESTCHESTER FIRE INSURANCE COMPANY on December 11, 2006; and ACE AMERICAN INSURANCE COMPANY on March 20, 2009:

"RESOLVED, that the following authorizations relate to the execution, for and on behalf of the Company, of bonds, undertakings, recognizances, contracts and other written commitments of the Company entered into in the ordinary course of business (each a "Written Commitment"):

- (1) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise.
(2) Each duly appointed attorney-in-fact of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise, to the extent that such action is authorized by the grant of powers provided for in such person's written appointment as such attorney-in-fact.
(3) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to appoint in writing any person the attorney-in-fact of the Company with full power and authority to execute, for and on behalf of the Company, under the seal of the Company or otherwise, such Written Commitments of the Company as may be specified in such written appointment, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.
(4) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to delegate in writing to any other officer of the Company the authority to execute, for and on behalf of the Company, under the Company's seal or otherwise, such Written Commitments of the Company as are specified in such written delegation, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.
(5) The signature of any officer or other person executing any Written Commitment or appointment or delegation pursuant to this Resolution, and the seal of the Company, may be affixed by facsimile on such Written Commitment or written appointment or delegation.

FURTHER RESOLVED, that the foregoing Resolution shall not be deemed to be an exclusive statement of the powers and authority of officers, employees and other persons to act for and on behalf of the Company, and such Resolution shall not limit or otherwise affect the exercise of any such power or authority otherwise validly granted or vested."

I, Dawn M. Chloros, Assistant Secretary of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, PACIFIC INDEMNITY COMPANY, WESTCHESTER FIRE INSURANCE COMPANY and ACE AMERICAN INSURANCE COMPANY (the "Companies") do hereby certify that

- (i) the foregoing Resolutions adopted by the Board of Directors of the Companies are true, correct and in full force and effect,
(ii) the foregoing Power of Attorney is true, correct and in full force and effect.

Given under my hand and seals of said Companies at Whitehouse Station, NJ, this 6/3/2021

**Travelers Casualty and Surety Company of America**  
**Travelers Casualty and Surety Company**  
**St. Paul Fire and Marine Insurance Company**

**POWER OF ATTORNEY**

**KNOW ALL MEN BY THESE PRESENTS:** That Travelers Casualty and Surety Company of America, Travelers Casualty and Surety Company, and St. Paul Fire and Marine Insurance Company are corporations duly organized under the laws of the State of Connecticut (herein collectively called the "Companies"), and that the Companies do hereby make, constitute and appoint **Susan A. Welsh** of **Chicago Illinois**, their true and lawful Attorney-in-Fact to sign, execute, seal and acknowledge any and all bonds, recognizances, conditional undertakings and other writings obligatory in the nature thereof on behalf of the Companies in their business of guaranteeing the fidelity of persons, guaranteeing the performance of contracts and executing or guaranteeing bonds and undertakings required or permitted in any actions or proceedings allowed by law.

**IN WITNESS WHEREOF**, the Companies have caused this instrument to be signed, and their corporate seals to be hereto affixed, this **3rd** day of **February**, 2017.

State of Connecticut

City of Hartford ss.

By:   
 Robert L. Raney, Senior Vice President

On this the **3rd** day of **February**, 2017, before me personally appeared **Robert L. Raney**, who acknowledged himself to be the Senior Vice President of Travelers Casualty and Surety Company of America, Travelers Casualty and Surety Company, and St. Paul Fire and Marine Insurance Company, and that he, as such, being authorized so to do, executed the foregoing instrument for the purposes therein contained by signing on behalf of the corporations by himself as a duly authorized officer.

**In Witness Whereof**, I hereunto set my hand and official seal.

My Commission expires the **30th** day of **June**, 2021

  
 Marie C. Tetreault, Notary Public

This Power of Attorney is granted under and by the authority of the following resolutions adopted by the Boards of Directors of Travelers Casualty and Surety Company of America, Travelers Casualty and Surety Company, and St. Paul Fire and Marine Insurance Company, which resolutions are now in full force and effect, reading as follows:

**RESOLVED**, that the Chairman, the President, any Vice Chairman, any Executive Vice President, any Senior Vice President, any Vice President, any Second Vice President, the Treasurer, any Assistant Treasurer, the Corporate Secretary or any Assistant Secretary may appoint Attorneys-in-Fact and Agents to act for and on behalf of the Company and may give such appointee such authority as his or her certificate of authority may prescribe to sign with the Company's name and seal with the Company's seal bonds, recognizances, contracts of indemnity, and other writings obligatory in the nature of a bond, recognizance, or conditional undertaking, and any of said officers or the Board of Directors at any time may remove any such appointee and revoke the power given him or her; and it is

**FURTHER RESOLVED**, that the Chairman, the President, any Vice Chairman, any Executive Vice President, any Senior Vice President or any Vice President may delegate all or any part of the foregoing authority to one or more officers or employees of this Company, provided that each such delegation is in writing and a copy thereof is filed in the office of the Secretary; and it is

**FURTHER RESOLVED**, that any bond, recognizance, contract of indemnity, or writing obligatory in the nature of a bond, recognizance, or conditional undertaking shall be valid and binding upon the Company when (a) signed by the President, any Vice Chairman, any Executive Vice President, any Senior Vice President or any Vice President, any Second Vice President, the Treasurer, any Assistant Treasurer, the Corporate Secretary or any Assistant Secretary and duly attested and sealed with the Company's seal by a Secretary or Assistant Secretary; or (b) duly executed (under seal, if required) by one or more Attorneys-in-Fact and Agents pursuant to the power prescribed in his or her certificate or their certificates of authority or by one or more Company officers pursuant to a written delegation of authority; and it is

**FURTHER RESOLVED**, that the signature of each of the following officers: President, any Executive Vice President, any Senior Vice President, any Vice President, any Assistant Vice President, any Secretary, any Assistant Secretary, and the seal of the Company may be affixed by facsimile to any Power of Attorney or to any certificate relating thereto appointing Resident Vice Presidents, Resident Assistant Secretaries or Attorneys-in-Fact for purposes only of executing and attesting bonds and undertakings and other writings obligatory in the nature thereof, and any such Power of Attorney or certificate bearing such facsimile signature or facsimile seal shall be valid and binding upon the Company and any such power so executed and certified by such facsimile signature and facsimile seal shall be valid and binding on the Company in the future with respect to any bond or understanding to which it is attached.

I, **Kevin E. Hughes**, the undersigned, Assistant Secretary of Travelers Casualty and Surety Company of America, Travelers Casualty and Surety Company, and St. Paul Fire and Marine Insurance Company, do hereby certify that the above and foregoing is a true and correct copy of the Power of Attorney executed by said Companies, which remains in full force and effect.

Dated this 3 day of June 2021

  
 Kevin E. Hughes, Assistant Secretary

**To verify the authenticity of this Power of Attorney, please call us at 1-800-421-3880.**  
**Please refer to the above-named Attorney-in-Fact and the details of the bond to which the power is attached.**

Power of Attorney

**BERKSHIRE HATHAWAY SPECIALTY INSURANCE COMPANY  
NATIONAL INDEMNITY COMPANY / NATIONAL LIABILITY & FIRE INSURANCE COMPANY**

Know all men by these presents, that **BERKSHIRE HATHAWAY SPECIALTY INSURANCE COMPANY**, a corporation existing under and by virtue of the laws of the State of Nebraska and having an office at One Lincoln Street, 23rd Floor, Boston, Massachusetts 02111, **NATIONAL INDEMNITY COMPANY**, a corporation existing under and by virtue of the laws of the State of Nebraska and having an office at 3024 Harney Street, Omaha, Nebraska 68131 and **NATIONAL LIABILITY & FIRE INSURANCE COMPANY**, a corporation existing under and by virtue of the laws of the State of Connecticut and having an office at 100 First Stamford Place, Stamford, Connecticut 06902 (hereinafter collectively the "Companies"), pursuant to and by the authority granted as set forth herein, do hereby name, constitute and appoint: Sandra M. Winsted, Susan A. Welsh, Derek J. Elston, Sandra M. Nowak, Christopher P. Troha, Jessica B. Demosey, Judith A. Lucky-Eftimov, Christina L. Sandoval, Aerie Walton, Bartlomiej Slepiewski, Rachel Fore, 200 East Randolph St, Aon Center of the city of Chicago, State of Illinois, their true and lawful attorney(s)-in-fact to make, execute, seal, acknowledge, and deliver, for and on their behalf as surety and as their act and deed, any and all undertakings, bonds, or other such writings obligatory in the nature thereof, in pursuance of these presents, the execution of which shall be as binding upon the Companies as if it has been duly signed and executed by their regularly elected officers in their own proper persons. This authority for the Attorney-in-Fact shall be limited to the execution of the attached bond(s) or other such writings obligatory in the nature thereof.

In witness whereof, this Power of Attorney has been subscribed by an authorized officer of the Companies, and the corporate seals of the Companies have been affixed hereto this date of December 20, 2018. This Power of Attorney is made and executed pursuant to and by authority of the Bylaws, Resolutions of the Board of Directors, and other Authorizations of BERKSHIRE HATHAWAY SPECIALTY INSURANCE COMPANY, NATIONAL INDEMNITY COMPANY and NATIONAL LIABILITY & FIRE INSURANCE COMPANY, which are in full force and effect, each reading as appears on the back page of this Power of Attorney, respectively. The following signature by an authorized officer of the Company may be a facsimile, which shall be deemed the equivalent of and constitute the written signature of such officer of the Company for all purposes regarding this Power of Attorney, including satisfaction of any signature requirements on any and all undertakings, bonds, or other such writings obligatory in the nature thereof, to which this Power of Attorney applies.

**BERKSHIRE HATHAWAY SPECIALTY INSURANCE COMPANY (BYLAWS)**

ARTICLE V.

CORPORATE ACTIONS

....

EXECUTION OF DOCUMENTS:

....

Section 6.(b) The President, any Vice President or the Secretary, shall have the power and authority:

- (1) To appoint Attorneys-in-fact, and to authorize them to execute on behalf of the Company bonds and other undertakings, and
- (2) To remove at any time any such Attorney-in-fact and revoke the authority given him.

**NATIONAL INDEMNITY COMPANY (BY-LAWS)**

Section 4. Officers, Agents, and Employees:

A. The officers shall be a President, one or more Vice Presidents, a Secretary, one or more Assistant Secretaries, a Treasurer, and one or more Assistant Treasurers none of whom shall be required to be shareholders or Directors and each of whom shall be elected annually by the Board of Directors at each annual meeting to serve a term of office of one year or until a successor has been elected and qualified, may serve successive terms of office, may be removed from office at any time for or without cause by a vote of a majority of the Board of Directors, and shall have such powers and rights and be charged with such duties and obligations as usually are vested in and pertain to such office or as may be directed from time to time by the Board of Directors; and the Board of Directors or the officers may from time to time appoint, discharge, engage, or remove such agents and employees as may be appropriate, convenient, or necessary to the affairs and business of the corporation.

**NATIONAL INDEMNITY COMPANY (BOARD RESOLUTION ADOPTED AUGUST 6, 2014)**

RESOLVED, That the President, any Vice President or the Secretary, shall have the power and authority to (1) appoint Attorneys-in-fact, and to authorize them to execute on behalf of this Company bonds and other undertakings and (2) remove at any time any such Attorney-in-fact and revoke the authority given.

**NATIONAL LIABILITY & FIRE INSURANCE COMPANY (BY-LAWS)**

ARTICLE IV

Officers

Section 1. Officers, Agents and Employees:

A. The officers shall be a president, one or more vice presidents, one or more assistant vice presidents, a secretary, one or more assistant secretaries, a treasurer, and one or more assistant treasurers, none of whom shall be required to be shareholders or directors, and each of whom shall be elected annually by the board of directors at each annual meeting to serve a term of office of one year or until a successor has been elected and qualified, may serve successive terms of office, may be removed from office at any time for or without cause by a vote of a majority of the board of directors. The president and secretary shall be different individuals. Election or appointment of an officer or agent shall not create contract rights. The officers of the Corporation shall have such powers and rights and be charged with such duties and obligations as usually are vested in and pertain to such office or as may be directed from time to time by the board of directors; and the board of directors or the officers may from time to time appoint, discharge, engage, or remove such agents and employees as may be appropriate, convenient, or necessary to the affairs and business of the Corporation.

**NATIONAL LIABILITY & FIRE INSURANCE COMPANY (BOARD RESOLUTION ADOPTED AUGUST 6, 2014)**

RESOLVED, That the President, any Vice President or the Secretary, shall have the power and authority to (1) appoint Attorneys-in-fact, and to authorize them to execute on behalf of this Company bonds and other undertakings and (2) remove at any time any such Attorney-in-fact and revoke the authority given.

This Power of Attorney limits the acts of those named herein, and they have no authority to bind the Company except in the manner and to the extent herein stated.

This Power of Attorney is made and executed pursuant to and by authority of the following By-laws and Authorizations of The Ohio Casualty Insurance Company, Liberty Mutual Insurance Company, and West American Insurance Company which resolutions are now in full force and effect reading as follows:

ARTICLE IV - OFFICERS: Section 12. Power of Attorney.

Any officer or other official of the Corporation authorized for that purpose in writing by the Chairman or the President, and subject to such limitation as the Chairman or the President may prescribe, shall appoint such attorneys-in-fact, as may be necessary to act in behalf of the Corporation to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations. Such attorneys-in-fact, subject to the limitations set forth in their respective powers of attorney, shall have full power to bind the Corporation by their signature and execution of any such instruments and to attach thereto the seal of the Corporation. When so executed, such instruments shall be as binding as if signed by the President and attested to by the Secretary. Any power or authority granted to any representative or attorney-in-fact under the provisions of this article may be revoked at any time by the Board, the Chairman, the President or by the officer or officers granting such power or authority.

ARTICLE XIII - Execution of Contracts: Section 5. Surety Bonds and Undertakings.

Any officer of the Company authorized for that purpose in writing by the chairman or the president, and subject to such limitations as the chairman or the president may prescribe, shall appoint such attorneys-in-fact, as may be necessary to act in behalf of the Company to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations. Such attorneys-in-fact subject to the limitations set forth in their respective powers of attorney, shall have full power to bind the Company by their signature and execution of any such instruments and to attach thereto the seal of the Company. When so executed such Instruments shall be as binding as if signed by the president and attested by the secretary.

Certificate of Designation - The President of the Company, acting pursuant to the Bylaws of the Company, authorizes David M. Carey, Assistant Secretary to appoint such attorneys-in-fact as may be necessary to act on behalf of the Company to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations.

Authorization - By unanimous consent of the Company's Board of Directors, the Company consents that facsimile or mechanically reproduced signature of any assistant secretary of the Company, wherever appearing upon a certified copy of any power of attorney issued by the Company in connection with surety bonds, shall be valid and binding upon the Company with the same force and effect as though manually affixed.

I, Renee C. Llewellyn, the undersigned, Assistant Secretary, The Ohio Casualty Insurance Company, Liberty Mutual Insurance Company, and West American Insurance Company do hereby certify that the original power of attorney of which the foregoing is a full, true and correct copy of the Power of Attorney executed by said Companies, is in full force and effect and has not been revoked.

IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed the seals of said Companies this 3 day of June, 2020

By: Renee C. Llewellyn
Renee C. Llewellyn, Assistant Secretary

## ATTACHMENTS

**ATTACHMENT A**  
**SCOPE OF WORK**

## SCOPE OF WORK

1. **SCOPE OF WORK:** The Metropolitan Biosolids Center (MBC) is the City's regional biosolids facility that receives and processes solids from both the North City Water Reclamation Plant (NCWRP) and the Point Loma Wastewater Treatment Plant. The NCWRP will undergo an expansion under Phase 1 of the Pure Water Program, increasing biosolids flows and loadings to MBC. To accommodate these increased loadings, upgrades and improvements at MBC will be necessary. Equipment replacements are also recommended due to the age and condition of existing equipment. Improvements will be made to the following process areas: grit removal, biosolids thickening and dewatering, anaerobic digestion, biogas handling and centrate pump station.
  - 1.1. The Work shall be performed in accordance with:
    - 1.1.1. The Notice Inviting Bids and Plans numbered **41198-1001-D** through **41198-1364-D**, inclusive. Plans are provided in the link below.  
[https://drive.google.com/drive/folders/1DHtTQFc\\_t9F\\_cVIj95Tvn7Y3g0jFQGnv?usp=sharing](https://drive.google.com/drive/folders/1DHtTQFc_t9F_cVIj95Tvn7Y3g0jFQGnv?usp=sharing)
2. **LOCATION OF WORK:** The location of the Work is as follows:  
See **Appendix E – Location Map**
3. **CONTRACT TIME:** The Contract Time for completion of the Work, shall be **889 Working Days**.
4. **The project has specific milestones, constraints, testing periods, and completion requirements, which include the following:**
  - 4.1. Milestone 1 Intermediate Substantial Completion – Completion of all requirements defined herein for Intermediate Substantial Completion.
  - 4.2. Milestone 2 Start of 120-Day Integration Period – The 120-Day Integration Period starts with the Intermediate Substantial Completion of the Morena Pump Station and Conveyance, North City Water Reclamation Plant Expansion, North City Pure Water Facility, North City Pure Water Pump Station, and North City Pure Water Pipeline and Dechlorination Facility.
  - 4.3. Milestone 3 Substantial Completion – Occurs after the completion of the Integration Period, including 120-Day Integration Period and subsequent 30-Day Facility Acceptance Tests, and upon completing the prerequisites for Substantial Completion
  - 4.4. Milestone 4 Final Completion and Acceptance – After successful completion of substantial completion requirements, and all aspects of the Contract Closeout have been satisfactorily completed.

Notice of Completion will follow the Final Acceptance and Completion.

**ATTACHMENT B**  
**PHASED FUNDING PROVISIONS**

## **PHASED FUNDING PROVISIONS**

### **1. PRE-AWARD**

- 1.1.** Within 10 Working Days of the Notice of Intent to Award, the Contractor must contact the Project Manager to discuss fund availability for each phase and shall also submit the following:
  - 1.1.1.** Construction Cost Loaded Schedule in accordance with 6-1, "CONSTRUCTION SCHEDULE AND COMMENCEMENT OF THE WORK" and 7-3, "PAYMENT."
- 1.2.** Contractor's failure to perform any of the following may result cancelling the award of the Contract:
  - 1.2.1.** Meeting with the City's Project Manager to discuss the Phased Funding Schedule.
  - 1.2.2.** Agreeing to a Phased Funding Schedule within twenty-two days of meeting with the City's Project Manager.

### **2. POST-AWARD**

- 2.1.** Do not start any construction activities for the next phase until the Notice to Proceed (NTP) has been issued by the City. The City will issue a separate NTP for each phase.
- 2.2.** The City may issue the NTP for a subsequent phase before the completion of the preceding phase.

## PHASED FUNDING SCHEDULE AGREEMENT

The particulars left blank below, such as the total number of phases and the amounts assigned to each phase, will be completed with funding specific information from the Pre-Award Schedule and Construction Cost Loaded Schedule submitted to and approved by the City.

**BID NUMBER:** K-21-1867-DBB-3

**CONTRACT OR TASK TITLE:** Metropolitan Biosolids Center Improvements Project

**CONTRACTOR:** PCL Construction, Inc.

Funding Phase	Phase Description	Phase Start	Phase Finish	Not-to-Exceed Amount
1	Mobilization, Bond, Contract execution, submittals, Equipment & Material Procurement	NTP	8/31/2021	S-17013- \$3,321,792.00  B-17006- \$161,280
2	Site work, Yard Pipe, Demo, pipe gallery work, mechanical pipe installation, equipment procurement for areas 72,76,80,10,11,94.	9/1/2021	1/31/2022	S-17013- \$10,259,623  B-17006- \$354,000
3	Mechanical pipe installation, Equipment procurement, Equipment Installation, platform installation, Demo Centrifuge & pumps, reinstall Centrifuge & pumps for areas 72,76,80,10,11,94.	2/1/2022	8/31/2023	S-17013- 18,905,495  B-17006- \$1,562,000
4	Performance testing, Plant operations, Demobilization	9/1/2023	Final Completion & Project Acceptance	S-17013- \$4,700,632  B-17006- \$821,868
<b>Contract Total</b>				<b>\$40,086,690.00</b>

**Notes:**

- 1) WHITEBOOK section 6-1.4, "Phased Funding Compensation" applies.
- 2) The total of all funding phases shall be equal to the TOTAL BID PRICE as shown on BID SCHEDULE 1 - PRICES.
- 3) This PHASED FUNDING SCHEDULE AGREEMENT will be incorporated into the CONTRACT and shall only be revised by written modifications to the CONTRACT.

**FUNDING AGENCY PROVISIONS**

**CALIFORNIA STATE REVOLVING FUND (CASRF), AND ENVIRONMENTAL  
PROTECTION AGENCY (EPA) REQUIREMENTS:**

**CLEAN WATER STATE REVOLVING FUND (CWSRF)**

**DRINKING WATER STATE REVOLVING FUND (DWSRF)**

**BUREAU OF RECLAMATION (BOR)**

**IN THE EVENT THAT THESE REQUIREMENTS CONFLICT WITH THE CITY'S GENERAL EOC REQUIREMENTS, THE FUNDING AGENCY'S REQUIREMENTS WILL CONTROL.**

**1. CALIFORNIA STATE REVOLVING FUND (CASRF) REQUIREMENTS.**

The City anticipates receiving financial assistance from the Federal Government and the State of California for this project. The following requirements are conditions of the receipt of financial assistance from the United States Environmental Protection Agency and the State Water Resources Control Board under the **California Water State Revolving Fund (CASRF)**. The firm contracting with the City (Contractor) shall comply with all of the following requirements. If there are other provisions in the Contract Documents that address the same subjects as this exhibit, Contractor shall comply with both provisions, with the more stringent requirements controlling. If there is a direct conflict between the Agreement and this exhibit, the requirements of this Exhibit shall control in order to preserve the City's eligibility to receive financial assistance.

**1.1. RECORDS.** Contractor shall maintain separate books, records and other material relative to the Project. Contractor shall also retain such books, records, and other material for itself and for each subcontractor who performed or performs work on this project for a minimum of thirty-six (36) years after Project Completion. Contractor shall require that such books, records, and other material are subject at all reasonable times (at a minimum during normal business hours) to inspection, copying, and audit by the State Water Board, the California State Auditor, the Bureau of State Audits, the United States Environmental Protection Agency (USEPA), the Office of Inspector General, the Internal Revenue Service, the Governor, or any authorized representatives of the aforementioned. Contractor shall allow and shall require its subcontractors to allow interviews during normal business hours of any employees who might reasonably have information related to such records. Contractor agrees to include a similar duty regarding audit, interviews, and records retention in any subcontract related to the performance of this Agreement. The provisions of this section shall survive the termination or expiration of this Agreement. (CWSRF Agmt. § 2.17(b); DWSRF Agmt. Ex. C § C.3.2(d)).

**1.2. BONDS.** For construction contracts of \$250,000 or more, Contractor shall not begin construction until after it has provided the City with performance and payment bonds each for 100% of the contract value. (CWSRF Agmt. § 4.3; DWSRF Agmt. Ex. C § C.3.6).

**1.3. COMPLIANCE WITH LAWS AND REGULATIONS.** Contractor shall, at all times, comply with and require its subcontractors to comply with all applicable federal and state laws, rules, guidelines, regulations, and requirements. Without limitation of the foregoing, to the extent applicable, Contractor shall:

- (a) Comply with and require its subcontractors on the Project to comply with federal DBE requirements.
- (a) Comply with and require its subcontractors to comply with the list of federal laws in this **Attachment D**. (CWSRF Agmt. § 4.5; DWSRF Agmt. Ex. C § C.3.8).

**1.4. INDEMNIFICATION.**

- a) Contractor shall defend, indemnify and hold harmless the State Water Quality Control Board, the California Infrastructure and Economic Development Bank (Bank), and any trustee, and their officers, employees, and agents for the Bonds issued by the Bank, if any, to the same extent Contractor is obligated to defend, indemnify, and hold harmless the City under the Agreement. Contractor shall

require its subcontractors to similarly defend, indemnify, and hold harmless the State Water Quality Control Board, the Bank, and any trustee, and their officers, employees, and agents for the Bonds issued by the Bank, if any, to the same extent its subcontractors are obligated to defend, indemnify, and hold harmless the Contractor. CWSRF Agmt. § 4.11; DWSRF Agmt. Ex. C § C.3.17).

#### **1.5. NON-DISCRIMINATION REQUIREMENTS.**

- a) During the performance of this Agreement, Contractor and its subcontractors shall not unlawfully discriminate, harass, or allow harassment against any employee or applicant for employment because of sex, race, color, ancestry, religion, religious creed, national origin, sexual orientation, mental or physical disability (including HIV and AIDS), mental disability, medical condition, age, marital status, denial of family and medical care leave, or genetic information, gender, gender identity, gender expression, or military and veteran status.
- b) Contractor and its subcontractors shall ensure that the evaluation and treatment of their employees and applicants for employment are free from such discrimination and harassment.
- c) Contractor and its subcontractors shall comply with the provisions of the Fair Employment and Housing Act and the applicable regulations promulgated thereunder. (Gov. Code, §12990, subds. (a)-(f) et seq.; Cal. Code Regs., tit. 2, § 7285 et seq.) Such regulations are incorporated into this Agreement by reference and made a part hereof as if set forth in full.
- d) Contractor and its subcontractors shall give written notice of their obligations under this clause to labor organizations with which they have a collective bargaining or other agreement. (CWSRF Agmt. § 4.15(e)-(h); DWSRF Agmt. Ex. C § C.3.21(e)-(h)).

**1.6. INSURANCE.** For any policy of general liability insurance concerning the construction of the Project, Contractor will cause, and will require its subcontractors to cause, a certificate of insurance to be issued showing the State Water Quality Control Board, its officers, agents, employees, and servants as additional insured. (CWSRF Agmt. § 4.17; DWSRF Agmt. Ex. C § C.3.25).

**1.7. EXCLUDED PARTIES.** Contractor shall not contract with any party who is debarred or suspended or otherwise excluded from or ineligible for participation in any work overseen, directed, funded, or administered by the State Water Board program for which this funding is authorized. For any work related to this Agreement, Contractor shall not contract with any individual or organization on the State Water Board's List of Disqualified Businesses and Persons that is identified as debarred or suspended or otherwise excluded from or ineligible for participation in any work overseen, directed, funded, or administered by the State Water Board program for which funding under this Agreement is authorized. The State Water Board's List of Disqualified Businesses and Persons is located at:

[http://www.waterboards.ca.gov/water\\_issues/programs/enforcement/fwa/dbp.shtm](http://www.waterboards.ca.gov/water_issues/programs/enforcement/fwa/dbp.shtm)  
(CWSRF Agmt. § 4.18; DWSRF Agmt. Ex. C § C.3.26).

**1.8. PREVAILING WAGES.** Contractor shall comply with all California State and Federal prevailing wage laws. Contractor shall include in its subcontracts the full the language provided in this Attachment D regarding federal prevailing wages. (CWSRF Agmt. § 4.19; DWSRF Agmt. Ex. C § C.3.28).

- 1.9. SIGNAGE.** Upon the direction of the City, Contractor shall place a sign at least four feet tall by eight feet wide made of ¾ inch thick exterior grade plywood or other approved material in a prominent location on the Project site and shall maintain the sign in good condition for the duration of the construction period. The sign must include the following disclosure statement and color logos (available from the State Water Resources Control Board):

*"Funding for this \$[insert value] million [insert name] project has been provided in full or in part by California State Revolving Funds through agreements with the State Water Resources Control Board. California's State Revolving Funds are capitalized through a variety of funding sources, including grants from the United States Environmental Protection Agency and state bond proceeds."*

The Project sign may include another agency's required promotional information so long as the above logos and disclosure statement are equally prominent on the sign. The sign shall be prepared in a professional manner. (CWSRF Agmt. Ex. A § 9; DWSRF Agmt. Ex. A § A.2.3).

See **Attachment E – Supplementary Special Provisions, Section 3-11.2, "Project Identification Sign"** for more information.

- 1.10. DISCLAIMER.** Funding for this project has been provided in full or in part through an agreement with the State Water Resources Control Board. California's State Revolving Funds are capitalized through a variety of funding sources, including grants from the United States Environmental Protection Agency and state bond proceeds. The contents of this document do not necessarily reflect the views and policies of the foregoing, nor does mention of trade names or commercial products constitute endorsement or recommendation for use. (DWSRF Agmt. Ex. A § A.2.1).

- 1.11. FEDERAL AWARD CONDITIONS.** Contractor shall comply with the following federal conditions:

- American Iron and Steel.** Unless the City has obtained a waiver from USEPA on file with the State Water Board or unless this Project is not a project for the construction, alteration, maintenance or repair of a public water system or treatment work, Contractor shall not purchase "iron and steel products" produced outside of the United States on this Project. Unless the City has obtained a waiver from USEPA on file with the State Water Board or unless this Project is not a project for the construction, alteration, maintenance or repair of a public water system or treatment work, Contractor shall ensure that all "iron and steel products" used in the Project were or will be produced in the United States. For purposes of this section, the term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials. "Steel" means an alloy that includes at least 50 percent iron, between .02 and 2 percent carbon, and may include other elements. CWSRF Agmt. Ex. E § A(1); DWSRF Agmt. Ex. C § C.4.3.i;)

2. **Wage Rate Requirements (Davis-Bacon).** Contractor shall include in its subcontracts the full the language provided in Attachment D, Section 10, regarding federal prevailing wages. CWSRF Agmt. Ex. E § A(2); DWSRF Agmt. Ex. C § C.4.3.ii;.
3. **Reserved.**
4. **Copyright and Patent.** USEPA and the State Water Board have the right to reproduce, publish, use and authorize others to reproduce, publish and use copyrighted works or other data developed pursuant to this Agreement. Where an invention is made with Project Funds, USEPA and the State Water Board retain the right to a worldwide, nonexclusive, nontransferable, irrevocable, paid-up license to practice the invention owned by Contractor. Contractor must utilize the Interagency Edison extramural invention reporting system at <http://iEdison.gov> and shall notify the State Water Board when an invention report, patent report, or utilization report is filed. (CWSRF Agmt. Ex. E § A(5)(e); DWSRF Agmt. Ex. C § C.4.3.i)
5. **Credit.** Contractor agrees that any reports, documents, publications or other materials developed for public distribution supported by this Agreement shall contain the following statement (CWSRF Agmt. Ex. E § A(5)(f)):
 

*“ This project has been funded wholly or in part by the United States Environmental Protection Agency and the State Water Resources Control Board. The contents of this document do not necessarily reflect the views and policies of the Environmental Protection Agency or the State Water Resources Control Board, nor does the EPA or the Board endorse trade names or recommend the use of commercial products mentioned in this document.”*
6. **Trafficking in Persons.** Contractor, its employees, its subcontractors and their employees may not engage in severe forms of trafficking in persons during the term of this Agreement, procure a commercial sex act during the term of this Agreement, or use forced labor in the performance of this Agreement. Contractor must include this provision in its subcontracts under this Agreement. Contractor must inform the City immediately of any information regarding a violation of the foregoing. Contractor understands that failure to comply with this provision may subject the State Water Board to loss of federal funds, and the loss of funding for this Project. (CWSRF Agmt. Ex. E § A(5)(h); DWSRF Agmt. Ex. C § C.4.3.xiii).

**1.12. CIVIL RIGHTS OBLIGATIONS.** Contractor shall comply with the following federal non-discrimination requirements CWSRF Agmt. Ex. E § B; DWSRF Agmt. Ex. C § C.4.3.xv);

- a) Title VI of the Civil Rights Act of 1964, which prohibits discrimination based on race, color, and national origin, including limited English proficiency (LEP).
- b) Section 504 of the Rehabilitation Act, 29 USC 794, supplemented by EO 11914, 41 FR 17871, April 29, 1976 and 11250, 30 FR 13003, October 13, 1965, which prohibits discrimination against persons with disabilities.
- c) The Age Discrimination Act, 42 USC 6101 et seq, which prohibits age discrimination.
- d) Section 13 of the Federal Water Pollution Control Act Amendments of 1972, which prohibits discrimination on the basis of sex.
- e) 40 CFR Part 7, as it relates to the foregoing.

- f) Executive Order No. 11246. Contractor shall include in its subcontracts related to the Project the following provisions (41 CFR § 60-1.4(b)):

"During the performance of this contract, the contractor agrees as follows:

- (1) The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, sexual orientation, gender identity, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, religion, sex, sexual orientation, gender identity, or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the City setting forth the provisions of this nondiscrimination clause.
- (2) The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, or national origin.
- (3) The contractor will not discharge or in any other manner discriminate against any employee or applicant for employment because such employee or applicant has inquired about, discussed, or disclosed the compensation of the employee or applicant or another employee or applicant. This provision shall not apply to instances in which an employee who has access to the compensation information of other employees or applicants as a part of such employee's essential job functions discloses the compensation of such other employees or applicants to individuals who do not otherwise have access to such information, unless such disclosure is in response to a formal complaint or charge, in furtherance of an investigation, proceeding, hearing, or action, including an investigation conducted by the employer, or is consistent with the contractor's legal duty to furnish information.
- (4) The contractor will send to each labor union or representative of workers with which it has a collective bargaining agreement or other contract or understanding, a notice to be provided by the City advising the labor union or workers' representatives of the contractor's commitments under section 202 of Executive Order 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.
- (5) The contractor will comply with all provisions of Executive Order 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.
- (6) The contractor will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and

will permit access to his books, records, and accounts by the contracting agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

- (7) In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be canceled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.
- (8) The contractor will include the provisions of paragraphs (1) through (8) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as may be directed by the Secretary of Labor as a means of enforcing such provisions, including sanctions for noncompliance: Provided, however, that in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such, the contractor may request the United States to enter into such litigation to protect the interests of the United States."

- g) **Disadvantaged Business Enterprises (40 CFR Part 33).** Contractor agrees to comply with the requirements of USEPA's Program for Utilization of Small, Minority and Women's Business Enterprises. The DBE rule can be accessed at [www.epa.gov/osbp](http://www.epa.gov/osbp). Contractor shall comply with 40 CFR Section 33.301, and retain all records documenting compliance with the six good faith efforts. The Contractor shall not discriminate on the basis of race, color, national origin or sex in the performance of this contract. The Contractor shall carry out applicable requirements of 40 CFR part 33 in the award and administration of contracts awarded under EPA financial assistance agreements. Failure by the Contractor to carry out these requirements is a material breach of this contract which may result in the termination of this contract or other legally available remedies. (CWSRF Agmt. Ex. E § D(2); DWSRF Agmt. Ex. A § A.2.2.5;)

**1.13. PROCUREMENT PROHIBITIONS UNDER SECTION 306 OF THE CLEAN AIR ACT AND SECTION 508 OF THE CLEAN WATER ACT, INCLUDING EXECUTIVE ORDER 11738, ADMINISTRATION OF THE CLEAN AIR ACT AND THE FEDERAL WATER POLLUTION CONTROL ACT WITH RESPECT TO FEDERAL CONTRACTS, GRANTS, OR LOANS; 42 USC § 7606; 33 USC § 1368.** Except where the purpose of this Agreement is to remedy the cause of the violation, Contractor may not procure goods, services, or materials from suppliers excluded under the federal System for Award Management: <http://www.sam.gov/>.

**1.14. Debarment and Suspension Executive Order 12549 (1986).** Contractor certifies that it will not knowingly enter into a contract with anyone who is ineligible under the 2 CFR part 180 and part 1532 to participate in the Project. Suspension and debarment information can be accessed at <http://www.sam.gov>. Contractor represents and warrants

that it has or will include a term or conditions requiring compliance with this provision in all of its subcontracts under this Agreement.

**1.15. SECURE CONNECTION.** Contractor agrees that if its network or information system is connected to USEPA networks to transfer data using systems other than the Environmental Information Exchange Network or USEPA’s Central Data Exchange, it will ensure that any connections are secure. (CWSRF Agmt. Ex. E § D(5); DWSRF Agmt. Ex. C § C.4.3.xxii).

**1.16. GEOSPATIAL DATA STANDARDS.** All geospatial data created pursuant to this Agreement that is submitted to the State Water Board for use by USEPA or that is submitted directly to USEPA must be consistent with Federal Geographic Data Committee endorsed standards. Information on these standards may be found at [www.fgdc.gov](http://www.fgdc.gov). (CWSRF Agmt. Ex. E § E; DWSRF Agmt. Ex. C § C.4.3.xxiii)

**1.17. FEDERAL LOBBYING RESTRICTIONS.** Recipients of federal financial assistance may not pay any person for influencing or attempting to influence any officer or employee of a federal agency, a member of Congress, an officer or employee of Congress, or an employee of a member of Congress with respect to the award, continuation, renewal, amendment, or modification of a federal grant, loan, or contract. These requirements are implemented for USEPA in 40 CFR Part 34, which also describes types of activities, such as legislative liaison activities and professional and technical services, which are not subject to this prohibition. Upon award of this contract, Contractor shall complete and submit to the City the certification and disclosure forms in Appendix A and Appendix B to 40 CFR Part 34. Contractor shall also require all subcontractors and suppliers of any tier awarded a subcontract over \$100,000 to similarly complete and submit the certification and disclosure forms pursuant to the process set forth in 40 CFR 34.110. (WIFIA Agmt. Ex. E, Section 319 of Pub. L. 101-121).

**1.18. CHILD SUPPORT COMPLIANCE ACT.** Contractor shall fully comply with all applicable state and federal laws relating to child and family support enforcement, including, but not limited to, disclosure of information and compliance with earnings assignment orders, as provided in Family Code § 5200 et seq. In addition, the Contractor shall fully complying with the earnings assignment orders of all employees and is providing the names of all new employees to the New Hire Registry maintained by the California Employment Development Department.

**2. NOTICE OF REQUIREMENT FOR AFFIRMATIVE ACTION TO ENSURE EQUAL EMPLOYMENT OPPORTUNITY (EXECUTIVE ORDER 11246) located at 41 CFR § 60-4.2.**

**2.1.** The goal and timetables for minority and female participation, expressed in percentage terms for the Contractor’s aggregate workforce in each trade on all construction work in the covered area, as follows:

	<u>Goal</u>
1. Minority Participation:	16.9%
2. Female Participation:	6.9%

**2.2.** These goals are applicable to all the Contractor’s construction work (whether or not it is Federal or federally assisted) performed in the covered area. If the Contractor performs Work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical area where the Work is actually performed. With regard to this second area, the Contractor also is subject to the goals for both federally involved and non-federally involved Work.

- 2.3. The Contractor's compliance with the Executive Order and the regulations in 41 CFR Part 60-4 shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and its efforts to meet the goals.
- 2.4. The hours of minority and female employment and training shall be substantially uniform throughout the length of the Contract, and in each trade, and the Contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from Contractor to Contractor or from project to project for the sole purpose of meeting the Contractor's goals shall be a violation of the Contract, the Executive Order, and the regulations in 41 CFR Part 60-4. Compliance with the goals will be measured against the total work hours performed.
- 2.5. The Contractor shall provide written notification to the Director the Office of Federal Contract Compliance Programs within 10 Working Days of award of any Subcontract in excess of \$10,000 at any tier for Work under the Contract resulting from this solicitation. The notification shall list the name, address and telephone number of the Subcontractor; employer identification number of the Subcontractor; estimated dollar amount of the Subcontract; estimated starting and completion dates of the Subcontract; and the geographical area in which the subcontract is to be performed. The "covered area" is the City of San Diego.

### **3. EQUAL OPPORTUNITY CLAUSES:**

- 3.1. The following equal opportunity clauses are incorporated by reference herein:
  1. The equal opportunity clause located 41 CFR 60.1.4(a), which specifies the obligations imposed under Executive Order 11246.
  2. The equal opportunity clause located at 41 CFR 60-741.5, which contains the obligations imposed by Section 503 of the Rehabilitation Act of 1973.
  3. The "Equal Opportunity Clause" (Resolution No. 765092) filed on December 4, 1978, in the Office of the City Clerk, San Diego, California and incorporated in the "Standard Federal Employment Opportunity Construction Contract Specifications (Executive Order 11246 - Document No. 769023, filed September 11, 1984, in the Office of the City Clerk, San Diego, California) is applicable to all non-exempt City construction contracts and subcontracts of \$2,000 or more.
  4. Age Discrimination Act of 1975, Pub. L. 94-135.
  5. Title VI of the Civil Rights Act of 1964, Pub. L. 88-352.
  6. Section 13 of the Federal Water Pollution Control Acts Amendments of 1972, Pub. L. 92-5200 (the Clean Water Act).
  7. Section 504 of the Rehabilitation Act of 1973, Pub. L. 93-112 (Executive Orders 11914 and 11250).
  8. Women's Minority Business Enterprises, Executive Orders 11625, 12138 and 12432.
  9. Section 129 of the Small Business Administration Reauthorization and Amendment Act of 1988, Pub. L. 100-590.

#### **4. STANDARD FEDERAL EQUAL EMPLOYMENT SPECIFICATIONS:**

**4.1.** The Contractor is required to comply with the 15 "Standard Federal Equal Employment Specifications" in section 4.2 below and also located in 41 CFR 60-4.3 for federal and federally assisted construction contracts in excess of \$10,000.

**4.2.** Standard Federal Equal Employment Specifications.

1. As used in these specifications:
  - a) Covered area" means the geographical area described in the solicitation from which this contract resulted;
  - b) "Director" means Director, Office of Federal Contract Compliance Programs, United States Department of Labor, or any person to whom the Director delegates authority;
  - c) "Employer identification number" means the Federal Social Security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941.
  - d) Minority" includes:
    - i. Black (all persons having origins in any of the Black African racial groups not of Hispanic origin);
    - ii. Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American or other Spanish Culture or origin, regardless of race);
    - iii. Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands); and
    - iv. American Indian or Alaskan Native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).
2. Whenever the Contractor, or any Subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of \$10,000 the provisions of these specifications and the Notice which contains the applicable goals for minority and female participation, and which is set forth in the solicitations from which this contract resulted.
3. If the Contractor is participating (pursuant to [41 CFR 60-4.5](#)) in a Hometown Plan approved by the U.S. Department of Labor in the covered area either individually or through an association, its affirmative action obligations on all work in the Plan area (including goals and timetables) shall be in accordance with that Plan for those trades which have unions participating in the Plan. Contractors must be able to demonstrate their participation in and compliance with the provisions of any such Hometown Plan. Each Contractor or Subcontractor participating in an approved Plan is individually required to comply with its obligations under the EEO clause, and to make a good faith effort to achieve each goal under the Plan in each trade in which it has employees. The overall good faith performance by other Contractors or Subcontractors toward a goal in an approved Plan does not excuse any covered Contractor's or Subcontractor's failure to take good faith efforts to achieve the Plan goals and timetables.

4. The Contractor shall implement the specific affirmative action standards provided in item 7, paragraphs "a" through "p", of this section below. The goals set forth in the solicitation from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and female utilization the Contractor should reasonably be able to achieve in each construction trade in which it has employees in the covered area. Covered Construction contractors performing construction work in geographical areas where they do not have a Federal or federally assisted construction contract shall apply the minority and female goals established for the geographical area where the work is being performed. Goals are published periodically in the Federal Register in notice form, and such notices may be obtained from any Office of Federal Contract Compliance Programs office or from Federal procurement contracting officers. The Contractor is expected to make substantially uniform progress in meeting its goals in each craft during the period specified.
5. Neither the provisions of any collective bargaining agreement, nor the failure by a union with whom the Contractor has a collective bargaining agreement, to refer either minorities or women shall excuse the Contractor's obligations under these specifications, [Executive Order 11246](#), or the regulations promulgated pursuant thereto.
6. In order for the nonworking training hours of apprentices and trainees to be counted in meeting the goals, such apprentices and trainees must be employed by the Contractor during the training period, and the Contractor must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees must be trained pursuant to training programs approved by the U.S. Department of Labor.
7. The Contractor shall take specific affirmative actions to ensure equal employment opportunity. The evaluation of the Contractor's compliance with these specifications shall be based upon its effort to achieve maximum results from its actions. The Contractor shall document these efforts fully, and shall implement affirmative action steps at least as extensive as the following:
  - a) Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which the Contractor's employees are assigned to work. The Contractor, where possible, will assign two or more women to each construction project. The Contractor shall specifically ensure that all foremen, superintendents, and other on-site supervisory personnel are aware of and carry out the Contractor's obligation to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities
  - b) Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority and female recruitment sources and to community organizations when the Contractor or its unions have employment opportunities available, and maintain a record of the organizations' responses.
  - c) Maintain a current file of the names, addresses and telephone numbers of each minority and female off-the-street applicant and minority or female referral from a union, a recruitment source or community organization and of what action was taken with respect to each such individual. If such individual was sent to the union hiring hall for referral and was not referred

back to the Contractor by the union or, if referred, not employed by the Contractor, this shall be documented in the file with the reason therefor, along with whatever additional actions the Contractor may have taken.

- d) Provide immediate written notification to the Director when the union or unions with which the Contractor has a collective bargaining agreement has not referred to the Contractor a minority person or woman sent by the Contractor, or when the Contractor has other information that the union referral process has impeded the Contractor's efforts to meet its obligations.
- e) Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the Contractor's employment needs, especially those programs funded or approved by the Department of Labor. The Contractor shall provide notice of these programs to the sources compiled under 7b above.
- f) Disseminate the Contractor's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting the Contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.
- g) Review, at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination or other employment decisions including specific review of these items with onsite supervisory personnel such as Superintendents, General Foremen, etc., prior to the initiation of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.
- h) Disseminate the Contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing the Contractor's EEO policy with other Contractors and Subcontractors with whom the Contractor does or anticipates doing business.
- i) Direct its recruitment efforts, both oral and written, to minority, female and community organizations, to schools with minority and female students and to minority and female recruitment and training organizations serving the Contractor's recruitment area and employment needs. Not later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the Contractor shall send written notification to organizations such as the above, describing the openings, screening procedures, and tests to be used in the selection process.
- j) Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school,

summer and vacation employment to minority and female youth both on the site and in other areas of a Contractor's work force.

- k) Validate all tests and other selection requirements where there is an obligation to do so under [41 CFR part 60-3](#).
- l) Conduct, at least annually, an inventory and evaluation at least of all minority and female personnel for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.
- m) Ensure that seniority practices, job classifications, work assignments and other personnel practices, do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the Contractor's obligations under these specifications are being carried out.
- n) Ensure that all facilities and company activities are nonsegregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.
- o) Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.
- p) Conduct a review, at least annually, of all supervisors' adherence to and performance under the Contractor's EEO policies and affirmative action obligations.

8. Contractors are encouraged to participate in voluntary associations which assist in fulfilling one or more of their affirmative action obligations (item 7, paragraphs "a" through "p", of this section). The efforts of a contractor association, joint contractor-union, contractor-community, or other similar group of which the contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under item 7, paragraphs "a" through "p", of this section that the contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the Contractor's minority and female workforce participation, makes a good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the Contractor. The obligation to comply, however, is the Contractor's and failure of such a group to fulfill an obligation shall not be a defense for the Contractor's noncompliance.

9. A single goal for minorities and a separate single goal for women have been established. The Contractor, however, is required to provide equal employment opportunity and to take affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, the Contractor may be in violation of the Executive Order if a particular group is employed in a substantially disparate manner (for example, even though the Contractor has achieved its goals for women generally, the Contractor may be in violation of the Executive Order if a specific minority group of women is underutilized).

10. The Contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex, sexual orientation, gender identity, or national origin.
11. The Contractor shall not enter into any Subcontract with any person or firm debarred from Government contracts pursuant to [Executive Order 11246](#).
12. The Contractor shall carry out such sanctions and penalties for violation of these specifications and of the Equal Opportunity Clause, including suspension, termination and cancellation of existing subcontracts as may be imposed or ordered pursuant to [Executive Order 11246](#), as amended, and its implementing regulations, by the Office of Federal Contract Compliance Programs. Any Contractor who fails to carry out such sanctions and penalties shall be in violation of these specifications and [Executive Order 11246](#), as amended.
13. The Contractor, in fulfilling its obligations under these specifications, shall implement specific affirmative action steps, at least as extensive as those standards prescribed in item 7 of these specifications, so as to achieve maximum results from its efforts to ensure equal employment opportunity. If the Contractor fails to comply with the requirements of the Executive Order, the implementing regulations, or these specifications, the Director shall proceed in accordance with [41 CFR 60-4.8](#).
14. The Contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government and to keep records. Records shall at least include for each employee the name, address, telephone numbers, construction trade, union affiliation if any, employee identification number when assigned, social security number, race, sex, status (e.g., mechanic, apprentice trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in an easily understandable and retrievable form; however, to the degree that existing records satisfy this requirement, contractors shall not be required to maintain separate records.
15. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents (e.g., those under the [Public Works Employment Act of 1977](#) and the Community Development Block Grant Program).

**4.3** Segregated Facilities (41 CFR 60-1.8). The contractor must ensure that facilities provided for employees are provided in such a manner that segregation on the basis of race, color, religion, sex, sexual orientation, gender identity, or national origin cannot result. The contractor may neither require such segregated use by written or oral policies nor tolerate such use by employee custom. The contractor's obligation extends further to ensuring that its employees are not assigned to perform their services at any location, under the contractor's control, where the facilities are segregated. This obligation extends to all contracts containing the equal opportunity clause regardless of the amount of the contract. The term "facilities," as used in this section, means waiting rooms, work areas, restaurants and other eating areas, time clocks, restrooms, washrooms, locker rooms, and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing provided for employees; Provided, that separate or single-user restrooms and necessary dressing or sleeping areas shall be provided to assure privacy between the sexes.

**5. VIOLATION OR BREACH OF REQUIREMENTS:**

- 5.1.** If at any time during the course of the Contract there is a violation of the Affirmative Action or Equal Employment Opportunity requirements by the Contractor, or the Subcontractors, the City will notify the Contractor of the breach. The City may withhold any further progress payments to the Contractor until the City is satisfied that the Contractor and Subcontractors are in full compliance with these requirements.

**6. MONTHLY EMPLOYMENT UTILIZATION REPORTS:**

- 6.1.** Refer to GENERAL EQUAL OPPORTUNITY CONTRACTING PROGRAM REQUIREMENTS, CONSTRUCTION CONTRACTOR REQUIREMENTS in The WHITEBOOK and the following:
1. Federal and Non-Federal Work in San Diego County. Submit an updated list only if work is complete or new contracts have been awarded during the span of this project.

**7. RECORDS OF PAYMENTS TO DBEs:**

- 7.1.** The Contractor shall maintain records and documents of payments to DBEs for 5 years following the NOC. These records shall be made available for inspection upon request by any authorized representative of the City, funding agency, or both. The reporting requirement shall be extended to any certified DBE Subcontractor.

**8. FEDERAL WAGE REQUIREMENTS FOR FEDERALLY FUNDED PROJECTS:**

- 8.1.** The successful Bidder's work shall be required to comply with Executive Order 11246, entitled "Equal Employment Opportunity," as amended by Executive Order 11375, and as supplemented in Department of Labor regulations (41 CFR chapter 60).
- 8.2.** This Executive Order pertains to Equal Employment Opportunity regulations and contains significant changes to the regulations including new goals and timetables for women in construction and revised goals and timetables for minorities in construction.
- 8.3.** Minimum wage rates for this project have been predetermined by the Secretary of Labor and are set forth in the Decision of the Secretary and bound into the specifications book. Should there be any difference between the state or federal wage rates, including health and welfare funds for any given craft, mechanic, or similar classifications needed to execute the Work, it shall be mandatory upon the Contractor or subcontractor to pay the higher of the two rates.
- 8.4.** The minimum wage rate to be paid by the Contractor and the Subcontractors shall be in accordance with the Federal Labor Standards Provisions (see below) and Federal Wage Rates (see Wage Rates below) and General Prevailing Wage Determination made by the State of California, Director of Industrial Relations pursuant to California Labor Code Part 7, Chapter 1, Article 2, Sections 1770, 1773 and 1773.1, whichever is higher.
- 8.5.** A Contractor having 50 or more employees and its Subcontractors having 50 or more employees and who may be awarded a contract of \$50,000 or more will be required to maintain an affirmative action program, the standards for which are contained in the specifications.
- 8.6.** To be eligible for award, each Bidder shall comply with the affirmative action requirements which are contained in the specifications

**8.7.** Women will be afforded equal opportunity in all areas of employment. However, the employment of women shall not diminish the standards of requirements for the employment of minorities.

**9. PREVAILING WAGE RATES:** Pursuant to San Diego Municipal Code section 22.3019, construction, alteration, demolition, repair and maintenance work performed under this Contract is subject to State prevailing wage laws. For construction work performed under this Contract cumulatively exceeding \$25,000 and for alteration, demolition, repair and maintenance work performed under this Contract cumulatively exceeding \$15,000, the Contractor and its subcontractors shall comply with State prevailing wage laws including, but not limited to, the requirements listed below.

**9.1. Compliance with Prevailing Wage Requirements.** Pursuant to sections 1720 through 1861 of the California Labor Code, the Contractor and its subcontractors shall ensure that all workers who perform work under this Contract are paid not less than the prevailing rate of per diem wages as determined by the Director of the California Department of Industrial Relations (DIR). This includes work performed during the design and preconstruction phases of construction including, but not limited to, inspection and land surveying work.

**9.1.1.** Copies of such prevailing rate of per diem wages are on file at the City and are available for inspection to any interested party on request. Copies of the prevailing rate of per diem wages also may be found at <http://www.dir.ca.gov/OPRL/DPreWageDetermination.htm>. Contractor and its subcontractors shall post a copy of the prevailing rate of per diem wages determination at each job site and shall make them available to any interested party upon request.

**9.1.2.** The wage rates determined by the DIR refer to expiration dates. If the published wage rate does not refer to a predetermined wage rate to be paid after the expiration date, then the published rate of wage shall be in effect for the life of this Contract. If the published wage rate refers to a predetermined wage rate to become effective upon expiration of the published wage rate and the predetermined wage rate is on file with the DIR, such predetermined wage rate shall become effective on the date following the expiration date and shall apply to this Contract in the same manner as if it had been published in said publication. If the predetermined wage rate refers to one or more additional expiration dates with additional predetermined wage rates, which expiration dates occur during the life of this Contract, each successive predetermined wage rate shall apply to this Contract on the date following the expiration date of the previous wage rate. If the last of such predetermined wage rates expires during the life of this Contract, such wage rate shall apply to the balance of the Contract.

**9.2. Penalties for Violations.** Contractor and its subcontractors shall comply with California Labor Code section 1775 in the event a worker is paid less than the prevailing wage rate for the work or craft in which the worker is employed. This shall be in addition to any other applicable penalties allowed under Labor Code sections 1720 – 1861.

**9.3. Payroll Records.** Contractor and its subcontractors shall comply with California Labor Code section 1776, which generally requires keeping accurate payroll records, verifying and certifying payroll records, and making them available for inspection. Contractor shall require its subcontractors to also comply with section 1776. Contractor and its subcontractors shall submit weekly certified payroll records online via the City's web-based Labor Compliance Program. Contractor is responsible for ensuring its subcontractors submit certified payroll records to the City.

- 9.3.1.** Contractor their subcontractors shall also furnish records specified in Labor Code section 1776 directly to the Labor Commissioner in the manner required by Labor Code section 1771.4.
- 9.4. Apprentices.** Contractor and its subcontractors shall comply with California Labor Code sections 1777.5, 1777.6 and 1777.7 concerning the employment and wages of apprentices. Contractor is held responsible for the compliance of their subcontractors with sections 1777.5, 1777.6 and 1777.7.
- 9.5. Working Hours.** Contractor and their subcontractors shall comply with California Labor Code sections 1810 through 1815, including but not limited to: (i) restrict working hours on public works contracts to eight hours a day and forty hours a week, unless all hours worked in excess of 8 hours per day are compensated at not less than 1½ times the basic rate of pay; and (ii) specify penalties to be imposed on contractors and subcontractors of \$25 per worker per day for each day the worker works more than 8 hours per day and 40 hours per week in violation of California Labor Code sections 1810 through 1815.
- 9.6. Required Provisions for Subcontracts.** Contractor shall include at a minimum a copy of the following provisions in any contract they enter into with a subcontractor: California Labor Code sections 1771, 1771.1, 1775, 1776, 1777.5, 1810, 1813, 1815, 1860 and 1861.
- 9.7. Labor Code Section 1861 Certification.** Contractor in accordance with California Labor Code section 3700 is required to secure the payment of compensation of its employees and by signing this Contract, Contractor certifies that "I am aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the work of this Contract."
- 9.8. Labor Compliance Program.** The City has its own Labor Compliance Program authorized in August 2011 by the DIR. The City will withhold contract payments when payroll records are delinquent or deemed inadequate by the City or other governmental entity, or it has been established after an investigation by the City or other governmental entity that underpayment(s) have occurred. For questions or assistance, please contact the City of San Diego's Prevailing Wage Unit at 858-627-3200.
- 9.9. Contractor and Subcontractor Registration Requirements.** This project is subject to compliance monitoring and enforcement by the DIR. A contractor or subcontractor shall not be qualified to bid on, be listed in a bid or proposal, subject to the requirements of section 4104 of the Public Contract Code, or engage in the performance of any contract for public work, unless currently registered and qualified to perform public work pursuant to Labor Code section 1725.5. It is not a violation of this section for an unregistered contractor to submit a bid that is authorized by Section 7029.1 of the Business and Professions code or by Section 10164 or 20103.5 of the Public Contract Code, provided the contractor is registered to perform public work pursuant to Section 1725.5 at the time the contract is awarded.
- 9.9.1.** A Contractor's inadvertent error in listing a subcontractor who is not registered pursuant to Labor Code section 1725.5 in response to a solicitation shall not be grounds for filing a bid protest or grounds for considering the bid non-responsive provided that any of the following apply: (1) the subcontractor is registered prior to bid opening; (2) within twenty-four hours after the bid opening, the subcontractor is registered and has paid the penalty registration fee specified in

Labor Code section 1725.5; or (3) the subcontractor is replaced by another registered subcontractor pursuant to Public Contract Code section 4107.

- 9.9.2.** By submitting a bid or proposal to the City, Contractor is certifying that he or she has verified that all subcontractors used on this public work project are registered with the DIR in compliance with Labor Code sections 1771.1 and 1725.5, and Contractor shall provide proof of registration for themselves and all listed subcontractors to the City at the time of bid or proposal due date or upon request.
- 9.10. Stop Order.** For Contractor or its subcontractors engaging in the performance of any public work contract without having been registered in violation of Labor Code sections 1725.5 or 1771.1, the Labor Commissioner shall issue and serve a stop order prohibiting the use of the unregistered contractors or unregistered subcontractor(s) on ALL public works until the unregistered contractor or unregistered subcontractor(s) is registered. Failure to observe a stop order is a misdemeanor.
- 9.11. List of all Subcontractors.** The City may ask Contractor for the most current list of subcontractors (regardless of tier), along with their DIR registration numbers, utilized on this Agreement at any time during performance of this contract, and Contractor shall provide the list within ten (10) working days of the City's request. Additionally, Contractor shall provide the City with a complete list of all subcontractors utilized on this contract (regardless of tier), within ten working days of the completion of the contract, along with their DIR registration numbers. The City shall withhold final payment to Contractor until at least 30 days after this information is provided to the City.
- 9.12. Exemptions for Small Projects.** There are limited exemptions for installation, alteration, demolition, or repair work done on projects of \$25,000 or less. The Contractor shall still comply with Labor Code sections 1720 et. seq. The only recognized exemptions are listed below:
- 9.12.1. Registration.** The Contractor will not be required to register with the DIR for small projects. (Labor Code section 1771.1).
- 9.12.2. Certified Payroll Records.** The records required in Labor Code section 1776 shall be required to be kept and submitted to the City of San Diego but will not be required to be submitted online with the DIR directly. The Contractor will need to keep those records for at least three years following the completion of the Contract. (Labor Code section 1771.4).
- 9.12.3. List of all Subcontractors.** The Contractor shall not be required to hire only registered subcontractors and is exempt from submitting the list of all subcontractors that is required in section 9.11. above. (Labor code section 1773.3).

**10. DAVIS-BACON WAGE RATES AND PROVISIONS:**

**10.1. WAGE RATES** This contract shall be subject to the following Davis-Bacon Wage Decisions:

"General Decision Number: CA20210001 01/01/2021

Superseded General Decision Number: CA20200001

State: California

Construction Types: Building, Heavy (Heavy and Dredging),  
Highway and Residential

County: San Diego County in California.

BUILDING CONSTRUCTION PROJECTS; DREDGING PROJECTS (does not include hopper dredge work); HEAVY CONSTRUCTION PROJECTS (does not include water well drilling); HIGHWAY CONSTRUCTION PROJECTS; RESIDENTIAL CONSTRUCTION PROJECTS (consisting of single family homes and apartments up to and including 4 stories)

Note: Under Executive Order (EO) 13658, an hourly minimum wage of \$10.95 for calendar year 2021 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least \$10.95 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2021. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate, if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at [www.dol.gov/whd/govcontracts](http://www.dol.gov/whd/govcontracts).

Workers required to suit up and work in a hazardous material environment: \$2.00 per hour additional. Combination mixer and compressor operator on gunite work shall be classified as a concrete mobile mixer operator.

SEE ZONE DEFINITIONS AFTER CLASSIFICATIONS

POWER EQUIPMENT OPERATORS CLASSIFICATIONS

GROUP 1: Bargeman; Brakeman; Compressor operator; Ditch Witch, with seat or similar type equipment; Elevator operator-inside; Engineer Oiler; Forklift operator (includes loed, lull or similar types under 5 tons; Generator operator; Generator, pump or compressor plant operator; Pump operator; Signalman; Switchman

GROUP 2: Asphalt-rubber plant operator (nurse tank operator); Concrete mixer operator-skip type; Conveyor operator; Fireman; Forklift operator (includes loed, lull or similar types over 5 tons; Hydrostatic pump operator; oiler crusher (asphalt or concrete plant); Petromat laydown machine; PJU side dum jack; Screening and conveyor machine operator (or similar types); Skiploader (wheel type up to 3/4 yd. without attachment); Tar pot fireman; Temporary heating plant operator; Trenching machine oiler

GROUP 3: Asphalt-rubber blend operator; Bobcat or similar type (Skid steer); Equipment greaser (rack); Ford Ferguson (with dragtype attachments); Helicopter radioman (ground); Stationary pipe wrapping and cleaning machine operator

GROUP 4: Asphalt plant fireman; Backhoe operator (mini-max or similar type); Boring machine operator; Boxman or mixerman (asphalt or concrete); Chip spreading machine operator; Concrete cleaning decontamination machine operator; Concrete Pump Operator (small portable); Drilling machine operator, small auger types (Texoma super economatic or similar types - Hughes 100 or 200 or similar types -

drilling depth of 30' maximum); Equipment greaser (grease truck); Guard rail post driver operator; Highline cableway signalman; Hydra-hammer-aero stomper; Micro Tunneling (above ground tunnel); Power concrete curing machine operator; Power concrete saw operator; Power-driven jumbo form setter operator; Power sweeper operator; Rock Wheel Saw/Trencher; Roller operator (compacting); Screed operator (asphalt or concrete); Trenching machine operator (up to 6 ft.); Vacuum or much truck

GROUP 5: Equipment Greaser (Grease Truck/Multi Shift).

GROUP 6: Articulating material hauler; Asphalt plant engineer; Batch plant operator; Bit sharpener; Concrete joint machine operator (canal and similar type); Concrete planer operator; Dandy digger; Deck engine operator; Derrickman (oilfield type); Drilling machine operator, bucket or auger types (Calweld 100 bucket or similar types - Watson 1000 auger or similar types - Texoma 330, 500 or 600 auger or similar types - drilling depth of 45' maximum); Drilling machine operator; Hydrographic seeder machine operator (straw, pulp or seed), Jackson track maintainer, or similar type; Kalamazoo Switch tamper, or similar type; Machine tool operator; Maginnis internal full slab vibrator, Mechanical berm, curb or gutter (concrete or asphalt); Mechanical finisher operator (concrete, Clary-Johnson-Bidwell or similar); Micro tunnel system (below ground); Pavement breaker operator (truck mounted); Road oil mixing machine operator; Roller operator (asphalt or finish), rubber-tired earth moving equipment (single engine, up to and including 25 yds. struck); Self-propelled tar pipelining machine operator; Skiploader operator (crawler and wheel type, over 3/4 yd. and up to and including 1-1/2 yds.); Slip form pump operator (power driven hydraulic lifting device for concrete forms); Tractor operator-bulldozer, tamper-scraper (single engine, up to 100 h.p. flywheel and similar types, up to and including D-5 and similar types); Tugger hoist operator (1 drum); Ultra high pressure waterjet cutting tool system operator; Vacuum blasting machine operator

GROUP 8: Asphalt or concrete spreading operator (tamping or finishing); Asphalt paving machine operator (Barber Greene or similar type); Asphalt-rubber distribution operator; Backhoe operator (up to and including 3/4 yd.), small ford, Case or similar; Cast-in-place pipe laying machine operator; Combination mixer and compressor operator (guniting work); Compactor operator (self-propelled); Concrete mixer operator (paving); Crushing plant operator; Drill Doctor; Drilling machine operator, Bucket or auger types (Calweld 150 bucket or similar types - Watson 1500, 2000 2500 auger or similar types - Texoma 700, 800 auger or similar types - drilling depth of 60' maximum); Elevating grader operator; Grade checker; Gradall operator; Grouting machine operator; Heavy-duty repairman; Heavy equipment robotics operator; Kalamazoo balliste regulator or similar type; Kolman belt loader and similar type; Le Tourneau blob compactor or

similar type; Loader operator (Athey, Euclid, Sierra and similar types); Mobark Chipper or similar; Ozzie padder or similar types; P.C. slot saw; Pneumatic concrete placing machine operator (Hackley-Presswell or similar type); Pumpcrete gun operator; Rock Drill or similar types; Rotary drill operator (excluding caisson type); Rubber-tired earth-moving equipment operator (single engine, caterpillar, Euclid, Athey Wagon and similar types with any and all attachments over 25 yds. up to and including 50 cu. yds. struck); Rubber-tired earth-moving equipment operator (multiple engine up to and including 25 yds. struck); Rubber-tired scraper operator (self-loading paddle wheel type-John Deere, 1040 and similar single unit); Self-propelled curb and gutter machine operator; Shuttle buggy; Skiploader operator (crawler and wheel type over 1-1/2 yds. up to and including 6-1/2 yds.); Soil remediation plant operator; Surface heaters and planer operator; Tractor compressor drill combination operator; Tractor operator (any type larger than D-5 - 100 flywheel h.p. and over, or similar-bulldozer, tamper, scraper and push tractor single engine); Tractor operator (boom attachments), Traveling pipe wrapping, cleaning and bending machine operator; Trenching machine operator (over 6 ft. depth capacity, manufacturer's rating); trenching Machine with Road Miner attachment (over 6 ft depth capacity): Ultra high pressure waterjet cutting tool system mechanic; Water pull (compaction) operator

GROUP 9: Heavy Duty Repairman

GROUP 10: Drilling machine operator, Bucket or auger types (Calweld 200 B bucket or similar types-Watson 3000 or 5000 auger or similar types-Texoma 900 auger or similar types-drilling depth of 105' maximum); Dual drum mixer, dynamic compactor LDC350 (or similar types); Monorail locomotive operator (diesel, gas or electric); Motor patrol-blade operator (single engine); Multiple engine tractor operator (Euclid and similar type-except Quad 9 cat.); Rubber-tired earth-moving equipment operator (single engine, over 50 yds. struck); Pneumatic pipe ramming tool and similar types; Prestressed wrapping machine operator; Rubber-tired earth-moving equipment operator (single engine, over 50 yds. struck); Rubber tired earth moving equipment operator (multiple engine, Euclid, caterpillar and similar over 25 yds. and up to 50 yds. struck), Tower crane repairman; Tractor loader operator (crawler and wheel type over 6-1/2 yds.); Woods mixer operator (and similar Pugmill equipment)

GROUP 11: Heavy Duty Repairman - Welder Combination, Welder - Certified.

GROUP 12: Auto grader operator; Automatic slip form operator; Drilling machine operator, bucket or auger types (Calweld, auger 200 CA or similar types - Watson, auger 6000 or similar types - Hughes Super Duty, auger 200 or similar types - drilling depth of 175' maximum); Hoe ram or similar

with compressor; Mass excavator operator less than 750 cu. yards; Mechanical finishing machine operator; Mobile form traveler operator; Motor patrol operator (multi-engine); Pipe mobile machine operator; Rubber-tired earth-moving equipment operator (multiple engine, Euclid, Caterpillar and similar type, over 50 cu. yds. struck); Rubber-tired self-loading scraper operator (paddle-wheel-auger type self-loading - two (2) or more units)

GROUP 13: Rubber-tired earth-moving equipment operator operating equipment with push-pull system (single engine, up to and including 25 yds. struck)

GROUP 14: Canal liner operator; Canal trimmer operator; Remote-control earth-moving equipment operator (operating a second piece of equipment: \$1.00 per hour additional); Wheel excavator operator (over 750 cu. yds.)

GROUP 15: Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (single engine, Caterpillar, Euclid, Athey Wagon and similar types with any and all attachments over 25 yds. and up to and including 50 yds. struck); Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (multiple engine-up to and including 25 yds. struck)

GROUP 16: Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (single engine, over 50 yds. struck); Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (multiple engine, Euclid, Caterpillar and similar, over 25 yds. and up to 50 yds. struck)

GROUP 17: Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (multiple engine, Euclid, Caterpillar and similar, over 50 cu. yds. struck); Tandem tractor operator (operating crawler type tractors in tandem - Quad 9 and similar type)

GROUP 18: Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps and similar types in any combination, excluding compaction units - single engine, up to and including 25 yds. struck)

GROUP 19: Rotex concrete belt operator (or similar types); Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps and similar types in any combination, excluding compaction units - single engine, Caterpillar, Euclid, Athey Wagon and similar types with any and all attachments over 25 yds. and up to and including 50 cu. yds. struck); Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps and similar types in any combination, excluding compaction units - multiple engine, up to and including 25 yds. struck)

GROUP 20: Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps and similar

types in any combination, excluding compaction units - single engine, over 50 yds. struck); Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps, and similar types in any combination, excluding compaction units - multiple engine, Euclid, Caterpillar and similar, over 25 yds. and up to 50 yds. struck)

GROUP 21: Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps and similar types in any combination, excluding compaction units - multiple engine, Euclid, Caterpillar and similar type, over 50 cu. yds. struck)

GROUP 22: Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (single engine, up to and including 25 yds. struck)

GROUP 23: Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (single engine, Caterpillar, Euclid, Athey Wagon and similar types with any and all attachments over 25 yds. and up to and including 50 yds. struck); Rubber-tired earth-moving equipment operator, operating with the tandem push-pull system (multiple engine, up to and including 25 yds. struck)

GROUP 24: Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (single engine, over 50 yds. struck); Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (multiple engine, Euclid, Caterpillar and similar, over 25 yds. and up to 50 yds. struck)

GROUP 25: Concrete pump operator-truck mounted; Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (multiple engine, Euclid, Caterpillar and similar type, over 50 cu. yds. struck)

#### CRANES, PILEDIVING AND HOISTING EQUIPMENT CLASSIFICATIONS

GROUP 1: Engineer oiler; Fork lift operator (includes loed, lull or similar types)

GROUP 2: Truck crane oiler

GROUP 3: A-frame or winch truck operator; Ross carrier operator (jobsite)

GROUP 4: Bridge-type unloader and turntable operator; Helicopter hoist operator

GROUP 5: Hydraulic boom truck; Stinger crane (Austin-Western or similar type); Tugger hoist operator (1 drum)

GROUP 6: Bridge crane operator; Cretor crane operator; Hoist

operator (Chicago boom and similar type); Lift mobile operator; Lift slab machine operator (Vagtborg and similar types); Material hoist and/or manlift operator; Polar gantry crane operator; Self Climbing scaffold (or similar type); Shovel, backhoe, dragline, clamshell operator (over 3/4 yd. and up to 5 cu. yds. mrc); Tugger hoist operator

GROUP 7: Pedestal crane operator; Shovel, backhoe, dragline, clamshell operator (over 5 cu. yds. mrc); Tower crane repair; Tugger hoist operator (3 drum)

GROUP 8: Crane operator (up to and including 25 ton capacity); Crawler transporter operator; Derrick barge operator (up to and including 25 ton capacity); Hoist operator, stiff legs, Guy derrick or similar type (up to and including 25 ton capacity); Shovel, backhoe, dragline, clamshell operator (over 7 cu. yds., M.R.C.)

GROUP 9: Crane operator (over 25 tons and up to and including 50 tons mrc); Derrick barge operator (over 25 tons up to and including 50 tons mrc); Highline cableway operator; Hoist operator, stiff legs, Guy derrick or similar type (over 25 tons up to and including 50 tons mrc); K-crane operator; Polar crane operator; Self erecting tower crane operator maximum lifting capacity ten tons

GROUP 10: Crane operator (over 50 tons and up to and including 100 tons mrc); Derrick barge operator (over 50 tons up to and including 100 tons mrc); Hoist operator, stiff legs, Guy derrick or similar type (over 50 tons up to and including 100 tons mrc), Mobile tower crane operator (over 50 tons, up to and including 100 tons M.R.C.); Tower crane operator and tower gantry

GROUP 11: Crane operator (over 100 tons and up to and including 200 tons mrc); Derrick barge operator (over 100 tons up to and including 200 tons mrc); Hoist operator, stiff legs, Guy derrick or similar type (over 100 tons up to and including 200 tons mrc); Mobile tower crane operator (over 100 tons up to and including 200 tons mrc)

GROUP 12: Crane operator (over 200 tons up to and including 300 tons mrc); Derrick barge operator (over 200 tons up to and including 300 tons mrc); Hoist operator, stiff legs, Guy derrick or similar type (over 200 tons, up to and including 300 tons mrc); Mobile tower crane operator (over 200 tons, up to and including 300 tons mrc)

GROUP 13: Crane operator (over 300 tons); Derrick barge operator (over 300 tons); Helicopter pilot; Hoist operator, stiff legs, Guy derrick or similar type (over 300 tons); Mobile tower crane operator (over 300 tons)

#### TUNNEL CLASSIFICATIONS

GROUP 1: Skiploader (wheel type up to 3/4 yd. without attachment)

GROUP 2: Power-driven jumbo form setter operator

GROUP 3: Dinkey locomotive or motorperson (up to and including 10 tons)

GROUP 4: Bit sharpener; Equipment greaser (grease truck); Slip form pump operator (power-driven hydraulic lifting device for concrete forms); Tugger hoist operator (1 drum); Tunnel locomotive operator (over 10 and up to and including 30 tons)

GROUP 5: Backhoe operator (up to and including 3/4 yd.); Small Ford, Case or similar; Drill doctor; Grouting machine operator; Heading shield operator; Heavy-duty repairperson; Loader operator (Athey, Euclid, Sierra and similar types); Mucking machine operator (1/4 yd., rubber-tired, rail or track type); Pneumatic concrete placing machine operator (Hackley-Presswell or similar type); Pneumatic heading shield (tunnel); Pumpcrete gun operator; Tractor compressor drill combination operator; Tugger hoist operator (2 drum); Tunnel locomotive operator (over 30 tons)

GROUP 6: Heavy Duty Repairman

GROUP 7: Tunnel mole boring machine operator

#### ENGINEERS ZONES

\$1.00 additional per hour for all of IMPERIAL County and the portions of KERN, RIVERSIDE & SAN BERNARDINO Counties as defined below:

That area within the following Boundary: Begin in San Bernardino County, approximately 3 miles NE of the intersection of I-15 and the California State line at that point which is the NW corner of Section 1, T17N,m R14E, San Bernardino Meridian. Continue W in a straight line to that point which is the SW corner of the northwest quarter of Section 6, T27S, R42E, Mt. Diablo Meridian. Continue North to the intersection with the Inyo County Boundary at that point which is the NE corner of the western half of the northern quarter of Section 6, T25S, R42E, MDM. Continue W along the Inyo and San Bernardino County boundary until the intersection with Kern County, as that point which is the SE corner of Section 34, T24S, R40E, MDM. Continue W along the Inyo and Kern County boundary until the intersection with Tulare County, at that point which is the SW corner of the SE quarter of Section 32, T24S, R37E, MDM. Continue W along the Kern and Tulare County boundary, until that point which is the NW corner of T25S, R32E, MDM. Continue S following R32E lines to the NW corner of T31S, R32E, MDM. Continue W to the NW corner of T31S, R31E, MDM. Continue S to the SW corner of T32S, R31E, MDM. Continue W to SW corner of SE quarter of Section 34, T32S, R30E, MDM. Continue S to SW corner of T11N, R17W, SBM. Continue E along south boundary of T11N, SBM to SW corner of T11N, R7W, SBM. Continue S to SW corner of T9N, R7W, SBM. Continue E along south boundary of T9N, SBM to SW corner of T9N, R1E, SBM.

Continue S along west boundary of R1E, SMB to Riverside County line at the SW corner of T1S, R1E, SBM. Continue E along south boundary of T1S, SBM (Riverside County Line) to SW corner of T1S, R10E, SBM. Continue S along west boundary of R10E, SBM to Imperial County line at the SW corner of T8S, R10E, SBM. Continue W along Imperial and Riverside county line to NW corner of T9S, R9E, SBM. Continue S along the boundary between Imperial and San Diego Counties, along the west edge of R9E, SBM to the south boundary of Imperial County/California state line. Follow the California state line west to Arizona state line, then north to Nevada state line, then continuing NW back to start at the point which is the NW corner of Section 1, T17N, R14E, SBM

\$1.00 additional per hour for portions of SAN LUIS OBISPO, KERN, SANTA BARBARA & VENTURA as defined below:

That area within the following Boundary: Begin approximately 5 miles north of the community of Cholame, on the Monterey County and San Luis Obispo County boundary at the NW corner of T25S, R16E, Mt. Diablo Meridian. Continue south along the west side of R16E to the SW corner of T30S, R16E, MDM. Continue E to SW corner of T30S, R17E, MDM. Continue S to SW corner of T31S, R17E, MDM. Continue E to SW corner of T31S, R18E, MDM. Continue S along West side of R18E, MDM as it crosses into San Bernardino Meridian numbering area and becomes R30W. Follow the west side of R30W, SBM to the SW corner of T9N, R30W, SBM. Continue E along the south edge of T9N, SBM to the Santa Barbara County and Ventura County boundary at that point which is the SW corner of Section 34. T9N, R24W, SBM, continue S along the Ventura County line to that point which is the SW corner of the SE quarter of Section 32, T7N, R24W, SBM. Continue E along the south edge of T7N, SBM to the SE corner to T7N, R21W, SBM. Continue N along East side of R21W, SBM to Ventura County and Kern County boundary at the NE corner of T8N, R21W. Continue W along the Ventura County and Kern County boundary to the SE corner of T9N, R21W. Continue North along the East edge of R21W, SBM to the NE corner of T12N, R21W, SBM. Continue West along the north edge of T12N, SBM to the SE corner of T32S, R21E, MDM. [T12N SBM is a thin strip between T11N SBM and T32S MDM]. Continue North along the East side of R21E, MDM to the Kings County and Kern County border at the NE corner of T25S, R21E, MDM, continue West along the Kings County and Kern County Boundary until the intersection of San Luis Obispo County. Continue west along the Kings County and San Luis Obispo County boundary until the intersection with Monterey County. Continue West along the Monterey County and San Luis Obispo County boundary to the beginning point at the NW corner of T25S, R16E, MDM.

\$2.00 additional per hour for INYO and MONO Counties and the Northern portion of SAN BERNARDINO County as defined below:

That area within the following Boundary: Begin at the intersection of the northern boundary of Mono County and the California state line at the point which is the center of Section 17, T10N, R22E, Mt. Diablo Meridian. Continue S then

SE along the entire western boundary of Mono County, until it reaches Inyo County at the point which is the NE corner of the Western half of the NW quarter of Section 2, T8S, R29E, MDM. Continue SSE along the entire western boundary of Inyo County, until the intersection with Kern County at the point which is the SW corner of the SE 1/4 of Section 32, T24S, R37E, MDM. Continue E along the Inyo and Kern County boundary until the intersection with San Bernardino County at that point which is the SE corner of section 34, T24S, R40E, MDM. Continue E along the Inyo and San Bernardino County boundary until the point which is the NE corner of the Western half of the NW quarter of Section 6, T25S, R42E, MDM. Continue S to that point which is the SW corner of the NW quarter of Section 6, T27S, R42E, MDM. Continue E in a straight line to the California and Nevada state border at the point which is the NW corner of Section 1, T17N, R14E, San Bernardino Meridian. Then continue NW along the state line to the starting point, which is the center of Section 18, T10N, R22E, MDM.

LABORER (RESIDENTIAL CONSTRUCTION - See definition below)		
(1) Laborer.....	\$ 30.82	18.80
(2) Cleanup, Landscape, Fencing (Chain Link & Wood).....	\$ 29.53	18.80

RESIDENTIAL DEFINITION: Wood or metal frame construction of single family residences, apartments and condominiums - excluding (a) projects that exceed three stories over a garage level, (b) any utility work such as telephone, gas, water, sewer and other utilities and (c) any fine grading work, utility work or paving work in the future street and public right-of-way; but including all rough grading work at the job site behind the existing right of way

LABORER CLASSIFICATIONS

GROUP 1: Cleaning and handling of panel forms; Concrete Screeding for Rought Strike-off; Concrete, water curing; Demolition laborer; Flagman; Gas, oil and/or water pipeline laborer; General Laborer; General clean-up laborer; Landscape laborer; Jetting laborer; Temporary water and air lines laborer; Material hoseman (walls, slabs, floors and decks); Plugging, filling of Shee-bolt holes; Dry packing of concrete; Railroad maintenance, Repair Trackman and road beds, Streetcar and railroad construction trac laborers; Slip form raisers; Slurry seal crews (mixer operator, applicator operator, squeegee man, Shuttle man, top man), filling of cracks by any method on any surface; Tarman and mortar man; Tool crib or tool house laborer; Window cleaner; Wire Mesh puling-all concrete pouring operations

GROUP 2: Asphalt Shoveler; Cement Dumper (on 1 yard or larger

mixer and handling bulk cement); Cesspool digger and installer; Chucktender; Chute man, pouring concrete, the handling of the chute from ready mix trucks, such as walls, slabs, decks, floors, foundations, footings, curbs, gutters and sidewalks; Concrete curer-impervious membrane and form oiler; Cutting torch operator (demolition); Guinea chaser; Headboard man-asphalt; Laborer, packing rod steel and pans; membrane vapor barrier installer; Power broom sweepers (small); Riiiprap, stonepaver, placing stone or wet sacked concrete; Roto scraper and tiller; Tank sealer and cleaner; Tree climber, faller, chain saw operator, Pittsburgh Chipper and similar type brush shredders; Underground laborers, including caisson bellower

GROUP 3: Buggymobile; Concrete cutting torch; Concrete cutting torch; Concrete pile cutter; Driller, jackhammer, 2 1/2 feet drill steel or longer; Dri Pak-it machine; High sealer (including drilling of same); Hydro seeder and similar type; Impact wrench, multi-plate; Kettleman, potmen and man applying asphalt, lay-kold, creosote, line caustic and similar type materials (applying means applying, dipping, brushing or handling of such materials for pipe wrapping and waterproofing); Operators of pneumatic, gas, electric tools, vibrating machines, pavement breakers, air blasting, come-along, and similar mechanical tools not separately classified herein; Pipelayers back up man coating, grouting, making of joints, sealing, caulking, diapering and including rubber gasket joints, pointing and any and all other services; Rotary Scarifier or multiple head concrete chipping scarifier; Steel header board man and guideline setter; Tampers, Barko, Wacker and similar type; Trenching machine, handpropelled

GROUP 4: Asphalt raker, luterman, ironer, asphalt dumpman and asphalt spreader boxes (all types); Concrete core cutter (walls, floors or ceilings), Grinder or sander; Concrete saw man; cutting walls or flat work, scoring old or new concrete; Cribber, shorer, lagging, sheeting and trench bracing, hand-guided lagging hammer; Laser beam in connection with laborer's work; Oversize concrete vibrator operator 70 pounds and over; Pipelayer performing all services in the laying, installation and all forms of connection of pipe from the point of receiving pipe in the ditch until completion of operation, including any and all forms of tubular material, whether pipe, metallic or non-metallic, conduit, and any other stationary type of tubular device used for the conveying of any substance or element, whether water, sewage, solid, gas, air or other product whatsoever and without regard to the nature of material from which the tubular material is fabricated; No joint pipe and stripping of same; Prefabricated manhole installer; Sandblaster (nozzleman), Porta shot-blast, water blasting

GROUP 5: Blasters Powderman-All work of loading holes, placing and blasting of all powder and explosives of whatever type, regardless of method used for such loading and placing; Driller-all power drills, excluding jackhammer, whether core, diamond, wagon, track, multiple

unit, and any and all other types of mechanical drills without regard to the form of motive power.

LABORER CLASSIFICATIONS

GROUP 1: Laborer: General or Construction Laborer, Landscape Laborer. Asphalt Rubber Material Loader. Boring Machine Tender (outside), Carpenter Laborer (cleaning, handling, oiling & blowing of panel forms and lumber), Concrete Laborer, Concrete Screeding for rough strike-off, Concrete water curing. Concrete Curb & Gutter laborer, Certified Confined Space Laborer, Demolition laborer & Cleaning of Brick and lumber, Expansion Joint Caulking; Environmental Remediation, Monitoring Well, Toxic waste and Geotechnical Drill tender, Fine Grader, Fire Watcher, Limbers, Brush Loader, Pilers and Debris Handlers. flagman. Gas Oil and Water Pipeline Laborer. Material Hoseman (slabs, walls, floors, decks); Plugging, filling of shee bolt holes; Dry packing of concrete and patching; Post Holer Digger (manual); Railroad maintenance, repair trackman, road beds; Rigging & signaling; Scaler, Slip-Form Raisers, Filling cracks on any surface, tool Crib or Tool House Laborer, Traffic control (signs, barriers, barricades, delineator, cones etc.), Window Cleaner

GROUP 2: Asphalt abatement; Buggymobile; Cement dumper (on 1 yd. or larger mixers and handling bulk cement); Concrete curer, impervious membrane and form oiler; Chute man, pouring concrete; Concrete cutting torch; Concrete pile cutter; driller/Jackhammer, with drill steel 2 1/'2 feet or longer; Dry pak-it machine; Fence erector; Pipeline wrapper, gas, oil, water, pot tender & form man; Grout man; Installation of all asphalt overlay fabric and materials used for reinforcing asphalt; Irrigation laborer; Kettleman-Potman hot mop, includes applying asphalt, lay-klold, creosote, lime caustic and similar tyhpes of materials (dipping, brushing, handling) and waterproofing; Membrane vapor barrier installer; Pipelayer backup man (coating, grouting, making of joints, sealing caulkiing,

diapering including rubber basket joints, pointing); Rotary scarifier, multiple head concrete chipper; Rock slinger; Roto scraper & tiller; Sandblaster pot tender; Septic tank digger/installer; Tamper/wacker operator; Tank scaler & cleaner; Tar man & mortar man; Tree climber/faller, chainb saw operator, Pittsburgh chipper & similar type brush shredders.

GROUP 3: Asphalt, installation of all frabrics; Buggy Mobile Man, Bushing hammer; Compactor (all types), Concrete Curer - Impervious membrane, Form Oiler, Concrete Cutting Torch, Concrete Pile Cutter, Driller/Jackhammer with drill steel 2 1/2 ft or longer, Dry Pak-it machine, Fence erector including manual post hole digging, Gas oil or water Pipeline Wrapper - 6 ft pipe and over, Guradrail erector, Hydro seeder, Impact Wrench man (multi plate), kettleman-Potman Hot Mop includes applying Asphalt, Lay-Kold, Creosote, lime caustic and similar types of materials (dipping, brushing or handling) and waterproofing. Laser Beam in connection with Laborer work. High Scaler, Operators of Pneumatic Gas or Electric Tools, Vibrating Machines, Pavement Breakers, Air Blasting, Come-Alongs and similar mechanical tools, Remote-Controlled Robotic Tools in connection with Laborers work. Pipelayer Backup Man (Coating, grouting, m makeing of joints, sealing, caulking, diapering including rubber gasket joints, pointing and other services). Power Post Hole Digger, Rotary Scarifier (multiple head concrete chipper scarifier), Rock Slinger, Shot Blast equipment (8 to 48 inches), Steel Headerboard Man and Guideline Setter, Tamper/Wacker operator and similar types, Trenching Machine hand propelled.

GROUP 4: Any worker exposed to raw sewage. Asphalt Raker, Luteman, Asphalt Dumpman, Asphalt Spreader Boxes, Concrete Core Cutter, Concrete Saw Man, Cribber, Shorer, Head Rock Slinger. Installation of subsurface instrumentation, monitoring wells or points, remediation system installer; Laborer, asphalt-rubber distributor bootman; Oversize concrete vibrator operators, 70 pounds or over. Pipelayer, Prfefabricated Manhole Installer, Sandblast Nozzleman (Water Balsting-Porta Shot Blast), Traffic Lane Closure.

GROUP 5: Blasters Powderman-All work of loading holes, placing and blasting of all powder and explosives of whatever type, regardless of method used for such loading and placing; Horizontal directional driller, Boring system, Electronic traking, Driller: all power drills excluding jackhammer, whether core, diamond, wagon, track, multiple unit, and all other types of mechanical drills without regard to form of motive power. Environmental remediation, Monitoring well, Toxic waste and Geotechnical driller, Toxic waste removal. Welding in connection with Laborer's work.

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

=====  
Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at [www.dol.gov/whd/govcontracts](http://www.dol.gov/whd/govcontracts).

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

-----  
The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the

most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

#### Survey Rate Identifiers

Classifications listed under the "SU" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

#### Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

---

#### WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- \* an existing published wage determination
- \* a survey underlying a wage determination
- \* a Wage and Hour Division letter setting forth a position on a wage determination matter
- \* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations  
Wage and Hour Division  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

=====

"END OF GENERAL DECISION"

**10.2. CWSRF DAVIS BACON PROVISIONS.** Contractor shall include the following language in this section in all of its subcontracts for the Project. Contractor and all subcontractors working on the Project shall comply with any provisions herein applicable to contractors and subcontractors, respectively:

(1) Minimum wages.

- (i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in § 5.5(a)(4).

Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph (a)(1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

Sub recipients may obtain wage determinations from the U.S. Department of Labor's web site, [www.dol.gov](http://www.dol.gov).

- (ii) (A) The sub recipient(s), on behalf of EPA, shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The State award official shall approve a request for an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

- (1) The work to be performed by the classification requested is not performed by a classification in the wage determination; and
- (2) The classification is utilized in the area by the construction industry; and
- (3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the sub recipient(s) agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), documentation of the action taken and the request, including the local wage determination shall be sent by the sub recipient (s) to the State award official. The State award official will transmit the request, to the Administrator of the Wage and Hour Division, Employment Standards

Administration, U.S. Department of Labor, Washington, DC 20210 and to the EPA DB Regional Coordinator concurrently. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification request within 30 days of receipt and so advise the State award official or will notify the State award official within the 30- day period that additional time is necessary.

(C) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the sub recipient(s) do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the award official shall refer the request and the local wage determination, including the views of all interested parties and the recommendation of the State award official, to the Administrator for determination. The request shall be sent to the EPA DB Regional Coordinator concurrently. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt of the request and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(D) The wage rate (including fringe benefits where appropriate) determined pursuant to paragraphs (a)(1)(ii)(B) or (C) of this section, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

- (iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

- (iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.
  
- (2) Withholding. The sub recipient(s), shall upon written request of the EPA Award Official or an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the (Agency) may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.
  
- (3) Payrolls and basic records.
  - (i) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

- (ii) (A)The contractor shall submit weekly, for each week in which any contract work is performed, a copy of all payrolls to the sub recipient, that is, the entity that receives the sub-grant or loan from the State capitalization grant recipient. Such documentation shall be available on request of the State recipient or EPA. As to each payroll copy received, the sub recipient shall provide written confirmation in a form satisfactory to the State indicating whether or not the project is in compliance with the requirements of 29 CFR 5.5(a)(1) based on the most recent payroll copies for the specified week. The payrolls shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on the weekly payrolls. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at <https://www.dol.gov/whd/forms/index.htm> or its successor site.

The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker and shall provide them upon request to the sub recipient(s) for transmission to the State or EPA if requested by EPA, the State, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the sub recipient(s).

(B)Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

1. That the payroll for the payroll period contains the information required to be provided under § 5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under § 5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;
2. That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;
3. That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of

work performed, as specified in the applicable wage determination incorporated into the contract.

(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph (a)(3)(ii)(B) of this section.

(D) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under paragraph (a)(3)(i) of this section available for inspection, copying, or transcription by authorized representatives of the State, EPA or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency or State may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

(4) Apprentices and trainees

(i) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's

hourly rate) specified in the contractor's or sub contractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

- (ii) Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.
- (iii) Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal

employment opportunity requirements of Executive Order 11246, as amended and 29 CFR part 30.

- (5) Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.
- (6) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the EPA determines may be appropriate, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.
- (7) Contract termination; debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.
- (8) Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.
- (9) Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and sub recipient(s), State, EPA, the U.S. Department of Labor, or the employees or their representatives.
- (10) Certification of eligibility.
  - (i) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).
  - (ii) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).
  - (iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001

## **5. Contract Provision for Contracts in Excess of \$100,000.**

- (a) Contract Work Hours and Safety Standards Act. The sub recipient shall insert the following clauses set forth in paragraphs (a)(1), (2), (3), and (4) of this section in full in any contract in an amount in excess of \$100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These clauses shall be inserted in addition to the

clauses required by Item 3, above or 29 CFR 4.6. As used in this paragraph, the terms laborers and mechanics include watchmen and guards.

- (i) Overtime requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.
  - (ii) Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in paragraph (a)(1) of this section the contractor and any subcontractor responsible therefore shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (a)(1) of this section, in the sum of \$25 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (a)(1) of this section.
  - (iii) Withholding for unpaid wages and liquidated damages. The sub recipient, upon written request of the EPA Award Official or an authorized representative of the Department of Labor, shall withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (b)(2) of this section.
  - (iv) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (a)(1) through (4) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (a)(1) through (4) of this section.
- (b) In addition to the clauses contained in Item 3, above, in any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other statutes cited in 29 CFR 5.1, the Sub recipient shall insert a clause requiring that the contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number,

correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid.

Further, the Sub recipient shall insert in any such contract a clause providing that the records to be maintained under this paragraph shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the (write the name of agency) and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

## **6. Compliance Verification**

(a) The sub recipient shall periodically interview a sufficient number of employees entitled to DB prevailing wages (covered employees) to verify that contractors or subcontractors are paying the appropriate wage rates. As provided in 29 CFR 5.6(a)(3), all interviews must be conducted in confidence. The sub recipient must use Standard Form 1445 (SF 1445) or equivalent documentation to memorialize the interviews. Copies of the SF 1445 are available from EPA on request.

(b) The sub recipient shall establish and follow an interview schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. Sub recipients must conduct more frequent interviews if the initial interviews or other information indicated that there is a risk that the contractor or subcontractor is not complying with DB.

Sub recipients shall immediately conduct interviews in response to an alleged violation of the prevailing wage requirements. All interviews shall be conducted in confidence.

(c) The sub recipient shall periodically conduct spot checks of a representative sample of weekly payroll data to verify that contractors or subcontractors are paying the appropriate wage rates. The sub recipient shall establish and follow a spot check schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. At a minimum, if practicable, the sub recipient should spot check payroll data within two weeks of each contractor or subcontractor's submission of its initial payroll data and two weeks prior to the completion date the contract or subcontract. Sub recipients must conduct more frequent spot checks if the initial spot check or other information indicates that there is a risk that the contractor or subcontractor is not complying with DB. In addition, during the examinations the sub recipient shall verify evidence of fringe benefit plans and payments there under by contractors and subcontractors who claim credit for fringe benefit contributions.

(d) The sub recipient shall periodically review contractors and subcontractors use of apprentices and trainees to verify registration and certification with respect to apprenticeship and training programs approved by either the U.S Department of Labor or a state, as appropriate, and that contractors and subcontractors are not using disproportionate numbers of, laborers, trainees and apprentices. These reviews shall be conducted in accordance with the schedules for spot checks and interviews described in Item 5(b) and (c) above.

(e) Sub recipients must immediately report potential violations of the DB prevailing wage requirements to the EPA DB contact listed above and to the appropriate DOL Wage and Hour District Office listed at <http://www.dol.gov/whd/america2.htm>.

## 11. AGENCY SPECIFIC PROVISIONS:

Note: Failure to comply with these specifications e.g., taking the specified steps prior to Bid opening and submitting the forms with the Bid, will lead to the Bid being declared **non-responsive** and, therefore, shall be rejected.

### 11.1. EPA Requirements:

1. Federal Disadvantaged Business Enterprise (DBE) regulations apply to this project. (Reference 40 Code of Federal Regulations Part 33 - Participation by Disadvantaged Business Enterprises in U.S. Environmental Protection Agency Programs).
2. The responsive Bid shall conform to GFE to increase DBE awareness of procurement opportunities through race and gender-neutral efforts. Race and gender-neutral efforts are ones which increase awareness of contracting opportunities in general, including outreach, recruitment and technical assistance.
3. Bidder agrees that it will cooperate with and assist the City in fulfilling the DBE Good Faith Effort Requirement achieving "fair share objectives" and will exercise GFE to achieve such minimum participation of small, minority and women owned businesses. In particular, in submitting a bid, the Bidder shall, in the selection of Subcontractors, and Suppliers for the procurement of equipment, supplies, construction, and services related to the project, at a minimum, undertake the affirmative GFE steps.
4. In accordance with EPA's Program for Utilization of Small, Minority Disadvantaged and Women Business Enterprises in procurement under Federal assistance programs, the Contractor agrees to the applicable "fair share objectives" as specified in **Attachment D**.
5. The provisions in the Contract Documents have been incorporated to prevent unfair practices that adversely affect DBEs.
6. If a DBE Subcontractor fails to complete the Work under the subcontract for any reason, the Contractor shall employ the 6 GFE if soliciting a replacement Subcontractor. The Contractor shall employ the 6 GFE described below even if the Contractor has achieved its fair share objectives.
7. Good Faith Efforts:
  - a. The Contractor shall demonstrate that efforts were made to attract DBEs on this contract. The "Good Faith" effort requires the Contractor and any Subcontractors to take the steps listed in these specifications to assure that DBEs are used whenever possible as sources of supplies, construction, equipment, or services even if the Contractor has achieved its fair share objectives.
  - b. If the Contractor awards subcontracts, it shall require the Subcontractors to take the steps in these specifications.
  - c. For the EPA defined GFE, see the steps below:
    - i. Ensure DBEs are made aware of contracting opportunities to the fullest extent practicable through outreach and recruitment activities. For

Indian Tribal, State and Local and Government recipients, this will include placing DBEs on solicitation lists and soliciting them whenever they are potential sources.

- ii. Make information on forthcoming opportunities available to DBEs and arrange time frames for contracts and establish delivery schedules, where the requirements permit, in a way that encourages and facilitates participation by DBEs in the competitive process. This includes posting solicitations for bids or proposals for a minimum of 30 Calendar Days (refer to 33 CFR 33.301) before the bid or proposal closing date.
- iii. Consider in the contracting process whether firms competing for large contracts could subcontract with DBEs. For Indian Tribal, State and local Government recipients, this will include dividing total requirements when economically feasible into smaller tasks or quantities to permit maximum participation by DBEs in the competitive process. Include with the GFE documentation a completed copy of the form AA61, "List of Work Made Available".
- iv. Encourage contracting with a consortium of DBEs when a contract is too large for one of these firms to handle individually.
- v. Use the services and assistance of the U.S. Small Business Administration (SBA) and the Minority Business Development Agency (MBDA) of the Department of Commerce (DOC). See "DBE Potential Resources Centers" Section in a later part these specifications.
- vi. If the Contractor awards Subcontracts, the Contractor shall take the steps in the paragraphs above.

## **11.2. California State Revolving Fund (CASRF) Requirements:**

**11.2.1.** Refer to Subsection 11.1, "EPA Requirements" above and the following:

**11.2.2.** The Bidder shall take affirmative steps prior to Bid opening to assure that MBE's and WBE's are used whenever possible as sources of supplies, construction and services.

**11.2.3.** The affirmative steps are defined for contracts funded by the California State Water Resources Control Board as follows:

1. Utilization of US Small Business Administration and Minority Business Development Agency (MBDA) resources is required at no cost. These agencies offer several services, including Internet access to databases of DBEs.
2. For additional assistance, the Contractor can telephone the local offices of both agencies in their area (SBA Minority Enterprise Development Offices and DOC MBDA Regional Centers). The Internet web sites also include names, addresses, and phone or fax numbers of local SBA and MBDA centers. There are contact phone numbers listed in Step 3 that will assist you in reaching the 2 offices if the Internet is unavailable. Do not write to these sources.
3. The Contractor shall provide documentation that the local SBA/MBDA offices or web sites were notified of the contracting bid opportunity at

least 30 Calendar Days prior to Bid opening and solicitation to DBE Subcontractors at least 15 Calendar Days prior to Bid opening. Documentation shall not only include the efforts to contact the information sources and list the Contract opportunity, but also the solicitation and response to the bid request.

4. Include qualified DBEs on solicitation lists and record the information. Solicitation shall be as broad as possible.
5. If DBE sources are not located, explain why and describe the efforts made.
6. The Contractor shall send invitations to at least 10 (or all, if less than 10) DBE vendors for each item of the Work referred by sources contacted. The invitations shall adequately specify the items for which bids are requested. The record of GFE shall indicate a real desire for a positive response, such as a certified mail receipt or a documented telephone conversation.
7. A regular letter or an unanswered telephone call is not an adequate "good faith" effort. A list of all Subcontractors, including the bidders not selected and non DBE Subcontractors, and bid amount for each item of the Work shall be submitted on Form AA62. If a low bid was not accepted, an explanation shall be provided.

**11.2.4.** See "DBE Potential Resources Centers" Section in a later part these specifications.

**11.2.5. Annual DBE Utilization Reporting:**

The Contractor shall report to the City on an annual basis, their utilization of Minority Business Enterprise and Women's Business Enterprise Subcontractors and Suppliers using California State Revolving Funds (CASRF) Form UR-334.

**12. DBE POTENTIAL RESOURCES CENTERS:**

- 12.1.** Utilization of US Small Business Administration and Minority Business Development Agency (MBDA) resources is required at no cost. These agencies offer several services, including Internet access to databases of DBEs.
- 12.2.** For additional assistance, the recipient or contractor can telephone the local offices of both agencies in their area (SBA Minority Enterprise Development Offices and DOC MBDA Regional Centers). The Internet web sites also include names, addresses, and phone or fax numbers of local SBA and MBDA centers. Do not write to these sources
- 12.3.** The Contractor shall provide documentation that the local SBA/MBDA offices or web sites were notified of the contracting bid opportunity at least 30 Calendar Days prior to Bid opening and solicitation to DBE subcontractors at least 15 Calendar Days prior to Bid opening. Documentation shall not only include the efforts to contact the information sources and list the Contract opportunity, but also the solicitation and response to the bid request.
- 12.4.** Include qualified DBEs on solicitation lists and record the information on Form AA63. Solicitation shall be as broad as possible.
- 12.5.** If DBE sources are not located, explain why and describe the efforts made.
- 12.6.** The Contractor shall send invitations to at least 10 (or all, if less than 10) DBE vendors for each item of work referred by sources contacted. The invitations shall adequately specify the items for which bids are requested. The record of "good faith" efforts shall indicate a

real desire for a positive response, such as a certified mail receipt or a documented telephone conversation.

**12.7.** A regular letter or an unanswered telephone call is not an adequate “good faith” effort. A list of all sub-bidders, including the bidders not selected and non-DBE Subcontractors, and bid amount for each item of the Work shall be submitted on Form AA62. If a low bid was not accepted, an explanation shall be provided.

**12.8.** Federal Agencies (must be contacted and solicitations posted on their websites):

Notes:

1. The Contractor shall use the SBA's Dynamic Business Search database to search for potential subcontractors, suppliers, and/or manufacturers. Bidder must provide a copy of all search records for items of work made available with GFE documentation.
2. Contractor shall use SUB-Net to post subcontracting opportunities. Contractor shall post Subcontractor opportunities at least 15 Working Days prior to bid opening. Small businesses can review this web site to identify opportunities in their areas of expertise. The web site is designed primarily as a place for large businesses to post solicitations and notices. Bidder **must** provide copy of the Display Solicitation Record identifying the date solicitation notice was posted with GFE documentation.
3. Contractor may use MBDA web portal to post subcontracting opportunities. If utilized, the Contractor shall post subcontractor opportunities at least 30 Calendar Days prior to Bid opening. Small businesses can review this web site to identify opportunities in their areas of expertise. The web site is designed primarily as a place for large businesses to post solicitations and notices. Provide copy of the Offer Overview with the GFE documentation.
4. Based on the federal DBE program, CALTRANS maintains a database and provides directories of minority and woman-owned firms. Bidder must provide a copy of all search records for items of work made available with GFE documentation.
5. CPUC maintains a database of DBE-owned business enterprises and serves to inform the public. Bidder **must** provide a copy of all search records for items of work made available with GFE documentation.

**13. GOOD FAITH EFFORT DOCUMENTATION SUBMITTALS:**

- 13.1.** The affirmative GFE steps documentation shall be submitted **within 4 Working Days after the Bid Opening**. If this documentation is not submitted when due, the City will declare the Bid **non-responsive** and reject it.
- 13.2.** The required documentation shall be submitted and logged in at the following address:

CITY OF SAN DIEGO  
ENGINEERING & CAPITAL PROJECTS DEPARTMENT, CONTRACTS DIVISION  
525 B STREET, SUITE 750  
SAN DIEGO, CA 92101

SUBJECT: AFFIRMATIVE GOOD FAITH EFFORT DOCUMENTATION

BID NO. **K-21-1867-DBB-3**

- 13.3.** The Contractor shall maintain the records documenting compliance with requirements including documentation of its GFE and data relied upon in formulating its fair share objectives.

**14. FORMS:**

- 14.1.** The Contractor shall demonstrate that efforts were made to attract DBEs on this contract. The Contractor and Subcontractors shall take the steps listed in these specifications to assure that DBEs are used whenever possible as sources of supplies, construction, equipment, or services. In addition to the specified GFE documentation, the Bidder shall submit the following forms.
  - 14.1.1.** The Contractor shall demonstrate that efforts were made to attract DBEs on this contract. The Contractor and Subcontractors shall take the steps listed in these specifications to assure that DBEs are used whenever possible as sources of

supplies, construction, equipment, or services. In addition to the specified GFE documentation, the Bidder shall submit the following forms.

**14.1.1.1** The following forms shall be submitted **with the Bid submittal**. Failure to include any of the forms shall cause the Bid to be deemed **non-responsive**.

1. Form 4500-3: DBE Subcontractor Performance Form
2. Form 4500-4: DBE Subcontractor Utilization Form

**14.1.1.2** The following forms shall be completed and submitted within **4 Working Days after the Bid opening by 5 PM**. Failure to include any of the forms shall cause the Bid to be deemed **non-responsive**.

1. Form AA61: List of Work Made Available
2. Form AA62: Summary of Bids Received
3. Form AA63: Good Faith Effort List of Subcontractors Solicited

**14.1.2.** The following additional forms shall be submitted annually in accordance with Section 11 "AGENCY SPECIFIC PROVISIONS".

1. Form UR-334: California State Revolving Funds (CASRF)

**14.1.3.** Bidder is to provide the following form to all DBE subcontractors participating on this contract. Submittal of form is dependent on DBE subcontractor and is to be forwarded to the DBE coordinator at any time during the project period of performance.

1. Form 4500-2: DBE Subcontractor Participation Form.

**FUNDING AGENCY PROVISIONS**  
**FORMS**

**Disadvantaged Business Enterprise (DBE) Program  
DBE Subcontractor Performance Form**

This form is intended to capture the DBE<sup>1</sup> subcontractor's<sup>2</sup> description of work to be performed and the price of the work submitted to the prime contractor. A Financial Assistance Agreement Recipient must require its prime contractor to have its DBE subcontractors complete this form and include all completed forms in the prime contractor's bid or proposal package.

Subcontractor Name		Project Name	
Bid / Proposal No.	Assistance Agreement ID No. (if known)	Point of Contact	
Address

- Box 1** Grant or Financing Agreement Number.
- Box 2** Annual reporting period.
- Box 3** Enter the dates between which you made procurements under this financing agreement or grant.
- Box 4** Enter the total amount of payments paid to the contractor or sub-contractors during this reporting period.
- Box 5** Enter Recipient's Name and Address.
- Box 6** Enter Recipient's Contact Name and Phone Number.
- Box 7** Enter details for the **DBE purchases only** and be sure to limit them to the current period. 1) Use either an "R" or a "C" to represent "Recipient" or "Contractor." 2) Enter a dollar total for DBE and total the two columns at the bottom of the section. 3) Provide the payment date. 4) Enter a product type choice from those at the bottom of the page. 5) List the vendor name and address in the right-hand column
- Box 8** Initial here if no DBE contractors or sub-contractors were paid during this reporting period.
- Box 9** Initial this box only if all purchases under this financing agreement or grant have been completed during this reporting period or a previous period. If you initial this box, we will no longer send you a survey.
- Box 10** This box is for explanatory information or questions.
- Box 11** Provide an authorized representative signature.
- Box 12** Enter the date form completed.

**Disadvantaged Business Enterprise (DBE) Program  
DBE Subcontractor Participation Form**

A Financial Assistance Agreement Recipient must require its prime contractors to provide this form to its DBE subcontractors. This form gives a DBE<sup>1</sup> subcontractor<sup>2</sup> the opportunity to describe work received and/or report any concerns regarding the funded project (e.g., in areas such as termination by prime contractor, late payments, etc.). The DBE subcontractor can, as an option, complete and submit this form to the DBE Coordinator at any time during the project period of performance.

**ATTACHMENT E**  
**SUPPLEMENTARY SPECIAL PROVISIONS**

## **SUPPLEMENTARY SPECIAL PROVISIONS**

The following Supplementary Special Provisions (SSP) modifies the following documents:

1. The **2018 Edition** of the Standard Specifications for Public Works Construction (The "GREENBOOK").
2. The **2018 Edition** of the City of San Diego Standard Specifications for Public Works Construction (The "WHITEBOOK"), including the following:
  - a) General Provisions (A) for all Construction Contracts.

---

### **PART 0 – EQUAL OPPORTUNITY CONTRACTING PROGRAM (EOCP)**

#### **SECTION A – GENERAL REQUIREMENTS**

**0-12 CONTRACT RECORDS AND REPORTS.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. You shall maintain records of all subcontracts and invoices from your Subcontractors and Suppliers for work on this project. Records shall show name, telephone number including area code, and business address of each Subcontractor, Supplier, and joint venture partner, and the total amount actually paid to each firm. Project relevant records, regardless of tier, may be periodically reviewed by the City.
2. You shall retain all records, books, papers, and documents pertinent to the Contract for a period of not less than 5 years after Notice of Completion and allow access to said records by the City's authorized representatives.
3. You shall submit the following reports using the City's web-based contract compliance (Prism® portal):
  - a) **Monthly Payment.** You shall submit Monthly Payment Reporting by the 10<sup>th</sup> day of the subsequent month. Incomplete and/or delinquent reporting may cause payment delays, non-payment of invoices, or both.
4. The records maintained under item 1, described above, shall be consolidated into a Final Summary Report, certified as correct by an authorized representative of the Contractor. The Final Summary Report shall include all subcontracting activities and be sent to the EOCP Program Manager prior to Acceptance. Failure to comply may result in assessment of liquidated damages or withholding of retention. The City will review and verify 100% of subcontract participation reported in the Final Summary Report prior to approval and release of final retention to you. In the event your Subcontractors are owed money for completed Work, the City may authorize payment to subcontractor via a joint check from the withheld retention.

## SECTION 1 – GENERAL, TERMS, DEFINITIONS, ABBREVIATIONS, UNITS OF MEASURE, AND SYMBOLS

**1-2 TERMS AND DEFINITIONS.** To the "WHITEBOOK", items 43, 56, 69, and 102, DELETE in their entirety and SUBSTITUTE with the following:

43. **Field Order** -A Field Order is a written agreement by the Engineer to compensate you for Work items in accordance with 2-8, "EXTRA WORK" or 2-9, "CHANGED CONDITIONS". A Field Order does not change the Contract Price, Contract Time, or the scope intent of the Contract. The unused portion of the Field Order shall revert to the City upon Acceptance.
56. **Notice of Completion (NOC)** - A document recorded with the County of San Diego to signify that the Contract Work has been completed and accepted by the City.
69. **Punchlist** - A list of items of Work or corrections generated after a Walk-through that is conducted when you consider that the Work and Services are complete, and as verified by the Owner. The Punchlist may be completed in phases if defined in the Contract.
102. **Walk-through**- An inspection the City uses to verify the completion of the Project or phase of the Project and to generate a Punchlist prior to Acceptance.

To the "WHITEBOOK", item 54, "Normal Working Hours", ADD the following:

The **Normal Working Hours** are **6:00 AM to 5:00 PM.**

To the "WHITEBOOK", ADD the following:

108. **Acceptance** – When all of the Contract Work, including all Punchlist items, is deemed officially complete by the City Asset Owning Department or Deputy City Engineer.
109. **Occupancy** – When the Owner deems a building is ready for use, the Owner will issue a certificate of Occupancy in writing.
110. **Beneficial Use** - The time at which the Work for a specific area or unit process has progressed to the point where, in the opinion of Owner and Construction Manager, the Work for the specific area or unit process is sufficiently complete, in accordance with the Contract Documents, so that the specific area or unit process can be utilized for the purposes for which it is intended.
111. **Construction Manager** - The authorized representative of the Owner, also referred to as the Owner's Representative, who may be assigned to the site or any part thereof. All communication from the Contractor shall be through the Construction Manager. The responsibilities, authority, and limitations of the Construction Manager shall be as shown in the Contract Documents.
112. **Design Engineer** - The person, firm(s) or corporation(s) named as such below:  
CH2M HILL Engineers, Inc.- Prime Design Engineer  
Lopez Engineering, Inc.  
Beyaz and Patel, Inc.  
O'Day Consultants, Inc.  
PW Engineering, Inc.

The authorized Engineer of Record hired by the Owner. The responsibilities, authority, and limitations of the Construction Manager shall be as shown in the Contract Documents. This Design Engineer is also the individual(s) or entity(ies) named as such in the Agreement and established as the Engineer of Record.

113. **Final Completion** - Once Substantial Completion has been achieved, the following items are to be completed prior to the Final Completion by the Contractor:

- a) The Contractor shall complete punch list fix-up as approved by the Construction Manager prior to being provided with Final Completion.
- b) All Work required under Section 01 77 00, Closeout Procedures shall have been completed.

Following Final Completion, the Owner shall provide acceptance of the facilities and take over operation of the facilities.

114. **Intermediate Substantial Completion** – The time at which the Project’s operating facilities or systems are sufficiently complete to provide the Owner with uninterrupted operations and maintenance of the overall facility as required to perform an integrated startup with other facilities within the Program. These facilities include the Morena Pump Station and Conveyance, North City Water Reclamation Plant Expansion, North City Pure Water Facility, North City Pure Water Pump Station, and North City Pure Water Pipeline and Dechlorination Facility. The CONTRACTOR shall support all activities within the Integration Period as described in Section 01 91 14 Testing, Integration, and Startup.

115. **Substantial Completion** –

- a) The time at which the Work (or a specified part thereof) has progressed to the point where, in the opinion of Owner and Construction Manager, the Work (or a specified part thereof) is sufficiently complete, in accordance with the Contract Documents, so that the Work (or a specified part thereof) can be utilized for the purposes for which it is intended. The terms “substantially complete” and “substantially completed”, as applied to all or part of the Work, shall refer to Substantial Completion thereof.
- b) The time at which the Project’s operating facilities or systems is sufficient to provide Owner the full time, uninterrupted, and continuous beneficial operation of the Work; and when all required functional, performance, and acceptance or startup testing, and commissioning has been successfully demonstrated for all components, devices, equipment, and instrumentation and control to the satisfaction of the Owner and Construction Manager in accordance with the requirements of the Specifications.
- c) For Substantial Completion, the Contractor shall have completed all interior finish work, electrical, instrumentation and control, mechanical, HVAC, lighting, plumbing, civil, and final grading and paving, and also when, in the opinion of the Construction Manager and the Owner, the plant is essentially complete and ready for operation.

### 1-7.1.3

**Requests for Information (RFI).** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. Should You discover a conflict, omission, errors in the Contract Documents, differences with existing field conditions, or have any questions concerning interpretation or clarification of Contract Documents, or when you propose deviations to the standards or design, you shall submit a Request for Information (RFI) to the City regarding your question or clarification within **1 Working Day**.
2. Your RFI shall meet the following requirements:
  - a) All RFIs, whether by You or your Subcontractor or supplier at any tier, shall be submitted by You to the City.
  - b) RFIs shall be numbered sequentially.
  - c) You shall clearly and concisely set forth the single issue for which interpretation or clarification is sought, indicate Specification Section numbers, Contract Drawing numbers, and details, or other items involved, and state why a response is required from the City.
  - d) RFIs shall be submitted within **1 Working Day** in order that they may be adequately researched and answered before the response affects any critical activity of the Work.
  - e) Should You believe that a response to an RFI causes a change to the requirements of the Contract, you shall, before proceeding, give written notice to the City, indicating that You believe that City response to the RFI to be a Change Order. Failure to give such written notice within **5 Working Days** of receipt of the City's response to the RFI shall waive Your right to seek additional time or cost.
3. The City will respond to RFIs within **5 Working Days** unless the City notifies You in writing that a response will take longer. The **5 Working Days** shall begin when the RFI is received and dated by the City. Responses from the City will not change any requirement of the Contract unless so noted by the City in the response to the RFI. The City will not issue a Change Order for Extra Work or additional time when the issue raised in the RFI was due to your fault, neglect, or any unauthorized deviations from the project design or specifications.
4. If You proceed in resolving a conflict, omission, or any error in the Contract Documents without sending the City an RFI in accordance with the requirements stated above, the City may require You to remove such work at Your cost or back charge You the cost to remove this work.

### 1-7.2

**Contract Bonds.** To the "WHITEBOOK", item 1, DELETE in its entirety and SUBSTITUTE with the following:

1. Before execution of the Contract, file payment and performance bonds with the City to be approved by the Board in the amounts and for the purposes noted. Bonds shall be executed by a responsible surety as follows:
  - a) If the Work is being funded with state or local money, consistent with California Code of Civil Procedure §995.670, the Surety shall be an

"admitted surety" authorized by the State of California Department of Insurance to transact surety insurance in the State.

- b) If the Work is being funded with federal money, the Surety shall be listed in the U.S. Treasury Department Circular 570 and shall be in conformance with the specified Underwriting Limitations.

To the "WHITEBOOK", item 2, subsection "a", subsection "i", DELETE in its entirety and SUBSTITUTE with the following:

- i. A "Payment Bond" (Materials and Labor Bond) is optional. If no bond is submitted, no payment shall be made until 35 Calendar Days after Acceptance and any lien requirements have been fulfilled. If a bond is submitted, progress payments shall be made in accordance with these Specifications.

To the "WHITEBOOK", item 2, subsection "d", DELETE in its entirety and SUBSTITUTE with the following:

- d) For Contracts over \$100,000:
  - i. A "Payment Bond" (Materials and Labor Bond) for 100% of the Contract Price to satisfy claims of material Suppliers and of mechanics and laborers employed on the Work. You shall maintain the bond in full force and effect until Acceptance and until all claims for materials and labor are paid and shall otherwise comply with the Government Code.
  - ii. A "Faithful Performance Bond" for 100% of the Contract Price to guarantee faithful performance of Work, within the time prescribed and in a manner satisfactory to the City, that materials and workmanship shall be free from original or developed defects.

To the "WHITEBOOK", item 7, DELETE in its entirety and SUBSTITUTE with the following:

- 7. You shall require the Surety to mail its standard "Bond Status" form to the Engineer at the following address:  
Deputy Director  
Construction Management and Field Engineering Division  
9573 Chesapeake Drive San Diego, CA 92123

## **SECTION 2 - SCOPE OF THE WORK**

**2-2 PERMITS, FEES, AND NOTICES.** To the "WHITEBOOK", ADD the following:

- 2. The City will obtain, at no cost to you, the following permits:
  - a) Building Permit

**2-10.1.4 City's Final Determination.** To the "WHITEBOOK", item 2, DELETE in its entirety and SUBSTITUTE with the following:

- 1. If you disagree with the City's Final Determination, notify the Engineer in writing of your objection within 15 Working Days after receipt of the written determination in accordance with 2-10.2.1.4, "DRB Traditional Dispute Meeting".

**2-10.2 Dispute Resolution Process.** To the "WHITEBOOK", DELETE all sections and subsections in their entirety and SUBSTITUTE with the following:

**2-10.2 Dispute Resolution Process.**

1. A mandatory Dispute Resolution Board process shall be established in accordance with 2-10.2.1, "Dispute Resolution Board (DRB)" prior to the mandatory mediation as described in 2-10.2.2, "Mandatory Non-binding Mediation".

**2-10.2.1 Dispute Resolution Board (DRB).**

1. The DRB is a 3-member board that you and the City establish prior to beginning work.

**2-10.2.1.1 DRB Member Selection.** Within 45 Working Days of Contract approval, you and the City shall select DRB members and establish the DRB using the following procedure:

1. You and the City each nominates a DRB member candidate who is on the City's approved list. For the list of approved member candidates, go to the City's Division of Construction website.
2. If you or the City nominates someone who is not on that list, the candidate shall:
  - a) Be knowledgeable in the type of construction and contract documents anticipated by the Contract.
  - b) Have completed training by the Dispute Resolution Board Foundation.
  - c) Have no prior direct involvement on this Contract.
  - d) Have no financial interest in the Contract or with the parties, subcontractors, suppliers, consultants, or associated legal or business services within 6 months before award and during the Contract, except for payments for City DRA or DRB services, or payments for retirement or pensions from either party not tied to, dependent on, or affected by the net worth of the party.
3. You and the City shall request a disclosure statement from each nominated DRB member candidate and must each furnish it to the other party. The statement shall include:
  - a) Resume of the candidate's experience.
  - b) Declaration statement that describes past, present, anticipated, and planned professional or personal relationships with each of the following:
    - i. Parties involved in the Contract
    - ii. Parties' principals
    - iii. Parties' counsel
    - iv. Associated subcontractors and suppliers
4. You and the City are allowed:
  - a) One-time objection to the other's candidate without stating a reason.
  - b) Objection to any of the other's subsequent candidates based on a specific breach of the candidate's responsibilities or qualifications under items 1 and 3 of this section.

5. If you or the City objects to the other's candidate, the party whose candidate was objected to must nominate another DRB candidate within 15 Working Days.
6. The 1st candidate from a party that receives no objection becomes that party's DRB member.
7. You and the City each provide written notification to your selected DRB member.
8. Within 15 Working Days of their notifications, the selected DRB members recommend to you and the City the 3rd DRB member candidate and provide that candidate's disclosure statement.
9. Within 15 Working Days of the recommendation, you and the City must each notify the first 2 DRB members whether you approve or disapprove of the recommended 3rd DRB member candidate.
10. If the 2 DRB members cannot agree on the 3rd DRB candidate, they will submit a list of candidates to you and the City for final selection and approval.
11. If the 2 DRB members do not recommend a 3rd DRB candidate within 15 Working Days of notification of their selections, or if you and the City do not agree on the 3rd DRB member candidate within 15 Working Days of the recommendation, or if you and the City do not agree on any of the candidates on the list provided by the first 2 selected DRB members, you and the City each must select 3 candidates from the current list of arbitrators certified by the Public Works Contract Arbitration Committee established by Pub Cont Code § 10245 et seq. who will be willing to serve as a DRB member. The first 2 selected DRB members must select the 3rd member in a blind draw of these 6 candidates.
12. The 3 DRB members then decide which of the three will act as the DRB chairman. If you and the City do not agree with the selected chairman, the 3rd member will act as the DRB chairman.

**2-10.2.1.2 DRB Member Replacement.**

1. The service of a DRB member may end at any time with a notice of at least 15 Working Days if any of the following occurs:
  - a) A member resigns
  - b) The City replaces its selected member
  - c) You replace your selected member
  - d) The City's and your selected members replace the 3rd member
2. Either you or the City replace any member for failing to comply with the required employment or financial disclosure conditions of DRB membership as described in the Contract and in the Dispute Resolution Board Agreement form.
3. Replacing any DRB member shall be accomplished by written notification to the DRB and the other party with substantiation for replacing the member.
4. A replacement DRB member is selected the same way as the original DRB member. Selecting a replacement must start upon determination of the need for a replacement and must be completed within 15 Working Days. The Dispute Resolution Board Agreement form shall be amended to reflect the change to the DRB.

### **2-10.2.1.3 DRB Progress Meetings.**

1. You and the City shall periodically meet with the DRB and visit the job site so the DRB members can keep abreast of construction activities and develop familiarity with the work in progress.
2. The progress meetings shall occur at the start of the project and at least once every 4 months after that.
3. Both parties shall attend each progress meeting.
4. You and the City may agree to waive scheduled progress meetings when the only work remaining is plant establishment.

### **2-10.2.1.4 DRB Traditional Dispute Meeting.**

1. If you disagree with the City's Final Determination, notify the Engineer and DRB in writing of your objection within 15 Working Days after receipt of the determination.
2. A DRB dispute meeting shall be held no sooner than 30 Calendar Days and no later than 60 Calendar Days after the DRB receives your written notice unless you and the City otherwise agree.
3. At least 15 Calendar Days before the scheduled dispute meeting, each party shall furnish the DRB documentation that supports its position and any additional information requested by the DRB.
4. If the DRB requests additional information within 10 Calendar Days after the dispute meeting, the party receiving the request shall furnish this information within 10 Calendar Days of receiving the request.
5. The DRB shall provide a written recommendation report within 30 Calendar Days of the dispute meeting unless you and the City agree to allow more time.
6. Within 10 Calendar Days of receiving the DRB's recommendation report, either you or the City may request clarification of any part of the report. Only one request for clarification from each party is allowed per dispute.
7. Within 30 Calendar Days after receiving the DRB's recommendation, each party shall furnish a written response to the DRB indicating acceptance or rejection of the recommendation. If a party rejects the recommendation and has new information that supports its position, the party may request reconsideration. The reconsideration request shall be made within 30 Calendar Days after receiving the DRB's recommendation. Only one request for reconsideration from each party is allowed per dispute.
8. If both you and the City accept the DRB's recommendation but cannot agree on the time or payment adjustment within 60 Calendar Days of accepting the recommendation, either party may request that the DRB recommend an adjustment.
9. If you reject the DRB's recommendation, notify the Resident Engineer and DRB in writing of your objection within 15 Working Days after receipt of the DRB's recommendation and file a "Request for Mediation" in accordance with 2-10.2.2, "Mandatory Non-binding Mediation".

## **2-10.2.2 Mandatory Non-binding Mediation.**

1. If a dispute arises out of or relates to the Contract, or the breach thereof, and if said dispute cannot be settled through contract provisions provided for the Dispute Resolution Board process, claim settlement, or negotiations, the parties agree to first endeavor to settle the dispute in an amicable manner, using mandatory mediation under the Construction Industry Mediation Rules of the American Arbitration Association or any other neutral organization agreed upon before having recourse in a court of law.

### **2-10.2.2.1 Mandatory Mediation Costs.**

1. The expenses of witnesses for either side shall be paid by the party producing such witnesses. All other expenses of the mediation, including required traveling and other expenses of the mediator and the cost of any proofs or expert advice produced at the direct request of the mediator, shall be borne equally by the parties, unless they agree otherwise.

### **2-10.2.2.2 Selection of Mediator.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. A single mediator, knowledgeable in construction aspects and acceptable to both parties, shall be used to mediate the dispute.
2. To initiate mediation, the initiating party shall serve a Request for Mediation at the American Arbitration Association (AAA) on the opposing party.
3. If AAA is used, the initiating party shall concurrently file with AAA a "Request for Mediation" along with the appropriate fees, a copy of requested mediators marked in preference order, and a preference for available dates.
4. If AAA is selected to coordinate the mediation (Administrator), within 10 Working Days from the receipt of the initiating party's Request for Mediation, the opposing party shall file the following:
  - a) A copy of the list of the preferred mediators listed in preference order after striking any mediators to which they have any objection.
  - b) A preference for available dates.
  - c) Appropriate fees.
5. If the parties cannot agree on a mediator, then each party shall select a mediator and those mediators shall select the neutral third party to mediate the matter.

### **2-10.2.2.3 Conduct of Mediation Sessions.**

1. Mediation hearings shall be conducted in an informal manner and discovery shall not be allowed.
2. Discussions, statements, and/or admissions shall be confidential to the proceedings and shall not be used for any other purpose as it relates to the party's legal position. The parties may agree to exchange any information they deem necessary.

3. Both parties shall have an authorized representative attend the mediation. Each representative shall have the authority to recommend entering into a settlement. Either party may have attorney(s), witnesses, or expert(s) present. Either party may request a list of witnesses and notifications of whether attorney(s) shall be present.
4. Any resulting agreements from mediation shall be documented in writing. Mediation results and documentation, by themselves, shall be "non-binding" and inadmissible for any purpose in any legal proceeding, unless such admission is otherwise agreed upon in writing by both parties. Mediators shall not be subject to any subpoena or liability and their actions shall not be subject to discovery.

**2-10.2.3 Payment.**

1. Pay each DRB member \$1,500 per day for DRB's participation at each on-site meeting.
  - a) If a DRB member serves on more than one DRB, the \$1,500 shall be divided evenly among the contracts.
2. On-site meetings include:
  - a) Initial project meeting
  - b) Scheduled progress meetings for a project with a DRB
  - c) Dispute meetings
3. This payment includes full compensation for on-site time, travel expenses, transportation, lodging, travel time, and incidentals for each day or portion thereof that the DRB member is at a DRB meeting.
4. Before a DRB member spends any time reviewing plans and specifications, evaluating positions, preparing recommendations, or performs any other off-site DRB-related tasks, you and the City shall agree to pay for the tasks. Pay the DRB member \$150 per hour for these tasks. This payment includes full compensation for incidentals such as expenses for telephone, fax, and computer services.
5. The City shall reimburse you for 1/2 of the invoiced costs to the DRB and 1/2 of the costs of any technical services agreed to. Submit a change order bill and associated invoices with the original supporting documents in the form of a canceled check or bank statement to receive reimbursement. Do not add mark-ups to the change order bill.
6. The City will not pay for any DRB-related work performed after Contract acceptance.
7. The City will not pay your cost of preparing for and attending a dispute resolution meeting

**SECTION 3 – CONTROL OF THE WORK**

**3-2 SELF-PERFORMANCE.** To the "GREENBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. You shall perform, with your own organization, Contract Work amounting to at least 40% of the base Bid.

**3-3 SUBCONTRACTORS.** To the "WHITEBOOK", ADD the following:

6. When a Subcontractor fails to prosecute a portion of the Work in a manner satisfactory to the City, you shall remove such Subcontractor immediately upon written request of the City and shall request approval of a replacement Subcontractor to perform the Work in accordance with California Public Contract Code (PCC), Subletting and Subcontracting, Section 4107, at no added cost to the City.

**3-9 TECHNICAL STUDIES AND SUBSURFACE DATA.** To the "WHITEBOOK", ADD the following:

5. In preparation of the Contract Documents, the designer has relied upon the following reports of explorations and tests at the Work Site:
  - a) Report of Geotechnical Investigation Proposed FIRP/NSPF Project at Southwest Side of Miramar Landfill, City of San Diego dated April 12, 1994 by Metcalf & Eddy, Inc.
  - b) Design of MBC Improvements Potholing Report No. X170497, dated April 5, 2018 by AirX Utility Surveyors Inc.
6. The reports listed above are available for review at the following link:

[https://drive.google.com/drive/folders/1H\\_xQt\\_lHoMQbwIBSoOxeTAWSVjLDUo55?usp=sharing](https://drive.google.com/drive/folders/1H_xQt_lHoMQbwIBSoOxeTAWSVjLDUo55?usp=sharing)

**3-10 SURVEYING.** To the "GREENBOOK" and "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

**3-10 SURVEYING (DESIGN-BID-BUILD).**

**3-10.1 General.**

1. You shall provide all required site layout and general grade checking work not specified in 3-10.2, "Survey Services Provided by City".
2. Notify the City, in writing, at least 2 Working Days prior to requesting survey services provided by the City.

**3-10.2 Survey Services Provided by City (via City Consultant Surveyor).**

1. Monument Perpetuation, including mark-outs. You are responsible for requesting the coordination of these services.
  - a) If at any time a monument will be destroyed or covered, such monument shall be perpetuated in accordance with state law. Inform the City Engineering Support & Technical Services Division's Land Survey Section (LSS), via project Resident Engineer, if any monument will be destroyed or covered during any construction activity.
2. The following surveying services (including construction staking), as defined in California Business & Professions Code §8726, shall be provided by the City:
  - a) Locating or establishing alignment or elevations of all features or structures shown on project Plans.

- b) Locating or establishing geodetic control points for all site feature or structure locations.
  - c) Produce topographic as-built data.
  - d) Locating, establishing, or re-establishing monuments, property lines, right-of-way lines, or easement lines.
  - e) Verifying structure finish grade elevations.
  - f) QA/QC surveys on project settlement monitoring survey reports.
3. All construction survey stakes, control points, and other survey related marks provided by the City shall be preserved for the duration of the Project. If any construction survey stakes, control points, or other survey related marks are lost or disturbed and need to be replaced, such replacement shall be performed at your expense.

**3-10.3 Payment.**

- 1. The payment for site layout and general grade checking Work, coordination, and preservation of all survey related marks shall be included in the Contract Price.

**3-11. 2 Project Identification Signs.** To the "WHITEBOOK", ADD the following:

- 4. The State Revolving Fund requires that the Contractor place (2) temporary signs at least four (4) feet tall by eight (8) feet wide made of three-fourths (3/4) inch thick exterior grade plywood or other approved material in a prominent locations approved by the Engineer. The Contractor shall fabricate, properly mount and maintain both signs. The image cast on the sign should be resistant and protected from weathering. The signs should be mounted firmly and securely at the two sites with proper footing and post, as approved by the Resident Engineer. The Contractor is responsible for maintaining the signs in a manner approved by the Resident Engineer and will remove and dispose of upon completion. The sign shall include the full colored image that will be provided on a CD, at the pre-construction meeting.

**3-12.1 General.** To the "WHITEBOOK", ADD the following:

- 2. You shall provide a PM-10 certified self-loading motorized street sweeper equipped with a functional water spray system for this project.
- 3. You shall sweep all paved areas within the Work site and all paved haul routes as specified below:
  - a) Every Friday on a weekly basis.
  - b) 1 Working Day prior to each rain event.
  - c) As directed by the Engineer.

If these requirements would require you to sweep on a Holiday or Weekend, then you shall sweep the next available Working Day prior to that Holiday or Weekend.

**3-12.7 Drinking Water Discharges Requirements.** To the "WHITEBOOK", ADD the following:

1. You shall record the results for each discharge event on the City's Drinking Water Discharge Monitoring form included as **Appendix H - Monthly Drinking Water Discharge Monitoring Form.**

**3-13.1 Completion.** To the "GREENBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. You shall submit a written assertion that the Work has been completed and is ready for Owner Acceptance. If, in the Engineer's judgment, the Work has been completed in accordance with the Contract Documents, the Engineer will set forth in writing the date the Work was completed. This will be the date that you are relieved from responsibility to protect and maintain the Work and to which liquidated damages will be computed.
2. For additional requirements related to Closeout items, refer to Technical Specifications, Section 01 77 00 "Closeout Procedures"

**3-13.1.1 Requirements Before Requesting a Walk-through.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

**3-13.1.1 Requirements Before Requesting Substantial Completion.**

1. The following items are required prior to requesting a Substantial Completion:
  - a) Remove temporary facilities from the Site.
  - b) Thoroughly cleaning the Site and removing all mark outs and construction staking.
  - c) Provide completed and signed Red-lines in accordance with 3-7.3 "Redlines and Record Documents".
  - d) Provide all material and equipment maintenance and operation instructions and/or manuals.
  - e) Provide all tools which are permanent parts of the equipment installed in the Project.
  - f) Provide and properly identify all keys for construction and all keys for permanent Work.
  - g) Provide all final Special Inspection reports required by the applicable building Code.
  - h) Provide all items specified to be supplied as extra stock. Wrap, seal, or place in a container all items as necessary to allow for storage by the City for future use. Verify the specified quantities.
  - i) Ensure that all specified EOCP and certified wage rate documentations covering the Contract Time have been submitted.
  - j) If the Work includes installing an irrigation system, provide the spare parts for the proposed irrigation system as specified in the Special Provisions.
  - k) If the Work includes sewer and storm drain installations, the inspection shall include televising in accordance with 306-18, "VIDEO INSPECTION".
  - l) If the Work includes a Plant Establishment Period, Work in accordance with 801-6, "MAINTENANCE AND PLANT ESTABLISHMENT" shall be

completed prior to requesting Substantial Completion, unless approved otherwise by the Owner.

- m) Notify the Engineer to arrange a final inspection of any permanent BMPs installed.

**3-13.1.2 Walk-through and Punchlist Procedure.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. You shall notify the Engineer 15 Working Days in advance of date of anticipated Substantial Completion to allow time for Engineer to schedule a Walk-through. After you complete the requirements in 3-13.1.1, "Requirements Before Requesting Substantial Completion" and when you consider that the Work is Substantially Complete, you will notify the Engineer in writing that the Project is Substantially Complete. The Engineer will review your request and determine if the Project is ready for a Walk-through, by verifying whether you have completed all items as required by 3-13.1.1, "Requirements Before Requesting Substantial Completion". Within 7 Working Days, the City will either reject your request of a Walk-through in writing or schedule a Walk-through inspection. The Engineer shall facilitate the Walk-through.
2. The following documents shall be provided at the time of your Walk-through request: As-Built markup, Plans, specifications, technical data such as submittals and equipment manuals, draft final payment, warranties, material certifications, bonds, guarantees, maintenance service agreements, and maintenance and operating manuals.
3. Written warranties, except manufacturer's standard printed warranties, shall be on a letterhead addressed to you. Warranties shall be submitted in the format described in this section, modified as approved by the City, to suit the conditions pertaining to the warranty. Lack of submitting these items will delay start of Walk-through.
4. The Engineer will provide you with the Punchlist within 15 Working Days after the date of the Walk-through. The City shall not provide a preliminary Punchlist.
5. If the Engineer finds that the Project is not Substantially Complete as defined herein, the Engineer will terminate the Walk-through and notify you in writing.
6. If, at any time during the Engineer's evaluation of the corrective Work required by the Punchlist, the Engineer discovers that additional corrective Work is required, the Engineer may include that corrective Work in the Punchlist.
7. You shall remain solely responsible for the Project Site until the Project is completely operational, all Punchlist items have been corrected, and all operation and maintenance manuals have been accepted by the City.
8. The Engineer shall meet with you within 5 Working Days of notification that all Punchlist items are corrected. You shall complete the Punchlist within 30 Working Days and Working Days will continue to be counted until Acceptance of the Project.

**3-13.2 Acceptance.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. You shall provide the completed, signed, and stamped DS-563 to the Engineer prior to Acceptance.
2. You shall deliver the final As-builts and final billing prior to Acceptance.

3. You shall assemble and deliver to the Engineer a Final Summary Report and Affidavit of Disposal prior to Acceptance.
4. Acceptance shall occur after all of the requirements contained in the Contract Documents have been fulfilled. If, in the Engineer's judgment, you have fully performed the Contract, the Engineer will recommend to the City Engineer that your performance of the Contract be accepted. You shall receive notification of Acceptance in writing from the Owner and counting of working days shall cease and Warranty begins.
5. Retention can be released 35 Calendar Days after NOC. Submit your request for retention to the Resident Engineer and they will mail to you a "Release of Claims" form which shall be completed and returned before the retention will be released.

**3-13.3**

**Warranty.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. You shall warranty and repair all defective materials and workmanship for a period of 1 year. This call back warranty period shall start on the date the Work was accepted by the City unless the City has Beneficial Use or takes Occupancy of the project earlier (excluding water, sewer, and storm drain projects).
2. You shall warranty the Work free from all latent defects for 10 years and patent defects for a period of 4 years.
3. The warranty period for specific items covered under manufacturers' or suppliers' warranties shall commence on the date they are placed into service at the direction of the Engineer in writing.
4. All express warranties from Subcontractors, manufacturers', or Suppliers', of any tier, for the materials furnished and Work performed shall be assigned, in writing, to the City, and shall be delivered to the Engineer prior to the Acceptance of your performance of the Contract.
5. Replace or repair defective materials and workmanship in a manner satisfactory to the Engineer after notice to do so from the Engineer and within the time specified in the notice. If you fail to make such replacements or repairs within the time specified in the notice, the City may perform the replacement or repairs at your expense. If you fail to reimburse the City for the actual costs, your Surety shall be liable for the cost
6. Items that shall be warrantied free from defective workmanship and materials for a period longer than 1 year are as follows:

<b>Specified Item</b>	<b>Minimum Warranty Period</b>
Detectable Warning Tile Construction	3 Years of Manufacturer's Warranty
All Work Under SECTION 500 – PIPELINE REHABILITATION	3 Years
Fiber Optic Interconnect Cables	2 Years
Luminaires*	10 Years of Manufacturer's Warranty
LED Signal Modules	3 Years of Manufacturer's Warranty

Specified Item	Minimum Warranty Period
Field Devices Associated with 700-6.3, "Adaptive Control Note"	See 700-6.3.9, "Warranty"

\* Provide documentation verifying that the induction luminaire models being offered for the Project are covered by the 10-year warranty.

7. If installed, you shall provide the City and property owner a copy of the manufacturer's warranty for private sewer pumps, including the alarm panel and all other accessories.
  - a) You shall involve the manufacturer in the installation and startup as needed to secure any extended warranty required.
  - b) Nothing in here is intended to limit any manufacturer's warranty which provides the City with greater warranty rights than set forth in this section or the Contract Documents.
  - c) The warranty shall include all components. The form of the warranty shall be approved by the Engineer in accordance with 3-13.3.2, "Warranty Format Requirements".
8. If, during the warranty period, any item of the Work is found to be Defective Work, you shall correct it promptly after receipt of written notice from the City to do so. The warranty period shall be extended with respect to portions of the Work corrected as part of the warranty requirements.

**3-13.3.1 Defective Work.** To the "WHITEBOOK", item 6, DELETE in its entirety and SUBSTITUTE with the following:

6. For Building Projects which require a certificate of occupancy, not including sewer and water facilities, if you fail to correct the defective Work listed on the City's Punchlist within 45 Working Days after the Contract Time, you shall reimburse the City for all costs to provide inspection services required to monitor Work beyond the 45 Working Days. The City shall bill you for the additional inspection at the City's established rates.

**3-14 FORMAL PARTNERING.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

Refer to Technical Specifications, Section 01 12 01 "Partnering" for requirements

**3-15.2 Integration of the Work with Separate Contractors.** To the "WHITEBOOK", ADD the following:

2. The list of Separate Contractors includes:
  - a) Project Title-North City Water Reclamation Plant Expansion-Early Site Work and Ozone/ BAC Relocation (Package 4), Limits of Work- Work associated with this project is within the NCWRP footprint,  
 Contractor- AECOM Energy and Construction,  
 City Lead Project Manager-Andrea Demich (858) 614-5741,  
 City Project Manager-Monika Smoczynski (858) 292-6455.

- b) Project Title-Flow Equalization Basin (Package 1), Limits of Work- Work associated with this project is within the NCWRP footprint,  
Contractor- TBD,  
City Lead Project Manager-Andrea Demich (858) 614-5741,  
City Project Manager-Monika Smoczynski (858) 292-6455.
- c) Project Title-North City Water Reclamation Plant Expansion (Package 2) and Pure Water Facility Influent Pump Station and Conveyance (Package 3), Limits of Work- Work associated with this project is within the NCWRP footprint,  
Contractor- TBD,  
City Lead Project Manager-Andrea Demich (858) 614-5741,  
City Project Manager-Monika Smoczynski (858) 292-6455.
- d) MBC Dewatering Centrifuge Replacement project – Superintendent  
Richard Pitchford (858) 614-5509

**3-15.3 Coordination.** To the “WHITEBOOK”, ADD the following:

- 2. Other adjacent City projects are scheduled for construction for the same time period in the vicinity of the MBC Improvements Project. See **Appendix F – Adjacent Projects Map** for the approximate location. Coordinate the Work with the adjacent projects as listed below:
  - a) Project Title-North City Water Reclamation Plant Expansion-Early Site Work and Ozone/ BAC Relocation (Package 4), Limits of Work- Work associated with this project is within the NCWRP footprint,  
Contractor- AECOM Energy and Construction,  
City Lead Project Manager-Andrea Demich (858) 614-5741,  
City Project Manager-Monika Smoczynski (858) 292-6455.
  - b) Project Title-Flow Equalization Basin (Package 1), Limits of Work- Work associated with this project is within the NCWRP footprint,  
Contractor- TBD,  
City Lead Project Manager-Andrea Demich (858) 614-5741,  
City Project Manager-Monika Smoczynski (858) 292-6455.
  - c) Project Title-North City Water Reclamation Plant Expansion (Package 2) and Pure Water Facility Influent Pump Station and Conveyance (Package 3), Limits of Work- Work associated with this project is within the NCWRP footprint,  
Contractor- TBD,  
City Lead Project Manager-Andrea Demich (858) 614-5741,  
City Project Manager-Monika Smoczynski (858) 292-6455.

- d) MBC Dewatering Centrifuge Replacement project- Superintendent –  
Richard Pitchford (858) 614-5509

#### **SECTION 4 - CONTROL OF MATERIALS**

**ADD:**

**4-1.1 American Iron and Steel (AIS).**

1. The Consolidated Appropriations Act, 2014, includes an "American Iron and Steel (AIS)" requirement in section 436 that requires this project, funded via the Clean Water State Revolving Loan Fund (CWSRF) and/or the Drinking Water State Revolving Loan Fund (DWSRF) to use iron and steel products that are produced in the United States for projects for the construction, alteration, maintenance, or repair of a public water system.
2. You acknowledge to and for the benefit of the City of San Diego and the State Water Resource Control Board that you understand the Work under this Contract is being funded with monies made available by the Clean Water State Revolving Fund and/or Drinking Water State Revolving Fund that have statutory requirements commonly known as "American Iron and Steel" that requires all of the iron and steel products used for construction to be produced in the United States including iron and steel products to be provided by you. You hereby warrant to and for the benefit of the City and the State that:
  - a) You have reviewed and understand the American Iron and Steel Requirement,
  - b) All of the iron and steel products used in the project will be and/or have been produced in the United States in a manner that complies with the American Iron and Steel Requirement with required certification (for sample certification letters, refer to **Appendix G**, unless a waiver of the requirement is approved, and;
  - c) You will provide any further verified information, certification or assurance of compliance with this paragraph, or information necessary to support a waiver of the American Iron and Steel Requirement, as may be requested by the City or the State.
3. The additional information below is being provided for reference and guidance to ensure that you comply with all requirements set forth by the CWSRF and/or DWSRF Loans:
  - a) Refer to the following EPA website:  
  
<http://www.epa.gov/cwsrf/state-revolving-fund-american-iron-and-steel-ais-requirement>
  - b) The United States Environmental Protection Agency's Memorandum dated March 20, 2014 entitled, "Implementation of American Iron and Steel Provisions of P.L. 113-76, Consolidated Appropriations Act, 2014":  
  
<https://www.epa.gov/sites/production/files/2015-09/documents/ais-final-guidance-3-20-14.pdf>
4. Your failure to comply with this provision shall permit the City or State to recover damages against you for any loss, expense, or cost (including without limitation

attorney's fees) incurred by the City or State resulting from any such failure (including without limitation any impairment or loss of funding, whether in whole or in part, from the State or any damages owed to the State by the City). Although you have no direct contractual privity with the State, as a lender to the City for the funding of this project, you and the City agree that the State is a third-party beneficiary and neither this provision (nor any other provision of this Contract necessary to give this provision force or effect) shall be amended or waived without the prior written consent of the State.

**4-3.4 Specialty Inspection Paid for by the Contractor.** To the "WHITEBOOK", ADD the following:

5. No special inspection shall be performed by the Contractor. The Contractor is not required to pay for special inspection due to the circumstances detailed in Technicals Section 01 45 33.

**4-3.6 Preapproved Materials.** To the "WHITEBOOK", ADD the following:

3. You shall submit in writing a list of all products to be incorporated in the Work that are on the AML.

**4-6 TRADE NAMES.** To the "WHITEBOOK", ADD the following:

11. You shall submit your list of proposed substitutions for an "equal" item **no later than 15 Working Days after the determination of the Apparent Low Bidder** and on the City's Product Submittal Form available at:

<https://www.sandiego.gov/ecp/edocref/>

## **SECTION 5 – LEGAL RELATIONS AND RESPONSIBILITIES**

**5-3.6 Project Labor Agreement (PLA).** The Contractor and all subcontractors agree to be bound by the Project Labor Agreement (which is attached as Attachment I and incorporated by this reference) by submitting a Letter of Assent to the City's Labor Coordinator. The Contractor shall submit its Letter of Assent as a condition of award and all subcontractors shall submit their Letter of Consent before commencing any Work on the Project.

**5-4 INSURANCE.** To the "GREENBOOK", DELETE in its entirety and SUBSTITUTE with the following:

**5-4 OWNER-CONTROLLED INSURANCE PROGRAM.**

**5-4.1 GENERAL REQUIREMENTS**

1. The City has implemented an Owner-Controlled Insurance Program (OCIP) for its Pure Water Projects. In this OCIP, the City furnishes Workers' Compensation, General, Excess, Pollution Liability and Builder's Risk insurance associated with construction of the Work. Insurance furnished under the OCIP covers the City, the Contractor, and the Contractor's subcontractors of all tiers with exceptions stated below. As detailed in Section 5-4.17 and 5-4.18, Contractor and subcontractors still provide some insurance coverage under the OCIP.

2. Bidders, as well as their subcontractors with a subcontract amount of greater than one half of one percent of the Contractors bid amount, shall exclude from bids the costs of insurance for risks covered under the OCIP.
3. Bidders, as well as their subcontractors with a subcontract amount of greater than one half of one percent, shall determine the OCIP coverage credit by utilizing the OCIP Credit Worksheets attached herein under **Section 6. Certifications and Forms.**
4. OCIP enrollment is mandatory for contractors/subcontractors with contracts valued at \$10,000 or greater or onsite labor of three days or more. For contracts under \$10,000 in value, should there be any potential for additive change orders thereby increasing the contract value to \$10,000 or greater, the contractor/subcontractor must enroll in the OCIP.
5. Bidders, as well as all of their subcontractors, with a subcontract amount of greater than one half of one percent of the Contractors bid amount, shall complete OCIP credit worksheets provided as part of the bid documents attached herein. Bidders shall submit these OCIP credit worksheets, including OCIP credit worksheets obtained from all their subcontractors, within 10 Working Days of receipt by bidder of contract forms and Notice of Intent to Award. **Failure to comply with OCIP Credit Worksheets requirements is a condition of final award.**
6. Contractor shall still maintain minimum insurance outside of OCIP as defined in Section 5-4.17
7. OCIP related manuals mentioned in Section 5-4 and 5-7 can be downloaded from the following link:

<https://drive.google.com/drive/folders/1aCNE-AWO-6Vihwex-JHZYpUNZ7aYIsLe?usp=sharing>

#### **5-4.2 OCIP DEFINITIONS**

1. The following definitions apply to the OCIP program:
  - a) Claim – A covered loss asserted under the OCIP insuring policy(s).
  - b) OCIP Deductible Assessment – The amount the Enrolled Contractor is responsible for paying as its contribution for settlement of any loss that is chargeable to the Contractor, or its subcontractors. The deductible shall be paid in a proportional amount between the Contractor and subcontractor, as determined by responsibility of the party causing the loss, by the OCIP insurance carrier.
  - c) Enrolled Contractors – The Contractor and any Subcontractor who have submitted all necessary enrollment information and have received confirmation letter, as well as certificates of insurance evidencing OCIP coverage as issued from the OCIP administrator. Enrollment date shall be established by the date on the certificate of insurance.
  - d) Excluded Parties: - The following parties shall not be enrolled in the OCIP:
    - i) Heavy or structural demolition utilizing wrecking balls or explosives.

- ii) Hazardous materials remediation, removal or transport companies and their consultants.
  - iii) Architects, surveyors, engineers, soil testing engineers and their respective consultants.
  - iv) Vendors, suppliers, fabricators, materials dealers, truckers, haulers, drivers and others who merely transport, pickup, deliver, or carry materials, personnel, parts or other equipment to and from the Job Site.
  - v) Any parties or entities not specifically designated by the City at its sole discretion, even if otherwise eligible.
  - vi) Subcontractors work with a value of less than \$10,000, unless their work extends to be greater than three days of work or more
- e) Insured Party - Contractor, the Contractor's subcontractors, officers, employees and agents, the City and the City's officers, employees, contractors and agents as enrolled in the OCIP, except any Uninsured Party.
  - f) OCIP Administrator - The person or insurance broker firm designated by the City with responsibility for administration of the OCIP, including claims.
  - g) OCIP Coverage – the insurance coverages generally described in Sections 5-4.3, through -4.10 of this Section and set forth more fully in the policies of insurance or forms of policies of insurance on file with the City's Public Utilities Department.
  - h) Uninsured Party - Any person, partnership, corporation, or other business entity performing work under the Contract that is not an Insured Party under the OCIP.

### **5-4.3 OCIP INSURANCE PROVIDED BY THE CITY**

1. Before commencement of the work, the City will obtain OCIP insurance coverage. Insured Parties will be enrolled in the OCIP according to the policies of OCIP insurance coverage.
2. The Contractor and the Contractor's subcontractors, officers, employees and agents, except for Excluded Parties as defined in Section 5-4.2 (d), will be Insured Parties with OCIP Coverage solely as to risks at the job site.
3. The City assumes no obligations to provide insurance other than OCIP Coverage.
4. The City does not warrant or represent that the OCIP Coverages constitute an insurance portfolio that adequately addresses all of the Contractor's risks under the contract documents. Nothing in this Section shall be construed to relieve the Contractor of any risk or obligation under the contract documents.
5. The OCIP Coverages are set forth in full in the respective policy forms and are on file with the City's Public Utilities Department. Nothing in this section is intended to alter or amend any provision of the OCIP Coverage policies. In the event of an actual conflict between the descriptions of coverage contained in this Section and the coverage provided under the policies, the provisions of the policies shall govern.

**5-4.4 INFORMATION TO BE PROVIDED BY SUCCESSFUL BIDDER AFTER CONTRACT AWARD**

1. Within 15 working days from the mailing date of the Notice of Intent to Award of Contract, the successful bidder shall complete and return to the OCIP Administrator the "OCIP Insurance Enrollment Form," and provide such other information as the Project Manager or OCIP insurance carriers deem necessary. Each subcontractor shall complete the OCIP Insurance Enrollment Form and return such forms to the successful bidder for submission with, and attachment to, its form.
2. Each subcontractor shall complete the OCIP Insurance Enrollment Forms and submit to the successful bidder for submission to the OCIP Administrator not less than two weeks before the date they are scheduled to begin work or within 90 working days of the City's issuance of the Limited Notice to Proceed, whichever occurs first. Failure to submit the information within the time required may delay the subcontractor's ability to commence work.
3. Contractor shall ensure that each subcontractor on the Work site for whom OCIP coverage is provided has received confirmation of such coverage from the OCIP Administrator before commencement of the subcontractor's work.
4. The City will review the OCIP documents submitted by the Contractor within 15 days of their submittal. Any deficiencies noted shall be corrected by the Contractor within five days of its receipt of the returned documents. The City will endeavor to issue a Limited Notice to Proceed within 60 working days of the mailing date of the Notice of Award however, failure to complete and return the documents identified in this paragraph within the time provided may delay the City's issuance of the Limited Notice to Proceed or result in forfeiture of the successful bidder's bid bond and award of contract to the next lowest bidder.

**5-4.5 OCIP WORKERS' COMPENSATION INSURANCE AND EMPLOYERS LIABILITY**

1. Coverage for workers' compensation insurance will comply with statutory limits of the workers' compensation laws of the State of California, with Coverage B - Employer's Liability, to limits of not less than one million dollars (\$1,000,000) each accident, one million dollars (\$1,000,000) each employee for bodily injury by disease, and one million dollars (\$1,000,000) policy limit for bodily injury by disease covering operations of the insured parties at the Work site. Coverage under the Broad Form All States extension is also included. This insurance is primary for all occurrences at the jobsite only.
  - a) Named Insured: Contractor and subcontractors of all tiers Enrolled in OCIP
  - b) Insurer: Zurich
  - c) A.M. Best Rating: AXV
  - d) Policy Term: Per Effective Date of each Enrolled Contractor, as defined above, to the earliest of each Enrolled Contractor Work completion, or at 12:01 AM, 7/21/25
  - e) Policy Form: Per CA statutory requirements

**5-4.6**

**OCIP GENERAL AND EXCESS LIABILITY INSURANCE**

1. General and Excess liability will be provided under Commercial General Liability insurance policy(s) and covering the insured parties in connection with the performance of the work at the jobsite, that includes hazards of operations (including explosion, collapse, and underground coverage), elevators, independent contractors, employees as additional insureds, completed operations with a ten (10) year extended discovery period after substantial completion of the work, contractual liability coverage (for contracts related to the work), personal injury liability coverage, and excess Employer's Liability coverage for claims arising out of the work hereunder, for personal injury, bodily injury, and property damage, in policies of insurance such that the total available limits to all insureds combined will not be less than one hundred million dollars (\$150,000,000) combined single limits for each occurrence and aggregates, as applicable.

- a) Named Insured: City, Contractor and subcontractors of tiers Enrolled in OCIP.
- b) Insurer: HDI
- c) A.M. Best Rating: AXV
- d) Policy Term: July 21, 2019 to July 21, 2025, Plus 10 years Completed Operation Coverage
- e) Policy Form: Occurrence
- f) Limits: General Liability

Coverage	Limit
Per Occurrence	\$2,000,000
Personal & Advertising Injury Limit	\$2,000,000
General Annual Aggregate*	\$4,000,000
Completed Operations Term Aggregate**	\$4,000,000

**NOTE:** \* All aggregate limits reinstate annually.  
 \*\* 10 year Completed Operations has single aggregate

**EXCESS LIABILITY**

- a) Coverage: Follow form excess liability (terms and conditions, exclusions, etc.) of the underlying Commercial General Liability and Employers Liability policy wording.
- b) Named Insured: City, Contractor and subcontractors of tiers Enrolled in OCIP.
- c) Insurer(s): See Below
- d) A.M. Best Rating: AXV
- e) Policy Term: 7/21/19 to 7/21/25
- f) Policy Form: Follow - Form
- g) Limits: Layered to \$154M.

Layer No.	Insurer	Policy Number	Shared Limit by all Enrolled Contractors	Cumulative Limits
1	AWAC		\$10M excess \$2M/\$4M	\$12M Each Occurrence \$14M Aggregate
2	CHUBB		\$15M excess \$27M/\$29M	\$27M Each Occurrence \$29M Aggregate
3	Liberty		\$25M excess \$27M/\$29M	\$52M Each Occurrence \$54M Aggregate
4	Great American		\$50M excess \$52M/\$54M	\$102M Each Occurrence \$104M Aggregate
5	Zurich		\$50M excess \$102M/\$104M	\$152M Each Occurrence \$154M Aggregate

#### 5-4.7 CONTRACTORS POLLUTION LIABILITY

Contractor's pollution liability shall include contractual liability coverage for liability arising out of cleanup, removal, storage, or handling of hazardous or toxic chemicals, materials, substances or any other pollutants resultant from the worksite.

1. Named Insured: City, Contractor and subcontractors of tiers Enrolled in OCIP.
2. Insurer: Ironshore
3. A.M. Best Rating: AXV
4. Policy Term: July 21, 2019 to July 21, 2025
5. Policy Form: Occurrence
6. Limits: \$50,000,000 per occurrence and Aggregate

#### 5-4.8 OCIP DEDUCTIBLES – GENERAL/ EXCESS AND POLLUTION LIABILITY

1. Notwithstanding the actual policy deductibles per occurrence, the Contractor shall be liable for a \$15,000 (fifteen thousand) dollar deductible for each occurrence, to the extent losses payable are attributable to the Contractor's acts or omissions or the acts or omissions of Contractor's officers, employees, subcontractors or agents, or Uninsured Parties providing equipment, materials, supplies or services for the Work. The Contractor's deductible shall encompass the costs of investigation and defense, including court costs and attorneys' fees.
2. Any deductible amount will be invoiced to the Contractor by separate billing. If not paid within 30 calendar days of notice, the amount will be withheld from the next progress payment. Any payment of a deductible amount per occurrence by the Contractor shall not be compensable to Contractor by the City.

3. Each claim, without regard to the amount claimed, shall be reported by the Contractor to the Project Manager, OCIP administrator and the insurance company. The insurance company will adjust the claim on behalf of the Insured Parties. Insurance company will determine if there is proportional responsibility for the loss between the contractor and subcontractor, and such determination will provide the basis for payment of the deductible between the contractor and subcontractor.

#### **5-4.9 OCIP BUILDER'S RISK INSURANCE**

1. OCIP Coverage for builder's risk will provide coverage on an all-risk basis, including coverage against fire, flood, lightning, wind damage, hail, explosion, collapse, offsite storage and in-transit, and installation risks of equipment to be installed as part of the work. Earthquake coverage is not included. The policies for such insurance will be secured and maintained by the City in a form and amount consistent with such coverage commonly purchased for large construction projects. The Contractor's coverage for Builder's Risk shall be contract value with no aggregate.
2. Coverage shall include materials, supplies, and equipment that are intended for specific installation in the work while such materials, supplies, and equipment are located at the jobsite, in transit, or while temporarily located away from the Work site for the purpose of repair, adjustment, or storage at the risk of one of the insured parties.
3. Except as otherwise provided in Subsection 5-4.9 (2), this insurance will not include coverage for tools or clothing of workers, or Contractor's equipment.

The Builder's Risk policy will be endorsed waiving the carrier's rights of recovery under subrogation against the other Insured Parties.

#### **5-4.10 OCIP BUILDERS RISK DEDUCTIBLES**

1. Notwithstanding the actual policy deductible, the Contractor shall be liable for the first \$25,000 (twenty-five thousand) of loss for each occurrence. Flood/Water and LEG3 deductible is \$50,000 (fifty thousand) The Contractor may insure deductible risk at the Contractor's discretion and cost.
2. Each claim without regard to the amount claimed shall be reported by the Contractor to the OCIP Administrator and the insurance company. The insurance company will adjust the claim on behalf of the Insured Parties. Insurance company will determine if there is proportional responsibility for the loss between the contractor and subcontractor, and such determination will provide the basis for payment of the deductible between the contractor and subcontractor.
3. Payments by the insurer for all losses covered under the All-Risk Builder's Risk policy will be made to the City. The City will make the proceeds from the Builder's Risk policy covered losses available to the Contractor for rebuilding work damaged by covered perils.

#### **5-4.11 NO WAIVER OF CONTRACT OBLIGATIONS**

1. Nothing contained herein or in any document referenced herein shall relieve, limit, or be construed to relieve or limit the Contractor from any liability or obligations otherwise imposed by the contract documents.

#### **5-4.12 CHANGE ORDERS**

1. Change orders shall include the removal of OCIP provided insurance costs from the Contractors costs associated with the change order. Contractor shall specifically identify the OCIP insurance costs associated with the change order.
2. Contractor is solely responsible for ensuring that its subcontractors remove the cost of OCIP insurance coverage associated with the change order.

#### **5-4.13 THE CITY'S RIGHT TO AUDIT OCIP**

The Contractor hereby warrants to the City the accuracy of the information provided on the OCIP Insurance Enrollment Form and OCIP Credit Worksheets, and agrees that the City, its officers, agents, insurance carriers, and the OCIP Administrator may audit the records of the Contractor and its subcontractors to confirm the accuracy of information provided, including the accuracy of all estimated payrolls, and to ascertain any effect on insurance resulting from changes in the work. The audit will be held during the Contractor's normal business hours at the office of the Contractor or at another mutually agreeable location. This provision is supplemental to 2015 Whitebook Section 6-11, "Right to Audit".

1. The City shall be entitled to credits in OCIP insurance premiums that may accrue as a result of the audit. The Contractor shall also be entitled to any credits as a result of the audit for any OCIP premiums paid in excess of their OCIP Credit Worksheets.
2. The Contractor shall maintain or cause to be maintained sufficient records as may be necessary to audit its compliance and its subcontractors' compliance with the requirements of the OCIP.

#### **5-4.14 ASSIGNMENT**

1. The Contractor and each of its subcontractors shall assign to the City all return premiums, premium refunds, dividends, and other monies due in connection with the insurance provided by the City. The Contractor and its subcontractors shall execute such other further documentation as may be required by the City to effect this assignment.

#### **5-4.15 OCIP CLAIMS**

1. The Contractor, its subcontractors, and uninsured parties shall assist the City, its agents, and the OCIP Administrator and shall provide the utmost cooperation in the adjustment of claims arising out of the operations conducted under, or in connection with, the work and shall cooperate with the City's insurance carriers in claims and demands that arise out of the work and that the insurance carriers are called upon to adjust or resist.
2. The Contractor and its subcontractors shall make every effort to provide modified work for injured workers who have been placed on modified duty status as a result of a Workers' Compensation injury or illness covered under this OCIP.

#### **5-4.16 LIMIT OF OCIP COVERAGES**

1. The City does not warrant or represent that the OCIP coverages constitute an insurance portfolio that adequately addresses the risk faced by the Contractor or its

subcontractors. The Contractors and its subcontractors shall satisfy themselves as to the existence, extent, and adequacy of the OCIP coverages before the commencement of work under the Contract.

2. The OCIP coverages referred to above are set forth in full in the respective policy forms, and the foregoing descriptions of such policies are not intended to be complete, or to alter or amend any provision of the actual policies. In the event of an actual conflict between the foregoing descriptions of policies with such instruments, the provisions of the insurance policies shall govern.

#### **5-4.17 CONTRACTOR PROVIDED INSURANCE THAT IS NOT COVERED BY THE OCIP INSURANCE**

1. The OCIP does not provide the insurance policies for auto liability coverage and aircraft liability coverage. In addition, the City requires that any excluded party under OCIP who is performing work to have the required insurance listed in this section. The Contractor shall procure and maintain during the period of performance of this Contract and for 12 months following completion, insurance from insurance companies authorized to do business in the State of California, as set forth in this Section. These policies shall be primary insurance as to the City so that any other coverage held by the City shall not contribute to any loss under the Contractor's insurance. Coverage may be provided by a combination of primary and excess insurance policies, provided all insurers meet the requirements of this Section.
2. The Contractor shall obtain and maintain insurance following insurance coverages in the amounts as follows:
  - a) General Commercial Liability -- \$5,000,000 for any excluded party, any subcontractor who fails or losses enrollment in the OCIP. Coverage at least as broad as ISO form CG 00 01 10 01 or its equivalent, with no exclusion endorsements.
  - b) Automobile Liability -- \$5,000,000 Coverage at least as broad as ISO form CA 00 01 10 01, for "any auto," including owned, non-owned and hired vehicles
  - c) Aircraft Liability: If aircraft is used by the Contractor, its subcontractors, or anyone else on their behalf, the Contractor or its subcontractor shall maintain or cause the operator of the aircraft to maintain aircraft public liability insurance insuring passengers and the general public against personal injury, bodily injury, or property damage arising from aircraft owned, used, operated or hired in connection with the work by the Contractor, subcontractor, or anyone else in limits of not less than ten million dollars (\$10,000,000) combined single limit for each occurrence, for each aircraft.
3. Workers' compensation and employer's liability: Coverage shall comply with the laws of the State of California, but an employer's liability limit of less than \$1,000,000 is not permitted. The Contractor may satisfy this requirement by proof of an approved self-insurance program under California law.
4. Any insurance policy utilizing a self-insured retention is subject to approval by the City. Contractor shall be solely responsible for the payment of any self-insured retention, however, any self-insured retention policy obtained by either the

contractor, or any tier of sub-contractor, shall be endorsed to provide that the self-insured retention may be satisfied by either the named, additional insured, or City covered under the policy.

5. The insurance policies shall be endorsed as follows:
  - a) For general commercial liability and automobile insurance, as well as excess or umbrella insurance covering risks within the scope of that type insurance, the City, its Council Members, officers, employees and agents are included as additional insureds with regard to liability and defense of suits or claims arising from the operations, products and activities performed by or on behalf of the Named Insured. The Contractor's insurance applies separately to each insured, including insureds added pursuant to this paragraph, against whom claim is made or suit is brought except with respect to the policy limits of liability. The inclusion of any person or entity as an insured shall not affect any right which the person or entity would have as a claimant if not so included. Any failure of the named insured to comply with reporting provisions of the policy or breaches or violations of warranties shall not affect coverage provided to the insureds added pursuant to this paragraph. The additional insured endorsement shall provide coverage at least as broad as ISO form CG 20 10 11 01 and CG 20 37 10 01
  - b) The Contractor's insurance shall be primary. Any other insurance or self-insurance available to the City or persons stated in paragraph (1) shall be in excess of and shall not contribute to the Contractor's insurance.
  - c) The Contractor's insurance shall not be canceled or materially reduced in coverage except after 30 days prior written notice has been given to the City, except 10 days' notice shall be allowed for non-payment of premium.
  - d) The workers' compensation and employer's liability insurance, and any property insurance shall be endorsed to include a waiver by the insurer all rights of subrogation against the City and other persons specified in paragraph (1) for losses paid under the terms of the insurance policy. Any of the Contractor's off-site insurance requirements shall not have the provision of naming the City as loss payee.
6. Unless otherwise specified by supplemental condition, the insurance shall be provided by an acceptable insurance provider, as determined by the City, which satisfies the following minimum requirements: An insurance carrier authorized to do business in California and maintaining an agent for process within the state. Such insurance carrier shall maintain a current A.M. Best rating classification of "A- (A minus)" or better and a financial size of \$50 million to \$100 million (Class VII) or better, or a Lloyds of London program provided by syndicates of Lloyds of London and other London insurance carriers, providing all participants are qualified to do business in California and the policy provides for an agent for process in the state and the program assures a financial capability at least equal to the required classification and size for authorized insurers. Workers' compensation and employer's liability insurance may be provided the California State Compensation Fund.
7. Certificates of insurance and endorsements shall be provided by the Contractor and approved by the City before execution of the Contract.

**5-4.18****SUBCONTRACTORS PROOF OF INSURABILITY REQUIREMENT UNDER OCIP**

1. As a requirement of the OCIP Program, all subcontractors shall demonstrate insurability to the satisfaction of the OCIP Administrator as follows:
  - a) Commercial General Liability -- \$1,000,000
  - b) Automobile Liability - \$1,000,000
  - c) Workers' Compensation and employer's liability – as required by California law with employer's liability of not less than \$1,000,000
2. The Contractor shall be responsible for obtaining proof of insurability from its subcontractors and providing the information to the OCIP Administrator, as well as for assuring that all its subcontractors comply with the requirements of the OCIP Program.

**5-4.19****NOTICES, COSTS, AND LOSSES - OCIP**

1. Before the date on which the Contractor or any subcontractor begins performance of its part of the work, the Contractor shall cause to be furnished to the OCIP Administrator certificates of insurance for insurance required to be maintained by the Contractor and its subcontractors as provided herein. The Contractor shall not be allowed and shall not allow subcontractors on the jobsite for the performance of work until appropriate certificates of insurance are issued by the OCIP Administrator.
2. The City will pay the cost of the OCIP insurance premiums for the insurance described above as being provided by the City, and the City will receive or pay, as the case may be, all adjustments in such costs, whether by way of dividends or otherwise. All enrolled Contractors, and Subcontractors, shall assign to the City all adjustments, premium discounts, dividends, costs or other monies due for the OCIP insurer(s).
3. The cost of losses sustained because of clauses that specify the Contractor deductible amounts in any of the insurance policies furnished by the City shall be paid by the Contractor. If the City-provided OCIP policies described in Sections 5-4.6., 5-4.7 and 5-4.9 have deductible amounts greater than the Contractor-deductible amounts, such excess amounts will be paid by the City provided that the Contractor shall be responsible for losses greater than OCIP policy limits.
4. Require its subcontractors to waive the rights of recovery in the same manner as waived in the employees, and Contractors rendering services at the Work site, the Contractor, other Project contractors, and their subcontractors regardless of tier.

**5-4.20****CONTRACTOR OBLIGATIONS UNDER OCIP**

1. The Contractor shall:
  - a) Provide OCIP Coverage enrollment information as required by the City. Furnish to the OCIP Administrator and the insurance carriers all information and documentation that the OCIP Administrator may require from time to time in connection with the issuance of policies under this Contract, in such form and substance as the OCIP Administrator may prescribe.

- b) Furnish to the OCIP Administrator monthly payroll reports on the form provided by OCIP Administrator, and payroll records as required. Segregate their respective reports relating to the work for which OCIP coverage is herein provided from their records relating to other work for which such coverage is not provided.
  - c) Promptly comply with the policy requirements of the OCIP insurance carriers as submitted through the Project Manager.
2. The Contractor shall not violate or knowingly permit any subcontractor to violate any conditions of the policies of insurance provided by the City under the terms of the Contract and shall at all times satisfy the requirements of the insurance companies issuing them.
  3. The Contractor shall assure that all OCIP requirements imposed upon and to be performed by the Contractor shall likewise be imposed upon, assumed, and performed by each of its subcontractors and uninsured parties with whom it or its subcontractors have a contractual relationship.
  4. The Contractor shall furnish each bidding and negotiating subcontractor, vendor, supplier, material dealer, or other person or business entity that may provide goods or services in connection with the work a copy of this Section describing the insurance requirements for the Contractor and its subcontractors shall require each to impose the same requirement in their subcontracting and procurement procedures.
  5. If the Contractor or any of its subcontractors should fail to comply with the requirements of this Section, the City may withhold payments due to the Contractor or suspend the work until such time as the Contractor and its subcontractors have performed such obligations to the reasonable satisfaction of the Project Manager.
  6. The Contractor shall include in the bid price the cost of complying with the OCIP as herein described.
  7. Failure of the Contractor to enroll any sub-contractor of any tier in the OCIP, or to allow any sub-contractor to begin work on-site without proof of enrollment, shall constitute a breach of the OCIP insurance requirements. As such, all work performed by the sub-contractor, or any accident or injury as a result of the sub-contractor's activity, shall be considered an uninsured risk under the OCIP coverage. No OCIP insurance coverage of any line of insurance described in this document, shall extend coverage to the conditions described above.

**5-4.21 OCIP INSURANCE MANUAL**

1. The OCIP Administrator will provide an OCIP Insurance Manual that will describe procedures relevant to the OCIP to the Contractor. The Contractor and its subcontractors are required to comply with the procedures therein described.

**5-4.22 ALTERNATIVE INSURANCE**

1. In the event the City is unable to furnish, or after commencement of work elects not to furnish or to continue to furnish the OCIP coverage herein described, and upon 30 days written notice from the City, the Contractor shall secure insurance as

required under the Section 5-4.17 with limits as specified below (2). The Contractor shall be allowed a change order for additional costs of insurance that were excluded from the bid as required by this Supplemental Condition.

2. The coverage limits for insurance required pursuant to paragraph (a), and also for coverage not provided by OCIP Coverage such as automobile liability, shall be as follows:
  - a) Commercial General Liability -- \$10,000,000 annual aggregate renewal
  - b) Contractors Pollution Liability - \$3,000,000 annual aggregate
  - c) Automobile Liability -- \$5,000,000
  - d) Workers' Compensation and employer's liability - as required by California law with employer's liability of not less than \$1,000,000
  - e) Builder's Risk – Contract Value
  - f) Aircraft Liability: If aircraft is used by the Contractor, its subcontractors, or anyone else on their behalf, the Contractor or its subcontractor shall maintain or cause the operator of the aircraft to maintain aircraft public liability insurance insuring passengers and the general public against personal injury, bodily injury, or property damage arising from aircraft owned, used, operated or hired in connection with the work by the Contractor, subcontractor, or anyone else in limits of not less than \$10,000,000 combined single limit for each occurrence, for each aircraft.

#### **5-4.23 ACCIDENT REPORTS AND CLAIMS**

1. Contractor shall immediately report (as soon as feasible, but not more than 24 hours after occurrence) to the City any accident or other occurrence causing injury to persons or property during the performance of this Contract. If required by the City's Risk Management Department, the report shall be made in writing and shall include, at a minimum:
  - a) the names, addresses, and telephone numbers of the persons involved,
  - b) the names, addresses and telephone numbers of any known witnesses,
  - c) the date, time and description of the accident or other occurrence.
2. All claims for damages, losses, expenses, and other costs, received by the Contractor or the City, arising out of or resulting from or in connection with the performance of the Work shall be acknowledged by the Contractor by sending written notice to the claimant within 10 days of the Contractor's receipt of the claim. The written notice shall either:
  - a) confirm the Contractor's responsibility for damages and losses, and intent to pay or settle claim directly with the claimant; or
  - b) confirm the Contractor's responsibility for prompt investigation and processing of the claim, including identifying the Contractor's insurance carrier and claims adjuster, describing the Contractor's or insurance carrier's procedure for investigating and processing of the claim, and providing a name and telephone number for contacting the representative of the Contractor. A copy of the written notice of claim shall be delivered to the Project Manager. Should the Contractor state his intent to pay or settle the claim directly with the claimant, payment or settlement shall be

made within 45 working days of receipt of the claim. Claims to be submitted to the Contractor's insurance carrier shall be forwarded to the insurance carrier within 30 calendar days of receipt of the claim. Failure by the Contractor to send the written notice of claim, or to notify the Project Manager of any claim, shall be cause for the City to withhold payments to the Contractor.

3. The City shall have full authority to compromise or otherwise settle any claim related to the Contract at any time. The City will notify the Contractor of the receipt of any third-party claim arising from or relating to the Work within 14 working days of the receipt of the claim by the City. The City shall be entitled to recover its reasonable costs incurred in providing the Contractor timely notification of third-party claims. Neither this Section nor the City's failure to give notice shall limit the City's ability to compromise or settle any claim.

#### **5-4.24 ADDITIONAL INSURANCE PROVISIONS**

1. Nothing in Section 5-4 shall be construed to limit or qualify the liabilities and obligations otherwise assumed by the Contractor pursuant to this Contract, including but not limited to the provisions relating to indemnity and warranty.
2. The City may require the Contractor to provide complete copies of all insurance policies required by Section 5-4.
3. If at any time, the Contractor fails to maintain in full force any insurance required by the Contract, the City may acquire the necessary insurance for the Contractor and deduct the cost thereof from any payment due the Contractor.

**PURE Program OCIP – Insurance Coverage by Project Segment Summary**  
 Project Name: **North City MBC Improvements**

Owner Controlled Insurance Program Insurance coverage provided for Contractor			Contractor/Sub-Contractor Insurance Requirements by type of insurance and limits still required under OCIP		
Type	Limit	Deductible	Contractor	Limit	Self-Insured Retention
General Liability	\$150M	\$15K	General Liability	\$5M	Needs Approval
Automobile Liability**	N/A	N/A	Automobile Liability	\$5M	Needs Approval
Workers Compensation	CA Statutory - \$1M employers Liability	N/A	Workers Compensation	CA Statutory - \$1M employers Liability

Builders Risk***	Contract Value	\$25K	Builders Risk*	N/A	N/A
*Indicates shared limit among all Pure projects, per project limit applies **N/A indicates not provided by OCIP coverage *** AOP deductible per occurrence with no aggregate – deductible limit for Flood/Water and LEG3 is \$50K			Sub-Contractor	Limit	Self-Insured Retention
			General Liability	\$1M	Needs Approval
			Automobile Liability	\$1M	Needs Approval
			Workers Compensation	CA Statutory - \$1M employers Liability	
			Pollution Liability*	N/A	N/A
			Builders Risk*	N/A	N/A
			* Coverage provided by OCIP		

Contractor Insurance Required if OCIP is unavailable at commencement of work or cancelled after construction has begun			General Notes – Pure Water OCIP Coverage North City MBC Improvements
Type	Limit	Self-Insured Retention	1) Contractor obligation for payment of the deductible under the OCIP coverage is triggered by insurance carrier acceptance of claim. 2) At issuance of the Notice to Proceed, the shared OCIP coverage limits remain at 100% of the values stated above.
General Liability	\$10M	Needs Approval	
Automobile Liability	\$5M		
Workers Compensation	CA Statutory - \$1M employers Liability		
Pollution Liability	\$3M		
Builders Risk	Contract Value	Needs Approval	

**Notes:** OCIP will utilize a per-occurrence deductible program. If Contractor utilizes Self-Insured retention insurance, it will require approval of the self-insurance retention amount the contractor declares.

**END OF SECTION**

**ADD:**

**5-7.2.1.1 Safety, Sanitation, Medical, and Drug and Alcohol Requirements.**

1. The Contractor shall have ultimate responsibility for the health and safety of its employees. These specifications shall not be construed to limit the Contractors liability nor to assume that the City, its employees, agents, or designates shall assume any of the Contractors liability associated with its safety performance.
2. The Contractor shall promptly and fully carry out the safety, sanitary, and medical requirements as stated in the contract documents and as may from time to time be prescribed by the Engineer, to the end that proper work shall be done, and the safety and health of the employees and of the public are preserved and safeguarded. In case such regulations and orders are not observed by the Contractor, they may be enforced by the Engineer at the Contractor's expense. The Contractor shall summarily dismiss and shall not again engage, except with the written consent of the Engineer, any employee or subcontractor who knowingly and willingly violates the safety, sanitary, or medical requirements. Such discharge shall not be the basis of any claim for compensation or damages from the Contractor against the City, its OCIP Insurance, or any of its officers, employees, consultants or agents.
3. Appropriate first aid facilities and supplies shall be kept at the site of the Work, and the Contractor shall provide and maintain all measures required by the Construction Safety Orders issued by the Division of Industrial Safety of the State of California.
4. The Contractor shall prohibit the use or possession of intoxicating liquors or controlled substance at the jobsite or in any vehicle or equipment used in performance of the Work. This prohibition shall not apply to use or possession of prescription or non-prescription medication in accordance with prescribed directions.
5. Employ a "competent person" as defined by Cal OSHA. The "competent person" shall monitor, educate, and facilitate safety related jobsite activities. This individual shall be on the jobsite during all work hours identified in Section 6.7, Paragraph (b), or as authorized in writing by the Engineer.
6. When trenching, place your name and emergency telephone number adjacent to the Work at intervals and locations approved by the Engineer. The method of marking shall be approved by the Engineer.
7. The City shall not assume any role in determining the adequacy of the Contractors Safety and Health Plan.

**ADD:**

**5-7.2.1.2 Contractor's Safety and Health Representatives.**

1. The Contractor shall provide a qualified and experienced full-time, on-site Safety Professional to serve as their Safety and Health Representative. Qualifications shall include at least 10 years of construction related safety experience as the lead site safety representative (only duty) and experience in developing and implementing accident prevention programs for construction projects. If the Contractors Safety and Health Representative has less than 10 years construction related safety experience, or equivalent level of education and experience, the Contractors Safety and Health Representative must be approved by The City of San Diego. This individual shall be assigned only to this project and whose sole duty is monitoring and supervising the Contractor's and Subcontractors' Safety, Health, and

Environmental Program, and who shall be on-site when any work is in progress. In the event the Contractor's Safety Representative gives notice of separation of employment or is transferred from the Contractor's work site, the Contractor shall ensure that the incumbent Safety Representative remains on site for a minimum of two weeks after giving notice, and that the Contractor's replacement Safety Representative receives a minimum of two weeks safety orientation on the construction site before being allowed to assume the full duties as the Contractor's Safety Representative. This requirement may be waived upon written approval by the City. The Contractor's Safety and Health Representative shall support and Implement the OCIP Safety Program, or its equivalent and shall coordinate and require the Contractor's and Subcontractor's foremen to participate in the OCIP Program and conduct and submit the required audits as described in the Safety Programs section of the OCIP Construction Safety Procedures Manual. In the event the Contractor fails to comply with the above safety professional requirements, the Engineer shall obtain the services of a Safety Professional, and charge all costs associated with the services to the Contractor.

2. The Contractor's safety and health representatives shall be responsible for, and have the authority to, direct the required safety and health programs, correct unsafe conditions and unsafe practices, and stop work in areas containing unsafe conditions or practices until such unsafe conditions or practices are correct.
3. The Contractor's safety and health representatives shall be charged with the responsibility of daily on-site safety and health coordination and inspections and shall record the results of the inspections and corrective actions, if any, on a report form provided by the City.
4. The weekly report shall be submitted to the Engineer not later than the first working day following the workweek covered by the report.
5. Contractor's Safety and Health representatives shall participate in weekly progress meetings and report out on safety conditions at the worksite.

#### **5-7.2.1.3 Submittals.**

1. Submit, within 30 days of the Notice of Award and before execution of the Contract or at a later time as directed by the Engineer a Project-specific safety and health program conforming to applicable laws and regulations that includes the following:
  - a) A Project-specific Injury and Illness Prevention Program covering work performed by or for the Contractor at the site.
  - b) The resume of qualification and experience for the Contractor's on-site safety representative responsible for safety and health.
  - c) A written Hazard Communication Program covering work performed by or for the Contractor at the site.
  - d) A written Emergency Action and Fire Protection Plan and a written Fire Prevention Plan covering work performed by or for the Contractor at the site. The Contractor shall have the Fire Protection Plan reviewed and approved by the jurisdictional fire protection agency. The Contractor's Fire Protection Plan shall include:
    - i. Dedication of an on-site 2,000 gallon or greater water truck fitted with a one and one-half inch fire hose that shall have the ability to access all on-site construction operations.

- ii. Fire watch on-site during construction operations. This role may be filled by the Contractor's safety representative.
  - iii. Contractor shall check in daily with CAL FIRE for an update on fire conditions and to determine if any fire restrictions have been ordered. This information shall be included on the Contractor's Daily Report to the Engineer.
  - iv. Contractor shall cease brush clearing, cutting, or chipping operations when a red flag fire day is declared by the jurisdictional fire agency.
  - v. Contractor shall have tailgate meetings daily to communicate fire conditions and fire prevention measures necessary for the daily work.
- e) A written hazard safety analysis of the project conditions. The Contractor shall perform a comprehensive site analysis before commencement of work to determine any existing hazards and shall abate these hazards or inform the Engineer and all affected employees of these hazards and how to protect themselves from them.
- f) In addition to the reports that the Contractor is required to file under the provisions of California Workers' Compensation law and other applicable laws, submit a report to the Engineer on or before the 10th day of each month giving:
- i. The total force employed on the contract in workdays during the previous calendar month.
  - ii. The number and character of all accidents resulting in loss of time, medical treatment and first aid treatment.
  - iii. Any other information or classification of employee injuries incurred on the Project and disabilities resulting there from that may be required by the Engineer.
- g) Obtain and keep copies of the Material Safety Data Sheets of all hazardous materials brought to and stored at the site.

#### **5-7.2.1.4 Emergency Procedures.**

1. Designate responsible personnel to make emergency calls. Should an emergency occur, the Contractor shall:
  - a) Immediately secure the area and implement the Emergency Action Plan. Preserve the site for investigation until released by OSHA, the Engineer or OCIP Insurance Provider.
  - b) Notify the Construction Management Team or another representative previously designated by the Engineer in writing.
  - c) Provide information regarding the emergency to the appropriate authorities and authorized City representatives only. Questions from others including the press and media shall be referred to the Engineer.

2. Emergency procedures shall ensure that the Contractor's Safety Representative or the most qualified senior supervisor present takes charge and directs the handling of the emergency. The Contractor shall ensure proper handling of all Subcontractor related emergencies per the Contractor's and OCIP Emergency Procedures.
3. All Incidents, whether causing injury, environmental impacts or unauthorized property damage or not, shall be investigated by the Contractor and documented on forms provided by the OCIP and as required by the OCIP Construction Procedures Safety Manual. Instruct and require supervisors that, except for rescue or other emergency measures, the Incident site shall be secured until investigation has been completed and the scene has been released by both the Contractor and the Engineer, and as appropriate, the insurance company/OSHA.
4. Injuries which require medical attention shall be reported to the Engineer or Construction Management Team immediately after summoning medical help and securing the scene to prevent further injury. Injuries which meet the Cal/OSHA, Title 8 requirement as reportable shall also be reported to Cal/OSHA immediately. The Contractor shall investigate and generate a report which identifies the root causes and corrective actions for all accidents and incidents. This report shall be on the OCIP Incident form or an equivalent form approved by the Engineer. The Construction Management Team will also investigate all accidents and incidents to identify means to prevent further occurrences
5. For incidents that caused or had the potential to cause injury or significant losses, the Engineer or Construction Management Team may request a post Incident review. In such cases, the Contractor, Subcontractor, or other entity shall send an appropriate Manager to present the facts of the incident and provide information how future similar incidents will be prevented.
6. Immediately notify the Engineer or OCIP Safety Manager of any unabated hazardous conditions and take action to guard or control access to these conditions until correction has been accomplished. Notify the Engineer of any property or equipment found at the work site that is not under the Contractor's control. However, it shall be the Contractor's responsibility to take necessary precautions to prevent injury to persons or damage to property from such hazardous conditions until corrected by the responsible party.

#### **5-7.2.1.5 Safety and Health.**

1. Have and implement a written site-specific IIPP and Code of Safe Work Practices covering site work to be performed under the contract.
  - a) If not a part of the IIPP, the following procedures shall also be implemented:
    - i. Stress the importance of and conduct a thorough hazard safety analysis at the start of the project.
    - ii. Participate to develop and ensure all key staff are aware of the project hazards and keep staff informed of existing and developing safety hazards.
    - iii. Encourage all suppliers to visit the project site to assess hazards before the delivery of materials.

- b) Foremen and superintendents shall provide written Job Task Analysis for all tasks. The JTA shall include all hazards that might be encountered while performing the task and methods for assuring that each employee will be protected from the hazard.
- c) Utilize supervisory and craft employees to conduct and document a jobsite Safety Survey each week. Each survey shall include subcontractor activities. Utilize the results of each survey to inform Contractor and Subcontractor employees and other affected jobsite individuals of hazards on the job and how to protect themselves from these identified hazards. Survey shall be submitted to the Engineer for review and comment. Identify upcoming jobs and associated hazards and notify affected employees and individuals.
- d) Before authorization or start of construction, the Contractor shall prepare a Spill Prevention and Contingency Plan for review and approval of the appropriate jurisdictional agency and all construction crew members shall be trained in the requirements of the Spill Prevention and Contingency Plan. The Plan will include information on storage of hazardous materials, emergency response procedures, employee training requirements, fire safety, first-aid procedures, hazardous materials release containment/control procedures, and release reporting requirements. The Contractor shall integrate this SP&CP into the IIPP.
- e) All persons shall be required to wear American National Standards Institute approved hard hats while at the Work site; no bump caps will be permitted. Each employee's hard hat shall identify the employee's name and employer. Steel toed shoes shall be worn when in active construction zone. Safety vest or equivalent shall be worn in addition to hard hat when in active construction zone.
- f) When sufficient time is available, notify the City in advance of safety inspections by Cal/OSHA, the fire department, or other governmental agencies. When regulatory agencies arrive on-site for unannounced inspections, the Contractor shall immediately inform the Engineer and the Construction Management Team and shall escort the inspector(s) for the entire duration of their time on-site. When the Engineer is not present during a safety inspection, immediately report to the Engineer that an inspection has taken place, and describe any violations, or citations, and the Contractor's abatement actions or salient events arising from the inspection.
- g) The Contractor shall be responsible to ensure compliance with the specific policies and procedures established in the OCIP Construction Safety Procedures Manual. To ensure Contractor and Subcontractor compliance with the IIPP's and applicable laws, contractor specifications, and the Owner Controlled Insurance Program, the Engineer or Construction Management Team Representative will use a Schedule Driven Safety Program and a Managing Safety Performance or equivalent program(s) as approved by the Engineer to gauge the Contractor's compliance and adherence to its site-specific IIPP and applicable laws and regulations. Such monitoring and audits by the Construction Management Team or the Engineer will not relieve the Contractor of any safety and health obligations.
- h) Eating and drinking shall not be permitted in areas containing hazardous materials.

- i) Equipment shall be maintained in a proper state of operation as per the manufacturer's specifications. Equipment service records will be maintained and be available for inspection to ensure compliance.
- j) Reduce harmful combustion engine emissions to the greatest extent feasible by conducting preventive maintenance on construction equipment and, whenever possible, limit equipment idling time by such means as turning engines off while vehicles are in loading and unloading queues; use clean and low sulfur fuels and use electric motors to drive conveyor belts, pumps, compressors, and other equipment.
- k) All personnel shall wear appropriate Personal Protective Equipment in accordance with the Contractor's IIPP, regulatory requirements, and the OCIP Construction Safety Procedures Manual. All personnel in active construction areas shall be required to wear approved hard hats, eye protection, safety vests with reflective stripes, steel toed work shoes, long pants, and shirts with sleeves. Gloves, hearing protection, and additional eye protection may be required as appropriate.
- l) No asbestos- or PCB-containing materials shall be used.
- m) At the beginning of the Project, the Contractor shall post at the entrance to the construction site a sign of size and wording approved by the Engineer listing the general rules, regulations, attire, and PPE requirements.

**5-7.2.1.6 Safety and Health Training.**

- 1. The Contractor's safety and health representatives shall conduct training classes before commencement of the Work and on a monthly basis, or more often if needed, on safety and health, emergency procedures, first aid, fire prevention, and other areas applicable to the Work. The Contractor may seek input from the Engineer.

**5-7.2.1.7 First Aid.**

- 1. The Contractor is responsible to provide initial emergency care and to notify Emergency Responders by calling 911 when required. The contractor is also responsible to arrange for transportation of sick or injured persons off the job site when other than emergency transport is appropriate.

**5-10.2.1 Public Notice by Contractor.** To the "WHITEBOOK", items 2 and 3, DELETE in their entirety and SUBSTITUTE with the following:

- 2. No less than 5 Working Days in advance of Project construction activities and utility service interruptions, you shall notify all critical facilities, businesses, institutions, property owners, residents, or any other impacted stakeholders within a minimum 300-foot (90 m) radius of the Project. Verbal and written notifications shall be sent to critical facilities (including but not limited to police stations, fire stations, hospitals, and schools). A copy of written notifications sent to any critical facility shall also be sent to the Resident Engineer. You shall keep records of the people contacted, along with the dates of notification, and shall provide the record to the Engineer upon request. You shall identify all other critical facilities that need to be notified.

3. Furnish and distribute public notices in the form of door hangers using the City's format to all occupants and/or property owners along streets:
  - a) Where Work is to be performed at least Working 5 Working Days before starting construction or survey activities or impacting the community as approved by the Resident Engineer.
  - b) Within 5 Working Days of the completion of your construction activities where Work was performed, you shall distribute public notices in the form of door hangers, which outlines the anticipated dates of Asphalt Resurfacing or Slurry Seal.
  - c) 72 hours in advance of the scheduled resurfacing.

**5-13 ELECTRONIC COMMUNICATION.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. PMWeb shall be used on this Contract. See Technicals Section 01 33 22 Web Based Construction Document Management.

**5-15.1 General.** To the "WHITEBOOK", item 10, DELETE in its entirety and SUBSTITUTE with the following:

10. If your construction activities have encountered flammable liquids or other hazardous substances, you shall ensure that construction staff have the required Hazardous Waste Operations and Emergency Response (HAZWOPER) certification. Construction staff shall include: City Engineers, City Laboratory Technicians, and City staff that perform onsite inspections.
  - a) If your Work encounters flammable liquids or other hazardous substances, you shall be responsible for scheduling training for all construction staff to attend and for submitting verification to the Engineer that construction staff have the required HAZWOPER certification prior to continuing that Work in that area. You shall maintain the HAZWOPER certifications annually until the construction activities triggering the requirement is complete, as approved by the Resident Engineer.

## **SECTION 6 – PROSECUTION AND PROGRESS OF THE WORK**

**6-1.1 Construction Schedule.** To the "WHITEBOOK", item 1, subsection "e" and "s", DELETE in their entirety and SUBSTITUTE with the following:

- e) Monthly progress payments are contingent upon the submittal of an updated Schedule to the Engineer. The Engineer may refuse to process the whole or part of any monthly payment if you refuse or fail to provide an acceptable schedule.
- s) Submit an updated cash flow forecast with every pay request (for each Project ID or WBS number provided in the Contract) showing periodic and cumulative construction billing amounts for the duration of the Contract Time. If there has been any Extra Work since the last update, include only the approved amounts.
  - i. Refer to the Sample City Invoice materials in **Appendix D – Sample City Invoice with Cash Flow Forecast** and use the format shown.

- ii. See also the "Cash Flow Forecast Example" at the location below:

<https://www.sandiego.gov/ecp/edocref/>

**6-1.5.2 Excusable Non-Compensable Delays.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

**6-1.5.2 Excusable Non-Compensable and Concurrent Delays.**

1. The City shall only issue an extension of time for Excusable Delays that meet the requirements of 6-4.2, "Extensions of Time" for the following circumstances:
  - a) Delays resulting from Force Majeure.
  - b) Delays caused by weather.
  - c) Delays caused by changes to County, State, or Federal law.
2. When a non-excusable delay is concurrent with an Excusable Delay, you shall not be entitled to an extension of Contract Time for the period the non-excusable delay is concurrent with the Excusable Delay.
3. When an Excusable Non-Compensable Delay is concurrent with an Excusable Compensable Delay, you shall be entitled to an extension of Contract Time but shall not be entitled to compensation for the period the Excusable Non-Compensable Delay is concurrent with the Excusable Compensable Delay.

**6-4.2 Extensions of Time.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. The Contract Time shall not be modified except by Change Order.
2. You shall notify the City in writing within **1 Working Day** after the occurrence and discovery of an event that impacts the Project Schedule.
  - a) If you believe this event requires a Change Order, you shall submit a **written Change Order request with a report to** the City that explains the request for Change Order within **5 Working Days**. The Change Order request must include supporting data, a general description of the discovery, the basis for extension, and the estimated length of extension. The City may grant an extension of time, in writing, for the Change Order request if you require more time to gather and analyze data.
3. The Engineer shall not grant an extension of Contract Time in accordance with 6-1.5, "Excusable Delays" unless you demonstrate, through an analysis of the critical path, the following:
  - a) The event causing the delay impacted the activities along the Project's critical path.
  - b) The increases in the time to perform all or part of the Project beyond the Contract Time arose from unforeseeable causes beyond your control and without your fault or negligence and that all project float has been used.

4. Any modifications to the Contract Time will be incorporated into the weekly document that the Engineer issues that stipulates the Contract Time. If you do not agree with this document, submit to the Engineer for review a written protest supporting your objections to the document within **30 Calendar Days** after receipt of the statement. Your failure to file a timely protest shall constitute your acceptance of the Engineer’s weekly document.
  - a) Your protest will be considered a claim for time extension and shall be subject to 2-10.1, “Claims”.

**6-4.4 Written Notice and Report.** To the “WHITEBOOK”, DELETE in its entirety and SUBSTITUTE with the following:

1. Your failure to notify the Resident Engineer within **1 Working Day** OR provide a Change Order request within **5 Working Days** after the event, in accordance with 6-4.2, “Extensions of Time”, will be considered grounds for refusal by the City to consider such request if your failure to notify prejudices the City in responding to the event.

**ADD:  
6-6.1.1**

**Environmental Document.**

1. The City of San Diego has prepared an **Environmental Impact Report/Environmental Impact Statement (EIR/EIS)**, Project. No. **SCH#2106081016/PS #499621** for Pure Water Phase 1, which includes the Metro Biosolids Center Improvements. This document may be obtained at the following web link:

<https://www.sandiego.gov/public-utilities/sustainability/pure-water-sd/reports>

In addition, Pure Water Phase 1 has obtained the Environmental Documents and permits listed below with corresponding links that the Contractor shall comply with.

<b>PURE WATER ENVIRONMENTAL DOCUMENTS</b>
Site Development Permit
Record of Decision
FAA Determination of No Hazard
MCAS Miramar Site Approval
Air Pollution Control District Authority to Construct Permits
Development Services Department Building Permits

These documents can be obtained at the following link:

<https://drive.google.com/drive/folders/19Kx4fEqn3-oOLYeWbEDOGpPmJ568yo81?usp=sharing>

2. Compliance with the City’s environmental documents shall be included in the Contract Price.

**6-6.2.1 Archaeological and Native American Monitoring Program.** To the “WHITEBOOK”, ADD the following:

4. The City will retain a qualified archaeologist and Native American Monitor for this Contract. You shall coordinate your activities and Schedule with the activities and schedules of the archaeologist and Native American monitor. Notify the Engineer before noon of the Working Day before monitoring is required. See 3-5, “INSPECTION” for details.

**6-6.2.2 Paleontological Monitoring Program.** To the "WHITEBOOK", ADD the following:

3. The City will retain a qualified paleontologist for this Contract. You shall coordinate your activities and Schedule with the activities and schedules of the paleontologist monitor. Notify the Engineer before noon of the Working Day before monitoring is required. See 3-5, "INSPECTION" for details.

**6-9 LIQUIDATED DAMAGES.** To the "WHITEBOOK", ADD the following:

3. Contractor and Owner recognize that time is of the essence of this Agreement and that Owner will suffer financial loss if the Work is not completed within the times specified in Contract Times in the Scope of Work. The parties also recognize the delays, expense, and difficulties involved in proving in a legal or arbitration proceeding the actual loss suffered by Owner if the Work is not completed on time. Accordingly, instead of requiring any such proof, Owner and Contractor agree that as liquidated damages for delay (but not as a penalty), the Contractor shall pay the following amounts for each Milestone for each day that expires after the time specified herein until the Work is substantially complete. If the Work of multiple Milestones are simultaneously not completed by the times specified, the Contractor shall pay the amount for the first Milestone not completed.

Milestone No.	Milestone Description	Required Completion Date	Amount of Liquidated Damages
Milestone 1	Intermediate Substantial Completion	619 Working Days after Notice to Proceed	\$4,600/day
Milestone 2	Start of Integration Period	736 Working Days after Notice to Proceed	\$4,600/day
Milestone 3	Substantial Completion	838 Working Days after Notice to Proceed	\$4,600/day
Milestone 4	Final Acceptance and Completion	889 Working Days after Notice to Proceed	\$4,600/day

**SECTION 7 – MEASUREMENT AND PAYMENT**

**7-3.1 General.** To the "GREENBOOK" and "WHITEBOOK", paragraph (8), DELETE in its entirety and SUBSTITUTE with the following:

If, within the time fixed by law, a properly executed notice to stop payment is filed with the City, due to your failure to pay for labor or materials used in the Work, all money due for such labor or materials will be withheld from payment in accordance with applicable laws.

To the "WHITEBOOK", ADD the following:

1. Unless specified otherwise, the Contract Price includes use, consumer, and other taxes mandated by applicable legal requirements.
2. As provided in §7105 of the California Public Contract Code, if the Contract is not financed by revenue bonds, you are not responsible for the cost of repairing or restoring damage to the Project when damage was proximately caused by an act of God, in excess of 5% of the Contract Price, if the following occur:
  - a) The Project damaged was built in accordance with the Contract requirements.
  - b) There are no insurance requirements in the Contract for the damages.

**7-3.2 Partial and Final Payment.** To the "WHITEBOOK", item 1, DELETE in its entirety and SUBSTITUTE with the following:

1. The Final Payment, which is the release of Retention, shall be paid to you after you have successfully submitted the following required documents:
  - a) An affidavit that payrolls and bills for materials, equipment, and other indebtedness connected with the Work for which the City or the City's property might be responsible for or encumbered by.
  - b) A certificate evidencing that insurances required by the Contract Documents shall remain in force after Final Payment is currently in effect and shall not be canceled or allowed to expire until at least a 30 Calendar Days prior written notice has been given to the Engineer.
  - c) Consent of Surety to Final Payment.
  - d) If required by the Engineer, other data establishing payment or satisfaction of obligations such as receipts, releases and waivers of liens, claims, and security interests or encumbrances arising out of the Contract Documents. If a Subcontractor refuses to furnish a release or waiver required by the City, you may furnish a bond satisfactory to the Engineer to indemnify the City against such lien.
  - e) If required in the Contract Documents, the successful completion and submittal of the required reports such as construction demolition, waste recycling, and hydrostatic discharge reports.
  - f) Required EOCP Final Summary Report in accordance with Section 0-12, "Contract Records and Reports", record drawings, operations manuals, test reports, warranty documentation, and UL labels shall be submitted before requesting the release of retention.
  - g) Acceptance of the completed Project by the asset owning Department.

To the "WHITEBOOK", ADD the following:

2. Submit an invoice for payment after you successfully complete the required documents and the City will pay the invoice within 30 Calendar Days. The City will pay 6% annually for late retention payments.

**7-3.2.1 Application for Progress Payment.** To the "WHITEBOOK", item 3, DELETE in its entirety and SUBSTITUTE with the following:

3. The City shall not pay progress or partial payments until you submit to the Engineer an acceptable updated Schedule. It is solely your responsibility to prepare and submit the Schedule updates.

**7-3.2.2 Amount of Progress Payments.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. The City will pay 6% annually for late progress payments.
2. Progress payments will be considered "late" if the following occur:
  - a) The City does not pay the contractor within 30 Calendar Days from receipt of an undisputed and properly submitted invoice. A properly submitted payment invoice means that the City has approved for payment the entire invoice amount or if the Resident Engineer has not disputed any portion of the application within 7 Calendar Days of the date of submission.
  - b) The application for payment does not require signing of a Contract Change Order.
3. The Engineer may withhold payment for any of the following reasons:
  - a) Defective or incomplete Work.
  - b) Not providing an updated and accurate Cost Loaded Construction Schedule in accordance with 6-1.1, "Construction Schedule".
  - c) Stop notices, wage orders, or other withholdings required by Applicable Law. Your failure to comply with 5-3.3, "Payroll Records" and the Contractor Registration and Electronic Reporting System requirements of the Contract Documents.
4. The Engineer may back charge the contract for any of the following reasons:
  - a) Defective or incorrect Work not remedied.
  - b) Damage to City property or a third party's property that was caused by you.
  - c) Liquidated Damages.

**7-3.2.3 Waiver of Claims at Final Payment.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. Your acceptance of Final Payment constitutes a waiver of affirmative Claims by you, except those previously made in writing and identified as unsettled at the time of Final Payment.

**7-3.2.4 Withholding of Payment and Back Charge.** To the "WHITEBOOK", DELETE in its entirety.

**7-3.5.1**

**General.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. Unit Bid prices shall not be subject to adjustment regardless of quantity used, or if none is used, for the following Bid items:
  - a) imported backfill
  - b) shoring
  - c) water services
  - d) house connection sewers
  - e) water pollution control items

Upon discovery and prior to the Work, you shall notify the Resident Engineer if there is a change in Bid item quantity that increases the total Contract Price by 5% or \$100,000 or more, whichever is less.

**7-3.9**

**Field Orders.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. If the cumulative total of Field Order items of Work does not exceed the "Field Orders" Bid Item, the City shall pay those Field Orders as shown below:

**TABLE 7-3.9  
FIELD ORDER LIMITS**

Contract Price	Maximum Field Order Work Amount
Less than \$100,001	\$2,500
\$100,001 to \$1,000,000	\$5,000
\$1,000,001 to \$5,000,000	\$10,000
\$5,000,001 to \$15,000,000	\$20,000
\$15,000,001 to \$30,000,000	\$40,000
Greater than \$30,000,000	\$50,000

2. Field Order items of Work for contracts greater than \$15,000,000 will require additional approvals from the City prior to its approval by the Resident Engineer.
3. The City will issue a Field Order only after the City's acceptance of the cost of the field order amount.
4. Field Orders shall not be used to add scope or to include extensions of time related to changes in work.
5. If in the event there is a change related to the critical path on the project which necessitates an extension of time and the change amount is within the Field Order

limits shown on Table 7-3.9, then a Field Order can be issued to compensate you for the approved costs. Any extensions of time associated with the change shall be included in a subsequent Change Order and no additional compensation shall be granted as part of the change order for the extension of time.

6. The unused portions of Field Orders Bid item shall revert to the City upon Acceptance.

**7-3.11 Compensation Adjustments for Price Index Fluctuations.** To the "WHITEBOOK", ADD the following:

5. This Contract is not subject to the provisions of The "WHITEBOOK" for Compensation Adjustments for Price Index Fluctuations for paving asphalt.

**7-4.3 Markup.** To the "WHITEBOOK", item 4, DELETE in its entirety and SUBSTITUTE with the following:

4. When a Subcontractor is performing Extra Work, the allowance for overhead and profit shall be applied to the labor, materials, and equipment costs of the Subcontractor as follows:
  - a) Regardless of the number of a Subcontractor's tasks for Extra Work, you may only apply 10% for the first \$50,000 of the Subcontractor's portion of accumulated total cost then 5% for any remaining costs. You shall not apply 10% to any costs after the first \$50,000 of accumulated total costs from performing Extra Work.
  - b) If the accumulated costs of single or subsequent tasks exceed the \$50,000 threshold, you shall instead only apply 5% to any amounts in excess of the \$50,000.
  - c) Regardless of the number of hierarchical tiers of Subcontractors, you may only markup a Subcontractor's Work once.

## **SECTION 8 - FACILITIES FOR AGENCY PERSONNEL**

**8-2 FIELD OFFICE FACILITIES.** To the "WHITEBOOK", ADD the following.

1. Provide Field Office per Technicals Section 01 50 00.

## **SECTION 203 – BITUMINOUS MATERIALS**

**203-6.3.1 General.** To the "WHITEBOOK", ADD the following:

3. Asphalt concrete for Job Mix Formula (JMF) and Mix Designs shall be Type III and shall not exceed 15% RAP.

## SECTION 209 – PRESSURE PIPE

**209-1.1.1 General.** To the "WHITEBOOK", ADD the following:

2. PVC products specifically type C900 and C905, as manufactured or distributed by J-M Manufacturing Company or JM Eagle shall not be used on the Contract for pressurized pipe.
3. Refer to AWWA C900-16 for all references to AWWA C905.

## SECTION 301 – SUBGRADE PREPARATION, TREATED MATERIALS, AND PLACEMENT OF BASE MATERIALS

**301-1.6 Preparatory Repair Work.** To the "WHITEBOOK", item 1, DELETE in its entirety and SUBSTITUTE with the following:

1. Prior to the placement of any asphalt concrete or application of slurry, you shall complete all necessary preparation and repair Work and shall obtain approval by the Resident Engineer.

ADD the following:

13. Asphalt concrete shall be Type III and shall not exceed 15% RAP in accordance with 203-6.3.1, "General".

## SECTION 302 – ROADWAY SURFACING

**302-4.5 Scheduling, Public Convenience and Traffic Control.** To the "GREENBOOK", paragraphs (1) and (2), DELETE in their entirety and SUBSTITUTE with the following:

1. In addition to the requirements of Part 6, you shall comply with the following:
  - a) At least 5 Working Days prior to commencing the Work, you shall submit your proposed Schedule to the Engineer for approval.
  - b) Based upon the approved schedule, you shall notify residents and businesses of the Work and post temporary "No Parking" signs 72 hours in advance.
  - c) Requests for changes in the approved Schedule shall be submitted to the Engineer for approval at least 3 Working Days before the street is scheduled to be sealed.

## SECTION 303 – CONCRETE AND MASONRY CONSTRUCTION

**303-5.1.1 General.** To the "WHITEBOOK", ADD the following:

7. For the purposes of this section, the terms "walk" and "access ramp" shall be synonymous with "sidewalk" and "curb ramp and pedestrian ramp", respectively.

## SECTION 306 – OPEN TRENCH CONDUIT CONSTRUCTION

**306-7.8.2.1 General.** To the "WHITEBOOK", item 2, DELETE in its entirety and SUBSTITUTE with the following:

2. Pressure testing of pipe and fittings at the lowest elevation shall be performed at 150% of the specified test pressure and no less than 100% of the specified test pressure at the highest elevation.
  - a) Specified test pressure for Class 235 pipe shall be 150 psi and is tested at 225 psi.
  - b) Specified test pressure for Class 305 pipe shall be 200 psi and is tested at 300 psi.

**306-8.8.3 Thrust Blocks and Anchor Blocks.** To the "WHITEBOOK", item 1, DELETE in its entirety and SUBSTITUTE with the following:

1. Thrust blocks shall be installed at all bends, tees, dead-ends and reducers. The use of restrained joints requires approval from the Engineer. The thrust blocks shall be constructed as follows:
  - a) Thrust blocks shall be constructed of concrete conforming to 201-1, "PORTLAND CEMENT CONCRETE".
  - b) Unless otherwise shown on the Plans, concrete thrust blocks shall be constructed in accordance with SECTION 303 - CONCRETE AND MASONRY CONSTRUCTION and the Standard Drawings.
  - c) Concrete blocks shall be constructed between undisturbed ground and fittings to be anchored.
  - d) Unless otherwise shown on the Plans, the quantity of concrete and the bearing area of the pipe against undisturbed soil shall be as shown on the Standard Drawings.
  - e) Unless otherwise shown on the Plans, concrete shall be placed so pipe joints and fittings remain accessible to repairs.

**306-8.9.2.3 Allowable Leakage.** To the "GREENBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. For prefabricated pressure pipe testing requirements, refer to prefabricated gravity pipe pressure testing requirements in 306-7.8.2, "Pressure Testing and Leakage Inspection".

## SECTION 402 – UTILITIES

**402-2 PROTECTION.** To the "WHITEBOOK", item 2, ADD the following:

- g) Refer to **Appendix J - Advanced Metering Infrastructure (AMI) Device Protection** for more information on the protection of AMI devices.

**402-6 COOPERATION.** To the "GREENBOOK", ADD the following:

1. Notify SDG&E at least 10 Working Days prior to excavating within 10 feet of SDG&E Underground High Voltage Transmission Power Lines (69 KV and higher).

**402-7.2 Pipe Separations.** To the "WHITEBOOK", item 1, subsection "a", DELETE in its entirety and SUBSTITUTE with the following:

- a) You shall notify the Engineer immediately if:
  - i. 1 foot (0.3 m) vertical separation as measured from the outside of pipe wall to the outside of pipe wall between sewer and water mains cannot be maintained.
  - ii. 10 feet (3.0 m) horizontal separation as measured from the outside of pipe wall to the outside of pipe wall between sewer and water mains cannot be maintained.
  - iii. 6 inches (152.4 mm) vertical separation as measured from the outside of pipe wall to the outside of pipe wall between utilities other than sewer and water mains cannot be maintained.
  - iv. 3 feet (0.9 m) or more of cover over the top of the water main cannot be maintained.
  - v. 5 feet (1.5 m) or more of cover over the top of the recycled water main cannot be maintained.

#### **SECTION 601 - TEMPORARY TRAFFIC CONTROL FOR CONSTRUCTION AND MAINTENANCE WORK ZONES**

**601-2.1.4 Traffic Control for Resurfacing and Slurry Sealing.** To the "WHITEBOOK", item 3, subsection "d", DELETE in its entirety and SUBSTITUTE with the following:

- d) Place "NO PARKING - TOW-AWAY ZONE" signs 72 hours in advance of the scheduled slurry sealing. Reschedule street block segments which are not completed by the last posted Working Day. If a Work delay of 48 hours or more occurs from the originally scheduled Work date, remove the "NO PARKING - TOW-AWAY ZONE" signs for a minimum of 24 hours, then reset and re-post for the appropriate Work date.

**601-3.5.1 General.** To the "WHITEBOOK", item 3, DELETE in its entirety and SUBSTITUTE with the following:

3. Temporary "No Parking" and "No Stopping" signs shall be installed 72 hours before enforcement. Temporary "No Parking" and "No Stopping" signs shall be installed and removed as specified in the Special Provisions. Signs shall indicate specific days, dates, and times of restrictions. If violations occur, call Police Dispatch 619-531-2000 to enforce the Tow-Away notice.

**601-3.6 Channelizing Devices.** To the "WHITEBOOK", item 4, Barricades, ADD the following:

- h) You shall place "OPEN TRENCH" signs (C27(CA)) on Type 3 Barricade within the construction Work zone, ahead of any Work areas with open trenches that are greater than 3 inches in depth, in accordance with California MUTCD SECTION 6F.103 (CA). The barricades shall be placed in a continuous manner and shall prevent pedestrian, vehicular, and biker access to the open trench area.

**SECTION 1001 – CONSTRUCTION BEST MANAGEMENT PRACTICES (BMPs)**

**1001-1 GENERAL.** To the "WHITEBOOK", ADD the following:

- 7. Based on a preliminary assessment by the City, this Contract is subject to **WPCP**.

**END OF SECTION**

**SECTION 01 12 01  
PARTNERING**

**PART 1 GENERAL**

**1.01 PARTNERING**

- A. The Owner intends to encourage the foundation of a cohesive partnership with the Contractor. This partnership will be structured to draw on the strengths of each organization to identify and achieve reciprocal goals. The general objectives are effective and efficient contract performance to achieve completion within budget, on schedule, and in accordance with the intent of the Contract Documents.
- B. Project partnering recognizes that the Owner, Contractor, Construction Manager and Design Engineer all hold in common the goal of successful completion of this Project, including the following specific goals:
  - 1. Construction of a facility that meets the Project performance standards as defined in the Specifications.
  - 2. Completion of the Project on schedule in order to correctly interface with other concurrent and related projects and provide operational success of the MBC and the Pure Water Program Projects.
  - 3. Conformance to budgetary requirements and limitations.
  - 4. Promote organizational efficiency for all parties.
- C. In addition, it is recognized that safety, liability limitation, avoidance of litigation, reputation, good will, and other factors are of significant importance to all parties involved in the Project.
- D. Through partnering, the four parties will agree among themselves regarding the primary goals for the Project and the methods that will be used to accomplish them. This will require development of a cooperative open relationship among the Contractor, Owner, Construction Manager, and Design Engineer. The parties will mutually develop a communication framework and a conflict resolution system to be used throughout the Project.
- E. Partnering will include an initial 8-hour workshop in which the basic requirements for the partnering relationship will be established. The following persons will be expected to attend the workshop, at a minimum.
  - 1. Contractor:
    - a. Project Sponsor (Principal-in-Charge).
    - b. Project Manager.
    - c. Safety Representative.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. Startup Manager.
  - e. Superintendents.
  - f. Subcontractors.
  - g. Key Manufacturers.
  - 2. Owner:
    - a. Director of Utility Services (Principal).
    - b. Manager of Technical Services.
    - c. Project Manager.
    - d. Construction Manager.
  - 3. Construction Manager:
    - a. Principals.
    - b. Construction Manager.
    - c. Project Coordinator.
    - d. Startup Manager.
    - e. Resident Engineers.
    - f. Inspectors.
  - 4. Design Engineer:
    - a. Principals.
    - b. Project Manager.
    - c. Resident Design Engineer.
- F. The partnering workshop will be conducted by an independent partnering facilitator within 30 days of the limited Notice to Proceed at a time and date agreed upon by all parties and at a neutral location away from each entity's home office and/or field facilities. The facilitator will prepare the workshop agenda after conducting telephone interviews with key individuals from each party to assess their needs and concerns.
- G. Additional partnering sessions will be held quarterly and will include an 8-hour workshop, with the same attendees as the initial partnering workshop. The purpose of these follow-up sessions will be to confirm the relationship and assure the partnering effort continues to be successful throughout the Project.
- H. Selection of a partnering facilitator and payments will be as indicated in The WHITEBOOK 3-14.1.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION (NOT USED)**

**END OF SECTION**

**SECTION 01 29 00  
PAYMENT PROCEDURES**

**PART 1 GENERAL**

**1.01 WORK REQUIRED OF THIS SECTION**

- A. Payment for the various items of the Bid Schedule, as further specified herein, shall include all compensation to be received by the Contractor for furnishing all tools, equipment, supplies, and manufactured articles, and for all labor and services, operations, and incidentals appurtenant to the items of Work being described here and within the plans, specifications, and Contract Documents, as necessary to complete the various items of the Work all in accordance with the requirements of the Contract Documents, including all appurtenances thereto, and including all costs of permits and cost of compliance with the regulations of public agencies having jurisdiction, including Safety and Health Requirements of the California Division of Industrial Safety and the Occupational Safety and Health Administration of the U.S. Department of Labor (OSHA). No separate payment will be made for any item that is not specifically set forth in the Bid Schedule, and all costs therefore shall be included in the Contract Price.
- B. Work shall include all aspects of the Project, including civil, electrical, mechanical, HVAC, plumbing, instrumentation and control, structural, coatings, and architectural work, and the like required to support each Bid Item.

**1.02 RELATED SECTIONS**

- A. The Work of the following Section applies to Work of this Section. Other Sections of the Work not referenced below shall also apply to the extent required for proper performance of the Work.
  - 1. Bid Schedule.
  - 2. Section 01 32 00, Construction Progress Documentation.
  - 3. Section 01 33 22, Web Based Document Management.

**1.03 SUBMITTALS**

- A. Informational Submittals:
  - 1. Schedule of Values: Submit based on a roll up of the cost-loaded schedule described in Section 01 32 00, Construction Progress Documentation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Schedule of Estimated Progress Payments: Submit based on current approved Schedule of Values.
3. Record Drawing Red-lines: Update and deliver monthly as required by Section 01 77 00, Closeout Procedures.
4. Application for Payment.
5. Final Application for Payment.

1.04 ALLOWANCES

- A. Allowances will be administered in accordance with the Contract requirements.
- B. Submit, with application for payment, invoice showing the date of purchase, labor costs, expenses, and the total price for all allowance items.
- C. Allowances shall be paid based on actual work performed up to the amount listed in the Bid Schedule. The Owner shall authorize the use of the cash allowances on an as needed basis.
- D. Allowances are further described as:
  1. Dispute Resolution Board.
  2. Contingency (Field Orders).

1.05 SCHEDULE OF VALUES

- A. Prepare a separate Schedule of Values for each schedule of the Work under the Agreement, using the Cost ID activity code specified in Section 01 32 00, Construction Progress Documentation.
- B. Upon request of Construction Manager, provide documentation to support the accuracy of the Schedule of Values.
- C. Limitations:
  1. The values of the activities listed below are limited as indicated. The limit is the percent of the Total Bid Amount.

Activity	Limit
Mobilization	2.0 percent maximum
Contractor Quality Control Program	0.25 percent minimum
180-day Schedule Approval	0.25 percent
Baseline Schedule Approval	0.5 percent

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Activity	Limit
O&M Data (Manuals)	1.0 percent minimum
Functional Testing	1.5 percent minimum
Performance Testing	1.0 percent minimum
Project Record Documents	0.5 percent minimum
Demobilization	0.25 percent minimum

2. Mobilization:
  - a. Payment for mobilization will be prorated until all the following items have been completed. Mobilization includes:
    - 1) Project Manager onsite full time.
    - 2) Plant and construction equipment for activities for first month onsite.
    - 3) Field office setup with utilities.
    - 4) Fire protection established.
    - 5) Construction yard setup with storage and maintenance facilities and utilities setup.
    - 6) Safety Plan submitted and required notices posted.
    - 7) Initial Quality Control Plan submitted.
    - 8) QC Manager onsite full time.
3. Contractor Quality Control Program: Payment for Contractor Quality Control will be prorated based on progress towards Project completion.
4. 180-Day Schedule Approval: Payment will be made upon approval of the 180-day schedule as specified in the Section 01 32 00, Construction Progress Documentation.
5. Baseline Schedule Approval: Payment will be made on approval of the Baseline schedule as specified in Section 01 32 00, Construction Progress Documentation.
6. O&M Data (Manuals):
  - a. The Contractor and Construction Manager shall meet to determine the total number of O&M Data (Manuals) for the Contract. The value of the O&M Data shall be distributed equally across the total number of O&M Data for the Contract.
  - b. A Draft, Draft-Final and Final submittal is required for each O&M Data (Manual). The Draft, Draft-Final and Final submittals will be assigned 50 percent, 25 percent, and 25 percent, respectively of the calculated value for each Manual. Payment will be made upon acceptance of each submittal.
7. Functional Testing: Payment will be prorated based upon completion of the functional testing activities. See Section 01 91 14, Testing, Integration, and Startup, and equipment specifications for details on functional testing activities.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

8. Performance Testing: Payment will be pro-rated based upon completion of all performance testing activities as described in the Section 01 91 14, Testing, Integration, and Startup.
9. Project Record Documents: Progress payments for project record (as-built) documentation will be made based on the estimated percent complete of the quantity of documents submitted in accordance with weighting established as follows:

No.	Project Record Categories	Drawing Weight
1.	Electrical interconnects and referenced drawings	10
2.	Loop drawings and referenced drawings, process and instrumentation	9
3.	Control and logic drawings, schedules and PLC documents; both Design Engineer and Contractor supplied	7
4.	Electrical and instrumentation, Area Control Center connection drawings; both City and Contractor supplied	5
5.	Process and Piping Schematic, Power, single and three-line	3
6.	All other Contract Drawings	1

10. Demobilization:
  - a. Submittal of warranties.
  - b. Removal of plant and construction equipment.
  - c. Removal of field office, construction yards and related facilities, utilities, and project signs.
  - d. Cleanup and disposal of materials, supplies, equipment, and debris.
  - e. Restoration of areas, roads and other facilities damaged or altered as a result of the Work.

D. An unbalanced or front-end loaded schedule will not be acceptable. Acceptable Schedule of Values will be required prior to submittal of first Application for Payment.

E. Summation of the complete Schedule of Values representing all the Work shall equal the Contract Price.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Use Schedule of Values Form provided by Owner
- G. Schedule of Values shall correlate with cost-loaded schedule

1.06 APPLICATION FOR PAYMENT

- A. Transmittal Summary Form: Attach one Summary Form with each detailed Application for Payment for each schedule and include Request for Payment of Materials and Equipment on Hand as applicable. Execute certification with inked signature by authorized officer of Contractor.
- B. Use detailed Application for Payment Form provided by Owner.
- C. Provide separate form for each schedule as applicable.
- D. Include accepted Schedule of Values for each schedule or portion of lump sum Work and the unit price breakdown for the Work to be paid on a unit priced basis.
- E. Include separate line item for each Change Order and Work Change Directive executed prior to date of submission. Provide further breakdown of such as requested by Construction Manager.
- F. Preparation:
  - 1. Round values to nearest dollar.
  - 2. Submit Application for Payment, including a Transmittal Summary Form and detailed Application for Payment Form(s) for each schedule as applicable, a listing of materials on hand for each schedule as applicable, and such supporting data as may be requested by Construction Manager.
- G. Progress payments do not constitute acceptance of the Work or a waiver of any terms or conditions of the Contract.

1.07 PAYMENT - GENERAL

- A. Payment for all Lump Sum Work shown or specified in Contract Documents is included in the Contract Price. Payment will be based on a percentage complete basis for each line item of the accepted Schedule of Values.
- B. Payment for the various items of the Bid Schedule, as further specified herein, shall include all compensation to be received by the Contractor for furnishing all tools, equipment, supplies, and manufactured articles, and for all labor and services, operations, and incidentals appurtenant to items of Work being described here and within the plans, specifications, and Contract Documents,

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

as necessary to complete the various items of the Work all in accordance with the requirements of the Contract Documents, including all appurtenances thereto, and including all costs of permits and cost of compliance with the regulations of public agencies having jurisdiction, including Safety and Health Requirements of the California Division of Industrial Safety and the Occupational Safety and Health Administration of the U.S. Department of Labor (OSHA). No separate payment will be made for any item that is not specifically set forth in the Bid Schedule, and all costs therefore shall be included in the contract price.

C. Payment for Procured Equipment:

1. Payment for procured equipment is divided into two types of equipment: Major Equipment and all other procured equipment.
2. Major Equipment will be paid according to the following milestones:
  - a. Purchase Order equals 5 percent. An executed purchase order must accompany the payment request.
  - b. Submittal Acceptance equals 5 percent. Approval of the equipment submittal is required prior to payment of this amount.
  - c. Fabrication equals 65 percent. Fabrication, including factory testing, may be paid in part provided adequate documentation is presented and accepted at the monthly Schedule Preview Meeting.
  - d. Delivery equals 10 percent. Proof of onsite delivery (or proper handling of stored materials) must accompany the payment request.
  - e. Pre-Operational Checkouts/Installation Certification equals 10 percent. Proof of Installation Certification by the Manufacturer must accompany the payment request.
  - f. Operational Checkouts/Performance Verification equals 5 percent. Documentation of successful operational checkouts/performance verification must be provided.
  - g. The sum of items listed above shall not exceed the documented quotation amount or invoice amount.
3. All other equipment (i.e., non-Major Equipment) will be paid upon submittal and acceptance of the required documents, including:
  - a. Paid invoices and proof of payment for materials on hand.
  - b. Proof of proper storage or stored materials.
  - c. Quantity verification (load tickets, etc.).
  - d. Any required certifications.

1.08 NONPAYMENT FOR REJECTED OR UNUSED PRODUCTS

A. Payment will not be made for following:

1. Loading, hauling, and disposing of rejected material.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Quantities of material wasted or disposed of in manner not called for under Contract Documents.
3. Rejected loads of material, including material rejected after it has been placed by reason of failure of Contractor to conform to provisions of Contract Documents.
4. Material not unloaded from transporting vehicle.
5. Defective Work not accepted by Owner.
6. Material remaining on hand after completion of Work.

1.09 RETENTION

- A. The Owner shall retain a percentage of each progress payment in accordance with Section 7-3.2 Partial and Final Payment of Part 1 Special Provisions – General of the Contract Documents. The retained amount is available for the protection and payment of the person(s), mechanics, subcontractors, or materialmen who perform labor upon the Contract or Work thereunder, and the persons who supply such person(s), or subcontractors with components and supplies for carrying on such Work.
- B. Pursuant to Section 22300 of the Public Contract Code of the State of California, the Contractor has the option, at its expense, to deposit securities with an Escrow Agent as a substitute for retention earnings required to be withheld by the City. Securities eligible for such substitution are bank or savings and loans certificates of deposit or such securities which are eligible for investment pursuant to Government Code Section 16430. As to any such security or securities so substituted for monies withheld, the Contractor shall be the beneficial owner of same and shall receive any interest thereon. Such security shall, at the request and expense of the Contractor, be deposited with the City or with a State or Federally Chartered bank as the escrow agent who shall pay such monies to the Contractor upon notification by the City that payment can be made. Such notification will be given at the expiration of 35 days from the date of acceptance of the Work, or as prescribed by law, provided however, that there will be a continued retention of the necessary securities to cover such amounts as are required by law to be withheld by properly executed and filed notices to stop payment, or as may be authorized by the Contract to be further retained.

1.10 BID ITEMS

- A. Bonds (payment and performance) - Lump Sum:
  1. No measurement shall be made for this Item.
  2. Payment is made for this item for the Bonds required under this Contract and shall be made as the lump sum price named in the Bid Schedule. Refer to Whitebook Section 1-7.2 for requirements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Mobilization - Lump Sum:

1. No measurement shall be made for this Item.
2. Payment for this item shall be made as a Lump Sum amount named in the Bid Schedule

C. Dispute Resolution Board - Allowance

1. No measurement shall be made for this Item.
2. Payment for this Bid Item is described in Section 2-10.2.3 of the SSP. Payment for this Item shall be made as an allowance amount named in the Bid Schedule.

D. SHEETING, SHORING, AND BRACING - LUMP SUM

1. No measurement shall be made for this Item.
2. Payment is made for this Item for temporary sheeting, shoring, and bracing or equivalent method and shall be made at the lump sum price named in the Bid Schedule, which price shall constitute full compensation for completion of all planning, design, engineering fees, furnishing and constructing, and removal and disposal of such temporary sheeting, shoring, and bracing as a lump sum item, complete, as required for the prosecution of the Work, required for temporary or permanent support of any structures, pipelines or utilities and required under the provisions of any permits, and in accordance with the requirements of OSHA and the Construction Safety Orders of the State of California, pursuant to the provisions of Section 6707 of the California Labor Code.

E. Site Civil Grading - Lump Sum:

1. No measurement shall be made for this Item.
2. General: All site civil grading.
3. Payment is made for this item for the following:
  - a. Civil demolition work and grading as shown on Drawings and as specified.
  - b. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.

F. Yard Piping - Lump Sum:

1. No measurement shall be made for this Item.
2. General: All yard piping
3. Payment is made for this item for the following:
  - a. All yard piping shown on Drawings and as specified.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.
- G. Receiving Tank Complex Facility 73 - Lump Sum:
  1. No measurement shall be made for this Item.
  2. Payment is made for the replacement of the raw solids feed pumps and adjustable speed drive replacement.
- H. Centrifuge Building Facility 76 - New Grit Separator - Lump Sum:
  1. No measurement shall be made for this Item.
  2. General: New grit separator and refurbishment of two existing grit clarifiers.
  3. Payment is made for this item for all Work required to upgrade the capacity of the grit removal system. Payment for this item includes the following:
    - a. A fourth grit separator will be installed to increase capacity. The two existing grit clarifiers will be refurbished.
    - b. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.
- I. Centrifuge Building Facility 76 - Centrifuge Building Improvements - Lump Sum:
  1. No measurement shall be made for this Item.
  2. General: New larger thickening centrifuges with feed pumps and polymer pumps, new larger thickened sludge transfer pumps.
  3. Payment is made for this item for all Work required to upgrade the capacity of the sludge thickening system. Payment for this item includes the following:
    - a. Five new increased capacity thickening centrifuges with new feed pumps and polymer pumps, all pumps with new ASDs.
    - b. Three new thickened solids transfer pumps all pumps with new ASDs.
    - c. Two new 6-inch thickened solids pipelines.
    - d. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.
- J. Centrifuge Building Facility 76 - Dewatering - Lump Sum:
  1. No measurement shall be made for this Item.
  2. General: New larger dewatering centrifuge feed pumps and polymer pumps.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Payment is made for this item for all Work required to upgrade dewatering centrifuges. Payment for this item includes the following:
  - a. Eight new dewatering centrifuge feed pumps and polymer pumps.
  - b. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.

K. Digester Complex Facility 80 - Lump Sum:

1. No measurement shall be made for this Item.
2. General: New mixing systems and new biogas collection piping for all three digesters.
3. Payment is made for this item for the following:
  - a. Replacement of the existing digester mixing pumps with new chopper pumps and ASDs for all three digesters.
  - b. Replacement of the existing digester recirculation pumps with new chopper pumps and ASDs for all three digesters.
  - c. Replacement of the existing digester axial mixing pumps with new chopper pumps and ASDs for all three digesters.
  - d. Remove the existing biogas collection pipe and replace with a larger pipe for all three digesters.
  - e. Remove the existing biogas collection pipe and replace with a larger pipe for two digested sludge storage tanks.
  - f. Addition of nozzles to digester mixing system.
  - g. Replacement of the existing digester overflow piping with larger piping.
  - h. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.

L. Biogas Flare Facility 10 - Lump Sum:

1. No measurement shall be made for this Item.
2. General: New biogas flare will be installed.
3. Payment is made for the installation of one new biogas flare adjacent to the two existing flares. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.

M. Biogas Holding Tank and Compressors Facility 11 - Lump Sum:

1. No measurement shall be made for this Item.
2. General: New biogas compressors and new compressor suction and discharge piping.
3. Payment is made for this item for the following:
  - a. Replace two existing compressors with two new larger compressors and one new compressor for a total of three compressors.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. New suction and discharge piping for compressors.
- c. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.

N. Wastewater Pump Station and Odor Control System Facility 94 - Lump Sum:

- 1. No measurement shall be made for this Item.
- 2. Payment is made for the replacement of the centrare pumps and adjustable speed drive replacement. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.

O. Controls, System Integration - Lump Sum:

- 1. No measurement shall be made for this Item.
- 2. Payment is made for this item for Distributed Control System (DCS) equipment supply and systems integration, to be performed by Emerson Process Controls, Inc., with the MBC Improvements existing controls in accordance with the Contract Documents. Payment for this item shall be made as the lump sum price named in the Bid Schedule.

P. Field Orders - Allowance:

- 1. No measurement shall be made for this Item.
- 2. Payment is made for this Item as an allowance towards field orders and contingencies that may occur during the course of the Work.

Q. Integration Period Services - Lump Sum:

- a. No measurement shall be made for this Item.
- b. Payment is made for this Item for the Integration Period Services required to be performed as part of the commissioning activities of the facilities. Payment for this item shall be made as the lump sum price named in the Bid Schedule.
- c. In the event the integration period is delayed or extended beyond the 120-day specified herein due to other related Pure Water Projects not being ready, the Contractor will be compensated based on the integration period Bid item shown above.
  - 1) Example: If the Contract Integration Bid item is \$100 for the 120 days and the delay is 30 days, then the additional compensation to the contractor will be  $(30/120*100)$  equals \$25.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.11 SUPPLEMENT

A. The supplement listed below, following “End of Section,” is part of this Specification.

1. MBC Improvements Major Equipment.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION (NOT USED)**

**END OF SECTION**

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

<b>MAJOR EQUIPMENT</b>	
<b>Specification Section</b>	<b>Specific Product</b>
26 20 00	Low-Voltage AC Induction Motors
26 24 19	Low-Voltage Motor Control
26 29 23	Low-Voltage Variable Speed Drive System
44 22 23	Thickening Centrifuges
44 42 56.05	Chopper Pumps and Mixing Nozzles
44 42 56.09	Non-Clog Dry-pit Centrifugal Pumps
44 42 56.10	Horizontal End Suction Centrifugal Pumps
44 42 56.13	Progressing Cavity Pumps
44 42 56.16	Peristaltic Hose Pump
44 46 20	Digester Gas Safety Equipment and Specialties
44 46 22	Digester Gas Boost Compressors
46 23 00	Grit Separators
46 23 10	Grit Dewatering Unit Rehabilitation

**SECTION 01 31 13**  
**PROJECT COORDINATION**

**PART 1 GENERAL**

1.01 GENERAL

- A. Surveying will be performed by a surveyor contracted with the City or Construction Manager. The Contractor will not be responsible for performing surveying. Contractor will be responsible for identifying surveying needs and coordinating those needs with the Construction Manager. The surveying requirements indicated in the Contract Documents are intended to provide information and background for the Contractor.

1.02 SUBMITTALS

A. Informational:

1. Statement of Qualification (SOQ) for land surveyor or civil engineer.
2. Maintenance of Plant Operations Plans (MOPO Plans).
  - a. Contractor shall develop a detailed plan for each maintenance of plant operation activity by unit process or facility that includes a detailed description of the outage, temporary provisions to maintain plant operations, procedural steps, list of equipment and materials, contingency plan, detailed hourly schedule, list of labor and equipment, and scheduling constraints. Plans shall be submitted to the Construction Manager and Owner for approval 45 days prior to planned activity. Plans must be approved a minimum of 10 days prior to the planned activity. In the absence of an approved work plan, scheduled activities will be postponed to provide a minimum 10-day advance notice of the Work. The Contractor will be solely responsible for any delays associated with failure to provide timely submittals for activities that impact plant operations.
  - b. The plan shall include the following steps for MOPOs:
    - 1) Step 1: The Contractor shall identify the anticipated project MOPO (maintenance of plant operation) processes needed and provide list them on a MOPO log and in the Baseline Schedule. This list shall also identify shutdowns, diversions, or tie-ins as described in the Contract Documents. The MOPO duration and timing shall be shown in the Baseline Schedule. Date scheduled MOPOs to coincide with the appropriate construction activities.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 2) Step 2: The Contractor shall request a Pre-MOPO Meeting with the Owner, Construction Manager, and Design Engineer to discuss the nature of the shutdown, diversion, or tie-in, and to gather the information necessary to complete the MOPO Form. The pre-MOPO meeting may be waived by the Owner or Construction Manager if the work is deemed to be minor.
  - 3) Step 3: The Contractor completes the MOPO Form and shall submit for approval to the Construction Manager.
  - 4) Step 4: The Construction Manager will distribute the MOPO Form for review by the Owner, Construction Manager, and Design Engineer. The MOPO Form shall be reviewed for completeness, accuracy, compliance with both the construction schedule, constraints defined in contract documents, and to ensure that the requested work does not negatively impact plant operations or other concurrent project activities. Additional information may be requested to better understand the nature of and method for completing the Work.
  - 5) Step 5: Once the MOPO is agreed to by all parties, the MOPO will be finalized by signature. Copies are distributed to the Owner, Construction Manager, Design Engineer, and Contractor.
  - 6) Step 6: The Contractor shall verify with the Construction Manager that everything is ready for the work described within the MOPO.
  - 7) Step 7: The Contractor shall complete a Safety Checklist.
  - 8) Step 8: The Contractor completes the work.
  - 9) Step 9: The Contractor updates MOPO log weekly and distributes at the regularly scheduled construction progress meetings.
3. Photographs:
    - a. Digital Images: Submit one copy of DVD disc containing images within 5 days of being taken. Each image is to have a minimum file size of 1.4 Mb (1,400 Kb) so viewed resolution is high quality. The production of larger file sizes with higher resolution is encouraged.
  4. Video Recordings: Submit one copy, including updated copy of project video log, within 5 days of being taken.
  5. Time Lapse Construction Video: Submit one copy of cumulative time lapse video of construction site on the first working day of each month.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 RELATED WORK AT SITE

A. General:

1. Other work, performed by others under separate contracts, that is either directly or indirectly related to scheduled performance of the Work under these Contract Documents, is listed henceforth.
  - a. North City Water Reclamation Plant Expansion.
  - b. MBC Dewatering Centrifuge Replacement Project.
  - c. North City Renewable Energy Project.
2. Coordinate the Work of these Contract Documents with work of others as specified.
3. Include sequencing constraints specified herein as a part of Progress Schedule.

B. Power:

1. Electricity/Gas Company: San Diego Gas and Electric (SDG&E).
  - a. Emergencies: (800) 411-7343.
  - b. Mark-Out: 811 or [www.call811.com](http://www.call811.com).
  - c. Website: <https://www.sdge.com/more-information/safety/gas-safety/dial-811-you-dig>.
  - d. Work to be performed by San Diego Gas and Electric will be complete prior to award of this Contract.

- C. Applications Software Development: Application software for the Distributed Control System (DCS) will be performed by the Distributed Control System Provider (DCSP). The DCSP will provide hardware and perform programming of the DCS applications software for certain portions of Process Instrumentation and Control Subsystem (PICS). Refer to Section 40 90 07, Scope of Work, and related Sections, for detailed information pertaining to DCS hardware and application software programming. The DCSP shall be Emerson Process Controls, Inc., no substitutions.

1.04 UTILITY NOTIFICATION AND COORDINATION

- A. Coordinate the Work with various utilities within Project limits. Notify applicable utilities prior to commencing Work, if damage occurs, or if conflicts or emergencies arise during the Work.

1. Electricity Company: San Diego Gas & Electric.
  - a. Contact: Cathy Cavaletto.
  - b. Telephone: (848) 636-5786.
2. Telephone Company: Chris Porter.
  - a. Telephone: (858) 208-8375.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Public Utilities Department: City of San Diego.
  - a. Contact Person: Monika Smoczynski.
  - b. Telephone: (858) 292-6455.
4. Gas Department: San Diego Gas & Electric.
  - a. Contact Person: Cathy Cavaletto.
  - b. Telephone: (848) 636-5786.
5. Building Department: City of San Diego.
  - a. Contact Person: Colette Redon.
  - b. Telephone: (619) 446-5402.

1.05 PROJECT MILESTONES

A. Project Milestones:

1. Generally described in the Contract Documents. The following is a detailed description of each:
  - a. Milestone 1: Substantial Completion – Occurs after completing the prerequisites for Substantial Completion.
  - b. Milestone 2: Final Completion – After successful completion of Substantial Completion requirements, and all aspects of the Contract Closeout have been satisfactorily completed.

1.06 WORK SEQUENCING/CONSTRAINTS

- A. The sequencing described herein is provided as guidance documentation for the Contractor. The Contractor shall comply with construction constraints which are stated in the Specifications. The Contractor shall be responsible for the detailed development of sequencing planning and scheduling to meet with the Milestone and Completion requirements of the Work.
- B. The Contractor shall supervise, direct, and cooperate fully with all subcontractors, manufacturers, fabricators, suppliers, distributors, installers, testing agencies, and all others whose services, materials or equipment are required to ensure completion of the Work within the Contract time.

1.07 FACILITY OPERATIONS

- A. Continuous operation of Owner's facilities is of critical importance. Schedule and conduct activities to enable existing facilities to operate continuously, unless otherwise specified.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. The Contractor shall be solely responsible for maintaining continued and uninterrupted operation of all facilities in the Project area, and shall prepare all required Maintenance of Plant Operation (MOPO) plans for all facilities affected by its work. The MOPO Plan shall detail how, but not limited to, the following elements that will allow the biosolids center to function continuously with appropriate capacity during construction:
1. Sequence of construction activities, temporary works, and bypassing.
- C. The Contractor shall provide the Privatizer power generation operations continuous access and operation of the power generation facilities. The Contractor shall coordinate through City for any Privatizer site access or impacts.
- D. Perform Work continuously during critical connections and changeovers, and as required to prevent interruption of Owner's operations.
- E. When necessary, plan, design, and provide various temporary services, utilities, connections, temporary piping and heating, access, and similar items to maintain continuous operations of Owner's facility.
- F. Do not close lines, open or close valves, or take other action which would affect the operation of existing systems. The Contractor shall provide a written request for any valve operation from the Owner so that the operations staff can operate the valves. Requests shall be made 48 hours prior to the need for the valve operation.
- G. Site Requirements:
1. Maintain chemical truck access for chemical delivery through the Site to Facility 60 at all times.
  2. Maintain solids haul truck access through the Site to Facility 76 at all times.
  3. Maintain access during construction to all facilities for City operation and maintenance staff.
  4. Provide temporary parking to replace all parking stalls removed during construction.
- H. Process or Facility Shutdown and Operating Requirements:
1. The following describes operating requirements and facilities which may be shutdown at some time during the Work:
    - a. 73 – Receiving Tank Complex: Two raw solids feed pumps must remain in service at all times.
    - b. 76 – Centrifuge Building: Two grit separators and one grit clarifier must remain in service at all times.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. 76 – Centrifuge Building: Three thickening centrifuges and associated feed and polymer pumps must remain in service at all times.
  - d. 80 – Digester Complex: One digester system may be taken out of in service at a time.
  - e. 10 – Biogas Flare Facility: The digester gas system shutdown shall be limited to 8 hours maximum each. Biogas Holding Tank and Compressors must remain in service at all times during construction on the Biogas Flare Facility.
  - f. 11 – Biogas Holding Tank and Compressors: The digester gas system shutdown shall be limited to 8 hours maximum each. Biogas Flare Facility must remain in service at all times during construction of the Biogas Compressors.
  - g. 76 – Centrifuge Building: One dewatering centrifuge may be taken out of service at a time for centrifuge feed pump and polymer pump replacement.
  - h. 94 – Centrate Pump Station: Two centrate pumps must remain in service at all times.
  - i. Provide 21 days advance written request for approval of need to shut down a process or facility to Owner and Engineer.
- 2. Power outages will be considered upon 7 days written request to Owner and Engineer. Describe the reason, anticipated length of time, and areas affected by the outage. Provide temporary provisions for continuous power supply to critical facility components.
  - 3. Fire protection system shall remain in continuous service during construction.
  - 4. Plant distributed control system (DCS) work shutdowns shall be limited to one 48-hour shutdown per Facility DCS for the following facilities. During this shutdown, the priority facility I/O points will be converted from the “Q Series” type of I/O to “R Series” I/O. Coordinate with Owner for operation during shutdown.
    - a. Drop 07 – Raw Solids.
    - b. Drop 08 – Raw Solids and Biogas Flares.
    - c. Drop 10 – Thickening Centrifuges 1 and 2.
    - d. Drop 11 – Thickening Centrifuges 3 and 4.
    - e. Drop 13 – Thickening Centrifuge 5.
    - f. Drop 17 – Grit Separators 1 and 3.
    - g. Drop 18 – Grit Separators 2 and 4.
    - h. Drop 29 – Centrate Pumps 1 and 3.
    - i. Drop 30 – Centrate Pump 2.
    - j. Drop 38 – Biogas Compressors.
- I. Install and maintain bypass facilities and temporary connections required to keep Owner’s wastewater treatment operations online. Sequences other than

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

those specified will be considered upon written request to Owner and Engineer, provided they afford equivalent continuity of operations.

- J. Do not proceed with Work affecting a facility's operation without obtaining Owner's and Engineer's advance written approval of the need for and duration of such Work.
- K. Relocation of Existing Facilities:
  - 1. During construction, it is expected that minor relocations of Work will be necessary.
  - 2. Provide complete relocation of existing structures and Underground Facilities, including piping, utilities, equipment, structures, electrical conduit wiring, electrical duct bank, and other necessary items.
  - 3. Use only new materials for relocated facility. Match materials of existing facility, unless otherwise shown or specified.
  - 4. Perform relocations to minimize downtime of existing facilities.
  - 5. Install new portions of existing facilities in their relocated position prior to removal of existing facilities, unless otherwise accepted by Engineer.
- L. Prior to any bypass, shutdown or testing of new equipment or process, the Contractor shall coordinate and sufficiently schedule and plan the Work with the Owner to prove the readiness and operational condition of the existing facility. This may include the Owner's operation of related valves, gates, etc., to verify system readiness.

1.08 ADJACENT FACILITIES AND PROPERTIES

- A. Examination:
  - 1. After Effective Date of the Agreement and before Work at Site is started, Contractor, Engineer, and affected property owners and utility owners shall make a thorough examination of pre-existing conditions including existing buildings, structures, and other improvements in vicinity of Work, as applicable, which could be damaged by construction operations.
  - 2. Periodic reexamination shall be jointly performed to include, but not limited to, cracks in structures, settlement, leakage, and similar conditions.
- B. Documentation:
  - 1. Record and submit documentation of observations made on examination inspections in accordance with Article Construction Photographs and Article Audio-Video Recordings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Such documentation shall be used as indisputable evidence in ascertaining whether and to what extent damage occurred as a result of Contractor's operations, and is for the protection of adjacent property owners, Contractor, and Owner.

1.09 CONSTRUCTION PHOTOGRAPHS

A. General:

1. Photographically document all phases of the Project including preconstruction, construction progress, and post-construction.
2. Engineer shall have right to select subject matter and vantage point from which photographs are to be taken.

B. Preconstruction and Post-Construction:

1. After Effective Date of the Agreement and before Work at Site is started, and again upon issuance of Substantial Completion, take a minimum of 60 photographs of Site and property adjacent to perimeter of Site.
2. Particular emphasis shall be directed to structures both inside and outside the Site.
3. Format: Digital, minimum resolution of 20 megapixel.

C. Construction Progress Photos:

1. Photographically demonstrate progress of construction, showing every aspect of Site and adjacent properties as well as interior and exterior of new or impacted structures.
2. Weekly: Take 50 photographs using digital, minimum resolution of 20 megapixel.

D. Documentation:

1. Digital Images:
  - a. Electronic image shall have date taken embedded into image.
  - b. Archive using a commercially available photo management system that provides listing of photographs including date, keyword description, and direction of photograph.
  - c. Label file folders or database records with Project and Owner's name, and month and year images were produced.

1.10 AUDIO-VIDEO RECORDINGS

- A. Prior to beginning the Work on Site or of a particular area of the Work, videograph Site and property adjacent to Site.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. In the case of preconstruction recording, no work shall begin in the area prior to Engineer's review and approval of content and quality of video for that area.
- C. Particular emphasis shall be directed to physical condition of existing vegetation, structures, and pavements within site and areas adjacent to and within the right-of-way or easement, and on Contractor storage and staging areas.
- D. Engineer shall have right to select subject matter and vantage point from which videos are to be taken.
- E. Time Lapse Construction Video
  - 1. Provide a continuous-sequence time lapse construction video of the MBC site beginning with mobilization and concluding with demobilization.
  - 2. Location:
    - a. Select a position, approved by the Owner and Construction Manager, for the time lapse video camera that will remain fixed for the entire duration of construction.
    - b. Video camera location should provide maximum view of the entire Site from a public interest perspective.
    - c. Provide a pole-mounted camera to achieve adequate height for enhanced visibility of the Site.
  - 3. Equipment:
    - a. Manufacturer: Time-Lapse Pro, iBEAM Construction Cameras, "or-equal."
    - b. Digital single-lens reflex video camera capable of 4K ultra HD time-lapse movies.
      - 1) 8.3 to 18 megapixel images.
      - 2) 4G LTE cellular communications.
      - 3) Power interruption remote alert.
- F. Video recording shall be by a professional commercial videographer, experienced in shooting exterior and interior construction videos. Video Format and Quality:
  - 1. DVD format, with sound.
  - 2. Video:
    - a. Produce bright, sharp, and clear images with accurate colors, free of distortion and other forms of picture imperfections.
    - b. Electronically and accurately display the month, day, year, and time of day of the recording.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Audio:
  - a. Audio documentation shall be done clearly, precisely, and at a moderate pace.
  - b. Indicate date, project name, and a brief description of the location of recording, including:
    - 1) Facility name.
    - 2) Street names or easements.
    - 3) Addresses of private property.
    - 4) Direction of coverage, including engineering stationing, if applicable.

G. Documentation:

1. DVD Label:
  - a. DVD number (numbered sequentially, beginning with 001).
  - b. Project name.
  - c. Applicable location.
  - d. Date and time of coverage.
2. Project Video Log: Maintain an ongoing log that incorporates above noted label information for DVDs on Project.

1.11 REFERENCE POINTS AND SURVEYS

A. Location and elevation of bench marks are shown on Drawings.

B. Contractor's Responsibilities:

1. Refer to Section 3-10 of the SSP for Contractor responsibilities and survey services provided by the City.
2. Provide additional survey and layout required to layout the Work.
3. Check and establish exact location of existing facilities prior to construction of new facilities and any connections thereto.
4. In event of discrepancy in data or staking provided by Owner, request clarification before proceeding with Work.
5. Retain professional land surveyor or civil engineer registered in California who shall perform or supervise engineering surveying necessary for construction staking and layout.
6. Maintain complete accurate log of survey work as it progresses as a Record Document.
7. On request of Engineer, submit documentation.
8. Provide competent employee(s), tools, stakes, and other equipment and materials as Engineer may require to:
  - a. Establish control points, lines, and easement boundaries.
  - b. Check layout, survey, and measurement work performed by others.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Measure quantities for payment purposes.

1.12 OWNER PERFORMED TESTING

A. General:

1. Owner performed tests does not:
  - a. Relieve Contractor of responsibility for providing adequate quality control measures.
  - b. Relieve Contractor of responsibility for damage to or loss of material before acceptance.
2. Contractor is responsible for additional costs associated with tests when Work is not ready for testing in accordance with the schedule previously identified and coordinated between Contractor and Construction Manager. Contractor and Construction Manager to coordinate schedule for all tests beforehand as directed by Construction Manager.
3. Contractor is responsible for associated costs for additional tests because of rejection of materials or Work that cannot be completed in the absence of acceptable test results as required by the Contract Documents.
4. Contractor shall provide access for all testing performed by Owner or Construction Manager.
5. Contractor shall notify the Construction Manager and Owner in advance of required tests no later than 48 hours prior to test.
6. Contractor shall provide access of construction documents at all times to personnel performing testing.
7. Contractor shall cooperate with Construction Manager and testing personnel and provide safe access to the Work in order to perform and complete the tests.
8. Contractor shall provide reasonable auxiliary services as requested by the Construction Manager and testing personnel. Auxiliary services include, but is not limited to:
  - a. Providing access to the Work and furnishing incidental labor and facilities necessary to facilitate tests and assist the testing personnel in performing tests.
  - b. Providing storage space for the exclusive use of testing personnel, such as area for storing test samples, curing concrete samples, and delivery of samples to testing laboratories if required by Construction Manager and testing personnel.
  - c. Providing security and protection of samples and test equipment at the Project Site if required by the Construction Manager or testing personnel.
  - d. Provide samples of materials to be tested in required quantities.
9. Owner performed test reports will be submitted to the Construction Manager, Contractor, Design Engineer, and Owner within 1 week of the

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

test completion. Delays that may occur due to delays in Owner performed tests shall be negotiated between the Owner and Contractor.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

**3.01 SALVAGE OF MATERIALS**

- A. Salvage materials for Owner’s use where shown:
  - 1. Remove material with extreme care so as not to damage for future use.
  - 2. Promptly remove salvaged materials from Work area.
  - 3. Store materials where instructed by Owner onsite.
- B. Meet with Construction Manager prior to starting to dismantle equipment or piping designated to be salvaged.
- C. Meet with Construction Manager and Owner prior to salvaging of equipment to ascertain the condition of the equipment being salvaged. Provide new or repair damaged equipment or material specified or indicated to be salvaged should condition vary from the condition prior to salvage. Clean and protect equipment from dust, dirt, natural elements, and store as directed.

**3.02 SUPPLEMENT**

- A. The supplement listed below, following “End of Section,” is part of this Specification.
  - 1. MBC Operations During Construction Criteria. This is a guideline and does not serve as final sequencing or a final construction schedule. Contractor is responsible for developing a detailed sequencing plan and schedule for review and approval by the Construction Manager prior to the start of the construction.

**END OF SECTION**

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

MBC Operations During Construction Criteria

Description	Criteria	MOPO Considerations
<i>Process Facilities</i>		
Grit Building	The existing grit removal equipment and raw solids pumping needs to remain in service during installation of the new equipment, except for brief shutdowns to tie in new equipment and facilities. The number and duration of shutdowns should be limited and scheduled to occur during low-flow periods of the year and low diurnal flow conditions. Grit separator (TeaCup) installation can occur to allow two existing grit separators and one existing clarifier in service at all times. Two raw solids feed pumps must remain in service.	Existing system has the necessary capacity to accommodate flows from NCWRP during construction.
Solids Thickening	Three solids thickening centrifuges and one thickened sludge pump need to remain in service at all times, except for a short duration tie-in for MBC to maintain solids handling.	Modifications to the thickened sludge pump suction and discharge piping may remove multiple pumps out of service.
Digester Mixing	One digester may be taken out of service at a time for MBC to maintain solids handling.	The digester improvement should rotate through the three digesters one-by-one. Short shutdowns will be required when combining common headers between digesters.
Biogas System	Larger biogas piping will be installed adjacent to the existing piping to maintain operations during construction.	Short shutdowns and depressurization will be required during tie-ins of new piping and equipment. Special precautions will be necessary when handling digester gas.
Sludge Dewatering	Not Applicable	Tie-ins to the larger centrifuges will take place one at a time and will require a shutdown of the associated centrifuge.
Centrate Pump Station	Two centrate pumps need to remain in service at all times for MBC to maintain solids handling.	Tie-ins for the new pumps will require short shutdowns.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Chemical Handling	Not Applicable	Not Applicable
<b>Site</b>		
	Maintain site access around existing facilities for maintenance and operations staff.	
Site Roadways	Maintain site access for Privatizer Cogeneration operations and maintenance. Chemical delivery truck routes, sludge hauling truck routes, and headworks grit and screening truck hauling routes need to remain in operation.	
Stormwater Handling	A temporary stormwater drainage plan will need to be developed to convey stormwater.	
<b>Electrical</b>		
Medium-voltage Distribution	Maintain supply to operating facilities. Develop a plan to stage system modifications to mesh with process system shutdowns.	
Low-voltage Systems	Maintain supply to operating facilities. Develop a plan to stage system modifications to mesh with process system shutdowns.	

**SECTION 01 31 19**  
**PROJECT MEETINGS**

**PART 1 GENERAL**

1.01 GENERAL

- A. The Construction Manager shall schedule physical arrangements for meetings throughout progress of the Work, prepare meeting agenda with regular participant input and distribute with written notice of each meeting, preside at meetings, record minutes to include significant proceedings and decisions, and reproduce and distribute copies of minutes within 5 days after each meeting to participants and parties affected by meeting decisions.

1.02 PRECONSTRUCTION CONFERENCE

- A. Contractor shall be prepared to discuss the following subjects, as a minimum:

1. Required schedules.
2. Status of Bonds and insurance.
3. Sequencing of critical path work items.
4. Progress payment procedures.
5. Project changes and clarification procedures.
6. Use of Site, access, office and storage areas, security and temporary facilities.
7. Major product delivery and priorities.
8. Contractor's safety plan and representative.

- B. Attendees will include:

1. Owner's representatives.
2. Construction Manager's representatives.
3. Contractor's office representative.
4. Contractor's resident superintendent.
5. Contractor's quality control representative.
6. Subcontractors' representatives whom Contractor may desire or Construction Manager may request to attend.
7. Design Engineer's representatives.
8. Others as appropriate.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 ENVIRONMENTAL MITIGATION MONITORING AND REPORTING  
PROGRAM PRECONSTRUCTION CONFERENCE

- A. The Contractor shall be required to discuss the following:
  - 1. Discuss the Environmental Mitigation Monitoring and Reporting Program.
- B. Attendees will include:
  - 1. City's Mitigation Monitoring Coordination Section Construction Manager.
  - 2. Owner's representatives.
  - 3. Construction Manager's representatives.
  - 4. Contractor's representatives.
  - 5. Contractor's quality control representative.
  - 6. Others as appropriate.

1.04 PRELIMINARY SCHEDULES REVIEW MEETING

- A. As set forth in Section 01 32 00, Construction Progress Documentation.
- B. Provide weekly look-ahead schedules for Progress Meetings (show 1 week past, current week, and 4 weeks in advance).

1.05 PROGRESS MEETINGS

- A. Construction Manager will schedule regular progress meetings at Site, conducted weekly to review the Work progress, Progress Schedule, Schedule of Submittals, Application for Payment, contract modifications, and other matters needing discussion and resolution.
- B. Attendees will include:
  - 1. Owner's representative(s), as appropriate.
  - 2. Construction Manager's representative (s), as appropriate.
  - 3. Contractor, Subcontractors, and Suppliers, as appropriate.
  - 4. Design Engineer's representative(s).
  - 5. Others as appropriate.

1.06 QUALITY CONTROL MEETINGS

- A. In accordance with Section 01 45 16.13, Contractor Quality Control.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Scheduled by Construction Manager on regular basis and as necessary to review test and inspection reports, and other matters relating to quality control of the Work and work of other Contractors.
- C. Attendees will include:
  - 1. Contractor.
  - 2. Contractor's designated quality control representative.
  - 3. Subcontractors and Suppliers, as necessary.
  - 4. Construction Manager's representatives.
  - 5. Design Engineer's representatives, as necessary.

1.07 PROCESS INSTRUMENTATION AND CONTROL SYSTEMS (PICS)  
COORDINATION MEETINGS

- A. Construction Manager will schedule as needed meetings at Site to review specific requirements of PICS work.
- B. Attendees will include:
  - 1. Contractor.
  - 2. Owner.
  - 3. Construction Manager.
  - 4. PICS Subcontractor/Installer.
  - 5. Distributed Control System Provider.
  - 6. Design Engineer's representatives, as required.

1.08 PREINSTALLATION MEETINGS

- A. Contractor shall schedule as needed meetings at Site to review specific requirements of the installation of the Work specified.
- B. When required in individual Specification sections, convene at Site prior to commencing the Work of that section.
- C. Require attendance of entities directly affecting, or affected by, the Work of that section.
- D. Notify Construction Manager 5 days in advance of meeting date.
- E. Provide suggested agenda to Construction Manager to include reviewing conditions of installation, preparation and installation or application procedures, and coordination with related Work and work of others.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.09 FACILITY STARTUP MEETINGS

- A. Contractor shall schedule and attend a minimum of twenty facility startup meetings. The first of such meetings shall be held prior to submitting Facility Startup Plan, as specified in Section 01 91 14, Testing, Integration, and Startup, and shall include preliminary discussions regarding such plan.
- B. Agenda items shall include, but not be limited to, content of Facility Startup Plan, coordination needed between various parties in attendance, and potential problems associated with startup.
- C. Attendees will include:
  - 1. Contractor.
  - 2. Contractor's designated quality control representative.
  - 3. Subcontractors and equipment manufacturer's representatives whom Contractor deems to be directly involved in facility startup.
  - 4. Construction Manager.
  - 5. Design Engineer's representatives.
  - 6. Owner's operations personnel.
  - 7. Others as required by Contract Documents or as deemed necessary by Contractor or City.

1.10 OTHER MEETINGS

- A. In accordance with Contract Documents and as may be required by Owner and Engineer.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION (NOT USED)**

**END OF SECTION**

**SECTION 01 32 00**  
**CONSTRUCTION PROGRESS DOCUMENTATION**

**PART 1 GENERAL**

1.01 GENERAL REQUIREMENTS

- A. The rate of progress and the time of completion of the Work are of the essence for this Contract. The Work shall be executed with such progress as required to prevent any delay to this Contract and to other projects or contractors working at the Site. Compliance includes, but is not limited to, meeting Contract Milestone dates, compliance to scheduling submittals, working within any constraints and completion of all contract work within the allotted time.
- B. The Work specified in this section includes the preparation, submittal, and acceptance of a Baseline Schedule, construction progress schedules, schedule updates, recovery schedules, Time Impact Analysis (TIA) and revisions to the construction progress schedule. The construction schedule shall conform to the time provisions specified in the special provisions of the Contract Documents and the requirements of all other specified work sequence constraints set forth in the Contract Documents.
- C. The Contractor shall prepare and submit a Baseline Construction Schedule in accordance with the requirements of this section. By preparing and submitting the Baseline Construction Schedule and monthly schedule updates, the Contractor represents that it can and intends to safely execute the contracted Work and all portions thereof including all activities of subcontractors, equipment vendors, and suppliers including submittals and re-submittals within the specified times and constraints. The Contractor also represents that the bid price covers all costs associated with the execution of the Work in accordance with the construction schedule and Contract Documents.
- D. This Specification includes the cost loaded schedule requirements, consistent with Section 01 29 00, Payment Procedures, which shall form the basis for the pay application report and all monthly payment requests. These referenced sections shall be correlated and linked when preparing the monthly progress payment. The Schedule of Values shall be generated from the Oracle Primavera P6 current accepted schedule.
- E. The City will review the schedule, and any updates or revisions, and any other schedule data for conformance to the Contract. Review and acceptance of the Baseline Construction Schedule and associated documents does not relieve the Contractor of responsibility for the feasibility of the schedule, performance of any

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

omitted work and completion of the Work and Milestones within the Contract Time.

1.02 DEFINITIONS

- A. Activity: A discrete work element of a project that can be identified for planning, scheduling, and controlling the construction project. Activities included in a construction schedule consume time and resources.
- B. Predecessor Activity: An activity that precedes another activity in the network.
- C. Successor Activity: An activity that follows another activity in the network.
- D. Code of Accounts: A unique lettering or numbering system in which letters or numbers are assigned to each unique component of the work breakdown structure.
- E. Hard Logic: Relationships with mandatory dependencies where the nature of the work itself dictates the order in which the activities should be performed. Construction of the walls before starting painting work is an example of mandatory dependency.
- F. Soft Logic: Also known as Discretionary Dependencies or Preferential Logic. Preferential logic that controls the critical path using constraints and lags will not be allowed.
- G. Hard Constraints: Override logical relationships and thereby prevent activities from being scheduled according to the logic. Hard Constraints include Mandatory Start, Mandatory Finish, Start On and Finish On.
- H. Critical Path Method (CPM): A method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine when activities can be performed and the critical path of the Project.
- I. Critical Activities: Activities on the critical path. To avoid project delays, work must start and finish on the planned early start and finish dates.
- J. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the maximum overall project duration or completion. There can only be one critical path for a project duration or a project milestone.
- K. Near Critical Path: The Near Critical Path shall be defined as the “longest path” plus 15 working days total float.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- L. Float:
1. The measure of leeway in starting and completing an activity. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
  2. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned project completion date or contract milestone.
- M. Fragnet: A partial or fragmentary network that breaks down activities into smaller activities for greater detail.
- N. Work Area: An area of construction, a separate facility, or a similar significant construction element.
- O. Contract Milestone: An activity or event that must be completed by a specific date and to which liquidated damages may apply. Contract start and completion dates are considered Contract Milestones.
- P. Network Diagram: A graphic diagram of a network schedule, showing activities and activity relationships.
- Q. Schedule Of Values: A realistic statement furnished by Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment. The Schedule of Values should be produced from P6 and match the Cost Loading in the Schedule.
- R. Cost-Loading: The allocation of the Schedule of Values for the completion of an activity as scheduled. The sum of costs for all activities must equal the total contract amount, unless otherwise approved by the City.
- S. Resource Loading: The allocation of manpower necessary for the completion of an activity as scheduled.
- T. Work Breakdown Structure (WBS): The WBS is a hierarchical structure of the Work to be performed under the Contract.
- U. Calendar Day: All days in a calendar year including weekends and holidays. Contract duration is measured in calendar days against contract milestones.
- V. Pacing: An intentional slowing of work activities during a delay, or alleged delay, to Project Completion.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- W. Installed Major Equipment: All major equipment installed as part of the final constructed facility. See Section 01 29 00, Payment Procedures for definition of Major Equipment.
- X. Construction Equipment: All equipment utilized by the contractor to construct the facility but is not a part of the final constructed facility.
- Y. Blackout Calendar: An activity calendar that applies the non-work option in Primavera P6 Activity Calendars to create non-working days, weeks, and/or months when work is restricted from occurring. The City requires the use of blackout calendars for restricted activities rather than adjusted logic and durations.

1.03 SCHEDULER QUALIFICATIONS

- A. The Contractor shall employ or retain the services of a full-time, onsite Senior Project Scheduler who shall have experience in construction work sequencing, productivity, and scheduling as well as preparing and maintaining detailed construction schedules using the most current version of Oracle Primavera P6 software. Experience on projects similar in size and total construction cost is desirable. Within 7 calendar days after Notice to Proceed, the Contractor shall submit to the City Representative for review and acceptance, in accordance with Section 01 33 00. Submittal Procedures and Section 01 33 22, Web Based Construction Document Management, the Project Scheduler's resume, including personal references from at least two owner- representatives familiar with the Project Scheduler's work on previous water or wastewater treatment projects. The City reserves the right to reject the proposed scheduler based on the lack of qualifications as defined in this section. The Contractor's scheduler shall attend all schedule related meetings, including progress meetings, job walks when necessary to verify schedule progress, schedule review meetings and special meetings pertaining to scheduling of the Work. This person, along with the Contractor's management team, is expected to work closely with the City Representative to deliver acceptable products outlined in this section and comply with the Reports requirements of this section.
- B. If the Senior Construction Scheduler leaves the employment or retainage of the Contractor, the Contractor will be required to notify the City Representative in advance of the intended departure and fulfill the requirements of this subsection within 30 calendar days of the departure of the Contractor's Senior Construction Scheduler. The City reserves the right to disapprove any candidate proposed for the Project. The City reserves the right to remove any member of the Contractor scheduling staff that is, in the City's opinion, not performing scheduling work in accordance with the scheduling requirements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.04 SCHEDULING CONFERENCES

- A. Pre-Construction Scheduling Conference: Within 30 calendar days after Notice to Proceed, the City Representative shall schedule and conduct a pre-construction scheduling conference to commence development of the required construction schedule. Attendance by the Contractor's Senior Construction Scheduler is mandatory. At the meeting, the requirements of this section will be reviewed with the Contractor; the Contractor shall present their proposed methodology for the Baseline Construction Schedule, sequence of operations, and resource and cost/quantity loading methodology. The Contractor shall submit to the City Representative a written copy of its proposed WBS structure at this meeting. The City shall review the WBS structure within 10 calendar days after submission by the Contractor. The Contractor shall make all modifications to the proposed WBS structure that are requested by the City. The WBS shall be correlated with the Contractor's Schedule of Values and the cost loaded schedule. The Senior Scheduler shall develop other activity codes and values needed to comply with the reporting requirements listed herewith, subject to acceptance by the City. The Contractor shall bring to the Pre-Construction Scheduling Conference the Network Logic Diagram used in bid preparation. This will be used as a basis of discussion for the construction plan.

1.05 FLOAT

- A. Pursuant to the float sharing requirements of the Contract, use of float suppression techniques such as preferential sequencing, special lead/lag logic restraints, hard constraints, Start on or After and Start on or Before constraints, adding and/or removing working or non-working days from an accepted activity calendar, extended activity durations, or imposed dates, shall be cause for rejection of the Baseline Construction Schedule and any revisions or updates. The use of float time disclosed or implied using alternative float suppression techniques shall be shared as directed by the City.
- B. Float time is not for the exclusive use or benefit of either the City or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and the contract completion date. Contractor's use of float shall be pre-approved by the City prior to use.
- C. No time extensions will be granted nor delay damages paid unless a City-caused delay occurs which impacts the Project's critical path and the Contractor has complied with all related contract requirements. Other delays will be evaluated by the Contractor for concurrency to issues and be included as part of the Contractor's analysis.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Submittal of an early completion schedule shall not provide a basis for the Contractor to claim an excusable delay for any time earlier than the Contract completion date. Any early completion schedule shall be approved by a Contract Change Order.

1.06 LOGIC AND LEVEL OF DETAIL

- A. The Project Schedule shall include activities of sufficient detail to accurately represent and clearly convey the Contractor’s feasible plan for the timely completion of the full scope of the work. Activities performed on site shall have maximum durations of 20 days and a value of \$50,000. The Contractor shall be responsible for developing the logic of the Baseline Schedule and for updating the logic each month to accurately reflect the progress of the work to date and the Contractor’s current plan for the timely completion of the Work. The schedule logic for each activity shall be constructed by determining which activities must be completed before any subsequent activity can start, which activities can occur simultaneously with the predecessor activity, which activities cannot start until another activity is complete, and the impact of all resource limitations on activity sequencing, activity durations, and activity dates. Every activity, except the Project start and finish Milestones, shall have a minimum of one predecessor and one successor. All paths through the Project Schedule shall proceed in the direction representing the progression of time; start to finish logic is disallowed. Activity lags shall not have a negative value. The use of lags shall be kept to a minimum and shall be subject to acceptance by the City. Redundant ties to preceding activities in a sequential series of activities will not be permitted.
- B. The activity descriptions shall be specific and discrete such that it cannot be confused with any other activity description. For example, “Form Concrete Wall” is too broad; there must be a description of the unique location of the wall. Similarly, activities that are discrete should not be combined.
- C. Finish to start logical relationships shall be predominantly used for schedule activities. The use of logical relationships with negative lags will not be allowed in the baseline schedule, in proposed revised schedules, or in the monthly updates.
- D. Milestones. Separately identify each Project milestone, conforming to the scheduling requirements as set forth in the Contract Documents, and assign a “finish no later than” constraint date. For Completion Deadlines, the activity description shall reference the appropriate Contract clause.
- E. No unspecified milestone constraints, other constraints, float suppression techniques, or use of Project activity durations, logic ties, and/or sequences deemed unreasonable by the City, will be used in the Project Schedule.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Any schedule showing an early completion date must show the time between the scheduled completion date(s) and the applicable Completion Deadline(s) as Float.

1.07 SCHEDULE SOFTWARE SETTINGS AND RESTRICTIONS

- A. Contractor shall use the most current version of Oracle Primavera P6 software to produce the contract schedules and reports as specified herein. In accordance with Section 01 33 00, Submittal Procedures, the Contractor shall submit all schedules and associated documentation directly into the City-furnished, web-based, document control system in accordance with Section 01 33 22, Web Based Construction Document Management. The schedule files shall be submitted in Primavera's Proprietary Exchange (XER) format until such time as Primavera recommends transferring to their Extensible Markup Language (XML) format. Reports shall be in Adobe Portable Document Format (PDF).
- B. Activity Constraints: Date/time constraint(s), other than those required by the Contract, will not be allowed unless accepted by the City. Identify any constraints proposed and provide an explanation of the purpose of the constraint in the Narrative Report. Any finish constraints for City required milestones must use a 'Finish on or Before' type designation and have logic ties. Start on or After and Start on or Before constraints are discouraged. All Start on or After and Start on or Before constraints are subject to approval by the City representative. No hard constraints, which include Start on, Finish on, Mandatory Start, and Mandatory Finish, are allowed. The Contractor shall not use any manual date entries that override schedule driven dates based on duration and network logic.
- C. Lags: Lags will not be used when the creation of an activity will perform the same function (e.g., concrete cure time), instead an activity representing the gap between the completion of one activity and the start of another will describe the time gap.
- D. Default Progress Data Disallowed: Actual Start and Actual Finish dates on the CPM schedule shall match the dates provided from Contractor Quality Control Production Reports, Contractor daily reports and other contemporaneous Project documentation.
- E. Software Settings:
  - 1. Schedule calculations and Out-of-Sequence progress (if applicable) shall be handled through Retained Logic, not Progress Override. All activity durations and float values will be shown in days. Activity progress will be shown using Remaining Duration. Default activity type set to "Task Dependent." User preference settings shall be set to hours with the show unit label box checked and zero decimal places. The "Durations Format"

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- shall be set to days with the show durations label box checked, and zero decimal places.
2. The critical path shall be calculated by selecting the Longest Path as opposed to Total Float.
- F. Activities unless otherwise approved will be “physical percent complete” type. Duration percent complete will only be used on City-related activities such as submittal reviews.
- G. Duration Type shall be set to Fixed Duration and Units.
- H. The “Automatically Level resources when scheduling” box shall not be checked. All schedule submittals, and schedule related data of any kind, shall not be resource leveled and shall be the basis for rejection if submitted with resource leveling.
- I. The Project critical path shall be displayed using both the ‘Critical’ and ‘Longest Path’ filters in P6.

1.08 COST LOADING

- A. The activities contained within the schedules shall be cost loaded, and they shall equal the Contract Total Price with Sub-Totals that match the Schedule of Values within Section 01 29 00, Payment Procedures. Contractor is required to cost load the construction schedule using price per unit. Equipment shall include installed and construction equipment specified as price of equipment that is worth over \$100,000. For example, the labor unit would be \$ per hour; the material unit would be material cost per unit installed. The non-labor resources shall be used exclusively on activities containing equipment. Equipment shall include installed and construction equipment specified as price of equipment. The resource coding and name shall distinguish between installed and construction equipment. An example of price per unit cost loading is shown below:
1. One (1) labor unit = \$1 of labor.
  2. Material unit of \$1 for 1 unit.
  3. Equipment unit of \$1 for 1 unit.
- B. Procured items, including installed equipment, should be budgeted as part of separate procurement activities such that the installation activity is not stated as started when the procured material is onsite and installation has not begun. Refer to Section 01 29 00, Payment Procedures for more details. O&M and Training activities shall be their own cost-loaded schedule activities. Project record documentation (as-builts) shall also be a separate cost-loaded schedule activity.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Overhead and profit shall be prorated evenly on all cost loaded activities. Alternatively, overhead may be treated as a Level of Effort activity or activities. The Contractor shall not unbalance the activity cost loading, nor shall the Contractor utilize Resource Leveling as a technique for extending activity durations. The approved Schedule of Values, as generated from the Cost Loading becomes the basis for the Payment Application.
- D. Every construction activity that contains labor shall be cost loaded.
- E. Fabricate and Deliver activities shall be cost loaded to cover the material or equipment costs. The Fabrication activities shall utilize a material or equipment resource.
- F. Commissioning activities shall be cost loaded using a labor resource.
- G. The cost loading and progress payments for long lead procurement items will be discussed at the pre-construction scheduling conference.
- H. Once the Schedule of Values is accepted with the Baseline Construction Schedule, requests for changes to the Baseline Schedule of Values will not be approved unless approved in writing by the City Representative.
- I. The Contractor shall submit with the Baseline Schedule the detailed budget documents reflecting the costs used as the basis of the cost loading contained therein.
- J. In Oracle Primavera P6, for actual monthly costs to store correctly, the Contractor must setup the financial period to equal the first and last date of the calendar month, regardless of the actual monthly cutoff date. Financial periods cannot bridge 2 months and must equal the full month. Financial dates table will be provided at the Preliminary Schedule meeting.
- K. Work Restrictions in Section 01 31 13, Project Coordination indicating activities that cannot be performed during specific periods of time due to operational or other City requirements shall be accommodated in the Baseline and Progress Schedules using blackout calendars. These Blackout Calendars must be developed incorporating the specific durations when work cannot be performed, according to the terms of each work restriction, and applied to the applicable activities. These Blackout Calendars will prevent work from extending into these restricted periods by shifting it until after the completion of the restriction.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- L. Cost shall be broken down by the funding sources and coded under cost ID's. The following are the breakdown requirements:
1. B-17006 NC MBC Improvements:
    - a. 76 - Centrifuge Building: One new grit separator.
    - b. 10 – Biogas Flare: One new biogas flare adjacent to existing flares.
  2. S-17013 MBC Equipment Upgrades:
    - a. 73 – Receiving Tank Complex: Three new raw solids feed pumps with ASDs.
    - b. 76 – Centrifuge Building: Refurbish two existing grit clarifiers.
    - c. 76 – Centrifuge Building: Five new thickening centrifuges to replace existing. Five new centrifuge sludge feed pumps and new centrifuge polymer feed pumps to replace existing. Three new thickened sludge transfer pumps to replace existing. New fully redundant 6-inch thickened sludge supply pipe.
    - d. 76 – Centrifuge Building: Eight dewatering centrifuge sludge feed pumps and eight dewatering centrifuge polymer feed pumps to replace existing.
    - e. 80 – Digester Complex: Six recirculation pumps, nine mixing pumps and nine axial mixing pumps to replace existing. Replace nozzles inside digesters.
    - f. 11 – Biogas Holding Tank and Compressors: Three new biogas compressors to replace two existing. Replace biogas laterals with larger pipes for three digesters and two sludge storage tanks. Replace existing biogas supply pipe to cogeneration facility with larger pipe.
    - g. 94 – Centrate Pump Station: Three centrate pumps with ASDs to replace existing.
    - h. Provide shelf spare ferric chloride feed pump.

1.09 RESOURCE LOADING

- A. Schedules shall include resource loading, also known as manpower loading, showing at a minimum, the composite crew, the classification (e.g., foreman, journeyman, etc.) of the individual craftsman comprising the crew, materials or equipment associated with each construction and commissioning activity shown on the schedule, plus any other information required by the City. Manpower shall be expressed as manhours.
- B. Manpower resources shall be listed in the Resource Library of the Primavera Software and the Contractor shall assign manpower resource loading by trade for each work activity of the schedule.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. The Contractor warrants that it will allocate resources and costs based upon Early Date curves and Late Date curves as well as all area between these two curves. The Contractor also warrants that the cost of performing the Work, based upon both curves, is included within its bid price.
- D. The Contractor shall submit with the Baseline Schedule the detailed budget documents reflecting labor hours used as the basis of the resource loading contained therein. The budget documents used to resource load the Baseline Construction Schedule shall be based upon the escrowed bid documents and reconcile thereto.
- E. Work performed by the prime contractor and all subcontractors with a contract value greater than or equal to 2 percent of the Prime Contract Value shall use the following resources:
  - 1. Labor.
  - 2. Materials.
  - 3. Installed Major Equipment (refer to Article Definitions).
  - 4. Construction Equipment (refer to Article Definitions).
  - 5. Manhours.
- F. The Prime Contractor, and each of the subcontractors with a contract value greater than or equal to 2 percent of the Prime Contract Value, shall create separate Labor, Material, and Nonlabor (Equipment) resources for the Prime Contractor and each subcontractor. The resources shall be titled with the name and/or trade of the Prime Contractor and subcontractors and shall match the responsibility activity code assigned to each activity.

1.10 ACTIVITY CALENDARS

- A. All calendars shall be given specific project names and defined clearly in Oracle Primavera P6. For example, “MBC Standard 5-day with Holidays,” “MBC 6-day with Holidays,” Calendars for different trades if used, should be specified. All calendars and activity coding within the schedule shall be “Global” rather than “Project” level and shall have a unique prefix of the City contract number.
- B. The Contractor shall utilize Blackout Calendars and apply the calendars to activities that may be impacted by the work restrictions stated in Section 01 31 13, Project Coordination.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 2     PRODUCTS**

2.01     180-DAY SCHEDULE

- A.     Within 30 calendar days after Notice to Proceed, the Contractor shall submit to the City the Preliminary Construction Schedule for all work in the first 180 calendar days following NTP, as well as a general approach for the remainder of the Work.
  
- B.     Within 60 days after Notice to Proceed, the Contractor shall submit to the Preliminary Construction Schedule cost and resource loaded. The remaining portion of the Work may be summary activities assigned to the Contractor's planned baseline WBS structure and shall be cost-loaded to equal the full Contract amount.
  
- C.     The City Representative, Contractor, and its Senior Project Scheduler shall meet within 14 calendar days of the submittal of the 180 calendar day Construction Schedule to review and make any necessary adjustments or revisions. The Contractor shall submit the revised 180 calendar day Construction Schedule within 14 calendar days after receiving comments. Such resubmittal shall be reviewed by the City Representative within 7 calendar days of receiving such resubmittal. The 180 calendar day Construction Schedule, when revised, will represent the Contractor's planned means, methods, and sequences for performance of the Work required in the 180 calendar days following NTP and is to be incorporated as the first 180 days of the Contractor's Baseline Construction Schedule. The 180 day schedule will include, but not be limited to, work tasks that will or may be critical to performance within the Contract Time including, but not limited to, the following:
  - 1.     Planning.
  - 2.     Mobilization.
  - 3.     Key shop drawing and sample submittals.
  - 4.     Fabrication and delivery of key and long-lead procurement elements.
  - 5.     Contractor and Subcontractor Activities.
  - 6.     Activities for the City, other contractors, utility providers, tenants, or other third parties.
  - 7.     Specific phasing as required by Contract.
  - 8.     Summary activities for the remaining duration of the Contract.
  
- D.     The 180-day schedule shall be cost loaded as described in the Cost Loading Section of this Specification.
  
- E.     The Contractor shall include a Schedule Narrative with the 180-Day Schedule submittal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 BASELINE CONSTRUCTION SCHEDULE

- A. The Baseline Construction Schedule shall be constructed to show sequence and duration of the activities the Contractor proposes to carry out the Work. The schedule shall be resource (manpower) and cost loaded and should indicate any restrictions on the availability of work areas. The Contractor shall utilize the Baseline Construction Schedule in planning, scheduling, coordinating, and performing the Work under the Contract (including all activities of Subcontractors, equipment vendors, and Suppliers). The Baseline Construction Schedule is the basis of the Schedule of Values and 4-week look-ahead schedules. The approved 180-Day Schedule shall be incorporated into the Baseline Schedule without any changes or progress. The Baseline Schedule shall demonstrate the feasibility of the Contractor's Civil and Concrete plans. Among other elements, this plan shall demonstrate the ability to meet concrete pour, cure and strip requirements including restrictions on adjacent pours, the ability of the crane and concrete pumping equipment to reach all areas of the concrete work, and a logical plan for completing and exiting the work. The plan shall demonstrate all work including Mechanical and Electrical work and Commissioning phases.
- B. Within 180 days after Notice to Proceed, the Contractor shall submit the Baseline Construction Schedule to the City, including a written narrative to further explain the plan as set forth in its CPM logic network and schedule. The Contractor shall schedule a workshop prior to submittal of the Baseline Construction Schedule to present the schedule plan. Within 5 working days from Baseline Schedule submittal, the Contractor shall conduct a Baseline Schedule presentation describing the schedule in detail and the Contractor's means and methods for construction. The City Representative shall accept or reject, in writing, the Contractor's Baseline Schedule within 30 calendar days after receipt of all required information. If rejected, the Contractor shall make necessary modification to the Baseline Schedule and resubmit to the City within 14 calendar days. The City Representative shall accept or reject, in writing, the revised Baseline Construction Schedule within 14 calendar days of resubmittal. Once accepted, the Baseline Construction Schedule shall be used for monitoring and evaluating Contract performance, including, but not limited to progress, progress payments, changes, and delays.
- C. The Baseline Construction Schedule will be the Performance Measurement Baseline (PMB) for the Project. This requires that the PMB will be maintained with any structural schedule changes in the current schedule. This includes expansion and contraction in WBS and/or activities, detailing out summary cost items, and anything else that makes the PMB non-measurable.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. There shall be at least one continuous Critical Path in the Baseline Schedule, using the longest path definition that starts at the earliest occurring schedule activity in the network (i.e., NTP1) and ends at the latest occurring schedule activity in the network. No more than 20 percent of the activities may be critical or near critical. The near critical path shall be defined as within 15 working days of the critical path. If 20 percent of the activities become critical, present a plan to reduce the number of near-critical path activities to the client.
- E. The Baseline Construction Schedule shall demonstrate the final level of detail for each activity and shall contain the required relationships completely identified and the durations of each activity correctly depicted. The Baseline Construction Schedule shall be developed as follows:
1. The Baseline Construction Schedule shall contain no contract changes or delays which may have been incurred during the interim schedule development period. These changes will be entered at the first update after the baseline schedule has been accepted and a change to the Contract Time or duration was made via an approved change order.
  2. The Baseline Construction Schedule submitted for review and acceptance by the City shall contain no status and the data date shall be the contract notice to proceed date.
  3. The Baseline Construction Schedule shall clearly indicate the longest critical path of activities from Notice To Proceed to the Contract completion date or Contract Milestone.
  4. The Baseline Construction Schedule will contain all cost information assigned to each of the specific activities at the final level of detail. Every construction activity that contains labor, construction equipment or permanent equipment shall be cost and resource loaded to permit initial generation of a cash flow curve and resource curve.
- F. The Baseline Schedule shall include summary activities and milestones for startup as defined in Article Submittals of Section 01 91 14, Testing, Integration, and Startup. The detailed Startup Schedule will be submitted and updated separately as described in Section 01 91 14, Testing, Integration, and Startup, with links to the accepted Baseline Schedule summary activities and milestones for startup. 100 working days prior to the start of Pre-Commissioning, the Contractor shall submit detailed Startup Schedule which will link to the accepted Baseline Schedule summary activities and milestones for startup.
- G. The comments made by the City Representative on the Baseline Construction Schedule, during review, will not relieve the Contractor from compliance with requirements of the Contract Documents. To the extent that there are any conflicts between the accepted schedule and the requirements of the Contract Documents, the Contract Documents shall govern. The Baseline Schedule shall show the

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

sequence and interdependence of activities required for complete performance of the Work, beginning with the date of the Contractor's Notice to Proceed date and concluding with the Contract Completion.

- H. Please refer to the Section 01 33 13, Project Coordination for specific requirements regarding Facility Operations. Maintenance of Plant Operations (MOPO) requests must be submitted prior to starting work in any area, and additional specific MOPO Requests must be submitted for each shutdown and cutover. MOPO requests shall be submitted a minimum of 10 working days prior to the need date. Activities for the MOPO Request Submittal, City Review Period, and MOPO Request Approval shall be included in the baseline schedule.
- I. The Baseline Construction Schedule shall reflect the Contractor's true plans for progressing and performing the Work. The Contractor shall be responsible for the means, methods, and duration and certifies that the schedule duration and Contract period is achievable and Contractor's estimate/bid, and/or budgets, are based upon sequences shown in the schedule.
- J. The Baseline Schedule shall provide the Contractor and the City with a tool to monitor and follow the progress of all phases of the Work. The Baseline Schedule submitted to the City shall comply with all limits imposed by the Scope of Work, with all contractually specified intermediate milestone and completion dates, and with all constraints, restraints or sequences included in the Contract. The Contractor shall obtain subcontractor written concurrence with its Baseline Construction Schedule for all subcontracts with a contract value of 2 percent or greater of the prime contract value.
- K. The Baseline Construction Schedule shall incorporate and include:
  - 1. Appropriate administrative activities and contract specified review periods (including the City and third parties) for all and phases and components of Work.
  - 2. Required cost, resource, and activity codes.
  - 3. Project milestones dates and overall construction activities and Project completion dates.
  - 4. Project budget, schedule of values, and the cost basis for progress payments.
  - 5. Commissioning activities.
  - 6. Punch list and final completion activities.
- L. Failure to include in the schedule any element of Work required for performance of Contract shall not excuse Contractor from completing all Work required within applicable time constraints, notwithstanding the City's acceptance of Contractor's Baseline Construction Schedule.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- M. Nothing in these requirements shall be deemed to negate or diminish Contractor's authority and responsibility to plan and schedule Work as required, subject to requirements of Contract Documents.
- N. No construction activity shall be more than 20 working days duration. Exceptions may be approved by the City.
- O. Submittal Review Time: Include in the schedule the review times indicated in Section 01 33 00, Submittal Procedures. Coordinate submittal review times in contractor's baseline construction schedule with submittal schedule. The schedule shall include a schedule activity for all submittals required by these Specifications. Rejected submissions will require the contractor to add activities that start a second submission and review process.

2.03 SCHEDULE NAMING REQUIREMENTS

- A. To assist the City in consolidating the schedules from all the projects, a standard naming convention has been adopted. The Project name in P6 and the schedule file name should be the same as the following example:

MBC Baseline 01 Dec18 DD123118

Where:

MBC = the code for the project, in this case Metropolitan Biosolids Center  
Baseline = the type of schedule submittal, which can also be Update, Recovery or Time Impact Analysis  
01 = the submittal number or version  
Dec18 = the month and year of the schedule submittal  
DD = the Data Date, in this example Dec 31, 2018  
The exported P6 data (XER) file shall use the same name as the Schedule ID

2.04 ACTIVITY CODES

- A. The Project Schedule shall utilize the following activity codes and code values. Unless otherwise specified, a value for each code shall be assigned to each activity. In the event it is unclear which code value assignment should be made for an activity, the City Representative will make the final decision. The Project ID (City Contract Number) shall be the prefix for all Activity Codes. All District-

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

required Activity Codes should be global. Final configuration will be presented at the Pre-Construction scheduling meeting.

Activity Code	Description
(Project ID) Phase	Phase of Work, Examples include Submit, Review & Approve, Fabrication, Deliver, Mobilization, Construction, Commissioning, etc.
(Project ID) Work Area	Assign Area code to activities based upon the work area in which the activity occurs. Define work areas based on resource constraints or space constraints that would preclude a resource, such as a particular trade or craft work crew, from working in more than one work area at a time due to restraints on resources of space. Examples of Area code include different areas within a floor of a building, different floors within a building, and different buildings within a complex of buildings. Activities shall not have more than one Area code. Not all activities are required to be work area coded.
(Project ID) Responsibility	Assign a Responsibility code to all activities indicating who is responsible for performing the activity. Examples include Electrical, Mechanical, Plumbing, Fire Protection, the City, General Contractor Etc. Responsibility code may be named to the company performing the work.
(Project ID) System	Assign System code to the group of activities that comprise a system that will be Commissioned during the commissioning phase. Examples of a System are: Chemical Treatment System, Sprinkler System, HRSG System, SCADA System, Switchgear, etc.
(Project ID) CSI	All procurement and submittal activities shall be assigned a 6 digit CSI code identifying Submittals, Purchase Orders, Fabrication and Delivery activities. The City uses CSI's Master Format 50 numbering system.
(Project ID) Cost ID	All cost loaded activities shall be assigned a cost code for the purpose of categorizing costs into accounts.
(Project ID) Change Orders	The Contractor shall use a City-provided change order code structure containing the change order number and a description of the change order.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Activity Code	Description
CITY Project Code	The Contractor shall add the City’s Project code to all activities. For MBC, for example, use the Code Value of “MBC” with a Description of “Metropolitan Biosolids Center (MBC)”
(Project ID) 180-Day Schedule	Assign an activity code to all activities to be reviewed and approved as part of the 180-Day Schedule, which includes all activities within the 180-day window
(Project ID) Major Equipment	Assign an activity code to all activities related to procurement of Major Equipment as defined in the Definitions and Terms found in Section 01 29 00, Payment Procedures
CITY Access Requests	Assign an AR Code to all access request activities
(Project ID) Milestones	The Contractor shall add a Milestones code to all milestones in the schedule
(Project ID) Weather Sensitivity	Code (WS or NWS). Assign Category of Work Code to all Activities based upon Weather Sensitive Installation or Non-Weather Sensitive Installation

2.05 ACTIVITY ID

- A. Every Activity ID in the baseline and updated schedules shall be preceded by a 3 letter or 4 letter prefix code followed by a dash. All suffix coding to the right of the dash is at the discretion of the Contractor. The prefix code for the MBC Project is ‘MBC-’.
- B. If for any reason an Activity ID is deleted or removed from the schedule, it may not be reused for another activity. Similarly, once the baseline construction schedule is accepted, activity descriptions may not be changed without the permission of the City Representative.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.06 SCHEDULE SUBMITTALS

- A. In accordance with Section 01 33 00, Submittal Procedures and the Section 01 33 22, Web Based Construction Document Management, submit all required schedule submittals in the following format:
1. One electronic copy of the Oracle Primavera P6 XER file including all project layouts.
  2. One PDF copy of all reports, bar-charts, time-scaled diagrams, histograms, s- curves and narrative.
- B. Variance Report: With each updated schedule submission, provide a computer-generated Log Report listing all changes made between the previous schedule and current updated schedule. Identify the name of the previous schedule and name of the current schedule being compared showing all changes to the Schedule. This report will as a minimum show changes for: Added and Deleted Activities, Original Durations, Calendars, Descriptions, Constraints (added, deleted or changed), Added/Deleted Resources, Costs, Added/Deleted Relationships, Changed Relationship Lags, a Critical Path Analysis, Float Analysis, Open Ended Activity Analysis. A narrative shall be included in the variance report stating the reason for the changes listed above.
- C. CPM Reports: Concurrent with the CPM schedule, submit in PDF format the reports listed below. The specific format of the required reports will be discussed at the Preconstruction Scheduling Conference.
1. Critical Path Gantt Chart as further described in Article Baseline Construction Schedule.
  2. Critical and Near Critical Path Gantt Chart as further described in Article Baseline Construction Schedule.
  3. Activity ID Report: List of all activities sorted by activity number.
  4. Activity Schedule Bar-chart: Sorted by phase, area, start and finish.
  5. Logic Report: List of preceding and succeeding activities for all activities, sorted by phase, area, start and finish.
  6. Total Float Report: List of all activities sorted by phase in descending order of total float, then descending finish.
  7. Schedule of Values Report generated from the Oracle Primavera P6 schedule grouped by the Cost ID activity code and filtered by “budgeted total cost is not equal to \$0.” Sort by Activity ID with the following columns:
    - a. Activity ID.
    - b. Activity Name.
    - c. Remaining Duration.
    - d. Start.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. Finish.
  - f. Cost Percent Complete.
  - g. Physical Percent Complete.
  - h. Previous Physical Percent Complete.
  - i. Budgeted Total Cost.
  - j. Actual Total Cost.
  - k. Actual This Period Total Cost.
  - l. Previous Applications Total Cost.
  - m. Remaining Total Cost.
  - n. At Completion Total Cost.
- D. Project Cash Flow S-Curve: Show the monthly budgeted costs, actual costs and estimate at completion. Include cash curves for early and late start and finish dates.
- E. Manpower Histograms: Showing Project overall labor hours per month and trade labor hours per month (carpenters, masons, electricians, laborers, foremen, etc.).
- F. Material and Equipment Status Report: Showing the status of materials and equipment stored onsite and materials and equipment stored in bonded warehouse(s).

2.07 BASELINE NARRATIVE

- A. The Contractor shall provide a written narrative accompanying the electronic version of the Contractor's Baseline Schedule submission. This narrative shall explain the Contractor's approach for meeting all milestones and project completion dates. It shall also include a clear description of the critical path activities from beginning to end and describe anticipated crew sizes, production rate and anticipated problems of major activities along the critical path.
- B. In the written narrative, the Contractor shall include the basis and assumptions used to develop the Contractor's Baseline Schedule. The Contractor shall include crew sizes, equipment requirements, and anticipated delivery dates; restraints; critical path activities; activities requiring overtime or additional shifts; activities that contain time contingencies for impacts to be expected from normal rainfall; holidays and other non-work days; potential problem areas; permits; coordination required with the City and third party agencies; and long lead delivery items requiring more than 60 calendar days from order to delivery. The narrative shall also include a description of winterization activities necessary for work to continue through normally inclement weather periods.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.08 PAYMENTS DURING THE 180 DAY AND BASELINE SCHEDULE PROCESSING

- A. The City will only process the Contractor's payment applications for Mobilization, Bonds and Insurance prior to the acceptance of the 180-Day Schedule. The accepted 180- Day Schedule shall be the basis for progress payment request until the duration of the 180-Day Schedule is exceeded, at which time the Contractor shall have an accepted Baseline Schedule in effect. Should the Contractor not have an accepted Baseline Schedule at the end of the 180-Day Schedule duration, the City will be unable to process payments until a Baseline schedule is accepted and stasured. This paragraph remains in effect in addition to any payment deductions or withholds determined per Article Compliance and Failure to Submit Timely Schedules.
- B. The City places a high value on the timely acceptance of the 180-Day and Baseline Schedules, and their usefulness to the City diminishes with late acceptance of these schedules. Accordingly, for every month that acceptance of the 180-Day Schedule is delayed beyond 95 calendar days after NTP, the payment amount for the 180-Day Schedule, as specified in the Section 01 29 00, Payments Procedures, will be reduced by 10 percent of the specified amount. For every month beyond 180 calendar days after NTP that an accepted Baseline Schedule is delayed, the payment amount for the Baseline Schedule, as specified in the Section 01 29 00, Payments Procedures, will be reduced by 10 percent of the specified amount.

2.09 SCHEDULE UPDATE PROCESS AND PAYMENTS

- A. Contractor to monthly update the approved Baseline Schedule to reflect the current status of the Project. The update shall include all information available and status of the Project as of the cut-off date established in the Preliminary Schedule Meeting. All Monthly Progress Schedules shall incorporate all schedule Revisions and changes previously approved by the City.
- B. Each Monthly Progress Schedule shall reflect all as-built activities performed as of the effective data date of the update schedule. The Monthly Progress Schedule shall include the period from the last update to the effective data date and for the remainder of the Project. The current period's activities shall be reported as they actually took place. In the updated schedule, Contractor shall indicate the actual dates that activities were started, completed, or split. Ongoing activities shall have an indication of the percent complete based on the amount of actual work performed, and the estimated remaining duration to complete such activities.
- C. Contractor shall certify that the progress shown on the schedule update accurately represents Work completed through the cutoff date of the Submittal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. If Work was performed out of sequence, implement changes to the schedule so that it correctly reflects the actual sequence of Work. In the case of repairing logic for Work performed out of sequence, the City may consider the use of negative lags. Any such schedule corrections for out of sequence work shall be considered a revision, and Contractor shall obtain written approval from the City prior to implementing those revisions to the Monthly Progress Schedule or any other type of schedule.
- E. The physical percentage completion status (and remaining duration) of activities shall be statused in the schedule Updates and the Monthly Progress Schedule independently from the status of the dollar amount assigned to the activity for cost (price) and progress payment purposes. For example, the status of an activity can be 50 percent complete (based on time of performance) and may have a remaining duration of 5 days of the original 10-day duration, but the cost assigned to that activity may have a different completion status, and the earned dollars could be more or less than 50 percent of the at-completion dollars assigned to that activity. Contractor shall set up the scheduling software to calculate the physical completion status of each activity related to time separately from the statusing of the value of dollars earned for progress payment purposes.
- F. The earned-to-date dollar amount must reflect the value of the Work completed (which may not be directly proportional to the activity remaining duration or physical completion status), and consideration must be given to:
1. Materials stored at the site or offsite, but not incorporated into the Work when payment prerequisites are met by Contractor,
  2. Reductions for non-compliant work,
  3. Reductions for failure to provide material testing or required certifications,
  4. Reductions for other reasons described by the Contract Documents,
  5. when the value of the Work remaining is naturally disproportionate to the performance time remaining. When the physical percentage complete of an activity is disproportionate to the earned-to-date dollar amount, the reasons for the variance shall be described in a Log field as part of the Monthly Progress Schedule data, and those Log field notations shall be displayed as a column in the “Application For Payment Detail”.
- G. In addition to what is required for a schedule Update of Work progress, the submission shall include a separate tabular report of all schedule activities that are cost loaded, and shall include the at-completion Total Cost, the proposed earned-this-period Cost amount, and the proposed earned-to-date Cost. The format and group subtotaling of the cost and payment accounting tabular report shall be submitted for review and acceptance by the City prior to the first Monthly Progress Schedule submission, and the City can request and Contractor shall implement revisions to the formatting and data displayed in the tabular report at

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

any time thereafter to better serve the City's cost accounting system. The tabular report shall serve as the line item detail of the earned-to-date dollars assigned to each activity through the schedule's data date, will be referred to as the "Application For Payment Detail" document, and once approved by the City, will be an attachment to the Contractor "Summary Of Tasks" submitted by Contractor as part of the monthly "Invoice And Invoice Certificate" package.

- H. Two days prior to the Monthly Progress Schedule data date, submit draft Monthly Progress Schedule for review by the City. Review will be done during a meeting to go over the claimed amounts. During the meeting the City Representative will respond to Contractor's estimated earned-to-date dollar amounts, and any variances between Contractor's proposed earned-to-date dollars and the City's estimate will be discussed and resolved. A marked up copy of the tabular report of the resolution of any variances will be copied for each party. Those changes to the draft Monthly Progress Schedule earned-to-date dollars will be made to the schedule before the Monthly Progress Schedule is formally submitted. If follow-up is required to further a discussion or to present proof in order to resolve the earned-to-date dollar amount for an activity, it shall occur within 2 working days after the Meeting, and a resolution shall be reached before formal submission of the Monthly Progress Schedule. If there is a disagreement between City's and Contractor's estimated earned-to-date dollar amounts, Contractor shall use the City's earned-to-date figure.
- I. If at any time, Contractor or the City discovers an at-completion dollar amount (budget) assigned to an activity that is unreasonable or incorrect, either party can request that an adjustment be made. Such proposed adjustment shall be presented at the next Weekly Progress Meeting and discussed and treated like any other proposed schedule revision. Adjustments to the at-completion dollar amount for any activity will naturally require an equal adjustment to another activity such that the total Contract value does not change. Any proposed Revision to the at-completion dollar amount for any activity must be accepted by the City in writing prior to the change being made to the Monthly Progress Schedule. Contractor will maintain and make available to the City a record of all approved revisions to at-completion dollar amounts that displays each approved revision, and the adjustments to all activities affected by a revision.
- J. Contractor's monthly payment applications shall not be accepted and processed for payment by the City Representative without Baseline Schedule progress updates submitted in the time and manner required by this Specification which accurately reflect the allowable costs due under the Contract Documents and are accepted by the City. Should the Baseline Schedule progress updates not be accepted due to the Contractor's failure to address all City provided comments, payment withholds and deducts will be applied as specified in Article Compliance and Failure to Submit Timely Schedules of this section.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- K. Please see the Section 01 29 00, Payment Procedures for the Schedule of Values approval process and coordination with invoice payment.
- L. The Schedule Update Submittal shall include:
1. A detailed Gantt chart showing all activities organized by Work Breakdown Structure. The activity columns shall include Activity ID, Activity Name, Original Duration, Remaining Duration, Duration Percent Complete, Physical Percent Complete, Start, Finish, and Total Float. The critical path shall be clearly shown.
  2. A Critical Path Gantt chart showing Longest Path grouped by WBS to Level 1 only. The activity columns shall include Activity ID, Activity Name, Remaining Duration, Start, Finish, and Total Float. The critical path and relationship lines (logic) shall be clearly shown and based upon the critical and longest path.
  3. A Critical and Near Critical Path Gantt using the “calculate multiple float paths” option in P6 with the “display multiple float paths ending with activity” set to each of the contract milestones. Set the number of float paths to thirty. Group the report by “Float Path” and filter for float value 15 days from the float value showing on each Contract Milestone. The activity columns on the tabular data portion of the schedule shall include Activity ID, Activity Name, Remaining Duration, Start, Finish, and Total Float. The critical path and relationship lines (logic) shall be clearly shown.
  4. A Schedule Variance Report shall be submitted comparing the current schedule submittal with the previously accepted schedule. Display the baseline project bars and Milestones in the Gantt Chart. Include the following categories:
    - a. Activity ID.
    - b. Activity Name.
    - c. Original Duration.
    - d. BL Project Duration.
    - e. Variance – BL Project Duration.
    - f. Start.
    - g. Finish.
    - h. BL Project Start.
    - i. BL Project Finish.
    - j. Variance – BL Project Finish Date.
  5. Schedule of Values Report generated from the Oracle Primavera P6 schedule grouped by the Cost ID activity code and filtered by “budgeted total cost is not equal to \$0.” Sort by Activity ID with the following columns:
    - a. Activity ID.
    - b. Activity Name.
    - c. Remaining Duration.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. Start.
  - e. Finish.
  - f. Cost Percent Complete.
  - g. Physical Percent Complete.
  - h. Previous Physical Percent Complete.
  - i. Budgeted Total Cost.
  - j. Actual Total Cost.
  - k. Actual This Period Total Cost.
  - l. Previous Applications Total Cost.
  - m. Remaining Total Cost.
  - n. At Completion Total Cost.
6. A Cashflow curve plotting actual invoicing against Baseline forecast cashflow and the update forecast to project completion. The cashflow shall include Show the monthly budgeted costs, actual costs and estimate at completion. Include cash curves for early and late start and finish dates.
7. A manpower histogram plotting actual labor hours against Baseline forecast labor hours over the entire Project.
8. Material and Equipment Histograms: Showing the status of materials and equipment stored onsite and materials and equipment stored in bonded warehouse(s).
9. Construction Equipment Histograms: Show Project overall equipment count per month by major equipment category count per month (cranes, excavators, etc.).
- M. All changes to Schedule Updates must be accepted by the City Representative. If the Contractor desires to make a change to the current accepted Progress Update Schedule, the Contractor shall request permission from the City in writing, stating the reasons for the change as well as the specifics, such as revisions to activities, logic, durations, calendars, etc. Pending changes will be discussed at the Monthly Schedule Review (2 days prior to last Friday) where the City may authorize their inclusion in the schedule without any determination of merit or responsibility.
- N. Out of sequence logic must be corrected before the Progress Update Schedule is submitted.
- O. Pending Changes shall have a City assigned Potential Change (PC) number. The Contractor shall incorporate PC activities into the schedule as Level of Effort (LOE) activities, with a zero-dollar value cost, in the update period in which the Contractor knew, or should have known of the change. The LOE shall be linked to the impacted base contract schedule activities. The change activity shall not be cost loaded until an agreement is reached between the Contractor and City as to cost. Should the PC impact the critical path, the Contractor shall submit a Time Impact Analysis (TIA) per the TIA provisions of these Specifications. Upon acceptance of a TIA by the City Representative, the Contractor shall

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

incorporate the detailed TIA schedule activities into the next Schedule Update retaining the original LOE activity. All Potential Change Activities shall be assigned a WBS and coding structure to distinguish said activities from base contract schedule activities. Upon PCs being incorporated into a Contract Change Order (CCO), the Contractor shall assign a WBS and Activity Code for each CCO, with its subset of PC numbers, with the sum cost loading of said PC activities equal to the value of the CCO. The sum of the base contract activities shall total the original contract value. The sum of the change activities shall total CCOs issued to date, plus remaining PCs pending CCO. In the case of deductive change, the base contract activity shall be broken into two activities with the same logic ties consisting of the original activity with the remaining base contract amount and second activity with the amount to be deducted, the sum of the two totaling the originally scheduled value. Add an offsetting deduct (negative cost) as a PC change activity. The deduct amount activity on the base contract section shall have the successor logic removed, with a “deduct” note in parenthesis added to the end of the activity description. The deduct activity shall remain open until the actual deduct activity in the change section is statused as complete upon the CCO being issued. Upon the CCO being issued, both activities shall be statused with the CCO issue date.

- P. Failure to include in the schedule any element of Work required for performance of Contract shall not excuse Contractor from completing all Work required within applicable time constraints, notwithstanding the City’s acceptance of Contractor’s Construction Schedule.
- Q. Contractor shall address City review comments and resubmit within 7 Calendar Days from receipt of review comments. Should the Contractor fail to timely incorporate the City schedule review comments prior to the due date for the next month’s update, the Contractor shall proceed with the update and the outstanding schedule review comments from the prior month will be included in the current schedule update’s review comments. The Contractor is responsible for including the City schedule review comments into all affected schedules.
- R. Schedule updates forecasting contract milestones 30 or more days late are subject to rejection.

## 2.10 NARRATIVE PROGRESS REPORTS

- A. A Cost Activity Report shall be prepared and submitted with each progress payment. The cost information shall be updated by activity and summarized for each month. The sum of all monthly costs shall be equal to the contract amount plus approved change orders.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. The Narrative Report shall be submitted with the monthly progress update and include:
1. The Contractor's transmittal letter.
  2. Schedule report indicating each activity on the CPM Schedule that has been:
    - a. Completed during this reporting period.
    - b. In progress during this reporting period.
  3. Scheduled for the next reporting period.
  4. Analysis, by critical path. (Note: critical path is longest path as described above.):
    - a. A listing of the current critical path.
    - b. Progress made on critical path activities in current CPM schedule.
    - c. Explanations for any lack of Work on critical path activities planned to be performed during the last month.
    - d. Impact on other activities, milestones, and completion dates.
  5. Current and anticipated delays:
    - a. Cause of the delay.
    - b. Corrective action and schedule adjustments taken or to be taken to correct the delay.
    - c. Impact of the delay on other activities, milestones, and completion dates.
    - d. Recommendations for recovery of the delays.
  6. Any change in construction sequence, logic changes, relationship changes, or duration changes and the rationale associated with each change for City review and acceptance.
  7. Any corrective actions taken by the Contractor to address delays or potential delays.
  8. Value of materials and equipment properly stored at the site but not yet incorporated in the Work.
  9. Identify interface items of work with another contract or with existing facilities or where third-party action or coordination is required.
  10. Pending issues and status of other items such as:
    - a. Permits.
    - b. Contract modifications.
    - c. Time extension requests.
    - d. Long-lead procurement items.
  11. Contract complete date status.
  12. Ahead of schedule and number of days.
  13. Behind schedule and number of days.
  14. Summary of Project status including cumulative information to date, variance, and forecast at completion.
  15. Other Project or scheduling concerns.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.11 WEEKLY 4-WEEK LOOK-AHEAD SCHEDULE

- A. The weekly bar chart “Four Week Look-Ahead Schedule” submittal shall comply with the following requirements:
1. Be produced using the latest version of Oracle Primavera P6 software and generated from the latest Monthly Schedule Update.
  2. Updated weekly with a Monday Data Date.
  3. The filter for the bar chart will be all activities that have started but not finished, plus all activities with a start or finish within minus 1 week and plus 4 weeks. Total float and the critical path shall clearly be shown.
  4. Submit as a printed bar chart on 11-inch by 17-inch paper 24 hours prior to the weekly Project meeting.
  5. Identify any shutdowns/cutovers that may potentially impact stakeholders.
  6. Be prepared to discuss the status of activities on the Four Week Look Ahead Schedule, including any key issues or delays at the weekly Project meetings. The Contractor’s Superintendent in charge of the work areas in the schedule shall review and sign off on the Four Week Look Ahead Schedule. The Superintendent shall be prepared to review the activities in the Four Week Look Ahead Schedule and discuss any foreseeable issues.
  7. The Contractor may provide supplemental detail to elaborate on any schedule activity and must clearly represent this supplement detail as supplemental task information separate from the Oracle Primavera P6 generated schedule. The Contractor shall not in any way change the Activity ID and description in the schedule. For each activity on the Four Week Rolling Schedule, the Contractor shall list the corresponding schedule activity identification number from the current Monthly Progress Schedule Update.

2.12 RECOVERY SCHEDULE

- A. When a periodic update indicates the project completion, or any intermediate contract milestone, is 1 day to 15 days behind the current accepted schedule, the City reserves the right to request a recovery schedule. If the Work falls more than 15 days behind the current accepted schedule, the Contractor is required to submit a Recovery Schedule taking steps necessary to improve progress at no additional cost to the City.
- B. Recovery schedules may be submitted independently or included in the next Monthly Progress Update. Indicate changes to working hours per shift, labor per shift, shifts per working day, working days per week, or amount of construction equipment, or any combination of foregoing, sufficiently to achieve the contractual milestones in accordance with the current Contract requirements. If the Contractor chooses to include the recovery schedule with the next Monthly

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Progress Update, the City Representative may reject the Monthly Progress Update or require revisions to be made to the recovery schedule before the Monthly Progress Schedule is accepted. Recovery Schedules shall be prepared by the Contractor regardless of the underlying cause for the delay and responsibility for the time.

- C. The Recovery Schedule shall have the same data date as the submitted Monthly Progress Schedule, and the data prior to the data date shall be the same in both.
- D. Concurrent with the submittal of the Monthly Progress Schedule for review by the City, Contractor shall submit the proposed Recovery Schedule. The Submittal shall also include a written, narrative format document detailing proposed changes to the Project Schedule and including reasons for the changes. This narrative document shall include at a minimum, the following:
  - 1. Detailed description of the changes in the means and methods that Contractor intends to implement to recover from schedule delay; such as additional design staff, additional construction crews, additional equipment, extended working hours, additional shifts per day, or other means;
  - 2. Detailed description of proposed changes in work activity sequences that will permit previously scheduled sequential work to be performed concurrently, or other scheduling changes, which will result in recovery of the schedule delay;
  - 3. Identification of changes to specific activity original durations;
  - 4. Identification of changes to activity relationships and/or schedule logic;
  - 5. Identification of activities that have been added, deleted, or modified; and/or
  - 6. Identification of changes to the Project Schedule's Critical Path.

2.13 TIME IMPACT ANALYSIS (TIA)

- A. When the Contractor asserts it has been or will be delayed, and as a result is requesting a time extension, the Contractor shall notify the City Representative of a potential delay and prepare and submit a TIA within 14 calendar days after the impact is known or should have been known.
- B. The TIA shall be submitted separately and based upon the current accepted schedule with a data date closest to and prior to the date when the Contractor knew, or should have known, of the impact. The current accepted schedule can be the Initial 180 Day Schedule, Baseline Schedule, or Monthly Schedule Update.
- C. If the Contractor is submitting time related costs of any kind and/or is requesting time due to a schedule delay, the submittal of a TIA is required.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. The Contractor shall submit to the City a written TIA illustrating the influence of each change or delay on any specified intermediate milestone date and the current projected completion date. Each TIA shall include a CPM schedule network (fragnet) indicating all necessary added activities, logic, duration and demonstrating how the Contractor proposes to incorporate the change or delay into the Schedule and any additional supporting evidence that the City deems necessary.
- E. The TIA submittal shall include a PDF fragnet comparing the current accepted schedule against the Contractor's claimed delay, showing the impact on the critical path. The fragnet must show all impacts leading up and including the contract milestones.
- F. The TIA shall include a narrative addressing entitlement including a description of the scope of the change as well as addressing compliance with all contract requirements for requesting a time extension. The schedule narrative at a minimum shall address the chronology of events (impact activities), compliance with notice requirements, schedule update used as the basis of analysis (or baseline schedule if applicable), critical path, identification of CPM schedule activities impacted, logic ties between impact activities and CPM schedule activities, fragnet, concurrency, and compensability if applicable.
- G. The Contractor shall submit one electronic copy of the Oracle Primavera P6 schedule files in XER format, PDF copies of the fragments, and the narrative. Each TIA should be identified with a discrete ID number and description.
- H. Should the Contractor fail to request time and submit a contract compliant TIA per these Specifications, the Contractor will have irrevocably waived its contract right to a time extension and time-related costs and will be responsible for all costs associated with mitigating said delay to complete the work within the Contract Time.
- I. It is expressly agreed and understood that the Contractor shall not be entitled to any time or compensation for potential delays, or delays, which:
1. Can be avoided by re-sequencing work activities;
  2. Applying additional resources;
  3. Do not delay the project completion date or a project milestone; or
  4. Result from any method used to sequester float.
- J. Pacing is defined as an intentional slowing of work activities during a delay, or alleged delay, to Project Completion. Absent contemporaneous notice of intent to pace, including the Contractor's rationale to pace and the City's concurrence, pacing of work activities will be construed as a concurrent delay for the purposes of assessing time extensions and delay costs."

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- K. The Contractor shall incorporate City review comments and resubmit the TIA within 7 calendar days of receiving them.
- L. Upon acceptance of the TIA by the City Representative, the Contractor shall incorporate the TIA fragnet into the next monthly progress schedule update.

**PART 3 WEATHER**

**3.01 ANTICIPATED WEATHER DAYS**

- A. Time Allowance For Inclement Weather: Time allowance for inclement weather: “Inclement weather” is a lost workday, caused by inclement weather conditions, and is defined as a day in which the Contractor’s workforce cannot work 50 percent or more of the day thereby resulting in a delay to the critical path. The number of inclement weather days will be reflected in a schedule activity titled “Inclement Weather”. The Contractor shall allow 13 working days per year within the Baseline Construction Schedule for inclement weather, the unused portion shall be considered as Float to be used by either party. The inclement weather activity’s successor shall be the Substantial Completion milestone. The predecessor activities shall be the last Project activities that occur before Substantial Completion. The Contractor shall notify the Resident Project Representative in writing when a lost workday has occurred due to inclement weather in accordance with the Baseline Construction Schedule update requirements. Any delays beyond the 13 working days per year shall not entitle the Contractor to any additional compensation. The sole remedy of the Contractor shall be to seek a non-compensable extension of time.

**3.02 WEATHER CALENDAR AND ACCOUNTING OF DAYS**

- A. The accounting of weather days shall occur once monthly corresponding to the Monthly Schedule Update. The City granted non-working days affecting the critical path attributable to weather shall be accounted for in the Weekly Statement of Contract Time, as prepared by the City, independent of the weather allowance. City granted weather days shall be added to the schedule monthly as a one work day Non-work days in the calendars with an actual date equal to the non-working day as reflected in the Weekly Statement of Contract Time. A monthly reconciliation will occur between the inclement weather allowance and actual weather impact, as reflected in the Weekly Statement of Contract Time. Should the Contractor meet all contract requirements for demonstrating unavoidable delay, the Contractor shall be granted a time extension for weather impact days, beyond the weather allowance days for the same time period, for activities on the critical path.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. No contract time adjustment shall be made if actual non-working days attributable to weather affecting the critical path DOES NOT exceed the allowance. Unused weather allowance shall become project float.

3.03 COMPLIANCE AND FAILURE TO SUBMIT TIMELY SCHEDULES

- A. Because the City places a high value on the importance and use of Project scheduling information as a management tool in achieving the completion of Work as planned, the City will deduct 10 percent of the monthly Progress Payment, but not more than 3 percent of the Contract value, for failure by the Contractor to submit accepted Baseline Schedules or the monthly Progress Update Schedules as required by these Specifications. These deductions shall apply should the Contractor fail to address within the specified time frame schedule review comments, TIA review comments, recovery schedule requirements, and address any other requirements of these Specifications and/or the City. These deductions are cumulative and will be made for each and every month that the Contractor fails to provide the required information. The Progress Update Schedules and narratives shall be accurate, reflect actual events on the Project, and meet all requirements of these Specifications. If the Contractor does not correct the deficiency by providing an acceptable schedule within the specified time frame from receiving the City's review comments, the deduction will become permanent via a deductive change order.

3.04 FINAL PROGRESS SCHEDULE

- A. The last monthly update of the Project Schedule shall be the project record (as-built) schedule. The project record schedule shall accurately show the completion of all Work required by the Contract and shall have a data date equivalent to the day after the actual date of the Contract Completion milestone. All Project Schedule activities shall be stated at 100 percent complete and have actual start and actual finish dates. The Project budgeted cost reflected in the project record schedule shall be the Contract price, inclusive of all adjustments due to executed change orders. The project record schedule submittal shall meet all monthly update requirements and include an actual cost statement. The City's acceptance of the project record schedule shall be a condition precedent to acceptance of the contract by the City's Board of Directors and to the release of final payment and bonds by the City.
- B. This schedule submission shall be accompanied by a certification, signed by an officer of the company and the Contractor's Project Manager and Project Scheduler, stating "To the best of our knowledge, the enclosed final update of the Construction Progress Schedule accurately reflects the actual start and completion

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

dates and logical relationships of all activities contained herein and represents an accurate depiction of the way in which the Project was constructed.”

**END OF SECTION**

**SECTION 01 33 00**  
**SUBMITTAL PROCEDURES**

**PART 1 GENERAL**

1.01 DEFINITIONS

- A. Action Submittal: Written and graphic information submitted by Contractor that requires Design Engineer's approval.
- B. Deferred Submittal: Information submitted by Contractor for portions of design that are to be submitted to permitting agency for approval prior to installation of that portion of the Work, along with Design Engineer's review documentation that submittal has been found to be in general conformance with Project's design.
- C. Informational Submittal: Information submitted by Contractor that requires Design Engineer's review and determination that submitted information is in accordance with the Conditions of the Contract.

1.02 PROCEDURES

- A. Direct submittals as described in Section 01 33 22, Web Based Construction Document Management, unless specified otherwise.
  - 1. Via Construction Manager.
- B. Electronic Submittals: Submittals shall, unless specifically accepted, be made in electronic format.
  - 1. Each submittal shall be an electronic file in Adobe Acrobat Portable Document Format (PDF). Use the latest version available at time of execution of the Agreement.
  - 2. Electronic files that contain more than 10 pages in PDF format shall contain internal bookmarking from an index page to major sections of the document.
  - 3. PDF files shall be set to open "Bookmarks and Page" view. Magnification shall be set to "fit page".
  - 4. Add general information to each PDF file, including title, subject, author, and keywords.
  - 5. PDF files shall be set up to print legibly at 8.5-inch by 11-inch, 11-inch by 17-inch, or 22-inch by 34-inch. No other paper sizes will be accepted.
  - 6. Submit new electronic files for each resubmittal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. Include a copy of the Transmittal of Contractor's Submittal form, located at end of section, with each electronic file.
8. Owner will reject submittal that is not electronically submitted, unless specifically accepted.
9. Provide Construction Manager with authorization to reproduce and distribute each file as many times as necessary for Project documentation. Provide file password if security settings are used.
10. Detailed procedures for handling electronic submittals will be discussed at the preconstruction conference and shall be as required by Section 01 33 22, Web Based Construction Document Management.

C. Transmittal of Submittal:

1. Contractor shall:
  - a. Review each submittal and check for compliance with Contract Documents.
  - b. Stamp each submittal with uniform approval stamp before submitting to Construction Manager.
    - 1) Stamp to include Project name, submittal number, Specification number, Contractor's reviewer name and inked signature, date of Contractor's approval, and statement certifying submittal has been reviewed, checked, and approved for compliance with Contract Documents.
    - 2) Construction Manager will not review submittals that do not bear Contractor's approval stamp and will return them without action.
2. Complete, sign, and transmit with each submittal package, one Transmittal of Contractor's Submittal form in format approved by Construction Manager.
3. Identify each submittal with the following:
  - a. Numbering and Tracking System:
    - 1) Sequentially number each submittal.
    - 2) Resubmission of submittal shall have original number with sequential alphabetic suffix.
  - b. Specification section and paragraph to which submittal applies.
  - c. Project title and Owner's project number.
  - d. Date of transmittal.
  - e. Names of Contractor, Subcontractor or Supplier, and manufacturer as appropriate.
4. Identify and describe each deviation or variation from Contract Documents.
5. All submittals shall be in the English language.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

D. Format:

1. Do not base Shop Drawings on reproductions of Contract Documents.
2. Package submittal information by individual specification section. Do not combine different specification sections together in submittal package, unless otherwise directed in specification.
3. Present in a clear and thorough manner and in sufficient detail to show kind, size, arrangement, and function of components, materials, and devices, and compliance with Contract Documents.
4. Index with labeled tab dividers in orderly manner.
5. Submit all text in the English language.

E. Timeliness: Schedule and submit in accordance Schedule of Submittals, and requirements of individual specification sections.

F. Processing Time:

1. Time for review shall commence on Engineer's receipt of submittal.
2. Construction Manager will act upon Contractor's submittal and transmit response to Contractor not later than 20 working days after receipt, unless otherwise specified.
3. Allow 30 working days for the review of deferred submittals by the AHJ after approval by the Design Engineer.
4. Resubmittals will be subject to same review time.
5. No adjustment of Contract Times or Price will be allowed as a result of delays in progress of Work caused by rejection and subsequent resubmittals.

G. Resubmittals: Clearly identify each correction or change made.

H. Incomplete Submittals:

1. Construction Manager will return entire submittal for Contractor's revision if preliminary review deems it incomplete.
2. When any of the following are missing, submittal will be deemed incomplete:
  - a. Contractor's review stamp; completed and signed.
  - b. Transmittal of Contractor's Submittal; completed and signed.
  - c. Insufficient number of copies.
3. The Contractor shall furnish required submittals with sufficient information and accuracy in order to obtain the required approval within one submittal and one resubmittal. The Construction Manager will record time for reviewing subsequent submittals and the Contractor shall reimburse the Owner for Design Engineer's such charges based on actual billing rates for the Design Engineer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- I. Submittals not required by Contract Documents:
  - 1. Will not be reviewed and will be returned stamped “Not Subject to Review.”
  - 2. Construction Manager will keep one copy and return submittal to Contractor.
  
- J. Approved Materials List (AML): See Section 4-1.3.6, “Preapproved Material” in The Whitebook and as amended in the SSP for submittal requirements of materials in the City’s AML.
  
- K. Working Drawings: Submit Working Drawings listed in Table 3-8.2 of The Whitebook in accordance with the requirements of The Whitebook and The Greenbook.

1.03 ACTION SUBMITTALS

- A. Prepare and submit Action Submittals required by individual specification sections.
  
- B. Shop Drawings:
  - 1. Copies: Five copies of closed submittals as required under Section 01 33 22, Web Based Construction Document Management.
  - 2. Identify and Indicate:
    - a. Applicable Contract Drawing and Detail number, products, units and assemblies, and system or equipment identification or tag numbers.
    - b. Equipment and Component Title: Identical to title shown on Drawings.
    - c. Critical field dimensions and relationships to other critical features of Work. Note dimensions established by field measurement.
    - d. Project-specific information drawn accurately to scale.
  - 3. Manufacturer’s standard schematic drawings and diagrams as follows:
    - a. Modify to delete information that is not applicable to the Work.
    - b. Supplement standard information to provide information specifically applicable to the Work.
  - 4. Product Data: Provide as specified in individual specifications.
  - 5. Deferred Submittal: See Drawings for list of deferred submittals.
    - a. Contractor-design drawings and product data related to permanent construction.
      - 1) Written and graphic information.
      - 2) Drawings.
      - 3) Cut sheets.
      - 4) Data sheets.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 5) Action item submittals requested in individual specification section.
  - b. Prior to installation of indicated structural or nonstructural element, equipment, distribution system, or component or its anchorage, submit required supporting data and drawings for review and acceptance by Design Engineer. Documentation of review and approval provided on Design Engineer's comment form, along with completed submittal, shall be filed with permitting agency by Contractor and approved by permitting agency prior to installation.
  6. Foreign Manufacturers: When proposed, include names and addresses of at least two companies that maintain technical service representatives close to Project.
- C. Samples:
1. Copies: Two, unless otherwise specified in individual specifications.
  2. Preparation: Mount, display, or package Samples in manner specified to facilitate review of quality. Attach label on unexposed side that includes the following:
    - a. Manufacturer name.
    - b. Model number.
    - c. Material.
    - d. Sample source.
  3. Manufacturer's Color Chart: Units or sections of units showing full range of colors, textures, and patterns available.
  4. Full-size Samples:
    - a. Size as indicated in individual specification section.
    - b. Prepared from same materials to be used for the Work.
    - c. Cured and finished in manner specified.
    - d. Physically identical with product proposed for use.
- D. Action Submittal Dispositions:
1. Design Engineer will review, comment, stamp, and distribute as noted:
    - a. Approved:
      - 1) Contractor may incorporate product(s) or implement Work covered by submittal.
      - 2) Distribution: Electronic.
        - a) One copy of closed submittal furnished to the Construction Manager.
    - b. Approved as Noted:
      - 1) Contractor may incorporate product(s) or implement Work covered by submittal, in accordance with Design Engineer's notations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 2) Distribution: Electronic.
- c. Partial Approval, Resubmit as Noted:
  - 1) Make corrections or obtain missing portions, and resubmit.
  - 2) Except for portions indicated, Contractor may begin to incorporate product(s) or implement Work covered by submittal, in accordance with Design Engineer's notations.
  - 3) Distribution: Electronic.
- d. Revise and Resubmit:
  - 1) Contractor may not incorporate product(s) or implement Work covered by submittal.
  - 2) Distribution: Electronic.

1.04 INFORMATIONAL SUBMITTALS

A. General:

- 1. Copies: Electronic.
- 2. Refer to individual specification sections for specific submittal requirements.
- 3. Construction Manager will review each submittal. If submittal meets conditions of the Contract, Construction Manager will forward copy to appropriate parties. If Construction Manager determines submittal does not meet conditions of the Contract and is therefore considered unacceptable, Construction Manager will provide review comments to Contractor, and require that submittal be corrected and resubmitted.
- 4. Construction Manager and Design Engineer's review of the submittals will be only for compliance with the information given in the Contract Documents and shall not extend to means, methods, sequences, techniques, or procedures of construction or to safety precautions or programs. Compliance confirmation shall not relieve the Contractor of responsibility for the accuracy of Drawings, nor for the proper fitting and construction of work, or for the furnishing of materials or work required by the Contract and not identified on Drawings.

- B. Equipment Procured Overseas: Within 60 calendar days of Notice to Proceed, submit a list of equipment that will require overseas shipping for project delivery. List shall include the value of shipped items.

C. Certificates:

- 1. General:
  - a. Provide notarized statement that includes signature of entity responsible for preparing certification.
  - b. Signed by officer or other individual authorized to sign documents on behalf of that entity.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Welding: In accordance with individual specification sections.
  3. Installer: Prepare written statements on manufacturer's letterhead certifying installer complies with requirements as specified in individual specification section.
  4. Material Test: Prepared by qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements.
  5. Certificates of Successful Testing or Inspection: Submit when testing or inspection is required by Laws and Regulations or governing agency or specified in individual specification sections.
  6. Manufacturer's Certificate of Compliance: In accordance with Section 01 61 00, Common Product Requirements.
  7. Manufacturer's Certificate of Proper Installation: In accordance with Section 01 43 33, Manufacturers' Field Services.
- D. Construction Photographs and Video: In accordance with Section 01 31 13, Project Coordination, and as may otherwise be required in Contract Documents.
- E. Closeout Submittals: In accordance with Section 01 77 00, Closeout Procedures.
- F. Contractor-design Data (related to temporary construction):
1. Written and graphic information.
  2. List of assumptions.
  3. List of performance and design criteria.
  4. Summary of loads or load diagram, if applicable.
  5. Calculations.
  6. List of applicable codes and regulations.
  7. Name and version of software.
  8. Information requested in individual specification section.
- G. Deferred Submittals: See Drawings for list of deferred submittals.
1. Contractor-design data related to permanent construction:
    - a. List of assumptions.
    - b. List of performance and design criteria.
    - c. Summary of loads or load diagram, if applicable.
    - d. Calculations.
    - e. List of applicable codes and regulations.
    - f. Name and version of design software.
    - g. Factory test results.
    - h. Informational submittals requested in individual specification section.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Prior to installation of indicated structural or nonstructural element, equipment, distribution system, or component or its anchorage, submit calculations and test results of Contractor-designed components for review by Design Engineer. Documentation of review and indication of compliance with general design intent and Project criteria provided on Design Engineer's comment form as meets conditions of the Contract, along with completed submittal, shall be filed with permitting agency by Contractor, and approved by permitting agency prior to installation.
  
- H. Manufacturer's Instructions: Written or published information that documents manufacturer's recommendations, guidelines, and procedures in accordance with individual specification section.
  
- I. Operation and Maintenance Data: As required in Section 01 78 23, Operation and Maintenance Data.
  
- J. Payment:
  1. Application for Payment: In accordance with Section 01 29 00, Payment Procedures.
  2. Schedule of Values: In accordance with Section 01 29 00, Payment Procedures.
  3. Schedule of Estimated Progress Payments: In accordance with Section 01 29 00, Payment Procedures.
  
- K. Quality Control Documentation: As required in Section 01 45 16.13, Contractor Quality Control.
  
- L. Schedules:
  1. Schedule of Submittals: The Schedule of Submittals shall be an integral part of the Project's Critical Path Method Schedule as specified in Section 01 32 00, Construction Progress Documentation.
    - a. Show for each, at a minimum, the following:
      - 1) Specification section number.
      - 2) Identification by numbering and tracking system as specified under Paragraph Transmittal of Submittal.
      - 3) Estimated date of submission to Engineer, including reviewing and processing time.
    - b. On a monthly basis, submit updated Schedule of Submittals to Construction Manager if changes have occurred or resubmittals are required.
  2. Progress Schedules: In accordance with Section 01 32 00, Construction Progress Documentation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- M. Special Guarantee: Supplier's written guarantee as required in individual specification sections.
- N. Statement of Qualification:
1. Evidence of qualification, certification, or registration as required in Contract Documents to verify qualifications of professional land surveyor, engineer, materials testing laboratory, specialty Subcontractor, trade, Specialist, consultant, installer, and other professionals.  
Submittals Required by Laws, Regulations, and Governing Agencies:
    - a. Promptly submit notifications, reports, certifications, payrolls, and otherwise as may be required, directly to the applicable federal, state, or local governing agency or their representative.
    - b. Transmit to Construction Manager for Owner's records one copy of correspondence and transmittals (to include enclosures and attachments) between Contractor and governing agency.
- O. Submittals Required by Laws, Regulations, and Governing Agencies:
1. Promptly submit promptly notifications, reports, certifications, payrolls, and otherwise as may be required, directly to the applicable federal, state, or local governing agency or their representative.
  2. Transmit to Construction Manager for Owner's records one copy of correspondence and transmittals (to include enclosures and attachments) between Contractor and governing agency.
- P. Test, Evaluation, and Inspection Reports:
1. General: Shall contain signature of person responsible for test or report.
  2. Factory:
    - a. Identification of product and specification section, type of inspection or test with referenced standard or code.
    - b. Date of test, Project title and number, and name and signature of authorized person.
    - c. Test results.
    - d. If test or inspection deems material or equipment not in compliance with Contract Documents, identify corrective action necessary to bring into compliance.
    - e. Provide interpretation of test results, when requested by Construction Manager.
    - f. Other items as identified in individual specification sections.
  3. Field:
    - a. As a minimum, include the following:
      - 1) Project title and number.
      - 2) Date and time.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 3) Record of temperature and weather conditions.
- 4) Identification of product and specification section.
- 5) Type and location of test, Sample, or inspection, including referenced standard or code.
- 6) Date issued, testing laboratory name, address, and telephone number, and name and signature of laboratory inspector.
- 7) If test or inspection deems material or equipment not in compliance with Contract Documents, identify corrective action necessary to bring into compliance.
- 8) Provide interpretation of test results, when requested by Construction Manager.
- 9) Other items as identified in individual specification sections.

Q. Testing and Startup Data: In accordance with Section 01 91 14, Testing, Integration, and Startup.

R. Training Data: In accordance with Section 01 43 33, Manufacturers' Field Services.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION (NOT USED)**

**END OF SECTION**

**SECTION 01 33 22**  
**WEB BASED CONSTRUCTION DOCUMENT MANAGEMENT**

**PART 1 GENERAL**

1.01 SUMMARY

- A. The Owner, Construction Manager, Design Engineer, and Contractor shall utilize PMWeb (PMWeb is a registered trademark of PMWeb, Inc.) for submission of all data and documents (unless specified otherwise herein) throughout the duration of the Contract.
1. PMWeb is a web-based electronic media site.
  2. PMWeb is paid for by the Owner.
  3. PMWeb will be made available to all Contractor's personnel, subcontractor personnel, suppliers, consultants, Construction Manager, and Design Engineer or as approved by Owner.
  4. The joint use of this system is to facilitate electronic exchange of information, automation of key processes, and overall management of Construction Phase Documentation.
  5. PMWeb shall be the primary official means of project information submission and management.
- B. User Access Limitations: The Owner will initially manage the Contractor's access to PM Web by allowing access and assigning user profiles to accepted Contractor personnel. User profiles will define levels of access into the system; determine assigned function-based authorizations and user privileges. Entry of information exchanged and transferred between the Contractor and its subcontractors and suppliers on PMWeb shall be the responsibility of the Contractor.
- C. Ownership of Data: Data entered in a collaborative mode (entered with the intent to share as determined by permissions and workflows within the PMWeb system) by the Owner, Construction Manager, Design Engineer, and Contractor will be owned by the City.
- D. Automated System Notification and Audit Log Tracking: Review comments made (or lack thereof) by the Owner on Contractor submitted documentation shall not relieve the Contractor from compliance with requirements of the Contract Documents. The Contractor is responsible for managing, tracking, and documenting the Work to comply with the requirements of the Contract Documents. Owner's acceptance via automated system notifications or audit logs extends only to the face value of the submitted documentation and does not constitute validation of the Contractor's submitted information.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

E. Submittals:

1. See Section 01 33 00, Submittal Procedures.
2. Preconstruction Submittals List of Contractor's key PMWeb personnel. Include descriptions of key personnel's roles and responsibilities for this Project. Contractor should also identify their organizations administrator on the list.

F. Computer Requirements:

1. The Contractor shall use computer hardware and software that meets the requirements of the PMWeb system as required to access and utilize PMWeb. As recommendations are modified by PMWeb, the Contractor will upgrade their system(s) to meet or exceed the recommendations. Upgrading of the Contractor's computer systems will not be justification for a cost or time modification to the Contract.
2. The Contractor shall ensure that connectivity to the PMWeb system is accomplished through DSL, cable, T-1 or wireless communications systems. The minimum bandwidth requirements for using the system is 1 Mb/s. It is recommended a faster connection be used when uploading pictures and files into the system.
3. PMWeb currently supports Mozilla's Firefox v3.0-3.5, Apple's Safari v3.0-3.5, Google Chrome v65.03325.181 and Microsoft's Internet Explorer v7.0 web browsers for accessing the application.

G. Contractor Responsibility:

1. The Contractor shall be responsible for the validity of their information placed in PMWeb and coordinate with the City System administrator for access for the ability of their personnel accessing and using the PM Web system.
2. Accepted users shall be knowledgeable in the use of computers, including Internet Browsers, email programs, cad drawing applications, and Adobe Portable Document Format (PDF) document distribution program.
3. The Contractor shall utilize the existing forms in PMWeb to the maximum extent possible. If a form does not exist in PMWeb the Contractor must include a form of their own, or provided by the Construction Manager, as an attachment to a submittal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Adobe PDF documents will be created through electronic conversion rather than optically scanned whenever possible. The Contractor is responsible for the training of their personnel in the use of PM Web (outside what is provided by the Owner) and the other programs indicated above as needed.
- H. Connectivity Problems: Provide a list of Contractor's key PMWeb personnel for the Construction Manager's acceptance. The Owner reserves the right to perform a security check on all potential users. The Contractor will be allowed to add additional personnel and subcontractors to PMWeb.
- I. Training:
1. The Owner will provide training to the Contractor.
  2. Training may consist of web-based seminars in conjunction with conference calls and/or in-person training.
  3. Contractor shall arrange and pay for the facilities and hardware/software required to facilitate their own training not provided by Owner.

**PART 2 PRODUCTS**

2.01 DESCRIPTION

- A. PMWeb project management application (no equal).

**PART 3 EXECUTION**

3.01 PMWEB UTILIZATION

- A. PMWeb shall be utilized in connection with all document and information management required by these Contract Documents.

3.02 SUBMITTALS

- A. Shop Drawings:
1. Shop Drawing and design data documents shall be submitted PDF attachments to the PMWeb submittal work flow process and form. Examples of Shop Drawings include, but are not limited to:
    - a. Standard manufacturer installation drawings.
    - b. Drawings prepared to illustrate portions of the work designed or developed by the Contractor.
    - c. Steel fabrication, piece, and erection drawings.
- B. See Section 01 33 00, Submittal Procedures.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.03 PRODUCT DATA

- A. Product catalog data and manufacturer's instructions shall be submitted as PDF attachments to the PMWeb submittal work flow process and form. Examples of product data include, but are not limited to:
1. Manufacturer's printed literature.
  2. Preprinted product specification data and installation instructions.

3.04 ADMINISTRATIVE OR INFORMATIONAL SUBMITTALS

- A. All correspondence and preconstruction submittals shall be submitted using PMWeb. Examples of administrative submittals include, but are not limited to:
1. Permits.
  2. Requests for substitutions (RFS).
  3. List of contact personnel.
  4. Requests for Information (RFI).
- B. Network Analysis Schedules and associated reports and updates. Each schedule submittal specified in these Contract Documents shall be submitted as a native backed-up file (.PRX or .STX) of the scheduling program being used. The schedule shall also be posted to PM Web as a PDF file in the format specified in these Contract Documents.
- C. Meeting minutes for quality control meetings, progress meetings, pre-installation meetings, etc., shall be posted to PM Web as a PDF file in format specified in these Contract Documents.
- D. Any general correspondence submitted.
- E. Project Photos: Project photos shall be posted monthly to PMWeb.

3.05 COMPLIANCE SUBMITTALS

- A. Test reports, certificates, and manufacture field report submittals shall be submitted on PMWeb as PDF attachments. Examples of compliance submittals include, but are not limited to:
1. Field test reports.
  2. Quality Control certifications.
  3. Manufacturer's documentation and certifications for quality of products and materials provided.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.06 RECORD AND CLOSEOUT SUBMITTALS

- A. Operation and maintenance data and closeout submittals shall be submitted on PMWeb as PDF documents during the approval and review stage as specified, with actual set of documents submitted for final. Examples of record submittals include, but are not limited to:
1. Operation and Maintenance Manuals: final documents shall be submitted as specified.
  2. Extra materials, spare stock, etc., submittal forms shall indicate when actual materials are submitted.

3.07 FINANCIAL SUBMITTALS

- A. Schedule of Value, Pay Estimates, and Change Request Proposals shall be submitted via PMWeb. Supporting material for Pay Estimates and Change Requests shall be submitted on PMWeb as PDF attachments. Examples of compliance submittals include, but are not limited to:
1. Contractor's Schedule of Values.
  2. Contractor's Monthly Progress Payment Requests.
  3. Contract Change proposals requested by the Owner.

3.08 SUBMITTAL PAPER COPIES

- A. Contractor shall deliver bound and tabbed paper copies of every closed submittal to the Construction Manager within 1 week of the Construction Manager closing a submittal with any disposition as follows:
1. Each copy shall have the closed PMWeb cover page including the disposition and any comments.
  2. Final copies of submittals returned with comments, but not requiring resubmittal shall incorporate revisions per the Design Engineer's comments.
  3. Number of paper copies:
    - a. Final O&M Manuals: Three copies as specified in the Section 01 78 23, Operation and Maintenance Data.
    - b. All Other Submittals: Five copies as specified in Section 01 33 00, Submittal Procedures.
    - c. For submittals with attachments over 30 megabytes in size, provide one CD of the submittal for each required paper copy.

**END OF SECTION**

**SECTION 01 42 13**  
**ABBREVIATIONS AND ACRONYMS**

**PART 1 GENERAL**

1.01 REFERENCE TO STANDARDS AND SPECIFICATIONS OF TECHNICAL SOCIETIES

- A. Reference to standards and specifications of technical societies and reporting and resolving discrepancies associated therewith shall be as provided in Article 3 of the General Conditions, and as may otherwise be required herein and in the individual Specification sections.
- B. Work specified by reference to published standard or specification of government agency, technical association, trade association, professional society or institute, testing agency, or other organization shall meet requirements or surpass minimum standards of quality for materials and workmanship established by designated standard or specification.
- C. Where so specified, products or workmanship shall also meet or exceed additional prescriptive or performance requirements included within Contract Documents to establish a higher or more stringent standard of quality than required by referenced standard.
- D. Follow the order of precedence per Section 3-7.2 of The Greenbook
- E. The design is based on the first listed supplier shown within the Contract Documents. Any modifications or adjustments shall made by the Contractor for other listed suppliers.
- F. Copies of standards and specifications of technical societies:
  - 1. Copies of applicable referenced standards have not been bound in these Contract Documents.
  - 2. Where copies of standards are needed by Contractor, obtain a copy or copies directly from publication source and maintain in an orderly manner at the Site as Work Site records, available to Contractor's personnel, Subcontractors, Owner, and Construction Manager.

1.02 ABBREVIATIONS

A. Abbreviations for trade organizations and government agencies: Following is a list of construction industry organizations and government agencies to which references may be made in the Contract Documents, with abbreviations used.

1.	AA	Aluminum Association
2.	AABC	Associated Air Balance Council
3.	AAMA	American Architectural Manufacturers Association
4.	AASHTO	American Association of State Highway and Transportation Officials
5.	ABMA	American Bearing Manufacturers' Association
6.	ACI	American Concrete Institute
7.	AEIC	Association of Edison Illuminating Companies
8.	AGA	American Gas Association
9.	AGMA	American Gear Manufacturers' Association
10.	AI	Asphalt Institute
11.	AISC	American Institute of Steel Construction
12.	AISI	American Iron and Steel Institute
13.	AITC	American Institute of Timber Construction
14.	ALS	American Lumber Standards
15.	AMCA	Air Movement and Control Association
16.	ANSI	American National Standards Institute
17.	APA	APA – The Engineered Wood Association
18.	API	American Petroleum Institute
19.	APWA	American Public Works Association
20.	AHRI	Air-Conditioning, Heating, and Refrigeration Institute
21.	ASA	Acoustical Society of America
22.	ASABE	American Society of Agricultural and Biological Engineers
23.	ASCE	American Society of Civil Engineers
24.	ASHRAE	American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.
25.	ASME	American Society of Mechanical Engineers
26.	ASNT	American Society for Nondestructive Testing
27.	ASSE	American Society of Sanitary Engineering
28.	ASTM	ASTM International
29.	AWI	Architectural Woodwork Institute
30.	AWPA	American Wood Preservers' Association
31.	AWPI	American Wood Preservers' Institute

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION (NOT USED)**

**END OF SECTION**

**SECTION 01 43 33**  
**MANUFACTURERS' FIELD SERVICES**

**PART 1 GENERAL**

1.01 DEFINITIONS

- A. Person-Day: One person for 8 hours within regular Contractor working hours.

1.02 SUBMITTALS

- A. Informational Submittals:

1. Training Schedule: Submit, in accordance with requirements of this Specification, not more than, nor not less than 21 days prior to start of equipment installation and revise as necessary for acceptance.
2. Lesson Plan: Submit, in accordance with requirements of this Specification, proposed lesson plan not less than 21 days prior to scheduled training and revise as necessary for acceptance.
3. Training Session Recordings: Furnish Owner with two complete sets of recordings fully indexed and cataloged with printed label stating session and date recorded.

1.03 QUALIFICATION OF MANUFACTURER'S REPRESENTATIVE

- A. Authorized representative of the manufacturer, factory trained, and experienced in the technical applications, installation, operation, and maintenance of respective equipment, subsystem, or system, with full authority by the equipment manufacturer to issue the certifications required of the manufacturer. Additional qualifications may be specified in the individual specification section.
- B. Representative subject to acceptance by Owner, Construction Manager, and Design Engineer. No substitute representatives will be allowed unless prior written approval by such has been given.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 FULFILLMENT OF SPECIFIED MINIMUM SERVICES

- A. Furnish manufacturers' services, when required by an individual specification section, to meet the requirements of this section.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Where time is necessary in excess of that stated in the Specifications for manufacturers' services, or when a minimum time is not specified, time required to perform specified services shall be considered incidental.
- C. Schedule manufacturer' services to avoid conflict with other onsite testing or other manufacturers' onsite services.
- D. Determine, before scheduling services, that conditions necessary to allow successful testing have been met.
- E. Only those days of service approved by Construction Manager will be credited to fulfill specified minimum services.
- F. When specified in individual specification sections, manufacturer's onsite services shall include:
  - 1. Assistance during product (system, subsystem, or component) installation to include observation, guidance, instruction of Contractor's assembly, erection, installation or application procedures.
  - 2. Inspection, checking, and adjustment as required for product (system, subsystem, or component) to function as warranted by manufacturer and necessary to furnish Manufacturer's Certificate of Proper Installation.
  - 3. Providing, on a daily basis, copies of manufacturers' representatives field notes and data to Design Engineer and Construction Manager.
  - 4. Revisiting the Site as required to correct problems and until installation and operation are acceptable to Construction Manager.
  - 5. Resolution of assembly or installation problems attributable to or associated with respective manufacturer's products and systems.
  - 6. Assistance during functional and performance testing, and facility startup and evaluation.
  - 7. Training of Owner's personnel in the operation and maintenance of respective product as required.

3.02 MANUFACTURER'S CERTIFICATE OF PROPER INSTALLATION

- A. A Manufacturer's Certificate of Proper Installation form, a copy of which is attached to this section, shall be completed and signed by equipment manufacturer's representative.
- B. Such form shall certify signing party is a duly authorized representative of manufacturer, is empowered by manufacturer to inspect, approve, and operate their equipment and is authorized to make recommendations required to ensure equipment is complete and operational.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.03 TRAINING

A. General:

1. Furnish manufacturers' representatives for detailed classroom and hands-on training to Owner's personnel on operation and maintenance of specified product (system, subsystem, component) and as may be required in applicable Specifications.
2. Furnish trained, articulate personnel to coordinate and expedite training, to be present during training coordination meetings with Owner, and familiar with operation and maintenance manual information specified in Section 01 78 23, Operation and Maintenance Data.
3. Manufacturer's representative shall be familiar with facility operation and maintenance requirements as well as with specified equipment.
4. Furnish complete training materials, to include operation and maintenance data, to be retained by each trainee.

B. Training Schedule:

1. List specified equipment and systems that require training services and show:
  - a. Respective manufacturer.
  - b. Estimated dates for installation completion.
  - c. Estimated training dates.
2. Allow for multiple sessions when several shifts are involved.
3. Adjust schedule to ensure training of appropriate personnel as deemed necessary by Owner, and to allow full participation by manufacturers' representatives. Adjust schedule for interruptions in operability of equipment.
4. Coordinate with Section 01 32 00, Construction Progress Documentation, and Section 01 91 14, Testing, Integration, and Startup.

C. Lesson Plan:

1. When manufacturer or vendor training of Owner personnel is specified, prepare a lesson plan for each required course containing the following minimum information:
  - a. Title and objectives.
  - b. Recommended attendees (such as, managers, engineers, operators, maintenance).
  - c. Course description, outline of course content, and estimated class duration.
  - d. Format (such as, lecture, self-study, demonstration, hands-on).
  - e. Instruction materials and equipment requirements.
  - f. Resumes of instructors providing training.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Prestartup Training:
1. Coordinate training sessions with Owner’s operating personnel and manufacturers’ representatives and with submission of operation and maintenance manuals in accordance with Section 01 78 23, Operation and Maintenance Data.
  2. Complete at least 14 days prior to beginning of facility startup.
- E. Post-startup Training: Furnish and coordinate training of Owner’s operating personnel by respective manufacturer’s representatives.
- F. Recording of Training Sessions:
1. Furnish video recording of prestartup and post-startup instruction sessions, including manufacturers’ representatives’ hands-on equipment instruction and classroom sessions.
  2. Video training materials shall be produced by a qualified, professional video production company.
  3. Use DVD format suitable for playback on standard equipment available commercially in the United States. Blu-ray® DVD format is not acceptable without Construction Manager’s prior approval.
  4. DVD may contain multiple training sessions. If multiple training sessions included on a DVD, provide with on-screen menu for playback selection.

3.04 SUPPLEMENT

- A. The supplement listed below, following “End of Section,” is part of this Specification.
1. Manufacturer’s Certificate of Proper Installation.

**END OF SECTION**

**MANUFACTURER'S CERTIFICATE OF PROPER INSTALLATION**

OWNER \_\_\_\_\_ EQPT SERIAL NO: \_\_\_\_\_  
EQPT TAG NO: \_\_\_\_\_ EQPT/SYSTEM: \_\_\_\_\_  
PROJECT NO: \_\_\_\_\_ SPEC. SECTION: \_\_\_\_\_

I hereby certify that the above-referenced equipment/system has been:

(Check Applicable)

- Installed in accordance with Manufacturer's recommendations.
- Inspected, checked, and adjusted.
- Serviced with proper initial lubricants.
- Electrical and mechanical connections meet quality and safety standards.
- All applicable safety equipment has been properly installed.
- Functional tests.
- System has been performance tested, and meets or exceeds specified performance requirements. (When complete system of one manufacturer)

Note: Attach any performance test documentation from manufacturer.

Comments: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

I, the undersigned Manufacturer's Representative, hereby certify that I am (i) a duly authorized representative of the manufacturer, (ii) empowered by the manufacturer to inspect, approve, and operate their equipment and (iii) authorized to make recommendations required to ensure equipment furnished by the manufacturer is complete and operational, except as may be otherwise indicated herein. I further certify that all information contained herein is true and accurate.

Date: \_\_\_\_\_, 20\_\_

**SECTION 01 45 16.13**  
**CONTRACTOR QUALITY CONTROL**

**PART 1 GENERAL**

1.01 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. ASTM International (ASTM):
    - a. D3740, Evaluation of Agencies Engaged in the Testing and/or Inspection of Soil and Rock as Used in Engineering Design and Construction.
    - b. E329, Use in the Evaluation of Testing and Inspection Agencies as Used in Construction.

1.02 DEFINITIONS

- A. Contractor Quality Control (CQC): The means by which Contractor ensures that the construction, to include that performed by subcontractors and suppliers, complies with the requirements of the Contract.

1.03 SUBMITTALS

- A. Informational Submittals:
1. CQC Plan: Submit, not later than 30 days after receipt of Notice to Proceed.
  2. CQC Report: Submit, weekly, an original and one copy in report form.

1.04 OWNER'S QUALITY ASSURANCE

- A. All Work is subject to Owner's quality assurance inspection and testing at all locations and at all reasonable times before acceptance to ensure strict compliance with the terms of the Contract Documents.
- B. Owner's quality assurance inspections and tests are for the sole benefit of Owner and do not:
1. Relieve Contractor of responsibility for providing adequate quality control measures.
  2. Relieve Contractor of responsibility for damage to or loss of the material before acceptance.
  3. Constitute or imply acceptance.
  4. Affect the continuing rights of Owner after acceptance of the completed Work.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. The presence or absence of a quality assurance inspector does not relieve Contractor from any Contract requirement.
- D. Promptly furnish all facilities, labor, and material reasonably needed for performing such safe and convenient inspections and tests as may be required by Construction Manager.
- E. Owner may charge Contractor for any additional cost of inspection or test when Work is not ready at the time specified by Contractor for inspection or test, or when prior rejection makes re-inspection or retest necessary. Quality assurance inspections and tests will be performed in a manner that will not unnecessarily delay the Work.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 GENERAL

- A. Maintain an adequate inspection system and perform such inspections as will ensure that the Work conforms to the Contract Documents.
- B. Maintain complete inspection records and make them available at all times to Owner and Construction Manager.
- C. The quality control system shall consist of plans, procedures, and organization necessary to produce an end product that complies with the Contract Documents. The system shall cover all construction and demolition operations, both onsite and offsite, including Work by subcontractors, fabricators, suppliers and purchasing agents, and shall be keyed to the proposed construction sequence.

3.02 COORDINATION MEETING

- A. After the Preconstruction Conference, but before start of construction, and prior to acceptance of the CQC Plan, schedule a meeting with Construction Manager and Owner to discuss the quality control system.
- B. Develop a mutual understanding of the system details, including the forms for recording the CQC operations, control activities, testing, administration of the system for both onsite and offsite Work, and the interrelationship of Contractor's management and control with the Owner's Quality Assurance.
- C. There may be occasions when subsequent conferences may be called by either party to reconfirm mutual understandings and/or address deficiencies in the CQC system or procedures that may require corrective action by Contractor.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.03 QUALITY CONTROL ORGANIZATION

A. CQC System Manager:

1. Designate an individual within Contractor's organization who will be responsible for overall management of CQC and have the authority to act in CQC matters for the Contractor.
2. CQC System Manager may not perform other duties on the Project.
3. CQC System Manager shall be an experienced construction person, with construction experience on similar type Work.
4. CQC System Manager shall report to the Contractor's project manager or someone higher in the organization. Project manager in this context shall mean the individual with responsibility for the overall quality and production management of the Project.
5. CQC System Manager shall be onsite during construction; periods of absence may not exceed 2 weeks at any one time.
6. Identify an alternate for CQC System Manager to serve with full authority during the System Manager's absence. The requirements for the alternate will be the same as for designated CQC System Manager.

B. CQC Staff:

1. Designate a CQC staff, available at the Site at all times during progress, with complete authority to take any action necessary to ensure compliance with the Contract. CQC staff members shall be subject to acceptance by Construction Manager.
2. CQC staff shall take direction from CQC System Manager in matters pertaining to QC.
3. CQC staff must be of sufficient size to ensure adequate QC coverage of Work phases, work shifts, and work crews involved in the construction. These personnel may perform other duties, but must be fully qualified by experience and technical training to perform their assigned QC responsibilities and must be allowed sufficient time to carry out these responsibilities.
4. The actual strength of the CQC staff may vary during any specific Work period to cover the needs of the Project. If the Owner's Quality Assurance staff believe the Contractor's Quality Control staff is insufficient in number or qualifications, the Owner will require the Contractor to increase and/or otherwise modify the CQC staff at no additional cost to the Owner.

- C. Organizational Changes: Obtain Construction Manager's acceptance before replacing any member of the CQC staff. Requests for changes shall include name, qualifications, duties, and responsibilities of the proposed replacement.

3.04 QUALITY CONTROL PHASING

- A. CQC shall include at least three phases of control to be conducted by CQC System Manager for all definable features of Work, as follows:
1. Preparatory Phase:
    - a. Notify Owner at least 48 hours in advance of beginning any of the required action of the preparatory phase.
    - b. This phase shall include a meeting conducted by the CQC System Manager and attended by the superintendent, other CQC personnel (as applicable), and the foreman responsible for the definable feature. The CQC System Manager shall instruct applicable CQC staff as to the acceptable level of workmanship required in order to meet Contract requirements.
    - c. Document the results of the preparatory phase meeting by separate minutes prepared by the CQC System Manager and attached to the QC report.
    - d. Perform prior to beginning Work on each definable feature of Work:
      - 1) Review applicable Contract Specifications.
      - 2) Review applicable Contract Drawings.
      - 3) Verify that all materials and/or equipment have been tested, submitted, and approved.
      - 4) Verify that provisions have been made to provide required control inspection and testing.
      - 5) Examine the Work area to verify that all required preliminary Work has been completed and is in compliance with the Contract.
      - 6) Perform a physical examination of required materials, equipment, and sample Work to verify that they are on hand, conform to approved Shop Drawing or submitted data, and are properly stored.
      - 7) Review the appropriate activity hazard analysis to verify safety requirements are met.
      - 8) Review procedures for constructing the Work, including repetitive deficiencies.
      - 9) Document construction tolerances and workmanship standards for that phase of the Work.
      - 10) Check to verify that the plan for the Work to be performed, if so required, has been accepted by Construction Manager.
  2. Initial Phase:
    - a. Accomplish at the beginning of a definable feature of Work:
      - 1) Notify Owner at least 48 hours in advance of beginning the initial phase.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 2) Perform prior to beginning Work on each definable feature of Work:
    - a) Review minutes of the preparatory meeting.
    - b) Check preliminary Work to verify compliance with Contract requirements.
    - c) Verify required control inspection and testing.
    - d) Establish level of workmanship and verify that it meets minimum acceptable workmanship standards. Comparison with sample panels is appropriate.
    - e) Resolve all differences.
    - f) Check safety to include compliance with and upgrading of the safety plan and activity hazard analysis. Review the activity analysis with each worker.
  - 3) Separate minutes of this phase shall be prepared by the CQC System Manager and attached to the QC report. Exact location of initial phase shall be indicated for future reference and comparison with follow-up phases.
  - 4) The initial phase should be repeated for each new crew to work onsite, or any time acceptable specified quality standards are not being met.
3. Follow-up Phase:
- a. Perform daily checks to verify continuing compliance with Contract requirements, including control testing, until completion of the particular feature of Work.
  - b. Daily checks shall be made a matter of record in the CQC documentation and shall document specific results of inspections for all features of Work for the day or shift.
  - c. Conduct final follow-up checks and correct all deficiencies prior to the start of additional features of Work that will be affected by the deficient Work. Constructing upon or concealing nonconforming Work will not be allowed.
4. Additional Preparatory and Initial Phases: Additional preparatory and initial phases may be conducted on the same definable features of Work as determined by Owner if the quality of ongoing Work is unacceptable; or if there are changes in the applicable QC staff or in the onsite production supervision or work crew; or if work on a definable feature is resumed after a substantial period of inactivity, or if other problems develop.

3.05 CONTRACTOR QUALITY CONTROL PLAN

A. General:

1. Plan shall identify personnel, procedures, control, instructions, test, records, and forms to be used.
2. An interim plan for the first 30 days of operation will be considered.
3. Construction will be permitted to begin only after acceptance of the CQC Plan or acceptance of an interim plan applicable to the particular feature of Work to be started.
4. Work outside of the features of Work included in an accepted interim plan will not be permitted to begin until acceptance of a CQC Plan or another interim plan containing the additional features of Work to be started.

B. Content:

1. Plan shall cover the intended CQC organization for the entire Contract and shall include the following, as a minimum:
  - a. Organization: Description of the quality control organization, including a chart showing lines of authority and acknowledgment that the CQC staff will implement the three-phase control system (see Article QC Phasing) for all aspects of the Work specified.
  - b. CQC Staff: The name, qualifications (in resume format), duties, responsibilities, and authorities of each person assigned a QC function.
  - c. Letters of Authority: A copy of a letter to the CQC System Manager signed by an authorized official of the firm, describing the responsibilities and delegating sufficient authorities to adequately perform the functions of the CQC System Manager, including authority to stop Work which is not in compliance with the Contract. The CQC System Manager shall issue letters of direction to all other various quality control representatives outlining duties, authorities and responsibilities. Copies of these letters will also be furnished to Owner.
  - d. Submittals: Procedures for scheduling, reviewing, certifying, and managing submittals, including those of subcontractors, offsite fabricators, suppliers and purchasing agents.
  - e. Testing: Control, verification and acceptance testing procedures for each specific test to include the test name, frequency, specification paragraph containing the test requirements, the personnel and laboratory responsible for each type of test, and an estimate of the number of tests required.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- f. Procedures for tracking preparatory, initial, and follow-up control phases and control, verification, and acceptance tests, including documentation.
  - g. Procedures for tracking deficiencies from identification through acceptable corrective action. These procedures will establish verification that identified deficiencies have been corrected.
  - h. Reporting procedures, including proposed reporting formats; include a copy of the CQC report form.
- C. Acceptance of Plans: Acceptance of the Contractor's basic and addendum CQC plans is required prior to the start of construction. Acceptance is conditional and will be predicated on satisfactory performance during the construction. Owner reserves the right to require Contractor to make changes in the CQC plan and operations including removal of personnel, as necessary, to obtain the quality specified.
- D. Notification of Changes: After acceptance of the CQC plan, Contractor shall notify Construction Manager, in writing, a minimum of 7 calendar days prior to any proposed change. Proposed changes are subject to acceptance by Construction Manager.

3.06 CONTRACTOR QUALITY CONTROL REPORT

- A. As a minimum, prepare a CQC report for every 7 calendar days. Account for all days throughout the life of the Contract. Reports shall be signed and dated by CQC System Manager. Include copies of test reports and copies of reports prepared by QC staff.
- B. Maintain current records of quality control operations, activities, and tests performed, including the Work of subcontractors and suppliers.
- C. Records shall be on an acceptable form and shall be a complete description of inspections, the results of inspections, daily activities, tests, and other items, including but not limited to the following:
- 1. Status of Noncompliances issued by the Construction Manager.
  - 2. Contractor/subcontractor and their areas of responsibility.
  - 3. Operating plant/equipment with hours worked, idle, or down for repair.
  - 4. Work performed today, giving location, description, and by whom. When a network schedule is used, identify each phase of Work performed each day by activity number.
  - 5. Test and/or control activities performed with results and references to specifications/plan requirements. The control phase should be identified (Preparatory, Initial, Follow-up). List deficiencies noted along with corrective action.
  - 6. Material received with statement as to its acceptability and storage.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. Identify submittals reviewed, with Contract reference, by whom, and action taken.
8. Offsite surveillance activities, including actions taken.
9. Job safety evaluations stating what was checked, results, and instructions or corrective actions.
10. List instructions given/received and conflicts in Drawings and/or Specifications.
11. Contractor's verification statement.
12. Indicate a description of trades working on the Project; the number of personnel working; weather conditions encountered; and any delays encountered.
13. These records shall cover both conforming and deficient features and shall include a statement that equipment and materials incorporated in file work and workmanship comply with the Contract.

3.07 SUBMITTAL QUALITY CONTROL

- A. Submittals shall be as specified in Section 01 33 00, Submittal Procedures. The CQC organization shall be responsible for certifying that all submittals are in compliance with the Contract requirements. Owner will furnish copies of test report forms upon request by Contractor. Contractor may use other forms as approved.

3.08 TESTING QUALITY CONTROL

- A. Testing Procedure:
  1. Perform tests specified or required to verify that control measures are adequate to provide a product which conforms to Contract requirements. Perform the following activities and record the following data:
    - a. Verify testing procedures comply with contract requirements.
    - b. Verify facilities and testing equipment are available and comply with testing standards.
    - c. Check test instrument calibration data against certified standards.
    - d. Verify recording forms and test identification control number system, including all of the test documentation requirements, have been prepared.
    - e. Documentation:
      - 1) Record results of all tests taken, both passing and failing, on the CQC report for the date taken.
      - 2) Include specification paragraph reference, location where tests were taken, and the sequential control number identifying the test.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 3) Actual test reports may be submitted later, if approved by Construction Manager, with a reference to the test number and date taken.
- 4) Provide directly to Construction Manager an information copy of tests performed by an offsite or commercial test facility. Test results shall be signed by an engineer registered in the state where the tests are performed.
- 5) Failure to submit timely test reports, as stated, may result in nonpayment for related Work performed and disapproval of the test facility for this Contract.

B. Testing Laboratories: Laboratory facilities, including personnel and equipment, utilized for testing soils, concrete, asphalt and steel shall meet criteria detailed in ASTM D3740 and ASTM E329, and be accredited by the American Association of Laboratory Accreditation (AALA), National Institute of Standards and Technology (NIST), National Voluntary Laboratory Accreditation Program (NVLAP), the American Association of State Highway and Transportation Officials (AASHTO), or other approved national accreditation authority. Personnel performing concrete testing shall be certified by the American Concrete Institute (ACI).

### 3.09 COMPLETION INSPECTION

- A. CQC System Manager shall conduct an inspection of the Work at the completion of all Work or any milestone established by a completion time stated in the Contract.
- B. Punchlist:
  1. CQC System Manager shall develop a punchlist of items which do not conform to the Contract requirements.
  2. Include punchlist in the CQC report, indicating the estimated date by which the deficiencies will be corrected.
  3. CQC System Manager or staff shall make a second inspection to ascertain that all deficiencies have been corrected and so notify the Owner.
  4. These inspections and any deficiency corrections required will be accomplished within the time stated for completion of the entire Work or any particular increment thereof if the Project is divided into increments by separate completion dates.

**END OF SECTION**

**SECTION 01 45 33**  
**SPECIAL INSPECTION, OBSERVATION, AND TESTING**

**PART 1 GENERAL**

1.01 SUMMARY

- A. This section covers requirements for Special Inspection, Observation, and Testing required in accordance with Chapter 17 of the 2016 CBC and is in addition to General Notes, Statement of Special Inspections, and Tables of Required Special Inspections shown on Drawings.

1.02 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. American Society of Civil Engineers (ASCE): 7, Minimum Design Loads for Buildings and Other Structures.
  2. 2016 California Building Code (CBC) by California Building Standards Commission.
  3. International Code Council (ICC):
    - a. International Building Code (IBC).
    - b. Evaluation Service (ICC-ES) Reports and Legacy Reports.

1.03 DEFINITIONS

- A. Agencies and Personnel:
1. Agency Having Jurisdiction (AHJ): Permitting building agency; may be a federal, state, local, or other regional department, or individual including building official, fire chief, fire marshal, chief of a fire prevention bureau, labor department, or health department, electrical inspector; or others having statutory authority. AHJ may be Owner when authorized to be self-permitting by governmental permitting agency or when no governmental agency has authority.
  2. Approved Agency: An established and recognized agency regularly engaged in conducting tests or furnishing inspection services, when such agency has been approved.
  3. Registered Design Professional in Responsible Charge: An individual who is registered or licensed to practice their respective design profession as defined by statutory requirements of professional registration laws of state or jurisdiction in which Project is to be constructed.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Special Inspector: Qualified person employed by Owner who will demonstrate competence to the satisfaction of AHJ for inspection of a particular type of construction or operation requiring Special Inspection.
- B. Statement of Special Inspections: Detailed written procedure contained on Drawings establishing systems and components subject to Special Inspection, Observation, and Testing during construction, type and frequency of testing, extent and duration of Special Inspection, and reports to be completed and distributed by Special Inspector.
- C. Special Inspection:
1. Special Inspection: Inspection required of materials, installation, fabrication, erection, or placement of components and connections requiring special expertise to ensure compliance with approved Contract Documents and referenced standards.
  2. Special Inspection, Continuous: Full-time observation of work requiring Special Inspection by an approved Special Inspector who is present in area where the Work is being performed.
  3. Special Inspection, Periodic: Part-time or intermittent observation of the Work requiring Special Inspection by an approved Special Inspector who is present in area where the Work has been or is being performed, and at completion of the Work.
- D. Nonstructural Components:
1. Electrical Component Supports: Structural members or assemblies which transmit loads and forces from electrical equipment to structure, including braces, frames, legs, pedestals, and tethers, as well as elements forged or cast as part of component for anchorage.
  2. Mechanical and Plumbing Component Supports: Structural members or assemblies which transmit loads and forces from mechanical or plumbing equipment to structure, including braces, frames, skirts, legs, saddles, pedestals, snubbers, and tethers, as well as elements forged or cast as part of component for anchorage.
- E. Professional Observation:
1. Does not include or waive responsibility for required Special Inspection or inspections by building official.
  2. Requirements are indicated on Statement of Special Inspections provided on Drawings.
  3. Geotechnical Observation: Visual observation of formational materials exposed during grading and overexcavation of selected subgrade bearing surfaces and installation of deep foundation elements by a

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- registered design professional for general conformance to Contract Documents.
4. Structural Observation: Visual observation of structural system(s) by a registered design professional for general conformance to Contract Documents.
  5. Observation: Visual observation of selected by registered design professional for general conformance to Contract Documents.

1.04 STATEMENT OF SPECIAL INSPECTIONS REQUIREMENTS

- A. Designated Systems for Inspection: Architectural, plumbing, mechanical, and electrical Components subject to Special Inspection under CBC Section 1705.12.5 and 1705.12.6 for Seismic Resistance.
- B. Statement of Special Inspections:
  1. As included and in support of building permit application, Project-specific requirements were prepared by Registered Design Professional in Responsible Charge. The following identifies elements of inspection, observation, and testing program to be followed in construction of the Work:
    - a. Components that are subject to Special Inspection and Structural Observation for lateral load resistance.
    - b. Special Inspection and testing required by CBC Section 1705 and other applicable sections and referenced standards therein.
    - c. Type and frequency of Special Inspection required.
    - d. Type and frequency of testing required.
    - e. Required frequency and distribution of testing and Special Inspection reports to be distributed by Special Inspector to Construction Manager, Contractor, building official, and Owner.
- C. Code required Special Inspection with associated testing as provided in Statement of Special Inspections and further provided in this section, is for benefit of Owner and does not:
  1. Relieve Contractor of responsibility for providing adequate quality control measures.
  2. Relieve Contractor of responsibility for damage to or loss of material before acceptance.
  3. Constitute or imply acceptance.
  4. Affect continuing rights of Owner after acceptance of completed Work.
- D. The presence or absence of code required Special Inspector and Professional Observer does not relieve Contractor from Contract requirements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Contractor is responsible for additional costs associated with Special Inspection and Testing when Work is not ready at time identified by Contractor and Special Inspectors and Professional Observer are onsite, but not able to provide contracted services.
- F. Contractor is responsible for associated costs for additional Special Inspection and Testing by Special Inspectors and Professional Observers required because of rejection of materials of in place Work that cannot be made compliant to Contract Document without additional inspections and observation and testing.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 GENERAL

- A. Requirements of the Statement of Special Inspections are provided by the Owner. All other testing and inspections, unless noted otherwise, are provided by Contractor.
- B. Provide access to shop or Site for Special Inspection and Testing and Professional Observation requirements.
- C. Notify Construction Manager and Design Engineer in advance of required Special Inspection and Professional Observation no later than 48 hours prior to date of Special Inspection.
- D. Provide access for Special Inspector to construction documents.
- E. Retain special inspection records onsite to be readily available for review.
- F. Cooperate with Special Inspector and provide safe access to the Work to be inspected.
- G. Provide reasonable auxiliary services as requested by the Special Inspector. Auxiliary services required include, but not limited to:
  - 1. Providing access to the Work and furnishing incidental labor and facilities necessary to facilitate inspections and tests to assist the Special Inspector in performing test/inspections.
  - 2. Providing storage space for the Special Inspector's exclusive use, such as for storing and curing concrete test samples and delivery of samples to testing laboratories.
  - 3. Providing the Special Inspector with access to all approved submittals.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Providing security and protection of samples and test equipment at the Project Site.
  5. Provide samples of materials to be tested in required quantities.
- H. When required by Registered Design Professional in Responsible Charge, provide access for plumbing, mechanical and electrical component inspections for those items requiring certification.
- I. Materials and systems shall be inspected during placement where Continuous Special Inspection is required.
- J. Where Periodic Special Inspection is indicated in the Statement of Special Inspections:
1. Schedule inspections for either during or at completion of their placement or a combination of both.
  2. Schedule periodically inspected Work (either inspected during or after its placement) so that corrections can be completed and re-inspected before Work is inaccessible.
  3. Sampling a portion of the Work is not allowed. Schedules shall provide for inspection of all Work requiring periodic inspection.

**END OF SECTION**

**SECTION 01 50 00**  
**TEMPORARY FACILITIES AND CONTROLS**

**PART 1 GENERAL**

1.01 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. American Association of Nurserymen (AAN): American Standards for Nursery Stock.
  2. Federal Emergency Management Agency (FEMA).
  3. National Fire Prevention Association (NFPA): 241, Standard for Safeguarding Construction, Alteration, and Demolition Operations.
  4. Telecommunications Industry Association (TIA); Electronic Industries Alliance (EIA): 568B, Commercial Building Telecommunications Cabling Standard.
  5. U.S. Department of Agriculture (USDA): Urban Hydrology for Small Watersheds.
  6. U.S. Weather Bureau: Rainfall-Frequency Atlas of the U.S. for Durations from 30 Minutes to 24 Hours and Return Periods from 1 to 100 Years.

1.02 SUBMITTALS

- A. Informational Submittals:
1. Copies of permits and approvals for construction as required by Laws and Regulations and governing agencies.
  2. Temporary Construction Submittals:
    - a. Access Roads: Routes, cross-sections, and drainage facilities.
    - b. Contractor's field office, storage yard, and storage building plans, including gravel surfaced area.
    - c. Fencing and protective barrier locations and details.
    - d. Construction Manager, Owner, and Engineer's field office plans.
    - e. Staging area location plan.
    - f. Traffic and Pedestrian Control and Routing Plans: As specified herein, and proposed revisions thereto.
    - g. Plan for maintenance of existing plant operations.
  3. Temporary Control Submittals:
    - a. Noise control plan.
    - b. Dust control plan.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Submittals required as part of the Environmental Mitigation Monitoring and Reporting Program in Supplement Mitigation Monitoring and Reporting Program.
  - d. WPCP submittals required under Section 01 57 13, Temporary Erosion and Sediment Control.
  - e. Plan for disposal of waste materials and intended haul routes.
  - f. Preconstruction and post construction condition assessment report, including video information and any recommendations, for the 60-inch storm drain crossing the site.
4. Temporary Utility Submittals:
- a. Electric power supply and distribution plans.
  - b. Water supply and distribution plans.
  - c. Sanitary.

1.03 MOBILIZATION

- A. Mobilization includes, but is not limited to, these principal items:
- 1. Obtaining required permits.
  - 2. Moving Contractor's field office and equipment required for first month operations onto Site.
  - 3. Installing temporary construction power, wiring, and lighting facilities.
  - 4. Providing onsite Internet service and telephones.
  - 5. Providing onsite sanitary facilities and potable water facilities as specified and as required by Laws and Regulations, and governing agencies.
  - 6. Arranging for and erection of Contractor's work and storage yard.
  - 7. Posting OSHA required notices and establishing safety programs and procedures.
  - 8. Having Contractor's superintendent at Site full time.
- B. Use area designated for Contractor's temporary facilities as shown on Drawings.

1.04 PROTECTION OF WORK AND PROPERTY

- A. Comply with Owner's safety rules while on Owner's property.
- B. Keep Owner informed of serious onsite accidents and related claims.
- C. Use of Explosives: No blasting or use of explosives will be allowed onsite.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 2 PRODUCTS**

2.01 CONSTRUCTION MANAGER FIELD OFFICES

- A. Furnish equipment specified for exclusive use of Construction Manager and their representatives.
- B. A general arrangement of the temporary construction facilities as shown for reference in Supplement Temporary Construction Facilities General Arrangement. The Contractor shall be responsible for providing facilities in an arrangement determined by the Contractor meeting the requirements for all Contractor and Subcontractor personnel as well as the Construction Manager, and Owner.
- C. Ownership of equipment furnished under this article will remain, unless otherwise specified, that of Contractor.
- D. Equipment furnished shall be new or like new in appearance and function.
- E. Minimum Features:
  - 1. 110-volt lighting and wall plugs.
  - 2. Fluorescent ceiling lights.
  - 3. Electric heating and self-contained air conditioning unit, properly sized for Project locale and conditions. Provide ample electric power to operate installed systems.
  - 4. Provide railed stairways and landings, and exterior lighting at entrances.
  - 5. Sign on entrance door reading Construction Manager, letter height 4 inches minimum.
  - 6. Exterior Door(s):
    - a. Number: Four.
    - b. Type: Solid core.
    - c. Lock(s): Cylindrical; keyed alike.
  - 7. Number of Windows: Fourteen.
  - 8. Minimum Interior Height: 8 feet.
- F. Trailer Type Mobile Structure: Two (28 by 60 feet).
- G. Floor Space: Minimum 1,680 square feet.
- H. All-metal frame; all-metal exterior, sides, and roof; and insulated double walls, floor, and roof.
- I. Security guard screens on windows.

AND CONTROLS

01 50 00 - 3  
272 | Page

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- J. Toilet and wash basin in separate compartment with hot and cold water and drains.
- K. Number of Private Offices: Four, 12 feet by 12 feet.
- L. Storage Room: One, 6 feet by 8 feet, with door with cylinder lock, keyed differently than exterior door locks. Provide two sets of keys.
- M. Shelving in Storage Room: 72 linear feet, 18 inches deep.
- N. Blinds or drapes on windows.
- O. Work Surface: One, 30 inches by 10 feet at desk height of 29 inches from floor.
- P. Office Equipment—General:
  - 1. Bottled Water Service: One, with cooler capable of producing hot water and cold water.
  - 2. Paper Cup Dispenser with Cups: One.
  - 3. Paper Towel Dispenser with Towels: One.
  - 4. Desk Chair:
    - a. Six, with the following characteristics:
      - 1) Five castor base.
      - 2) Adjustable height.
      - 3) Swivels.
      - 4) Locking back.
      - 5) Adjustable seat back for height and angle.
      - 6) Adjustable arms.
  - 5. Folding Table: Two, 36 inches by 72 inches.
  - 6. Steel Folding Chairs: Ten.
  - 7. Four-Drawer Steel File with Lock: Two, legal width.
  - 8. Drawing Rack with Drawing Hangers: Four.
  - 9. Bookcase: Four, 36 inches wide by 48 inches high.
  - 10. Wastepaper Basket: Four.
  - 11. Blue Recycling Basket: Four.
  - 12. Clothes Rack: Two.
  - 13. First-Aid Kit: One.
  - 14. Tri-Class (ABC), Dry Chemical Fire Extinguisher, 10-Pound: Two.
  - 15. Telephone: Four, with one intercom line and two incoming/outgoing lines, Touch-Tone, with conference speaker, and 12-foot coiled handset cord.
  - 16. Digital Answering Machine: Model as approved by Engineer. Must have capability to retrieve messages remotely.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Q. Computer Hardware:

1. Accessories:
  - a. Free Standing Document Holder: 11 inches by 17 inches.
  - b. Adjustable keyboard tray, large enough to accommodate standard keyboard and mouse.
  - c. Wrist rest for keyboard.
  - d. Wrist rest and pad for mouse.
  - e. Foot rest, slanted and small enough to fit under desk.
  - f. Monitor arm.
  - g. Monitor risers.
  - h. Laptop Accessories:
    - 1) External Mouse: Three-button.
    - 2) External keyboard.
    - 3) Riser.
2. Power Supply Surge Protector: One each per computer; rated at 15 amps minimum.
3. Uninterruptible Power Supply (UPS): APC Smart, sized for minimum 15-minute run time for computers.
4. Printer: One each; HP LaserJet or approved equal.
5. Printer Accessories: Manufacturer's standard network-attached storage device. Black and color toner cartridges.
6. Maintenance service agreements for all hardware for duration of Contract.
7. Scheduling (most current version): Primavera Project Planner P6.

2.02 PROJECT SIGN

- A. Refer to Whitebook Section 3-11.2 for requirements for City-furnished Project signs and the Funding Agency provisions for required signage.

**PART 3 EXECUTION**

3.01 CONSTRUCTION MANAGER'S AND ENGINEER'S FIELD OFFICE

- A. Make available for Construction Manager's use prior to start of the Work at Site and to remain on Site for minimum of 60 days after final acceptance of the Work.
- B. Locate where directed by Construction Manager; level, block, tie down, skirt, provide stairways, and relocate when necessary and approved. Construct on proper foundations, and provide proper surface drainage and connections for utility services.

PW\DEN001\050020-695037  
OCTOBER 2020

TEMPORARY FACILITIES  
AND CONTROLS

01 50 00 - 5

274 | Page

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Provide minimum 100 square feet of gravel or crushed rock base, minimum depth of 4 inches, at each entrance.
- D. Raise grade under field office, as necessary, to elevation adequate to avoid flooding.
- E. Provide sanitary facilities in compliance with state and local health authorities.
- F. Exterior Door Keys: Furnish two set(s) of keys.
- G. Telephone:
  - 1. Provide number of incoming lines equal to that specified for telephone type.
  - 2. Provide appropriate jacks; locate as directed by Construction Manager.
  - 3. Provide wiring necessary for complete telephone system.
- H. Computer: Provide required connecting cables and plugs.
- I. Local Area Network (LAN):
  - 1. Provide Ethernet network prewired in compliance with EIA/TIA 568B.
  - 2. Ethernet wireless hub shall be capable of a minimum of four connections.
  - 3. LAN shall be designed and installed by personnel experienced in similar LAN systems.
- J. Telecommunications:
  - 1. Provide cable Internet connection with minimum of five live portable computer (PC) ports.
  - 2. Provide appropriate jacks, wiring, and equipment required for a complete telecommunications system.
  - 3. Arrange and provide for telecommunication service for use during construction. Pay costs of installation, maintenance, and monthly service of internet connection.
- K. Maintain in good repair and appearance, and provide weekly cleaning service and replenishment, as required, of paper towels, paper cups, hand soap, toilet paper, first-aid kit supplies, and bottled water.
- L. Replenish, as needed, copy paper and toner.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.02 TEMPORARY UTILITIES

A. Power:

1. Electric power will be available at or near Site. Determine type and amount available and make arrangements for obtaining temporary electric power service, metering equipment, and pay costs for electric power used during Contract period, except for portions of the Work designated in writing by Engineer as substantially complete.
2. Where grid power is unavailable or impractical, provide diesel fueled standby generators and temporary distribution circuit breaker equipment to maintain continuous power to process facilities as required.

B. Lighting: Provide temporary lighting to meet applicable safety requirements to allow erection, application, or installation of materials and equipment, and observation or inspection of the Work.

C. Heating, Cooling, and Ventilating:

1. Provide as required to maintain adequate environmental conditions to facilitate progress of the Work, to meet specified minimum conditions for installation of materials, and to protect materials, equipment, and finishes from damage because of temperature or humidity. Provide adequate forced air ventilation of enclosed areas to cure installed materials, to dispense humidity, and to prevent hazardous accumulations of dust, fumes, vapors, or gases.
2. Pay costs of installation, maintenance, operation, removal, and fuel consumed.
3. Provide portable unit heaters, complete with controls, oil- or gas-fired, and suitably vented to outside as required for protection of health and property.
4. If permanent natural gas piping is used for temporary heating units, do not modify or reroute gas piping without approval of utility company. Provide separate gas metering as required by utility.

D. Water:

1. Hydrant Water:
  - a. Is available from nearby hydrants. Secure written permission for connection and use from water department and meet requirements for use. Notify fire department before obtaining water from fire hydrants.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Use only special hydrant-operating wrenches to open hydrants. Make certain hydrant valve is open full, since cracking valve causes damage to hydrant. Repair damaged hydrants and notify appropriate agency as quickly as possible. Hydrants shall be completely accessible to fire department at all times.
    - c. Include costs to connect and transport water to construction areas in Contract Price.
  2. Owner will provide a place of temporary connection for construction and drinking water at Site. Contractor to provide temporary facilities and piping required to bring water to point of use and remove when no longer needed. Install an acceptable metering device and pay for water used at Owner's current rate.
  3. Provide and bear costs of necessary water in excess of 100 gpm required for testing equipment, tanks or basins, and piping prior to Substantial Completion, unless otherwise specifically stated in Specifications for equipment, systems, or facilities to be tested.
  4. Provide means to prevent water used for testing from flowing back into source pipeline.
- E. Sanitary and Personnel Facilities:
  1. Provide and maintain facilities for Contractor's employees, Subcontractors, and other onsite employers' employees. Service, clean, and maintain facilities and enclosures.
  2. Use of Owner's existing sanitary facilities by construction personnel will not be allowed.
- F. Telephone Service:
  1. Contractor: Arrange and provide onsite telephone service for use during construction. Pay costs of installation and monthly bills.
- G. Fire Protection: Furnish and maintain on Site adequate firefighting equipment capable of extinguishing incipient fires. Comply with applicable parts of NFPA 241.

3.03 PROTECTION OF WORK AND PROPERTY

- A. General:
  1. Perform Work within right-of-way and easements in a systematic manner that minimizes inconvenience to property owners and the public.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. No business shall be cut off from vehicular traffic. Contractor shall phase work to allow ingress/egress at all times, unless special arrangements have been made.
3. Maintain in continuous service existing oil and gas pipelines, underground power, telephone or communication cable, water mains, irrigation lines, sewers, poles and overhead power, and other utilities encountered along line of the Work, unless other arrangements satisfactory to owners of said utilities have been made.
4. Where completion of the Work requires temporary or permanent removal or relocation of existing utility, coordinate activities with owner of said utility and perform work to their satisfaction.
5. Protect, shore, brace, support, and maintain underground pipes, conduits, drains, and other underground utility construction uncovered or otherwise affected by construction operations.
6. Keep fire hydrants and water control valves free from obstruction and available for use at all times.
7. In areas where Contractor's operations are adjacent to or near a utility, such as gas, telephone, television, electric power, water, sewer, or irrigation system, and such operations may cause damage or inconvenience, suspend operations until arrangements necessary for protection have been made by Contractor.
8. Notify property owners and utility offices that may be affected by construction operation at least 2 days in advance. Before exposing a utility, obtain utility owner's permission. Should service of utility be interrupted due to Contractor's operation, notify proper authority immediately. Cooperate with said authority in restoring service as promptly as possible and bear costs incurred.
9. Do not impair operation of existing sewer system. Prevent construction material, pavement, concrete, earth, volatile and corrosive wastes, and other debris from entering sewers, pump stations, or other sewer structures.
10. Maintain original Site drainage wherever possible.
11. Maintain existing lights, guard rails, covers, and barricades.
12. Protect and maintain existing floors and roofs.
13. Brace and secure all parts of work against storm and accident.
14. Enclose excavations with barricades.
15. Provide a preconstruction and post-construction video condition assessment and report for the existing 60-inch storm drain located onsite for its entire length. The report shall include all condition issues for the existing pipeline and recommendations for repairs. The post-construction video shall be used to ensure that no damage has been caused to the storm drain during the construction process.

PW\DEN001\050020-695037  
OCTOBER 2020

TEMPORARY FACILITIES  
AND CONTROLS

01 50 00 - 9

278 | Page

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Site Security: Provide and maintain temporary security fences as necessary to protect the Work and Contractor-furnished products not yet installed.
- C. Barricades and Lights:
1. Provide as required by the CalTrans, OSHA Title 8, California Manual on Uniform Traffic Control Devices (CAMUTCD), or other required Vehicle Code and in sufficient quantity to safeguard public and the Work.
  2. Provide as necessary to prevent unauthorized entry to construction areas and affected roads, streets, and alleyways, inside and outside of fenced area, and as required to ensure public safety and the safety of Contractor's employees, other employer's employees, and others who may be affected by the Work.
  3. Provide to protect existing facilities and adjacent properties from potential damage.
  4. Locate to enable access by facility operators and property owners.
  5. Illuminate barricades and obstructions with warning lights from sunset to sunrise.
- D. Trees and Plantings:
1. Protect from damage and preserve trees, shrubs, and other plants outside limits of the Work and within limits of the Work, which are designated on Drawings to remain undisturbed.
    - a. Where practical, tunnel beneath trees when on or near line of trench.
    - b. Employ hand excavation as necessary to prevent tree injury.
    - c. Do not stockpile materials or permit traffic within drip lines of trees.
    - d. Provide and maintain temporary barricades around trees.
    - e. Water vegetation as necessary to maintain health.
    - f. Cover temporarily exposed roots with wet burlap, and keep burlap moist until soil is replaced around roots.
    - g. No trees, except those specifically shown on Drawings to be removed, shall be removed without written approval of Engineer.
    - h. Dispose of removed trees in a legal manner off the Site.
  2. Balling and burlapping of trees indicated for replacement shall conform to recommended specifications set forth in the American Standards for Nursery Stock, published by American Association of Nurserymen. Balls shall be firm and intact and made-balls will not be accepted. Handle ball and burlap trees by ball and not by top.
  3. In event of damage to bark, trunks, limbs, or roots of plants that are not designated for removal, treat damage by corrective pruning, bark

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

tracing, application of a heavy coating of tree paint, and other accepted horticultural and tree surgery practices.

4. Replace each plant that dies as a result of construction activities.

E. Existing Structures:

1. Where Contractor contemplates removal of small structures such as signposts, and culverts that interfere with Contractor's operations, obtain approval of property owner and Engineer.
2. Replace items removed in their original location and a condition equal to or better than original.

F. Finished Construction: Protect finished floors and concrete floors exposed as well as those covered with composition tile or other applied surfacing.

G. Waterways: Keep ditches, culverts, and natural drainages continuously free of construction materials and debris.

3.04 TEMPORARY CONTROLS

A. Air Pollution Control:

1. Minimize air pollution from construction operations.
2. Burning: Of waste materials, rubbish, or other debris will not be permitted on or adjacent to Site.
3. Conduct operations of dumping rock and of carrying rock away in trucks to cause a minimum of dust. Give unpaved streets, roads, detours, or haul roads used in construction area a dust-preventive treatment or periodically water to prevent dust. Strictly adhere to applicable environmental regulations for dust prevention.
4. Provide and maintain temporary dust-tight partitions, bulkheads, or other protective devices during construction to permit normal operation of existing facilities. Construct partitions of plywood, insulating board, plastic sheets, or similar material. Construct partitions in such a manner that dust and dirt from demolition and cutting will not enter other parts of existing building or facilities. Remove temporary partitions as soon as need no longer exists.

B. Noise Control:

1. Provide acoustical barriers so noise emanating from tools or equipment will not exceed legal noise levels.
2. Noise Control Ordinance: San Diego Municipal Code, Section 59.5.01.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Noise Control Plan: Propose plan to mitigate construction noise and to comply with noise control ordinances, including method of construction, equipment to be used, and acoustical treatments.
- C. Requirements for the Federal Aviation Administration and Marine Corps Air Station.
1. The Contractor shall comply with all requirements provided in the Environment Impact Report (EIR).
  2. Cranes shall have a maximum height limit as required by the ALUC Air Space Obstruction Criteria defined in the EIR. The limit is 200 feet above ground level.
  3. All Work shall be provided in accordance with the Compatibility Plan provided within the EIR.

3.05 STORAGE YARDS AND BUILDINGS

- A. Coordinate requirements with Section 01 61 00, Common Product Requirements.
- B. Temporary Storage Yards: Construct temporary storage yards for storage of products that are not subject to damage by weather conditions.
- C. Temporary Storage Buildings:
1. Provide environmental control systems that meet recommendations of manufacturers of equipment and materials stored.
  2. Arrange or partition to provide security of contents and ready access for inspection and inventory.
  3. Store combustible materials (paints, solvents, fuels) in a well-ventilated and remote building meeting safety standards.

3.06 ACCESS ROADS AND DETOURS

- A. Alignments for alternative routes to that provided on Drawings shall be approved by the Construction Manager.
- B. Maintain drainage ways. Install and maintain culverts to allow water to flow beneath access roads. Provide corrosion-resistant culvert pipe of adequate strength to resist construction loads.
- C. Provide gravel, crushed rock, or other stabilization material to permit access by all motor vehicles at all times.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Maintain road grade and crown to eliminate potholes, rutting, and other irregularities that restrict access.
- E. Upon completion of construction, restore ground surface disturbed by access road construction to original grade. Replace damaged or broken culverts with new culvert pipe of same diameter and material.
- F. Coordinate with Construction Manager detours and other operations affecting traffic and access with the Construction Manager. Provide at least 72 hours' notice to Construction Manager of operations that will alter access to Site.
- G. Construct access roads as shown and within easements, rights-of-way, or Project limits.

3.07 PARKING AREAS

- A. Control vehicular parking to preclude interference with public traffic or parking, access by emergency vehicles, Owner's operations, or construction operations.
- B. If equipment staging and parking facilities are not identified in the Contract Documents, the Contractor's proposed locations for these purposes is subject to City approval.
- C. Provide parking facilities for personnel working on Project. No employee or equipment parking will be permitted on Owner's existing paved areas.
- D. Use area designated on Drawings for parking of Contractor's and Contractor's employees' vehicles.

3.08 CLEANING DURING CONSTRUCTION

- A. In accordance with General Conditions, as may be specified in other Specification sections, and as required herein.
- B. Wet down exterior surfaces prior to sweeping to prevent blowing of dust and debris. At least weekly, sweep floors (basins, tunnels, platforms, walkways, roof surfaces), and pick up and dispose of debris.
- C. Provide approved containers for collection and disposal of waste materials, debris, and rubbish. At least weekly, dispose of such waste materials, debris, and rubbish offsite.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. At least weekly, brush sweep entry drive, roadways, and other streets and walkways affected by the Work and where adjacent to the Work.

**END OF SECTION**

**SECTION 01 56 39  
TREE PROTECTION**

**PART 1 GENERAL**

1.01 SUMMARY

- A. Section includes general protection and pruning of existing trees and plants that are affected by execution of the Work, whether temporary or permanent construction.
- B. Related Sections:
  - 1. Section 01 50 00, Temporary Facilities and Controls, for temporary site fencing.
  - 2. Section 31 10 00, Site Clearing, for removing existing trees and shrubs.

1.02 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract apply to this Section.

1.03 DEFINITIONS

- A. Tree Caliper: Diameter of a trunk measured by the average of the smallest and largest diameters at 6 inches above the ground for trees up to, and including, 4-inch size; and 12 inches above the ground for trees larger than 4-inch size.
- B. Tree and Shrub Protection Critical Root Zone (CRZ): Area surrounding existing trees, tree groupings, or shrub groupings to be protected during construction, as indicated on Drawings.
- C. DBH (Diameter Breast Height): Every inch of DBH of each existing tree to be protected represents one required radial foot of tree protection.
- D. Arborist must be a Board Certified Master Arborist, Registered Consulting Arborist, and must be Certified by the International Society of Arboriculture (ISA).
- E. Appraised Value: Removal of any tree without prior approval will be subject to replacement equal to the Appraised Value of the tree that is lost. Value will be determined by Consulting Arborist.

1.04 SUBMITTALS

- A. Product Data: For each type of product indicated.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Samples for Verification:
  - 1. For each type of the following:
    - a. Organic Mulch: 1 pint volume of organic mulch; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch.
    - b. Protection-Zone Fencing: Assembled Samples of full-size components.
    - c. Protection-Zone Signage: Full-size Samples of each size and text, ready for installation.
- C. Pruning and Maintenance Schedule: Verify locations of trees and shrubs to remain that are affected by construction, and submit written schedule detailing scope and extent of protective fencing, pruning, root pruning, and scope of on-going maintenance during all phases of construction.
- D. Qualification Data: Submit Certificates for qualified Consulting Arborist and tree service firm.
- E. Maintenance Recommendations: Submit list of instructions for care and protection of trees and shrubs affected by construction during and after completing the Work. Instructions shall be prepared by Consulting Arborist with clear definition of standards, and shall include instructions for prompt and proper treatment and repair of any trees or shrubs that are damaged.
- F. Tree and Shrub Protection Certification: Submit letter from Consulting Arborist, certifying that trees and shrubs indicated to remain have been protected during initial and on-going phases of construction.
- G. Existing Conditions: Submit Tree and Shrub Evaluation and Protection Report from Certified Consulting Arborist including detailed Site Map and Photo Documentation of each existing tree, shrub or plant grouping indicated to be protected, which establishes a record of preconstruction conditions, for use in documenting consequential damage caused by construction activities. Report shall include plans and notations indicating specific wounds and damage conditions.

## 1.05 QUALITY ASSURANCE

- A. Contractor shall take extreme care to protect the root systems of the existing trees. No grading shall occur within the CRZ. Bulk material, equipment, scaffold footings, or vehicles shall not be stockpiled or parked within the critical root zone (CRZ) of any tree or shrub, or within 10 feet of the trunk (whichever is greater). This is done to minimize surface and subsurface root and soil compaction. Any damage to existing trees or shrubs during construction shall be the Contractor's responsibility.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Preparatory work shall be performed under direction of Consulting Arborist. Pruning work shall be performed in accordance with ANSI A300 standards and by a qualified, licensed and insured arborist or tree service company.
- C. Tree Service Firm Qualifications: A tree service firm that has experience with work similar to that required for this Project and that will assign an experienced, qualified arborist to Project site during execution of the Work.
- D. Preconstruction Conference:
  - 1. Conduct 'Plant Protection' conference at Project site prior to any site demolition or construction.
  - 2. 'Plant Protection' conference to include General Contractor, Earthwork Contractor, Site Utility Contractor, Landscape Contractor, Consulting Arborist, Tree Service Firm, Landscape Architect and City Project Manager.
  - 3. Purpose of the conference is to review methods and procedures related to tree and plant protection, including the following:
    - a. Construction Schedule: Verify availability of materials, personnel, and equipment needed to make progress and avoid delays.
    - b. Enforcing requirements for protection zones.
    - c. Arborist's responsibilities.
    - d. Field quality control.

1.06 PROJECT CONDITIONS

- A. The following practices are prohibited within the plant protection zones:
  - 1. Storage of construction materials, debris, or excavated material.
  - 2. Parking or operation of vehicles or equipment.
  - 3. Erection of sheds or structures.
  - 4. Impoundment or runoff of water or chemicals.
  - 5. Grading, excavation, or digging unless otherwise indicated.
  - 6. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.
- B. Do not direct vehicle or equipment exhaust toward protection zones.
- C. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones and organic mulch.

## PART 2 PRODUCTS

### 2.01 MATERIALS

- A. Topsoil: Natural or cultivated top layer of the soil profile or manufactured topsoil; containing organic matter and sand, silt, and clay particles; friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects more than 1 inch in diameter; and free of weeds, roots, and toxic and other nonsoil materials.
1. Obtain topsoil only from well-drained sites where topsoil is 4 inches deep or more; do not obtain from bogs or marshes.
  2. Imported or manufactured topsoil shall comply with ASTM D5268.
- B. Organic Mulch:
1. Free from deleterious materials and suitable as a top dressing for trees and shrubs, consisting of one of the following:
    - a. Type: Bark chips, natural color (not dyed).
    - b. Particle Size Range: 3-inch maximum, 1/2 inch minimum.
- C. Protection-Zone Fencing: Fencing fixed in position and meeting one of the following requirements. Previously used materials may be used when approved by City Project Manager.
1. Chain-Link Fencing for Trees and Tree/Shrub Groupings: Fence to be 6-foot high galvanized-steel fencing fabricated from minimum 2-inch opening, 0.148-inch diameter wire chain-link fabric; with steel pipe posts, minimum 2-3/8-inch OD line posts, and 2-7/8-inch OD corner and pull posts; with 1-5/8-inch OD top rails and 0.177-inch diameter bottom tension wire; with tie wires, hog ring ties, and other accessories for a complete fence system.
  2. Gates: Single swing access gates matching material and appearance of fencing, to allow for maintenance activities within protection zones; minimum width 36 inches.
- D. Protection-Zone Signage: Shop-fabricated, rigid plastic or metal sheet with attachment holes prepunched and reinforced; legibly printed with nonfading letters.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 3 EXECUTION**

3.01 EXAMINATION

- A. Erosion and Sedimentation Control: Examine the site to verify that temporary erosion- and sedimentation-control measures are in place. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.
- B. Submit written report, endorsed by Consulting Arborist, listing all conditions that are or may become detrimental to tree and plant protection.

3.02 COORDINATION

- A. Coordinate relocation of any irrigation lines to serve protected plant materials as necessary.
- B. Coordinate relocation of other utility lines or structures that are in conflict with protection zones. Notify the Owner's Representative of any conflicts encountered.

3.03 PREPARATION

- A. Prior to site demolition or construction operations, install Plant Protection Fencing in all areas and obtain approval from Construction Manager for fence alignment and any anticipated root pruning.
- B. Locate and clearly identify trees, shrubs, and other vegetation to remain. Tie a 1-inch blue-vinyl tape around each tree trunk at 54 inches above the ground.
- C. Protect tree root systems from damage caused by runoff or spillage of noxious materials while mixing, placing, or storing construction materials. Protect root systems from ponding, eroding, or excessive wetting.

3.04 TREE- AND PLANT-PROTECTION ZONES

- A. Protection-Zone Fencing: Prior to any construction activities on this site, install protection-zone fencing along edges of protection zones before materials or equipment are brought on the site and construction operations begin in a manner that will prevent people from easily entering protected area except by entrance gates. Construct fencing so as not to obstruct safe passage or visibility at vehicle intersections where fencing is located adjacent to pedestrian walkways or in close proximity to street intersections, drives, or other vehicular circulation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Protection-Zone Signage: Install protection-zone signage in visibly prominent locations spaced approximately every 35 feet on protection-zone fencing, but no fewer than four signs with each facing a different direction.
- C. Contractor shall not engage in any construction activity within the Tree and Plant Protection Area without the approval of the Owner's Representative including: operating, moving or storing equipment; storing supplies or materials; locating temporary facilities including trailers or portable toilets and shall not permit employees to traverse the area to access adjacent areas of the project or use the area for lunch or any other work breaks. Permitted activity, if any, within the Tree and Plant Protection Area maybe indicated on the drawings along with any required remedial activity as listed below.
- D. Contractor shall be fully responsible to ensure that adequate water is provided to all plants to be preserved during the entire construction period. Adequate water is defined to be maintaining soil moisture above the permanent wilt point to a depth of 8 inches or greater. Contractor shall adjust irrigation system or apply additional water, using hoses or water tanks as required. If hand watering, ensure that the watering basin is of sufficient diameter to capture all roots. Do not allow water to pond against the tree trunk.
- E. Contractor shall be fully responsible to ensure that plants remain free of disease and insect infestations during the entire construction period. Provide all disease and insect control required to keep the plants in a healthy state using the principles of Integrated Plant Management (IPM). All pesticides shall be applied by a certified pesticide applicator.
- F. Contractor shall maintain plant protection zones free of weeds and trash.
- G. Contractor shall maintain protection-zone fencing and signage in good condition through all phases of construction. Remove when construction operations are complete and equipment has been removed from the site.
  - 1. Do not remove protection-zone fencing, even temporarily, to allow deliveries or equipment access through the protection zone.
  - 2. Temporary access is permitted subject to preapproval in writing by arborist if a root buffer effective against soil compaction is constructed as directed by arborist. Maintain root buffer so long as access is permitted.

3.05 EXCAVATION

- A. General: Excavate at edge of protection zones and for trenches indicated within protection zones according to requirements in Section 31 23 16, Excavation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Trenching Near Trees: Where utility trenches are required within protection zones, hand excavate under or around tree roots or tunnel under the roots by drilling, auger boring, or pipe jacking. Do not cut main lateral tree roots or taproots; cut only smaller roots that interfere with installation of utilities. Cut roots as required for root pruning.
- C. Redirect roots in backfill areas where possible. If encountering large, main lateral roots, expose roots beyond excavation limits as required to bend and redirect them without breaking. If encountered immediately adjacent to location of new construction and redirection is not practical, cut roots approximately 3 inches back from new construction and as required for root pruning.
- D. Do not allow exposed roots to dry out before placing permanent backfill. Provide temporary earth cover or pack with peat moss and wrap with burlap. Water and maintain in a moist condition. Temporarily support and protect roots from damage until they are permanently relocated and covered with soil.

3.06 ROOT AND BRANCH PRUNING

- A. Prune roots that are affected by temporary and permanent construction. Prune roots under the direction of Consulting Arborist and with pre-approval by City Project Manager.

3.07 REGRADING

- A. Maintain existing grade within tree protection zone at all times during and after construction.

3.08 FIELD QUALITY CONTROL

- A. Inspections: Engage a Consulting Arborist to direct plant-protection measures in the vicinity of trees, shrubs, and other vegetation indicated to remain and to prepare inspection reports.

3.09 REPAIR AND REPLACEMENT

- A. In the event that construction activity is unavoidable within the Tree and Plant Protection Area, Contractor shall submit a detailed written plan of action (prepared by Consulting Arborist) for pre-approval by City Project Manager. Plan shall include a description of proposed activity; the time period for the activity, and a list of remedial actions that will reduce the impact on the Tree and Plant Protection Area from the activity.
- B. Contractor is responsible for replacement of trees and shrubs that have been damaged by construction operations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Trees shall be replaced with a tree of similar species and of equal size, or 6-inch caliper (whichever is less). Shrubs and groundcovers shall be replaced with plants of similar species and equal size, or the largest size plants reasonably available. Plant quantities shall match quantities of all plants removed or damaged.
- D. Remedial work for damaged plants shall be completed by the Contractor at no cost to the Owner, and may extend for a period beyond the Maintenance Period. Remedial work shall include but is not limited to plant replacement, irrigation repair, soil compaction remediation, pruning, staking or cabling, insect and disease control, fertilizing, watering, and mulching.
- E. Remedial work shall be done at the direction of a Consulting Arborist and shall be reviewed and approved by the City Project Manager upon completion of all remedial efforts.

3.10 DISPOSAL OF SURPLUS AND WASTE MATERIALS

- A. Disposal: Remove excess excavated material, cuttings, roots, trash, and debris, and legally dispose of them off Project site.

**END OF SECTION**

**SECTION 01 57 13**  
**TEMPORARY EROSION AND SEDIMENT CONTROL**

**PART 1 GENERAL**

1.01 SUMMARY

- A. This section covers Work to implement structural and nonstructural Best Management Practices (BMP) to control soil erosion by wind or water and keep eroded sediments and other construction-generated pollutants from moving off project sites. Requirements described in this Specification are part of the project Water Pollution Control Plan (WPCP) and are the minimum for all project construction sites and conditions. This Specification covers all Project activities, including material sources, disposal sites, and offsite mitigation areas unless specific Project activities are excluded elsewhere in this Specification or in other Contract Documents controlling the Work.
- B. National Pollutant Discharge Elimination System: Comply with Federal, state, and local laws, rules and regulations, and the National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer System (MS4) Permit Draining the Watersheds of the San Diego Region, Order No. R9-2013-0001, as amended by R9-2015-0001 and R9-2015-0100 or Permits applicable to the Project. A copy of the Project's General Construction Permit, if applicable to the Project, is available from Owner.
- C. Other Regulations: A local government erosion and sediment control permit may apply and some local agency requirements may be more stringent than this specification. Adequate erosion and sediment control is essential for complying with the federal Endangered Species Act where construction runoff enters waters inhabited by protected species.

1.02 REFERENCES

- A. Activities shall conform to the Municipal Storm Water Permit No. R9-2013-0001, as amended by R9-2015-0001 and R9-2015-0100, the 2018 City of San Diego Storm Water Standards Manual, the Storm Water Pollution Prevention Plan, the 2018 "Whitebook" the City of San Diego Standard Specifications for Public Works Construction, the 2018 "Greenbook" Standard Specifications for Public Works Construction and Drawings. In the event of a conflict, follow the precedence of the Contract Documents per Greenbook 3-7.2.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. The following is a list of standards that may be referenced in this section:
1. California Stormwater Quality Association (CASQA) Stormwater Best Management Practice Handbook for Construction.
  2. Storm Water Quality Handbooks Construction Site Best Management Practices (BMPs) Manual, State of California Department of Transportation (Caltrans), March 2003.
  3. National Oceanic and Atmospheric Administration (NOAA) National Weather Service:
    - a. Precipitation-Frequency of the United States by State/Territory, 2012.
    - b. Precipitation Frequency Data Server, 2012.

1.03 SYSTEM DESCRIPTION

- A. Erosion and Sediment Control: Provide, maintain, and operate temporary facilities to control erosion and sediment releases during construction period.
- B. Personnel Training:
1. Prior to commencement of construction, applicable personnel must have an understanding of the Municipal Storm Water Permit requirements and their specific responsibilities under the permit. At a minimum, personnel must be trained to understand the following as it relates to the scope of their job duties:
    - a. The location of all stormwater controls and how to maintain them.
    - b. Procedures for complying with the pollution prevention requirements.
    - c. Procedures for conducting inspections, recording findings, and taking corrective action.
- C. Temporary Erosion and Sediment Control Plan (Water Pollution Control Plan):
1. A WPCP shall be prepared by the Contractor for approval.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. For each phase of the scheduled work, indicate on the WPCP all the BMPs proposed and installed for erosion and sediment control to minimize clearing, stabilize exposed soil, divert or temporarily store flows, limit runoff from exposed areas, and filter transported sediment. Include all temporary slopes, constructed for staging or other reasons, which may not have been identified in the original Contract plans. Refer to the City of San Diego 2016 Storm Water Standards Manual as well as the California Construction General Permit, Municipal Storm Water Permit.
    - a. The required BMPs and Procedures for Erosion Prevention, Runoff Control, and Sediment Control.
  3. Keep a copy of the approved WPCP with updated changes onsite during all construction activities.
- D. Water Management: Manage site water in accordance with the conditions of the Municipal Storm Water permit from a local permitting authority.
- E. Pollution Control: Waste Management and Materials Pollution Control BMPs are source control BMPs that prevent pollution by limiting or reducing potential pollutants at their source before they come in contact with storm water. These BMPs also involve day to day operations of the construction site and include material delivery and storage as well as various liquid and solid waste management. The Project-specific waste management BMPs to be implemented on the Project will be identified by the Contractor in their WPCP. Certain authorized non-stormwater discharges may be necessary for the completion of a construction project. Non-stormwater Management BMPs are source control BMPs that prevent pollution by limiting or reducing potential pollutants at their source or eliminating offsite discharge.
- F. If California State Water Resources Control Board or City of San Diego orders the Work suspended or permit violated, continue to control erosion, pollution, and runoff during the shutdown.
- G. Nothing in this section shall relieve Contractor from complying with other Contract requirements.

1.04 SUBMITTALS

- A. Informational Submittals:
1. Prepare a WPCP for approval that includes the following:
    - a. The WPCP shall cover all areas that may be affected inside and outside the limits of the Project (including all Owner-provided sources, disposal sites, and haul roads, and all nearby land, streams, and other bodies of water).

PW\DEN001\050020-695037  
OCTOBER 2020

TEMPORARY EROSION AND  
SEDIMENT CONTROL

01 57 13 - 3

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. BMP plan including the type of BMP, installation details, and location for each BMP.
- c. BMP Inspection and maintenance plan for each proposed BMP.

**PART 2 PRODUCTS**

**2.01 SILT (SEDIMENT) FENCE**

- A. Geotextile: As specified in Article Geotextile.
- B. Support Posts: As recommended by manufacturer of geotextile.
- C. Fasteners: Heavy-duty wire staples at least 1-inch long, tie wires, or hog rings, as recommended by manufacturer of geotextile.

**2.02 STABILIZED CONSTRUCTION ENTRANCE**

- A. Construct a pad from stone 3 inches to 6 inches in size, placed at least 8 inches deep and not less than 50 feet long.
- B. Provide aggregate free of extraneous materials that may cause or contribute to track out.
- C. Place separation geotextile under the rock to prevent fine sediment from pumping up into the rock pad. See Article Geotextile for required geotextile properties.
- D. Use of constructed or constructed/manufactured steel plates with ribs (such as, shaker/rumble plates or corrugated steel plates) for entrance/exit access is allowable.

**2.03 WATTLES**

- A. Cylinders of biodegradable plant material such as weed-free straw, coir, compost, wood chips, excelsior, or wood fiber or shavings encased within biodegradable netting.
- B. Diameter: 5 inches minimum.
- C. Netting Material: Clean, evenly woven, and free of encrusted concrete or other contaminating materials such as preservatives. Also free from cuts, tears, or weak places with a minimum lifespan of 6 months.
- D. Compost Filler: Coarse compost, wood chips, or wood shavings.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Wood Stakes: Untreated softwood species, 2-inch by 2-inch nominal dimension and 36 inches in length.

2.04 GEOTEXTILE

- A. Geotextiles shall consist only of long chain polymeric fibers or yarns formed into a stable network such that the fibers or yarns retain their position relative to each other during handling, placement, and design service life. At least 95 percent by weight of the material shall be polyolefins or polyesters. The material shall be free from defects or tears. Geotextile shall also be free of any treatment or coating which might adversely alter its hydraulic or physical properties after installation. Geotextile properties shall be as described in Table 1.

<b>Table 1 Geotextile for Temporary Silt Fence</b>			
Geotextile Property	ASTM Test Method	Geotextile Property Requirements	
		Unsupported Between Posts	Supported Between Posts with Wire or Polymeric Mesh
AOS	D4751	U.S. No. 30 max. for silt wovens, U.S. No. 50 for all other geotextile types, U.S. No. 100 min.	
Water Permittivity	D4491	0.2 sec <sup>-1</sup> min.	
Grab Tensile Strength, in machine and x-machine direction	D4632/D4632M	180 lb min. in machine direction, 100 lb min. in x-machine direction	100 lb min.
Grab Failure Strain, in machine and x-machine direction	D4632/D4632M	30% max. at 180 lb or more	
Ultraviolet (UV) Radiation Stability	D4355	70% strength retained min., after 500 hours in xenon arc device	

**PART 3 EXECUTION**

3.01 PREPARATION

- A. Construction General Permit Coverage is required prior to starting earth disturbing activities.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. The WPCP shall include proposed stockpile areas and installation of temporary erosion control devices, ditches, or other facilities in Work phasing plans.
- C. Areas designated for Contractor's use during Project may be temporarily developed as specified to provide working, staging, and administrative areas. Include control of sediment from these areas in the WPCP.
- D. Implementation of erosion and sediment control BMPs are delineated in the WPCP.

3.02 MAINTENANCE

- A. The erosion and sediment control measures described in the WPCP are minimum requirements for anticipated Site conditions. During the construction period, upgrade these measures as needed to comply with all applicable local, state, and federal erosion and sediment control regulations.
- B. BMP Inspection and maintenance is depicted in the WPCP.

3.03 REMOVAL

- A. When the Engineer determines that an erosion control BMP is no longer required, remove BMP and all associated hardware from the Project limits. When materials are biodegradable, Engineer may approve leaving temporary BMP in place.
- B. Permanently stabilize all bare and disturbed soil after removal of erosion and sediment control BMPs. Dress sediment deposits remaining after BMPs have been removed to conform to existing grade. Prepare and seed graded area. If installation and use of erosion control BMPs have compacted or otherwise rendered soil inhospitable to plant growth, such as construction entrances, take measures to rehabilitate soil to facilitate plant growth. This may include, but is not limited to, ripping the soil, incorporating soil amendments, or seeding with specified seed.

**END OF SECTION**

**SECTION 01 61 00  
COMMON PRODUCT REQUIREMENTS**

**PART 1 GENERAL**

1.01 DEFINITIONS

A. Products:

1. New items for incorporation in the Work, whether purchased by Contractor or Owner for the Project, or taken from previously purchased stock, and may also include existing materials or components required for reuse.
2. Includes the terms material, equipment, machinery, components, subsystem, system, hardware, software, and terms of similar intent and is not intended to change meaning of such other terms used in Contract Documents, as those terms are self-explanatory and have well recognized meanings in construction industry.
3. Items identified by manufacturer's product name, including make or model designation, indicated in manufacturer's published product literature, that is current as of the date of the Contract Documents.

1.02 DESIGN REQUIREMENTS

A. Where Contractor design is specified, design of installation, systems, equipment, and components, including supports and anchorage, shall be in accordance with provisions of the 2016 California Building Code (CBC) by California Building Standards Commission.

1. Wind: Basic wind speed, V: 115 mph (3-second gust), with exposure Category C, and Risk Category III.
2. Seismic: Risk Category III, importance factor, I, of 1.25, Site Class Definition D, mapped maximum considered earthquake, 5 percent damped, spectral response at short periods, S<sub>s</sub> 1.06G, mapped maximum considered earthquake, 5 percent damped, spectral response at a period of 1 second, S<sub>1</sub> 0.41G, unless specified otherwise.

1.03 ENVIRONMENTAL REQUIREMENTS

- A. Altitude: Provide materials and equipment suitable for installation and operation under rated conditions at 400 feet above sea level.
- B. Provide equipment and devices installed outdoors or in unheated enclosures capable of continuous operation within an ambient temperature range of 36 degrees F to 91 degrees F.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.04 PREPARATION FOR SHIPMENT

- A. When practical, factory assemble products. Mark or tag separate parts and assemblies to facilitate field assembly. Cover machined and unpainted parts that may be damaged by the elements with strippable protective coating.
- B. Package products to facilitate handling and protect from damage during shipping, handling, and storage. Mark or tag outside of each package or crate to indicate its purchase order number, bill of lading number, contents by name, name of Project and Contractor, equipment number, and approximate weight. Include complete packing list and bill of materials with each shipment.
- C. Extra Materials, Special Tools, Test Equipment, and Expendables:
  - 1. Furnish as required by individual Specifications.
  - 2. Schedule:
    - a. Ensure that shipment and delivery occurs concurrent with shipment of associated equipment.
    - b. Transfer to Owner shall occur immediately subsequent to Contractor's acceptance of equipment from Supplier.
  - 3. Packaging and Shipment:
    - a. Package and ship extra materials and special tools to avoid damage during long term storage in original cartons insofar as possible, or in appropriately sized, hinged-cover, wood, plastic, or metal box.
    - b. Prominently displayed on each package, the following:
      - 1) Manufacturer's part nomenclature and number, consistent with Operation and Maintenance Manual identification system.
      - 2) Applicable equipment description.
      - 3) Quantity of parts in package.
      - 4) Equipment manufacturer.
  - 4. Deliver materials to Site.
  - 5. Notify Construction Manager upon arrival for transfer of materials.
  - 6. Replace extra materials and special tools found to be damaged or otherwise inoperable at time of transfer to Owner.
- D. Request a minimum 7-day advance notice of shipment from manufacturer. Upon receipt of manufacturer's advance notice of shipment, promptly notify Construction Manager of anticipated date of equipment arrival.
- E. Factory Test Results: Reviewed and accepted by Design Engineer before product shipment as required in individual Specification sections.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.05 DELIVERY AND INSPECTION

- A. Deliver products in accordance with accepted current Progress Schedule and coordinate to avoid conflict with the Work and conditions at Site. Deliver anchor bolts and templates sufficiently early to permit setting prior to placement of structural concrete.
- B. Deliver products in undamaged condition, in manufacturer's original container or packaging, with identifying labels intact and legible. Include on label, date of manufacture and shelf life, where applicable.
- C. Unload products in accordance with manufacturer's instructions for unloading or as specified. Record receipt of products at Site. Promptly inspect for completeness and evidence of damage during shipment.
- D. Remove damaged products from Site and expedite delivery of identical new undamaged products, and remedy incomplete or lost products to provide that specified, so as not to delay progress of the Work.

1.06 HANDLING, STORAGE, AND PROTECTION

- A. Handle and store products in accordance with manufacturer's written instructions and in a manner to prevent damage. Store in approved storage yards or sheds provided in accordance with Section 01 50 00, Temporary Facilities and Controls. Provide manufacturer's recommended maintenance during storage, installation, and until products are accepted for use by Owner.
- B. Manufacturer's instructions for material requiring special handling, storage, or protection shall be provided prior to delivery of material.
- C. Arrange storage in a manner to provide easy access for inspection. Make periodic inspections of stored products to ensure that products are maintained under specified conditions, and free from damage or deterioration. Keep running account of products in storage to facilitate inspection and to estimate progress payments for products delivered, but not installed in the Work.
- D. Store electrical, instrumentation, and control products, and equipment with bearings in weather-tight structures maintained above 60 degrees F. Protect electrical, instrumentation, and control products, and insulate against moisture, water, and dust damage. Connect and operate continuously space heaters furnished in electrical equipment.
- E. Store fabricated products aboveground on blocking or skids, and prevent soiling or staining. Store loose granular materials in well-drained area on solid surface to prevent mixing with foreign matter. Cover products that are subject

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

to deterioration with impervious sheet coverings; provide adequate ventilation to avoid condensation.

- F. Store finished products that are ready for installation in dry and well-ventilated areas. Do not subject to extreme changes in temperature or humidity.
- G. After installation, provide coverings to protect products from damage due to traffic and construction operations. Remove coverings when no longer needed.
- H. Hazardous Materials: Prevent contamination of personnel, storage area, and Site. Meet requirements of product specification, codes, and manufacturer's instructions.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Provide manufacturer's standard materials suitable for service conditions, unless otherwise specified in the individual Specifications.
- B. Where product specifications include a named manufacturer, with or without model number, and also include performance requirements, named manufacturer's products must meet the performance specifications.
- C. Like items of products furnished and installed in the Work shall be end products of one manufacturer and of the same series or family of models to achieve standardization for appearance, operation and maintenance, spare parts and replacement, manufacturer's services, and implement same or similar process instrumentation and control functions in same or similar manner.
- D. Do not use materials and equipment removed from existing premises, except as specifically permitted by Contract Documents.
- E. Provide interchangeable components of the same manufacturer, for similar components, unless otherwise specified.
- F. Equipment, Components, Systems, and Subsystems: Design and manufacture with due regard for health and safety of operation, maintenance, and accessibility, durability of parts, and shall comply with applicable OSHA, state, and local health and safety regulations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- G. Regulatory Requirement: Coating materials shall meet federal, state, and local requirements limiting the emission of volatile organic compounds and for worker exposure.
- H. Safety Guards: Provide for all belt or chain drives, fan blades, couplings, or other moving or rotary parts. Cover rotating part on all sides. Design for easy installation and removal. Use 16-gauge or heavier; galvanized steel, aluminum coated steel, or galvanized or aluminum coated 1/2-inch mesh expanded steel. Provide galvanized steel accessories and supports, including bolts. For outdoors application, prevent entrance of rain and dripping water.
- I. Authority Having Jurisdiction (AHJ):
  - 1. Provide the Work in accordance with NFPA 70, National Electrical Code (NEC). Where required by the AHJ, material and equipment shall be labeled or listed by a nationally recognized testing laboratory or other organization acceptable to the AHJ in order to provide a basis for approval under NEC.
  - 2. Materials and equipment manufactured within the scope of standards published by UL shall conform to those standards and shall have an applied UL listing mark.
- J. Equipment Finish:
  - 1. Provide manufacturer's standard finish and color, except where specific color is indicated.
  - 2. If manufacturer has no standard color, provide equipment with finish as approved by Construction Manager.
- K. Special Tools and Accessories: Furnish to Owner, upon acceptance of equipment, all accessories required to place each item of equipment in full operation. These accessory items include, but are not limited to, adequate oil and grease (as required for first lubrication of equipment after field testing), light bulbs, fuses, hydrant wrenches, valve keys, handwheels, chain operators, special tools, and other spare parts as required for maintenance.
- L. Lubricant: Provide initial lubricant recommended by equipment manufacturer in sufficient quantity to fill lubricant reservoirs and to replace consumption during testing, startup, and operation until final acceptance by Owner.
- M. Components and Materials in Contact with Water for Human Consumption: Comply with the requirements of the Safe Drinking Water Act and other applicable federal, state, and local requirements. Provide certification by manufacturer or an accredited certification organization recognized by the Authority Having Jurisdiction that components and materials comply with the

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

maximum lead content standard in accordance with NSF/ANSI 61 and NSF/ANSI 372.

1. Use or reuse of components and materials without a traceable certification is prohibited.

## 2.02 FABRICATION AND MANUFACTURE

### A. General:

1. Manufacture parts to U.S.A. standard sizes and gauges.
2. Two or more items of the same type shall be identical, by the same manufacturer, and interchangeable.
3. Design structural members for anticipated shock and vibratory loads.
4. Use 1/4-inch minimum thickness for steel that will be submerged, wholly or partially, during normal operation.
5. Modify standard products as necessary to meet performance Specifications.

### B. Lubrication System:

1. Require no more than weekly attention during continuous operation.
2. Convenient and accessible; oil drains with bronze or stainless steel valves and fill-plugs easily accessible from the normal operating area or platform. Locate drains to allow convenient collection of oil during oil changes without removing equipment from its installed position.
3. Provide constant-level oilers or oil level indicators for oil lubrication systems.
4. For grease type bearings, which are not easily accessible, provide and install stainless steel tubing; protect and extend tubing to convenient location with suitable grease fitting.

## 2.03 SOURCE QUALITY CONTROL

- A. Where Specifications call for factory testing to be witnessed by Design Engineer, Owner, or Construction Manager, notify Construction Manager not less than 30 days prior to scheduled test date, unless otherwise specified.
- B. Calibration Instruments: Bear the seal of a reputable laboratory certifying instrument has been calibrated within the previous 12 months to a standard endorsed by the National Institute of Standards and Technology (NIST).
- C. Factory Tests: Perform in accordance with accepted test procedures and document successful completion.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 3 EXECUTION**

3.01 INSPECTION

- A. Inspect materials and equipment for signs of pitting, rust decay, or other deleterious effects of storage. Do not install material or equipment showing such effects. Remove damaged material or equipment from the Site and expedite delivery of identical new material or equipment. Delays to the Work resulting from material or equipment damage that necessitates procurement of new products will be considered delays within Contractor's control.

3.02 MANUFACTURER'S CERTIFICATE OF COMPLIANCE

- A. When so specified, a Manufacturer's Certificate of Compliance, a copy of which is attached to this section, shall be completed in full, signed by entity supplying the product, material, or service, and submitted prior to shipment of product or material or execution of the services.
- B. Construction Manager may permit use of certain materials or assemblies prior to sampling and testing if accompanied by accepted certification of compliance.
- C. Such form shall certify proposed product, material, or service complies with that specified. Attach supporting reference data, affidavits, and certifications as appropriate.
- D. May reflect recent or previous test results on material or product, if acceptable to Design Engineer.

3.03 INSTALLATION

- A. Equipment Drawings show general locations of equipment, devices, and raceway, unless specifically dimensioned.
- B. No shimming between machined surfaces is allowed.
- C. Install the Work in accordance with NECA Standard of Installation, unless otherwise specified.
- D. Install the Equipment per Section 01 88 15, Anchorage and Bracing.
- E. Repaint painted surfaces that are damaged prior to equipment acceptance.
- F. Do not cut or notch any structural member or building surface without specific approval of Design Engineer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- G. Handle, install, connect, clean, condition, and adjust products in accordance with manufacturer's instructions, and as may be specified. Retain a copy of manufacturers' instruction at Site, available for review at all times.
- H. For material and equipment specifically indicated or specified to be reused in the Work:
  - 1. Use special care in removal, handling, storage, and reinstallation to assure proper function in the completed Work.
  - 2. Arrange for transportation, storage, and handling of products that require offsite storage, restoration, or renovation. Include costs for such Work in the Contract Price.

3.04 FIELD FINISHING

- A. In accordance with Section 09 90 00, Painting and Coating, and individual Specification sections.

3.05 ADJUSTMENT AND CLEANING

- A. Perform required adjustments, tests, operation checks, and other startup activities.

3.06 LUBRICANTS

- A. Fill lubricant reservoirs and replace consumption during testing, startup, and operation prior to acceptance of equipment by Owner.

3.07 ANCHOR BOLTS

- A. Provide anchor bolts as specified in the specification sections and in accordance with Section 05 50 00, Metal Fabrications.

3.08 SUPPLEMENT

- A. The supplement listed below, following "End of Section," is part of this Specification.
  - 1. Manufacturer's Certificate of Compliance.

**END OF SECTION**

**SECTION 01 74 19**  
**CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL**

**PART 1 GENERAL**

1.01 SUMMARY

- A. Section includes administrative and procedural requirements for the following:
  - 1. Salvaging nonhazardous construction waste.
  - 2. Recycling nonhazardous construction waste.
  - 3. Disposing of nonhazardous construction waste.

1.02 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.
- B. The Section shall be used in conjunction with Section 02 41 00, Demolition.

1.03 DEFINITIONS

- A. Construction Waste: Building, structure, and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.
- B. Disposal: Removal of demolition or construction waste and subsequent salvage, sale, recycling, or deposit in landfill, incinerator acceptable to authorities having jurisdiction, or designated spoil areas on Owner's property.
- C. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.
- D. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.
- E. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.

1.04 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition and construction waste becomes property of Contractor.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
  - 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.05 ACTION SUBMITTALS

- A. Waste Management Plan: Submit plan within 7 days of date established for the Notice to Proceed.

1.06 INFORMATIONAL SUBMITTALS

- A. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit monthly report. Use the City of San Diego's and the California Green Building Code forms for construction waste. Include the following information:
  - 1. Material category.
  - 2. Generation point of waste.
  - 3. Total quantity of waste in tons.
  - 4. Quantity of waste salvaged, both estimated and actual in tons.
  - 5. Quantity of waste recycled, both estimated and actual in tons.
  - 6. Total quantity of waste recovered (salvaged plus recycled) in tons.
  - 7. Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.
- B. Waste Reduction Calculations: Before request for Substantial Completion, submit calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.
- C. Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.
- D. Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.
- E. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- G. Qualification Data: For waste management coordinator.

1.07 QUALITY ASSURANCE

- A. Waste Management Coordinator Qualifications: Experienced firm, or individual employed and assigned by General Contractor, with experience of successful waste management coordination of projects with similar requirements. Superintendent may serve as Waste Management Coordinator.
- B. Regulatory Requirements: Comply with transportation and disposal regulations of authorities having jurisdiction.
- C. Waste Management Conference(s):
  - 1. Conduct conference(s) at Project site to review methods and procedures related to waste management including, but not limited to, the following:
    - a. Review and discuss waste management plan including responsibilities of each contractor and waste management coordinator.
    - b. Review requirements for documenting quantities of each type of waste and its disposition.
    - c. Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
    - d. Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
    - e. Review waste management requirements for each trade.

1.08 WASTE MANAGEMENT PLAN

- A. General: Develop a waste management plan according to the requirements in this Section and in accordance with the City of San Diego's New Construction and Demolition Debris Diversion Requirement, and the California Green Building Code. Plan shall consist of waste identification, waste reduction work plan, including identification of five material streams. Indicate quantities by weight or volume but use same units of measure throughout waste management plan.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Waste Identification: Indicate anticipated types and quantities of site-clearing and construction waste generated by the Work. Use the City of San Diego's and the California Green Building Code forms for construction waste. Include estimated quantities and assumptions for estimates.
  
- C. Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, or disposed of in landfill or incinerator. Use the City of San Diego's and the California Green Building Code forms for construction waste. Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.
  - 1. Salvaged Materials for Donation: For materials that will be donated to individuals and organizations, include list of their names, addresses, and telephone numbers.
  - 2. Recycled Materials: Include list of local receivers and processors and type of recycled materials each will accept. Include names, addresses, and telephone numbers.
  - 3. Disposed Materials: Indicate how and where materials will be disposed of. Include name, address, and telephone number of each landfill and incinerator facility.
  - 4. Handling and Transportation Procedures: Include method that will be used for separating recyclable waste including sizes of containers, container labeling, and designated location where materials separation will be performed.

**PART 2 PRODUCTS**

**2.01 RECYCLING RECEIVERS AND PROCESSORS**

- A. Subject to compliance with requirements, available recycling receivers and processors include, but are not limited to, the following:
  - 1. The City of San Diego's published Certified Construction and Demolition Recycling Facilities.

**2.02 PERFORMANCE REQUIREMENTS**

- A. General: Achieve end-of-Project rates for salvage/recycling of 75 percent by weight of total nonhazardous solid waste generated by the Work and separation of four waste streams excluding landfill. Practice efficient waste management in the use of materials in the course of the Work. Use all reasonable means to divert construction and demolition waste from landfills

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

and incinerators. Facilitate recycling and salvage of materials, including the following:

1. Construction Waste:
  - a. Masonry and CMU.
  - b. Lumber.
  - c. Wood sheet materials.
  - d. Wood trim.
  - e. Metals.
  - f. Roofing.
  - g. Insulation.
  - h. Carpet and pad.
  - i. Gypsum board.
  - j. Piping.
  - k. Electrical conduit.
  - l. Packaging:
    - 1) Regardless of salvage/recycle goal indicated in Article Performance Requirements, Paragraph General above, salvage or recycle 100 percent of the following uncontaminated packaging materials:
      - a) Paper.
      - b) Cardboard.
      - c) Boxes.
      - d) Plastic sheet and film.
      - e) Polystyrene packaging.
      - f) Wood crates.
      - g) Wood pallets.
      - h) Plastic pails.
  - m. Construction Office Waste:
    - 1) Regardless of salvage/recycle goal indicated in Article Performance Requirements, Paragraph General above, salvage or recycle 100 percent of the following construction office waste materials:
      - a) Paper.
      - b) Aluminum cans.
      - c) Glass containers.
  - n. Electrical wiring.

**PART 3 EXECUTION**

3.01 PLAN IMPLEMENTATION

- A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.
- B. Waste Management Coordinator: Engage a waste management coordinator to be responsible for implementing, monitoring, and reporting status of waste management work plan.
- C. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work.
  - 1. Distribute waste management plan to everyone concerned within 3 days of submittal return.
  - 2. Distribute waste management plan to entities when they first begin work onsite. Review plan procedures and locations established for salvage, recycling, and disposal.
- D. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
  - 1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged and recycled.
  - 2. Comply with Section 01 50 00, Temporary Facilities and Controls, for controlling dust and dirt, environmental protection, and noise control.

3.02 RECYCLING CONSTRUCTION WASTE, GENERAL

- A. General: Recycle paper and beverage containers used by onsite workers.
- B. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall accrue to Contractor.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.
- D. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type (minimum allowable is 4 streams) at Project site to the maximum extent practical according to approved construction waste management plan.
  - 1. Provide appropriately marked containers or bins for controlling recyclable waste until removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.
    - a. Inspect containers and bins for contamination and remove contaminated materials if found.
  - 2. Stockpile processed materials onsite without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
  - 3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
  - 4. Store components off the ground and protect from the weather.
  - 5. Remove recyclable waste from Owner's property and transport to recycling receiver or processor as often as required to prevent overfilling bins.

3.03 RECYCLING CONSTRUCTION WASTE

- A. Packaging:
  - 1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
  - 2. Polystyrene Packaging: Separate and bag materials.
  - 3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain onsite, break down pallets into component wood pieces and comply with requirements for recycling wood.
  - 4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.
- B. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location.
- C. Paint: Seal containers and store by type.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.04 DISPOSAL OF WASTE

A. General:

1. Except for items or materials to be salvaged or recycled, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.
  - a. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate onsite.
  - b. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
2. Except for items or materials to be salvaged or recycled, remove waste materials and legally dispose of at designated spoil areas on Owner's property.

B. Burning:

1. Do not burn waste materials.
2. Burning of waste materials is permitted only at designated areas on Owner's property, provided required permits are obtained. Provide full-time monitoring for burning materials until fires are extinguished.

3.05 FINAL STATUS REPORT

- A. A Final Status Report demonstrating final disposition, either diverted or disposed, of materials generated by the Project is required before final payment.

**END OF SECTION**

**SECTION 01 77 00  
CLOSEOUT PROCEDURES**

**PART 1 GENERAL**

**1.01 SUBMITTALS**

**A. Informational Submittals:**

1. Submit prior to application for final payment.
  - a. Record Documents: As described in Section 01 33 00, Submittal Procedures and as required in General Conditions.
  - b. Approved Shop Drawings and Samples: As described in Section 01 33 00, Submittal Procedures. Special bonds, Special Guarantees, and Service Agreements and as required in General Conditions.
  - c. Consent of Surety to Final Payment: As required in General Conditions.
  - d. Releases or Waivers of Liens and Claims: As required in General Conditions.
  - e. Releases from Agreements.
  - f. All documentation as required by all Funding Agencies.
  - g. Final Application for Payment: Submit in accordance with procedures, requirements stated in Section 01 29 00, Payment Procedures , and requirements stated in the General Conditions.
  - h. Extra Materials: As required by individual Specification sections.

**1.02 RECORD DOCUMENTS**

**A. Quality Assurance:**

1. Furnish qualified and experienced person, whose duty and responsibility shall be to maintain record documents and to ensure compliance with the requirements of the Contract Documents and Funding Agencies.
2. Accuracy of Records:
  - a. Coordinate changes within record documents, making legible and accurate entries on each sheet of Drawings and other documents where such entry is required to show change.
  - b. Purpose of Project record documents is to document factual information regarding aspects of the Work, both concealed and visible, to enable future modification of the Work to proceed without lengthy and expensive Site measurement, investigation, and examination.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Make entries within 24 hours after receipt of information that a change in the Work has occurred.
4. Prior to submitting each request for progress payment, request Construction Manager's review and approval of current status of record documents. Failure to properly maintain, update, and submit record documents may result in a deferral by Construction Manager to recommend whole or any part of Contractor's Application for Payment, either partial or final.

1.03 RELEASES FROM AGREEMENTS

- A. Furnish Owner written releases from property owners or public agencies where side agreements or special easements have been made, or where Contractor's operations have not been kept within the Owner's construction right-of-way.
- B. In the event Contractor is unable to secure written releases:
  1. Inform Owner of the reasons.
  2. Owner or its representatives will examine the Site, and Owner will direct Contractor to complete the Work that may be necessary to satisfy terms of the side agreement or special easement.
  3. Should Contractor refuse to perform this Work, Owner reserves right to have it done by separate contract and deduct cost of same from Contract Price, or require Contractor to furnish a satisfactory bond in a sum to cover legal Claims for damages.
  4. When Owner is satisfied that the Work has been completed in agreement with Contract Documents and terms of side agreement or special easement, right is reserved to waive requirement for written release if: (i) Contractor's failure to obtain such statement is due to grantor's refusal to sign, and this refusal is not based upon any legitimate Claims that Contractor has failed to fulfill terms of side agreement or special easement, or (ii) Contractor is unable to contact or has had undue hardship in contacting grantor.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 MAINTENANCE OF RECORD DOCUMENTS

A. General:

1. Promptly following commencement of Contract Times, secure from Construction Manager at no cost to Contractor, one complete set of Contract Documents. Drawings will be full size.
2. Label or stamp each record document with title, "RECORD DOCUMENTS," in neat large printed letters.
3. Record information concurrently with construction progress and within 24 hours after receipt of information that change has occurred. Do not cover or conceal Work until required information is recorded.

B. Preservation:

1. Maintain documents in a clean, dry, legible condition and in good order. Do not use record documents for construction purposes.
2. Make documents and Samples available at all times for observation by Construction Manager.

C. Making Entries on Drawings:

1. Clearly describe change by graphic line and note as required. Entries shall be adequately clear to accurately locate and indicate changes on Drawings. Entries shall be dark enough to allow scanned copies.
  - a. Color Coding:
    - 1) Green when showing information deleted from Drawings.
    - 2) Red when showing information added to Drawings.
    - 3) Blue and circled in blue to show notes.
  2. Date entries.
  3. Call attention to entry by "cloud" drawn around area or areas affected.
  4. Legibly mark to record actual changes made during construction, including, but not limited to:
    - a. Depths of various elements of foundation in relation to finished first floor data if not shown or where depth differs from that shown.
    - b. Horizontal and vertical locations of existing and new Underground Facilities and appurtenances, and other underground structures, equipment, or Work. Horizontal and vertical locations of utilities placed at locations different than the coordinates shown on Drawings shall be surveyed, with revised coordinates to two

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- decimal places, marked on Record Documents. Reference to at least two measurements to permanent surface improvements.
- c. Location of internal utilities and appurtenances concealed in the construction referenced to visible and accessible features of the structure.
  - d. Locate existing facilities, piping, equipment, and items critical to the interface between existing physical conditions or construction and new construction.
  - e. Changes made by Addenda and Field Orders, Work Change Directive, Change Order, and Construction Manager's written interpretation and clarification using consistent symbols for each and showing appropriate document tracking number. Changes shall also be physically annotated on Drawings, in addition to noting the associated change.
5. Dimensions on Schematic Layouts: Show on Record Drawings, by dimension, the centerline of each run of items such as are described in previous subparagraph above.
- a. Clearly identify the item by accurate note such as "cast iron drain," "galv. water," and the like.
  - b. Show, by symbol or note, vertical location of item ("under slab," "in ceiling plenum," "exposed," and the like).
  - c. Make identification so descriptive that it may be related reliably to Specifications.

### 3.02 FINAL CLEANING

- A. At completion of the Work or of a part thereof and immediately prior to Contractor's request for certificate of Substantial Completion; or if no certificate is issued, immediately prior to Contractor's notice of completion, clean entire Site or parts thereof, as applicable.
1. Leave the Work and adjacent areas affected in a cleaned condition satisfactory to Owner and Construction Manager.
  2. Remove grease, dirt, dust, paint or plaster splatter, stains, labels, fingerprints, and other foreign materials from exposed surfaces.
  3. Repair, patch, and touch up marred surfaces to specified finish and match adjacent surfaces.
  4. Clean all windows.
  5. Clean and wax wood, vinyl, or painted floors.
  6. Broom clean exterior paved driveways and parking areas.
  7. Hose clean sidewalks, loading areas, and others contiguous with principal structures.
  8. Rake clean all other surfaces.
  9. Remove snow and ice from access to buildings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

10. Replace air-handling filters and clean ducts, blowers, and coils of ventilation units operated during construction.
  11. Leave water courses, gutters, and ditches open and clean.
- B. Use only cleaning materials recommended by manufacturer of surfaces to be cleaned.

3.03 SUBSTANTIAL COMPLETION

- A. When Contractor considers the entire Work ready for its intended use, Contractor shall notify Owner and Construction Manager in writing that the entire Work is substantially complete (except for items specifically listed by Contractor as incomplete), and request that Construction Manager issue a certificate of Substantial Completion.
- B. Promptly after Contractor's notification, Owner, Contractor, and Construction Manager shall make an inspection of the Work to determine the status of completion. If Construction Manager does not consider the Work substantially complete, Construction Manager will notify Contractor in writing giving the reasons therefor.
- C. If Construction Manager considers the Work substantially complete, Construction Manager will deliver to Owner a tentative certificate of Substantial Completion which shall fix the date of Substantial Completion. There shall be attached to the certificate a tentative list of items to be completed or corrected before final payment. Owner shall have 7 days after receipt of the tentative certificate during which to make written objection to Construction Manager as to any provisions of the certificate or attached list. If, after considering such objections, Construction Manager concludes that the Work is not substantially complete, Construction Manager will within 14 days after submission of the tentative certificate to Owner, notify Contractor in writing, stating the reasons therefor. If, after consideration of Owner's objections, Construction Manager considers the Work substantially complete, Construction Manager will within said 14 days execute and deliver to Owner and Contractor a definitive certificate of Substantial Completion (with a revised tentative list of items to be completed or corrected) reflecting such changes from the tentative certificate as Construction Manager believes justified after consideration of any objections from Owner.
- D. At the time of delivery of the tentative certificate of Substantial Completion, Construction Manager will deliver to Owner and Contractor a written recommendation as to division of responsibilities pending final payment between Owner and Contractor with respect to security, operation, safety, and protection of the Work, maintenance, heat, utilities, insurance, and warranties and guarantees. Unless Owner and Contractor agree otherwise in writing and

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

so inform Construction Manager in writing prior to Construction Manager's issuing the definitive certificate of Substantial Completion, Construction Manager's aforesaid recommendation will be binding on Owner and Contractor until final payment.

3.04 FINAL INSPECTION

- A. Upon written notice from Contractor that the entire Work or an agreed portion thereof is complete, Construction Manager will promptly make a final inspection with Owner and Contractor and will notify Contractor in writing of all particulars in which this inspection reveals that the Work is incomplete or defective. Contractor shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

**END OF SECTION**

**SECTION 01 78 23**  
**OPERATION AND MAINTENANCE DATA**

**PART 1 GENERAL**

1.01 SECTION INCLUDES

- A. Detailed information for the preparation, submission, and Design Engineer's review of Operations and Maintenance (O&M) Data, as required by individual Specification sections.

1.02 DEFINITIONS

- A. Preliminary Data: Initial and subsequent submissions for Design Engineer's review.
- B. Final Data: Design Engineer-accepted data, submitted as specified herein.
- C. Maintenance Operation: As used on Maintenance Summary Form is defined to mean any routine operation required to ensure satisfactory performance and longevity of equipment. Examples of typical maintenance operations are lubrication, belt tensioning, adjustment of pump packing glands, and routine adjustments.

1.03 SEQUENCING AND SCHEDULING

- A. Equipment and System Data:
  - 1. Preliminary Data:
    - a. Do not submit until Shop Drawing for equipment or system has been reviewed and approved by Design Engineer.
    - b. Submit prior to shipment date.
  - 2. Final Data: Submit Instructional Manual Formatted data not less than 30 days prior to equipment or system field functional testing.
  - 3. Record Data: Submit final Compilation Formatted and Electronic Media Formatted data prior to Substantial Completion of Project.
- B. Materials and Finishes Data:
  - 1. Preliminary Data: Submit at least 15 days prior to request for final inspection.
  - 2. Final Data: Submit within 10 days after final inspection.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.04 DATA FORMAT

- A. Prepare preliminary data in the form of an instructional manual. Prepare final data in data compilation format and on electronic media.
- B. Instructional Manual Format:
1. Binder: Commercial quality, permanent, three-ring or three-post binders with durable plastic cover.
  2. Size: 8-1/2 inches by 11 inches, minimum.
  3. Cover: Identify manual with typed or printed title “OPERATION AND MAINTENANCE DATA” and list:
    - a. Project title.
    - b. Include name of piece of equipment and equipment tag number.
    - c. Designate applicable system, equipment, material, or finish.
    - d. Identity of separate structure as applicable.
    - e. Identify volume number if more than one volume.
    - f. Identity of general subject matter covered in manual. Identity of equipment number and Specification section.
  4. Spine:
    - a. Project title.
    - b. Identify volume number if more than one volume.
  5. Title Page:
    - a. Contractor name, address, and telephone number.
    - b. Subcontractor, Supplier, installer, or maintenance contractor’s name, address, email address, and telephone number, as appropriate.
      - 1) Identify area of responsibility of each.
      - 2) Provide name and telephone number of local source of supply for parts and replacement.
  6. Table of Contents:
    - a. Neatly typewritten and arranged in systematic order with consecutive page numbers.
    - b. Identify each product by product name and other identifying numbers or symbols as set forth in Contract Documents.
  7. Paper: 20-pound minimum, white for typed pages.
  8. Text: Manufacturer’s printed data, or neatly typewritten.
  9. Three-hole punch data for binding and composition; arrange printing so that punched holes do not obliterate data.
  10. Material shall be suitable for reproduction, with quality equal to original. Photocopying of material will be acceptable, except for material containing photographs. FAX and thermal copies are not acceptable.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. Data Compilation Format:

1. Compile all Design Engineer-accepted preliminary O&M data into a hard-copy, hard-bound set.
2. Each set shall consist of the following:
  - a. Binder: Commercial quality, permanent, three-ring or three-post binders with durable plastic cover.
  - b. Cover: Identify each volume with typed or printed title "OPERATION AND MAINTENANCE DATA, VOLUME NO. \_\_\_ OF \_\_\_", and list:
    - 1) Project title.
    - 2) Contractor's name, address, and telephone number.
    - 3) If entire volume covers equipment or system provided by one Supplier include the following:
      - a) Identity of general subject matter covered in manual.
      - b) Identity of equipment number and Specification section.
  - c. Provide each volume with title page and typed table of contents with consecutive page numbers. Place contents of entire set, identified by volume number, in each binder.
  - d. Table of contents neatly typewritten, arranged in a systematic order:
    - 1) Include list of each product, indexed to content of each volume.
    - 2) Designate system or equipment for which it is intended.
    - 3) Identify each product by product name and other identifying numbers or symbols as set forth in Contract Documents.
  - e. Section Dividers:
    - 1) Heavy, 80-pound cover weight, tabbed with numbered plastic index tabs.
    - 2) Divider Page:
      - a) For each separate product, or each piece of operating equipment, with typed description of product and major component parts of equipment.
      - b) List with Each Product:
        - (1) Name, address, and telephone number of Subcontractor, Supplier, installer, and maintenance contractor, as appropriate.
        - (2) Identify area of responsibility of each.
        - (3) Provide local source of supply for parts and replacement.
      - c) Identity of separate structure as applicable.
  - f. Assemble and bind material, as much as possible, in same order as specified in the Contract Documents.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

D. Electronic Media Format:

1. Portable Document Format (PDF):
  - a. After all preliminary data has been found to be acceptable to Design Engineer, submit Operation and Maintenance Data in PDF format on CD. Minimize the number of files in each manual. Files should not be broken up unless the size is greater than 1 GB.
  - b. Files to be exact duplicates of Design Engineer-accepted preliminary data. Arrange by specification number and name.
  - c. Files to be processed for optical character recognition, bookmarked, and viewable in most recent version of Adobe Acrobat.
  - d. Document properties requirements of each file shall be set as follows:
    - 1) Title: Name of the system.
    - 2) Author: Manufacturer's name.
    - 3) Subject: Equipment Service Manual.
    - 4) Keywords: Equipment Tag Number, equipment type.
    - 5) Initial View – Navigation Tab: Bookmarks Panel and Page.
    - 6) Layout: Single Page.
    - 7) Magnification: Fit Page.
    - 8) Window Option: Show document title.
    - 9) Security: No security.

1.05 SUBMITTALS

A. Informational:

1. Data Outline: Submit two copies and electronic copies of a detailed outline of proposed organization and contents of Final Data prior to preparation of Preliminary Data.
2. Preliminary Data:
  - a. Submit two copies and electronic copies for Design Engineer's review.
  - b. If data meets conditions of the Contract:
    - 1) One copy will be returned to Contractor.
    - 2) One copy will be forwarded to Resident Project Representative.
    - 3) One copy will be retained in Engineer's file.
  - c. If data does not meet conditions of the Contract:
    - 1) All copies will be returned to Contractor with Engineer's comments (on separate document) for revision.
    - 2) Engineer's comments will be retained in Engineer's file.
    - 3) Resubmit two copies revised in accordance with Engineer's comments.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Final Data: Submit two printed copies and an electronic copy in format specified herein.
4. Record Data: Submit two printed copies and an electronic copy in format specified herein, incorporating all modifications made during testing and commissioning.

1.06 DATA FOR EQUIPMENT AND SYSTEMS

A. Content for Each Unit (or Common Units) and System:

1. Product Data:
  - a. Include only those sheets that are pertinent to specific product.
  - b. Clearly annotate each sheet to:
    - 1) Identify specific product or part installed.
    - 2) Identify data applicable to installation.
    - 3) Delete references to inapplicable information.
  - c. Function, normal operating characteristics, and limiting conditions.
  - d. Performance curves, engineering data, nameplate data, and tests.
  - e. Complete nomenclature and commercial number of replaceable parts.
  - f. Original manufacturer's parts list, illustrations, detailed assembly drawings showing each part with part numbers and sequentially numbered parts list, and diagrams required for maintenance.
  - g. Spare parts ordering instructions.
  - h. Where applicable, identify installed spares and other provisions for future work (e.g., reserved panel space, unused components, wiring, terminals).
2. As-installed, color-coded piping diagrams.
3. Charts of valve tag numbers, with the location and function of each valve.
4. Drawings: Supplement product data with Drawings as necessary to clearly illustrate:
  - a. Format:
    - 1) Provide reinforced, punched, binder tab; bind in with text.
    - 2) Reduced to 8-1/2 inches by 11 inches, or 11 inches by 17 inches folded to 8-1/2 inches by 11 inches.
    - 3) Where reduction is impractical, fold and place in 8-1/2-inch by 11-inch envelopes bound in text.
    - 4) Identify Specification section and product on Drawings and envelopes.
  - b. Relations of component parts of equipment and systems.
  - c. As-built control and flow diagrams.
  - d. Coordinate drawings with Project record documents to assure correct illustration of completed installation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Instructions and Procedures: Within text, as required to supplement product data.
  - a. Format:
    - 1) Organize in consistent format under separate heading for each different procedure.
    - 2) Provide logical sequence of instructions for each procedure.
    - 3) Provide information sheet for Owner's personnel, including:
      - a) Proper procedures in event of failure.
      - b) Instances that might affect validity of guarantee or Bond.
  - b. Installation Instructions: Including alignment, adjusting, calibrating, and checking.
  - c. Operating Procedures:
    - 1) Startup, break-in, routine, and normal operating instructions.
    - 2) Test procedures and results of factory tests where required.
    - 3) Regulation, control, stopping, and emergency instructions.
    - 4) Description of operation sequence by control manufacturer.
    - 5) Shutdown instructions for both short and extended duration.
    - 6) Summer and winter operating instructions, as applicable.
    - 7) Safety precautions.
    - 8) Special operating instructions.
  - d. Maintenance and Overhaul Procedures:
    - 1) Routine maintenance.
    - 2) Guide to troubleshooting.
    - 3) Disassembly, removal, repair, reinstallation, and re-assembly.
6. Guarantee, Bond, and Service Agreement: In accordance with Section 01 77 00, Closeout Procedures.

B. Content for Each Electric or Electronic Item or System:

1. Description of Unit and Component Parts:
  - a. Function, normal operating characteristics, and limiting conditions.
  - b. Performance curves, engineering data, nameplate data, and tests.
  - c. Complete nomenclature and commercial number of replaceable parts.
  - d. Interconnection wiring diagrams, including control and lighting systems.
2. Circuit directories of panelboards.
3. Electrical service.
4. Control requirements and interfaces.
5. Communication requirements and interfaces.
6. List of electrical relay settings, and control and alarm contact settings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. Electrical interconnection wiring diagram, including as applicable, single-line, three-line, schematic and internal wiring, and external interconnection wiring.
8. As-installed control diagrams by control manufacturer.
9. Operating Procedures:
  - a. Routine and normal operating instructions.
  - b. Startup and shutdown sequences, normal and emergency.
  - c. Safety precautions.
  - d. Special operating instructions.
10. Maintenance Procedures:
  - a. Routine maintenance.
  - b. Guide to troubleshooting.
  - c. Adjustment and checking.
  - d. List of relay settings, control and alarm contact settings.
11. Manufacturer's printed operating and maintenance instructions.
12. List of original manufacturer's spare parts, manufacturer's current prices, and recommended quantities to be maintained in storage.

C. Maintenance Summary:

1. Compile individual Maintenance Summary for each applicable equipment item, respective unit or system, and for components or sub-units.
2. Format:
  - a. Use Maintenance Summary Form bound with this section or electronic facsimile of such.
  - b. Each Maintenance Summary may take as many pages as required.
  - c. Use only 8-1/2-inch by 11-inch size paper.
  - d. Complete using typewriter or electronic printing.
  - e. Provide in electronic media format.
3. Include detailed lubrication instructions and diagrams showing points to be greased or oiled; recommend type, grade, and temperature range of lubricants and frequency of lubrication.
4. Recommended Spare Parts:
  - a. Data to be consistent with manufacturer's Bill of Materials/Parts List furnished in O&M manuals.
  - b. "Unit" is the unit of measure for ordering the part.
  - c. "Quantity" is the number of units recommended.
  - d. "Unit Cost" is the current purchase price.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.07 DATA FOR MATERIALS AND FINISHES

- A. Content for Architectural Products, Applied Materials, and Finishes:
  - 1. Manufacturer's data, giving full information on products:
    - a. Catalog number, size, and composition.
    - b. Color and texture designations.
    - c. Information required for reordering special-manufactured products.
  - 2. Instructions for Care and Maintenance:
    - a. Manufacturer's recommendation for types of cleaning agents and methods.
    - b. Cautions against cleaning agents and methods that are detrimental to product.
    - c. Recommended schedule for cleaning and maintenance.
  
- B. Content for Moisture Protection and Weather Exposed Products:
  - 1. Manufacturer's data, giving full information on products:
    - a. Applicable standards.
    - b. Chemical composition.
    - c. Details of installation.
  - 2. Instructions for inspection, maintenance, and repair.

1.08 SUPPLEMENT

- A. The supplement listed below, following "End of Section," is part of this Specification.
  - 1. Maintenance Summary Form.

Part No.	Description	Unit	Quantity	Unit Cost
Note: Identify parts provided by this Contract with two asterisks.				

**SECTION 01 88 15**  
**ANCHORAGE AND BRACING**

**PART 1 GENERAL**

1.01 SUMMARY

- A. This section covers requirements for anchorage and bracing of equipment, distribution systems, and other nonstructural components required in accordance with the 2016 California Building Code (CBC), for seismic, wind, gravity, soil, and operational loads.

1.02 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. American Institute of Steel Construction (AISC) 360, Specification for Structural Steel Buildings.
  2. American Society of Civil Engineers (ASCE): ASCE 7, Minimum Design Loads for Buildings and Other Structures.
  3. American Society of Civil Engineers (ASCE): ASCE 41-17, Seismic Evaluation and Retrofit of Existing Buildings.
  4. California Building Commission: 2016 CBC.
  5. International Code Council (ICC): International Building Code (IBC).

1.03 DEFINITIONS

- A. Authority Having Jurisdiction (AHJ): Permitting building agency; may be a federal, state, local, or other regional department, or individual including building official, fire chief, fire marshal, chief of a fire prevention bureau, labor department, or health department, electrical inspector; or others having statutory authority. AHJ may be Owner when authorized to be self-permitting by governmental permitting agency or when no governmental agency has authority.
- B. Designated Seismic System: Architectural, electrical, and mechanical system or their components for which component importance factor is greater than 1.0.

1.04 DESIGN AND PERFORMANCE REQUIREMENTS

- A. General:
1. Anchorage and bracing systems shall be designed by a qualified professional engineer registered in the State of California.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Design anchorage and bracing of architectural, mechanical, and electrical components and systems in accordance with this section, unless a design is specifically provided within Contract Documents or where exempted hereinafter.
3. Design attachments, braces, and anchors for equipment, components, and distribution systems to structure for gravity, seismic, wind, and operational loading.
4. Design seismic anchorage and bracing for modified existing architectural, mechanical, or electrical systems where code requirements would dictate design for similar new components.
5. Anchor and brace piping and ductwork, whether exempt or not exempt for this section, so that lateral or vertical displacement does not result in damage or failure to essential architectural, mechanical, or electrical equipment.
6. Architectural Components: Includes, but are not limited to, nonstructural walls and elements, partitions, cladding and veneer, access flooring, signs, cabinets, suspended ceilings, and glass in glazed curtain walls and partitions.
7. Provide supplementary framing where required to transfer anchorage and bracing loads to structure.
8. Adjust equipment pad sizes or provide additional anchorage confinement reinforcing to provide required anchorage capacities.
9. Anchor existing equipment as noted on Drawings.
10. Design anchorage and bracing for:
  - a. Equipment and components that weigh more than 400 pounds and have center of mass located 4 feet or less above adjacent finished floor.
  - b. Equipment weighing more than 20 pounds that has center of mass located more than 4 feet above adjacent finished floor.
  - c. Mechanical and electrical components that are not provided with flexible connections between components and associated ductwork, piping, or conduit.
  - d. Distribution systems that weigh more than 5 pounds per foot that have center of mass located more than 4 feet above adjacent finished floor.
11. Design seismic anchorage and bracing for Designated Seismic Systems regardless of weight or mounting height.
  - a. Component Important Factor:
    - 1)  $I_p$  equals 1.0, unless noted otherwise.
    - 2)  $I_p$  shall be taken as 1.5 if any of the following conditions apply:
      - a) Component is required to function for life-safety purposes after an earthquake, including fire protection sprinkler systems and egress stairways.
      - b) Component contains hazardous materials.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c) Component is in or attached to Risk Category IV structure and is needed for continued operation of facility or its failure could impair continued operation of facility.
  - 3) Per Section 01 61 00, Common Product Requirements.
12. For components exempted from design requirements of this section, provide bolted, welded, or otherwise positively fastened attachments to supporting structure.

B. Design Loads:

1. Gravity: Design anchorage and bracing for self-weight and superimposed loads on components and equipment.
2. Wind: Design anchorage and bracing for wind criteria provided in Section 01 61 00, Common Product Requirements and on General Structural Notes on Drawings for exposed architectural components and exterior and wind-exposed mechanical and electrical equipment. Alternately, manufacturer certification may be provided for components such as roofing and flashing to verify attachments meet Project-specific design criteria.
3. Operational:
  - a. For loading supplied by equipment manufacturer for CBC required load cases.
  - b. Loads may include equipment vibration, torque, thermal effects, effects of internal contents (weight and sloshing), water hammer, and other load-inducing conditions.
  - c. Locate braces to minimize vibration to or movement of structure.
  - d. For vibrating loads, use anchors meeting requirements of Section 05 50 00, Metal Fabrications, for anchors with designated capacities for vibratory loading per manufacturer's ICC-ES report.
4. Hydraulic: Design of anchorage for submerged gates and other mechanical equipment shall include hydrostatic and hydrodynamic loads determined in accordance with Section 15.7 of ASCE 7-10.
5. Seismic:
  - a. In accordance with 2016 CBC, Section 1613, and Chapter 13 of ASCE 7.
  - b. Design anchorage and bracing for design criteria listed on General Structural Notes on Drawings.
  - c. Design forces for anchors in concrete or masonry shall be in accordance with ASCE 7, Section 13.4.2 or CBC Section 1905.1.9 as applicable for Project Seismic Design Category.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. Seismic Design Requirements:

1. Nonstructural Components: Design as nonbuilding structures for components with weights greater than or equal to 25 percent of effective seismic weight of overall structure.
2. Analyze local region of body of nonstructural component for load transfer of anchorage attachment if component  $I_p$  equals 1.5.
3. The following are exempt from requirements for provision of seismic anchorages and bracing, in addition to those items specifically exempted in ASCE 7, Part 13.5 for architectural components and Part 13.6 for electrical and mechanical equipment:
  - a. Furniture, except storage cabinets and bookshelves over 6 feet tall.
  - b. Temporary or movable equipment.
4. Fire protection sprinkler systems designed and constructed in accordance with NFPA 13 shall be considered to meet requirements of Chapter 13 of ASCE 7.
5. Provide support drawings and calculations for electrical distribution components if any of the following conditions apply:
  - a. Conduit diameter is greater than 2.5-inch trade size.
  - b. Total weight of bus duct, cable tray, or conduit supported by trapeze assemblies exceeds 10 pounds per foot.
6. Existing components, systems, and equipment in their final condition that are modified by Project requirements and are not exempted by above paragraph require the same anchorage and bracing drawing and calculation submittals as new equipment. Field verify existing conditions.
7. Other seismic design and detailing information identified in ASCE 7, Chapter 13, is required to be provided for new and modified or noted architectural, mechanical and electrical components, systems, or equipment.

1.05 SUBMITTALS

A. Action Submittals:

1. Shop Drawings:
  - a. List of architectural, mechanical, and electrical equipment requiring Contractor-designed anchorage and bracing, unless specifically exempted.
  - b. Manufacturers' engineered seismic and nonseismic hardware product data sealed by a civil or structural engineer registered in the State of California.
  - c. Attachment assemblies' drawings including seismic attachments; include connection hardware, braces, and anchors or anchor bolts for nonexempt components, equipment, and systems.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. List of existing architectural, mechanical, and electrical equipment or components to be modified in Project requiring Contractor-designed anchorage and bracing in final retrofitted condition.
- e. Drawings for seismic attachment assemblies include connection hardware, braces, and anchors (or anchor bolts) for modified, nonexempt existing components, equipment, and systems where a combination of new and existing systems or components' final condition would require anchorage or bracing under this specification for new equipment.
- f. Submittal will be rejected if proposed anchorage method would create excessive stress to supporting member. Revise anchorages and strengthen structural support to eliminate overstressed condition.

B. Informational Submittals:

- 1. Anchorage and Bracing Calculations: For attachments, braces, and anchorages, include IBC and Project-specific criteria as noted on General Structural Notes on Drawings, in addition to manufacturer's specific criteria used for design; sealed by a civil or structural engineer registered in the State of California.
- 2. Manufacturer's hardware installation requirements.

C. Deferred Submittals:

- 1. Submitted seismic anchorage drawings and calculations for Designated Seismic Systems are identified as CBC deferred submittals and will be submitted to and must be accepted by AHJ prior to installation of component, equipment, or distribution system.
- 2. Submit deferred Action Submittals such as Shop Drawings with supporting deferred informational submittals such as calculations no less than 8 weeks in advance of installation of component, equipment or distribution system to be anchored to structure.

1.06 SOURCE QUALITY CONTROL

- A. Contractor and supplier responsibilities to accommodate Owner-furnished shop fabrication related special inspections and testing are provided in Project's Statement of Special Inspections on Drawings, and Section 01 45 33, Special Inspection, Observation, and Testing.
- B. Provide all other specified, regulatory required, or required repair verification inspection and testing that is not listed in Statement of Special Inspections Provide Source Quality Control for welding and hot-dip galvanizing of anchors in accordance with Section 05 50 00, Metal Fabrications.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Contractor and supplier responsibilities to accommodate Owner-furnished shop fabrication related special inspections and testing are provided in Project's Statement of Special Inspections on Drawings, and Section 01 45 33, Special Inspection, Observation, and Testing.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Design and construct attachments and supports transferring seismic and nonseismic loads to structure of materials and products suitable for application and in accordance with design criteria shown on Drawings and nationally recognized standards.
- B. Provide anchor bolts for anchorage of equipment to concrete or masonry in accordance with Section 05 50 00, Metal Fabrications. Provide anchor bolts of the size, minimum embedment, and spacing designated in calculations submitted by Contractor and accepted by Design Engineer.
- C. Provide post-installed concrete and masonry anchors for anchorage of equipment to concrete or masonry in accordance with Section 05 05 19, Post-Installed Anchors. Provide post-installed anchors of the size, minimum embedment, and spacing designated in calculations submitted by Contractor and accepted by Design Engineer.
- D. Do not use powder-actuated fasteners or sleeve anchors for seismic attachments and anchorage where resistance to tension loads is required. Do not use expansion anchors, other than undercut anchors, for nonvibration isolated mechanical equipment rated over 10 hp.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Make attachments, bracing, and anchorage in such a manner that component lateral force is transferred to lateral force resisting system of structure through a complete load path.
- B. Design, provide, and install overall seismic anchorage system to provide restraint in all directions, including vertical, for each component or system so anchored.
- C. Provide snubbers in each horizontal direction and vertical restraints for components mounted on vibration isolation systems where required to resist overturning.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Provide piping anchorage that maintains design flexibility and expansion capabilities at flexible connections and expansion joints.
  - 1. Piping and ductwork suspended more than 12 inches below supporting structure shall be braced for seismic effects to avoid significant bending of hangers and their attachments unless high or limited deformability piping is used per ASCE 7, Section 13.6.8 or HVAC ducts have a cross-sectional area of less than 6 square feet or weigh 17 pounds per foot or less.
- E. Anchor tall and narrow equipment such as motor control centers and telemetry equipment at base and within 12 inches from top of equipment, unless approved otherwise by Design Engineer.
- F. Do not attach architectural, mechanical, or electrical components to more than one element of a building structure at a single restraint location where such elements may respond differently during a seismic event. Do not make such attachments across building expansion and contraction joints.

3.02 INSTALLATION

- A. Do not install components or their anchorages or restraints prior to review and acceptance by Design Engineer and AHJ.
- B. Notify Construction Manager upon completion of installation of seismic restraints in accordance with Section 01 45 33, Special Inspection, Observation, and Testing.

3.03 FIELD QUALITY ASSURANCE AND QUALITY CONTROL

- A. In accordance with Section 05 50 00, Metal Fabrications, and Section 05 05 19, Post-Installed Anchors.
- B. Owner-Furnished Quality Assurance, in accordance with IBC Chapter 17 requirements, is provided in Statement of Special Inspections Plan on Drawings. Contractor responsibilities and related information are included in Section 01 45 33, Special Inspection, Observation, and Testing.
- C. Provide any other specified, regulatory required, or required repair verification inspection and testing that is not listed in Statement of Special Inspections.

**END OF SECTION**

**SECTION 01 91 14**  
**TESTING, INTEGRATION, AND STARTUP**

**PART 1 GENERAL**

1.01 STARTUP

- A. The goal of startup is to verify proper performance and operation of the Facility.
- B. Testing, integration, and startup are complex portions of the Work required for satisfactory completion and require thorough planning and proper execution.
- C. See Supplement 1, Phase 1 Commissioning Model for the MBC startup in the context of the overall Program Integration and Acceptance Plan.
- D. See Supplement 2, MBC Testing, Integration and Startup Flowchart, for a graphical representation of the startup processes.

1.02 DEFINITIONS

- A. Acceptance Testing: A contractually required, specific and measurable test, often with liquidated damages attached, to demonstrate a system or facility performs to its intended function (e.g. flow amounts, duration and quality criteria are met). A successor activity to Performance Testing all major defects are resolved at this point.
- B. Distributed Control System Provider (DCSP): Entity who is responsible for the development and programming of the Facility DCS.
- C. Auxiliary Systems: Subsystems and systems selected by the Owner as critical to the operation and function of the Work. Auxiliary systems are more specifically identified in the Contract Documents.
- D. Beneficial Use: Utilization of a system, unit process, or facility by the Owner. Refer to Supplemental Special Provisions for further definition and extended warranty requirements for equipment placed into Beneficial Use.
- E. Facility Commissioning:
  - 1. The disciplined and systematic process of assuring that all components, subsystems and systems of a constructed unit are designed, installed, tested and operated in conformance with the design intent, and functional intent and operational requirements of the Owner.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. This includes:
  - a. Proof testing of design intent using static check sheets, dynamic check sheets and defined procedures to ensure compliance with design drawings, data sheets, and specifications.
  - b. Achieving a smooth and safe transition from an inert state to a completely tested, clean, leak tight, operable and safe unit ready for start-up and performance testing.
  - c. All testing shown in Supplement 1, Commissioning Model.
  
- F. Components: Individual items of equipment or portions of the Work that when combined with other components make up subsystems or systems. Components may be minor items such as pressure gauges, or they may be significant items such as pump motors.
  
- G. Contract Documents: Construction Contract, Specifications and Drawings.
  
- H. Facility: The combined equipment and systems collocated to perform a specified function e.g. Metropolitan Biosolids Center (MBC).
  
- I. Factory Acceptance Testing (FAT): All testing required to be conducted at the fabricator's/manufacturer's/vendor's off-site locations, witnessed or unwitnessed. Includes all such testing, regardless of the specific descriptive title used for said testing in the Contract Documents.
  
- J. Final Completion: Refer to the Contract requirements and Supplementary Provisions.
  
- K. Functional Testing: A test of a given component, subsystem or system to confirm its operation meets specifications and Contract requirements. Functional testing is a prerequisite of Facility Commissioning.
  
- L. Integration Period: This is the period occurring after Intermediate Substantial Completion and before substantial completion during which the MBC Improvements project will be tested and operated as part of the overall PureWater Program system, including the Morena Force Main and Pump Station, the NCPWF Influent Pump Station and Conveyance, the NCPWF, the North City Water Reclamation Facility Expansion, the NCPWF Pump Station and the North City Pure Water Pipeline, and Dechlorination Facilities.
  
- M. Intermediate Substantial Completion: The time at which the Project's operating facilities or systems are sufficiently complete to send tertiary flow to the MBC to perform an integrated startup with other facilities within the Program. Refer to Supplement 1 for commissioning model planned. The Contractor shall support all activities within the Integration period as described in Section 01 91 14, Testing, Integration, and Startup. Refer to Contract requirements and Supplementary Provisions.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- N. Refer to Contract requirements and Supplementary Provisions.
- O. Digester Stress Testing Phase: This is a phase in which the Owner will perform testing of the digesters. This phase runs concurrent with the Integration Period of other projects. These other projects include the Morena Force Main and Pump Station, the NCPWF Influent Pump Station and Conveyance, the NCPWF, the Metropolitan Biosolids Center Improvements, the NCPWF Pump Station and the North City Pure Water Pipeline, and Dechlorination Facilities.
- P. Joint Test Group (JTG): Workgroup consisting of personnel from the Design Engineer, Construction Manager, Owner, Contractor, and Subcontractors whose goal is to facilitate pre-startup and startup of the Facility. This work group shall also support the Integration Period testing as part of a larger work group from other Facilities.
- Q. Major Equipment Systems: Systems, subsystems, or major equipment components selected by the Owner as critical to the operation and function of the Work. Major equipment systems are more specifically identified in the Contract Documents.
- R. Manufacturer's Installation Inspection: Preliminary inspection conducted by Manufacturer or Manufacturer's accepted representative to confirm proper installation of components, systems, and subsystems.
- S. Mechanical/Electrical Functional Testing: Testing performed to confirm general performance of mechanical and electrical systems. Hydrostatic leak testing of pipes is an example. Electrical testing specified in Division 26, Electrical, shall be considered Mechanical/Electrical Functional Testing.
- T. Performance Test: A defined test of a system, systems or facility over a specified period of time to demonstrate the system or facility is fully operational and meets all specifications, performance objectives and Contract requirements. Performance testing will be done with clean water and wastewater, as defined with these Contract Documents.
- U. Operational Readiness Test, See Section 40 90 00, Instrumentation and Control.
- V. Instrumentation and Control (I&C): Computer-based system whose purpose is to control and supervise the overall Facility operation. See Section 40 90 00, Instrumentation and Control.
- W. Staging Site Demonstration: Startup phase during which the DCSP performs an FAT to test the proper communication and action of the DCSP-developed software system. This testing will be conducted offsite.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- X. Startup: The act of starting or operating a component, subsystem or system and testing its functionality and performance against defined metrics.
- Y. Subsystems: A group of related equipment that performs a defined function and is an element of a larger system.
- Z. Substantial Completion: Upon satisfactory completion of the 30-Day Systemwide Facility Acceptance Test, See Supplement 1 Phase 1 Commissioning Model. Refer to Contract requirements and Supplementary Provisions.
- AA. Systems: A group of related components, equipment or subsystems that perform a defined function or set of functions within a facility.
- BB. Training: Classroom and equipment area instruction by Manufacturer or Manufacturer accepted representative intended to educate the Owner on the proper operation and maintenance of components, systems, and subsystems.
- CC. Unit Process: Portion of the facility that performs a specific process function, such as influent pumping, screening and grit removal, chemical feed, blowers, membrane system, and plant water.

1.03 SUBMITTALS

A. Action Submittals:

- 1. Startup Personnel Qualifications: Startup Manager and Project Integrator shall be experienced providing similar services for projects of the size and type as this Project.
- 2. Startup Management Plan: Submitted within 60 days after Notice to Proceed.
- 3. Overall Facility Startup Plan.
- 4. Factory Acceptance Test Plans.
- 5. Acceptance Test Plans.
- 6. Startup Schedule:
  - a. Schedule shall be a detailed Oracle Primavera P6 schedule linked to the milestones and key startup activities contained in the Construction Schedule as specified in Section 01 32 00, Construction Progress Documentation.
  - b. The Startup Schedule shall include each phase of testing of for the systems defined herein.
  - c. Schedule shall be submitted in both XER and PDF format and updated monthly.
  - d. The detailed Startup Schedule shall be submitted no later than 6 months prior to the start of ORT in the accepted Baseline

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Schedule, as specified in Section 01 32 00. Construction Progress Documentation.

7. Startup Results Submittal:
  - a. Include the following:
    - 1) Final minutes from all JTG meetings.
    - 2) Results documentation from all Factory Acceptance Testing.
    - 3) Completed test plans (endorsed by Construction Manager and Contractor).
    - 4) Record of all Training:
      - a) Training requests.
      - b) Agendas.
      - c) Sign in sheets.
      - d) Handouts.
      - e) Electronic copy of all training presentations.
    - 5) Record of all Manufacturer Services/Inspections.
    - 6) Record of all testing not covered above.

1.04 JOINT TEST GROUP (JTG)

A. Purpose:

1. The purpose of the JTG is to facilitate communication and collaboration between all parties required to successfully complete startup including but not limited to the following:
  - a. Prepare test plans.
  - b. Conduct testing.
  - c. Oversee testing.
  - d. Assign individual or multiple JTG personnel tasks associated with startup to be completed outside of the JTG workshops.

B. Personnel:

1. The following Owner personnel will participate in the JTG:
  - a. Design Engineer.
  - b. DCSP.
  - c. Owner's Representatives:
    - 1) Construction representative.
    - 2) Operations representative.
  - d. Construction Manager.
  - e. Owner's Startup Manager.
  - f. Others as required.
2. The Contractor shall assign the following personnel to the JTG:
  - a. Contractor's Startup Manager.
  - b. Project Integrator.
  - c. Electrical Subcontractor Management Representative.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. Centrifuge Supplier Management Representative.
- C. The JTG will participate in the following meetings:
- 1. Startup Preparation Workshops:
    - a. Status of equipment submittals and startup plan for overall facility.
    - b. Development of team.
    - c. Frequency: Every 2 weeks.
    - d. Duration: 4 hours minimum.
    - e. Start Date: 4 weeks after Notice to Proceed.
  - 2. Startup Planning Workshops:
    - a. Preparation of test plans.
    - b. Review of equipment shop drawings.
    - c. Frequency: Every week.
    - d. Duration: 8 hours minimum.
    - e. Start Date: 6 months before anticipated commencement of functional testing.
  - 3. Factory Acceptance Test Prep Workshops:
    - a. Preparation of factory test plans.
    - b. Address scheduling.
    - c. Frequency: Once per required FAT.
    - d. Duration: 8 hours minimum.
    - e. Start Date: 2 months prior to anticipated FAT date.
  - 4. Prestartup Execution Workshops:
    - a. Finalize planning for startup activities.
    - b. Finalize test plans.
    - c. Address any supplier/manufacturer issues.
    - d. Frequency: Every week.
    - e. Duration: 8 hours minimum.
    - f. Start Date: 1 month before anticipated commencement of functional testing.
  - 5. Startup Execution Workshops:
    - a. Current status of testing.
    - b. Identification of specific needs.
    - c. Identification and resolution of issues.
    - d. Frequency: Daily.
    - e. Duration: 4 hours minimum.
    - f. Start Date: Commencement of functional testing through completion of 30-Day Facility Acceptance Testing.
- D. Authority:
- 1. The Construction Manager will be the final authority on all disputes. Construction Manager's authority is not intended to compromise or

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

change the Contractor’s rights and responsibilities as described elsewhere in these Contract Documents.

2. The JTG may not independently amend or change the Contract Documents. However, the Contract Documents may be amended or changed according to the Contract Documents, based on JTG recommendations approved by the Construction Manager.

E. Contractor Participation:

1. The Contractor is required to participate in all JTG meetings and shall dedicate the required time and personnel to complete tasks assigned by the JTG. This shall include, but not be limited to the development of all startup and testing plans identified as being required to be led by the Contractor.
2. The Contractor shall include, in his lump sum bid, all costs associated with onsite and offsite testing described in these Specifications including travel, subsistence, lodging, etc.

1.05 ORGANIZATION OF STARTUP PHASES

A. The following table summarizes the various phases of startup:

<b>Description</b>	<b>Duration</b>	<b>Preceding Constraints</b>	<b>Comments</b>
Submittals	As required to meet testing schedule		
Factory Acceptance Testing	As required to meet testing schedule	Approved submittals required prior to testing	
Staging Site Demonstration	180 days	Delivery of DCS components to DCSP staging site Completion of all FATs	Done by DCSP
Mechanical/Electrical Functional Testing and Equipment Testing	As required to meet testing schedule for individual unit process	Complete all FATs Complete equipment and piping installation Approved submittals required prior to testing (including O&Ms)	Includes hydrostatic testing

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Description	Duration	Preceding Constraints	Comments
PIC Operational Readiness Test	As required to meet testing schedule	Manufacturer's installation assistance and inspection  Approved submittals required prior to testing (including O&Ms)  Completion of PICS Operational Readiness Test  Completion of staging site demonstration test and loading of application software  Approved submittals required prior to testing (including O&Ms)	
Functional Testing on Unit Processes and Auxiliary Systems	As required to meet testing schedule	Completion of PIC Operational Readiness Test  Approved submittals required prior to testing (including O&Ms)	
Training	As specified	Completion of all functional and performance testing	
Facility Commissioning	As required	Completion of Functional Testing of Unit Processes and Auxiliary Systems	
Integration Period Testing and Commissioning	120 days	Intermediate Substantial Completion Facility and Unit Process Commissioning as required  Interfacing Facilities Ready to Test	Integrating the NCPWF, MPS, and NCWRP facilities

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Description	Duration	Preceding Constraints	Comments
Facility Acceptance Test	30 days	Completion of commissioning of the unit processes and facilities. Manufacturer's Certificate of Proper Installation. Training. Approved submittals required prior to testing (including O&Ms).	

1.06 WORK RELATED TO THE FACILITY

- A. During the period between Intermediate Substantial Completion and Substantial Completion, the Owner will conduct integration procedures associated with the Facility and its coordinated operation with NCPWF, Morena Pump Station, and North City Water Reclamation Plant, and systems being constructed by others, such as the communications and control interface and COMNET upgrade. This integration will generally consist of communications system verification and a verification that the facilities can operate as one overall system.

1.07 CONTRACTOR STARTUP PERSONNEL

- A. Contractor shall provide personnel, both supervisory and from the applicable trades, who are experienced in startup, testing, and commissioning for the execution of the work described in these Contract Documents.
- B. Startup Manager: Only assigned duties are those specifically related to planning and execution of startup activities in support of the Work. The Startup Manager shall have the necessary experience to fully understand all startup requirements and the authority to dedicate Contractor's resources as required to execute the Work.
  - 1. The Startup Manager shall have the following minimum qualifications:
    - a. Has provided startup services for wastewater facilities similar to those included in the Work.
  - 2. The Contractor shall allocate the costs for the Startup Manager as a monthly allocation starting at the project limited NTP and terminating at Final Completion.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Once the Owner and Construction Manager accept the Startup Manager, the Contractor shall not change the Startup Manager throughout the full period of performance of the Work, beginning after the limited NTP, without the express written permission of Construction Manager and Owner.
4. The minimum scope of services to be managed and/or executed by the Startup Manager shall include the following tasks:
  - a. Formation of an onsite startup team of supervisory staff, including the Contractor's Project Integrator, qualified in each and every element of the startup process required as part of the Work. This staff shall prepare all Contractor-performed startup and testing documentation and direct the associated startup activities, including all required Contractor and Subcontractor personnel required for testing. This requirement is also applicable to all factory testing, whether witnessed by Construction Manager or not.
  - b. Complete planning, development, and where required, the preparation of all Startup and Test Plans, testing procedures, schedules, and related prerequisite, and final documentation for startup activities required by the Contract Documents. This requirement is applicable to all required startup and/or testing plans, reports, and procedures, regardless of the specific portion of the Contract Documents where they may be specified or otherwise required.
  - c. Overall coordination and scheduling of all startup and testing activities. This shall include the development of detailed startup and testing schedules, integrated with Contractor's CPM schedule. It shall also include all coordination with the Owner and Construction Manager for operation of the system to accommodate test flows and joint testing activities.
  - d. Coordination of all manufacturers' startup activities and certification of proper installation and/or function as required by the Contract Documents.
  - e. Coordination, direction, and management of the actual day-to-day testing.
  - f. Review and certify all test results. Prepare and/or compile all versions of all test reports and related submittals. Prior to being submitted to the Construction Manager, all test reports shall be certified by the Startup Manager that the reports and associated test results comply with the Contract Documents.
  - g. Coordinate all testing and startup with the Design Engineer, Construction Manager, and Owner.
  - h. Integration with the vendor packaged control systems.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Project Integrator: Only assigned duties are those specifically required to plan and execute the installation, interconnection, integration, and startup of the various PICS devices, panels, components, systems, and subsystems required for the Work. The Project Integrator shall have the necessary experience to fully understand all PICS and related devices, panels, components, systems, and subsystems installation, integration, and startup requirements and the authority to dedicate Contractor's resources as required to execute the Work.
1. The Project Integrator shall have the following minimum qualifications:
    - a. Has provided PICS integration services for wastewater facilities similar to those included in the Work.
    - b. The Project Integrator shall not be the same person as the System Integrator for the Instrumentation and Control system.
  2. The Contractor shall allocate the costs for the Project Integrator as a monthly allocation starting at the project limited NTP and terminating at Final Completion.
  3. Once the Owner and Construction Manager accept the Project Integrator, the Contractor shall not change the Project Integrator throughout the full period of performance of the Work without the express written permission of Construction Manager and Owner.
  4. The minimum scope of services to be managed and/or executed by the Project Integrator shall include the following tasks:
    - a. Integration of all Process Instrumentation and Control System (PICS) components and related devices, panels, components, systems, and subsystems required to be provided as part of the Work, regardless of the actual supplier or prepackage nature of the supply.
    - b. Integration and coordination of the Process Instrumentation and Control System with all components provided as packaged systems or supplied with individual equipment suppliers.
- D. The Startup Manager and the Project Integrator may not be the same person.

1.08 THE STARTUP MANAGEMENT PLAN

- A. The Contractor's Startup Manager shall conduct a startup coordination workshop and prepare and submit a Startup Management Plan that describes how Contractor will accomplish the minimum scope of services and manage the daily startup activities. The coordination workshop shall, at a minimum, include the Contractor's Startup Manager, Project Integrator, and Project Superintendent. The requirements for Startup requirements for the Work will be reviewed at the workshop. The Startup Management Plan shall be prepared immediately following the workshop and shall include a detailed description, including procedures and examples of how the Startup Team will manage the interface between Contractor's trades, Contractor's management, Contractor's

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

subcontractors, Contractor's PLC programmers, Construction Manager's field team, Owner, and the DCSP programming team. The workshop shall be conducted within 4 weeks of Notice to Proceed. The draft Startup Management Plan shall be completed and submitted within 4 weeks of the startup coordination workshop. The plan will be reviewed and processed for acceptance in accordance with Section 01 33 00, Submittal Procedures.

1.09 THE STARTUP AND TEST PLANS

- A. The Contractor under the guidance of the JTG will develop specific plans for the testing of all elements of the Facility. These plans shall outline the detailed sequence of activities necessary to confirm the proper operation of every component, system, and subsystem.
- B. Test plans will be prepared for each phase of startup where testing is required including, but not limited to the following:
  - 1. Factory acceptance testing.
  - 2. Staging site demonstration.
  - 3. Manufacturer's installation inspection.
  - 4. Mechanical/electrical functional testing.
  - 5. Operational Readiness Test.
  - 6. Functional testing on unit processes and auxiliary systems.
  - 7. Equipment performance testing.
  - 8. Facility commissioning.
  - 9. Facility acceptance test.
  - 10. Systemwide 120-Day Integration Period.
- C. Test plans will be developed as described below:
  - 1. The Overall Startup Plan shall include five main sections arranged as follows:
    - a. Overall Startup Plan Summary.
    - b. Factory Acceptance Testing.
    - c. Operational Readiness Testing.
    - d. Functional and Performance Testing.
    - e. Systemwide 120-Day Integration Period.
    - f. Startup Schedule.
  - 2. The contents and requirements pertaining to each section are described below. It is expected that each section could require multiple volumes, depending on the size and complexity of the Work.
  - 3. Overall Startup Plan Summary:
    - a. The Overall Startup Plan Summary is the master startup plan document. It includes a brief summary of all testing and startup activities and provides the basic organization of the startup and

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

testing program. It shall be submitted in advance of any other test plans except for Factory Acceptance Test Plans as described herein.

- b. The Overall Startup Plan Summary shall include the following:
  - 1) Introduction with a narrative description of the overall testing and startup program planned for implementation by the Contractor. Tables and flowcharts in addition to those described below should be included to clearly illustrate the Contractor's intent for the testing and startup program.
  - 2) List of major Acceptance Test Plan categories. Factory Acceptance Testing shall be a specific subset for each category. At a minimum, a separate acceptance test plan shall be prepared for the following four categories:
    - a) All PIC and DCS testing specified in Division 40, Process Integration, of the specifications and including all related testing referring to Division 40 from other specification sections and divisions.
    - b) All electrical testing specified in Division 26, Electrical, of the specifications and including all related testing referring to Division 26, Electrical, from other specification sections and divisions.
    - c) All hydrostatic testing of piping and appurtenances, pipelines, aqueducts, valves, water holding structures, pressure vessels, tanks, and any other component, subsystem, or system specified to be hydrostatic or pressure tested.
    - d) Unless otherwise indicated in the Contract Documents, all other testing.
- c. In addition to the breakdown listed above, the Contractor may propose to further divide, or group, the testing into categories assigned by process area or physical site delineation. However, said division or grouping must be agreed to, in writing, by the Construction Manager prior to the initial submittal of the Overall Startup Plan Summary. The Construction Manager will be the sole judge as to the acceptability of the additional division or grouping of testing proposed by the Contractor.
  - 1) Complete listing of component, subsystem, and system tests within each Test Plan category. Special focus should be placed on a complete listing of tests for all major equipment items and all auxiliary systems identified in the Contract Document. In any case, all components, sub-systems, and systems and their associated testing shall be included in the listing.
  - 2) Complete listing of Factory Acceptance Testing (witnessed and unwitnessed). All specified Factory Acceptance Testing

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- will be required to be successfully completed to achieve Substantial Completion. It may be to the Contractor's benefit to obtain concurrence on the listing of Factory Acceptance Testing early in the project. In that case, this section would simply be a copy of the material already agreed to, with any updates.
- 3) Flowchart the full testing program from Factory Acceptance Testing and initial shakedown through Acceptance Testing, and ending at Substantial Completion. The flowchart shall demonstrate the precedence, or order, by which the testing will take place. The order of testing shall be such that it is consistent with the requirements of the Contract Documents.
  - 4) Provide a preliminary schedule illustrating the timeline associated with the flowchart described above. This schedule does not need to be CPM based as it will be replaced with schedules developed according to requirements stated below for the Startup Schedule.
4. Factory Acceptance Test Plan:
- a. The Factory Test Plan shall be a comprehensive description of the complete test setup, procedures, analyses, and reporting program for each factory test required for the Work. Detailed step by step procedures describing all activities in the test process shall be included for all factory tests, witnessed or unwitnessed. Unwitnessed readiness tests prior to witnessed PIC Factory Acceptance Test are exempt from this requirement. However, all other shop or factory tests, witnessed, or unwitnessed, that require testing to demonstrate compliance with the Contract Documents and require submittal of test results, must have a Factory Acceptance Test Plan accepted by the Design Engineer and Construction Manager at least 4 weeks prior to the test.
  - b. At a minimum, the following shall be included for each Factory Acceptance Test Plan:
    - 1) Identification information for the component, subsystem, or system being tested. All applicable tag numbers shall be included.
    - 2) A narrative description of the purpose and goals of the test.
    - 3) Pass/Fail criteria.
    - 4) A listing and copy of all pertinent reference documents (Contract Documents and industry standards or specifications applicable to the testing).
    - 5) Complete description, including drawings, for all test stands and/or test apparatuses.
    - 6) Credentials of test personnel.
    - 7) Descriptions of all test equipment.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 8) Descriptions and product information, including calibration certificates, for all test instruments.
  - 9) Step-by-step detailed procedures of how the test will be conducted. The level of detail shall be sufficient for any witness with a rudimentary technical aptitude to be able to follow the steps and develop confidence that the tests were being performed as planned. All steps are significant and all steps shall be included in the procedures.
  - 10) Copies of the actual data logs and/or data recording forms that will be used for the test.
  - 11) A complete disclosure of all calculation methodologies.
  - 12) Sample computations or analyses with results in the same format as the final report. This item is intended to demonstrate how data collected will be used to generate final results. A sample shall be included for each type of computation required for the test and analysis of results.
  - 13) A detailed outline of the final factory testing report.
- c. Each factory test shall be described separately. Factory Acceptance Test Plans are the only portion of the Startup and Test Plans that will be accepted prior to acceptance of the Overall Startup Plan Summary. Also, Factory Acceptance Test Plans will be allowed to be submitted and reviewed individually. However, the Overall Startup Plan Summary is required to summarize the factory testing program and all submittal numbers for individually submitted Factory Acceptance Test Plans shall be accurately accounted for in that document.
- d. This section is not intended to supersede the specific requirements for PIC/DCS Factory Acceptance Tests (FATs) described for the Work. However, Factory Acceptance Test Plans shall be provided for the PIC/DCS FATs in accordance with these requirements. In the case of conflict, the specific testing requirements of the FATs in the PIC/DCS specification sections shall prevail. All other Factory Acceptance Testing Plans shall strictly comply with this section unless otherwise approved by the Construction Manager.
- D. Contractor shall execute these test plans with the witnessing of the Construction Manager and/or Design Engineer and/or Owner.
- E. For startup and testing purposes, the following designations are made:
1. MBC Improvements:
    - a. Main Unit Processes:
      - 1) 10 – Biogas Flare Facility: Biogas flare.
      - 2) 11 – Biogas Holding Tank and Compressors:
        - a) Biogas piping.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b) Biogas compressors.
- 3) 73 – Receiving Tank Complex: Raw solids pumps.
- 4) 76 – Grit Removal:
  - a) Grit separators.
  - b) Grit clarifiers.
- 5) 76 – Sludge Thickening:
  - a) Thickening centrifuges.
  - b) Thickening centrifuge feed pumps.
  - c) Thickening centrifuge polymer pumps.
  - d) Thickened sludge transfer pumps.
- 6) 76 – Dewatering Centrifuges:
  - a) Dewatering centrifuge feed pumps.
  - b) Dewatering centrifuge polymer pumps.
- 7) 80 – Digester Complex:
  - a) Digester mixing pumps.
  - b) Digester axial mixing pumps.
  - c) Digester recirculation pumps.
  - d) Digester gas collection piping.
  - e) Digester and storage tank overflow and emergency overflow piping.
- 8) 94 – Centrate Pump Station: Centrate pumps.
- b. Auxiliary Systems:
  - 1) Main Piping:
    - a) Yard piping.
    - b) Appurtenant instruments, devices, valves, and piping.
  - 2) Corrosion Control: Coating materials.
  - 3) Water Quality Instrumentation.
  - 4) Fiber Optic Network.

- F. Contractor shall submit the completed test reports as part of the Startup Results Submittal.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

**3.01 GENERAL STARTUP AND TESTING REQUIREMENTS**

- A. Contractor is responsible for the complete testing, check out, startup, and commissioning of all elements of the Facility. Verify these activities through daily inspection reports, test records/reports, onsite vendor certifications, specified testing, and by other appropriate means. Startup and Testing Plans and Test Reports shall include specific language to demonstrate that the requirements stated herein are planned, executed, and accomplished. The

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

requirements below are complementary to those indicated elsewhere in the Contract Documents.

- B. Design Engineer and Construction Manager shall be solely responsible for determining the party responsible for conducting any and all corrective actions and for determining the party responsible for any and all delays.
- C. Facility Startup Meetings: Schedule, in accordance with requirements of Section 01 31 19, Project Meetings, to discuss test schedule, test methods, materials, chemicals and liquids required, facilities operations interface, and Owner involvement.
- D. Provide temporary valves, gauges, piping, test equipment and other materials and equipment required for testing and startup.
- E. Owner will:
  - 1. Provide water, power, chemicals, and other items as required for startup, unless otherwise indicated.
  - 2. Operate process units and facility with support of Contractor.
  - 3. Provide labor and materials as required for laboratory analyses.

3.02 FACTORY ACCEPTANCE TESTING

- A. Contractor shall coordinate the timing and location of all Factory Acceptance Testing (FAT) including, but not limited to the following items:
  - 1. Grit separator.
  - 2. Thickening centrifuge.
  - 3. Any other systems containing PLC's or complex control panels as identified by the Construction Manager.
- B. The JTG will prepare the test plans for each FAT or review manufacturer standard test plans in accordance with these Contract Documents. The Contractor's Startup Manager shall be the lead representative for the development of these test plans.
- C. The following Contractor personnel are required to attend all FATs:
  - 1. Startup Manager.
  - 2. Project Integrator.
  - 3. Manufacturer Representative(s).

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.03 STAGING SITE DEMONSTRATION

- A. The DCSP shall provide the required items for the development of the application software programming.

3.04 MANUFACTURER'S INSTALLATION INSPECTION

- A. When Contractor has completed installation of components, systems, or subsystems, they shall schedule a manufacturer inspection. This manufacturer or approved manufacturer's representative shall certify that the component, system, or subsystem is properly installed and that testing of the component, system, or subsystem may commence.

B. Preparation:

1. Complete installation before testing.
2. Furnish qualified manufacturers' representatives, when required by individual Specification sections.
3. Obtain and submit from equipment manufacturer's representative Manufacturer's Certificate of Proper Installation Form, in accordance with Section 01 43 33, Manufacturers' Field Services, when required by individual Specification sections.
4. Cleaning and Checking:
  - a. Prior to beginning functional testing:
    - 1) Calibrate testing equipment in accordance with manufacturer's instructions.
    - 2) Inspect and clean equipment, devices, connected piping, and structures to ensure they are free of foreign material.
    - 3) Lubricate equipment in accordance with manufacturer's instructions.
    - 4) Turn rotating equipment by hand when possible to confirm that equipment is not bound.
    - 5) Open and close valves by hand and operate other devices to check for binding, interference, or improper functioning.
    - 6) Check power supply to electric-powered equipment for correct voltage.
    - 7) Adjust clearances and torque.
    - 8) Test piping for leaks.
5. Ready-to-test determination will be by Design Engineer and Construction Manager based at least on the following:
  - a. Acceptable Operation and Maintenance Data.
  - b. Notification by Contractor of equipment readiness for testing.
  - c. Receipt of Manufacturer's Certificate of Proper Installation, if so specified.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. Adequate completion of work adjacent to, or interfacing with, equipment to be tested, including Membrane Equipment System.
- e. Availability and acceptability of manufacturer's representative, when specified, to assist in testing of respective equipment.
- f. Satisfactory fulfillment of other specified manufacturer's responsibilities.
- g. Equipment and electrical tagging complete.
- h. Delivery of all spare parts and special tools.

3.05 MECHANICAL/ELECTRICAL FUNCTIONAL TESTING

- A. After each mechanical system is completely installed, the Contractor shall confirm proper installation according to these Contract Documents. Mechanical system testing shall include, but not be limited to the following system types:
  - 1. Piping (buried and exposed).
  - 2. Pumps, motors, and drives.
- B. After the complete installation of electrical systems (or portions thereof), the Contractor shall conduct all testing, including the independent electrical testing, as specified in Division 26, Electrical.

3.06 OPERATIONAL READINESS TEST

- A. This work shall consist of manual verification of controls, verification of instrument calibration, and the completion of all loop checks.
- B. The Operational Readiness Test shall be a coordinated effort between the Contractor, PIC System Integrator, and DCSP to confirm the PIC, including the applications software is ready for operation. This testing is described in Division 40, Process Interconnections.

3.07 FUNCTIONAL TESTING ON UNIT PROCESSES

- A. Functional Testing shall include successful completion of all specified testing and related work required by the Contract Documents. Successful Functional Testing will demonstrate that all portions of the unit processes or auxiliary systems are functional, operational, installed as specified, and perform their intended function.
- B. Demonstration of the ability of all portions of the facilities to successfully operate, as specified, over their full range of capacity or capability is required as part of Functional Testing. Functional Testing shall include all balancing, adjustments, specified tests (both factory and field), tuning, and startup activities not included in Performance Testing.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Functional testing shall be performed using the process flow stream intended to be used for the given unit process.
- D. Functional Testing shall include testing of all specified shutdown conditions, failure conditions, pumping station power fail and restart, bypass conditions, and failure resets. Functional Testing shall include all equipment testing for operating parameters. Functional Testing shall not be considered complete until all testing produces successful results and all documentation of tests and all manufacturer's certifications required by the Contract Documents are submitted and accepted by the Construction Manager. Functional Testing shall be successfully completed prior to conducting and Performance Testing or Facility Commissioning.
- E. Equipment Testing shall be conducted as part of Functional Testing:
  - 1. Furnish the services of an experienced and authorized representative of the manufacturer or supplier of each item of equipment indicated in the equipment schedules (excluding manually-operated valves smaller than 24 inches in size, injectors, tanks, batch-type disc meters, rotameters, and other minor items of equipment specifically exempted by the Design Engineer or Construction Manager in writing), who shall visit the Site of the Work and inspect, check, adjust if necessary, and approve the equipment installation. In each case, arrange to have the supplier or manufacturer's representative revisit the Site as often as necessary until any and all trouble is corrected and the equipment installation and operation are satisfactory to the Construction Manager.
  - 2. Contractor shall require that each manufacturer's representative furnish to the Construction Manager a written report addressed to the City certifying that the equipment has been properly installed and lubricated, is in accurate alignment, is free from any undue stress imposed by connecting piping or anchor bolts, and has been operated satisfactorily over its full range of capability and under full-load conditions.
  - 3. Contractor shall require that the electrical and/or instrumentation subcontractor and the adjustable speed drive supplier furnish a written and signed report to the Construction Manager certifying that the motor control logic for the equipment items that reside in motor control centers, control panels, control boards, microprocessors, computers, and the like furnished by the electrical and/or instrumentation Subcontractor have been properly tested and calibrated. The report shall certify that the control logic for equipment startup, shutdown, sequencing, resets, interlocks, and emergency shutdown has been tested and is properly operating. The Contractor shall also sign said certification.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.08 EQUIPMENT PERFORMANCE TESTING

- A. Testing specified within specific equipment specifications to verify performance requirements of a piece of equipment.
- B. This testing shall be performed by the equipment supplier with support from the Contractor.
- C. The method for testing to validate the performance requirements shall be provided in submitted and approved test plan submittals.

3.09 FACILITY COMMISSIONING

- A. Facility Commissioning Testing:
  - 1. The disciplined and systematic process of assuring that all components, subsystems and systems of a constructed unit are designed, installed, tested and operated in conformance with the design intent, and functional intent and operational requirements of the Owner.
  - 2. Notify Construction Manager, Design Engineer, and Owner in writing at least 10 days prior to scheduled date of test.
  - 3. Commissioning shall not commence until equipment has been accepted by Construction Manager and Design Engineer as having satisfied performance test requirements specified.
  - 4. Type of fluid, gas, or solid for testing shall be as specified.
  - 5. Unless otherwise indicated, furnish labor, materials, and supplies for conducting the test and taking samples and performance measurements.
  - 6. Prepare Test Reports summarizing test method and results.
  - 7. When, in Construction Manager's and Design Engineer's opinion, the integrated facility operates as specified and is accepted as to conforming to Contract requirements. Such acceptance will be evidenced by Construction Manager's and Design Engineer's signature on Facility Commissioning Report.

3.10 TRAINING

- A. All components, systems, or subsystems require separate training by the manufacturer.
- B. Training for each component, system, or subsystem shall be a minimum of 4 hours if no specific requirements are described in the individual specification sections.
- C. All training shall be requested at least 14 days in advance of proposed training date.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1. Proposed training shall be requested by the Contractor in an acceptable format including the following information as a minimum:
  - a. Description of training.
  - b. Name and contact information of trainer.
  - c. Location of training.
  - d. Proposed date.
  - e. Alternative dates (if applicable).
  - f. Proposed start time.
  - g. Proposed duration.
  - h. Proposed detailed agenda including topics, times, breaks, etc.
- D. All training shall be scheduled through the Construction Manager.
- E. If suitable training facilities are not available at the Facility, Contractor shall arrange and pay for training offsite.

3.11 INTEGRATION PERIOD TESTING

- A. Pure Water Phase 1 shall be fully tested, started up, commissioned, and integrated during the Integration Period. Pure Water Phase 1 includes the following projects:
  1. North City Pure Water Facility (NCPWF).
  2. North City Pure Water Pump Station (NCPWPS).
  3. North City Pure Water Pipeline (NCPWPL) and Dechlorination Facility.
  4. Morena Pump Station and Conveyance.
  5. North City Water Reclamation Plant (NCWRP) Expansion.
  6. Metropolitan Biosolids Center (MBC) Improvements.
  7. Miramar Reservoir Pump Station.
  8. Miramar Subaqueous Pipeline.
- B. The Integration Period includes the 120-Day Integration Period and subsequent 30-Day Facility Acceptance Tests. The Contractor is advised that the entire duration between Intermediate Substantial Completion and Substantial Completion is the Integration Period.
- C. The 120-Day Integration Period consists of the 120-day period starting with NCPWF Intermediate Substantial Completion.
- D. The Project shall be tested and operated concurrently with Pure Water Phase 1 during the Integration Period until Pure Water Phase 1 is fully tested, started up, commissioned, and integrated. The Contractor shall provide System Support for the integration of the Project into Pure Water Phase 1 as described herein.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Substantial Completion shall not be achieved until the Integration Period Testing is successfully completed.
- F. Contractor shall keep resources on 24-hour standby and provide all crews, materials, and equipment required to repair, replace adjust, balance, and provide other services as may be required to immediately correct all failures or malfunctions of any kind. Contractor shall provide the services of authorized representatives of equipment suppliers or manufacturers during the Integration Period as necessary to certify that all corrective actions for all defects, malfunctions, faulty equipment operation, calibration, adjustment, or related flaws are complete and acceptable.
- G. System Support testing, startup, integration, and commissioning during the Integration Period shall be coordinated by the Construction Manager (CM). The project Joint Test Group (JTG) shall support the CM in the development of these Integration Period test plans. In addition to the project JTG, the CM will coordinate and manage a Pure Water Phase 1 JTG to oversee System Support testing.

3.12 DIGESTER STRESS TESTING

- A. The MBC Improvements shall be fully tested, started up, and commissioned during the digester testing phase.
- B. The digester testing phase shall last 120 days.
- C. The digester testing phase will run concurrent with the Integration Period.
- D. Substantial Completion shall not be achieved until the Digester Stress Testing is successfully completed.
- E. Contractor shall keep resources on 24-hour standby and provide all crews, materials, and equipment required to repair, replace adjust, balance, and provide other services as may be required to immediately correct all failures or malfunctions of any kind. Contractor shall provide the services of authorized representatives of equipment suppliers or manufacturers during the Integration Period as necessary to certify that all corrective actions for all defects, malfunctions, faulty equipment operation, calibration, adjustment, or related flaws are complete and acceptable.
- F. Contractor shall provide maintenance records to the Owner at Substantial Completion.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.13 FACILITY ACCEPTANCE TEST

- A. The Facility Acceptance Test shall be a 30-day operational run of the completed systems demonstrating that all portions of the facility operate continuously as intended.
- B. All aspects of the Work and all Project facilities must be functional and operate in automatic mode 24 hours per day, 7 days per week during the acceptance test at varying flow rates established by the Construction Manager.
- C. Unless indicated otherwise, if any item fails or malfunctions during the test, the item shall be repaired and the test restarted at time zero with no credit given for the operating time before the aforementioned failure or malfunction. Malfunctions meeting all of the following conditions, in the opinion of the Owner/Construction Manager, will not be considered grounds for restarting the test at time zero:
  - 1. Malfunctions that do not cause any interruption of the continuous operation of any other components, subsystems, systems, and equipment during the acceptance test.
  - 2. Malfunctions that are corrected without causing or requiring any components, subsystems, systems, and equipment to cease operations during the acceptance.
  - 3. Malfunctions that are corrected properly and permanently, in the opinion of the Owner and Construction Manager, within 4 hours of the time the malfunction is detected (the 4-hour period includes the time required to locate the cause of the malfunction and shall begin upon Contractor's notification from the Construction Manager that a malfunction exists and shall end when the item is corrected and the system is successfully placed back into operation).
- D. Time lost during the test for equipment repairs, wiring corrections, control point settings, or other reasons that are not determined by the Construction Manager to be grounds to restart the test shall be justifiable cause for extending the test duration by an amount of time equal to the time required to repair the problems.
- E. Operation of the system for the acceptance test shall be conducted on a schedule or plan of operations developed by the JTG and supported by Contractor as specified. The Contractor shall provide personnel to operate the Work and support said testing activities to be performed jointly with the Construction Manager in accordance with a test plan prepared by the JTG.
- F. During the test, furnish the services of authorized representatives of the manufacturers, in addition to those services required in support of other

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

testing, as necessary, to correct faulty equipment operation, calibration, adjustment, or related flaws.

- G. Contractor's acceptance test personnel shall include qualified representatives for the electrical and instrumentation crews as indicated for Acceptance Testing.
- H. The Contractor's warrantee period.

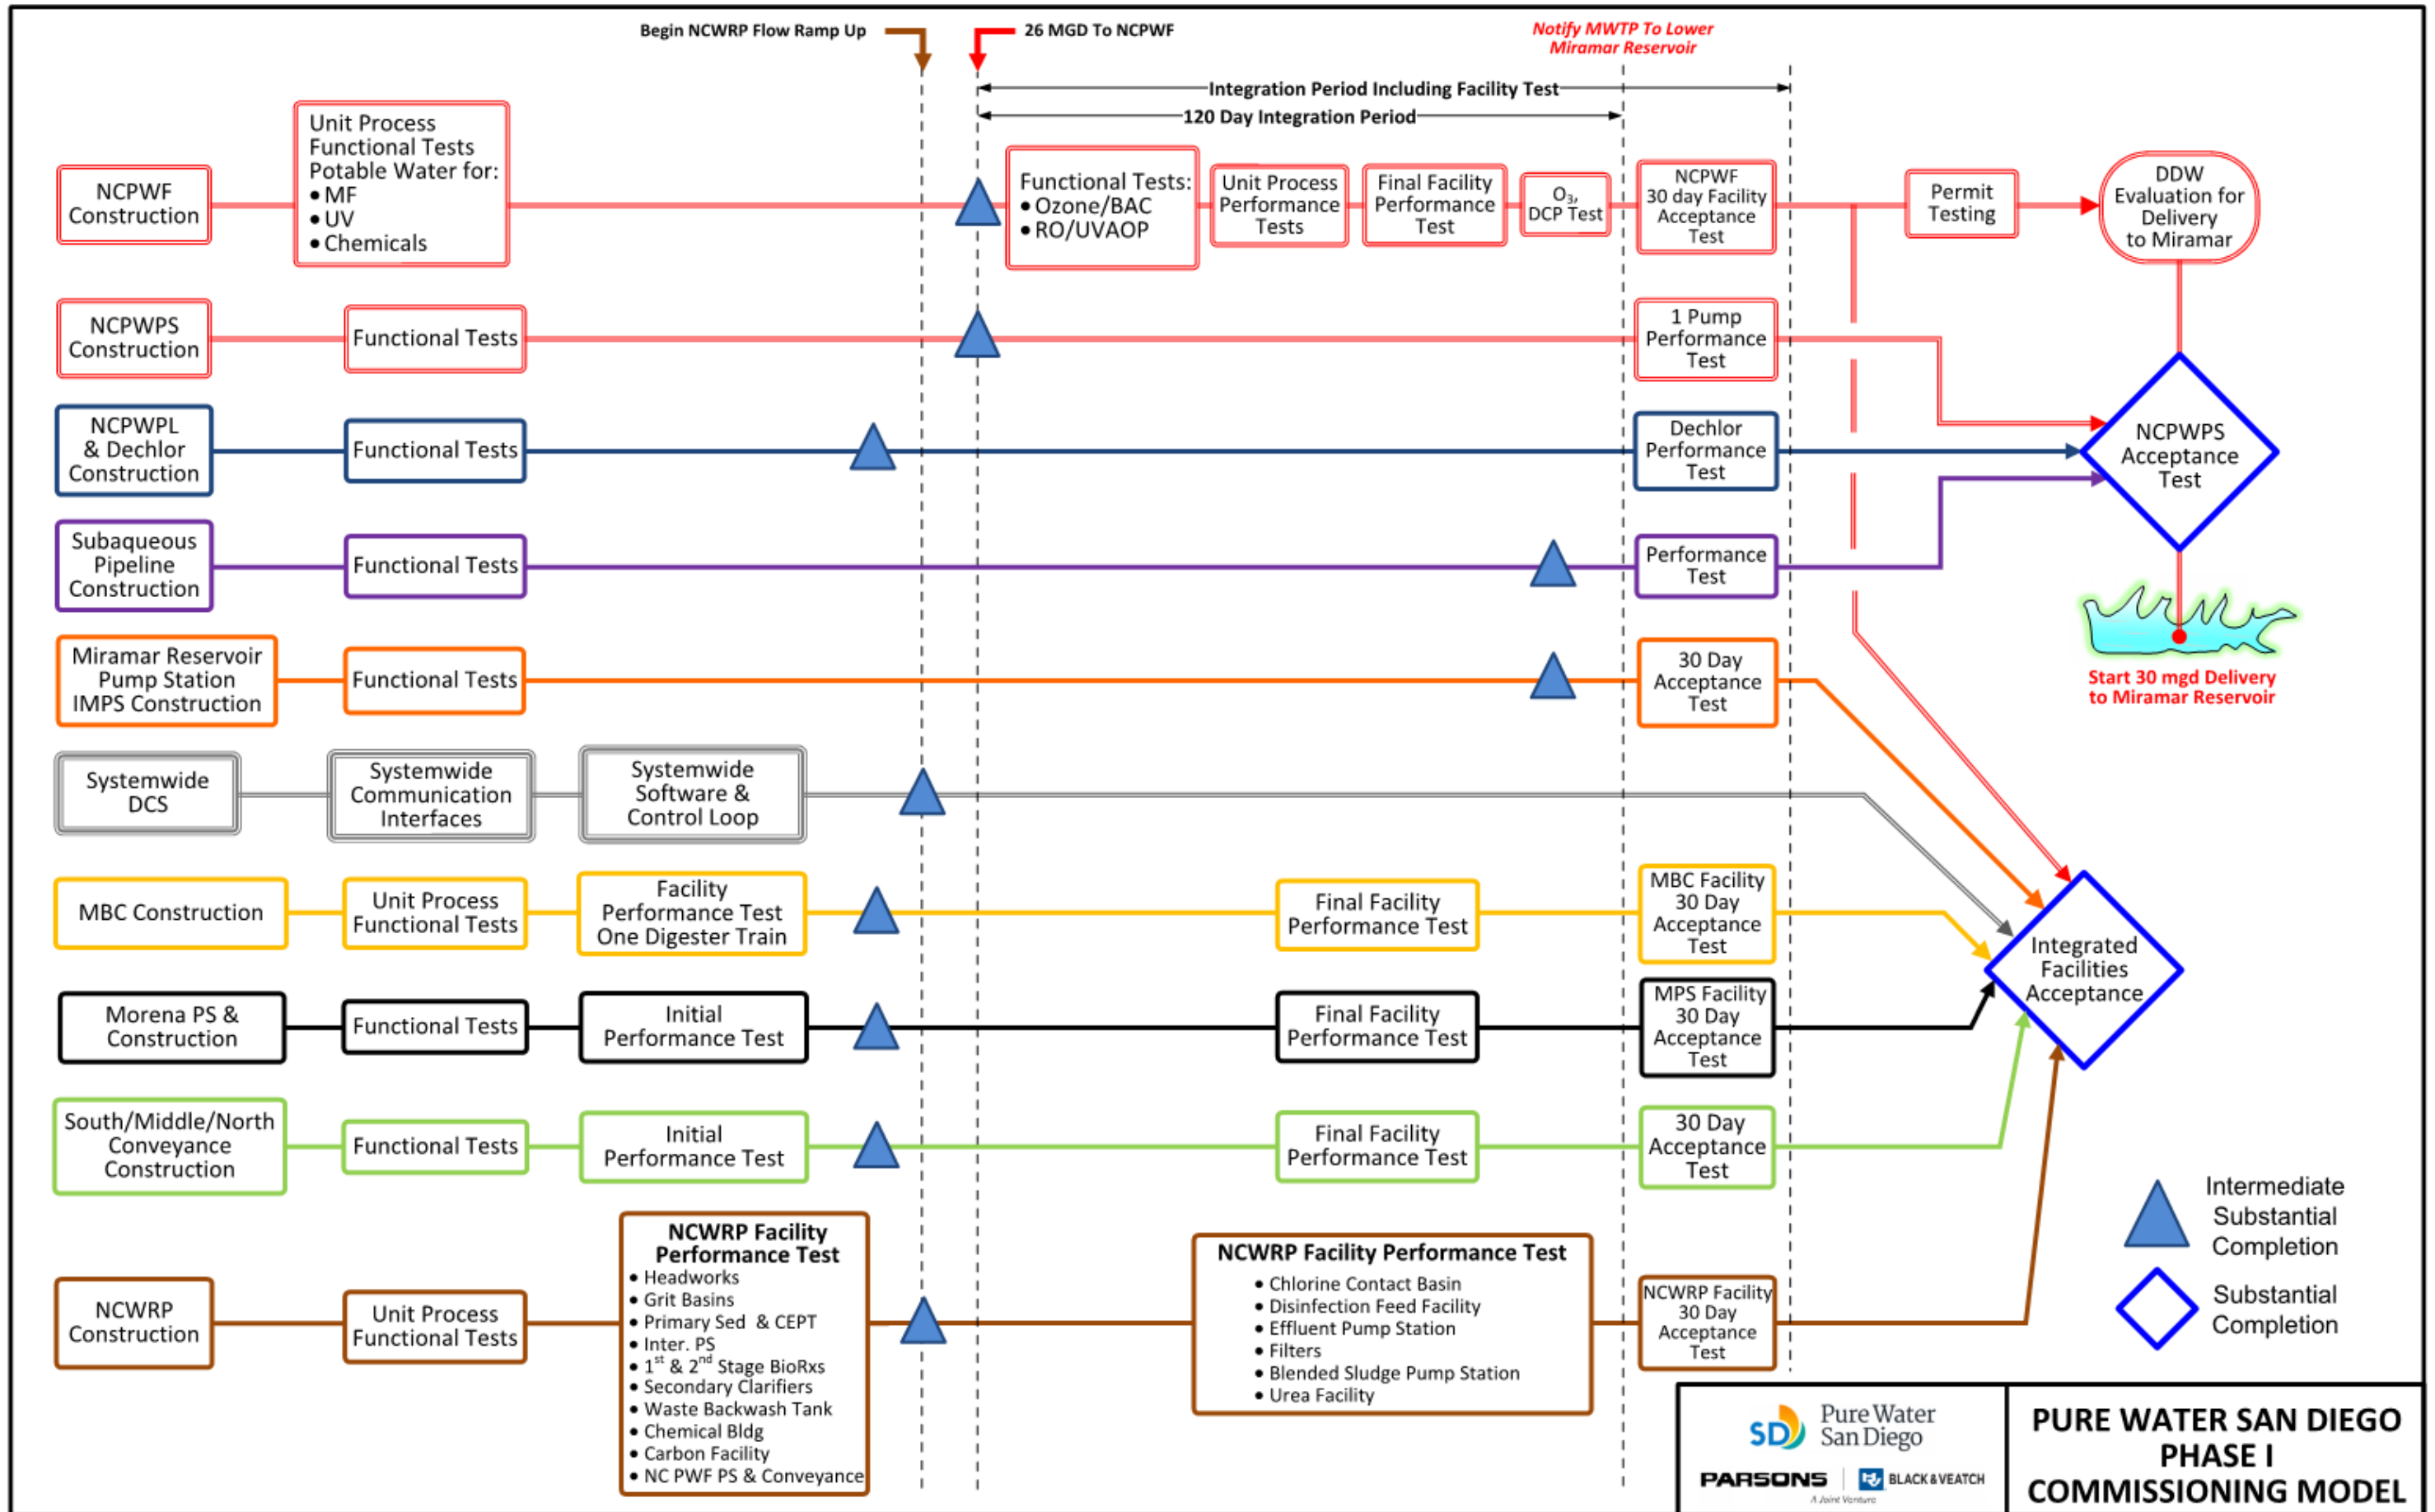

3.14 WITNESSING AND SUPERINTENDENCE

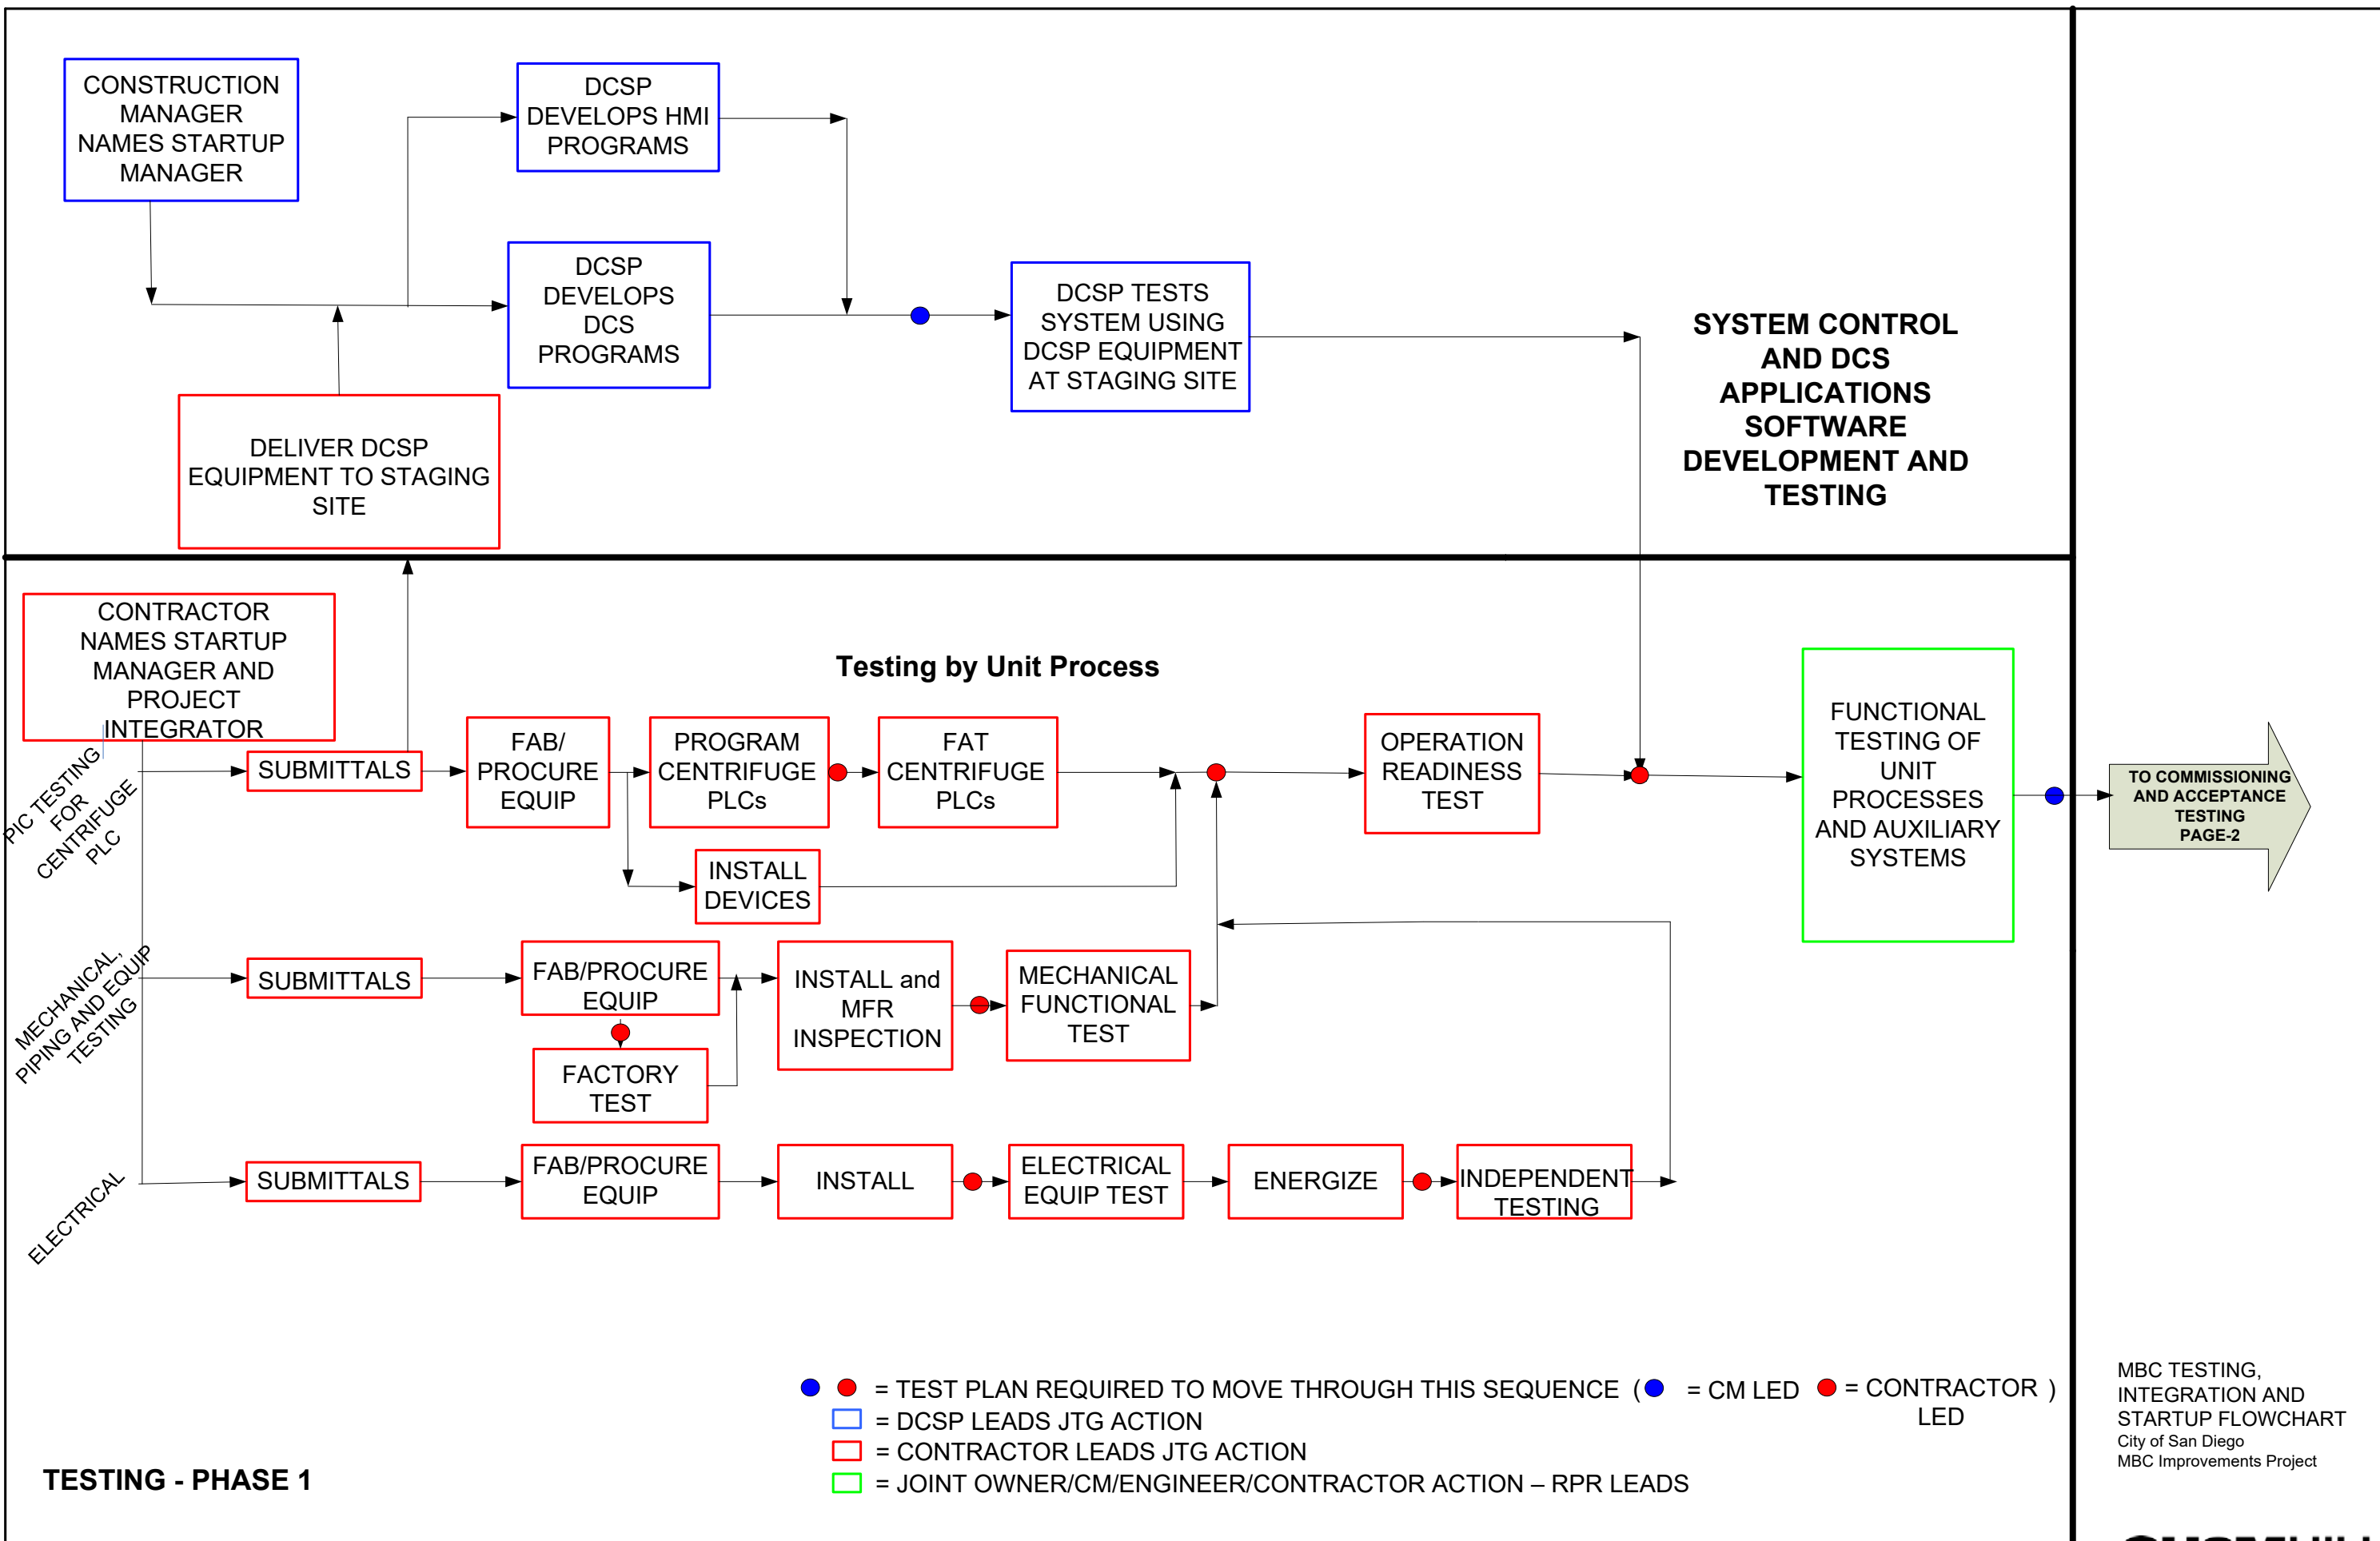

- A. The Design Engineer, Owner, Construction Manager, and others as necessary shall be allowed to witness all testing conducted during any phase of startup.
- B. The Contractor shall maintain overall superintendence of the Work during all phases of startup.
- C. The Contractor shall promptly and permanently repair damage to any portion of the Work during startup and testing.
  - 1. All repair work shall be performed by the manufacturer or with manufacturer's approved published methods.
- D. The Contractor shall perform all scheduled maintenance in strict compliance with manufacturers' published procedures and with products acceptable to manufacturers.
- E. Authorized representatives of equipment suppliers or manufacturers shall certify that all corrective actions for all defects, malfunctions, faulty equipment operation, calibration, adjustment, or related flaws are complete and acceptable.
- F. The Contractor shall keep on 24-hour local standby and provide all crews, materials, and equipment required to repair, replace adjust, balance, modify and provide other services as may be required to immediately correct all failures or malfunctions of any kind.

3.15 SUPPLEMENT

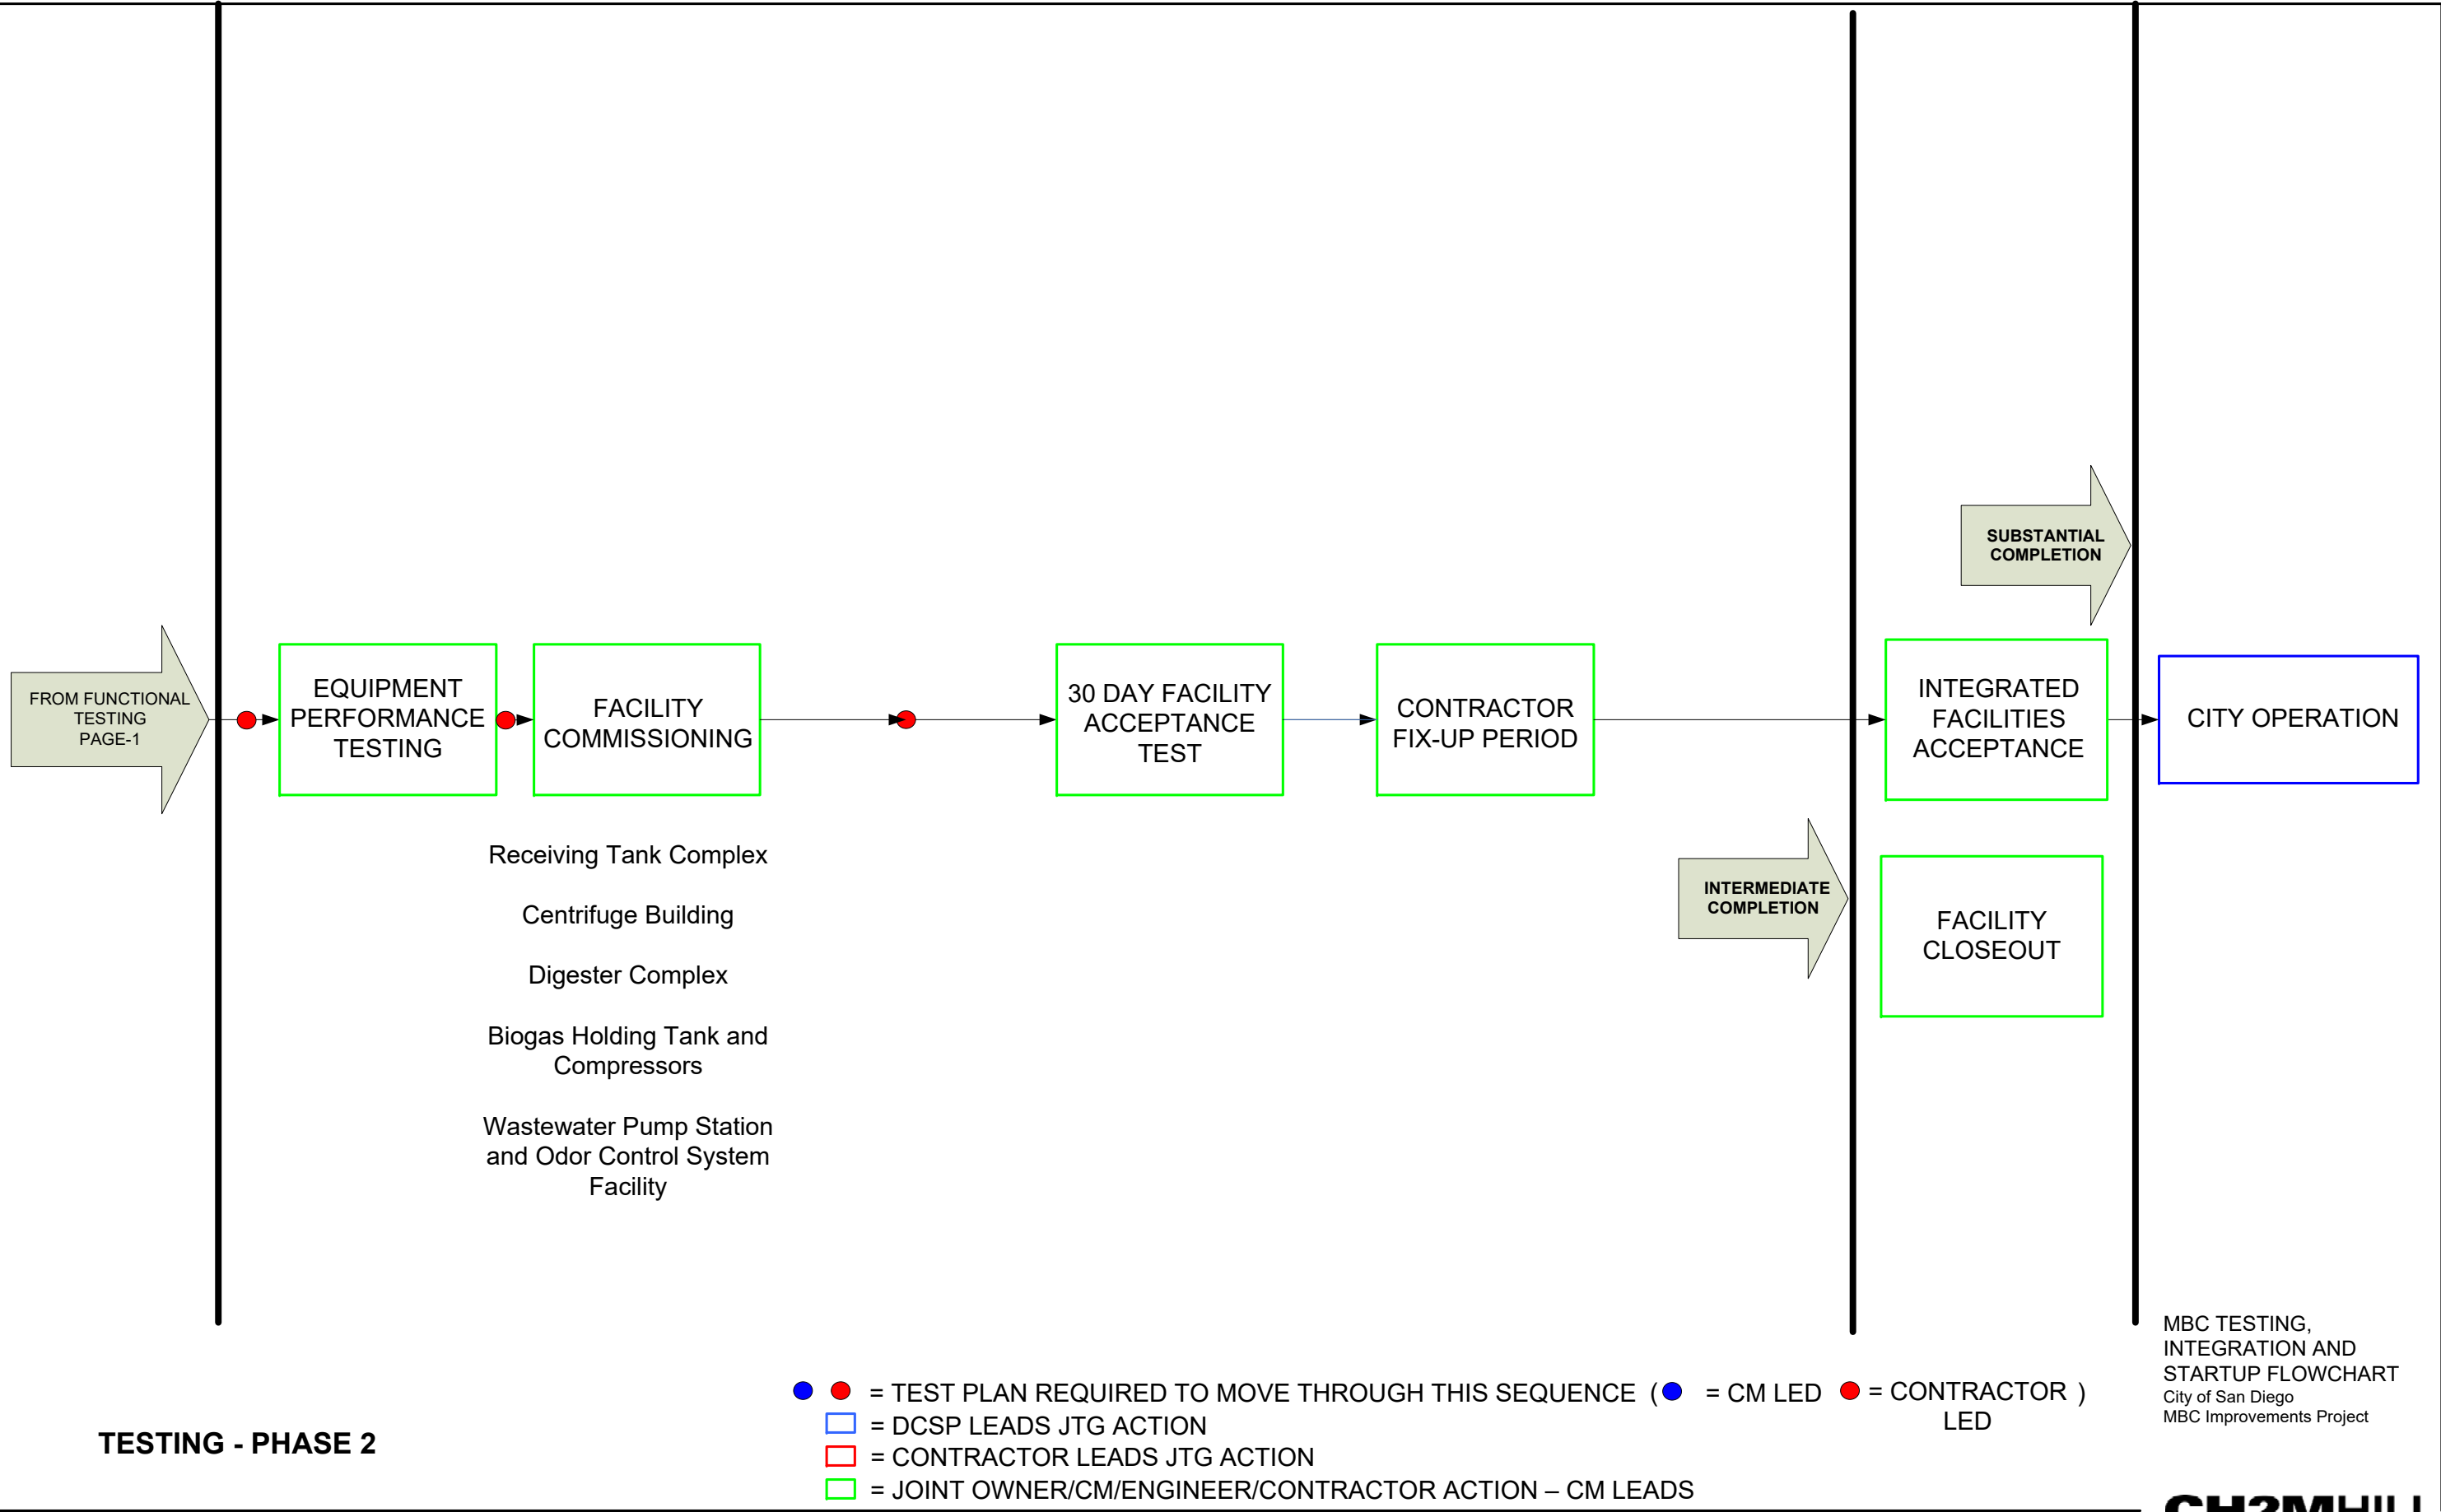

- A. The supplements listed below, following "End of Section," are part of this Specification.
  - 1. Phase 1 Commissioning Model.
  - 2. MBC Testing, Integration and Startup Flowchart.

**SECTION 02 41 00**  
**DEMOLITION**

**PART 1 GENERAL**

1.01 REFERENCES

- A. The following is a list of standards which may be referenced in this Section:
1. Air-Conditioning, Heating, and Refrigeration Institute (AHRI): Guideline K, Containers for Recovered Non-flammable Fluorocarbon Refrigerants.
  2. American National Standards Institute (ANSI): A10.6, Safety Requirements for Demolition Operations.
  3. Occupational Safety and Health Administration (OSHA), U.S. Code of Federal Regulations (CFR) Title 29 Part 1926—Occupational Safety and Health Regulations for Construction.
  4. Environmental Protection Agency (EPA), U.S. Code of Federal Regulations (CFR), Title 40:
    - a. Part 61—National Emission Standards for Hazardous Air Pollutants.
    - b. Part 82—Protection of Stratospheric Ozone.
    - c. Part 273—Standards for Universal Waste Management.

1.02 DEFINITIONS

- A. ACM: Asbestos-containing material.
- B. Demolition: Dismantling, razing, destroying, or wrecking of any fixed building or structure or any part thereof. Demolition also includes removal of equipment, pipes, conduit, and other underground facilities, whether as a separate activity or in conjunction with construction of new facilities.
- C. Modify: Provide all necessary material and labor to modify an existing item to the condition indicated or specified.
- D. Relocate: Remove, protect, clean and reinstall equipment, including electrical, instrumentation, and all ancillary components required to make the equipment fully functional, to the new location identified on the Drawings.
- E. Renovation: Altering a facility or one or more facility components in any way.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Salvage/Salvageable: Remove and deliver, to the specified location(s), the equipment, building materials, or other items so identified to be saved from destruction, damage, or waste; such property to remain that of Owner. Unless otherwise specified, title to items identified for demolition shall revert to Contractor.
- G. Universal Waste Lamp: In accordance with 40 CFR 273, the bulb or tube portion of an electric lighting device, examples of which include, but are not limited to, fluorescent, high-intensity discharge, neon, mercury vapor, high-pressure sodium, and metal halide lamps.
- H. Universal Waste Thermostat: A temperature control device that contains metallic mercury in an ampule attached to a bimetal sensing element, and mercury-containing ampules that have been removed from these temperature control devices in compliance with the requirements of 40 CFR 273.

1.03 SUBMITTALS

- A. Informational Submittals:
  - 1. Submit proposed Demolition Plan, in accordance with requirements specified herein, for approval before such Work is started.
  - 2. Submit copies of any notifications, authorizations and permits required to perform the Work.
  - 3. Copies of reports and other documentation required for abandoning wells.
  - 4. Submit a shipping receipt or bill of lading for all containers of ozone depleting substance (ODS) shipped.
  - 5. Submit a shipping receipt or bill of lading for all containers of ACM shipped.
  - 6. Submit a shipping receipt or bill of lading for all universal waste shipped.

1.04 REGULATORY AND SAFETY REQUIREMENTS

- A. When applicable, demolition Work shall be accomplished in strict accordance with 29 CFR 1926-Subpart T.
- B. Comply with federal, state, and local hauling and disposal regulations. In addition to the requirements of the General Conditions, Contractor's safety requirements shall conform to ANSI A10.6.
- C. Furnish timely notification of this demolition project to applicable federal, state, regional, and local authorities in accordance with 40 CFR 61-Subpart M.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.05 DEMOLITION PLAN

- A. Demolition Plan shall provide for safe conduct of the Work and shall include:
1. Detailed description of methods and equipment to be used for each operation;
  2. The Contractor's planned sequence of operations, including coordination with other work in progress;
  3. Procedures for removal and disposition of materials specified to be salvaged.
- B. Removal and disposal of equipment to be demolished. Include statements affirming Contractor inspection of the existing roof deck, floors, walls, and framing members, and their suitability to perform as a safe working platform or, if inspection reveals a safety hazard to workers, state provisions for securing the safety of the workers throughout the performance of the Work.
- C. Contractor shall submit proposed methods, equipment and operating sequences for demolition or tie-ins to existing facilities, including coordination requirements with Owner for shut-offs, temporary services, continuation of utility services, and other applicable items to ensure continuous and safe operation of existing facilities affected by Contractor's work.

1.06 SEQUENCING AND SCHEDULING

- A. The Work of this Specification shall not commence until Contractor's Demolition Plan has been approved by Engineer.
- B. Include the Work of this Specification in the progress schedule, as specified in Section 01 32 00, Construction Progress Documentation.
- C. Areas in which the Work is to be accomplished will be available in accordance with schedule coordinated with the Owner.

1.07 ENVIRONMENTAL PROTECTION

- A. Demolition work and material disposal shall be planned and performed to comply with environmental protection requirements. Contractor to submit a plan for removal and disposal prior to demolition.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

**3.01 EXISTING FACILITIES TO BE DEMOLISHED**

- A. Facilities: Portions of buildings and other areas scheduled for selective demolition, partial demolition, and renovation Work are as shown on Drawings.
- B. Utilities and Related Equipment:
  - 1. Notify Engineer and Owner or appropriate utilities to turn off affected services at least 48 hours before starting demolition or renovation activities.
  - 2. Remove existing utilities as indicated and terminate in a manner conforming to the nationally recognized code covering the specific utility and approved by Engineer.
  - 3. When utility lines are encountered that are not indicated on Drawings, notify Engineer prior to further work in that area.
  - 4. Remove meters and related equipment and deliver to a location as determined by the Engineer.
- C. Paving and Slabs:
  - 1. Sawcut concrete and asphaltic concrete paving and slabs as indicated.
  - 2. Provide neat sawcuts at limits of pavement removal as indicated.
- D. Concrete:
  - 1. Laser scan concrete walls prior to cutting for remodel to identify any embedded electrical conduits.
  - 2. Core drill corners of new opening to avoid overcutting adjacent reinforcing in existing concrete to remain. Saw concrete along straight lines to a depth of not less than 2 inches. Make each cut in walls perpendicular to the face and in alignment with the cut in the opposite face. Break out the remainder of the concrete provided that the broken area is concealed in the finished Work, and the remaining concrete is sound.
  - 3. At locations where the broken face cannot be concealed, grind smooth or saw cut entirely through the concrete. Repair exposed rebar ends and embeds as shown on Drawings.
  - 4. Where new concrete adjoins existing concrete, thoroughly clean and mechanically roughen existing concrete surfaces to roughness profile of 3/16 inch. Rebar and small embeds at existing concrete may be required to be left to engage new concrete. Saturate surface with water for 24 hours prior to placing new concrete. The new Work shall tie into the existing construction as shown on Drawings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

E. Patching:

1. Where removals leave holes and damaged surfaces exposed in the finished Work, patch and repair to match adjacent finished surfaces as to texture and finish.
2. Where new Work is to be applied to existing surfaces, perform removals and patching in a manner to produce surfaces suitable for receiving new Work.
3. Patching shall be as specified and indicated, and shall include:
  - a. Fill holes and depressions left as a result of removals in existing concrete surfaces with an approved patching material, applied in accordance with the manufacturer's printed instructions.

F. Electrical:

1. Cut off concealed or embedded conduit, boxes, or other materials a minimum of 3/4 inch below final finished surface.
2. When removing designated equipment, conduit and wiring may require rework to maintain service to other equipment.
3. Rework existing circuits, or provide temporary circuits as necessary during renovation to maintain service to existing lighting and equipment not scheduled to be renovated. Existing equipment and circuiting shown are based upon limited field surveys. Verify existing conditions, make all necessary adjustments, and record the Work on the Record Drawings. This shall include, but is not limited to, swapping and other adjustments to branch circuits and relocation of branch circuit breakers within panelboards as required to accomplish the finished work.
4. Reuse of existing luminaires, devices, conduits, boxes, or equipment will be permitted only where specifically indicated.
5. Raceways and cabling will be permitted only where specifically indicated.
6. Inaccessibly Concealed: Cut off and abandon in place.
7. Exposed or Concealed Above Accessible Ceilings: Remove.
8. Raceways and Cabling Scheduled for Future Use: Cap/seal and tag.
9. Relocating Equipment: Extend existing wiring or run new wiring from the source.
10. Where the existing raceway is concealed, the outlet box shall be cleaned, and a blank cover plate installed.
11. Where the concealed raceway is uncovered remove raceway (or extended to new location if appropriate).
12. Provide new typewritten panelboard circuit directory cards.

G. Universal Waste Lamps and Thermostats: Manage, contain, package, and label in strict accordance with 40 CFR 273.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- H. The Drawings show the location of known existing structures, utilities, and facilities. The information on exposed and buried objects has been obtained from field investigations, observations and available Record Drawings and shown as a screened background. The information is not guaranteed to be either complete or accurate and must be verified by the Contractor via potholing and hand excavation, and field measurements as required prior to starting demolition work. The Contractor shall utilize ground penetrating radar to survey the entirety of the new biogas pipeline alignments followed up by potholing of any potential interferences not already identified. The Contractor shall include field verified measurements and as-built documentation with the required submittals defined under Article Demolition Plan.
- I. Prior to performing any demolition work on the existing utilities or facilities, the Contractor shall coordinate all efforts with Owner to define details and schedules of temporary shutdowns of existing utilities or facilities, or maintaining of continuous plant operation.

3.02 PROTECTION

- A. Dust and Debris Control:
  - 1. Prevent the spread of dust and debris to occupied and operated portions of the building and site facilities and avoid the creation of a nuisance or hazard in the surrounding area. Do not use water if it results in hazardous or objectionable conditions such as, but not limited to, ice, flooding, or pollution.
  - 2. Vacuum and dust the Work area daily.
  - 3. Sweep pavements as often as necessary to control the spread of debris that may result in foreign object damage potential to vehicular traffic.
- B. Traffic Control Signs: Where pedestrian and driver safety is endangered in the area of removal Work, use traffic barricades with flashing lights.
- C. Existing Work:
  - 1. Survey the site and examine the Drawings and Specifications to determine the extent of the Work before beginning any demolition.
  - 2. Take necessary precautions to avoid damage to existing items scheduled to remain in place, to be reused, or to remain the property of Owner; any Contractor-damaged items shall be repaired or replaced as directed by Engineer.
  - 3. Provide temporary weather protection during interval between removal of existing exterior surfaces and installation of new to ensure that no water leakage or damage occurs to structure or interior areas of existing building.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Ensure that structural elements are not overloaded as a result of or during performance of the Work. Responsibility for additional structural elements or increasing the strength of existing structural elements as may be required as a result of any Work performed under this Contract shall be that of the Contractor. Repairs, reinforcement, or structural replacement must have Engineer approval.
  5. Do not overload pavements to remain.
- D. Trees: Protect trees within the Site that might be damaged during demolition and are indicated to be left in place, by a 6-foot-high fence. The fence shall be securely erected a minimum of 5 feet from the trunk of individual trees or follow the outer perimeter of branches or clumps of trees. Any tree designated to remain that is damaged during the Work shall be replaced in kind, as approved by the Engineer.
- E. Facilities:
1. Protect electrical and mechanical services and utilities. Where removal of existing utilities and pavement is specified or indicated, provide approved barricades, temporary covering of exposed areas, and temporary services or connections for electrical and mechanical utilities.
  2. Floors, roofs, walls, columns, pilasters, and other structural elements that are designed and constructed to stand without lateral support or shoring, and are determined by Contractor to be in stable condition, shall remain standing without additional bracing, shoring, or lateral support until demolished, unless directed otherwise by the Engineer.
  3. Protect all facility elements not scheduled for demolition.
  4. Provide interior shoring, bracing, or support to prevent movement, settlement, or collapse of structure or element to be demolished and adjacent facilities.
- F. Protection of Personnel:
1. During demolition, continuously evaluate the condition of the structure being demolished and take immediate action to protect all personnel working in and around the demolition site.
  2. Provide temporary barricades and other forms of protection to protect Owner's personnel and the general public from injury due to demolition Work.
  3. Provide protective measures as required to provide free and safe passage of Owner's personnel and the general public to occupied portions of the structure.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.03 BURNING

- A. The use of burning at the Site for the disposal of refuse and debris will not be permitted.

3.04 RELOCATIONS

- A. Perform the removal and reinstallation of relocated items as indicated with workmen skilled in the trades involved. Clean all items to be relocated prior to reinstallation, to the satisfaction of Engineer. Repair items to be relocated which are damaged or replace damaged items with new undamaged items as approved by Engineer.

3.05 BACKFILL

- A. Do not use demolition debris as backfill material.

3.06 TITLE TO MATERIALS

- A. All salvaged equipment and materials will remain the property of the Owner.
- B. With the exception of the following listed salvaged equipment and materials, all items designated to be removed shall become the property of Contractor:
  - 1. Four of the six motorized valves from the grit separator work labelled as 76MV1101, 76MV1102, 76MV1106, 76MV1107, 76MV1111, and 76MV1112. Two of the six valves to be re-installed and re-named as indicated in these construction documents.
  - 2. Additional items as identified by the Owner,
- C. Title to equipment and materials resulting from demolition is vested in the Contractor upon approval by Engineer of Contractor's Demolition Plan, and the resulting authorization by Engineer to begin demolition.

3.07 DISPOSITION OF MATERIAL

- A. Do not remove equipment and materials without approval of Contractor's Demolition Plan by Engineer.
- B. Salvage equipment and material to the maximum extent possible.
- C. Repair or replace, at the discretion of Engineer, items damaged during removal or storage.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.08 REUSE OF MATERIALS AND EQUIPMENT

- A. Remove and store materials and equipment shown on Drawings to be salvaged, reused or relocated to prevent damage, and reinstall as the Work progresses.
- B. Properly store and maintain equipment and materials in same condition as when removed.
- C. Store equipment and material designated to be reused in a location designated by Engineer.
- D. Equipment and material designated to be reused shall be cleaned, serviced and checked for proper operability before being put back into service.
- E. Engineer will determine condition of equipment and materials prior to removal.

3.09 SPECIALIZED SALVAGE

- A. Combustible material shall be disposed of off the Site.
- B. Universal Waste Lamps and Thermostats: Dispose of in strict accordance with 40 CFR 273.

3.10 CLEANUP

- A. Debris and rubbish shall be removed from basement and similar excavations. Debris and rubbish shall be removed and transported in a manner that prevents spillage on streets or adjacent areas. Local regulations regarding hauling and disposal shall apply.

**END OF SECTION**

**SECTION 03 30 01  
REINFORCED CONCRETE**

**PART 1 GENERAL**

1.01 SUBMITTALS

A. Action Submittals:

1. Reinforcing steel bending lists and placing drawings in accordance with CRSI Manual of Standard Practice.
2. Curing compound and evaporation retardant data.
3. Complete data on the concrete mix design, including aggregate gradations and admixtures, in accordance with ASTM C94.
4. Repair mortar data.

B. Informational Submittals:

1. Manufacturer's application instructions for curing compound.
2. Ready-mix delivery tickets for each truck in accordance with ASTM C94.

1.02 QUALITY ASSURANCE

- A. Formwork: Unless otherwise specified, follow the recommendations of ACI 347.
- B. Proportioning Concrete Mixtures: Conform to ACI 211.1.
- C. Concrete and Reinforcement: Unless otherwise specified, meet the requirements of ACI 301 and ACI 318/318R.
- D. Concrete Mixing, Transporting and Placing Concrete: Conform to ACI 304.
- E. Curing Concrete: Conform to ACI 308.
- F. Consolidating Concrete: ACI 309.
- G. Hot Weather Concreting: Conform to ACI 305R.
- H. Cold Weather Concreting: Conform to ACI 306R.
- I. Detailing Reinforced Concrete: Conform to ACI 315.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 ENVIRONMENTAL REQUIREMENTS

- A. Do not place Concrete when the ambient temperature is below 40 degrees F or approaching 40 degrees F and air temperature less than 40 degrees F for the first 7 days, without special protection to keep Concrete above 40 degrees F.

**PART 2 PRODUCTS**

2.01 CONCRETE

- A. Ready-mixed meeting ASTM C94, Option A and C.
- B. Portland Cement: ASTM C150, Type V.
- C. Admixtures:
  - 1. Air-Entraining: ASTM C260.
  - 2. Water-Reducing: ASTM C494, Type A or Type D.
  - 3. Fly Ash: ASTM C618, Class C or Class F.
- D. Mix Design:
  - 1. Minimum Allowable 28-day Compressive Field Strength: 4,000 psi when cured and tested in accordance with ASTM C31 and ASTM C39 except 3,000 psi is permitted for curbs, sidewalks, concrete fill, and pipe conduit encasements.
  - 2. Water-cement Ratio: 0.45, maximum for 4,000 psi concrete, 0.50 for 3,000 psi concrete.
  - 3. Coarse Aggregate Size: 1 inch.
  - 4. Air Entrainment: 4 percent by volume, plus or minus 1-1/2 percent.
  - 5. Water Reducers: Use in all concrete.
  - 6. Super Plasticizers: Use in all wall concrete.
- E. Mixing: Minimum 70 and maximum 270 revolutions of mixing drum. Non-agitating equipment is not allowed.

2.02 REINFORCING STEEL

- A. Deformed Bars: ASTM A615, Grade 60.

2.03 ANCILLARY MATERIALS

- A. Nonshrink Grout: In accordance with Section 03 62 00, Grouting.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Repair Mortar:

1. Contain only trace amounts of chlorides and other chemicals that can potentially cause steel to oxidize.
2. Where repairs of exposed concrete are required, match color and texture of adjacent concrete.
3. Repair mortar shall be site mixed.
4. Prepare concrete substrate and mix, place, and cure repair material in accordance with manufacturer's written recommendations.
5. Manufacturers and Products:
  - a. BASF Building Systems Inc., Shakopee, MN; EMACO S-Series products.
  - b. Sika Chemical Corp., Lyndhurst, NJ; SikaTop-Series.
  - c. Or approved equal.

C. Curing Compound:

1. Water-based, high solids content nonyellowing curing compound meeting requirements of ASTM C309 and ASTM C1315.
  - a. Moisture Loss: 0.40 kg/square meter/72 hours maximum.
  - b. Capable of meeting moisture retention at manufacturer's specified application rate.
2. Manufacturers and Products:
  - a. Chemrex, Inc., Shakopee, MN; Masterkure.
  - b. Euclid Chemical Co., Cleveland, OH; Super Diamond Clear VOX.
  - c. WR Meadows, Inc., Hampshire, IL; VOCOMP-30.
  - d. Vexcon Chemical, Inc.; Philadelphia, PA; Starseal 1315.
  - e. Dayton Superior; Safe Cure and Seal 30 percent.
  - f. Or approved equal.

D. Form Ties:

1. Material: Steel.
2. Spreader Inserts:
  - a. Conical or spherical type.
  - b. Design to maintain positive contact with forming material.
  - c. Furnish units that will leave no metal closer than 1.5 inches to concrete surface when forms, inserts, and tie ends are removed.
3. Wire ties not permitted.
4. Flat bar ties for panel forms; furnish plastic or rubber inserts with minimum 1.5-inch depth and sufficient dimensions to permit patching of tie hole.

## **PART 3 EXECUTION**

### **3.01 FORMWORK**

#### **A. Form Materials:**

1. Use hard plastic finished plywood for exposed areas, and new shiplap or plywood for unexposed areas.
2. Earth cuts may be used for forming footings, where they will not be exposed.

#### **B. Construction:**

1. In accordance with ACI 347.
2. Make joints tight to prevent escape of mortar and to avoid formation of fins.
3. Brace as required to prevent distortion during concrete placement.
4. On exposed surfaces locate form ties in uniform pattern.
5. Construct so ties remain embedded in the wall with no metal within 1 inch of concrete surface when forms, inserts, and tie ends are removed.

#### **C. Beveled Edges (Chamfer):**

1. Form 3/4-inch bevels at exposed concrete edges, unless otherwise noted on Drawings.
2. Where beveled edges on existing adjacent structures are other than 3/4 inch, obtain Engineer's approval of size prior to placement of beveled edge.

#### **D. Form Removal:**

1. Remove form as shown below:
  - a. Side Form of Walls and Beams: After 48 hours.
  - b. Load Supporting Forms and Shoring: After concrete has attained its full compressive strength, but not before 14 days.
2. Remove forms with care to prevent scarring and damaging the surface.
3. Prior to form removal provide thermal protection for concrete being placed under the requirements of cold weather concreting.

### **3.02 PLACING REINFORCING STEEL**

- #### **A.**
- Unless otherwise specified on drawings, place reinforcing steel in accordance with CRSI Recommended Practice for Placing Reinforcing Bars. In case of discrepancy between the Drawings and CRSI publication, the Drawing shall

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

govern. Reinforcement shall be placed within the tolerances provided in ACI 117.

- B. Splices and Laps: As shown on Drawing, “General Structural Notes.”

3.03 PLACING CONCRETE

- A. Place concrete in accordance with ACI 301.
- B. Prior to placing concrete, remove water from all trenches and foundations and debris and foreign material from forms. Check reinforcing steel for proper placement and tolerances.
- C. Before depositing new concrete on old concrete, clean surface using sandblast or bush hammer or other mechanical means to obtain a 1/4-inch rough profile. Mechanical means shall be approved by Engineer. Pour a cement-sand grout to minimum depth of 1/2 inch over surface. Proportion 1 part cement to 2.5 parts sand by weight. The new concrete shall be placed before the grout has attained its initial set.
- D. Place concrete as soon as possible after leaving mixer, without segregation or loss of ingredients, without splashing forms or steel above, and in layers not over 2 feet deep, except for pile concrete fill which may be placed continuously. Placing shall be carried on at such a rate the concrete which is being integrated with fresh concrete is still plastic. Place within 1-1/2 hours after adding cement to mix.
- E. Three feet maximum vertical drop to final placement, when not guided with chutes or other devices to prevent segregation due to impact with reinforcing.

3.04 COMPACTION

- A. Vibrate concrete as follows:
  - 1. Approved vibrator shall be inserted and withdrawn at many points approximately 18 inches apart. At each insertion, the duration shall be sufficient to consolidate the concrete but not to cause segregation, generally 5 to 15 second duration.
  - 2. Apply close enough to forms to vibrate surface effectively but not damage form surfaces.
  - 3. Vibrator must penetrate fresh placed concrete and into previous layer of fresh concrete below.
  - 4. Follow the detailed recommendations given in “Consolidation of Concrete” (ACI 309R) where applicable.

3.05 FINISHING

A. Slabs:

1. After proper and adequate vibration and tamping, top surface shall be brought to a uniform surface.
2. After sufficient leveling, screed surfaces to true level planes.
3. After initial water has been absorbed, float with wood float and trowel with steel trowel to smooth finish free from trowel marks.
4. Do not absorb wet spots with neat cement.

B. Tolerances: Slabs shall not vary from level or true plane more than 1/4 inch in 10 feet when measured with a 10-foot straightedge.

C. New Slab at Waste Gas Burner.

1. Screed surfaces to true level planes.
2. After initial water has been absorbed, float with wood float and trowel with steel trowel to smooth finish free from trowel marks.
3. Follow with light broom finish.
4. Do not absorb wet spots with neat cement.
5. Finish exposed edges with steel edging tool.

3.06 PROTECTION AND CURING

A. Protect fresh concrete from direct rays of sunlight, drying winds, and wash by rain.

B. Keep concrete slabs continuously wet for a 7-day period. Intermittent wetting is not acceptable.

C. Use curing compound only where approved by Engineer. Cure formed surfaces with curing compound applied in accordance with approved manufacturer's directions as soon as forms are removed and finishing is completed. Water cure walls that are to receive coatings.

3.07 FIELD TESTS

A. Evaluation of Concrete Field Strength: In accordance with ACI 318/318R.

**END OF SECTION**

**SECTION 03 62 00**  
**GROUTING**

**PART 1 GENERAL**

METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Informational Submittals:

1. Manufacturer's Written Instructions:
  - a. Mixing of grout.
  - b. Epoxy grout installation and curing.

**PART 2 PRODUCTS**

2.01 NONSHRINK GROUT AND EPOXY GROUT SCHEDULE

- A. Furnish nonshrink grout (Category I, II, and III) and epoxy grout for applications as indicated in the following schedule:

Application	Temperature Range	Max. Placing Time	
	40 deg F to 100 deg F	20 Min.	Greater Than 20 Min.
Machine bases 25 hp or less	II	II	II
Machine bases 26 hp and up	III or Epoxy Grout	III or Epoxy Grout	III or Epoxy Grout
Baseplates and/or soleplates with vibration, thermal movement, etc.	III or Epoxy Grout	III or Epoxy Grout	III or Epoxy Grout

2.02 NONSHRINK GROUT

- A. Category I:

1. Nonmetallic and nongas-liberating.
2. Prepackaged natural aggregate grout requiring only the addition of water.
3. Test in accordance with ASTM C1107/C1107M:
  - a. Grout shall have flowable consistency.
  - b. Flowable for 15 minutes.
4. Grout shall not bleed at maximum allowed water.
5. Minimum strength of flowable grout, 3,000 psi at 3 days, 5,000 psi at 7 days, and 7,000 psi at 28 days.
6. Manufacturers and Products:
  - a. BASF Building System, Inc., Shakopee, MN; MasterFlow 100.
  - b. Euclid Chemical Co., Cleveland, OH; NS Grout.
  - c. Dayton Superior Corp., Miamisburg, OH; 1107 Advantage Grout.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. US MIX Co., Denver, CO; US SPEC GP Grout.
- e. Five Star Products Inc., Fairfield, CT; Five Star Grout.
- a. Or approved equal.

B. Category II:

- 1. Nonmetallic, nongas-liberating.
- 2. Prepackaged natural aggregate grout requiring only the addition of water.
- 3. Aggregate shall show no segregation or settlement at fluid consistency at specified times or temperatures.
- 4. Test in accordance with ASTM C1107/C1107M:
  - a. Fluid consistency 20 seconds to 30 seconds in accordance with ASTM C939.
  - b. Temperatures of 40 degrees F, 80 degrees F, and 90 degrees F.
- 5. 1 hour after mixing, pass fluid grout through flow cone with continuous flow.
- 6. Minimum strength of fluid grout, 3,500 psi at 1 day, 4,500 psi at 3 days, and 7,500 psi at 28 days.
- 7. Maintain fluid consistency when mixed in 1-yard to 9-yard loads in ready-mix truck.
- 8. Manufacturers and Products:
  - a. BASF Building Systems, Inc., Shakopee, MN; MasterFlow 928.
  - b. Five Star Products Inc., Fairfield, CT; Five Star Fluid Grout 100.
  - c. Euclid Chemical Co., Cleveland, OH; Hi Flow Grout.
  - d. Dayton Superior Corp., Miamisburg, OH; Sure Grip High Performance Grout.
  - e. US MIX Co., Denver, CO; US SPEC MP Grout.
  - f. Or approved equal.

C. Category III:

- 1. Metallic and nongas-liberating.
- 2. Prepackaged aggregate grout requiring only the addition of water.
- 3. Aggregate shall show no segregation or settlement at fluid consistency at specified times or temperatures.
- 4. Test in accordance with ASTM C1107/C1107M:
  - a. Fluid consistency 20 seconds to 30 seconds in accordance with ASTM C939.
  - b. Temperatures of 40 degrees F and 100 degrees F.
- 5. 1 hour after mixing, pass fluid grout through flow cone with continuous flow.
- 6. Minimum strength of fluid grout, 4,000 psi at 1 day, 5,000 psi at 3 days, and 9,000 psi at 28 days.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. Maintain fluid consistency when mixed in 1-yard to 9-yard loads in ready-mix truck.
8. Manufacturer and Product:
  - a. BASF Building Systems, Inc., Shakopee, MN; MasterFlow 885.
  - b. Euclid Chemical Co, Cleveland, OH; Hi-Flow Metallic Grout.
  - c. Or approved equal.

2.03 EPOXY GROUT

- A. High-strength, nonshrink, high-temperature epoxy grouting material developed for the support of heavy equipment with vibratory loads.
- B. Three-component mixture of a two-component epoxy resin system (100 percent solids) with a graded, precision aggregate blend.
- C. Premeasured, prepackaged system.
- D. Flowable.
- E. Minimum compressive strength in accordance with ASTM C579 Method B, 9,500 psi at 75 degrees F at 7 days, 11,000 psi at post cure.
- F. Maximum creep resistance in accordance with ASTM C1181 at 600 psi, 140 degrees F; 6.0 by  $10^{-3}$  in/in.
- G. Minimum bond strength in accordance with ASTM C882, 2,000 psi.
- H. Minimum tensile strength in accordance with ASTM C307, 2,000 psi.
- I. Maximum coefficient of thermal expansion in accordance with ASTM C531 at 73 degrees F to 210 degrees F, 23.0 by  $10^{-6}$  in/in/degrees F.
- J. Working Time: Minimum 2 hours at 50 degrees F; 1.5 hours at 70 degrees F; 50 minutes at 90 degrees F.
- K. Good chemical resistance.
- L. Good effective bearing area.
- M. Noncorrosive.
- N. Moisture insensitive.
- O. Modify resin and aggregate content where recommended by epoxy grout manufacturer to provide desired epoxy grout flow properties.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

P. Manufacturer and Product:

1. BASF Building System, Inc., Shakopee MN; MasterFlow 648.
2. Euclid Chemical Co., Cleveland, OH; E<sup>3</sup>-G.
3. Dayton Superior Corp., Miamisburg, OH; Pro-Poxy 2000 Normal Set.
4. Five Star Products Inc., Fairfield, CT; DP Epoxy Grout.
5. Or approved equal.

**PART 3 EXECUTION**

3.01 GROUT

- A. General: Mix, place, and cure grout in accordance with grout manufacturer's representative's training instructions.
- B. Epoxy Grout: Concrete slab shall be fully cured for 28 days to ensure excess water has evaporated. Test concrete surface for moisture in accordance with ASTM D4263 before epoxy grout is placed.

3.02 GROUTING MACHINERY FOUNDATIONS

- A. Block out original concrete or finish off at distance shown below bottom of machinery base with grout. Prepare concrete surface by sandblasting, chipping, or by mechanical means to remove any soft material. Surface roughness in accordance with manufacturer's written instructions.
- B. Clean metal surfaces of all paint, oil, grease, loose rust, and other foreign material that will be in contact with grout.
- C. Sandblast to bright metal all metal surfaces in contact with epoxy grout in accordance with manufacturer's written instructions.
- D. Set machinery in position and wedge to elevation with steel wedges, or use cast-in leveling bolts. Remove wedges after grout is set and pack void with grout.
- E. Form with watertight forms at least 2 inches higher than bottom of plate.
- F. Fill space between bottom of machinery base and original concrete in accordance with manufacturer's representative's training instructions.
- G. If grout cannot be placed from one edge and flowed to the opposite edge, air vents shall be provided through the plate to prevent air entrapment.
- H. Radius all corners of grout pad.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- I. Install expansion joints for epoxy grout placement in accordance with manufacturer's written instructions.

3.03 FIELD QUALITY CONTROL

A. General:

1. Performed by Project representative's inspection staff.
2. Perform the following quality control inspections. The grout manufacturer's representative shall accompany the Project representative's inspection staff on the first installation of each size and type of equipment.

B. Evaluation and Acceptance of Nonshrink Grout:

1. Inspect the surface preparation of concrete substrates onto which nonshrink grout materials are to be applied, for conformance to the specified application criteria including, but not limited to, substrate profile, degree of cleanliness, and moisture.
2. Inspect preparation and application of nonshrink grout form work for conformance to the manufacturer's recommendations.
3. Conduct a final review of completed nonshrink grout installation for conformance to these Specifications.

C. Evaluation and Acceptance of Epoxy Grout:

1. Inspect ambient conditions during various phases of epoxy grouting installation for conformance with the epoxy grout manufacturer's requirements.
2. Inspect the surface preparation of concrete substrates onto which epoxy grout materials are to be applied, for conformance to the specified application criteria including, but not limited to, substrate profile, degree of cleanliness, and moisture.
3. Inspect the surface preparation of the metallic substrates onto which the epoxy primer is to be applied.
4. Inspect the epoxy-primed metallic substrate for coverage and adhesion.
5. Inspect preparation and application of epoxy grout form work for conformance to the manufacturer's recommendation.
6. Verify consistency obtained is sufficient for the proper field placement at the installed temperatures.
7. Inspect and record that the "pot life" of epoxy grout materials is not exceeded during the installation.
8. Inspect epoxy grout for cure.
9. Inspect and record that localized repairs made to grout voids are in conformance with the specification requirements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

10. Conduct a final review of completed epoxy grout installation for conformance to these Specifications.
11. All grout, already placed, which fails to meet the requirements of these Specifications, is subject to removal and replacement at no additional cost to the Owner.

**1.02 DEFINITIONS**

- A. ICC Evaluation Services Report: Published by ICC for products provided by concrete adhesive anchor manufacturers.
- B. Special Inspection: As defined in the CBC and indicated on the Statement of Special Inspection (Plan) on Drawings.

**1.03 SUBMITTALS**

- A. Action Submittals:
1. Product Data: Manufacturer's catalog information.
- B. Informational Submittals:
1. Manufacturer's instructions for preparation, placement, drilling of holes, installation of anchors and adhesive, and handling of cartridges, nozzles, and equipment.
  2. Manufacturer's written letter of certification identifying installer's qualifications to install products.
  3. ICC Evaluation Services Report: Specific to proposed doweling system manufacturer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.04 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Experience with installation of specified products.
2. Installer: Trained and certified by manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Container Markings: Include manufacturer's name, product name, batch number, mix ratio by volume, product expiration date, ANSI hazard classification, and appropriate ANSI handling precautions.

B. Store adhesive components in accordance with manufacturer's written instructions.

C. Dispose of when:

1. Shelf life has expired.
2. Stored other than per manufacturer's instructions.

**PART 2 PRODUCTS**

2.01 MATERIALS

A. Adhesive:

1. Approved by an ICC Evaluation Services Report for conformance to 2016 CBC requirements for doweling of steel reinforcing bars in cracked concrete.
2. Suitable for long-term loads as well as for wind and seismic loads.
3. Meet requirements of ASTM C881/C881M.
4. Two-component, insensitive to moisture, designed to be used in adverse freeze/thaw environments.
5. Disposable, Self-Contained Cartridge System:
  - a. Capable of dispensing both components in proper mixing ratio.
  - b. Fit into manually or pneumatically operated caulking gun.
6. Mixed Adhesive: Nonsag, light paste consistency with ability to remain in a 1-inch diameter overhead drilled hole without runoff.
7. Cure Temperature, Pot Life, and Workability: Compatible for intended use and anticipated environmental conditions.
8. Manufacturers and Products:
  - a. Hilti, Inc., Tulsa, OK; HIT-RE 500-SD (ESR-2322) or HIT-HY 200 (ESR-3187) Adhesive Anchors.
  - b. Powers Fasteners, Brewster, NY; Power PURE110+ Epoxy Adhesive Anchor System (ESR-3298).

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Simpson Strong-Tie Co., Inc., Pleasanton, CA; SET-XP Epoxy Adhesive Anchors (ESR-2508).
  - a. Or approved equal.
- B. Mixing Nozzles: Disposable, manufactured in several sizes to accommodate size of reinforcing dowels.
- C. Reinforcing Dowels: As specified in Section 03 30 01, Reinforced Concrete.

**PART 3 EXECUTION**

**3.01 INSTALLATION**

- A. Drilling Equipment:
- 1. Drilling Hammers for Dowel Holes:
    - a. Electric or pneumatic rotary type with medium or light impact.
    - b. Hollow drills with flushing air systems are preferred.
  - 2. Where edge distances are less than 2 inches, use lighter impact equipment to prevent microcracking and concrete spalling during drilling process.
- B. Hole Diameter: Use drill bit diameter meeting ICC Evaluation Services Report requirements and as recommended by manufacturer.
- C. Obstructions in Drill Path: When existing steel reinforcement is encountered during drilling, obtain Engineer approval for proposed fix.
- D. Doweling:
- 1. Install per details shown on Drawings and in accordance with adhesive manufacturer's instructions.
  - 2. When using epoxy anchors, dowels may be pre-bent prior to installation to 15 degrees to align with other bars. Do not heat dowels to bend.
  - 3. Bent Bar Dowels: Where edge distances are critical, and intersection with steel reinforcement is likely, drill hole at 10-degree angle or less and use pre-bent reinforcing bars.
  - 4. If bars have fused epoxy coating and coating is damaged, recoat damaged area with epoxy.
- E. Adhesive:
- 1. Install in accordance with written manufacturer's instructions.
  - 2. Dispense components through specially designed static mixing nozzle that thoroughly mixes components and places mixed adhesive at base of predrilled hole.

3.02 FIELD QUALITY ASSURANCE AND QUALITY CONTROL

- A. Owner-Furnished Quality Assurance, in accordance with CBC Chapter 17 requirements, is provided in the Statement of Special Inspection (Plan). Contractor responsibilities and related information on special inspection and testing are included in Section 01 45 33, Special Inspection, Observation, and Testing.
1. Special inspection will be performed by the Special Inspector in accordance with ICC ESR requirements and as specified in Section 01 45 33, Special Inspection, Observation, and Testing.
  2. Continuous inspection required where noted on Drawings and where concrete dowels are installed in overhead applications.
  3. Periodic inspection required where continuous inspection is not specified.
  4. Special Inspector will observe installation in accordance with requirements of the ICC Evaluation Services Report and will submit report including the following:
    - a. Product Description: Product name, rod diameter, and length.
    - b. Drill bit compliance.
    - c. Hole diameter, diameter, and depth and cleanliness.
    - d. Adhesive expiration date.
  5. Verification of dowel installation in accordance with manufacturer's published instructions
- B. Contractor-Furnished Quality Control: Inspection and testing as required in Section 01 45 16.13, Contractor Quality Control.

**END OF SECTION**

**SECTION 05 05 19**  
**POST-INSTALLED ANCHORS**

**PART 1 GENERAL**

1.02 DEFINITIONS

- A. Corrosive Area: Containment area or area exposed to delivery, storage, transfer, or use of chemicals.
- B. Exterior Area: Location not protected from weather by a building or other enclosed structure to include buried roof structures.
- C. Interior Dry Area: Location inside building or structure where floor is not subject to liquid spills or wash down, and where wall or roof slab is not common to a water-holding or earth-retaining structure.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Interior Wet Area: Location inside building or structure where floor is sloped to floor drains or gutters and is subject to liquid spills or wash down, or where wall, floor, or roof slab is common to a water-holding or earth-retaining structure.
- E. Submerged: Location at or below top of wall of open water-holding structure, such as a basin or channel, or wall, ceiling, or floor surface inside a covered water-holding structure, or exterior belowgrade wall or roof surface of water-holding structure, open or covered.

1.03 SUBMITTALS

A. Action Submittals:

- 1. Shop Drawings: Specific instructions for concrete anchor installation, including drilled hole size and depth, preparation, placement, procedures, and instructions for safe handling of anchoring systems.

B. Informational Submittals:

- 1. Concrete Anchors:
  - a. Manufacturer's product description and installation instructions.
  - b. Current ICC-ES or IAPMO-UES Report for each type of post-installed anchor to be used.
  - c. Adhesive Anchor Installer Certification.
- 2. Passivation method for stainless steel members.
- 3. Hot-Dip Galvanizing: Certificate of compliance signed by galvanizer, with description of material processed and ASTM standard used for coating.

1.04 QUALITY ASSURANCE

A. Qualifications:

- 1. Installers of adhesive anchors horizontally or upwardly inclined to support sustained tension loads shall be certified by an applicable certification program. Certification shall include written and performance tests in accordance with the ACI/CRSI Adhesive Installer Certification Program or equivalent.
- 2. Galvanized Coating Applicator: Company specializing in hot-dip galvanizing after fabrication and following procedures of Quality Assurance Manual of the American Galvanizers Association.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Package stainless steel items in a manner to provide protection from carbon impregnation.
- B. Protect hot-dip galvanized finishes from damage as a result of metal banding and rough handling.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Unless otherwise indicated, meet the following requirements:

Item	ASTM Reference
Stainless Steel:	
Threaded Rods	F593, AISI Type 316, Condition CW
Nuts*	F594, AISI Type 316, Condition CW
Carbon Steel:	
Threaded Rods	F1554, Grade 36 or F568M Class 5.8 A193/A193M, Grade B7
Flat and Beveled Washers (Hardened)	F436
Nuts*	A194/A194M, Grade 2H
Galvanized Steel:	
All	A153/A153M
*Nuts of other grades and styles having specified proof load stresses greater than specified grade and style are also suitable. Nuts must have specified proof load stresses equal to or greater than minimum tensile strength of specified threaded rod.	

- B. Bolts, Washers, and Nuts: Use stainless steel, hot-dip galvanized steel, and zinc-plated steel material types as indicated in Fastener Schedule at end of this section.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 POST-INSTALLED CONCRETE ANCHORS

A. General:

1. AISI Type 316 stainless or hot-dip galvanized as shown in Fastener Schedule at end of this section.
2. Post-installed anchor systems used in concrete shall be approved by ICC Evaluation Services Report or equivalent for use in cracked concrete and for short-term and long-term loads including wind and earthquake.
3. Mechanical Anchors: Comply with the requirements of ICC-ES AC193 or ACI 355.2.
4. Adhesive Anchors: Comply with the requirements of ICC-ES AC308 or ACI 355.4.

B. Torque-Controlled Expansion Anchors (Wedge Anchors):

1. Manufacturers and Products:
  - a. Hilti, Inc., Tulsa, OK; Kwik-Bolt –TZ (KB-TZ) Anchors (ESR-1917).
  - b. Powers Fasteners, Brewster, NY; Power-Stud +SD1, +SD2, +SD4, or +SD6 Anchors (ESR-2502 and ESR-2818).
  - c. Simpson Strong-Tie Co., Inc., Pleasanton, CA; Strong-Bolt 2 Anchors (ESR-1771 and ESR-3037).
  - d. Or approved equal.

C. Undercut Anchors:

1. Manufacturers and Products:
  - a. USP Structural Connectors, Burnsville, MN; DUC Undercut Anchor (ESR-1970).
  - b. Hilti, Inc., Tulsa, OK; HDA Undercut Anchor (ESR-1546).
  - c. Simpson Strong-Tie Co., Inc., Pleasanton, CA; TORQ-CUT Self-Undercutting Anchor (ESR-2705).
  - d. Powers Fasteners, Brewster, NY; Atomic+ Undercut Anchor (ESR-3067).
  - e. Or approved equal.

D. Self-Tapping Concrete Screw Anchors:

1. Manufacturers and Products:
  - a. Powers Fasteners, Brewster, NY; Wedge-Bolt+ (ESR-2526).
  - b. Powers Fasteners, Brewster, NY; Vertigo+ Rod Hanger Screw Anchor (ESR-2989).
  - c. Powers Fasteners, Brewster, NY; Snake+ Flush Mount Screw Anchor (ESR-2272).
  - d. Hilti, Inc., Tulsa, OK; HUS-EZ Screw Anchor (ESR-3027).

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. Simpson Strong-Tie Co., Inc., Pleasanton, CA; Titen HD Screw Anchor (ESR-2713).
- f. Or approved equal.

E. Adhesive Anchors:

- 1. Threaded Rod:
  - a. Diameter as shown on Drawings.
  - b. Length as required to provide minimum depth of embedment indicated and thread projection required.
  - c. Clean and free of grease, oil, or other deleterious material.
- 2. Adhesive:
  - a. Two-component, insensitive to moisture, designed to be used in adverse freeze/thaw environments.
  - b. Cure Temperature, Pot Life, and Workability: Compatible for intended use and anticipated environmental conditions.
- 3. Packaging and Storage:
  - a. Disposable, self-contained system capable of dispensing both components in proper mixing ratio and fitting into a manually or pneumatically operated caulking gun.
  - b. Store adhesive on pallets or shelving in a covered storage area.
  - c. Package Markings: Include manufacturer's name, product name, batch number, product expiration date, ANSI hazard classification, and appropriate ANSI handling precautions.
  - d. Dispose of When:
    - 1) Shelf life has expired.
    - 2) Stored other than in accordance with manufacturer's instructions.
- 4. Manufacturers and Products:
  - a. Hilti, Inc., Tulsa, OK; HIT Doweling Anchor System, HIT RE 500 SD (ESR-2322), or HIT-HY 200 (ESR-3187).
  - b. Simpson Strong-Tie Co., Inc., Pleasanton, CA; SET-XP Epoxy Adhesive Anchors (ESR-2508), or AT-XP Adhesive Anchors (IAPMO UES-263).
  - c. Powers Fasteners, Brewster NY; Pure 110+ Epoxy adhesive anchor system (ESR-3298).
  - d. Or approved equal.

F. Adhesive Threaded Inserts:

- 1. Type 316 stainless steel, internally threaded inserts.
- 2. Manufacturer and Product: Hilti, Inc., Tulsa, OK; HIS-RN Insert with HIT-RE 500-SD or HIT-HY 200 adhesive.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 3 EXECUTION**

3.01 CONCRETE ANCHORS

- A. Begin installation only after concrete to receive anchors has attained its full compressive strength.
- B. Locate existing reinforcing with Ground Penetrating Radar or other method approved by Engineer prior to drilling. Coordinate with Engineer to adjust anchor locations where installation would result in hitting reinforcing.
- C. Install in accordance with approved manufacturer's written instructions.
- D. Provide minimum embedment, edge distance, and spacing as indicated on Drawings.
- E. Use only drill type and bit type and diameter recommended by approved anchor manufacturer.
- F. Properly clean cored hold per approved manufacturer's requirements.
- G. When unidentified embedded steel, rebar, or other obstruction is encountered in drill path, slant drill to clear obstruction. If drill must be slanted more than indicated in approved manufacturer's installation instructions to clear obstruction, notify Engineer for direction on how to proceed.
- H. Adhesive Anchors:
  - 1. Unless otherwise approved by Engineer and approved adhesive manufacturer:
    - a. Do not install adhesive anchors when temperature of concrete is below 40 degrees F or above 100 degrees F.
    - b. Do not install prior to concrete attaining an age of 28 days.
    - c. Remove any standing water from hole with oil-free compressed air. Inside surface of hole shall be dry.
    - d. Do not disturb anchor during recommended curing time.
    - e. Do not exceed maximum torque as specified in approved manufacturer's instructions.

3.02 FIELD QUALITY ASSURANCE AND QUALITY CONTROL

- A. Owner-Furnished Quality Assurance, in accordance with CBC Chapter 17 requirements, is provided in the Statement of Special Inspections Plan on Drawings. Contractor responsibilities and related information are included in Section 01 45 33, Special Inspection, Observation, and Testing.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Contractor-Furnished Quality Control: Inspection and testing as required in Section 01 45 16.13, Contractor Quality Control.

3.03 FASTENER SCHEDULE

- A. Unless indicated otherwise on Drawings, provide fasteners as follows:

Service Use and Location	Product	Remarks
1. Post Installed Anchors for Metal Components to Cast-in-Place Concrete (such as, Ladders, Handrail Posts, Electrical Panels, Platforms, and Equipment)		
Interior Dry Areas	Anchor material type to match material being anchored (for example, stainless steel anchors to anchor stainless steel equipment, galvanized anchors to anchor galvanized equipment).	Verify product acceptability and approved manufacturer's requirements if anchor installation will occur in an overhead application
Submerged, Exterior, Interior Wet, and Corrosive Areas	Stainless steel adhesive anchors	Verify product acceptability and approved manufacturer's requirements if anchor installation will occur in an overhead application
2. All Others		
All service uses and locations	Stainless steel fasteners	

- B. Antiseizing Lubricant: Use on all stainless steel threads.
- C. Do not use adhesive anchors to support fire-resistive construction or where ambient temperature will exceed 120 degrees F.

## 1.02 SUBMITTALS

### A. Action Submittals:

- 1. Provide Shop Drawing details showing:
  - a. Erection plans.
  - b. Members, including piece numbers, sizes, grades, dimensions, cambers, and connection details.
  - c. Anchor bolt layouts.
  - d. Connection material specifications.
  - e. Indicate type, size, and length of bolts.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- f. Indicate welds by standard AWS symbols, distinguishing between shop and field welds and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
2. Product specifications, including primer and other coatings.
3. Welding requirements as specified in AISC 341 Appendix W, Section W2.2 or AWS D1.8/D1.8M.

1.03 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Load structural members in such a manner that they will be transported and unloaded without damage to coatings and without being excessively stressed, deformed, or otherwise damaged.
- B. Storage:
  1. Store materials to permit easy access for inspection and identification. Store in a dry area and keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.
    - a. Do not store materials in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials as directed.
  2. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.
    - a. Fasteners may be repackaged provided testing and inspecting agency observes repackaging and sealing of containers.
    - b. Clean and lubricate bolts and nuts that become dry or rusty before use.
    - c. Comply with manufacturer's written recommendations for cleaning and lubricating fasteners and for retesting fasteners after lubrication.
- C. Handle materials to avoid distortion or damage to members or supporting structures.

**PART 2 PRODUCTS**

2.01 MATERIALS

- A. Rolled Plates, Shapes except W-Shapes and Bars: ASTM A36/A36M or A572/A572M, Grade 50, unless indicated otherwise.
- B. W-Shapes: ASTM A992/A992M, unless indicated otherwise on Drawings.
- C. Steel Pipe: ASTM A53/A53M, Grade B.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Round Hollow Structural Sections (HSS): ASTM A500/A500M, Grade C (Fy equals 46 ksi) or ASTM A1085/A1085M.
- E. Square and Rectangular Hollow Structural Sections (HSS): ASTM A500/A500M, Grade C (Fy equals 50 ksi) or ASTM A1085/A1085M.

2.02 FASTENERS

- A. Anchor Bolts: As specified in Section 05 50 00, Metal Fabrications.
- B. Post-Installed Anchors: As specified in Section 05 05 19, Post-Installed Anchors.

2.03 ANCILLARY MATERIALS

- A. Surface Preparation and Primer: As specified in Section 09 90 00, Painting and Coating.
- B. Grout: As specified in Section 03 62 00, Grouting.

2.04 FABRICATION

- A. General:
  - 1. Fabricate as shown and in accordance with AISC 360 and AISC 303.
  - 2. Mark and match mark materials for field assembly.
  - 3. Complete assembly, including bolting and welding of units, before start of finishing operations.
  - 4. Fabricate to agree with field measurements.
  - 5. Fillet re-entrant cuts and corners to radius of not less than 1/2 inch.
- B. Connections:
  - 1. Shop Connections: Weld or bolt as shown on Drawings.
  - 2. Meet requirements of AISC 325 for bolted double-angle shear connections, unless indicated otherwise.
- C. Welded Construction:
  - 1. Groove and Butt Joint Welds: Complete penetration, unless otherwise indicated.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.05 FINISHES

A. Shop Paint Primer:

1. Surface Preparation and painting as specified in Section 09 90 00, Painting and Coating.
2. Do not shop prime the following surfaces, unless indicated otherwise:
  - a. Within 2 inches of field-welded connections.
  - b. Steel members to be completely encased in reinforced concrete or coated with cementitious fireproofing.
  - c. Faying surfaces of slip critical bolted connections and bolted connections in Seismic Force Resisting Systems.
3. Apply shop primer to top flange surfaces of composite steel beams, unless indicated otherwise.

B. Galvanizing:

1. Fabricate steel to be galvanized in accordance with ASTM A143/A143M, ASTM A384/A384M, and ASTM A385/A385M. Avoid fabrication techniques that could cause distortion or embrittlement of steel.
2. Remove welding slag, splatter, burrs, grease, oil, paint, lacquer, and other deleterious material prior to delivery for galvanizing.
3. Remove, by blast cleaning or other methods, surface contaminants and coatings not removable by normal chemical cleaning process in galvanizing operation.
4. Hot-dip galvanize steel members, fabrications, and assemblies after fabrication in accordance with ASTM A123/A123M. Galvanized coating shall be G90.
5. Hot-dip galvanize ASTM A325 bolts, nuts, washers, and hardware components in accordance with ASTM A153/A153M. Oversize holes to allow for zinc alloy growth. Shop-assemble bolts, nuts, and washers with special lubricant and test in accordance with ASTM A325 and ASTM A563.
6. Mechanically zinc coat ASTM F1852 twist-of-type tension-control (TC) bolts, nuts, and washers in accordance with ASTM F1852 and ASTM B695, Class 50.
7. Coat ASTM F2280 twist-off-type tension-control (TC) bolts, nuts, and washers in accordance with ASTM F1136.
8. Galvanize components of bolted assemblies separately before assembly.

2.06 SOURCE QUALITY CONTROL

A. Welding:

1. Contractor's Certified Welding Inspector (CWI): Inspect and test fabrication.
2. Visually inspect fabrication welds in accordance with AWS D1.1/D1.1M, Section 6 and Table 6.1, Visual Inspection Acceptance Criteria.
3. An independent testing agency will be retained by Owner to perform the inspection and testing of fabrication.

B. Hot-Dip Galvanizing:

1. An independent testing agency shall be retained by Contractor and approved by Engineer to inspect and test hot-dip galvanized fabricated items in accordance with ASTM A123/A123M and ASTM A153/A153M.
2. Visually inspect and test for thickness and adhesion of zinc coating for minimum of three test samples from each lot in accordance with ASTM A123/A123M and ASTM A153/A153M.
3. Reject and retest nonconforming articles in accordance with ASTM A123/A123M and ASTM A153/A153M.

**PART 3 EXECUTION**

3.01 ERECTION

A. General:

1. Meet requirements of AISC 360 and AISC 303, with exceptions as specified.
2. Install Contractor-designed temporary construction bracing to provide necessary support until components are in place and construction is complete.
3. Provide additional field connection material as required by AISC 303.
4. Splice members only where indicated and accepted on Shop Drawings.

B. Field Assembly:

1. Clean bearing surfaces and other surfaces that will be in permanent contact before assembly.
2. Set structural frames accurately to lines and elevations shown.
3. Align and adjust various members forming a part of a complete frame or structure before permanently fastening.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Level and plumb individual members of structure within tolerances shown in AISC 303.
5. Establish required leveling and plumbing measurements on mean operating temperature of structure. Make allowances for difference between temperature at time of erection and mean temperature at which structure will be completed and in service.
6. Perform necessary adjustments to compensate for minor discrepancies in elevations and alignment.

C. Setting Baseplates and Bearing Plates:

1. Clean concrete and masonry bearing surfaces of bond reducing materials and roughen to improve bond to surfaces.
2. Clean bottom surface of baseplates and bearing plates.
3. Set loose and attached baseplates and bearing plates for structural members on wedges, shims, leveling nuts, or other adjustable devices. Use leveling plates where indicated.
4. Tighten anchor bolts after supported members have been positioned and plumbed. Do not remove wedges or shims, but if protruding, cut off flush with edge of base or bearing plate prior to placing grout. Weld plate washer to baseplate where indicated.
5. Grout Under Baseplate: As specified in Section 03 62 00, Grouting, prior to placing loads on structure.

D. Anchor Bolts:

1. Coordinate installation of anchor bolts and other connectors required for securing structural steel to in-place work.
2. Provide templates and other devices for presetting bolts and other anchors to accurate locations.
3. Projection of anchor bolts beyond face of concrete and threaded length shall be adequate to allow for full engagement of threads of hold-down nuts, adjustment of leveling nuts, washer thicknesses, and construction tolerances, unless indicated otherwise.
4. Placement Tolerances:
  - a. As required by AISC 303, unless indicated otherwise.
  - b. Embedded anchor bolts shall not vary from dimensions shown on Drawings by more than the following:
    - 1) Center-to-Center of Any Two Bolts Within an Anchor Group: 1/8 inch.
    - 2) Center-to-Center of Adjacent Anchor Bolt Groups: 1/4 inch.
    - 3) Variation from Perpendicular to Theoretical Bearing Surface: 1:50.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

E. Connections:

1. High-Strength Bolted:
  - a. Tighten in accordance with RCSC Specification for Structural Joints Using High-Strength Bolts.
  - b. For snug-tightened connections (N, X), tighten to snug tight condition. Use hardened washer over slotted or oversize holes in outer plies.

3.02 MISFITS

A. At Bolted Connections:

1. Immediately notify Engineer for approval of one of the following methods of correction:
  - a. Ream holes that must be enlarged to admit bolts and use oversized bolts.
  - b. Plug weld misaligned holes and re-drill holes to admit standard size bolts.
  - c. Drill additional holes in connection, conforming to AISC for bolt spacing and end and edge distances, and add additional bolts.
  - d. Reject member containing misfit, incorrect sized, or misaligned holes and fabricate new member to ensure proper fit.
2. Do not enlarge incorrectly sized or misaligned holes in members by burning or by use of drift pins.

B. At Anchor Bolts:

1. Resolve misalignments between anchor bolts and bolt holes in steel members in accordance with approved Shop Drawing.
2. Do not flame cut to enlarge holes without prior approval of Engineer.

C. Gas Cutting:

1. Do not use gas cutting torches in field for correcting fabrication errors in structural framing.
2. Secondary members not under stress and concealed in finished structure may be corrected by gas cutting torches, if approved by Engineer.
3. Finish flame-cut sections equivalent to sheared and punched appearance.

3.03 REPAIR AND CLEANING

- A. Clean shop primer from field welds, bolted connections, and abraded areas immediately after erection.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Remove and grind smooth tack welds, fit-up-lugs, and weld runoff tabs.
- C. Remove weld back-up bars and grind smooth where indicated on Drawings.
- D. Apply touchup paint primer by brush or spray of same thickness and material as that used in shop application and as specified in Section 09 90 00, Painting and Coating.
- E. Hot-Dip Galvanized Coating Repair:
  - 1. Conform to ASTM A780/A780M.
  - 2. For minor repairs at abraded areas, use sprayed zinc conforming to ASTM A780/A780M.
  - 3. For flame cut or welded areas, use zinc-based solder, or zinc sticks, conforming to ASTM A780/A780M.
  - 4. Use magnetic gauge to determine thickness is equal to or greater than base galvanized coating.

3.04 FIELD FINISH

- A. Field finish in accordance with Section 09 90 00, Painting and Coating.

3.05 FIELD QUALITY ASSURANCE AND QUALITY CONTROL

- A. Owner-Furnished Quality Assurance, in accordance with CBC Chapter 17 requirements, is provided in Statement of Special Inspections Plan. Contractor responsibilities and related information are included in Section 01 45 33, Special Inspection, Observation, and Testing.
- B. Contractor-Furnished Quality Control: Inspect and test as required in Section 01 45 16.13, Contractor Quality Control.
- C. Welding:
  - 1. Contractor's Certified Welding Inspector (CWI): Inspect and test field welds.
  - 2. Visually inspect field welds in accordance with AWS D1.1/D1.1M, Section 6 and Table 6.1, Visual Inspection Acceptance Criteria.
  - 3. An independent testing agency will be retained by Owner to perform inspection and testing of field welds.
- D. Special inspection will be provided by Owner.

1.02 DEFINITIONS

- A. Anchor Bolt: Cast-in-place anchor; concrete or masonry.
- B. Corrosive Area: Containment area or area exposed to delivery, storage, transfer, or use of chemicals. Corrosive area includes areas exposed to corrosive atmosphere such as hydrogen sulfide from wastewater.
- C. Exterior Area: Location not protected from weather by building or other enclosed structure.
- D. Interior Dry Area: Location inside building or structure where floor is not subject to liquid spills or washdown, nor where wall or roof slab is common to a water-holding or earth-retaining structure.
- E. Interior Wet Area: Location inside building or structure where floor is sloped to floor drains or gutters and is subject to liquid spills or washdown, or where wall, floor, or roof slab is common to a water-holding or earth-retaining structure.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Submerged: Location at or below top of wall of open water-holding structure, such as basin or channel, or wall, ceiling or floor surface inside a covered water-holding structure, or exterior belowgrade wall or roof surface of water-holding structure, open or covered.

1.03 SUBMITTALS

A. Action Submittals:

- 1. Shop Drawings: Metal fabrications, including welding and fastener information.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Insofar as practical, factory assemble specified items. Package assemblies, which have to be shipped unassembled to protect materials from damage and tag to facilitate identification and field assembly.
- B. Package stainless steel items to provide protection from carbon impregnation.
- C. Protect painted coatings and hot-dip galvanized finishes from damage as a result of metal banding and rough handling. Use padded slings and straps.
- D. Store fabricated items in dry area, not in direct contact with ground.
- E. Delivery: In accordance with Section 01 61 00, Common Product Requirements.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. For hot-dip galvanized steel that is exposed to view and does not receive paint, limit the combined phosphorus and silicon content to 0.04 percent. For steels that require a minimum of 0.15 percent silicon (such as plates over 1.5 inches thick for ASTM A36/A36M steel), limit maximum silicon content to 0.21 percent and phosphorous content to 0.03 percent.
- B. All aluminum products are to be anodized.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. Unless otherwise indicated, meet the following requirements:

Item	ASTM Reference
Steel Wide Flange Shapes	A992/992M
Other Steel Shapes and Plates	A36/A36M or A572/A572M, Grade 50 or A992/A992M for other steel shapes
Steel Pipe	A500, Grade B
Hollow Structural Sections (HSS)	A500/A500M, Grade C
Aluminum:	
Aluminum Plates	B209, Alloy 6061-T6
Aluminum Structural Shapes	B308/B308M, Alloy 6061-T6
Stainless Steel:	
Bars and Angles	A276, AISI Type 316 (316L for welded connections)
Shapes	A276, AISI Type 304 (304L for welded connections)
Steel Plate, Sheet, and Strip	A240/A240M, AISI Type 316 (316L for welded connections)
Bolts, Threaded Rods, Anchor Bolts, and Anchor Studs	F593, AISI Type 316, Group 2, Condition SH
Nuts	F594, AISI Type 316, Condition CW
Steel Bolts and Nuts:	
Carbon Steel	A307 bolts, with A563 nuts
High-Strength	A325, Type 1 bolts, with A563 nuts
Anchor Bolts and Rods	F1554, Grade 36, with weldability supplement S1.
Eyebolts	A489
Threaded Rods	A36/A36M
Flat Washers (Unhardened)	F844

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Item	ASTM Reference
Flat and Beveled Washers (Hardened)	F436
Thrust Ties for Steel Pipe:	
Threaded Rods	A193/A193M, Grade B7
Nuts	A194/A194M, Grade 2H
Plate	A283/A283M, Grade D
Welded Anchor Studs	A108, Grades C-1010 through C-1020
Aluminum Bolts and Nuts	F468, Alloy 2024-T4
Cast Iron	A48/A48M, Class 35

- D. Bolts, Washers, and Nuts: Use stainless steel, hot-dip galvanized steel, zinc-plated steel, and aluminum material types as indicated in Fastener Schedule at end of this section.

2.02 ANCHOR BOLTS AND ANCHOR BOLT SLEEVES

A. Cast-In-Place Anchor Bolts:

1. Headed type, unless otherwise shown on Drawings.
2. Material type and protective coating as shown in Fastener Schedule at end of this section.

B. Anchor Bolt Sleeves:

1. Plastic:
  - a. Single unit construction with corrugated sleeve.
  - b. Top of sleeve shall be self-threading to provide adjustment of threaded anchor bolt projection.
  - c. Material: High-density polyethylene.
2. Fabricated Steel: ASTM A36/A36M.

2.03 POST-INSTALLED CONCRETE ANCHORS

- A. See Section 05 05 19, Post-Installed Anchors.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.04 PIPE SLEEVES

- A. As specified in Section 40 27 01, Process Piping Specialties.
- B. ASTM A53/A53M, Schedule 40 steel pipe sleeves with continuously welded 3/16-inch thick seep ring with outside diameter 3 inches greater than sleeve outside diameter. Hot-dip galvanize in accordance with ASTM A123/A123M.

2.05 ACCESSORIES

- A. Antiseizing Lubricant for Stainless Steel Threaded Connections:
  - 1. Suitable for potable water supply.
  - 2. Resists washout.
  - 3. Manufacturers and Products:
    - a. Bostik, Middleton, MA; Neverseez.
    - b. Saf-T-Eze Div., STL Corp., Lombard, IL; Anti-Seize.
    - c. Or approved equal.

2.06 FABRICATION

- A. General:
  - 1. Finish exposed surfaces smooth, sharp, and to well-defined lines.
  - 2. Furnish necessary rabbets, lugs, and brackets so work can be assembled in neat, substantial manner.
  - 3. Conceal fastenings where practical; where exposed, flush countersink.
  - 4. Drill metalwork and countersink holes as required for attaching hardware or other materials.
  - 5. Grind cut edges smooth and straight. Round sharp edges to small uniform radius. Grind burrs, jagged edges, and surface defects smooth.
  - 6. Fit and assemble in largest practical sections for delivery to Site.
- B. Materials:
  - 1. Use steel shapes, unless otherwise noted.
  - 2. Steel to be hot-dip galvanized: Limit silicon content to less than 0.04 percent or to between 0.15 percent and 0.25 percent.
  - 3. Fabricate aluminum in accordance with AA Specifications for Aluminum Structures—Allowable Stress Design.
- C. Welding:
  - 1. Weld connections and grind exposed welds smooth. When required to be watertight, make welds continuous.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Welded fabrications shall be free from twisting or distortion caused by improper welding techniques.
3. Steel: Meet fabrication requirements of AWS D1.1/D1.1M, Section 5.
4. Aluminum: Meet requirements of AWS D1.2/D1.2M.
5. Stainless Steel: Meet requirements of AWS D1.6/D1.6M.
6. Welded Anchor Studs: Prepare surface to be welded and weld with stud welding gun in accordance with AWS D1.1/D1.1M, Section 7, and manufacturer's instructions.
7. Complete welding before applying finish.

D. Painting:

1. Shop prime with rust-inhibitive primer as specified in Section 09 90 00, Painting and Coating, unless otherwise indicated.
2. Coat surfaces of galvanized steel and aluminum fabricated items to be in direct contact with concrete, grout, masonry, or dissimilar metals, as specified in Section 09 90 00, Painting and Coating, unless indicated otherwise.
3. Do not apply protective coating to galvanized steel anchor bolts or galvanized steel welded anchor studs, unless indicated otherwise.

E. Galvanizing:

1. Fabricate steel to be galvanized in accordance with ASTM A143/A143M, ASTM A384/A384M, and ASTM A385/A385M. Avoid fabrication techniques that could cause distortion or embrittlement of the steel.
2. Provide venting and drain holes for tubular members and fabricated assemblies in accordance with ASTM A385/A385M.
3. Remove welding slag, splatter, burrs, grease, oil, paint, lacquer, and other deleterious material prior to delivery for galvanizing.
4. Remove by blast cleaning or other methods surface contaminants and coatings not removable by normal chemical cleaning process in the galvanizing operation.
5. Hot-dip galvanize steel members, fabrications, and assemblies after fabrication in accordance with ASTM A123/A123M. Galvanized coating shall be G90.
6. Hot-dip galvanize bolts, nuts, washers, and hardware components in accordance with ASTM A153/A153M. Oversize holes to allow for zinc alloy growth. Shop assemble bolts and nuts.
7. Galvanized steel sheets in accordance with ASTM A653/A653M.
8. Galvanize components of bolted assemblies separately before assembly. Galvanizing of tapped holes is not required.

- F. Electrolytic Protection: Coat surfaces of galvanized steel and aluminum fabricated items to be in direct contact with concrete, grout, masonry, or

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

dissimilar metals, as specified in Section 09 90 00, Painting and Coating, unless indicated otherwise.

- G. Fitting: Where movement of fabrications is required or shown, cut, fit, and align items for smooth operation. Make corners square and opposite sides parallel.
- H. Accessories: Furnish as required for a complete installation. Fasten by welding or with stainless steel bolts or screws.

2.07 SOURCE QUALITY CONTROL

- A. Visually inspect all fabrication welds and correct deficiencies.
  - 1. Steel: AWS D1.1/D1.1M, Section 6 and Table 6.1, Visual Inspection Acceptance Criteria.
  - 2. Aluminum: AWS D1.2/D1.2M.
  - 3. Stainless Steel: AWS D1.6/D1.6M.
- B. Hot-Dip Galvanizing:
  - 1. An independent testing agency will be retained by Owner in accordance with ASTM A123/A123M and ASTM A153/A153M.
  - 2. Visually inspect and test for thickness and adhesion of zinc coating for minimum of three test samples from each lot in accordance with ASTM A123/A123M and ASTM A153/A153M.
  - 3. Reject and retest nonconforming articles in accordance with ASTM A123/A123M and ASTM A153/A153M.

**PART 3 EXECUTION**

3.01 INSTALLATION OF METAL FABRICATIONS

- A. General:
  - 1. Install metal fabrications plumb and level, accurately fitted, free from distortion or defects.
  - 2. Install rigid, substantial, and neat in appearance.
  - 3. Install manufactured products in accordance with manufacturer's recommendations.
  - 4. Obtain Engineer approval prior to field cutting steel members or making adjustments not scheduled.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Aluminum:

1. Do not remove mill markings from concealed surfaces.
2. Remove inked or painted identification marks on exposed surfaces not otherwise coated after installed material has been inspected and approved.
3. Fabrication, mechanical connections, and welded construction shall be in accordance with the AA Aluminum Design Manual.

C. Pipe Sleeves:

1. Provide where pipes pass through concrete or masonry.
2. Holes drilled with a rotary drill may be provided in lieu of sleeves in existing walls.
3. Provide center flange for water stoppage on sleeves in exterior or water-bearing walls.
4. Provide rubber caulking sealant or a modular mechanical unit to form watertight seal in annular space between pipes and sleeves.

3.02 CAST-IN-PLACE ANCHOR BOLTS

- A. Locate and hold anchor bolts in place with templates at time concrete is placed.
- B. Use anchor bolt sleeves for location adjustment and provide two nuts and one washer per bolt of same material as bolt.
- C. Minimum Bolt Size: 1/2-inch diameter by 12 inches long, unless otherwise shown.

3.03 ELECTROLYTIC PROTECTION

A. Aluminum and Galvanized Steel:

1. Coat surfaces of galvanized steel and aluminum fabricated items to be in direct contact with concrete, grout, masonry, or dissimilar metals, as specified in Section 09 90 00, Painting and Coating, unless indicated otherwise.
2. Do not apply protective coating to galvanized steel anchor bolts or galvanized steel welded anchor studs, unless indicated otherwise.
3. Allow coating to dry before installation of the material.
4. Protect coated surfaces during installation.
5. Should coating become marred, prepare and touch up in accordance with paint manufacturer's written instructions.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Stainless Steel:

1. During handling and installation, take necessary precautions to prevent carbon impregnation of stainless steel members.
2. After installation, visually inspect stainless steel surfaces for evidence of iron rust, oil, paint, and other forms of contamination.
3. Remove contamination using cleaning and passivation methods in accordance with requirements of ASTM A380 and ASTM A967.
4. Brushes used to remove foreign substances shall utilize only stainless steel or nonmetallic bristles.
5. After treatment, visually inspect surfaces for compliance.

3.04 PAINTING

A. Painted Galvanized Surfaces: Prepare as specified in Section 09 90 00, Painting and Coating.

B. Repair of Damaged Hot-Dip Galvanized Coating:

1. Conform to ASTM A780/A780M.
2. For minor repairs at abraded areas, use sprayed zinc conforming to ASTM A780/A780M.
3. For flame cut or welded areas, use zinc-based solder, or zinc sticks, conforming to ASTM A780/A780M.
4. Use magnetic gauge to determine thickness is equal to or greater than base galvanized coating.

C. Field Painting of Shop Primed Surfaces: Prepare surfaces and field finish in accordance with Section 09 90 00, Painting and Coating.

3.05 FIELD QUALITY ASSURANCE AND QUALITY CONTROL

A. Owner-Furnished Quality Assurance:

1. In accordance with IBC Chapter 17 requirements, is provided in the Statement of Special Inspections Plan.
2. Contractor responsibilities and related information on special inspection, observation, and testing are included in Section 01 45 33, Special Inspection, Observation, and Testing.

B. Contractor-Furnished Quality Control:

1. Inspection and testing required in Section 01 45 16.13, Contractor Quality Control.
2. Manufacturer's Certificate of Compliance per Section 01 61 00, Common Product Requirements, for test results, or calculations, or

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

drawings that ensure material and equipment design and design criteria meet requirements of Section 01 61 00, Common Product Requirements and Section 01 88 15, Anchorage and Bracing.

3. Special inspection shall be provided by Owner where indicated in Statement of Special Inspections Plan.

3.06 FASTENER SCHEDULE

- A. Unless indicated otherwise on Drawings, provide fasteners as follows:

Service Use and Location	Product	Remarks
1. Anchor Bolts Cast Into Concrete for Structural Steel, Metal Fabrications and Castings		
Interior Dry Areas	Hot-dip galvanized steel headed anchor bolts, unless indicated otherwise	
Exterior and Interior Wet Areas	Stainless steel headed anchor bolts	
Submerged and Corrosive Areas	Stainless steel headed anchor bolts with fusion bonded coating	See Section 09 90 00, Painting and Coating
2. Anchor Bolts Cast Into Concrete for Equipment Bases		
Interior Dry Areas	Hot-dip galvanized steel headed anchor bolts, unless otherwise specified with equipment	
Submerged, Exterior, Interior Wet, and Corrosive Areas	Stainless steel headed anchor bolts with fusion bonded coating, unless otherwise specified with equipment	See Section 09 90 00, Painting and Coating

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Service Use and Location	Product	Remarks
3. Post-Installed Anchors: See Section 05 05 19, Post-Installed Anchors		
4. Connections for Structural Steel Framing		
Exterior and Interior Wet and Dry Areas	High-strength steel bolted connections	Use hot-dipped galvanized high-strength bolted connections for galvanized steel framing members.
5. Connections for Steel Fabrications and Wood Components		
Exterior and Interior Wet and Dry Areas	Stainless steel bolted connections	
6. Connections of Aluminum Components		
Submerged, Exterior and Interior Wet and Dry Areas	Stainless steel bolted connections, unless otherwise specified with equipment	
7. All Others		
Exterior and Interior Wet and Dry Areas	Stainless steel fasteners	

B. Antiseizing Lubricant: Use on stainless steel threads.

**END OF SECTION**

**SECTION 05 52 16  
ALUMINUM RAILINGS**

**PART 1 GENERAL**

**1.01 REFERENCES**

A. The following is a list of standards which may be referenced in this section:

1. Aluminum Association: Aluminum Design Manual.
2. Aluminum Association, Incorporated (AA): DAF45, Designation System for Aluminum Finishes.
3. American Concrete Institute (ACI) 318, Building Code Requirements for Structural Concrete.
4. American Iron and Steel Institute (AISI).
5. ASTM International (ASTM):
  - a. A193/A193M, Standard Specification for Alloy-Steel and Stainless Steel Bolting for High Temperature or High Pressure Service and Other Special Purpose Applications.
  - b. A194/A194M, Standard Specification for Carbon and Alloy Steel Nuts for Bolts for High Pressure or High Temperature Service, or Both.
  - c. E894, Standard Test Method for Anchorage of Permanent Metal Railing Systems and Rails for Buildings.
  - d. E935, Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings.
  - e. E985, Standard Specification for Permanent Metal Railing Systems and Rails for Buildings.
6. California Buildings Commission: California Building Code (IBC).
7. Occupational Safety and Health Act (OSHA): 29 CFR 1910, Code of Federal Regulations.

**1.02 DEFINITIONS**

- A. ICC Evaluation Services Report: ICC report on evaluation of manufactured concrete anchor systems.
- B. Railings: This term includes guardrail systems, handrail systems, platform railing systems, ramp-rail systems, and stair-rail systems. Railings may be comprised of a framework of vertical, horizontal, or inclined members, grillwork or panels, accessories, or combination thereof.
- C. Special Inspection: As defined by the ICC IBC.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Toeboards: Vertical barrier at floor level usually erected on railings along exposed edges of floor or wall openings, platforms, or ramps to prevent miscellaneous items from falling through.

1.03 DESIGN REQUIREMENTS

- A. Structural Performance of Railing Systems: Design, test, fabricate, and install railings to withstand the following structural loads without exceeding allowable design working stress or allowable deflection. Apply each load to produce maximum stress and deflection in railing system components.
1. Railing System: Capable of withstanding the following load cases applied:
    - a. Concentrated load of 200 pounds applied at any point and in any direction in accordance with CBC and OSHA.
    - b. Uniform load of 50 pounds per linear foot applied in any direction in accordance with CBC.
    - c. Concentrated load need not be assumed to act concurrently with uniform loads in accordance with CBC.
  2. In-Fill Area of Railing Systems:
    - a. Capable of withstanding a horizontally applied normal load of 50 pounds applied to 1 square foot at any point in system including panels, intermediate rails, balusters, and openings and space between railings.
    - b. Horizontal concentrated load need not be assumed to act concurrently with loads on top rails of railings.
  3. Calculated lateral deflection at top of posts shall not exceed 1 inch.

1.04 SUBMITTALS

- A. Action Submittals:
1. Shop Drawings:
    - a. Project-specific scaled plans and elevations of railings and detail drawings. Include railing profiles, sizes, connections, anchorage, size and type of fasteners, and accessories.
    - b. Manufacturer's literature and catalog data of railing and components.
    - c. Design Data: Calculations or test data using specified design performance loads and including the following:
      - 1) Railing calculations including the connection design shall be performed based on Aluminum Design Manual.
      - 2) Bending stress in, and deflection of, posts in accordance with ASTM E985 as modified herein.
      - 3) Design of post base connection.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 4) Documentation that concrete anchors have been designed in accordance with one of the following:
    - a) ACI 318, Appendix D.
    - b) ICC Evaluation Services Report for selected anchor.
  2. Samples:
    - a. Rail sections, 6 inches long showing each type of proposed connection, proposed finish, and workmanship.
    - b. Each fitting including wall brackets, castings, toeboard, and rail expansion joints.
- B. Informational Submittals:
1. Manufacturer's assembly and installation instructions.
  2. Special Inspection: Manufacturer's instructions for Special Inspection of post-installed anchors.
  3. Test Reports: Test data may supplement load calculations providing data covers complete railing system, including anchorage:
    - a. Test data for railing and components showing load and deflection as a result of load, in enough detail to prove railing is strong enough and satisfies national, state, local standards, regulations, code requirements, and OSHA 29 CFR 1910, using design loads specified. Include test data for the following:
      - 1) Railing and post connections.
      - 2) Railing wall connections.
      - 3) Railing expansion joint connections.
      - 4) Railing system gate assembly, including latch, gate stop, and hinges. Both gate latch and stop to support required loads applied independent of each other.
      - 5) Railing picket panel clamps and connections.
    - b. Testing of anchorages shall be in accordance with ASTM E894 and ASTM E935 using applied loads in accordance with ICC IBC.
    - c. Deflection Criteria: In accordance with ASTM E985 and design loads specified, except as follows: maximum calculated lateral deflection at top of posts shall not exceed 1 inch.
    - d. Aluminum Rail Piping: Test data showing yield strength of pipe as delivered equals or exceeds specified values.
  4. Manufacturer's written recommendations describing procedures for maintaining railings including cleaning materials, application methods, and precautions to be taken in use of cleaning materials.

## 1.05 QUALITY ASSURANCE

- A. Qualifications: Calculations required for design data shall be stamped by a registered civil or structural engineer licensed in state where Project will be constructed.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Package and wrap railings to prevent scratching and denting during shipment, storage, and installation. Maintain protective wrapping to the extent possible until railing is completely installed.
- B. Delivery:
  - 1. Shop assemble into practical modules of lengths not exceeding 24 feet for shipment.
  - 2. Deliver toeboards loose for field assembly.
  - 3. Deliver clear anodized railing pipe and posts with protective plastic wrap.

1.07 ENVIRONMENTAL REQUIREMENTS

- A. Thermal Movements: Allow for thermal movement resulting from the following maximum range in ambient temperature in design, fabrication, and installation of railings to prevent buckling, opening up of joints, over stressing of components, connections and other detrimental effects. Base design calculation on actual surface temperature of material as a result of both solar heat gain and night time sky heat loss. Temperature change is difference between high or low temperature and installation temperature.
  - 1. Temperature Change Range: 70 degrees F, ambient; 100 degrees F, material surfaces.

**PART 2 PRODUCTS**

2.01 ALUMINUM RAILINGS

- A. General:
  - 1. All aluminum members shall be anodized.
  - 2. Furnish pre-engineered and prefabricated railing systems as shown on Drawings.
  - 3. Railing systems using pop rivets or glued railing construction are not permitted.
  - 4. Sand cast accessories and components are not permitted.
  - 5. Fasteners shall be AISI Type 304 or Type 316 stainless steel, unless otherwise noted.
- B. Rails, Posts, and Formed Elbows:
  - 1. Extruded Alloy 6105-T5, 6061-T6, or equivalent.
  - 2. Tensile Strength: 38,000 psi, minimum.
  - 3. Yield Strength: 35,000 psi, minimum.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Wall Thickness: 0.145 inch, minimum.
5. Posts and railings shall be nominal 1-1/2-inch diameter (1.90-inch outside diameter).

C. Accessories:

1. Fittings and Accessories:
  - a. Extruded, machined bar stock, permanent mold castings, or die castings of sufficient strength to meet load requirements.
  - b. Gauge metal components are not acceptable for load-resisting components.
  - c. Fittings shall match color of pipe in railings.
2. Miscellaneous Extruded Aluminum Parts: Alloys 6063-T6, 6061-T6, or 6105 T5 aluminum, or equivalent, and of adequate strength for all loads.
3. Castings for Railings:
  - a. Cast Al-mag with sufficient strength to meet load and test requirements.
  - b. Anodizable grade finish with excellent resistance to corrosion when subjected to exposure of sodium chloride solution intermittent spray and immersion.
4. Post Anchorages:
  - a. Refer to standard details for types of post anchorages and minimum requirements.
  - b. Bolts at anchorages shall be minimum 1/2-inch diameter.
5. Wall Brackets: Adjustable wall fitting, with provision for minimum three 3/8-inch diameter AISI Type 304 or Type 316 stainless steel bolts or concrete anchors.
6. Rail Terminals (including Wall Returns): Aluminum wall fitting with provision for three 3/8-inch Type 304 fasteners.
7. Railing System Gate:
  - a. Extruded aluminum rail components.
  - b. Hardware Manufacturers and Products:
    - 1) Julius Blum & Co., Inc., Carlstadt, NJ; No. 782/3 gate hinges with springs, and No. 784 gate latch and stop.
    - 2) CraneVeyor Corp., South El Monte, CA; No. C4370b gate hinges with spring, No. C4369 gate latch, and No. C4368 gate stop.
    - 3) Moultrie Manufacturing Co., Moultrie, GA; Part No. W60006.
    - 4) Or approved equal.
8. Toeboards:
  - a. Molded or extruded Alloy 6063-T6 or 6061-T6 aluminum.
  - b. Provide slotted holes for expansion and contraction where required.
9. Fasteners: Stainless steel.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

D. Metal Supports Embedded in Concrete: In accordance with Section 05 50 00, Metal Fabrications.

E. Finishes:

1. Pipe and Post: In accordance with AA DAF45, designation AA-M32-C22-A41.
2. Cast Fittings and Toeboards: In accordance with AA DAF45, designation AA-M10-C22-A41.

2.02 ANCHOR BOLTS, FASTENERS, AND CONCRETE ANCHORS

A. Locknuts, Washers, and Screws:

1. Elastic Locknuts, Steel Flat Washers, Round Head Machine Screws (RHMS): AISI Type 304 or Type 316 stainless steel.
2. Flat Washers: Molded nylon.

B. Bolts and Nuts for Bolting Railing to Metal Beams: ASTM A193/A193M and ASTM A194/A194M, Type 304 or Type 316 stainless steel.

C. Concrete Anchors:

1. Stainless steel, AISI Type 304 or Type 316.
2. Post-installed anchors in accordance with Section 05 50 00, Metal Fabrications, unless otherwise specified herein.
3. Bolt Diameter: 1/2-inch, minimum.

2.03 FABRICATION

A. Shop Assembly:

1. Post Spacing: Maximum 6-foot horizontal spacing.
2. Railing Posts Bolted to Metal or Concrete:
  - a. In lieu of field cutting, provide approved fitting with sufficient post overlap, containing provisions for vertical adjustment.
  - b. Field fit-up is required.
3. Free of burrs, nicks, and sharp edges when fabrication is complete.
4. Welding is not permitted.

B. Shop/Factory Finishing:

1. Use same alloy for uniform appearance throughout fabrication for railings.
2. Railing and Post Fittings: Match fittings with color of pipe in railing.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Shop Assembly:
  - 1. Shop assemble rails, posts, and formed elbows with a close tolerance for tight fit.
  - 2. Fit dowels tightly inside posts.
- D. Repair of Defective Work: Remove stains and replace defective Work.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Field fabrication of aluminum railing systems is not permitted.
- B. Fabricate aluminum railing in accordance with approved Shop Drawings.
- C. Install railing with base that provides plus or minus 1/4-inch vertical adjustment inside base fitting. If adjustment is required in field and exceeds plus or minus 1/4-inch, reduce post length not to exceed beyond bottom of lowest set-screw or bolt in base fitting. Modification to post shall be approved by Engineer prior to making changes.
- D. Modification to supporting structure is not permitted where railing is to be attached.
- E. Mount railings only on completed walls.
- F. Protection from Entrapped Water:
  - 1. Make provisions in exterior and interior installations subject to high humidity to drain water from railing system.
  - 2. For posts mounted in concrete, bends, and elbows occurring at low points, drill weep holes of 1/4-inch diameter at lowest possible elevations, one hole per post or rail. Drill hole in plane of rail.

3.02 RAILING INSTALLATION

- A. Assembly and Installation: Perform in accordance with approved manufacturer's written recommendations for installation.
- B. Posts and Rails:
  - 1. Surface Mounted Posts:
    - a. Bolt post baseplate connectors firmly in place.
    - b. Shims, wedges, grout, and similar devices for railing post alignment not permitted.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Grouted Posts:
    - a. Clean dust and foreign matter from sleeves or blockouts.
    - b. Moisten interior of hole and surrounding surface with clean water. Fill hole with nonshrink grout or epoxy grout prior to installing post.
    - c. Brace railing until grout sets.
    - d. Posts installed outside and exposed to freezing temperatures, drill weep hole through post approximately 1/2 inch above level of grout inside post and in plane of rail to prevent entrapment and freezing of water inside post.
  3. Set posts plumb and aligned to within 1/8 inch in 12 feet.
  4. Set rails horizontal or parallel to slope of steps to within 1/8 inch in 12 feet.
  5. Install posts and rails in same plane.
  6. Remove projections or irregularities and provide a smooth surface for sliding hands continuously along top rail.
  7. Use offset rail for use on stairs and platforms if post is attached to web of stringers or structural platform supports.
  8. Support 1-1/2-inch rails directly above stairway stringers with offset fittings.
- C. Wall Brackets: Support wall rails on brackets spaced maximum 5 feet on centers as measured on the horizontal projection.
- D. Toeboard:
1. Provide at railings, except where 4-inch or higher concrete curbs are installed, at gates, or at stairways unless shown otherwise.
  2. Accurately measure in field for correct length; after railing post installation cut and secure to posts.
  3. Dimension between bottom of toeboard and walking surface not to exceed 1/4 inch.
  4. Install plumb and aligned to within 1/8 inch in 12 feet.
- E. Railing System Gate: Install in accordance with manufacturer's installation instructions.

### 3.03 FIELD FINISHING

- A. Corrosion Protection: Prevent galvanic action and other forms of corrosion caused from direct contact with concrete and dissimilar metals by coating metal surfaces as specified in Section 09 90 00, Painting and Coating.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.04 FIELD QUALITY CONTROL

- A. Post-installed anchors supporting railing systems require special inspection.
- B. Owner-Furnished Quality Assurance, in accordance with ICC IBC Chapter 17 requirements, is provided in the Statement of Special Inspections Plan on Drawings. Contractor responsibilities and related information are included in Section 01 45 33, Special Inspection Observation, and Testing.
- C. Contractor-Furnished Quality Control: Inspection and testing as required in Section 01 45 16.13, Contractor Quality Control.

3.05 CLEANING

- A. Wash railing system thoroughly using clean water and soap. Rinse with clean water.
- B. Do not use acid solution, steel wool, or other harsh abrasive.
- C. If stain remains after washing, restore in accordance with approved railing manufacturer's recommendations or replace stained railings.

**END OF SECTION**

**SECTION 05 53 00  
METAL GRATINGS**

**PART 1 GENERAL**

**1.01 REFERENCES**

- A. The following is a list of standards which may be referenced in this section:
1. American Association of State Highway and Transportation Officials (AASHTO): Standard Specifications for Highway Bridges.
  2. ASTM International (ASTM):
    - a. A36/A36M, Standard Specification for Carbon Structural Steel.
    - b. A510, Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel.
    - c. A666, Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
    - d. A1011/A1011M, Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
    - e. B221, Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
  3. National Association of Architectural Metal Manufacturers (NAAMM):
    - a. MBG 531, Metal Bar Grating Manual.
    - b. MBG 532, Heavy-Duty Metal Bar Grating Manual.

**1.02 SUBMITTALS**

- A. Action Submittals:
1. Shop Drawings:
    - a. Grating: Show dimensions, weight, size, and location of connections to adjacent grating, supports, and other Work.
    - b. Grating Anchorage: Show details of anchorage to supports to prevent displacement from traffic impact.
    - c. Product data for grating, grating clips, anchors, accessories, and other manufactured products specified herein.
    - d. Manufacturer's specifications, including coatings, surface treatment, and finishes.
- B. Informational Submittals:
1. Special handling and storage requirements.
  2. Installation instructions.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 DELIVERY, STORAGE, AND HANDLING

- A. Insofar as is practical, factory assemble items.
- B. Package and clearly tag parts and assemblies that are, due to necessity, shipped unassembled.

**PART 2 PRODUCTS**

2.01 MANUFACTURERS

- A. Materials, equipment, and accessories specified in this section shall be products of:
  - 1. Alabama Metal Industries Corporation (AMICO), Birmingham, AL.
  - 2. IKG Industries, Houston, TX.
  - 3. Ohio Gratings, Inc., Canton, OH.
  - 4. Seidelhuber Metal Products, Inc., South San Francisco, CA.
  - 5. Or approved equal.

2.02 GRATING MATERIALS

- A. Aluminum: Provide alloy and temper as designated below.
  - 1. Bearing Bars and Banding: ASTM B221 alloy 6061-T6 or 6063-T6.
  - 2. Swaged Crossbar Rods: ASTM B221 alloy 6061 or 6063, or ASTM B210 alloy 3003.
  - 3. Finish: Mill.

2.03 METAL BAR GRATING

- A. General Requirements:
  - 1. Maximum Service Load:
    - a. Light Duty (Type A): 100 psf uniformly distributed load.
    - b. Medium Duty (Type B): 500 psf uniformly distributed load.
  - 2. Maximum Deflection: Span/240 or 1/4 inch, whichever is less.
  - 3. Bearing Bar Spacing:
    - a. Light Duty: 1-3/16-inch maximum, center-to-center.
    - b. Medium Duty: 15/16-inch maximum, center-to-center.
  - 4. Cross Bar Spacing: 4 inches maximum, center-to-center. For aluminum I-bar grating with depths greater than 2 inches, provide cross bars at 2 inches maximum, center-to-center.
  - 5. Bearing Bars, Cross Bars and Banding: Minimum thickness as specified in NAAMM MBG 531 or as shown on Drawings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Grating Materials: Aluminum, pressure-locked rectangular bar grating fabricated by pressing crossbars between rectangular bearing bars.
- C. Surface: Plain.
- D. Stair Treads:
  - 1. Material and Type: Same as grating material and grating type as furnished for connecting walkway or work surface.
  - 2. Nosings: Integral ribbing and serrated edge on one long axis of tread, or nonslip abrasive on each tread along one long edge.
  - 3. Carrier Plate or Angle: Furnish at each end for connection to stair stringers.

2.04 ACCESSORIES

- A. Embedded Frames: As indicated on Drawings and as specified in Section 05 50 00, Metal Fabrications.
- B. Grating Clamps:
  - 1. Use at flanged beam and bolted angle frame supports.
  - 2. Removable from above grating walkway surface.
  - 3. Provide hat bracket, recessed bolt, and bottom clamp of same material as grating.
  - 4. Manufacturers and Products:
    - a. Direct Metals Company, LLC, Kennesaw, GA; Grating Clamp.
    - b. Grating Fasteners, Inc., Harvey, LA; G-Clip.
    - c. Or approved equal.
- C. Anchor Stud and Saddle Clip:
  - 1. Use at embedded angle frame supports with stud anchor and nut recessed below top of grating surface.
  - 2. Removable from above grating walkway surface.
  - 3. Provide Type 316 stainless steel welded threaded stud anchor, nut, washer, and saddle clip.
  - 4. Manufacturers and Products:
    - a. Welded Stud Anchor:
      - 1) Nelson Stud Welding, Inc., Elyria, OH.
      - 2) Stud Welding Associates, Inc. Elyria, OH.
      - 3) Or approved equal.
    - b. Saddle Clip:
      - 1) Direct Metals Company, LLC, Kennesaw, GA; Saddle Clip.
      - 2) Grating Fasteners, Inc., Harvey, LA; Saddle Clip.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 3) Struct-Fast, Inc., Baltimore, MD; Gratefast.
- 4) Or approved equal.

2.05 FABRICATION

A. General:

1. In accordance with NAAMM MBG 531 or NAAMM MBG 532.
2. Do not weld aluminum grating.
3. Conceal fastenings where practical.
4. Drill metalwork and countersink holes as required for attaching hardware or other materials.
5. Cutouts:
  - a. Fabricate in grating sections for penetrations indicated.
  - b. Arrange to permit grating removal without disturbing items penetrating grating.
  - c. Edge band openings in grating that interrupt four or more bearing bars with bars of same size and material as bearing bars.
6. Do not notch bearing bars at supports to maintain elevation.
7. Field measure areas to receive grating. Verify dimensions of new fabricated supports, and fabricate to dimension required for specified clearances.
8. Section Length: Sufficient to prevent section from falling through clear opening when oriented in the span direction and one end is touching either the concrete or the vertical leg of grating support.
9. Minimum Bearing: 1 inch for grating depth up to 2-1/4 inches and 2 inches for grating depth greater than 2-1/4 inches.
10. Banding and Toe Plates: Same material as grating and welded to bearing bars in accordance with requirements of NAAMM MBG 531 and NAAMM MBG 532.

B. Metal Bar Grating: A single grating section shall be not less than 1.5 feet or greater than 3 feet in width, or weigh more than 150 pounds.

C. Heavy Duty Metal Bar Grating: Minimum width of grating sections shall be 2 feet regardless of length and weight.

D. Supports:

1. Same material as grating, except that supports which are to be embedded in concrete shall be Type 316 stainless steel, unless part of an extruded aluminum system.
2. Coordinate dimensions and fabrication with grating to be supported.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 3 EXECUTION**

3.01 PREPARATION

- A. Electrolytic Protection:
  - 1. Protect aluminum surfaces in contact with dissimilar metals, or embedded or in contact with masonry, grout, or concrete as specified in Section 09 90 00, Painting and Coating.
  - 2. Allow paint to dry before installation of material.

3.02 INSTALLATION

- A. Until grating sections are securely fastened in place, area shall be appropriately barricaded or flagged to alert people working in the area of potential fall hazard.
- B. Install manufactured products in accordance with manufacturer's recommendations.
- C. Install supports such that grating sections have a solid bearing on both ends, and that grating sections will not rock or wobble under design loads.
- D. Install grating supports plumb and level as applicable.
- E. Install sections of welded frames with anchors to straight plane without offsets.
- F. Field locate and install fasteners to fit grating layout.
- G. Anchor grating securely to supports using minimum of four fastener clips and bolts per grating section.
- H. Each grating or plank section shall be easily removable and replaceable.
- I. Completed installation shall be rigid and neat in appearance.
- J. Protect painted and galvanized surfaces during installation.
- K. Repair damaged coatings as specified in Section 09 90 00, Painting and Coating.

**END OF SECTION**

**SECTION 09 90 00**  
**PAINTING AND COATING**

1.02 DEFINITIONS

A. Terms used in this Section:

1. Coverage: Total minimum dry film thickness in mils or square feet per gallon.
2. FRP: Fiberglass Reinforced Plastic.
3. HCl: Hydrochloric Acid.
4. MDFT: Minimum Dry Film Thickness, mils.
5. MDFTPC: Minimum Dry Film Thickness per Coat, mils.
6. Mil: Thousandth of an inch.
7. PPDS: Paint Product Data Sheet.
8. PSDS: Paint System Data Sheet.
9. PVC: Polyvinyl Chloride.
10. SFPG: Square Feet per Gallon.
11. SFPGPC: Square Feet per Gallon per Coat.
12. SP: Surface Preparation.

1.03 SUBMITTALS

A. Action Submittals:

1. Shop Drawings:
  - a. Data Sheets:
    - 1) For each product, furnish a Paint Product Data Sheet (PPDS), the manufacturer's technical data sheets, and paint colors available (where applicable). The PPDS form is appended to the end of this section.
    - 2) For each paint system, furnish a Paint System Data Sheet (PSDS). The PSDS form is appended to the end of this section.
    - 3) Technical and performance information that demonstrates compliance with specification.
    - 4) Furnish copies of paint system submittals to the coating applicator.
    - 5) Indiscriminate submittal of only manufacturer's literature is not acceptable.
  - b. Detailed chemical and gradation analysis for each proposed abrasive material.
2. Samples:
  - a. Proposed Abrasive Materials: Minimum 5-pound sample for each type.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Reference Panel:
  - 1) Surface Preparation:
    - a) Prior to start of surface preparation, furnish a 4-inch by 4-inch steel panel for each grade of sandblast specified herein, prepared to specified requirements.
    - b) Provide panel representative of the steel used; prevent deterioration of surface quality.
    - c) Panel to be reference source for inspection upon approval by Engineer.
  - 2) Paint:
    - a) Unless otherwise specified, before painting work is started, prepare minimum 8-inch by 10-inch sample with type of paint and application specified on similar substrate to which paint is to be applied.
    - b) Furnish additional samples as required until colors, finishes, and textures are approved.
    - c) Approved samples to be the quality standard for final finishes.

B. Informational Submittals:

- 1. Applicator's Qualification: Shall be experienced as an applicator for similar types of application.
- 2. Coating manufacturer's Certificate of Compliance, in accordance with Section 01 43 33, Manufacturers' Field Services.
- 3. Factory Applied Coatings: Manufacturer's certification stating factory applied coating system meets or exceeds requirements specified.
- 4. Manufacturer's written verification that submitted material is suitable for the intended use.
- 5. Coating for Faying Surfaces: Manufacturer's test results that show the proposed coating meets the slip resistance requirements of the AISC Specification for Structural Joints using ASTM A325 or ASTM A490 bolts.
- 6. If the manufacturer of finish coating differs from that of shop primer, provide finish coating manufacturer's written confirmation that materials are compatible.
- 7. Manufacturer's written instructions and special details for applying each type of paint.

1.04 QUALITY ASSURANCE

- A. Applicator Qualifications: Experience in application of specified products.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Regulatory Requirements:

1. Meet federal, state, and local requirements limiting the emission of volatile organic compounds.
2. Perform surface preparation and painting in accordance with recommendations of the following:
  - a. Paint manufacturer's instructions.
  - b. SSPC PA 10.
  - c. Federal, state, and local agencies having jurisdiction.

C. Mockup:

1. Before proceeding with Work under this section, finish one complete space or item of each color scheme required showing selected colors, finish texture, materials, quality of work, and special details.
2. After Engineer approval, sample spaces or items shall serve as a standard for similar work throughout the Project.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Shipping:

1. Where precoated items are to be shipped to the Site, protect coating from damage. Batten coated items to prevent abrasion.
2. Protect shop painted surfaces during shipment and handling by suitable provisions including padding, blocking, and use of canvas or nylon slings.

B. Storage:

1. Store products in a protected area that is heated or cooled to maintain temperatures within the range recommended by paint manufacturer.
2. Primed surfaces shall not be exposed to weather for more than 2 months before being topcoated, or less time if recommended by coating manufacturer.

1.06 PROJECT CONDITIONS

A. Environmental Requirements:

1. Do not apply paint in temperatures or moisture conditions outside of manufacturer's recommended maximum or minimum allowable.
2. Do not perform final abrasive blast cleaning whenever relative humidity exceeds 85 percent, or whenever surface temperature is less than 5 degrees F above dew point of ambient air.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.07 EXTRA MATERIALS

- A. Provide small quantity kits for touchup painting and for painting other small areas.
- B. Fusion Bonded Coating: Provide appropriate liquid repair kits for field use.

**PART 2 PRODUCTS**

2.01 MANUFACTURERS

- A. Nationally recognized manufacturers of paints and protective coatings who are regularly engaged in the production of such materials for essentially identical service conditions.
- B. Experience in providing products as specified for this Project.
- C. Each of the following manufacturers is capable of supplying most of the products specified herein:
  - 1. Sherwin Williams.
  - 2. Tnemec Coatings.
  - 3. Azko Nobel (Devoe, International).
  - 4. Carboline Coatings.
  - 5. PPG Industrial Coatings.
  - 6. Or approved equal.

2.02 ABRASIVE MATERIALS

- A. Select abrasive type and size to produce surface profile that meets coating manufacturer's recommendations for specific primer and coating system to be applied.

2.03 PAINT MATERIALS

- A. General:
  - 1. Manufacturer's highest quality products suitable for intended service.
  - 2. Compatibility: Only compatible materials from a single manufacturer shall be used in the Work. Particular attention shall be directed to compatibility of primers and finish coats.
  - 3. Thinners, Cleaners, Driers, and Other Additives: As recommended by coating manufacturer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Products:

Product	Definition
Acrylic Latex	Single-component, finish as required
Alkyd Enamel	Optimum quality, gloss or semigloss finish as required, medium long oil
Bituminous Paint	Single-component, coal-tar pitch based
Coal-Tar Epoxy	Amine, polyamide, or phenolic epoxy type 70% volume solids minimum, suitable for immersion service
Epoxy Primer— Ferrous Metal	Anticorrosive, converted epoxy primer containing rust-inhibitive pigments
Epoxy Primer— Other	Epoxy primer, high-build, as recommended by coating manufacturer for specific galvanized metal, copper, or nonferrous metal alloy to be coated
Fusion Bonded Coating	100% solids, thermosetting, fusion bonded, dry powder epoxy, suitable for the intended service
High Build Epoxy	Polyamidoamine epoxy, minimum 69% volume solids, capability of 4 to 8 MDFT per coat
Polyurethane Enamel	Two-component, aliphatic or acrylic based polyurethane; high gloss finish

2.04 MIXING

A. Multiple-Component Coatings:

1. Prepare using each component as packaged by paint manufacturer.
2. No partial batches will be permitted.
3. Do not use multiple-component coatings that have been mixed beyond their pot life.
4. Furnish small quantity kits for touchup painting and for painting other small areas.
5. Mix only components specified and furnished by paint manufacturer.
6. Do not intermix additional components for reasons of color or otherwise, even within the same generic type of coating.

- B. Colors: Formulate paints with colorants free of lead, lead compounds, or other materials that might be affected by presence of hydrogen sulfide or other gas likely to be present at Site.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.05 SHOP FINISHES

- A. Shop Blast Cleaning: Reference Paragraph Shop Coating Requirements.
- B. Surface Preparation: Provide Engineer minimum 7 days' advance notice to start of shop surface preparation work and coating application work.
- C. Shop Coating Requirements:
  - 1. When required by equipment specifications, such equipment shall be primed and finish coated in shop by manufacturer and touched up in field with identical material after installation.
  - 2. Where manufacturer's standard coating is not suitable for intended service condition, Engineer may approve use of a tie-coat to be used between manufacturer's standard coating and specified field finish. In such cases, tie-coat shall be surface tolerant epoxy as recommended by manufacturer of specified field finish coat. Coordinate details of equipment manufacturer's standard coating with field coating manufacturer.
- D. Pipe:
  - 1. Ductile Iron Pipe:
    - a. Use SSPC standards as a guide for desired prepared surface. Follow recommendations of pipe and coating manufacturers for means and methods to achieve SSPC-equivalent surface.
    - b. The surface preparation and application of the primer and finish coats shall be performed by pipe manufacturer.
    - c. For high performance (epoxy) coatings, follow additional recommendations of pipe and coating manufacturers.
    - d. Prior to blast cleaning, grind smooth surface imperfections, including, but not limited to delaminating metal or oxide layers.
  - 2. Steel Pipe:
    - a. Surface preparation and application of primer and finish coats shall be performed by pipe manufacturer.
    - b. For pipe with epoxy lining, do not place end cap seals until pipe lining material has sufficiently cured.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Provide Engineer minimum 7 days' advance notice to start of field surface preparation work and coating application work.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Perform the Work only in presence of Engineer, unless Engineer grants prior approval to perform the Work in Engineer's absence.
- C. Schedule inspection of cleaned surfaces and all coats prior to succeeding coat in advance with Engineer.

3.02 EXAMINATION

- A. Factory Finished Items:
  - 1. Schedule inspection with Engineer before repairing damaged factory-finished items delivered to Site.
  - 2. Repair abraded or otherwise damaged areas on factory-finished items as recommended by coating manufacturer. Carefully blend repaired areas into original finish. If required to match colors, provide full finish coat in field.
- B. Surface Preparation Verification: Inspect and provide substrate surfaces prepared in accordance with these Specifications and printed directions and recommendations of paint manufacturer whose product is to be applied. The more stringent requirements shall apply.

3.03 PROTECTION OF ITEMS NOT TO BE PAINTED

- A. Remove, mask, or otherwise protect hardware, lighting fixtures, switchplates, aluminum surfaces, machined surfaces, couplings, shafts, bearings, nameplates on machinery, and other surfaces not specified elsewhere to be painted.
- B. Provide drop cloths to prevent paint materials from falling on or marring adjacent surfaces.
- C. Protect working parts of mechanical and electrical equipment from damage during surface preparation and painting process.
- D. Mask openings in motors to prevent paint and other materials from entering.
- E. Protect surfaces adjacent to or downwind of Work area from overspray.

3.04 SURFACE PREPARATION

- A. Field Abrasive Blasting:
  - 1. Perform blasting for items and equipment where specified and as required to restore damaged surfaces previously shop or field blasted and primed or coated.
  - 2. Refer to coating systems for degree of abrasive blasting required.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Where the specified degree of surface preparation differs from manufacturer's recommendations, the more stringent shall apply.

B. Metal Surface Preparation:

1. Where indicated, meet requirements of SSPC Specifications summarized below:
  - a. SP 1, Solvent Cleaning: Removal of visible oil, grease, soil, drawing and cutting compounds, and other soluble contaminants by cleaning with solvent.
  - b. SP 2, Hand Tool Cleaning: Removal of loose rust, loose mill scale, loose paint, and other loose detrimental foreign matter, using nonpower hand tools.
  - c. SP 3, Power Tool Cleaning: Removal of loose rust, loose mill scale, loose paint, and other loose detrimental foreign matter, using power-assisted hand tools.
  - d. SP 5, White Metal Blast Cleaning: Removal of visible oil, grease, dust, dirt, mill scale, rust, coatings, oxides, corrosion products, and other foreign matter by blast cleaning.
  - e. SP 6, Commercial Blast Cleaning: Removal of visible oil, grease, dust, dirt, mill scale, rust, coatings, oxides, corrosion products, and other foreign matter, except for random staining limited to no more than 33 percent of each unit area of surface which may consist of light shadows, slight streaks, or minor discolorations caused by stains of rust, stains of mill scale, or stains of previously applied coatings.
  - f. SP 7, Brush-Off Blast Cleaning: Removal of visible rust, oil, grease, soil, dust, loose mill scale, loose rust, and loose coatings. Tightly adherent mill scale, rust, and coating may remain on surface.
  - g. SP 10, Near-White Blast Cleaning: Removal of visible oil, grease, dust, dirt, mill scale, rust, coatings, oxides, corrosion products, and other foreign matter, except for random staining limited to no more than 5 percent of each unit area of surface which may consist of light shadows, slight streaks, or minor discolorations caused by stains of rust, stains of mill scale, or stains of previously applied coatings.
  - h. SP 11, Power Tool Cleaning to Bare Metal: Removal of visible oil, grease, dirt, dust, mill scale, rust, paint, oxide, corrosion products, and other foreign matter using power-assisted hand tools capable of producing suitable surface profile. Slight residues of rust and paint may be left in lower portion of pits if original surface is pitted.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- i. SP-16, Brush Blasting of Non-Ferrous Metals: A brush-off blast cleaned non-ferrous metal surface, when viewed without magnification, shall be free of all visible oil, grease, dirt, dust, metal oxides (corrosion products), and other foreign matter. Intact, tightly adherent coating is permitted to remain. A coating is considered tightly adherent if it cannot be removed by lifting with a dull putty knife. Bare metal substrates shall have a minimum profile of 19 micrometers (0.75 mil).
2. The words “solvent cleaning”, “hand tool cleaning”, “wire brushing”, and “blast cleaning”, or similar words of equal intent in these Specifications or in paint manufacturer’s specification refer to the applicable SSPC Specification.
3. Where OSHA or EPA regulations preclude standard abrasive blast cleaning, wet or vacu-blast methods may be required. Coating manufacturers’ recommendations for wet blast additives and first coat application shall apply.
4. Ductile Iron Pipe Supplied with Asphaltic Varnish Finish: Remove asphaltic varnish finish prior to performing specified surface preparation.
5. Hand tool clean areas that cannot be cleaned by power tool cleaning.
6. Round or chamfer sharp edges and grind smooth burrs, jagged edges, and surface defects.
7. Welds and Adjacent Areas:
  - a. Prepare such that there is:
    - 1) No undercutting or reverse ridges on weld bead.
    - 2) No weld spatter on or adjacent to weld or any area to be painted.
    - 3) No sharp peaks or ridges along weld bead.
  - b. Grind embedded pieces of electrode or wire flush with adjacent surface of weld bead.
8. Preblast Cleaning Requirements:
  - a. Remove oil, grease, welding fluxes, and other surface contaminants prior to blast cleaning.
  - b. Cleaning Methods: Steam, open flame, hot water, or cold water with appropriate detergent additives followed with clean water rinsing.
  - c. Clean small isolated areas as above or solvent clean with suitable solvent and clean cloth.
9. Blast Cleaning Requirements:
  - a. Type of Equipment and Speed of Travel: Design to obtain specified degree of cleanliness. Minimum surface preparation is as specified herein and takes precedence over coating manufacturer’s recommendations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Select type and size of abrasive to produce surface profile that meets coating manufacturer's recommendations for particular primer to be used.
  - c. Use only dry blast cleaning methods.
  - d. Do not reuse abrasive, except for designed recyclable systems.
  - e. Meet applicable federal, state, and local air pollution and environmental control regulations for blast cleaning, confined space entry (if required), and disposition of spent aggregate and debris.
10. Post-Blast Cleaning and Other Cleaning Requirements:
- a. Clean surfaces of dust and residual particles from cleaning operations by dry (no oil or water vapor) air blast cleaning or other method prior to painting. Vacuum clean enclosed areas and other areas where dust settling is a problem and wipe with a tack cloth.
  - b. Paint surfaces the same day they are blasted. Reblast surfaces that have started to rust before they are painted.
- C. Galvanized Metal, Copper, and Nonferrous Metal Alloy Surface Preparation:
- 1. Remove soil, cement spatter, and other surface dirt with appropriate hand or power tools.
  - 2. Brush blast in accordance with SSPC SP 16.
  - 3. Obtain and follow coating manufacturer's recommendations for additional preparation that may be required.
- D. Concrete Surface Preparation:
- 1. Do not begin until 30 days after concrete has been placed.
  - 2. Meet requirements of SSPC SP 13.
  - 3. Remove grease, oil, dirt, salts or other chemicals, loose materials, or other foreign matter by solvent, detergent, or other suitable cleaning methods.
  - 4. Brush-off blast clean to remove loose concrete and laitance, and provide a tooth for binding. Upon approval by Engineer, surface may be cleaned by acid etching method. Approval is subject to producing desired profile equivalent to No. 80 grit flint sandpaper. Acid etching of vertical or overhead surfaces shall not be allowed.
  - 5. Secure coating manufacturer's recommendations for additional preparation, if required, for excessive bug holes exposed after blasting.
  - 6. Unless otherwise required for proper adhesion, ensure surfaces are dry prior to painting.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Plastic and FRP Surface Preparation:
  - 1. Hand sand plastic surfaces to be coated with medium grit sandpaper to provide tooth for coating system.
  - 2. Large areas may be power sanded or brush-off blasted, provided sufficient controls are employed so surface is roughened without removing excess material.
  
- F. Gypsum Board Surface Preparation: Typically, new gypsum board surfaces need no special preparation before painting.
  - 1. Surface Finish: Dry, free of dust, dirt, powdery residue, grease, oil, or any other contaminants.

3.05 SURFACE CLEANING

- A. Brush-off Blast Cleaning:
  - 1. Equipment, procedure, and degree of cleaning shall meet requirements of SSPC SP 7.
  - 2. Abrasive: Either wet or dry blasting sand, grit, or nutshell.
  - 3. Select various surface preparation parameters, such as size and hardness of abrasive, nozzle size, air pressure, and nozzle distance from surface such that surface is cleaned without pitting, chipping, or other damage.
  - 4. Verify parameter selection by blast cleaning a trial area that will not be exposed to view.
  - 5. Engineer will review acceptable trial blast cleaned area and use area as a representative sample of surface preparation.
  - 6. Repair or replace surface damaged by blast cleaning.
  
- B. Solvent Cleaning:
  - 1. Consists of removal of foreign matter such as oil, grease, soil, drawing and cutting compounds, and any other surface contaminants by using solvents, emulsions, cleaning compounds, steam cleaning, or similar materials and methods that involve a solvent or cleaning action.
  - 2. Meet requirements of SSPC SP 1.

3.06 APPLICATION

- A. General:
  - 1. The intention of these Specifications is for new, interior and exterior concrete and metal and submerged metal surfaces to be painted, whether specifically mentioned or not, except as specified otherwise. Do not paint exterior concrete surfaces, unless specifically indicated.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Extent of Coating (Immersion): Coatings shall be applied to internal vessel and pipe surfaces, nozzle bores, flange gasket sealing surfaces, carbon steel internals, and stainless steel internals, unless otherwise specified.
3. For coatings subject to immersion, obtain full cure for completed system. Consult coatings manufacturer's written instructions for these requirements. Do not immerse coating until completion of curing cycle.
4. Apply coatings in accordance with these Specifications and paint manufacturers' printed recommendations and special details. The more stringent requirements shall apply. Allow sufficient time between coats to assure thorough drying of previously applied paint.
5. Vacuum clean surfaces free of loose particles. Use tack cloth just prior to applying next coat.
6. Fusion Bonded Coatings Method Application: Electrostatic, fluidized bed, or flocking.
7. Coat units or surfaces to be bolted together or joined closely to structures or to one another prior to assembly or installation.
8. Water-Resistant Gypsum Board: Use only solvent type paints and coatings.
9. On pipelines, terminate coatings along pipe runs to 1 inch inside pipe penetrations.
10. Keep paint materials sealed when not in use.
11. Where more than one coat is applied within a given system, alternate colors to provide a visual reference showing required number of coats have been applied.

B. Galvanized Metal, Copper, and Nonferrous Metal Alloys:

1. Concealed galvanized, copper, and nonferrous metal alloy surfaces (behind building panels or walls) do not require painting, unless specifically indicated herein.
2. Prepare surface and apply primer in accordance with System No. 10 specification.
3. Apply intermediate and finish coats of the coating system appropriate for the exposure.

C. Porous Surfaces, Such As Concrete and Masonry:

1. Filler/Surfacer: Use coating manufacturer's recommended product to fill air holes, bug holes, and other surface voids or defects.
2. Prime Coat: May be thinned to provide maximum penetration and adhesion.
  - a. Type and Amount of Thinning: Determined by paint manufacturer and dependent on surface density and type of coating.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Surface Specified to Receive Water Base Coating: Damp, but free of running water, just prior to application of coating.

D. Film Thickness and Coverage:

1. Number of Coats:
  - a. Minimum required without regard to coating thickness.
  - b. Additional coats may be required to obtain minimum required paint thickness, depending on method of application, differences in manufacturers' products, and atmospheric conditions.
2. Application Thickness:
  - a. Do not exceed coating manufacturer's recommendations.
  - b. Measure using a wet film thickness gauge to ensure proper coating thickness during application.
3. Film Thickness Measurements and Electrical Inspection of Coated Surfaces:
  - a. Perform with properly calibrated instruments.
  - b. Recoat and repair as necessary for compliance with specification.
  - c. Coats are subject to inspection by Engineer and coating manufacturer's representative.
4. Visually inspect concrete, masonry, nonferrous metal, plastic, and wood surfaces to ensure proper and complete coverage has been attained.
5. Give particular attention to edges, angles, flanges, and other similar areas, where insufficient film thicknesses are likely to be present, and ensure proper millage in these areas.
6. Apply additional coats as required to achieve complete hiding of underlying coats. Hiding shall be so complete that additional coats would not increase the hiding.

3.07 PROTECTIVE COATINGS SYSTEMS AND APPLICATION SCHEDULE

- A. Unless otherwise shown or specified, paint surfaces in accordance with the following application schedule. In the event of discrepancies or omissions in the following, request clarification from Engineer before starting work in question.
- B. Additional requirements are included in the Piping Schedule.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. System No. 4 Exposed Metal—Highly Corrosive:

Surface Prep.	Paint Material	Min. Coats, Cover
SP 10, Near-White Blast Cleaning	Epoxy Primer— Ferrous Metal	1 coat, 2.5 MDFT
	High Build Epoxy	1 coat, 4 MDFT
	Polyurethane Enamel	1 coat, 3 MDFT

1. Use on the following items or areas:
  - a. Exposed metal surfaces new and located inside or outside of structures.

D. System No. 7 Concrete Encased Metal:

Surface Prep.	Paint Material	Min. Coats, Cover
SP 6, Commercial Blast Cleaning	High Build Epoxy	2 coats, 16 MDFT

1. Use on the following items or areas:
  - a. Use on concrete encased ferrous metals including wall pipes, pipe sleeves, access manholes, gate guides, and thimbles.

E. System No. 8 Buried Metal—General:

Surface Prep.	Paint Material	Min. Coats, Cover
SP 10, Near-White Blast Cleaning	Standard Hot Coal-Tar Enamel	AWWA C203
	-OR- Coal-Tar Epoxy	2 coats, 16 MDFT

1. Use on the following items or areas:
  - a. Buried, belowgrade portions of misc. steel items, except buried stainless steel or ductile iron.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

F. System No. 10 Galvanized Metal, Copper, and Nonferrous Metal Alloy Conditioning:

Surface Prep.	Paint Material	Min. Coats, Cover
In accordance with Paragraph Galvanized Metal, Copper, and Nonferrous Metal Alloy Surface Preparation	Epoxy Primer—Other	As recommended by coating manufacturer  Remaining coats as required for exposure

1. Use on the following items or areas:
  - a. Galvanized surfaces requiring painting.
  - b. After application of System No. 10, apply System No. 4 as finish coat.

G. System No. 25 Exposed FRP, CPVC:

Surface Prep.	Paint Material	Min. Coats, Cover
In accordance with Paragraph Plastic and FRP Surface Preparation	Acrylic Latex Semigloss	2 coats, 320 SFPGPC

1. Use on the following items or areas:
  - a. All exposed-to-view PVC and CPVC surfaces, and FRP surfaces without integral UV-resistant gel coat.

H. System No. 27 Aluminum and Dissimilar Metal Insulation:

Surface Prep.	Paint Material	Min. Coats, Cover
Solvent Clean (SP 1)	Prime in accordance with manufacturer's recommendations	
	Bituminous Paint	1 coat, 10 MDFT

1. Use on aluminum surfaces embedded or in contact with concrete.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

I. System No. 29 Fusion Bonded Coating:

Surface Prep.	Paint Material	Min. Coats, Cover
SP 10, Near-White Blast Cleaning	Fusion Bonded Coating 100% Solids Epoxy	1 or 2 coats, 7 MDFT

1. For steel pipe and fittings, meet all requirements of AWWA C213.

3.08 COLORS

- A. Provide as selected by Owner or Engineer.
- B. Proprietary identification of colors is for identification only. Selected manufacturer may supply matches.
- C. Equipment Colors:
  1. Equipment includes the machinery or vessel itself plus the structural supports and fasteners and attached electrical conduits.
  2. Paint nonsubmerged portions of equipment the same color as the piping it serves, except as itemized below:
    - a. Dangerous Parts of Equipment and Machinery: OSHA Orange.
    - b. Fire Protection Equipment and Apparatus: OSHA Red.
    - c. Radiation Hazards: OSHA Purple.
    - d. Physical hazards in normal operating area and energy lockout devices, including, but not limited to, electrical disconnects for equipment and equipment isolation valves in air and liquid lines under pressure: OSHA Yellow.
- D. Pipe Identification Painting:
  1. Color code nonsubmerged metal piping, except electrical conduit. Paint fittings and valves the same color as pipe, except equipment isolation valves.
  2. Pipe Color Coding: In accordance with Piping Schedule.
  3. On exposed stainless steel piping, apply color 24 inches in length along pipe axis at connections to equipment, valves, or branch fittings, at wall boundaries, and at intervals along piping not greater than 9 feet on center.
  4. Pipe Supports: Painted light gray, as approved by Owner.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Fiberglass reinforced plastic (FRP) pipe, polyvinylidene fluoride (PVDF), and polyvinyl chloride (PVC) pipe located inside of buildings and enclosed structures will not require painting, except as noted or scheduled.

3.09 FIELD QUALITY CONTROL

A. Testing Equipment:

1. Provide calibrated electronic type dry film thickness gauge to test coating thickness specified in mils.
2. Provide low-voltage wet sponge electrical holiday detector to test completed coating systems, 20 mils dry film thickness or less, except zinc primer, high-build elastomeric coatings, and galvanizing, for pinholes, holidays, and discontinuities, as manufactured by Tinker and Rasor, San Gabriel, CA, Model M-1.
3. Provide high-voltage spark tester to test completed coating systems in excess of 20 mils dry film thickness. Unit as recommended by coating manufacturer.

B. Testing:

1. Thickness and Continuity Testing:
  - a. Measure coating thickness specified in mils with a magnetic type, dry film thickness gauge, in accordance with SSPC PA 2. Check each coat for correct millage. Do not make measurement before a minimum of 8 hours after application of coating.
  - b. Holiday detect coatings 20 mils thick or less, except zinc primer and galvanizing, with low voltage wet sponge electrical holiday detector in accordance with NACE SP0188.
  - c. Holiday detect coatings in excess of 20 mils dry with high voltage spark tester as recommended by coating manufacturer and in accordance with NACE SP0188.
  - d. After repaired and recoated areas have dried sufficiently, retest each repaired area. Final tests may also be conducted by Engineer.

- C. Inspection: Leave staging and lighting in place until Engineer has inspected surface or coating. Replace staging removed prior to approval by Engineer. Provide additional staging and lighting as requested by Engineer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

D. Unsatisfactory Application:

1. If item has an improper finish color or insufficient film thickness, clean surface and topcoat with specified paint material to obtain specified color and coverage. Obtain specific surface preparation information from coating manufacturer.
2. Evidence of runs, bridges, shiners, laps, or other imperfections is cause for rejection.
3. Repair defects in accordance with written recommendations of coating manufacturer.

E. Damaged Coatings, Pinholes, and Holidays:

1. Hand or power sand visible areas of chipped, peeled, or abraded paint, and feather edges. Follow with primer and finish coat. Depending on extent of repair and appearance, a finish sanding and topcoat may be required.
2. Remove rust and contaminants from metal surface. Provide surface cleanliness and profile in accordance with surface preparation requirements for specified paint system.
3. Feather edges and repair in accordance with recommendations of paint manufacturer.
4. Apply finish coats, including touchup and damage-repair coats in a manner that will present a uniform texture and color-matched appearance.

3.10 MANUFACTURER'S SERVICES

A. In accordance with Section 01 43 33, Manufacturers' Field Services, coating manufacturer's representative shall be present at Site as follows:

1. On first day of application of any coating system.
2. A minimum of two additional Site inspection visits, each for a minimum of 4 hours, in order to provide Manufacturer's Certificate of Proper Installation.
3. As required to resolve field problems attributable to or associated with manufacturer's product.
4. To verify full cure of coating prior to coated surfaces being placed into immersion service.

3.11 CLEANUP

A. Place cloths and waste that might constitute a fire hazard in closed metal containers or destroy at end of each day.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Upon completion of the Work, remove staging, scaffolding, and containers from Site or destroy in a legal manner.
- C. Remove paint spots, oil, or stains upon adjacent surfaces and floors and leave entire job clean.

3.12 SUPPLEMENTS

- A. The supplements listed below, following “End of Section,” are a part of this Specification:
  - 1. Paint System Data Sheet (PSDS).
  - 2. Paint Product Data Sheet (PPDS).

**END OF SECTION**

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PAINT SYSTEM DATA SHEET (PSDS)**

Complete this PSDS for each coating system, include all components of the system (surface preparation, primer, intermediate coats, and finish coats). Include all components of a given coating system on a single PSDS.

Paint System Number (from Spec.):

B. Informational Submittals:

1. Manufacturer's installation instructions.
2. Anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.

**PART 2 PRODUCTS**

2.01 SIGN TYPES

A. Metal Sign (Type B):

1. Material: Baked enamel finished 18-gauge (minimum) aluminum signs.
2. Manufacturers:
  - a. Seton Identification Products.
  - b. Nutheme Illustrated Safety Co.
  - c. Or approved equal.

B. Individual Letter and Number Signs (Type E): Stainless steel for concealed flush mounting.

1. Manufacturers:
  - a. Eder Metal Letter Co., Milwaukee, WI.
  - b. Spanjer Brothers, Inc., Chicago, IL.
  - c. Andco Industries Corp., Greensboro, NC.
  - d. Or approved equal.

C. Exit Sign (Type G):

1. Material: Metal (Type B), 1/8-inch minimum thickness.
2. Letters:
  - a. 6 inches high, with 3/4-inch stroke.
  - b. 2 inches wide, except for letter "I", with spacing of 3/8 inch.
3. Colors: Red letters and direction arrows on white background.

2.02 IDENTIFICATION LABELS

A. Pipe Labels:

1. Snap-on, reversible type with lettering and directional arrows, sized for outside diameter of pipe and insulation.
2. Provided with ties or straps for pipes of 6 inches and over diameter.
3. Designed to firmly grip pipe so labels remain fixed in vertical pipe runs.
4. Material: Heavy-duty vinyl or polyester, suitable for exterior use, long lasting, and resistance to moisture, grease, and oils.
5. Letters and Arrows: Black on OSHA safety yellow background.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

6. Color Field and Letter Height: Meet ASME A13.1.
7. Message: Piping system name as indicated on Piping Schedule.
8. Manufacturers and Products:
  - a. Brady Signmark; B-915 BradySnap-On and Strap-On Pipe Markers.
  - b. Seton Identification Products; Ultra-mark Pipe Markers.
  - c. Or approved equal.

B. Equipment Labels:

1. Applies to equipment with assigned tag numbers, where specified.
2. Letters: Black bold face, 3/4-inch minimum high.
3. Background: OSHA safety yellow.
4. Materials: Aluminum or stainless steel with a baked-on finish suitable for use on wet, oily, exposed, abrasive, and corrosive areas.
5. Furnish 1-inch margin with holes at each end of label, for mounting. On fiberglass labels, furnish grommets at each hole.
6. Size:
  - a. 2 inches minimum and 3 inches maximum high, by 14 inches minimum and 18 inches maximum long.
  - b. Furnish same size base dimensions for all labels.
7. Message: Equipment names and tag numbers as used in sections where equipment is specified.
8. Manufacturers:
  - a. Brady Signmark.
  - b. Seton Identification Products.
  - c. Or approved equal.

2.03 ANCILLARY MATERIALS

- A. Fasteners: Stainless steel screws or bolts of appropriate sizes.
- B. Pipe Posts: 2-1/2-inch galvanized steel pipe meeting ASTM A53/A53M, Type S, Grade B.
- C. Chain: Type 304 stainless steel, No. 16 single jack chain or No. 2 double loop coil chain.
- D. Manufacturer's standard brackets for wall mounting of two-sided exit signs.

**PART 3 EXECUTION**

3.01 INSTALLATION—GENERAL

- A. In accordance with manufacturer’s recommendations.
- B. Mount securely, plumb, and level.

3.02 SIGNS

- A. General:
  - 1. Fasten to walls or posts, or as required on new equipment.
  - 2. Anchor in place for easy removal and reinstallation with ordinary hand tools.
- B. Information, Exit, and Safety Signs: Install facing traffic. Locate for high visibility with minimum restriction of working area around walkways and equipment.

3.03 IDENTIFICATION LABELS

- A. Pipe Labels:
  - 1. Locate at connections to equipment, valves, or branching fittings at wall boundaries.
  - 2. At intervals along piping not greater than 18 feet on center with at least one label applied to each exposed horizontal and vertical run of pipe.
  - 3. At exposed piping not normally in view, such as above suspended ceilings and in closets and cabinets.
  - 4. Supplementary Labels: Provide to Owner those listed on Piping Schedule that do not receive arrows.
  - 5. Apply to pipe after painting in vicinity is complete, or as approved by Engineer.
  - 6. Install in accordance with manufacturer’s instructions.
- B. Equipment Labels:
  - 1. Locate and install on equipment or concrete equipment base as shown on Drawings.
  - 2. Anchor to equipment or base for easy removal and replacement with ordinary hand tools.

**END OF SECTION**

**SECTION 26 05 02**  
**BASIC ELECTRICAL REQUIREMENTS**

**PART 1 GENERAL**

1.01 RELATED SECTIONS

- A. Requirements specified within this section apply to Division 26, Electrical. Work specified herein shall be performed as if specified in the individual sections.

1.02 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. National Electrical Contractors Association (NECA): National Electrical Installation Standards.
  2. National Electrical Manufacturers Association (NEMA):
    - a. 250, Enclosures for Electrical Equipment (1000 Volts Maximum).
    - b. Z535.4, Product Safety Signs and Labels.
  3. National Fire Protection Association (NFPA): 70, National Electrical Code (NEC).
  4. UL.

1.03 DESIGN REQUIREMENTS

- A. Design and submit conduit layout design and conduit stub-up layout, as required in Section 26 05 33, Raceway and Boxes.

1.04 SUBMITTALS

- A. Action Submittals:
1. Provide manufacturers' data for the following:
    - a. Nameplates, signs, and labels.

1.05 QUALITY ASSURANCE

- A. Provide the Work in accordance with NFPA 70. Where required by Authority Having Jurisdiction (AHJ), material and equipment shall be labeled or listed by a nationally recognized testing laboratory or other organization acceptable to the AHJ, in order to provide a basis for approval under the NEC.
- B. Materials and equipment manufactured within the scope of standards published by UL shall conform to those standards and shall have an applied UL listing mark or label.

## **PART 2 PRODUCTS**

### 2.01 GENERAL

- A. Where two or more units of the same class of material or equipment are required, provide products of a single manufacturer. Component parts of materials or equipment need not be products of the same manufacturer.
- B. Material and equipment installed in heated and ventilated areas shall be capable of continuous operation at their specified ratings within an ambient temperature range of 40 degrees F to 104 degrees F.
- C. Materials and equipment installed outdoors shall be capable of continuous operation at their specified rating within the ambient temperature range stated in Section 01 61 00, Common Product Requirements.

### 2.02 EQUIPMENT FINISH

- A. Manufacturer's standard finish color, except where specific color is indicated. If manufacturer has no standard color, finish equipment in accordance with light gray color finish as approved by Engineer.

### 2.03 NAMEPLATES

- A. Material: Laminated plastic.
- B. Attachment Screws: Stainless steel.
- C. Color: Black, engraved to a white core.
- D. Letter Height:
  - 1. Pushbuttons/Selector Switches: 1/8 inch.
  - 2. Other Electrical Equipment: 3/8 inch.

### 2.04 SIGNS AND LABELS

- A. Sign size, lettering, and color shall be in accordance with NEMA Z535.4.

## **PART 3 EXECUTION**

### 3.01 GENERAL

- A. Electrical Drawings show general locations of equipment, devices, and raceway, unless specifically dimensioned. Contractor shall be responsible for actual location of equipment and devices and for proper routing and support of raceways, subject to approval of Engineer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Check approximate locations of light fixtures, switches, electrical outlets, equipment, and other electrical system components shown on Drawings for conflicts with openings, structural members, and components of other systems and equipment having fixed locations. In the event of conflicts, notify Engineer in writing.
- C. Install work in accordance with NECA Standard of Installation, unless otherwise specified.
- D. Keep openings in boxes and equipment closed during construction.
- E. Lay out work carefully in advance. Do not cut or notch any structural member or building surface without specific approval of Engineer. Carefully perform cutting, channeling, chasing, or drilling of floors, walls, partitions, ceilings, paving, or other surfaces required for the installation, support, or anchorage of conduit, raceways, or other electrical materials and equipment. Following such work, restore surfaces to original condition.

3.02 ANCHORING AND MOUNTING

- A. Equipment anchoring and mounting shall be in accordance with manufacturer's requirements for seismic zone criteria given in Section 01 61 00, Common Product Requirements.

3.03 COMBINING CIRCUITS INTO COMMON RACEWAY

- A. Circuits shown on Drawings indicate functional wiring requirements for power and control circuits. Circuits may be combined into common raceways in accordance with the following requirements:
  - 1. Analog control circuits from devices in same general area to same destination.
    - a. No power or AC discrete control circuits shall be combined in same conduit with analog circuits.
    - b. No Class 2 or Class 3 circuits including, but not limited to, HVAC control circuits, fire alarm circuits, paging system circuits shall be combined with power or Class 1 circuits.
    - c. Analog circuits shall be continuous from source to destination. Do not add TJB, splice, or combine into a multi-pair cable without authorization of Engineer.
    - d. Raceways shall be sized per General Circuit and Raceway Schedule and do not exceed 40 percent fill. Follow NEC.
    - e. Changes shall be documented on record drawings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Discrete control circuits from devices in the same general area to the same destination.
  - a. No power or analog control circuits shall be combined in same conduit with discrete circuits.
  - b. No Class 2 or Class 3 circuits including, but not limited to, HVAC control circuits, fire alarm circuits, and paging system circuits shall be combined with power or Class 1 circuits.
  - c. Raceways shall be sized per the General Circuit and Raceway Schedule and do not exceed 40 percent fill.
  - d. Changes shall be documented on record drawings.
3. Power circuits from loads in same general area to same source location (such as panelboard, switchboard, low voltage motor control center).
  - a. Lighting Circuits: Combine no more than three circuits to a single raceway. Provide a separate neutral conductor for each circuit. Contractor shall be responsible for increasing conduit and conductor size if derating is required by NEC.
  - b. Receptacle Circuits, 120-Volt Only: Combine no more than three circuits to a single raceway. Provide a separate neutral conductor for each circuit. Contractor shall be responsible for increasing conduit and conductor size if derating is required by NEC.
  - c. All Other Power Circuits: Do not combine power circuits without authorization of Engineer.

3.04 NAMEPLATES, SIGNS, AND LABELS

- A. Arc Flash Protection Warning Signs: Refer to Section 26 05 70, Electrical Systems Analysis, for requirements.
- B. Multiple Power Supply Sign: Install permanent plaque or directory at each service disconnect location denoting other services, feeders, and branch circuits supplying the building and the area served by each.
- C. Equipment Nameplates:
  1. Provide a nameplate to label electrical equipment including switchgear, switchboards, motor control centers, panelboards, motor starters, transformers, terminal junction boxes, disconnect switches, switches and control stations.
  2. Switchgear, motor control center, transformer, and terminal junction box nameplates shall include equipment designation.
  3. Disconnect switch, starter, and control station nameplates shall include name and number of equipment powered or controlled by that device.
  4. Switchboard and panelboard nameplates shall include equipment designation, service voltage, and phases.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.05 LOAD BALANCE

- A. Drawings and Specifications indicate circuiting to electrical loads and distribution equipment.
- B. Balance electrical load between phases as nearly as possible on switchboards, panelboards, motor control centers, and other equipment where balancing is required.
- C. When loads must be reconnected to different circuits to balance phase loads, maintain accurate record of changes made, and provide circuit directory that lists final circuit arrangement.

3.06 CLEANING AND TOUCHUP PAINTING

- A. Cleaning: Throughout the Work, clean interior and exterior of devices and equipment by removing debris and vacuuming.
- B. Touchup Paint:
  - 1. Touchup scratches, scrapes and chips on exterior and interior surfaces of devices and equipment with finish matching type, color, and consistency and type of surface of original finish.
  - 2. If extensive damage is done to equipment paint surfaces, refinish entire equipment in a manner that provides a finish equal to or better than factory finish, that meets requirements of Specification, and is acceptable to Engineer.

3.07 PROTECTION FOLLOWING INSTALLATION

- A. Protect materials and equipment from corrosion, physical damage, and effects of moisture on insulation and contact surfaces.
- B. When equipment intended for indoor installation is installed at Contractor's convenience in areas where subject to dampness, moisture, dirt or other adverse atmosphere until completion of construction, ensure adequate protection from these atmospheres is provided and acceptable to Engineer.

**END OF SECTION**

- h. 1059, Standard for Terminal Blocks.
- i. 1479, Fire Tests of Through-Penetration Fire Stops.

1.02 SUBMITTALS

A. Action Submittals:

- 1. Provide manufacturers' data for the following:
  - a. Control devices.
  - b. Control relays.
  - c. Circuit breakers.
  - d. Fused switches.
  - e. Nonfused switches.
  - f. Timers.
  - g. Fuses.
  - h. Magnetic contactors.
  - i. Intrinsic safety barriers.
  - j. Enclosures: Include enclosure data for products having enclosures.
- 2. Seismic anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals: Seismic anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.

**PART 2 PRODUCTS**

2.01 MOLDED CASE CIRCUIT BREAKER THERMAL MAGNETIC, LOW VOLTAGE

A. General:

- 1. Type: Molded case.
- 2. Trip Ratings: 15 amps to 100 amps.
- 3. Voltage Ratings: 120, 208, 240, 277V ac.
- 4. Suitable for mounting and operating in any position.
- 5. UL 489.

B. Operating Mechanism:

- 1. Overcenter, trip-free, toggle type handle.
- 2. Quick-make, quick-break action.
- 3. Locking provisions for padlocking breaker in OPEN position.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. ON/OFF and TRIPPED indicating positions of operating handle.
5. Operating handle to assume a CENTER position when tripped.

C. Trip Mechanism:

1. Individual permanent thermal and magnetic trip elements in each pole.
2. Two and three pole, common trip.
3. Automatically opens all poles when overcurrent occurs on one pole.
4. Calibrated for 40 degrees C ambient, unless shown otherwise.
5. Do not provide single-pole circuit breakers with handle ties where multi-pole circuit breakers are shown.

D. Short Circuit Interrupting Ratings: Equal to rating of existing equipment.

E. Accessories: Shunt trip, auxiliary switches, handle lock ON devices, mechanical interlocks, key interlocks, unit mounting bases, double lugs as shown or otherwise required. Shunt trip operators shall be continuous duty rated or have coil-clearing contacts.

F. Connections:

1. Supply (line side) at either end.
2. Mechanical wire lugs, except crimp compression lugs where shown.
3. Suitable for 75 degrees C rated conductors without derating breaker or conductor ampacity.

2.02 FUSED SWITCH, INDIVIDUAL, LOW VOLTAGE

A. UL 98 listed for use and location of installation.

B. NEMA KS 1.

C. Short Circuit Rating: 200,000 amps rms symmetrical with Class R, Class J, or Class L fuses installed.

D. Quick-make, quick-break, motor rated, load-break, heavy-duty (HD) type with external markings clearly indicating ON/OFF positions.

E. Connections:

1. Mechanical lugs, except crimp compression lugs where shown.
2. Lugs removable/replaceable.
3. Suitable for 75 degrees C rated conductors at NEC 75 degrees C ampacity.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Fuse Provisions:
  - 1. 30-amp to 600-amp rated shall incorporate rejection feature to reject all fuses except Class R.
  - 2. 601-amp rated and greater shall accept Class L fuses, unless otherwise shown.
- G. Enclosures: See Article Enclosures.
- H. Interlock: Enclosure and switch to prevent opening cover with switch in ON position. Provide bypass feature for use by qualified personnel.

2.03 NONFUSED SWITCH, INDIVIDUAL, LOW VOLTAGE

- A. NEMA KS 1.
- B. Quick-make, quick-break, motor rated, load-break, heavy-duty (HD) type with external markings clearly indicating ON/OFF positions.
- C. Lugs: Suitable for use with 75 degrees C wire at NEC 75 degrees C ampacity.
- D. Enclosures: See Article Enclosures.
- E. Interlock: Enclosure and switch to prevent opening cover with switch in ON position. Provide bypass feature for use by qualified personnel.

2.04 FUSE, 250-VOLT AND 600-VOLT

- A. Power Distribution, General:
  - 1. Current-limiting, with 200,000 ampere rms interrupting rating.
  - 2. Provide to fit mountings specified with switches.
  - 3. UL 248.
- B. Power Distribution, Ampere Ratings 1 Amp to 600 Amps:
  - 1. Class: RK-1.
  - 2. Type: Dual element, with time delay.
  - 3. Manufacturers and Products:
    - a. Bussmann; Types LPS-RK (600 volts) and LPN-RK (250 volts).
    - b. Littelfuse; Types LLS-RK (600 volts) and LLN-RK (250 volts).
    - c. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Power Distribution, Ampere Ratings 601 Amps to 6,000 Amps:
  - 1. Class: L.
  - 2. Double O-rings and silver links.
  - 3. Manufacturers and Products:
    - a. Bussmann; Type KRP-C.
    - b. Littelfuse, Inc.; Type KLPC.
    - c. Or approved equal.
  
- D. Cable Limiters:
  - 1. 600V or less; crimp to copper cable, bolt to bus or terminal pad.
  - 2. Manufacturers and Products:
    - a. Bussmann; K Series.
    - b. Or approved equal.
  
- E. Ferrule:
  - 1. 600V or less, rated for applied voltage, small dimension.
  - 2. Ampere Ratings: 1/10 amp to 30 amps.
  - 3. Dual-element time-delay, time-delay, or nontime-delay as required.
  - 4. Provide with blocks or holders as indicated and suitable for location and use.
  - 5. Manufacturers:
    - a. Bussmann.
    - b. Littlefuse, Inc.
    - c. Or approved equal.

2.05 PUSHBUTTON, INDICATING LIGHT, AND SELECTOR SWITCH

- A. Contact Rating: 7,200VA make, 720VA break, at 600V, NEMA ICS 5 Designation A600.
- B. Selector Switch Operating Lever: Standard.
- C. Indicating Light: Push-to-test.
- D. Pushbutton Color: As shown on Control Diagrams. Depends on application, refer to NEC.
- E. Pushbutton and selector switch lockable in OFF position where indicated.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

F. Legend Plate:

1. Material: Aluminum.
2. Engraving: Enamel filled in high contrasting color.
3. Text Arrangement: 11-character/spaces on one line, 14-character/spaces on each of two lines, as required, indicating specific function.
4. Letter Height: 7/64 inch.

G. Manufacturers and Products:

1. Heavy-Duty, Oil-Tight Type:
  - a. General Electric Co.; Type CR 104P.
  - b. Square D Co.; Type T.
  - c. Eaton/Cutler-Hammer; Type 10250T.
  - d. Or approved equal.
2. Heavy-Duty, Watertight, and Corrosion-Resistant Type:
  - a. Square D Co.; Type SK.
  - b. General Electric Co.; Type CR 104P.
  - c. Eaton/Cutler-Hammer; Type E34.
  - d. Crouse-Hinds; Type NCS.
  - e. Or approved equal.

2.06 TERMINAL BLOCK, 600 VOLTS

- A. UL 486E and UL 1059.
- B. Size components to allow insertion of necessary wire sizes.
- C. Capable of termination of control circuits entering or leaving equipment, panels, or boxes.
- D. Screw clamp compression, dead front barrier type, with current bar providing direct contact with wire between compression screw and yoke.
- E. Yoke, current bar, and clamping screw of high strength and high conductivity metal.
- F. Yoke shall guide all strands of wire into terminal.
- G. Current bar shall ensure vibration-proof connection.
- H. Terminals:
  1. Capable of wire connections without special preparation other than stripping.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Capable of jumper installation with no loss of terminal or rail space.
  3. Individual, rail mounted.
- I. Marking system, allowing use of preprinted or field-marked tags.
- J. Manufacturers:
1. Weidmuller, Inc.
  2. Ideal.
  3. Electrovert USA Corp.
  4. Or approved equal.

2.07 SUPPORT AND FRAMING CHANNELS

- A. Carbon Steel Framing Channel:
1. Material: Rolled, mild strip steel, 12-gauge minimum, ASTM A1011/A1011M, Grade 33.
  2. Finish: Hot-dip galvanized after fabrication.
- B. Paint Coated Framing Channel: Carbon steel framing channel with electro-deposited rust inhibiting acrylic or epoxy paint.
- C. PVC-Coated Framing Channel: Carbon steel framing channel with 40-mil polyvinyl chloride coating.
- D. Stainless Steel Framing Channel: Rolled, Type 316 stainless steel, 12-gauge minimum.
- E. Extruded Aluminum Framing Channel:
1. Material: Extruded from Type 6063-T6 aluminum alloy.
  2. Fittings fabricated from Alloy 5052-H32.
- F. Nonmetallic Framing Channel:
1. Material: Fire retardant, fiber reinforced vinyl ester resin.
  2. Channel fitting of same material as channel.
  3. Nuts and bolts of long glass fiber reinforced polyurethane.
- G. Manufacturers:
1. B-Line Systems, Inc.
  2. Unistrut Corp.
  3. Aickinstrut.
  4. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.08 INTRINSIC SAFETY BARRIER

- A. Provides a safe energy level for exposed wiring in a Class I, Division 1 or Division 2 hazardous area when circuit is connected to power source in nonhazardous area.
- B. Rating: Power source shall be rated 24 volts dc, nominal, with not more than 250 volts available under fault conditions.
- C. Contact Rating: 5 amps, 250 volts ac.
- D. Mounting: Rail or surface.
- E. Manufacturers and Products:
  - 1. MTL, Inc.; Series 2000 or Series 3000.
  - 2. R. Stahl, Inc.
  - 3. Or approved equal.

2.09 FIRESTOPS

- A. General:
  - 1. Provide UL 1479 classified hourly fire rating equal to, or greater than, the assembly penetrated.
  - 2. Prevent the passage of cold smoke, toxic fumes, and water before and after exposure to flame.
  - 3. Sealants and accessories shall have fire-resistance ratings as established by testing identical assemblies in accordance with ASTM E814, by UL, or other testing and inspection agency acceptable to authorities having jurisdiction.
- B. Firestop System:
  - 1. Formulated for use in through-penetration firestopping around cables, conduit, pipes, and duct penetrations through fire-rated walls and floors.
  - 2. Fill, Void, or Cavity Material: 3M Brand Fire Barrier Caulk CP25, Putty 303, Wrap/Strip FS195, Composite Sheet CS195 and Penetration Sealing Systems 7902 and 7904 Series.
  - 3. Two-Part, Foamed-In-Place, Silicone Sealant: Dow Corning Corp. Fire Stop Foam, General Electric Co. Pensil 851.
  - 4. Fire Stop Devices: See Section 26 05 33, Raceway and Boxes, for raceway and cable fittings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.10 ENCLOSURES

- A. Finish: Sheet metal structural and enclosure parts shall be completely painted using an electrodeposition process so interior and exterior surfaces as well as bolted structural joints have a complete finish coat on and between them.
- B. Color: Manufacturer's standard color (gray) baked-on enamel, unless otherwise shown.
- C. Barriers: Provide metal barriers within enclosures to separate wiring of different systems and voltage.
- D. Enclosure Selections:
  - 1. Enclosure shall be selected per their NEMA rating and approved by the City Project Manager.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Install equipment in accordance with manufacturer's recommendations.

3.02 PUSHBUTTON, INDICATING LIGHT, AND SELECTOR SWITCH

- A. Install heavy-duty, oil-tight type in nonhazardous, indoor, dry locations, including motor control centers, control panels, and individual stations, unless otherwise shown.
- B. Install heavy-duty, watertight and corrosion-resistant type in nonhazardous, outdoor, or normally wet areas, unless otherwise shown.

3.03 SUPPORT AND FRAMING CHANNEL

- A. Install where required for mounting and supporting electrical equipment, raceway, and cable tray systems.
- B. Channel Type:
  - 1. Interior, Wet or Dry (Noncorrosive) Locations:
    - a. Aluminum Raceway: Extruded aluminum or carbon steel with neoprene material isolators.
    - b. PVC-Coated Conduit: PVC coated.
    - c. Steel Raceway and Other Systems Not Covered: Carbon steel or paint coated.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Interior, Corrosive (Wet or Dry) Locations:
  - a. Aluminum Raceway: Extruded aluminum.
  - b. PVC Conduit: Type 316 stainless steel or nonmetallic.
  - c. PVC-Coated Steel Conduit and Other Systems Not Covered: Type 316 stainless steel, nonmetallic, or PVC-coated steel.
3. Outdoor, Noncorrosive Locations:
  - a. Steel Raceway: Carbon steel or paint coated framing channel, except where mounted on aluminum handrail, then use aluminum framing channel.
  - b. Aluminum Raceway and Other Systems Not Covered: Aluminum framing channel or carbon steel with neoprene material isolators.
4. Outdoor Corrosive Locations:
  - a. PVC Conduit: Type 316 stainless steel or nonmetallic.
  - b. Aluminum Raceway: Aluminum or carbon steel with neoprene material isolators.
  - c. PVC-Coated Steel Conduit and Other Systems Not Covered: Type 316 stainless steel, nonmetallic, or PVC-coated steel.
5. Aluminum Railings: Devices mounted on aluminum railing shall use aluminum framing channel.

C. Paint cut ends prior to installation with the following:

1. Carbon Steel Channel: Zinc-rich primer.
2. Painted Channel: Rust-inhibiting epoxy or acrylic paint.
3. Nonmetallic Channel: Epoxy resin sealer.
4. PVC-Coated Channel: PVC patch.

### 3.04 INTRINSIC SAFETY BARRIERS

- A. Install in compliance with ISA RP12.06.01.
- B. Arrange conductors such that wiring from hazardous areas cannot short to wiring from nonhazardous area.
- C. Stencil “INTRINSICALLY SAFE CIRCUIT” on all boxes enclosing barriers.

### 3.05 FIRESTOPS

- A. Install in strict conformance with manufacturer’s instructions. Comply with installation requirements established by testing and inspecting agency.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Sealant: Install sealant including forming, packing, and other accessory materials, to fill openings around electrical services penetrating floors and walls, to provide firestops with fire-resistance ratings indicated for floor or wall assembly in which penetration occurs.

- e. 486C, Standard for Safety for Splicing Wire Connectors.
- f. 510, Standard for Safety for Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape.
- g. 854, Standard for Safety for Service-Entrance Cables.
- h. 1277, Standard for Safety for Electrical Power and Control Tray Cables with Optional Optical-Fiber Members.
- i. 1569, Standard for Safety for Metal-Clad Cables.
- j. 1581, Standard for Safety for Reference Standard for Electrical Wires, Cables, and Flexible Cords.

1.02 SUBMITTALS

A. Action Submittals:

- 1. Product Data:
  - a. Wire and cable.
  - b. Wire and cable accessories.

1.03 QUALITY ASSURANCE

A. Authority Having Jurisdiction (AHJ):

- 1. Provide the Work in accordance with NFPA 70. Where required by the AHJ, material and equipment shall be labeled or listed by a nationally recognized testing laboratory or other organization acceptable to the AHJ in order to provide a basis for approval under NEC.
- 2. Materials and equipment manufactured within the scope of standards published by UL shall conform to those standards and shall have an applied UL listing mark.

**PART 2 PRODUCTS**

2.01 CONDUCTORS 600 VOLTS AND BELOW

- A. Conform to applicable requirements of NEMA WC 70.
- B. Conductor Type:
  - 1. 120-Volt and 277-Volt Lighting, 10 AWG and Smaller: Solid copper.
  - 2. 120-Volt Receptacle Circuits, 10 AWG and Smaller: Solid copper.
  - 3. All Other Circuits: Stranded copper.
- C. Insulation: Type THHN/THWN-2, except for sizes No. 6 and larger, with XHHW-2 insulation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

D. Direct Burial and Aerial Conductors and Cables:

1. Type USE/RHH/RHW insulation, UL 854 listed, or Type RHW-2/USE-2.
2. Conform to physical and minimum thickness requirements of NEMA WC 70.

E. Flexible Cords and Cables:

1. Type SOW-A/50 with ethylene propylene rubber insulation in accordance with UL 62.
2. Conform to physical and minimum thickness requirements of NEMA WC 70.

2.02 600-VOLT RATED CABLE

A. General:

1. Type TC, meeting requirements of UL 1277, including Vertical Tray Flame Test at 70,000 Btu per hour, and NFPA 70, Article 340, or UL 13 meeting requirements of NFPA 70, Article 725.
2. Permanently and legibly marked with manufacturer's name, maximum working voltage for which cable was tested, type of cable, and UL listing mark.
3. Suitable for installation in open air, in cable trays, or conduit.
4. Minimum Temperature Rating: 90 degrees C dry locations, 75 degrees C wet locations.
5. Overall Outer Jacket: PVC, flame-retardant, sunlight- and oil-resistant.

B. Type 1, Multiconductor Control Cable:

1. Conductors:
  - a. 14 AWG, seven-strand copper.
  - b. Insulation: 15-mil PVC with 4-mil nylon.
  - c. UL 1581 listed as Type THHN/THWN rated VW-1.
  - d. Conductor group bound with spiral wrap of barrier tape.
  - e. Color Code: In accordance with ICEA S-58-679, Method 1, Table 2.
2. Cable: Passes the ICEA T-29-520, 210,000 Btu per hour Vertical Tray Flame Test.
3. Manufacturers:
  - a. Okonite Co.
  - b. Southwire.
  - c. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Type 2, Multiconductor Power Cable (MPC):
1. General:
    - a. Meet or exceed UL 1581 for cable tray use.
    - b. Meet or exceed UL 1277 for direct burial and sunlight-resistance.
    - c. Overall Jacket: PVC.
  2. Conductors:
    - a. Class B stranded, coated copper.
    - b. Insulation: Chemically cross-linked ethylene-propylene or cross-linked polyethylene.
    - c. UL rated VW-1 or listed Type XHHW-2.
    - d. Color Code:
      - 1) Conductors, size 8 AWG and smaller, colored conductors, ICEA S-58-679, Method 1, Table 1.
      - 2) Conductors, size 6 AWG and larger, ICEA S-73-532, Method 4.
  3. Cable shall pass ICEA T-29-520, 210,000 Btu per hour Vertical Tray Flame Test.
  4. Manufacturers:
    - a. Okonite Co.
    - b. Southwire.
    - c. Or approved equal.
- D. Type 3, 16 AWG, Twisted Shielded Pair (TSP), Instrumentation Cable: Single pair, designed for noise rejection for process control, computer, or data log applications meeting NEMA WC 57 requirements.
1. Outer Jacket: 45-mil nominal thickness.
  2. Individual Pair Shield: 1.35-mil, double-faced aluminum/synthetic polymer overlapped to provide 100 percent coverage.
  3. Dimension: 0.31-inch nominal OD.
  4. Conductors:
    - a. Bare soft annealed copper, Class B, seven-strand concentric, meeting requirements of ASTM B8.
    - b. 20 AWG, seven-strand tinned copper drain wire.
    - c. Insulation: 15-mil nominal PVC.
    - d. Jacket: 4-mil nominal nylon.
    - e. Color Code: Pair conductors, black and red.
  5. Manufacturers:
    - a. Okonite Co.
    - b. Alpha Wire Corp.
    - c. Belden.
    - d. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Type 4, 16 AWG, Twisted, Shielded Triad Instrumentation Cable (TST): Single triad, designed for noise rejection for process control, computer, or data log applications meeting NEMA WC 57 requirements.
1. Outer Jacket: 45-mil nominal.
  2. Individual Pair Shield: 1.35-mil, double-faced aluminum/synthetic polymer, overlapped to provide 100 percent coverage.
  3. Dimension: 0.32-inch nominal OD.
  4. Conductors:
    - a. Bare soft annealed copper, Class B, seven-strand concentric, meeting requirements of ASTM B8.
    - b. 20 AWG, seven-strand, tinned copper drain wire.
    - c. Insulation: 15-mil nominal PVC.
    - d. Jacket: 4-mil nylon.
    - e. Color Code: Triad conductors black, red, and blue.
  5. Manufacturers:
    - a. Okonite Co.
    - b. Alpha Wire Corp.
    - c. Belden.
    - d. Or approved equal.

2.03 300-VOLT RATED CABLE

- A. General:
1. Type PLTC, meeting requirements of UL 13 and NFPA 70, Article 725.
  2. Permanently and legibly marked with manufacturer's name, maximum working voltage for which cable was tested, type of cable, and UL listing mark.
  3. Suitable for installation in open air, in cable trays, or conduit.
  4. Minimum Temperature Rating: 105 degrees C.
  5. Passes Vertical Tray Flame Test.
  6. Outer Jacket: PVC, flame-retardant, sunlight- and oil-resistant.

2.04 SPECIAL CABLES

- A. Type 30, Unshielded Twisted Pair (UTP) Telephone and Data Cable, 600V:
1. Category 6 UTP, UL listed, and third party verified to comply with TIA/EIA 568-C Category 6 requirements.
  2. Suitable for high speed network applications including gigabit Ethernet and video. Cable shall be interoperable with other standards compliant products and shall be backward compatible with Category 5 and Category 5e.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Provide four each individually twisted pair, 23 AWG conductors, with FEP insulation and blue PVC jacket.
4. NFPA 70 Plenum (CMP) rated; comply with flammability plenum requirements of NFPA 70 and NFPA 262.
5. Cable shall withstand a bend radius of 2.5-inch minimum at a temperature of minus 20 degrees C maximum without jacket or insulation cracking.
6. Manufacturers:
  - a. Belden.
  - b. Or approved equal.

2.05 GROUNDING CONDUCTORS

- A. Equipment: Stranded copper with green, Type USE/RHH/RHW-XLPE or THHN/THWN, insulation.
- B. Direct Buried: Bare stranded copper.

2.06 ACCESSORIES FOR CONDUCTORS 600 VOLTS AND BELOW

- A. Tape:
  1. General Purpose, Flame Retardant: 7-mil, vinyl plastic, Scotch Brand 33+, rated for 90 degrees C minimum, meeting requirements of UL 510.
  2. Flame Retardant, Cold and Weather Resistant: 8.5-mil, vinyl plastic, Scotch Brand 88.
  3. Arc and Fireproofing:
    - a. 30-mil, elastomer.
    - b. Manufacturers and Products:
      - 1) 3M; Scotch Brand 77, with Scotch Brand 69 glass cloth tapebinder.
      - 2) Plymouth; 53 Plyarc, with 77 Plyglas glass cloth tapebinder.
      - 3) Or approved equal.
- B. Identification Devices:
  1. Sleeve:
    - a. Permanent, PVC, yellow or white, with legible machine-printed black markings.
    - b. Manufacturers and Products:
      - 1) Raychem; Type D-SCE or ZH-SCE.
      - 2) Brady, Type 3PS.
      - 3) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Heat Bond Marker:
  - a. Transparent thermoplastic heat bonding film with acrylic pressure sensitive adhesive.
  - b. Self-laminating protective shield over text.
  - c. Machine printed black text.
  - d. Manufacturers and Products:
    - 1) 3M Co.; Type SCS-HB.
    - 2) Or approved equal.
3. Marker Plate: Nylon, with legible designations permanently hot stamped on plate.
4. Tie-On Cable Marker Tags:
  - a. Chemical-resistant white tag.
  - b. Size: 1/2 inch by 2 inches.
  - c. Manufacturers and Products:
    - 1) Raychem; Type CM-SCE.
    - 2) Or approved equal.
5. Grounding Conductor: Permanent green heat-shrink sleeve, 2-inch minimum.

C. Connectors and Terminations:

1. Nylon, Self-Insulated Crimp Connectors:
  - a. Manufacturers and Products:
    - 1) Thomas & Betts; Sta-Kon.
    - 2) Burndy; Insulug.
    - 3) ILSCO.
    - 4) Or approved equal.
2. Nylon, Self-Insulated, Crimp Locking-Fork, Torque-Type Terminator:
  - a. Suitable for use with 75 degrees C wire at full NFPA 70, 75 degrees C ampacity.
  - b. Seamless.
  - c. Manufacturers and Products:
    - 1) Thomas & Betts; Sta-Kon.
    - 2) Burndy; Insulink.
    - 3) ILSCO; ILSCONS.
    - 4) Or approved equal.
3. Self-Insulated, Freespring Wire Connector (Wire Nuts):
  - a. UL 486C.
  - b. Plated steel, square wire springs.
  - c. Manufacturers and Products:
    - 1) Thomas & Betts.
    - 2) Ideal; Twister.
    - 3) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Self-Insulated, Set Screw Wire Connector:
  - a. Two piece compression type with set screw in brass barrel.
  - b. Insulated by insulator cap screwed over brass barrel.
  - c. Manufacturers:
    - 1) 3M Co.
    - 2) Thomas & Betts.
    - 3) Marrette.
    - 4) Or approved equal.

D. Cable Lugs:

1. In accordance with NEMA CC 1.
2. Rated 600 volts of same material as conductor metal.
3. Uninsulated Crimp Connectors and Terminators:
  - a. Suitable for use with 75 degrees C wire at full NFPA 70, 75 degrees C ampacity.
  - b. Manufacturers and Products:
    - 1) Thomas & Betts; Color-Keyed.
    - 2) Burndy; Hydent.
    - 3) ILSCO.
    - 4) Or approved equal.
4. Uninsulated, Bolted, Two-Way Connectors and Terminators:
  - a. Manufacturers and Products:
    - 1) Thomas & Betts; Locktite.
    - 2) Burndy; Quiklug.
    - 3) ILSCO.
    - 4) Or approved equal.

E. Cable Ties:

1. Nylon, adjustable, self-locking, and reusable.
2. Manufacturers and Products:
  - a. Thomas & Betts; TY-RAP.
  - b. Or approved equal.

F. Heat Shrinkable Insulation:

1. Thermally stabilized cross-linked polyolefin.
2. Single wall for insulation and strain relief.
3. Dual Wall, adhesive sealant lined, for sealing and corrosion resistance.
4. Manufacturers and Products:
  - a. Thomas & Betts; SHRINK-KON.
  - b. Raychem; RNF-100 and ES-2000.
  - c. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.07 PULLING COMPOUND

- A. Nontoxic, noncorrosive, noncombustible, nonflammable, water-based lubricant; UL listed.
- B. Suitable for rubber, neoprene, PVC, polyethylene, hypalon, CPE, and lead-covered wire and cable.
- C. Approved for intended use by cable manufacturer.
- D. Suitable for zinc-coated steel, aluminum, PVC, bituminized fiber, and fiberglass raceways.
- E. Manufacturers:
  - 1. Ideal Co.
  - 2. Polywater, Inc.
  - 3. Cable Grip Co.
  - 4. Or approved equal.

2.08 WARNING TAPE

- A. As specified in Section 26 05 33, Raceway and Boxes.

2.09 SOURCE QUALITY CONTROL

- A. Conductors 600 Volts and Below: Test in accordance with UL 44 and UL 854.
- B. Conductors Above 600 Volts: Test in accordance with NEMA WC 71 and AEIC CS 8 partial discharge level test for EPR insulated cable.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Conductor installation shall be in accordance with manufacturer's recommendations.
- B. Conductor and cable sizing shown is based on copper conductors for 600V circuits.
- C. Do not exceed cable manufacturer's recommendations for maximum pulling tensions and minimum bending radii.
- D. Terminate conductors and cables, unless otherwise indicated.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Tighten screws and terminal bolts in accordance with UL 486A-486B for copper conductors.
- F. Cable Lugs: Provide with correct number of holes, bolt size, and center-to-center spacing as required by equipment terminals.
- G. Bundling: Where single conductors and cables in manholes, handholes, vaults, cable trays, and other indicated locations are not wrapped together by some other means, bundle conductors from each conduit throughout their exposed length with cable ties placed at intervals not exceeding 12 inches on center.
- H. Ream, remove burrs, and clear interior of installed conduit before pulling wires or cables.
- I. Concrete-Encased Raceway Installation: Prior to installation of conductors, pull through each raceway a mandrel approximately 1/4 inch smaller than raceway inside diameter.
- J. Cable Tray Installation:
  - 1. Install wire and cable parallel and straight in tray.
  - 2. Bundle, in groups, wire and cable of same voltage having a common routing and destination; use cable ties, at maximum intervals of 8 feet.
  - 3. Clamp cable bundles prior to making end termination connections.
  - 4. Separate cables of different voltage rating in same cable tray with barriers.
  - 5. Fasten wires, cables, and bundles to tray with nylon cable straps at the following maximum intervals:
    - a. Horizontal Runs: 20 feet.
    - b. Vertical Runs: 5 feet.

3.02 POWER CONDUCTOR COLOR CODING

- A. Conductors 600 Volts and Below:
  - 1. 6 AWG and Larger: Apply general purpose, flame retardant tape at each end, and at accessible locations wrapped at least six full overlapping turns, covering area 1-1/2 inches to 2 inches wide.
  - 2. 8 AWG and Smaller: Provide colored conductors.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Colors:

<b>System</b>	<b>Conductor</b>	<b>Color</b>
All Systems	Equipment Grounding	Green
240/120 Volts, Single-Phase, Three-Wire	Grounded Neutral One Hot Leg Other Hot Leg	White Black Red
208Y/120 Volts, Three-Phase, Four-Wire	Grounded Neutral Phase A Phase B Phase C	White Black Red Blue
480Y/277 Volts, Three-Phase, Four-Wire	Grounded Neutral Phase A Phase B Phase C	White Brown Orange Yellow
Note: Phase A, B, C implies direction of positive phase rotation.		

4. Tracer: Outer covering of white with identifiable colored strip, other than green, in accordance with NFPA 70.

3.03 CIRCUIT IDENTIFICATION

- A. Identify power, instrumentation, and control conductor circuits at each termination, and in accessible locations such as manholes, handholes, panels, switchboards, motor control centers, pull boxes, and terminal boxes.
- B. Circuits Appearing in Circuit Schedules: Identify using circuit schedule designations.
- C. Circuits Not Appearing in Circuit Schedules:
  - 1. Assign circuit name based on device or equipment at load end of circuit.
  - 2. Where this would result in same name being assigned to more than one circuit, add number or letter to each otherwise identical circuit name to make it unique.
- D. Method:
  - 1. Conductors 3 AWG and Smaller: Identify with sleeves or heat bond markers.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Cables and Conductors 2 AWG and Larger:
  - a. Identify with marker plates or tie-on cable marker tags.
  - b. Attach with nylon tie cord.
3. Taped-on markers or tags relying on adhesives not permitted.

3.04 CONDUCTORS 600 VOLTS AND BELOW

- A. Install 10 AWG or 12 AWG conductors for branch circuit power wiring in lighting and receptacle circuits.
- B. Do not splice incoming service conductors and branch power distribution conductors 6 AWG and larger, unless specifically indicated or approved by Engineer.
- C. Connections and Terminations:
  1. Install wire nuts only on solid conductors. Wire nuts are not allowed on stranded conductors.
  2. Install nylon self-insulated crimp connectors and terminators for instrumentation and control, circuit conductors.
  3. Install self-insulated, set screw wire connectors for two-way connection of power circuit conductors 12 AWG and smaller.
  4. Install uninsulated crimp connectors and terminators for instrumentation, control, and power circuit conductors 4 AWG through 2/0 AWG.
  5. Install uninsulated, bolted, two-way connectors and terminators for power circuit conductors 3/0 AWG and larger.
  6. Install uninsulated terminators bolted together on motor circuit conductors 10 AWG and larger.
  7. Place no more than one conductor in any single-barrel pressure connection.
  8. Install crimp connectors with tools approved by connector manufacturer.
  9. Install terminals and connectors acceptable for type of material used.
  10. Compression Lugs:
    - a. Attach with a tool specifically designed for purpose. Tool shall provide complete, controlled crimp and shall not release until crimp is complete.
    - b. Do not use plier type crimpers.
- D. Do not use soldered mechanical joints.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Splices and Terminations:
  - 1. Insulate uninsulated connections.
  - 2. Indoors: Use general purpose, flame retardant tape or single wall heat shrink.
  - 3. Outdoors, Dry Locations: Use flame retardant, cold- and weather-resistant tape or single wall heat shrink.
  - 4. Below Grade and Wet or Damp Locations: Use dual wall heat shrink.
  
- F. Cap spare conductors with UL listed end caps.
  
- G. Cabinets, Panels, and Motor Control Centers:
  - 1. Remove surplus wire, bridle and secure.
  - 2. Where conductors pass through openings or over edges in sheet metal, remove burrs, chamfer edges, and install bushings and protective strips of insulating material to protect the conductors.
  
- H. Control and Instrumentation Wiring:
  - 1. Where terminals provided will accept such lugs, terminate control and instrumentation wiring, except solid thermocouple leads, with insulated, locking-fork compression lugs.
  - 2. Terminate with methods consistent with terminals provided, and in accordance with terminal manufacturer's instructions.
  - 3. Locate splices in readily accessible cabinets or junction boxes using terminal strips.
  - 4. Where connections of cables installed under this section are to be made under Section 40 90 00, Instrumentation and Control for Process Systems, leave pigtails of adequate length for bundled connections.
  - 5. Cable Protection:
    - a. Under Infinite Access Floors: May install without bundling.
    - b. All Other Areas: Install individual wires, pairs, or triads in flex conduit under floor or grouped into bundles at least 1/2 inch in diameter.
    - c. Maintain integrity of shielding of instrumentation cables.
    - d. Ensure grounds do not occur because of damage to jacket over shield.
  
- I. Extra Conductor Length: For conductors to be connected by others, install minimum 6 feet of extra conductor in freestanding panels and minimum 2 feet in other assemblies.

**END OF SECTION**

**SECTION 26 05 26**  
**GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS**

**PART 1 GENERAL**

1.01 REFERENCES

A. The following is a list of standards which may be referenced in this section:

1. Institute of Electrical and Electronics Engineers (IEEE) IEEE Standard 3003.2-2014: C2, National Electrical Safety Code (NESC).
2. National Fire Protection Association (NFPA): 70, National Electrical Code. (NEC).

1.02 SUBMITTALS

A. Action Submittals:

1. Shop Drawings:
  - a. Product data for the following:
    - 1) Exothermic weld connectors.
    - 2) Mechanical connectors.
    - 3) Compression connectors.

1.03 QUALITY ASSURANCE

A. Authority Having Jurisdiction (AHJ):

1. Provide the Work in accordance with NFPA 70, National Electrical Code (NEC). Where required by the AHJ, material and equipment shall be labeled or listed by a nationally recognized testing laboratory or other organization acceptable to the AHJ in order to provide a basis for approval under NEC.
2. Materials and equipment manufactured within the scope of standards published by UL shall conform to those standards and shall have an applied UL listing mark.

**PART 2 PRODUCTS**

2.01 GROUND ROD

- A. Material: Copper-clad.
- B. Diameter: Minimum 5/8 inch.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. Length: 8 feet.

2.02 GROUND CONDUCTORS

A. As specified in Section 26 05 05, Conductors.

2.03 CONNECTORS

A. Exothermic Weld Type:

1. Outdoor Weld: Suitable for exposure to elements or direct burial.
2. Indoor Weld: Utilize low-smoke, low-emission process.
3. Manufacturers and Products:
  - a. Erico Products, Inc.; Cadweld and Cadweld Exolon.
  - b. Thermoweld.
  - c. Or approved equal.

B. Compression Type:

1. Compress-deforming type; wrought copper extrusion material.
2. Single indentation for conductors 6 AWG and smaller.
3. Double indentation with extended barrel for conductors 4 AWG and larger.
4. Barrels prefilled with oxide-inhibiting and anti-seizing compound and sealed.
5. Manufacturers and Products:
  - a. Burndy Corp.; Hyground Irreversible Compression.
  - b. Thomas and Betts Co.
  - c. ILSCO.
  - d. Or approved equal.

C. Mechanical Type: Split-bolt, saddle, or cone screw type; copper alloy material.

1. Manufacturers:
  - a. Burndy Corp.
  - b. Thomas and Betts Co.
  - c. Or approved equal.

2.04 GROUNDING WELLS

A. Ground rod box complete with cast iron riser ring and traffic cover marked GROUND ROD.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Manufacturers and Products:

1. Christy Co.; No. G5.
2. Lightning and Grounding Systems, Inc.; I-R Series.
3. Or approved equal.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Grounding shall be in compliance with NFPA 70 and IEEE C2 and IEEE Standard 3003.2-2014.
- B. Ground electrical service neutral at service entrance equipment with grounding electrode conductor to grounding electrode system.
- C. Ground each separately derived system neutral with common grounding electrode conductor to grounding electrode system.
- D. Bond together all grounding electrodes that are present at each building or structure served to form one common grounding electrode system.
- E. Bond together system neutrals, service equipment enclosures, exposed noncurrent-carrying metal parts of electrical equipment, metal raceways, ground conductor in raceways and cables, receptacle ground connections, and metal piping systems.
- F. Shielded Power Cables: Ground shields at each splice or termination in accordance with recommendations of splice or termination manufacturer.
- G. Shielded Instrumentation Cables:
  1. Ground shield to ground bus at power supply for analog signal.
  2. Expose shield minimum 1 inch at termination to field instrument and apply heat shrink tube.
  3. Do not ground instrumentation cable shield at more than one point.

3.02 WIRE CONNECTIONS

- A. Ground Conductors: Install in conduit containing power conductors and control circuits above 50 volts.
- B. Nonmetallic Raceways and Flexible Tubing: Install equipment grounding conductor connected at both ends to noncurrent-carrying grounding bus.
- C. Connect ground conductors to raceway grounding bushings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Extend and connect ground conductors to ground bus in all equipment containing a ground bus.
- E. Connect enclosure of equipment containing ground bus to that bus.
- F. Bolt connections to equipment ground bus.
- G. Bond grounding conductors to metallic enclosures at each end, and to intermediate metallic enclosures.
- H. Junction Boxes: Furnish materials and connect to equipment grounding system with grounding clips mounted directly on box, or with 3/8-inch machine screws.
- I. Metallic Equipment Enclosures: Use furnished ground lug; if none furnished, tap equipment housing and install solderless terminal connected to box with machine screw. For circuits greater than 20 amps use minimum 5/16-inch diameter bolt.

3.03 MOTOR GROUNDING

- A. Extend equipment ground bus via grounding conductor installed in motor feeder raceway; connect to motor frame.
- B. Nonmetallic Raceways and Flexible Tubing: Install an equipment grounding conductor connected at both ends to noncurrent-carrying grounding bus.
- C. Motors Less Than 10 hp: Use furnished ground lug in motor connection box; if none furnished, provide compression, spade-type terminal connected to conduit box mounting screw.
- D. Motors 10 hp and Above: Use furnished ground lug in motor connection box; if none furnished, tap motor frame or equipment housing; furnish compression, one-hole, lug type terminal connected with minimum 5/16-inch brass threaded stud with bolt and washer.
- E. Circuits 20 Amps or Above: Tap motor frame or equipment housing; install solderless terminal with minimum 5/16-inch diameter bolt.

3.04 GROUND RODS

- A. Install full length with conductor connection at upper end.
- B. Install with connection point below finished grade, unless otherwise shown.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Space multiple ground rods by one rod length.

3.05 GROUNDING WELLS

- A. Install for ground rods located inside buildings, asphalt and paved areas, and where shown on Drawings.
- B. Install riser ring and cover flush with surface.
- C. Place 6 inches of crushed rock in bottom of each well.

3.06 CONNECTIONS

A. General:

1. Above grade Connections: Install exothermic weld, mechanical, or compression-type connectors; or brazing.
2. Below grade Connections: Install exothermic weld or compression type connectors.
3. Remove paint, dirt, or other surface coverings at connection points to allow good metal-to-metal contact.
4. Notify Owner prior to backfilling ground connections.

B. Exothermic Weld Type:

1. Wire brush or file contact point to bare metal surface.
2. Use welding cartridges and molds in accordance with manufacturer's recommendations.
3. Avoid using badly worn molds.
4. Mold to be completely filled with metal when making welds.
5. After completed welds have cooled, brush slag from weld area and thoroughly clean joint.

C. Compression Type:

1. Install in accordance with connector manufacturer's recommendations.
2. Install connectors of proper size for grounding conductors and ground rods specified.
3. Install using connector manufacturer's compression tool having proper sized dies and operate per manufacturer's instructions.

D. Mechanical Type:

1. Apply homogeneous blend of colloidal copper and rust and corrosion inhibitor before making connection.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Install in accordance with connector manufacturer's recommendations.
3. Do not conceal mechanical connections.

3.07 METAL STRUCTURE GROUNDING

- A. Bond metal sheathing and exposed metal vertical structural elements to grounding system.
- B. Bond electrical equipment supported by metal platforms to the platforms.
- C. Provide electrical contact between metal frames and railings supporting pushbutton stations, receptacles, and instrument cabinets, and raceways carrying circuits to these devices.

3.08 MANHOLE AND HANDHOLE GROUNDING

- A. Install one ground rod inside each manhole and handhole larger than 24-inch by 24-inch inside dimensions.
- B. Ground Rod Floor Protrusion: 4 inches to 6 inches above floor.
- C. Make connections of grounding conductors fully visible and accessible.
- D. Connect all noncurrent-carrying metal parts, and any metallic raceway grounding bushings to ground rod with 6 AWG copper conductor.

3.09 TRANSFORMER GROUNDING

- A. Bond neutrals of transformers within buildings to system ground network, and to any additional indicated grounding electrodes.
- B. Bond neutrals of substation transformers to substation grounding grid and system grounding network.
- C. Bond neutrals of pad-mounted transformers to four locally driven ground rods and buried ground wire encircling transformer and system ground network.

3.10 SURGE PROTECTION EQUIPMENT GROUNDING

- A. Connect surge arrestor ground terminals to equipment ground bus.

1.02 SUBMITTALS

A. Action Submittals:

1. Manufacturer’s Literature:
  - a. Conduit and conduit fittings.
  - b. Wireways.
  - c. Junction boxes.
  - d. Terminal junction boxes.
2. Precast Manholes and Handholes:
  - a. Dimensional drawings and descriptive literature.
  - b. Traffic loading calculations.
  - c. Accessory information.
3. Seismic anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.
4. Conduit Layout:
  - a. Provide drawings for conduit installations including, but not limited to ductbanks, under floor slabs, concealed in slabs, and concealed in walls.
  - b. Provide plan and section showing arrangement and location of conduit and duct bank required for:
    - 1) Low and medium voltage feeder and branch circuits.
    - 2) Instrumentation and control systems.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 3) Communications systems.
- 4) Empty conduit for future use.
- c. Reproducible scale not greater than 1-inch equals 20 feet.

B. Informational Submittals:

1. Seismic anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
2. Manufacturer's certification of training for PVC-coated rigid galvanized steel conduit installer.

1.03 QUALITY ASSURANCE

A. Authority Having Jurisdiction (AHJ):

1. Provide the Work in accordance with NFPA 70, National Electrical Code (NEC). Where required by the AHJ, material and equipment shall be labeled or listed by a nationally recognized testing laboratory or other organization acceptable to the AHJ in order to provide a basis for approval under NEC.
2. Materials and equipment manufactured within scope of standards published by UL shall conform to those standards and shall have an applied UL listing mark.

- B. PVC-Coated, Rigid Galvanized Steel Conduit Installer: Certified by conduit manufacturer as having received minimum 2 hours of training on installation procedures.

**PART 2 PRODUCTS**

2.01 CONDUIT AND TUBING

A. Rigid Galvanized Steel Conduit (RGS):

1. Meet requirements of NEMA C80.1 and UL 6.
2. Material: Hot-dip galvanized with chromated protective layer.

B. Electric Metallic Tubing (EMT):

1. Meet requirements of NEMA C80.3 and UL 797.
2. Material: Hot-dip galvanized with chromated and lacquered protective layer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. PVC Schedule 40 Conduit:
1. Meet requirements of NEMA TC 2 and UL 651.
  2. UL listed for concrete encasement, underground direct burial, concealed or direct sunlight exposure, and 90 degrees C insulated conductors.
- D. PVC Schedule 80 Conduit:
1. Meet requirements of NEMA TC 2 and UL 651.
  2. UL listed for concrete encasement, underground direct burial, concealed or direct sunlight exposure, and 90 degrees C insulated conductors.
- E. PVC-Coated Rigid Galvanized Steel Conduit:
1. Meet requirements of NEMA RN 1 and ETL.
  2. Material:
    - a. Meet requirements of NEMA C80.1 and UL 6.
    - b. Exterior Finish: PVC coating, 40-mil nominal thickness; bond to metal shall have tensile strength greater than PVC.
    - c. Interior Finish: Urethane coating, 2-mil nominal thickness.
  3. Threads: Hot-dipped galvanized and factory coated with urethane.
  4. Bendable without damage to interior or exterior coating.
- F. Flexible Metal, Liquid-Tight Conduit:
1. UL 360 listed for 105 degrees C insulated conductors.
  2. Material: Galvanized steel with extruded PVC jacket.
- G. Flexible, Nonmetallic, Liquid-Tight Conduit:
1. Material: PVC core with fused flexible PVC jacket.
  2. UL 1660 listed for:
    - a. Dry Conditions: 80 degrees C insulated conductors.
    - b. Wet Conditions: 60 degrees C insulated conductors.
  3. Manufacturers and Products:
    - a. Carlon; Carflex or X-Flex.
    - b. T & B; Xtraflex LTC or EFC.
    - c. Or approved equal.
- H. Innerduct:
1. Resistant to spread of fire, per requirements of UL 2024.
  2. Smooth or corrugated HDPE.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 FITTINGS

A. Rigid Galvanized Steel:

1. General:
  - a. Meet requirements of UL 514B.
  - b. Type: Threaded, galvanized. Set screw and threadless compression fittings not permitted.
2. Bushing:
  - a. Material: Malleable iron with integral insulated throat, rated for 150 degrees C.
  - b. Manufacturers and Products:
    - 1) Appleton; Series BU-I.
    - 2) O-Z/Gedney; Type HB.
    - 3) Or approved equal.
3. Grounding Bushing:
  - a. Material: Malleable iron with integral insulated throat rated for 150 degrees C, with solderless lugs.
  - b. Manufacturers and Products:
    - 1) Appleton; Series GIB.
    - 2) O-Z/Gedney; Type HBLG.
    - 3) Or approved equal.
4. Conduit Hub:
  - a. Material: Malleable iron with insulated throat with bonding screw.
  - b. UL listed for use in wet locations.
  - c. Manufacturers and Products:
    - 1) Appleton, Series HUB-B.
    - 2) O-Z/Gedney; Series CH.
    - 3) Meyers; ST Series.
    - 4) Or approved equal.
5. Conduit Bodies:
  - a. Sized as required by NFPA 70.
  - b. Manufacturers and Products (For Normal Conditions):
    - 1) Appleton; Form 35 threaded unilets.
    - 2) Crouse-Hinds; Form 7 or Form 8 threaded condulets.
    - 3) Killark; Series O electrolets.
    - 4) Thomas & Betts; Form 7 or Form 8.
    - 5) Or approved equal.
  - c. Manufacturers (For Hazardous Locations):
    - 1) Appleton.
    - 2) Crouse-Hinds.
    - 3) Killark.
    - 4) Or approved equal.
6. Couplings: As supplied by conduit manufacturer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. Unions:
  - a. Concrete tight, hot-dip galvanized malleable iron.
  - b. Manufacturers and Products:
    - 1) Appleton; Series SCC bolt-on coupling or Series EC three-piece union.
    - 2) O-Z/Gedney; Type SSP split coupling or Type 4 Series, three-piece coupling.
    - 3) Or approved equal.
8. Conduit Sealing Fitting:
  - a. Manufacturers and Products:
    - 1) Appleton; Type EYF, EYM, or ESU.
    - 2) Crouse-Hinds; Type EYS or EZS.
    - 3) Killark; Type EY or Type EYS.
    - 4) Or approved equal.
9. Drain Seal:
  - a. Manufacturers and Products:
    - 1) Appleton; Type EYD.
    - 2) Crouse-Hinds; Type EYD or Type EZD.
    - 3) Or approved equal.
10. Drain/Breather Fitting:
  - a. Manufacturers and Products:
    - 1) Appleton; Type ECDB.
    - 2) Crouse-Hinds; ECD.
    - 3) Or approved equal.
11. Expansion Fitting:
  - a. Manufacturers and Products:
    - 1) Deflection/Expansion Movement:
      - a) Appleton; Type DF.
      - b) Crouse-Hinds; Type XD.
      - c) Or approved equal.
    - 2) Expansion Movement Only:
      - a) Appleton; Type XJ.
      - b) Crouse-Hinds; Type XJ.
      - c) Thomas & Betts; XJG-TP.
      - d) Or approved equal.
12. Cable Sealing Fitting:
  - a. To form watertight nonslip cord or cable connection to conduit.
  - b. For Conductors with OD of 1/2 inch or Less: Neoprene bushing at connector entry.
  - c. Manufacturers and Products:
    - 1) Appleton; CG-S.
    - 2) Crouse-Hinds; CGBS.
    - 3) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. PVC Conduit and Tubing:

1. Meet requirements of NEMA TC 3.
2. Type: PVC, slip-on.

C. PVC-Coated Rigid Galvanized Steel Conduit:

1. Meet requirements of UL 514B.
2. Fittings: Rigid galvanized steel type, PVC coated by conduit manufacturer.
3. Conduit Bodies: Cast metal hot-dipped galvanized or urethane finish. Cover shall be of same material as conduit body. PVC coated by conduit manufacturer.
4. Finish: 40-mil PVC exterior, 2-mil urethane interior.
5. Overlapping pressure-sealing sleeves.
6. Conduit Hangers, Attachments, and Accessories: PVC-coated.
7. Manufacturers:
  - a. Robroy Industries.
  - b. Ocal.
  - c. Or approved equal.
8. Expansion Fitting:
  - a. Manufacturer and Product:
    - 1) Ocal; OCAL-BLUE XJG.
    - 2) Or approved equal.

D. Flexible Metal, Liquid-Tight Conduit:

1. Metal insulated throat connectors with integral nylon or plastic bushing rated for 105 degrees C.
2. Insulated throat and sealing O-rings.
3. Manufacturers and Products:
  - a. Thomas & Betts; Series 5331.
  - b. O-Z/Gedney; Series 4Q.
  - c. Or approved equal.

E. Flexible, Nonmetallic, Liquid-Tight Conduit:

1. Meet requirements of UL 514B.
2. Type: High strength plastic body, complete with lock nut, O-ring, threaded ferrule, sealing ring, and compression nut.
3. Body/compression nut (gland) design to ensure high mechanical pullout strength and watertight seal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Manufacturers and Products:
  - a. Carlon; Type LT.
  - b. O-Z/Gedney; Type 4Q-P.
  - c. Thomas & Betts; Series 6300.
  - d. Or approved equal.
  
- F. Flexible Coupling, Hazardous Locations:
  1. Approved for use in atmosphere involved.
  2. Rating: Watertight and UL listed for use in Class I, Division 1 and 2 areas.
  3. Outer bronze braid and an insulating liner.
  4. Conductivity equal to a similar length of rigid metal conduit.
  5. Manufacturers and Products:
    - a. Crouse-Hinds; Type ECGJH or Type ECLK.
    - b. Appleton; EXGJH or EXLK.
    - c. Or approved equal.
  
- G. Watertight Entrance Seal Device:
  1. New Construction:
    - a. Material: Oversized sleeve, malleable iron body with sealing ring, pressure ring, grommet seal, and pressure clamp.
    - b. Manufacturer and Product:
      - 1) O-Z/Gedney; Type FSK or Type WSK, as required.
      - 2) Or approved equal.
  2. Cored-Hole Application:
    - a. Material: Assembled dual pressure disks, neoprene sealing ring, and membrane clamp.
    - b. Manufacturers and Products:
      - 1) O-Z/Gedney; Series CSM.
      - 2) Or approved equal.

2.03 OUTLET AND DEVICE BOXES

- A. Sheet Steel: One-piece drawn type, zinc-plated or cadmium-plated.
  
- B. Cast Metal:
  1. Box: Malleable iron or cast ferrous metal.
  2. Cover: Gasketed, weatherproof, malleable iron, or cast ferrous metal, with stainless steel screws.
  3. Hubs: Threaded.
  4. Lugs: Cast Mounting.
  5. Manufacturers and Products, Nonhazardous Locations:
    - a. Crouse-Hinds; Type FS or Type FD.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Appleton; Type FS or Type FD.
    - c. Killark.
    - d. Or approved equal.
  6. Manufacturers and Products, Hazardous Locations:
    - a. Crouse-Hinds; Type GUA or Type EAJ.
    - b. Appleton; Type GR.
    - c. Or approved equal.
- C. Cast Aluminum:
  1. Material:
    - a. Box: Cast, copper-free aluminum.
    - b. Cover: Gasketed, weatherproof, cast copper-free aluminum with stainless steel screws.
  2. Hubs: Threaded.
  3. Lugs: Cast mounting.
  4. Manufacturers and Products, Nonhazardous Locations:
    - a. Crouse-Hinds; Type FS-SA or Type FD-SA.
    - b. Appleton; Type FS or Type FD.
    - c. Killark.
    - d. Or approved equal.
  5. Manufacturers and Products, Hazardous Locations:
    - a. Crouse-Hinds; Type GUA-SA.
    - b. Appleton; Type GR.
    - c. Or approved equal.
- D. PVC-Coated Cast Metal:
  1. Type: One-piece.
  2. Material: Malleable iron, cast ferrous metal, or cast aluminum.
  3. Coating:
    - a. Exterior Surfaces: 40-mil PVC.
    - b. Interior Surfaces: 2-mil urethane.
  4. Manufacturers:
    - a. Robroy Industries.
    - b. Ocal.
    - c. Or approved equal.
- E. Nonmetallic:
  1. Box: PVC.
  2. Cover: PVC, weatherproof, with stainless steel screws.
  3. Manufacturers and Products:
    - a. Carlon; Type FS or Type FD, with Type E98 or Type E96 covers.
    - b. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.04 JUNCTION AND PULL BOXES

- A. Outlet Box Used as Junction or Pull Box: As specified under Article Outlet and Device Boxes.
- B. Conduit Bodies Used as Junction Boxes: As specified under Article Fittings.
- C. Sheet Steel Box:
  - 1. NEMA 250, Type 1.
  - 2. Box: Code-gauge, galvanized steel.
  - 3. Cover: Full access, screw type.
  - 4. Machine Screws: Corrosion-resistant.
- D. Cast Metal Box:
  - 1. NEMA 250, Type 4.
  - 2. Box: Cast malleable iron, or ferrous metal, electrogalvanized finished, with drilled and tapped conduit entrances and exterior mounting lugs.
  - 3. Cover: Hinged with clamps.
  - 4. Gasket: Neoprene.
  - 5. Hardware and Machine Screws: ASTM A167, Type 316 stainless steel.
  - 6. Manufacturers and Products, Surface Mounted Nonhinged Type:
    - a. Crouse-Hinds; Series W.
    - b. O-Z/Gedney; Series Y.
    - c. Or approved equal.
  - 7. Manufacturer and Product:
    - a. Surface Mounted, Hinged Type: O-Z/Gedney; Series YW.
    - b. Or approved equal.
  - 8. Manufacturers and Products, Recessed Type:
    - a. Crouse-Hinds; Type WJBF.
    - b. O-Z/Gedney; Series YR.
    - c. Or approved equal.
- E. Cast Metal Box, Hazardous Locations:
  - 1. NEMA 250 Type 7 or Type 9 as required for Class, Division, and Group involved.
  - 2. Box: Cast ferrous metal, electro-galvanize finished or copper-free aluminum with drilled and tapped conduit entrances.
  - 3. Cover: Nonhinged with bolts.
  - 4. Hardware and Machine Screws: ASTM A167, Type 316 stainless steel.
  - 5. Manufacturers and Products:
    - a. Crouse-Hinds; Type EJB.
    - b. Appleton; Type AJBEW.
    - c. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

F. Stainless Steel Box:

1. NEMA 250 Type 4X.
2. Box: 14-gauge, ASTM A240/A240M, Type 316 stainless steel, with white enamel painted interior mounting panel.
3. Cover: Hinged with clamps.
4. Hardware and Machine Screws: ASTM A167, Type 316 stainless steel.
5. Manufacturers:
  - a. Hoffman Engineering Co.
  - b. Robroy Industries.
  - c. Wiegman.
  - d. Or approved equal.

G. Steel Box:

1. NEMA 250 Type 1, 3R and 12.
2. Box: 10-gauge steel, with white enamel painted interior and gray primed exterior, over phosphated surfaces. Provide gray finish.
3. Cover: Hinged with clamps.
4. Hardware and Machine Screws: ASTM A167, Type 316 stainless steel.
5. Manufacturers:
  - a. Hoffman Engineering Co.
  - b. Robroy Industries.
  - c. Wiegman.
  - d. Or approved equal.

H. Nonmetallic Box:

1. NEMA 250 Type 4X.
2. Box: High-impact, fiberglass-reinforced polyester or engineered thermoplastic, with stability to high heat.
3. Cover: Hinged with clamps.
4. Hardware and Machine Screws: ASTM A167, Type 316 stainless steel.
5. Conduit hubs and mounting lugs.
6. Manufacturers and Products:
  - a. Crouse-Hinds; Type NJB.
  - b. Carlon; Series N, C, or H.
  - c. Robroy Industries.
  - d. Or approved equal.

I. Concrete Box, Nontraffic Areas:

1. Box: Reinforced, cast concrete with extension.
2. Cover: Steel diamond plate with locking bolts.
3. Cover Marking: ELECTRICAL, TELEPHONE, or as shown.
4. Size: 10 inches by 17 inches, minimum.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Manufacturers and Products:
  - a. Utility Vault Co.; Series 36-1017.
  - b. Christy, Concrete Products, Inc.; N9.
  - c. Quazite; "PG" Style.
  - d. Or approved equal.

J. Concrete Box, Traffic Areas:

1. Box: Reinforced, cast concrete with extension and bottom slab.
2. Cover: Steel checked plate; H/20 loading with screw down.
3. Cover Marking: ELECTRICAL, TELEPHONE, or as shown.
4. Manufacturers and Products:
  - a. Christy, Concrete Products, Inc.; B1017BOX.
  - b. Utility Vault Co.; 3030 SB.
  - c. Or approved equal.

2.05 TERMINAL JUNCTION BOX

- A. Cover: Hinged, unless otherwise shown.
- B. Interior Finish: Paint with white enamel or lacquer.
- C. Terminal Blocks:
  1. Separate connection point for each conductor entering or leaving box.
  2. Spare Terminal Points: 25 percent, minimum.

2.06 SURFACE METAL RACEWAY

- A. Outlets:
  1. Manufacturers:
    - a. The Wiremold Co.
    - b. Walker.
    - c. Or approved equal.

2.07 METAL WIREWAYS

- A. Meet requirements of UL 870.
- B. Type: Steel-enclosed, lay-in type.
- C. Cover: Removable, screw type.
- D. Rating: Indoor.
- E. Finish: Rust inhibiting phosphatizing primer and gray baked enamel.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Hardware: Plated to prevent corrosion; screws installed toward the inside protected by spring nuts or otherwise guarded to prevent wire insulation damage.
- G. Knockouts: Without knockouts, unless otherwise indicated.
- H. Manufacturers:
  - 1. Circle AW.
  - 2. Hoffman.
  - 3. Square D.
  - 4. Or approved equal.

2.08 PRECAST MANHOLES AND HANDHOLES

- A. Concrete Strength: Minimum, 3,000 psi compressive, in 28 days.
- B. Loading: AASHTO, H-20 in accordance with ASTM C857.
- C. Access: Provide cast concrete risers and access hole adapters between top of manhole and finished grade at required elevations.
- D. Drainage:
  - 1. Slope floors toward drain points, leaving no pockets or other nondraining areas.
  - 2. Provide drainage outlet or sump at low point of floor constructed with a heavy, cast iron, slotted or perforated hinged cover, and a minimum 4-inch outlet and outlet pipe.
- E. Raceway Entrances:
  - 1. Provide on all four sides.
  - 2. Provide knockout panels or precast individual raceway openings.
  - 3. At entrances where raceways are to be installed by others, provide minimum 12-inch-high by 24-inch-wide knockout panels for future raceway installation.
- F. Embedded Pulling Iron:
  - 1. Material: 3/4-inch-diameter stock, fastened to overall steel reinforcement before concrete is placed.
  - 2. Location:
    - a. Wall: Opposite each raceway entrance and knockout panel for future raceway entrance.
    - b. Floor: Centered below manhole or handhole cover.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

G. Cable Racks:

1. Arms and Insulators: Adjustable, of sufficient number to accommodate cables for each raceway entering or leaving manhole, including spares.
2. Wall Attachment:
  - a. Adjustable inserts in concrete walls. Bolts or embedded studs not permitted.
  - b. Insert Spacing: Maximum 3 feet on center for inside perimeter of manhole.
  - c. Arrange in order that spare raceway ends are clear for future cable installation.

H. Manhole Frames and Covers:

1. Material: Machined cast iron.
2. Diameter: 36-1/2 inch nominal unless otherwise indicated on Drawings.
3. Cover Type: Indented, solid top design, with two drop handles each.
4. Cover Loading: AASHTO H-20.
5. Cover Designation: Cast, on upper side, in integral letters, minimum 2 inches in height, appropriate titles:
  - a. Above 600 Volts: ELECTRIC HV.
  - b. 600 Volts and Below: ELECTRIC LV.
  - c. COMMUNICATIONS.

I. Handhole Frames and Covers:

1. Material: Steel, hot-dipped galvanized.
2. Cover Type: Solid, torsion spring, of nonskid design.
3. Cover Loading: AASHTO H-20.
4. Cover Designation: Burn by welder, on upper side in integral letters, minimum 2 inches in height, appropriate titles:
  - a. 600 Volts and Below: ELECTRIC LV.
  - b. COMMUNICATIONS.

J. Hardware: Steel, hot-dip galvanized.

K. Furnish knockout for ground rod in each handhole and manhole.

L. Manufacturers:

1. Utility Vault Co.
2. Penn-Cast Products, Inc.
3. Concrete Conduit Co.
4. Associated Concrete Products, Inc.
5. Pipe, Inc.
6. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.09 ACCESSORIES

A. Duct Bank Spacers:

1. Modular Type:
  - a. Nonmetallic, interlocking, for multiple conduit sizes.
  - b. Suitable for all types of conduit.
  - c. Manufacturers:
    - 1) Underground Device, Inc.
    - 2) Carlon.
    - 3) Or approved equal.
2. Template Type:
  - a. Nonmetallic, custom made one-piece spacers.
  - b. Suitable for all types of conduit.
  - c. Material: HDPE or polypropylene, 1/2-inch minimum thickness.
  - d. Conduit openings cut 1 inch larger than conduit outside diameter.
  - e. Additional openings for stake-down, rebar, and concrete flow through as required.
  - f. Manufacturers and Products
    - 1) SP Products; Quik Duct.
    - 2) Or approved equal.

B. Identification Devices:

1. Raceway Tags:
  - a. Material: Permanent, nylon.
  - b. Raceway Designation: Pressure stamped, embossed, or engraved.
  - c. Tags relying on adhesives or taped-on markers not permitted.
2. Warning Tape:
  - a. Material: Polyethylene, 4-mil gauge with detectable strip.
  - b. Color: Red.
  - c. Width: Minimum 6 inches.
  - d. Designation: Warning on tape that electric circuit is located below tape.
  - e. Identifying Letters: Minimum 1-inch-high permanent black lettering imprinted continuously over entire length.
  - f. Manufacturers and Products:
    - 1) Panduit; Type HTDU.
    - 2) Reef Industries; Terra Tape.
    - 3) Or approved equal.

C. Heat Shrinkable Tubing:

1. Material: Heat-shrinkable, cross-linked polyolefin.
2. Semi-flexible with meltable adhesive inner liner.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Color: Black.
  4. Manufacturers:
    - a. Raychem.
    - b. 3M.
    - c. Or approved equal.
- D. Wraparound Duct Band:
1. Material: Heat-shrinkable, cross-linked polyolefin, precoated with hot-melt adhesive.
  2. Width: 50 mm minimum.
  3. Manufacturers and Products
    - a. Raychem; Type TWDB.
    - b. Or approved equal.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Conduit and tubing sizes shown are based on use of copper conductors. Reference Section 26 05 05, Conductors, concerning conduit sizing for aluminum conductors.
- B. Comply with NECA Installation Standards.
- C. Crushed or deformed raceways not permitted.
- D. Maintain raceway entirely free of obstructions and moisture.
- E. Immediately after installation, plug or cap raceway ends with watertight and dust-tight seals until time for pulling in conductors.
- F. Sealing Fittings: Provide drain seal in vertical raceways where condensate may collect above sealing fitting.
- G. Avoid moisture traps where possible. When unavoidable in exposed conduit runs, provide junction box and drain fitting at conduit low point.
- H. Group raceways installed in same area.
- I. Proximity to Heated Piping: Install raceways minimum 12 inches from parallel runs.
- J. Follow structural surface contours when installing exposed raceways. Avoid obstruction of passageways.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- K. Run exposed raceways parallel or perpendicular to walls, structural members, or intersections of vertical planes.
- L. Block Walls: Do not install raceways in same horizontal course or vertical cell with reinforcing steel.
- M. Install watertight fittings in outdoor, underground, or wet locations.
- N. Paint threads and cut ends, before assembly of fittings, galvanized conduit, PVC-coated galvanized conduit, or IMC installed in exposed or damp locations with zinc-rich paint or liquid galvanizing compound.
- O. Metal conduit shall be reamed, burrs removed, and cleaned before installation of conductors, wires, or cables.
- P. Do not install raceways in concrete equipment pads, foundations, or beams without Engineer approval.
- Q. Horizontal raceways installed under floor slabs shall lie completely under slab, with no part embedded within slab.
- R. Install concealed, embedded, and buried raceways so that they emerge at right angles to surface and have no curved portion exposed.
- S. Install conduits for fiber optic cables, telephone cables, and Category 6 data cables in strict conformance with the requirements of TIA 569B.

3.02 REUSE OF EXISTING CONDUITS

- A. Where Drawings indicate existing conduits may be reused, they may be reused only where they meet the following criteria.
  - 1. Conduit is in useable condition with no deformation, corrosion, or damage to exterior surface.
  - 2. Conduit is sized per the NEC.
  - 3. Conduit is of the type specified in Contract Documents.
  - 4. Conduit is supported as specified in Contract Documents.
- B. Conduit shall be reamed with wire brush, then with a mandrel approximately 1/4 inch smaller than raceway inside diameter then cleaned prior to pulling new conductors.

3.03 INSTALLATION IN CAST-IN-PLACE STRUCTURAL CONCRETE

- A. Minimum Cover: 2 inches, including fittings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Conduit placement shall not require changes in reinforcing steel location or configuration.
- C. Provide nonmetallic support during placement of concrete to ensure raceways remain in position.
- D. Conduit larger than 1 inch shall not be embedded in concrete slabs, walls, foundations, columns, or beams unless approved by Engineer.
- E. Slabs and Walls (Requires Engineer Approval):
  - 1. Trade size of conduit not to exceed one-fourth of slab or wall thickness.
  - 2. Install within middle two-fourths of slab or wall.
  - 3. Separate conduit less than 2-inch trade size by a minimum ten times conduit trade size, center-to-center, unless otherwise shown.
  - 4. Separate conduit 2-inch and greater trade size by a minimum eight times conduit trade size, center-to-center, unless otherwise shown.
  - 5. Cross conduit at an angle greater than 45 degrees, with minimum separation of 1 inch.
  - 6. Separate conduit by a minimum six times the outside dimension of expansion/deflection fittings at expansion joints.
  - 7. Conduit shall not be installed below the maximum water surface elevation in walls of water holding structures.
- F. Columns and Beams (Requires Engineer Approval):
  - 1. Trade size of conduit not to exceed one-fourth of beam thickness.
  - 2. Conduit cross-sectional area not to exceed 4 percent of beam or column cross section.

3.04 CONDUIT APPLICATION

- A. Diameter: Minimum 3/4 inch.
- B. In addition to the requirements below, refer to the Area Classification Table on Drawings.
- C. Direct Earth Burial: PVC Schedule 40.
- D. Concrete-Encased Ductbank: PVC Schedule 40 for ac circuits, PVC-Coated Rigid Galvanized Steel for dc, analog, or copper communication or other circuits sensitive to electromagnetic interference.
- E. Under Slabs-on-Grade: PVC Schedule 40 for ac circuits, PVC-Coated Rigid Galvanized Steel for dc, analog, or copper communication or other circuits sensitive to electromagnetic interference.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Transition from Underground or Concrete Embedded to Exposed: PVC-coated rigid steel conduit.

3.05 FLEXIBLE CONNECTIONS

- A. For motors, wall or ceiling mounted fans and unit heaters, dry type transformers, electrically operated valves, instrumentation, and other locations approved by Engineer where flexible connection is required to minimize vibration:
  - 1. Conduit Size 4 Inches or Less: Flexible, liquid-tight conduit.
  - 2. Conduit Size Over 4 Inches: Nonflexible.
  - 3. Wet or Corrosive Areas: Flexible, nonmetallic liquid-tight.
  - 4. Dry Areas: Flexible, metallic liquid-tight.
  - 5. Hazardous Areas: Flexible coupling suitable for Class I, Division 1 and 2 areas.
- B. Suspended Lighting Fixtures in Dry Areas: Flexible steel, nonliquid-tight conduit.
- C. Outdoor Areas, Process Areas Exposed to Moisture, and Areas Required to be Oil-Tight and Dust-Tight: Flexible metal, liquid-tight conduit.
- D. Flexible Conduit Length: 18 inches minimum, 60 inches maximum; sufficient to allow movement or adjustment of equipment.

3.06 PENETRATIONS

- A. Make at right angles, unless otherwise shown.
- B. Notching or penetration of structural members, including footings and beams, not permitted.
- C. Fire-Rated Walls, Floors, or Ceilings: Firestop openings around penetrations to maintain fire-resistance rating as specified in Section 26 05 04, Basic Electrical Materials and Methods.
- D. Apply heat shrinkable tubing or single layer of wraparound duct band to metallic conduit protruding through concrete floor slabs to a point 2 inches above and 2 inches below concrete surface.
- E. Concrete Walls, Floors, or Ceilings (Aboveground): Provide non-shrink grout dry-pack, or use watertight seal device.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

F. Entering Structures:

1. General: Seal raceway at first box or outlet with oakum or expandable plastic compound to prevent entrance of gases or liquids from one area to another.
2. Concrete Roof or Membrane Waterproofed Wall or Floor:
  - a. Provide a watertight seal.
  - b. Without Concrete Encasement: Install watertight entrance seal device on each side.
  - c. With Concrete Encasement: Install watertight entrance seal device on accessible side.
  - d. Securely anchor malleable iron body of watertight entrance seal device into construction with one or more integral flanges.
  - e. Secure membrane waterproofing to watertight entrance seal device in a permanent, watertight manner.
3. Corrosive-Sensitive Areas:
  - a. Seal conduit passing through walls.
  - b. Seal conduit entering equipment panel boards and field panels containing electronic equipment.
  - c. Seal penetration with Type 5 sealant, as specified in Section 07 92 00, Joint Sealants.
4. Existing or Precast Wall (Underground): Core drill wall and install watertight entrance seal device.
5. Nonwaterproofed Wall or Floor (Underground, without Concrete Encasement):
  - a. Provide Schedule 40 galvanized pipe sleeve, or watertight entrance seal device.
  - b. Fill space between raceway and sleeve with expandable plastic compound or oakum and lead joint, on each side.
6. Manholes and Handholes:
  - a. Metallic Raceways: Provide insulated grounding bushings.
  - b. Nonmetallic Raceways: Provide bell ends flush with wall.
  - c. Install such that raceways enter as near as possible to one end of wall, unless otherwise shown.

3.07 SUPPORT

- A. Support from structural members only, at intervals not exceeding NFPA 70 requirements. Do not exceed 10 feet in any application. Do not support from piping, pipe supports, or other raceways.
- B. Multiple Adjacent Raceways: Provide ceiling trapeze. For trapeze-supported conduit, allow 25 percent extra space for future conduit.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Application/Type of Conduit Strap:
  - 1. Rigid Steel Conduit: Zinc coated steel, pre-galvanized steel or malleable iron.
  - 2. PVC-Coated Rigid Steel Conduit: PVC-coated metal.
  - 3. Nonmetallic Conduit: Nonmetallic or PVC-coated metal.
  
- D. Provide and attach wall brackets, strap hangers, or ceiling trapeze as follows:
  - 1. Wood: Wood screws.
  - 2. Hollow Masonry Units: Toggle bolts.
  - 3. Concrete or Brick: Expansion shields, or threaded studs driven in by powder charge, with lock washers and nuts.
  - 4. Steelwork: Machine screws.
  - 5. Location/Type of Hardware: Refer to the Area Classification and Materials Selection Table on Drawings.
  
- E. Nails or wooden plugs inserted in concrete or masonry for attaching raceway not permitted. Do not weld raceways or pipe straps to steel structures. Do not use wire in lieu of straps or hangers.
  
- F. Support aluminum conduit on concrete surfaces with stainless steel or nonmetallic spacers, or aluminum or nonmetallic framing channel.

3.08 BENDS

- A. Install concealed raceways with a minimum of bends in the shortest practical distance.
  
- B. Make bends and offsets of longest practical radius. Bends in conduits and ducts being installed for fiber optic cables shall be not less than 20 times cable diameter, 15 inches minimum.
  
- C. Install with symmetrical bends or cast metal fittings.
  
- D. Avoid field-made bends and offsets, but where necessary, make with acceptable hickey or bending machine. Do not heat metal raceways to facilitate bending.
  
- E. Make bends in parallel or banked runs from same center or centerline with same radius so that bends are parallel.
  
- F. Factory elbows may be installed in parallel or banked raceways if there is change in plane of run, and raceways are same size.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- G. PVC Conduit:
  - 1. Bends 30 Degrees and Larger: Provide factory-made elbows.
  - 2. 90-Degree Bends: Provide rigid steel elbows, fiberglass where direct buried.
  - 3. Use manufacturer's recommended method for forming smaller bends.
- H. Flexible Conduit: Do not make bends that exceed allowable conductor bending radius of cable to be installed or that significantly restricts conduit flexibility.

3.09 EXPANSION/DEFLECTION FITTINGS

- A. Provide on raceways at structural expansion joints and in long tangential runs.
- B. Provide expansion/deflection joints for 50 degrees F maximum temperature variation.
- C. Install in accordance with manufacturer's instructions.

3.10 PVC CONDUIT

- A. Solvent Welding:
  - 1. Apply manufacturer recommended solvent to joints.
  - 2. Install in order that joint is watertight.
- B. Adapters:
  - 1. PVC to Metallic Fittings: PVC terminal type.
  - 2. PVC to Rigid Metal Conduit or IMC: PVC female adapter.
- C. Belled-End Conduit: Bevel unbelled end of joint prior to joining.

3.11 PVC-COATED RIGID STEEL CONDUIT

- A. Install in accordance with manufacturer's instructions.
- B. Tools and equipment used in cutting, bending, threading and installation of PVC-coated rigid conduit shall be designed to limit damage to PVC coating.
- C. Provide PVC boot to cover exposed threading.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.12 WIREWAYS

- A. Install in accordance with manufacturer's instructions.
- B. Locate with cover on accessible vertical face of wireway, unless otherwise shown.
- C. Applications:
  - 1. Metal wireway in indoor dry locations.
  - 2. Nonmetallic wireway in indoor wet, outdoor, and corrosive locations.

3.13 TERMINATION AT ENCLOSURES

- A. Cast Metal Enclosure: Install manufacturer's pre-molded insulating sleeve inside metallic conduit terminating in threaded hubs.
- B. Nonmetallic, Cabinets, and Enclosures:
  - 1. Terminate conduit in threaded conduit hubs, maintaining enclosure integrity.
  - 2. Metallic Conduit: Provide ground terminal for connection to maintain continuity of ground system.
- C. Sheet Metal Boxes, Cabinets, and Enclosures:
  - 1. General:
    - a. Install insulated bushing on ends of conduit where grounding is not required.
    - b. Provide insulated throat when conduit terminates in sheet metal boxes having threaded hubs.
    - c. Utilize sealing locknuts or threaded hubs on sides and bottom of NEMA 3R and NEMA 12 enclosures.
    - d. Terminate conduits at threaded hubs at the tops of NEMA 3R and NEMA 12 boxes and enclosures.
    - e. Terminate conduits at threaded conduit hubs at NEMA 4 and NEMA 4X boxes and enclosures.
  - 2. Rigid Galvanized Conduit:
    - a. Provide one lock nut each on inside and outside of enclosure.
    - b. Install grounding bushing at source enclosure.
    - c. Provide bonding jumper from grounding bushing to equipment ground bus or ground pad.
  - 3. Electric Metallic Tubing: Provide gland compression, insulated connectors.
  - 4. Flexible Metal Conduit: Provide two screw type, insulated, malleable iron connectors.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Flexible, Nonmetallic Conduit: Provide nonmetallic, liquid-tight strain relief connectors.
  6. PVC-Coated Rigid Galvanized Steel Conduit: Provide PVC-coated, liquid-tight, metallic connector.
  7. PVC Schedule 40 Conduit: Provide PVC terminal adapter with lock nut, except where threaded hubs required above.
- D. Control Center, Switchboard, Switchgear, and Free-Standing Enclosures:
1. Terminate metal conduit entering bottom with grounding bushing; provide grounding jumper extending to equipment ground bus or grounding pad.
  2. Terminate PVC conduit entering bottom with bell end fittings.

3.14 UNDERGROUND RACEWAYS

- A. Grade: Maintain minimum grade of 4 inches in 100 feet, either from one manhole, handhole, or pull box to the next, or from a high point between them, depending on surface contour.
- B. Cover: Maintain minimum 2-foot cover above concrete encasement, unless otherwise shown.
- C. Make routing changes as necessary to avoid obstructions or conflicts.
- D. Couplings: In multiple conduit runs, stagger so couplings in adjacent runs are not in same transverse line.
- E. Union type fittings not permitted.
- F. Spacers:
  1. Provide preformed, nonmetallic spacers designed for such purpose, to secure and separate parallel conduit runs in a trench or concrete encasement.
  2. Install at intervals not greater than that specified in NFPA 70 for support of the type conduit used, but in no case greater than 10 feet.
- G. Support conduit so as to prevent bending or displacement during backfilling or concrete placement.
- H. Installation with Other Piping Systems:
  1. Crossings: Maintain minimum 12-inch vertical separation.
  2. Parallel Runs: Maintain minimum 12-inch separation.
  3. Installation over valves or couplings not permitted.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- I. Provide expansion fittings that allow minimum of 4 inches of movement in vertical conduit runs from underground where exposed conduit will be fastened to or will enter building or structure.
- J. Provide expansion/deflection fittings in conduit runs that exit building or structure below grade. Conduit from building wall to fitting shall be PVC-coated rigid steel.
- K. Concrete Encasement: As specified in Section 03 30 01, Reinforced Concrete.
- L. Backfill: As specified in Section 31 23 23.15, Trench Backfill.

3.15 UNDER SLAB RACEWAYS

- A. Make routing changes as necessary to avoid obstructions or conflicts.
- B. Support raceways to prevent bending or displacement during backfilling or concrete placement.
- C. Install raceways with no part embedded within slab and with no interference with slab on grade construction.
- D. Raceway spacing, in a single layer or multiple layers:
  - 1. 3 inches clear between adjacent 2-inch or larger raceway.
  - 2. 2 inches clear between adjacent 1-1/2-inch or smaller raceway.
- E. Multiple Layers of Raceways: Install under slab on grade in trench below backfill zone, as specified in Section 31 23 23.15, Trench Backfill.
- F. Individual Raceways and Single Layer Multiple Raceways: Install at lowest elevation of backfill zone with spacing as specified herein. Where conduits cross at perpendicular orientation, installation of conduits shall not interfere with placement of under slab fill that meets compaction and void limitations of earthwork specifications.
- G. Under slab raceways that emerge from below slab to top of slab as exposed, shall be located to avoid conflicts with structural slab rebar. Coordinate raceway stub ups with location of structural rebar.
- H. Fittings:
  - 1. Union type fittings are not permitted.
  - 2. Provide expansion/deflection fittings in raceway runs that exit building or structure below slab. Locate fittings 18 inches, maximum, beyond exterior wall. Raceway type between building exterior wall to fitting shall be PVC-coated rigid steel.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Couplings: In multiple raceway runs, stagger so couplings in adjacent runs are not in same traverse line.

### 3.16 OUTLET AND DEVICE BOXES

#### A. General:

1. Install plumb and level.
2. Install suitable for conditions encountered at each outlet or device in wiring or raceway system, sized to meet NFPA 70 requirements.
3. Open no more knockouts in sheet steel device boxes than are required; seal unused openings.
4. Install galvanized mounting hardware in industrial areas.

#### B. Size:

1. Depth: Minimum 2 inches, unless otherwise required by structural conditions. Box extensions not permitted.
  - a. Hollow Masonry Construction: Install with sufficient depth such that conduit knockouts or hubs are in masonry void space.
2. Ceiling Outlet: Minimum 4-inch octagonal device box, unless otherwise required for installed fixture.
3. Switch and Receptacle: Minimum 2-inch by 4-inch device box.

#### C. Locations:

1. Drawing locations are approximate.
2. To avoid interference with mechanical equipment or structural features, relocate outlets as directed by Engineer.
3. Light Fixture: Install in symmetrical pattern according to room layout, and to meet minimum recommended lighting levels, unless otherwise shown.

#### D. Mounting Height:

1. General:
  - a. Dimensions given to centerline of box.
  - b. Where specified heights do not suit building construction or finish, adjust up or down to avoid interference.
  - c. Do not straddle CMU block or other construction joints.
2. Light Switch:
  - a. 48 inches above floor.
  - b. When located next to door, install on lock side of door.
3. Thermostat: 54 inches above floor.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Telephone Outlet:
    - a. 15 inches above floor.
    - b. 6 inches above counter tops.
    - c. Wall Mounted: 52 inches above floor.
  5. Convenience Receptacle:
    - a. General Interior Areas: 15 inches above floor.
    - b. General Interior Areas (Counter Tops): Install device plate bottom or side flush with top of backsplash, or 6 inches above counter tops without backsplash.
    - c. Outdoor Areas: 24 inches above finished grade.
  6. Special-Purpose Receptacle: 24 inches above floor or as shown.
  7. Switch, Motor Starting: 48 inches above floor, unless otherwise indicated on Drawings.
- E. Flush Mounted:
1. Install with concealed conduit.
  2. Install proper type extension rings or plaster covers to make edges of boxes flush with finished surface.
  3. Holes in surrounding surface shall be no larger than required to receive box.
- F. Supports:
1. Support boxes independently of conduit by attachment to building structure or structural member.
  2. Install bar hangers in frame construction or fasten boxes directly as follows:
    - a. Wood: Wood screws.
    - b. Concrete or Brick: Bolts and expansion shields.
    - c. Hollow Masonry Units: Toggle bolts.
    - d. Steelwork: Machine screws.
  3. Threaded studs driven in by powder charge and provided with lock washers and nuts are acceptable in lieu of expansion shields.
  4. Provide plaster rings where necessary.
  5. Boxes embedded in concrete or masonry need not be additionally supported.
- G. Install separate junction boxes for flush or recessed lighting fixtures where required by fixture terminal temperature.
- H. Boxes Supporting Fixtures: Provide means of attachment with adequate strength to support fixture.

3.17 JUNCTION AND PULL BOXES

A. General:

1. Install plumb and level.
2. Installed boxes shall be accessible.
3. Do not install on finished surfaces.
4. Use outlet boxes as junction and pull boxes wherever possible and allowed by applicable codes.
5. Use conduit bodies as junction and pull boxes where no splices are required and allowed by applicable codes.
6. Install pull boxes where necessary in raceway system to facilitate conductor installation.
7. Install where shown and where necessary to terminate, tap-off, or redirect multiple conduit runs.
8. Install in conduit runs at least every 150 feet or after the equivalent of three right-angle bends.

B. Mounting Hardware: Refer to the Area Classification and Material Selection Table on Drawings.

C. Supports:

1. Support boxes independently of conduit by attachment to building structure or structural member.
2. Install bar hangers in frame construction or fasten boxes directly as follows:
  - a. Wood: Wood screws.
  - b. Concrete or Brick: Bolts and expansion shields.
  - c. Hollow Masonry Units: Toggle bolts.
  - d. Steelwork: Machine screws.
3. Threaded studs driven in by powder charge and provided with lock washers and nuts are acceptable in lieu of expansion shields.
4. Boxes embedded in concrete or masonry need not be additionally supported.

D. At or Below Grade:

1. Install boxes for below grade conduit flush with finished grade in locations outside of paved areas, roadways, or walkways.
2. If adjacent structure is available, box may be mounted on structure surface just above finished grade in accessible but unobtrusive location.
3. Obtain Engineer's written acceptance prior to installation in paved areas, roadways, or walkways.
4. Use boxes and covers suitable to support anticipated weights.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Install Drain/breather fittings in NEMA 250 Type 4 and Type 4X enclosures.

3.18 MANHOLES AND HANDHOLES

- A. Excavate, shore, brace, backfill, and final grade in accordance with Section 31 23 16, Excavation, and Section 31 23 23.15, Trench Backfill.
- B. Do not install until final raceway grading has been determined.
- C. Install such that raceway enters at nearly right angle and as near as possible to end of wall, unless otherwise shown.
- D. Grounding: As specified in Section 26 05 26, Grounding and Bonding for Electrical Systems.
- E. Identification: Field stamp covers with manhole or handhole number as shown. Stamped numbers to be 1-inch minimum height.

3.19 EMPTY RACEWAYS

- A. Provide permanent, removable cap over each end.
- B. Provide PVC plug with pull tab for underground raceways with end bells.
- C. Provide nylon pull cord.
- D. Identify, as specified in Article Identification Devices, with waterproof tags attached to pull cord at each end, and at intermediate pull point.

3.20 IDENTIFICATION DEVICES

- A. Raceway Tags:
  - 1. Identify origin and destination.
  - 2. For exposed raceways, install tags at each terminus, near midpoint, and at minimum intervals of every 50 feet, whether in ceiling space or surface mounted.
  - 3. Install tags at each terminus for concealed raceways.
  - 4. Provide nylon strap for attachment.
- B. Warning Tape: Install approximately 12 inches above underground or concrete-encased raceways. Align parallel to, and within 12 inches of, centerline of run.

3.21 PROTECTION OF INSTALLED WORK

- A. Protect products from effects of moisture, corrosion, and physical damage during construction.
- B. Provide and maintain manufactured watertight and dust-tight seals over conduit openings during construction.
- C. Touch up painted conduit threads after assembly to cover nicks or scars.
- D. Touch up coating damage to PVC-coated conduit with patching compound approved by manufacturer. Compound shall be kept refrigerated according to manufacturers' instructions until time of use.

**END OF SECTION**

**SECTION 26 05 70**  
**ELECTRICAL SYSTEMS ANALYSIS**

**PART 1 GENERAL**

1.01 EXISTING MODEL

- A. An existing SKM up-to-date current model will be provided by the Owner to the Contractor upon request. It will not be the responsibility of the Contractor to verify any of the settings or values in the model provided. The Contractor will only be responsible for adding new equipment, provided under this contract, to the model. Arc flash labels will only be required for new serviceable equipment that has been added under this contract. In the case of new MCC equipment, arc flash labels will only be required to be affixed to the affected MCC bucket. In addition, arc flash labels will be required for VFDs and disconnects.

1.02 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. American National Standards Institute (ANSI).
  2. Institute of Electrical and Electronics Engineers, Inc. (IEEE):
    - a. C57.12.00, Standard General Requirements for Liquid-Immersed Distribution, Power, and Regulating Transformers.
    - b. 242, Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems.
    - c. 399, Recommended Practice for Industrial and Commercial Power System Analysis.
    - d. 1584, Guide for Performing Arc Flash Hazard Calculations.
  3. National Electrical Manufacturers Association (NEMA): Z535.4, Product Safety Signs and Labels.
  4. National Fire Protection Association (NFPA):
    - a. 70, National Electrical Code (NEC).
    - b. 70E, Standard for Electrical Safety in the Workplace.
  5. Occupational Safety and Health Standards (OSHA): 29 CFR, Part 1910 Subpart S, Electrical.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 SUBMITTALS

A. Action Submittals:

1. Short circuit study.
2. Arc Flash Study: Submit initial study with short circuit study. Submit final study prior to equipment energization.
3. Arc flash warning labels; submit sample with initial study.
4. Electronic files of final studies including all engineering software input files, output reports, and libraries.

1.04 QUALITY ASSURANCE

- A. Short circuit and arc flash studies shall be prepared by manufacturer furnishing the majority VFDs and stamped by a professional electrical engineer registered in the State of California.

1.05 SEQUENCING AND SCHEDULING

- A. Initial complete short circuit study shall be submitted and reviewed before Design Engineer will review Shop Drawings for VFD equipment.
- B. Initial complete arc flash studies shall be submitted within 90 days after approval of initial short circuit study.
- C. Initial complete arc flash study shall be submitted and accepted prior to energization of the electrical equipment.
- D. Revised short circuit, arc flash studies, and arc flash labels shall be submitted 10 days before energizing electrical equipment.
- E. Final short circuit and arc flash studies shall be completed prior to Project Substantial Completion. Final version of study shall include as-installed equipment, materials, and parameter data or settings entered into equipment based on study.
- F. Submit final arc flash labels described herein and in compliance with NEMA Z535.4 and NFPA 70E prior to Project Substantial Completion.

1.06 GENERAL STUDY REQUIREMENTS

- A. Equipment and component titles used in the studies shall be identical to equipment and component titles shown on Drawings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Perform studies using one of the following electrical engineering software packages:
  - 1. SKM Power Tools for Windows.
  - 2. ETAP.
  - 3. Paladin.
  - 4. Easy Power.
- C. Perform complete fault calculations for each new piece of electrical equipment that is serviceable during energization.
- D. Device coordination time-current curves for low voltage distribution system; include individual protective device time-current characteristics.

1.07 SHORT CIRCUIT STUDY

- A. General:
  - 1. Prepare in accordance with IEEE 399.
  - 2. Use cable impedances based on copper conductors, except where aluminum conductors are specified or shown.
  - 3. Use bus impedances based on copper bus bars, except where aluminum bus bars are specified or shown.
  - 4. Use cable and bus resistances calculated at 25 degrees C.
  - 5. Use 600-volt cable reactances based on use of typical dimensions of XHHW conductors.
  - 6. Use transformer impedances 92.5 percent of “nominal” impedance based on tolerances specified in IEEE C57.12.00.
- B. Provide:
  - 1. Calculation methods and assumptions.
  - 2. Typical calculation.
  - 3. Tabulations of calculated quantities.
  - 4. Results, conclusions, and recommendations.
  - 5. Selected base per unit quantities.
  - 6. One-line diagrams.
  - 7. Source impedance data, including electric utility system and motor fault contribution characteristics.
  - 8. Impedance diagrams.
  - 9. Zero-sequence impedance diagrams.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Calculate short circuit interrupting and momentary (when applicable) duties for an assumed three-phase bolted fault at each:
1. Low-voltage switchboard.
  2. Adjustable speed drives.
  3. Disconnect switches.
  4. Transfers switches.
  5. Branch circuit panelboards.
- D. Verify:
1. Equipment and protective devices are applied within their ratings.
  2. Adequacy of electrical distribution equipment bus bars to withstand short circuit stresses.
  3. Adequacy of transformer windings to withstand short circuit stresses.
  4. Cable and busway sizes for ability to withstand short circuit heating, in addition to normal load currents.
- E. Tabulations:
1. General Data:
    - a. Short circuit reactances of rotating machines.
    - b. Cable and conduit material data.
    - c. Bus data.
    - d. Transformer data.
    - e. Circuit resistance and reactance values.
  2. Short Circuit Data (for each source combination):
    - a. Fault impedances.
    - b. X to R ratios.
    - c. Asymmetry factors.
    - d. Motor contributions.
    - e. Short circuit kVA.
    - f. Symmetrical and asymmetrical fault currents.
  3. Equipment Evaluation:
    - a. Equipment bus bracing, equipment short circuit rating, transformer, cable, busway.
    - b. Maximum fault current available.
- F. Written Summary:
1. Scope of studies performed.
  2. Results of short circuit study.
  3. Results of arc flash study.
  4. Comments or suggestions.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- G. Suggest changes and additions to equipment rating and/or characteristics.
- H. Notify Construction Manager in writing of existing circuit protective devices improperly rated for new fault conditions.
- I. Revise data for “as-installed” condition.

1.08 ARC FLASH STUDY

- A. Perform arc flash hazard study after short circuit study has been completed, reviewed and accepted.
- B. Perform arc flash study in accordance with NFPA 70E, OSHA 29 CFR, Part 1910 Subpart S, and IEEE 1584.
- C. Base Calculation:
  - 1. For each major part of electrical power system, determine the following:
    - a. Flash hazard protection boundary.
    - b. Limited approach boundary.
    - c. Restricted approach boundary.
    - d. Incident energy level.
    - e. Glove class required.
- D. Produce arc flash warning labels that list items in Paragraph Base Calculation and the following additional items.
  - 1. Equipment name.
  - 2. Equipment voltage.
- E. Produce equipment detail sheets that list items in Paragraph Base Calculation and the following additional items:
  - 1. Equipment name.
  - 2. Upstream protective device name, type, and settings.
  - 3. Equipment line-to-line voltage.
- F. Produce arc flash evaluation summary sheet listing the following additional items:
  - 1. Equipment name.
  - 2. Upstream protective device name, type, settings.
  - 3. Equipment line-to-line voltage.
  - 4. Equipment bolted fault.
  - 5. Protective device bolted fault current.
  - 6. Arcing fault current.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. Protective device trip/delay time.
  8. Breaker opening time.
  9. Equipment type.
  10. Gap.
  11. Arc flash boundary.
  12. Working distance.
  13. Incident energy.
- G. Analyze short circuit and arc flash calculations and highlight equipment that is determined to be underrated or causes incident energy values greater than 8 cal/cm<sup>2</sup>. Propose approaches to reduce energy levels.
- H. Prepare report summarizing arc flash study with conclusions and recommendations which may affect integrity of electric power distribution system. As a minimum, include the following:
1. Equipment manufacturer's information used to prepare study.
  2. Assumptions made during study.
  3. Reduced copy of one-line drawing; 11 inches by 17 inches maximum.
  4. Arc flash evaluations summary spreadsheet.
  5. Equipment detail sheets.
  6. Arc flash warning labels printed in color on thermally bonded adhesive backed UV and weather-resistant labels.

**PART 2 PRODUCTS**

2.01 ARC FLASH WARNING LABELS

- A. Arc flash warning labels printed in color on thermally bonded adhesive backed, UV- and weather-resistant labels. An example label is located following end of section in Figure 1.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Adjust relay and protective device settings according to values established by coordination study.
- B. Make minor modifications to equipment as required to accomplish conformance with short circuit and protective device coordination studies.
- C. Notify Construction Manager in writing of required major equipment modifications.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Provide laminated one-line diagrams (minimum size 11 inches by 17 inches) to post on interior of electrical room doors.
- E. Provide arc flash warning labels on equipment as specified in this section.

3.02 SUPPLEMENT

- A. The supplement listed below, following “End of Section,” is a part of this Specification:
  - 1. Shock and Arc Flash Hazard Label.

**END OF SECTION**

1.02 SUBMITTALS

A. Informational Submittals:

- 1. Submit 30 days prior to performing inspections or tests:
  - a. Schedule for performing inspection and tests.
  - b. List of references to be used for each test.
  - c. Sample copy of equipment and materials inspection form(s).
  - d. Sample copy of individual device test form.
  - e. Sample copy of individual system test form.
- 2. Energization Plan: Prior to initial energization of electrical distribution equipment; include the following:
  - a. Owner's representative sign-off form for complete and accurate arc flash labeling and proper protective device settings for equipment to be energized.
  - b. Staged sequence of initial energization of electrical equipment.
  - c. Lock-Out-Tag-Out plan for each stage of the progressive energization.
  - d. Barricading, signage, and communication plan notifying personnel of newly energized equipment.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Submit test or inspection reports and certificates for each electrical item tested within 30 days after completion of test:
4. Operation and Maintenance Data:
  - a. In accordance with Section 01 78 23, Operation and Maintenance Data.
  - b. After test or inspection reports and certificates have been reviewed by Engineer and returned, insert a copy of each in Operation and Maintenance Manual.
5. Programmable Settings: At completion of Performance Demonstration Test, submit final hardcopy printout and electronic files on compact disc of as-left setpoints, programs, and device configuration files for:
  - a. Protective relays.
  - b. Intelligent overload relays.
  - c. Variable frequency drives.
  - d. Electrical communications modules.

1.03 QUALITY ASSURANCE

- A. Test equipment shall have an operating accuracy equal to or greater than requirements established by NETA ATS.
- B. Test instrument calibration shall be in accordance with NETA ATS.

1.04 SEQUENCING AND SCHEDULING

- A. Perform inspection and electrical tests after equipment listed herein has been installed.
- B. Perform tests with apparatus de-energized whenever feasible.
- C. Inspection and electrical tests on energized equipment shall be:
  1. Scheduled with Engineer prior to de-energization.
  2. Minimized to avoid extended period of interruption to the operating plant equipment.
- D. Notify Engineer at least 24 hours prior to performing tests on energized electrical equipment.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 GENERAL

- A. Perform tests in accordance with requirements of Section 01 91 14, Equipment Testing and Facility Startup.
- B. Tests and inspections shall establish:
  - 1. Electrical equipment is operational within industry and manufacturer's tolerances and standards.
  - 2. Installation operates properly.
  - 3. Equipment is suitable for energization.
  - 4. Installation conforms to requirements of Contract Documents and NFPA 70, NFPA 70E, NFPA 101, and IEEE C2.
- C. Perform inspection and testing in accordance with NETA ATS, industry standards, and manufacturer's recommendations.
- D. Set, test, and calibrate protective relays, circuit breakers, power monitoring meters, and other applicable devices.
- E. Adjust mechanisms and moving parts of equipment for free mechanical movement.
- F. Adjust and set electromechanical electronic relays and sensors to correspond to operating conditions, or as recommended by manufacturer.
- G. Verify nameplate data for conformance to Contract Documents and approved Submittals.
- H. Realign equipment not properly aligned and correct unlevelness.
- I. Properly anchor electrical equipment found to be inadequately anchored.
- J. Tighten accessible bolted connections, including wiring connections, with calibrated torque wrench/screw driver to manufacturer's recommendations, or as otherwise specified in NETA ATS.
- K. Clean contaminated surfaces with cleaning solvents as recommended by manufacturer.
- L. Provide proper lubrication of applicable moving parts.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- M. Inform Engineer of working clearances not in accordance with NFPA 70.
- N. Investigate and repair or replace:
  - 1. Electrical items that fail tests.
  - 2. Active components not operating in accordance with manufacturer's instructions.
  - 3. Damaged electrical equipment.
- O. Electrical Enclosures:
  - 1. Remove foreign material and moisture from enclosure interior.
  - 2. Vacuum and wipe clean enclosure interior.
  - 3. Remove corrosion found on metal surfaces.
  - 4. Repair or replace, as determined by Engineer door and panel sections having dented surfaces.
  - 5. Repair or replace, as determined by Engineer poor fitting doors and panel sections.
  - 6. Repair or replace improperly operating latching, locking, or interlocking devices.
  - 7. Replace missing or damaged hardware.
  - 8. Finish:
    - a. Provide matching paint and touch up scratches and mars.
    - b. If required because of extensive damage, as determined by Engineer, refinish entire assembly.
- P. Replace fuses and circuit breakers that do not conform to size and type required by the Contract Documents or approved Submittals.

3.02 CHECKOUT AND STARTUP

- A. Voltage Field Test: Check voltage amplitude and balance between phases for loaded and unloaded conditions.
- B. Equipment Line Current Tests:
  - 1. Check line current in each phase for each piece of equipment.
  - 2. If phase current for a piece of equipment is above rated nameplate current, prepare Equipment Line Phase Current Report that identifies cause of problem and corrective action taken.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.03 LOW VOLTAGE CABLES, 600 VOLTS MAXIMUM

A. Visual and Mechanical Inspection:

1. Inspect each individual exposed new and existing power Conductor No. 12 and larger for:
  - a. Physical damage.
  - b. Proper connections in accordance with single-line diagram.
  - c. Cable bends not in conformance with manufacturer's minimum allowable bending radius where applicable.
  - d. Color coding conformance with specification.
  - e. Proper circuit identification.
2. Mechanical Connections For:
  - a. Proper lug type for conductor material.
  - b. Proper lug installation.
  - c. Bolt torque level in accordance with NETA ATS, Table 100.12, unless otherwise specified by manufacturer.
3. Shielded Instrumentation Cables For:
  - a. Proper shield grounding.
  - b. Proper terminations.
  - c. Proper circuit identification.
4. Control Cables For:
  - a. Proper termination.
  - b. Proper circuit identification.
5. Cables Terminated Through Window Type CTs: Verify neutrals and grounds are terminated for correct operation of protective devices.

B. Electrical Tests for new and existing power Conductors No. 12 and larger:

1. Insulation Resistance Tests:
  - a. Utilize 1,000V dc megohmmeter for 600-volt insulated conductors and 500V dc megohmmeter for 300-volt insulated conductors.
  - b. Test each conductor with respect to ground and to adjacent conductors for 1 minute.
  - c. Evaluate ohmic values by comparison with conductors of same length and type.
  - d. Investigate values less than 50 megohms.
2. Continuity test by ohmmeter method to ensure proper cable connections.

C. Low-voltage cable tests may be performed by installer in lieu of independent testing firm.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.04 SAFETY SWITCHES, 600 VOLTS MAXIMUM

A. Visual and Mechanical Inspection:

1. Proper blade pressure and alignment.
2. Proper operation of switch operating handle.
3. Adequate mechanical support for each fuse.
4. Proper contact-to-contact tightness between fuse clip and fuse.
5. Cable connection bolt torque level in accordance with NETA ATS, Table 100.12.
6. Proper phase barrier material and installation.
7. Verify fuse sizes and types correspond to one-line diagram or approved Submittals.
8. Perform mechanical operational test and verify mechanical interlocking system operation and sequencing.

B. Electrical Tests:

1. Insulation Resistance Tests:
  - a. Applied megohmmeter dc voltage in accordance with NETA ATS, Table 100.1.
  - b. Phase-to-phase and phase-to-ground for 1 minute on each pole.
  - c. Insulation resistance values equal to, or greater than, ohmic values established by manufacturer.
2. Contact Resistance Tests:
  - a. Contact resistance in microhms across each switch blade and fuse holder.
  - b. Investigate deviation of 50 percent or more from adjacent poles or similar switches.

3.05 MOLDED AND INSULATED CASE CIRCUIT BREAKERS

A. General: Inspection and testing limited to circuit breakers 70 amperes and larger and to motor circuit protector breakers rated 50 amperes and larger.

B. Visual and Mechanical Inspection:

1. Proper mounting.
2. Proper conductor size.
3. Feeder designation according to nameplate and one-line diagram.
4. Cracked casings.
5. Connection bolt torque level in accordance with NETA ATS, Table 100.12.
6. Operate breaker to verify smooth operation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. Compare frame size and trip setting with circuit breaker schedules or one-line diagram.
8. Verify that terminals are suitable for 75 degrees C rated insulated conductors.

C. Electrical Tests:

1. Insulation Resistance Tests:
  - a. Utilize 1,000V dc megohmmeter for 480-volt and 600-volt circuit breakers and 500V dc megohmmeter for 240-volt circuit breakers.
  - b. Pole-to-pole and pole-to-ground with breaker contacts opened for 1 minute.
  - c. Pole-to-pole and pole-to-ground with breaker contacts closed for 1 minute.
  - d. Test values to comply with NETA ATS, Table 100.1.
2. Contact Resistance Tests:
  - a. Contact resistance in microhms across each pole.
  - b. Investigate deviation of 50 percent or more from adjacent poles and similar breakers.
3. Primary Current Injection Test to Verify:
  - a. Long-time minimum pickup and delay.
  - b. Short-time pickup and delay.
  - c. Ground fault pickup and delay.
  - d. Instantaneous pickup by run-up or pulse method.
  - e. Trip characteristics of adjustable trip breakers shall be within manufacturer's published time-current characteristic tolerance band, including adjustment factors.
  - f. Trip times shall be within limits established by NEMA AB 4, Table 5-3. Alternatively, use NETA ATS, Table 100.7.
  - g. Instantaneous pickup value shall be within values established by NEMA AB 4, Table 5-4. Alternatively, use NETA ATS, Table 100.8.

### 3.06 INSTRUMENT TRANSFORMERS

A. Visual and Mechanical Inspection:

1. Visually check current, potential, and control transformers for:
  - a. Cracked insulation.
  - b. Broken leads or defective wiring.
  - c. Proper connections.
  - d. Adequate clearances between primary and secondary circuit wiring.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Verify Mechanically:
  - a. Grounding and shorting connections have good contact.
  - b. Withdrawal mechanism and grounding operation, when applicable, operate properly.
3. Verify proper primary and secondary fuse sizes for potential transformers.

B. Electrical Tests:

1. Current Transformer Tests:
  - a. Insulation resistance test of transformer and wiring-to-ground at 1,000V dc for 30 seconds.
  - b. Polarity test.
2. Potential Transformer Tests:
  - a. Insulation resistance test at test voltages in accordance with NETA ATS, Table 100.9, for 1 minute on:
    - 1) Winding-to-winding.
    - 2) Winding-to-ground.
  - b. Polarity test to verify polarity marks or H1-X1 relationship as applicable.
3. Insulation resistance measurement on instrument transformer shall not be less than that shown in NETA ATS, Table 100.5.

3.07 AC INDUCTION MOTORS

A. General: Inspection and testing limited to motors rated 1/2 horsepower and larger.

B. Visual and Mechanical Inspection:

1. Proper electrical and grounding connections.
2. Shaft alignment.
3. Blockage of ventilating air passageways.
4. Operate motor and check for:
  - a. Excessive mechanical and electrical noise.
  - b. Overheating.
  - c. Correct rotation.
  - d. Check vibration detectors, resistance temperature detectors, or motor inherent protectors for functionality and proper operation.
  - e. Excessive vibration, in excess of values in NETA ATS, Table 100.10.
5. Check operation of space heaters.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. Electrical Tests:

1. Insulation Resistance Tests:
  - a. In accordance with IEEE 43 at test voltages established by NETA ATS, Table 100.1 for:
    - 1) Motors above 200 horsepower for 10-minute duration with resistances tabulated at 30 seconds, 1 minute, and 10 minutes.
    - 2) Motors 200 horsepower and less for 1-minute duration with resistances tabulated at 30 seconds and 60 seconds.
  - b. Insulation resistance values equal to, or greater than, ohmic values established by manufacturers.
2. Calculate polarization index ratios for motors above 200 horsepower. Investigate index ratios less than 1.5 for Class A insulation and 2.0 for Class B insulation.
3. Insulation resistance test on insulated bearings in accordance with manufacturer's instructions.
4. Measure running current and voltage, and evaluate relative to load conditions and nameplate full-load amperes.

3.08 LOW-VOLTAGE MOTOR CONTROL

A. Visual and Mechanical Inspection:

1. Proper operation of indicating and monitoring devices.
2. Proper overload protection for each motor.
3. Improper blockage of air-cooling passages.
4. Check door and device interlocking system by:
  - a. Closure attempt of device when door in in OPEN position.
  - b. Opening attempt of door when device in in ON position.
5. Check nameplates for proper identification of:
  - a. Equipment title and tag number with latest one-line diagram.
  - b. Pushbuttons.
  - c. Control switches.
  - d. Pilot lights.
  - e. Control relays.
  - f. Circuit breakers.
  - g. Indicating meters.
6. Verify fuse and circuit breaker sizes and types conform to Contract Documents.
7. Verify current and potential transformer ratios conform to Contract Documents.
8. Check bus connections for high resistance by low-resistance ohmmeter and thermographic survey:

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

9. Temperature gradient of conductors, connections and contacts:
  - a. Thermographic survey temperature gradient of 2 degrees C, or less per NETA ATS, Table 100.18.
10. Check operation and sequencing of electrical and mechanical interlock systems by:
  - a. Closure attempt for locked open devices.
  - b. Opening attempt for locked closed devices.
  - c. Key exchange to operate devices in OFF-NORMAL positions.
11. Verify performance of each control device and feature furnished as part of motor control center.
12. Control Wiring:
  - a. Compare wiring to local and remote control, and protective devices with elementary diagrams.
  - b. Check for proper conductor lacing and bundling.
  - c. Check for proper conductor identification.
  - d. Check for proper conductor lugs and connections.
13. Exercise active components.
14. Inspect contactors for:
  - a. Correct mechanical operations.
  - b. Correct contact gap, wipe, alignment, and pressure.
  - c. Correct torque of connections.
15. Compare overload heater rating with full-load current for proper size.
16. Compare fuse motor protector and circuit breaker with motor characteristics for proper size.

B. Electrical Tests:

1. Insulation Resistance Tests:
  - a. Applied megohmmeter dc voltage in accordance with NETA ATS, Table 100.1.
  - b. Contactor phase-to-ground and across open contacts for 1 minute on each phase.
  - c. Starter section phase-to-phase and phase-to-ground on each phase with starter contacts closed and protective devices open.
  - d. Test values to comply with NETA ATS, Table 100.1.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Control Wiring Tests:
  - a. Apply secondary voltage to control power and potential circuits.
  - b. Check voltage levels at each point on terminal board and each device terminal.
  - c. Insulation resistance test at 1,000V dc on control wiring, except that connected to solid state components; 1 megohm minimum insulation resistance.
3. Operational test by initiating control devices to affect proper operation.

**END OF SECTION**

**SECTION 26 20 00**  
**LOW-VOLTAGE AC INDUCTION MOTORS**

**PART 1 GENERAL**

1.01 RELATED SECTIONS

- A. This section applies only when referenced by a motor-driven equipment specification. Application, horsepower, enclosure type, mounting, shaft type, synchronous speed, and deviations from this section will be listed in the equipment specification. Where such deviations occur, they shall take precedence over this section.

1.02 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. American Bearing Manufacturers Association (ABMA):
    - a. 9, Load Ratings and Fatigue Life for Ball Bearings.
    - b. 11, Load Ratings and Fatigue Life for Roller Bearings.
  2. Institute of Electrical and Electronics Engineers, Inc. (IEEE):
    - a. 112, Standard Test Procedure for Polyphase Induction Motors and Generators.
    - b. 620, Guide for the Presentation of Thermal Limit Curves for Squirrel Cage Induction Machines.
    - c. 841, Standard for Petroleum and Chemical Industry—Premium Efficiency Severe Duty Totally Enclosed Fan-Cooled (TEFC) Squirrel Cage Induction Motors—Up to and Including 370 kW (500 hp).
  3. National Electrical Manufacturers Association (NEMA):
    - a. 250, Enclosures for Electrical Equipment (1,000 Volts Maximum).
    - b. C50.41, Polyphase Induction Motors for Power Generating Stations.
    - c. MG 1, Motors and Generators.
  4. National Fire Protection Association (NFPA): 70, National Electrical Code (NEC).
  5. UL:
    - a. 83, Standard for Safety for Thermoplastic-Insulated Wire and Cables.
    - b. 674, Standard for Safety for Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations.
    - c. 2111, Standard for Safety for Overheating Protection for Motors.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 DEFINITIONS

- A. CISD-TEFC: Chemical industry, severe-duty enclosure.
- B. DIP: Dust-ignition-proof enclosure.
- C. EXP: Explosion-proof enclosure.
- D. Inverter Duty Motor: Motor meeting applicable requirements of NEMA MG 1, Section IV, Parts 30 and 31.
- E. Motor Nameplate Horsepower: That rating after any derating required to allow for extra heating caused by the harmonic content in the voltage applied to the motor by its controller.
- F. ODP: Open drip-proof enclosure.
- G. TEFC: Totally enclosed, fan-cooled enclosure.
- H. TENV: Totally enclosed, nonventilated enclosure.
- I. WPI: Open weather protected enclosure, Type I.
- J. WPPI: Open weather protected enclosure, Type II.

1.04 SUBMITTALS

- A. Action Submittals:
  - 1. Descriptive information.
  - 2. Nameplate data in accordance with NEMA MG 1.
  - 3. Additional Rating Information:
    - a. Service factor.
    - b. Locked rotor current.
    - c. No load current.
    - d. Multispeed load classification (for example, variable torque).
    - e. Adjustable frequency drive motor load classification (for example, variable torque) and minimum allowable motor speed for that load classification.
    - f. Guaranteed minimum full load efficiency and power factor.
  - 4. Enclosure type and mounting (such as, horizontal, vertical).
  - 5. Dimensions and total weight.
  - 6. Conduit box dimensions and usable volume as defined in NEMA MG 1 and NFPA 70.
  - 7. Bearing type.
  - 8. Bearing lubrication.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

9. Bearing life.
10. Space heater voltage and watts.
11. Description, ratings, and wiring diagram of motor thermal protection.
12. Motor sound power level in accordance with NEMA MG 1.
13. Maximum brake horsepower required by the equipment driven by the motor.
14. Description and rating of submersible motor moisture sensing system.

B. Informational Submittals:

1. Factory test reports.
2. Component and attachment testing seismic certificate of compliance as required by Section 01 45 33, Special Inspection, Observation, and Testing.
3. Operation and Maintenance Data: As specified in Section 01 78 23, Operation and Maintenance Data.

**PART 2 PRODUCTS**

2.01 MANUFACTURERS

A. Materials, equipment, and accessories specified in this section shall be products of:

1. General Electric.
2. Reliance Electric.
3. MagneTek.
4. Siemens Energy and Automation, Inc., Motors and Drives Division.
5. Baldor.
6. U.S. Electrical Motors.
7. TECO-Westinghouse Motor Co.
8. Toshiba International Corp., Industrial Division.
9. WEG Electric Motors Corp.
10. Or approved equal.

2.02 GENERAL

- A. For multiple units of the same type of equipment, furnish identical motors and accessories of a single manufacturer.
- B. In order to obtain single source responsibility, use a single supplier to provide drive motor, its driven equipment, and specified motor accessories.
- C. Meet requirements of NEMA MG 1.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. For motors used in hazardous (classified) locations, Class I, Division 1, Groups B, C, and D, and Class II, Division 1, Groups E, F, and G provide motors that conform to UL 674 and have an applied UL listing mark.
- E. Motors shall be specifically designed for the use and conditions intended, with a NEMA design letter classification to fit the application.
- F. Lifting lugs on motors weighing 100 pounds or more.
- G. Operating Conditions:
  - 1. Maximum ambient temperature not greater than 40 degrees C.
  - 2. Motors shall be suitable for operating conditions without reduction being required in nameplate rated horsepower or exceeding rated temperature rise.
  - 3. Overspeed in either direction in accordance with NEMA MG 1.

2.03 HORSEPOWER RATING

- A. As designated in motor-driven equipment specification.
- B. Constant Speed Applications: Brake horsepower of driven equipment at any operating condition not to exceed motor nameplate horsepower rating, excluding service factor.
- C. Adjustable Frequency and Adjustable Speed Applications (Inverter Duty Motor): Driven equipment brake horsepower at any operating condition not to exceed motor nameplate horsepower rating, excluding service factor.

2.04 SERVICE FACTOR

- A. Inverter-duty Motors: 1.0 at rated ambient temperature, unless otherwise noted.
- B. Other Motors: 1.15 minimum at rated ambient temperature, unless otherwise noted.

2.05 VOLTAGE AND FREQUENCY RATING

- A. System Frequency: 60-Hz.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Voltage Rating:

1. Unless otherwise indicated in motor-driven equipment specification:

Voltage Rating		
Size	Voltage	Phase
1/2 hp and smaller	115	1
3/4 hp through 400 hp	460	3

C. Suitable for full voltage starting.

D. 100 hp and larger also suitable for reduced voltage starting with 65 percent or 80 percent voltage tap settings on reduced inrush motor starters.

E. Suitable for accelerating the connected load with supply voltage at motor starter supply terminals dipping to 90 percent of motor rated voltage.

2.06 EFFICIENCY AND POWER FACTOR

A. For all motors except single-phase, under 1 hp, multispeed, short-time rated and submersible motors, or motors driving gates, valves, elevators, cranes, trolleys, and hoists:

1. Efficiency:

- a. Tested in accordance with NEMA MG 1, Paragraph 12.59.
- b. Guaranteed minimum at full load in accordance with NEMA MG 1 Table 12-12, Full-load Efficiencies for NEMA Premium Efficiency Electric Motors Rated 600 Volts or Less (Random Wound), or as indicated in motor-driven equipment specification.

2. Power Factor: Guaranteed minimum at full load shall be manufacturer's standard or as indicated in motor-driven equipment specification.

2.07 LOCKED ROTOR RATINGS

A. Locked rotor kVA Code F or lower, if motor horsepower not covered by NEMA MG 1 tables.

B. Safe Stall Time: 12 seconds or greater.

2.08 INSULATION SYSTEMS

A. Single-Phase, Fractional Horsepower Motors: Manufacturer's standard winding insulation system.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Motors Rated Over 600 Volts: Sealed windings in accordance with NEMA MG 1.
- C. Three-phase and Integral Horsepower Motors: Unless otherwise indicated in motor-driven equipment specification, Class F with Class B rise at nameplate horsepower and designated operating conditions, except EXP motors which must be Class B with Class B rise.

2.09 ENCLOSURES

- A. Enclosures to conform to NEMA MG 1.
- B. TEFC and TENV: Furnish with drain hole with porous drain/weather plug.
- C. Explosion-Proof (EXP):
  - 1. TEFC listed to meet UL 674 and NFPA 70 requirements for Class I, Division 1, Group D hazardous locations.
  - 2. Drain holes with drain and breather fittings.
  - 3. Integral thermostat opening on excessive motor temperature in accordance with UL 2111 and NFPA 70.
  - 4. Terminate thermostat leads in terminal box separate from main terminal box.
- D. Submersible: In accordance with Article Special Motors.
- E. Chemical Industry, Severe-Duty (CISD-TEFC): In accordance with Article Special Motors.

2.10 TERMINAL (CONDUIT) BOXES

- A. Oversize main terminal boxes for motors.
- B. Diagonally split, rotatable to each of four 90-degree positions. Threaded hubs for conduit attachment.
- C. Except ODP, furnish gaskets between box halves and between box and motor frame.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Minimum usable volume in percentage of that specified in NEMA MG 1, Section 1, Paragraph 4.19 and NFPA 70, Article 430:

<b>Terminal Box Usable Values</b>		
<b>Voltage</b>	<b>Horsepower</b>	<b>Percentage</b>
Below 600	15 through 125	500
Below 600	150 through 300	275
Below 600	350 through 600	225
Above 600	All sizes	200

- E. Terminal for connection of equipment grounding wire in each terminal box.
- F. Coordinate motor terminal box conduit entries versus size and quantity of conduits shown on Drawings.

2.11 BEARINGS AND LUBRICATION

A. Horizontal Motors:

1. 3/4 hp and Smaller: Permanently lubricated and sealed ball bearings, or regreasable ball bearings in labyrinth sealed end bells with removable grease relief plugs.
2. 1 hp through 400 hp: Regreasable ball bearings in labyrinth sealed end bells with removable grease relief plugs.
3. Above 400 hp: Split sleeve, oil insulated bearings.
4. Minimum 100,000 hours L-10 bearing life for ball and roller bearings as defined in ABMA 9 and ABMA 11.

B. Vertical Motors:

1. Thrust Bearings:
  - a. Antifriction bearing.
  - b. Manufacturer's standard lubrication 200 hp and smaller.
  - c. Oil lubricated 125 hp and larger.
  - d. Minimum 50,000 hours L-10 bearing life.
2. Guide Bearings:
  - a. Manufacturer's standard bearing type.
  - b. Manufacturer's standard lubrication 200 hp and smaller.
  - c. Oil lubricated 250 hp and larger.
  - d. Minimum 100,000 hours L-10 bearing life.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Regreasable Antifriction Bearings:
  - 1. Readily accessible, grease injection fittings.
  - 2. Readily accessible, removable grease relief plugs.
- D. Oil Lubrication Systems:
  - 1. Oil reservoirs with sight level gauge.
  - 2. Oil fill and drain openings with opening plugs.
  - 3. Provisions for necessary oil circulation and cooling.
- E. Inverter Duty Rated Motors, Bearing Isolation: Motors larger than 50 hp shall have electrically isolated bearings to prevent stray current damage.

2.12 NOISE

- A. Measured in accordance with NEMA MG 1.
- B. Motors controlled by adjustable frequency drive systems shall not exceed sound levels of 3 dBA higher than NEMA MG 1.

2.13 BALANCE AND VIBRATION CONTROL

- A. In accordance with NEMA MG 1, Part 7.

2.14 EQUIPMENT FINISH

- A. External Finish: Prime and finish coat manufacturer's standard. Finish color manufacturer's standard.
- B. Internal Finish: Bore and end turns coated with clear polyester or epoxy varnish.

2.15 SPECIAL FEATURES AND ACCESSORIES

- A. Screen Over Air Openings: Stainless steel on motors with ODP, WPI, and WPII enclosures meeting requirements for guarded machine in NEMA MG 1, and attached with stainless steel screws.
- B. Winding Thermal Protection:
  - 1. Thermostats:
    - a. Motors for constant and adjustable speed application 5 hp to 100 hp.
    - b. Bi-metal disk or rod type thermostats embedded in stator windings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Automatic reset contacts rated 120 volts ac, 5 amps minimum, opening on excessive temperature. (Provide manual reset at motor controller.)
- C. Bearing Temperature Protection:
1. On each bearing of horizontal motors 100 hp and larger.
  2. On the thrust bearing of each vertical motor 100 hp and larger.
  3. Bearing temperature sensor/relay, Mercoid, with contact closing on bearing overtemperature mounted in NEMA 250, Type 4X enclosure.
- D. Vibration detection relay mounted in NEMA 250, Type 4X enclosure on side of motors 200 hp and larger.
- E. Nameplates:
1. Raised or stamped letters on stainless steel or aluminum.
  2. Display motor data required by NEMA MG 1, Paragraph 10.39 and Paragraph 10.40 in addition to bearing numbers for both bearings.
  3. Premium efficiency motor nameplates to display NEMA nominal efficiency, guaranteed minimum efficiency, full load power factor, and maximum allowable kVAR for power factor correction capacitors.
- F. Space Heaters:
1. Provide winding space heaters with leads wired out to motor terminal junction box.
  2. Provide extra hole or hub on motor terminal junction box as required.
  3. Unless shown otherwise, heater shall be suitable for 120V ac supply, with wattage suitable for motor frame size.
- G. Anchor Bolts: Provide meeting manufacturer's recommendations and of sufficient size and number for specified seismic condition.

2.16 SPECIAL MOTORS

- A. Requirements in this article take precedence over conflicting features specified elsewhere in this section.
- B. Chemical Industry, Severe-Duty (CISD-TEFC):
1. In accordance with IEEE 841.
  2. TEFC in accordance with NEMA MG 1.
  3. Suitable for indoor or outdoor installation in severe-duty applications including high humidity, chemical (corrosive), dirty, or salty atmospheres.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Motor Frame, End Shields, Terminal Box, and Fan Cover: Cast iron.
  5. Ventilating Fan: Corrosion-resistant, nonsparking, external.
  6. Drain and Breather Fittings: Stainless steel.
  7. Nameplate: Stainless steel.
  8. Gaskets between terminal box halves and terminal box and motor frame.
  9. Extra slinger on rotor shaft to prevent moisture seepage along shaft into motor.
  10. Double shielded bearings.
  11. 125,000 hours minimum L-10 bearing life for direct-connected loads.
  12. External Finish: Double-coated epoxy enamel.
  13. Coated rotor and stator air gap surfaces.
  14. Insulation System, Windings, and Connections:
    - a. Class F insulation, Class B rise or better at 1.0 service factor.
    - b. Multiple dips and bakes of non-hygroscopic polyester varnish.
  15. Service Factor:
    - a. At 40 Degrees C Ambient: 1.15.
    - b. At 65 Degrees C Ambient: 1.00.
  16. Safe Stall Time Without Injurious Heating: 20 seconds minimum.
- C. Severe-duty Explosion-proof: Meet requirements for EXP enclosures and CISC-TEFC motors.
- D. Severe-duty, Dust-ignition-proof: Meet requirements for DIP enclosures and CISC-TEFC motors.
- E. Multispeed: Meet requirements for speeds, number of windings, and load torque classification indicated in motor-driven equipment specification.
- F. Inverter Duty Motor:
1. Motor supplied power by adjustable voltage and adjustable frequency drives shall be inverter duty rated.
  2. Suitable for operation over entire speed range indicated.
  3. Provide forced ventilation where speed ratio is greater than published range for motor provided.
  4. When installed in Division 1 hazardous (classified) location shall be identified as acceptable for variable speed when used in Division 1 location.
- G. Inclined Motors:
1. Motors suitable for operation only in horizontal position not acceptable.
  2. Bearings designed for thrust imposed by driven equipment and by motor rotor when motor is in inclined position.
  3. Lubrication system designed to provide adequate bearing lubrication when motor is in inclined position.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.17 FACTORY TESTING

A. Tests:

1. In accordance with IEEE 112 for polyphase motors.
2. Routine (production) tests in accordance with NEMA MG 1. Test multispeed motors at all speeds.
3. For energy efficient motors, test efficiency and power factor at 50 percent, 75 percent, and 100 percent of rated horsepower:
  - a. In accordance with IEEE 112, Test Method B, and NEMA MG 1, Paragraph 12.59 and Paragraph 12.60.
  - b. For motors 500 hp and larger where facilities are not available to test by dynamometer (Test Method B), determine efficiency by IEEE 112, Test Method F.
  - c. On motors of 100 hp and smaller, furnish certified copy of motor efficiency test report on an identical motor.
4. Provide test reports for polyphase motors 100 hp and larger.

B. Test Report Forms:

1. Routine Tests: IEEE 112, Form A-1.

**PART 3 EXECUTION**

3.01 INSTALLATION

- A. In accordance with manufacturer's instructions and recommendations.
- B. Align motor carefully and properly with driven equipment.
- C. Secure equipment to mounting surface with anchor bolts.

3.02 MANUFACTURER'S SERVICES

- A. Furnish manufacturer's representative at Site in accordance with Section 01 43 33, Manufacturers' Field Services, for installation assistance, inspection, equipment testing, and startup assistance for motors larger than 150 hp.
- B. Manufacturer's Certificate of Proper Installation.

**END OF SECTION**

**SECTION 26 24 19**  
**LOW-VOLTAGE MOTOR CONTROL**

**PART 1 GENERAL**

1.01 REFERENCES

METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 SUBMITTALS

A. Action Submittals:

1. Descriptive information.
2. Itemized Bill of Material.
3. Conduit entrance locations.
4. Typed Tabulation:
  - a. Motor name; tag (equipment) numbers as shown on Drawings.
  - b. Motor horsepower.
  - c. Nameplate full load current.
  - d. Heater model number and relay setting.
  - e. Protective device trip settings.
  - f. Attach above typed, tabulated data to a copy of starter manufacturer's overload heater or setting selection tables for starters provided.
5. Control diagrams.

B. Informational Submittals:

1. Manufacturer's installation instructions.
2. Operation and Maintenance Data as specified in Section 01 78 23, Operation and Maintenance Data.

1.04 QUALITY ASSURANCE

- A. Provide products manufactured within scope of UL that conform to UL Standards and have applied UL Listing Mark.

**PART 2 PRODUCTS**

2.01 MANUFACTURERS

- A. Materials, equipment, and accessories specified in this section shall be products of:
1. Eaton Electrical/Cutler-Hammer.
  2. Or approved equal.

2.02 GENERAL

- A. Like Items of Equipment: End product of one manufacturer.
- B. Make adjustments necessary to wiring, conduit, disconnect devices, motor starters, branch circuit protection, and other affected material or equipment to accommodate motors actually provided under this Contract.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Controllers: NEMA ICS 1, NEMA ICS 2, Class A or match existing when possible.
- D. Control Transformer:
  - 1. Two winding, 120-volt secondary, primary voltage to suit.
  - 2. Two current-limiting fuses for primary circuit.
  - 3. One fuse in secondary circuit with blown fuse indicator.
  - 4. Mount within starter unit.
- E. Suitable for use with 75 degrees C wire at full NFPA 70, 75 degrees C ampacity.

2.03 MOTOR CONTROL CENTERS

- A. General:
  - 1. In accordance with NEMA ICS 1, NEMA ICS 2, NEMA ICS 18, and UL 845.
  - 2. Voltage Rating: As shown.
  - 3. Short Circuit Rating: As shown on Drawings.
  - 4. Main and branch circuit breakers, controllers, wire connections, and other devices to be front mounted and accessible, unless otherwise noted.
- B. Motor Controller Unit:
  - 1. Starters:
    - a. NEMA ICS 18, standard rating, except none smaller than NEMA ICS, Size 1.
    - b. Rating: Horsepower rated at 600 volt, UL labeled for 65,000 amperes at 480 volts short circuit capacity with overload protection.
    - c. Three-phase, nonreversing, unless specified otherwise.
    - d. Disconnect Type: Motor circuit protector or circuit breaker.
    - e. Combination Full Voltage, Magnetic Starter:
      - 1) Control: As shown on Drawings.
  - 2. Disconnecting Device:
    - a. In each starter, control circuit disconnect to de-energize circuits in unit which are not de-energized by starter power disconnect device.
    - b. Padlockable in OPEN position for up to three locks.
  - 3. Circuit Breaker:
    - a. Meet requirements of UL 489.
    - b. Molded case with manufacturer's recommended trip setting for maximum motor protection.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Thermal-magnetic trip or magnetic trip only as shown.
  - d. Tripping indicated by operating-handle position.
  - e. Interrupting capacity required for connection to system with short-circuit capacity indicated.
4. Thermal Motor Overload Protection:
- a. Inverse-time-limit characteristic.
  - b. Heater: Bimetallic overload, adjustable trip, or directly heated melting alloy, ratchet principle type element.
  - c. Relay Trip: Standard, Class 20.
  - d. Manual reset.
  - e. Provide in each ungrounded phase.
  - f. Mount within starter unit.
5. Solid State Motor Overload Protection:
- a. Inverse-time-limit characteristic.
  - b. Phase loss, phase unbalance and Class II ground fault protection.
  - c. Current operated electronic circuitry with adjustable trip.
  - d. Class 10/20/30 relay trip, switch selectable.
  - e. One N.O. auxiliary contact for remote monitoring.
  - f. Manual reset.
  - g. Provide in each ungrounded phase.
  - h. Mount within starter unit.
  - i. Communications: None.
6. Motor Thermal Protector Interface: Manual-reset interposing relay for connection to motor-mounted thermal protector system.
- C. Control Unit:
- 1. Disconnecting Device: Pull-apart terminal blocks capable of de-energizing external source control circuits in unit.
  - 2. Control Devices: As indicated and as specified in Section 26 05 04, Basic Electrical Materials and Methods.
  - 3. Control Wiring:
    - a. Copper, 14 AWG, minimum.
    - b. Permanent sleeve type markers with wire numbers applied to each end of wires.
    - c. Terminate wires using insulated locking fork or ring type crimp terminals.
    - d. Terminate current transformer leads on shorting type terminal blocks.
- D. Incoming Line Terminal:
- 1. Construction: As specified in Paragraph, Motor Controller Unit.
  - 2. Incoming Service Feeder: Cable.
  - 3. Mechanical type CU-/AL lugs for 75 degrees C cable.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 3 EXECUTION**

3.01 INSTALLATION

A. General:

1. Motor Data: Provide typed, self-adhesive label attached inside each motor starter enclosure door displaying the following information:
  - a. Motor served by tag number and equipment name.
  - b. Nameplate horsepower.
  - c. Motor code letter.
  - d. Full load amperes.
  - e. Service factor.
  - f. Installed overload relay heater catalog number.

B. Circuit Breakers:

1. Field adjust trip settings of motor starter magnetic-trip-only circuit breakers.
2. Adjust to approximately 11 times motor rated current.
3. Determine motor rated current from motor nameplate following installation.

C. Overload Relay: Select and install overload relay heaters and switch settings after actual nameplate full-load current rating of motor has been determined.

**END OF SECTION**

**SECTION 26 29 23**  
**LOW-VOLTAGE VARIABLE FREQUENCY DRIVE SYSTEM**

**PART 1 GENERAL**

13. Rated Speed: Nominal rated (100 percent) speed specified for equipment.
14. TDD: Total demand distortion.
15. THD: Total harmonic distortion.
16. TTL: Transistor logic.

1.03 SYSTEM DESCRIPTION

A. Performance Requirements:

1. Rated Continuous Operation Capacity: Not less than 1.15 times full load current rating of driven motor, as indicated on motor nameplate, and suitable for continuous operation at continuous overload which may be imposed on motor by driven pump operating over specified speed range.

B. Design Requirements:

1. Furnish VFD rated on basis of actual motor full load nameplate current rating times the service factor.
2. Drive System: Convert incoming three-phase, 60-Hz ac power to variable voltage, adjustable frequency output for adjustable speed operation of a standard ac induction squirrel-cage motor, using pulse-width-modulation (PWM) technique to produce adjustable frequency output.
3. System rated for continuous industrial duty and suitable for use with NEMA MG 1, Design B motors.
4. Incoming Line Circuit Breaker: Provide positive means of disconnecting incoming power, and overcurrent protection for drive system.
5. Incoming Line Filters: Design to minimize harmonic distortion on incoming power feeder. Provide ultra-low harmonic generation with no additional transformers or external filters.

1.04 SUBMITTALS

A. Action Submittals:

1. Overall drive system operating data, including efficiencies, input currents, and power factors, at driven equipment actual load and rated system input voltage, at 0, 40, 60, 80, 100, and 110 percent of rated speed.
2. VFD output pulse maximum peak voltage, pulse rise time, and pulse rate of rise including justification for proposed deviation from specified values. Include motor manufacturer's certification motor insulation will

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- withstand long-term overvoltages caused at motor terminals due to specified output pulse data or proposed deviation from this data.
3. Complete system rating, including nameplate data, continuous operation load capability throughout speed range of 0 percent to 120 percent of rated speed.
  4. Complete variable frequency controller rating coordinated with motor full load nameplate current rating; list controller special features being supplied.
  5. Controller, reactor, harmonic filter, and isolating transformer (if applicable) dimensional drawings; information on size and location of space for incoming and outgoing conduit.
  6. Maximum heat dissipation from enclosures.
  7. Should separate enclosures and equipment be necessary for filter elements or isolation transformers, provide complete dimensional information including location of space for incoming and outgoing conduit, weight, maximum heat loss, and minimum current carrying capacity and recommended wire size for required interconnecting circuits.
  8. Layout of controller face showing pushbuttons, switches, instruments, and indicating lights.
  9. Complete system operating description.
  10. Complete system schematic (elementary) wiring diagrams.
  11. Complete system interconnection diagrams between controller, drive motor, and related components or controls external to system, including wire numbers and terminal board point identification.
  12. One-line diagram of system, including component ratings.
  13. Description of diagnostic features being provided.
  14. Descriptive literature for control devices such as relays and timers.
  15. Itemized bill-of-materials listing system components.
  16. Seismic anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals:

1. Seismic anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
2. Special shipping, storage and protection, and handling instructions.
3. Manufacturer's installation instructions.
4. Factory functional test reports.
5. Field test reports.
6. Component and attachment testing seismic certificate of compliance as required by Section 01 45 33, Special Inspection, Observation, and Testing.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. Operation and Maintenance Data: As specified in Section 01 78 23, Operation and Maintenance Data.

1.05 WARRANTY

- A. Warranty period shall cover 24 months from date of startup, not to exceed 30 months from date of shipment. During this period repairs, including parts and labor, shall be provided at no cost to the Owner.

**PART 2 PRODUCTS**

2.01 MANUFACTURERS AND PRODUCTS

- A. Components and accessories specified in this section shall be products of:
  1. All VFDs shall be active front-end type and shall be separately mounted:
    - a. ABB; Model ACS880-37.
    - b. Allen-Bradley; Powerflex 755TL.
    - c. Or approved equal.

2.02 SERVICE CONDITIONS

- A. Ambient Operating Temperature: 32 degrees F to 104 degrees F.
- B. Storage Temperature: Minus 40 degrees F to 158 degrees F.
- C. Humidity: 0 percent to 95 percent relative (noncondensing).
- D. Altitude: 0 foot to 3,300 feet.
- E. Frequency Stability: Plus or minus 0.1 percent of maximum frequency.

2.03 COMPONENTS

- A. Drive Units:
  1. Incorporate switching power supply operating from dc bus, to produce PWM output waveform simulating sine wave and providing power loss ride through of 2 milliseconds at full load, full speed.
  2. Current-limiting semiconductor fuses for protection of internal power semiconductors.
  3. Provide constant displacement power factor of 0.95 minimum at all operating speeds and loads.
  4. Output Section: Provide a minimum 97 percent drive efficiency at full speed, full load.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Employ dc power discharge circuit so that after removal of input power dc link capacitor voltage level will decay below 50V dc within 1 minute after de-energizing following NEMA CP 1 and NFPA 79. Operate with open circuited output.
6. Input Voltage: 480V ac plus or minus 10 percent.
7. Output Voltage: 0 volt to 480 volts, three-phase, 0-Hz to 66-Hz, minimum.
8. Maximum peak voltage of PWM VFD output pulse of 1,000 volts, with pulse rise time of not less than 2 microseconds, and maximum rate of rise of 500 volts per microsecond. Maximum frequency of PWM VFD output pulse (carrier) frequency of 3,000-Hz. Should magnitudes of these characteristics be more stressful to motor insulation than specified values, furnish insulation systems on motors suitable for proposed values.
9. Motor Audible Noise Level: When operating throughout speed range of PWM VFD, no more than 3 dBA above that designated in NEMA MG 1 for same motor operated at constant speed with a 60-Hz supply voltage.
10. Short-Time Overload Capacity: 115 percent of rated load in rms current for 1 minute following full load, full speed operation.
11. Equipment Short-Circuit Rating: Suitable for connection to system with maximum source three-phase, bolted fault, short-circuit available of 42,000 amps rms symmetrical at 480 volts.
12. Furnish drives with output current-limiting reactors mounted within equipment enclosure.
13. Diagnostics. Comprehensive for drive adjustment and troubleshooting:
  - a. Memory battery backup; 100-hour minimum during power loss.
  - b. Status messages will not stop drive from running but will prevent it from starting.
  - c. Fault Condition Messages and History:
    - 1) First fault protection function to be activated, ability to store six successive fault occurrences in order. Minimum faults numerically:
      - a) Overcurrent (time and instantaneous).
      - b) Overvoltage.
      - c) Undervoltage (dc and ac).
      - d) Overtemperature (drive, motor windings, motor bearing, pump bearing).
      - e) Serial communication fault.
      - f) Short-circuit/ground fault (motor and drive).
      - g) Motor stalled.
      - h) Semiconductor fault.
      - i) Microprocessor fault.
      - j) Single-phase voltage condition.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

14. Drive Protection:
  - a. Fast-acting semiconductor fuses.
  - b. Overcurrent, instantaneous overcurrent trip.
  - c. Dc undervoltage protection, 70 percent dropout.
  - d. Dc overvoltage protection, 130 percent pickup.
  - e. Overtemperature, drive, inverter, converter, and dc link components.
  - f. Overtemperature, motor, and pump.
  - g. Single-phase protection.
  - h. Reset overcurrent protection (manual or automatic reset).
  - i. Active current limit/torque limit protection.
  - j. Semiconductor fault protection.
  - k. Short-circuit/ground fault protection.
  - l. Serial communication fault protection.
  - m. Microprocessor fault.
  - n. Surge protection for transient overvoltage (6,000 volts, 80 joule surge, tested per IEEE C62.41).
  - o. Visual display of specific fault conditions.
15. Operational Features:
  - a. Use manufacturer's standard unless otherwise indicated.
  - b. Sustained power loss.
  - c. Momentary power loss.
  - d. Power interruption.
  - e. Power loss ride through (0.1 second).
  - f. Start on the fly.
  - g. Electronic motor overload protection.
  - h. Stall protection.
  - i. Slip compensation.
  - j. Automatic restart after power return (ability to enable/disable function).
  - k. Critical frequency lockout (three selectable points minimum, by 1.5-Hz steps in 10-Hz bands, to prevent resonance of system).
  - l. Drive maintenance system software for complete programming and diagnostics.
  - m. Ground fault protection, drive, and motor.
  - n. Operate with no motor connected to output terminals.

B. Rectifier:

1. Active Front-end Drives: Three-phase, active front end.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. Harmonics (Active Front-end Drives Only):

1. All harmonic management devices must be internal to the VFD enclosure and supplied as a complete solution.
2. Drive shall have an active line supply unit which controls the waveform of the input current and reduces the low order harmonic current drawn from the power line. Line currents and voltages shall be nearly sinusoidal. IGBTs shall be used in the rectified and inverter circuits.
3. Each input phase of the drive shall incorporate a symmetrical LCL filter arranged in a T-configuration. The inductors are to be series power components that carry the full current of the drive.
4. The input current to the drive shall have a total harmonic content less than 5 percent of full rated capability at the input terminals of the drive on power system sized according to IEEE 519 at line voltage unbalance up to 3 percent and under all motor load conditions.
5. The drive shall operate at fundamental power factor 1.0 on the supply side under all motor load conditions.
6. The input power factor shall be programmable from 0.8 lagging to 0.8 leading, allowing the drive to be used as a compensating device for installations that are excessively inductive or excessively capacitive in reactive power.

D. Controller: Microprocessor-controller PWM inverter to convert to dc voltage to variable voltage, variable frequency, three-phase ac output. Output voltage shall vary proportionally with frequency to maintain constant ratio of volts to hertz up to 60-Hz; above 60-Hz, voltage shall remain constant with drive operating in constant horsepower output mode.

E. Enclosure:

1. NEMA 250, Type 1, gasketed, freestanding, enclosure for mounting against wall, completely front accessible, and hinged doors. Properly sized to dissipate heat generated by controller within limits of specified operating conditions (including ambient temperature and ambient airflow).
2. Door mounted equipment/features:
  - a. Door mounted handle interlocked to main circuit breaker/disconnect, defeatable.
  - b. Control switches and indicating lights as indicated on Drawings.
  - c. Emergency stop pushbutton.
  - d. Keypad and display. Components and controls specified in Section 26 05 04, Basic Electrical Materials and Methods.
3. Wire drive from below for power and control wiring.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Size forced-ventilation for periodic operation to cool each unit with maximum room ambient temperature of 95 degrees F. Furnish redundant fans such that if one fan fails remaining fans furnish adequate ventilation for drive when operating at maximum capacity. Furnish filters on ventilation intakes.
  5. Wiring:
    - a. Bundle stranded copper wiring neatly with nylon tie wraps or with continuous plastic spiral binding.
    - b. Label each terminal for permanent identification of leads.
    - c. Identify each wire at each end with imprinted mylar adhesive-back wire markers.
    - d. Incorporate in as-installed wiring diagrams for wire and terminal numbers shown.
    - e. Wiring across door hinge, use 19-strand, NEMA WC 57 Class C stranding looped for proper twist rather than bending at hinge.
    - f. Wire connections internal to panels by crimp-on terminal types.
    - g. For multiple enclosure systems, complete interconnection wiring with gasketed enclosure openings for wiring.
    - h. Multipoint plug receptacles for control wiring crossing equipment shipping splits.
  6. Selector switches, indicating lights, potentiometers, instruments, protective devices, and major system components identified by means of mechanically attached, engraved, laminated nameplates.
- F. Operator Interface:
1. Controls:
    - a. Mount drive local control on front door of enclosure and include control switch and membrane type keypad for the following operator functions:
      - 1) Start (when in local mode).
      - 2) Stop (when in local mode).
      - 3) Speed increase (when in local mode).
      - 4) Speed decrease (when in local mode).
      - 5) Parameter mode selection (recall programmed parameters).
      - 6) LOCAL/OFF/REMOTE control selection (in remote, furnish for remote RUN command digital input and speed increase/decrease via remote 4 mA to 20 mA analog signal).
      - 7) Fault reset, manual for faults, except loss of ac voltage which is automatic upon return.
      - 8) RUN/preset speed.
      - 9) Parameter lock, password or key switch lockout of changes to parameters.
      - 10) Start disable, key switch or programmed code.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Control circuit disconnect shall de-energize circuits in units that are not de-energized by main power disconnect device as required by California Administrative Code.
3. 120 volts, single-phase, 60-Hz circuits for control power and operator controls from internal control power transformer. Furnish power for motor space heaters rated 120 volts where indicated.
4. Arrange component and circuit such that failure of a single component cannot cause cascading failure(s) of other component(s).
5. Alphanumeric Display:
  - a. During normal operation and routine test, the following parameters shall be available:
    - 1) Motor current (percent of drive rated current).
    - 2) Output frequency (Hertz).
    - 3) Output voltage.
    - 4) Running time.
    - 5) Local/remote indicator.
    - 6) Status of digital inputs and outputs.
    - 7) Analog input and output values.
    - 8) Output motor current per leg.
    - 9) All test points.
6. Adjustable Parameters:
  - a. Set drive operating parameters and indicate in numeric form. Potentiometers may not be used for parameter adjustment. Minimum setup parameters available:
    - 1) Frequency range, minimum, maximum.
    - 2) Adjustable acceleration/deceleration rate.
    - 3) Volts per Hertz (field weakening point).
    - 4) Active current limit/torque limit, 0 percent to 140 percent of drive rating.
    - 5) Adjustable voltage boost (IR compensation).
    - 6) Preset speed (adjustable, preset operating point).
    - 7) Provision for adjustment of minimum and maximum pump speed to be furnished as function of 4 mA to 20 mA remote speed signal.

G. Signal Interface:

1. Digital Input:
  - a. Accept a remote RUN command contact closure input.
  - b. High temperature contact closure input from field mounted motor temperature monitoring relay.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Digital Output: Furnish three discrete output dry contact closures rated 5 amps at 120V ac.
  - a. DRIVE RUNNING.
  - b. DRIVE FAULT (with common contact closure for all fault conditions).
  - c. DRIVE IN REMOTE MODE.
3. Analog Input: When LOCAL/OFF/REMOTE switch is in REMOTE, control drive speed from remote 4 mA to 20 mA dc signal.
  - a. Make provisions for adjustment of minimum and maximum motor speed which shall result from this signal.
  - b. Factory set this adjustment to comply with operating speed range designated in driven equipment specifications.
  - c. Frequency resolution shall be 0.1 percent of base speed.
  - d. Accept second analog input from speed transmitter located on motor shaft.
4. Analog Output: Furnish two 4 mA to 20 mA dc signals for actual frequency, actual load.
5. Network Communications: Modbus TCP/IP.
  - a. Provide the following parameters/information to the plant control system via the network connection (except for HVAC drives):
    - 1) Run Forward Command.
    - 2) Run Reverse Command.
    - 3) Local/Remote Status.
    - 4) Motor Running Status – Forward Direction.
    - 5) Motor Running Status – Reverse Direction.
    - 6) Drive Fault.
    - 7) Motor Current.
    - 8) Motor Voltage.
    - 9) Motor Power (kW).
    - 10) Power Factor Applied to Motor.
    - 11) Motor Speed Command (0 percent to 100 percent).
    - 12) Motor Speed Feedback (0 percent to 100 percent).

H. Accessories:

1. Equipment Identification Plate: 16-gauge stainless steel with 1/4-inch die-stamped equipment tag number securely mounted in readily visible location.
2. Lifting Lugs: Equipment weighing over 100 pounds.
3. Anchor Bolts: Sized by equipment manufacturer, and as specified in Section 05 50 00, Metal Fabrications.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.04 FACTORY FINISHING

- A. Enclosure:
  - 1. Primer: One coat of rust-inhibiting coating.
  - 2. Finish:
    - a. Interior: One coat white enamel.
    - b. Exterior: One coat manufacturer's standard gray enamel or EIA 359-A-1, No. 61.

2.05 SOURCE QUALITY CONTROL

- A. Factory Inspections: Inspect control panels for required construction, electrical connection, and intended function.
- B. Factory Tests and Adjustments: Test all control panels actually furnished.
- C. Record test data for report.
- D. Functional Test: Perform manufacturer's standard.

**PART 3 EXECUTION**

3.01 INSTALLATION

- A. Install in accordance with manufacturer's printed instructions.

3.02 FIELD QUALITY CONTROL

- A. Functional Test:
  - 1. Conduct on each controller.
  - 2. Inspect controller for electrical supply termination connections, interconnections, proper installation, and quiet operation.
  - 3. Vibration Test:
    - a. Complete assembly, consisting of motor, load, and flexible shafting, connected and in normal operation shall not develop amplitudes of vibration exceeding limits recommended by HIS.
    - b. Where loads and drives are separated by intermediate flexible shafting, measure vibration both at top motor bearing and at two points on top pump bearing, 90 degrees apart.
  - 4. Record test data for report.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Network and Communication Test:
  - 1. Coordinate with plant control system to ensure that all specified data points are communicated over the network.
  - 2. Conduct on each drive unit.
  
- C. Performance Test:
  - 1. Conduct on each controller.
  - 2. Perform under actual or approved simulated operating conditions.
  - 3. Test for continuous 6-hour period without malfunction.
  - 4. Demonstrate performance by operating continuous period while varying application load, as input conditions allow, to verify system performance.
  - 5. Record test data for report.
  
- D. Test Equipment: Provide diagnostic plug-in test card complete with instructions, multiposition selector switch, and meters or built-in diagnostic control panel or ROM-based processor for monitoring ac, dc, and digital signals to assist in troubleshooting and startup of drive.

3.03 MANUFACTURERS' SERVICES

- A. Manufacturer's Representative:
  - 1. Present at Site or classroom designated by Owner, for minimum person-days listed below, travel time excluded:
    - a. 2 person-days for installation assistance and inspection.
    - b. 2 person-days for programming of network connection and coordination of required data exchange with plant control system.
    - c. 1 person-day for functional and performance testing and completion of Manufacturer's Certificate of Proper Installation.
    - d. 1 person-day for facility startup.
    - e. 1 person-day for post-startup training
  
- B. See Section 01 43 33, Manufacturers' Field Services, and Section 01 91 14, Testing, Integration, and Startup.

**END OF SECTION**

**SECTION 31 10 00  
SITE CLEARING**

**PART 1 GENERAL**

1.01 DEFINITIONS

- A. Interfering or Objectionable Material: Trash, rubbish, and junk; vegetation and other organic matter, whether alive, dead, or decaying; topsoil.
- B. Clearing: Removal of interfering or objectionable material lying on or protruding above ground surface.
- C. Grubbing: Removal of vegetation and other organic matter including stumps, buried logs, and roots greater than 2-inch caliper to a depth of 6 inches below subgrade.
- D. Stripping: Removal of topsoil.
- E. Project Limits: Areas, as shown or specified, within which Work is to be performed.

1.02 SUBMITTALS

- A. Action Submittals: Drawings clearly showing clearing, grubbing, and stripping limits.

1.03 QUALITY ASSURANCE

- A. Obtain Engineer's approval of staked clearing, grubbing, and stripping limits, prior to commencing clearing, grubbing, and stripping.

1.04 SCHEDULING AND SEQUENCING

- A. Prepare Site only after adequate erosion and sediment controls are in place. Limit areas exposed uncontrolled to erosion during installation of temporary erosion and sediment controls.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 GENERAL

- A. Clear, grub, and strip areas actually needed for Site improvements within limits shown or specified.
- B. Do not injure or deface vegetation that is not designated for removal.

3.02 LIMITS

- A. As follows, but not to extend beyond Project limits:
  - 1. Structures: 10 feet outside of new structures or slabs.
  - 2. Other Areas: As shown.
- B. Remove rubbish, trash, and junk from entire area within Project limits.

3.03 CLEARING

- A. Clear areas within limits shown or specified.
- B. Fell trees so that they fall away from facilities and vegetation not designated for removal.
- C. Cut stumps not designated for grubbing flush with ground surface.
- D. Cut off shrubs, brush, weeds, and grasses to within 2 inches of ground surface.

3.04 GRUBBING

- A. Grub areas within limits shown or specified.

3.05 STRIPPING

- A. Strip areas within limits to minimum depths shown or specified. Do not remove subsoil with topsoil.

3.06 TREE REMOVAL OUTSIDE CLEARING LIMITS

- A. Remove Within Project Limits: Dead, dying, leaning, or otherwise unsound trees that may strike and damage Project facilities in falling.
- B. Cut stumps off flush with ground, remove debris, and if disturbed, restore surrounding area to its original condition.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.07 DISPOSAL

A. Clearing, Grubbing, and Stripping Debris:

1. Dispose of debris offsite.
2. Burning of debris onsite will not be allowed.
3. Woody debris may be chipped. Chips may be sold to Contractor's benefit. Dispose of chips that are unsaleable with unchipped debris.
4. Limit offsite disposal of clearing and grubbing debris to locations that are approved by federal, state, and local authorities, and that will not be visible from Project.

**END OF SECTION**

**SECTION 31 23 13**  
**SUBGRADE PREPARATION**

**PART 1 GENERAL**

1.01 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. ASTM International (ASTM):
    - a. D1557, Standard Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft lbf/ft<sup>3</sup>).
    - b. D6938, Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

1.02 DEFINITIONS

- A. Optimum Moisture Content:
1. Determined in accordance with ASTM D1557 to determine maximum dry density for relative compaction.
  2. Determine field moisture content on basis of fraction passing 3/4-inch sieve.
- B. Prepared Ground Surface: Ground surface after completion of clearing and grubbing, scalping of sod, stripping of topsoil, excavation to grade, and scarification and compaction of subgrade.
- C. Relative Compaction:
1. Ratio, in percent, of as-compacted field dry density to laboratory maximum dry density as determined in accordance with ASTM D1557.
  2. Apply corrections for oversize material to either as-compacted field dry density or maximum dry density, as determined by Engineer.
- D. Subgrade: Layer of existing soil after completion of clearing, grubbing, and stripping prior to placement of base rock, roadway structure or concrete.
- E. Unsuitable Material: Soil with organics, expansive clay or other deleterious materials, that are not suitable to support the applied loads.

1.03 SEQUENCING AND SCHEDULING

- A. Complete applicable Work specified in Sections 02 41 00, Demolition; 31 10 00, Site Clearing; and 31 23 16, Excavation, prior to subgrade preparation.

1.04 QUALITY ASSURANCE

- A. Notify Engineer when subgrade is ready for compaction or whenever compaction is resumed after a period of extended inactivity.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 GENERAL

- A. Keep subgrade free of water, debris, and foreign matter during compaction or proof-rolling.
- B. Bring subgrade to proper grade and cross-section and uniformly compact surface.
- C. Do not use sections of prepared ground surface as haul roads. Protect prepared subgrade from traffic.
- D. Maintain prepared ground surface in finished condition until next course is placed.

3.02 COMPACTION

- A. Under Pavement Structure, Floor Slabs On Grade, or Granular Fill Under Structures: Compact the upper 6 inches to minimum of 95 percent relative compaction as determined in accordance with ASTM D1557.
- B. Pipe Trench Subgrade: Make three complete passes using hand guided vibratory plate compactors, under observation by Engineer. Operate at a slow walking pace as coordinated with the Engineer.

3.03 MOISTURE CONDITIONING

- A. Adjust moisture to within 2 percent of the optimum moisture content.
- B. Dry Subgrade: Scarify, add water, then mix to make moisture content uniform throughout upper 6 inches.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Wet Subgrade: Scarify and aerate material in upper 6 inches by blading, discing, harrowing, or other methods, to hasten drying process.

3.04 TESTING

- A. Detect soft or loose pipe trench subgrade by observation of the vibratory plate compactors in Article Compaction above.
- B. Perform a minimum of one in-place density test in accordance with ASTM D6938 for every 50-foot by 50-foot subgrade area beneath structures or slabs on grade.

3.05 CORRECTION

- A. If subgrade is pumping or otherwise yielding during compaction:
  - 1. Scarify, adjust moisture content and recompact, or
  - 2. Overexcavate as specified in Section 31 23 16, Excavation, and replace with trench stabilization material, as specified in Section 31 23 23.15, Trench Backfill.
- B. Unsuitable Material: Overexcavate as specified in Section 31 23 16, Excavation, and replace with suitable earth backfill material from the excavation, as specified in Section 31 23 23.15, Trench Backfill.

**END OF SECTION**

**SECTION 31 23 16  
EXCAVATION**

**PART 1 GENERAL**

1.01 QUALITY ASSURANCE

- A. Provide adequate survey control to avoid unauthorized overexcavation.

1.02 WEATHER LIMITATIONS

- A. Material excavated during inclement weather shall not be used as fill or backfill until after material drains and dries sufficiently for proper compaction.

1.03 SEQUENCING AND SCHEDULING

- A. Demolition: Complete applicable Work specified in Section 02 41 00, Demolition, prior to excavating.
- B. Clearing and Grubbing: Complete applicable Work specified in Section 31 10 00, Site Clearing, prior to excavating.
- C. Excavation Support: Install and maintain shoring, as necessary to support sides of excavations and prevent detrimental settlement and lateral movement of existing facilities, adjacent property, and completed Work.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 GENERAL

- A. Comply with applicable excavation permits.
- B. Prior to excavating, install erosion and sediment control measures as specified with required permits.
- C. Excavate to lines, grades, and dimensions shown and as necessary to accomplish Work. Excavate to within tolerance of plus or minus 0.1 foot, except where dimensions or grades are shown or specified as maximum or minimum. Allow for forms, working space, granular base, topsoil, and similar items, wherever applicable. Trim to neat lines where concrete is to be deposited against earth. Furnish, place, and maintain supports and shoring that may be required for the sides of the excavations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Use of Excess Excavated Materials: Use of excess excavated materials to complete fills or produce granular rock products required for the Work is permitted.
  - 1. Process excavated materials to meet specified material requirements.
  - 2. In the event that excavated materials or processed materials do not meet the specified material requirements, import the specified material.
  - 3. Only use excavated materials from excavations actually required for the Work for generating fills or other granular rock products required for the Work. No borrow excavations intended solely to generate materials for processing are allowed.
  
- E. Removal and Exclusion of Water: Remove and exclude water, if encountered, from open excavations, including stormwater, groundwater, irrigation water and wastewater. Use well points, sump pumps or other means to remove water and continuously maintain groundwater at a level at least 2 feet below the lowest point of excavations. Remove and exclude water until backfilling is complete and field soils testing has been completed, or as approved by Engineer. Excavate and replace any subgrade soil that is loosened or damaged by water as directed by Engineer.
  
- F. Do not overexcavate without written authorization of Engineer.
  
- G. Remove or protect obstructions as shown and as specified in Section 01 50 00, Temporary Facilities and Controls, Article Protection of Work and Property.
  
- H. Use of explosives for blasting to assist rock excavation is not allowed.

3.02 UNCLASSIFIED EXCAVATION

- A. Excavation is unclassified. Complete all excavation regardless of the type, nature, or condition of the materials encountered.

3.03 TRENCH WIDTH

- A. Minimum Width of Trenches:
  - 1. For sewers, potable water mains, irrigation, recycled water mains, and storm drains, refer to Drawing No. SDS-110, SDW-110, SDI-110, SDRW-101, and SDD-110, respectively, of the City of San Diego Standard Drawings.
  - 2. For Single Pipe, Conduit, Direct-Buried Cable, and Duct Bank:
    - a. Less than 4-inch Outside Diameter or Width: 18 inches.
    - b. Greater than 4-inch Outside Diameter or Width: 24 inches greater than outside diameter or width of pipe, conduit, direct-buried cable, or duct bank.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Multiple Pipes, Conduits, Cables, or Duct Banks in Single Trench:  
24 inches greater than aggregate width of pipes, conduits, cables, duct banks, plus space between.
4. Increase trench widths by thicknesses of shoring.

B. Maximum Trench Width:

1. For sewers, potable water mains, irrigation, recycled water mains, and storm drains, refer to Drawing No. SDS-110, SDW-110, SDI-110, SDRW-101, and SDD-110, respectively, of the City of San Diego Standard Drawings.
2. No more than 48 inches greater than outside diameter or width of pipe, conduit, direct-buried cable, or duct bank.

3.04 PIPE AND UTILITY TRENCH EXCAVATION

- A. Perform in accordance with the safety requirements of the California Occupational Safety and Health Administration, latest edition.
- B. General: Unless otherwise indicated or ordered, open-cut trenches with widths as indicated for excavation for pipelines and utilities.
- C. Open Trench Length: Unlimited.
- D. Trench Bottom: Uniformly excavate and smooth the bottom of the trench to the grade of the bottom of the pipe bedding. Remove loose or disturbed material from the bottom of the trench, including excavator ridges.
- E. Overexcavation: Overexcavate where required by Engineer. Backfill excavation below the grade ordered with the indicated material and compaction specified in Section 31 23 23.15, Trench Backfill.
- F. Trench Overexcavation: Where trenches are indicated to be overexcavated, excavate to the depth indicated, and install stabilization material to the grade of the bottom of the pipe bedding.
- G. If a moveable trench shield is used during excavation operations, construct the trench width wider than the shield so that the shield is free to be lifted and then moved horizontally without binding against the trench sidewalls. Remove the trench shield and stabilize the trench if the trench walls cave in or slough.

3.05 STOCKPILING EXCAVATED MATERIAL

- A. Stockpile excavated material that is suitable for use as trench backfill until material is needed.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Confine stockpiles to within approved work areas. Do not obstruct roads or streets.
- C. Do not stockpile excavated material adjacent to trenches and other excavations, unless excavation side slopes and excavation support systems are designed, constructed, and maintained for stockpile loads.
- D. Do not stockpile excavated materials near or over existing facilities, adjacent property, or completed Work, if weight of stockpiled material could induce excessive settlement.
- E. Stockpile excavated material on the downhill side of the excavation where practicable.

3.06 INSPECTION AND TESTING

- A. Excavation will be performed under the observation of the Engineer. The Engineer must be notified at the following stages:
  - 1. Upon completion of site clearing.
  - 2. During excavation.
  - 3. After completion of excavations and prior to placement of concrete or backfill.
  - 4. When any unusual or unexpected geotechnical conditions are encountered.

3.07 DISPOSAL OF SPOIL

- A. Dispose of excavated materials, which are unsuitable or exceed quantity needed for trench backfill, offsite.
- B. Dispose of debris resulting from removal of underground facilities as specified in Section 02 41 00, Demolition, for demolition debris.
- C. Dispose of debris resulting from removal of organic matter, trash, refuse, and junk as specified in Section 31 10 00, Site Clearing, for clearing and grubbing debris.

**END OF SECTION**

**SECTION 31 23 23.15  
TRENCH BACKFILL**

**PART 1 GENERAL**

1.01 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. American Public Works Association (APWA): Uniform Color Code for Temporary Marking of Underground Utility Locations.
  2. ASTM International (ASTM):
    - a. C33, Standard Specification for Concrete Aggregates.
    - b. C136, Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates.
    - c. C150, Standard Specification for Portland Cement.
    - d. C618, Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Concrete.
    - e. D1140, Standard Test Method for Amount of Material in Soils Finer than the No. 200 (75 micrometer) Sieve.

  3. National Electrical Manufacturers Association (NEMA): Z535.1, Safety Color Code.

1.02 DEFINITIONS

- A. Base Rock: Granular material upon which manhole bases and other structures are placed.
- B. Bedding Material: Granular material upon which pipes, conduits, cables, or duct banks are placed.
- C. Imported Material: Material obtained by Contractor from source(s) offsite.
- D. Lift: Loose (uncompacted) layer of material.
- E. Pipe Zone: Backfill zone that includes full trench width and extends from prepared trench bottom to an upper limit above top outside surface of pipe, conduit, cable, or duct bank.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Prepared Trench Bottom: Graded trench bottom after excavation and installation of stabilization material, if required, but before installation of bedding material.
- G. Relative Compaction: The ratio, in percent, of the as-compacted field dry density to the laboratory maximum dry density as determined by ASTM D1557. Corrections for oversize material may be applied to either as-compacted field dry density or maximum dry density, as determined by Engineer.
- H. Selected Backfill Material: Material available onsite that Engineer determines to be suitable for a specific use.
- I. Well-Graded: A mixture of particle sizes that has no specific concentration or lack thereof of one or more sizes producing a material type that, when compacted, produces a strong and relatively incompressible soil mass free from detrimental voids. Does not define numerical value that must be placed on coefficient of uniformity, coefficient of curvature, or other specific grain size distribution parameters.

1.03 SUBMITTALS

A. Action Submittals:

- 1. Shop Drawings: Manufacturer's descriptive literature for marking tapes and tracer wire.

B. Informational Submittals:

- 1. Catalog and manufacturer's data sheets for compaction equipment.
- 2. Certified Gradation Analysis: Submit not less than 30 days prior to delivery for imported materials or anticipated use for excavated materials, except for trench stabilization material that will be submitted prior to material delivery to Site.
- 3. Controlled Low Strength Material: Certified mix design and test results. Include material types and weight per cubic yard for each component of mix.

**PART 2 PRODUCTS**

2.01 MARKING TAPE

A. Nondetectable:

- 1. Inert polyethylene, impervious to known alkalis, acids, chemical reagents, and solvents likely to be encountered in soil.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Thickness: Minimum 5 mils.
3. Width: 6 inches.
4. Identifying Lettering: Minimum 1-inch high, permanent black lettering imprinted continuously over entire length.
5. Manufacturers and Products:
  - a. Reef Industries; Terra Tape.
  - b. Mutual Industries; Non-detectable Tape.
  - c. Presco; Non-detectable Tape.
  - d. Or approved equal.

B. Detectable:

1. Solid aluminum foil, visible on unprinted side, encased in protective high visibility, inert polyethylene plastic jacket.
2. Foil Thickness: Minimum 0.35 mils.
3. Laminate Thickness: Minimum 5 mils.
4. Width: 6 inches.
5. Identifying Lettering: Minimum 1-inch high, permanent black lettering imprinted continuously over entire length.
6. Joining Clips: Tin or nickel-coated furnished by tape manufacturer.
7. Manufacturers and Products:
  - a. Reef Industries; Terra Tape, Sentry Line Detectable.
  - b. Mutual Industries; Detectable Tape.
  - c. Presco; Detectable Tape.
  - d. Or approved equal.

C. Color: In accordance with APWA Uniform Color Code.

<b>Color*</b>	<b>Facility</b>
Red	Electric power lines, cables, conduit, and lightning cables
Orange	Communicating alarm or signal lines, cables, or conduit
Yellow	Gas, oil, steam, petroleum, or gaseous materials
Green	Sewers and drain lines
Blue	Potable water
Purple	Reclaimed water, irrigation, and slurry lines
*As specified in NEMA Z535.1, Safety Color Code.	

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 TRACER WIRE

- A. Material: Minimum 12-gauge solid copper or copper jacket with a steel core, with high-density polyethylene (HDPE) or high-molecular weight polyethylene (HMWPE) insulation suitable for direct bury.
- B. Splices: Use wire nut or lug suitable for direct burial as recommended by tracer wire manufacturer.
- C. Manufacturers:
  - 1. Copperhead Industries, LLC.
  - 2. Performance Wire & Cable Inc.
  - 3. Pro-line Safety Products Company.
  - 4. Or approved equal.

2.03 TRENCH STABILIZATION MATERIAL

- A. Clean, hard, durable 3-inch minus crushed rock or gravel, or pit run, free from clay balls, other organic materials, or debris.
- B. Uniformly graded from coarse to fine, less than 10 percent by weight passing the 1/4-inch sieve.

2.04 BEDDING MATERIAL AND PIPE ZONE MATERIAL

- A. For sewers, potable water mains, irrigation, recycled water mains, and storm drains, refer to Drawing No. SDS 110, SDW-110, SDI-110, SDRW-101, and SDD-110, respectively, of the City of San Diego Standard Drawings.
- B. Unfrozen, friable, and no clay balls, roots, or other organic material.
- C. Clean or gravelly sand with less than 5 percent passing No. 200 sieve, as determined in accordance with ASTM D1140, with a maximum particle size and other requirements as follows unless otherwise specified.
  - 1. Stainless Steel Pipe, Copper Pipe, and Plastic Pipe Under 3-inch Diameter: 1/4 inch maximum particle size.
  - 2. All Other Pipe: 3/4 inch maximum particle size.
  - 3. Conduit and Direct-Buried Cable:
    - a. Individual Particles: Free of sharp edges.
    - b. Maximum Size Particle: Pass a No. 4 sieve.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.05 EARTH BACKFILL ABOVE PIPE ZONE

- A. Excavated material from required excavations and designated borrow sites, free from rocks larger than 4 inches, from roots and other organic matter, trash, debris, and other deleterious materials.
- B. Provide imported material of equivalent quality, if required to accomplish Work.

2.06 CONTROLLED LOW STRENGTH MATERIAL (CLSM)

- A. A fluid, workable mixture of aggregate, cement, admixtures, and water.
- B. Select and proportion ingredients to obtain compressive strength between a minimum of 50 psi at 4 days and a maximum of 150 psi at 28 in accordance with ASTM D4832.
- C. Materials:
  - 1. Cement: ASTM C150/C150M, Type I or Type II.
  - 2. Aggregate: ASTM C33/C33M, Size 8 to 9, or fine aggregate.
  - 3. Fly Ash (Pozzolan): Class F or Class C fly ash in accordance with ASTM C618.
  - 4. Water: Clean, potable, containing less than 500 ppm of chlorides.

2.07 GRAVEL SURFACING ROCK

- A. As specified in Section 32 11 23, Aggregate Base Courses.

2.08 SOURCE QUALITY CONTROL

- A. Perform gradation analysis in accordance with ASTM C136 for:
  - 1. Trench stabilization material.
  - 2. Bedding and pipe zone material.
- B. Certified Laboratory Performance of Mix Designs: Controlled low strength material.

**PART 3 EXECUTION**

3.01 TRENCH PREPARATION

- A. Water Control:
  - 1. Promptly remove and dispose of water entering trench as necessary to grade trench bottom and to compact backfill and install manholes, pipe,

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

conduit, direct-buried cable, or duct bank. Do not place concrete, lay pipe, conduit, direct-buried cable, or duct bank in water.

2. Remove water in a manner that minimizes soil erosion from trench sides and bottom.
  3. Provide continuous water control until trench backfill is complete.
- B. Remove foreign material and backfill contaminated with foreign material that falls into trench.

3.02 TRENCH BOTTOM

- A. Firm Subgrade: Grade with hand tools, remove loose and disturbed material, and trim off high areas and ridges left by excavating bucket teeth. Allow space for bedding material if shown or specified.
- B. Soft Subgrade: If subgrade is encountered that may require removal to prevent pipe settlement, notify Engineer. Engineer will determine depth of overexcavation, if any required.

3.03 TRENCH STABILIZATION MATERIAL INSTALLATION

- A. Rebuild trench bottom with trench stabilization material.
- B. Place material over full width of trench in 6-inch lifts to required grade, providing allowance for bedding thickness.
- C. Compact each lift so as to provide a firm, unyielding support for the bedding material prior to placing succeeding lifts.

3.04 BEDDING

- A. Furnish imported bedding material where, in the opinion of Engineer, excavated material is unsuitable for bedding or insufficient in quantity.
- B. Place over full width of prepared trench bottom in two equal lifts when required depth exceeds 6 inches.
- C. Hand grade and compact each lift to provide a firm, unyielding surface.
- D. Minimum Thickness:
  1. For sewers, potable water mains, irrigation, recycled water mains, and storm drains, refer to Drawing No. SDS 110, SDW-110, SDI-110, SDRW-101, and SDD-110, respectively, of the City of San Diego Standard Drawings.
  2. Pipe: 6 inches.
  3. Conduit, Duct Banks, or Buried Cable: 3 inches.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Check grade and correct irregularities in bedding material. Loosen top 1 inch to 2 inches of compacted bedding material with a rake or by other means to provide a cushion before laying each section of pipe, conduit, direct-buried cable, or duct bank.
- F. Install to form continuous and uniform support except at bell holes, if applicable, or minor disturbances resulting from removal of lifting tackle.
- G. Bell or Coupling Holes: Excavate in bedding at each joint to permit proper assembly and inspection of joint and to provide uniform bearing along barrel of pipe or conduit.

3.05 BACKFILL PIPE ZONE

- A. Upper limit of pipe zone shall not be less than following:
  - 1. Pipe: 12 inches above top of pipe, unless shown otherwise.
  - 2. Conduit: 3 inches above conduit, unless shown otherwise.
  - 3. Direct-Buried Cable: 3 inches above cable, unless shown otherwise.
  - 4. Duct Bank: 3 inches above duct bank, unless shown otherwise.
- B. Restrain pipe, conduit, cables, and duct banks as necessary to prevent their movement during backfill operations.
- C. Place material simultaneously in lifts on both sides of pipe and, if applicable, between pipes, conduit, cables, and duct banks installed in same trench.
  - 1. Pipe 10-Inch and Smaller Diameter: First lift less than or equal to 1/2 pipe diameter.
  - 2. Pipe Over 10-Inch Diameter: Maximum 6-inch lifts.
- D. Thoroughly tamp each lift, including area under haunches, with handheld tamping bars supplemented by “walking in” and slicing material under haunches with a shovel to ensure voids are completely filled before placing each succeeding lift.
- E. Do not use power-driven impact compactors to compact pipe zone material. After full depth of pipe zone material has been placed as specified, compact material by a minimum of three passes with a vibratory plate compactor.

3.06 MARKING TAPE INSTALLATION

- A. Continuously install marking tape along centerline of buried piping, at depth of 2 feet unless otherwise indicated on Drawings. Coordinate with piping installation drawings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1. Detectable Marking Tape: Install with nonmetallic piping and waterlines.
2. Nondetectable Marking Tape: Install with metallic piping.

3.07 TRACER WIRE INSTALLATION AND TESTING

- A. Install tracer wire continuously along centerline of nonmetallic buried piping.
- B. Attach wire to top of pipe using tape at maximum of 10-foot intervals. In areas where depth of cover is excessive for allowing detection of tracer wire with electronic pipe locator, install tracer wire within pipe backfill directly above pipe centerline at a minimum depth of 3 feet.
- C. Install splices in accordance with manufacturer's instructions for direct bury applications. Tie ends of wire to be joined in a knot as required to reduce tension on splice.
- D. Bring tracer wire to surface at each condensate drainage structure. Tracer wire shall be brought to surface at least every 1,000 feet. If distance between pipe appurtenances exceeds 1,000 feet, install valve box to allow access to tracer wire. Mark valve box cover with the word "TRACER". Coil enough excess tracer wire at each appurtenance to extend wire 12 inches above ground.
- E. Test continuity of tracer wire using electronic pipe locator in presence of Engineer prior to paving.

3.08 BACKFILL ABOVE PIPE ZONE

- A. For repair or relocation of sewers, potable water mains, irrigation, recycled water mains, and storm drains, refer to Drawing No. SDS 110, SDW 110, SDI 110, SDRW 101, and SDD 110, respectively, of the City of San Diego Standard Drawings, for backfill material and compaction requirement.
- B. General:
  1. Process excavated material to meet specified gradation requirements.
  2. Adjust moisture content as necessary to obtain specified compaction.
  3. Do not allow backfill to free fall into trench or allow heavy, sharp pieces of material to be placed as backfill until after at least 2 feet of backfill has been provided over top of pipe.
  4. Do not use power driven impact type compactors for compaction until at least 4 feet of backfill is placed over top of pipe.
  5. Backfill to grade with proper allowances for surfacing and pavement thicknesses, wherever applicable.
  6. Backfill around structures with same backfill as specified for adjacent trench, unless otherwise shown or specified.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. Placement and Compaction:

1. Place in lifts not exceeding thickness of 8 inches prior to compaction.
2. Mechanically compact each lift to a minimum of 90 percent relative compaction in accordance with ASTM D1557 prior to placing succeeding lifts.
3. For areas under roadways, mechanically compact each lift to a minimum of 95 percent relative compaction in accordance with ASTM D1557 prior to placing succeeding lifts.

D. Controlled Low Strength Material:

1. Discharge from truck mounted drum type mixer into trench.
2. Place in lifts as necessary to prevent uplift (flotation) of new and existing facilities.
3. In traveled areas, fill entire trench section to pavement finish grade for a temporary driving surface, and screed off excess and finish with a float.
4. In other areas, fill trench section as shown.

3.09 SITE TESTING

- A. Gradation of Bedding and Pipe Zone Material: In accordance with ASTM C136. One sample from each 500 tons of bedding and pipe zone material or more often as determined by Engineer, if variation in gradation is occurring, or if material appears to depart from the Specifications.
- B. In-Place Density Testing of Trench Backfill Above Pipe Zone: In accordance with ASTM D6938. Minimum one test per foot of fill for every 100 linear feet of trench.
- C. If test results indicate material does not meet Specification requirements, terminate material placement until corrective measures are taken.

3.10 MAINTENANCE OF TRENCH BACKFILL

- A. After each section of trench is backfilled, maintain surface of backfilled trench even with adjacent ground surface until final surface restoration is completed.
- B. Gravel Surfacing Rock: Add gravel surfacing rock where applicable and as necessary to keep surface of backfilled trench even with adjacent ground surface, and grade and compact as necessary to keep surface of backfilled trenches smooth, free from ruts and potholes, and suitable for normal traffic flow.
- C. Concrete Pavement: Replace settled slabs as specified in Section 32 12 16, Asphalt Paving.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Asphaltic Pavement: Replace settled areas or fill with asphalt as specified in Section 32 12 16, Asphalt Paving.
- E. Other Areas: Add excavated material where applicable and keep surface of backfilled trench level with adjacent ground surface.

3.11 SETTLEMENT OF BACKFILL

- A. Settlement of trench backfill, or of fill, or facilities constructed over trench backfill will be considered a result of defective compaction of trench backfill.

**AGGREGATE BASE COURSES**

**PART 1 GENERAL**

**1.01 REFERENCES**

A. The following is a list of standards which may be referenced in this section:

1. American Association of State Highway and Transportation Officials (AASHTO):
  - a. T11, Standard Method of Test for Materials Finer Than 75 $\mu$ m (No. 200) Sieve in Mineral Aggregates by Washing.
  - b. T27, Standard Method of Test for Sieve Analysis of Fine and Coarse Aggregates.
  - c. T89, Standard Specification for Determining the Liquid Limit of Soils.
  - d. T90, Standard Specification for Determining the Plastic Limit and Plasticity Index of Soils.
  - e. T96, Standard Specification for Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.
  - f. T99, Standard Specification for the Moisture-Density Relations of Soils Using a 2.5 kg (5.5 pound) Rammer and a 305 mm (12 in) Drop.
  - g. T180, Standard Specification for Moisture-Density Relations of Soils Using a 4.54 kg (10-lb) Rammer and a 457 mm (18-in) Drop.
  - h. T190, Standard Specification for Resistance R-Value and Expansion Pressure of Compacted Soils.
  - i. T265, Standard Method of Test for Laboratory Determination of Moisture Content of Soils.
  - j. T310, Standard Specification for In-Place Density and Moisture Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).
2. ASTM International (ASTM):
  - a. C88, Test Method for Soundness of Aggregates by Use of Sodium Sulfate or Magnesium Sulfate.
  - b. D1883, Test Method for CBR (California Bearing Ratio) of Laboratory Compacted Soils.
  - c. D2419, Test Method for Sand Equivalent Value of Soils and Fine Aggregate.
  - d. D4791, Test Method for Flat Particles, Elongated Particles, or Flat and Elongated Particles in Coarse Aggregate.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.02 DEFINITIONS

- A. Completed Course: Compacted, unyielding, free from irregularities, with smooth, tight, even surface, true to grade, line, and cross-section.
- B. Completed Lift: Compacted with uniform cross-section thickness.
- C. Standard Specifications: When referenced in this section, shall mean 2018 “Greenbook” Standard Specifications for Public Works Construction.

1.03 SUBMITTALS

- A. Action Submittals:
  - 1. Samples: Submit for specified materials 20 days prior to delivery to Site.
- B. Informational Submittals: See Section 3-8 of the 2018 “Greenbook” Standard Specifications for Public Works Construction, and 3-8 of the City of San Diego Supplement “Whitebook” Standard Specifications for Public Works Construction.

**PART 2 PRODUCTS**

2.01 BASE COURSE

- A. As specified in Section 200 of the Standard Specifications, and Section 200-2.9 of the 2018 City of San Diego Supplemental “Whitebook” Standard Specifications for Public Works Construction.

2.02 SOURCE QUALITY CONTROL

- A. See Section 200-2 of the 2018 “Greenbook” Standard Specifications for Public Works Construction, and Section 200-2.9.3 of the City of San Diego 2018 Supplement “Whitebook” Standard Specification for Public Works Construction for quality requirement tests.

**PART 3 EXECUTION**

3.01 SUBGRADE PREPARATION

- A. As specified in Section 31 23 13, Subgrade Preparation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.02 EQUIPMENT

- A. Compaction Equipment: Adequate in design and number to provide compaction and to obtain specified density for each layer as required by Section 301-1 of the Standard Specifications, and Section 301 of the 2018 City of San Diego Supplement “Whitebook” Standard Specifications for Public Works Construction.

3.03 HAULING AND SPREADING

- A. In accordance with Section 301-2 of the Standard Specifications.

3.04 CONSTRUCTION OF COURSES

- A. Construction of Courses: In accordance with Section 301 of the Standard Specifications, and Section 301 of the 2018 City of San Diego Supplement “Whitebook” Standard Specifications for Public Works Construction.

3.05 ROLLING AND COMPACTION

- A. Subgrade and base material shall be compacted per Section 301-1 and Section 301-2 of the Standard Specifications, and Section 301-1.3 of the 2018 City of San Diego Supplement “Whitebook” Standard Specifications for Public Works Construction.

3.06 SURFACE TOLERANCES

- A. See Section 301-2 of the Standard Specifications for compaction and surface tolerance of aggregate base.

3.07 CLEANING

- A. Remove excess material from the work area. Clean stockpile and staging areas of all excess aggregate.

**END OF SECTION**

**SECTION 32 12 16  
ASPHALT PAVING**

**PART 1 GENERAL**

    - b. M81, Standard Specification for Cut-Back Asphalt (Rapid Curing Type).
    - c. M82, Standard Specification for Cut-Back Asphalt (Medium Curing Type).
    - d. M140, Standard Specification for Emulsified Asphalt.
    - e. M208, Standard Specification for Cationic Emulsified Asphalt.
    - f. T166, Standard Method of Test for Bulk Specific Gravity of Compacted Asphalt Mixtures Using Saturated Surface-Dry Specimens.
    - g. T176 Standard Method of Test for Plastic Fines in Graded Aggregates and Soils by Use of the Sand Equivalent Test.
    - h. T230, Standard Method of Test for Determining Degree of Pavement Compaction of Bituminous Aggregate Mixtures.
    - i. T245, Standard Method of Test for Resistance to Plastic Flow of Bituminous Mixtures Using Marshall Apparatus.
    - j. T246, Standard Method of Test for Resistance to Deformation and Cohesion of Bituminous Mixtures by Means of Hveem Apparatus.
    - k. T247, Standard Method of Test for Preparation of Test Specimens of Bituminous Mixtures by Means of California Kneading Compactor.
    - l. T283, Standard Method of Test for Resistance of Compacted Bituminous Mixture to Moisture Induced Damage.
    - m. T304, Standard Method of Test for Uncompacted Void Content of Fine Aggregate (Method A).
  2. Asphalt Institute (AI):
    - a. Manual Series No. 2 (MS-2), Mix Design Methods for Asphalt Concrete.
    - b. Superpave Series No. 2 (SP-2), Superpave Mix Design.
  3. ASTM International (ASTM):
    - a. D2041, Test Method for Theoretical Maximum Specific Gravity and Density of Bituminous Paving Mixtures.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. D4318, Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.
- c. D4791, Test Method for Flat Particles, Elongated Particles, or Flat and Elongated Particles in Coarse Aggregate.
- d. D5821, Test Method for Determining the Percentage of Fractured Particles in Coarse Aggregate.
- e. E329, Specification for Agencies Engaged in the Testing and/or Inspection of Materials Used in Construction.
- 4. 2018 “Greenbook” Standard Specifications for Public Works Construction.
- 5. 2018 City of San Diego Supplement “Whitebook” Standard Specifications for Public Works Construction.

1.02 DEFINITIONS

- A. Combined Aggregate: All mineral constituents of asphalt concrete mix, including mineral filler and separately sized aggregates.
- B. RAP: Reclaimed asphalt pavement.
- C. Standard Specifications: 2018 “Greenbook” Standard Specifications for Public Works Construction and 2018 City of San Diego Supplement “Whitebook” Standard Specifications for Public Works Construction.

1.03 SUBMITTALS

- A. Informational Submittals: See Section 3-8 of the Standard Specifications and Section 203-6.3.1 of the City of San Diego Supplement Standard Specifications.

1.04 ENVIRONMENTAL REQUIREMENTS

- A. Temperature: Do not apply asphalt materials or place asphalt mixes when ground temperature is lower than 10 degrees C (50 degrees F) or air temperature is lower than 4 degrees C (40 degrees F). Measure ground and air temperature in shaded areas away from heat sources or wet surfaces.
- B. Moisture: Do not apply asphalt materials or place asphalt mixes when application surface is wet.

**PART 2 PRODUCTS**

2.01 MATERIALS

- A. Tack Coat: Emulsified asphalt, conform to Section 302-5.4 of the Standard Specifications.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Sand (Blotter Material): As specified in Section 200-1.5.5 of the Standard Specifications.

2.02 ASPHALT CONCRETE MIX

- A. See Section 203-6 of the Standard Specifications.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Traffic Control:
  - 1. In accordance with Section 01 50 00, Temporary Facilities and Controls.
  - 2. Minimize inconvenience to traffic, but keep vehicles off freshly treated or paved surfaces to avoid pickup and tracking of asphalt.
- B. Driveways: Repave driveways from which pavement was removed. Leave driveways in as good or better condition than before start of construction.

3.02 LINE AND GRADE

- A. Provide and maintain intermediate control of line and grade, independent of underlying base, to meet finish surface grades and minimum thickness.
- B. Shoulders: Construct to line, grade, and cross-section shown.

3.03 PREPARATION

- A. Prepare subgrade as specified in Section 301-1 of the Standard Specifications.
- B. Existing Roadway: Cold milling of existing pavement in accordance with Section 404 of the Standard Specifications.
- C. Thoroughly coat edges of contact surfaces (curbs, manhole frames) with emulsified asphalt or asphalt cement prior to laying new pavement. Prevent staining of adjacent surfaces.

3.04 PAVEMENT APPLICATION

- A. General: Place asphalt concrete mixture on approved, prepared base in conformance with Section 302-5 of the Standard Specifications.
- B. Compaction: See Section 302-5 of the Standard Specifications.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Tolerances:
1. General: Conduct measurements for conformity with crown and grade immediately after initial compression. Correct variations immediately by removal or addition of materials and by continuous rolling.
  2. Completed Surface or Wearing Layer Smoothness see Section 302-5 of Standard Specifications.
  3. Transverse Slope Maximum Deviation: 6.4 millimeters (1/4 inch) in 3 meters (10 feet) from rate of slope shown.
  4. Finished Grade:
    - a. Perform field differential level survey on maximum 15-meter (50-foot) meter grid and along grade breaks.
    - b. Maximum Deviation: 6 millimeters (0.02 foot) from grade shown.
- D. Seal Coat in accordance of with Section 302-5 of the Standard Specifications.

3.05 PAVEMENT OVERLAY

- A. For Cold Milling of Existing Pavement see Section 404 of the Standard Specifications.
- B. Application: See Section 302-5 of the Standard Specifications.

3.06 PATCHING

- A. See Section 301-1.6 of the 2018 City of San Diego Supplement “Whitebook” Standard Specifications for Public Works Construction.

**END OF SECTION**

**SECTION 33 05 01**  
**CONVEYANCE PIPING—GENERAL**

**PART 1 GENERAL**

  4. NSF International (NSF):
    - a. NSF/ANSI 61, Drinking Water System Components - Health Effects.
    - b. NSF/ANSI 372, Drinking Water System Components - Lead Content.

1.02 DELIVERY, STORAGE, AND HANDLING

- A. In accordance with manufacturer's recommendations and as specified in individual specification(s) following this section.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Pipe, specials, and fittings received at Project Site in damaged condition will not be accepted.
- C. Gasket Storage: Store rubber gaskets in cool, well ventilated place, and do not expose to direct rays of sun. Do not allow contact with oils, fuels, petroleum, or solvents.
- D. Store and support pipe securely to prevent accidental rolling and to avoid contact with mud, water, or other deleterious materials.
- E. Handling:
  - 1. Pipe shall be handled with proper equipment in a manner to prevent distortion or damage. Use of hooks, chains, wire ropes, or clamps that could damage pipe, damage coating or lining, or kink and bend pipe ends is not permitted.
  - 2. Use heavy canvas, or nylon slings of suitable strength for lifting and supporting materials.
  - 3. Lifting pipe during unloading or lifting into trench shall be done using two slings placed at quarter point of pipe section. Pipe may be lifted using one sling near center of pipe, provided pipe is guided to prevent uncontrolled swinging and no damage will result to pipe or harm to workers. Slings shall bear uniformly against pipe.
  - 4. Pipe and fittings shall not be stored on rocks or gravel, or other hard material that might damage pipe. This includes storage area and along pipe trench.
  - 5. Handle as specified in individual specification(s) following this section.

## **PART 2 PRODUCTS**

### **2.01 PIPE**

- A. HDPE Gas Distribution Pipe and Fittings:
  - 1. Provide 12-inch diameter factory manufactured section of HDPE gas distribution pipe and fittings where shown on Drawing 41198-1192-D. Pipe shall be Performance Pipe 8300, or approved equal.
  - 2. Pipe and fittings shall conform to requirements of ASTM D2513 incorporated by reference in 49 CFR Part 192.
  - 3. Resin:
    - a. Polyethylene resin shall meet or exceed requirements of ASTM D3350 for PE 4710 material with cell classification of 445574C, or better. PE 4710 HDPE pipe and fittings shall be manufactured from bimodal resins. Pressure rating shall be based on hydrostatic design stress of 1,000 psi at 73.4 degrees F.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. DR: 13.5.
5. Outside Diameter Basis: IPS.
6. Pipe lengths, fittings, and flanged connections to be joined by thermal butt-fusion shall be of a compatible resin mix for the fusion process.
7. Fittings: Polyethylene fittings shall have same or higher-pressure rating as pipe.

B. HDPE Pipe and Fitting: As specified in the individual specification following this section.

2.02 PIPE LOCATING TAPE

A. As specified in Section 31 23 23.15, Trench Backfill.

2.03 BACKFILL ABOVE PIPE ZONE

A. As specified in Section 31 23 23.15, Trench Backfill.

2.04 PIPE BEDDING AND PIPE ZONE MATERIAL

A. Granular material or controlled low strength material as specified in Section 31 23 23.15, Trench Backfill.

2.05 TRENCH STABILIZATION MATERIAL

A. As specified in Section 31 23 23.15, Trench Backfill.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Notify Engineer at least 2 weeks prior to field fabrication of pipe or fittings.
- B. Distributing Materials: Place materials along trench only as will be used each day, unless otherwise approved by Engineer. Placement of materials shall not be hazardous to traffic or to general public, obstruct access to adjacent property, or obstruct others working in area.

3.02 EXAMINATION

- A. Verify size, material, joint types, elevation, and horizontal location of existing pipeline to be connected to new pipeline or new equipment.
- B. Inspect size and location of structure penetrations to verify adequacy of wall pipes, sleeves, and other openings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Damaged Coatings and Linings: Repair using coating and lining materials in accordance with manufacturer's instructions.

3.03 PREPARATION OF TRENCH

- A. Prepare trench as specified in Section 31 23 16, Excavation.

3.04 INSTALLATION

A. General:

1. Join pipe and fittings in accordance with manufacturer's instructions, unless otherwise shown or specified.
2. Install individual pipe lengths in accordance with approved lay diagram. Misplaced pipe shall be removed and replaced.
3. Inspect pipe and fittings before installation, clean ends thoroughly, remove foreign matter and dirt from inside.
4. Flanged Joints:
  - a. Install perpendicular to pipe centerline.
  - b. Bolt Holes: Straddle vertical centerline, aligned with connecting equipment flanges or as shown on Drawings.
  - c. Use torque-limiting wrenches to provide uniform bearing and proper bolt tightness.
  - d. Flange Type: Use flat-faced flange when joining with flat-faced ductile or cast iron flange.

B. Buried Pressure Pipe:

1. Butt fuse DR 13.5 HDPE gas distribution pipe to DR 17 HDPE pipe using procedures that have been qualified and approved by the operator in accordance with Title 49, CFR and Part 192.283.
2. Concrete Encased or Embedded Pipe: Do not encase joints in concrete, unless specifically shown on Drawings.
3. Placement:
  - a. Keep trench dry until pipe laying and joining is completed.
  - b. Exercise care when lowering pipe into trench to prevent twisting or damage to pipe.
  - c. Measure for grade at pipe invert, not at top of pipe.
  - d. Excavate trench bottom and sides of ample dimensions to permit proper joining, welding, visual inspection, and testing of entire joint.
  - e. Prevent foreign material from entering pipe during placement.
  - f. Close and block open end of last laid pipe section when placement operations are not in progress and at close of day's work.
  - g. In general, lay pipe upgrade in direction of laying.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- h. Check pipe alignment and grade and record pipe inverts, northings, eastings at all pipe bends, pipe beginning and pipe end.
- i. Place sufficient pipe zone material to secure pipe from movement before next pipe section is installed.
- j. Prevent uplift and floating of pipe prior to backfilling.
- 4. Tolerances:
  - a. Deflection From Horizontal Line: Maximum 2 inches.
  - b. Deflection From Vertical Line: Maximum 1 inch.
- 5. Cover Over Top of Pipe: Minimum 3 feet, unless otherwise shown.
- 6. Disposal of Excess Excavated Material: As specified in Section 31 23 16, Excavation.

3.05 PLACEMENT OF PIPE LOCATING TAPE

- A. Place pipe locating tape in accordance with Section 31 23 23.15, Trench Backfill.

3.06 PIPE BEDDING AND ZONE MATERIAL

- A. Place pipe bedding and pipe zone material in accordance with Section 31 23 23.15, Trench Backfill.

3.07 FIELD QUALITY CONTROL

- A. Pressure Leakage Testing: As specified in the individual specification(s) following this section.

3.08 CLEANING

- A. Following assembly and testing, and prior to final acceptance, flush pipelines with water at 2.5 fps minimum flushing velocity until foreign matter is removed. Dispose of water and flushed foreign matter.
- B. If impractical to flush large diameter pipe at 2.5 fps, clean pipe by use of pipe pig as approved by Engineer. Multiple passes of pipe pig may be required to adequately clean line.
- C. Remove accumulated debris through blow-offs 2 inches and larger or by removing spools and valves from piping.

**END OF SECTION**

**SECTION 33 05 01.10**  
**HIGH-DENSITY POLYETHYLENE (HDPE) PRESSURE PIPE AND FITTINGS**

**PART 1 GENERAL**

1.02 SUBMITTALS

A. Action Submittals:

- 1. Shop Drawings:
  - a. Detailed pipe fabrication drawings showing pipe details, special fittings and bends, dimensions, coatings, and other pertinent information.
  - b. Catalog information confirming pipe, fittings, and other materials conform to requirements of this section.
  - c. Drawings of pipe layout and specific connection details as shown on Drawings.
  - d. Product Data: Manufacturer's data for couplings, saddles, gaskets, and other pipe accessories. Indicate maximum rated working pressure and test pressure for each item.
- 2. Submit HDPE temperature control plan describing Contractor's approach to controlling movement of the pipe related to the thermal expansion and contraction of the pipeline during installation. Plan shall outline Contractor's approach to mitigate and control movement during installation, backfill, and connection to flanges or structures. Plan shall include means of reducing pipe temperature to the limits stated in Part 3 of this Specification.
- 3. Joint Logs of First Three Joints: Logs to be approved by the Design Engineer prior to installation of pipe.

B. Informational Submittals:

- 1. Manufacturer's Certificate of Compliance, in accordance with Section 01 61 00, Common Product Requirements.
- 2. Infrared temperature gun product data.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Certificates of qualification for persons to be fusing HDPE pipe. Experience, training record, and certificates of persons to be fusing HDPE pipe.
4. Information on manufacturer and model of machine to be used for fusion of HDPE pipe.
5. Hydrostatic Testing Plan: Submit at least 15 days prior to testing and include the following as a minimum:
  - a. Testing dates.
  - b. Piping systems and section(s) to be tested.
  - c. Method of isolation from existing piping and equipment.
  - d. Method of isolation from instrumentation and other items not to be tested.
  - e. Provisions for supporting and providing thrust restraint for buried piping during hydrostatic testing.
  - f. Method to remove all air from piping prior to testing.
  - g. Method of conveying water from source to system being tested.
  - h. Method of filling and removing water.
  - i. Calculation of acceptable pressure range for piping section(s) to be tested
6. Certifications of Calibration: Approved testing laboratory certificate if pressure gauge for hydrostatic test has been previously used. If pressure gauge is new, no certificate is required.
7. Test report documentation.
8. Installation Plan following the Plastic Pipe Institute, ASTM F2620, and manufacturer's recommendations. Plan shall include, but not be limited to the following major components:
  - a. Pipe and fitting storage.
  - b. Pipe and fitting handling equipment.
  - c. Proposed means to maintain required temperatures for fusing.
  - d. Proposed means to shield the fusing area from wind, snow, blowing dust, and rain.
  - e. Proposed means to maintain uniform pipe wall temperature prior to fusing.
9. Fusion parameters including recommended limits of criteria recorded by data logger.
10. Fusion report for each joint, including information listed under Article Field Quality Control. Submit joint reports, within 24 hours after fusion.
11. Gasket manufacturer's table for recommended bolt torque and tightening pattern.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 QUALITY ASSURANCE

A. Qualifications:

1. Pipe Manufacturer: Listed with Plastic Pipe Institute.
2. Persons fusing HDPE pipe shall be certified under 49 CFR § 192.285, shall have experience fusing similar diameter HDPE pipe sizes and shall have received a minimum of 20 hours of training for fusing HDPE pipe from pipe supplier or fusing equipment supplier

B. Marking at Plant: Mark each pipe and fitting in accordance with AWWA C906.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Shipping: Do not cut, kink, or otherwise damage pipe during transportation.

B. Storage and Handling:

1. Pipe interiors are to be inspected and all debris removed, prior to storage.
2. Limit stacking of pipe to a height that will not cause excessive deformation of bottom layers of pipes under anticipated temperature conditions. Do not exceed the stacking heights stated in AWWA Manual M55 Table 7-1.
3. Where necessary, because of ground conditions, store pipe on wooden sleepers, spaced suitably and of such widths as not to allow deformation of pipe at point of contact with sleeper or between supports.
4. Comply with the requirements of the approved installation plan.
5. Keep pipes completely shaded from direct sunlight prior to fusion and installation in trench. Provide a white colored shading material.

1.05 CONNECTIONS TO EXISTING PIPE

A. Fusing to Existing Pipe: Comply with manufacturer's or distributor's recommendations based on Site conditions and PPI TR-33.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 2 PRODUCTS**

2.01 MATERIALS

A. Pipe and Fittings:

1. Conform to requirements of AWWA C906-15.
2. Resin: Polyethylene resin shall meet or exceed requirements of ASTM D3350 for PE 4710 material with cell classification of 445574C, or better. PE 4710 HDPE pipe and fittings shall be manufactured from bimodal resins. Pressure rating shall be based on hydrostatic design stress of 1,000 psi at 73.4 degrees F.
3. Maximum DR: 17.
4. Outside Diameter Basis: Iron Pipe Size (IPS).
5. Pipe lengths, fittings, and flanged connections to be joined by thermal butt-fusion shall be of a compatible resin mix for the fusion process.
6. Fittings:
  - a. Polyethylene fittings shall have same or higher pressure rating as pipe.
  - b. Sizes 12 inches and Smaller: Molded and manufactured to the requirements of ASTM D3261, Standard Specification for Butt Heat Fusion Polyethylene (PE) Plastic Fittings for Polyethylene (PE) Plastic Pipe and Tubing.
  - c. Unless noted otherwise, provide fittings with a factory fused 4-foot long spool on each end to facilitate on-site fusion.

B. Backup Rings:

1. Convolved for Flanged Connections:
  - a. ASTM A240/A240M, Type 316 stainless steel.
  - b. Complete with one-piece, molded polyethylene flange adapters.
  - c. Flanged Connections: Same or greater pressure rating as pipe.
2. Gaskets:
  - a. Gylon Style 3545.
  - b. Multi-Swell Styles 3760/3760U.
  - c. Gasket manufacturer shall provide a table with recommended bolt torque and tightening pattern.
  - d. No "or approved equal."

- C. Joints: Thermal butt-fusion or electrofusion (at approved field closures), except where connecting to unions, valves, and equipment with flanged or threaded connections that may require future disassembly. Use appropriate transition fitting or adapter for all joints that are not thermal butt-fused or electro-fused.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

D. Bolts, Nuts, Washers:

1. Bolt Materials: Type 316 stainless steel, ASTM A193/A193M, Grade B8M hex-head, carbide solution treated and strained hardened.
2. Bolt Fabrication: In accordance with ASME B18.2.1.
3. Nut Materials: Type 316 stainless steel, ASTM A194/A194M, Grade 8 hex-head.
4. Nut Fabrication: In accordance with ASME B18.2.2.
5. Washers: Type 316 stainless steel, same material as bolts in accordance with ASME B18.21.1.
6. Thread Lubricant: Provide bolt manufacturer's recommended lubricant on bolt threads, nuts, the nut face and around the bolt hole.

E. Wall Anchor:

1. Material: Same as HDPE pipe.
2. Internal Diameter: Equal to adjacent pipe.
3. Shear Strength: Equal to or greater than tensile strength of adjacent pipe.
4. Fabrication: Butt fusion. Extrusion bead welding is not allowed.

F. Electrofusion Couplings:

1. Material: HDPE.
2. Method of Attachment: Electrofusion.
3. Designed for coupling HDPE pipe.
4. Manufacturers:
  - a. Central Plastics Company.
  - b. ISCO Industries.
  - c. Or approved equal.

G. Products that restrain HDPE pipe with wedges, or clamps are not acceptable.

**PART 3 EXECUTION**

3.01 INSTALLATION

A. General:

1. Install polyethylene pipe in conformance with AWWA M55, PPI TR-33, ASTM F2620, and pipe manufacturer's recommendations.
2. If HDPE pipe surface temperature is above 80 degrees F as measured with infrared temperature gun, allow pipe to cool prior to making any connections to flanges, existing pipeline systems, or structures.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Connect HDPE pipe to auxiliary equipment such as valves, pumps, tanks, and other piping systems with flanged connections as follows:
  - a. Polyethylene flange adapter, thermally butt-fused to end of pipe. Flange “stub ends” are not allowed.
  - b. Convoluted backing flange, as specified.
  - c. Bolt and nut of sufficient length to show a minimum of three complete threads when joint is made and tightened to manufacturer’s standard.
  - d. Follow requirements of PPI Technical Note 38 including mandatory 4-hour bolt re-torquing.
4. Special Precautions at Flanges: Support polyethylene pipe connected to heavy fittings, manholes, and rigid structures in such a manner that no subsequent relative movement between polyethylene pipe at flanged joint and rigid structures is possible.
5. Minimum Long-Term Field Bending Radius: 100 times pipe outside diameter.

B. Placement in Trench:

1. In accordance with AWWA M55 and manufacturers installation recommendations, including but not limited to the following:
  - a. Handle joined pipeline in such a manner that pipe is not damaged by dragging it over sharp and cutting objects.
  - b. Position slings for handling pipeline away from butt-fused joints.
  - c. Remove sections of damaged pipe and replace it with undamaged pipe. Damaged pipe is defined as pipe with kinks or gouges exceeding 10 percent of pipe wall thickness.
  - d. Exercise care when lowering pipe into trench to prevent damage or twisting of pipe.

3.02 FIELD QUALITY CONTROL

A. Joint Butt Fusion:

1. Measure and log each joint fusion by an electronic monitoring device (data logger) affixed to fusion machine. Data to be logged shall include the following and shall be capable of being retrieved electronically:
  - a. Pipe size, dimensions, and wall thickness.
  - b. Machine model and size.
  - c. Operator identification.
  - d. Job identification number.
  - e. Weld number.
  - f. Fusion, heating, and drag pressure settings.
  - g. Heater plate temperature.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- h. Time stamp showing when weld was performed.
  - i. Heating and curing time of weld.
  - j. Curing temperature readings and time stamps of readings.
  - k. Error messages and warnings for out of range temperature or pressure settings.
2. In addition to logged items above, the following shall be logged or annotated on report:
- a. Location of joint being fused by pipeline station or by reference to pipe shop drawing.
  - b. Ambient temperature, wind speed, precipitation, and humidity.
  - c. Environmental actions taken (e.g., use of tarps, enclosures, blankets, etc.).
  - d. Type of HDPE and manufacturer.
- B. Joint Weld Inspection:
- 1. Visually examine each joint in accordance with the guidelines in ASTM F2620. Remove and replace any joints not meeting the standard.
  - 2. Mechanical Joint Testing:
    - a. Pipe Wall Thickness 1 Inch or Less: Test joints in accordance with the bend back testing provided in Appendix X4 of ASTM F2620.
    - b. Pipe Wall Thickness Greater than 1 Inch: Test joints in accordance with the guided side bend testing in accordance with ASME BPVC Section IX Article XXI-XXIV.
    - c. Specimens: Cut pipe 12 inches on each side of field made joint. Rejoin ends and proceed with Work.
    - d. Test Frequency:
      - 1) Two joints selected at random by Engineer.
      - 2) Each Test Failure: Two additional joints selected at random by Engineer.
- C. Pipeline Hydrostatic Test:
- 1. General:
    - a. Notify Engineer in writing 5 days in advance of testing. Perform testing in presence of Engineer.
    - b. Furnish testing equipment and perform tests in manner satisfactory to Engineer.
    - c. Test newly installed pipelines.
    - d. Isolate new pipelines that are connected to existing pipelines.
    - e. Provide temporary air vents with manual valves at high points for venting during initial fill-up and draining.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- f. Using water as test medium, pipes shall successfully pass a hydrostatic test prior to acceptance.
  - g. Conduct field hydrostatic test on buried piping after trench has been completely backfilled. Testing may, as approved by Engineer, be done prior to placement of asphaltic concrete or roadway structural section.
  - h. Contractor may, if field conditions permit and as determined by Engineer, partially backfill trench and leave joints open for inspection and conduct initial service leak test. Final field hydrostatic test shall not be conducted until backfilling has been completed as specified above.
  - i. Supply of temporary water shall be as stated in Section 01 50 00, Temporary Facilities and Controls.
  - j. Dispose of water used in testing in accordance with federal, state, and local requirements.
2. Preparation:
- a. Install temporary thrust blocking or other restraint as necessary to prevent movement of pipe and protect adjacent piping or equipment. Make necessary taps in piping prior to testing.
  - b. Wait 5 days minimum after concrete thrust blocking or designed thrust collars are installed to perform pressure tests. If high-early strength cement is used for thrust blocking, wait may be reduced to 2 days.
  - c. Prior to test, remove or suitably isolate appurtenant instruments or devices that could be damaged by pressure testing.
  - d. New Piping Connected to Existing Piping: Isolate new piping with grooved-end pipe caps, blind flanges, or other means as acceptable to Engineer.
3. Procedure:
- a. Initial expansion pressure shall be 25 psi as measured at ground surface.
  - b. Test pressure shall be 15 psi.
  - c. Maximum filling velocity shall not exceed 0.25 feet per second, calculated based on full area of the pipe.
  - d. Expel air from pipe system during filling through temporary vent valves and other end vents.
  - e. Test procedure shall be in accordance with ASTM F2164.
    - 1) Initial Expansion Phase: Add water as required to maintain initial expansion pressure for 4 hours.
    - 2) Test Phase: Reduce pressure by 10 psi to test pressure and start pressure test.
    - 3) Test is successful if pressure stays within 5 percent of initial value for 1 hour.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- f. If test is not completed because of leakage, equipment failure, or other reasons, depressurize test section and allow it to relax for at least 8 hours before retesting.
- g. If there is leakage, repair defective pipe section and repeat hydrostatic test.

3.03 MANUFACTURER'S SERVICES

- A. Provide pipe manufacturer's representative in accordance with Section 01 43 33, Manufacturers' Field Services, for assistance during pipe joining operations and pipe installation.

**END OF SECTION**

**SECTION 40 05 15**  
**PIPING SUPPORT SYSTEMS**

**PART 1 GENERAL**

1.02 DEFINITIONS

- A. Wetted or Submerged: Submerged, less than 1 foot above liquid surface, below top of channel wall, under cover or slab of channel or tank, or in other damp locations.

1.03 SUBMITTALS

- A. Action Submittals:
1. Catalog information and drawings of piping support system, locating each support, sway brace, seismic brace, hanger, guide, component, and anchor for all piping. Identify support, hanger, guide, and anchor type by catalog number and Shop Drawing detail number.
  2. Calculations for each type of pipe support, attachment and anchor.
  3. Revisions to support systems resulting from changes in related piping system layout or addition of flexible joints.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Seismic anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals:

1. Seismic anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
2. Component and attachment testing seismic certificate of compliance as required by Section 01 45 33, Special Inspection, Observation, and Testing.
3. Maintenance information on piping support system.

1.04 QUALIFICATIONS

- A. Piping support systems shall be designed and Shop Drawings prepared and sealed by a Registered Professional Engineer in the State of California.

1.05 DESIGN REQUIREMENTS

A. General:

1. Design, size, and locate piping support systems throughout facility, whether shown or not.
2. Piping Smaller than 30 Inches: Supports are shown only where specific types and locations are required; additional pipe supports may be required.
3. Piping 30 Inches and Larger: Support systems have been designed for piping shown.
4. Meet requirements of MSS SP 58 and ASME B31.1 or as modified by this section.

B. Pipe Support Systems:

1. Design pipe support systems for gravity and thrust loads imposed by weight of pipes or internal pressures, including insulation and weight of fluid in pipes.
2. Seismic loads in accordance with governing codes and as shown on Structural General Drawings.
3. Wind loads in accordance with governing codes and as shown on Structural General Drawings.
4. Maximum Support Spacing and Minimum Rod Size: In accordance MSS SP 58 Table 3 and Table 4.
  - a. Ductile-iron Pipe 8 Inches and Under: Maximum span limited to that for standard weight steel pipe for water service.
  - b. Ductile-iron Pipe 10 Inches and Larger: Maximum span limited to 20 feet.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Anchoring Devices: Design, size, and space support anchoring devices, including anchor bolts, inserts, and other devices used to anchor support, to withstand shear and pullout loads imposed by loading and spacing on each particular support.
- D. Vertical Sway Bracing: 10-foot maximum centers or as shown.
- E. Existing Support Systems: Use existing supports systems to support new piping only if Contractor can show they are adequate for additional load, or if they are strengthened to support additional load.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. When specified items are not available, fabricate pipe supports of correct material and to general configuration indicated.
- B. Special support and hanger details may be required for cases where standard catalog supports are not applicable.
- C. Materials: In accordance with Table 1 and Table 2, attached as Supplements at end of section.

2.02 HANGERS

- A. Clevis: MSS SP 58, Type 1:
  - 1. Anvil; Figure 260 for steel pipe and Figure 590 for ductile-iron pipe, sizes 1/2 inch through 30 inches.
  - 2. Insulated Steel Pipe: Anvil; Figure 260 with insulated saddle system (ISS), sizes 1/2 inch through 16 inches.
  - 3. B-Line; Figure B3100, sizes 1/2 inch through 30 inches.
  - 4. Or approved equal.
- B. Adjustable Swivel Split-Ring Pipe Clamp: MSS SP 58, Type 6:
  - 1. Anvil; Figure 104, sizes 3/4 inch through 8 inches.
  - 2. B-Line; Figure B3171, sizes 3/4 inch through 8 inches.
  - 3. Or approved equal.
- C. Steel Yoke Pipe Rolls and Roller Supports: MSS SP 58, Type 41 or Type 43:
  - 1. Anvil; Figure 181 for sizes 2-1/2 inches through 24 inches, and Figure 171 for sizes 1 inch through 30 inches.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. B-Line; Figure B3110 for sizes 2 inches through 24 inches and Figure B3114 for 30 inches.
3. Or approved equal.

D. Pipe Rollers and Supports: MSS SP 58, Type 44:

1. Anvil; Figure 175, sizes 2 inches through 30 inches.
2. B-Line; Figure B3120, sizes 2 inches through 24 inches.
3. Or approved equal.

2.03 WALL BRACKETS, SUPPORTS, AND GUIDES

A. Welded Steel Wall Bracket: MSS SP 58, Type 33 (heavy-duty):

1. Anvil; Figure 199, 3,000-pound rating.
2. B-Line; Figure B3067, 3,000-pound rating.
3. Or approved equal.

B. Adjustable “J” hanger MSS SP 58, Type 5:

1. Anvil; Figure 67, sizes 1/2 inch through 8 inches.
2. B-Line; Figure B3690, sizes 1/2 inch through 8 inches.
3. Or approved equal.

C. Offset Pipe Clamp:

1. Anvil; Figure 103, sizes 3/4 inch through 8 inches.
2. Or approved equal.

D. Channel Type:

1. Unistrut.
2. Anvil; Power-Strut.
3. B-Line; Strut System.
4. Aickinstrut (FRP).
5. Or approved equal.

2.04 PIPE SADDLES

A. Provide 90-degree to 120-degree pipe saddle for pipe 6 inches and larger with baseplates drilled for anchors bolts.

1. In accordance with Standard Details.
2. Sizes 20 inches through 60 inches, Piping Technology & Products, Inc.; Figure 2000.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Saddle Supports, Pedestal Type:

1. Minimum standard weight pipe stanchion, saddle, and anchoring flange.
2. Nonadjustable Saddle: MSS SP, Type 37 with U-bolt.
  - a. Anvil; Figure 259, sizes 4 inches through 36 inches with Figure 63C base.
  - b. B-Line; Figure B3095, sizes 1 inch through 36 inches with Figure B3088S base.
  - c. Or approved equal.
3. Adjustable Saddle: MSS SP 58, Type 38 without clamp.
  - a. Anvil; Figure 264, sizes 2-1/2 inches through 36 inches with Figure 62C base.
  - b. B-Line; Figure B3092, sizes 3/4 inch through 36 inches with Figure B3088S base.
  - c. Or approved equal.

2.05 CHANNEL TYPE SUPPORT SYSTEMS

- A. Channel Size: 12-gauge, 1-5/8-inch wide minimum steel, or 1-1/2-inch wide, minimum FRP.
- B. Members and Connections: Design for loads using one-half of manufacturer's allowable loads.
- C. Fasteners: Vinyl ester fiber, polyurethane base composite nuts and bolts, or encapsulated steel fasteners.
- D. Manufacturers and Products:
  1. B-Line; Strut System.
  2. Unistrut.
  3. Anvil; Power-Strut.
  4. Aickinstrut (FRP System).
  5. Enduro-Durostrut (FRP Systems).
  6. Or approved equal.

2.06 FRP PIPE SUPPORTS SYSTEMS

- A. General:
  1. FRP with UV additive, protective veil, and vinyl ester resins resistance to chemicals listed in Supplement at end of section.
  2. Fire Retardant: ASTM E84.
  3. Include hangers, rods, attachments, and fasteners.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Clevis Hangers:

1. Factor of Safety: 3 to 1.
2. Minimum Design Load: 200 pounds.

C. Design:

1. Design pipe supports spacing, hanger rod sizing based upon manufacturer's recommendations.
2. Identify and highlight non-FRP fasteners or components on Shop Drawing.

D. Manufacturers:

1. Aickinstrut.
2. Enduro.
3. Century Composite.
4. Or approved equal.

2.07 PIPE CLAMPS

A. Riser Clamp: MSS SP 58, Type 8.

1. Anvil; Figure 261, sizes 3/4 inch through 24 inches.
2. B-Line; Figure B3373, sizes 1/2 inch through 30 inches.
3. Or approved equal.

2.08 ELBOW AND FLANGE SUPPORTS

A. Elbow with Adjustable Stanchion: Sizes 2 inches through 18 inches, Anvil; Figure 62C base.

B. Elbow with Nonadjustable Stanchion: Sizes 2-1/2 inches through 42 inches, Anvil; Figure 63A or Figure 63B base.

C. Flange Support with Adjustable Base: Sizes 2 inches through 24 inches, Standon; Model S89.

D. Or approved equal.

2.09 INTERMEDIATE PIPE GUIDES

A. Type: Hold down pipe guide.

1. Manufacturer and Product:
  - a. B-Line; Figure B3552, 1-1/2 inches through 30 inches.
  - b. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Type: U-bolts with double nuts to provide nominal 1/8-inch to 1/4-inch clearance around pipe; MSS SP 58, Type 24.
  - 1. Anvil; Figure 137 and Figure 137S.
  - 2. B-Line; Figure B3188 and Figure B3188NS.
  - 3. Or approved equal.

2.10 PIPE ALIGNMENT GUIDES

- A. Type: Spider.
- B. Manufacturers and Products:
  - 1. Anvil; Figure 255, sizes 1/2 inch through 24 inches.
  - 2. B-Line; Figure B3281 through Figure B3287, sizes 1/2 inch through 24 inches.
  - 3. Or approved equal.

2.11 PIPE ANCHORS

- A. Type: Anchor chair with U-bolt strap.
- B. Manufacturers and Products:
  - 1. B-Line; Figure B3147A or Figure B3147B.
  - 2. Or approved equal.

2.12 SEISMIC RESTRAINTS

- A. Solid pipe bracing attachment to pipe clevis with clevis cross brace and angle rod reinforcement.
- B. Manufacturers:
  - 1. Mason Industries.
  - 2. B-Line.
  - 3. Anvil.
  - 4. Or approved equal.

2.13 ACCESSORIES

- A. Anchor Bolts:
  - 1. Size and Material: Sized by Contractor for required loads, 1/2-inch minimum diameter, and as specified in Section 05 50 00, Metal Fabrications.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Bolt Length (Extension Above Top of Nut):
  - a. Minimum Length: Flush with top of nut preferred. If not flush, shall be no more than one thread recessed below top of nut.
  - b. Maximum Length: No more than a full nut depth above top of nut.
  
- B. Dielectric Barriers:
  1. Plastic coated hangers, isolation cushion, or tape.
  2. Manufacturer and Products:
    - a. B-Line; B1999 Vibra Cushion.
    - b. B-Line; Iso Pipe, Isolation Tape.
    - c. Or approved equal.
  
- C. Insulation Shields:
  1. Type: Galvanized steel or stainless steel, MSS SP 58, Type 40.
  2. Manufacturers and Products:
    - a. Anvil; Figure 167, sizes 1/2 inch through 24 inches.
    - b. B-Line; Figure B3151, sizes 1/2 inch through 24 inches.
    - c. Or approved equal.
  
- D. Welding Insulation Saddles:
  1. Type: MSS SP 58, Type 39.
  2. Manufacturers and Products:
    - a. Anvil; Figure Series 160, sizes 1 inch through 36 inches.
    - b. B-Line; Figure Series B3160, sizes 1/2 inch through 24 inches.
    - c. Or approved equal.
  
- E. Plastic Pipe Support Channel:
  1. Type: Continuous support for plastic pipe and to increase support spacing.
  2. Manufacturers and Products:
    - a. B-Line; Figure Series B3106V, sizes 1/2 inch through 6 inches with Figure B3106 Vee bottom hanger.
    - b. Or approved equal.
  
- F. Hanger Rods, Clevises, Nuts, Sockets, and Turnbuckles: In accordance with MSS SP 58.
  
- G. Attachments:
  1. I-Beam Clamp: Concentric loading type, MSS SP 58, Type 21, Type 28, Type 29, or Type 30, which engage both sides of flange.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Concrete Insert: MSS SP 58, Type 18, continuous channel insert with load rating not less than that of hanger rod it supports.
3. Welded Beam Attachment: MSS SP 58, Type 22.
  - a. Anvil; Figure 66.
  - b. B-Line; Figure B3083.
  - c. Or approved equal.
4. U-Channel Concrete Inserts: As specified in Section 05 50 00, Metal Fabrications.
5. Concrete Attachment Plates:
  - a. Anvil; Figure 47, Figure 49, or Figure 52.
  - b. B-Line; Figure B3084, Figure B3085, or Figure B3086.
  - c. Or approved equal.

**PART 3 EXECUTION**

3.01 INSTALLATION

A. General:

1. Install support systems in accordance with MSS SP 58, unless shown otherwise.
2. Install pipe hanger rods plumb, within 4 degrees of vertical during shut down, start up or operations.
3. Support piping connections to equipment by pipe support and not by equipment.
4. Support large or heavy valves, fittings, and appurtenances independently of connected piping.
5. Support no pipe from pipe above it.
6. Support pipe at changes in direction or in elevation, adjacent to flexible joints and couplings, and where shown.
7. Do not use adhesive anchors for attachment of supports to ceiling or walls.
8. Do not install pipe supports and hangers in equipment access areas or bridge crane runs.
9. Brace hanging pipes against horizontal movement by both longitudinal and lateral sway bracing and to reduce movement after startup.
10. Install lateral supports for seismic loads at changes in direction.
11. Install pipe anchors where required to withstand expansion thrust loads and to direct and control thermal expansion.
12. Repair mounting surfaces to original condition after attachments are completed.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Standard Pipe Supports:

1. Horizontal Suspended Piping:
  - a. Single Pipes: Clevis hangers or adjustable swivel split-ring.
  - b. Grouped Pipes: Trapeze hanger system.
2. Horizontal Piping Supported from Walls:
  - a. Single Pipes: Wall brackets, or attached to wall, or to wall mounted framing with anchors.
  - b. Stacked Piping: Wall mounted framing system and “J” hangers acceptable for pipe smaller than 3-inch.
  - c. Pipe clamp that resists axial movement of pipe through support is not acceptable. Use pipe rollers supported from wall bracket.
3. Horizontal Piping Supported from Floors:
  - a. Saddle Supports:
    - 1) Pedestal Type, elbow and flange.
    - 2) Provide minimum 1-1/2-inch grout beneath baseplate.
  - b. Floor Mounted Channel Supports:
    - 1) Use for pipe smaller than 3-inch running along floors and in trenches at pipe elevations lower than can be accommodated using pedestal pipe supports.
    - 2) Attach channel framing to floors with baseplate on minimum 1-1/2-inch nonshrink grout and with anchor bolts.
    - 3) Attach pipe to channel with clips or pipe clamps.
  - c. Concrete Cradles: Use for pipe larger than 3 inches along floor and in trenches at pipe elevations lower than can be accommodated using stanchion type.
4. Insulated Pipe:
  - a. Pipe hanger and support shall be on outside of insulation. Do not enclose within insulation.
  - b. Provide precut 120-degree sections of rigid insulation (minimum length same as shield), shields and oversized hangers or insulated saddle system (ISS).
  - c. Wall-mounted pipe clips not acceptable for insulated piping.
5. Vertical Pipe: Support with wall bracket and elbow support, or riser clamp on floor penetration.

C. Standard Attachments:

1. New Concrete Ceilings: Concrete inserts, concrete attachment plates, or concrete anchors as limited below:
  - a. Single point attachment to ceiling allowed only for 3/4-inch rod and smaller (8 inches and smaller pipe).
  - b. Where there is vibration or bending considerations, do not connect a single pipe support hanger rod directly to a drilled concrete anchor (single point attachment) regardless of size.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 1) These lines include air operated diagram pumps and other lines, if any, as identified below:
  2. Existing Concrete Ceilings: Channel type support with minimum of two anchor points, concrete attachment plates or concrete anchors as limited below:
    - a. Single point attachment to ceiling is allowed only for 3/4-inch rod and smaller (8 inches and smaller pipe).
    - b. Where there is vibration or bending considerations do not connect a single pipe support hanger rod directly to a drilled concrete anchor (single point attachment) regardless of size.
      - 1) These lines include air operated diagram pumps and other lines, if any, as identified below:
  3. Steel Beams: I-beam clamp or welded attachments.
  4. Wooden Beams: Lag screws and angle clips to members not less than 2-1/2 inches thick.
  5. Concrete Walls: Concrete inserts or brackets or clip angles with concrete anchors.
  6. Concrete Beams: Concrete inserts, or if inserts are not used attach to vertical surface similar to concrete wall. Do not drill into beam bottom.
- D. Saddles for Steel or Concrete Pipe: Provide 90-degree to 120-degree pipe saddle for pipe sizes 6 inches and larger when installed on top of steel or concrete beam or structure, pipe rack, trapeze, or where similar concentrated point supports would be encountered.
- E. Intermediate and Pipe Alignment Guides:
1. Provide pipe alignment guides, or pipe supports that provide same function, at expansion joints and loops.
  2. Guide pipe on each side of expansion joint or loop at four-pipe and 14-pipe diameters from each joint or loop.
  3. Install intermediate guides on metal framing support systems not carrying pipe anchor or alignment guide.
- F. Accessories:
1. Insulation Shield: Install on insulated piping with oversize rollers and supports.
  2. Welding Insulation Saddle: Install on insulated steel pipe with oversize rollers and supports.
  3. Dielectric Barrier:
    - a. Provide between painted or galvanized carbon steel members and copper or stainless steel pipe or between stainless steel supports and nonstainless steel ferrous metal piping.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Install rubber wrap between submerged metal pipe and oversized clamps.

3.02 FIELD FINISHING

- A. Paint atmospheric exposed surfaces hot-dip galvanized steel components as specified in Section 09 90 00, Painting and Coating.

3.03 SUPPLEMENTS

- A. The supplements listed below, following “End of Section,” are a part of this Specification:
  - 1. Table 1: Nonchemical Areas.
  - 2. Table 2: Chemical Areas.

**END OF SECTION**

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

<b>Table 1 Nonchemical Areas</b>	
<b>Exposure Conditions</b>	<b>Support Material</b>
Pipe Galleries Process Areas: Exposed	Galvanized steel or precoated steel, plastic coated hangers for uninsulated copper or stainless steel piping
Process Areas: Wetted or Submerged	Stainless steel or FRP
Pipes conveying chemicals listed in Table 2	Provide with corresponding support per Table 2
<p>Notes:</p> <ol style="list-style-type: none"> <li>1. Precoated steel to be fusion bonded epoxy or vinyl copolymer (Plastisol).</li> <li>2. Stainless steel to be Type 316.</li> <li>3. Galvanized steel to be per ASTM A653/A653M, Class G90, or hot-dip galvanized after fabrication to ASTM A123/A123M.</li> </ol>	

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

<b>Table 2 Chemical Areas</b>		
<b>Exposure Conditions</b>	<b>Support for Direct Exposure</b>	<b>Support for Remote Exposure</b>
Coagulants	FRP	Precoated steel or galvanized steel
Ferric Chloride	FRP	Precoated steel
Polymers	FRP	Precoated steel
<p>Notes:</p> <ol style="list-style-type: none"> <li>1. Direct exposure includes entire area within containment area; area within 20 feet horizontal and 10 feet vertical of chemical pumps or chemical mixing stations; or as specified.</li> <li>2. Remote exposure is area beyond area defined as direct exposure, but within designated building.</li> <li>3. Precoated steel to be fusion bonded epoxy or vinyl copolymer (Plastisol).</li> <li>4. Galvanized steel to be per ASTM A653/A653M, Class G90, or hot-dip galvanized after fabrication to ASTM A123/A123M.</li> </ol>

METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

8. FM Global (FM).
9. Manufacturers Standardization Society of the Valve and Fittings Industry, Inc. (MSS): SP-43, Wrought and Fabricated Butt-Welding Fittings for Low-Pressure, Corrosion Resistant Applications.
10. National Electrical Manufacturers Association (NEMA): LI 1, Industrial Laminating Thermosetting Products.
11. National Fire Protection Association (NFPA): 24, Standard for the Installation of Private Fire Service Mains and Their Appurtenances.
12. NSF International (NSF):
  - a. ANSI 61: Drinking Water System Components - Health Effects.
  - b. ANSI 372: Drinking Water System Components - Lead Content.

1.02 DEFINITIONS

A. Submerged or Wetted:

1. Zone below elevation of:
  - a. Top face of channel walls and cover slabs.
  - b. Roof of digester, including structure pipe penetrations.
  - c. Liquid surface or within 2 feet above top of liquid surface.
  - d. Top of tank wall or under tank cover.

1.03 DESIGN REQUIREMENTS

A. Where pipe diameter, thickness, pressure class, pressure rating, or thrust restraint is not shown or specified, design piping system in accordance with the following:

1. Process Piping: ASME B31.3, normal fluid service unless otherwise specified.
2. Buried Piping: H20-S16 traffic load with 1.5 impact factor, AASHTO HB-17, as applicable.
3. Thrust Restraints: Restrained pipe joints shall be used. Thrust blocks shall be used only as shown on Drawings or as approved by the Engineer.
  - a. Design for test pressure shown in Piping Schedule.
  - b. Allowable Soil Pressure: 1,000 pounds per square foot.
  - c. Low Pressure Pipelines:
    - 1) When bearing surface of the fitting against soil provides an area equal to or greater than area required for thrust restraint, concrete thrust blocks will not be required.
    - 2) Determine bearing area for fittings without thrust blocks by projected area of 70 percent of internal diameter multiplied by chord length for fitting centerline curve.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.04 SUBMITTALS

A. Action Submittals:

1. Shop Fabricated Piping:
  - a. Detailed pipe fabrication or spool drawings showing special fittings and bends, dimensions, coatings, and other pertinent information.
  - b. Layout drawing showing location of each pipe section and each special length; number or otherwise designate laying sequence on each piece.
2. Pipe Wall Thickness: Identify wall thickness and rational method or standard applied to determine wall thickness for each size of each different service including exposed, submerged, buried, and concrete-encased installations for Contractor-designed piping.
3. Hydraulic Thrust Restraint for Restrained Joints: Details including materials, sizes, assembly ratings, and pipe attachment methods.
4. Thrust Blocks: Concrete quantity, bearing area on pipe, and fitting joint locations.
5. Dissimilar Buried Pipe Joints: Joint types and assembly drawings.
6. Pipe Corrosion Protection: Product data.
7. Anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals:

1. Manufacturer's Certification of Compliance, in accordance with Section 01 61 00, Common Product Requirements:
  - a. Pipe and fittings.
  - b. Factory applied resins and coatings.
2. Anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
3. Flanged Pipe and Fittings: Manufacturer's product data sheets for gaskets including torquing requirements and bolt tightening procedures.
4. Qualifications:
  - a. Nondestructive Testing Personnel: SNT-TC-1A Level II certification and qualifications.
  - b. AWS QC1 Certified Welding Inspector: Submit evidence of current certification prior to commencement of welding activities.
  - c. Welders:
    - 1) Continuity log for welders and welding operators.
    - 2) Welder qualification test records conducted by Contractor or manufacturer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Welding Procedures: Qualified in accordance with ASME Boiler and Pressure Vessel Code, Section IX for weld type(s) and base metal(s).
6. Nondestructive inspection and testing procedures.
7. Test logs.
8. Pipe coating applicator certification.
9. Laboratory Testing Equipment: Certified calibrations, manufacturer's product data, and test procedures.
10. CWI inspection records and NDE test records.
11. Component and attachment testing seismic certificate of compliance as required by Section 01 45 33, Special Inspection, Observation, and Testing.

1.05 QUALITY CONTROL

A. Qualifications:

1. Independent Inspection and Testing Agency:
  - a. Experience in field of welding and welded pipe fittings testing required for this Project.
  - b. Calibrated instruments and equipment, and documented standard procedures for performing specified testing.
  - c. Certified in accordance with ASNT SNT-TC-1A for testing procedures required for this Project.
  - d. Testing Agency: Personnel performing tests shall be NDT Level II certified in accordance with ASNT SNT-TC-1A.
2. Welding Procedures: In accordance with ASME BPVC SEC IX (Forms QW-482 and QW-483) or AWS D1.1/D1.1M (Annex N Forms).
3. Welder Qualifications: In accordance ASME BPVC SEC IX (Form QW-484) or AWS D1.1/D1.1M (Annex N Forms).
4. Contractor's CWI: Certified in accordance with AWS QC1, and having prior experience with specified welding codes. Alternate welding inspector qualifications require approval by Engineer.

1.06 QUALITY ASSURANCE

- A. Owner will retain an independent inspection and testing agency. The presence of the Owner's Special Inspectors or Verification CWI does not relieve Contractor from performing own Quality Control, including 100 percent visual inspection of welds and other testing required by ASME B31.3 for Normal Fluid Service Category piping.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.07 DELIVERY, STORAGE, AND HANDLING

- A. In accordance with Section 01 61 00, Common Product Requirements, and:
1. Flanges: Securely attach metal, hardboard, or wood protectors over entire gasket surface.
  2. Threaded or Socket Welding Ends: Fit with metal, wood, or plastic plugs or caps.
  3. Linings and Coatings: Prevent excessive drying.
  4. Cold Weather Storage: Locate products to prevent coating from freezing to ground.
  5. Handling: Use heavy canvas or nylon slings to lift pipe and fittings.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Components and Materials in Contact with Water for Human Consumption: Comply with the requirements of the Safe Drinking Water Act and other applicable federal, state, and local requirements. Provide certification by manufacturer or an accredited certification organization recognized by the Authority Having Jurisdiction that components and materials comply with the maximum lead content standard in accordance with NSF/ANSI 61 and NSF/ANSI 372.
1. Use or reuse of components and materials without a traceable certification is prohibited.

2.02 PIPING

- A. As specified on Piping Data Sheet(s) located at the end of this section as Supplement and on Piping Schedule located on Drawings.
- B. Diameters Shown:
1. Standardized Products: Nominal size.
  2. Fabricated Steel Piping (Except Cement-Lined): Outside diameter, ASME B36.10M.
  3. Cement-Lined Steel Pipe: Lining inside diameter.

2.03 JOINTS

- A. Grooved End System:
  - 1. Rigid type.
  - 2. Use of flexible grooved joints only allowed where shown on Drawings or with prior approval by Engineer.
  - 3. Flanges: When required, furnish with grooved type flange adapters of same manufacturer as grooved end couplings.
  
- B. Flanged Joints:
  - 1. Flat-faced, carbon steel, or alloy flanges when mating with flat-faced cast or ductile iron flanges.
  - 2. Higher pressure rated flanges as required to mate with equipment when equipment flange is of higher pressure rating than required for piping.
  
- C. Threaded Joints: NPT taper pipe threads in accordance with ASME B1.20.1.
  
- D. Mechanical Joint Anchor Gland Follower:
  - 1. Ductile iron anchor type, wedge action, with break-off tightening bolts.
  - 2. Thrust rated to 250 psi minimum.
  - 3. Rated operating deflection not less than:
    - a. 3 degrees for sizes through 12 inches.
    - b. 2 degrees for sizes 14 inches through 16 inches.
    - c. 1.5 degrees for sizes 18 inches through 24 inches.
    - d. 1 degree for sizes 30 inches through 48 inches.
  - 4. UL and FM approved.
  
- E. Flexible Mechanical Compression Joint Coupling:
  - 1. Stainless steel, ASTM A276, Type 305 bands.
  - 2. Manufacturers:
    - a. Pipeline Products Corp.
    - b. Fernco Joint Sealer Co.
    - c. Or approved equal.
  
- F. Mechanical connections of high-density polyethylene pipe to auxiliary equipment such as valves, pumps, tanks, and other piping systems shall be through-flanged connections consisting of the following:
  - 1. Polyethylene stub end thermally butt-fused to end of pipe.
  - 2. ASTM A240/A240M, Type 304 stainless steel backing flange, 125-pound, ASME B16.1 standard. Use insulating flanges where shown.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Bolts and nuts of sufficient length to show a minimum of three complete threads when joint is made and tightened to manufacturer's standard.  
Retorque nuts after 4 hours.
4. Gaskets as specified on Data Sheet.

2.04 GASKET LUBRICANT

- A. Lubricant shall be supplied by pipe manufacturer and no substitute or approved equal will be allowed.

2.05 PIPE CORROSION PROTECTION

- A. Coatings: See Section 09 90 00, Painting and Coating, for details of coating requirements.
- B. Heat Shrink Wrap:
  1. Type: Cross-linked polyolefin wrap or sleeve with mastic sealant.
  2. Manufacturers and Products:
    - a. Raychem; WPC or TPS.
    - b. Or approved equal.
- C. Polyethylene Encasement (Bagging):
  1. Encasement Tube: Black polyethylene encasement tube, 8 mils minimum thickness, conforming to AWWA C105/A21.5, free of gels, streaks, pinholes, foreign matter, undispersed raw materials, and visible defects such as tears, blisters, and thinning at folds.
  2. Securing Tape: Thermoplastic tape, 8 mils minimum thickness, 1 inch wide, pressure sensitive adhesive face capable of bonding to metal, bituminous coating, and polyethylene encasement tube.
- D. Insulating Flanges, Couplings, and Unions:
  1. Materials:
    - a. In accordance with applicable piping material specified in Pipe Data Sheet. Complete assembly shall have ASME B31.3 working pressure rating equal to or higher than that of joint and pipeline.
    - b. Galvanically compatible with piping.
    - c. Resistant for intended exposure, operating temperatures, and products in pipeline.
  2. Union Type, 2 Inches and Smaller:
    - a. Screwed or solder-joint.
    - b. O-ring sealed with molded and bonded insulation to body.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Flange Type, 2-1/2 Inches and Larger:
  - a. Flanged, complete with bolt insulators, dielectric gasket, bolts, and nuts.
  - b. Bolt insulating sleeves shall be provided full length between insulating washers.
  - c. Ensure fit-up of components of insulated flange assembly to provide a complete functioning installation.
  - d. AWWA C207 steel flanges may be drilled oversize up to 1/8-inch to accommodate insulating sleeves.
  - e. No less than minimum thread engagement in accordance with specified bolting standards will be permitted to accommodate thicknesses of required washers, flanges, and gasket.
4. Flange Insulating Kits:
  - a. Gaskets: Full-face, Type E with elastomeric sealing element. Sealing element shall be retained in a groove within retainer portion of gasket.
  - b. Insulating Sleeves: Full-length fiberglass reinforced epoxy (NEMA LI-1, G-10 grade).
  - c. Insulating Washers: Fiberglass-reinforced epoxy (NEMA LI-1, G-10 grade).
  - d. Steel Washers: Hardened steel, ASTM F436, 1/8 inch thick.
    - 1) Flange Diameters 36 Inches or Less: Provide two washers per bolt.
    - 2) Flange Diameters Larger Than 36 Inches: Provide four washers per bolt.
5. Manufacturers and Products:
  - a. Dielectric Flanges and Unions:
    - 1) PSI, Houston, TX.
    - 2) Advance Products and Systems, Lafayette, LA.
    - 3) Or approved equal.
  - b. Insulating Couplings:
    - 1) Dresser; STAB-39.
    - 2) Baker Coupling Company, Inc.; Series 216.
    - 3) Or approved equal.

2.06 THRUST BLOCKS

- A. Concrete: As specified in Section 03 30 01, Reinforced Concrete.

2.07 THRUST TIES

- A. Steel Pipe: Fabricated lugs and rods in accordance with details shown on Drawings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.08 VENT AND DRAIN VALVES

- A. Pipeline 2-Inch Diameter and Smaller: 1/2-inch vent, 1-inch drain, unless shown otherwise.
- B. Pipelines 2-1/2-Inch Diameter and Larger: 3/4-inch vent, 1-inch drain, unless shown otherwise.

2.09 FABRICATION

- A. Mark each pipe length on outside with the following:
  - 1. Size or diameter and class.
  - 2. Manufacturer's identification and pipe serial number.
  - 3. Location number on laying drawing.
  - 4. Date of manufacture.
- B. Code markings according to approved Shop Drawings.
- C. Shop fabricate flanged pipe in shop, not in field, and delivered to Site with flanges in place and properly faced. Threaded flanges shall be individually fitted and machine tightened on matching threaded pipe by manufacturer.

2.10 FINISHES

- A. Factory prepare, prime, and finish coat in accordance with Pipe Data Sheet(s) and Piping Schedule.
- B. Galvanizing:
  - 1. Hot-dip applied, meeting requirements of ASTM A153/A153M.
  - 2. Electroplated zinc or cadmium plating is unacceptable.
  - 3. Stainless steel components may be substituted where galvanizing is specified.

**PART 3 EXECUTION**

3.01 EXAMINATION

- A. Verify size, material, joint types, elevation, horizontal location, and pipe service of existing pipelines to be connected to new pipelines or new equipment.
- B. Inspect size and location of structure penetrations to verify adequacy of wall pipes, sleeves, and other openings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.02 PREPARATION

- A. See Piping Schedule and Section 09 90 00, Painting and Coating, for additional requirements.
- B. Notify Engineer at least 2 weeks prior to field fabrication of pipe or fittings.
- C. Inspect pipe and fittings before installation, clean ends thoroughly, and remove foreign matter and dirt from inside.
- D. Damaged Coatings and Linings: Repair using original coating and lining materials in accordance with manufacturer's instructions.

3.03 WELDING

- A. Perform in accordance with Section IX, ASME Boiler and Pressure Vessel Code and ASME B31.3 for Pressure Piping, as may be specified on Piping Data Sheets, and if recommended by piping or fitting manufacturer.
- B. Weld Identification: Keep paper record of which welder welded each joint.
- C. Pipe End Preparation:
  - 1. Machine Shaping: Preferred.
  - 2. Oxygen or Arc Cutting: Smooth to touch, true, and slag removal by chipping or grinding.
  - 3. Beveled Ends for Butt Welding: ASME B16.25.
- D. Surfaces:
  - 1. Clean and free of paint, oil, rust, scale, slag, or other material detrimental to welding.
  - 2. Clean stainless steel joints with stainless steel wire brushes or stainless steel wool prior to welding.
  - 3. Thoroughly clean each layer of deposited weld metal, including final pass, prior to deposition of each additional layer of weld metal with a power-driven wire brush.
- E. Alignment and Spacing:
  - 1. Align ends to be joined within existing commercial tolerances on diameters, wall thicknesses, and out-of-roundness.
  - 2. Root Opening of Joint: As stated in qualified welding procedure.
  - 3. Minimum Spacing of Circumferential Butt Welds: Minimum four times pipe wall thickness or 1 inch, whichever is greater.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Climatic Conditions:
  - 1. Do not perform welding if there is impingement of any rain, snow, sleet, or wind exceeding 5 mph on the weld area, or if ambient temperature is below 32 degrees F.
  - 2. Stainless Steel and Alloy Piping: If ambient is less than 32 degrees F, local preheating to a temperature warm to the hand is required.
- G. Tack Welds: Performed by qualified welder using same procedure as for completed weld, made with electrode similar or equivalent to electrode to be used for first weld pass, and not defective. Remove those not meeting requirements prior to commencing welding procedures.
- H. Surface Defects: Chip or grind out those affecting soundness of weld.
- I. Weld Quality: Meet requirements of governing welding codes.

3.04 INSTALLATION—GENERAL

- A. Join pipe and fittings in accordance with manufacturer's instructions, unless otherwise shown or specified.
- B. Remove foreign objects prior to assembly and installation.
- C. Flanged Joints:
  - 1. Install perpendicular to pipe centerline.
  - 2. Bolt Holes: Straddle vertical centerlines, aligned with connecting equipment flanges or as shown.
  - 3. Use torque-limiting wrenches to ensure uniform bearing and proper bolt tightness.
  - 4. Plastic Flanges: Install annular ring filler gasket at joints of raised-face flange.
  - 5. Grooved Joint Flange Adapters: Include stainless steel washer plates as required for mating to serrated faces and lined valves and equipment.
  - 6. Raised-Face Flanges: Use flat-face flange when joining with flat-faced ductile or cast iron flange.
  - 7. Verify compatibility of mating flange to adapter flange gasket prior to selecting grooved adapter flanging.
  - 8. Flange fillers are to be avoided, but if necessary, may be used to make up for small angles up to 6 degrees and for filling gaps up to 2 inches between flanges. Stacked flange fillers shall not be used.
  - 9. Threaded flanged joints shall be shop fabricated and delivered to Site with flanges in-place and properly faced.
  - 10. Manufacturer: Same as pipe manufacturer or grooved joint flange adapter manufacturer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Threaded and Coupled Joints:
1. Conform to ASME B1.20.1.
  2. Produce sufficient thread length to ensure full engagement when screwed home in fittings.
  3. Countersink pipe ends, ream and clean chips and burrs after threading.
  4. Make connections with not more than three threads exposed.
  5. Lubricate male threads only with thread lubricant or tape as specified on Piping Data Sheets.
- E. Grooved-End Joints:
1. Piping shall be grooved in accordance with manufacturer's latest published instructions and shall be accurately cut with tools conforming to coupling manufacturer's standards and to AWWA C606.
  2. Install grooved joint couplings and gaskets in accordance with manufacturer's latest published installation instructions.
- F. Soldered Joints:
1. Use only solder specified for particular service.
  2. Cut pipe ends square and remove fins and burrs.
  3. After thoroughly cleaning pipe and fitting of oil and grease using solvent and emery cloth, apply noncorrosive flux to the male end only.
  4. Wipe excess solder from exterior of joint before hardened.
  5. Before soldering, remove stems and washers from solder joint valves.
- G. Pipe Connections at Concrete Structures: As specified in Article Piping Flexibility Provisions in Section 40 27 01, Process Piping Specialties.
- H. PVC and CPVC Piping:
1. Provide Schedule 80 threaded nipple where necessary to connect to threaded valve or fitting.
  2. Use strap wrench for tightening threaded plastic joints. Do not overtighten fittings.
  3. Do not thread Schedule 40 pipe.
- I. Ductile Iron Piping:
1. Cutting Pipe: Cut pipe with milling type cutter, rolling pipe cutter, or abrasive blade cutter. Do not flame cut.
  2. Dressing Cut Ends:
    - a. General: As required for the type of joint to be made.
    - b. Rubber Gasketed Joints: Remove sharp edges or projections.
    - c. Push-On Joints: Bevel, as recommended by pipe manufacturer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. Flexible Couplings, Flanged Coupling Adapters, and Grooved End Pipe Couplings: As recommended by the coupling or adapter manufacturer.

3.05 INSTALLATION—EXPOSED PIPING

- A. Piping Runs:
  1. Parallel to building or column lines and perpendicular to floor, unless shown otherwise.
  2. Piping upstream and downstream of flow measuring devices shall provide straight lengths as required for accurate flow measurement.
- B. Supports: As specified in Section 40 05 15, Piping Support Systems.
- C. Group piping wherever practical at common elevations; install to conserve building space and not interfere with use of space and other work.
- D. Unions or Flanges: Provide at each piping connection to equipment or instrumentation on equipment side of each block valve to facilitate installation and removal.
- E. Install piping so that no load or movement in excess of that stipulated by equipment manufacturer will be imposed upon equipment connection; install to allow for contraction and expansion without stressing pipe, joints, or connected equipment.
- F. Piping clearance, unless otherwise shown:
  1. Over Walkway and Stairs: Minimum of 7 feet 6 inches, measured from walking surface or stair tread to lowest extremity of piping system including flanges, valve bodies or mechanisms, insulation, or hanger/support systems.
  2. Between Equipment or Equipment Piping and Adjacent Piping: Minimum 3 feet, measured from equipment extremity and extremity of piping system including flanges, valve bodies or mechanisms, insulation, or hanger/support systems.
  3. From Adjacent Work: Minimum 1 inch(es) from nearest extremity of completed piping system including flanges, valve bodies or mechanisms, insulation, or hanger/support systems.
  4. Do not route piping in front of or to interfere with access ways, ladders, stairs, platforms, walkways, openings, doors, or windows.
  5. Headroom in front of openings, doors, and windows shall not be less than the top of the opening.
  6. Do not install piping containing liquids or liquid vapors in transformer vaults or electrical equipment rooms.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. Do not route piping over, around, in front of, in back of, or below electrical equipment including controls, panels, switches, terminals, boxes, or other similar electrical work.

3.06 INSTALLATION—BURIED PIPE

A. Joints:

1. Dissimilar Buried Pipes:
  - a. Provide flexible mechanical compression joints for pressure pipe.
  - b. Provide concrete closure collar for gravity and low pressure (maximum 10 psi) piping or as shown.
2. Concrete Encased or Embedded Pipe: Do not encase joints in concrete, unless specifically shown.

B. Placement:

1. Keep trench dry until pipe laying and joining are completed.
2. Pipe Base and Pipe Zone: As specified in Section 31 23 23.15, Trench Backfill.
3. Exercise care when lowering pipe into trench to prevent twisting or damage to pipe.
4. Measure for grade at pipe invert, not at top of pipe.
5. Excavate trench bottom and sides of ample dimensions to permit visual inspection and testing of entire flange, valve, or connection.
6. Prevent foreign material from entering pipe during placement.
7. Close and block open end of last laid pipe section when placement operations are not in progress and at close of day's work.
8. Lay pipe upgrade with bell ends pointing in direction of laying.
9. Install closure sections and adapters for gravity piping at locations where pipe laying changes direction.
10. Deflect pipe at joints for pipelines laid on a curve using unsymmetrical closure of spigot into bell. If joint deflection of standard pipe lengths will not accommodate horizontal or vertical curves in alignment, provide:
  - a. Shorter pipe lengths.
  - b. Special mitered joints.
  - c. Standard or special fabricated bends.
11. After joint has been made, check pipe alignment and grade.
12. Place sufficient pipe zone material to secure pipe from movement before next joint is installed.
13. Prevent uplift and floating of pipe prior to backfilling.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. PVC, CPVC, or HDPE Pipe Placement:

1. Lay pipe snaking from one side of trench to other.
2. Offset: As recommended by manufacturer for maximum temperature variation between time of solvent welding and during operation.
3. Do not lay pipe when temperature is below 40 degrees F, or above 90 degrees F when exposed to direct sunlight.
4. Shield ends to be joined from direct sunlight prior to and during the laying operation.

D. Tolerances:

1. Deflection from Horizontal Line, Except PVC, CPVC, or HDPE: Maximum 2 inches.
2. Deflection From Vertical Grade: Maximum 1/4 inch(es).
3. Joint Deflection: Maximum of 75 percent of manufacturer's recommendation.
4. Horizontal position of pipe centerline on alignment around curves maximum variation of 1.75 feet from position shown.
5. Pipe Cover: Minimum 3 feet, unless otherwise shown.

3.07 INSTALLATION—CONCRETE ENCASED

- A. Provide reinforced concrete pipe encasement where shown on Drawings and where otherwise required. Some piping may be required to be concrete encased for pipe strength requirements that are included in the Specifications. Piping under and within the influence of buildings, utility trenches, vaults, slabs, and other structures shall be concrete encased. See details on Drawings for encasement requirements.
- B. Where concrete encased piping crosses structure construction and expansion joints, provide flexible piping joints to coincide with structure joints to prevent excessive pipe stress and breakage.

3.08 PIPE CORROSION PROTECTION

A. Ductile Iron Pipe:

1. Exposed: As specified in Section 09 90 00, Painting and Coating, and as shown in Piping Schedule.
2. Buried: Wrap with polyethylene bagging.
3. Submerged or Embedded: Coat with coal-tar epoxy as specified in Section 09 90 00, Painting and Coating. If in potable water service, use NSF/ANSI 61 approved epoxy.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Carbon Steel Pipe:
1. Exposed: As specified in Section 09 90 00, Painting and Coating.
  2. Buried:
    - a. Pipe: Wrap with tape coating system as specified in Section 09 90 00, Painting and Coating.
    - b. Joints: Wrap with tape coating system as specified in Section 09 90 00, Painting and Coating, or heat shrink wrap as specified herein.
  3. Submerged or Embedded: Shop coat with coal-tar epoxy as specified in Section 09 90 00, Painting and Coating. If in potable water service, use NSF/ANSI 61 approved epoxy.
- C. Copper Pipe:
1. Exposed: As specified in Section 09 90 00, Painting and Coating.
  2. Buried:
    - a. Pipe: Tape Wrap.
    - b. Joints: Tape Wrap.
- D. PVC and CPVC Pipe, Exposed: As specified in Section 09 90 00, Painting and Coating.
- E. Piping Accessories:
1. Exposed:
    - a. Field paint black and galvanized steel, brass, copper, and bronze piping components as specified in Section 09 90 00, Painting and Coating, as applicable to base metal material.
    - b. Accessories include, but are not limited to, pipe hangers, supports, expansion joints, pipe guides, flexible couplings, vent and drain valves, and fasteners.
  2. Buried:
    - a. Ferrous Metal and Stainless Steel Components: Coat with coal-tar epoxy as specified in Section 09 90 00, Painting and Coating.
    - b. Bolts, Nuts, and Similar Items: Coat with bituminous paint.
    - c. Flexible Couplings, Grooved Couplings, and Similar Items: Wrap with heat shrink wrap or coat with cement.
    - d. Buried Valves and Similar Elements on Wrapped Pipelines: Coat with bituminous paint and wrap entire valve in polyethylene encasement.
    - e. Cement-Coated Pipelines: Cement coat appurtenances same as pipe.
- F. Polyethylene Encasement: Install in accordance with AWWA C105/A21.5 and manufacturer's instructions.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- G. Tape Coating System: As specified in Section 09 90 00, Painting and Coating.
- H. Heat Shrink Wrap: Apply in accordance with manufacturer's instructions to surfaces that are cleaned, prepared, and primed.
- I. Insulating Flanges, Couplings, and Unions:
  - 1. Applications:
    - a. Dissimilar metal piping connections.
    - b. Cathodically protected piping penetration to buildings and watertight structures.
    - c. Submerged to unsubmerged metallic piping connections.
    - d. Connections to existing metallic pipe.
    - e. Where required for electrically insulated connection.
  - 2. Pipe Installation:
    - a. Insulating joints connecting immersed piping to nonimmersed piping shall be installed above maximum water surface elevation.
    - b. Submerged carbon steel, ductile iron, or galvanized piping in reinforced concrete shall be isolated from the concrete reinforcement steel.
    - c. Align and install insulating joints as shown on the Drawings and according to manufacturer's recommendations. Bolt lubricants that contain graphite or other metallic or electrically conductive components that can interfere with the insulating capabilities of the completed flange shall not be used.

3.09 THRUST RESTRAINT

- A. Location:
  - 1. Buried Piping: Where shown and where required to restrain force developed at pipeline tees, plugs, caps, bends, and other locations where unbalanced forces exist because of hydrostatic testing and normal operating pressure.
  - 2. Exposed Piping: At all joints in piping.
- B. Thrust Ties:
  - 1. Flanged Coupling Adapters: For exposed installations, install manufacturer's anchor studs through coupling sleeve or use dismantling joints.
- C. Mechanical Joint Valve Restraint in Proprietary Restrained Joint Piping: Install pipe joint manufacturer's adapter gland follower and pipe end retainer, or mechanical joint anchor gland follower.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

D. Thrust Blocking:

1. Place between undisturbed ground and fitting to be anchored only as shown on Drawings.
2. Quantity of Concrete: Sufficient to cover bearing area on pipe and provide required soil bearing area as shown.
3. Place blocking so that pipe and fitting joints will be accessible for repairs.
4. Place concrete in accordance with Section 03 30 00, Cast-in-Place Concrete.

3.10 SLAB, FLOOR, WALL, AND ROOF PENETRATIONS

- A. Application and Installation: As specified in Section 40 27 01, Process Piping Specialties.

3.11 BRANCH CONNECTIONS

- A. Do not install branch connections smaller than 1/2-inch nominal pipe size, including instrument connections, unless shown otherwise.
- B. When line of lower pressure connects to a line of higher pressure, requirements of Piping Data Sheet for higher pressure rating prevails up to and including first block valve in the line carrying the lower pressure, unless otherwise shown.
- C. Threaded Pipe Tap Connections:
1. Ductile Iron Piping: Connect only with service saddle or at tapping boss of a fitting, valve body, or equipment casting.
  2. Welded Steel or Alloy Piping: Connect only with welded threadolet or half-coupling as specified on Piping Data Sheet.
  3. Limitations: Threaded taps in pipe barrel are unacceptable.

3.12 VENTS AND DRAINS

- A. Vents and drains at high and low points in piping required for completed system may or may not be shown. Install vents on high points and drains on low points of pipelines as shown and at all low and high point locations.

3.13 FIELD FINISHING

- A. Notify Engineer at least 3 days prior to start of surface preparation or coating application work.
- B. As specified in Section 09 90 00, Painting and Coating.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.14 PIPE IDENTIFICATION

- A. As specified in Section 10 14 00, Signage, Section 31 23 23.15, Trench Backfill, and Section 09 90 00, Painting and Coating.

3.15 FIELD QUALITY CONTROL

- A. Pressure Leakage Testing: As specified in Section 40 80 01, Process Piping Leakage Testing.
- B. Minimum Duties of Welding Inspector:
  - 1. Job material verification and storage.
  - 2. Qualification of welders.
  - 3. Certify conformance with approved welding procedures.
  - 4. Maintenance of records and preparation of reports in a timely manner.
  - 5. Notification to Engineer of unsatisfactory weld performance within 24 hours of weld test failure.
- C. Required Weld Examinations:
  - 1. Perform examinations in accordance with Piping Code ASME B31.3 for Normal Fluid Service, except that 5 percent of circumferential butt welds shall be random radiographed.
  - 2. Perform examinations for every pipe thickness and for each welding procedure, progressively, for piping covered by this section.
  - 3. Examine at least one of each type and position of weld made by each welder or welding operator.
  - 4. For each weld found to be defective under the acceptance standards or limitations on imperfections contained in the applicable Piping Code, examine two additional welds made by the same welder that produced the defective weld. Such additional examinations are in addition to the minimum required above. Examine, progressively, two additional welds for each tracer examination found to be unsatisfactory.

3.16 CLEANING

- A. Following assembly and testing, and final acceptance, flush pipelines, except as stated below, with water at 2.5 fps minimum flushing velocity until foreign matter is removed.
- B. Blow clean of loose debris natural gas, and instrument air lines with compressed air at 4,000 fpm; do not flush with water.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. If impractical to flush large diameter pipe at 2.5 fps or blow at 4,000 fpm velocity, clean in-place from inside by brushing and sweeping, then flush or blow line at lower velocity.
- D. Insert cone strainers in flushing connections to attached equipment and leave in-place until cleaning is complete.
- E. Remove accumulated debris through drains 2 inches and larger or by removing spools and valves from piping.

3.17 SUPPLEMENTS

- A. The supplements listed below, following “End of Section,” are a part of this Specification:
  - 1. Piping Schedule as shown on Drawings.
  - 2. Data Sheets.

Number	Title
40 27 00.01	Cement-Mortar, Glass, and Polyurethane-Lined Ductile Iron Pipe and Fittings
40 27 00.02	Carbon Steel Pipe and Fittings – Special Service

<b>SECTION 40 27 00.01                      CEMENT-MORTAR, GLASS, AND POLYURETHANE-LINED                      DUCTILE IRON PIPE AND FITTINGS</b>	
<b>Item</b>	<b>Description</b>
General	<p>Materials in contact with potable water shall conform to NSF 61 acceptance.</p> <p>Pipe manufacturer shall submit certification that source manufacturing facility has experience producing ductile iron pipe of the specified diameters, dimensions, and standards. Testing of pipe required by AWWA A21.51 shall be conducted in testing and laboratory facilities located in the USA and operating under USA laws and regulations. Pipe shall be handled during manufacture and shipped without nesting (without insertion of one pipe inside another).</p>
Pipe	<p>Buried Liquid Service Using, Mechanical, or Proprietary Restrained Joints: AWWA C111/A21.11, and AWWA C151/A21.51, pressure class conforming to Table 5 and Table 7 for Type 4 trench, 250 psi minimum working pressure. Follower glands shall be ductile iron.</p> <p>Exposed Pipe Using Grooved End and Flange Joints:                      AWWA C115/A21.15, thickness Class 53 minimum, 250 psi minimum working pressure.</p>
Lining	<p>Cement-mortar: AWWA C104/A21.4 with double lining thickness.</p> <p>Glass: Completely fused above 1,400 degrees F, 6 mils to 10 mils thick, defects which expose base metal not greater than 0.01 percent of total lined surface, hardness greater than 5 on the Mohs scale, lining bonded sufficiently to withstand a metal strain of 0.001 inch/inch without damage to the glass lining, finished lined pipe not to deviate more than 0.0125 inch per foot of length from a centerline perpendicular to the flange face or square end of the pipe. Fast Fabricators, Inc., Ferroch MEH-32; Ceramic Coating Co., SL-31; VITCO Corp., SG-14.</p>

<b>SECTION 40 27 00.01 CEMENT-MORTAR, GLASS, AND POLYURETHANE-LINED DUCTILE IRON PIPE AND FITTINGS</b>	
<b>Item</b>	<b>Description</b>
Fittings	<p>Lined and coated same as pipe.</p> <p>Mechanical: AWWA C110/A21.10 and AWWA C111/A21.11 ductile iron, 250 psi minimum working pressure. Follower glands shall be ductile iron. Compact fittings not allowed.</p> <p>Proprietary Restrained: AWWA C110/A21.10 and AWWA C111/A21.11 ductile iron, 250 psi minimum working pressure. Restraint shall be achieved with removable metal elements fitted between a welded bar on the pipe barrel and the inside of the joint bell or fitting sizes smaller than 16 inches may be mechanical joint, restrained by anchor gland followers, ductile iron anchor type, wedge action, with break-off tightening bolts. Assembled joints shall be rated for deflection in operation at rated pressure. Rated deflection shall be not less than 1-1/2 degrees for 36-inch and smaller pipe. Rated deflection shall be not less than 1/2 degree for 42-inch and larger pipe. Clow Corp., American Cast Iron Pipe Co., U.S. Pipe. Restrained joints relying on metal teeth molded into the gasket to prevent joint separation under pressure will not be accepted. Compact fittings not allowed.</p> <p>Grooved End: AWWA C606 and AWWA C110/A21.10, ductile iron, 250 psi minimum working pressure; Victaulic.</p> <p>Flange: AWWA C110/A21.10 ductile iron, faced and drilled, Class 125 flat face or ASME B16.1, Class 250 raised face. Gray cast iron will not be allowed.</p>

<b>SECTION 40 27 00.02            CARBON STEEL PIPE AND FITTINGS—SPECIAL SERVICE</b>		
<b>Item</b>	<b>Size</b>	<b>Description</b>
Pipe	All  Screwed: 1-1/2" & smaller  Welded: 2" through 4"	Black carbon steel, ASTM A106/A106M, Grade B seamless or ASTM A53/A53M, Grade B seamless or ERW. Threaded, butt-welded, and flanged joints:  Schedule 40.  Standard weight.
Joints	1-1/2" & smaller  2" & larger	Threaded or socket-welded; flanged at equipment as required or shown.  Butt-welded or flanged at valves and equipment.
Fittings	1-1/2" & smaller  2" & larger	Threaded or socket-weld, forged carbon steel, ASTM A105/A105M, 2,000-pound or 3,000-pound WOG (3,000-pound chlorine service), conforming to ASME B16.11; bore to match pipe inside diameter.  Wrought carbon steel butt-welding, ASTM A234/A234M, Grade WPB meeting the requirements of ASME B16.9; fitting wall thickness to match adjoining pipe; long radius elbows unless shown otherwise.
Branch Connections	1-1/2" & smaller  2" & larger	Threadolet or socket in conformance with Fittings above.  Butt-welding tee in accordance with Fittings above.
Flanges	1-1/2" & smaller	Forged carbon steel, ASTM A105/A105M, ASME B16.5 Class 150 or Class 300 socket-weld or threaded, 1/16-inch raised face.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

<b>SECTION 40 27 00.02 CARBON STEEL PIPE AND FITTINGS—SPECIAL SERVICE</b>		
<b>Item</b>	<b>Size</b>	<b>Description</b>
	2" & larger	Forged carbon steel, ASTM A105/A105M, ASME B16.5 Class 150 or Class 300 slip-on or welding neck, 1/16-inch raised face. Weld neck bore to match pipe internal diameter. Use weld neck flanges when abutting butt-weld fittings. Weld slip-on flanges inside and outside.
Unions	1-1/2" & smaller	Threaded or socket-weld, forged carbon steel, ASTM A105/A105M, 2,000-pound or 3,000-pound WOG, integral ground steel-to-steel seats, AAR design meeting the requirements of ASME B16.11, bore to match pipe.
Bolting	All	Carbon steel ASTM A193/A193M, Grade B7 studs; ASTM A194/A194M, Grade 2H hex head nuts and ASTM F436 hardened steel washers at nuts and bolt heads. Achieve 40 percent to 60 percent of bolt minimum yield stress.
		When mating flange on equipment is cast iron and gasket is flat ring, provide ASTM A307, Grade B hex head bolts; ASTM A563, Grade A heavy hex nuts and ASTM F436 hardened steel washers at nuts and bolt heads. Achieve 40 percent to 60 percent of bolt minimum yield stress.
Gaskets	All flanges	General Service and Oil/Gas: 1/16-inch-thick compressed nonasbestos composition flat ring type, rated 400 degrees F continuous. Garlock, Blue-Gard 3000; Durlon 7950.
		Steam Service: 1/8-inch-thick compressed inorganic or carbon fiber with nitrile binder, flat ring type, rated 600 degrees F continuous. Garlock, ST-706; Durlon, Style 8300; Leader Global Technologies, Type 2078.
		Chlorine Unions: Chemical lead, 2 percent to 4 percent antimony, 1/8-inch-thick.

<b>SECTION 40 27 00.08 STAINLESS STEEL PIPE AND FITTINGS—GENERAL SERVICE</b>		
<b>Item</b>	<b>Size</b>	<b>Description</b>
Pipe	2-1/2" & smaller	Schedule 40S: ASTM A312/A312M, Type 316 seamless, pickled and passivated.
	3" through 6"	Schedule 10S: ASTM A778, "as-welded" grade, Type 316L, pickled and passivated.
	8" & larger	Schedule 5S: ASTM A778, "as-welded" grade, Type 316L, pickled and passivated.
Tubing	All	ASTM A269, Type 316 stainless steel, seamless, fully annealed hydraulic tubing, 0.065-inch wall thickness minimum.
Joints	1-1/2" & smaller	Threaded or flanged at equipment as required or shown.
	2" & larger	Butt-welded or flanged at valves and equipment.
Tubing Joints	All	Flareless compression fitting.
Fittings	1-1/2" & smaller	Threaded: Forged 1,000 CWP minimum, ASTM A182/A182M, Grade F316 or cast Class 150, ASTM A351/A351M, Grade CF8M/316.
	2" & 2-1/2"	Butt Welded: ASTM A403/A403M, Grade WP316L conforming to ASME B16.9 and MSS SP 43, annealed, pickled and passivated; fitting wall thickness to match adjoining pipe; long radius elbows, unless shown otherwise.
	3" & larger	Butt-Welded: ASTM A774/A774M conforming to MSS SP 43, "as-welded" grade, Type 316L pickled and passivated; fitting wall thickness to match adjoining pipe; long radius elbows, unless shown otherwise.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

<b>SECTION 40 27 00.08 STAINLESS STEEL PIPE AND FITTINGS—GENERAL SERVICE</b>		
<b>Item</b>	<b>Size</b>	<b>Description</b>
Tubing Fittings	All	Flareless Compression Type Forged: ASTM A182/A182M, Grade F316, Parker-Hannifin Ferulok, Flodar BA Series.
Branch Connections	1-1/2" & smaller	Tee or reducing tee in conformance with fittings above.
	2" & larger	Butt-welding tee or reducing tee in accordance with fittings above.
Tubing Branch Connections	All	Compression type tees or reducing tees in accordance with Tubing Fittings above.
Flanges	All	<p>Forged Stainless Steel: ASTM A182/A182M, Grade F316L, ASME B16.5 Class 150 or Class 300, slip-on weld neck or raised face. Weld slip-on flanges inside and outside.</p> <p>Cast Carbon Steel: ASTM A216/A216M Grade WCA, drilled, ASME B16.5 Class 150 or Class 300 Van Stone Type with stainless steel stub ends, ASTM A240/A240M Type 316L "as-welded grade", conforming to MSS SP 43, wall thickness same as pipe.</p> <p>Blind Flanges, exposed to the atmosphere and not buried nor immersed in liquid, may be either stainless steel or Class 125 ductile iron or Class 150 carbon steel with gaskets as specified herein.</p>
Unions	2" & smaller	Threaded Forged: ASTM A182/A182M, Grade F316, 2,000-pound or 3,000-pound WOG, integral ground seats, AAR design meeting the requirements of ASME B16.11, bore to match pipe.

<b>SECTION 40 27 00.13 COPPER AND COPPER ALLOY PIPE, TUBING, AND FITTINGS</b>	
<b>Item</b>	<b>Description</b>
General	Materials in contact with potable water shall conform to NSF 61 acceptance.
Tubing	Seamless, conforming to ASTM B88 as follows: Water (buried) ..... Type K, soft or hard temper Water (exposed)..... Type L, hard drawn Domestic hot water ..... Type L, hard drawn Compressed air service ..... Type L, hard drawn Refrigerant service..... Type L, hard drawn P-Trap priming service ..... Type L, soft temper Sample line service ..... Type L, hard drawn
Fittings	ASTM B75 commercially pure wrought copper, socket joint, dimensions conforming to ASME B16.22.
Flanges	Class 150, ASTM B75 commercially pure wrought copper, socket joint, ASME B16.24 standard.
Bolting	ASTM A307, carbon steel, Grade A hex head bolts, ASTM A563 Grade A hex head nuts and ASTM F436/F436M hardened steel washers at nuts and bolt heads. Torque to gasket manufacturers recommendations.
Gaskets	1/16-inch-thick nonasbestos compression type, full face, Cranite, John Manville.
Solder	Joints 2-1/2 Inch and Smaller: Wire solder (95 percent tin), conforming to ASTM B32 Alloy Grade Sn95. Do not use cored solder.  Joints Larger Than 2-1/2 Inch: Wire solder, melt range approximately 440 degrees F to 660 degrees F, conforming to ASTM B32 Alloy Grade HB or HN. Do not use cored solder.

- B. Informational Submittals:
1. Coupling Harness:
    - a. Details, ratings, calculations and test reports for thrust restraints relying on welded bars or rings.
    - b. Weld procedure qualifications.
    - c. Load proof-testing report of prototype restraint for any size coupling.
  2. Basket Strainer:
    - a. Manufacturer's written/printed installation instructions.
    - b. Manufacturer's Certificate of Proper Installation, in accordance with Section 01 43 33, Manufacturers' Field Services.
- C. Operation and Maintenance Data as specified in Section 01 78 23, Operation and Maintenance Data.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Provide required piping specialty items, whether shown or not shown on Drawings, as required by applicable codes and standard industry practice.
- B. Rubber ring joints, mechanical joints, flexible couplings, and proprietary restrained ductile iron pipe joints are considered flexible joints; welded, screwed, and flanged pipe joints are not considered flexible.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Components and Materials in Contact with Water for Human Consumption: Comply with the requirements of the Safe Drinking Water Act and other applicable federal, state, and local requirements. Provide certification by manufacturer or an accredited certification organization recognized by the Authority Having Jurisdiction that components and materials comply with the maximum lead content standard in accordance with NSF/ANSI 61 and NSF/ANSI 372.
1. Use or reuse of components and materials without a traceable certification is prohibited.

2.02 CONNECTORS

A. Elastomer Bellows Connector:

1. Type: Fabricated spool, with single filled arch.
2. Materials: Nitrile tube and wrap-applied neoprene cover.
3. End Connections: Flanged, drilled 125-pound ASME B16.1 standard, with full elastomer face and steel retaining rings.
4. Working Pressure Rating: 140 psig, minimum, at 180 degrees F for all services pipe sizes 12 inches and smaller, 65 psig, minimum, at 180 degrees F for digester gas service pipe sizes between 14 inches and 24 inches.
5. Thrust Restraint: Control rods to limit travel of elongation and compression.
6. Manufacturers and Products:
  - a. Garlock; Style 204.
  - b. Unisource Manufacturing, Inc.; Style 1501.
  - c. Goodall Rubber Co.; Specification E-1462.
  - d. Proco Products, Inc.; Series 220.
  - e. Or approved equal.

B. Flexible Metal Hose Connector:

1. Type: Close pitch, annular corrugated with single braided jacket.
2. Material: Bronze.
3. End Connections: Female copper solder joint.
4. Minimum Burst Pressure: 500 psig at 70 degrees F.
5. Length: Minimum manufacturer recommendation for vibration isolation.
6. Manufacturers:
  - a. U.S. Hose Corp.; Series 300.
  - b. Anamet Industrial, Inc.
  - c. Unisource Manufacturing, Inc.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. Proco Products, Inc.
  - e. Or approved equal.
- C. Closure Collar Concrete: As specified in Section 03 30 00, Cast-in-Place Concrete, and Section 03 30 01, Reinforced Concrete.
- D. Quick Connect Couplings for Chemical Services:
- 1. Type: Twin cam arm actuated, male and female, locking, for chemical loading and transfer.
  - 2. Materials: Glass-filled polypropylene or PVDF with EPDM, Viton-A or Teflon gaskets as recommended for the service by manufacturer.
  - 3. End Connections: NPT threaded or flanged to match piping connections. Hose shank for chemical installations.
  - 4. Plugs and Caps: Female dust cap for each male end; male dust plug for each female end.
  - 5. Pressure Rating: 125 psi, minimum, at 70 degrees F.
  - 6. Manufacturers and Products:
    - a. OPW; Kamlock.
    - b. Ryan Herco; 1300 Series.
    - c. Or approved equal.

## 2.03 COUPLINGS

### A. General:

- 1. Coupling linings for use in potable water systems shall be in conformance with NSF/ANSI 61.
- 2. Couplings shall be rated for working pressure not less than indicated in Piping Schedule for the service and not less than 150 psi.
- 3. Couplings shall be lined and coated with fusion-bonded epoxy in accordance with AWWA C213.
- 4. Unless thrust restraint is provided by other means, couplings shall be harnessed in accordance with requirements of AWWA Manual M11 or as shown on Drawings.
- 5. Sleeve type couplings shall conform to AWWA C219 and shall be hydraulically expanded beyond minimum yield for accurate sizing and proofing of tensile strength.

### B. Flexible Sleeve Type Coupling:

- 1. Manufacturers and Products:
  - a. Steel Pipe:
    - 1) Dresser Piping Specialties; Style 38.
    - 2) Smith-Blair, Inc.; Style 411.
    - 3) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Ductile Iron Pipe:
  - 1) Dresser Piping Specialties; Style 253.
  - 2) Smith-Blair, Inc.; Style 441.
  - 3) Or approved equal.
  
- C. Transition Coupling for Steel Pipe:
  - 1. Manufacturers and Products:
    - a. Dresser Piping Specialties; Style 162.
    - b. Smith-Blair, Inc.; Style 413.
    - c. Or approved equal.
  
- D. Flanged Coupling Adapter:
  - 1. Anchor studs where required for thrust restraint.
  - 2. Manufacturers and Products:
    - a. Steel Pipe:
      - 1) Dresser Piping Specialties; Style 128.
      - 2) Smith-Blair, Inc.; Style 913.
      - 3) Or approved equal.
    - b. Ductile Iron Pipe:
      - 1) Dresser Piping Specialties; Style 128.
      - 2) Smith-Blair, Inc.; Style 912.
      - 3) Or approved equal.
  
- E. Restrained Flange Adapter:
  - 1. Pressure Rating:
    - a. Minimum Working Pressure Rating: Not less than 150 psi.
    - b. Safety Factor: Not less than two times working pressure and shall be supported by manufacturer's proof testing.
  - 2. Thrust Restraint:
    - a. Provide hardened steel wedges that bear against and engage outer pipe surface, and allow articulation of pipe joint after assembly while wedges remain in their original setting position on pipe surface.
    - b. Products employing set screws that bear directly on pipe will not be acceptable.
  - 3. Manufacturer and Product:
    - a. EBAA Iron Sales Co.; Mega-Flange.
    - b. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

F. Restrained Dismantling Joints:

1. Pressure Rating:
  - a. Minimum working pressure rating shall not be less than rating of the connecting flange.
  - b. Proof testing shall conform to requirements of AWWA C219 for bolted couplings.
2. Manufacturers and Products:
  - a. Dresser Piping Specialties; Style 131.
  - b. Smith Blair, Inc.; Model 975.
  - c. Or approved equal.

G. Exposed Metallic Piping Plain End Couplings:

1. Plain end pipe couplings shall be self-restrained against hydrostatic thrust forces equal to not less than two times the working pressure rating of the coupling. Couplings shall accommodate 4 degrees angular deflection at the time of installation and subsequent to pressurization.
2. Casing, bolts, and nuts shall be Type 304 or Type 316 stainless steel. The sealing sleeve shall be EPDM or NBR elastomer as best suited for the fluid service.
3. Couplings Manufacturer and Products:
  - a. Straub Couplings, Grip-L or Metal Grip.
  - b. Or approved equal.

2.04 EXPANSION JOINTS

A. Elastomer Bellows:

1. Type: Reinforced molded wide arch.
2. End Connections: Flanged, drilled 125-pound ASME B16.1 standard, with split galvanized steel retaining rings.
3. Washers: Over retaining rings to help provide leak-proof joint under test pressure.
4. Thrust Protection: Control rods to protect the bellows from overextension.
5. Bellows Arch Lining: Buna-N, nitrile, or butyl.
6. Rated Temperature: 250 degrees F.
7. Rated Deflection and Pressure:
  - a. Lateral Deflection: 3/4 inch, minimum.
  - b. Burst Pressure: Four times the working pressure.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Compression deflection and minimum working pressure as follows:

Size (inch)	Deflection (inch)	Pressure (psig)
2-1/2 to 12	1.06	150
14	1.65	130
16 to 20	1.65	110

8. Manufacturers and Products:
- General Rubber Corp.; Style 1015 Maxijoint.
  - Mercer; Flexmore Style 450.
  - Goodall Rubber Co.; Specification E-711.
  - Unisource Manufacturing, Inc.; Series 1500.
  - Proco Products, Inc.; Series 251.
  - Or approved equal.

B. Flexible Metal Hose:

- Type: Close pitch, annular corrugated with single braided jacket.
- Material: Stainless steel, ASTM A276, Type 321.
- End Connections:
  - 3 Inches and Larger: Shop fabricated flanged ends to match mating flanges.
  - 2-1/2 Inches and Smaller: Screwed ends with one union end.
- Minimum Burst Pressure: 600 psig at 70 degrees F for 12 inches and smaller.
- Length: Provide hose live-length equal to lengths shown on Drawings.
- Manufacturer:
  - U.S. Hose Corp.; Series 401M.
  - Anamet Industrial, Inc.; BWC21-1.
  - Or approved equal.

2.05 SERVICE SADDLES

A. Double-Strap Iron:

- Pressure Rating: Capable of withstanding 150 psi internal pressure without leakage or over stressing.
- Run Diameter: Compatible with outside diameter of pipe on which saddle is installed.
- Taps: Iron pipe threads.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Materials:
  - a. Body: Malleable or ductile iron.
  - b. Straps: Galvanized steel.
  - c. Hex Nuts and Washers: Steel.
  - d. Seal: Rubber.
5. Connecting Piping 3-Inches and Smaller: All pipe nipples 3-inches and smaller connecting to valves or instrumentation shall be Type 316 stainless steel unless specifically called out on Drawings.
6. Manufacturers and Products:
  - a. Smith-Blair; Series 313 or 366.
  - b. Dresser; Style 91.
  - c. Or approved equal.

2.06 OUTLET/TAPPING SADDLES

- A. Materials:
  1. Straps: Alloy steel with 3/4-inch threaded ends.
  2. Seal: O-Ring SBR rubber gasket.
  3. Compatible with ductile iron pipe.
- B. Connection: AWWA C110/A21.10 flange or Mechanical joint outlet as shown.
- C. Pressure Rating: Capable of withstanding 250 psi internal pressure without leakage over stressing.
- D. Manufacturers and Products:
  1. American Ductile Iron; Outlet/Tapping Saddle.
  2. Or approved equal.

2.07 PIPE SLEEVES

- A. Steel Pipe Sleeve:
  1. Minimum Thickness: 3/16 inch.
  2. Seep Ring:
    - a. Center steel flange for water stoppage on sleeves in exterior or water-bearing walls, 3/16-inch minimum thickness.
    - b. Outside Diameter: Unless otherwise shown, 3 inches greater than pipe sleeve outside diameter.
    - c. Continuously fillet weld on each side all around.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Factory Finish:
    - a. Galvanizing:
      - 1) Hot-dip applied, meeting requirements of ASTM A153/A153M.
      - 2) Electroplated zinc or cadmium plating is unacceptable.
    - b. Shop Lining and Coating: Factory prepare, prime, and finish coat in accordance with Section 09 90 00, Painting and Coating.
- B. Molded Polyethylene Pipe Sleeve:
1. Molded HDPE with integral water stop ring not less than 3 inches larger than sleeve.
  2. Provided with end caps for support during concrete placement.
  3. Manufacturers and Products:
    - a. Century-Line, Model CS sleeves as manufactured by PSI-Thunderline/Link-Seal.
    - b. Or approved equal.
- C. Insulated and Encased Pipe Sleeve:
1. Manufacturers and Products:
    - a. Pipe Shields, Inc.; Models WFB, WFB-CS and -CW Series, as applicable.
    - b. Or approved equal.
- D. Modular Mechanical Seal:
1. Type: Interconnected synthetic rubber links shaped and sized to continuously fill annular space between pipe and wall sleeve opening.
  2. Fabrication:
    - a. Assemble interconnected rubber links with ASTM A276, Type 316 stainless steel bolts and nuts.
    - b. Pressure plates shall be reinforced nylon polymer.
  3. Size: According to manufacturer's instructions for size of pipes shown to provide a watertight seal between pipe and wall sleeve opening and to withstand a hydrostatic head of 40 feet of water.
  4. Manufacturers:
    - a. Thunderline Corp., Link-Seal Division.
    - b. Or approved equal.

2.08 SLAB, FLOOR, WALL AND ROOF PENETRATIONS

- A. Ductile Iron Wall Pipe:
1. Diameter, Lining, and Ends: Same as connecting ductile iron pipe.
  2. Thickness: Equal to or greater than remainder of pipe in line.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Fittings: In accordance with applicable Pipe Data Sheet.
4. Thrust Collars:
  - a. Rated for thrust load developed at 250 psi.
  - b. Safety Factor: 2, minimum.
  - c. Material and Construction: Ductile iron or cast iron, cast integral with wall pipe wherever possible, or thrust rated, welded attachment to wall pipe.
5. Manufacturers:
  - a. American Cast Iron Pipe Co.
  - b. U.S. Pipe and Foundry Co
  - c. Or approved equal..

B. Steel or Stainless Steel Wall Pipe:

1. Same material and thickness as connecting pipe, except 1/4-inch minimum thickness.
2. Lining: Same as connecting pipe.
3. Thrust Collar:
  - a. Outside Diameter: Unless otherwise shown, 3 inches greater than outside diameter of wall pipe.
  - b. Continuously fillet welded on each side all around.

2.09 MISCELLANEOUS SPECIALTIES

A. Strainers, Water Service, 2 Inches and Smaller:

1. Type: Bronze body, Y-pattern, 200 psi nonshock rated, with screwed gasketed bronze cap.
2. Screen: Heavy-gauge Type 304 stainless steel or monel, 20-mesh.
3. Manufacturers and Products:
  - a. Armstrong International; Inc.; Model F.
  - b. Mueller Steam Specialty; Model 351M.
  - c. Or approved equal.

B. Strainers, Water Service, 2-1/2 Inches and Larger:

1. Type: Cast iron or ductile iron body, Y-pattern, 175 psi nonshock rated, with flanged gasketed iron cap.
2. Screen: Heavy-gauge Type 316 stainless steel, 0.045-inch perforations.
3. Manufacturers and Products:
  - a. Armstrong International, Inc.; Model A7FL 125.
  - b. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Strainers, Plastic Piping Systems, 4 Inches and Smaller:
  - 1. Type: Y-pattern PVC body, 150 psi nonshock rated, with screwed PVC cap and Viton seals.
  - 2. End Connections: Screwed or solvent weld, 2 inches and smaller. Class 150 ANSI flanged, 2-1/2 inches and larger.
  - 3. Screen: Heavy-gauge PVC, 1/32-inch mesh, minimum 2 to 1 screen area to pipe size ratio.
  - 4. Manufacturers:
    - a. Hayward.
    - b. Or approved equal.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Provide accessibility to piping specialties for control and maintenance.

3.02 PIPING FLEXIBILITY PROVISIONS

- A. General:
  - 1. Thrust restraint shall be provided as specified in Section 40 27 00, Process Piping—General.
  - 2. Install flexible couplings to facilitate piping installation, in accordance with approved Shop Drawings.
- B. Flexible Joints at Concrete Backfill or Encasement: Install within 18 inches or one-half pipe diameter, whichever is less, from the termination of any concrete backfill or concrete encasement.
- C. Buried Flexible Joints at Concrete Structures – Ductile Iron Pipe:
  - 1. Install 18 inches or less from face of structures; joint may be flush with face.
  - 2. Install a second flexible joint, whether or not shown.
    - a. Pipe Diameter 18 Inches and Smaller: Within 18 inches of first joint.
    - b. Pipe Diameter Larger than 18 Inches: Within two to three pipe diameter of first joint.
- D. Buried Flexible Joints at Concrete Structures – All others: Install as shown on Drawings.

### 3.03 PIPING TRANSITION

#### A. Applications:

1. Provide complete closure assembly where pipes meet other pipes or structures.
2. Pressure Pipeline Closures: Plain end pieces with double flexible couplings, unless otherwise shown.
3. Restrained Joint Pipe Closures: Install with thrust tie-rod assemblies as shown or in accordance with NFPA 24.
4. Gravity Pipe Closures: As specified for pressure pipelines, or concrete closures.
5. Concrete Closures: Use to make connections between dissimilar pipe where standard rubber gasketed joints or flexible couplings are impractical, as approved.
6. Elastomer sleeves bonded to pipe ends are not acceptable.

#### B. Installation:

1. Flexible Transition Couplings: Install in accordance with coupling manufacturer's instructions to connect dissimilar pipe and pipes with a small difference in outside diameter.
2. Concrete Closures:
  - a. Locate away from structures so there are at least two flexible joints between closure and pipe entering structure.
  - b. Clean pipe surface before placing closure collars.
  - c. Wet nonmetallic pipe thoroughly prior to pouring collars.
  - d. Prevent concrete from entering pipe.
  - e. Extend collar a minimum of 12 inches on each side of joint with minimum thickness of 6 inches around outside diameter of pipe.
  - f. Make entire collar in one placement.
  - g. After concrete has reached initial set, cure by covering with well-moistened earth.

### 3.04 PIPING EXPANSION

A. Piping Installation: Allow for thermal expansion due to differences between installation and operating temperatures.

#### B. Expansion Joints:

1. Grooved Joint and Flanged Piping Systems: Elastomer bellows expansion joint.
2. Nonmetallic Pipe: Teflon bellows expansion joint.
3. Screwed and Soldered Piping Systems: Copper or galvanized and black steel pipe expansion compensator, as applicable.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Air and Water Service above 120 Degrees F: Metal bellows expansion joint.
5. Pipe Run Offset: Flexible metal hose.

- C. Anchors and Anchor Walls: Install as specified in Section 40 05 15, Piping Support Systems, to withstand expansion joint thrust loads and to direct and control thermal expansion.

3.05 SERVICE SADDLES

- A. Ferrous Metal Piping (except stainless steel): Double-strap iron.
- B. Plastic Piping: Nylon-coated iron.

3.06 OUTLET/TAPPING SADDLE

- A. Install in accordance with manufacturer's written instructions.

3.07 COUPLINGS

- A. General:
  1. Install in accordance with manufacturer's written instructions.
  2. Before coupling, clean pipe holdback area of oil, scale, rust, and dirt.
  3. Do not remove shop applied pipe coating. If damaged, repair before joint is made.
  4. Application:
    - a. Metallic Piping Systems: Flexible couplings, transition couplings, and flanged coupling adapters.
    - b. Concrete Encased Couplings: Flexible coupling.

3.08 FLEXIBLE PIPE CONNECTIONS TO EQUIPMENT

- A. Install to prevent piping from being supported by equipment, for vibration isolation, and where shown.
- B. Product Applications Unless Shown Otherwise:
  1. Nonmetallic Piping: Teflon bellows connector.
  2. Copper Piping: Flexible metal hose connector.
  3. Compressor and Blower Discharge: Metal bellows connector.
  4. All Other Piping: Elastomer bellows connector.
- C. Limit Bolts and Control Rods: Tighten snug prior to applying pressure to system.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.09 PIPE SLEEVES

A. Application:

1. As specified in Section 40 27 00, Process Piping—General.
2. Abovegrade in Nonsubmerged Areas: Hot-dip galvanized after fabrication.
3. Belowgrade or in Submerged or Damp Environments: Shop-lined and coated.
4. Alternatively, Molded Polyethylene Pipe Sleeve as specified may be applied.

B. Installation:

1. Support noninsulating type securely in formwork to prevent contact with reinforcing steel and tie-wires.
2. Caulk joint with specified sealant in non-submerged applications and seal below-grade and submerged applications with wall penetration seal.

3.10 SLAB, FLOOR, WALL AND ROOF PENETRATIONS

A. Applications:

1. Watertight and Belowground Penetrations:
  - a. Wall pipes with thrust collars.
  - b. Provide taps for stud bolts in flanges to be set flush with wall face.
2. Nonwatertight Penetrations: Pipe sleeves with seep ring.
3. Existing Walls: Rotary drilled holes.
4. Fire-Rated or Smoke-Rated Walls, Floors or Ceilings: Insulated and encased pipe sleeves.

B. Wall Pipe Installation:

1. Isolate embedded metallic piping from concrete reinforcement using coated pipe penetrations as specified in Section 09 90 00, Painting and Coating.
2. Support wall pipes securely by formwork to prevent contact with reinforcing steel and tie-wires.

1.02 SUBMITTALS

A. Action Submittals:

1. Shop Drawings:
  - a. Product data sheets for each make and model. Indicate valve type number, applicable tag number, and facility name/number or service where used.
  - b. Complete catalog information, descriptive literature, specifications, and identification of materials of construction.
  - c. Certification for compliance to NSF/ANSI 61 for valves used for drinking water service.
  - d. Power and control wiring diagrams, including terminals and numbers.
  - e. For each power actuator provided, manufacturer's standard data sheet, with application specific features and options clearly identified.
  - f. Sizing calculations for open-close/throttle and modulating valves.
  - g. Anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals:

1. Anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
2. Manufacturer's Certificate of Compliance, in accordance with Section 01 61 00, Common Product Requirements, for:
  - a. Electric actuators; full compliance with AWWA C542.
  - b. Butterfly valves; full compliance with AWWA C504.
3. Component and attachment testing seismic certificate of compliance as required by Section 01 45 33, Special Inspection, Observation, and Testing.
4. Tests and inspection data.
5. Operation and Maintenance Data as specified in Section 01 78 23, Operation and Maintenance Data.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

6. Manufacturer's Certificate of Proper Installation, in accordance with Section 01 43 33, Manufacturers' Field Services.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Valves to include operator, actuator, handwheel, chain wheel, extension stem, floor stand, operating nut, chain, wrench, and accessories to allow a complete operation from the intended operating level.
- B. Valve to be suitable for intended service. Renewable parts not to be of a lower quality than specified.
- C. Valve same size as adjoining pipe, unless otherwise called out on Drawings or in Supplements.
- D. Valve ends to suit adjacent piping.
- E. Resilient seated valves shall have no leakage (drip-tight) in either direction at valve rated design pressure. All other valves shall have no leakage (drip-tight) in either direction at valve rated design pressure, unless otherwise allowed for in this section or in stated valve standard.
- F. Size operators and actuators to operate valve for full range of pressures and velocities.
- G. Valve to open by turning counterclockwise, unless otherwise specified.
- H. Factory mount operator, actuator, and accessories.
- I. Components and Materials in Contact with Water for Human Consumption: Comply with the requirements of the Safe Drinking Water Act and other applicable federal, state, and local requirements. Provide certification by manufacturer or an accredited certification organization recognized by the Authority Having Jurisdiction that components and materials comply with the maximum lead content standard in accordance with NSF/ANSI 61 and NSF/ANSI 372.
  - 1. Use or reuse of components and materials without a traceable certification is prohibited.

2.02 SCHEDULE

- A. Additional requirements relative to this section are shown on Electrically Actuated Valve Schedule, Manual Valve Schedule and Self-Regulated Valve Schedule located on Drawings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.03 MATERIALS

- A. Bronze and brass valve components and accessories that have surfaces in contact with water to be alloys containing less than 16 percent zinc and 2 percent aluminum.
  - 1. Approved alloys are of the following ASTM designations: B61, B62, B98/B98M (Alloy UNS No. C65100, C65500, or C66100), B139/B139M (Alloy UNS No. C51000), B584 (Alloy UNS No. C90300 or C94700), B164, B194, and B127.
  - 2. Stainless steel Alloy 18-8 may be substituted for bronze.
- B. Valve materials in contact with or intended for drinking water service to meet the following requirements:
  - 1. Materials to comply with requirements of the Safe Drinking Water Act and other applicable federal, state, and local requirements.
  - 2. Coatings materials to be formulated from materials deemed acceptable to NSF/ANSI 61.
  - 3. Supply certification product is certified as suitable for contact with drinking water by an accredited certification organization in accordance with NSF/ANSI 61. Provide certification for each valve type used for drinking water service.

2.04 FACTORY FINISHING

- A. General:
  - 1. Interior coatings for valves and hydrants shall be in accordance with AWWA C550, unless otherwise specified.
  - 2. Exterior coating for valves and hydrants shall be in accordance with Section 09 90 00, Painting and Coating.
  - 3. Material in contact with potable water shall conform to NSF/ANSI 61.
  - 4. Exposed safety isolation valves and lockout valves with handles, handwheels, or chain wheels shall be “safety yellow.”
- B. Where epoxy lining and coating are specified, factory finishing shall be as follows:
  - 1. In accordance with AWWA C550.
  - 2. Either two-part liquid material or heat-activated (fusion) material except only heat-activated material if specified as “fusion” or “fusion bonded” epoxy.
  - 3. Minimum 7-mil dry film thickness except where limited by valve operating tolerances.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.05 VALVES

A. Gate Valves:

1. General:
  - a. AWWA gate valves to be in full compliance with stated AWWA standard and the following requirements:
    - 1) Provide 2-inch operating nut and handwheel for AWWA gate valves 12 inches and smaller.
    - 2) Provide totally enclosed spur or bevel gear operator with indicator for AWWA gate valves 14 inches and larger.
    - 3) Provide Affidavit of Compliance in accordance with the applicable AWWA standard for AWWA gate valves.
    - 4) Mark AWWA gate valves with manufacturer's name or mark, year of valve casting, valve size, and working water pressure.
    - 5) Repaired AWWA gate valves shall not be submitted or supplied.
    - 6) AWWA C509 and AWWA C515 valves may be substituted for each other.
2. Type V100 Gate Valve 3 Inches and Smaller:
  - a. All-bronze, screwed bonnet, packed gland, single solid wedge gate, nonrising stem, Class 125 rated 200 psi CWP, complies with MSS SP-80 Type 1.
  - b. Manufacturers and Products:
    - 1) Crane; Figure 438, NPT threaded ends.
    - 2) Stockham; Figure B103, NPT threaded ends.
    - 3) Crane; Figure 1324, soldered ends.
    - 4) Stockham; Figure B104, soldered ends.
    - 5) Or approved equal.
3. Type V130 Resilient Seated Gate Valve 3 Inches to 12 Inches:
  - a. Iron body, resilient seat, bronze stem and stem nut, ASME B16.1, Class 125 flanged ends, nonrising stem, in accordance with AWWA C509, minimum design working water pressure 250 psig, full port, fusion-epoxy coated inside and outside per AWWA C550, NSF/ANSI 61 certified.
  - b. Manufacturers and Products:
    - 1) M&H Valve; AWWA C509.
    - 2) U.S. Pipe; A-USPO.
    - 3) Or approved equal.
4. Type V150 Knife Gate Valve 24 Inches and Smaller:
  - a. Bonnetless wafer body type, outside stem and yoke, rated for 150 psi cold water, ASME B16.1 flanged ends, self-cleaning, nonclogging, with round port, resilient neoprene seat, drip-tight shutoff.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Wetted metal parts and stem, Type 316 stainless steel, yoke sleeve bronze, gate finish ground both sides with a sharp knife edge.
- c. Packing system leak-tight seal around gate, valve superstructure and yoke designed for full peripheral access to gland bolts when valve is equipped with manual or power actuator.
- d. In compliance with MSS SP-81.
- e. Manufacturers and Products:
  - 1) DeZurik; Series L.
  - 2) Rovang; Model L17.
  - 3) ITT Fabri-Valve; Figure C67R.
  - 4) Or approved equal.

B. Globe Valves:

- 1. Type V200 Globe Valve 3 Inches and Smaller:
  - a. All-bronze, union bonnet, packed gland, inside screw, rising stem, TFE disc, Class 150 rated 150 psi SWP/300 psi CWP, complies with MSS SP-80 Type 2.
  - b. Manufacturers and Products:
    - 1) Stockham; Figure B-22T, NPT threaded end.
    - 2) Crane Co.; Figure 7TF, NPT threaded end.
    - 3) Milwaukee; Model 1590T, soldered ends.
    - 4) NIBCO; Figure S-235-Y, soldered ends.
    - 5) Or approved equal.
- 2. Type V205 Angle Pattern Valve 2 Inches and Smaller:
  - a. All-bronze, NPT threaded ends, union bonnet, packed gland, inside screw, rising stem, replaceable stainless steel tapered plug type disc and seat ring, Class 300 rated 300 psi SWP/1,000 psi CWP, complies with MSS SP-80 Type 3.
  - b. Manufacturers and Products:
    - 1) Stockham; Figure B-274.
    - 2) Crane; Figure 384P.
    - 3) Or approved equal.
- 3. Type V208 Needle Disc Type Globe Valve 1/8 Inch to 3/4 Inch:
  - a. All-bronze, threaded bonnet, packed gland, rising stem, bronze body and stem, Class 200 rated 200 psi SWP/400 psi CWP, complies with MSS SP-80.
  - b. Manufacturers and Products:
    - 1) Crane Cat.; No. 88.
    - 2) Stockham; B-64.
    - 3) Or approved equal.
- 4. Type V210 Globe Valve 2 Inches to 10 Inches:
  - a. Iron body, bronze mounted, flanged ends, bronze seat, outside screw and yoke, bolted bonnet, Class 125 rated 125 psi SWP/200 psi CWP, complies with MSS SP-85 Type 1.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Manufacturers and Products:
  - 1) Stockham; G-512.
  - 2) Crane; Figure 351.
  - 3) Or approved equal.
- 5. Type V234 Angle Type Hose Valve 1/2 Inch to 3/4 Inch:
  - a. Bronze or manufacturer's standard brass, angle sillcock type body, threaded or solder inlet as applicable, pressure rating 125 psi cold water.
  - b. Manufacturers and Products:
    - 1) Nibco; QTX Series.
    - 2) Or approved equal.
- 6. Type V235 Angle Type Hose Valve 3/4 Inch:
  - a. 3/4-inch NPT female inlet, 3/4-inch male hose thread outlet, heavy rough brass body rated 125 psi, lockshield bonnet, removable handle, atmospheric vacuum breaker conforming to ASSE 1011 and IAPMO code.
  - b. Manufacturers and Products:
    - 1) Acorn; 8126, surface pipe mount valve, bent nose without flange.
    - 2) Acorn; 8121, surface mount through wall valve, bent nose with flange.
    - 3) Acorn; 8131, pipe and pedestal mounted valve located above 6 inches, straightnose.
    - 4) Acorn; 8136, pedestal mounted valve located lower than 6 inches, inverted nose.
    - 5) Or approved equal.

C. Ball Valves:

- 1. Type V301 Ball Valve 2 Inches and Smaller for General Water and Air Service:
  - a. Two-piece, full port, NPT threaded ends, bronze body and end piece, hard chrome-plated solid bronze or brass ball, RTFE seats and packing, blowout-proof stem, adjustable packing gland, zinc-coated steel hand lever operator with vinyl grip, rated 600-pound WOG, 150-pound SWP, complies with MSS SP-110.
  - b. Manufacturers and Products:
    - 1) Threaded:
      - a) Conbraco Apollo; 77-100.
      - b) Nibco; T-585-70.
      - c) Or approved equal.
    - 2) Soldered:
      - a) Conbraco Apollo; 77-200.
      - b) Nibco; S-585-70.
      - c) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Type V305 Ball Valve 2 Inches and Smaller for Natural Gas Service:
  - a. Two-piece bronze or forged brass body and end piece, NPT threaded ends, hard chrome-plated solid brass ball, RTFE seats and seal, blowout-proof stem, zinc-plated hand lever operator with vinyl grip, UL Listed Guide YRPV for natural/manufactured gas, 600 WOG.
  - b. Manufacturers and Products:
    - 1) Conbraco Apollo; 80-100.
    - 2) Nibco; T-585-70-UL/T-580-70-UL.
    - 3) Or approved equal.
3. Type V306 Stainless Steel Ball Valve 2 Inches and Smaller:
  - a. Two-piece, full port, ASTM A276 GR 316 or ASTM A351/A351M GR CF8M stainless steel body and end piece, NPT threaded ends, ASTM A276 Type 316 stainless steel ball, reinforced PTFE seats, seals, and packing, adjustable packing gland, blowout proof stainless steel stem, stainless steel lever operator with vinyl grip, rated 1,000 psig CWP, complies with MSS SP-110.
  - b. Manufacturers and Products:
    - 1) Conbraco Apollo; 76F-100 Series.
    - 2) Nibco; T-585-S6-R-66-LL.
    - 3) Or approved equal.
4. Type V307 Stainless Steel Ball Valve 2 Inches and Smaller:
  - a. Three-piece, full port, ASTM A276 GR 316 or ASTM A351/A351M GR CF8M stainless steel body and end pieces, Type 316 stainless steel ball, NPT threaded ends, reinforced PTFE seats, seals, and packing, adjustable packing gland, blowout-proof stainless steel stem, stainless steel lever operator with vinyl grip, rated 800 psig to 1,000 psig CWP, complies with MSS SP-110.
  - b. Manufacturers and Products:
    - 1) Conbraco Apollo; 86R-100/86-500 Series.
    - 2) Nibco; T-595-S6-R-66-LL.
    - 3) Or approved equal.
5. Type V335 CPVC Ball Valve 2 Inches and Smaller:
  - a. Rated 150 psi at 100 degrees F, 80 psi at 140 degrees, with ASTM D1784, Type IV, Grade 1 chlorinated polyvinyl chloride (CPVC) body, ball, and stem, end entry, double union design, with solvent-weld socket ends or single union ball with flanged ends drilled to ASME B16.1, replaceable Teflon seat, Viton or Teflon O-ring stem seals, to block flow in both directions.
  - b. Manufacturers and Products:
    - 1) Nibco; Chemtrol Tru-Bloc.
    - 2) ASAHI/America; Type 21.
    - 3) Spears; True Union.
    - 4) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

D. Plug Valves:

1. Type V400 Eccentric Plug Valve 2 Inches and Smaller:
  - a. Nonlubricated type rated 175 psig CWP, drip-tight shutoff with pressure from either direction, cast-iron body, threaded ends, lever operator, cast-iron plug with round or rectangular port, plug coated with Buna-N, stem bearing lubricated stainless steel or bronze, stem seal multiple V-rings, or U-cups with O-rings of nitrile rubber.
  - b. Manufacturers and Products:
    - 1) Pratt; Ballcentric.
    - 2) DeZurik; Style PEC.
    - 3) Milliken; Millcentric Series 603.
    - 4) Or approved equal.
2. Type V405 Eccentric Plug Valve 3 Inches to 12 Inches:
  - a. Nonlubricated type rated 175 psig CWP, drip-tight shutoff with pressure from either direction, cast-iron body, exposed service flanged ends in accordance with ASME B16.1 or grooved ends in accordance with AWWA C606 for rigid joints, buried service mechanical joint ends, unless otherwise shown.
  - b. Plug cast iron with round or rectangular port of no less than 80 percent of connecting pipe area and coated with Buna-N, seats welded nickel, stem bearings lubricated stainless steel or bronze, stem seal multiple V-rings, or U-cups with O-rings of nitrile rubber, grit seals on both upper and lower bearings.
  - c. For buried service, provide external epoxy coating.
  - d. Operators:
    - 1) 3-Inch to 4-Inch Valves: Wrench lever manual.
    - 2) 6-Inch to 12-Inch Valves: Totally enclosed, geared, manual operator with handwheel, 2-inch nut or chain wheel. Size operator for 1.5 times maximum operating shutoff pressure differential for direct and reverse pressure, whichever is higher. For exposed service, provide a Visual Valve Position Indicator. For buried service, provide completely sealed operator filled with heavy lubricant and 2-inch nut.
  - e. Manufacturers and Products:
    - 1) Pratt; Ballcentric.
    - 2) DeZurik; Style PEC.
    - 3) Milliken; Millcentric Series 600.
    - 4) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Type V406 Eccentric Plug Valve 14 Inches to 20 Inches:
  - a. Nonlubricated type rated 150 psig CWP, drip-tight shutoff with pressure from either direction, cast-iron body, exposed service flanged ends in accordance with ASME B16.1 or grooved ends in accordance with AWWA C606 for rigid joints, buried service mechanical joints ends, unless otherwise shown, plug cast iron with round or rectangular port of no less than 80 percent of connecting pipe area and coated with Buna-N, seats welded nickel, stem bearings lubricated stainless steel or bronze, stem seal multiple V-rings or U-cups with O-rings of nitrile rubber, grit seals on both upper and lower bearings.
  - b. Totally enclosed, geared, manual operator with handwheel, 2-inch nut or chain wheel. Size operator for 1.5 times maximum operating shutoff pressure differential for direct and reverse pressure, whichever is higher. For exposed service, provide a Visual Valve Position Indicator. For buried service, provide completely sealed operator filled with heavy lubricant and 2-inch nut.
  - c. For buried service, provide external epoxy coating.
  - d. Manufacturers and Products:
    - 1) Pratt; Ballcentric.
    - 2) DeZurik; Style PEC.
    - 3) Milliken; Millcentric Series 600.
    - 4) Or approved equal.
4. Type V408 Eccentric Plug Valve 3 Inches to 14 Inches for Digester Gas Service:
  - a. Nonlubricated type rated 150 psig minimum working pressure, bubble-tight shutoff with gas pressure from one direction, body cast iron with flanged ends, plug cast iron with round or rectangular port of no less than 80 percent of connecting pipe area and coated with Buna-N, seats welded nickel, stem bearing lubricated stainless steel, stem seal multiple V-rings or U-cups with O-rings of nitrile rubber.
  - b. Internal surfaces of valve body epoxy lined (except seat). For buried service, provide external epoxy coating.
  - c. Operators:
    - 1) 3-Inch and 4-Inch Valves: Wrench lever manual.
    - 2) 6-Inch through 12-Inch Valves: Totally enclosed, geared, manual operator, with handwheel, 2-inch nut, or chain wheel. Provide a Visual Valve Position Indicator.
  - d. Manufacturers and Products:
    - 1) Pratt; Ballcentric.
    - 2) DeZurik; Style PEC.
    - 3) Milliken; Millcentric Series 600.
    - 4) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Type V410 Three-Way, Nonlubricated, Tapered Plug Valve 3 Inches to 16 Inches:
  - a. Cast-iron body with Buna-N-coated plug, multiple V-rings or U-cups with O-ring seals, lubricated stainless steel bearings, and nickel- or epoxy-coated seat, rated 125 psi CWP minimum, flanged to ASME B16.1.
  - b. Operator: Gear type, totally enclosed and lubricated, with handwheel.
  - c. Manufacturers and Products:
    - 1) DeZurik; Style PTW.
    - 2) Milliken; Millcentric Series 600.
    - 3) Or approved equal.
6. Type V420 Nonlubricated Plug Valve 2 Inches and Smaller:
  - a. Ductile iron or carbon steel body, Type 316 stainless steel plug with straight-way rectangular ports, Teflon sleeves, screwed ends, wrench operator.
  - b. Class: 150.
  - c. Rating: 275 psi WOG.
  - d. Manufacturers and Products:
    - 1) Duriron Co.; Figure No. G432.
    - 2) Tuflin; Figure 066.
    - 3) Or approved equal.
7. Type V462 Gauge Cock 1/8 Inch to 1/4 Inch:
  - a. 1/4-inch bronze body, hexagon end pattern, tee head, male ends, rated 125-pound SWP.
  - b. Manufacturers and Products:
    - 1) United Brass Works; Figure 973.
    - 2) Or approved equal.
8. Type V464 Corporation Stop 1/2 Inch to 2 Inches:
  - a. AWWA C800 type, tapered threaded inlet, except when connecting to tapped fittings which require IPS tapered threads, outlet compression connection or IPS threads to suit connecting pipe, stops 1 inch and smaller rated 100 psi, larger stops rated 80 psi.
  - b. Manufacturers:
    - 1) Ford Meter Box Co.
    - 2) Mueller Co.
    - 3) Or approved equal.
9. Type V466 Buried Service Natural Gas Plug Valve 2 Inches and Smaller:
  - a. UL Listed, iron body type, rated 125 psi, screwed ends, drilled key head for permanent pinned operating rod.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Manufacturers and Products:
    - 1) DeZurik; Figure 425.
    - 2) Mueller; (Gas) Curb Stop H-11104.
    - 3) Or approved equal.
- E. Butterfly Valves:
- 1. General:
    - a. In full compliance with AWWA C504 and following requirements:
      - 1) Suitable for throttling operations and infrequent operation after periods of inactivity.
      - 2) Elastomer seats that are bonded or vulcanized to the body shall have adhesive integrity of bond between seat and body assured by testing, with minimum 75-pound pull in accordance with ASTM D429, Method B.
      - 3) Bubble-tight with rated pressure applied from either side. Test valves with pressure applied in both directions.
      - 4) No travel stops for disc on interior of body.
      - 5) Self-adjusting V-type or O-ring shaft seals.
      - 6) Isolate metal-to-metal thrust bearing surfaces from flow stream.
      - 7) Provide traveling nut or worm gear actuator with handwheel. Valve actuators to meet the requirements of AWWA C504.
      - 8) Buried service operators shall withstand 450 foot-pounds of input torque at fully open and fully closed positions.
      - 9) Provide linings and coatings in accordance with AWWA, unless otherwise indicated on Drawings or specified herein.
      - 10) Valves to be in full compliance with NSF/ANSI 61.
    - b. Non-AWWA butterfly valves to meet the following actuator requirements:
      - 1) For above ground installations, provide handle and notch plate for valves 6 inches and smaller and heavy-duty, totally enclosed gearbox type operators with handwheel, position indicator and travel stops for valves 8 inches and larger, unless otherwise indicated on Drawings or specified herein.
  - 2. Type V500 Butterfly Valve Water Works Service 3 Inches to 72 Inches:
    - a. AWWA C504, Class 150B.
    - b. Short body type, flanged ends.
    - c. Cast-iron body, cast or ductile iron disc, Type 304 stainless steel shafts, Buna-N rubber seat bonded or molded in body only, and stainless steel seating surface.
    - d. Provide epoxy lining and coating in compliance with AWWA C550.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. Manufacturers and Products:
    - 1) Pratt; Model 2FII or Triton XR-70.
    - 2) DeZurik; AWWA Valve.
    - 3) Or approved equal.
  - 3. Type V512 Lug Butterfly Valve 2 Inches to 20 Inches for Digester Gas:
    - a. Lug style, two-piece cast-iron body, one-piece Type 316 stainless steel thin-profile disc and stem, heavy-duty stem bushing, NBR stem seal, FKM (Viton) replaceable resilient seat, 50 psi pressure bi-directional bubble-tight rating, suitable for temperatures up to 250 degrees F, valve body to fit between ASME B16.1, Class 125/150 flanges. Supply reduced disc diameter, if available.
    - b. Provide a Visual Valve Position Indicator.
    - c. Manufacturers and Products:
      - 1) Bray Controls; Model 21.
      - 2) Tyco/Keystone; Model 920.
      - 3) Or approved equal.
  - 4. Type V514 High Performance Butterfly Valve 2 Inches to 36 Inches:
    - a. ASME B16.1 Class 150 lug style, high performance type, Type 316 stainless steel body, Type 316 stainless steel single or double offset disc, Type 316 stainless steel shaft and taper pins, EPDM seat, PTFE stem packing, stainless steel with RTFE thrust washer.
    - b. Manufacturers and Products:
      - 1) Tyco/Keystone; K-Lok Series.
      - 2) DeZurik; BHP Series.
      - 3) Or approved equal.
- F. Check and Flap Valves:
- 1. Type V600 Check Valve 2 Inches and Smaller:
    - a. All bronze, threaded cap, threaded or soldered ends, swing type replaceable bronze disc, rated 125-pound SWP, 200-pound WOG.
    - b. Manufacturers and Products:
      - 1) Stockham; Figure B-319, threaded ends.
      - 2) Milwaukee; Figure 509, threaded ends.
      - 3) Stockham; Figure B-309, soldered ends.
      - 4) Milwaukee; Figure 1509, soldered ends.
      - 5) Or approved equal.
  - 2. Type V608 Swing Check Valve 2 Inches to 24 Inches:
    - a. AWWA C508, 125-pound flanged ends, cast-iron body, bronze body seat, bronze mounted cast-iron clapper with rubber facing, stainless steel hinge shaft.
    - b. Valves, 2 inches through 12 inches rated 175-pound WWP and 14 inches through 24 inches rated 150-pound WWP. Valves to be fitted with adjustable outside lever and weight, or fitted with

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- adjustable outside lever and spring. Increasing-pattern body valve may be used where increased outlet piping size is shown.
- c. Valve manufacturer shall furnish compatible limit switches for the following check valves:
    - 1) Check Valve, 73HV0020 on discharge of Raw Solids Feed Pumps No. 1.
    - 2) Check Valve, 73HV0021 on discharge of Raw Solids Feed Pumps No. 2.
    - 3) Check Valve, 73HV0022 on discharge of Raw Solids Feed Pumps No. 3.
  - d. Manufacturers and Products:
    - 1) M&H Valve; Style 59, 159, or 259.
    - 2) Mueller Co.; No. A-2600 Series.
    - 3) Or approved equal.
3. Type V612 Double Disc Swing Check Valve 2 Inches to 48 Inches:
- a. Wafer style, spring loaded, cast-iron body, aluminum-bronze or ductile iron discs, Buna-N resilient seats, and Type 316 stainless steel spring, hinge pin, and stop pin.
  - b. Valves 2 inches through 12 inches rated 200 psi nonshock working pressure and valves 14 inches through 48 inches rated 150 psi nonshock working pressure.
  - c. Manufacturers and Products:
    - 1) APCO; Series 9000.
    - 2) Val-Matic; Dual Disc.
    - 3) Crane/Stockham; WG-970.
    - 4) Tyco; Gulf MB Series.
    - 5) Or approved equal.
4. Type V631 CPVC Ball Check Valve 4 Inches and Smaller:
- a. ASTM D1784 Cell Class 23477B CPVC body, single or dual union socket weld ends, rated 150 psi at 73 degrees F, 110 psi at 140 degrees F, Viton seat and seal.
  - b. Manufacturers and Products:
    - 1) Nibco; Chemtrol Tru Union.
    - 2) ASAHI/America.
    - 3) Spears; True Union.
    - 4) Or approved equal.
- G. Self-Regulated Automatic Valves:
- 1. Type V710 Pressure-Reducing Valve 2-1/2 Inches and Smaller:
    - a. Direct diaphragm operated, spring controlled, bronze body, NPT threaded ends, 200-psig rated minimum.
    - b. Size/Rating: As shown in Valve Schedule.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Manufacturers and Products:
  - 1) Fisher; Type 75A.
  - 2) Watts; Series 223.
  - 3) Or approved equal.
- 2. Type V711 Pressure-Reducing Valve 2 Inches and Smaller:
  - a. Direct diaphragm, spring controlled, cast-iron body, spring case, composition seat and diaphragm, stainless steel valve stem, NPT threaded ends, 250-psig rated.
  - b. Size/Rating: As shown in Valve Schedule.
  - c. Manufacturers and Products:
    - 1) Fisher; 95 Series.
    - 2) Or approved equal.
- 3. Type V720 PVC Pressure Relief, By-Pass Relief, Back-Pressure Regulator, Back-Pressure, Anti-Siphon Valve 1/2 Inch to 2 Inches:
  - a. Direct acting diaphragm, spring controlled, in-line pattern, NPT threaded inlet and outlet, 150 psi design pressure.
  - b. PVC body, Teflon or Viton diaphragm, PVC or Teflon piston, high-density polyethylene or stainless steel adjusting bolt and locknut, stainless steel or coated steel spring, stainless steel fasteners.
  - c. Designed to open when upstream pressure reaches setpoint; set pressure adjustable from 10 psi to 100 psi, minimum. Pressure setpoint as shown in the Piping Schedule.
  - d. Manufacturers and Products:
    - 1) Plast-O-Matic; Series RVDT.
    - 2) Griffco; Series BPV.
    - 3) Primary Fluid Systems; TOP Valve.
    - 4) Or approved equal.
- 4. Type V731 Pressure-relief Valve 2 Inches and Smaller:
  - a. Spring controlled, stainless steel CF8M body, spring case, PTFE body gasket, Type 316 stainless steel valve stem, NPT threaded ends, 400 psi rated.
  - b. Opens when upstream pressure reaches a maximum setpoint.
  - c. Size/Rating: As shown on Drawings.
  - d. Manufacturers and Products:
    - 1) Kunkle Valve; Model 171S.
    - 2) Or approved equal.
- 5. Type V733 Pressure-Relief Valve, Back-pressure regulator for Digester Gas Service in a Municipal Wastewater Treatment Plant:
  - a. Pneumatically operated, diaphragm actuated, pilot controlled globe valve, ductile iron or cast steel body, ASME B16.1 Class 150 flanged ends, rated 250 psi, stainless steel stem, nickel coated on sealing surfaces plug, rubberized canvas diaphragm, steel and vulcanized rubber seat with nitrile rubber seals, to open

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- when upstream pressure reaches a maximum set point and to close when upstream pressure falls below the set point.
- b. Fusion-bonded epoxy lining and coating installed in accordance with specification Section 09 90 00 Painting and Coating.
  - c. Size/Rating: 10 inch, set point of 2.5 psig (field adjustable).
  - d. Manufacturers and Products:
    - 1) Pietro Fiorentini; Reval 182.
    - 2) Or approved equal.
6. Type V740 Air and Vacuum Valve 1/2 Inch to 16 Inches:
- a. 1/2-inch through 3-inch NPT inlets and outlets, 4-inch and larger ASME B16.1 Class 125 flanged inlet with plain outlet and protective hood.
  - b. Rated 150 psi (250 psi for RWHP service) working pressure, cast-iron or ductile iron body and cover, stainless steel float and trim, built and tested to AWWA C512. Operating pressure as shown on the Valve Schedule.
  - c. Manufacturers and Products:
    - 1) APCO Valve and Primer Corp.; Series 140 or Series 150.
    - 2) Val-Matic Valve; Series 100.
    - 3) Or approved equal.
7. Type V741 Air and Vacuum Valve 4 Inches to 16 Inches with Anti-slam Device:
- a. Equipped with anti-slam device to throttle flow of water into air valve. Design anti-slam device to permit full, unrestricted flow of air into and out of air valve but reduce flow area for water to approximately 10 percent.
  - b. Rated 150 psi working pressure, cast-iron or ductile iron body and cover, stainless steel float and trim, built and tested to AWWA C512, ASME B16.1 Class 125 flanged inlet and plain outlet with protective hood.
  - c. Provide air release valve and isolation gate valve to meet rated working pressure. Operating pressure is shown on the Valve Schedule.
  - d. Manufacturers and Products:
    - 1) ARI; Series D-23NS.
    - 2) Vent-O-Mat; Series RGXII.
    - 3) Or approved equal.
8. Type V744 Air Release Valve 1/2 Inch to 2 Inches:
- a. Suitable for water service, automatically exhaust small amounts of entrained air that accumulates in a system. In CLOSED position, seat against resilient seat to prevent water leakage.
  - b. Rated 150 psi working pressure (250 psi for RWHP/UWHP service), cast-iron or ductile iron body and cover, stainless steel float and trim, NPT threaded inlet and outlet, built and tested to

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- AWWA C512. Operating pressure is shown on the Valve Schedule.
- c. Manufacturers and Products:
    - 1) APCO Valve and Primer Corp.; Series 50, 200, and 200A.
    - 2) Val-Matic Valve; Series 15A to 45.6.
    - 3) Or approved equal.
9. Type V746 Combination Air Release Valve 1 Inch to 16 Inches:
- a. Suitable for water service, combines operating features of air and vacuum valve and air release valve. Air and vacuum portion to automatically exhaust air during filling of system and allow air to re-enter during draining or when vacuum occurs. Air release portion to automatically exhaust entrained air that accumulates in system.
  - b. Valve single body or dual body, air release valve mounted on air and vacuum valve, isolation valve mounted between the dual valves. 1-inch through 3-inch valves with NPT threaded inlet and outlet, 4-inch and larger valves with ASME B16.1 Class 125 flanged inlet and cover outlet.
  - c. Rated 150 psi working pressure, cast-iron or ductile iron body and cover, stainless steel float and trim, built and tested to AWWA C512.
  - d. Manufacturers and Products:
    - 1) APCO Valve and Primer Corp.; Series 143C to 147C or 1804 to 1816.
    - 2) Val-Matic Valve; Series 201C to 203C or 104/22 to 116/38.
    - 3) Or approved equal.
10. Type V750 Sewage Air and Vacuum Valve 2 Inches to 14 Inches:
- a. Suitable for sewage service; automatically exhausts air during system filling and allows air to re-enter during draining or when vacuum occurs.
  - b. Rated working pressure of 150 psi, 1-inch through 3-inch valves with NPT threaded inlet and outlet, 4-inch and larger valves with ASME B16.1 Class 125 flanged inlet and threaded cover outlet, built and tested to AWWA C512.
  - c. Materials: Cast-iron or ductile iron body and cover, concave or skirted stainless steel float and trim, Buna-N seat.
  - d. Sewage air and vacuum valve fitted with blowoff valve, flushing valve with quick disconnect couplings, and a minimum 5 feet of hose with quick disconnect couplings to permit backflushing after installation without dismantling valve.
  - e. Manufacturers and Products:
    - 1) APCO Valve and Primer Corp.; Series 401 SAVV to 414 SAVV.
    - 2) Val-Matic Valve; Series 301 to 306.
    - 3) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

11. Type V752 Sewage Air Release Valve 2 Inches to 4 Inches:
  - a. Suitable for sewage service; automatically exhausts entrained air that accumulates in a system.
  - b. Rated working pressure of 150 psi, operating pressure as shown on the Valve Schedule, built and tested to AWWA C512.
  - c. Materials: Cast-iron or ductile iron body and cover with NPT threaded inlet and 1-inch NPT threaded outlet, concave or skirted stainless steel float and trim; Buna-N resilient seat.
  - d. Sewage air release valve fitted with blowoff valve, flushing valve with quick disconnect couplings, and a minimum 5 feet of hose with quick disconnect couplings to permit backflushing after installation without dismantling valve.
  - e. Manufacturers and Products:
    - 1) APCO Valve and Primer Corp.; Series 400 SARV or 450 SARV.
    - 2) Val-Matic Valve; Series 48 or 49.
    - 3) Or approved equal.
12. Type V754 Sewage Combination Air Valve 2 Inches to 6 Inches:
  - a. Suitable for sewage service; combines operating functions of air and vacuum valve and an air release valve. Air and vacuum portion shall automatically exhaust air during filling of a system and allow air to re-enter during draining or when a vacuum occurs. Air release portion to automatically exhaust entrained air that accumulates in system. Single body unit with air and vacuum valve and an air release valve in a single housing.
  - b. Rated working pressure of 150 psi; built and tested to AWWA C512.
  - c. Materials: Cast-iron or ductile iron body and covers, NTP threaded inlet and outlet, with concave or skirted stainless steel float and trim.
  - d. Sewage air release valve fitted with blowoff valve, flushing valve with quick disconnect couplings, and a minimum 5 feet of hose with quick disconnect couplings to permit backflushing after installation without dismantling valve.
  - e. Manufacturers and Products:
    - 1) APCO Valve and Primer Corp.; Series 440 SCAV.
    - 2) Val-Matic Valve; Series 800.
    - 3) Or approved equal.

H. Miscellaneous Valves:

1. Type V900 Diaphragm Valve 1/2 Inch to 12 Inches:
  - a. Weir type, polypropylene-lined cast-iron body, ASME B16.1 flanged ends, manual operator indicating, rising stem type with

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- handwheel, diaphragm ethylene propylene, in accordance with MSS SP-88 Category B.
- b. Manufacturers:
    - 1) ITT Engineered Valves.
    - 2) Saunders Valve, Inc.
    - 3) Or approved equal.
  2. Type V901 Diaphragm Valve 1/2 Inch to 12 Inches:
    - a. Straight-through type, polypropylene-lined cast-iron body, ASME B16.1 flanged ends, manual operator indicating, rising stem type with handwheel, diaphragm ethylene propylene, in accordance with MSS SP-88, Category B.
    - b. Manufacturers:
      - 1) ITT Engineered Valves.
      - 2) Saunders Valve, Inc.
      - 3) Or approved equal.
  3. Type V903 Diaphragm Valve, 1/2 Inch to 4 Inches:
    - a. Weir type with CPVC Type 4, Grade 1 body, PTFE with EPDM backing diaphragm, double union design, solvent weld socket ends for valves smaller than 2 inch, flanged ends for valve 2 inch and larger, handwheel operator, position indicator, adjustable travel stop, clear molded acrylic stem cap.
    - b. Manufacturers and Products:
      - 1) ASAHI/AMERICA; Diaphragm Valve Type 14.
      - 2) ITT Engineered Valves; Dia-Flo.
      - 3) Saunders Valve; Diaphragm Valve.
      - 4) Or approved equal.
  4. Type V925 Sampling Valve:
    - a. Type 316 stainless steel wetted parts, hand operated iron crank, piston to extend to inner surface of vessel or pipe, sealed by two compressible replaceable Teflon rings, one above discharge port and other below discharge port, 1-inch NPT inlet and 1-inch NPT outlet.
    - b. Manufacturers and Products:
      - 1) Strahman Valves, Inc.; Piston Type Sampling Valve.
      - 2) Fetterolf Corporation; Rod-Seal Sampling Valve.
      - 3) Or approved equal.
  5. Type V940 Solenoid Valve 1/4 Inch to 2 Inches:
    - a. Two-way internal pilot operated diaphragm type, brass body, resilient seat suitable for air or water, solenoid coil molded epoxy, NEMA insulation Class F, 120V ac, 60-Hz, unless otherwise indicated. Solenoid enclosure NEMA 250, Type 4 unless otherwise indicated. Size and normal position (when de-energized) as indicated on the Valve Schedule.
    - b. Minimum operating pressure differential no greater than 5 psig, maximum operating pressure differential not less than 125 psig.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Manufacturers:
  - 1) ASCO.
  - 2) Skinner.
  - 3) Or approved equal.
- 6. Type V960 Flow Regulator Valve 3/8 Inch to 3 Inches:
  - a. Designed to deliver a constant volume of water flow over a wide pressure drop range with the use of a flexible orifice. The flow rate shall be maintained to within 15 percent between 15 psi and 125 psi.
  - b. ASTM A276 GR 316 or ASTM A351/A351M GR CF8M stainless steel body and end piece, NPT threaded ends, EPDM orifice, 175-psig rated minimum.
  - c. Flow Rate: 50 gpm.
  - d. Manufacturers and Products:
    - 1) Eddington Industries; Model FR-250-S.
    - 2) Or approved equal.

2.06 OPERATORS AND ACTUATORS

A. Manual Operators:

- 1. General:
  - a. For AWWA valves, operator force not to exceed requirements of applicable valve standard. Provide gear reduction operator when force exceeds requirements.
  - b. For non-AWWA valves, operator force not to exceed applicable industry standard or 80 pounds, whichever is less, under operating condition, including initial breakaway. Provide gear reduction operator when force exceeds requirements.
  - c. Operator self-locking type or equipped with self-locking device.
  - d. Position indicator on quarter-turn valves.
  - e. Worm and gear operators one-piece design, worm-gears of gear bronze material. Worm of hardened alloy steel with thread ground and polished. Traveling nut type operator's threaded steel reach rod with internally threaded bronze or ductile iron nut.
- 2. Exposed Operator:
  - a. Galvanized and painted handwheel.
  - b. Cranks on gear type operator.
  - c. Chain wheel operator with tieback, extension stem, floor stand, and other accessories to permit operation from normal operation level.
  - d. Valve handles to take a padlock, and wheels a chain and padlock.
- 3. Buried Operator:
  - a. Buried service operators on valves larger than 2-1/2 inches shall have a 2-inch AWWA operating nut. Buried operators on valves

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2 inches and smaller shall have cross handle for operation by forked key. Enclose moving parts of valve and operator in housing to prevent contact with the soil.

- b. Buried service operators to be grease packed and gasketed to withstand submersion in water to 20 feet minimum.
- c. Buried valves shall have extension stems, bonnets, and valve boxes.

B. Electric Operators, 120 Volts:

- 1. General:
  - a. Comply with latest version of AWWA C542. Size to 1-1/2 times required operating torque. Motor stall torque not to exceed torque capacity of the valve.
  - b. Controls integral with actuator and fully equipped as specified in AWWA C542.
  - c. There are various proprietary valve communication protocols adopted in the plant. Contractor shall provide operators that are compatible with the existing proprietary valve communication protocols, as applicable.
- 2. Operator Operation, General:
  - a. Suitable for full 90-degree rotation of quarter-turn valves.
  - b. Manually override handwheel.
  - c. Mechanical valve position indication.
- 3. Electronic Control:
  - a. Torque Limiting Switches: Two single pole, double throw mechanical switches. Switches operate at any point in valve travel.
  - b. Jammed-valve detection and protection.
  - c. Motor over-temperature detection and protection.
  - d. Travel limit switches, single pole double throw.
  - e. 24 volts control.
- 4. Open-Close (O/C) Service:
  - a. Duty cycle for intermittent ON-OFF operation shall be 25 percent.
  - b. Operator shall power to OPEN and power to CLOSE.
  - c. Local Indication and Control:
    - 1) Integral mechanical valve POSITION indication, 0 percent to 100 percent OPENED.
    - 2) Integral OPENED and CLOSED indication lights.
    - 3) Integral LOCAL-OFF-REMOTE (L-O-R).
    - 4) Integral OPEN maintained switch which causes the valve to stroke full OPENED, even if OPEN switch is released, while L-O-R switch is in LOCAL.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 5) Integral CLOSE maintained switch which causes valve to stroke full CLOSED, even if CLOSED switch is released, while L-O-R switch is in LOCAL.
- d. Remote Indication and Control:
  - 1) Relay contact that closes when valve is capable of being controlled remotely (L-O-R switch in REMOTE) for connection to and monitoring by plant control system.
  - 2) Limit switch that closes when valve is fully OPENED for connection to and monitoring by plant control system.
  - 3) Limit switch that closes when valve is fully CLOSED for connection to and monitoring by plant control system.
5. Modulating (M) Service:
  - a. Operator rated for modulating duty.
  - b. Operator shall modulate based on an externally applied 4 mA to 20 mA dc signal.
  - c. Ac motor with solid state reversing starter or dc motor with solid state reversing controller, and built-in overload protection.
  - d. Local Indication and Control:
    - 1) Integral mechanical valve POSITION indication, 0 percent to 100 percent OPENED.
    - 2) Integral OPENED and CLOSED indication lights.
    - 3) Integral LOCAL-OFF-REMOTE (L-O-R).
    - 4) Integral OPEN momentary switch which causes valve to stroke towards OPENED, as long as OPEN switch is held, while L-O-R switch is in LOCAL.
    - 5) Integral CLOSE momentary switch which causes valve to stroke towards CLOSED, as long as CLOSED switch is held, while L-O-R switch is in LOCAL.
    - 6) Position valve proportionally 0 percent to 100 percent OPEN with external 4 mA to 20 mA dc signal while in REMOTE.
  - e. Remote Indication and Control:
    - 1) Relay contact that closes when valve is capable of being controlled remotely (L-O-R switch in REMOTE) for connection to and monitoring by plant control system.
    - 2) Limit switch that closes when valve is fully OPENED for connection to and monitoring by plant control system.
    - 3) Limit switch that closes when valve is fully CLOSED for connection to and monitoring by plant control system.
    - 4) Current Position Transmitter, 4 mA to 20 mA dc signal in proportion to 0 percent to 100 percent OPENED, with 0.5 percent accuracy and 0.5 percent repeatability, capable of driving a 750-ohm load, for connection to and monitoring by plant control system.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

6. Control Features: Electric motor actuators with features as noted above, and as modified/supplemented in Electric Actuated Valve Schedule.
  7. Manufacturers:
    - a. Rotork Controls.
    - b. Flowserve Limitorque.
    - c. AUMA.
    - d. Or approved equal.
- C. Electric Motor Actuators, 480 Volts:
1. General:
    - a. Comply with latest version of AWWA C542.
    - b. Size to 1-1/2 times required operating torque. Motor stall torque not to exceed torque capacity of valve.
    - c. Controls integral with actuator and fully equipped as specified in AWWA C542.
    - d. Stem protection for rising stem valves.
    - e. There are various proprietary valve communication protocols adopted in the plant. Contractor shall provide operators that are compatible with the existing proprietary valve communication protocols as applicable.
  2. Actuator Operation—General:
    - a. Suitable for full 90-degree rotation of quarter-turn valves or for use on multiturn valves, as applicable.
    - b. Manual override handwheel.
    - c. Valve position indication.
    - d. Operate from FULL CLOSED to FULL OPEN positions or the reverse in the number of seconds given in Electric Actuated Valve Schedule.
    - e. Nonintrusive Electronic Control: Local controls, diagnostics, and calibration, including limit and torque settings, shall be accomplished nonintrusively. Electronic valve position display with capability to show continuous torque output. If applicable, provide two hand-held configuration units for every 10 actuators provided, two minimum.
  3. Open-Close(O/C)/Throttling(T) Service:
    - a. Size motors for one complete OPEN-CLOSE-OPEN cycle no less than once every 10 minutes.
    - b. Actuator suitable for throttling operation of valve at intermediate positions.
    - c. LOCAL-OFF-REMOTE Selector Switch, padlockable in each position:
      - 1) Integral OPEN-STOP-CLOSE momentary pushbuttons with seal-in circuits to control valve in LOCAL position.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 2) Remote OPEN-STOP-CLOSE momentary control dry contact inputs in REMOTE position. Integral seal-in circuits for remote OPEN and CLOSE commands; valve travel stops when remote STOP contact opens.
    - 3) Auxiliary contact that closes in REMOTE position.
  - d. OPEN and CLOSED indicating lights.
  - e. Integral reversing motor starter with built-in overload protection.
4. Modulating (M) Service:
  - a. Size actuators for modulating duty.
  - b. Feedback potentiometer, or equivalent, and integral electronic positioner/comparator circuit to maintain valve position.
  - c. HAND-OFF-AUTO (Local-Off-Remote) Selector Switch, padlockable in each position:
    - 1) Integral OPEN-STOP-CLOSE momentary pushbuttons with seal-in circuits to control valve in HAND (Local) position.
    - 2) 4 mA to 20 mA dc input signal to control valve in AUTO (Remote) position.
    - 3) Auxiliary contact that closes in AUTO (Remote) position.
  - d. OPEN and CLOSED indicating lights.
  - e. Ac motor with solid state reversing starter or dc motor with solid state reversing controller, and built-in overload protection. Controller capable of 1,200 starts per hour.
  - f. Duty cycle limit timer and adjustable band width, or equivalent, to prevent actuator hunting.
  - g. Valve position output converter that generates isolated 4 mA to 20 mA dc signal in proportion to valve position, and is capable of driving into loads of up to 500 ohms at 24V dc.
5. Limit Switch:
  - a. Single-pole, double-throw (SPDT) type, field adjustable, with contacts rated for 5 amps at 120V ac.
  - b. Each valve actuator to have a minimum of two auxiliary transfer contacts at end position, one for valve FULL OPEN and one for valve FULL CLOSED.
  - c. Housed in actuator control enclosure.
6. Control Features: Electric motor actuators with features as noted above, and as modified/supplemented in Electric Actuated Valve Schedule.
7. Manufacturers:
  - a. Rotork Controls.
  - b. Flowserve Limatorque.
  - c. AUMA.
  - d. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.07 ACCESSORIES

- A. Tagging: 1-1/2-inch diameter heavy brass or stainless steel tag attached with No. 16 solid brass or stainless steel jack chain for each valve bearing valve tag number shown on Electric Actuated Valve Schedule, Pneumatic Actuated Valve Schedule, and Self-Regulated Valve Schedule.
- B. Limit Switch:
  - 1. Factory installed NEMA 4X limit switch by valve or actuator manufacturer.
  - 2. SPST, rated at 5 amps, 120V ac.
- C. Visual Valve Position Indicator:
  - 1. Visual position indicators showing valve position, OPEN or CLOSED, shall be provided as shown on Drawings for instant recognition of valve position from all vantage points.
  - 2. The color code shall be Green (CLOSED) and Red (OPEN). When valve is in a CLOSED position, operating personnel shall view a highly visible green cylinder. The green cylinder is transformed in a red cylinder when the valve is OPEN. Provide stainless steel fabricated mounting hardware and drive guide as required for mounting position indicator on the valve.
  - 3. Manually operated valves that require limit switches shall be equipped with SolaR Indicator by StoneL Corporation, or approved equal.
  - 4. Manually operated valves and electrically actuated valves that require visual position indication, only, shall be equipped with Stand Alone Visual Indicators by StoneL Corporation, or approved equal.
- D. Extension Bonnet for Valve Operator: Complete with enclosed stem, extension, support brackets, and accessories for valve and operator.
  - 1. Manufacturers:
    - a. Pratt.
    - b. DeZurik.
    - c. Or approved equal.
- E. Floor Stand:
  - 1. Nonrising, heavy pattern, indicating type.
  - 2. Complete with solid extension stem, coupling, handwheel, stem guide brackets, and yoke attachment. Stem length as required to connect valve operating nut and floor stand.
  - 3. Stem Guide: Space such that stem L/R ratio does not exceed 200.
  - 4. Anchor Bolts: Type 304 stainless steel.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Manufacturers and Products:
    - a. Clow; Figure F-5515.
    - b. Mueller, Figure A-26426.
    - c. Or approved equal.
- F. Floor Box:
1. Plain type, for support of nonrising type stem.
  2. Complete with solid extension stem, operating nut, and stem guide brackets. Stem length as required to extend valve operating nut to within 3 inches of finish floor.
  3. Stem Guide: Space such that stem L/R ratio does not exceed 200.
  4. Anchor Bolts: Type 304 stainless steel.
  5. Manufacturers and Products:
    - a. Neenah Foundry; R 7506.
    - b. Clow; No. F5690.
    - c. Or approved equal.
- G. Chain Wheel and Guide:
1. Handwheel direct-mount type.
  2. Complete with chain.
  3. Galvanized or cadmium-plated.
  4. Manufacturers and Products:
    - a. Clow Corp.; Figure F-5680.
    - b. Walworth Co.; Figure 804.
    - c. DeZurik Corp.; Series W or LWG.
    - d. Or approved equal.
- H. Cast-Iron Valve Box: Designed for traffic loads, sliding type, with minimum of 5-1/4-inch ID shaft.
1. Box: Cast iron with minimum depth of 9 inches.
  2. Lid: Cast iron, minimum depth 3 inches, locking type, marked with appropriate service.
  3. Extensions: Cast iron.
  4. Two-piece box and lid for valves 4 inches through 12 inches, three-piece box and lid for valves larger than 12 inches with base sized for valve.
  5. Valve extension stem for valves with operating nuts 3 feet or greater below finish grade.
  6. Manufacturers and Products:
    - a. East Jordan Iron Works; Cast-Iron Valve Boxes.
    - b. Bingham & Taylor; Cast-Iron Valve Boxes.
    - c. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- I. Concrete Valve Box: Designed for traffic loads, sliding type, with minimum of 10-inch ID shaft.
  1. Box: High-density, reinforced concrete, minimum depth 12 inches, cast-iron ring seat.
  2. Lid: Cast iron, minimum depth 3 inches, marked with appropriate service.
  3. Extensions: Concrete.
  4. Manufacturers and Products:
    - a. Christy Concrete Products; G Series.
    - b. BES Concrete Products; G Series.
    - c. Or approved equal.

**PART 3 EXECUTION**

**3.01 INSTALLATION**

- A. Flange Ends:
  1. Flanged valve bolt holes shall straddle vertical centerline of pipe.
  2. Clean flanged faces, insert gasket and bolts, and tighten nuts progressively and uniformly.
- B. Screwed Ends:
  1. Clean threads by wire brushing or swabbing.
  2. Apply joint compound.
- C. PVC and CPVC Valves: Install using solvents approved for valve service conditions.
- D. Valve Installation and Orientation:
  1. General:
    - a. Install valves so handles operate from fully open to fully closed without encountering obstructions.
    - b. Install valves in location for easy access for routine operation and maintenance.
    - c. Install valves per manufacturer's recommendations.
  2. Gate, Globe, and Ball Valves:
    - a. Install operating stem vertical when valve is installed in horizontal runs of pipe having centerline elevations 4 feet 6 inches or less above finished floor, unless otherwise shown.
    - b. Install operating stem horizontal in horizontal runs of pipe having centerline elevations greater than 4 feet 6 inches above finish floor, unless otherwise shown.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Eccentric Plug Valves:
    - a. Unless otherwise restricted or shown on Drawings, install valve as follows:
      - 1) Liquids with suspended solids service with horizontal flow: Install valve with stem in horizontal position with plug up when valve is open. Install valve with seat end upstream (flow to produce unseating pressure).
      - 2) Liquids with suspended solids service with vertical flow: Install valve with seat in highest portion of valve (seat up).
      - 3) Clean Liquids and Gas Service: Install valve with seat end downstream of higher pressure when valve is closed (higher pressure forces plug into seat).
  4. Butterfly Valves:
    - a. Unless otherwise restricted or shown on Drawings, install valve a minimum of 8 diameters downstream of a horizontal elbow or branch tee with shaft in horizontal position.
    - b. For vertical elbow or branch tee immediately upstream of valve, install valve with shaft in vertical position.
    - c. For horizontal elbow or branch tee immediately upstream of valve, install valve with shaft in horizontal position.
    - d. When installed immediately downstream of swing check, install valve with shaft perpendicular to swing check shaft.
    - e. For free inlet or discharge into basins and tanks, install valve with shaft in vertical position.
  5. Check Valves:
    - a. Install valve in accordance with manufacturer's instructions and provide required distance from immediate upstream fitting.
    - b. Install valve in vertical flow (up) piping only for gas services.
    - c. Install swing check valve with shaft in horizontal position.
    - d. Install double disc swing check valve to be perpendicular to flow pattern when discs are open.
  6. Solenoid Valves: Install in accordance with manufacturer's instructions.
- E. Install line size ball valve and union upstream of each solenoid valve, in-line flow switch, or other in-line electrical device, excluding magnetic flowmeters, for isolation during maintenance.
- F. Locate valve to provide accessibility for control and maintenance. Install access doors in finished walls and plaster ceilings for valve access.
- G. Extension Stem for Operator: Where depth of valve operating nut is 3 feet or greater below finish grade, furnish operating extension stem with 2-inch operating nut to bring operating nut to a point within 6 inches of finish grade.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- H. Torque Tube: Where operator for quarter-turn valve is located on floor stand, furnish extension stem torque tube of a type properly sized for maximum torque capacity of valve.
- I. Floor Box and Stem: Steel extension stem length shall locate operating nut in floor box.
- J. Chain Wheel and Guide: Install chain wheel and guide assemblies or chain lever assemblies on manually operated valves over 6 feet 9 inches above finish floor. Install chain to within 3 feet of finish floor. Where chains hang in normally traveled areas, use appropriate “L” type tie-back anchors. Install chains to within operator horizontal reach of 2 feet 6 inches maximum, measured from normal operator standing location or station.
- K. Actuators with Network Communications Protocols:
  - 1. Actuators as defined in Power Operated Valve Schedule or P&IDs as having communications protocol.
  - 2. Programming Services:
    - a. Integration of the new valve(s) into the existing valve network via the Master Station and redundant Master Station.
    - b. Removal of any networked valves deleted in this project from the Master Station(s) to ensure error free communications on the valve network and communications to the Distributed Control System (DCS).
    - c. Setup and confirm communications to the DCS with the DCS Provider (DCSP).
  - 3. Actuators networked communications are called as:
    - a. Pakscan (Rotork).
    - b. Flowserve (Limitorque).

3.02 TESTS AND INSPECTION

- A. Valve may be either tested while testing pipelines, or as a separate step.
- B. Test that valves open and close smoothly under operating pressure conditions. Test that two-way valves open and close smoothly under operating pressure conditions from both directions.
- C. Inspect air and vacuum valves as pipe is being filled to verify venting and seating is fully functional.
- D. Count and record number of turns to open and close valve; account for discrepancies with manufacturer’s data.
- E. Set, verify, and record set pressures for relief and regulating valves.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Automatic valves to be tested in conjunction with control system testing. Set opening and closing speeds, limit switches, as required or recommended by Engineer.
- G. Test hydrostatic relief valve seating; record leakage. Adjust and retest to maximum leakage of 0.1 gpm per foot of seat periphery.

3.03 MANUFACTURER'S SERVICES

- A. Manufacturer's Representative:
  - 1. Present at Site for minimum person-days listed below, travel time excluded:
    - a. 1 person-day for installation assistance and inspection.
    - b. 1 person-day for functional and performance testing and completion of Manufacturer's Certificate of Proper Installation.
- B. See Section 01 43 33, Manufacturers' Field Services, and Section 01 91 14, Testing, Integration, and Startup.

**END OF SECTION**

**SECTION 40 80 01**  
**PROCESS PIPING LEAKAGE TESTING**

**PART 1 GENERAL**

1.01 SUBMITTALS

A. Informational Submittals:

1. Testing Plan:
  - a. Submit prior to testing and include at least the information that follows.
    - 1) Testing dates.
    - 2) Piping systems and section(s) to be tested.
    - 3) Test type.
    - 4) Method of isolation from existing piping and equipment.
    - 5) Method of isolation from instrumentation and other items not to be tested.
    - 6) Provisions for supporting and providing thrust restraint for buried piping during preliminary visual test.
    - 7) Method to remove all air from piping prior to testing.
    - 8) Method of filling and removing water.
    - 9) Calculation of maximum allowable leakage for piping section(s) to be tested.
2. Certifications of Calibration: Testing equipment.
3. Certified Test Report.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 PREPARATION

- A. Notify Engineer in writing 5 work days in advance of testing. Perform testing in presence of Engineer.
- B. Pressure Piping:
  1. Install temporary thrust blocking or other restraint as necessary to protect adjacent piping or equipment and make taps in piping prior to testing.
  2. Wait 5 days minimum after concrete thrust blocking is installed to perform pressure tests. If high-early strength cement is used for thrust blocking, wait may be reduced to 2 days.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Prior to test, remove or suitably isolate appurtenant instruments or devices that could be damaged by pressure testing.
  4. New Piping Connected to Existing Piping:
    - a. Isolate new piping with grooved-end pipe caps, spectacle blinds, blind flanges, or as acceptable to Engineer.
    - b. Test joint between new piping and existing piping by methods that do not place entire existing system under test load, as approved by Engineer.
  5. Items that do not require testing to be coordinated with Engineer.
  6. Test Pressure: As indicated on Piping Schedule.
- C. Test section may be filled with water and allowed to stand under low pressure prior to testing.
- D. Gravity Piping:
1. Perform testing after service connections, manholes, and backfilling have been completed between stations to be tested.
  2. Determine groundwater level at time of testing by exploratory holes or other method acceptable to Engineer.
  3. Pipe 42 Inches Diameter and Larger: Joint testing device may be used to isolate and test individual joints.

### 3.02 HYDROSTATIC TEST FOR PRESSURE PIPING

- A. Fluid: Clean water of such quality to prevent corrosion of materials in piping system.
- B. Exposed Piping:
1. Perform testing on installed piping prior to application of insulation.
  2. Maximum Filling Velocity: 0.25 foot per second, applied over full area of pipe.
  3. Vent piping during filling. Open vents at high points of piping system or loosen flanges, using at least four bolts, or use equipment vents to purge air pockets.
  4. Maintain hydrostatic test pressure continuously for 60 minutes, minimum, and for such additional time as necessary to conduct examinations for leakage.
  5. Examine joints and connections for leakage.
  6. Correct visible leakage and retest as specified.
  7. Leave pipe full of water after repair of leaks or empty pipe of water prior to final cleaning or disinfection per direction of Engineer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. Buried Piping:

1. Perform preliminary visual test on piping prior to backfilling. Provisions to support piping and thrust restraint must be completed prior to filling pipe with water. Final testing for approval to be completed after backfilling.
2. Expel air from piping system during filling.
3. Apply and maintain specified test pressure with hydraulic force pump. Valve off piping system when test pressure is reached.
4. Maintain hydrostatic test pressure continuously for 2 hours minimum, reopening isolation valve only as necessary to restore test pressure.
5. Determine actual leakage by measuring quantity of water necessary to maintain specified test pressure for duration of test.
6. Maximum Allowable Leakage:

$$L = \frac{SD(P)^{1/2}}{148,000}$$

where:

- L = Allowable leakage, in gallons per hour.  
S = Length of pipe tested, in feet.  
D = Nominal diameter of pipe, in inches.  
P = Test pressure during leakage test, in pounds per square inch.

7. Correct leakage greater than allowable, and retest as specified.

3.03 PNEUMATIC TEST FOR PRESSURE PIPING

- A. Do not perform on:
1. PVC or CPVC pipe.
  2. Piping larger than 18 inches.
  3. Buried and other non-exposed piping.
- B. Fluid: Oil-free, dry air.
- C. Procedure:
1. Apply preliminary pneumatic test pressure of 25 psig maximum to piping system prior to final leak testing, to locate visible leaks. Apply soap bubble mixture to joints and connections; examine for leakage.
  2. Correct visible leaks and repeat preliminary test until visible leaks are corrected.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Gradually increase pressure in system to half of specified test pressure. Thereafter, increase pressure in steps of approximately one-tenth of specified test pressure until required test pressure is reached.
  4. Maintain pneumatic test pressure continuously for minimum of 10 minutes and for such additional time as necessary to conduct soap bubble examination for leakage.
  5. Correct visible leakage and retest as specified.
- D. Allowable Leakage: Piping system, exclusive of possible localized instances at pump or valve packing, shall show no visual evidence of leakage.
- E. After testing and final cleaning, purge with nitrogen those lines that will carry flammable gases to assure no explosive mixtures will be present in system during filling process.

3.04 HYDROSTATIC TEST FOR GRAVITY PIPING

- A. Testing Equipment Accuracy: Plus or minus 1/2-gallon water leakage under specified conditions.
- B. Maximum Allowable Leakage: 0.16 gallon(s) per hour per inch diameter per 100 feet. Include service connection footage in test section, subjected to minimum head specified.
- C. Gravity Sanitary and Roof Drain Piping: Test with 15 feet of water to include highest horizontal vent in filled piping. Where vertical drain and vent systems exceed 15 feet in height, test systems in 15-foot vertical sections as piping is installed.
- D. Exfiltration Test:
1. Hydrostatic Head:
    - a. At least 6 feet above maximum estimated groundwater level in section being tested.
    - b. No less than 6 feet above inside top of highest section of pipe in test section, including service connections.
  2. Length of Pipe Tested: Limit length such that pressure on invert of lower end of section does not exceed 30 feet of water column.
- E. Infiltration Test:
1. Groundwater Level: At least 6 feet above inside top of highest section of pipe in test section, including service connections.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Piping with groundwater infiltration rate greater than allowable leakage rate for exfiltration will be considered defective even if pipe previously passed a pressure test.
- G. Defective Piping Sections: Replace and retest as specified.

3.05 PNEUMATIC TEST FOR GRAVITY PIPING

A. Equipment:

- 1. Calibrate gauges with standardized test gauge provided by Engineer at start of each testing day. Engineer will witness calibration.
- 2. Install gauges, air piping manifolds, and valves at ground surface.
- 3. Provide pressure release device, such as rupture disc or pressure relief valve, to relieve pressure at 6 psi or less.
- 4. Restrain plugs used to close sewer lines to prevent blowoff.

B. Procedure:

- 1. Require that no person enter manhole where pipe is under pressure.
- 2. Slowly introduce air into pipe section until internal air pressure reaches 4 psi greater than average back pressure of groundwater submerging pipe.
- 3. Allow 2 minutes minimum for air temperature to stabilize.

C. Allowable Leakage: Test section will be considered defective when time required for pressure to decrease from 3.5 psi to 2.5 psi greater than average back pressure of groundwater submerging pipe is less than that computed using values from following table:

<b>Table 1*</b>

<p>Example: 15-inch diameter pipe:                      For 150 feet, T = 2.50 sec (Col B) x 150 ft = 375 sec = 6:15                      For 250 feet, T = 7:05 (Col D)                      For 500 feet, T = 1.42 sec (Col F) x 500 ft = 710 sec = 11:50</p> <p>*Based on 0.003 cfm per square foot with a minimum significant loss of 2 cfm and a maximum loss of 3.5 cfm.</p>					

- D. Piping with groundwater infiltration rate greater than allowable leakage rate for exfiltration will be considered defective even if pipe previously passed a pressure test.
- E. Defective Piping Sections: Replace and retest as specified.

3.06 FIELD QUALITY CONTROL

- A. Test Report Documentation:
  - 1. Test date.
  - 2. Description and identification of piping tested.
  - 3. Test fluid.
  - 4. Test pressure.
  - 5. Remarks, including:
    - a. Leaks (type, location).
    - b. Repair/replacement performed to remedy excessive leakage.
  - 6. Signed by Contractor and Engineer to represent that test has been satisfactorily completed.

**SECTION 40 90 00**  
**INSTRUMENTATION AND CONTROL**

**PART 1 GENERAL**

1.01 WORK OF THIS SECTION

- A. The Work of the following Divisions and Sections applies to the Work of this Section. Other Sections of the Specifications, not referenced below, shall also apply to the extent required for proper performance of this Work.
  - 1. Section 01 33 00, Submittal Procedures.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. The Work of this Section includes the general specification and requirements for the Instrumentation and Control (I&C) Work under this, and other applicable Specifications, including providing instrumentation and all related wiring as shown in these Contract Documents and Drawings. Detailed scope, and quantities are shown in Section 40 90 03, General Requirements, and Section 40 90 07, Scope of Work.
- C. The Contractor shall be responsible for the design, procurement, installation, testing, training, and documentation for I&C systems provided under this Contract in accordance with this Section and Section 40 90 07, Scope of Work. A Distributed Control System (DCS), when applicable, as specified in Section 40 90 03, General Requirements, will be provided by the City's DCS provider, Emerson Process Management (EPM). The Contractor shall be responsible for terminating and integrating all I&C equipment with the EPM DCS systems.

1.02 SCOPE

- A. The intent of this Section is that the Contractor will provide a complete and operational, turn-key, integrated I&C system, including all instrumentation and equipment as shown on Drawings, and as specified herein.
- B. The Contractor shall furnish all materials, tools, equipment, consumables and supplies and shall perform all labor required to complete the work in this Specification.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 REFERENCES

- A. The following is a list of standards which may be referenced in this Section:
1. American Petroleum Institute (API): API RP-550, Manual on Installation of Refinery Instruments and Control Systems, Part 1 - Process Instrumentation and Control Sections 1 Through 13.
  2. American National Standards Institute (ANSI):
    - a. ANSI B16.1, Cast Iron Pipe Flanges and Flanged Fittings, Class 25, 125, 250, and 800.
    - b. ANSI/ASME B16.5, Pipe Flanges and Flanged Fittings.
    - c. ANSI/AWWA C207, Steel Pipe Flanges for Waterworks Service - Sizes 4 In Through 144 In.
    - d. ANSI/AWWA C701, Cold-Water Meters - Turbine Type for Customer Service.
    - e. ANSI/AWWA C702, Cold-Water Meters - Compound Type.
    - f. AWWA C704, Cold-Water Meters - Propeller Type for Main Line Applications.
    - g. ANSI/AWWA, Ductile-Iron and Gray-Iron Fittings, 3-In Through C110/A21.10 48-In for Water and Other Liquids.
  3. American Society of Mechanical Engineers: ASME Report Fluid Meters, Sixth Edition, 1971.
  4. ASTM International (ASTM):
    - a. ASTM A105, Specification for Forgings, Carbon Steel for Piping Components.
    - b. ASTM A193, Specification for Alloy Steel and Stainless Steel Bolting Materials for High Temperature Service.
    - c. ASTM A194, Specification for Carbon and Alloy Steel Nuts for Bolts for High Pressure and High Temperature Service.
    - d. ASTM A283, Specification for Low and Intermediate Tensile Strength Carbon Steel Plates, Shapes, and Bars.
    - e. ASTM A312, Stainless Steel Piping.
    - f. ASTM A126, Specification for Gray Iron Castings for Valves, Flanges and Pipe Fittings.
    - g. ASTM B61, Specification for Steam or Valve Bronze Castings.
  5. International Society of Automation (ISA):
    - a. ISA-RP60.6, Nameplates, Labels, and Tags for Control Centers.
    - b. ISA-RP7.1, Pneumatic Control Circuit Pressure Test.
    - c. ISA-RP12.6, Installation of Intrinsically Safe Systems for Hazardous (Classified) Locations.
    - d. ISA-S5.1, Instrument Symbols and Identification.
    - e. ISA-S5.4, Instrument Loop Diagrams.
    - f. ISA-S12.4, Instrument Purging for Reduction of Hazardous Area Classification.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- g. ISA-S20, Specification Forms for Process Measurement and Control Instrumentation; Primary Elements and Control Valves.
- B. Work of this Section shall comply with the current editions of the following codes as adopted by the City of San Diego Municipal Code:
  - 1. Uniform Fire Code.
  - 2. National Electrical Code: NFPA70.
  - 3. National Fire Protection Association: NFPA 70E.
- C. UL: All I&C and instrument equipment furnished in this Section shall be listed by and shall bear the label of UL or of an independent testing laboratory acceptable to the City of San Diego (City).
- D. No exposed voltage that would require PPE or work permits will be allowed.

1.04 SUBMITTALS

- A. General:
  - 1. All submittals shall be provided in accordance with Section 01 33 00, Submittal Procedures, as a minimum, and in accordance with specialty submittal requirements below.
  - 2. All submittal of this section shall be provided with six hard copy and one soft copy CD.
  - 3. Submittals of this section shall be in Adobe Acrobat PDF format, unless otherwise specified. Vendor and Contractor Shop Drawings developed under this section shall be in Bentley MicroStation (.dgn) format, utilizing monochrome.
    - a. Documents not available in electronic format shall be scanned at 600 dpi, black and white) for documents without graphics, or color for documents with graphics and converted to Adobe Acrobat (PDF).
  - 4. Operations and Maintenance (O&M) Submittal Requirements of this Section:
    - a. Preliminary Submittal: Where required by Specification, two hard copies and one PDF of the preliminary submittals shall be provided to the City's representative for review.
    - b. Final Submittal: All Submittal documents in this section, including design and O&M documents, shall be provided on two CD's; One CD shall provide documents in native format (e.g. MicroStation, MS Word, MS Excel, etc.), and the other CD shall provide documents in PDF format. Both CD shall use the same file naming convention, except that the suffixes shall be different (e.g. PDF, XLS, etc.).

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Each document shall be indexed, and a database table in Excel shall be provided, which includes the following data for each document:
- 1) Document file name.
  - 2) Document description.
  - 3) Hard Copy Catalog No. (used by facility document coordinator).
  - 4) Document Type:
    - a) Shop Drawings:
      - (1) P&IDs.
      - (2) Loop Drawings.
      - (3) Instrument Data Sheets.
      - (4) Other.
    - b) Manufacturer's data.
    - c) Maintenance instructions.
    - d) Training.
  - 5) Facility Name.
  - 6) Specification Number.
  - 7) Process Name.
  - 8) Unit Process Number.

B. Presubmittal Conference:

1. The Contractor shall arrange and conduct a Presubmittal Conference within 60 days after award of the Contract. The purpose of the Presubmittal Conference is to review and approve the manner in which the Contractor intends to carry out his responsibilities for shop drawing submittal on the Work to be provided under this Section. The Contractor and the City Representative shall attend. Both the Contractor and the City Representative may invite additional parties at their discretion.
2. The Contractor shall allot a minimum of two 8-hour days for the Conference.
3. The Contractor shall prepare the following for discussion at the Conference:
  - a. List of equipment and materials for the instrumentation and I&C systems, including proposed manufacturer names and model numbers.
  - b. List of proposed clarifications to the indicated requirements plus a brief written explanation of each exception. Review and acceptance of proposed clarifications will be according to Section 01 33 00, Submittal Procedures.
  - c. One complete example of each type of submittal proposed.
  - d. A flow chart showing the steps the Contractor will take in preparing and coordinating each submittal to the City's Representative.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. A Gantt-Chart type schedule for the Work provided under this section, covering the time period beginning with the conference and ending after startup and acceptance. Dates for the beginning and ending of submittal preparation, submittal review periods, design, fabrication, programming, factory testing, delivery to the site, installation, field testing, and training shall be scheduled. The schedule shall be subdivided into major items or groups of items which are on the same schedule.
  4. The Contractor shall take formal minutes of the Pre-submittal Conference, including all events, questions, and resolutions. Minutes shall be distributed to the City's Representative within 48 hours after the meeting.
  5. The Contractor shall prepare a formal 'sign-in sheet for the pre-submittal meeting that captures the name, telephone number, affiliation/title and email address for each participant. Contractor shall deliver a copy of the sign-n sheet with the 'Minutes' as required above.
- C. Informational Submittals:
1. Submittal List: The Contractor shall develop and deliver a detailed list of all submittals required by the specification, as well as all additional submittals he/she envisions. This should be inclusive of Instruments and I&C hardware, software, reports, plans, status of schedules, testing documents and relevant maintenance documentation and forms.
  2. I&C Schedule: Within 60 days of Contract NTP the Contractor shall develop and deliver a detailed base-line schedule for the Instrumentation and I&C disciplines of the Project. The base-line schedule shall reference each submittal shown on the 'Submittal List', as well as all design, engineering, fabrication, delivery, installation, testing and acceptance elements related to Instrumentation and I&C Work.
    - a. The base-line schedule shall be prepared utilizing Primavera P6, or other project controls software standards that the city may direct.
    - b. The base-line schedule shall ensure that each activity is tied to all appropriate predecessor(s) and successor(s) activities.
    - c. 'Float' contained within the schedule shall be 'owned' by the City. Contractor utilization of schedule float is at the discretion of the City and the City may, at its sole discretion, require 'schedule recovery' efforts to regain float, to maintain Project delivery, if the City deems Contractor use of the float as deleterious to the Project.
    - d. Contractor shall allocate a minimum of 1 day to present and explain the baseline schedule to the City's representative.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. The City will review, and approve, the Contractor's baseline schedule, and Contractor shall not proceed with any of the Work of this section until he has obtained Instrumentation and I&C schedule approval.
- f. The 'approved' base-line schedule shall be 'stated' and submitted to the City, no later than the fifth workday of each month, following the Work status period.
- 3. Shop Drawings: The Contractor shall submit a sample of each 'type' of Shop Drawing the Contractor anticipates for the Project.
- 4. Loop Drawings: The Contractor shall submit a sample for each 'type', Analog, Discrete and Foreign Device Interface (Data link), Loop Drawings.
  - a. The Sample Loop Drawings will utilize a City Standard format which will be provided to the Contractor after Contract NTP. The loop drawing and DCS standards are available on the City's website under the Clean Water Operations Management Network (COMNET) Project Standards and Procedures Manual webpage. The purpose of this is to prove that the Contractor understands the various steps necessary to deliver a final, as- constructed, set of Loop Drawings to the City.
- 5. Training Submittal: The Contractor shall submit a sample of a training syllabus, and his training Plan for each piece of Instrumentation and I&C and DCS system components and software.

D. Action Submittals:

- 1. General: The Contractor shall be responsible for providing instrument and I&C Submittals to be used in the generation of control-panel wiring diagrams and Loop Drawings which depict the interconnection between instruments, panels, valve actuators, MCCs, and the DCS.
- 2. Shop Drawings:
  - a. Preparation of Shop Drawings shall not commence until completion of the Presubmittal Conference.
  - b. Preliminary Shop Drawings shall be submitted as a single package at one time not later than 90 days after NTP.
  - c. All systems, meters, instruments, and other elements shall be represented by symbology derived from the latest version of ANSI/ISA S5.1 and in accordance with Contract Documents and Drawings. The ISA nomenclature and numbers indicated herein shall be used exclusively in all Shop Drawings. No manufacturer's standard symbology or nomenclature shall replace those indicated in the Contract Documents.
  - d. During Shop Drawing development, the Contractor shall maintain a direct, informal liaison with the City's Representative, identified at the presubmittal conference, for exchange of technical

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- information. As a result, certain minor refinements and revisions to the indicated systems may be authorized informally by the City's Representative. However, these shall not alter the Work of this section and shall not cause increase or decrease in the Contract Price. No statement or direction by the City's Representative shall be construed as approval of any component or method, or exception to, or deviation from these Contract Documents.
- e. All Shop Drawings shall include the letterhead or title block of the Contractor. The title block shall include, as a minimum, the Contractor registered business name and address, project name, drawing name, revision level, and personnel responsible for drawing development and the name of the QA/QC reviewer.
- 1) Shop drawing copies shall be submitted as standard size 3-ring, loose-leaf, vinyl plastic binders suitable for bookshelf storage.
  - 2) A complete index shall be placed at the front of each binder. All sections indexed shall be separated by Alpha-Numeric Tabs that match the index.
  - 3) A separate technical brochure or bulletin shall be included for each instrument, meter system, and other element. The brochures shall be indexed by systems or loops. If, within a single system or loop, a single item is employed more than once, one brochure may cover all identical uses of that item in the system. Each brochure shall include a list of tag numbers to which it applies. System groups shall be separated by labeled tags.
3. Loop Drawings:
- a. Contractor is responsible for the overall development, coordination efforts and final delivery of Loop Drawings. Special requirements are outlined below.
  - b. Loop Diagrams: Loop diagrams shall be submitted in accordance with Section 01 33 00, Submittal Procedures, and the special requirements of this section. All Loop Drawings will conform to ISA 5.4 to verify DCS interface with all instrumentation and devices provided or installed under the project. The loop diagrams shall also define all interfaces with equipment provided by skid-mounted for Foreign Device interfaces.
  - c. Loop Drawings shall be developed utilizing a three-sheet format. A sample of the City's Standard three-sheet format will be provided to the Contractor after NTP. The following three-sheet format is required:
    - 1) Sheet 1:
      - a) Provide a device schedule developed from an electronic spreadsheet or database file, which will be

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

submitted with the loop diagrams. The table will show the following:

- (1) Device tag number, with Prefix, Unit Process, ISA Tag Prefix, Tag No. (a three or four-digit number based on the loop number) and Tag suffix.
  - (2) Equipment Service.
  - (3) Device Type.
  - (4) Location.
  - (5) Device Manufacturer.
  - (6) Model No.
  - (7) Spec. No.
  - (8) Area Contractor (if applicable).
  - (9) Submittal No.
  - (10) Calibrated Range/Remarks.
  - (11) Data Sheet No.
  - (12) I/O Signal type (AI, AO, DI, or DO).
  - (13) Signal Level.
  - (14) Device Range (full available instrument range).
  - (15) Engineering Units.
  - (16) Process Set Point.
  - (17) Loop Diagram No., reflecting the field instrument tag number.
  - (18) Loop Drawing File Name.
  - (19) Interconnect Drawing File Name.
- 2) Sheet 2: Loop Drawing meeting the Requirements of ANSI/ISA S5.4, except that intermediate terminal junction boxes may be omitted, and shall be shown on Page 3 for clarity. Butt splices and wire nuts shall be shown on as-builts, with the corresponding termination housing (JB, LB, etc. shown on Sheet 3. Datalinks, third-party I/O and bus connections shall also be shown.
- 3) Sheet 3: (Expansion sheet - required if the number of intermediate devices or terminal junction boxes exceeds what can be legibly shown on Sheet 2). Abbreviated diagram showing instrument, wire and cable numbers, intermediate terminal junction boxes, and PCM terminations. Wire identification numbers will reflect the field instrument tag number, and not the DCS I/O number.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 4) DCS I/O tag numbers will generally reflect the device tag number. Each I/O tag number will be unique. The tag prefix will be based on ISA-5.4, with the following additional special acronyms:

Acronym	Signal Use
RI	Ready Signals/Status
QI	In Computer Status
ZD	Device Open
ZB	Device Closed
MI	Motor Run
HS	Equipment Start/Stop

- d. The Contractor in concert with his I&C subcontractor shall be responsible for the preliminary development of all Loop Drawings, in the format specified. The Contractor will develop a ‘draft’ of each Loop Drawing.
- e. The Contractor will then coordinate with the DCS Controls Programmer (DCSCP), delivering draft Loop Drawings to the DCSP, who shall be responsible to filling out all the DCS-related addressing, software- level Information, DCS termination numbering, etc.
- f. The Contractor will then receive the draft Loop Drawings from the DCSP, and the Contractor shall finalize all Loop Drawings in Microstation. Contractor shall ensure that all ‘as- constructed’ information (such as I/O wiring being re-addressed at the DCS) has been incorporated onto the finalized Loop Drawings.
- g. The Contractor shall deliver the finalized Loop Drawings to the project Design Engineer. The Design Engineer is responsible for Quality Assurance/Quality Control of the final loop drawings, and shall check all Loop Drawings against design P&IDs, electrical design, and Contractor’s field as-constructed drawings. Contractor is responsible for all coordination with the Design Engineers and shall incorporate all changes and corrections required by the Design engineer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- h. Contractor shall prepare and deliver all loop drawing packages in accordance with these specifications. Note: All Loop Drawings shall be submitted to the City’s representative, prior to the start of any DCS cutover.
  - i. The City’s representative will review and approve the Loop Drawing Submittal in accordance with Section 01 33 00, Submittal Procedures. The Contractor is responsible for making all changes and annotation to the final Loop Drawings, as may be dictated during the various testing procedures. Red-line mark-up of all annotated Loop Drawings shall be delivered to the City’s representative at the conclusion of DCS testing activities.
4. Instruments and I&C Devices: For all Instruments and I&C devices provided under this section Contractor shall submit Technical brochures, bulletins and data sheets containing:
- a. Fully completed ISA S20 data sheets.
  - b. Component functional descriptions.
  - c. Locations or assembly at which component is to be installed.
  - d. Materials of a component's parts which will be in contact with process fluids or gases.
  - e. Instrument Factory Calibration Sheets: Where an instrument is of necessity, precalibrated at the factory, the Contractor shall submit all Factory Calibration Sheets to the City’s representative immediately upon arrival.
  - f. Instrument Bench Calibration Sheets: Contractor shall submit the calibration plan for bench calibration of each type of instruments. Upon approval of the Bench Calibration Plant by the City, Contractor shall coordinate and commence Bench Calibration of all instruments, other than those containing Factory Calibration. Bench Calibration of Instruments will be witnessed by the City’s representative, who may at his sole discretion, provide Contractor a waiver of witnessing. Upon completion of bench calibration Contractor shall submit Calibration Sheet documentation and shall affix calibration stickers to each instrument, indicating date of calibration and initials of person performing calibration.
5. Panels, Local Control Panels:
- a. Contractor shall supply:
    - 1) Schematic and wiring diagrams for control circuits shall be submitted in two stages. Initially, schematic control diagrams shall show complete details on the circuit interrelationships of all devices within and outside each Control Panel. Subsequent to acceptance of all schematic control diagrams, by the City’s representative, piping and wiring diagrams shall be submitted. The diagrams shall consist of component layout drawings to scale, showing

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- numbered terminals on components together with the unique number of the wire to be connected to each terminal.
- 2) Piping and wiring diagrams shall show terminal assignments from all primary measurement devices, such as flow meters, and to all final control devices, such as pumps, valves, chemical feeders and local control panels. Wiring diagrams shall include MCC Panel, circuit, and breaker number for each power feed.
  - 3) Assembly and construction drawings for each Panel and Local Control Panel type. These drawings shall include dimensions, identification of all components, surface preparation and finish data, and nameplates. These drawings also shall include enough other details, including prototype photographs, to define exactly the style and overall appearance of the assembly; a finish treatment sample shall be included.
  - 4) Installation, mounting, and anchoring details for all components and assemblies to be field-mounted, including conduit connection or entry details. Where applicable and required by Code, Contractor shall include seismic calculations for the panel assembly and mounting, which shall be stamped by a California registered structural engineer.
  - 5) Complete control panel layouts, all drawn to a 1-1/2 inch equals 1 foot scale showing.
    - a) Physical arrangements which define and quantify the physical groupings of annunciators, hand-stations, recorders, indicators, pilot lights and all other instrumentation devices associated with control panel sections, auxiliary panels, subpanels and racks.
    - b) All cutout locations fully dimensioned. All outside panel dimensions shall be shown.
    - c) Locations of back-of-panel stiffeners.
    - d) Terminal point locations for all panel and back-of-panel piping and wiring connections. Terminations shall be coded with identifiers for wiring and piping connections for all electric, hydraulic and pneumatic terminations.
  - 6) Contractor shall submit a complete Nameplate engraving list, annotating the size of each engraved plate, the material, font size, color and attaching methodology. [Note: Adhesive-backed mount is to be avoided, except in those cases where screw mounting is not possible.]

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 7) A complete and detailed bill of material list shall be submitted for each field mounted device or assembly as well as cabinet assemblies and subassemblies. Bills of material shall include all items within an enclosure. An incomplete submittal shall be rejected and no further evaluation performed until a complete and detailed bill of material is submitted.

1.05 OWNER'S MANUAL

- A. The Owner's Manual shall be submitted in both paper and electronic format. Electronic format shall conform to the Electronic Document Submittal Requirements for Shop Drawings.
- B. Information included in the Owner's Manual shall comply with the requirements of Section 01 33 00, Submittal Procedures, with the following exceptions:
  1. Two copies of the Owner's Manual shall be submitted after acceptance of all submittals. One set will be returned to the Contractor with comments.
  2. Final copies of the Owner's Manual, after revision, shall be submitted to the City's representative 15 days prior to startup.
- C. The following shall be included in the Owner's Manual in accordance with Section 01 33 00, Submittal Procedures.
  1. Installation, connection, operating, troubleshooting, maintenance, and overhaul instructions from the manufacturer.
  2. Exploded or details views of all instruments, assemblies, and accessory components.
  3. Parts lists and ordering instructions.
  4. Wiring diagrams.
  5. A list of spare parts for 1 year operation recommended by the manufacturers of all DCS and analog equipment.
  6. As-built drawings.

1.06 AS-BUILT DRAWINGS

- A. As-built drawings shall be prepared in accordance with Section 01 33 00, Submittal Procedures, with the following exceptions and changes:
  1. The Contractor shall keep current an approved set of complete loop diagrams and schematic diagrams which shall include all field and panel wiring, all piping and tubing runs, all routing, all mounting details, all point-to-point diagrams with cable, wire, tube and termination numbers.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

These drawings shall include all instruments and all instrument elements for the complete instrument loop as provided under equipment and electrical requirements of this Contract.

2. Two copies of each as-built drawing under this Section shall be submitted to the City's representative after completion of field checkout but before placing the systems in service for the Owner's use.
3. Drawings shall also be submitted in electronic format (MicroStation) and in PDF.

1.07 SERVICES OF MANUFACTURER

- A. Calibration, Testing and Startup: A technical service representative of the manufacturer shall visit the site and perform the following on all flow meters and analyzers.
  1. Inspection, checking and calibrating the equipment.
  2. Startup and field testing for proper operation.
  3. Performing field adjustments to ensure that installation and operation comply with the Specifications.
- B. Instruction of Owner's Personnel: The manufacturer's technical service representative shall instruct the Owner's personnel as indicated in Article Installation, Calibration, Testing, Functional Testing, Startup, and Instruction.

1.08 SPECIAL GUARANTEE

- A. The Contractor shall guarantee the Work of this section for 2 years following final acceptance of the Work. In making any warranty repairs, the Contractor shall utilize technical service personnel designated by the manufacturer of the failed device. Repairs shall be completed within 5 days after written notification by the Owner.

1.09 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Delivery of Materials: Products delivered to the site for incorporation into the Work of this Section shall be delivered in original, unbroken packages, containers, or bundles bearing the name of the manufacturer.
- B. Storage: Products shall be carefully stored in a manner that will prevent damage and in an area that is protected from the elements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.10 ENVIRONMENTAL CONDITIONS

- A. General: All instrumentation and control system components and associated wiring shall be suitable for use in a treatment facility environment where there may be high energy ac fields, dc control pulses, and varying ground potentials between transducers and system components. The system design shall be adequate to provide proper protection against interferences from all such possible situations.
  
- B. Field Situated Equipment:
  - 1. The instrumentation and control system shall be installed on a wastewater treatment plant site. All devices shall be designed to exist in environments rated (G2)(G3)(GX) per ISA S71.04. The system design shall be adequate to provide proper protection the environment typically associated with these facilities. As a minimum, the instrumentation and control systems shall be designed and constructed for satisfactory operation and low maintenance requirements under the following environmental conditions:
    - a. Temperature Range: 0 degrees C through 50 degrees C (32 degrees F through 122 degrees F).
    - b. Thermal Shock: 0.55 degrees C per minute (1.0 degrees F per minute).
    - c. Relative Humidity: 20 percent through 95 percent (noncondensing).
  
- C. Control Room Situated Equipment: Control rooms shall be air conditioned to achieve the environmental noted in item B herein. (No positive control of relative humidity is provided.) In the event of a failure of the air conditioning system, all components of the instrumentation and control system shall be rated to operate in an environment where the ambient temperature is 15 degrees C through 35 degrees C (59 degrees F through 95 degrees F) and the relative humidity is 20 percent to 95 percent (noncondensing).
  
- D. Noise Tolerance: The instrumentation and control system components shall not exceed a dB level of 55 when monitored 3 feet away from the devices. If upon testing it is found that this limit is exceeded at the option of the City's representative and at no additional cost to the Owner, devices shall be replaced in order to achieve a maximum level of 55 dB or sound absorption materials shall be added.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.11 CABLE NUMBERING

- A. The first two characters denote the facility or area number.
- B. The second group of characters identifies the device being served (field device).
- C. The third section uses one of the four suffixes in the table below. Where multiple circuits of the same type are routed to the same endpoint, the suffix will be P1, P2, as required.
- D. At each device or termination point, the circuit identification number is appended with the individual wire number. For Direct-Current (DC) circuits only, wire polarity is shown in parentheses as (+) or (-).
- E. Spaces are not allowed, and letters are case-sensitive, written in upper case.

Suffix	Circuit Type	Example
(A)	24V dc analog (4 to 20 mA)	76FIT2152(A)-1(+)
(C)	120V ac control	05P320(C)-2
(D)	24V dc digital status or control	76LSH2151A(D)-1(+)
(P)	Power (120-volt, 480V, 5 kV, 15 kV, etc.)	01MCC6101(P)-2

**PART 2 PRODUCTS**

2.01 GENERAL

- A. All meters, all instruments, and all other components shall be of the most recent field-proven models marketed by their manufacturers at the time of submittal of the Shop Drawings unless otherwise indicated.
- B. Panel mounted instruments shall have matching style and general appearance. Instruments performing similar functions shall be of the same type, model, or class, and shall be of one manufacturer.
- C. Outdoor instrumentation shall be suitable for operation in the ambient conditions at the equipment installation locations. Heating, cooling, and dehumidifying devices shall be incorporated with the outdoor instrumentation in order to maintain it within its rated environmental operating ranges. The Contractor shall provide all power wiring for these devices. Outdoor enclosures suitable for the environment shall be provided.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. All instrumentation in hazardous areas shall be intrinsically safe or be approved for use in the particular hazardous classification in which it is to be installed.
- E. Mercury switches and components containing liquid mercury shall not be used.
- F. Analog measurements and control signals shall be electrical and shall vary in direct linear proportion to the measured variable, except as indicated. Electrical signals outside control board(s) shall be 4 mA to 20 mA dc except as noted. Analog instruments shall be provided with Highway Addressable Remote Transducer (HART) Protocol.
- G. The accuracy of each instrumentation system or loop shall be expressed as a probable maximum error; this shall be the square-root of the sum of the squares of certified "accuracies" of the designated components in each system, expressed as a percentage of the actual span or value of the measured variable. Each individual instrument shall have a minimum accuracy of plus or minus 0.5 percent of full scale and a minimum repeatability of plus or minus 0.25 percent of full scale unless otherwise indicated. Instruments which do not conform to or improve upon these criteria are not acceptable.
- H. Control panels shall be provided with redundant power supplies which are configured in a fault-tolerant manner to prevent interruption of service upon failure and interruption of service necessitated by the replacement of a power supply. All power supplies shall have an excess rated capacity of 40 percent. The failure of a power supply shall be annunciated locally and shall generate an alarm to the DCS.

2.02 CONTROL PANELS

- A. General: Control Panels shall minimize the use of PLC's as it is the intent of the City to maximize the use of the DCS as the primary control system. PLC's may be used where 'package system' vendors require PLC use to provide warranty and support of their system. Where PLC's are utilized they shall conform to the Allen Bradley ControlLogix or CompactLogix standards of the City.
  - 1. When PLCs are utilized the Contractor shall interface the 'Package system' PLC to the DCS via TCP/IP using the Ethernet I/P protocol network interface, or Modbus protocol.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Control Panels shall be provided in accordance with Section 40 95 13, Field Cabinetry.

2.03 GENERAL INSTRUMENTATION ENCLOSURE COMPONENTS

- A. Signal Isolators, Converters, and Power Supplies: Signal isolators shall be provided in each measurement and control loop, wherever required, to match adjacent component impedances, or where feedback paths may be generated or to maintain loop integrity when the removal of a component of a loop is required. Signal converters shall be provided where required to resolve any signal incompatibilities. Signal power supplies shall be provided to supply sufficient power to each loop component.
- B. General Purpose Relays: General purpose relays in the Control Panels shall be plug-in type with contacts rated 10 amperes at 120V ac; quantity and type of contacts shall be as indicated. Each relay shall be enclosed in a clear plastic heat and shock resistant dust cover. Sockets for relays shall have screw type terminals.
- C. Time Delay Relays: Time delay relays shall be electronic on-delay or off-delay type with contacts rated 10 amperes at 120V ac. Units shall include adjustable dials with graduated scales covering the indicated time range.
- D. Slave Relays: Slave relays shall be provided when the number or type of contacts indicated exceed the contact capacity of the indicated relays and timers.
- E. Circuit Breakers: Circuit breakers shall be single pole, 120-volt, 15-ampere rating or as required to protect wiring and equipment. Circuit breakers shall be mounted inside the panels as shown.

2.04 FIELD INSTRUMENTATION

- A. Provide components that are listed in the Instrument List in Article Supplements at the end of this Section. Specific component requirements are defined in the Instrument Data Sheets at the end of this Section.

2.05 CONTROL PANEL INSTRUMENTATION

- A. Bar Graph Indicators: Indicators shall be the electronic gas-discharge type suitable for installation in flush panel mounting shelves. Indicator shall provide for two non-isolated input circuits. Input signal level shall be 4 mA to 20 mA dc through a shelf-mounted 250-ohm resistor. The units shall contain an integral power supply suitable to energize two 4 mA to 20 mA dc, two-wire transmitters. Unit power supply shall be 24V dc. Indicator accuracy

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

shall be plus or minus 0.5 percent of span with a repeatability of 0.1 percent of span. Indicator scales shall be in engineering units.

B. Digital Indicators:

1. Digital indicators shall be self-contained instruments that display process signals directly in engineering units. The unit shall be suitable for panel mounting and shall utilize an LED display where numerals are no less than 0.5-inch height.
2. The input signal to the digital process indicator shall be 4 mA to 20 mA dc or 1 to 5V dc. The input sample rate of the unit shall be a minimum of 2 per second. The unit shall have an auto-zeroing feature and shall have provisions for field adjustable scaling and offset. Accuracy shall be plus or minus 1 least significant digit. Input power to the digital indicator shall be 120V ac, 60-Hz.

C. Current Alarm Trip Switches: Current alarm trips shall be single or dual type as indicated. Units shall accept voltage or current input signals. Dead bands shall be factory set at 1.0 percent of full span for dual trips and adjustable over 100 percent of span for single trips. Alarm trips shall be equipped with 10A DPDT contacts. Alarm trips shall include setpoint dials calibrated 0 percent to 100 percent for each trip point. Single alarm trips shall include a dead band adjustment dial calibrated 0 percent to 100 percent.

D. Selector and Pushbutton Switches: Selector and pushbutton switches shall be rated 10A at 600 volts, shall be heavy-duty, oil-tight, and shall have the number of positions and poles indicated. Operators shall be corrosion resistant.

E. Indicating Lights: Indication lights shall be incandescent push-to-test type and shall be heavy-duty, oil-tight. Each light shall have a screwed-on glass prismatic lens approximately 1-inch in diameter. Each light shall have a factory-engraved legend plate as indicated. Indicating lights shall be 120V ac type with transformers for use with 6.3-volt lamps.

2.06 PROGRAMMABLE LOGIC CONTROLLER (PLC)

- A. Where required, the Contractor shall furnish, install, program, test, calibrate, fully configure and place into operation Programmable Logic Controllers (PLCs) as specified herein. These requirements also pertain to all PLCs provided under package system specifications and within the electrical specifications.
- B. The PLC's shall be in compliance with Section 40 94 43, Programmable Logic Controllers.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. General: The Contractor shall furnish all necessary interconnecting cables, all accessories, and all appurtenances as indicated herein or as required for proper operation of the system. All major PLC components of the system shall be of the same manufacturer and PLC family product line. All equipment shall be housed in an enclosure or control panel suitable for the intended operation and location. The PLC system shall be capable of tolerating and capable of riding through a power interruption of 8 milliseconds or less without interruption of normal operation. The PLC system shall be Allen Bradley ControlLogix or CompactLogix to match existing.

**PART 3 EXECUTION**

**3.01 INSTALLATION**

- A. The Contractor shall employ installers who are skilled and experienced in the installation and connection of all elements, all instruments, all accessories, and all assemblies provided under this Contract.
- B. The Contractor shall install all instruments according to the manufacturer's installation instructions and the following:
1. Perform field engineering as required for mounting and supporting all field mounted components.
  2. Prepare any additional schematic and interconnection diagrams required for installation.
  3. Assemble and interconnect instrument components disconnected for shipping purposes.
  4. Remove all temporary supports, bracing, and padding inserted in instrument control panels and other equipment to prevent damage during shipping, storage, or installation.
  5. All piping shall be field measured prior to fabrication and erection. Any significant discrepancies between drawings and field conditions shall be reported to the City's representative. The Owner will not be responsible for any costs to the Contractor for rework because of Contractor failure to take measurements prior to fabrication.
  6. Adequately support and protect capillary tubing. All extra tubing shall be carefully coiled, tied, and protected at the instrument location.
- C. The Contractor shall install pneumatic instrument air systems according to the manufacturer's installation instructions and the following:
1. Install all pneumatic tubing and make all connections at control panels, instruments, and control valves.
  2. Perform field engineering as required for instrument air supply headers and individual air supply taps and lines.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Check all air supply branch headers by blowing with clean air and checking for tightness.
  4. Clean all transmission and control tubing by blowing with dried and filtered air prior to connecting to instrument components.
  5. Leak test all pneumatic control circuits in accordance with ISA Recommended Practice RP-7.1.
  6. Set all instrument air regulators at manufacturer's recommended supply pressures.
- D. It is the intent of the Contract Documents that all wiring external to Control Panels be provided under the requirements of Division 26, Electrical. Further, it is the general intent that all 4 mA to 20 mA signal circuits, process equipment control wiring, signal wiring to field instruments, and Control Panel input and output wiring, be provided under Division 26, Electrical and be terminated and identified under Division 40, Process Interconnections.
- E. The Contractor's attention is directed to the electrical and mechanical schematics and details of this project. Referral to these portions of the Contract Documents shall be required in order to understand the full intent and scope of work required.
- F. Monitoring and control system configurations are diagrammatic only. Locations of equipment are approximate unless dimensioned on Drawings. Exact locations and routing of wiring and cables shall be governed by structural conditions, physical interferences, and locations of electrical terminations on equipment.
- G. Where job conditions require minor changes in approximated locations and arrangements, the Contractor shall make such changes without additional cost to the Owner.
- H. All instruments shall be located and installed for ready access by the Owner's operation and maintenance staff. The Owner reserves the right to require minor changes in location of equipment prior to roughing without any additional cost to the Owner.
- I. Meters shall be installed in easily accessible locations and orientated for ease of reading and maintenance, and where shown, for balancing flow. Wherever possible, meters shall be inserted in such a way to comply with the manufacturer's recommendations. Meters, shut-off and balancing valves shall be properly supported. In-line meters shall be installed to ensure full-line flow and not less than the manufacturer's recommended head at all times.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.02 CONTROL PANEL SIGNAL AND CONTROL CIRCUIT WIRING

- A. Wiring Installation: All wires shall be in plastic wireways except (1) field wiring, (2) wiring between mating blocks in adjacent sections, (3) wiring from components on a swing-out panel to components on the fixed structure, and (4) wiring to panel-mounted components. Wiring from components on a swing-out panel to other components on fixed panels shall be tied into bundles with nylon wire ties, and shall be secured to panels at both sides of the "hinge loop" so that conductors are not strained at the terminals.
- B. Wiring to control devices on the front panels shall be tied together at short intervals with nylon wire ties and secured to the inside face of the panel using adhesive mounts.
- C. Wiring to rear terminals on panel-mount instruments shall be in plastic wireways secured to horizontal brackets above or below the instruments in about the same plane as the rear of the instruments.
- D. Wire Marking: Each signal, control, alarm, and indicating circuit conductor connected to a given electrical point shall be designated by a single unique number which shall be shown on all Shop Drawings. These numbers shall be marked on all conductors at every terminal using white numbered wire markers which shall be permanently marked heat-shrink plastic.

3.03 INSTRUMENT CABLE TESTS

- A. General: The following tests shall be performed on each instrumentation and control system cable. All tests shall be end-to-end tests of installed cables with the ends supported in free air, not adjacent to any grounded object. All test data shall be recorded on forms which are available from the City's representative. Complete records of all tests shall be made and delivered to the City's representative. Each form shall be signed by the City's Representative who witnessed the testing.
- B. Continuity tests shall be performed by measuring wire/shield loop resistance of each signal cable as the wires, taken one at a time, are shorted to the channel shield. No loop resistance measurement shall vary by more than plus or minus 2 ohms from the calculated average loop resistance value.
- C. Insulation resistance tests shall be performed by using a 500-volt megometer to measure the insulation resistance between each channel wire, between each channel wire and the channel shield, between individual channel shields in a multichannel cable, between each individual channel shield and the overall cable shield in a multi-channel cable, between each wire and ground, and between each shield and ground. Values of resistance less than 1 megohms shall be unacceptable.

3.04 INSTALLATION, CALIBRATION, TESTING, FUNCTIONAL TESTING,  
STARTUP, AND INSTRUCTION

- A. Installation and Connection: The Contractor shall install and connect all field-mounted components and assemblies under the following criteria:
1. Process sensing lines and air signal tubing shall be installed to the installation of conduit indicated under Section 26 05 33, Raceways and Boxes. Individual tubes shall be run parallel and near the surfaces from which they are supported. Supports shall be used at intervals not longer than 3 feet of tubing.
  2. Bends shall be formed with the proper tool and to uniform radii and shall be made without deforming or thinning the walls of the tubing. Plastic clips shall be used to hold individual plastic tubes parallel. Ends of tubing shall be square-cut and cleaned before insertion into fittings. Bulkhead fittings shall be provided at all panels requiring pipe or tubing entries.
  3. All flexible cables and all capillary tubing shall be provided in flexible conduits. Lengths shall be sufficient to withdraw the cables and tubing for periodic maintenance.
  4. Thermocouple lead wire shall be provided in dedicated conduit or wireway from the thermocouple to the control panel. Conduit or wireway shall be sized in accordance with the capacity of the instrument.
  5. All power and all signal wires shall be terminated with spade type lugs.
  6. All connectors shall be, as a minimum, watertight.
  7. After all installation and connections have been completed, a technical field representative of the Contractor shall check the Work for polarity of electric power and signal connections, leaks at all process connections, and conformance with requirements. The technical field representative shall certify in writing to the Contractor that each loop and system meets requirements.
  8. All wire and all cable shall be connected from terminal to terminal without splices, arranged in a neat manner and securely supported in cable groups. All wiring shall be protected from sharp edges and corners.
- B. Calibration: All analog instrumentation and all control system equipment shall be calibrated and tested after installation to verify that requirements are satisfied. The Contractor shall provide all necessary labor, tools, and equipment to calibrate and test each instrument in accordance with the manufacturer's instructions. Each instrument shall be calibrated at a minimum of three points using test equipment to simulate inputs and read outputs. All test equipment and all instruments used to simulate inputs and read outputs shall be suitable for the purpose intended and shall have an accuracy better

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

than the required accuracy of the instrument being calibrated. Test equipment shall have accuracies traceable to the NIST as applicable. All analog instruments shall be calibrated and tested in place without removal. Test data, applicable accuracy requirements, all instrument manufacturer published performance specifications and all permissible tolerances at each point of calibration shall be entered on test forms available from the City's representative. These test forms shall verify compliance with all. A report shall be delivered to the City's representative for each instrument, certifying that the instrument has been calibrated in the presence of the City's Representative and meets Contract and system requirements.

- C. Analog Loop Tests: The Contractor shall be responsible for loop checking and testing all instrumentation loops with this project. The Contractor shall coordinate all loop check functions with the CSP to ensure that a single total loop check is conducted for each device. The intent of the loop checks is to confirm and document each loop's component specification conformance up to and including all field-situated CSP devices. The CSP will have all control room personnel present to witness and confirm loop check results at the CRT level. The Contractor shall provide all necessary labor, tools, and equipment to field test, inspect and adjust each instrument to its indicated performance requirement in accordance with manufacturer's specifications and instructions. Any instrument which fails to meet any Contract requirement, or any published manufacturer performance specification for functional and operational parameters, whether or not indicated in the Contract Documents, shall be repaired or replaced, at the discretion of the City's representative at no additional cost to the Owner.
1. At least 15 working days before installation testing begins, the Contractor shall submit to the City's representative a detailed description, in duplicate, of the installation tests to be conducted to demonstrate correct installation of the instrumentation and control system and the anticipated dates the testing will occur.
  2. Controllers and electronic function modules, shall be tested and exercised by the Contractor to demonstrate correct operation, first individually and then collectively as functional analog networks. Each hardwired analog control network shall be tested to verify proper performance within indicated accuracy tolerances. Accuracy tolerances for each analog network are defined as the root-mean-square-summation of individual component accuracy tolerances. Individual component accuracy tolerances shall be as indicated by contract requirements, or by published manufacturer accuracy specifications, whenever contract accuracy tolerances are not indicated.
  3. Each analog network shall be tested by applying simulated inputs to the first element(s). Simulated sensor inputs corresponding to 10 percent, 50 percent, and 90 percent of span shall be applied, and the resulting

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

outputs read to verify compliance to network accuracy tolerance requirements. All analog test equipment used to simulate or measure current/voltage signals shall be certified accurate within the previous 6 months by a recognized/certified testing facility. Actual equipment listed as customer spares or test equipment may not be used for these tests. Continuously variable analog inputs shall be applied to verify the proper operation of discrete devices. Temporary settings shall be made on controllers, alarms, etc., during analog loop tests. All analog loop test data shall be recorded on test forms, which include calculated root-mean-square-summation system accuracy tolerance requirements for each output.

4. Air systems shall be tested for leaks in compliance with ISA RP7.1.
5. When installation tests have been successfully completed for all individual instruments and all separate analog control networks, a certified copy of all test forms signed by the City's Representative as a witness, with test data entered, shall be submitted together with a clear and unequivocal statement that all instrumentation has been successfully calibrated, fully inspected, and fully tested.

D. Functional Testing: During the DCS Operational Readiness Testing (ORT), the Contractor shall be responsible for demonstrating the operability of all systems provided under this specification. The City will assist and coordinate the operability assessment with the Contractor. Functional Testing shall commence after acceptance of all wire, all calibrating and loop tests, all inspections have been conducted, and DCS ORT has been started. Functional Testing shall demonstrate proper operation of all systems with process equipment operating over full operating ranges under actual operating conditions.

1. The Contractor shall develop and submit to the City's representative for approval a Functional Testing Plan which describes detailed test procedures, checklists, blank forms and data to be recorded, test equipment to be used and calculated tolerance limits.
2. Functional Testing activities shall include the use of water to establish service conditions that simulate, to the greatest extent possible, normal final control element operating conditions in terms of applied process loads, operating ranges and environmental conditions. Final control elements, control panels, and ancillary equipment shall be tested under start-up and steady-state operating conditions to verify that proper and stable control is achieved using motor control center and local field mounted control circuits. All hardwired and software control circuit interlocks and alarms shall be operational. The control of final control elements and ancillary equipment shall be tested using both manual and automatic (where provided) control circuits. The stable steady-state operation of final control elements running under the control of field

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- mounted automatic analog controllers or software based controllers shall be assured by adjusting the controllers, as required, to eliminate oscillatory final control element operation. The transient stability of final control elements operating under the control of field mounted, and software based automatic analog controllers shall be verified by applying control signal disturbances, monitoring the amplitude and decay rate of control parameter oscillations (if any) and making necessary controller adjustments, as required, to eliminate excessive oscillatory amplitudes and decay rates.
3. All control stations incorporating proportional, integral and/or differential (P&ID) control circuits shall be initially tuned using mathematical methods such as Ziegler-Nichols or Tyreus-Luyben rules in order to establish the initial parameters for closed loop control. The tuning parameters shall be refined experimentally, by applying control signal disturbances and adjusting the gain, reset and/or rate setting(s) as required to achieve a proper response. Measured final control element variable position/speed set-point settings shall be compared to measured final control element position/speed values at 10 percent, 50 percent and 90 percent of span and the results checked against specified accuracy tolerances. Specified accuracy tolerances are defined as the root-mean-square-summation of individual component accuracy requirements. Individual component accuracy requirements shall be as specified in the contract or as specified by published manufacturer accuracy specifications whenever contract accuracy requirements are not specified.
  4. Individual component accuracy tolerances shall be as indicated in the Contract Documents or as specified by published manufacturer accuracy specifications whenever not indicated.
  5. The Contractor shall submit an instrumentation and control system Functional Testing completion report which shall state that all Contract requirements have been met and which shall include a listing of all instrumentation and all control system maintenance and repair activities conducted during the Functional Testing. The City's representative must accept the instrumentation and control system Functional Testing before the 30-day operational testing may begin. Final acceptance of the control system shall coincide with final acceptance of the Work.
- E. 30-Day Operational Testing: The Contractor shall furnish his own personnel, electrical personnel, and any instrument manufacturers' representatives as required during the testing period required in Section 01 91 14, Testing, Integration, and Startup, to produce a fully operational system.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Instruction: The Contractor shall train the Owner's maintenance personnel in the maintenance, calibration and repair of all instruments provided under this Contract.
1. The training shall be scheduled a minimum of 3 weeks in advance of the first session. The training shall be performed concurrent with the Functional Testing in subparagraph D above.
  2. The training shall be performed by qualified representatives of the instrument manufacturers' and shall be specific to each instrument model provided.
  3. Each training class shall be a minimum of 8 hours in duration and shall cover Operational Theory, Maintenance, Trouble Shooting/Repair, and Calibration of the instrument.
  4. Proposed training material, including resumes for the proposed instructors and a detailed outline of each lesson shall be submitted to the City's representative at least 30 days in advance of when the lesson is to be given. The City's representative shall review the submitted data for suitability and provide comments which shall be incorporated into the course.
  5. Within 10 days after the completion of each lesson the Contractor shall present to the City's representative the following:
    - a. A list of all Owner personnel that attended the lesson.
    - b. An evaluation of Owner personnel knowledge through written testing or equivalent.
    - c. A copy of text utilized during the lesson with all notes, diagrams, and comments.

3.05 INSTRUMENT SUMMARY

- A. General: The Instrument Summary (IS) shown in Supplements itemizes the instrumentation devices to be furnished under this Contract.
- B. Each column on the Instrument Summary is defined as follows:
1. Tag Number: The identifier assigned to a device which performs a function in the control system. The Contractor shall use this identifier in tagging devices in the field.
  2. Loop Number: The number assigned to the control loop associated with the device.
  3. Description: A process-oriented functional description which defines the measured/monitored/controlled parameter and the associated process/process equipment.
  4. P&ID Drawing Number: The Process and Instrumentation drawing upon which the device appears.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Component Code: The number associated with the technical specification which describes the requirements associated with the device.
6. Installation Detail Number: The designation of the installation detail defining the installation requirements associated with the device.

3.06 INSTRUMENT DATA SHEETS

- A. General: The Instrument Data Sheets shown in Supplements provides specific device requirements for the instrumentation referenced in Appendix C, Instrument Summary such as meter size, ranges, scales, set points, NEMA ratings, flange sizes, pipe connection sizes, material types, probe types, etc.

3.07 CONTROL PANEL SUMMARY

- A. General: The Instrument Summary (IS) shown in Supplements itemizes the control panels to be furnished under this Contract.
- B. Each column on the Instrument Summary is defined as follows:
  1. Control Panel Number: The designation of the control panel where the device resides.
  2. Control Panel Description: A process-oriented functional description.
  3. Control Panel Rating: NEMA rating for control panel.
  4. Electrical Drawing Number: The electrical drawing upon which the device appears.

3.08 DCS INPUT/OUTPUT (I/O) SUMMARY

- A. General: The DCS I/O List contained in Section 40 94 24, Process Inputs/Outputs (I/O), Supplements, itemizes all inputs and outputs to and from the DCS, both hardwired and data linked, which are furnished by the Contractor.
  1. Highlighted I/O on the DCS Input/Output Summary are new I/O. Items shown in normal text are existing I/O.
- B. Each column on the I/O List is defined as follows:
  1. DCU: Distributed Control Unit number.
  2. Cabinet: PCM where I/O resides.
  3. Card Type: DCS module number.
  4. Tag Number: The ISA identifier assigned to a device which performs a function in the control system. The Contractor shall use this identifier in tagging devices in the DCS.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Description: A 30-character process-oriented functional description which defines the measured/monitored/controlled parameter and the associated process/process equipment.
6. Zero State: The status to be displayed on the alarm summary when a digital point is not activated or returns to its normal state.
7. One State: The status to be displayed on the alarm summary when a digital point is activated.
8. I/O Type: The type of I/O required for current and future monitoring and control activities.
  - a. Analog Input (AI): If the tag number generates an AI, the quantity of AIs are listed in Section 40 94 24, Process Inputs/Outputs (I/O), Supplements.
  - b. Analog Output (AO): If the tag number generates an AO, the quantity of AOs are listed in Section 40 94 24, Process Inputs/Outputs (I/O), Supplements.
  - c. Discrete Input (DI): If the tag number generates a DI, the quantity of DIs are listed in Section 40 94 24, Process Inputs/Outputs (I/O), Supplements.
  - d. Discrete Output (DO): If the tag number generates a DO, the quantity of DOs are listed in Specification Section 40 94 24, Process Inputs/Outputs (I/O), Supplements.
9. Location: DCS address.

### 3.09 PROCESS CONTROL STRATEGIES

- A. The control strategies, shown in Supplements, complement of the Process and Instrumentation Diagrams (P&IDs). All materials and components shall be furnished, whether explicitly indicated or not, to affect the functional requirements defined on the P&IDs and in the process control strategy descriptions. The Contractor shall utilize the control strategies as a resource in generating control narratives to be included in the analog hardware submittal.
- B. Common functions that are generally applicable to all strategies or to similar strategies are described under the heading “General DCS Functions”. These functions are not repeated in the descriptions for each strategy.
- C. Each strategy is described as follows:
  1. Overview: A brief description of the mission of the related strategy including the roles of logic, monitoring and control stations located/associated with MCCs, field situated, and DCS -based.
  2. Detailed Strategy Functions: A detailed description of each and every monitoring and control function associated with the associated strategy. This description addresses the strategies reaction to sensor failures, process equipment failures, control device failures, DCS malfunctions,

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

and power interruptions. All control modes (MCC, local hand station, local control panel, DCS keyboard) are fully described. These descriptions are augmented by a listing of all instruments, valves, control devices, process equipment, and DCS equipment associated with the noted strategy. All control sequences associated with equipment activation, deactivation, process startup and process shutdown are defined along with all required time delays.

3. Preface to Control Strategy Section:
  - a. Tag numbering system definitions and terms.
  - b. Controls and control functions provided for all equipment, unless otherwise noted Local control station at equipment.
  - c. Local/DCS switch.
  - d. Alarms Logic: Open contact for alarms (fail-safe).
4. Format for Each Strategy:
  - a. General Description:
    - 1) An overall description of the process.
    - 2) Major control components (PCM, PLC, annunciator, panels).
    - 3) General function of each major control component.
    - 4) P&ID references for this strategy.
    - 5) Reference to I/O listing.
  - b. Related equipment.
  - c. Overview of strategy.
  - d. Non-DCS Control:
    - 1) Local Manual Control: Description of monitoring and control from each equipment item. If this is covered by the general statement in the Preface, describe any deviations. Example: "Because of inaccessibility location of this valve in the sump, a local control station is not provided."
    - 2) Remote Manual Control: Description of control from any local or area control panels. Other Control: Package system, PLC, etc.
  - e. DCS Alarm, Monitoring and Control Functions:
    - 1) DCS Manual Control.
    - 2) DCS Automatic Control.
    - 3) Alarms: Define alarms and alarm priorities. Define level (1, 2, 3, or 4) for each alarm.
  - f. Failure modes.
  - g. Communications Interfaces: Third party devices and connections to DCS, including any details that may not be present on Loop Drawings or other sources of documentation.
  - h. In-Service/Out of Service Algorithm: Description of devices which determine in/out of service status for each piece of equipment. (In- service (I/S)/out of service (OOS) algorithms mask or block out all or selected alarms associated with the OOS

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

device (i.e., if a wet well is declared OSS, low level alarms shall be inhibited). Additionally, if a device has been designated OOS, all control routines shall declare the equipment as being unavailable for service.

- i. See Supplements for detailed descriptions of the process control strategies.

3.10 SUPPLEMENTS

A. The supplements listed below, following “End of Section,” are part of this Specification.

1. Instrument List.
2. Instrument Data Sheets.
3. Control Panel Summary.
4. Control Strategies.

**END OF SECTION**

## INSTRUMENT LIST

Loop	Tag Number	Loop Title	Code	Code Description	P+ID	Design Detail
76FT2152	76FIT2152	Thickening Centrifuge Feed Pump No. 1 Flow	F04	Flow Element & Transmitter, Electromagnetic	76-I-31	4091-219
76FT2156	76FIT2156	Thickening Centrifuge Feed Pump No. 2 Flow	F04	Flow Element & Transmitter, Electromagnetic	76-I-32	4091-219

# **F04 FLOW ELEMENT & TRANSMITTER, ELECTROMAGNETIC**

GENERAL	1	Tag Number	P&ID	76FIT2152	76-I-31	
	2	Loop Title		Thickening Centrifuge Feed Pump No. 1 Flow		
	3	Area Classification		Unclassified		
	4					
	5	Line Number	Equipment Number			
	6	Line Size	Line Schedule	8 inch	Ductile Iron	
PROCESS CONDITIONS	7	Fluid		Raw Solids		
	8					
	9	Min Flow	Max Flow	0	1200 gpm	
	10	Nominal Pressure		100 psi		
	11	Nominal Temperature		75 degF		
	12	Specific Gravity	Viscosity	1.0		
	13	Conductivity	Density			
	14	Vapor Pressure	Critical Pressure			
	15					
	16	Vacuum Possibility		No		
METERING ELEMENT	18	Element Tag		76FE2152		
	19	Element Size		8"		
	20	Process Connection/Material		316 Stainless Steel		
	21	Electrical Connection		0.5 inch NPT		
	22	Tube Material		Stainless Steel		
	23	Liner Material		Teflon		
	24	Electrode Type		Flush or Bullet Nose		
	25	Electrode Material		316 Stainless Steel		
	26	Range		0-40 ft/sec		
	27	Element Cable Length		As required to accommodate device locations		
	28	Grounding Rings	Material	Two	316 Stainless Steel	
	29	Enclosure NEMA Rating		NEMA 4X		
	30	Minimum Measurable Velocity		0.033 Feet/Sec		
	31	Minimum Conductivity		5 microS/cm		
	32	Ambient Temperature Limits		-5 degF to 140 degF		
	33	Process Temperature Limits		32 degF to 180 degF		
	34	Options				
TRANSMITTER	36	Mounting		Wall		
	37	Enclosure NEMA Rating		NEMA 4X		
	38	Power Supply	Voltage	4 - Wire	120 VAC	
	39	Output Signal		Isolated 4 to 20 mA dc		
	40	Communication Protocol		HART		
	41	Calibrated Range		0 - 1500 gpm		
	42	Low Flow Cutoff				
	43	Ambient Temperature Limits		-5 degF to 140 degF		
	44					
OPTIONS	45	Accuracy	Repeatability	+/- 0.5 percent of rate		
	46	Vendor Calibration		Factory calibrate with calibration certificate		
	47	Tagging		Stainless steel tag with Tag Number		
	48	Element Mounting Bracket				
	49					
PURCHASE	50	Manufacturer		Endress+Hauser	Krohne	
	51	Model Number		Promag L400	Optiflux 2000	
	52					
	53	Purchase Note		1 year warranty

TRANSMITTER	31	Transmitter Tag		80FIT2692	
	32	Mounting		Wall	
	33	Enclosure NEMA Rating		NEMA 4X	
	34	Power Supply	Voltage	4 - Wire	120 VAC
	35	Output Signal		Isolated 4 to 20 mA dc	
	36	Communication Protocol		HART	
	37				
	38	Ambient Temperature Limits		0 degF to 150 degF	
CALIBRATION	40	Calibrated Range		0-1200 scfm	
	41	Vendor Calibration		Factory calibrate - Provide calibration certificate	
	42				
	43	Accuracy	Repeatability	1.5 Pct of Full Scale	0.4 Percent
	44				
OPTIONS	45				
	46	Tagging		Affix stainless steel tag with Tag Number	
	47				
PURCHASE	48	Flow Conditioner		Yes	
	49	Manufacturer		Endress + Hauser	Kurz
	50	Model Number		65I	454FTB-WGF
	51				
	52	Purchase Note		1 year warranty

# **P03**

## **PRESSURE DIFFERENTIAL TRANSMITTER**

GENERAL	1	Tag Number	P&ID	76DPIT1104B	76-I-11
	2	Loop Title		Grit Separator No. 1 Differential Pressure	
	3	Area Classification		Unclassified	
	4	Line Number	Equipment Number		
	5	Line Size	Line Schedule	0.25 Inch	SST
PROCESS CONDITIONS	6	Fluid		Utility Water Low Pressure	
	7	Min Pressure	Max Pressure	0 in. H2O	700 in. H2O
	8	Temperature		Ambient	
	9	Specific Gravity	Viscosity	1.0	
	10	Conductivity	Density		
	11	Vapor Pressure	Critical Prssure		
ELEMENT	12	Element Type		Ceramic Diaphragm	
	13	Element Material			
	14	Body Rating			
	15	Instrument Body Material		AISI 316L	
	16	Wetted Materials		AISI 316L	
	17	Process Connection		0.5 inch NPT	
	18	Measurable Limits			
	19	Ambient Temperature Limits		-40 degF to 175 degF	
	20	Process Temperature Limits		-40 degF to 250 degF	
	21	Wetted O-Ring Material			
DIAPHRAGM SEAL - ANNULAR SEAL	22	Type		N/A	
	23	Process Connection			
	24	Body Material			
	25	Diaphragm / Sleeve Material			
	26				
	27	Calillary Material			
	28	Capillary Length			
	29	Fill Fluid			
	30	Flushing Connection			
	31				
	32	Manufacturer			
	33	Model Number			
TRANSMITTER	34	Mounting		Integral	
	35	Enclosure NEMA Rating		NEMA 4X; Coated Aluminum	
	36	Power Supply	Voltage	2 - Wire	24 VDC
	37	Output Signal		4 to 20 madc	
	38	Communication Protocol		HART	
	39	Range		0 - 700 in. H2O	
	40				
CALIBRATION	41	Calibrated Range		0 - 700 in. H2O	
	42	Vendor Calibration		Factory calibrate - Provide calibration certificate	
	43	Zero Elevated or Suppressed			
	44	Zero Reference			
	45	Accuracy	Repeatability	+/- 0.1 Pct of Span	
OPTIONS	46	Multi-Valve Manifold		N/A	
	47	Tagging		Stainless steel tag with Tag Number	
	48	Mounting Bracket			
	49				
	50	Manufacturer		Endress+Hauser	Rosemount
PURCHASE	51	Model Number		PMD75	3051
	52	3-valve SS Manifolds mounted			
	53	Purchase Note		Provided by Raw Solids Degritting System Vendor

**CONTROL STRATEGIES**

**RECEIVING TANK COMPLEX**

**1.01 RAW SOLIDS FEED PUMPS**

- A. Reference P&ID: 73-I-30, 32, 33.
- B. Loop Mission: There are three variable speed raw solids feed pumps. The pumps will transfer raw solids from the raw solids receiving tanks through the grit separators to the thickening centrifuge feed pump feed loop and will be connected to 76LCP01. The raw solids Feed Pumps can be automatically controlled by the DCS. The raw solids Feed Pumps can be manually controlled by the operator via the DCS.
- C. DCS Manual Control Mode: Start/Stop and adjust speed of each pump. Pump will start if valve is open. Open/Close all pump routing and isolation valves.
- D. DCS Automatic Control Mode:
  - 1. Operator to select raw solids Feed Pump Strategy.
  - 2. Operator to select tank(s) from which to pump.
  - 3. Operator to select lead/lag/standby status for pumps (123/231/312).
  - 4. Operator to input desired minimum recycle flow rate setpoint (adjustable 100 gpm to 200 gpm), initial 200 gpm).
  - 5. DCS will scan all I/O associated with the strategy and will indicate ready or not ready.
  - 6. If ready, operator will initiate strategy start up which will:
    - a. Check for open status on selected tank(s) outlet hand valve; upon confirmation,
    - b. Open appropriate main pump header valves to allow flow from selected tank(s) to all pumps; upon confirmation.
    - c. Open selected tank(s) recycle line valve; upon confirmation,
    - d. Confirm operational status of degritting system; upon confirmation,
    - e. Determine the flow setpoint for pump control; upon confirmation or bypassed,
    - f. Flow setpoint will be determined as follows:
      - 1)  $x = \text{sum of the feed pump flow rate setpoints for the operating Centrifuges (Centrifuge is considered operating once the centrifuge LCP issues the Centrifuge operational speed signal) and the minimum recycle flow rate setpoint (100 gpm 200 gpm, normally 200 gpm).}$
      - 2) If  $x$  is less than 1,042 gpm then setpoint is 1.5 mgd.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 3) If x is greater than 1,042 gpm but less than 2,083 gpm then setpoint is 3.0 mgd.
- 4) If x is greater than 2,083 gpm then setpoint is 4.5 mgd.
- 5) During operation strategy recalculates x as follows:
  - a) When a Centrifuge reaches operational speed (Centrifuge PLC issues Centrifuge operational speed signal), strategy calculates x including all operating Centrifuges.
  - b) When a centrifuge stops issuing operational speed signal (Centrifuge PLC stops issuing centrifuge operational speed signal), strategy will recalculate x without the centrifuge that has stopped issuing the operational signal.
  - c) When a centrifuge experiences high-high torque conditions and/or high vibration conditions, strategy recalculates x without including the centrifuge that is experiencing high-high torque or high vibration.
  - d) When the operator changes the minimum recycle rate setpoint, strategy recalculates x using the new recycle setpoint value.
  - e) When the thickening Centrifuge Feed Pump Strategy overrides the operator inputted raw solids feed rate setpoint, (see process interlocks in the Thickening Centrifuge Feed Pump Strategy), strategy recalculates x excluding those Centrifuges for which a zero flow rate setpoint has been entered.
  - f) When a Centrifuge experiences high torque conditions, strategy recalculates x using either a zero flow rate setpoint or the minimum flow rate setpoint (as recommended by the Centrifuge manufacturer) for that Centrifuge.
- g. Initiate operation of the software controllers:
  - 1) Control pumps to maintain flow setpoint calculated by DCS or input by the operator. Adjust pump speed in accordance with following variables: Setpoint - 1.5 mgd, 3.0 mgd, or 4.5 mgd, Primary Process Variable - actual raw solids flow in the main discharge header. Controller output will be pump speed. Start the lead pump when the setpoint flow rate equals 1.5 mgd. Start the lead and lag pump when the setpoint flow rate equals 3.0 mgd or 4.5 mgd.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. During operation, if a pump fails, strategy switches the lead/lag/standby status of the pumps so that the failed pump is in the standby position. Strategy will issue an alarm and indicate which pump failed and limit flow rate to 3.0 mgd.
8. During operation, to facilitate a bump less transfer from DCS control to local FIC control, if the DCS fails, strategy continuously outputs the lead/lag/standby status to the LCP hand switch until failure. FIC is programmed to assume control with same pump sequence prior to failure of DCS.
9. Process Interlocks: Pumps are stopped upon any of the following events:
  - a. Low sludge level in selected receiving tank(s) (adjustable x-x, initial x).
  - b. Thickening Centrifuge feed loop influent flow rate equals recycle flow rate for time period (adjustable 5 minutes to 15 minutes, initial 10 minutes).
  - c. No Thickening Centrifuge PLC issuing operational speed signal.
  - d. If the following valves are all closed - grit system inlet and/or outlet valve(s), grit separator system bypass valve and emergency storage tank valve.
10. Failure Responses: Upon loss of centrifuge flow signals from other PCMs, continue pumping at the same rate.

**END OF SECTION**

**CONTROL STRATEGIES**

**GRIT REMOVAL**

1.01 GRIT SEPARATORS

- A. Reference P&ID: 76-I-10, 11, 12, 13, 14.
- B. Loop Mission: There are four Grit Separators. Each Grit Separator has a maximum flow rate of 1,040 gpm. The Grit Separator removes grit from the raw solids being fed to the Thickening Centrifuges. The grit is then fed to the Grit Dewatering unit(s). The Grit Separators can be brought in and out of use via DCS control. The Grit Separators will operate in a Lead/Lag-1/Lag-2/Standby operation. To get the most efficiency out of the Grit Separator the separator should be run in a continuous manner.
- C. DCS Manual Control Mode:
  - 1. Open / Close all grit separator isolation and routing valves.
  - 2. Operator to select the Grit Dewatering to be used by opening either 76MV1102 for Grit Dewatering Unit No. 1 or 76MV1107 for Grit Dewatering Unit No. 2.
  - 3. Provide operator selectable IN SERVICE and OUT OF SERVICE status for each grit separator.
- D. DCS Automatic Control Mode:
  - 1. Operator to select Lead/Lag-1/Lag-2/Standby status for grit separators.
  - 2. Lead/Lag-1/Lag-2/Standby operation:
    - a. If the Raw Solids flow setpoint is less than 1,042 gpm then call the Lead unit online.
    - b. If the Raw Solids flow setpoint is greater than 1,042 less than 2,084 gpm then call the Lead and Lag-1 units online.
    - c. If the Raw Solids flow setpoint is greater than 2,084 then call the Lead, Lag-1, and Lag-2 units online.
    - d. If either Lead, Lag-1, and Lag-2 units fails to come online after 0 minutes to 5 minutes (operator adjustable), call the Standby unit online.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.02 GRIT DEWATERING

- A. Reference P&ID: 76-I-20, 21.
- B. Loop Mission: There are 2 Grit Dewatering units. The grit is fed from the Grit Separators to the Grit Dewatering unit(s), where the dewatered grit is then deposited on the Screw Conveyor(s). The dewatered grit is dumped into the roll off container(s) as selected by operations. The Grit Dewatering unit(s) is started by the opening of the associated underflow plug valve. Grit Dewatering Unit No. 1 (76-GS-01) is always run in conjunction with Screw Conveyor No. 1 (76-GO-01). Grit Dewatering Unit No. 2 (76-GS-02) is always run in conjunction with Screw Conveyor No. 2 (76-GO-02).
- C. General DCS Functions:
  - 1. Monitor Grit Dewatering Unit(s) for loss of control power.
  - 2. Monitor Screw Conveyor(s) for loss of control power.
  - 3. Monitor Roll Off Container level(s), alarm on High level.
- D. DCS Manual Control Mode:
  - 1. Operator to select Roll Off Container(s) IN SERVICE.
  - 2. Open / Close screw conveyor discharge valves.
- E. DCS Automatic Control Mode: (None).

**END OF SECTION**

**CONTROL STRATEGIES**

**CENTRIFUGE BUILDING**

1.01 THICKENING CENTRIFUGE POLYMER FEED PUMPS

- A. Reference P&ID 76-I-210, 211, 212, 213, 214, 215.
- B. Loop Mission: The thickening polymer system consists of two polymer day tanks and five variable speed thickening polymer feed pumps. There will be one pump for each thickening centrifuge. The thickening polymer system will be used to inject polymer into the raw biosolids flow prior to thickening the bio solids using the thickening centrifuges. The thickening polymer system can be automatically controlled by the DCS. The thickening polymer system can be manually controlled by the operator via the DCS.
- C. DCS Manual Control Mode:
  - 1. Open/Close all polymer system routing valves.
  - 2. Start/Stop polymer day tank mixers.
  - 3. Open/Close all polymer pump isolation valves.
- D. DCS Automatic Control Mode:
  - 1. When the DCS is operating, automatic control of each polymer feed pump will be performed by a software flow controller. Each pump will be controlled to maintain a dosage setpoint (input by the operator). For each feed pump the controller will operate as follows:
    - a. Software ratio module will calculate the polymer flow setpoint: (dosage rate) (biosolids flow to the associated centrifuge).
    - b. Adjust pump speed in accordance with the following variable: Setpoint - calculated polymer flow setpoint, Primary Process Variable - actual polymer flow,
    - c. Controller will output a speed setpoint to the associated pump through a hard wired signal.
  - 2. When the DCS is operating, for standby operation (Pump No. 1 to pump to a centrifuge other than Centrifuge No. 1), control of Pump No. 1 will be performed by a software controller in the DCS. The software controller will operate as follows:
    - a. Software ratio module will calculate the polymer flow setpoint: (polymer dosage rate) (sludge flow to the centrifuge to which Pump No. 1 is to pump)

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Adjust pump speed in accordance with the following variable:  
Setpoint - calculated polymer flow setpoint, Primary Process  
Variable - actual polymer flow.
  - c. DCS will input the speed setpoint to Pump No. 1.
  - d. Start / Stop signal from the centrifuge to which Pump No. 1 is  
pumping will enable/disable the setpoint transfer.
  - e. During operation, strategy will pump from the first polymer  
day tank until the tank reaches low level, strategy will then  
open the second day tanks outlet valves, close the first day  
tank's outlet valves and open its' inlet valve (When the inlet  
valve is open the tank can be filled. Filling of the day tank will  
be performed by another strategy). Day tank inlet valve will  
close on high level. When the second day tank reaches low  
level, strategy will open the outlet valves of the first day tank,  
close the outlet valves of the second day tank and open its'  
inlet valve. This will be a continuous cycle.
  - f. If a day tank is selected to be taken OUT OF SERVICE,  
strategy will close the inlet and outlet valves from the tank,  
stop the mixer of the tank, inhibit control of the valves and the  
mixer from the DCS and indicate that the tank is OUT OF  
SERVICE. When the tank is selected to be placed back IN  
SERVICE, strategy will reestablish control of the valves and  
the mixer from the DCS.
3. Process Interlocks: Thickening centrifuge polymer feed pumps to  
shut down when both polymer day tanks are at low level alarm.  
Strategy will perform this shut - down by inputting a zero dosage  
setpoint in place of the operator inputted values. Zero setpoint will  
not become the default. Strategy will issue an alarm message to the  
operator indicating that the thickening centrifuge polymer day tanks  
are at low level.
4. Failure response:
- a. Upon loss of DCS the thickening polymer feed pump(s) will  
shut down.
  - b. Upon loss of thickening feed pump flow signal polymer feed  
rate to stay the same.

**END OF SECTION**

**CONTROL STRATEGIES**

**CENTRIFUGE BUILDING**

1.01 THICKENING CENTRIFUGE FEED PUMPS

- A. Reference P&ID: 76-I-30, 31, 32, 33, 34, 35.
- B. Loop Mission: There are five variable speed Thickening Centrifuge (TC) feed pumps. There is one pump for each of the five TCs. The feed pumps transfer raw sludge from the TC feed pump feed loop to the centrifuges. The feed pumps can be automatically controlled by the DCS. The feed pumps can be manually controlled by the operator via the DCS.
- C. DCS Manual Control Mode: Open/Close all feed pump isolation and routing valves. Start/Stop control of each feed pump.
- D. DCS Automatic Control Mode:
  - 1. When the DCS is operating, automatic control of each raw solids pump will be performed by a software flow controller. Each pump will be controlled to maintain a flow setpoint (adjustable 500 gpm to 1,200 gpm).
  - 2. Adjust pump speed in accordance with the following variable:  
Setpoint - flow setpoint, Primary Process Variable - actual flow.
  - 3. If the centrifuge experiences a high torque condition, strategy will stop the pump by energizing a normally closed disable / enable discrete output to the feed pump drive. This output will remain in the disable state until the alarm condition is cleared and the operator initiates a reset.
  - 4. When the DCS is operating, in standby operations (feed pump to pump to a centrifuge other than the centrifuge of the same number), control of the feed pump will be performed by a software flow controller in the DCS. The software flow controller will operate as follows:
    - a. DCS will input the speed setpoint to the standby pump.
    - b. Start/stop signal from the centrifuge to which the standby pump is pumping will start/stop the standby feed pump.
    - c. When the standby TC feed pump is being used to pump to a centrifuge other than the centrifuge of the same number, if that centrifuge experiences high torque conditions, strategy will stop the pump. This will remain in the disable state until the alarm condition is cleared and the operator initiates a reset.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Process Interlocks:
  - a. Strategy will stop the pumps if the solids level in the thickened solids wetwell reaches the high level switch.
  - b. Strategy will stop the pumps. This output will remain in the disable state until the alarm condition is cleared and the operator initiates a reset.
6. Failure Response: Upon loss of PCM the thickening centrifuge feed pump will stop pumping.

**END OF SECTION**

**CONTROL STRATEGIES**

**CENTRIFUGE BUILDING**

1.01 THICKENING CENTRIFUGES

- A. Reference P&ID: 76-I-41, 42, 43, 44, 45.
- B. Loop Mission: There are five thickening centrifuges. The thickening centrifuges receive raw sludge in a concentration of 0.5 percent to 1.3 percent solids and thicken the sludge to 6.5 percent solids. The thickened sludge will be discharged to the thickened solids wetwell. The centrate will be discharged to the wastewater pump station. The thickening centrifuges can be automatically controlled by the DCS. The thickening centrifuges can be manually controlled by the operator via the DCS.
- C. General DCS Function:
  - 1. Use Ethernet communications to allow for DCS control and interaction with the thickening centrifuge(s).
    - a. Display thickening centrifuge status.
    - b. Display and notify operations of thickening centrifuge alarms.
    - c. Display operator adjustable thickening centrifuge setpoints.
- D. DCS Manual Control Mode:
  - 1. Set thickening centrifuge control mode.
    - a. Differential speed mode.
    - b. Auto torque mode.
  - 2. Start / Stop each thickening centrifuge.
  - 3. Open/Close motor operated routing valves.
  - 4. Start / Stop each thickening centrifuge feed pump.
  - 5. Reset a thickening centrifuge.
- E. DCS Automatic Control Mode:
  - 1. Operator to select thickening centrifuge strategy.
    - a. Operator to select centrifuge(s) to operate from the Thickening Centrifuge Control Strategy.
    - b. For each centrifuge selected for operation, operator to input polymer dosage rate of 0.01 and raw solids flow setpoint (adjustable 500 gpm to 1,200 gpm). A setpoint below 500 gpm will cause the thickening centrifuge sludge feed pump to be disabled.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. If polymer is to be used, operator to select first polymer day tank to operate.
- d. If Polymer Pump No. 1 or Thickening Centrifuge No. 1 Sludge Feed Pump is to be used to pump to a centrifuge other than Centrifuge No. 1, then the operator is to select standby operation which will prompt operator to select if Polymer Pump No. 1 and/or Thickening Sludge Feed Pump No. 1 is to be used to feed a centrifuge other than Centrifuge No. 1.
- e. If Polymer Pump No. 1 is to be used to pump to a centrifuge other than Centrifuge No. 1 then operator to select centrifuge to which Pump No. 1 is to pump.
- f. If any of Thickening Centrifuge Sludge Feed Pumps Nos. 1 through 5 is to be used to feed a centrifuge other than the centrifuge with the same number, then the operator is to select standby operation which will prompt operator to select which Thickening Sludge Feed Pump is to be used to feed a centrifuge other than the centrifuge of the same number.
- g. If one of the Thickening Centrifuge Sludge Feed Pump Nos. 1 through 5 is to be used to pump to a centrifuge other than the centrifuge of the same number, the operator will verify that all relevant manual valves have been adjusted in the field to allow the thickening centrifuge sludge feed pump to pump to a different numbered centrifuge.
- h. Operator to adjust back drive DIFFERENTIAL SPEED setpoint (0.1 rpm to 10.0 rpm).
- i. DCS to scan all I/O associated within the strategy and indicate ready or not ready. The centrifuge sludge feed pump DCS AUTO/MANUAL mode selection will not be a factor in determining if the strategy is ready or not ready.
- j. If Polymer Pump No. 1 is to pump to a centrifuge other than Centrifuge No. 1 then strategy will:
  - 1) Open the Pump No. 1 discharge line valve that goes to the discharge line of the pump that Pump No 1 is replacing.
  - 2) Close the discharge isolation valve of the pump that Pump No. 1 is replacing.
  - 3) (Strategy for control of this pump in this mode of operation is described in the thickening polymer system strategy).
- k. If Thickening Centrifuge Sludge Feed Pump Nos. 1 through 5 is selected to pump to a centrifuge other than a centrifuge of the same number then strategy will:
  - 1) Operations to verify that the manual valves have been configured for standby operation.
  - 2) Open the selected pump's discharge valve and bypass valve so that the sludge feed will be fed into the bypass header.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 3) Close the discharge isolation valve of the pump that the selected pump is replacing and open the bypass valve.
- 4) (Strategy for control of this pump in this mode of operation is described in the thickening centrifuge sludge feed pumps strategy).
- l. When the operator initiates startup the strategy will:
  - 1) Open first polymer day tank's outlet valves; upon confirmation.
  - 2) Check for open status of polymer injection line hand valves for each selected centrifuge. There are two injection lines, each with a hand valve. If at least one valve is not open, strategy will initiate an alarm to the operator, upon confirmation.
  - 3) Initiate control of pumps.
- m. After the strategy has started the operator will have the option to select a standby sludge feed pump and/or Thickening Centrifuge Polymer Feed Pump No. 1 for standby operation or remove them from standby operation without stopping the strategy.
  - 1) Operations will pause the centrifuge operation by placing the centrifuge in suspend mode. Stopping the sludge and polymer feeds without stopping the centrifuge.
  - 2) Operations will select the centrifuge to which the centrifuge sludge feed and/or polymer feed is to pump.
  - 3) Strategy will stop (disable) the centrifuge sludge feed pump for the selected centrifuge and position valves as described above to place the standby pump(s) into operation.
  - 4) After verification, the strategy will resume operations.
  - 5) When the Operator stops the Thickening Centrifuge Strategy, upon confirmation of the Stop signal, the strategy will stop the centrifuge sludge and polymer feed pumps and the centrifuge will begin its flushing sequence. When the flushing sequence is complete the Centrifuge will shut down.
- n. When the operator selects to place a centrifuge OUT OF SERVICE, strategy will inhibit control of the centrifuge. When selected to be placed back IN SERVICE, strategy will reestablish control of the centrifuge from the DCS.
2. Failure Responses: Upon failure of Process Control Module (PCM) centrifuge control will shut down the centrifuge.

**END OF SECTION**

**CONTROL STRATEGIES**

**CENTRIFUGE BUILDING**

**1.01 THICKENED SOLIDS TRANSFER PUMPS**

- A. Reference P&ID: 76-I-51, 52, 53, 54.
- B. Loop Mission: There are three constant speed thickened solids transfer pumps are to operate in a two-pump program (lead/lag) with one pump in standby. The pumps will transfer the thickened solids from the thickened solids wetwell to the digesters. The thickened solids transfer pumps can be automatically controlled by the DCS. The thickened solids transfer pumps can be manually controlled by the operator via the DCS.
- C. DCS Manual Control Mode:
  - 1. Open / Close all thickened solids transfer pump isolation valves.
  - 2. Start / Stop of each pump.
- D. DCS Automatic Control Mode:
  - 1. Operator to select thickened solids transfer pump strategy.
    - a. Operator to enter wetwell level setpoint.
    - b. Operator to select lead/lag/standby status for pumps (123/231/312).
    - c. DCS to scan all I/O associated with the strategy and indicate ready or not ready.
    - d. If ready, operator to initiate control of pumps.
    - e. Pumps will be controlled as follows:
      - 1) Start the lead pump at the level setpoint.
      - 2) Start the lag pump at level equal to: (level setpoint + 5 feet).
      - 3) Stop the lag pump at level equal to: (level setpoint + 1 feet).
      - 4) Stop the lead pump at level equal to: (level setpoint – 2 feet).
    - f. During operation, if a pump fails, strategy will switch the lead/lag/standby status of the pumps so that the failed pump is in the standby position. Strategy will issue an alarm and indicate which pump failed.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- g. During operation, to facilitate a bump less transfer from DCS control to local LIC control if the DCS fails, strategy will continuously output the lead/lag/standby status to the LCP hand switch until failure. Level Indicating Controller (LIC), to be programmed to assume control with same pump sequence prior to failure of DCS.
- 2. Process interlocks.
- 3. Failure responses: Upon loss of thickened solids wetwell level 76LIT2260 use 76LSH2261 to stop all thickening centrifuge feed pumps leaving the centrifuge running and use 76LSL2261 to stop thickened solids transfer pumps.

**CONTROL STRATEGIES**

**CENTRIFUGE BUILDING**

**1.01 DEWATERING CENTRIFUGE FEED PUMPS**

- A. Reference P&ID: 76-I-100, 101, 102, 103, 104, 105, 106, 107, 108.
- B. Loop Mission: There are eight variable speed dewatering centrifuge (DC) feed pumps. There is one pump for each of the eight DCs. The feed pumps transfer digested biosolids from the DC feed pump feed loop to the centrifuges. The feed pumps can be automatically controlled by the DCS. The feed pumps can be manually controlled via the DCS.
- C. DCS Manual Control Mode:
  - 1. Open/Close all feed pump isolation and bypass valves.
  - 2. Add manual raising and lowering of pump speed output and setpoint.
- D. DCS Automatic Control Mode:
  - 1. In AUTO mode each pump can be used to pump to its designated centrifuge only.
  - 2. When the DCS is operating, and START/STOP control is selected by an operator to AUTO mode the pump will be started by DCS when a “Centrifuge Ready for Feed” signal is received from the corresponding centrifuge PLC via the Ethernet datalink.
  - 3. When the DCS is operating, and SPEED CONTROL is selected by an operator to AUTO mode control of each Dewatering Centrifuge feed pump speed will be performed by a software flow controller. Each pump will be controlled to maintain a flow setpoint entered by the operator as follows:
    - a. Adjust pump speed in accordance with the following variable: Setpoint - flow setpoint, Primary Process Variable - actual flow. Controller will modulate the speed demand output signal that is hardwired directly to the associated VFD.
    - b. If the “Centrifuge Ready for Feed” is set to 0 by the centrifuge PLC (NOT READY status) or if the datalink between the DCS and PLC is lost strategy will set the speed demand to a 0 and stop the feed pump.
  - 4. Process Interlocks:
    - a. Strategy will stop the centrifuge feed pump and issue an alarm, when a hopper level failure is detected for the hopper associated with that feed pump.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Strategy will stop the centrifuge feed pumps and issue an alarm - if the level of solids in the dewatering biosolids hopper associated with the centrifuge to which the pump is pumping reaches the high level setpoint of 50 percent (presently set to try to maintain a 35 percent level).
- c. Strategy will stop all running feed pumps when a High-High Level alarm is received from the Centrate Wetwel.
- d. After this event, Operator must reset the sludge pump disable once the centrifuge bin High-High level has been cleared.
- e. If the “Centrifuge Ready for Feed” is set to 0 by the corresponding centrifuge PLC (NOT READY status) or if the datalink between the DCS and PLC is lost the feed pumps will be commended to stop and prevented from starting until the datalink is restored AND “Centrifuge Ready for Feed” signal is received.

**END OF SECTION**

**CONTROL STRATEGIES**

**CENTRIFUGE BUILDING**

**1.01 DEWATERING CENTRIFUGE POLYMER FEED PUMPS**

- A. Reference P&ID: 76-I-220, 221, 222, 223, 224, 225, 226, 227, 228.
- B. Loop Mission: The dewatering polymer system consists of two polymer day tanks and eight variable speed dewatering polymer feed pumps. One pump for each dewatering centrifuge. The dewatering polymer system will be used to inject polymer into the digested biosolids flow prior to dewatering the biosolids using the dewatering centrifuges. The dewatering polymer system can be automatically controlled by the DCS. The dewatering polymer system can be manually controlled by the operator via the DCS.
- C. DCS Manual Control Mode:
  - 1. Open / Close all polymer system crossover valves.
  - 2. Start / Stop polymer day tank mixers.
  - 3. Open / Close all polymer pump isolation valves.
  - 4. Manual speed control of feed pump
- D. DCS Automatic Control Mode:
  - 1. When the DCS is operating, and START/STOP control is selected by an operator to AUTO mode the pump will be started by DCS when the same centrifuge's Sludge Feed Pump running signal is received and corresponding sludge flow is above a minimal value (exact value TBD).
  - 2. When the DCS is operating, and SPEED CONTROL is selected by an operator to AUTO mode control of each Dewatering Centrifuge polymer feed pump speed will be performed by a software flow controller. Each pump will be controlled to maintain a dosage setpoint (input by the operator). For each feed pump the controller will operate as follows: Initial condition is 0.06.
    - a. Software ratio module will calculate the polymer flow setpoint: (dosage rate) (Biosolids flow to the associated centrifuge). Set at 0.06.
    - b. Adjust pump speed in accordance with the following variable: Setpoint calculated polymer flow setpoint, Primary Process Variable - actual polymer flow.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Controller will output a speed setpoint to the associated hardwired controller in the centrifuge control panel (the speed setpoint will go through the hardwired flow controller when it's in the computer position) to the pump.
3. During operation, strategy will pump from the first polymer day tank until the tank reaches low level, strategy shall then open the second day tanks' outlet valves, close the first day tank's outlet valves and open its' inlet valve (When the inlet valve is open the tank can be filled. Filling of the day tank will be performed by another strategy). Day tank inlet valve will close on high level. When the second day tank reaches low level, strategy will open the outlet valves of the first day tank, close the outlet valves of the second day tank and open its' inlet valve. This will be a continuous cycle. Initial conditions – Low is 3.0, High is 8.0.
4. The day tank mixer will not normally be used for Mannich polymer. Its control will be switched to manual. It will be turned on at the discretion of the operator depending on the history of the original mixed batch of polymer.
5. If a day tank is selected to be taken OUT OF SERVICE, strategy will close the inlet and outlet valves from the tank, stop the mixer of the tank, inhibit control of the valves from the DCS and indicate that the tank is OUT OF SERVICE. When the tank is selected to be placed back IN SERVICE, strategy will re-establish control of the valves and the mixer from the DCS.
6. Process Interlocks:
  - a. Dewatering centrifuge polymer feed pumps to pause or standby when both polymer day tanks are at low level alarm. (Physical switches only.) Strategy will perform this step by inputting a zero dosage setpoint in place of the operator inputted values. Zero setpoint will not become the default. Strategy will issue an alarm message to the operator indicating that the dewatering centrifuge polymer day tanks are at low level.
  - b. One tank OUT OF SERVICE and other tank that is IN SERVICE can be refilled while tank is still in use.

**CONTROL STRATEGIES**

**DIGESTER COMPLEX**

**1.01 DIGESTER FEED LINES**

- A. Reference P&ID: 80-I-3, 53, 103.
- B. Loop Mission: Each digester that is ON-LINE to receive thickened biosolids or digested sludge will be fed thickened biosolids one at a time, in a repeating cycle. Each digester will be fed a set quantity of biosolids then the next digester will be fed a set quantity. The cycle will be controlled by opening and closing appropriate digester inlet header valves. In order to feed the selected digester, the digester mix pump(s) must be on.
- C. DCS Manual Control Mode: Open / Close all feed isolation and bypass valves.
- D. DCS Automatic Control:
  - 1. DCS to monitor and record the following:
    - a. Flow to each digester.
    - b. Open/close, thermal overload, valve torque and hand switch status of all routing and isolation valves.
    - c. Open/close status for all hand valves.
  - 2. If more than one digester is to be IN SERVICE ON-LINE, operator to select digester feeding cycle load (adjustable 1,000 gallons to 10,000 gallons) (The digesters will be fed in a cycle, one at a time. Each digester will be fed the entered cycle load then the next digester will be fed).
  - 3. Before feeding an IN SERVICE ON-LINE digester. Confirm the mix pumps are on. If the mix pumps are not on strategy will issue an alarm and indicate the pump status.

- A. Reference P&ID: 80-I-1, 2, 51, 52, 101, 102.
- B. Loop Mission: While in the digesters, the biosolids will be mixed using the recirculation pumps. The recirculation pumps can be automatically controlled by the DCS. The recirculation pumps can be manually controlled by the operator via the DCS.
- C. DCS Manual Control Mode:
  - 1. Open/close all routing and isolation valves.
  - 2. Start/stop of each recirculation pump.
- D. DCS Automatic Control Mode:
  - 1. For each digester to be put IN SERVICE ON-LINE, operator to:
    - a. Select lead recirculation pump (remaining pump to become standby).
    - b. Enter the setpoint for recirculation flow.
  - 2. While a digester Strategy is Running:
    - a. Start the lead recirculation pump and two lead mix pumps when the biosolids level in the digester is at or above El. 21.3 feet. Stop both recirculation pumps and all mix pumps when the biosolids level in the digester is below El. 20.3 feet. (Note: A 60 second delay timer will start before the valves are closed and the pump is stopped).
    - b. If the lead recirculation pump fails, the standby pump will start; upon confirmation, the failed pump will stop and an alarm will be issued.

1.01 DIGESTER AXIAL PUMPS

- A. Reference P&ID: 80-I-1, 20, 21, 22, 51, 70, 71, 72, 101, 120, 121, 122.
- B. Loop Mission: While in the digesters, the biosolids will be mixed using the axial flow pumps. The axial flow pumps can be automatically controlled by the DCS. The axial flow pumps can be manually controlled by the operator via the DCS.
- C. DCS Manual Control Mode:
  - 1. Open/close all routing and isolation valves.
  - 2. Start/stop of each axial pump
- D. DCS Automatic Control Mode:
  - 1. Start the axial pumps when the biosolids level in the digester is at or above 33.8 feet. with deadband of 0.05 feet. Stop the axial pumps when the biosolids level in the digester is below 33.0 feet. Note: 300 second delay before active pump can be restarted.
  - 2. If an axial pump discharge pressure exceeds the high pressure setpoint (as -20 psi DB=1 recommended by the pump manufacturer), strategy will issue alarm, indicate the axial flow pump that is experiencing high discharge pressure and stop that axial pump.
    - a. Note 1: 300 second restart delay on axial pump needs alarm reset, low pressure.
    - b. Note 2: 180 second delay on low flow, 500 gpm.
  - 3. If an axial pump discharge flow falls below the minimum setpoint flow set at 500 gpm, 2.00 DB and 180 second delay (adjustable 0 to 4,400, initial 3,000 gpm), strategy will issue alarm, indicate the axial pump that is experiencing low flow conditions and stop that axial flow pump.

**DIGESTER COMPLEX**

1.01 BIogas COLLECTION SYSTEM

- A. Reference P&ID: 80-I-250, 251,252, 260, 262.
- B. Loop Mission: The biogas system consists of biogas collection headers, a biogas storage tank, three biogas Compressors (blowers), three biogas flares, five condensate sedimentation traps and three condensate sumps. The biogas will be collected from the three anaerobic digesters, the biosolids storage tanks and then be routed to either the biogas storage tank, the flares, or the Compressors (blowers). Biogas condensate will flow into condensate sedimentation traps, then to condensate collection sumps from which it will be pumped to the wastewater pump station. The biogas system valves can be automatically controlled by the DCS. The biogas system valves can be manually controlled by the operator via the DCS.
- C. General DCS Functions:
  - 1. DCS to monitor and record the following:
    - a. Each tank's biogas flow and pressure.
    - b. Open/close, ready and hand switch status of all routing, inlet and isolation valves.
    - c. Sediment trap low-low and high-high level switch status.
    - d. Total biogas flow and pressure.
    - e. Gas storage tank floating cover level and head space pressure
    - f. Condensate sump low-low and high-high level switch status.
    - g. Open/close status of storage tank outlet valve.
    - h. Open/close status of storage tank pressure relief valve isolation hand valve.
- D. DCS Manual Control Mode: Open/close all routing inlet and isolation valves.
- E. DCS Automatic Control Mode:
  - 1. DCS to monitor and record the following:
    - a. Each tank's biogas flow and pressure.
    - b. Open/close, ready and hand switch status of all routing, inlet and isolation valves.
    - c. Sediment trap low-low and high-high level switch status.
    - d. Total biogas flow and pressure.

CITY OF SAN DIEGO

**DIGESTER COMPLEX**

1.01 BIOGAS COMPRESSORS

- A. Reference P&ID: 80-I-272, 273.
- B. Loop Mission: To provide biogas to the cogeneration system. Changes in gas flow rate to the cogeneration system to not exceed 50 scfm in 15 minutes. Operate biogas recirculation valve to ensure the maximum flow rate of change is not exceeded and the desired flow setpoint is obtained.
- C. DCS Manual Control Mode:
  - 1. Open/close all routing and isolation valves.
  - 2. Start/stop/alternate biogas compressors (blowers). The Inlet valve must be open greater than 35 percent before the Compressor will start.
  - 3. Interlocks that will remain active in DCS Manual mode will include all interlocks that are in place in the DCS Automatic mode.
- D. DCS Automatic Control Mode:
  - 1. Operator to select Lead/Lag/Standby status for biogas compressors.
  - 2. Strategy will open a tank's biogas collection valve when that tank is tagged IN SERVICE from the DCS and close a tank's biogas collection valve when that tank is tagged OUT OF SERVICE from the DCS.
  - 3. When the Biogas Storage Tank Level Transmitter (80LT2681) indicates the following levels, provide the indicated action:

Level	Level Setpoint	Action	Action	Notes
	<i>80LT2681 (Feet)</i>	Rising level	Falling Level	
A	16.0	Open Biogas Discharge Valve to open and Position Biogas Compressor Inlet Valve to Full Open		1

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Level	Level Setpoint	Action	Action	Notes
	D<LEVEL>C	Modulate Biogas Compressor Inlet Valve between MINIMUM setting at "D" and full OPEN at "C" to maintain Biogas Storage Tank level within this range	Modulate Biogas Compressor Inlet Valve between MINIMUM setting at "D" and full OPEN at "C" to maintain Biogas Storage Tank level within this range	2,3,4
B	8.0	Open Biogas Compressor Inlet Valve to MINIMUM position and START Compressor	Position Biogas Compressor Inlet Valve to MINIMUM position	1
C	6.0		STOP Biogas Compressor and then close the Discharge Valve and position Inlet Valve to MINIMUM position	
D	4.0		Initiate Biogas Storage Tank LOW LEVEL ALARM	

Notes:

1. Level Setpoint listed for A, B and C are initial setpoints and shall be adjustable.
2. Provide an adjustable floating deadband for compressor inlet valve modulation (Range: 0.in. to plus/minus 12.in. WC, Initial setting: plus/minus 6.in. WC).
3. Limit amount of compressor inlet valve modulation such that the flow as indicated by 80FIT2673 does not change by more than 50 scfm per five (15) minute interval.
4. Set MINIMUM position of compressor inlet valve opening in the field to correspond to 120% of the compressor surge flow.

4. Provide the indicated action When the Biogas Storage Tank Pressure Transmitter (80PIT2680) indicates the following pressures:

Pressure	Pressure Setpoint	Action	Action	Notes
	80PIT2680 (Inches WC)	Rising Pressure	Falling Pressure	
E	9.0	ENABLE Biogas Compressors		1
F	8.7		Initiate LOW PRESSURE ALARM and DISABLE Biogas Compressors.	

Notes:

1. All Pressure Setpoints listed are initial Settings and shall be adjustable

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. When Biogas Compressor Discharge Pressure Transmitter (80PIT2671) indicates pressure rising to the High-pressure setpoint (Range 5.0 psig to 6.0 psig, initial setting: 5.5 psig) initiate compressor HIGH DISCHARGE PRESSURE ALARM. Initiate a HIGH-HIGH DISCHARGE PRESSURE ALARM and initiate a compressor shutdown when 80PIT2671 indicates a pressure of 6.1 psig.
6. When Biogas Compressor Discharge Pressure Transmitter (80PIT2671) indicates pressure falling to allow pressure setpoint (Range: 2.0 psig to 3.0 psig; initial setting 2.5 psig) for more than an adjustable period of time (Range: 0 seconds to 30 seconds Initial setting: 10 seconds) while a compressor is operating, initiate a LOW DISCHARGE PRESSURE ALARM, STOP the compressor, close the compressor discharge valve and position the inlet valve at the Minimum position.
7. When Compressor Inlet Pressure Transmitter (80PIT2670) indicates pressure falling to a low pressure setpoint (Range: 8.5 inch WC to 9.5 inch WC, initial setting 8.7 inch WC) for more than an adjustable time period (Range: 0 seconds to 30 seconds. Initial setting 10 seconds) while compressor is operating, initiate a COMPRESSOR LOW INLET PRESSURE Alarm, STOP the compressor, close the compressor discharge valve and set the inlet valve to minimum setpoint.
8. When the Compressor Discharge Temperature Transmitter (80TIT 2672) indicates temperature rising to the high temperature setpoint (Range: 120 degrees F to 190 degrees F., initial setpoint 180 degrees F) initiate a HIGH COMPRESSOR DISCHARGE TEMPERATURE ALARM and inhibit further increases in the biogas flow by inhibiting the inlet valve from modulating further open until the HIGH COMPRESSOR TEMPERATURE ALARM has been cleared. When the Compressor Discharge Temperature Transmitter (80TIT2672) indicates temperature rising to the high-high temperature setpoint (Range: 200 degrees F to 210 degrees F, initial setting 200 degrees F) initiate a HIGH-HIGH COMPRESSOR DISCHARGE TEMPERATURE ALARM, initiate a staged compressor shutdown by modulating the inlet valve to reduce the Discharge Flow in 10 scfm increments every 5 minutes to the minimum Flow Position and then stop the compressor and close the discharge valve.
9. Alternate Lead Compressor on each start. Upon being stopped, lock out the Compressor for an adjustable time period (Range: 0 minutes to 60 minutes, initial setting: 15 minutes).

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

10. When a compressor is given the command to START, the strategy shall OPEN and move the inlet valve to the Minimum Flow position. After confirmation that the valve is in the minimum flow position, start the compressor after an adjustable time delay (Range: 0 seconds to 60 seconds initial setting 15 seconds). Maintain this initial flow for 5 minutes before modulating the inlet valve as described above at paragraph B.
11. When the flow setpoint is greater than the Lead gas compressor can provide start the Lag gas compressor. Modulate the recirculation valve (80MV1679) to achieve desired setpoint while ensuring the flow rate doesn't exceed the system's allowable rate of change.

**END OF SECTION**

**CONTROL STRATEGIES**

**DIGESTER COMPLEX**

1.01 BIOGAS FLARES

- A. Reference P&ID: 80-I-275, 277, 279, 280.
- B. Loop Mission: The biogas flares will operate in a Lead/Lag-1/Lag-2 flare program with the Lag-2 flare acting as standby. The biogas flares will be monitored and controlled by the DCS. When not in operation, flares can be tested manually. The flares are controlled by either a start / stop signal from the DCS or when there is sufficient pressure meet the start pressure setpoint. Existing Flares 1 (80-GFL-01) and 2 (80-GFL-02) start and stop setpoints are set locally inside the flare control panel(s). Flare 3 (80-GFL-03) start / stop gas setpoint can be set from the DCS. By adjusting Flare 3 (80-GFL-03) start / stop pressure setpoints to be either above or below the manually set values for existing Flares 1 (80-GFL-01) and 2 (80-GFL-02) Flare 3 will be either the Lead or Lag 2 flare in the event of a DCS outage.
- C. DCS Manual Control Mode:
  - 1. Open/close biogas inlet valves.
  - 2. Manually test flare(s).
  - 3. Start/Stop Biogas flare local control panels.
  - 4. Reset Biogas flare local control panels.
- D. DCS Automatic Control Mode:
  - 1. Operator to select Lead/Lag-1/Lag-2 status for flares.
  - 2. Operator to set the Lag-1 and Lag-2 start delay setpoints.
  - 3. Operator to set the Lead/Lag-1/Lag-2 low level shutdown setpoints.
  - 4. With the H-O-C selector switch(s) on the flare local control panel and the flare master control panel in the computer position, the DCS will provide a start/stop signal.
  - 5. When the level in the gas storage tank reaches a high setpoint level, the DCS issues a start signal to the lead flare. If the high setpoint level persists for 30 seconds to 60 seconds (operator adjustable) then Lag-1 will start, If the high setpoint level continues to persist for an additional 30 seconds to 60 seconds (operator adjustable) then Lag-2 will start.
  - 6. The DCS will stop the flares when the gas level drops below the Lead/Lag-1/Lag-2 low level setpoint(s).

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. When the Cogen system is not in operation the Lead/Lag-1/Lag-2 low level setpoints should be spaced much further apart allowing the Lead and Lag-1 flare(s) to stay on continuously as required by the biogas production.
8. When the Biogas Storage Tank Level Transmitter (80LT2681) indicates the following levels, provide the indicated action:

Level	Level Setpoint	Action	Action	Notes
	<i>80LT2681</i>	Rising level	Falling Level	
A	20.0	Initiate Biogas Storage Tank High Level Alarm And Start Lag-2 Biogas Flare		
B		START Lag-1 Biogas Flare		1
C	18.0	START Lead Biogas Flare		1
D			STOP Lag-2 Biogas Flare	1
E			STOP Lag-1 Biogas Flare	1
F	16.0		STOP Lead Biogas Flare	1
Notes:				
1. All Level Setpoints listed are initial Settings and shall be adjustable				

9. Provide the indicated action When the Biogas Storage Tank Pressure Transmitter (80PIT2680) indicates the following pressures:

Pressure	Pressure Setpoint	Action	Action	Notes
	<i>@ 80PIT2680 (Inches WC)</i>	Rising Pressure	Falling Pressure	
A	13.0	Initiate HIGH HIGH PRESSURE ALARM and START the Lag-2 Biogas Flares		
B	12.5	START the Lag-1 Biogas Flares		1
C	12.0	Initiate HIGH PRESSURE ALARM and START Lead Biogas Flare		1
D	11.1		STOP Lag-2 Biogas Flare	1

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Pressure	Pressure Setpoint	Action	Action	Notes
E	11.0		STOP Lag-1 Biogas Flare	1
F	10.0		STOP Lead Biogas Flare	1
Notes:

**END OF SECTION**

**CONTROL STRATEGIES**

**CENTRATE PUMP STATION**

1.01 CENTRATE PUMPS

- A. Reference P&ID: 94-I-10, 15, 16, 17.
- B. Loop Mission: There are three variable speed centrate pumps. The pumps will transfer centrate from the centrate pump station wetwell to the centrate force main which discharges to NCWRP Influent Pump Station drop structure, from there the centrate flows by gravity to the Point Loma Wastewater Treatment Plant. The pumps can be automatically controlled by the DCS. The pumps can be controlled manually by the operator via the DCS. The Centrate Wetwell system matches the pump rate with the inflow rate which due to the small size wetwell. The wetwell becomes an extension of the centrate pipeline. Each pump has a maximum factory design capacity of 2,510 gpm.
- C. General DCS Functions:
  - 1. The Centrate Pumps VFD's have been provided with Modbus/TCP communications along with hardwired I/O. Provide the following VFD parameters to the DCS for each drive:
    - a. Motor Current.
    - b. Motor Voltage.
    - c. Motor Power (kW).
    - d. Power Factor Applied to Motor.
- D. DCS Manual Control Mode:
  - 1. Open/close centrate wetwell inlet sluice gate.
  - 2. Start/stop and adjust speed of each centrate pump. (To enable the operator to manually adjust the speed of a pump from the DCS, the DCS will have to issue a manual speed enable signal to the speed relay for that pump.)
  - 3. Open/close pump isolation valves.
- E. DCS Automatic Control Mode:
  - 1. Operator to select centrate pump station strategy.
    - a. Operator to select lead/lag/standby status for the pumps.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. The operator will select one of six matrices 123 / 231 / 312, 1/3/2, 2/1/3, 3/2/1 for the lead, lag and standby operation of the Centrate Pumps. To enter the selection, click on the desired button, followed by the “Confirm” button. (Graphic No. 2627). Check that mode select is in DCS.
- c. Select level transmitter to use for level control, other level transmitter is then the automatic backup level. DCS is in control.
- d. DCS to scan all I/O associated with strategy and indicate ready or not ready.
- e. Once the Strategy Ready button is illuminated, the Start button becomes enabled and may be selected. Once the START button is selected, and initiates the strategy.
- f. If ready, operator to initiate startup strategy which will:
- g. Open the centrate wetwell inlet sluice gate.
- h. Upon open confirmation of the sluice gate, initiate centrate pump control.
- i. The DCS will control the centrate pumps by a software level controller. Control will be as follows:
  - 1) One Pump Operation:
    - a) At Invert elevation of 36-inch centrate pipe, set low level alarm at elevation 4.7 feet (adjustable).
    - b) Stop lead pump on falling level at elevation 4.9 feet (adjustable).
    - c) Start lead pump at minimum speed on rising level at elevation 5.03 feet (adjustable) and vary speed of lead pump to maximum speed at elevation 5.45 feet (adjustable).
  - 2) Two Pump Operation:
    - a) Start first lag pump on rising level at 5.62 feet (adjustable). Switch speed control to two pump operation. Both lead and first lag pumps to vary speed over new wetwell level range of 5.45 feet to 6.2 feet (adjustable). falling level at 5.35 feet (adjustable).
    - b) Stop first lag pump at 5.67 feet on falling level and return speed control to one pump operation.
    - c) Initially set high level alarm at 6.5 feet (adjustable), in future, when additional centrifuges are installed, reset to 6.3 feet (adjustable).
    - d) Note:
      - (1) Close Gate at 7.0 feet.
      - (2) Start lag at 5.92 feet.
      - (3) Stop Lag at 5.67 feet.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- (4) Start Lead at 5.10 feet.
  - (5) Stop Lead at 4.90 feet.
- j. During operation, if a pump fails and the Standby pump is IN SERVICE, strategy will switch the lead/lag/standby status of the pumps so that failed pump is in the standby position. Strategy will issue an alarm and indicate which pump has failed.
- k. During operation, to facilitate a bump less transfer from DCS control to local Level Indicating Controller (LIC) control, if the DCS fails, strategy will continuously output the lead/lag/standby pump status to the centrate pump local control panel LIC.
- l. If the operator selects a pump to be taken OUT OF SERVICE, strategy will stop the pump, close the isolation valves for that pump, inhibit control of the pump and the valves from the DCS and indicate that the pump is OUT OF SERVICE. In addition, strategy will switch the lead/lag/standby status of the pumps so that the pump selected to be taken OUT OF SERVICE is in the standby position. When the pump is selected to be placed back IN SERVICE, strategy will re-establish control of the pump and the isolation valves.
- m. The operator will be able to take OUT OF SERVICE and place back IN SERVICE any pump that can be controlled from the DCS. A pump can be selected to be placed OUT OF SERVICE by clicking on the pump which accesses a faceplate providing IN or OUT OF SERVICE capabilities. (Graphic No. 2611).
- n. Any pump in alarm will be highlighted and flashing until the alarm is acknowledged; at which time the light stop flashing. When the alarm is cleared the alarm will be extinguished. Monitoring of mechanical devices related to this strategy is indicated at the bottom of the screen. Devices that are in a state of alarm will be highlighted. (Graphic No. 2627).
- o. At the present time, it is not practical to implement a leak detection system. This concern is presently being addressed with a view to finding a viable solution. The problem lies in the fact that sections of the pipeline flow downhill as well as uphill and the gravitational effect on varying flow has presented flow measurement difficulties.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- p. During operation, if there is a power failure to the equipment in the pump station, the DCS will remain operational until the UPS Backup Power system is exhausted. In this condition, the DCS will continue to send the DCS 'Computer Ready' signal to the Pumps Local Control Panel. Even though this signal is present when power is restored to the Local Control Panel, the Local Panel always defaults to Local/Manual mode. This condition will persist until the Remote/Local Pushbutton on the Local Panel is pressed. This will require that an operator descend to the Local/Panel to perform this operation.

**VOLUME 4**

**SPECIFICATIONS**

---

**SECTION 40 90 03  
GENERAL REQUIREMENTS**

**PART 1 GENERAL**

**1.01 THE REQUIREMENT**

**A. General:**

1. The distributed control system provider (DCSP) shall furnish all equipment and provide all applicable engineering for a fully functional distributed control system, that complies with the technical requirements of the Contract Documents including, but not limited to, project management, design assistance, coordinate with on-site area contractors, detailed system design and integration, conducting graphic design workshops, equipment supply and shipment, storage, job site delivery, programming and configuration, installation oversight, testing, commissioning and startup, integration with the existing Cleanwater Operation and Management Network (COMNET), and training.
  - a. The DCS Work shall be as defined within Division 01, General Requirements, and these Specifications.
  - b. The Work covered by this section and all of its subparts shall include, but not be limited to, field verification of all existing conditions, engineering and design of system and components, manufacture and/or procurement of all necessary equipment, components, material, transportation, labor, special tools, factory testing, application programming, shipment, storage, and jobsite delivery, operational readiness testing, installation of equipment, system integration, startup operation, site testing, training and documentation, support, maintenance/warranty of a complete, integrated and operational distributed control system (DCS) for the City of San Diego.
  - c. The statements of Work contained herein are necessarily general in nature and should not be construed as an all-inclusive list of devices, equipment, software and services necessary for successful completion of the Work.
  - d. It shall be the responsibilities of the DCSP to coordinate and project manage the Work, as set forth in this section of the specifications, with work and equipment specified under other sections of the specifications, in order to provide a complete and satisfactory installation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. To ensure that the DCS shall be a standard system of Emerson Process Management, Ovation family, with a complete repertoire of pre-existing software modules running in a familiar hardware environment and free from hardware/software incompatibilities.
- f. This section is generic to all facilities and applicable sections shall be delivered for each process segment of the Work as defined in these Specifications and Project Contract Documents.
- g. The DCSP shall be responsible for coordination, installation, and testing of DCS. The Prime Contractor is responsible for termination of I/O signals, power and ground utilities for all DCS equipment. The DCSP shall review and inspect all current designs and all Contract Documents to assess space allocations, power allotments and available grounds. If the DCSP's requirements for power, grounding or spatial requirements differ from that shown within the Contract Documents, the DCSP shall include all required engineering, design and construction details to the Prime Contractor and City's representative immediately.
- h. The DCSP shall be responsible for providing all equipment, installation supervision, engineering, programming, configuration, management and services associated with integrating all instrumentation and control (I&C) devices, and special systems, including foreign device interfaces (FDIs), into the DCS in a transparent and seamless manner. The use of a third party, system house, or system integrators for the above service is not acceptable.
- i. DCSP shall be fully responsible for the implementation, installation, and integration of the DCS as outlined in this section.
- j. The provisions of this section shall apply to all items specified in the various sections of Division 40, Process Interconnections, and all other divisions.
- k. DCSP shall be responsible for interfacing to all existing instrumentation and all other input/output (I/O) devices.
- l. During field functional testing the DCSP shall verify the operation of all instruments and field devices and associated wiring (from instrument/device to DCS) and notify the City's representative and Prime Contractor of any deficiencies that exist.

B. Scope of Work:

- 1. The Work generally consists of the supply of all labor, tools, services and provision of all products required, for a complete, integrated, operational DCS control system in accordance with the Contract Specification and Drawings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Identify other ongoing projects/systems development that are not part of this Contract. Ensure other ongoing activities, in close proximity or otherwise, do not disturb or interrupt the operation of the existing systems or the work already commissioned or placed into operation. Should any such activity pose a risk to this work or to the system operation, advise the City immediately.
3. In general, the work involves the supply, installation and commissioning of the DCS control system as indicated on Drawings and Specifications, and as defined in the Matrix of Responsibilities below. The following is a summary of the major works:
  - a. Engineer to provide a high-level description of the Project-specific Work including provision of all instruments, hardware, software, network, cabling, and services such as testing, commissioning, training, documentation.
  - b. Following the instructions, provide, test and commission all field instrumentation including field wiring, instrument control panels, and control system hardware including all lightning and surge protection, and all peripheral devices necessary.
  - c. Conduits and Wires:
    - 1) All conduits, including those for the district information network (DIN), plant information network (PIN) and facility information network (FIN), will be furnished and installed by the Contractor. All conductors, including power and grounding for DCSP-furnished equipment will be furnished and installed by the Contractor. DCS grounding will use a special triad grounding system; specifications for this system are provided in the Contract Documents in accordance with the DCSP requirements. All signal conductors, except for PIN and FIN fiber optic and coaxial cables, will be provided and installed by the General Contractor (GC).
    - 2) The PIN and FIN fiber optic and coaxial cables will be furnished, installed, and terminated by the GC. DIN fiber optic cable will be furnished by the GC up to the first termination point within a facility.
    - 3) Cables and conduits for non-DCS communications systems, such as the telephone system, will be furnished and installed by the GC.
  - d. Provide all programming and microprocessor-based instrument configuration.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. Provide all required testing, commissioning and startup services. Allow in the Contract Price, for any additional time deemed necessary to meet the testing and commission requirements.
  - f. Provide factory acceptance testing (FAT) to demonstrate the operational functionality of hardware and communications in accordance with the specifications.
  - g. Provide operational readiness testing (ORT) to demonstrate the correct operation of the control system with both hardware and software in place per specifications.
  - h. Provide performance acceptance test (PAT) to ensure entire system functions properly per specifications.
  - i. Provide all required training in accordance with Specifications.
  - j. Provide warranty services in accordance with contract requirements.
4. Interfacing and Responsibilities of GC and DCSP: The following Table 1 shows the procurement, installation, and labor responsibilities of the DCSP and the GC. All field instrumentation devices and final control elements which are needed to support DCS functionality will be wired to process control modules (PCMs). Table 2 and Table 3 define in greater detail of the responsibilities assigned to the GC and the DCSP.

<b>Table 1: Matrix of Responsibilities - Equipment/Devices/Materials</b>		
<b>Product</b>	<b>Supply</b>	<b>Install</b>
DCS process control modules (PCMs)	DCSP	GC
DCS PIN/FIN hubs and network equipment	DCSP	DCSP
All other communication cables that interconnect DCS equipment	DCSP	DCSP
Instrumentation panels and racks provided by DCSP	DCSP	GC
Panels (including PLCs) and racks provided by GCs	GC	GC
Instrumentation provided by GCs	GC	GC
Instrumentation provided by DCSP within panels (including specialized communications cables required)	DCSP	GC
Interposing relays to interface DCS control commands with equipment controls FIE	DCSP	DCSP
DCS isolated (reference) grounding cables and rods	GC	GC

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

<b>Table 2: Matrix of Responsibilities - Wire/Conduit/Terminations</b>			
<b>Description</b>	<b>Supply</b>	<b>Install</b>	<b>Terminate</b>
Power conduits and wire to GC furnished equipment and devices	GC	GC	GC
Power conduits and wire to DCSP furnished equipment and devices	GC	GC	GC
Signal conduits from DCSP or GC furnished instruments to DCSP or GC furnished equipment and device	GC	GC	---
Signal wire/cable from DCSP or GC furnished instruments to DCSP or GC furnished equipment and devices	GC	GC	GC
All conduits associated with the PIN, FIN, DIN and other communication links	GC	GC	----
PIN and FIN fiber optic, unshielded twisted-pair and coaxial cables	GC	GC	GC
Other communications cables from GC-supplied equipment to the DCS	GC	GC	GC
All cable associated with the DIN	DCSP	GC	DCSP
Ground conduits and wire/cable from power panel to PCM or any other DCSP furnished equipment	GC	GC	GC

<b>Table 3: Matrix of Responsibilities - Submittals/Commissioning</b>	
<b>Task</b>	<b>Responsibility</b>
Prepare DCS hardware/installation submittals for PCM	DCSP
Prepare DCS software submittal	DCSP
Provide SAMA functional diagrams	DCSP
Prepare annotated software listings of all GC-furnished PLCs and other programmable equipment	GC

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

<b>Table 3: Matrix of Responsibilities - Submittals/Commissioning</b>	
<b>Task</b>	<b>Responsibility</b>
Prepare instrument submittal	GC
Calibrate instruments	GC
Prepare GC panel submittals	GC
Prepare loop drawings to support the termination of all DCS I/O and the installation of all instruments	GC
Coordinate all control systems integration (instrumentation, PLCs, DCS, network, communications and data exchange) amongst various subcontractors	GC
Perform FAT of DCS	DCSP
Perform FAT of GC panels	GC
Perform ORT of DCS	DCSP
Perform ORT test of GC panels	DCSP/GC
Perform loop tests	DCSP/GC
Participate in plant startup	DCSP/GC
Provide DCS information to support GC development of loop drawings	DCSP

1.02 RELATED SECTIONS

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
1. Division 01, General Requirements.
  2. Division 26, Electrical.
  3. Division 40, Process Interconnections.
- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 SPECIFICATIONS, CODES AND STANDARDS

- A. The Work shall comply with the current editions of the publication and codes identified in Section 40 90 04, References, and herein.

1.04 DEFINITIONS

- A. Definitions of acronyms are identified in Section 40 90 05, Definitions.

1.05 SUBMITTALS

- A. The DCSP shall develop and submit within the first 45 days after NTP, a detailed list of submittals required by all Contract Documents for review and approval. The list shall contain the title of each submittal, detailed description of its contents and the applicable reference sections. Submittal shall be grouped, organized and sequenced logically such that it facilitates the City's representative's review process. This requirement extends to all Work required by all other Divisions.
- B. All submittals shall be executed in accordance with Section 01 33 00, Submittal Procedures.
- C. The DCSP shall conduct a pre-submittal conference. At a minimum, the following shall be presented at the conference:
  - 1. A list of equipment and materials required for the applicable submittal content.
  - 2. A list of proposed exceptions to the Specifications and Drawings, along with a brief explanation of each.
  - 3. An exact one-to-one sample of each type of document to be submitted.
  - 4. Any implementation and construction documentation associated with the submittal.
  - 5. A schedule or schedule fragment that applies to the submittal.
- D. The DCSP shall coordinate the Work of the DCS with the Contractor and its subcontractor so that a complete DCS package will be provided inclusive of accurate shop drawings and record drawings. The DCSP shall prepare and submit complete and organized shop drawings, as specified herein. Incomplete or partial submittals are not acceptable. All shop drawings and record drawings shall be submitted in accordance with Section 01 33 00, Submittal Procedures.
  - 1. Plant-wide loop drawing submittal (PLDS) to verify the DCS interfaces with all instrumentation and devices being provided or installed under this Project are to be developed by the Contractor or its subcontractor with the assistance of DCSP. Loop drawings shall define all interfaces

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

with equipment provided by the DCSP and as such the DCSP is responsible for providing all necessary information to the Contractor on a timely basis. Loop drawings shall be developed in accordance with existing City Loop Drawing standards, as follows:

- a. The loop drawing shall be composed of three sections:
  - 1) Page 1: A device schedule with a table showing the following:
    - a) Device tag number, with prefix, unit process, ISA tag prefix, tag number, tag suffix.
    - b) Equipment service.
    - c) Device type.
    - d) Location.
    - e) Device manufacturer.
    - f) Model number.
    - g) Specification section number.
    - h) Area contractor (if applicable).
    - i) Submittal number.
    - j) Remarks.
    - k) Data sheet number.
    - l) I/O signal (AI, AO, DI, or DO).
    - m) Signal level.
    - n) Device range.
    - o) Engineering units.
    - p) Process setpoint.
    - q) Loop diagram number.
    - r) Loop drawing file name.
    - s) Interconnect drawing file name.
    - t) For third-party devices, should also include IP (if applicable), module addresses, data registers, I/O tag names (AB), protocols etc.
  - 2) Page 2: Loop drawing meeting the requirements of ANSI/ISA S5.4, except that intermediate terminal junction boxes may omitted and be shown on Page 3 for clarity.
  - 3) Page 3: Abbreviated diagram showing instrument, wire and cable numbers, intermediate terminal junction boxes, and PCM terminations.
2. The DCSP shall augment the content of the Loop Drawings by providing all of the requisite data relating to the DCS. For each DCS I/O, the DCSP shall note on the PLDS the following information:
  - a. PCM number, and physical location.
  - b. Controller number.
  - c. Type of input.
  - d. I/O card location and address.
  - e. All DCS-dependent displayed functions using ISA symbology.
  - f. Drawing reference for DCS software content.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. In these Contract Documents all systems, all meters, all instruments, and all other elements are represented schematically, and are designated by symbology as derived from International Society of Automation ISA S5.1 (latest revision). The nomenclature and numbers designated herein and on Drawings shall be employed exclusively throughout shop drawings, and similar materials. Any other symbols, designations, and nomenclature unique to any manufacturer's standard methods shall not replace those prescribed above, used herein, and on Drawings.
  4. All Shop Drawings shall include a City-approved title block. The title block shall include, as a minimum, business name and address, project name, drawing name, revision level, and personnel responsible for the content of the drawing. Loop Drawing submittals shall be submitted in accordance with Section 01 33 00, Submittal Procedures.
- E. The DCS hardware submittal (DCSHS) shall be singular and all inclusive, submitted in accordance with Section 01 33 00, Submittal Procedures. The DCSHS shall include, but not be limited to:
1. A complete set of system diagrams which depict:
    - a. All PCMs, FDIs communication devices, and communication links.
    - b. A one-line showing the designed conduit and wire required to support the power, ground, I/O, and communication requirements of the system.
    - c. A complete I/O database showing all I/Os, annotated in ISA format, which depicts all designed I/O, both external and internal hard-wired and data-linked, inclusive of DCS termination locations.
    - d. A complete one-line diagram showing all power wiring and ground wiring, including UPS power, utility (non-UPS) power and any other external dc or ac sources for each PCM.
  2. A complete set of factory data sheets for every DCS component. This shall include layout drawings that show enclosure details, including seismic mounting, as well as the location of each component within the DCS PCM enclosure. Drawings shall contain a scaled representation of the placement of all DCS equipment being provided under this contract and its spatial relationship to all other equipment (both new and existing) located in the abutting and adjoining areas. All acquired access and clearances associated with the DCS equipment and other equipment must be shown with a statement of compliance to DCSP requirements, NEC, NFPA and other applicable codes.
  3. Detailed installation, mounting and anchoring details for all components and assemblies to be field mounted, including access requirements, conduit connections or entry details shall be provided.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. DCSP shall provide seismic calculations for each DCS PCM enclosure, and UPS installation, or other anchored apparatus, based on the proposed mounting arrangement. Installation/mounting/anchoring drawings shall be stamped by a structural engineer registered with the State of California. Each individual anchoring drawing, as well as the seismic calculations drawings, shall be stamped by the structural engineer.
  5. A complete, and detailed, bill of material (BOM) shall be provided. The BOM shall show the factory model number for each component within the DCS.
- F. The DCS network submittal (DCSNS) shall be singular and all inclusive, submitted in accordance with Section 01 33 00, Submittal Procedures. The DCSNS shall include, but not be limited to:
1. A complete set of network diagrams which depict:
    - a. All PCMs, FDI communication devices, and communication links.
    - b. A one-line showing the designed conduit and wire required to support the power, ground, I/O, and communication requirements of the system.
    - c. A complete network design report including IP scheme, traffic planning and control, QoS, configuration of every network equipment including routers, switches and firewalls.
    - d. A complete, and detailed, bill of material (BOM) shall be provided. The BOM shall show the factory model number for each component within the DCS.
  2. A complete set of factory data sheets for every network component.
- G. The DCS software submittal (DCSSS) shall be singular and all inclusive, submitted in accordance with Section 01 33 00, Submittal Procedures. The DCSSS shall include, but not be limited to:
1. A complete set of all available software algorithms.
  2. A complete set of designer control strategies, with annotations provided by the DCSP depicting engineering details to show how all monitoring and control functions, on a loop-by-loop basis, will be accomplished, so operators can understand how the process will respond to their actions through DCS interfaces.
  3. An English narrative of each data acquisition or control loop mission and anticipated action. Narratives shall enumerate the signal point name, signal descriptor, associated PCM number, associated system template displays, system functions activated by signal (i.e., interlocks, alarms, logs, etc.).

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. A complete set of PCM configuration sheets depicting each loop linkage. Each loop shall be on its own 11-inch by 17-inch sheet.
  5. A complete listing of the DCS data base listing for each data point's relevant parameters such as range, contact orientation, limits, incremental limits, I/O card type, I/O hardware address and assignment, including ALL macros used/created for the software.
- H. The DCS graphic submittal (DCSGS) shall be singular and all inclusive, submitted in accordance with Section 01 33 00, Submittal Procedures. The DCSGS shall include, but not be limited to:
1. One complete set of all WS-accessible displays unique to this Project (i.e., process global, system global, process regional, systems regional, process group, process loop, process component, integrated tutorials, integrated process tutorials, integrated documentation, user assistance).
  2. The DCSP shall ensure that all graphics development, and graphics submittal, conform to the existing graphics layouts, linkages and formats used throughout the COMNET Enterprise.
  3. The graphics submittals shall contain displays in full size color graphic format and replicate the proposed screen contents. All background colors shall be identical to that of the screen content. All displays shall be arranged in a hierarchical order with references to associated WSs.
  4. A system display linkage diagram which defines the hierarchical order and the linkages via page, down, left, right commands.
  5. A definition of each displays data fields by tag numbers, using the existing DCS COMNET standard.
  6. A definition of each displays dynamic elements which shall blink, change color, rotate or change shape in response to process changes, and conforms to the existing COMNET standard.
  7. A listing of all "help" text associated with each display screen, arranges in conformance to the COMNET standard.
- I. The DCSP shall prepare and submit plans for the FAT and ORT. FAT and ORT plans shall be submitted in accordance with Section 01 33 00, Submittal Procedures. The FAT and ORT plans shall each be a single-source document which shall encompasses means and methods for testing the complete DCS for this Project segment.
1. FAT and ORT plans shall provide testing of all DCS hardware, software, graphics, alarms, and network communications.
  2. FAT plan shall elaborate on the simulator to be used to provide proof of performance testing for I&C and DCS functions of the Project.
  3. FAT and ORT plans shall provide sample sheets depicting all I/O, hardware, data links, communication networking, and internally generated alarms and I/O points. Once approved conceptually by the

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

City, these forms will be populated and used by the DCSP in the submission of each PCM individual FAT and ORT submittal.

- J. The DCSP shall prepare a complete training plan. The training plan shall be submitted in accordance with Section 01 33 00, Submittal Procedures. The DCS training plan will provide the structure and syllabus for training sessions as follows:
1. Operator Training: Shall provide instruction to operators already familiar with operation of the Enterprise DCS, and shall be tailored to the new I/O, process controls, P&ID schemes, and specialty consideration for the controls for this Project.
  2. Maintenance Training; Shall provide training to City DCS staff on all enhancements to the DCS, new-generation components and all other hardware, software or graphics maintenance requirements, not currently covered in the City's existing Enterprise DCS.
  3. The DCSP shall allow for a minimum of four sessions of each class outlined in the training plan to ensure staff availability and shift-differential considerations are facilitated.
  4. Resumes of all training instructors to be used in DCS training shall be included in the training plan submittal.
  5. After approval of the training plan, the DCSP is responsible for coordinating with City DCS staff, or the City's project representative, to schedule training classes at appropriate times in advance of cut-over and startup.

**PART 2 PRODUCTS**

**2.01 CURRENT TECHNOLOGY**

- A. All hardware and software shall be the product of Emerson Process Management (EPM) and shall be of the Ovation family of DCS.
- B. All products shall be the latest available version of a product or module.
- C. The DCS should use state-of-the-art products in the DCSP's product line. However, the DCSP must ensure that all products used for this Project are compatible, and will fully integrate into the City's existing enterprise-wide COMNET DCS.
- D. Successful operation and calculation shall be demonstrated during FAT, ORT, and functional testing phases.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 HARDWARE AND SOFTWARE COMMONALITY

- A. Where there is more than one item of similar equipment being furnished, all such similar equipment shall be the of the same Ovation family series.
- B. The DCSP shall submit a plan in case of a discontinued or upgraded product, or other cases where changing technology requires changes in equipment, the DCSP shall submit a Substitute Item Request Form.
- C. All equipment shall be of modular design to facilitate interchangeability of parts and to assure ease of servicing. This interchangeability shall apply to the following components, as a minimum, of the DCS.
  - 1. Processor modules.
  - 2. Bulk memory modules.
  - 3. Communication interface modules.
  - 4. Analog and discrete signal modules.
  - 5. Power supply modules, and UPS devices.
  - 6. Workstations (WSs) and operator interface devices.
  - 7. Software licenses.

2.03 DCS PRIMARY ARCHITECTURAL COMPONENTS

- A. The DCS supplied by the DCSP shall consist of, but not be limited to, the following primary architectural components:
  - 1. Copper communications network (at DCS PCMs, etc.).
  - 2. DCS OS software for alarms, events, monitoring and control, and configuration tools.
  - 3. Historian/historical data recording and reporting.
  - 4. System configuration (application software) of I/O database, displays, control loops, and human-machine interface (HMI) graphics.
  - 5. Process control modules (PCMs).
  - 6. I/O cards and devices, I/O racks, I/O units, remote I/O, and termination cabinets.
- B. In addition, components associated with the DCS are:
  - 1. Services related to DCS (including system maintenance, upgrading, and third party and enterprise integration).
  - 2. Enclosures, termination panels, power, UPS, and ground termination busses, etc.
  - 3. PLCs, RTUs, FDI modules for PCMs.

2.04 SUPPORTING COMPONENTS

- A. The supporting components and associated application software shall consist of DCSLAN switches.

**PART 3 EXECUTION**

3.01 PROJECT EXECUTION AND PROJECT MANAGEMENT SERVICES

- A. The DCSP shall prosecute all Work in strict accordance with the sequence and schedule of the Prime Contractor's Master Baseline Schedule.
- B. The DCSP'S attention is called to the Contract Documents and Division 40, Process Interconnections, for specific administrative and commercial requirements of the Work.
- C. The DCSP shall provide all project management services required to complete the Work of these documents. At a minimum project management services shall include:
  - 1. Progress review meetings.
  - 2. Meeting and workshops to develop project requirements and design details.
  - 3. Regular meetings on scheduling and invoicing.
  - 4. All required meetings for design and submittal reviews.
  - 5. Coordination of support and warranty.
  - 6. Coordination of training.
  - 7. Development and delivery of DCS project controls and document management that coordinates with that of the Prime Contractor.
  - 8. Attend coordination meetings with Prime Contractor, City's representative, plant staff, and other City entities as they relate to the delivery of DCS Work.
  - 9. Respond to City representative's requests for information and project documentation.
  - 10. Respond to RFI reviews, as requested by the Design Engineer through the City's representative.
  - 11. As defined in Section 40 98 00, Project Management Services.
- D. The DCSP shall provide all labor, equipment, and materials for tenant improvements required for the approved staging site at the sole expense of the DCSP.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.02 ENGINEERING AND DESIGN PHASE

- A. The DCSP shall provide all engineering, resources, equipment, and labor required to successfully:
1. Produce all submittals, in accordance with Section 01 33 00, Submittal Procedures, and Division 40, Process Interconnections requirements.
  2. Program, configure, and test of all hardware and software as required by these Specifications.
  3. Develop the classroom and computer-based-training for all system elements.
  4. Execute field verification and documentation of all conditions, and develop installation drawings and accurate as-constructed documents to successfully complete the Work.
  5. Setup, stage and test the Work of each process segment and perform FAT, witnessed by the City's representative at the approved staging area prior to any installation.
  6. Put into service all system elements by detailed I/O tests, loop checks, and commissioning. Develop and perform functional and performance testing.
  7. Develop and submit PCM-by-PCM cutover plans for approval by the City's representative.
  8. Document all system elements, software and custom applications.
  9. Maintain, upgrade, and warrant all Work required by the Prime Contract.
  10. Design, develop, program, and test Integration of DCS with other systems.
  11. The DCSP shall develop and submit a uniform and standardized I/O tag name convention, and follow the ISA tagging scheme standardly used by the COMNET DCS.

3.03 PROCUREMENT, STAGING, PROGRAMMING, AND TESTING PHASE

- A. The DCSP shall provide all engineering, resources, equipment, and labor required to:
1. Procure all goods and services required to conform to these Specifications.
  2. Perform all shipments required by the Work.
  3. Ship all equipment and software to the approved staging facility, including deliveries from approved staging site to Project site.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Assemble, stage and program each segment of Work at the approved staging area and perform FAT prior to delivery for installation. All tests shall be performed in accordance with Division 40, Process Interconnections, specifications and approved test procedures.
- C. The system elements (i.e., PCM, etc.) may be assembled at the DCSPS facility and shipped to the approved staging area for staging, programming and testing. However, the City reserves the right to inspect these system elements prior to shipment, and again prior to delivery from the staging site to the Project site.

3.04 FIELD CONSTRUCTION/ COMMISSIONING PHASE

- A. Provide all engineering, resources, equipment and labor required to:
  - 1. Oversee the physical install, by others, of all PCM and remote I/O (RIO) enclosures and electronics.
  - 2. Oversee termination, by others, of all field wiring in 'B' or PCM cabinets.
  - 3. Run new wires from cabinet to DCS IO where required.
  - 4. Design, install, and test foreign devices including serial or networked I/O.
  - 5. Oversee supply and termination of power and grounding of all devices, by others.
  - 6. Test all signal grounding and certify proper installation and function.
  - 7. Deliver Uninterruptible Power Supplies, for installation by others under Division 26, Electrical.
  - 8. Obtain and manage all required intra-plant permits.
  - 9. Install and test all DCS-related networking hardware and cabling.
  - 10. Test all PCM cabinetry and enclosures.
  - 11. The DCSP shall support as-built documentation including DCS loop diagram information and P&ID information, as specified.
  - 12. Conduct a functional test, and site acceptance test to verify DCS performance.
  - 13. Update and submit all specified documentation to reflect "as-built" or record conditions.
  - 14. Support the Integration Period Testing as specified.

3.05 MAINTENANCE AND UPGRADE SERVICES PHASE

- A. The DCSP shall warrant all parts and services for a period as specified for the Prime Contract, after final DCS acceptance.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.06 ENVIRONMENTAL SUITABILITY

- A. All DCS devices provided under this Contract shall be provided with enclosures which are suitable for use in a treatment facility environment where there are typically high energy ac fields, dc control pulses, and varying ground potentials between the transducers or process instrument locations and those occupied by DCS components.
- B. The system design shall be adequate to provide proper protection against interferences from all such possible situations.
- C. As a minimum, all DCS equipment shall be resistive to airborne contaminants commonly found in wastewater treatment facilities, and be suitable for installation in an environment which conforms to a G2 classification as defined by ISA S71.04.
- D. Field-Situated Equipment:
  - 1. DCS equipment being furnished under this Contract shall be suitable for use in wastewater treatment facilities, some of which are in an environment of air with traces of methane and hydrogen purging sulfide. The system design shall be adequate to provide proper protection against such an environment.
  - 2. All field-situated components including PCMs shall be UL-listed or approved by an independent certification agency acceptable to the City of San Diego.
  - 3. All DCS devices shall be housed in an enclosure suitable for its intended service and installation location.
  - 4. All DCS devices to be installed in motor control center or other protected areas shall be furnished in NEMA 12 rated enclosure.
  - 5. All DCS devices to be installed in indoor protected areas shall be furnished in NEMA 12 rated enclosures.
  - 6. All DCS devices to be installed in indoor unprotected or areas subject to hose-down conditions, or outdoor areas, shall be furnished in Type 316 stainless steel NEMA 4X rated enclosures.
  - 7. All DCS devices to be installed in Hazardous (classified) areas shall be furnished in Type 316 stainless steel or aluminum (rated for a corrosive environment), NEMA 7 or NEMA 4X (explosion proof) Class 1 Division 1 and Division 2, Class A, B, C, or D.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

8. At a minimum, the DCS shall be designed and constructed for satisfactory, long, and low maintenance operation under the following environmental conditions:
  - a. Temperature Range: 0 degrees to 50 degrees C (32 degrees to 122 degrees F).
  - b. Thermal Shock: 0.55 degrees C (1 degree F per minute maximum).
  - c. Relative Humidity: 5 percent to 95 percent (noncondensing).
9. The mounting of all enclosures shall meet the requirements as specified in Division 26, Electrical, and shall be seismically braced as required by code for this seismic zone.

**END OF SECTION**

**SECTION 40 90 04**  
**REFERENCES**

**PART 1 GENERAL**

1.01 GENERAL

- A. Comply with Greenbook precedence of the Contract Documents, 3-7.2.
- B. In the case of conflict between any mandatory requirements and the Contract Documents, the mandatory requirements shall be followed in each case, but only after submitting such proposed changes to the City's representative for approval.
- C. Nothing contained in the Contract Documents shall be so construed to conflict with any national state, municipal, or local laws or regulations governing the installation of Work specified herein, and all such acts, ordinance, and regulations, including the National Electrical Code, are hereby incorporated and made a part of the Contract Documents. All such requirements shall be satisfied by the DCSP at no additional expense to the City.

1.02 PERMITS

- A. Construction permits are the responsibility of the Contractor. However, the DCSP shall be responsible for obtaining any Plant permits, "outage requests," etc., imposed by the City and plant standard operating procedure.

1.03 REFERENCES

- A. The equipment materials, installation, and other Work shall conform to all the following applicable regulations, standards, Specifications, and codes unless a more current version is applicable:
