**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION (NOT USED)**

**END SECTION**

**SECTION 40 90 05**  
**DEFINITIONS**

**PART 1 GENERAL**

1.01 DEFINITIONS

A. Terms used in this section:

1. ACAD: AutoCAD, and City of San Diego approved software.
2. A/D: Analog to digital conversion.
3. AMS: Asset management system.
4. Analog Range: An analog range is the minimum to maximum value that a device is expected to have in the field.
5. AP: Access Point. A wireless access point (WAP or AP) is a device that “connects” wireless communication devices together to create a wireless network.
6. API: Application programming interface are a set of definitions of the ways in which one piece of computer software communicates with another. It is a method of achieving abstraction, usually (but not necessarily) between lower-level and higher-level software.
7. Authentication: Authentication is the process of verifying an identity claimed by or for a system entity.
8. Authorization: Authorization is a right or a permission that is granted to a system entity to access a system resource.
9. AWG: American wire gauge.
10. CCTV: Closed circuit television.
11. CFC: California Fire Code.
12. CMMS: Computerized maintenance management system.
13. COMC: Central control room.
14. COMNET: Cleanwater operations management network. COMNET is a dedicated term for City’s existing enterprise level of wastewater operation systems.
15. CoSD: City of San Diego.
16. COTS: Commercial off-the-shelf.
17. CPU: Central processing unit.
18. CSMA/CD: Carrier sense multiple access with collision detection.
19. CSU: Channel service unit.
20. D/A: Digital to analog conversion.
21. DCS: Distributed control system.
22. DCSP: Distributed control system provider.
23. DCSLAN: Distributed control system intra-plant local area network located within the plant to interconnect various controllers, workstations, printers and servers.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

24. DCS Tag: Tag assigned to a loop for identification purposes and reference inside DCS and on P&IDs (without plant identifier).
25. DCSWAN: Distributed control system wide area network, used to connect plant-based DCSs together.
26. DHCP: Dynamic host configuration protocol.
27. DIN: Department Information network. DIN is a dedicated term for City's COMNET system. The DIN shall provide connectivity between all Department facilities and resources by virtue of a network which incorporates high-speed fiber, telephone data links, and radio technology.
28. DIN: Deutsches Institut für Normung eV (German Institute for Standardization; similar to US ANSI).
29. DMZ: Demilitarized zone. Isolation zone between a protected control network (CN) and external users, such that all production traffic "flowing" between the CN and those external users actually flows through an access control device, such as a firewall.
30. DSU: Data service unit.
31. EHWS: Environmentally hardened workstation. The EHWS shall have a Type 316 stainless steel enclosure rated as NEMA 4X. The EHWS shall be configured in the range of 32 to 104 degrees F, and humidity of 95 percent noncondensing.
32. EMI: Electromagnetic interference.
33. ESD: Emergency shutdown.
34. Ethernet: Ethernet is a frame-based computer networking technology for local area networks (LANs). It defines wiring and signaling for the physical layer, and frame formats and protocols for the media access control (MAC)/data link layer of the OSI model. Ethernet is mostly standardized as IEEE 802.3.
35. EWS: Engineer's workstation(s).
36. FAT: Factory acceptance test. A test conducted at the DCSP or vendor premise to ensure operability of a system according to Specifications.
37. FCC: U.S. Federal Communications Commission.
38. FDDI: Fiber distributed data interface, a protocol used in early version of Emerson Ovation systems.
39. FIN: Facility information network. FIN is a dedicated term for City's COMNET system. The FIN shall provide connectivity between the DCS and plant facility management systems. The FIN shall specifically have connectivity to WS and HS devices.
40. FWS: Field workstation(s).
41. GFCI: Ground-fault circuit interrupting receptacle.
42. HART: Highway addressable remote transducer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

43. HMI: Human-machine interface. A term that refers to the “layer” that separates a human that is operating a machine from the machine itself. One example of a HMI is the computer hardware and software that enables a single operator to monitor and control large machinery remotely.
44. HOR: Hand-Off-Remote.
45. HS: Historian server.
46. HSE: Health and safety equipment.
47. IEC: International Electro-technical Commission, is a European standards body which has developed IEC 60870-5 series of supervisory control and data acquisition (SCADA) protocols. IEC is now working on IEC 62351 a secure protocol envelope for DNP3 and IEC 60870-5.
48. IEEE: Institute of Electrical and Electronics Engineers.
49. I/O: Input and Output: I/O is used by the DCS for receiving and sending signals to and from the field to the DCS. I/O types are:
  - a. AI: Analog input.
  - b. AO: Analog output.
  - c. DI: Digital input.
  - d. DO: Digital output.
50. I/O Card: Input/output (I/O) cards refer to devices used by the DCS to communicate with field devices. I/O cards consist of digital-in (DI), for on/off detection, analog-in (AI), to measure a range of a device in the field, digital-out (DO), to send on-off signals, or analog-out (AO) to control field devices.
51. IP: Internet protocol. A data-oriented protocol used by source and destination hosts for communicating data across a packet-switched inter-network. Data in an IP inter-network are sent in blocks referred to as packets or datagrams (the terms are basically synonymous in IP).
52. ISA: International Society of Automation.
53. ISO: International Organization for Standardization. The International Organization for Standardization, also known as ISO, is global network of the national standards bodies of 156 countries dedicated to technical standards development.
54. IWS: Instructor workstation.
55. LAN: Local area network.
56. LIMS: Laboratory Information management system.
57. LCP: Local control panel.
58. LOR: Local-Off-Remote.
59. LOS: Lock-out stop.
60. L/R: Local/Remote.
61. Malware: Malware is malicious software designed to infiltrate or damage a computer system, without the owner’s consent. Malware is commonly taken to include computer viruses, worms, Trojan horses, rootkits, spyware, and adware.
62. MBC: Metropolitan Biosolids Center.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

63. MTBF: Mean time before failure.
64. MTTR: Mean time to repair.
65. MOC II: Metropolitan Operations Center.
66. MOV: Motor-operated valve.
67. NCWRP: North City Water Reclamation Plant.
68. NEC: National Electrical Code.
69. NEMA: National Electrical Manufacturers Association.
70. NFPA: National Fire Protection Association.
71. NIC: Network interface card.
72. NMS: Network management system.
73. NIST: National Institute of Standards and Technology.
74. NRC: National Research Council.
75. NTP: Notice-to-proceed.
76. OPC: Open connectivity via open standards. OPC is open connectivity in industrial automation and the enterprise systems that support industry. Interoperability is assured through the creation and maintenance of open standards specifications. OPC has been termed object linking embedding (OLE) for process control.
77. OPH: Ovation process historian. OPH is a dedicated term for City's COMNET system.
78. ORT: Operational readiness test. ORT is completed at the final stage of DCS installation to verify installed system is ready for live deployment and functional testing of unit processes.
79. OS: Operating system.
80. OSC: Ovation security center.
81. OSHA: Occupational Safety and Health Standards.
82. OSI: Open systems interconnection reference model. OSI is a layered abstract description for communications and computer network protocol design, developed as part of the open systems interconnect initiative.
83. OWS: Operator workstation.
84. PCM: Process control module. PCM is a dedicated term for City's COMNET system. A PCM refers to a combination of various modules including central processing unit/modules, network modules, I/O modules, and/or other special modules, these modules are normally located in the same enclosure, and function together to accomplish data acquisition, alarming and implementation of control strategies for a designated process area.
85. P&ID: Piping and instrumentation diagram.
86. PID: Proportional-integral-derivative controller. A standard feedback loop component in industrial control applications. It measures an "output" of a process and controls an "input," with a goal of maintaining the output at a target value, which is called the "setpoint."

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

87. PIN: Process information network. PIN is a dedicated term for the existing COMNET system. The PIN provides connectivity between WSS, PCMs, and the historian system (HS) to enable the timely update and archiving of process information and timely control response.
88. PLC: Programmable logic controller.
89. PLWTP: Point Loma Wastewater Treatment Plant.
90. PMS: Power monitoring system.
91. PPS: Penasquitos Pump Station.
92. QA: Quality assurance.
93. QC: Quality control.
94. QoS: Quality of service.
95. RAID: Redundant array of independent disks.
96. RDT: Remote desktop.
97. RDS: Remote data server.
98. RFP: Request for proposal.
99. RSSI: Receive signal strength indicator.
100. RTU: Remote terminal unit. An RTU, or remote terminal unit is a device which interfaces objects in the physical world to a DCS or SCADA system by transmitting telemetry data to the system and/or altering the state of connected objects based on control messages received from the system.
101. SBWRP: South Bay Water Reclamation Plant.
102. SAT: Site acceptance testing.
103. SCADA: Supervisory control and data acquisition.
104. SOP: Standard operating procedure.
105. SS: Selector switch.
106. S/S: Start/Stop.
107. SNMP: Simple network management protocol.
108. TCP: Transmission control protocol.
109. TCP/IP: Transmission control protocol/internet protocol.
110. Terminal Server: A hardware device or server that provides terminals (PCs, printers, and other devices) with a common connection point to a local or wide area network.
111. TIA: Telecommunications Industry Association.
112. UFC: Uniform Fire Code.
113. UL: Standards to measure performance, environmental health and sustainability.
114. UPS: Uninterruptible power supply.
115. VFD: Variable frequency drive.
116. VLAN: Virtual LAN. A virtual LAN, commonly known as a VLAN, is a logically segmented network mapped over physical hardware.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

117. VoIP: Voice over internet protocol (also called VoIP, IP telephony, internet telephony, and digital phone) is the routing of voice conversations over the internet or any other IP-based network. Voice data flows over a general-purpose packet-switched network, instead of traditional dedicated, circuit-switched voice transmission lines.
118. VPN: Virtual private network. A private, encrypted communications network usually used within a company, or by several different companies or organizations, used for communicating in a software tunnel over a public network.
119. WAN: Wide area network.
120. WDPF II: Westinghouse distributed processing family, second generation.
121. WiFi: Wireless fidelity. Short for wireless fidelity and is meant to be used generically when referring of any type of 802.11 network, whether 802.11b/a/g dual-band, etc.
122. WiMax: Worldwide interoperability of microwave access. WiMax is the name commonly given to the IEEE 802.16 standard. A wireless protocol designed for distances as far as 30 miles but more commonly 3 to 5 miles.
123. WS: Workstation, see also EWS, FWS, IWS, OWS.

B. Types of Variables:

1. Calculated Analog Points (CA): Analog variables computed from inputs, manual inputs, calculated discrete points, and other calculated analog points.
2. Calculated Discrete Points (CD): Discrete variables computed from inputs, manual inputs, calculated analog points, and other calculated discrete points.
3. Manual Inputs (MI): Variables whose values are manually entered, e.g., laboratory data.
4. Process Variables (PV): Analog variables from analog inputs and calculated analog points.
5. Report Variables: Variables computed by report generator.

1.02 RELATED SECTIONS

A. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

1. Division 01, General Requirements.
2. Division 26, Electrical.
3. Division 40, Process Interconnections.

**END OF SECTION**

**SECTION 40 90 07**  
**SCOPE OF WORK**

**PART 1 GENERAL**

1.01 REQUIREMENTS

A. General:

1. The intent of this section is to provide the DCSP direction in the specific and unique tasks of Work related to the Project segment of the delivery. All other requirements of these Specifications apply.
2. The Work includes, but is not limited to the design, procurement, installation, staging, testing, warranty maintenance, and documentation, of a distributed control system (DCS) for the MBC Improvements Project, which includes all process area of the Project required by the Contract Documents.
3. The new DCS equipment is being provided under a proprietary sole-source agreement, and must be fully compatible with, and integrate onto the existing City of San Diego Enterprise wide COMNET DCS.
4. See following drawings in Exhibits:
  - a. Plant: Data Highway Topology.
  - b. Plant: Plant Network Architecture and Topology.

1.02 RELATED SECTIONS

- A. The Work described in the following sections applies to the Work identified in this section.
1. Division 01, General Requirements.
  2. Division 26, Electrical.
  3. Division 40, Process Interconnections.

1.03 SPECIFICATIONS, CODES, AND STANDARDS

- A. The Work shall comply with the current editions of the publication and codes identified in Section 40 90 04, References.

1.04 DEFINITIONS

- A. Definitions of acronyms are identified in Section 40 90 05, Definitions.

1.05 SUBMITTALS

- A. The DCSP shall systematically design, install, test and cut-over all DCS project segments in a carefully phased and coordinated way that will ensure that all

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

outages are planned, sequenced, and coordinated with plant supervisors and staff, when applicable and in concert with the Prime Contractor's master baseline schedule.

- B. All DCSP required submittals are referenced through Division 40, Process Interconnections, of the Project Specifications as well as Division 01, General Requirements. All required DCSP Submittals shall be submitted in accordance with Section 01 33 00, Submittal Procedures.

**PART 2 PRODUCTS**

2.01 REQUIREMENTS

- A. The requirements of each product, material or other are contained in the Specifications below. Other sections of the Specifications, not referenced below, shall also apply to the extent required for proper performance of this Work.
  - 1. Division 26, Electrical.
  - 2. Division 40, Process Interconnections.
  - 3. Other Technical Specifications.

**PART 3 EXECUTION**

3.01 REQUIREMENTS FOR THE MBC IMPROVEMENTS PROJECT - PROJECT WORK SEGMENT

- A. The DCSP shall provide the following I/O and all required control logic, distributed in the PCMs by process area according to the control narratives, exhibits and drawings identified in the Contract Documents and, in addition, provide spare capacity of 20 percent I/O in each PCM.
- B. The DCSP shall provide all I/O, including the upgrade from Emerson Series "Q" to Series "R" as specified in Section 40 94 24, Process Inputs/Outputs (I/O), Supplement DCS Input/Output List.
- C. The DCSP is to follow the design engineer's layout and DCS configuration. However, the DCSP may consider consolidation of PCM counts, in adjacent-area PCMs, shall submit the request to the City's representative, and shall receive approval from the City to co-locate I/O. In this event, the DCSP shall be responsible for coordinating redesign of all raceways, conduits and duct bank affected by the consolidation. The DCSP shall submit the redesigned I/O to the City's representative for change issuance to the Prime Contractor. If consolidation is approved, the DCSP shall ensure that the PCM complies with expansion requirements set forth in the Contract Documents.
- D. No PCMs shall be consolidated beyond adjacent process area or unit process.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. The consolidation of PCMs shall be optimized by DCSP to limit the disruption to other unit processes and process areas during construction and operation.
- F. The consolidation of PCMs shall maintain the integrity of the DCS and shall not cause single points of failure of ANY process or subprocess.
- G. The DCSP shall provide one fully redundant PCM with two I/O cards of each type to support IWS training requirements and Section 40 98 06, Distributed Control System Training.
- H. The DCSP shall segment all I/O and cards to increase the reliability of all systems and limit any single I/O card failure causing an outage to a process or process area.
- I. The DCSP shall perform all necessary drawing reviews and site investigations to provide the specified DCS portions of the Loop Diagrams, which are the responsibility of the General Contractor to create.
- J. The DCSP shall provide all DCS furniture, enclosures and associated equipment, where shown on Drawings.
- K. New copper based intra-site LAN communications is being installed and terminated by others under Division 26, Electrical. The DCSP shall provide oversight of the cable installation and termination to, patch or termination panels provided by the DCSP under this Specification.
- L. All equipment shall be located and installed so that it will be readily accessible for operation and maintenance. All code space-clearance requirements of NEC shall be adhered to.

3.02 SPECIFIC REQUIREMENTS OF MBC IMPROVEMENTS PROJECT –  
ENGINEERING AND DESIGN PHASE

- A. The DCSP shall provide all submittals required by these Specifications to provide a complete final design for the new DCS at the Project. The DCSP submittals shall fully detail DCSPS' engineered design addressing, at a minimum, the following:
  - 1. All administrative submittals.
  - 2. Staging area modifications at approved staging site.
  - 3. Configuration/architecture, equipment locations, programming and testing of all hardware and software required by these Specifications.
  - 4. Review of design and specification of the DCSLAN for communications, including verification of signal loss budgets.
  - 5. Classroom and computer based training.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

6. Field verification documentation of all existing conditions and adequate as-built drawings required to successfully complete the Work.
  7. Pre-installation staging and witnessed operational readiness testing (ORT) at approved staging area.
  8. Provide DCS-related information (e.g., PCM termination nomenclature, software level addressing, etc.) required to support the General Contractor to produce the as-constructed loop diagrams and process and instrumentation diagrams (P&IDs).
  9. As-built documents of all system elements, software and custom applications.
  10. Warranty services required by Contract Documents.
- B. When necessary to accomplish the Work of the DCS, the DCSP shall request through the City representative and then facilitate all workshops necessary to gather information, reach consensus and deliver design submittals in accordance with the milestones contained in the Prime Contractors master baseline schedule.
- C. The DCSP shall immediately, if needed, on notice-to-proceed design, build and furnish the approved staging area adequately to, support their proposed staff, test all systems and equipment, provide long term maintenance and storage for spare parts for the life of the Project segments.
- D. The DCSP shall perform project management, engineering, programming and staging work at the approved staging area.
- E. The DCSP shall design, provide and oversee installation of new uninterruptible power supplies (UPS) for the Work as defined in Division 26, Electrical.

3.03 SPECIFIC REQUIREMENTS OF PROJECT PROCUREMENT, STAGING, PROGRAMMING AND TESTING PHASE

- A. Procurement and Staging:
1. The DCSP shall develop the approved staging area as the basis of their operations where DCSP staff provides all labor for the entire Project. The design and build out of the staging area shall commence with the notice to proceed of the Project, unless DCSP is using a staging area previously developed. The DCSP shall be responsible for providing a safe, secure, maintained area for the staging area, including janitorial service and supplies, security systems, power and sanitary services.
  2. DCSP shall procure, program and stage all system elements at the approved staging area to build a complete and operable DCS.
  3. All equipment shall be delivered FOB to the DCSP approved staging area. DCSP shall provide all labor and materials including but not limited to, shipping, logistics, material training tracking, and insurance required bonds and setup/testing costs.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Programming and Testing Phase:

1. DCSP shall program system elements at the staging area to build a complete and operable DCS.
2. DCSP shall provide any and all configuration and programming required to create a fully functional DCS for the Project, including but not limited to:
  - a. DCSP shall create all graphics to operate with the new DCS.
  - b. DCSP shall create all trends/trend groups commonly used on the City's DCS to operate with the new DCS.
  - c. DCSP shall create all control programming to operate with the new DCS.
  - d. DCSP shall create all reports to operate with the new DCS, and integrate with the Enterprise DCS Reports generation system. Existing types and quantities of the reports for Project are as follows:
    - 1) 40 plant level reports.
    - 2) 25 state/regulatory level reports.
    - 3) 25 enterprise level reports.
  - e. In addition, when requested by the City, the DCSP shall facilitate a minimum of five meetings/workshops with the City's representative for the DCSP to design, program, install, and test the following:
    - 1) An additional 10 three-dimensional main graphic process screens as defined by user workshops.
    - 2) An additional 20 main graphic process screens as defined by user workshops.
    - 3) An additional 15 subgraphic (windows) process screens as defined by user workshops.
    - 4) An additional eight plant-level reports as defined by user workshops.
    - 5) An additional five state/regulatory reports as defined by user workshops.
    - 6) An additional five enterprise level reports as defined by user workshops.
    - 7) An additional 20 trend groups as defined by user workshops.
  - f. The DCSP shall remove the Centrifuge Building screenings equipment from the DCS database, control logic, and graphics.
    - 1) Screens:
      - a) 76-S-01.
      - b) 76-S-02.
      - c) 76-S-03.
    - 2) Screening Conveyors:
      - a) 76-O-01.
      - b) 76-O-02.
      - c) 76-SH-01.
    - 3) Lime Day Tank: 76-LDT-01.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- g. The DCSP shall provide monitoring of PCM redundant power supplies through the PCM's controller chassis built in power monitoring.
- 3. DCSP shall provide any and all configuration and programming required to create a fully functional DCS for the Project including, but not limited to, all intermediate or calculated values, I/O database, control and graphic programming, report and historian programming and trending.
- 4. In addition to all the other requirements of the DCS identified throughout Division 40, Process Interconnections, the DCSP shall provide an additional 20 percent of software database I/O of each I/O type for integration to other systems or as directed by the City's representative. These I/O, if needed, will be defined during the course of the delivery by DCSP facilitated workshops with the City's representative.
- 5. The DCSP shall provide all necessary products, services, and materials as required by these Specifications for the DCSLAN. All DCSLAN equipment shall be staged and tested in pre-installation testing for ORT.
- 6. DCSP shall conduct all factory acceptance testing (FAT) at the approved staging area.

3.04 SPECIFIC REQUIREMENTS MBC IMPROVEMENTS PROJECT FIELD CONSTRUCTION AND COMMISSIONING PHASE

- A. The DCSP shall obtain all required intra-plant permits and approvals for the DCS construction.
- B. The DCSP shall witness the installation of final termination in PCM, RIO, etc. for all new UPSs for the DCS as defined in Division 26, Electrical.
- C. The DCSP shall perform ORT in the field, working in conjunction with the General Contractor.
- D. DCSP shall perform all testing requirements including but not limited to; complete testing of all DCS-ends of loops, functional testing, and other field testing as required.

3.05 SPECIFIC REQUIREMENTS OF PROJECT WARRANTY SERVICES PHASE

- A. Work shall be performed pursuant to Prime Contract warranty requirements of Division 01, General Requirements. The City may, at its sole discretion, contract with the DCSP for an extended warranty and maintenance period.

**END OF SECTION**

**SECTION 40 94 00**  
**DISTRIBUTED CONTROL SYSTEM GENERAL REQUIREMENTS**

**PART 1 GENERAL**

1.01 SUMMARY

- A. The intent of this section is to provide the Distributed Control System Provider (DCSP) direction in specific and unique tasks of Work related to the Project segment of the delivery. All other requirements of these Specifications apply.
- B. The Work includes, but is not limited to, the design, procurement, installation, staging, testing, warranty maintenance, and documentation of a distributed control system (DCS) for the Project, which includes all process areas of the Project required by the Contract Documents.
- C. The new DCS components is being provided under a proprietary sole-source agreement, and must be fully compatible with, and integrated into the existing City of San Diego Enterprise-wide COMNET DCS.

1.02 RELATED SECTIONS

- A. This section gives general requirements for the Distributed Control System (DCS). The following DCS subsections expand on requirements of this section:
  - 1. Section 40 90 06, DCS Bill of Materials and Quantities.
  - 2. Section 40 94 23, Process Control Module (PCM).
  - 3. Section 40 94 24, Process Inputs/Outputs (I/O).
  - 4. Section 40 95 13, Field Cabinetry.
  - 5. Section 40 96 00, Applications Software.
  - 6. Section 40 98 00, Project Management Services.
  - 7. Section 40 98 01, Engineering and Design Services.
  - 8. Section 40 98 04, Field Construction / Commissioning Services.
  - 9. Section 40 98 05, Quality Control.
  - 10. Section 40 98 06, Distributed Control System Training.
- B. Major Work Items: Includes but is not limited to engineering, furnishing, installing, calibrating, adjusting, testing, documenting, starting up, and training for complete PIC.
  - 1. Distributed Control System (DCS).
  - 2. Computers and networks for Human Machine Interface (HMI).
  - 3. Applications Software: Provided by the Distributed Control System Provider (DCSP) for DCS and HMI.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. The DCSP shall furnish all equipment and provide all applicable engineering for a fully functional distributed control system, that complies with the technical requirements of the Contract Documents including, but not limited to, project management, design assistance, coordination with on-site area contractors, detailed system design and integration, conducting graphic design workshops, equipment supply and shipment, storage, job site delivery, programming and configuration, installation oversight, testing, commissioning and startup, integration with the existing City-wide Operation and Management Network (COMNET), and training.
1. The work covered by this Specification and all of its subparts shall include, but not limited to, field verification of all existing conditions, engineering and design of system and components, manufacture and/or procurement of all necessary equipment, components, material, transportation, labor, special tools, factory testing, application programming, shipment, storage, and jobsite delivery, operational readiness testing, installation of equipment, system integration, startup operation, site testing, training and documentation, support, maintenance/warranty of a complete, integrated and operational Distributed Control System (DCS) for the City of San Diego.
  2. The statements of work contained herein are necessarily general in nature and should not be construed as an all-inclusive list of devices, equipment, software and services necessary for successful completion of the Work.
  3. It shall be the responsibilities of the DCSP to coordinate and project manage the Work, as set forth in this section of the Specifications, with work and equipment specified under other sections of the Specifications, in order to provide a complete and satisfactory installation.
  4. To ensure that the distributed control system shall be a standard system of Emerson Process Management, Ovation family. With a complete repertoire of pre-existing software modules running in a familiar hardware environment and free from hardware/software incompatibilities.
  5. This Specification is generic to all facilities and applicable sections shall be delivered for each process segment of the Work as defined in these Specifications and project Contract Documents.
  6. The DCSP shall be responsible for coordination, installation and testing of DCS. The Prime Contractor is responsible for termination of I/O signals, power and ground utilities for all DCS equipment. The DCSP shall review and inspect all current designs and all Contract Documents to assess space allocations, power allotments and available grounds. If the DCSP's requirements for power, grounding or spatial requirements differ from that shown within the Contract Documents, the DCSP shall include all required engineering, design and construction details to the Prime Contractor and City's representative immediately.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. The DCSP shall be responsible for providing all equipment, installation supervision, engineering, programming, configuration, management and services associated with integrating all instrumentation and control devices, and special systems, including Foreign Device Interfaces (FDI), into the DCS in a transparent and seamless manner. The use of a third party, system house, or system integrators for the above service is not acceptable.
8. DCSP shall be fully responsible for the implementation, installation, and integration of the DCS as outlined in this Specification.
9. The provisions of this section shall apply to all items specified in the various Sections of Division 40, Process Interconnections, and all other Divisions.
  - a. DCSP shall be responsible for interfacing to all existing instrumentation and all other Input/Output (I/O) devices.
  - b. During field functional testing the DCSP shall verify the operation of all instruments and field devices and associated wiring (from instrument/device to DCS) and notify the City's representative and Prime Contractor of any deficiencies that exist.

D. SCOPE OF WORK

1. The Work generally consists of the supply of all labor, tools, services and provision of all products required, for a complete, integrated, operational DCS control system in accordance with the Contract Specifications and Drawings.
2. Identify other on-going projects/systems development that are not part of this contract. Ensure other ongoing activities, in close proximity or otherwise, do not disturb or interrupt the operation of the existing systems or the Work already commissioned or placed into operation. Should any such activity pose a risk to this Work or to the system operation, advise the City immediately.
3. In general, the Work involves the supply, installation and commissioning of the DCS control system as indicated on Drawings and specification sheets, and as defined in the Matrix of Responsibilities in Scope of Work. The following is a summary of the major works:
  - a. Engineer to provide a high-level description of the Project-specific Work including provision of all instruments, hardware, software, network, cabling, and services such as testing, commissioning, training, documentation.
  - b. Following the instructions in Scope of Work, provide, test, and commission all field instrumentation including field wiring, instrument control panels, and control system hardware including all lightning and surge protection, and all peripheral devices necessary.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Conduits and Wires:
- 1) All conduits, including those for the district information network (DIN), plant information network (PIN) and facility information network (FIN), will be furnished and installed by the Contractor. All conductors, including power and grounding for DCSP furnished equipment will be furnished and installed by the Contractor. DCS grounding will use a special triad grounding system; specifications for this system are provided in the contract documents in accordance with the DCSP requirements. All signal conductors, except for PIN, and FIN fiber optic and coaxial cables, will be provided and installed by the General Contractor.
  - 2) The PIN and FIN fiber optic and coaxial cables will be furnished, installed and terminated by the DCSP. DIN fiber optic cable will be furnished by the DCSP and installed by the Contractor up to the first termination point within a facility. All wire termination except for PIN, FIN and DIN cables will be performed by the General Contractor.
  - 3) Cables and conduits for non-DCS communications systems, such as the telephone system, will be furnished and installed by the General Contractor.
    - a) Provide all programming and microprocessor-based instrument configuration.
    - b) Provide all required testing, commissioning and start up services. Allow in the contract price, for any additional time deemed necessary to meet the testing and commission requirements.
    - c) Provide Factory Acceptance Testing (FAT) to demonstrate the operational functionality of hardware and communications per specifications.
    - d) Provide Operational Readiness Testing (ORT) to demonstrate the correct operation of the control system with both hardware and software in place per specifications.
    - e) Provide Performance Acceptance Test (PAT) to ensure entire system functions properly per specifications.
    - f) Provide all required training per specifications.
    - g) Provide warranty services per Contract requirements.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Interfacing and Responsibilities of General Contractor (GC) and DCSP: The following Table 1 shows the procurement, installation, and labor responsibilities of the DCSP and the GC. All field instrumentation devices and final control elements which are needed to support DCS functionality will be wired to process control modules (PCMs). Tables 2 and Table 3 define in greater detail of the responsibilities assigned to the General Contractor and the DCSP.

<b>Table 1: Matrix of Responsibilities - Equipment/Devices/Materials</b>

1.03 RELATED SECTIONS

A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.

1. Division 01, General Requirements.
2. Division 26, Electrical.
3. Division 40, Process Interconnections.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

1.04 SPECIFICATIONS, CODES, AND STANDARDS

- A. The Work shall comply with the current editions of the publications and codes identified in Section 40 90 04, References, and herein.

1.05 DEFINITIONS

- A. Definitions of acronyms are identified in Section 40 90 05, Definitions.

1.06 SUBMITTALS

- A. The DCSP shall develop and submit within the first 45 days after NTP, a detailed list of submittals required by all Contract Documents for review and approval. The list shall contain the title of each submittal, detailed description of its contents and the applicable reference sections. Submittal shall be grouped, organized and sequenced logically such that it facilitates the City's representative's review process. This requirement extends to all Work required by all other Divisions.
- B. All submittals shall be executed in accordance with Section 01 33 00, Submittal Procedures.
- C. The DCSP shall conduct a presubmittal conference. At a minimum, the following shall be presented at the conference:
  - 1. A list of equipment and materials required for the applicable submittal content.
  - 2. A list of proposed exceptions to the Specifications and Drawings, along with a brief explanation of each.
  - 3. An exact one-to-one sample of each type of document to be submitted.
  - 4. Any implementation and construction documentation associated with the submittal.
  - 5. A schedule or schedule fragment that applies to the submittal.
- D. The DCSP shall coordinate the work of the DCS with the Contractor and its subcontractor so that a complete DCS package will be provided inclusive of accurate Shop Drawings and Record Drawings. The DCSP shall prepare and submit complete and organized Shop Drawings, as specified herein. Incomplete or partial submittals are not acceptable. All Shop Drawings and Record Drawings shall be submitted in accordance with Section 01 33 00, Submittal Procedures.
  - 1. Plant-wide loop drawing submittal (PLDS) to verify the DCS interfaces with all instrumentation and devices being provided or installed under this

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Project are to be developed by the Contractor or its subcontractor with the assistance of DCSP. The Loop Drawings shall define all interfaces with equipment provided by the DCSP and as such the DCSP is responsible for providing all necessary information to the Contractor on a timely basis. The Loop Drawings shall be developed in accordance with existing City Loop Drawing standards, as follows:

- a. The loop drawing shall be composed of three sections.
  - b. Page 1: A device schedule with a table showing the following:
    - 1) Device tag number, with Prefix, Unit Process, ISA Tag Prefix, Tag No, Tag suffix.
    - 2) Equipment Service.
    - 3) Device Type.
    - 4) Location.
    - 5) Device Manufacturer.
    - 6) Model No.
    - 7) Specification No.
    - 8) Area Contractor (if applicable).
    - 9) Submittal No.
    - 10) Remarks.
    - 11) Data Sheet No.
    - 12) I/O Signal (AI, AO, DI, or DO).
    - 13) Signal Level.
    - 14) Device Range.
    - 15) Engineering Units.
    - 16) Process Set Point.
    - 17) Loop Diagram No.
    - 18) Loop Drawing File Name.
    - 19) Interconnect Drawing File Name.
    - 20) For third-party devices, should also include: IP (if applicable), module addresses, data registers, IO Tag Names (AB), protocols etc.
  - c. Page 2: Loop drawing meeting the requirements of ANSI/ISA S5.4, except that intermediate terminal junction boxes may omitted and be shown on Page 3 for clarity.
  - d. Page 3: Abbreviated diagram showing instrument, wire and cable numbers, intermediate terminal junction boxes, and PCM terminations.
2. The DCSP shall augment the content of the Loop Drawings by providing all of the requisite data relating to the DCS. For each DCS input/output, the DCSP shall note on the PLDS the following information:
- a. PCM number, and physical location.
  - b. Controller number.
  - c. Type of input.
  - d. I/O card location and address.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. All DCS-dependent displayed functions using ISA symbology.
  - f. Drawing reference for DCS software content.
3. In these Contract Documents all systems, all meters, all instruments, and all other elements are represented schematically, and are designated by symbology as derived from International Society of Automation ISA S5.1 (latest revision). The nomenclature and numbers designated herein and on Drawings shall be employed exclusively throughout Shop Drawings, and similar materials. Any other symbols, designations, and nomenclature unique to any manufacturer's standard methods shall not replace those prescribed above, used herein, and on Drawings.
4. All Shop Drawings shall include a City-approved title block. The title block shall include, as a minimum, business name and address, project name, drawing name, revision level, and personnel responsible for the content Drawing. Loop Drawing Submittals shall be submitted in accordance with Section 01 33 00, Submittal Procedures.
- E. The DCS hardware submittal (DCSHS) shall be singular and all inclusive, submitted in accordance with Section 01 33 00, Submittal Procedures. The DCS Hardware Submittal shall include, but not be limited to:
- 1. A complete set of system diagrams which depict:
    - a. All Process Control Modules (PCMs), Workstations (WSs), video devices, printers, UPS, Foreign Device Interfaces (Data Link) telemetry devices, communication devices, and communication links.
    - b. A one-line showing the designed conduit and wire required to support the power, ground, Input/Output, and communication requirements of the system.
    - c. A complete I/O Database showing all I/Os, annotated in ISA format, which depicts all designed I/O, both external and internal hard-wired and data-linked, inclusive of DCS termination locations.
    - d. A complete one-line diagram showing all power wiring and ground wiring, including UPS power, Utility (non-UPS) power and any other external dc. or ac. sources for each PCM.
  - 2. A complete set of factory data sheets for every DCS component. This shall include layout drawings that show enclosure details, including seismic mounting, as well as the location of each component within the DCS PCM enclosure. Drawings shall contain a scaled representation of the placement of all DCS equipment being provided under this contract and its spatial relationship to all other equipment (both new and existing) located in the abutting and adjoining areas. All acquired access and clearances associated with the DCS equipment and other equipment must be shown with a statement of compliance to DCSP requirements, NEC, NFPS and other applicable codes.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Detailed installation, mounting and anchoring details for all components and assemblies to be field mounted, including access requirements, conduit connections or entry details shall be provided.
  - a. DCSP shall provide seismic calculations for each DCS PCM enclosure, or other anchored apparatus, based on the proposed mounting arrangement. Installation/mounting/anchoring drawings shall be stamped by a Structural Engineer, registered with the State of California. Each individual anchoring drawing, as well as the seismic calculations drawings, shall be stamped by the structural engineer.
  - b. A complete, and detailed, bill of material (BOM) shall be provided. The BOM shall show the factory model number for each component within the DCS.
  
- F. The DCS Network submittal (DCSNS) shall be singular and all inclusive, submitted in accordance with Section 01 33 00, Submittal Procedures. The DCS Hardware Submittal shall include, but not be limited to:
  1. A complete set of network diagrams which depict:
    - a. All Process Control Modules (PCMs), Workstations (WSs), video devices, printers, UPS, Foreign Device Interfaces (Data Link) telemetry devices, communication devices, and communication links.
    - b. A one-line showing the designed conduit and wire required to support the power, ground, Input/Output, and communication requirements of the system.
    - c. A complete network design report including IP scheme, traffic planning and control, QoS, configuration of every network equipment including routers, switches and firewalls.
    - d. A Complete fiber connection diagrams including fiber routing plans, fiber details, link budget calculations etc.
    - e. A complete, and detailed, bill of material (BOM) shall be provided. The BOM shall show the factory model number for each component within the DCS.
  2. A complete set of Factory Data sheets for every network component.
  
- G. The DCS Software Submittal (DCSSS) shall be singular and all inclusive, submitted in accordance with Section 01 33 00, Submittal Procedures. The DCS Software Submittal shall include, but not be limited to:
  1. A complete set of all available software algorithms.
  2. A complete set of Designer control strategies, with annotations provided by the DCSP depicting engineering details to show how all monitoring and control functions, on a loop by loop basis, will be accomplished. So operators can understand how the process will respond to his actions through DCS interfaces.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. An English narrative of each data acquisition or control loop mission and anticipated action. Narratives shall enumerate the signal point name, signal descriptor, associated PCM number, associated system template displays, system functions activated by signal (i.e., interlocks, alarms, logs, etc.).
  4. A complete set of PCM configuration sheets depicting each loop linkage. Each loop shall be on its own 8-1/2-inch by 11-inch sheet.
  5. A complete listing of the DCS data base listing for each data point's relevant parameters such as range, contact orientation, limits, incremental limits, I/O card type, I/O hardware address and assignment, including ALL Macros used/created for the Software.
- H. The DCS Graphic Submittal (DCSGS) shall be singular and all inclusive, submitted in accordance with Section 01 33 00, Submittal Procedures. The DCS Graphics Submittal shall include, but not be limited to:
1. One complete set of all WS-accessible displays which are unique to this project (i.e., process global, system global, process regional, systems regional, process group, process loop, process component, integrated tutorials, integrated process tutorials, integrated documentation, user assistance).
  2. The DCSP shall ensure that all graphics development, and graphics submittal, conform to the existing graphics layouts, linkages and formats used throughout the COMNET Enterprise.
  3. The Graphics Submittals shall contain displays in full size color graphic format and replicate the proposed screen contents. All background colors shall be identical to that of the screen content. All displays shall be arranged in a hierarchical order with references to associated WSs.
  4. A system display linkage diagram which defines the hierarchical order and the linkages via page, down, left, right commands.
  5. A definition of each displays data fields by tag numbers, utilizing the existing DCS COMNET standard.
  6. A definition of each displays dynamic elements which shall blink, change color, rotate or change shape in response to process changes, and conforms to the existing COMNET standard.
  7. A listing of all "help" text associated with each display screen, arranges in conformance to the COMNET standard.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- I. The DCSP shall prepare and submit a Plan for the Operation Readiness Tests (ORT). The ORT plan shall be submitted in accordance with Section 01 33 00, Submittal Procedures. The ORT Plan shall be a single-source document which shall encompass means and methods for testing the complete DCS for this Project segment.
  1. The ORT Plan shall provide testing of all DCS hardware, software, graphics, alarms and network communications.
  2. The ORT Plan shall elaborate on the simulator to be utilized to provide proof of performance testing for the I&C and DCS functions of the project.
  3. The ORT Plan shall provide sample sheets depicting all I/O, hardware, data links, communication networking and internally generated alarms, and I/O points. Once approved conceptually by the City, these forms will be populated and utilized by the DCSP in the submission of each PCM individual ORT submittal.
  
- J. The DCSP shall prepare a complete Training Plan. The Training Plan shall be submitted in accordance with Section 01 33 00, Submittal Procedures. The DCS Training Plan will provide the structure and syllabus for training sessions as follows:
  1. Operator Training: Shall provide instruction to Operators already familiar with the operation of the Enterprise DCS, and shall be tailored to the new I/O, process controls, P&ID schemes and specialty consideration for the controls for this Project.
  2. Maintenance Training; Shall provide training to City DCS staff on all enhancements to the DCS, new-generation components and all other hardware, software or graphics maintenance requirements, not currently covered in the City's existing Enterprise DCS.
  3. The DCSP shall allow for a minimum of four sessions of each class outlined in the Training Plan to ensure staff availability and shift-differential considerations are facilitated.
  4. Resumes of all Training Instructors to be utilized in DCS training shall be included in the Training Plan submittal.
  5. After approval of the Training Plan, the DCSP is responsible for coordinating with City DCS staff, or the City's project representative, to schedule training classes at appropriate times in advance of cut-over and start-up.

## **PART 2 PRODUCTS**

### **2.01 CURRENT TECHNOLOGY**

- A. All hardware and software shall be the product of Emerson Process Management (EPM) and shall be of the Ovation family of DCS.
- B. The DCS should utilize state-of-the-art products in the DCSP's product line. However, the DCSP must ensure that all products used for this Project are compatible, and will fully integrate into the City's existing enterprise wide COMNET DCS.
- C. Successful operation and calculation shall be demonstrated during Factory Acceptance Testing (FAT), Operational Readiness Testing (ORT) and Functional Testing phases.

### **2.02 HARDWARE AND SOFTWARE COMMONALITY**

- A. Where there is more than one item of similar equipment being furnished, all such similar equipment shall be the of the same Ovation family series.
- B. The DCSP shall submit a plan in case of a discontinued or upgraded product, or other cases where changing technology requires changes in equipment, the DCSP shall submit a Substitute Item Request Form.
- C. All equipment shall be of modular design to facilitate interchangeability of parts and to assure ease of servicing. This interchangeability shall apply to the following components, as a minimum, of the DCS.
  - 1. Processor Modules.
  - 2. Bulk Memory Modules.
  - 3. Communication Interface Modules.
  - 4. Analog and Discrete Signal Modules.
  - 5. Power Supply Modules, and UPS devices.
  - 6. Workstations and operator interface devices.
  - 7. Software licenses.

### **2.03 DCS PRIMARY ARCHITECTURAL COMPONENTS**

- A. The DCS supplied by EPM shall consist of, but not be limited to, the following primary architectural components:
  - 1. Operator, engineering, instructor, and field workstations.
  - 2. Copper and fiber optic communications network (at DCS PCMs, etc.).

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. DCS OS Software for alarms, events, monitoring and control, and configuration tools.
4. Security.
5. Historian/historical data recording and reporting.
6. System Configuration (Application Software) of I/O database, displays, control loops, and human machine interfaces (HMI) graphics.
7. Process Control Modules (PCM).
8. Input/output (I/O) cards and devices, I/O racks, I/O units, remote IO, and Termination Cabinets.
9. PLCs, RTUs, Foreign Device Interface (FDI) modules for PCMs.

B. In addition, components associated with the DCS are:

1. Control room furniture as shown on Drawings and contained in these Specifications, peripherals such as large screen displays, alarm printers, etc.).
2. Services related to DCS (including system maintenance, upgrading, and third party and enterprise integration).
3. Enclosures, termination panels, power, UPS, and ground termination busses, etc.

#### 2.04 INTEGRATION COMPONENTS

A. The Integration components shall consist of the following:

1. Integration server (where show on design drawings and specified herein).
2. Integration adapters.
3. Software integration services.
4. Web services (when required by Specifications).

#### 2.05 SUPPORTING COMPONENTS

A. The supporting components and associated application software shall consist of the following:

1. DCSLAN Switches.
2. DCSLAN/DCSWAN Routers.
3. Patch Management Server (when specified herein).
4. Security hardware and software, including Antivirus software and malware detection.

**PART 3 EXECUTION**

**3.01 PROJECT EXECUTION AND PROJECT MANAGEMENT SERVICES**

- A. The DCSP shall prosecute all Work in strict accordance with the sequence and schedule of the Prime Contractor's Master Baseline Schedule.
- B. The DCSP'S attention is called to the Contract Documents and Division 40, Process Interconnections, for specific administrative and commercial requirements of the Work.
- C. The DCSP shall provide all project management services required to complete the Work of these documents. At a minimum project management services shall include:
  - 1. Progress review meetings.
  - 2. Meeting and workshops to develop project requirements and design details.
  - 3. Regular meetings on scheduling and invoicing.
  - 4. All required meetings for design and submittal reviews.
  - 5. Coordination of support and warranty.
  - 6. Coordination of training.
  - 7. Development and delivery of DCS project controls and document management that coordinates with that of the Prime Contractor.
  - 8. Attend coordination meetings with Prime Contractor, City's representative, plant staff and other City entities as they relate to the delivery of DCS Work.
  - 9. Respond to City representative's requests for information and project documentation.
  - 10. Respond to RFI reviews, as requested by the Design Engineer through the City's representative.
- D. The DCSP shall provide all labor, equipment, materials and furniture for the tenant improvements required for the approved staging site at the sole expense of the DCSP.

**3.02 ENGINEERING AND DESIGN PHASE**

- A. The DCSP shall provide all engineering, resources, equipment, and labor required to successfully:
  - 1. Produce all submittals, in accordance with Section 01 33 00, Submittal Procedures, and Division 40, Process Interconnections requirements.
  - 2. Program, configure, and test of all hardware and software as required by these Specifications.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Design and specify the enterprise inter-site WAN interface at Project site for communications interface with the existing COMNET DCS.
4. Develop the classroom and computer-based-training for all system elements.
5. Execute field verification and documentation of all conditions, and develop installation drawings and accurate as-constructed documents to successfully complete the Work.
6. Setup, stage and test the Work of each process segment and perform ORT, witnessed by the City's representative at the approved staging area prior to any installation.
7. Put into service all system elements by detailed I/O tests, loop checks, and commissioning. Develop and perform functional and performance testing.
8. Develop and submit PCM-by-PCM cutover plans for approval by the City's representative.
9. Document all system elements, software and custom applications
10. Maintain, upgrade and warrant all Work required by the Prime Contract.
11. Design, develop, program, test, and commission Integration of DCS with other systems, see Section 40 90 00, Instrumentation and Control.
12. The DCSP shall develop and submit a uniform and standardized I/O tag name convention, and follow the ISA tagging scheme standardly used by the COMNET DCS.

3.03 PROCUREMENT, STAGING, PROGRAMMING, AND TESTING PHASE

- A. The DCSP shall provide all engineering, resources, equipment, and labor required to:
  1. Procure all goods and services required to conform to these Specifications.
  2. Perform all shipments required by the Work.
  3. Ship all equipment and software to the approved staging facility, including deliveries from approved staging site to Project site.
- B. Assemble, stage and program each segment of Work at the approved staging area and perform ORT prior to delivery for installation. All tests shall be performed in accordance with Division 40, Process Interconnections specifications and approved test procedures.
- C. The system elements (i.e. WS, PCM, FHS, etc.) may be assembled at the DCSPS facility and shipped to the approved staging area for staging, programming and testing. However, the City reserves the right to inspect these system elements prior to shipment, and again prior to delivery from the staging site to the Project site.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.04 FIELD CONSTRUCTION/COMMISSIONING PHASE

- A. Provide all engineering, resources, equipment and labor required to:
1. Oversee the physical install, by others, of all Process Control Modules (PCM) and Remote IO (RIO) enclosures and electronics.
  2. Oversee termination, by others, of all field wiring in 'B' or PCM Cabinets.
  3. Run new wires from cabinet to DCS IO where required.
  4. Design, install, and test foreign devices including serial or networked I/O.
  5. Oversee supply and termination of power and grounding of all devices, by others.
  6. Test all signal grounding and certify proper installation and function.
  7. Deliver Uninterruptible Power Supplies, for installation by others under Division 26, Electrical.
  8. Obtain and manage all required intra-plant permits.
  9. Install and test all DCS-related networking hardware and cabling.
  10. Test all workstations, hardened workstations, PCM and RIO cabinetry and enclosures.
  11. Manage and deliver as-built documentation including DCS loop diagram information and P&IDs information. As specified.
  12. Conduct a functional test, and site acceptance test to verify DCS performance.
  13. Update and submit all specified documentation to reflect "as-built" or record conditions.

3.05 MAINTENANCE AND UPGRADE SERVICES PHASE

- A. The DCSP shall warrant all parts and services for a period as specified for the Prime Contract, after Final DCS acceptance.

3.06 ENVIRONMENTAL SUITABILITY

- A. All DCS devices provided under this Contract shall be provided with enclosures which are suitable for use in a treatment facility environment where there are typically high energy AC fields, DC control pulses, and varying ground potentials between the transducers or process instrument locations and those occupied by DCS components.
- B. The system design shall be adequate to provide proper protection against interferences from all such possible situations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. As a minimum, all DCS equipment shall be resistive to airborne contaminants commonly found in wastewater treatment facilities, and be suitable for installation in an environment which conforms to a G2 classification as defined by ISA-S71.04.
- D. Field-Situated Equipment:
1. DCS equipment being furnished under this contract shall be suitable for use in wastewater treatment facilities, some of which are in an environment of air with traces of methane and hydrogen purging sulfide. The system design shall be adequate to provide proper protection against such an environment.
  2. All field-situated components including PCMs shall be UL-listed or approved LABOS by an independent certification agency acceptable to the City of San Diego.
  3. All DCS devices shall be housed in an enclosure suitable for its intended service and installation location.
  4. All DCS devices to be installed in MCC or other protected areas shall be furnished in NEMA 12 rated enclosure.
  5. All DCS devices to be installed in indoor protected areas shall be furnished in NEMA 12 rated enclosures.
  6. All DCS devices to be installed in indoor unprotected or areas subject to hose-down conditions, or outdoor areas, shall be furnished in Type 316 stainless steel NEMA 4X rated enclosures.
  7. At a minimum, the DCS shall be designed and constructed for satisfactory, long, and low maintenance operation under the following environmental conditions:
    - a. Temperature Range: 0 degrees C through 50 degrees C (32 degrees F through 122 degrees F).
    - b. Thermal Shock: 0.55 degrees C (1 degree F per minute maximum).
    - c. Relative Humidity: 5 percent through 95 percent (noncondensing).
  8. The mounting of all enclosures shall meet the requirements as specified in Division 26, Electrical, and shall be seismically braced as required by code for this seismic zone.

**END SECTION**

**SECTION 40 94 23**  
**PROCESS CONTROL MODULE (PCM)**

**PART 1 GENERAL**

1.01 REQUIREMENT

- A. This specification section covers furnishing all labor, materials, equipment and programming for the provision of the required process control modules (PCMs) to complete this Work.
- B. Named Types: Process Control Modules (PCM) type.
- C. At a minimum, a PCM shall include the redundant controller processors, redundant memory and communication modules, redundant power supplies with arbitration control, redundant I/O communication processors, NEMA enclosure and backplane, all wiring, power and ground distribution, mounting and anchoring hardware. If part of the manufacturer's standard assembly, it shall also include the chassis to facilitate the I/O modules.
- D. Fault Tolerant:
  - 1. Where a system processor or a system is required to be redundant, that unit shall function as a fault tolerant device.
  - 2. Fault tolerant processing shall consist of two parallel-operation processors (electronics) with separate connections to the system communication network. Both processors shall receive and process information simultaneously, with faults detected by the processors themselves.
  - 3. A fault tolerant configuration shall provide synchronous read/execute/compare capabilities with no database transfer.
  - 4. Upon detection of a fault, self-diagnostics shall be run by both processors to determine which processor is defective. The nondefective processor shall then assume communication and control without affecting normal system operation. Upon replacement of the defective processor the system shall automatically, or the operator may initiate, download of the database to the replaced processor and assume communications via the network without affecting normal system operation. The use of backup, "hot standby," or "automatic and bumpless switch over" configurations are acceptable if the transition from failed device to backup device does not degrade the process monitoring and control system or the system's availability.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.02 RELATED SECTIONS

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
  - 1. Division 01, General Requirements.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

1.03 SUBMITTALS

- A. The DCSP shall provide all submittals in accordance with the requirements of Section 01 33 00, Submittal Procedures. In addition, the DCSP shall provide PCM component data: Manufacturer's standard catalog data, including a description and depiction of all control devices and instruments in sufficient detail to demonstrate complete specification compliance. If standard catalog data does not contain sufficient detail to verify compliance, then the DCSP shall submit supplementary documentation to verify compliance.
- B. PCM Design:
  - 1. Layout and shop drawings, including the following:
    - a. Panel layout, including fully dimensioned and detailed external spatial views and internal layout.
    - b. Electrical schematics, including, new panel wiring, instrument wiring and power and grounding.
    - c. Layout of relays, breakers, switches and instrumentation provided, and applicable single line and wiring diagrams.
    - d. I/O card placement and layout.
    - e. Enclosures, including all associated hardware devices.
    - f. Detailed description and associated diagrams of all software components of the PCM.

1.04 CODES AND REGULATORY REQUIREMENTS

- A. Instrument Society of America: ISA S5.1 (ANSI/ISA-5.01.01) Instrument Symbols and Identification.
- B. National Electric Manufacturers Association (NEMA):
  - 1. NEMA 250, Enclosures for Electrical Equipment.
  - 2. NEMA ICS 2, Industrial Control Devices, Controllers, and Assemblies.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. National Fire Protection Association (NFPA): NFPA 70, National Electrical Code.

1.05 DEFINITIONS

- A. Definitions of acronyms are identified in Section 40 90 05, Definitions.

**PART 2 PRODUCTS**

2.01 PCM REQUIREMENTS

- A. All DCS controllers shall be manufactured by Emerson Process Management (EPM) and shall be of the Ovation family line. All I/O modules shall match existing and shall be compatible with and seamlessly integrate onto the existing Enterprise wide COMNET DCS.
- B. DCS controllers shall be directly or remotely connected to field Input/Output (I/O) modules.
- C. All requirements for Process Control Modules (PCM) enclosures shall apply to a RIO enclosure.
- D. Examples of PLCs provided as a part of a vendor's standard package system are: UV disinfection controls, RO filtration units, HVAC controls and generator controls. This application is distinguished by extensive use of packaged control software and a substantial number of I/Os which are of secondary interest and do not directly affect the major treatment processes (monitoring of lamp status in UV systems, for example). Many of these systems are provided standard with separate operator interfaces. Because of limited space and maintenance requirements, panel-mounted color LCD operator interfaces for these packaged control systems are preferred over desktop personal computers. For these systems, the DCS will be used for supervisory control and monitoring via a communications link, preferably Modbus/TCP, with the PLC operating in the "slave" mode.
- E. All PLCs and local operator interface panels provided for a packaged system project will be of a common manufacturer. Furthermore, the design consultant will consult with City prior to the naming of acceptable PLC manufacturers. The PLC programmer will include a heartbeat bit to be exchanged between the PLC and the DCS, and the designer will include this bit in the MODBUS I/O list. The City's standard PLC is Allen-Bradley. Designers must carefully select I/O points included in PLC to DCS communications. Points transmitted must support the control strategies, necessary alarms, or otherwise be useful to the operator. Simply specifying that all PLC points will be transmitted to the DCS is not acceptable.
- F. All remote I/O (RIO) shall be physically connected to its associated PCM. Wireless communication is not acceptable.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- G. Each PCM shall contain all of the required I/O, inclusive of all attributes, data, alarming, and control strategies required to monitor and control its associated process.
- H. PCMs, including remote I/O, shall receive power from a dedicated UPS branch circuit and from an additional secondary branch power source (other than the circuit feed to the UPS) to create a redundant bumpless transfer of power to the PCM and/or RIO. UPS and utility power circuits are to be provided to the PCM and RIO by others, under Division 26, Electrical.
- I. PCMs shall be configured, programmed and loaded using engineering functions found in Ovation Developer Studio. The number of user licenses required for each engineering function for each project will be identified in the scope of work.
- J. PCMs shall be dual network ported to communicate with other DCS devices over the fault tolerant DCSLAN.
- K. PCMs shall communicate with the facility historian system (FHS), and workstations (WSs) over the DCSLAN.
- L. Each PCM shall be able to communicate with every other PCM directly in a peer-to-peer manner using peer protocol.
- M. Each process location shall be provided with dual redundant DCS controllers (excluding I/O) configured for fault tolerant processing via standard system configuration procedures.
- N. Each DCS Controller shall be redundant and provide complete “bumpless” automatic failover to a backup PCM controller in the event of primary PCM failure.
- O. Each PCM enclosure shall be provided with an interior cabinet temperature sensor and security switch to report “real-time temperature” and “door ajar” conditions, respectively.
- P. Each PCM enclosure with additional air purge shall be equipped with a sensor to report air purge system fail.
- Q. PCM Interface to Packaged System PLCs:
  - 1. PLCs shall interface to the DCS through Foreign Device Interfaces (FDI) which is defined as follows:
    - a. The DCS shall be provided with an integrated fault-tolerant FDI in the PCM which supports monitoring and control of the PLC.
    - b. The FDI shall be fault-tolerant and redundant where indicated.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. The DCS shall have an open architecture, which shall enable the FDI to provide a means of integration with multiple vendors in a manner which is transparent to the user at the WS level. All of the data associated with the FPI shall appear at the WS in a similar format and presentation to data derived from PCMs. All WS interaction functions that the operator uses to monitor and control inputs/outputs associated with the PLC(s) shall be similar to those used by the operator to interact with inputs/outputs associated with the PCM(s).
  - d. The FDIs provided shall interface with all existing packaged system PLCs that are connected to inputs/outputs on the plant.
  - e. All self-documentation features which relate to DCS devices shall also relate to the documentation of PLC configurations made at the DCS. All documentation produced shall be in like format as that for all other DCS components.
  - f. The FDI shall support existing field workstations that are part of the existing or packaged system PLC.
  - g. DCSP shall include all research, development of drivers (if necessary), I/O maps, I/O register address/protocol maps, configure and startup all FDIs.
  - h. As an alternative to the above, if the FDI utilizes custom software drivers to communicate with various manufacturers PLCs/PLC networks, the DCSP shall include all costs associated with providing, licensing, documenting, and revising these software drivers throughout the duration of this contract. If a software driver is used at more than one location, the DCSP shall furnish the additional software driver(s) at no additional cost. A minimum of one set of hardware and all required software shall be furnished to interface with each of the PLCs and PLC communications networks listed below.
2. The DCSP shall provide all hardware, software, to interface to the existing PLCs. FDI network cabling will be supplied and installed by others, under Division 26, Electrical.
  3. The following interface communication protocols and support management shall be provided via the FDI for third-party PLC integration:
    - a. Allen-Bradley (EIP, TCP and serial DF-1).
    - b. Modbus (TCP and serial).
    - c. DNP3.

R. Process Database:

1. PCMs shall support the following types of database points:
  - a. I/O points from I/O resident in PCMs, remote I/O, or OWS/EWS.
  - b. I/O points from FDIs.
  - c. DCS calculated analog and calculated discrete points.
  - d. DCS manual inputs.
  - e. PLC/RTU registers.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. The user shall be able to configure all database points and attribute information from the EWS.
3. The PCM shall store the following configurable/default fields about each database point:
  - a. DCS Tag Numbers: 16 characters, minimum, assigned as follows:
    - 1) Characters 1-3 to identify each plant/collection system, e.g., ‘DCT.’
    - 2) Characters 4-X pad with zeros (0’s).
    - 3) DCS Point Naming Guidelines: Below are naming guidelines for DCS I/O points and user-created internal DCS points that are visible to operations (such as derived alarm points that are shown on alarm screens, calculated points that are collected by the historian, or shown on reports, graphics, or on trend screens).
      - a) For all such points, the recommended tag structure is:

<Plant> <Plant Area> <ISA Acronym> <Loop Number>  
<Suffix>, where:

**<Plant>** = A single letter to designate the Plant or system as follows:

“M” for Metropolitan Biosolids Center (MBC)

“N” for North City WRP

“P” for Point Loma WTP

“S” for South Bay WRP

“T” for Pump Stations 1 and 2

“I” for Pump Stations 64 and 65

“E” for East Mission Gorge Pump Station

“Q” for Penasquitos Pump Station

“C” for SCADA

“G” for Grove Avenue Pump Station (GAPS)

“O” for Otay Pump Station

**<Plant Area>** = Two-digit Plant area code

For example, “05” is commonly used for the “Headworks” area.

**<ISA Acronym>** = Two or more identification letters chosen based on “ISA-5.4 Appendix B”

If an appropriate ISA Acronym is not readily identifiable, the letter “X” (“unclassified”) may be used.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**<Loop Number>** = Four Digit Loop Number

For points that are derived from an I/O point or associated with a device for which a loop number is defined, the loop number should be readily identifiable. If an appropriate loop number is not readily identifiable, the number “0” may be used, or any number in the range 0-999 chosen at the discretion of the programmer (for example unit number, system number).

**<Suffix>** = A multi alpha-numeric character string that begins with a letter. The string is chosen at the discretion of the programmer to make the point unique and/or to clarify point use.

- 4) DCS point names should be composed of alpha-numeric characters only (i.e., characters A through Z and 0 through 9). They should not include any special characters such as #, \$, &, (, %, -, and so on.
- 5) For all such user-created points, engineering descriptions should be provided. For packed points, where individual bits are used for separate functions, descriptions should be provided for any individual bits that are used.
- 6) DCS point names must be unique.

2.02 PCM HARDWARE COMPONENT PLATFORM

- A. Each PCM shall use minimum 32 BIT processor.
- B. Redundancy – Fully Redundant Pairs:
  1. The PCM cabinet shall be provided with the following redundancy unless specified otherwise:
    - a. Dual functional processors.
    - b. Dual redundant network interfaces.
    - c. Dual processor power supplies.
    - d. Dual I/O power supplies.
    - e. Dual input power feeds.
    - f. Dual I/O interfaces not dual I/O.
    - g. Dual auxiliary power supplies (loop power).
    - h. Auto fail over from active PCM to standby PCM for all sites that contain dual PCMs.
    - i. Hot programming of backup module.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 3 EXECUTION**

3.01 GENERAL

- A. The DCSP shall furnish all materials, tools, equipment, consumables and supplies, hardware, firmware, software and software licenses, and shall perform all labor required to complete the Work in this specification.
- B. All I/O tags shall be incorporated as defined elsewhere in these Specifications required for the process database as defined in these Specifications.
- C. The International Society of Automation (ISA) standards will be used if there are no conflicts with existing codes. If there is a conflict between existing Enterprise DCS facility, DCS tag codes, and the current published ISA table, which lists the ISA identifiers, it shall be brought to the attention of the City's representative and the fix coordinated with the City COMNET staff and Project Design Engineers.
- D. Spares, Tools, and Test Equipment:
  - 1. General:
    - a. The DCSP shall furnish all spare parts, tools and test equipment, which may be unique to hardware or software provided under this Contract, that is required to repair and calibrate the DCS and maintain it in good operating condition. In addition, the DCSP shall provide the following spare parts and supplies:
      - 1) One of each type of processor board associated with PCMs, WSs, and peripheral devices.
      - 2) One spare I/O card, of each type used, for every PCM provided under this Contract.
      - 3) One of each type of communication board.
      - 4) Three of each type power supplies, used in any DCS component of the Contract.

**END OF SECTION**

**SECTION 40 94 24**  
**PROCESS INPUTS/OUTPUTS (I/O)**

**PART 1 GENERAL**

1.01 REQUIREMENT

- A. Process I/O to and from the DCS shall be provided primarily through I/O modules connected to each PCM.
- B. I/O modules shall be modular plug-in components.
- C. Analog Input Modules shall be available for analog-to-digital conversion, including 4 to 20 mA, 1 to 5V dc or RTD input signals.
- D. Analog output modules shall be 24V dc and generate 4 mA to 20 mA output signals.
- E. Digital and analog I/O modules shall be 24V dc.
- F. Digital output modules shall be available with current sinking and relay outputs.
- G. Intelligent device modules (e.g., Hart, DeviceNet, Fieldbus, etc.) shall be a requirement.
- H. Foreign processor interface (FPI) referenced in Section 40 94 23, Process Control Module (PCM).

1.02 RELATED SECTIONS

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
  - 1. Division 01, General Requirements.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

1.03 SUBMITTALS

- A. The DCSP shall provide submittals in accordance with the requirement in Section 01 33 00, Submittal Procedures.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.04 CODES AND REGULATORY REQUIREMENTS

- A. The Work shall comply with the current editions of the publication and codes identified in Section 40 90 04, References.

1.05 DEFINITIONS

- A. Definitions of acronyms are identified in Section 40 90 05, Definitions.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. All I/O products shall be manufactured by Emerson Process Management (EPM) and shall be of the Ovation family line. All I/O modules shall match existing and shall be compatible with and seamlessly integrate onto the existing Enterprise-wide COMNET DCS.
- B. All process I/O modules shall be located in an enclosure that is proximal or integral to the associated PCM.
- C. All I/O modules shall be 24V dc maximum. Connection to external 120V ac and other foreign voltages shall use interposing relays. Interposing or slave relays shall also be provided in cases where the number, type or rating of the DO module output are incompatible with the electrical circuit to which it is connected. All interposing relays switching 120V ac shall be isolated from low voltage I/O in accordance with NFPA.
- D. Boards or modules shall be provided to interface with process I/O and intelligent transmitters as follows:
  - 1. Analog Inputs HART (AI):
    - a. Maximum 8 AI per analog input module.
    - b. Four-wire transmitters shall provide an isolated 4 mA to 20 mA signal.
    - c. Two-wire transmitters shall provide an isolated 4 mA to 20 mA signal powered from dc power supplies internal or external to the DCS.
    - d. Sink/source selection shall be available by hard jumper or software configuration on a point-by-point basis.
    - e. All AIs shall be HART protocol compatible.
    - f. DCS analog inputs shall have a load of 250 ohms.
    - g. Each analog input shall have a minimum of 12-bit resolution, accuracy of 0.25 percent, and a dedicated A/D converter.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Thermocouple Inputs and RTD Modules:
  - a. Maximum 8 RTD per RTD input module.
  - b. Thermocouple input cards shall be able to receive signals from Type J, K, and T thermocouples.
  - c. Thermocouple type shall be selectable on a point-by-point basis.
  - d. Each RTD or thermocouple input shall have a minimum of 12-bit resolution, accuracy of 0.25 percent, and a dedicated D/A converter.
3. Analog Outputs (AO):
  - a. Maximum 8 AO per analog output module.
  - b. Analog output boards shall provide isolated 4 to 20 mA output signals.
  - c. Signals shall be capable of driving a loop impedance of at least 600 ohms.
  - d. Each analog output shall have a minimum of 12-bit resolution, accuracy of 0.25 percent, and a dedicated D/A converter.
4. Discrete Inputs (DI):
  - a. Maximum 16 DI per digital input module.
  - b. Discrete inputs shall be powered by the DCS.
  - c. 24V dc signals shall be available.
  - d. Field contacts shall be dry isolated inputs to the DCS.
  - e. Field contacts that are used for alarms or control purposes shall be wired in a fail-safe manner; i.e. an open wire will result in an alarm and/or in the DCS controlling the system to a safe state.
5. Discrete Outputs (DO):
  - a. Maximum 12 DO per digital output module.
  - b. Discrete outputs shall be dry, isolated relay contacts capable of switching a minimum of 2 amps, at 24V dc, or bussed 24V dc current sinking output (maximum 0.5-amp per channel and 6-amp per module), depending on the application.
  - c. Power for sensing (“wetting”) discrete outputs shall be provided external to the DCS.
  - d. Output signal shall use interposing or slave relays.
6. Intelligent Transmitters:
  - a. Intelligent transmitter module (ITM) providing bi-directional communications with smart transmitters shall be available.
  - b. PCM shall allow remote transmitter configuration that simultaneously updates DCS database, excluding DeviceNet.
  - c. All digital communication with the intelligent process instrumentation from the DCS WS shall be in engineering units and shall be received a minimum of ten times per second.
  - d. ITMs shall be available that communicate using Foundation Fieldbus, Profibus, etc.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. Each message shall contain the following information with analog values specified in standard IEEE 754 32-bit floating-point:
  - 1) Primary measurement information such as flow, pressure, level, etc.
  - 2) Transmitter temperature readings.
  - 3) Data security information.
  - 4) Diagnostic information.
  - 5) Message checking.
- 7. Configuration and status information shall be accessible at any DCS workstation, and shall include:
  - a. The assignment of configurable parameters such as tag number, location, address, tag name, upper and lower range values, zero elevation or suppression, linear or square root output for d/p cells, and damping time.
  - b. I/O card diagnostics graphic display.
  - c. Display of the process value in terms of percent of span, engineering units, or current level.
  - d. Diagnostics, card faults, and communications errors.
  - e. DCS sites that contain AMS shall be up dated with new HART I/O when added by Contract.

### **PART 3 EXECUTION**

#### **3.01 GENERAL**

- A. DCSP shall furnish and install all I/O boards and related equipment as shown on Drawings and called for in Project Specifications.
- B. Modules will be Configured Using:
  - 1. Established format of fully qualified module record point names with full English descriptions.
  - 2. Ac line frequency set at 60-Hz.
  - 3. Suppress point fault module alarm active.
  - 4. Blown fuse detection enabled.
- C. Valve Network Communications:
  - 1. Preferred communication protocol is Modbus/TCP. Convert communications protocol from Serial to Modbus/TCP where existing wiring infrastructure supports this change. See Supplement 1 (DCS Input / Output List) and Network Block Diagrams for which protocol is used by each valve network.
  - 2. Pakscan valve network communications:
    - a. The Pakscan 3 controller uses RS-232 to connect to the DCS Ethernet Link Controller.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. The Pakscan 3 controller uses RS-232 to connect to the DCS, where called out in the DCS Input / Output List change Pakscan 3 communication setting to use the Ethernet protocol Modbus/TCP to connect to the DCS Ethernet Link Controller.
3. Flowserve valve network communications:
  - a. The Master Station II controller uses RS-485 to connect to the DCS, change Master Station II communication setting to use the Ethernet protocol Modbus/TCP to connect to the DCS Ethernet Link Controller.

3.02 SUPPLEMENT

- A. The supplements listed below, following “End of Section,” are part of this Specification.
  1. DCS Input/Output List: Highlighted text indicates additional DCS I/O.
  2. Deleted DCS Input/Output List: List of existing DCS I/O points to be deleted under this Contract.

**SECTION 40 94 43**  
**PROGRAMMABLE LOGIC CONTROLLER SYSTEM**

**PART 1 GENERAL**

1.01 GENERAL

- A. Function: Used for process monitoring and control, by emulating functions of conventional panel mounted equipment such as relays, timers, counters, current switches, calculation modules, proportional-integral-derivative (PID) controllers, stepping switches, and drum programmers.
- B. Programmable logic controller (PLC)-based systems are typically used in wastewater collection, pumping stations, package systems provided by equipment vendor.
- C. DCSP shall provide integration services to integrate all PLCs used in the Project. Integration services include, but are not limited to the following:
  - 1. Lead all integration activities such as coordination meetings, joint testing and site commissioning etc.
  - 2. Provide information necessary for PLC configuration such as IP, port assignment, and others.
  - 3. Define data exchange requirements between PLC and DCS, and send the requirements to Package Systems vendor.
  - 4. Establish and test communication between PLC and DCS.
  - 5. Map PLC data into DCS database.
  - 6. Create and monitor diagnostic info of the communication between PLC and DCS.

1.02 APPLICABLE SECTIONS

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
  - 1. Division 01, General Requirements.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 SUBMITTALS

- A. PLC Component Data: All submittals shall be in accordance with Section 01 33 00, Submittal Procedures.
- B. PLC Design:
  - 1. In addition to the submittal requirements, the DCSP shall provide all layout and Shop Drawings, including the following:
    - a. Panel layout, including fully dimensioned and detailed external spatial views and internal layout.
    - b. Electrical schematics, including, new panel wiring, instrument wiring, and power and grounding.
    - c. Layout of relays, breakers, switches and instrumentation provided, and applicable single line and wiring diagrams.
    - d. I/O card placement and layout.
    - e. Enclosures, including all associated hardware devices.
    - f. Detailed description and associated diagrams of all software components and firmware of the PLC.
- C. Operations and Maintenance Manuals: PLC O&M manual shall be provided as part of its package systems in accordance with applicable sections.

1.04 COORDINATION AND PROGRESS MEETING

- A. DCSP shall be responsible for the scheduling of meetings/workshops with parties that supplied package systems to coordinate the PLC integration and complete PLC integration into DCS system.
- B. The purpose of the meetings shall be to review the requirements of data exchange, define data mapping between PLC and DCS and testing.
- C. Representatives at the meetings shall have the competence and authority to make any and all necessary decisions.

**PART 2 PRODUCT**

2.01 TYPE

- A. PLC shall be Allen-Bradley Logix family including ControlLogix, or CompactLogix, to match existing City standard.
- B. PLC shall be capable to communicate with Emerson Ovation DCS system directly over Ethernet using Ethernet/IP protocol.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 PARTS

- A. The PLC based systems shall include, as a minimum: Central processing unit (CPU), power supplies, input/output modules, controllers, I/O bases (chassis/rack), and factory assembled interconnecting cables. Provide all components required to make a complete and operational system.
- B. PLC system shall include the following as a minimum:
1. CPU: Latest version of AB Logix family with appropriate memory size. Provide redundancy CPUs if required by the contract document.
  2. Power Supply Module: Shall use the latest version, 120V ac, 60-Hz or 24V dc. Provide redundant power supply module if required by the contract document.
  3. Input/Output:
    - a. Discrete Input Modules:
      - 1) Voltage: 120V ac, 60-Hz or 24V dc.
      - 2) Operating Power: 2 watts.
      - 3) Points per Module: 16 maximum.
      - 4) LED status indicator for each point.
      - 5) Isolation: Between input point and PLC, 1,500 volts rms.
    - b. Discrete Output Modules:
      - 1) Voltage: 120V ac, 60-Hz or 24V dc.
      - 2) Operating Power: 2 watts.
      - 3) Load Rating: 2 amps continuous.
      - 4) Isolation: Between PLC and output point, 1,500 volts rms.
      - 5) Points per Module: 16 maximum.
      - 6) LED status indicator for each point
    - c. Isolated Discrete Output Modules:
      - 1) Type: Isolated Form C relay.
      - 2) Voltage: 120V ac, 60-Hz or 24V dc.
      - 3) Isolated Outputs per Module: 8.
      - 4) Load Rating: 5 amps continuous.
      - 5) Operating Power: 2.5 watts.
      - 6) Points Per Module: 8 maximum.
      - 7) LED status indicator and fuse for each point.
      - 8) Isolation: Between PLC and output point, 1,500 volts rms.
    - d. Analog Input/Output Modules:
      - 1) Voltage: 4 to 20 mA and 1 to 5 volts.
      - 2) Power: 3 watts.
      - 3) Differential Analog Points per Module: 8 maximum.
      - 4) Isolated Analog Output Points per Module: 8 maximum.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 5) Isolation: Between PLC and I/O point and between I/O points, 1,500 volts rms.
- 6) Inputs modules shall be HART compatible.
- e. Pulse Input Modules:
  - 1) Input Voltage: 5V or 12V to 24V (user selectable).
  - 2) Input Current: 7 mA at 5V; 7 mA to 1.5 mA at 12V to 24V.
  - 3) Points per Module: 4 maximum.
  - 4) Maximum Input Frequency: 100 KHz in counter mode.
  - 5) Maximum Count Value: 0 to 999,999 (programmable).
- f. Communication Network Module: Latest version of Ethernet Network module from AB Logix family product line for Ethernet/IP protocol.
- g. Interface Products: Provide any hardware, such as interfacing cables required for accessing/programming/modifying logic or I/O configuration.
- h. PLC Programming:
  - 1) PLC Programming Software Tool:
    - a) Provide one copy of the latest Version AB Studio 5000 PLC programming software.
    - b) Provide all licenses to facilitate the communications, such as, Modbus, EIP, etc.
    - c) Provide all development software used to create the application software, such as Studio 5000, containing the exact software revision level used to develop the logic.
  - 2) Application Program: Provide final PLC application program at the end of the project to the City. If it is password protected, the password shall be provided. Provide complete annotated soft copies of the developed application software complete with I/O assignments and network configurations.
  - 3) Application program shall be programmed based on City's standard using IEC 1131-3 standard languages including FB, ladder logic, structured text, and sequential flow chart.
- i. Spare Parts:
  - 1) CPU: One.
  - 2) Power Supply: Three.
  - 3) Communication/Network Module: One.
  - 4) Spare I/O Cards Installed in I/O racks: For each type of I/O card, quantity equals 10 percent of each type and size used, minimum one each.
  - 5) Spare I/O Cards Provided Loose (Shelf Spares): For each type of I/O card, quantity 10 percent of each type and size used, minimum one each.
  - 6) I/O Rack: One.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Controller: The controller shall have its control strategies programmed in a "ladder logic" language. It shall be easily reprogrammed with a laptop computer as specified below. The PLC system shall be programmed by the Contractor to perform the specified control strategies and monitoring functions. Two documented copies, in hardcopy and electronic format, of the operating PLC program(s) shall be furnished to the Owner which shall allow direct, step-by-step, reloading of the PLC system program(s). The ladder logic shall reflect equipment name designations used in the PLC as well as the Contract Drawing equipment name designations (i.e., timer "Q" in the Contract Drawing may become timer OL in PLC program).
- D. Communications: If the PLC is required to interface with the DCS via a datalink, it shall be done so by an Ethernet IP link. The serial link type used shall be determined by distances. The PLC system shall be provided with all appurtenances to support this requirement. The communications protocol shall be Modbus with the PLC configured in a slave mode. The DCS will operate in the master mode.
- E. Programming Laptop: All programming shall be accomplished with a laptop computer loaded with all necessary software provided for each "type" of PLC provided. The PLC programming may be performed via a network connection or locally at the PLC. The laptop, software, PLC program, manuals, and passwords will be turned over to the City upon PLC commission. All programming, all monitoring, all searching, and all editing shall be accomplished with the laptop. These functions shall be capable of being done both "on line" while the PLC processor is scanning or "off line" while the PLC processor is not scanning. The laptop shall display multiple series and parallel contacts, coils, timers, counters, and calculation functions. The laptop shall also be able to monitor the status of all inputs, all outputs, all timers, all counters, and all coils. It shall have the capability to disable/force all inputs, all outputs, and all coils to simulate system operation. It shall also indicate "power flow" through all elements and include a search function to locate any element and its program location. The PLC processor status information, such as error indication and amount of memory remaining, shall be shown on the laptop screen. The Contractor shall provide one new laptop complete with manuals to the Owner to enable future system support. The laptop shall be turned over to the Owner at startup. No proprietary software, logic, passwords, etc., will be used that are not disclosed and turned over to the City upon Project completion. The City will retain all rights to use any programs, logic, graphic code, etc., created by the Contractor or DCSP in the everyday maintenance of installed equipment.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. PLC Control System Software: This section covers furnishing standard and customized software, fully installed and fully configured, in the control systems specified herein. It is the intent of this specification to have the PLC system supplier furnish latest generation, standard, field-proven, fully debugged and supported software package for this application with a minimum of additions or changes. Customized or specially written software shall be furnished if required to meet all functional requirements specified herein. Any custom applications software required shall be fully integrated into the basic software and shall not require unique command structures. Software specified herein is described in broad, functional categories. System supplier shall furnish a complete software package including the functional requirements specified herein along with whatever additional software is required by the supplier for proper and efficient operation of the PLC control system. All logic developed must be fully annotated with point tag names that match or comply with City standards and DCS I/O. Program subroutines will contain useful descriptions as to the functionality of the logic. Special programming to accommodate other systems will be fully annotated. All points, I/O and internal will have meaningful English descriptions to identify the purpose of the point. All network paths and IP parameters will be fully identified, all serial connections (if any) will be fully disclosed and identified. No attempt has been made to list all software or list all characteristics of software required by the system supplier to meet the functional requirements specified herein.
1. General: The software package shall provide a system capable of controlling system level activities and a higher level process control language allowing the operator to monitor and control the process through an interactive human interface. The software environment shall support a multi-programming atmosphere allowing concurrent execution of more than one program in a background/foreground mode or multi-tasking mode.
  2. Throughout the execution of all software modules, the operator shall be presented with all command or operation choices available at that point in the program. using sufficient verbiage or symbols to make choices self-explanatory and unambiguous. Question and answer or fill-in-the-blank requests shall only be permitted where file names, tag names, or other unique text or numerical information is required.
  3. System-level software shall include a real-time operating system, a calendar/time program, a file management program and a system of diagnostic routines in addition to any compilers, editors, loaders, or assemblers required to support the process control software language.
  4. All programs shall be self-configuring, such that they obtain the size and configuration of the system from parameters contained in the various files created during system generation. No parameters related to the hardware configuration shall be hard coded into any of the software.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. System Level Software: System-level software shall include a complete and unmodified operating system furnished by the system supplier that provides system-level functions as specified herein. Operating system software shall function automatically without operator intervention, except as required to establish file names and similar information.
6. Operating System Software:
  - a. The real-time operating system software shall be the standard uncorrupted product of the host computer and shall provide the following minimum functions:
    - 1) Respond to demands from a program request or to demands from an operator.
    - 2) Dynamic allocation of resources available in the system. These resources shall include main memory usage, computation time, peripheral usage, and I/O channel usage.
    - 3) Allotment of system resources on the basis of task priority levels such that a logical allocation of resources and suitable response times are assured.
    - 4) Queuing of requests in order of priority if one or more requested resources are unavailable.
    - 5) Resolution of contending requests for the same resource in accordance with priority.
    - 6) Service requests for execution of one program by another.
    - 7) Transfer data between programs as requested.
    - 8) Management of all information transfers to and from peripheral devices.
    - 9) Control and recovery from all program fault conditions.
    - 10) Diagnose and report real-time hardware device errors.
7. Program execution shall be scheduled on a priority basis. A multilevel priority interrupt structure is required. A program interrupted by a higher priority program shall be entered into a list of pending programs. Its execution shall be resumed once it becomes the currently highest priority program. Initiation of programs shall, as a minimum, be activated in the following ways:
  - a. In response to external interrupts.
  - b. At a scheduled time of the day.
  - c. On an elapsed-time interval basis.
  - d. On request by another program.
  - e. On request from the data access panel.
8. The system shall allow periodic programs to be scheduled. The allocation of resources to a time scheduled program shall be based on its relative priority and the availability of computer system resources.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

9. Startup and Restart:
  - a. Software shall be provided that initializes and brings a computer or any microprocessor based hardware unit from an inactive condition to a state of operational readiness.
  - b. Initialization shall include determination of computer system status prior to startup of initializing operating system software and initializing application software. Initialization shall also include the loading of all memory resident software, initialization of timers, counters, and queues, and initialization of all dynamic database values.
10. Shutdown: The software shall provide an orderly shutdown capability for shutdowns resulting from equipment failure, including computer processor failure, primary power failure, or a manually entered shutdown command. When the loss of primary power is sensed, a high-priority hardware interrupt shall initiate software for an immediate, orderly shutdown. When a shutdown occurs in response to a command or malfunction, the software shall control the affected hardware quickly and automatically to a secure state.
11. Diagnostics:
  - a. Diagnostic programs shall be furnished with the software package to detect and isolate hardware problems and assist maintenance personnel in discovering the causes for system failures. The system manufacturer's standard diagnostic routines shall be used as much as possible. Diagnostic software and test programs shall be furnished for each significant component in the system.
  - b. Diagnostic routines shall test for power supply, central processing unit, memory, and I/O bus failures as a minimum.
12. Calendar/Time Program: The calendar/time program shall update the second, minute, hour, day, month and year in the operating system and transfer accurate time and date information to all system level and application software. Variations in the number of days in each month and in leap years shall be handled automatically by the program. The operator shall be able to set or correct the time and date from the data access panel, only at the highest security level.

G. Operator Interface:

1. System-level software shall provide for creation and modification of alphanumeric displays, compression of display information for storage, and linking of dynamic files to database variables. Each display screen shall be able to be made up of static and dynamic alphanumeric information. The system shall be furnished with standard displays as specified herein. The system shall be capable of storing and using all standard display formats.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Additionally, all display screens shall include a dedicated area that shall display the current time and date, and at least one line for system-level messages.

H. Standard Displays:

1. The operator interface systems shall include at least the following standard, nonconfigurable displays:
  - a. Current Alarm Summary: As specified in the alarm processing section of this Document.
  - b. System Overview: Displaying the current status of major systems hardware components including the I/O hardware.
  - c. Menu Displays: Indicating the various displays and application level choice available to the operator.
  - d. Point Displays: Detailed displays in a standard format for all types of points in the system. Any point in the system shall be able to be displayed indicating all parameters associated with the point. Each entry in the display shall be labeled in engineering units.

I. Algorithms:

1. System software shall support the implementation of algorithms for the determinations of control actions and special calculations involving analog and discrete inputs. These algorithms shall be capable of outputting positional or incremental control outputs or providing the product of calculations. The algorithms shall include alarm checks where appropriate. As a minimum, the following types of algorithms shall be provided:
  - a. A calculator algorithm which performs functions such as summing several variables, raising to a power, roots, dividing, multiplying, and subtracting.
  - b. A switch algorithm that reads the current value from its input address and stores it as the value of its output address. Two types of switches shall be accommodated, two outputs with one input and one output with two inputs.
  - c. A 3-mode PID controller algorithm, with each of the 3 modes independently adjustable. The algorithm shall support both direct and reverse acting modes.
  - d. Algorithms for lead, lag, dead time, and ration compensators.
  - e. Algorithms to perform integration and totalization of analog process variables.
  - f. Algorithms that drive the setpoint of a controller shall include provisions for bumpless transfer, which shall be implemented by use of a bias value.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- g. Algorithms shall be implemented and modified in the system at any time through the use of interactive software modules in a manner consistent with other interactive modules and shall not require any direct source of code changes.
- J. Alarm Processing:
- 1. Alarm processing software shall be provided to recognize and report alarm events and conditions to the local control panel in an organized, unambiguous, clear, and convenient manner. Alarms shall be classified into at least two priority levels and at least two independent classes.
  - 2. Alarm processing software shall generate alarms for the following conditions:
    - a. Discrete input or output change of state is defined as an alarm in the control software.
    - b. Analog value exceeding alarm limits defined in the control software.
    - c. Analog rate of change exceeding limits defined in the control software.
    - d. Failure of the PLC processor, mass memory device, process input/output hardware, or other major hardware component.
    - e. Alarms shall be generated in each case above at the time of occurrence and at the time the condition returns to normal.
- K. Testing: The City's representative shall witness testing of the PLC system. Solid-state logic systems shall be tested as complete assemblies. Testing of individual components or modules shall not be acceptable. Testing shall include a simulated test with the DCS interface to ensure accurate passing of data between systems.
- L. Training: A manufacturer's representative shall supply two 8-hour days of onsite training for the Owner's personnel. The training shall include but not be restricted to, operation of programming unit, troubleshooting of system hardware and software, and program development.
- M. 30-day Acceptance Test:
- 1. After startup has been completed, the system shall undergo a 30-day acceptance test. The system must run continuously for 30 consecutive days. During this period, all system functions shall be exercised. Any system interruption and accompanying component, subsystem, or program failure shall be logged for cause of failure, as well as time of occurrence and duration of each failure. A failure shall cause termination of the 30-day acceptance test. When the cause of a failure has been corrected, a new 30-day acceptance test shall be started.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Each time the Contractor's technician is required to respond to a system malfunction, the technician must complete a report, which shall include details concerning the nature of the complaint or malfunction and the resulting repair action required and taken.
3. The 30-day acceptance test shall be performed jointly with the DCSP during its 30-day DCS acceptance test.

N. Operation and Maintenance Manuals:

1. The Contractor shall furnish to the Owner 5 complete sets of operation and maintenance manuals. The manuals shall include data, information drawings, etc., for the system, subsystem, and all components, and shall include names, addresses and telephone numbers of equipment suppliers, representatives and repair facilities.
2. This shall include a complete description of the recommended operating procedures, maintenance procedures, and spare/replacement parts list for equipment items with catalog data, diagrams, and drawings or cuts describing the equipment. Each set shall include full size assembly and wiring diagrams; drawings showing "as-build" conditions shall be furnished to the Owner.
3. This shall include backup programming on disc or thumb drive, all programming hardware and software (including all software packages must be licensed to the City). All configuration parameters, IP addresses, settings, network paths and gateways, serial port connection parameters, IO tag descriptors (and/or register addresses) will be identified.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Where shown on Drawings, or specified, the DCSP shall furnish all materials, tools, equipment, consumables and supplies, hardware, firmware, software, and shall perform all labor required to integrate all PLCs in conjunction with the DCS.
- B. The DCSP shall connect all PLCs to a network access point switch associated with the process control area, or nearest physical PCMs approved by the City's representative.
- C. DCS shall connect each PLC via Ethernet link controller (ELC), as specified in Article PCM Requirements, of Section 40 94 23, Process Control Module (PCM).

3.02 TRAINING

- A. Training shall be provided in accordance with Section 40 98 06, Distributed Control System Training.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.03 CABINETY ENCLOSURES

- A. PLC field cabinetry hardware and submittal requirements shall conform to the requirements of Section 40 95 13, Field Cabinetry.

**END OF SECTION**

**SECTION 40 95 13  
FIELD CABINETRY**

**PART 1 GENERAL**

1.01 GENERAL

- A. The DCSP shall provide a complete and operational, turn-key, distributed control system (DCS) capable of supporting all process operations for the Project as specified in these Contract Documents.
- B. The distributed control system provider (DCSP) shall furnish all materials, tools, equipment, consumables, and supplies and shall perform all labor required to complete the Work in this Specification.
- C. This section identifies the different types of DCS cabinets to be provided under this Specification, e.g., the process control module (PCM) cabinet, remote input/output (RIO) cabinet, patch panels, and field termination cabinets.
  - 1. As the names imply, the PCM cabinet shall house the DCS processors and related equipment, including redundant power supplies, electrical protective devices, electrical grounding strips, and fiber optic patch panels (specified elsewhere – if DCSPS equipment allows).
  - 2. The RIO cabinet shall house DCS remote I/O modules, applicable redundant power supplies and related hardware, electrical grounding strips and electrical protective devices.
  - 3. The PCM or termination cabinets shall contain all terminals and related hardware for termination of field I/Os. This cabinet will provide terminal isolation between discrete I/O (DI and DO) and analog I/O (AI and AO) and shall contain all required I/O electrical protective devices for field wiring. The termination cabinet, when used, will contain screw-type termination (spring-pressure termination is not allowed) for all I/O wiring (including analog shields) under the screw terminal. All I/O wiring shall be crimped to snap-tight type spade lugs as manufactured by T&B. No alternate is allowed.
  - 4. It is the intent that each PCM and RIO cabinet shall be provided with an associated termination cabinet (as needed) to isolate the DCS hardware from the field hardware and to provide orderly single-point termination of all I/O. Direct termination of field wiring to the I/O modules is allowed without the written consent of the City's representative.
- D. This section provides specific requirements for each cabinet and includes the design, testing and shipping of the hardware described herein.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.02 RELATED SECTIONS

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
  - 1. Division 01, General Requirements.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

1.03 REQUIREMENT

- A. The DCSP, as part of their final design, shall be responsible for providing seismic analysis reports for each cabinet for the applicable seismic zone, and shall provide all required seismic bracing of cabinets.
  - 1. The DCSP shall submit six hard copies and one soft copy of all seismic reports to the City's representative prior to beginning any installation of cabinets. Submission shall be made in accordance with Section 01 33 00, Submittal Procedures.
- B. The DCSP shall be responsible for design review of all concrete 'house-keeping pads' required by the cabinets and any other structural modification necessary for installation. In the event the DCSP finds the housekeeping pad design is deficient, they shall immediately notify the City's representative and the Prime Contractor.

1.04 DESIGN CRITERIA

- A. Environmental Conditions:
  - 1. Unless otherwise noted, provide cabinets suitable for the following environmental conditions:
    - a. Indoor Environment – Process Area:
      - 1) Temperature: 50 to 120 degrees F.
      - 2) Relative Humidity: 10 to 60 percent noncondensing.
  - 2. Enclosure Rating: NEMA 4X, Type 316 stainless steel.
    - a. Classification: Nonhazardous.
    - b. Indoor Environment: Electrical/control room.
    - c. Temperature: 50 to 78 degrees F.
    - d. Relative Humidity: 10 to 60 percent, noncondensing.
    - e. Enclosure Rating: NEMA 12, painted steel.
    - f. Classification: Nonhazardous.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Outdoor Environment:

1. Temperature: 20 to 120 degrees F.
2. Relative Humidity: 0 to 95 percent, noncondensing.
3. Enclosure Rating: NEMA 4X, Type 316 stainless steel.
4. Classification: Nonhazardous.
5. Hazardous (classified) Environment:
  - a. Temperature: 20 to 120 degrees F.
  - b. Relative Humidity: 0 to 100 percent noncondensing.
  - c. Enclosure Rating: NEMA 7 or NEMA 4X (explosion proof) Class 1 Divisions I and II, Class A, B, C, or D, Type 316 stainless steel or Aluminum rated for a corrosive environment.
  - d. Classification Area: Hazardous.

1.05 CODES AND REGULATORY REQUIREMENTS

A. Fabricate and install cabinet and enclosures to the following industrial standards:

1. American Petroleum Institute (API).
2. American National Standards Institute (ANSI).
3. IEC 529, Classification of Degrees of Protection provided by enclosures.
4. Institute of Electrical and Electronic Engineers (IEEE).
5. Instrument Society of America (ISA).
6. Military Standards (MIL Standards).
7. National Fire Protection Association (NFPA).
8. NEMA Standards Publication ICS6, Enclosures for Industrial Controls and Systems.
9. NFPA 79, Electrical Standards for Industrial Machinery.
10. OSHA Standard 1920.147: The Control of Hazardous Energy (Lockout/Tagout).
11. UL, 508A, Industrial Control Cabinet and/or CSA Standard C22.2.

B. Perform the design, and provide all enclosure work in compliance with the requirement of UL Bulletin 508A.

C. All electrical equipment, components, devices, etc. installed within the cabinet, shall be UL certified.

D. The DCSP shall install cabinets in compliance with requirements of all state and local codes with respect to clearances and area classifications, and in accordance with seismic requirements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. The DCSP shall obtain seismic calculations and mounting details for each cabinet. Seismic calculations and mounting details shall be stamped, on each page of the submittal, by a registered structural engineer in the State of California. Coast for all seismic certifications shall be borne by the DCSP. Seismic calculations and mounting drawings shall be submitted in accordance with Section 01 33 00, Submittal Procedures. No DCS-related cabinet shall be installed on site until seismic submittals have been returned “Approved.”

1.06 DELIVERY, STORAGE, AND HANDLING

- A. The DCSP shall provide protection for materials, components, and equipment against loss or damage and from the effect of weather while in fabrication and at the approved staging area. Upon delivery to Site, the Prime Contractor is responsible for protection of the DCS equipment during construction and installation. Prior to shipment to Project Site, the DCSP shall store items in an indoor dry location, inclusive of corrosive-inhibitive vapor capsules in shipping containers, and related equipment as recommended by the capsule manufacturer. Provide a suitable controlled environment in storage areas for items subject to corrosion under damp conditions.
- B. Provide protection for cabinets against loss or damage from effects of weather upon receipt, and a suitable controlled environment for storage of cabinets, while stored in the approved staging area.

1.07 SUBMITTALS

- A. The hardware submittal shall be in accordance with Section 01 33 00, Submittal Procedures. The submittal shall be provided in a singular, all-inclusive submittal, which shall include but not be limited to:
  - 1. The DCSP shall provide all submittals in accordance with all requirements of the Specifications and shall submit hardware catalog information and specification sheets with selected model numbers identified.
  - 2. The DCSP shall provide six hard copies and one soft copy of complete cabinet shop drawings prior to fabrication of cabinets. The DCSP shall not begin cabinet fabrication until City’s representative approval is obtained for its design. Details shall include location and dimensions of cabinet cutouts, location of any/all back of cabinet stiffeners and cabinet face to exact scale, terminations with their identification indicated, and the location and size of all equipment and devices to be mounted within and on the cabinet. The allowable conduit entrance area shall also be depicted. All shall be drawn to scale and accurately depict all information in sufficient detail to allow City’s representative to determine compliance with the Contract requirements. Poorly drawn details and/or lack of accuracy shall be grounds for rejection.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Bill of Materials (BOM):
  - a. Contractor will provide a complete and detailed BOM for each field-mounted device and assembly as well as cabinet assemblies and subassemblies.
  - b. BOM shall include all items within an enclosure. Each BOM shall be delineated by process segment and on a PCM/RIO unique basis. Incomplete submittals may be rejected without further review.
4. Schematic and Wiring Diagrams:
  - a. DCSP will provide six hard copies and one soft copy of all drawings showing both schematic and wiring diagrams for all circuits. Complete details on the circuit interrelationship of all internal, and external, devices associated with each enclosure shall be submitted first, using schematic control diagrams.
  - b. Subsequent to return of this first submittal, the DCSP shall submit six hard copies and one soft copy of all cabinet wiring diagrams. The diagrams shall be submitted in accordance with Section 01 33 00, Submittal Procedures, and shall contain:
    - 1) Component layout drawings (proportional layout), showing numbered terminals on components together with the unique number of the wire to be connected to each terminal.
    - 2) Wiring diagrams shall show terminal assignments including tagging identifying field primary and final measurement and control devices.
  - c. As-constructed Drawings made during the Project which differ from the original drawings, and/or the shop drawings shall be documented and shall be submitted to the Prime Contractor as “red-lined Record Drawings.”
  - d. Record Drawings shall be reviewed by City’s representative prior to the acceptance of the Project. The DCSP shall respond to all comments on shop drawings made by City’s representative either by making required corrections, or stating why corrections were not possible.
5. Assembly and Construction Drawings:
  - a. DCSP shall provide six hard copies and one soft copy of assembly and construction drawings for each DCS enclosure to facilitate field installation: These drawings shall include dimensions, identification of all components, surface preparation, and finish data, nameplates, safety placarding, etc. These drawings also shall include room identification and enough other details, including prototype photographs, to define exactly the style and overall appearance of the assembly.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

6. Installation, Mounting, and Anchoring Details: The DCSP shall provide six hard copies and one soft copy of installation, mounting and anchoring details, including housekeep pad size requirements and details, for all components and assemblies to be field-mounted, including conduit connection and entry details. Seismic calculations for the cabinet and mounting details shall be included as specified elsewhere.
7. Uninterruptible Power Supply (UPS):
  - a. Complete product literature.
  - b. Electrical load calculations showing the electrical loads and battery backup time under full loading.
  - c. Wiring and connection diagrams.
  - d. The UPS submittal shall include Modbus addressing and network configuration data for monitoring the status of the UPS.
8. Calculations for Sizing of Cabinetry UPS and Air-conditioning Units:
  - a. The DCSP will provide six hard copies and one soft copy of all calculations, as a submittal to determine the requirements for:
    - 1) UPS.
    - 2) Thermal Management System: DCSP to provide six hard copies and one soft copy (CD/DVD) of submittals depicting calculated heat gain for each PCM, RIO, termination cabinet or local cabinet which contains electronics. Calculations shall take into account the maximum ambient air temperature anticipated.
      - a) Where DCSP heat gain calculations indicate that cabinet temperatures for PCM, RIO, and termination cabinets containing electronics cannot be held at or below 75 degrees F, the DCSP shall provide a thermal management system for the cabinet. In the case of local cabinets containing electronics, the temperature shall be held 10 degrees F below the maximum temperature rating of the lowest-rated piece of cabinet electronics.
      - b) All thermal management systems provided shall be housed in enclosures of the same material used for its associated electronics cabinet.
      - c) If cabinet-mounted air conditioners are used, the DCSP shall provide a means acceptable to the City's representative for disposal of any condensate generated.
      - d) A separate, non-UPS source of power (utility power), fed from an existing lighting or power panel, to feed thermal management systems shall be provided by others under Division 26, Electrical. Thermal management systems using 'plant air' shall not be used.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.08 QUALITY ASSURANCE

- A. The DCSP shall achieve product quality assurance by possessing the following:
1. System of traceability of the manufactured unit throughout production and testing in compliance with applicable standards or other approved quality assurance programs.
  2. System of “burn-in” for all components and available supportive documents in compliance with applicable standards or other approved quality assurance programs.
  3. Demonstrated record of prompt positive response to field failures.
  4. Documented program of failure analysis.
  5. Proof of compliance with relevant regulations, standards, specifications, and/or codes of the following sources: ISA, API, UL, NEMA, OSHA, ANSI, MIL, NFPA, JIC, IEEE, NEC, ICEA, and any other national state, municipal, and local laws, regulations, and codes.
  6. Documented product safety policy relevant to all products intended to be furnished under this Contract.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. All cabinets to be located in process areas or outdoors shall be provided with an integral thermostatically controlled thermal management system as required under Part 1. Indoor cabinets mounted in conditions areas, or conditioned electrical rooms, may contain cleanable/replaceable filters and circulation fans to maintain cabinet temperature.
- B. Field I/O wiring shall be terminated in the PCM cabinet, by others, or preferably. termination in termination cabinets adjacent to or integral to, the PCM or RIO cabinet. For integral configurations, two completely separate compartments must be maintained with individually lockable doors. All internal hardware to the individual cabinets shall be designed as if they were standalone cabinets.
- C. Enclosures shall contain only those openings required for cabling and ventilation in accordance with area classification.
- D. The cabinets shall be free from waves and other imperfections. Cabinet fronts shall not be recessed at the base. Adjoining cabinet sections shall be accurately shop-fitted to ensure satisfactory assembly in the field.
- E. Check with the design drawings to determine where front-only, or front and rear, opening cabinets can be used based on space availability. All equipment and wiring shall be accessible from the front and rear of the enclosure as appropriate.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Field wire entry capability shall be from the top and the bottom of the cabinet as required by the specific application and in accordance with DCSP submittal showing acceptable conduit entrance areas. Each cabinet shall, wherever possible, be one of the DCSP's standard sizes; however, the height shall not exceed 96 inches. All indoor cabinets shall be sized so that they can be moved through a 36-inch-wide doorway.
- G. Ventilation openings in enclosures in all areas, based on area classification, shall be provided with dust filters and insect screens. Ventilation shall be provided with cleanable/replaceable filter backed louvers at top and bottom. Thermostatically controlled fans shall be located at air inlets so that the enclosure interior is pressurized. Filters shall be capable of removal and reinstallation without the use of tools. Exhaust vents shall contain the same dust filters and insect screens and shall be placed so as to facilitate cabinet top heat gain. Where area classification precludes ventilation opening, a recirculation type thermal management system shall be used.
- H. Cabinets shall be of adequate strength to support mounted components during shipment and to support a concentrated load of 200 pounds on their top after erection, and shall be rated for Seismic Zone 4 requirements.
- I. Each freestanding enclosure shall be mounted on a concrete housekeeping pad that elevates the cabinet in accordance with the design Engineer's standard pad design.
- J. Utility and UPS branch power shall be installed and terminated by others under Division 26, Electrical. Each cabinet, as specified below, shall have an externally-mounted, weatherproof, modular (plug in) RJ-45 type data jack to support connection of the industrial hardened workstations (FHS). Addition of the data jack shall not violate the NEMA integrity of the cabinet. Where possible, data jacks shall be mounted 12 inches above grade.
- K. All cabinets shall be provided with a temperature sensor to monitor cabinet temperature. The sensor shall provide a hardwired analog input signal to the DCS.
- L. All cabinet doors shall be provided with limit switches which shall activate when the door is opened. Switches shall be double-pole; one pole operating the cabinet light and the other pole providing supervised, 'door-open' indication to the DCS I/O. These points shall provide a hardwired digital input signal to the DCS.
- M. Control panels, including those furnished by equipment manufacturers shall be provided according to the following requirements:
  - 1. Where indicated, control panels shall be provided with all required taps, fittings, rotameters, regulation and alarm interlocks to enable the implementation of a purge system which is in conformance with

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

ISA S12.4 Type Z requirements. Dimensions shall be in accordance with manufacturer's requirements. Elevations and horizontal spacing shall be subject to City's representative approval.

2. All workstation control panels which require NEMA 3 or 4 ratings will be provided with window kits to preserve the panel's integrity and enable operations ready access to information.
3. Panels shall be fabricated, piped and wired by fully qualified panel shop who are properly trained, experienced and supervised.
4. See Section 40 90 07, Scope of Work, for control panels to be provided under this Contract.

N. Materials:

1. Panel section faces shall be No. 10 gauge minimum thickness steel for freestanding panels and No. 14 gauge minimum thickness steel for smaller panels. All materials shall be selected for levelness and smoothness.
2. Relay rack high density type panels shall use standard relay racks with No. 14 gauge steel frame and supports.
3. Structural Shapes and Strap Steel: ASTM A283.
4. Bolting Material: Commercial quality carbon steel bolts, nuts and washers, all 1/2-inch diameter with UNC threads. Carriage bolts shall be used for attaching end plates. All other bolts shall be hex head machine bolts. All nuts shall be hot pressed hex, American Standard, heavy. Standard wrought washers shall be used for foundation bolts and attachments to building structures. All other bolted joints shall have S.A.E. standard lock washers.

O. Fabrication:

1. End plates, top plates and top closure panels shall be furnished when required. End plates, top plates and top closure panels shall be removable with countersunk bolts to match panels. Top closure panels shall be furnished in lengths which match the widths of standard panels, except that one top closure panel may extend across two 4 feet 6 inches wide or five 2 feet 0 inches wide standard panels. The vertical joints of these panels shall align with the vertical joints of the standard panels.
2. End closure or rear closure doors shall be provided. Such doors shall be flush fitting and gasketed and be of the hinged lift-off type with lockable door handles. A common key shall be provided for all doors on one panel assembly. Where removable access panels are indicated, they shall be furnished with dished handle fasteners. Screw driver 1/4 turn type fasteners are not acceptable.
  - a. The flanged edges of all panels shall be straight and smooth. Corners shall be welded and ground smooth.
  - b. The face of the panel shall be true and level after flanging.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. All panel cut-outs and holes may be cut or drilled by any standard method that will not cause deformation. Burrs shall be ground smooth.
- d. Adjacent panels shall be assembled with faces flush. Gaps or cracks shall not be visible from the front of the assembled instrument board.
- e. Stiffeners shall be welded to the back of panels, as required to prevent panel deformation due to the weight of front of panel mounted instruments.
- f. Panels shall be self-supporting as defined below.

P. Framework and Supports:

- 1. The rear of each panel section shall have a steel framework for supporting conduit, tubing, wireways, switches, air piping, and all instrument accessory items such as relay or terminal enclosures, transducers, pressure switches, valves and air relays. The main frame work shall be constructed of standard structural shapes. Special shapes such as "Unistrut" may be used for secondary supports. Framework must not interfere with instrument connections or access needed for maintenance or adjustments.
- 2. Steel framework shall extend 2 feet 8 inches back of the panel face unless otherwise required. Where indicated, individual adjustable leg supports shall be provided at the back of the framework so that the entire panel shall be self-supporting.

Q. Finish:

- 1. Preparation:
  - a. Front and rear face of the panel, both sides and the edges of all flanges, and the periphery of all openings shall be prepared as follows:
    - 1) All high spots, burrs, and rough spots shall be ground smooth.
    - 2) The surfaces shall be sanded or sandblasted to a smooth, clean bright finish.
    - 3) All traces of oil shall be removed with a solvent.
- 2. Finishing:
  - a. A 3-mil dry coat of Amercoat 185, "or approved equal" primer shall be applied over the entire panel surface immediately after solvent cleaning.
  - b. Wet sand, dry, then quick glaze spot putty on the front of the panel only. Dry, then wet sand again and dry.
  - c. Apply a second 3-mil dry coat of alkyd enamel primer to the front of the panel.
  - d. Wet sand to smooth clear finish, then dry.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. At least two 3-mil dry coats of air-dry, satin finish, alkyd enamel shall be applied over the entire surface. Color to be as selected by City's representative.
  - f. The Contractor shall furnish two 1-pint containers of the enamel to the City's representative.
3. Instrument Finishing: The final coats applied to painted surface of instrument cases, doors, or bezels which are visible from the front of panels shall be manufacturer's standard unless otherwise indicated. Black japan or "crinkle" finishes on instrument cases are not acceptable.

R. Mounting of Instruments:

1. The Contractor shall provide cut-outs, and shall mount all instrument items indicated to be panel mounted, including any instruments indicated to be furnished by other manufacturers.
2. The Contractor shall also mount, behind the panels, other instrument accessory items as indicated.
3. Rear of panel-mounted equipment shall be installed with due regard to commissioning adjustments, servicing requirements, and cover removal.
4. Wiring shall be kept clear of spare space to give maximum space for future additions.

S. Piping Requirements for Control Panels:

1. General:
  - a. The Contractor shall provide terminal connections near the top, rear of the panel for all tubing and piping which connect to instruments, valves, air supply, and other pressure leads external to the panel. Terminal connections for tubing shall be bulkhead tube unions. Those for pipe shall be threaded couplings, plugged for shipping purposes.
  - b. Each terminal connection shall have an engraved metal or plastic plate with a terminal and instrument tag number affixed nearby.
  - c. The Contractor shall provide the air supply pressure reducing station, all instrument and supply piping and all pneumatic tubing or piping to terminal connections and between instruments located within the confines of the panel and supporting framework.
2. Air Supply Piping:
  - a. The Contractor shall provide air supply piping from a point near the top of the panel framework to the inlet side of the pressure-reducing station, or alternately to the inlet side of individual filter regulators.
  - b. Piping, fittings, and valves downstream of the filters at the air supply reducing station shall be brass or copper. Headers may be extruded aluminum if the tube wall section is thick enough to accept threaded connections.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. The low-pressure instrument air supply header shall extend from the downstream side of the main pressure reducing valves across the length of panel which includes air users. Where the header must be broken for shipping purposes, brass unions shall be provided at panel section junctions.
- d. A separate air supply take-off consisting of a 1/4-inch brass connection braced into the air header (if brass or copper) shall be furnished for each instrument requiring an air supply. An additional 10 percent of the take-offs shall also be provided. Take-offs for 3/4-inch size headers may be made by using 3/4-inch by 3/4-inch by 1/4-inch reducing tees.
- e. Each take-off shall be fitted with a 1/4-inch brass diaphragm of needle type shut-off valve. Provide circular type handle with tag number shown thereon.
- f. The dead end of the air header opposite the supply end shall be fitted with a plugged 1/2-inch brass gate valve.
- g. The connection from shut-off valves air head to the instruments shall be by means of 1/4- or 3/8-inch O.D. tubing as required.

T. Electrical Requirements for Control Panels:

- 1. The Contractor shall provide all wiring, conduit, wireways, and switches required to make instruments and other panel electrical devices operational.
- 2. Conduit, wireways, junction boxes and fittings shall be installed for all signal wire, all thermocouple and resistance thermometer lead wire including those between temperature sensors and temperature indicators.
- 3. Each terminal connection shall have a plastic plate with a terminal and instrument tag number. All wiring shall be identified with stamped tubular wire markers.
- 4. Freestanding panels shall be provided with switched 100-watt incandescent back-of-panel lights which are powered from a source independent from that which powers the panel devices. One light shall be provided for every 4 feet of panel width and shall be mounted inside in the top of the back-of-panel area.
- 5. Freestanding panels shall be provided with a 15-amp, 120-volt service outlet circuit within the back-of-panel area which are powered from a source independent from that which powers the panel devices. The circuit shall be provided with one 3-wire, 120-volt, 15-amp, duplex receptacle for every 4 feet of panel width spaced evenly along the back-of-panel area. As a minimum, two duplex outlets shall be provided for each panel.
- 6. Smaller panels shall be sized to adequately dissipate heat generated by equipment mounted in or on the panel.
- 7. Where smaller panels are mounted outside or in unshaded areas, they shall be provided with thermostatically controlled heaters capable of maintaining inside temperatures above 40 degrees F.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

8. Smaller panels shall be provided with a hand-switch controlled 100-watt incandescent light and a breaker protected 120-volt, 15-amp duplex receptacle.
9. Wiring Methods: Wiring methods and materials for all panels shall be in accordance with the NEC requirements for General Purpose unless otherwise indicated. Opening wiring in close cabinet type panels is allowed when indicated.
10. Construction:
  - a. Wire for 115-volt circuits shall be No. 14 AWG stranded with Type THWN or THHN insulation. All terminals for external wiring connections shall be suitable for No. 12 AWG wire.
  - b. Flexible conduit is not acceptable.
  - c. Conduit fittings shall be cast fittings.
  - d. Soldered or pressure crimped wire splicing in conduits shall be acceptable.
  - e. For case grounding, panels shall be provided with a 1/4-inch by 1-inch copper ground buss completed with solderless connector for one No. 4 AWG bare stranded copper cable. The Contractor shall connect the copper cable to a system ground loop.
  - f. Single case annunciator units with no remote logic that are installed at the top of a panel may be considered as being a terminal box when top of panel wire entry is indicated. If bottom of panel entry is indicated, terminal box shall be provided at the bottom of the panel and wired to the annunciator. Terminals shall be identified with plastic marker strips.
  - g. Terminal boxes for incoming and outgoing signal leads shall be located at the top or bottom of the panel as indicated or as otherwise required.
11. Power Supply Wiring:
  - a. Unless otherwise indicated, all instruments, all alarm systems, and all motor controls shall operate on 24V dc circuits.
  - b. The Contractor shall furnish terminal box connections for the main power supply entry as indicated.
  - c. Power supply switches for alarm units shall be 3-pole type, arranged to open both the power and alarm circuits. Each annunciator shall be equipped with a separate switch.
  - d. Instruments located on a single panel section which serve one process unit may be connected to a common branch power circuit. The number of branch circuits shall be such that no circuit load exceeds 10 amps. Different panel sections and instruments serving different process units shall not use common branch circuits. A 15-amp, 2-pole circuit breaker shall be provided in each branch circuit. When instruments do not come equipped with integral fuses, the panel fabricator shall furnish and install fuses as required for the protection of individual instrument against fault currents. Fuses shall be mounted

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- on the back of the panel, in a fuse holder, with each fuse identified by a service name tag.
- e. Each potentiometer type instrument, electronic transducer, controller or analyzer shall have an individual disconnect switch. Disconnect switches shall have metal or plastic tags listing the associated instrument tag numbers. Individual plug and cord set power supply connections may be used without switches when indicated.
  - f. Where alarm units are single unit types, one switch may be used to disconnect not more than six alarm units located on the same or adjacent panels.
12. Alarm Wiring: The Contractor shall provide all alarms including light cabinets, audible signal units, test and acknowledge switches, and remote logic units as indicated. Interconnecting wiring to panel-mounted initiating devices shall also be provided. Wiring from external initiating devices shall be provided by the Contractor. Where plug and cord sets are provided for component interconnection, the Contractor shall harness and support the cables in a neat and orderly fashion. Where separate wire is required, the Contractor shall install 16 AWG with THWN or THHN insulation between all components.
13. Signal Wiring:
- a. Computer and Noncomputer Use: Signal wire shall be twisted shielded pair or triads in conduit or troughs. Cable shall be constructed of No. 16 AWG copper signal wires with THWN or THHN insulation. Color code for instrument signal wiring shall be:
    - 1) Positive: Black (+).
    - 2) Signal Ground Negative: White (-).
    - 3) Equipment Ground: Green.
    - 4) Ungrounded: Red.
    - 5) Energized by Voltage Sound External to Panel: Yellow.
    - 6) Dc Circuit: Blue.
  - b. Multiconductor cables where indicated shall consist of No. 16 AWG copper signal wires twisted in pairs, with 600-volt fault insulation. A copper drain wire shall be provided for the bundle with a wrap of aluminum polyester shield. The overall bundle jacket shall be PVC.
  - c. Multi-conductor cables, wireways and conduit shall provide for 10 percent allocation of spare, unused signal wires in addition to the indicated requirements.
14. Thermocouple Wiring:
- a. The Contractor shall provide metal wire troughs, pull boxes, and thin-walled conduit for duplex thermocouple lead wire in a manner that will facilitate field installation of lead wire without splices or terminal connections. The Contractor shall also provide the lead wire connections between multipoint temperature sensors and temperature indicators when indicated. When a thermocouple junction box is indicated, it shall be located with the approval of the City's

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

representative. The panel manufacturer shall install conduit and troughs and lead wires between the junction box and the instruments. Terminal material shall be compatible with extension wire used.

- b. Thermocouple lead wire shall be No. 16 AWG with high temperature PVC insulation on each wire and PVC jacket overall, and shall conform to the latest ISA Specification for standard grade.
- c. Conduit for thermocouple lead wire shall be in accordance with the following:

Conduit Size	1/2"	3/4"	1"	1-1/2"	2"
No. of Duplex Leads	1	4	6	16	26

- d. Where the number of duplex lead wires exceeds 26, the wires shall be installed in rectangular ducts filled to not more than 40 percent capacity.
  - e. All thermocouple wireways and main conduits shall be sized to allow for 10 percent spare thermocouple leads.
  - f. Each signal, control, alarm, and indicating circuit conductor shall be designated by a single unique number which shall be shown on shop drawings. These numbers shall be marked on all conductors at every terminal using white numbered wire markers which shall be plastic-coated cloth, or shall be permanently marked heat-shrink plastic.
15. Terminal Blocks: Terminal blocks shall be molded plastic with barriers and box lug terminals, and shall be rated 15 amperes at 600 volts. White marking strips, fastened securely to the molded sections, shall be provided and wire numbers or circuit identifications shall be marked thereon with permanent marking fluid.

U. Color Conventions. Lens covers for indicating lights on all panels will be colored as follows:

- 1. Red ON when:
  - a. Motor not running (STOPPED).
  - b. Valve CLOSED (not fully opened).
  - c. Circuit breaker CLOSED.
- 2. Green ON when:
  - a. Motor running in forward direction (fast speed for multi-speed motors).
  - b. Valve OPEN (not fully closed).
  - c. Circuit breaker OPENED.
- 3. White ON when:
  - a. Power available.
  - b. System in AUTOMATIC mode.
  - c. Monitoring taking place.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Amber ON when:
  - a. Malfunction trip.
  - b. Equipment locked out.
  - c. Alarm condition.
  
- V. Nameplates: Nameplates shall be provided for instruments, function titles for each group of instruments, and other components mounted on the front panel(s) as indicated. A nameplate shall be provided for each signal transducer, signal converter, signal isolator, and electronic trip mounted inside the panel(s). Nameplates shall be descriptive to define the function and system of such element. These nameplates shall be of the same material as those on the front of the panel(s). Adhesives shall be used for attaching nameplates. Nameplates shall be fabricated from black face white-center laminated engraving plastic. Painted surfaces shall be prepared to allow permanent bonding of adhesives. Colors, lettering, styles, abbreviations and sizes shall be in conformance with ISA-RP60.6 with an intended viewing distance of 3 feet to 6 feet.
  
- W. Factory Inspection:
  1. Panels shall be inspected for compliance with requirements at the factory before shipment to the Site. The Contractor shall notify the City's representative 2 weeks in advance of the testing date. A representative of the City's representative will visit the factory to make the inspection.
  2. Contractor shall perform the following tests prior to arrival of the City's representative:
    - a. All air lines adequately tested for leaks.
    - b. All alarm circuits rung out to determine their operability.
    - c. Electrical circuits checked for continuity and where applicable, operability.
    - d. Nameplates checked for correct spelling and correct size of letters.
    - e. Other test required to place the panel in an operating condition.
  3. It shall be the responsibility of the Contractor to furnish all necessary testing devices and sufficient manpower to perform the tests required by the City's representative to determine conformance to the requirement of the Contract Documents.
  4. If the above tests have not been performed prior to the arrival of the City's representative, the Contractor shall reimburse the Owner for the cost of the extra time required for the inspector's services and travel expenses.
  
- X. Shipment: Panels shall be crated for shipment using a heavy framework and skids. Panel sections shall be cushioned to protect the finish of the instruments and panel during shipment. Instruments that are shipped with the panel shall have suitable shipping stops and cushioning material installed to protect instrument parts from mechanical shock damage during shipment. Each panel crate shall be provided with removable lifting lugs to facilitate handling.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 PROCESS CONTROL MODULE (PCM) CABINETS

- A. PCM cabinets shall be provided to house the DCS PCM hardware which interfaces to the DCS network and RIO, PLC, or termination cabinets.
- B. Cabinet shall be as required by area classification, gasketed, floor standing (minimum 72 inches wide by 96 inches high by 24 inches deep), with double doors and access from the front, and rear where applicable, of the cabinet. Doors shall have a three-point, key-locking, 1/4 turn latching mechanism. Doors shall be 36 inches wide and hung by continuous full height piano hinges at the outside edges (integral cabinet configuration dimensions shall not exceed 72 inches wide). Cabinet shall be provided with cable entry from the top and bottom (where applicable) as needed for entry of cables from cable trays and/or conduits. Cabinet shall be able to incorporate:
1. One set redundant PCM.
  2. Redundant power supplies.
  3. Redundant communications modules.
  4. Redundant RIO communications modules if applicable.
  5. I/O cards or modules and all required appurtenances to function as a stand-alone node within the DCS.
  6. Any cabinet and raceway shall be sized to accommodate equipped, spare, and future growth requirements of I/O and wiring, as well as for cables from I/O cards to the termination cabinet if used.
  7. Weatherproof, exterior mounted, RJ-45 data jack, which shall be wired back to the closest port on the data highway/LAN switch.
  8. UPS to power DCS PCM and loop-powered instruments.
- C. Cabinet Layout:
1. PCM and I/O rack and cards shall be accessible from the front of the cabinet. Access for card I/O cable connections shall be from the front or rear of the cabinet, based on area requirements. A separate wire-way shall be used to carry 120V ac signals. 120V ac power shall be separately routed within the enclosure for shielding and isolation from low-voltage signal wiring. Power entry to the cabinet and UPS shall be grouped together in an area of the cabinet that is separated from PCM processors and I/O wiring assemblies.
  2. Cabinet Power Distribution: Provide circuit breakers in the number and capacity required to protect all internal power circuits from overload and damage due to abnormal power conditions and/or device failure. Follow requirements for power circuits contained elsewhere in the Specifications. Group the circuit breakers together in a part of the cabinet adjacent to power supplies. Associated wiring shall be routed in wireway and/or conduit provided for 120V ac power only. A main circuit breaker/disconnect shall

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

also be provided for the cabinet, which shall switch electrical power to all internal cabinet equipment.

3. Wireway: Internal cabinet wiring shall be contained in wireway, or where this is not possible, wiring shall be bundled and tied with nylon ties and secured to the nearby cabinet walls with approved affixed mounts.

2.03 REMOTE INPUT/OUTPUT (RIO) CABINETS

- A. RIO cabinets shall be provided to house the DCS RIO hardware that interfaces to the DCS PCM and termination cabinets (if provided).
- B. Cabinet shall be as required by area classification, gasketed, floor standing (minimum 36 inches wide by 96 inches high by 24 inches deep), with single or double doors as appropriate, and access from the front, and rear of the cabinet where applicable based onsite conditions. Doors shall have a 3-point, key-locking, 1/4-turn latching mechanism. Doors shall be 36 inches wide and hung by continuous full height piano hinges at the outside edges. (Integral cabinet configuration dimensions shall not exceed 72 inches wide). Cabinet shall be provided with cable entry from the top and bottom as needed for entry of cables from cable trays and/or conduits. Cabinet shall be able to incorporate:
  1. Redundant PCM communications modules.
  2. Redundant power supplies.
  3. A minimum of 32 I/O cards or modules and all required appurtenances to function as a RIO node within the DCS.
  4. Any cabinet and raceway shall be sized to accommodate equipped, spare, and future growth requirements of I/O and wiring, as well as for cables from I/O cards to the termination cabinet.
  5. Weatherproof, exterior mounted, RJ-45 data jack, which shall be wired back to the closest port on the data highway/LAN switch.
  6. UPS to power DCS RIO and loop-powered instruments.
  7. Cabinet shall be sized to accommodate expansion and growth of 20 percent of the I/O.
- C. Cabinet Layout:
  1. RIO PCM communications modules and I/O rack and cards shall be accessible from the front of the cabinet. Access for card I/O cable connections shall be from the front and rear of the cabinet where applicable based onsite conditions. Separate wireways shall be used to carry 120V ac signals. 120V ac power shall be separately routed within the enclosure for shielding and isolation from low voltage signal wiring.
  2. Power entry to the cabinet and UPS power supplies shall be grouped together in an area of the cabinet that is separated from PCM processors and I/O racks assemblies.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Cabinet Power Distribution: Provide circuit breakers in the number and capacity required to protect power circuits from overload and damage due to abnormal power conditions and/or device failure. Follow requirements for power circuits contained elsewhere in the Specifications. Group the circuit breakers together in a part of the cabinet adjacent to power supplies. Associated wiring shall be routed in wireway and/or conduit provided for 120V ac power. A main circuit breaker/disconnect shall also be provided for the cabinet, which shall switch electrical power to all internal cabinet equipment.
4. Wireway: Internal cabinet wiring shall be contained in wireway, or where this is not possible, wiring shall be bundled and tied with nylon ties and secured to the nearby cabinet walls with adhesive mounts.

2.04 FIELD TERMINATION CABINETS

- A. Field Termination Cabinets, if required, shall be provided to interface between the DCS PCM/RIO cabinets housing the DCS system hardware and the field mounted instruments and devices. In addition to providing terminal blocks for connection of wiring, the cabinets may also provide electrical isolation between DCS discrete output signals and the equipment being controlled, and between the DCS and any field signal operating at a voltage level other than 24V dc. Where necessary to ensure analog signal compatibility and/or isolate ground loops, signal isolators shall be provided and installed in the termination cabinets.
- B. Cabinet shall be front access only, and shall provide openings at the top, or bottom, as needed for entry of cables from cable trays and/or conduits. The cabinet shall be as required by area classification, gasketed, floor standing (minimum 72 inches wide by 96 inches high by 24 inches deep), with double doors and 3-point latching mechanism, and key locking 1/4-turn. Doors shall be 36-inches wide and hung by continuous full height piano hinges at the outside edges. Cabinet shall incorporate:
  1. Knife-blade fused terminal blocks shall be provided on every wire connection for convenient isolation of circuits without de-terminating wiring.
  2. Interposing Relays: Slave/pilot relays shall be provided in the termination cabinet for the electrical isolation of discrete output signals. Where 120-volt wetting voltages are present, interposing relays shall be isolated from relays handling low voltage.
  3. Signal Isolators: Provide in the termination cabinet as mentioned above.
  4. Power supplies: Provide a redundant power system for the cabinet consisting of individual power supplies and automatic failover with alarm light, located in the bottom of the termination cabinets. All electronics power supplies and loop-powered instruments shall be powered by the UPS as specified elsewhere.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Provide three terminal blocks for each two-wire signal (two conductors and shield), and four terminals for each three-wire signal for landing field wiring and DCS wiring entering/exiting the termination cabinets. Also, provide all terminal blocks required for internal cabinet wiring and connections such as power supply, interposing relays, signal isolators, grounding and similar requirements. Provide terminals for all other wiring entering/leaving the termination cabinets as needed for landing connections. No wire splicing shall be used for connections in the termination cabinets.
6. Every wire conductor shall be individually labeled with its unique ISA identifying wire number in accordance with the requirements of the Contract Documents. Similar labels shall be attached to every terminal block.
7. Each conductor will be terminated in one of the following manners:
  - a. Conductor may be terminated in a safety-type forked, spade terminal of appropriate size for the screw on the termination block. All conductors shall be crimp-type spade terminal as manufactured by T&B. Substitution is not allowed.
  - b. If Phoenix Contact compression-type terminal blocks are used, each wire shall be ferruled or soldered tinned prior to terminating under the compression pawl.
  - c. Conductor may be terminated in a ferruled terminal type of appropriate size for the screw on the termination block. All conductors shall be crimp-type ferruled terminal.
8. Labels and nameplates shall be provided for identification of each active component contained within the termination cabinets (i.e., interposing relays, power supplies, terminal blocks, and similar items).
9. Grounding: Provide an electrical cabinet ground bus and ground wiring system.
10. Signal Grounding: Provide an isolated signal ground path and buss within the cabinet. All shields from signal wiring shall be grounded in the termination cabinets. Grounding and signal grounding shall be terminated to the ground buses and connected to the DCS ground grid by other under Division 26, Electrical.

C. Cabinet Layout:

1. Cabinets shall be arranged with vertical columns of terminal blocks bounded on both sides by wireways. Wherever possible, DCS wiring shall be separated from field wiring within the wireways. DCS wiring shall be routed to the left side of terminal blocks and field wiring to the right side of terminal blocks. Separate wireways shall be used to carry 120V ac signals. 120V ac power shall be separately routed in conduit within the enclosure for shielding and isolation from signal wiring.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Interposing relays shall be housed in an area of the cabinet that is separate from terminal blocks. Within this area, relays shall be separated according to whether they carry 24V dc or 120V ac signals. Relays shall be arranged so that all 120V ac signal wiring is contained in separate wireways from 24V dc signals.
  3. Power supplies shall be grouped together in an area of the cabinet that is separated from terminal blocks and relays, but may be located in adjacent areas on the DIN rail in order to facilitate interconnecting wiring.
  4. Cabinet Power Distribution: Provide DIN rail-mounted circuit breakers in the number and capacity required to protect power circuits from overload and damage due to abnormal power conditions and/or device failure. Follow requirements for power circuits contained elsewhere in the Specifications. Group the circuit breakers together in a part of the cabinet that is separated from terminal blocks and relays, but is adjacent to power supplies. Associated wiring shall be routed in wireway and/or conduit provided for 120V ac power. A main circuit breaker/disconnect shall also be provided for the termination cabinets, which shall switch electrical power to all internal cabinet equipment.
  5. Cabinet Power Supply: The cabinet power supplies shall be provided from two independent sources, UPS and utility power. These shall be distributed separately within the cabinet to provide the sources of power as described herein.
- D. Wireway: Internal cabinet wiring shall be contained in plastic wireway, or where this is not possible, wiring shall be bundled and tied with nylon ties and secured to the nearby cabinet walls with adhesive mounts. Wireways shall also be provided at the top and bottom of the cabinets to collect the wiring from the vertical wireways and direct it to the proper location.
- E. Separate areas shall be provided on the DIN rail terminal blocks for each type of input / output points (i.e., analog input – AI, analog output – AO, discrete input – DI, and discrete output – DO). Separate areas shall also be provided in the Cabinets for interposing relays.
- F. Cabinet shall be sized to accommodate expansion and growth of 20 percent of the I/O.
- 2.05 UNINTERRUPTIBLE POWER SUPPLY (UPS)
- A. UPS supply systems shall be provided by the DCSP for each PCM, RIO, termination cabinet and any local cabinet containing electronics, in this contract. The UPS shall be installed and terminated under Division 26, Electrical by others.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. UPS systems shall be sized to match area supply voltages and will provide, as a minimum, 2-hour of standby power, at the full rated load of the cabinet plus 20 percent spares.
- C. UPS shall be provided with external bypass mechanism to allow removal of the UPS for service without interrupting the PCM, etc.
- D. Each UPS shall be provided with its own electrical protective load center, provided and installed by others under Division 26, Electrical. Load center will contain adequate number and ampacity of circuit breakers to facilitate all loads fed from that UPS. Load center will be of appropriate voltage and have a main protective breaker of appropriate ampacity to match the KVA rating of the UPS.
- E. UPSs shall be floor mounted adjacent to the cabinet being served. They shall be mounted on a rack above a minimum of 6 inches above finished floor. If requirements dictate, UPS shall have additional, self-contained battery capacity to ensure minimum standby times.
- F. The UPS shall be provided with a network communications module capable of Modbus and SNMP that will transmit UPS environmental data to the DCS.
- G. Manufacturer and Products:
  - 1. Liebert; GXT4 with IS-Unity communications card.
  - 2. Or approved equal.

2.06 SHOP PAINTING

- A. Powdered epoxy resin coatings applied in the shop shall protect all ferrous metal surfaces. Surfaces that will be inaccessible after assembly shall be hot-dip galvanized and flood coated with two-part epoxy paint. All surfaces shall be cleaned and prepared in the shop prior to painting/coating. All mill scale, rust, lubricants, and other coatings shall be removed. Exposed surfaces shall be finished smooth, thoroughly cleaned, and filled as necessary to provide a smooth, uniform base for painting. All surfaces shall be treated with primer to resist rust and to form a bond between the metal and the paint.
- B. As an alternative to powder coating, PCM and RIO enclosures shall be given one or more coats of rust-inhibiting primer and two coats of high-grade oil-resistant enamel, lacquer, epoxy or polyurethane finish both inside and out. Paint films that show sags, checks, blisters, teardrops, or fat edges will not be acceptable. Any such defects shall be repaired by the DCSP prior to shipping.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. The DCSP shall include touch-up paint and primer with the equipment he is furnishing that shall be of the same type and color as the factory-applied finish paint and primer. One quart of finish color shall be furnished for future touch-up. Complete application instructions shall be furnished. The paint and instructions shall be boxed or crated to prevent damage and shall be clearly labeled.
- D. The exterior finish colors of the enclosures shall be the DCSP's standard colors. Interior color shall be white. Where stainless steel enclosures are used, powder coating or painting is not required.
- E. Where area classification dictates, or at the option of the DCSP all cabinets may be provided in Type 316 stainless steel as opposed to painting and epoxy coating.

2.07 WIRING REQUIREMENTS

- A. General: The cabinets shall be provided with top or bottom terminal box connections for the main power supply entry. Each electronic component shall be equipped with a separate switch or disconnect means. Signal and low voltage wiring shall be run separately from power and 120-volt control wiring. Intrinsically safe wiring shall be run separately from non-intrinsically safe wiring.
- B. Power Supplies: Low-voltage dc power supplies shall be supplied. Low-voltage direct-current power supplies for bulk instrumentation power shall be convection-cooled switching type. Line regulation shall be 0.4 percent for input line variations from 105V to 132V ac, and load regulation shall be 0.4 percent for load variations from 0 to full load. Ripple and noise shall not exceed 100 mV peak-to-peak. Hold-up time at maximum load shall not be less than 16 milliseconds. Efficiency shall be better than 70 percent. Power supply shall be designed for continuous duty at full rated capacity operating in ambient temperatures from 0 to 50 degrees C. In addition, power supplies shall be sized so that they do not exceed 60 percent of their rated capacity, when operating under the full calculated electrical load of the connected control system equipment. Output shall be electronically current limited, and overvoltage shutdown shall be provided. Power supply output voltages shall be rated as required and adjustable plus or minus 5 percent.
- C. Provide UPS power to all control cabinets to supply all DCS components and instrumentation, via UPS provided by the DCSP and installed by others as part of Division 26, Electrical.
- D. Cabinet Power Supply: The cabinet power supplies shall be provided from two independent sources, UPS and utility power. These shall be distributed separately within the cabinet to provide the sources of power as described herein.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Interposing Relays: Interposing relays (IR) shall be 115V ac or 24V dc coils and have a minimum of 10-amp rated contacts and be suitable for the application. Mounting dimensions and drilling for ac and dc relays shall be identical.
1. Manufacturer:
    - a. Phoenix Contact.
    - b. Or approved equal.
- F. Surge Protectors:
1. Surge protectors shall be nominal 120V ac with a nominal clamping voltage of 200 volts. Surge protectors shall be non-faulting and un-interrupting design with a response time of not more than 5 nanoseconds.
  2. Manufacturers:
    - a. Islatrol.
    - b. L.E.A. Dynatech.
    - c. Or approved equal.
- G. Enclosure Lights and Receptacles: Enclosures shall be internally lighted by LED lamps, provided with guards and a door activated switch. One duplex GFCI, grounded twist lock type receptacle shall, also, be provided in each cabinet enclosure section. Lights and receptacles shall be wired to outgoing terminal blocks for normal (utility, non-UPS) 120V, 60-Hz, single-phase utility power supply. Power branch circuits will be installed by others under Division 26, Electrical.
- H. Limit Switches: Switches mounted on all cabinet enclosure doors for intrusion detection and light activation, shall be proximity type and shall be self-contained, side or end sensitive as required. Output shall be a closed contact with no intrusion (supervised).
1. Manufacturer and Products:
    - a. Square D; Class 9007 Type C.
    - b. Allen-Bradley; 802T Series.
    - c. Or approved equal.
- I. Terminal Blocks:
1. Quantity:
    - a. For external connections.
    - b. Wire spare or unused cabinet mounted elements to their cabinets' terminal blocks.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. General: Group to keep 120V ac circuits separate from 24V dc circuits.
  - a. Connection Type: Screw connection clamp.
  - b. Compression Clamp:
    - 1) Hardened steel clamp with transversal grooves penetrating wire strands providing a vibration-proof connection.
    - 2) Guides strands of wire into terminal.
  - c. Screws: Hardened steel, captive, and self-locking.
  - d. Current Bar: Copper or treated brass.
  - e. Insulation:
    - 1) Thermoplastic rated for minus 55 degrees C to plus 110 degrees C.
    - 2) Two funnel shaped inputs to facilitate wire entry.
  - f. Mounting:
    - 1) Rail.
    - 2) Terminal block can be extracted from an assembly without displacing adjacent blocks.
    - 3) End Stops: One at each end of rail, minimum.
  - g. Wire Preparation: Stripping only.
  - h. Jumpers: Allow jumper installation without loss of space on terminal or rail.
  - i. Marking System:
    - 1) Terminal number shown on both sides of terminal block.
    - 2) Allow use of preprinted and field marked tags.
    - 3) Terminal strip numbers shown on end stops.
  - j. Mark terminal block and terminal strip numbers as required.
3. Terminal Block, 120-Volt Power:
  - a. Rated Voltage: 600V ac.
  - b. Rated Current: 30-amp.
  - c. Wire Size: 22-10 AWG.
  - d. Rated Wire Size: 10 AWG.
  - e. Color: Gray body.
  - f. Spacing: 0.25 inch, maximum.
  - g. Manufacturer and Product:
    - 1) Entrelec; Type M4/6.
    - 2) Or approved equal.
4. Terminal Block, Ground:
  - a. Wire Size: 22-12 AWG.
  - b. Rated Wire Size: 12 AWG.
  - c. Color: Green and yellow body.
  - d. Spacing: 0.25 inch, maximum.
  - e. Grounding: Ground terminal blocks electrically grounded to the mounting rail.
  - f. Manufacturer and Product:
    - 1) Entrelec; Type M4/6.P.
    - 2) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Terminal Block, Blade Disconnect Switch:
    - a. Use: Provide one for each discrete input and output field interface wire.
    - b. Rated Voltage: 600V ac.
    - c. Rated Current: 10-amp.
    - d. Wire Size: 22-12 AWG.
    - e. Rated Wire Size: 12 AWG.
    - f. Color: Gray body, orange switch.
    - g. Spacing: 0.25 inch, maximum.
    - h. Manufacturer and Product:
      - 1) Entelec; Type M4/6.SN.
      - 2) Or approved equal.
  6. Terminal Block, Fused, 24V dc:
    - a. Rated Voltage: 600V dc.
    - b. Rated Current: 6.3-amp.
    - c. Wire Size: 22-12 AWG.
    - d. Rated Wire Size: 12 AWG.
    - e. Color: Gray body.
    - f. Fuse: 5 by 20 GMA fuses.
    - g. Fuse Marking: Fuse amperage rating shown on top of terminal block.
    - h. Indication: LED diode 24V dc.
    - i. Leakage Current: 5.2 mA, maximum.
    - j. Spacing: 0.32 inch, maximum.
    - k. Manufacturer and Product:
      - 1) Entelec; Type M4/6.SFD.
      - 2) Or approved equal.
  7. Terminal Block, Fused, 120V ac:
    - a. Rated Voltage: 600V ac.
    - b. Rated Current: 6.3-amp.
    - c. Wire Size: 22-12 AWG.
    - d. Rated Wire Size: 12 AWG.
    - e. Color: Gray body.
    - f. Fuse: 5 by 20 GMA fuses.
    - g. Fuse Marking: Fuse amperage rating shown on top of terminal block.
    - h. Indication: Neon lamp 110V ac.
    - i. Leakage Current: 1.8 mA, maximum.
    - j. Spacing: 0.32 inch, maximum.
    - k. Manufacturer and Product:
      - 1) Entelec; Type M4/6.SFL.
      - 2) Or approved equal.
- J. Grounding: Internal copper grounding bus for ground connections on cabinets, consoles, racks, and cabinets.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

K. Intrinsic Safety Barriers:

1. Intrinsically Safe Relays:
  - a. Monitor discrete signals that originate in hazardous area and are used in a safe area.
  - b. Manufacturer and Product:
    - 1) MTL, Inc.; Series MTL 2000.
    - 2) Or approved equal.
2. Intrinsically Safe Barriers:
  - a. Interface analog signals as they pass from hazardous area to safe area.
  - b. Manufacturer and Product:
    - 1) MTL, Inc.; Series MTL 6000.
    - 2) Or approved equal.

2.08 NAMEPLATES

- A. Nameplates shall be provided for all I/O, PCM, RIO and miscellaneous DCS racks, and shall include function titles for each group of components mounted within the enclosures. A nameplate with identifying tag numbers coded to City's DCS numbering system shall be provided for each signal isolator, electronic trip, and other components mounted inside the enclosure(s). The nameplates shall be descriptive to define the equipment number, function, and system of each element. All nameplates shall be engraved phenolic, black-on white labels. Adhesive labels are not acceptable. The DCSP shall be select lettering, style, and sizes for approval by City's representative. Unless otherwise noted, mount all labels with stainless steel screws, nuts, bolts, etc. Before being produced the DCSP shall submit a list indicating the wording and tag numbers of all equipment identification name plates to City's representative for approval in accordance with Section 01 33 00, Submittal Procedures.

**PART 3 EXECUTION**

3.01 PACKAGING FOR SHIPMENT/STORAGE

- A. Enclose copies of the cabinet layout, wiring diagrams and installation detail documentation within manila envelopes and secure inside of each cabinet in a door pocket made for this purpose.
- B. During the construction period, periodically provide and replace cabinetry and air conditioning filters. Replace the filters just prior to City's representative's final acceptance of the equipment.
- C. During the construction period, provide and replace blown cabinet fuses.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.02 INSTALLATION

- A. DCSP shall perform a complete factory acceptance test (FAT) in accordance with these Specifications for all cabinet configurations in accordance with the Specifications. FAT shall be executed at the approved staging area and witnessed by the City representative.
- B. DCSP shall provide jobsite delivery of enclosures in accordance with the requirements of these Contract Documents.
- C. During the installation of DCS cabinets it shall be the responsibility of the DCSP to provide personnel to oversee proper installation of all DCS cabinetry, grounding, peripherals and systems components in addition to termination of I/O wiring, all of which is executed by others under Division 26, Electrical.
- D. The DCSP shall furnish the services of factory trained engineer(s) to check the completed installation and to perform all loop testing jointly with others, functional testing and make all necessary adjustments for satisfactory operation of the DCS.
- E. All Work, including installation oversight, calibration, testing, adjustment, startup and maintenance, shall be done by qualified experienced personnel who are technically skilled in their trade, are thoroughly instructed, and are competently supervised.

3.03 CABINET GROUNDING

- A. Rack Framework Grounding Conductor:
  - 1. Each DCS equipment cabinet and equipment rack framework requires its own grounding connection to the grounding infrastructure. A minimum of a No. 6 AWG copper conductor shall be used for this purpose. The recommended conductor types are:
    - a. Bare copper.
    - b. Insulated green, UL VW1 flame rated.
- B. Rack grounding connection point: Each DCS cabinet or rack shall have a suitable connection point to which the rack framework grounding conductor can be bonded. A dedicated rack ground bus, a 1-inch by 1/4-inch by rack width, copper ground bar or copper strip, shall be attached to the rack. A bond between the ground bar or strip and the rack shall exist. The mounting screws shall be of the thread-forming type, self-tapping or sheet metal screws are prohibited.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

C. Bonding to the Rack:

1. When bonding the rack framework grounding conductors to the busbars on the cabinet or rack, two-hole irreversible compression lugs listed by a nationally recognized testing laboratory (NRTL) shall be used to ensure that the ground connection does not become loose due to excessive vibration or movement of the attaching cable. Paint or other surface contact inhibitors should be removed before bonding straps are directly attached to metal enclosures or cabinet surfaces. Subsequently, the connections should be properly treated to inhibit rust, corrosion, and moisture.
2. The connection to the rack should have the following characteristics:
  - a. Bare metal-to-metal contact.
  - b. Antioxidant recommended.

D. Bonding to the Grounding Infrastructure: Attach the opposite end of the rack framework or equipment grounding conductor (EGC) to the grounding infrastructure (CBN). The connection should use a compression type, through-bolt lug which is UL listed. All DCS equipment, should be connected to the signal reference grid busbar with low-inductance bonding straps or jumpers. Grounding straps should be as short as practicable to minimize inductive reactance in the path.

E. Rack Continuity:

1. Every structural member of the cabinet or rack shall be grounded. This is achieved by assembling the cabinet or rack in such a way that there is electrical continuity throughout its structural members, as described below:
  - a. For Welded Racks: The welded construction serves as the method of bonding the structural members of the rack together.
  - b. Bolt Together Racks: Special consideration should be taken while assembling bolted racks. Removing paint at the point of contact with assembly hardware is an acceptable method of bonding. An alternate method is the use of two internal-external tooth lock washers: one under the bolt head contacting and cutting paint and one under the nut.
  - c. Even in equipment lineups where the cabinets are bolted together, bond each enclosure to the signal reference grid with its own strap.
  - d. All enclosure doors shall have independent ground straps which bridge the hinge point, providing grounding of the door to the main enclosure frame, or ground buss bar.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

F. Grounding the Equipment Chassis:

1. All rack-mounted equipment shall be bonded and grounded via the chassis, in accordance with the manufacturer's instructions. The equipment chassis should be bonded to the rack using one of the following methods:
  - a. To meet the chassis grounding requirements; the manufacturer may supply a separate grounding hole or stud. This should be used with a conductor of proper size to handle any fault currents up to the limit of the circuit protection device feeding power to the equipment unit. One end of this chassis grounding conductor will be bonded to the chassis hole or stud, and the other end will be properly bonded to the cabinet copper ground bar or strip.
  - b. If the equipment manufacturer suggests grounding via the chassis mounting flanges and the mounting flanges are not painted, the use of thread-forming tri-lobular screws and normal washers will provide an acceptable bond to the rack.
  - c. If the equipment mounting flanges are painted, the paint can be removed, or the use of the same thread-forming screws and aggressive internal-external tooth lock washers, designed for this application, will supply an acceptable bond to safety ground through the rack.
  - d. Assuming adequate grounding, solely through the equipment ac (alternating current) power cables containing a ground wire, is not allowed.

- G. Electrostatic Discharge Wrist Straps: The use of static discharge wrist straps when working on or installing network or computer hardware is specified in most manufacturers' installation guidelines. Wrist strap ports shall be provided at each DCS enclosure and shall be permanently attached to the rack grounding busbar by a means that ensures electrical continuity to ground.

3.04 FIELD TESTS

- A. Perform all field tests in accordance with Section 26 08 00, Commissioning of Electrical Systems, on "Electrical Tests."

B. DCS Grounding:

1. Ground resistance testing shall be performed by an independent testing laboratory.
2. Measurement of ground resistance shall be in accordance with IEEE Standard 81.
3. Measurements of all grounding electrodes shall not exceed 25 ohms in accordance with Section 250.56 of the NEC. Resistance testing shall take place after installation but before connecting the earth grounding electrode to the remaining grounding system, but at no other time. The ground

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

resistance tests shall be conducted with a fall-of-potential method instrument.

4. Verify that the impedance level of the EGC does not exceed the values in Table 1 below, based on the amperage rating of the over-current device for the feeder or branch circuit.
5. An “open ground” indication reveals no EGC connection. A high-impedance measurement indicates poor-quality connections in the equipment grounding system or an improperly installed EGC and must be repaired and retested by the Contractor at no extra cost.

<b>Table 1</b>		
<b>Overcurrent Device Rating (A)</b>	<b>Circuit Voltage to Ground</b>	
	<b>120V</b>	<b>220/240/277V</b>
10	1.6	-----
15	1.0	1.0
20	0.8	0.7
25	0.6	0.6
30	0.5	0.5
40	0.4	0.3
60	0.10	0.10
100	0.10	0.07
125	0.06	-----
150	0.05	-----
200	0.04	-----

6. The Contractor shall verify that the ground reading through the ground bond conductor from the rack or enclosure, to the independent tri-ground system, or alternately to the UFER ground grid, is 1 ohm or less. Testing shall be provided by an independent ground testing agency in accordance with a City-approved ground testing plan. Failure to achieve proper signal grounding, shall require the Contractor to add additional tri-ground systems and larger bonding conductors, and retest to acceptable levels.
  - a. At the conclusion of Ground Testing, the Contractor shall submit copies of the certified testing report in accordance with Section 01 33 00, Submittal Procedures.

**END SECTION**

**SECTION 40 95 33**  
**DISTRIBUTED CONTROL SYSTEM NETWORK**

**PART 1 GENERAL**

1.01 NAMED TYPES

- A. DCS network shall consist of the facility information network (FIN), the process information network (PIN), and the DCS WAN, consisting of the district information network (DIN).
- B. Remote network is a network other than a DCS network. A DCS network shall not be directly connected to a remote network.
- C. DCS LAN: Consists of two elements, the FIN and the PIN.
  - 1. FIN: Fiber network connecting root switches to fan-out switches.
  - 2. PIN: Category 6 cabling between fan-out switches and DCS drops.
- D. DCS WAN (DIN): Inter-plant-wide area network (provided by City COMNET group).
- E. Business network Ethernet TCP/IP communication network (provided by City), which is also a remote network.
- F. City intranet is a remote network.
- G. Internet is a remote network.
- H. Wireless networks are defined as remote networks.

1.02 RELATED SECTIONS

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
  - 1. Division 01, General Requirements.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 REQUIREMENT

- A. The DCSP shall interface all DCS components to the DCS LAN at Project plant, which is designed by the design Engineer and installed by others, under Division 26, Electrical.
- B. Assumptions made for the Work involved in this section include:
  - 1. Each DCS LAN communications network shall be capable of Gbit/sec Ethernet communications system linking all DCS stations.
  - 2. DCSP shall coordinate with City for IP address assignments.
  - 3. Cabling shall be provided, installed, and tested as specified.

1.04 SUBMITTALS

- A. The DCSP shall submit six hard copies and one soft copy (CD/DVD) of detailed proposed final LAN design diagrams detailing network components, hardware, interfaces, etc. in accordance with Section 01 33 00, Submittal Procedures.
- B. Based on the design Engineer's network design, the DCSP shall develop and submit six hard copies and one soft copy (CD/DVD) of a link budget evaluation that calculates the total loss suffered by a transmitted signal across the various components and fiber channels with reference to the minimum receiver power required to maintain normal operation. The purpose of this submittal is to verify adequacy of network design and memorialize the expected signal budgets. The link budget for all point-to-point transmissions shall include the following parameters:
  - 1. The minimum transmit power guaranteed (minTx), expressed in dBm.
  - 2. The minimum receive power required (minRx), expressed in dBm.
  - 3. The loss of optical connectors and adapters (L), expressed in dBm.
  - 4. The number of connectors and adapters (n).
  - 5. The normalized fiber loss (FL), expressed in dB/km.
  - 6. The reach or distance to be achieved (d), expressed in km.
  - 7. The link budget and loss shall be calculated as follows:
    - a. Link Budget in dB (LB) = (minTx)-(minRx).
    - b. The total loss (TL) suffered by the transmitted signal along the given link, in dB: (TL) = n\*(L) +d\*(FL).
    - c. Any amplifier gain or dispersion unit loss shall be taken into account in the calculations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.05 CODES AND REGULATORY REQUIREMENTS

- A. Each communication network has been designed around the International Standards Organization's open system interconnection (OSI) model, IEEE 802.3 industry standards, and support a hierarchical communications network.
- B. All Work shall comply with:
  - 1. ISO/IEC 11801:2000.
  - 2. ISO/IEC 15802-3:1998.
  - 3. ISO/IEC 17799:2005.
  - 4. ANSI/EIA/TIA-568-B.

1.06 DEFINITIONS

- A. Definitions of acronyms are identified in Section 40 90 05, Definitions.

**PART 2 PRODUCTS**

2.01 NETWORK ELEMENTS

- A. All network elements shall consist of routers and switches, provided by the DCSP from a single vendor.
- B. Network Elements shall be compliant with industrial standards for network managed network elements in harsh environments. This includes the following characteristics:
  - 1. Tolerance to high EMI/RFI.
  - 2. Tolerance to temperature ranges from 0 degree C to 50 degrees C.
  - 3. Tolerance to 95 percent relative humidity, noncondensing.
  - 4. Tolerance to electrical power voltage variations.
  - 5. Tolerance to vibration and physical shock.
  - 6. Supports DIN rail mounting or rack mounting.
  - 7. Powered by 24V dc.
  - 8. Network elements shall support security features such as authentication, authorization, and auditing. Security shall include password protection and access control lists. Network elements shall be capable of port disabling.
  - 9. Network elements shall support a browser based administration. Network administrators shall be able to log in to the network elements and provision the network elements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 FIBER OPTIC PATCH PANELS

- A. Fiber optic patch panels shall be provided by the DCSP, wall or rack mountable, and designed to provide termination facilities for 24 fibers. Fiber optic patch panels used shall match the existing Enterprise-wide DCS installations wherever possible. Existing patch panels are the products of AT&T and Corning, or approved equal.

2.03 NETWORK SWITCHES AND ROUTERS

- A. The DCSP shall use industrial network switches and routers from Cisco and the DCSP shall guarantee the performance based on its choice of switch or router model. If possible the switches and routers selected shall match that of the existing Enterprise DCS, or shall be of a family that is a successor to the switches originally used. Switches and routers shall be fully backwards compatible with the existing network and network hardware.
- B. All switches shall have an IP address on the network. IP addressing scheme will be provided by City COMNET Group to the DCSP, at time of network setup.
- C. All switches and routers shall provide built-in support for SNMP.
- D. All fan-out switches shall support fiber links to the root switches via SFP hardware.
- E. Multicast traffic shall be allowed on all switches on the DCSLAN.
- F. Port status shall be visible on LEDs.
- G. External media converters shall not be used between root and fan-out switches.

**PART 3 EXECUTION**

3.01 DCSLAN

- A. The Design Engineer has designed each DCSLAN for each plant process segment to support the performance requirements and operating characteristics of the DCS. However, it is the responsibility of the DCSP to verify functionality of the DCSLAN and shall immediately notify the Prime Contractor and the City's representative of all operational problems found on the DCSLAN.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. The DCSLAN shall consist of a dual redundant communications network at each facility.
- C. The DCSLAN shall facilitate communications between devices using fiber optic and Cat 6 cables.
- D. Each networked DCS device shall be dual ported onto the DCSLAN.
- E. The DCSLAN, in its installed configuration, shall be fault tolerant.
- F. The DCSLAN provides connectivity between the WSSs, PCMs, RIOs, and facility historian system (FHS) to enable the timely update and archiving of process information and timely control response.
  - 1. To provide support of FHS, the DCSP will provide exterior-mounted Data Jacks on each PCM and RIO cabinet, as a minimum, as specified elsewhere in these documents. Based on process functionality, or safety considerations, the design Engineer may have added additional data jacks to support FHS, which are shown on Drawings.
  - 2. Each data jack will be wired back to the nearest port on the appropriate data highway/LAN network switch. Cat 6 LAN cabling shall be provided and installed by others, under Division 26, Electrical.
- G. The DCSLAN designs, and associated documentation, provide the configuration and equipment inventory requirements of a fully dual redundant Ethernet network for all process segments, which shall operate independently of the other plants LANs.
- H. VLANs shall conform to standard IEEE 802.1Q.
- I. VLAN designs segment traffic onto the appropriate VLAN. VLANs are independent from each other, in particular, with regards to bandwidth control and segmentation. Typical traffic segmentation strategies include defining VLANs and traffic priority schemes. Other VLANs and network traffic prioritization schemes can be defined for administration traffic and operational traffic. Operational traffic may be further subdivided into file transfer traffic (backups) and non-file transfer traffic. Non-FTP traffic shall include VLANs to support applications such as trouble ticket, work management, and other operational applications. Network design shall provide traffic segmentation and prioritization capabilities to support work cells, where required by Specifications.
- J. Classic DMZ network design uses firewalls to isolate the DCS network from remote networks.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- K. Network design shall use standard Cat 6 cables or fiber optic cables for links between Network Elements as specified in the TIA/EIA 568-B set of standards. Cat 6 and fiber optic link cables are provided and installed by others, under Division 26, Electrical.
- L. All network devices shall be included in the sizing calculations of the UPS systems. All network devices shall be powered and backed up by DCSP-supplied UPS systems provided under Division 40, Process Interconnections, and installed by others in Division 26, Electrical.
- M. Laminated plastic nameplates conforming to standard ASTM D709 shall be provided for all network hardware. Nameplates shall include the function, network address, and identifier (ISA tag) of the device.
- N. PCM Data Highway Performance:
  - 1. Networks are designed with due consideration for quality of services (QoS), bandwidth, latency, and high performance within a plant automation application.
  - 2. LAN networks shall be robust, scalable, secure, and manageable; and must provide high availability (24 by 7 by 365) for single points of failure.
  - 3. Communication speed shall be capable of 1.0 Gbit/second.
  - 4. Operating Length: 6,000 feet, minimum.
  - 5. Stations Supported per Highway: 256, minimum.
  - 6. Time Synchronization interval shall be every 1 minute, minimum, using multicast messaging.
- O. Redundancy and Reliability:
  - 1. The network design supports a network topology design that is fault tolerant. Fault tolerance shall be defined as 99.999 percent system uptime of critical network equipment consisting of the network backbone and associated servers.
  - 2. The design is to ensure continuing communications between servers and workstations (WSs) under any of the following conditions:
    - a. A port on a network adapter fails.
    - b. A network cable fails.
    - c. A port on a switch fails.
    - d. A switch fails.
  - 3. Communications system are fully redundant; no single failure of communications component results in loss of communications to any DCS station.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Redundant Components: Including, but not limited to, communications controllers, modems, power supplies, data highway cables, and cable connectors.
5. The DCSLAN design shall incorporate automatic detection of communications system component failure.
6. The DCSLAN design shall incorporate automatic switchover from failed communications system component to backup component without any interruptions to normal operations.
7. The DCSLAN shall alarm switchover and identify the failed component in alarm message to the NMS.
8. Communication system shall not be affected by connection, disconnection, and failure of DCS distributed processing stations (PCMs).

P. Network Elements Performance Requirements:

1. Network elements shall be able to monitor and alarm for network performance.
2. Excessive loss of packets and elevated network congestion issues shall be alarmed via standard network administration protocols such as SNMP. Network congestion, loss of packets, CRC errors, collisions, IGMP Snooping, defective frames, and the number of packets sent/received and other QoS levels shall be defined for various traffic types.

3.02 DCSWAN

- A. The DCSWAN shall be provided by the City COMNET Group.

3.03 INDIVIDUAL FACILITIES

A. Treatment Plant Communications:

1. The new design includes all process segments of the plant on one physical LAN.
2. Fiber optic cables in support of the LANs are routed in separate new conduits, raceways, or duct banks.
3. Redundant paths are provided in separate conduit so as to provide no single point of network failure in the event of a cable strike, or failure.

**END OF SECTION**

**SECTION 40 96 00**  
**APPLICATIONS SOFTWARE**

**PART 1 GENERAL**

**1.01 WORK INCLUDED**

- A. The DCSP shall design, develop, and start up the DCS application process control software.
- B. The Work of this section shall include:
  - 1. Project management and revision control.
  - 2. Applications software workshop, if and when required by City's representative.
  - 3. Applications software submittals.
  - 4. Applications software development.
  - 5. Software testing.
  - 6. Software installation.
  - 7. Startup.
- C. All application software developed for this Project shall fully conform with and be integrated into the existing Enterprise-wide COMNET DCS. New application software development shall follow, as closely as possible, the control scheme application software of the existing system(s).
- D. The DCSP shall provide all loop tuning and software modifications employed throughout the startup and testing period with actual process to provide operation exhibiting stable and controllable response to all process changes, steady state operation, and alteration of control parameters such as set point, with robust and fault tolerant functionality, all in accordance with the requirements of these Specifications.
- E. All application software developed for this Project shall follow the best practices for designing control as defined in Emerson's "Control Builder User Guide for Ovation" documentation.
- F. All application software developed by DCSP for the City's DCS becomes the property of City of San Diego and may be modified, deleted, copied, and reused for other functions or in other drops or other plants. The City will not retransmit any application software beyond the exclusive use in the COMNET DCS.

1.02 RELATED SECTIONS

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
  - 1. Division 01, General Requirements.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

1.03 DIVISION OF WORK

- A. The DCSP shall provide and implement the applications software required to complete the Work.
- B. The DCSP shall have overall system responsibility and shall provide all Work necessary to satisfy all requirements of this and related sections.
- C. Software of this section at a minimum shall include software, programming and configuration of: PCM control code, graphics code, trend groups and reports.
- D. Definition of Software Types:
  - 1. Standard Software: Software packages that are independent of the project on which they are used. Standard software includes system software and process monitoring and control software.
    - a. System Software: Application independent software developed by Microsoft. Includes, but is not limited to Microsoft operating systems, file management utilities, text editors, debugging aids, and diagnostics.
    - b. DCS Software (DCSS): Software packages independent of the specific process control project on which they are used. Includes, but is not limited to, providing capability for, data acquisition, monitoring, alarming, human-machine interface (HMI), data collection, data retrieval, trending, report generation, control, and diagnostics.
  - 2. Application Software:
    - a. Software to provide functions unique to this Work and that are not provided by standard software alone.
    - b. Configuring databases, tables, displays, reports, parameter lists ladder logic, and control strategies required to implement functions unique to this Project.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.04 WORK SEQUENCE AND SCHEDULE

- A. DCSP shall integrate all elements of this section to their P6 fragnet schedule and integrate this schedule information into the Prime DCSPs master baseline schedule.

1.05 CODES AND REGULATORY REQUIREMENTS

- A. City of San Diego, COMNET Graphic Display Standards, 1995.

1.06 PREREQUISITES FOR SOFTWARE DEVELOPMENT

- A. Process and Instrumentation Diagrams (P&IDs): DCSP shall use P&ID drawings developed by the design Engineer. Should the DCSP determine errors or omissions in the P&IDs that would affect software development schedules, he shall immediately notify the City's representative and the Prime DCSP. DCSP shall keep diligent red-line markups of all P&ID modifications, additions or clarifications.
- B. Loop Diagrams and Specifications: DCSP shall use loop drawings developed by the General Contractor. However, the DCSP is responsible for providing DCS-level details e.g., I/O termination identification, software level addresses, etc., to the design Engineer to allow him to finalize the Project as-constructed loop drawings.
- C. Fully Attributed I/O Lists and Attributed Control Narratives: DCSP shall annotate and attribute the design Engineer's I/O list, and shall annotate design Engineer's control narratives with all assumptions, corrections and changes, for each process segment of the Project. The DCSP shall maintain red-line markups of all changes to facilitate final as-constructed documentation.
- D. Control Strategies: The DCSP shall review project control strategies for completeness. Should the DCSP find any errors or omissions, or have questions as to functionality, he shall immediately notify the City's representative.
- E. The DCSP shall develop process graphics descriptions for all graphics programming, for all process segments, as part of the software submittal(s) for that process segment. The DCSP shall ensure that new graphics development conforms with existing COMNET DCS standards and will function with, and be integrated onto, the existing Enterprise wide DCS.
  - 1. At a minimum, the process graphics descriptions will include:
    - a. Graphic hierarchy.
    - b. Navigation/paging.
    - c. Operator inputs and control templates.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. Action buttons and menus.
  - e. Color coding, alarming, background fills, animation.
2. New graphics developed for the Metropolitan Biosolids Center will maintain the existing DCS standards and will not be updated to the new graphic standards used at the City's other facilities.

1.07 SOFTWARE DESIGN WORKSHOPS

- A. DCSP may request software design workshops for the work in this section on a process area by process area basis to clarify any questions or confirm compliance with City DCS standards. Should the DCSP require workshops, they shall submit the request through their Prime DCSP to be processed through the City's representative.

1.08 DCS SOFTWARE SUBMITTALS

- A. The DCS software submittal (DCSSS) shall be singular and all inclusive, submitted in accordance with Section 01 33 00, Submittal Procedures. The DCSSS shall include, but not be limited to:
- 1. The DCSP shall provide all Submittals in accordance with Section 01 33 00, Submittal Procedures. DCSP shall provide six hard copies and one soft copy (CD/DVD) of all submittals.
  - 2. Logic Diagrams: The DCSP shall develop and submit logic diagrams for all new PCM codes for City's representative approval. Diagrams shall be organized and bundled in a way that facilitates optimum review by the City's representative. All PCM codes shall be annotated with comments.
  - 3. Graphic Diagrams: An English narrative of each data acquisition or control loop mission and anticipated action. Narratives shall enumerate the signal point name, signal descriptor, associated PCM number, associated system template displays, system functions activated by signal (i.e., interlocks, alarms, logs, etc.).
  - 4. I/O Database: The DCSP shall develop and submit a fully attributed I/O database. The I/O database shall be organized and bundled in a way that facilitates optimum review by the City. The complete listing of the DCS database shall list each data point's relevant parameters such as range, contact orientation, limits, incremental limits, I/O card type, I/O hardware address and assignment as minimum.
  - 5. Reports: The DCSP shall document and submit all reports being developed units this Contract.
  - 6. PCM Software Standards: The DCSP shall develop PCM software standards based on the function blocks listed in this section.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. DCS Standards: The DCSP shall use the existing City COMNET software standards to the greatest degree possible.
8. A complete set of PCM configuration sheets depicting each loop linkage. Each loop shall be on its own 11 inch by 17-inch sheet.

1.09 DCS GRAPHIC SUBMITTAL

- A. The DCS graphic submittal (DCSGS) shall be singular and all-inclusive, submitted in accordance with Section 01 33 00, Submittal Procedures. The DCSGS shall include, but not be limited to:
  1. One complete set of all WS-accessible displays which are unique to this Project (i.e., process global, system global, process regional, systems regional, process group, process loop, process component, integrated tutorials, integrated process tutorials, integrated documentation, user assistance.)
  2. The DCSP shall ensure that all graphics development, and graphics submittal, conform to the existing graphics layouts, linkages and formats used throughout the COMNET Enterprise.
  3. DCSGSs shall contain displays in full size color graphic format and replicate the proposed screen contents. All background colors shall be identical to that of the screen content. All displays shall be arranged in a hierarchical order with references to associated WSs.
  4. A system display linkage diagram which defines the hierarchical order and the linkages via page, down, left, right commands.
  5. A definition of each display's data fields by tag numbers, using City's standard.
  6. A definition of each display's dynamic elements which shall blink, change color, rotate or change shape in response to process changes, and conforms to the City's standard.
  7. A listing of all "help" text associated with each display screen, arranges in conformance to the City's standard.

**PART 2 PRODUCTS**

2.01 PCM APPLICATION SOFTWARE DESIGN CRITERIA

- A. PCM Program Design:
  1. DCSP shall develop and submit PCM application software in strict accordance with these requirements and following existing City COMNET software standards.
  2. The PCM shall be used to provide each process segment automatic control, alarm functions, and continuous loop control. Specific PCM functional requirements are described in the control narratives of source code for the current system provided as part of the Contract Document.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. The DCSP shall organize the PCM application software into:
  - a. Sections:
    - 1) Contains all logic for a specific unit operation.
    - 2) Each section consists of a general logic subsections and, followed by unit operation subsections.
    - 3) Subsections: Contains logic for specific equipment such as a pump, valve or loop.
  - b. Functional Blocks:
    - 1) Building block for pumps, valves, loop control, analog processing, and alarm switches.
    - 2) Requirements for standard DCS/PCM function blocks to be provided are specified herein.
4. Program Documentation:
  - a. Note and describe start of a new program section.
  - b. Briefly describe control objectives.
  - c. Identify subsections.
  - d. Subsection documentation includes brief description of control objective followed by a description and tag of the equipment being controlled.
5. The DCSP shall provide an organizational index for PCM applications software that can be used to quickly search and locate a specific process section.

B. Program Flow Diagram:

1. Develop program flow diagrams (PFDs) showing software sections, subsections and functions blocks, subprograms, and their interrelationships. Provide written description of each section subsection and function block that will be used in the actual program.
2. PFD for each analog loop and PID loop configuration to include written descriptions of setpoint ramps, loop initialization, interface with DCS, etc.
3. PFD submittals shall follow SAMA Standards.

2.02 DCS APPLICATION SOFTWARE DESIGN REQUIREMENTS

A. General:

1. DCSP shall develop and submit PCM application software in strict accordance with these requirements, and conforming as closely as possible with existing City COMNET standards.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. The DCSP shall develop the DCS design to convey accurate information to the plant operations staff so they can make informed process control decisions and provide the platform to execute the control decisions.
  3. The following outlines key objectives in designing the DCS graphics displays:
    - a. New graphics will be developed with the application of Graphic User Groups.
    - b. Graphic user groups will consist of representatives from the City operations/management staff, COMNET engineers, design engineers (optional) and qualified graphic experts representing the DCSP.
    - c. Additional members may be included as required.
    - d. Established formats, look and feel will be followed unless re-designed by the graphic user group.
- B. General Display Organizational Philosophy: Graphic displays provide the vehicle for Operations to accomplish supervisory control over the entire treatment process. Organization of these graphics displays into a consistent homogeneous hierarchy that permits fast, easy and intuitive navigation between the displays is essential for plan operations. The DCSP shall use its standard graphic and library together with existing City COMNET displays and standards to generate the new displays for the DCS.

2.03 DCS/PCM I/O DATABASE

- A. DCS/PCM I/O Database:
1. The DCSP shall provide a database tool that has the following functions:
    - a. Coordinate, manage and document all PCM points.
    - b. Access to all database points and attributes (including live data) shall be accessible and maintainable thru standard query language.
    - c. A comprehensive database listing shall be provided that contains the following as minimum: Point tag, English description, set/reset descriptions, limits, engineering units, wire tag designations to be used on loop diagrams and when landing I/O wires in PCM cabinets, alarm priorities, alarm limits, alarm delays, alarm cutout points, hardware addresses, third-party I/O linkage details including protocols and addressing packed group point usage and descriptions, point origination.
- B. Configuring the DCS Controller: The DCS controller shall be configured from an EWS using a standard Emerson Process Management (EPM) studio, DCS controller configuration shall conform to City COMNET standards and shall integrate into the existing Enterprise-wide COMNET DCS.

2.04 TOTALIZATION REQUIREMENTS

- A. DCSP shall provide diagnostic totalization for all field assets and DCS components, in accordance with existing COMNET DCS standards. Totalization may include:
1. All runtimes and start/stops for rotating equipment greater than 5 hp including, but not limited to: Pumps, conveyers, augers, fans, blowers, and rakes.
  2. All successful open/closes of all motor operated valves, gates and other mission critical valves.
  3. The runtime for each DCS components and UPS.
  4. Accumulated analog values of power monitoring for all UPS, switchgear and motor control centers where said devices are capable of interfacing to DCS.
  5. Totalization code shall be resident in the PCM in which the I/O is attached.
  6. A reset of the totalization shall only be initiated by authorized personnel.
  7. Each totalizer IO value shall be attributed with the asset ID associated with the piece of equipment.
  8. Totalization accumulations shall be based on EWS input ranging between 1 minute and 1 year.
- B. At a minimum, upon totalization reset, the previous total shall be recorded in the historian.

**PART 3 EXECUTION (NOT USED)**

**END OF SECTION**

**SECTION 40 98 00**  
**PROJECT MANAGEMENT SERVICES**

**PART 1 GENERAL**

1.01 REQUIREMENTS

- A. The Work of the DCS requires all project management services to complete the tasks specified in these RFP documents for the Project.
- B. Notwithstanding the requirements of the Contracts Documents the DCSPs Project Manager and representatives shall perform the Work of this section.

1.02 REFERENCES

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
  - 1. Division 01, General Requirements.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

1.03 SPECIFICATIONS

- A. Definitions:
  - 1. Definitions of acronyms are identified in Division 40, Process Interconnections.
  - 2. A DCSP Project Manager and the team shall be established and shall be comprised of personnel who are familiar with this type of DCS work and the existing City Enterprise-wide DCS. The PM and the team shall oversee the design, implementation, construction, and support of the DCS Work.
  - 3. Project Manager (PM) and the team shall perform the necessary DCSP project management services to ensure that the DCS provided under this contract is fully functional in accordance with Contract requirements, and works seamlessly integrating into the City's Enterprise-wide COMNET DCS.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Process Segments: The implementation of this project may include multiple process segments comprising the overall Distributive Control System for this portion of the Project. Each process segment may require separate engineering design(s), design approvals, procurement, staging, programming/configuration, readiness testing, and installation, and commissioning of the DCS at the Project site.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 PROJECT MANAGEMENT

- A. The DCSP shall provide a Project Manager to perform the necessary project management services. The DCSP shall provide all project management services required to complete the DCS Work specified in these documents. DCSP Project Management and administrative services shall be performed at the approved staging site and Project site, as required. The required minimal project management services are defined in the following sections.

3.02 PROJECT COMMUNICATIONS

- A. Communications Structure:
  1. A communication structure and escalation procedure will be developed between the DCSP, Prime Contractor and the City as part of the Prime Contract.
  2. The DCS Project Manager (PM) will coordinate and communicate project activities with the Contractor and City's representative.
  3. The PM shall coordinate new DCS upgrades, as well as existing DCS modifications (when specified) with the City's representative and Plant staff.
  4. The PM shall have strong verbal and written communication skills and be fluent in English.

3.03 PROJECT SCHEDULE

- A. The DCS Work of the process segments shall be initiated and completed in accordance with the Contractors Master Baseline Schedule, as required by Division 01, General Requirements.
- B. The DCSP shall develop within their P6 fragnet schedule, sufficient granularity, inclusive of goals, internal DCSP milestones and contractual milestones to demonstrate proper schedule coordination with the Contractors Master Schedule.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.04 PM TASKS

- A. The DCSP shall take full responsibility for DCS-related project management services required to meet the requirements of the RFP documents. At a minimum, the DCSP shall perform the tasks below as required by the Work:
1. Regular coordination meetings with the Contractor and City's representative review progress, as scheduled by the Contractor.
  2. The DCSP shall provide weekly status reports to the Contractor, depicting DCS development and readiness, through the construction phase of the project.
  3. Project delivery plan (PDP), which defines the overall delivery of each process segment of the Project. The PDP shall include the following items:
    - a. Delivery philosophy.
    - b. Control system architecture, device networks, local networks and communications interfaces.
    - c. Design approach.
    - d. Software development and testing criteria.
    - e. Procurement plan.
    - f. Construction coordination plan.
    - g. Document management and revision control strategy.
    - h. Communication network plan.
    - i. FAT, field testing, (including ORT) startup and commissioning plan.
    - j. Operations and maintenance manual criteria.
    - k. Training requirements criteria.
    - l. Health and safety plan.
    - m. QA/QC plan requirements.
  4. Scheduling: The DCSP shall be responsible for updating the DCS portion of the project schedule as necessary.
  5. Schedule of values/detailed cost breakdown.
  6. Scheduling of training.
  7. Invoicing to Contractor, on a monthly schedule.
  8. The DCSP shall execute periodic quality reviews of delivery of the DCS, including management QA/QC and delivery of:
    - a. Record management and document control.
    - b. Testing records.
    - c. Acceptance records.
    - d. Inspection records.
    - e. Maintenance records.
  9. Prepare outage requests forms or plant permits as required.
  10. Prepare and provide operation and maintenance manuals.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.05 PROJECT IMPLEMENTATION

- A. General: Project implementation is generally defined as the actual implementation of the Work required under the Contract. During the implementation of each of the five segments, the DCSP is required to fulfill a number of project management requirements. The delivery of each segment shall be based on four phases, including the engineering/design phase, procurement, staging, programming and testing phase, field construction/commissioning phase, maintenance phase. It is expected that the phases for each segment will be performed in order as identified below. The following project management services are required to be performed by the DCSP for each of the five segments.
- B. Engineering/Design Phase:
1. In the engineering/design phase, the DCSP shall complete the detailed design of the DCS as specified in the contract documents. The DCSP is also responsible for the following project management services during the engineering and design phase:
    - a. The DCSP shall coordinate all activities related to the DCS design of the Project.
    - b. The DCSP shall review and confirm requirements as necessary with the Prime Contractor and the City's representative.
- C. Procurement, Staging, Programming and Testing Phase:
1. In the procurement, staging, programming and testing phase, the DCSP shall procure the equipment required in the final design documents and stage the system at the approved staging site. Project management services related to these activities include, but are not limited to:
    - a. The DCSP shall coordinate and schedule the procurement, delivery and storage of all required equipment and materials on a timely basis.
    - b. Procurement of hardware and software shall be based upon requirements defined within these Project Specifications and refined during the engineering/design phase.
    - c. Procurement schedules shall be communicated to the Prime Contractor and the City's representative.
    - d. The DCSP shall be responsible for the development of the approved staging area.
    - e. The DCSP shall be responsible for all permitting activities related to the staging area construction, if any.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- f. The DCSP shall coordinate the moving and storage of all materials between manufacturing site and staging area and between the staging area and the Project Site. DCSP shall be responsible for coordinating delivery of DCS components at Site with the Prime Contractor.
- g. The City's representative and the Prime Contractor shall be provided the opportunity to inspect inventory and staging set-up.
- h. DCSP shall manage all licensed software and the development of all controls, graphics, and database programming and DCS configuration.
- i. Factory acceptance testing (FAT) shall be witnessed and signed-off by the City's representative prior to installation of the system.

D. Field Construction/Commissioning Phase:

- 1. In the field construction/commissioning phase, the DCSP shall coordinate installation, construction, and commissioning activities of all DCS-related components in accordance with these Specifications. Project management services related to these activities include:
  - a. The DCSP shall coordinate the overall sequence and schedule of control systems construction and installation.
  - b. The DCSP shall coordinate and participate in preconstruction safety conference, and shall adhere to the Prime Contractor's safety plan at all times.
  - c. The DCSP shall coordinate the ORT, system, software and performance testing.
  - d. The DCSP shall establish a health and safety plan for construction activities which adheres to the Prime Contractor's safety plan as well as the City's safety standards.
  - e. The DCSP shall perform loop check and commissioning activities. The DCSP shall be responsible for manning all PCM locations, main control room(s) and workstation locating in performance of loop testing. The Prime Contractor shall be responsible for coordinating and manning at all field device, instruments and foreign device (skid-mounted and package system) in support of loop testing.
  - f. The DCSP shall coordinate system cutover and outage requests and permits, as related to DCS operation.
  - g. City's representative shall be provided the opportunity to inspect system installation prior to cutover.

E. Maintenance Phase:

- 1. In the maintenance phase, the DCSP shall provide ongoing support services and warranty repair in accordance with Division 01 of the Contract.
- 2. The DCSP shall establish warranty and maintenance procedures to meet operations and maintenance criteria of the plant.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. The DCSP shall coordinate operations and maintenance activities with City's representative and plant operations staff.
4. The DCSP shall monitor system performance and perform corrective maintenance as required.
5. The DCSP shall provide warranty service reports to the City's representative or City COMNET staff, within 48 hours of the completion of each service or warranty event.

**END OF SECTION**

**SECTION 40 98 01**  
**ENGINEERING AND DESIGN SERVICES**

**PART 1 GENERAL**

1.01 SUBMITTALS

- A. The DCSP shall take full responsibility for developing an approved DCS design that meets the Specifications set forth in these Contract Documents. The hardware and software design shall be developed by the DCSP and submitted using a submittal review process in accordance with Section 01 33 00, Submittal Procedures.
- B. The DCSP shall group or arrange submittals in a methodical and logical fashion such that the City's representative and design engineers have all the required information to perform its review. For example, grouping of all hardware including workstations, PCM, field cabinets, networking and the like, for a process area, would be acceptable.
- C. The DCSP shall develop a complete list of all submittals (technical and administrative) required by all Contract Documents for all process segments in accordance with the Prime Contractor schedule requirements of the Contract.
- D. The DCSP shall plan for a pre-submittal conference to finalize the needs of the City's representative and design engineers to eliminate as much rework as possible. DCSP shall present an outline and samples of the proposed submission to the City's representative in this conference.
- E. The DCSP shall provide adequate time in their schedule to accommodate the review of the City's representative and any and all resubmittals.
- F. Loop Diagram Submittals:
  - 1. Loop Diagrams: The preparation of loop diagrams is the responsibility of the Contractor. However, the DCSP is responsible for providing to the Contractor all the DCS-level information, including termination designation, software addressing levels, I/O card assignments, etc. on a timely basis to facilitate development of these documents. DCSP portions of the loop diagrams shall be submitted in accordance with Section 01 33 00, Submittal Procedures.
  - 2. In addition to other DCS-related construction level as-built drawings, DCSP shall be responsible for providing red-line mark-ups of the loop diagrams and P&IDs, as required. Red-line mark-ups shall be provided on a timely basis to allow Engineers and Contractor time to finalize as-built documentation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.02 RELATED SECTIONS

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
1. Division 01, General Requirements.
  2. Division 26, Electrical.
  3. Division 40, Process Interconnections.
- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

3.01 ENGINEERING AND DESIGN TASKS

- A. The list below is intended to be used as a guide for DCSP and not intended to be all-inclusive and complete. At a minimum, DCSP shall perform the tasks below as required by the Work:
1. Workshop participation; as may be required for development of software, operations training, special maintenance requirements, etc.
  2. Submittals (Refer to Division 40, Process Interconnections, and Section 01 33 00, Submittal Procedures).
  3. Develop and submit DCS-PCM-related termination information.
  4. Develop and submit DCS-related portions of loop drawings.
  5. Develop and submit DCS-related portions of P&IDs.
  6. Develop and submit mounting details for all DCS equipment, including seismic calculations and certifications.
  7. Civil design, if and when required.
  8. Structural design, if and when required.
  9. Electrical design requirements for DCS-related equipment.
  10. Mechanical design requirements for DCS-related equipment.
  11. Develop and submit control system block design.
  12. DCS design.
  13. Work scopes for DCS-related subcontractors.
  14. Historian format designs, if and when specified.
  15. I/O database design including point attributes.
  16. Technical calculations.
  17. Control strategy review and functional verification.
  18. Control strategy programming.
  19. Graphic design workshops, and graphics development.
  20. System security design.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

21. Red-line markups of all As-built documents.
22. As-built documentation updated red-lines during construction.
23. Review and coordinate all submittals from DCSP subcontractor.
24. Coordinate information among DCSP and Prime Contractor subcontractors' submittals.
25. Coordinate panel drawing design.
26. Develop and submit panel drawings.
27. Approved staging area design and build-out.
28. DCSP staging area equipment and furniture.

3.02 DCSP QA/QC AND DESIGN ASSISTANCE REQUIREMENTS

- A. As the DCSP is operating under and 'assigned subcontractor', 'sole-source provider' arrangement with the City, various items of quality control and of design assistance to the project design engineers is required of the DCSP. Some, but not all, of the assistance items required of the DCSP are as follows:
1. The DCSP shall be responsible for thorough review of the project design documents, annotating any DCS related errors, omissions, size conflicts, environmental difficulties, etc. and so notifying the Project design engineer on a timely basis.
  2. The DCSP may be called upon by the City, or the design engineers to participate in RFI responses related to the DCS or I&C-related questions posed by other subcontractors. The DCSP shall provide immediate responses to such RFIs.
  3. The DCSP may be called upon by the design engineers to provide technical detail, review and/or approval of designs being executed via change-order to the Project. DCSP shall promptly provide such services.
  4. During the course of construction, the DCSP shall have their field engineers verify various aspects of installation are being installed within the Project specification and DCS manufacturer's requirements. This is particularly true of I/O and fiber optic conduit, raceway or duct bank installation, conduit cabinet entrance locations, physical obstructions to the DCS and environmental requirements. Inspection and notification requirements are stated throughout Division 40, Process Interconnections Specifications.
  5. The DCSP shall verify that special DCS grounding requirements and installation, as specified in Division 40, Process Interconnections are performed correctly and in accordance with the Specifications and DCS manufacturer's requirements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

6. The DCSP shall verify that the UPS provided under the DCS portion of the Contract, but install by others under Division 26, Electrical, is placed, wired, installed and tested in accordance with Specifications and DCS manufacturer requirements.
  7. The DCSP shall be responsible for oversight of I/O wiring installation to ensure subcontractor does not combine conduits, or route dis-similar I/O wiring in common conduits e.g., analog I/O with discrete I/O.
  8. The DCSP shall be responsible for coordinating with package system suppliers or other foreign device manufacturer's equipment to ensure that data-links are installed correctly, communications protocols are coordinated, etc.
  9. The DCSP shall be responsible for oversight of all I/O wiring termination, being provided by others under Division 26, Electrical, to ensure that I/O wiring is tagged correctly, routed and dressed neatly and terminated on correct locations, at the DCS end I/O wiring only.
  10. Integration of new configuration across all multi-networked DCS installations.
  11. Field verification of existing installations to confirm proper engineering designs.
  12. Removal of logic, graphics, database, field wiring, and hardware related to changes in the design where these items will no longer be used, unless otherwise specified by the Statement of Work. Removal of abandoned graphics includes the down loaded source code on all workstations across all networks.
  13. All wiring that is abandoned in place will have to be tagged such that it is clear where the wiring originates. Likewise by the contractor that removes field instrumentation on the field side of the wiring.
  14. AI systems that have been removed but still have wiring abandoned in place shall have a notated loop diagram that shows what was removed. No data from the loop diagram shall be erased, rather it will be notated with the changes.
- B. The costs for all QA/QC engineering service above shall be borne solely by the DCSP under this assigned subcontract.

**END OF SECTION**

**SECTION 40 98 02**  
**PROCUREMENT, STAGING, PROGRAMMING**

**PART 1 GENERAL**

1.01 DEFINITIONS

- A. Equipment: Tools, products, items, devices, or machines needed for the correct functioning of the DCS and its supporting systems.
- B. Materials: Materials are physical substances used as inputs to production or manufacturing of the DCS. The definition of materials also includes finished materials, which includes equipment.
- C. Procurement: DCSP manufactures DCS equipment and procures third-party equipment in accordance with contract documents.
- D. Staging: Approved site that receives shipments of equipment and materials to be set up or staged, used for programming all equipment as a system and for factory acceptance testing.
- E. Programming: Programming of all software systems.
- F. Testing: All testing required prior to shipping to each facility.

1.02 RELATED SECTIONS

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the Specifications not referenced below shall also apply to the extent required for proper performance of this Work.
  - 1. Division 01, General Requirements.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. Equipment, materials, etc. shall be certified as UL compliant.

1.03 PROCUREMENT

- A. The DCSP is responsible for procuring all materials related to the delivery of the Work.
- B. The DCSP shall coordinate procurement to meet the Project schedule and the needs of the City representative.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. The manufacturer's standard equipment suitable for applicable service conditions shall be provided, unless otherwise specified in the individual Specifications.
- D. Like items of products furnished and installed in the Work shall be end products of one manufacturer and of the same series or family of models to achieve standardization for appearance, operation and maintenance, spare parts and replacement, manufacturer's services, and implement same or similar process instrumentation and control functions in same or similar manner.
- E. Interchangeable components of the same manufacturer shall be provided for similar components, unless otherwise specified.
- F. Design and manufacture with due regard for health and safety of operation, maintenance, and accessibility, durability of parts, and shall comply with applicable OSHA, state, and local health and safety regulations.
- G. Coating materials shall meet federal, state, and local requirements limiting the emission of volatile organic compounds and for worker exposure.

1.04 PREPARATION FOR SHIPMENT

- A. Systems may be manufactured at remote facilities, but shall be assembled at the DCSP approved staging site. The DCSP shall:
  - 1. Mark or tag, using ISA tagging scheme, the separate parts and assemblies for field assembly.
  - 2. Cover machined and unpainted parts that may be damaged by elements with a strippable protective coating.
  - 3. Products shall be packaged or crated to provide protection from damage during shipping, handling, and storage.
  - 4. Packages and crates shall be marked or tagged to indicate its purchase order number, bill of lading number, contents by name, name of project, seller, equipment number, and approximate weight.
  - 5. Spare parts and special tools shall be delivered at same time as products delivery.
  - 6. Accessories shall be delivered at same time as products delivery.
  - 7. Accessories shall be furnished so that each item of equipment may be placed in full operation.
  - 8. Accessories include, but are not limited to, light bulbs/LEDs, fuses, enclosure keys, special tools, and other items as required for initial operation.
- B. Delivery of Products:
  - 1. Deliver products in accordance with accepted current Project schedule and coordinate to avoid conflict with the Work and conditions at Site.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Deliver products in undamaged condition, in original container or packaging, with identifying labels intact and legible. Include on label, date of manufacture and shelf life, where applicable.
3. DCSP shall record receipt of products at the approved staging site, and upon receipt of products shall inspect for completeness and evidence of damage during shipment. Receipt and inventory of products must be witnessed by the City representative.
4. Should there appear to be damage, DCSP shall inform the City's representative and the project Prime Contractor and shall immediately make necessary arrangements to repair or replace the item.
5. DCSP shall expedite replacement of damaged, incomplete, or lost items, so as not to delay progress of the Work.

1.05 MOVING AND STORAGE OF EQUIPMENT

A. General:

1. The DCSP is responsible for the movement, as well as the safe storage, of all material from the factory, to the approved staging area and ultimately to its installed location. To adhere to this requirement, the DCSP must perform the following:
  - a. Unloading of Products: Unless otherwise specified, after acceptance by inspecting party products will be unloaded by DCSP in accordance with manufacturer's instructions.
  - b. Handling, Storage, and Protection:
    - 1) Products shall be handled and stored in accordance with manufacturer's written instructions and in a manner to prevent damage.
    - 2) Products shall be stored in an approved environment within the staging area and at each installation site.
    - 3) Storage shall be arranged in a manner to provide easy access for inspection.
    - 4) Periodic inspections of stored products shall be performed by the DCSP to assure that products are maintained under specified conditions, and free from damage or deterioration.
    - 5) A running account of products in storage shall be kept by the DCSP to facilitate inspection.
    - 6) Electrical, instrumentation, control products, and equipment containing bearings shall be stored in weather-tight structures maintained between 60 and 120 degrees F, with humidity control.
    - 7) Electrical, instrumentation, and control products, shall be protected and insulated against moisture, water, and dust damage.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 8) Products that are ready for installation shall be stored in dry and well-ventilated areas that are not subject to extreme changes in temperature or humidity.

1.06 DCS APPROVED STAGING SITE

- A. The proposed staging site shall be submitted to the City in accordance with Section 01 33 00, Submittal Procedures. The City shall approve the staging site in writing. The DCSP shall also perform project management, engineering, programming, assembly, testing and support services at the approved staging site.
- B. The DCSP shall be responsible for providing all utility power source, potable water (tap) and sanitary sewer services at the approved staging site. The DCSP shall bear the cost of power, water and sewer.
- C. The DCSP shall provide necessary tenant improvement for the approved staging site space, power/ground and acceptable environmental conditions.
- D. The DCSP shall be responsible for provide parking space for the DCSP staff City inspection staff. Where required, the DCSP shall pay for parking.
- E. The DCSP shall provide the necessary equipment at the staging site to perform the required programming, DCS setup, testing and support activities, furnish and build-out the staging site, and disassemble after Final Completion.
- F. FAT results shall be reviewed and accepted by the City's representative before systems are transported to the various sites for installation.
- G. The DCSP shall establish security measures, and pay all security costs, to protect the equipment at the approved staging. Prime Contractor shall be responsible for DCS security once transported to the Project Site.
- H. The staging site shall meet environmental requirements established in article Moving and Storage of Equipment of this Specification.
- I. The staging site shall be accessible to the appropriate DCSP, DCSP subcontractor, and City staff.
- J. The staging site shall adequately accommodate DCSP staff, storage of equipment, and setup of system for testing purposes in accordance with building codes, ADA requirements and OSHA requirements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- K. The staging site shall meet the City’s workplace safety requirements as well as the Prime Contractor’s safety plan.
1. The DCSP shall provide a plan and schedule for the construction and setup of the approved staging site.
  2. The DCSP shall provide lighting to meet applicable safety requirements to allow erection, application, or installation of materials and equipment, and observation or inspection of the Work.
  3. The DCSP shall make the necessary provisions to maintain adequate environmental conditions to facilitate progress of the Work, to meet specified conditions for installation of materials, and to protect materials, equipment, and finishes from damage due to impact, temperature or humidity.
  4. The DCSP shall provide adequate forced air ventilation of enclosed areas to cure installed materials, to dispense humidity, and to prevent hazardous accumulations of dust, fumes, vapors, or gases.
  5. The DCSP shall pay all costs of installation, maintenance, operation, removal, and fuel consumed at the approved staging area prior to transport and installation.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

**3.01 PROJECT DELIVERY SERVICES - PROCUREMENT AND STAGING**

- A. The DCSP shall take full responsibility for the procurement, delivery and staging of all equipment and materials required by these Contract Documents. The list below is intended to be used as a guide for DCSP and not intended to be all inclusive and complete. At a minimum, DCSP shall deliver the following to achieve a complete delivery, including procurement, staging, installation, testing, maintenance, upgrades and warranty, as required by the Work such as:
1. All COTS and DCSP software and firmware.
  2. All hardware for DCS.
  3. All DCS-related LAN and required network equipment.
  4. All UPS for all DCS and LAN equipment.
  5. All required cabinetry for DCS equipment.
  6. All DCS network connectivity.
  7. All DCS PCM-related cabling including copper, fiber optic, conduits, interducts, etc.
  8. All control system databases.
  9. All integration equipment.
  10. All security equipment.
  11. All specified spare parts and tools.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.02 PROGRAMMING

- A. The DCSP shall take full responsibility for the configuration and programming of all software, and firmware required by these Contract Documents. The list below is intended to be used as a guide for DCSP and not intended to be all-inclusive and complete. At a minimum, DCSP shall deliver the following to achieve a complete operating DCS:
1. All coordination of software development.
  2. All control strategy programming.
  3. All system software development and programming and configuration.
  4. All control system database programming.
  5. All integration to “other,” foreign device systems as required by these Specifications.
  6. All local historian configuration and programming, when and where specified.
  7. All security configuration and access programming.
  8. All graphics programming/ configuration.
  9. All trending and alarm configuration.
- B. All detailed programming requirements are specified in other sections.

**END OF SECTION**

**SECTION 40 98 03**  
**INSPECTION AND TESTING SERVICES**

**PART 1 GENERAL**

1.01 GENERAL

- A. The DCSP is responsible for all testing of all software and hardware and their operation together in project segments and the overall Enterprise-wide DCS, as a complete system.
- B. The DCSP is responsible for supplying all testing tools, such as operating systems and test software, testing tools, simulation hardware and software, and equipment.
- C. Inspections and tests shall be carried out to demonstrate that the Work complies with the requirements detailed in these specifications.
- D. Test results shall be measurable; the performance of the test object shall be clearly specified in terms of conditions, inputs, and outputs. The specification of the whole system or relevant part shall be the starting point in all cases.
- E. All testing must be accomplished in accordance with Division 01, General Requirements.

1.02 SUBMITTALS

- A. The DCSP shall develop and submit to the City's representative, test procedures for all testing required by these Contract Documents in accordance with Section 01 33 00, Submittal Procedures.

1.03 REFERENCES

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
  - 1. Division 01, General Requirements.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

**PART 2 PRODUCT**

2.01 TYPES OF INSPECTION AND TESTING

- A. The DCSP shall provide the following types of tests:
1. Factory acceptance testing (FAT).
  2. Operational readiness testing (ORT).
  3. Contractor functional testing and commissioning support.
  4. Thirty-day performance acceptance testing.
  5. Integration period testing support.

**PART 3 EXECUTION**

3.01 EXECUTION SERVICES

- A. For all types of inspections and testing the DCSP shall provide experienced personnel and management in field (staging Site and plant Site) to coordinate and complete all aspects of the Work in this specification.
- B. At the Staging Site:
1. The DCSP shall maintain distributed control system (DCS) hardware and standard software by completing the following:
    - a. Preventive maintenance.
    - b. Demand maintenance.
    - c. Replacement of failed components and parts.
    - d. Replenishment of spare parts, where applicable.
    - e. Recordkeeping.
- C. Startup and Testing Team:
1. Provide a team, as required by Project, of experienced DCS systems engineers, hardware maintenance, and software configuration staff at the plant Site during the total period required to:
    - a. Check the installation, termination, and adjustment of all subsystems and their components.
    - b. Perform complete onsite tests.
    - c. Provide startup assistance to the Prime Contractor and City staff.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.02 FACTORY ACCEPTANCE TEST (FAT)

- A. General: The complete system, including all DCS equipment, peripheral devices and interconnecting cables shall be assembled on the DCS manufacturer's test floor or City pre-approved staging site, and all programs shall be completely tested under simulated operating conditions. Further tests shall be performed in the field at time of startup, with external sensors and field wiring connected to determine final Specification compliance.
- B. Four certified copies of all test data and results shall be submitted to the City. All test documentation and results shall comply with ISA RP55.1 (R1983) Type 2 and Type 3 documentation standard.
- C. The equipment shall be operationally tested for compliance with the conditions of these Specifications. FAT setup shall include simulated inputs. On line configuration of the monitoring and control loops using simulated inputs shall be demonstrated without error or malfunction. Logs and report generation capability shall be demonstrated by simulating process inputs and manually entering data.
- D. The DCSP shall submit a detailed FAT specification to the City at least 6 weeks in advance of commencement of the FAT. The City shall be notified at least 30 days in advance of the FAT and reserves the right to have representatives in attendance.
- E. Each item of equipment shall be fully inspected, calibrated and tested for function, operation and continuity of circuits as applicable. Exceptions shall be approved in writing from the City.
- F. System performance shall be tested using a complete integrated system including all peripheral devices and interconnecting cables assembled on the test floor, complete operational programs loaded, and simulated inputs applied. The DCSP shall carry out a 100-hour full system test during which the entire system shall operate continuously without failure, all in accordance with the requirements of the Specifications and Drawings. If a system component fails during the test, the 100-hour test period shall be restarted after its operation is restored.
- G. After successful completion of the FAT, four certified copies of all test results shall be furnished to the City together with a clear and unequivocal statement that all FAT requirements have been met. The City will give written notice of the acceptability of the FAT within 30 days of receipt of the FAT results.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- H. City's representatives shall witness the FAT and at least 30 days written notice shall be given prior to date of starting tests. One copy of each acceptance test procedure shall be submitted to the City 20 days prior to the start of the acceptance test.
- I. In the event that the system does not function as specified, it shall be modified to meet the Specification requirements, and shall be retested as specified herein. Costs for all such retesting and witnessing shall also be borne by the DCSP.
  - 1. All of the City's representatives travel and per diem costs associated with all FAT testing and retesting shall be borne by the DCSP.
- J. Prior to installation, all PIN, FIN, and DIN cable shall be factory tested by the DCSP to verify that the attenuation does not exceed prescribed limits and to ensure that concealed or internal discontinuities which could cause reflections do not exist. In conformance with the submittal requirements of these specifications, the DCSP shall submit certified test reports which contain the following data:
  - 1. Dielectric constant.
  - 2. Outside diameter of inner conductor.
  - 3. Inside diameter of outer conductor.
  - 4. Attenuation constant.
  - 5. Plot of each cable attenuation frequency response per 100 feet of cable.
  - 6. All data links, which shall be the final hardware, application software, and node addresses installed in the field shall be tested during the operational readiness test.

3.03 PACKAGE SYSTEM FACTORY ACCEPTANCE TESTS

- A. The DCSP shall coordinate with the following package system vendors the communications link between the DCS and the individual package system control panels:
  - 1. Section 44 22 23, Thickening Centrifuges.
  - 2. Section 44 46 20, Digester Gas Safety Equipment and Specialties (Bio Gas Flare).
- B. Factory acceptance tests (FAT) will be conducted at the respective package system's factory.
- C. Communications shall be tested by the DCSP between the DCS and the package system equipment using a complete integrated system, including all peripheral devices and interconnecting cables. This also includes complete operational programs loaded and simulated inputs applied.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. The DCSP shall pay for all costs associated with travel to the package system FAT.

3.04 INSTALLATION

- A. Physical installation of the DCS PCM assemblies may be accomplished by the DCSP or as required others, under the contract. The DCSP shall provide all labor required for oversight of the installation and to verify proper installation of all equipment.
- B. Subsequent to the installation of all DCS equipment, the DCSP shall certify to the City's representative that the DCS has been properly installed.
- C. The DCSP shall furnish the services of trained engineer(s) to check the completed installation and to make all necessary adjustments for satisfactory operation of the DCS.
- D. There shall also be furnished complete installation drawings and instructions in accordance with these Specifications. Final as-built drawings, and loop diagrams are the responsibility of the Prime Contractor and/or design engineer. The DCSP shall furnish all drawings and technical assistance to these parties to complete these Drawings.
- E. If any device (including network cables) has been installed by others in a faulty manner, the DCSP shall notify the City's representative immediately.

3.05 OPERATIONAL READINESS TESTING

- A. The DCSP shall time the complete DCS system testing after installation.
  - 1. This shall ensure that those components provided under this Contract, having adjustable features are set carefully for the specific conditions and applications of this installation and that the components and systems are within the specified limits of accuracy.
  - 2. The DCSP, as part of this process, shall furnish qualified engineers to assist City Operations staff with the tuning of P&ID loops to ensure proper operation of process equipment.
  - 3. The DCSP shall notify the City's representative if any existing components, including field devices or instruments provided by others, are found to be defective.
  - 4. Defective DCS elements which were provided under this Contract, which cannot achieve proper calibration or accuracy, either individually or within the system, or subsystem, shall be replaced and the City's representative shall be notified.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. The DCSP shall be responsible for performing all DCSP related portions of loop checks and testing procedures. DCSP shall be responsible for manning all PCMs, control room, remote workstation locations, etc. Prime Contractor shall be responsible for manning all field devices, instruments, etc. in order to ensure a complete end-to-end loop test.
  6. Analog input channels shall be verified at a minimum of five points: 0, 25, 50, 75 and 100 percent of span by applying simulated analog test signals (using a calibrated signal generator). Applied test data shall be processed by the associated PCM using programs assigned to the particular data channels being simulated with the resulting engineering unit data presented on a display.
- B. A complete DCS test shall be performed by the DCSP, including interfaces with, foreign devices and networks. All modes of operation and HMI interactions shall be exercised. All data communication equipment shall be thoroughly tested for function and accuracy. DCSP shall be responsible for DCS related items during this test and the prime contractor shall be responsible for all field devices and instruments.
- C. Upon the satisfactory completion of all DCS installation tests, six hard copies and one soft copy in a format acceptable to the City of a certified report, including all test documentation, shall be furnished to the City's representative together with a clear and unequivocal statement that the installed system has been successfully calibrated, tuned, inspected and tested. These documents shall be submitted in accordance with Section 01 33 00, Submittal Procedures. The City's representative will give acceptance of the installation tests within 21 days of receipt of the test report if the results of the installation tests are acceptable.
- D. The DCSP shall submit six hard copies and one soft copy of a procedure for field hardware and software tests. In addition, a full functional procedure that pertains to the control system logic and graphic displays shall be submitted for approval by the City's representative. The procedure shall include:
1. The object to be tested.
  2. The aspects of the object to be tested.
  3. The kind of tests to be carried out.
  4. The conditions under which the tests shall be performed.
  5. The procedures to be followed.
  6. The expected results and how the results will be evaluated.
  7. When the tested aspect has passed the test.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Systems shall be exercised through operational tests in the presence of the City's representative in order to demonstrate achievement of the specified performance.
- F. The equipment shall be operationally tested for compliance with the conditions of these Specifications. Online configuration of the monitoring and control loops shall be demonstrated without error or malfunction. Logs and report generation capability shall be demonstrated by simulating process inputs if actual inputs are not available from process components with City approval.
- G. The proper control of all final control elements and control panels shall be verified by tests conducted in accordance with the requirements specified herein. Where feasible, system commissioning activities shall include the use of water to establish service conditions that simulate, to the greatest extent practicable, normal final control element operating ranges and environmental conditions. Final control elements, control panels, and ancillary equipment shall be tested under start-up and steady-state operating conditions to verify that proper and stable control is achieved using the DCS and local field mounted control circuits. All hardwired control circuit interlocks and alarms shall be operational. The control of final control elements and ancillary equipment shall be tested using both manual and automatic (where provided) control modes.
- H. All control stations incorporating proportional, integral and/or differential (P&ID) control circuits shall be initially tuned using mathematical methods such as Ziegler-Nichols or Tyreus-Luyben rules in order to establish the initial parameters for closed loop control. The tuning parameters shall be refined experimentally, by applying control signal disturbances and adjusting the gain, reset and/or rate setting(s) as required to achieve a proper response. Measured final control element variable position/speed setpoint settings shall be compared to measured final control element position/speed values at 10, 50 and 90 percent of span and the results checked against specified accuracy tolerances. Specified accuracy tolerances are defined as the root-mean-square-summation of individual component accuracy requirements. Individual component accuracy requirements shall be as specified in the contract or as specified by published manufacturer accuracy specifications whenever contract accuracy requirements are not specified.
- I. Completion of all system commissioning and test activities shall be documented by a certified report, including all test forms with tests data entered, delivered to the City's representative with a clear and unequivocal statement that all system commissioning and test requirements have been satisfied. The City's representative will give written acceptance of the system commissioning and test activities.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- J. In the event that the system does not function as specified, it shall be modified to meet the specification requirements, and shall be retested as specified herein. Costs for all such retesting and witnessing shall be borne by the DCSP.
- K. Six hard copies and one soft copy of certified test data and results shall be submitted to the City's representative in accordance with Section 01 33 00, Submittal Procedures.

3.06 DCS PERFORMANCE TEST

- A. DCS performance testing shall commence after ORT and inspections have been conducted and accepted in accordance with the following B, C, D, and E, and shall demonstrate that all components of the control system can meet all contract requirements with the equipment operating over full operating ranges under actual operating conditions.
- B. All commissioning and test activities shall follow detailed test procedures, and check lists, previously submitted by Contractor and approved by the City. All tests data shall be acquired using equipment as specified and recorded on test forms, previously submitted by Contractor and approved by the City.
- C. The proper control of all final control elements and control panels shall be verified by tests conducted in accordance with the requirements specified herein. Where feasible DCS performance testing activities shall include the use of water to establish service conditions that simulate, to the greatest extent practicable, normal final control element operating ranges and environmental conditions. Final control elements, control panels, and ancillary equipment shall be tested under start up and steady state operating conditions to verify that proper and stable control is achieved using the DCS and local field mounted control circuits. All hardwired control circuit interlocks and alarms shall be operational. The control of final control elements and ancillary equipment shall be tested using both manual and automatic (where provided) control modes. The stable steady state operation of final control elements running under the control of field mounted automatic analog controllers shall be assured by adjusting the controllers, as required, to eliminate oscillatory final control element operation. The transient stability of final control elements operating under the control field mounted automatic analog controllers shall be verified.
- D. All control stations incorporating proportional, integral and/or differential control circuits shall be tuned experimentally, by applying control signal disturbances and adjusting the gain, reset and/or rate setting(s) as required to achieve a proper response. Measured final control element variable position/speed set point settings shall be compared to measured final control element position/speed values at 25,

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

50, and 75 percent of span and the results checked against specified accuracy tolerances.

1. Various tests required during testing may require the presence and control of a licensed wastewater operator. It is incumbent on Contractor to coordinate all tests are conducted within the regulations.
  2. Contractor and its subcontractors are responsible for the field-end testing and operation of all equipment, which may require manipulation by a licensed wastewater operator.
  3. The DCSP shall be responsible for staffing at PCM cabinets, DCS peripheral equipment locations and the main control room, during commissioning phases.
- E. During the commissioning phase, and possibly beyond, as may be required, the DCSP shall be responsible for coordinating, and working with Operations, in providing fine tuning of the of PID controllers to ensure proper process operation. The DCSP shall also aid in setting alarm limits, top of scale setting etc., in concert with Operations.
- F. Subsequent to the commissioning and performance testing of process equipment furnished by others, the DCSP shall conduct a successful 30-day performance acceptance test for the DCS furnished under this Contract. In the test, the entire DCS shall be continuously operated and maintained (i.e., 7 days per week, 24 hours per day) during the test period with zero downtime resulting from DCS system failures. If a system failure occurs, the 30-day test shall be considered a failure and not acceptable. The DCSP shall reinitiate the 30-day test. The DCS shall be acceptable only after all equipment has satisfied the performance test requirements and demonstrated a system availability of 99.98 percent.
- G. The system availability shall be calculated based on the following equation:
1. System Availability equals  $(MTBF \times 100\%) / (MTBF + MTTR)$ , where:
    - a. A equals system availability in percent.
    - b. MTBF equals average time interval between consecutive system failures.
    - c. MTTR equals average time required to repair system failure.
- H. Thirty-day Acceptance Test: During this period, all system functions shall be exercised. Any system interruption and accompanying component, subsystem, or program failure shall be logged for cause of failure, as well as time of occurrence and duration of each failure. A failure may be categorized as “minor” so long as the fundamental monitoring and control functions of the system are not affected. For example, failure of a peripheral equipment, such as a printer, would fall in the minor failure category. A minor failure shall halt the 30-day acceptance test. Upon correction of the failure, the test may continue for the remaining during. If a

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

component failure causes disruption to proper operation of the system, it shall be considered a “major” failure. A major failure shall cause termination of the 30-day acceptance test. When the cause of a failure has been corrected, a new 30-day acceptance test shall start.

- I. The DCSP shall submit a performance test completion report which shall state that all contract requirements have been met and which shall include (1) a listing of all DCS equipment maintenance/repair activities conducted during testing and (2) a listing of all components which were unable to operate successfully. The performance testing report shall be submitted in accordance with Section 01 91 14, Testing, Integration, and Startup. Final acceptance, in writing, of the DCS will be provided by the City.

3.07 SYSTEM CUTOVER

- A. In case of migrating or upgrading from legacy DCS to the latest version of DCS, a system cutover plan must be developed first with City Operation staff and COMNET staff. Cutover activities shall not start until an approved Cutover Plan is in place.
- B. Cutover will be executed as per the ‘Cutover Plan’ a set of detailed, sequenced tasks to cutover I/Os, convert and migrate control strategies, configure the newer version of DCS system and decommission legacy systems. Cutover plan shall also include a fallback plan in case the cutover failed.
- C. Newer version of the DCS shall be fully tested prior to cutover.
- D. Cutover shall be completed in an orderly manner, closely coordinated with Operation staff to minimize interruption to the plant process. Schedule of cutover shall be approved by all parties involved.

3.08 INTEGRATION PERIOD TESTING SUPPORT

- A. The DCSP shall provide support during the integration period. The support shall be as described in Section 01 91 14, Testing, Integration, and Startup.

**END OF SECTION**

**SECTION 40 98 04**  
**FIELD CONSTRUCTION/COMMISSIONING SERVICES**

**PART 1 GENERAL**

1.01 REQUIREMENTS

- A. The DCSP shall be responsible for all distributed control system (DCS) related field construction/commissioning services for the facilities within this contract document.
- B. The DCSP shall be responsible for monitoring Contractor field construction/commissioning services, to ensure that no negative impact to DCS commissioning is occurring. In the event of such impacts, the DCSP shall immediately notify the City's representative of the impact.

1.02 REFERENCES

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
  - 1. Division 01, General Requirements.
  - 2. Division 26, Electrical.
  - 3. Division 40, Process Interconnections.
- B. Specifications:
  - 1. Codes and Standards: The Work shall comply with the current editions of the publication and codes as adopted by the City of San Diego.

1.03 SUBMITTALS

- A. The list below is intended to be used as a guide for DCSP and not intended to be all-inclusive and complete. At a minimum, DCSP shall be responsible for the submittals below as required by the Work:
  - 1. Technical, operational, and administrative submittals.
  - 2. DCS systems construction and installation schedule to be included and incorporated into the Contractor's master baseline schedule.
  - 3. Installation details for new UPS systems, load centers and both utility and UPS power and grounding, for those portions provided by the DCSP.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Details for installation of all DCSP provided systems, including:
  - a. All network communications.
  - b. I/O wiring and termination schemes.
  - c. Utility and UPS power and grounding for all DCS equipment.
5. The Design Engineer is responsible for generating a complete set of P&ID Drawings for the project. However, the DCSP is responsible for providing the Design Engineer with the DCS design, termination architecture, etc. required to complete the DCS P&ID redlines. The Contractor shall be responsible for producing the loop drawings with support from the DCSP.
6. Health and safety plan.
7. Results of all field verification of existing conditions and documentation, where applicable.
8. System and unit process cutover plan and schedule(s).
9. All test results including, but not limited to, network communications, including fiber optic cable tests, DCS calibration, loop checks, ground tests, and system tests.
10. Verification that each training class/course has been successfully completed, in accordance with Section 40 98 05, Quality Control.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION**

**3.01 OUTAGE FORMS**

- A. The DCSP shall ensure that all City required outage forms, or City/plant work permits are completed prior to commencement of any construction.
  1. All outage request/permits shall be submitted with three hard copies and one soft copy to the City's representative.
- B. General:
  1. The DCSP shall coordinate installation, construction and commissioning activities with the City's representative in accordance with the Contract Documents.
  2. The DCSP shall coordinate and participate in preconstruction safety conference as specified in Division 01, General Requirements.
  3. The DCSP shall coordinate the overall sequence of control systems construction and installation, by the Contractor, with the City's representative.
  4. The DCSP shall establish a health and safety plan for construction activities, for integration into the Contractor's health and safety plan.
  5. The DCSP shall perform all DCSP related loop checking, functional testing and commissioning in accordance with these Contract Documents.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

6. The DCSP shall coordinate system cutover and outage requests through the City's representative.
  7. City's representative shall inspect all DCS and I&C system installation prior to cutover.
  8. The DCSP shall coordinate the DCS system, software and performance testing with the City's representative.
- C. The DCSP shall pay particular attention to both Contractor construction sequencing and commissioning scheduling as the complexities of the unit processes cutover timing may create conflicts and predecessors that could adversely affect plant operation or adversely affect process compliance.
1. To ensure that the DCSP is closely monitoring and coordinating these efforts, he shall participate in weekly commissioning and startup meetings with the City's representative and the Contractor, including attendance in the joint test group meetings.
  2. The DCSP shall provide a fragnet Type P6 Schedule, excerpted from the Contractor's master baseline status schedule, updated monthly, which shows progress and all planning activities for individual and overall Segment activities. The City's representative will review and approve/disapprove the fragnet schedule and may require additional granularity in the schedule, if in the sole opinion of the City's representative there is not sufficient granularity in the schedule.

**END OF SECTION**

**SECTION 40 98 05**  
**QUALITY CONTROL**

**PART 1 GENERAL**

**1.01 QUALITY PROGRAM**

- A. The DCSP shall institute a Quality Control Plan (QCP) which utilizes organized methodologies and industry standards. All manufacturing, design, development, production, installation, and field service resources of the DCSP shall be certified as conforming to all of the requirements of international quality management standard ISO 9001. The certification shall be submitted to the City's representative in accordance with Section 01 33 00, Submittal Procedures. This certification shall be a "Certification of Quality" from an internationally recognized certification agency. The plan shall include the following aspects at a minimum:
1. Quality assurance organization which complies with ISO 9001 guidelines.
  2. System of traceability of manufactured unit and system software throughout development, production and testing.
  3. System of "burn-in" for all components and available supportive documents.
  4. Record of prompt shipments in accordance with contract obligations.
  5. Documented program of failure analysis.
  6. Documented product safety policy relevant to all products intended to be furnished under this Contract.
  7. Demonstrated record of prompt positive response to field failures.
- B. Provide DCS of rugged construction design for the site conditions. Provide only new, standard, first-grade materials throughout, conforming to standards established by UL, and so marked or labeled, together with manufacturer's brand or trademark.
- C. Provide material and equipment in accordance with applicable codes and standards, except as modified by the specifications.
- D. Refer to Section 01 45 16.13, Contractor Quality Control.

**1.02 SUBMITTALS**

- A. DCSP Project Specific Quality Control Plan (CQP): Submit, not later than 30 days after receipt of Notice to Proceed.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 RISK MANAGEMENT PLAN

- A. The DCSP shall assess and document all potential project risks. Risk assessment and mitigation shall include:
1. Risks shall be documented in a format to be communicated to the City's representative.
  2. Each risk shall be classified in terms of probability, impact, and status.
  3. High impact risks shall be discussed at project progress meetings.
  4. Each risk shall have an associated mitigation plan.

1.04 DCSP QUALITY CONTROL PLAN (QCP)

A. General:

1. Plan shall identify personnel, procedures, control, instructions, test, records, and forms to be used.
2. DCS Construction will be permitted to begin only after acceptance of the Quality Control Plan (CQP).

B. Content:

1. Plan shall cover the intended quality control organization for the entire Contract and shall include the following, as a minimum:
  - a. Organization: Description of the quality control organization, including a chart showing lines of authority.
  - b. Quality Control Staff: The name, qualifications, duties, responsibilities, and authorities of each person assigned a QC function.
  - c. Submittals: Procedures for scheduling, reviewing, certifying, and managing submittals, including those of sub DCSPs, offsite fabricators, suppliers, and purchasing agents.
  - d. Testing: Control, verification, and acceptance testing procedures for each specific test to include the test name, frequency, specification paragraph containing the test requirements, the personnel and laboratory responsible for each type of test, and an estimate of the number of tests is required.
  - e. Procedures for tracking preparatory, initial, and follow-up control steps and control verification, and acceptance tests, including documentation.
  - f. Procedures for tracking deficiencies from identification through acceptable corrective action. These procedures will establish verification that identified deficiencies have been corrected.
  - g. Reporting procedures, including proposed reporting formats; include a copy of the CQC report form.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Acceptance of Plans: Acceptance of the DCSP's basic and addendum QC plans is required prior to the start of DCS construction. Acceptance is conditional and will be predicated on satisfactory performance during the construction. The City reserves the right to require DCSP to make changes in the QC plan and operations including removal of personnel, as necessary, to obtain the quality specified.
- D. Notification of Changes: After acceptance of the QC plan, DCSP shall notify City's representative, in writing, a minimum of 7 calendar days prior to any proposed change in the plan. Proposed changes are subject to acceptance by the City's representative.

1.05 SUBMITTAL QUALITY CONTROL

- A. The QC organization shall be responsible for certifying that all submittals are in compliance with the Contract requirements. City's representative will furnish copies of test report forms upon request by DCSP, or DCSP may use other forms as approved by City representative.

1.06 TESTING QUALITY CONTROL

- A. Testing Procedure:
  - 1. Perform tests specified or required to verify that control measures are adequate to provide a product which conforms to Contract requirements. Perform the following activities and record the following data:
    - a. Verify testing procedures comply with contract requirements.
    - b. Verify facilities and testing equipment are available and comply with testing standards.
    - c. Check test instrument calibration data against certified standards and provide certification to City's representative.
    - d. Verify recording forms and test identification control number system, including all of the test documentation requirements, have been prepared.
    - e. Documentation:
      - 1) Record results of all tests taken, both passing and failing, on the QC report for the date taken.
      - 2) Include specification paragraph reference, location where tests were taken, and the sequential control number identifying the test.
      - 3) Actual test reports may be submitted later, if approved by City's representative, with a reference to the test number and date taken.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 4) Provide directly to City's representative an information copy of tests performed by an offsite, or commercial test facility, if applicable. Test results shall be signed by an engineer registered in the state where the tests are performed.

1.07 COMPLETION INSPECTION

- A. QC System Manager shall conduct an inspection of the DCS Work at the completion of all Work or any contract milestone established by a completion time stated in the Contract.
- B. Punch List:
  1. QC System Manager shall develop a punch list of DCS items which do not conform to the Contract requirements.
  2. Include punch list in the QC report, indicating the estimated date by which the deficiencies will be corrected.
  3. The QC System Manager or staff shall make a second inspection to ascertain that all deficiencies have been corrected and so notify the City's representative.
  4. These inspections and any deficiency corrections required will be accomplished within the time stated for completion of the entire Work or any particular increment thereof if the Project is divided into increments by separate completion dates.

**PART 2 PRODUCTS (NOT USED)**

**PART 3 EXECUTION (NOT USED)**

**END OF SECTION**

**SECTION 40 98 06**  
**DISTRIBUTED CONTROL SYSTEM TRAINING**

**PART 1 GENERAL**

1.01 REQUIREMENTS

- A. The DCSP shall develop and implement a training program that will allow personnel to develop the skills and knowledge necessary to safely and efficiently operate and maintain the all systems of the DCS and related ancillary items.
- B. The DCSP shall furnish all tools, equipment, materials and supplies, and shall perform all functions and service required to complete the work as specified herein.
- C. All training shall be a prerequisite to the Statement of Partial Completion of the Segment, CIP or project. Applicable training specific to any given process area shall be completed prior to cut-over and Beneficial Use of the equipment in that process area.
- D. Training shall be provided in the operation and maintenance of equipment manufactured by the DCSP, by the manufacturer, and by the manufacturer of specific associated equipment items, other than DCS components. Each of the courses shall be taught by authorized representatives of each respective equipment manufacturer, at the DCSP approved staging site, City Operations facility, or other local facility as determined by the City's representative. Each manufacturer's representative shall be fully knowledgeable in the operations and maintenance of their equipment and shall be a full-time instructor under the employ of the respective manufacturer.
- E. The DCSP shall prepare a complete Training Plan. The Training Plan shall be submitted in accordance with Section 01 33 00, Submittal Procedures. The DCS Training Plan will provide the structure and syllabus for training sessions as follows:
  - 1. In accordance with Division 01, General Requirements, the DCSP shall submit a training plan which contains, as a minimum, course outlines and schedules for training to be provided. The training plan shall include:
    - a. Course descriptions and syllabuses.
    - b. Schedule of training courses including dates, durations, and locations of each class.
    - c. Resumes of the instructors who will actually implement the plan.
  - 2. Courses shall be scheduled in series so as to allow the same personnel to attend more than one training course.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. The training shall be scheduled in accordance with Division 01, General Requirements.
4. Proposed training materials, including a detailed training agenda itemizing relative emphasis on various topics of each course and support materials shall be submitted to the City's representative in accordance with of Division 01, General Requirements, and Section 01 33 00, Submittal Procedures.
5. City's representative shall review this outline and provide comments that shall be incorporated into the course.
6. Dedicated hardware and software shall be assigned for training purposes. The live system shall NOT be used for training purposes.
7. Training shall be developed so that home study is not required.
8. Training shall combine classroom and field hands-on training that is structured and scheduled to facilitate trainee comprehension on subject material.
9. The training shall be provided by qualified instructors of the equipment manufacturers or their representative, as approved by the City's representative based on technical and instructional qualifications.
10. Training shall be structured to develop comprehension of the process theory for each system, its component subsystems, and the interrelationship of the operating variables, the responses required for various types of abnormalities, safety precautions, procedures for safe start-up and shutdown, equipment maintenance overview and troubleshooting.
11. Following completion of the training, the DCSP shall provide the City's representative six complete hardcopy sets, and one soft copy, of training materials, such as lesson plan, student manual, and support materials for each course.
12. Training shall be provided using the equipment of the same model and family being supplied as part of this Project.
13. Training shall be conducted so as not to impact normal plant operations, or the construction schedule.
14. No course shall be provided at the same time as another unless otherwise permitted by the City's representative.
15. All training shall be monitored and approved by the City's representative. Any session or portion thereof deemed unsatisfactory, based on evaluation of the training shall be repeated by the DCSP at no additional cost to the City.
16. Each course shall be for up to eight people.
17. Training shall utilize actual graphics for each individual plant segment control services. The use of 'canned' or 'typical' training systems shall be limited to a minimum.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.02 REFERENCES

- A. The Work described in the following sections also applies to the Work in this section. Other sections of the specifications not referenced below shall also apply to the extent required for proper performance of this Work.
1. Division 01, General Requirements.
  2. Division 26, Electrical.
  3. Division 40, Process Interconnections.

**PART 2 PRODUCTS**

2.01 COURSE DESCRIPTIONS

- A. Training courses shall be tailored to Operations and Maintenance staff who are already generally familiar with the COMNET DCS. The DCSP is responsible for developing several training courses. For each course, the DCSP is responsible for developing a curriculum and course materials. The DCSP may use its standard training material where applicable.
- B. The DCSP shall submit a project specific training plan for City review, comment, and approval prior to implementing the training.

**PART 3 EXECUTION**

3.01 REQUIRED TRAINING

- A. Training is required to educate all system users and selected City representative members. The trainings will occur locally at the DCSP approved staging site, Wastewater Operations building or other City facility as directed by the City's representative. Any training aids and/or materials are the responsibility of the DCSP.

**END OF SECTION**

**SECTION 40 99 90**  
**PACKAGE CONTROL SYSTEMS**

**PART 1 GENERAL**

1.01 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. The Institute of Electrical and Electronics Engineers, Inc. (IEEE): C62.41, IEEE Recommended Practice on Surge Voltages in Low-Voltage AC Power Circuits.
  2. International Society of Automation (ISA): S50.1, Compatibility of Analog Signals for Electronic Process Instruments.
  3. National Electrical Manufacturers Association (NEMA):
    - a. 250, Enclosures for Electrical Equipment (1000 Volts Maximum).
    - b. AB 1, Molded Case Circuit Breakers and Molded Case Switches.
    - c. ICS 2, Industrial Control Devices, Controllers and Assemblies.
  4. National Fire Protection Association (NFPA): 70, National Electrical Code (NEC).
  5. UL: 508A, Standards for Safety, Industrial Control Panels.

1.02 SYSTEM DESCRIPTION

- A. Assemble panels and install instruments, plumbing, and wiring in equipment manufacturer's factories.
- B. Test panels and panel assemblies for proper operation prior to shipment from equipment manufacturer's factory.

1.03 SUBMITTALS

- A. Action Submittals:
1. Bill of material, catalog information, descriptive literature, wiring diagrams, and shop drawings for components of control system.
  2. Catalog information on electrical devices furnished with system.
  3. Shop drawings, catalog material, and dimensional layout drawings for control panels and enclosures.
  4. Panel elementary diagrams of prewired panels. Include in diagrams control devices and auxiliary devices, for example, relays, alarms, fuses, lights, fans, and heaters.
  5. Plumbing diagrams of preplumbed panels and interconnecting plumbing diagrams.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

6. Interconnection wiring diagrams that include numbered terminal designations showing external interfaces.
7. Seismic anchorage and bracing data sheets and drawings as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals:

1. Programmable Controller Submittals:
  - a. Complete set of user manuals.
  - b. Fully documented ladder logic listings.
  - c. Function listing for function blocks not fully documented by ladder logic listings.
  - d. Cross-reference listing.
  - e. Modbus Data Table:
    - 1) All soft points passed between the DCS and PLC must be referenced with Modbus addressing and format.
    - 2) PLC will act as a slave to the DCS using Modbus TCP/IP.
  - f. Communications hardware and configuration.
2. Manufacturer's list of proposed spares, expendables, and test equipment.
3. Manufacturer's Certificate of Proper Installation, in accordance with Section 01 43 33, Manufacturers' Field Services.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Prior to shipment, include corrosive-inhibitive vapor capsules in shipping containers and related equipment as recommended by capsule manufacturer.

1.05 EXTRA MATERIALS

- A. Spares, Expendables, and Test Equipment:
  1. Selector Switch, Pushbutton, and Indicating Light: 20 percent, one minimum, of each type used.
  2. Light Bulb: 100 percent, two minimum, of each type used.
  3. Fuse: 100 percent, five minimum, of each type used.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Section 40 90 00, Instrumentation and Control.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 INSTRUMENT TAG NUMBERS

A. A shorthand tag number notation is used. For example:

12FIT345 [pH]

<u>Notation</u>	<u>Explanation</u>
12	Unit process number
FIT	ISA designator for flow indicating transmitter
345	Loop number
[pH]	Same notation shown at 2 o'clock position on ISA circle symbol on process and instrument diagram

2.03 SIGNAL CHARACTERISTICS

A. Analog Signals:

1. 4 mA to 20 mA dc, in accordance with compatibility requirements of ISA S50.1.
2. Unless otherwise specified or shown, use Type 2, two-wire circuits.
3. Transmitters: Load resistance capability conforming to Class L.
4. Fully isolate input and output signals of transmitters and receivers.

B. Discrete Signals:

1. Two-state logic signals.
2. Utilize 120V ac sources for control and alarm signals.
3. Alarm signals shall be normally open, close to alarm isolated contacts rated for 5-ampere at 120V ac and 2-ampere at 30V dc.

2.04 CORROSION PROTECTION

A. Corrosion-Inhibiting Vapor Capsule Manufacturers:

1. Northern Instruments; Model Zerust VC.
2. Hoffmann Engineering; Model A-HCI.
3. Or approved equal.

2.05 CONTROL PANEL

A. Panel Construction and Interior Wiring: In accordance with the National Electrical Code (NEC), UL 508, state and local codes, and applicable sections of NEMA, ANSI, and ICECA.

B. Conform to NEMA ratings as specified in individual equipment sections.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Minimum Metal Thickness: 14-gauge.
- D. NEMA 250, Type 4X Panels: Type 316 stainless steel construction unless otherwise specified.
- E. Doors:
  - 1. Three-point latching mechanisms in accordance with NEMA 250 Type 1 and Type 12 panels with doors higher than 18 inches.
  - 2. For other doors, stainless steel quick release clamps.
- F. Cutouts shall be cut, punched, or drilled and finished smoothly with rounded edges.
- G. Access: Front, suitable for installation with back and sides adjacent to or in contact with other surfaces, unless otherwise specified.
- H. Temperature Control:
  - 1. Size panels to adequately dissipate heat generated by equipment mounted on or in the panel.
  - 2. Furnish cooling fans with air filters if required to dissipate heat.
  - 3. For panels outdoors or in unheated areas, furnish thermostatically controlled heaters to maintain temperature above 40 degrees F.
- I. Push-to-Test Circuitry: For each push-to-test indicating light, provide a fused push-to-test circuit.
- J. Lighting: Minimum of one hand switch controlled internal 100-watt incandescent light for panels 12 cubic feet and larger.
- K. Minimum of one 120-volt GFCI duplex receptacle for panels 3 cubic feet and larger or any enclosure containing a processor that is capable of communicating with a laptop computer.
- L. Finish:
  - 1. Metallic External Surfaces (Excluding Aluminum and Stainless Steel): Manufacturer's standard gray unless otherwise specified.
  - 2. Internal Surfaces: White enamel.
- M. Panel Manufacturers:
  - 1. Hoffman.
  - 2. Rittal.
  - 3. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- N. Breather and Drains: Furnish with NEMA 250, Type 4 and 4X panels.
  - 1. Manufacturer and Product:
    - a. Cooper Crouse-Hinds; ECD Type 4X Drain and Breather; Drain Model ECD1-N4D, Breather Model ECD1-N4B.
    - b. Or approved equal.

2.06 PROGRAMMABLE CONTROLLERS/HMI HARDWARE

- A. Refer to Section 40 94 43, Programable Logic Controller System.

2.07 CONTROL PANEL ELECTRICAL

- A. UL Listing Mark for Enclosures: Mark stating “Listed Enclosed Industrial Control Panel” in accordance with UL 508A.
- B. I&C and electrical components, terminals, wires, and enclosures UL recognized or UL listed.
- C. Control Panels without Motor Starters:
  - 1. Furnish main circuit breaker and a circuit breaker on each individual branch circuit distributed from power panel.
  - 2. Locate to provide clear view of and access to breakers when door is open. Group on single subpanel. Provide typed directory.
  - 3. Circuit Breakers:
    - a. Coordinate for fault in branch circuit trips, branch breaker, and not main breaker.
    - b. Branch Circuit Breakers: 15 amps at 250V ac.
    - c. Breaker Manufacturers and Products:
      - 1) Heineman Electric Co.; Series AM.
      - 2) Airpax/North American Philips Controls Corp.; Series 205.
      - 3) Or approved equal.
- D. Control Panels with Three-phase Power Supplies and Motor Starters:
  - 1. Interlock Main Circuit Breaker with Panel Door:
    - a. Mount logic controls, branch circuit breakers, overload reset switches, and other control circuit devices.
    - b. Mount operator controls and indications on front access door.
  - 2. Circuit Breakers:
    - a. In accordance with NEMA AB 1.
    - b. 18,000-ampere RMS symmetrical rating, minimum at 480 volts, unless otherwise specified.
    - c. Breakers, except Motor Branch Breakers: Molded case thermal magnetic.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. 14,000-ampere RMS symmetrical rating, minimum at 480 volts, unless otherwise specified in package system equipment specification sections.
- e. Tripping: Indicate with operator handle position.
- 3. Magnetic Motor Starters:
  - a. Full voltage, NEMA ICS 2, Class A, Size O minimum.
  - b. Include three-pole bimetallic or eutectic alloy thermal overload relays sized for each motor.
  - c. Manual reset type with reset button mounted on panel door.
- 4. Motor Control: 120V ac (except intrinsically safe circuits where applicable).
  - a. Power Control Transformer:
    - 1) Sufficient capacity to serve connected load, including 200VA for duplex outlet plus 100VA (minimum).
    - 2) Limit voltage variation to 15 percent during contact pickup.
    - 3) Fuse one side of secondary winding and ground the other.
    - 4) Furnish primary winding fuses in ungrounded conductors.
- 5. Power Monitoring Relay:
  - a. Protect three-phase equipment from single phasing, phase imbalance, or phase reversal.
  - b. Separate, isolated contact outputs to stop motors and activate alarm light during abnormal conditions.
  - c. Transient Voltage Protection: 10,000 volts.
  - d. Manufacturers and Products:
    - 1) Furnas; Class 47.
    - 2) Or approved equal.
- 6. Power Distribution Blocks: Furnish to parallel feed tap on branch circuit protective devices. Do not “leap frog” power conductors.
- 7. Terminations for Power Conductors: Suitable for use with 75 degrees C wire at full NFPA 70, 75 degrees C ampacity.

E. Wiring:

- 1. ac Circuits:
  - a. Type: 600-volt, Type MTW stranded copper.
  - b. Size: For current to be carried, but not less than 14 AWG.
- 2. Analog Signal Circuits:
  - a. Type: 600-volt, Type 2 stranded copper, twisted shielded pairs.
  - b. Size: 18 AWG, minimum.
- 3. Other dc Circuits.
  - a. Type: 600-volt, Type MTW stranded copper.
  - b. Size: 18 AWG, minimum.
- 4. Separate analog and other dc circuits by at least 6 inches from ac power and control wiring, except at unavoidable crossover points and at device terminations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Enclose wiring in sheet metal raceways or plastic wiring ducts.
  6. Wire Identification: Numbered and tagged at each termination.
    - a. Wire Tags: Machine printed, heat shrink.
    - b. Manufacturers and Product:
      - 1) Brady; PermaSleeve.
      - 2) Tyco Electronics.
      - 3) Or approved equal.
- F. Wiring Interface:
1. For analog and discrete signal, terminate at numbered terminal blocks.
  2. For special signals, terminate power (240 volts or greater) at manufacturer's standard connectors.
  3. For panel, terminate at equipment on/with which it is mounted.
- G. Terminal Blocks:
1. Quantity:
    - a. For external connections.
    - b. Wire spare or unused panel mounted elements to their panels' terminal blocks.
    - c. Spare Terminals: 20 percent of connected terminals, but not less than 10.
  2. General: Group to keep 120V ac circuits separate from 24V dc circuits.
    - a. Connection Type: Screw connection clamp.
    - b. Compression Clamp:
      - 1) Hardened steel clamp with transversal grooves penetrating wire strands providing a vibration-proof connection.
      - 2) Guides strands of wire into terminal.
    - c. Screws: Hardened steel, captive, and self-locking.
    - d. Current Bar: Copper or treated brass.
    - e. Insulation:
      - 1) Thermoplastic rated for minus 55 to 110 degrees C.
      - 2) Two funnel shaped inputs to facilitate wire entry.
    - f. Mounting:
      - 1) Rail.
      - 2) Terminal block can be extracted from an assembly without displacing adjacent blocks.
      - 3) End Stops: One at each end of rail, minimum.
    - g. Wire Preparation: Stripping only.
    - h. Jumpers: Allow jumper installation without loss of space on terminal or rail.
    - i. Marking System:
      - 1) Terminal number shown on both sides of terminal block.
      - 2) Allow use of preprinted and field marked tags.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 3) Terminal strip numbers shown on end stops.
    - 4) Mark terminal block and terminal strip numbers as shown.
  3. Manufacturers:
    - a. Entrelec.
    - b. Phoenix Contact.
    - c. Or approved equal.
- H. Grounding: Internal copper grounding bus for ground connections on panels, consoles, racks, and cabinets.
- I. Relays:
  1. General:
    - a. Relay Mounting: Plug-in type socket.
    - b. Relay Enclosure: Provide dust cover.
    - c. Socket Type: Screw terminal interface with wiring.
    - d. Socket Mounting: Rail.
    - e. Furnish holddown clips.
  2. Manufacturer:
    - a. Potter and Brumfield.
    - b. Or approved equal.
- J. Intrinsic Safety Barriers:
  1. Intrinsically Safe Relays: Monitor discrete signals that originate in hazardous area and are used in a safe area.
    - a. Manufacturers and Products:
      - 1) MTL, Inc.; Series MTL 5000.
      - 2) Or approved equal.
  2. Intrinsically Safe Barriers: Interface analog signals as they pass from hazardous area to safe area.
    - a. Manufacturers and Products:
      - 1) MTL, Inc.; Series MTL 5000.
      - 2) Or approved equal.
- K. Front-of-Panel Devices in Conjunction with NEMA 250, Type 1 and 12 Panels:
  1. Potentiometer Units:
    - a. Three-terminal, oiltight construction, resolution of 1 percent and linearity of plus or minus 5 percent.
    - b. Single-hole, panel mounting accommodating panel thicknesses between 1/8 inch and 1/4 inch.
    - c. Include legend plates with service markings.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. Manufacturers and Products:
  - 1) Allen-Bradley; Model 800T.
  - 2) Eaton/Cutler-Hammer; Model 10250T.
  - 3) Or approved equal.
2. Indicating Lights:
  - a. Heavy-duty, push-to-test type, oiltight, industrial type with integral transformer for 120V ac applications.
  - b. Screwed on prismatic glass lenses in colors noted and factory engraved legend plates for service legend.
  - c. Manufacturers and Products:
    - 1) Eaton/Cutler-Hammer; Type 10250T.
    - 2) General Electric; CR2940U.
    - 3) Or approved equal.
3. Pushbutton, Momentary:
  - a. Heavy-duty, oiltight, industrial type with full guard and momentary contacts rated for 10 amperes continuous at 120V ac.
  - b. Standard size legend plates with black field and white markings for service legend.
  - c. Manufacturers and Products:
    - 1) Square D; Class 9001, Type K.
    - 2) Eaton/Cutler-Hammer; Type T.
    - 3) General Electric; Type CR-2940.
    - 4) Or approved equal.
4. Selector Switch:
  - a. Heavy-duty, oiltight, industrial type with contacts rated for 120V ac service at 10 amperes continuous.
  - b. Standard size, black field, legend plates with white markings, for service legend.
  - c. Operators: Black knob type.
  - d. Single-hole mounting, accommodating panel thicknesses from 1/16 inch to 1/4 inch.
  - e. Manufacturers and Products for Units with up to Four Selection Positions:
    - 1) Eaton/Cutler-Hammer; Type T.
    - 2) Square D; Type K.
    - 3) Or approved equal.
  - f. Manufacturers and Products for Units with up to 12 Selection Positions:
    - 1) Rundel-Idex; Standard Cam Switch.
    - 2) Electroschwitch; 31.
    - 3) Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- L. Front-of-Panel Devices Used in Conjunction with NEMA 250, Type 4X Panels:
1. Potentiometer, Watertight:
    - a. Three-terminal, heavy-duty NEMA 250, Type 4X watertight construction, resolution of 1 percent and linearity of plus or minus 5 percent.
    - b. Single-hole, panel mounting accommodating panel thicknesses between 1/8 inch and 1/4 inch.
    - c. Include engraved legend plates with service markings.
    - d. Manufacturer and Product:
      - 1) Allen-Bradley; Bulletin 800H.
      - 2) Or approved equal.
  2. Indicating Lights, Watertight:
    - a. Heavy-duty, push-to-test type, NEMA 250, Type 4X watertight, industrial type with integral transformer for 120V ac applications and corrosion-resistant service.
    - b. Screwed on prismatic lenses and factory engraved legend plates for service legend.
    - c. Manufacturers and Products:
      - 1) Square D; Type SK.
      - 2) Allen-Bradley; Type 800H.
      - 3) Or approved equal.
  3. Pushbutton, Momentary, Watertight:
    - a. Heavy-duty, NEMA 250, Type 4X watertight, industrial type with momentary contacts rated for 120V ac service at 10 amperes continuous and corrosion-resistant service.
    - b. Standard size, black field, legend plates with white markings for service legend.
    - c. Manufacturers and Products:
      - 1) Square D; Type SK.
      - 2) Allen-Bradley; Type 800H.
      - 3) Or approved equal.
  4. Selector Switch, Watertight:
    - a. Heavy-duty, NEMA 250, Type 4X watertight, industrial type with contacts rated for 120V ac service at 10 amperes continuous and corrosion-resistant service.
    - b. Standard size, black field, legend plates with white markings, for service legend.
    - c. Operators: Black knob type.
    - d. Single-hole mounting, accommodating panel thicknesses from 1/16 inch to 1/4 inch.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. Manufacturer and Products:
  - 1) Square D; Class 9001, Type SK.
  - 2) Allen-Bradley; Type 800H.
  - 3) Or approved equal.

2.08 NAMEPLATES, NAMETAGS, AND SERVICE LEGENDS

- A. Nametags: Permanently mounted bearing entire ISA tag number.
  - 1. Panel Mounted: Plastic, mounted to instrument behind panel face.
  - 2. Field Mounted: Engraved Type 316 stainless steel, 22-gauge minimum thickness, attached with stainless steel.
  
- B. Service Legends (Integrally Mounted with Instrument) and Nameplates:
  - 1. Engraved, rigid, laminated plastic type with adhesive back. Furnish service legends and nameplates to adequately describe functions of panel face mounted instruments.
  - 2. Color: White with black letters.
  - 3. Letter Height: 3/16 inch.
  - 4. For each panel, face mounted laminated nameplate inscribed with the panel name and tag number. Color shall be white with black letters 1/2 inch high.
  
- C. Standard Light Colors and Inscriptions:
  - 1. Unless otherwise specified in individual equipment specifications, use the following color code and inscriptions:

<b>Tag</b>	<b>Inscription(s)</b>	<b>Color</b>
ON	ON	Green
OFF	OFF	Red
OPEN	OPEN	Green
CLOSED	CLOSED	Red
LOW	LOW	Amber
FAIL	FAIL	Amber
HIGH	HIGH	Amber
AUTO	AUTO	White
MANUAL	MANUAL	Yellow
LOCAL	LOCAL	White

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

<b>Tag</b>	<b>Inscription(s)</b>	<b>Color</b>
REMOTE	REMOTE	Yellow
FORWARD	FORWARD	Red
REVERSE	REVERSE	Blue

2. Lettering: Black on white and amber lenses; white on red and green lenses.
3. Standard Pushbutton Colors and Inscriptions:
  - a. Use following unless otherwise noted:

<b>Tag Function</b>	<b>Inscription(s)</b>	<b>Color</b>
OO	ON OFF	Black Black
OC	OPEN CLOSE	Black Black
OCA	OPEN CLOSE AUTO	Black Black Black
OOA	ON OFF AUTO	Black Black Black
MA	MANUAL AUTO	Black Black
SS	START STOP	Black Black
RESET	RESET	Black
EMERGENCY STOP	EMERGENCY STOP	Red

- b. Lettering Color:
  - 1) Black on white and yellow buttons.
  - 2) White on black, red, and green buttons.

2.09 ELECTRICAL SURGE AND TRANSIENT PROTECTION

- A. Equip control panels with surge-arresting devices to protect equipment from damage as a result of electrical transients induced in interconnecting lines from lightning discharges and nearby electrical devices.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Suppressor Locations:

1. At point of connection between an equipment item, including ac powered transmitters, and power supply conductor (direct-wired equipment).
2. On analog pairs at each end when the pair travels outside of building.
3. In other locations where equipment sensitivity to surges and transients requires additional protection beyond that inherent to design of equipment.

C. Suppressor Design:

1. Construction: First-stage, high-energy metal oxide varistor and second-stage, bipolar silicon avalanche device separated by series impedance; includes grounding wire, stud, or terminal.
2. Response: 5 nanoseconds maximum.
3. Recovery: Automatic.
4. Temperature Range: Minus 20 to 85 degrees C.
5. Enclosure Mounted: Encapsulated inflame retardant epoxy.

D. Suppressors on 120V ac Power Supply Connections:

1. Occurrences: Tested and rated for a minimum of 50 occurrences of IEEE C62.41 Category B test waveform.
2. First-Stage Clamping Voltage: 350 volts or less.
3. Second-Stage Clamping Voltage: 210 volts or less.
4. Power Supplies for Continuous Operation:
  - a. Four-Wire Transmitter or Receiver: Minimum 5 amps at 130V ac.
  - b. All Other Applications: Minimum 30 amps at 130V ac.

E. Suppressors on Analog Signal Lines:

1. Test Waveform: Linear 8-microsecond rise in current from 0 amp to a peak current value followed by an exponential decay of current reaching one-half the peak value in 20 microseconds.
2. Surge Rating: Tested and rated for 50 occurrences of 2,000-amp peak test waveform.
  - a. dc Clamping Voltage: 20 to 40 percent above operating voltage for circuit.
  - b. dc Clamping Voltage Tolerance: Plus or minus 10 percent.
  - c. Maximum Loop Resistance: 18 ohms per conductor.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

F. Manufacturers and Products:

1. Analog Signals Lines:
  - a. Emerson Edco; PC-642 or SRA-64 series.
  - b. Or approved equal.
2. 120V ac Lines:
  - a. Emerson Edco; HSP-121.
  - b. Or approved equal.
3. 480-Volt, Three-phase Power Supplies:
  - a. Square D; Model SDSA3650.
  - b. Or approved equal.
4. Field Mounted at Two-wire Instruments:
  - a. Encapsulated in stainless steel pipe nipples.
  - b. Emerson Edco; SS64 series.
  - c. Or approved equal.
5. Field-mounted at Four-wire Instruments: With 120V ac outlet, ac circuit breaker, and 10-ohm resistor on signal line, all in enclosure.
  - a. Enclosure:
    - 1) NEMA 4X, Type 316 stainless steel with door.
    - 2) Maximum Size: 12 inches by 12 inches by 8 inches deep.
  - b. Emerson Edco; SLAC series.
  - c. Or approved equal.

G. Grounding:

1. Coordinate surge suppressor grounding in field panels and field instrumentation as specified in Section 26 05 26, Grounding and Bonding for Electrical Systems, and suppressor manufacturer's requirements.
2. Provide control panels with an integral copper grounding bus for connection of suppressors and other required instrumentation.

**PART 3 EXECUTION**

3.01 ELECTRICAL POWER AND SIGNAL WIRING

- A. Restrain control and signal wiring in control panels by plastic ties or ducts. Secure hinge wiring at each end so bending or twisting will occur around the longitudinal axis of wire. Protect bend area with a sleeve.
- B. Arrange wiring neatly, cut to proper length, and remove surplus wire. Install abrasion protection for wire bundles passing through holes or across edges of sheet metal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Use manufacturer's recommended tool with sized anvil for crimp terminations. No more than one wire may be terminated in a single crimp lug. No more than two lugs may be installed on a single screw terminal.
- D. Do not splice or tap wiring except at device terminals or terminal blocks.

3.02 PROTECTION

- A. Protect enclosures and other equipment containing electrical, instrumentation and control devices, including spare parts, from corrosion through the use of corrosion-inhibiting vapor capsules.
- B. During Work, periodically replace capsules in accordance with capsule manufacturer's recommendations. Replace capsules at Substantial Completion.

**END OF SECTION**

**SECTION 44 22 23  
THICKENING CENTRIFUGES**

**EQUIPMENT AND COMPONENT NUMBERS**

Centrifuges	76-TC-01 through 76-TC-05
Control Panels	76-TC-01.LCP through 76-TC-05.LCP
VFD Panels	76-TC-01.VFD through 76-TC-05.VFD

**PART 1 GENERAL**

1.01 WORK OF THIS SECTION

- A. This section covers the Work necessary to provide five thickening centrifuges, including centrifuge control and variable frequency drive (VFD) panels and all appurtenances as specified herein.

1.02 GENERAL

A. Related Sections:

1. Section 26 20 00, Low-Voltage AC Induction Motors.
2. Section 26 29 23, Low-Voltage Variable Frequency Drive System.
3. Section 40 99 90, Package Control Systems.

- B. Unit Responsibility: A single centrifuge manufacturer shall be responsible for supplying the centrifuge equipment, complete with all accessories and appurtenances (including, but not necessarily limited to, electric motors, variable speed drives, control panels, VFD panels, shafting, safety guards, speed reducers, and spare parts) and for the design, assembly, delivery, installation supervision, startup, and testing of the centrifuge equipment. The centrifuge manufacturer shall furnish all components and accessories of the system to enhance compatibility, ease of operation and maintenance, and as necessary to place the equipment in operation in conformance with the specified performance, features, and functions. The centrifuge equipment shall be produced and assembled by the manufacturer at a facility owned and operated by the manufacturer and under the direct supervision and control of the manufacturer.

- C. Like items of equipment provided hereunder shall be the end products of one manufacturer in order to achieve standardization for operation, maintenance, spare parts, and manufacturers' services.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. General Requirements: See Division 1, General Requirements, which contains information and requirements that apply to the Work specified herein and are mandatory for this project.
- E. AC Induction Motor Requirements: Conform to the requirements of Section 26 20 00, Low-Voltage AC Induction Motors.
- F. Variable Frequency Drive Requirements: Conform to the requirements of Section 26 29 23, Low-Voltage Variable Frequency Drive System. Coordination shall include a letter from the VFD supplier verifying the compatibility of the VFDs with the motor and coordination of VFD sizing requirements.
- G. Control System Requirements: Conform to the requirements of Section 40 99 90, Package Control Systems.
- H. The control functions contained and described herein are intended to provide proposed minimum performance requirements. They do not necessarily identify each and every control function, connection, communications, or equipment to achieve the requirements. Additional specificity and details shall be coordinated at time of submittals.

### 1.03 REFERENCES

- A. The following is a list of standards which may be referenced in this section:

### 1.04 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00, Submittal Procedures. In addition, the specific information listed below shall be provided.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Action Submittals:

1. Shop Drawings:
  - a. Documentation of modifications to the manufacturer's standard design to meet the requirements specified in this Section and where the manufacturer's standard design does not comply with the specified performance, features, functions, and materials of construction specified herein.
  - b. Make, model, weight, and horsepower of each equipment assembly.
  - c. Manufacturer's catalog information, descriptive literature, specifications, and identification of materials of construction for the centrifuge, drive motor, backdrive motor, variable speed drives, control panel, VFD panel, power supply, lubrication system, and flexible connectors. Provide listing of materials of construction to match the listing in Article Materials.
  - d. Data on the characteristics and performance of the units to indicate ability to meet the system performance specified herein, including back drive gear box rated torque capacity and torque capacity required to meet performance requirements.
  - e. Detailed mechanical drawings showing the equipment fabrications and interface with other items. Include:
    - 1) Dimensions, size, and locations of connections to other work, and weights of equipment associated therewith.
    - 2) Foundation drawings showing anchor bolt layouts and locations with seismic anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.
    - 3) Recommended anchor bolt sizes.
    - 4) Weights of individual pieces of equipment and live (dynamic loads) created by the total weight of each centrifuge and ancillary equipment.
    - 5) Scroll hard surfacing materials and coverage.
    - 6) Sizes and locations of space for incoming and outgoing conduits.
    - 7) Minimum clearance distances around equipment required to access equipment for service/repair/removal and high hook elevation necessary for hoisting equipment.
    - 8) Control panel and VFD panel drawings showing panel size and sizes and locations of raceway connections.
  - f. Bill of materials listing major system components, special tools, and spare parts.
  - g. Outside utility requirements such as air, water, power, drain, etc., for each component.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- h. Calculated AFBMA L-10 bearing life and type of lubrication recommended for all equipment.
- i. Design data for the following:
  - 1) Main drive motor sizing.
  - 2) Backdrive motor sizing.
  - 3) Main drive sheave and belt sizing.
  - 4) Variable frequency drive sizing.
  - 5) Main bearings.
  - 6) Maximum measured sound power levels at 3 feet, all sides of equipment.
  - 7) Heat transfer to room from centrifuge, control panel, and VFD panel.
- j. Motor submittals in conformance with Section 26 20 00, Low-Voltage AC Induction Motors.
- k. VFD submittals in conformance with Section 26 29 23, Low-Voltage Variable Frequency Drive System.
- l. Certificate(s) demonstrating that the centrifuge production and assembly facilities are currently ISO 9001 certified.
- m. Functional description of internal and external instrumentation and controls to be supplied including list of parameters monitored, controlled, or alarmed.
- n. Sequential description of operation under various modes of control, describing the complete control circuit and equipment operation and logic, including interlocks and permissives.
- o. Description of all automatic shutdown features and interfaces with the plant instrumentation and control systems, in both word and schematic form. Standard Instrument Society of America symbols shall be used on all schematics.
- p. Control and VFD Panel interconnection diagrams showing wiring interconnections between all centrifuge system components and between centrifuge system components and remote components provided by others.
- q. Control and VFD Panel Elevation Drawings showing construction and placement of operator interface devices and other elements.
- r. Instrumentation and Control Submittals: In conformance with Section 40 99 90, Package Control Systems.
- s. Power and control wiring diagrams including terminals and numbers.
- t. Shop and field painting systems proposed: Include Manufacturer's descriptive technical catalog literature and specifications, and hazardous communication data sheets.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Samples:
  - a. Submit the following items with the Shop Drawings:
    - 1) Scroll abrasive resistant tile, quantity of two.

C. Informational Submittals:

1. Factory Quality Control Submittals:
  - a. Obtain Engineer's review and approval of the information listed below prior to equipment shipment.
  - b. Manufacturer's Certificate of Compliance.
  - c. Factory test results, reports, and certifications. Include:
    - 1) Functional Test Reports and Certificates.
    - 2) Vibration Test Reports and Certificates.
    - 3) Noise Test Reports and Certificates.
    - 4) For each ac motor, provide a certified copy of a test report for an identical motor tested in accordance with NEMA MG 1-12.53a and IEEE Standard 112, Test Method B. The test report shall show full-load efficiency and power factor meeting or exceeding the specified minimum guaranteed values. Motors not as specified will be rejected.
    - 5) Certified Scratch Abrasion Test results of the abrasion protection tiles.
  - d. Submit certified copies of mill test results for the stainless steel castings and abrasion-resistant materials. The test reports shall certify that the materials supplied are in accordance with the applicable standards and shall include:
    - 1) The actual material analysis.
    - 2) Applicable standards.
    - 3) Date of manufacture.
    - 4) Place of manufacture.
    - 5) Manufacturer's name.
    - 6) Markings on the materials to denote the batch number.
    - 7) Mechanical property test for parts of the rotating assembly subject to stress.
  - e. Test results of the control panels and VFD panels for proper operation, construction, electrical connection, and function.
  - f. Shipping, storage and protection, and handling instructions.
  - g. Manufacturer's written/printed installation instructions.
  - h. Routine maintenance requirements prior to plant startup.
2. Operation and Maintenance Manual with Maintenance Summary Form shall be provided in accordance with Section 01 78 23, Operation and Maintenance Data, and the following requirements:
  - a. Operation, maintenance, recommended spare parts, and renewal parts information for all equipment furnished under this Section.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Set of complete as-reviewed Shop Drawing submittals.
  - c. As-built electric and instrumentation and control wiring diagrams and equipment drawings.
  - d. Index of all equipment suppliers listing current names, addresses, and telephone numbers of those who should be contacted for service, information, and assistance.
  - e. Detailed operational procedures including step-by-step startup, normal operation, shutdown, and troubleshooting procedures.
  - f. Detailed preventative maintenance requirements and recommended schedule.
3. Seismic anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
4. Equipment Testing Procedure Submittals: Centrifuge manufacturer shall submit test procedures for the following tests for review, comment, and approval at least 30 days in advance of the notice to conduct the testing:
- a. Functional Testing.
  - b. Pre-Performance Testing.
  - c. Performance Testing.
  - d. Optimization.
5. Field Quality Control Submittals:
- a. Obtain Engineer’s review and approval of the information listed below prior to Project completion. Centrifuge manufacturer shall submit test reports within 20 days after completing field testing.
  - b. Field test results, reports, and certifications. Include:
    - 1) Functional Test Report and Certificates.
    - 2) Manufacturer’s Certificate of Equipment Installation Services.
    - 3) Pre-Performance Test Report and Certificates.
    - 4) Performance Test Report and Certificates.
    - 5) Vibration Test Certificates.

1.05 EXTRA MATERIALS

A. Spare Parts and Special Tools:

<u>Item</u>	<u>Quantity</u>
Plate Dams	One complete set per centrifuge
Sheaves	One complete set
Drive Belts	Two complete sets
Main Bearings	Two complete sets
Scroll Conveyor Bearings	Two complete sets

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

<u>Item</u>	<u>Quantity</u>
Thrust Bearings, Seals, and Lock Washers	Two complete sets
Gaskets, O-rings, and Seals	Two complete sets
Speed Proximity Sensors	Two complete sets
Scroll Conveyor Tiles	Twenty (20)
Replacement Indicating Lamps	One complete set

B. Tools and Accessories:

1. Provide manufacturer’s recommended special tools and accessories required to assemble and disassemble installed centrifuges, including the minimum following items:
  - a. Bowl lifter, including spreader beam, shackles, and ratchet straps, suitable for bowl removal.
  - b. Bowl truck.
  - c. Conveyor lifter.
  - d. Straps for lifting of machine top case.
  - e. Straps for lifting of drive motor assembly.
  - f. Straps for lifting of gearbox.
  - g. Tools for removal/installation of conveyor and thrust bearings.
  - h. Tools for plate dam adjustment/replacement.
  - i. Lifting eyes for hoisting of main drive pillow block bearings.
  - j. Set of Universal Tools:
    - 1) Set of spanners.
    - 2) Set of hex-keys.
    - 3) Standard pliers.
    - 4) Needle-nose pliers.
    - 5) Large standard screwdriver.
    - 6) Small standard screwdriver.
    - 7) Large Phillips screwdriver.
    - 8) Small Phillips screwdriver.
    - 9) Socket set with ratchet.
    - 10) Open-end wrench set.
    - 11) Snap-ring remover.
    - 12) Torque wrench, clicker type.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Lubricants: All necessary lubricants shall be provided for the initial startup of the centrifuge equipment. Lubricants and filters shall be provided and changed by the manufacturer as frequent as required during the period between successfully completed functional testing and equipment acceptance, up to a maximum period of 12 months. New lubricants and filters shall be furnished and installed by manufacturer at Substantial Completion. After acceptance and substantial completion, the Owner will be responsible for changing the lubricants according to the schedule provided by the manufacturer.
- D. Delivery: In accordance with Section 01 61 00, Common Product Requirements.

1.06 SAFETY REQUIREMENTS

- A. All equipment furnished shall be designed and manufactured with due regard to safety of operation, accessibility, and durability of parts, and shall comply with all applicable Occupational Health and Safety Act, federal, state, and local safety regulations.

1.07 SPECIAL GUARANTEE

- A. Provide manufacturer's extended guarantee or warranty, with Owner named as beneficiary, in writing, as special guarantee. Special guarantee shall provide for correction, or removal and replacement of Work provided under this Specification section (including but not limited to the centrifuge, drive motors, gear box or scroll drive, control panel, VFD panel, and variable frequency drives) found defective during a warranty period of 3 years. With the exception of warranty period, all other requirements specified in Article 36 of the General Conditions remain in effect. Duties and obligations for correction or removal and replacement of defective Work shall be as specified in the General Conditions.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Each centrifuge system shall consist of a solid bowl, horizontal, continuous feed, scroll type unit, and shall be specifically designed to meet the performance requirements for the sludges specified herein. Each unit shall be capable of continuous operations with a minimum of maintenance.
- B. Each centrifuge system shall be equipped with:
  - 1. Variable speed electric main drive motor assembly.
  - 2. Belt guards.
  - 3. Variable speed electrical backdrive.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Lubrication system for the rotating assembly's main bearings.
  5. Vibration isolators.
  6. Flexible connectors, necessary for all mechanical and electrical connections.
  7. Feed, Polymer, Centrate and Thickened Solids sampling provisions.
  8. Control and VFD panel and instrumentation and controls specified herein.
  9. Main drive and backdrive variable frequency drives.
- C. All equipment shall be suitable and rated for the electrical classification required as shown in the Area Classification Table on Drawings and the Area Classification envelopes shown on Drawings.
- D. The centrifuge equipment shall be suitable for installation in the existing building. In addition, the removal and replacement of the largest centrifuge components for maintenance shall be able to be accomplished with the existing building's 20-ton overhead crane and utilizing the dimensioned floor openings shown on Drawings.

2.02 MANUFACTURER

- A. Centrifuge manufacturer's production and assembly facilities shall be ISO 9001 certified.
- B. The centrifuge manufacturer shall have experience providing centrifuges meeting the requirements of this Specification.
- C. Modifications to Standard Equipment Model Offerings:
  1. Listing of a centrifuge manufacturer within this section shall not be justification for acceptance of the manufacturer's standard centrifuge model offering.
  2. Equipment provided by a listed manufacturer shall be furnished, modified as necessary, to conform to the performance, functions, features, and materials of construction as specified herein.
- D. The centrifuges shall be from one manufacturer: Alfa-Laval, Inc.

2.03 SERVICE CONDITIONS

- A. The centrifuges, control panels, and VFD panels, and appurtenances shall be suitable for exposure to continuous 95 percent relative humidity conditions, for operation in ambient air temperature from 50 to 104 degrees F, for exposure to intermittent water or sludge splash and spill conditions, and for continuous operation at a site elevation of approximately 400 feet above sea

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

level. Equipment shall be rated for the area classification in which it is located. Refer to Drawings for delineation of area classification.

- B. Design Feed Sludge: This is the sludge that will be available during performance testing to meet the performance requirements specified herein. The sludge will be a mixture of raw waste activated sludge (WAS) and chemically enhanced primary sludge (PS). The characteristics of the sludge are summarized in the table below:

Parameter	Value
Nominal Sludge Composition, Total Dry Solids Weight Basis	75% chemically enhanced primary sludge, 25% raw WAS
Sludge Feed Concentration, % Total Dry Solids Exclusive of Polymer	0.5 % to 1.3 %
Sludge Volatile Solids Concentration, % Volatile Solids Dry Weight Basis	75 % to 90%

- C. The sludge to be processed will be fed to each centrifuge from a dedicated, adjustable speed progressing cavity feed pump. Polymer solution will be pumped by a dedicated polymer feed pump and injected at the centrifuge feed tube.

## 2.04 PERFORMANCE REQUIREMENTS

- A. The centrifuges shall continuously receive, condition, and thicken the feed sludges specified herein, and continuously discharge the thickened solids into the thickened sludge wet well. Each unit shall be able to operate continuously on demand; shall be suitable for thickening the specified sludges continuously for up to 24 hours per day, 7 days per week; and shall operate without spillage of sludge beyond the nominal solids discharge chute and piping envelope or spillage of centrate beyond the liquid (centrate) discharge chute and piping envelope.
- B. Manufacturer shall guarantee that the centrifuge equipment shall be capable of the minimum performance requirements specified below for Design Feed Sludge, to be confirmed via the field performance testing specified herein while operating with that sludge stream.
- C. The goal of the specified Optimization Testing is to maximize the percent total dry solids produced and minimize polymer dose used by the centrifuge equipment. This will reduce the Owner’s operating cost of sludge thickening. The target performance criteria for this effort are listed in the table below under appropriate performance targets using Design Feed Sludge.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

D. Performance Requirements:

Parameter	Design Feed 75% CEPT – 25% WAS
Feed Hydraulic Loading Rates <sup>(1)</sup> , gpm	1,200 gpm @ 0.5%
Minimum Thickened Solids Concentration, % Total Dry Solids	6.5%
Minimum Total Solids Capture, %	92%
Maximum Polymer Dose, lbs Active per Dry Ton of Feed Solids	8 lbs active / dry ton
Maximum Hydraulic loading rate <sup>(1)</sup> , gpm	1,200 gpm
1. Operating hydraulic loading range per centrifuge of 600 to 1,200 gpm at 0.5 to 1.3% solids.	

E. Solids Capture:

$$\% \text{ Capture} = \frac{T}{F} \times \frac{F - C}{T - C} \times 100$$

Where: T = Thickened solids total solids concentration (mg/L).  
 F = Feed sludge total solids concentration, excluding any dilution due to polymer solution addition (mg/L).  
 C = Centrate total suspended solids concentration, excluding any dilution due to polymer solution addition and centrifuge purge water (mg/L).

F. Polymer: Make-down of a polymer solution will be from only bulk Mannich cationic polymers. A different polymer may be used for each of the sludge streams specified in Article Service Conditions.

2.05 EQUIPMENT DESCRIPTION

A. The centrifuges shall be of the high-speed, dry solids, solid bowl horizontal, continuous feed, scroll conveyor type specifically configured for thickening only applications and intended to produce thickened solids with a higher solids content than that produced with conventional centrifuges. No disc type or nozzle bowl type or basket type centrifuges will be allowed. The centrifuges shall be designed to limit air leakage into or from the body of the centrifuges by providing gaskets on the casing flange and labyrinth-type seals on both hub ends. The centrifuge equipment shall be designed and built to operate continuously. A variable frequency drive (VFD) main drive system shall be provided to drive each centrifuge rotating assembly. An VFD

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

backdrive system shall be supplied with each centrifuge to provide speed variation between the conveyor and the centrifuge bowl. The centrifuges shall be designed to be mounted on a steel frame allowing discharge into a discharge chute directly beneath the centrifuge bowl.

## 2.06 MATERIALS

A. Materials of Construction: Unless otherwise specified, materials shall conform to the following:

1. Bowl: Stainless steel, Type 316 or 317 or ANSI SC-2205 duplex stainless steel centrifugal castings.
2. Bowl Wear Strips: Stainless steel, Type 316, and/or replaceable ribbed bowl liner or bowl strips (stainless steel, Type 316, minimum 3 mm thickness), or longitudinal grooves.
3. Scroll Conveyor: Stainless steel, Type 316 or ANSI SC-2205 duplex stainless steel.
4. Scroll Conveyor Tips: Sintered Tungsten Carbide tiles<sup>(1)</sup> and flame sprayed tungsten carbide hard surfacing.
5. Feed Tube: Stainless steel, Type 316.
6. Base: Fabricated carbon steel or cast steel with replaceable stainless steel cladding on all surfaces in contact with process material.
7. Upper Case: Stainless steel, Type 316 or fiberglass reinforced plastic (FRP).
8. Bottom Case: For all surfaces in contact with the process material, from the liquid to solids discharge shall be stainless steel or fabricated carbon steel with stainless steel cladding or cast steel with stainless steel cladding.
9. Main Centrifuge Bearings: Grease lubricated, L-10 life of 100,000 hours minimum.
10. Scroll Conveyor Bearings: Grease lubricated, L-10 life of 100,000 hours minimum.
11. Feed Compartment: Stainless steel, Type 316 or 317 or duplex stainless steel.
12. Feed Compartment Liner: Either constructed of corrosion resistant, hardened material or equipped with field replaceable Adiprene, ceramic or Urethane liner or Flame Sprayed Coast 53C, or equal, including axial walls.
13. Sludge Feed Nozzles: Replaceable Solid Sintered Tungsten Carbide<sup>(1)</sup>.
14. Solids Discharge Nozzles: Replaceable Solid Sintered Tungsten Carbide<sup>(1)</sup>.
15. Case Protection, Solids Discharge End: Field Replaceable Adiprene, Urethane, or Type 316 stainless steel liner, or equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

16. Fasteners (Wetted): Minimum Type 316 stainless steel.
17. Anchor Bolts, Nuts and Washers: Stainless steel, Type 316, minimum 3/4 inch in diameter for all anchor bolts under the centrifuge frame.
18. Solids and Centrate Discharge Hoppers: Stainless steel, Type 316 with a UHMW liner no less than 1/4-inch thick.

(1) All sintered tungsten carbide abrasion resistant materials shall be tested in accordance with the ASTM G65, Procedure A, Standard Practice for Conducting Dry Sand/Rubber Wheel Abrasion Tests with volume loss less than 3 cubic millimeters.

## 2.07 BOWL

- A. The bowl shall be designed to withstand, with an adequate factor of safety, all forces encountered during operation. The bowl shall be supported on each end by pillow block bearings.

1. Bowl Inside Diameter: Minimum 39 inches.
2. Bowl Inside Length: Minimum 149.
3. Bowl Length to Diameter Ratio: Minimum 3.75.
  - a. G-volume: Minimum 450,000 gallons, as calculated using the formula shown below:
  - b. G-volume calculated by the following formula:

$$\text{G-volume} = K\omega^2 D_b L_c (D_b^2 - D_d^2)$$

Where:  $K$  = constant equal to  $4.83 \times 10^{-8}$   
 $\omega$  = operating speed, rpm  
 $D_b$  = bowl diameter, inches  
 $D_d$  = thickened solids discharge diameter, inches  
 $L_c$  = length of bowl cylinder, inches

Provide values for each variable for the given centrifuge unit.

4. Normal Operating Speed: Minimum 2,200 rpm to maximum 3,000 rpm.
5. The minimum bowl wall thickness shall be 0.7 inches. All surfaces shall be examined for cracks, shrinkage, porosity, or other defects by means of a liquid penetrant test.
6. Pool depth level must be readily adjustable via power tubes located at the large diameter end of the bowl where liquid is discharged.
7. Solids shall be conveyed through a conical section of the bowl and discharged from the small diameter end of the bowl through multiple solids discharge ports spaced evenly around the bowl end. Solids discharge ports shall be protected against abrasion by field replaceable, weight balanced, mechanically attached wear nozzles manufactured of Sintered Tungsten Carbide.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

8. Centrifugally cast bowls shall be 100 percent dye penetrant inspected. Casting certificates for each component will be required. Rolled and welded or statically cast bowls shall not be allowed.
9. A replaceable ribbed liner from two wraps beyond the feed zone (towards the liquid end), or minimum of eight evenly spaced longitudinal bowl strips the entire length of the bowl, or longitudinal grooves the entire length of the bowl, to trap solids and form a layer to protect the bowl from wear shall be provided.
10. Material to be processed shall be introduced to the bowl through a compartment which shall evenly distribute the feed. The feed compartment shall be protected against abrasion.

2.08 SCROLL CONVEYOR

- A. Each centrifuge shall include a horizontal cylindrical-conical scroll conveyor supported by anti-friction bearings and equipped with helical flights independently mounted concentrically within the centrifuge bowl. Bearings shall have externally greased fittings.
- B. Conveyor shall include solids feed ports protected against abrasion by field replaceable, weight balanced, mechanically attached wear nozzles manufactured of Sintered Tungsten Carbide.
- C. The conveyor edge and face of the flights shall be protected against abrasion by a series of welded-on sintered tungsten carbide tile assemblies, with coverage from two wraps beyond the feed zone (towards the liquids discharge end) through to the solids discharge end. Each tile assembly shall be weight correct, and consist of a solid sintered tungsten carbide wear part attached to a stainless steel backup holder. Spray hard surfacing applied to a backup plate is not allowed. Each assembly shall be individually replaceable, and shall include the ability to monitor wear by means of visual inspection. The tile assemblies shall extend a minimum of 0.3 inches beyond the radial edge of the conveyor flight. The remaining scroll conveyor edge and face shall be protected from abrasion by flame sprayed hard surfacing containing a minimum of 40 percent tungsten carbide particles.
- D. After attachment of the abrasion protection tiles on the back up plate flighting, each tile shall be individually torque tested at a minimum shear stress of 5,000 psi, by the means of a torque wrench, or other equivalent method. No total detachment, visible or residual deformation, or carbon cracking shall be noticed after the test. If not so, the tile shall be removed and a new one attached in its place and the torque test repeated. The manufacturer shall keep and submit a record of this test.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. All sintered tungsten carbide tiles shall be able to meet ASTM G65 Test Procedure A with a volume loss as specified in Article Factory Tests.

2.09 CASE

- A. Each centrifuge shall be enclosed in a fabricated case, the purpose of which shall be to contain and direct the solids and liquid discharge from the centrifuge, to act as a protective guard, and to provide complete enclosure for noise reduction and odor control. The casing assembly shall be provided with a Type 304/316 stainless steel or FRP upper case per manufacturer's standard, specifically designed for rigidity and noise reduction, and Type 304/316 stainless steel cladding on wetted parts in the lower casing. The case top shall be bolted in place. Lifting eyes shall be provided for lifting of the case top.
- B. A flanged and gasketed seal shall be provided between the upper and lower case components. Flange bolts shall be stainless steel.

2.10 FRAME

- A. Each centrifuge shall be supported individually on a fabricated carbon steel or combination cast iron and steel base which shall in turn be mounted on vibration isolators. The centrifuge frame shall not be artificially weighted to dampen vibration.
- B. The vibration isolators shall be provided to isolate the centrifuge from the building structure. The number, capacity, and vibration constant of the isolators shall be selected by the manufacturer for the load and impact resulting from operation of the centrifuge provided.
- C. The bottom portion of the frame shall be provided with machined outlets for the attachment of the solids and centrate flexible connectors.

2.11 MAIN DRIVE SYSTEM

- A. For each centrifuge system, the bowl drive system shall consist of an electric main drive motor with variable frequency drive and direct drive system complete with necessary vibration isolators for the individual support of the motor and centrifuge.

2.12 GEAR BOX

- A. Gear Box: Either 1) a two-gear conveyor drive system consisting of a primary cyclo gear and a secondary cyclo gear; or 2) a one-stage cyclo reducer; or 3) a two-stage planetary gear unit shall maintain a differential speed between the conveyor and bowl. Each of the above devices shall be suitable for 24-hour per day continuous service. The gear box shall have a torque capacity

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

to meet the specified service conditions and performance requirements with the design required torque not to exceed 80 percent of the gear box full rated torque capacity. Gear boxes shall be capable of withstanding a 500 percent momentary overload and 150 percent intermittent overload. A torque overload control shall be provided to initiate centrifuge shutdown in the event of conveyor overload. Manufacturer shall select the reduction gear ratio as required for the solids to be handled and to be consistent with satisfactory operation. The gear unit shall be oil lubricated with its housing serving as a lubricant reservoir.

2.13 BACKDRIVE SYSTEMS

- A. Provide an variable frequency drive (VFD) backdrive system for each centrifuge. Backdrives utilizing hydraulic drives shall not be acceptable. If a regenerative type backdrive system is provided, the motor sizes specified herein may change as well as the associated electrical supply. The Contractor shall be responsible for all required changes.
- B. An inverter duty backdrive motor shall be supplied and connected to the pinion shaft of the differential gear box, if a gear box is supplied. Backdrive system shall provide step-wise or infinite speed variation between the conveyor and the bowl shell of the centrifuge.
- C. The backdrive systems shall be capable of operating in a DIFFERENTIAL or TORQUE control mode that provides for operation at specific adjustable scroll/bowl differential speeds or backdrive torque values. In the DIFFERENTIAL control mode, the backdrive system shall provide for operation at a specific, adjustable scroll differential speed with internal torque allowed to vary up to the maximum allowable scroll shaft torque. In the TORQUE control mode, the backdrive system shall continuously monitor changes in internal torque created by variations in influent feed solids and automatically maintain a preset torque input to the scroll by allowing the differential speed to vary.
- D. The backdrive control system shall provide for automatic shutdown in the event that excessive torque is detected. Torque shall be measured as a function of input in the drive unit. In the event that torque exceeds the normal operating range, monitoring instrumentation shall detect this condition and stop the sludge feed to allow the machine to clear itself. The torque monitoring system shall automatically reset when the torque approaches the normal operating range. In the event that the torque approaches the limit of the backdrive, the centrifuge's controller shall initiate centrifuge shutdown and shutdown of both sludge and polymer feeds.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.14 FASTENERS

- A. All internal fasteners furnished with the centrifuges which are subject to contact with sludge, centrate, or vapors of wash water and wastewater shall be a minimum Type 316 stainless steel.

2.15 BEARINGS

- A. The entire rotating assembly of each centrifuge shall be supported by two main bearings. Each main bearing shall be grease lubricated ball or cylindrical roller type bearings. Main bearings shall be housed in one piece pillow blocks with dowel pins for proper alignment. Provide each pillow block bearing with a threaded female connection to permit the use of a lifting eye to facilitate inspection and maintenance.
- B. Scroll conveyor bearings shall be anti-friction ball or roller type bearings sealed from process contamination. Bearings shall have external grease fitting for lubrication. Permanently lubricated bearings shall not be allowed.
- C. Bearings shall have an DIN ISO 281 life of 100,000 hours minimum.

2.16 GUARDS

- A. Fabricated guards shall be provided for all gear boxes, pulleys, and belt drives.
  - 1. Guards shall be 11-gauge minimum thickness Type 304 stainless steel.
  - 2. The guards shall meet OSHA standards and completely enclose the rotating parts of drive system and shall be designed to minimize vibration and noise.
  - 3. Guards, except for the main drive motor, shall have 1-inch diameter holes coincident with the shafts of all equipment to allow the shaft speed to be checked.
  - 4. Fasteners shall be externally accessible.

2.17 FEED TUBE

- A. Sludge shall be fed to the centrifuge by means of a removable feed tube suitable to minimize turbulence. The feed connection to the centrifuge shall be a 6-inch, 150-pound ASME flange connection. The maximum inlet pressure required at the centrifuge inlet flange shall be 35 psig at 1,200 gpm (when based on water with the viscosity of 1 Centipoise). The feed tube shall also include a NPT connection for polymer.

2.18 FLEXIBLE CONNECTIONS

- A. All mechanical and electrical connections to the centrifuge equipment, including, but not necessarily limited to, the feed sludge, polymer, centrate and thickened solids connections, sample line, vents, and electrical raceways shall be equipped with flexible connections. All flexible connections shall isolate centrifuge vibrations from fixed, rigid external connections. No exterior loads shall be transferred to a centrifuge by external connections to the machine. Centrate and thickened solids flexible connections shall be flanged and fabricated from neoprene, with Type 316 stainless steel bolts with Type 316 stainless steel retainer plates at each end. Piping flexible connectors shall be metal reinforced elastomer with flanged connections. Tubing flexible connectors shall be metal reinforced hose with Type 316 stainless steel hose clamps. Flexible electrical connections shall be provided in accordance with Section 26 05 33, Raceway and Boxes.

2.19 SAMPLE CONNECTIONS

- A. Provide sampling connection for centrifuge feed sludge after polymer addition and before it enters the bowl.
- B. Centrate Sample Connection: Provide centrate discharge chute extension with integral functional centrate sample provisions/connection. Sample connection shall enable representative sampling while not interfering with the rotating elements of the centrifuge. Chute extension shall be located below the centrate flexible connection, flanged and fabricated from 1/4-inch thick Type 316 stainless steel, with flange to flange length of 6 inches. The sample connection shall be horizontal, centered vertically in the chute extension, and located in order to interface with the existing centrate sample sump. Sample connection shall be 2-inch, Type 316 stainless steel pipe. Provide tubing flexible connector between the sample piping and the sample sump piping connection. Coordinate tubing flexible connector length with Contractor.
- C. Thickened Sludge Sample Connection: Provide functional thickened sludge sample connection from the centrifuge case or manufacturer-provide chute extension bolted directly to the centrifuge discharge flange. Sample connection shall allow sampling from the centrifuge operating floor. Sample connection shall be a pipe inset integrally mounted through the centrifuge case or discharge chute extension located to enable representative sampling while not interfering with the rotating elements of the centrifuge. Thickened solids sample connection shall have a hinged cap and pipe insertion device.

2.20 NOISE

- A. Centrifuge shall be designed such that when running at the normal operating speed, the average noise level measured at 3 feet around the periphery of the

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

complete centrifuge assembly shall not exceed 90 dBA, when tested at the manufacturing facility, without feed and with inlet and discharge connections sealed.

2.21 VIBRATION MONITORING SYSTEM

- A. A vibration monitoring system shall be provided for each centrifuge to perform the following functions:
1. Convert vibration into velocity.
  2. Sound a warning and initiate stop of sludge feed if the velocity reaches a certain preset level (HIGH).
  3. Sound a warning and shut the centrifuge down if the velocity reaches a separate pre-set level (HIGH HIGH).
  4. Provide an adjustable time delay during centrifuge startup to account for initial acceleration and feed induced vibration.
  5. Provide an adjustable time delay, not to exceed 5 seconds, during operation to account for momentary excursions due to process changes.
- B. Provide one sensor per pillow block bearing for each centrifuge and wired to a common terminal junction box.
- C. Each centrifuge, when running at the normal operating speed, shall not produce vibration velocities greater than 6.5 mm/sec at the main bearings when tested at the manufacturing facility without feed.

2.22 ELECTRICAL

- A. General:
1. Conform with Division 26, Electrical.
  2. Provide all necessary electrical components and wiring for a complete, functional system.
  3. All motor variable frequency drives for each centrifuge system shall be provided in associated VFD panel provided as part of this Section.
  4. Control panel and VFD panel and interior components shall be rated for continuous operation in 40 degrees C (104 degrees F) ambient conditions.
- B. Wiring: Size conductors and conduits for power circuits to the main and backdrive motors. Factory prewire (size, furnish, install, and connect) all skid mounted equipment control conductors and instrumentation cables to skid mounted terminal junction boxes for connection to the associated control panel and VFD panel by Division 26, Electrical. The electrical wiring requirements and proper documentation shall be included as part of the package system scope of supply. All conductors shall be stranded copper, and

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

all wiring shall meet the requirements of NFPA 70, the 2008 National Electrical Code. Insulation shall be rated 600 volts, minimum. Low-voltage (24V) signals shall be run in 600-volt twisted shielded pair cable. Analog circuits shall not be mixed with power or discrete control circuits.

- C. Electrical Raceways: All conductors and cables not subject to vibration between prewired devices and skid-mounted terminal junction boxes shall be installed in PVC-coated rigid galvanized steel conduits. Flexible, nonmetallic, liquid-tight conduits shall be provided where flexible conduits are required. Conductors shall be stranded copper.
- D. Terminal Junction Boxes: All skid-mounted devices, except for motor leads, shall be prewired to skid-mounted terminal junction boxes (TJBs). Separate TJBs shall be provided for (a) 120V power and (b) 4 mA to 20 mA analog and 24V dc discrete signals. Size, furnish, and install NEMA 4X, Type 316 stainless steel TJBs on the centrifuge skid.
- E. Main Drive Motors:
  - 1. Provide squirrel-cage ac induction motors meeting the requirement of Section 26 20 00, Low-Voltage AC Induction Motors, and as specified herein.
  - 2. Motor shall meet the following specific requirements:
    - a. Motor Horsepower: 300.
    - b. Synchronous Speed: 1,800 rpm.
    - c. Voltage Rating: 460V, three-phase.
    - d. Enclosure Type: TEFC per Section 26 20 00, Low-Voltage AC Induction Motors.
    - e. Mounting: Horizontal.
    - f. Inverter duty rated motor.
  - 3. Provide motor modifications as follows:
    - a. With the motor at ambient temperature (COLD), it shall be capable of making two complete starts in succession with coasting to rest between starts within a 1-hour time period. With the motor running (HOT), it shall be capable of at least one restart within 1 hour after any shutdown. The motor insulation temperature classification shall not be exceeded.
    - b. The motor shall be of the quiet type design. The noise level shall not exceed 85 dBA sound pressure measured at 3 feet from the motor in all directions.
    - c. A motor thermal protection system consisting of six (two per phase) three-wire 100-ohm platinum resistance temperature detectors (RTDs) or bi-metallic thermostat. Bring the RTD leads out to a Type 316 stainless steel NEMA Type 4X junction box.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- Provide temperature monitoring and overtemperature relay at the main drive VFD enclosure.
- d. Provide motor bearing temperature protection on each motor bearing. Provide 100 ohm three-wire platinum resistance temperature detectors (RTDs). Bring the RTD leads out to terminal blocks in a threaded cast aluminum junction box. Provide temperature monitoring and overtemperature relay at the main drive VFD enclosure.
- F. Main Drive VFDs: Each main drive motor shall be controlled by an variable frequency drive.
1. The system shall be sized in accordance with manufacturer's design requirements and shall be as specified in Section 26 29 23, Low-Voltage Variable Frequency Drive System.
  2. The motor shall be capable of delivering full load torque across a 10:1 turndown ratio.
  3. Drive system shall be capable of flying restart.
- G. Backdrive Motors:
1. Provide squirrel-cage ac induction motors meeting the requirements of Section 26 20 00, Low-Voltage AC Induction Motors, and as specified herein.
  2. Motor shall meet the following specific requirements:
    - a. Motor Horsepower: 40.
    - b. Synchronous Speed: 1,800 rpm.
    - c. Voltage Rating: 460V, three-phase.
    - d. Enclosure Type: TEFC per Section 26 20 00, Low-Voltage AC Induction Motors.
    - e. Mounting: Horizontal.
    - f. Inverter duty rated motor.
  3. Provide motor modifications as follows:
    - a. Provide bi-metallic thermostat for thermal protection.
    - b. Attach the motor to the pinion shaft of the differential gearbox via a coupling.
- H. Backdrive VFDs: Each backdrive motor shall be controlled by an variable frequency drive.
1. The backdrive system shall provide infinite speed variation between the scroll conveyor and bowl shell of the centrifuge.
  2. The system shall be sized in accordance with manufacturer's design requirements and shall be as specified in Section 26 29 23, Low-Voltage Variable Frequency Drive System.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. The motor shall be capable of delivering full load torque across a 10:1 turn down ratio.
4. Drive systems shall be capable of flying restart.

I. VFD Panels: Provide an VFD Panel for each centrifuge.

Panel Nos.	Name	NEMA Enclosure	Material
76-TC-01.VFD through 76-TC-05.VFD	Centrifuge VFD Panel	12	Painted Steel

1. Each VFD Panel shall be a freestanding enclosure, each containing the following:
  - a. A main circuit breaker with a through the door lockable handle.
  - b. VFD controls for main drive.
  - c. VFD controls for backdrive.
  - d. E-stop pushbutton.
  - e. Provide VFD panel with an external air conditioning device, to sustain the control panel in ambient air temperature conditions up to 115 degrees F. Air conditioning device shall be powered by a single 480V, 60-Hz circuit. Provide thermostat to control operation of the air conditioning device, so that device only provides cooling when panel interior temperature exceeds a preset and adjustable limit. The purpose of this device shall be to sustain the panel in the event that the building air conditioning system is out of service.
2. Variable frequency drives shall be sized in accordance with NEC and Division 26, Electrical.
3. The main circuit breaker shall be a 65,000 symmetrical amp thermal magnetic breaker sized in accordance with centrifuge system requirements.
4. Power Supply: 480-volt, three-phase, three-wire, 60-Hz.

2.23 CONTROLS

A. General:

1. In accordance with general control requirements specified in Section 40 99 90, Package Control Systems.
2. Instrumentation component qualities shall be in accordance with components specified in Section 40 90 00, Instrumentation and Control.
3. Provide centrifuge controls equipment in a dedicated compartment of the Control and VFD Panel specified herein, in Article Electrical.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

4. Control Panels: Provide a control panel for each centrifuge.

Panel Nos.	Name	NEMA Enclosure	Material
76-TC-01.LCP through 76-TC-05.LCP	Centrifuge Control Panels	4X	Type 304/316 Stainless Steel

5. The controls for all components of each centrifuge shall be provided by a dedicated programmable logic controller (PLC), mounted in each of the respective control panels. The PLC shall provide all control and monitoring functions as required for the operation and monitoring of the centrifuge including, but not limited to, timing, interlocks, startup sequencing, normal and emergency shutdowns, and permissive functions required for safe operation of each centrifuge.
- Programming Standards: All PLC programming for the centrifuge system shall not be proprietary in nature.
  - Critical field alarm instruments and contacts will be wired for failsafe operation where an open circuit will alarm. PLC communications and faults shall be monitored.
  - All indicating lights shall be in accordance with Section 40 99 90, Package Control Systems, with equipment tag numbering as specified herein and as shown on Drawings.
6. Provide uninterruptible power supply (UPS) backup power for all PLC and instrument components of the centrifuge control system. Size UPS to supply power for a minimum of 20 minutes.
7. PLC Manufacturer and Products: As specified in Section 40 99 90, Package Control Systems.
8. Provide Application software for all digital, programmable components of the centrifuge systems as specified in Section 40 99 90, Package Control Systems.
9. Provide Ethernet TCP/IP 100 Mbps network communications module to support communications between the PLC and the Owner’s Plant Control System network.

B. Control Panel Functions:

- Operator Interface Terminal (OIT):
  - Provide a panel-mounted OIT on each centrifuge control panel.
  - OIT Manufacturer and Product: As specified in Section 40 99 90, Package Control Systems.
  - The OIT for each centrifuge shall provide the primary method for an operator to monitor the status of the centrifuge and to affect its operation by command or directive entry. The OIT shall provide

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- the graphics-based interface between the operator and the centrifuge controller. The graphics and their layout/presentation shall be manufacturer's standard.
- d. The OIT shall provide all displays and control screens needed to safely and efficiently monitor and control the associated centrifuge system.
  - e. The OIT shall provide for selection of the following:
    - 1) Centrifuge Control Mode: LOCAL/REMOTE.
    - 2) Backdrive Control Mode: TORQUE/DIFFERENTIAL (in Local mode).
    - 3) Centrifuge Start (in Local mode).
    - 4) Centrifuge Stop (in both LOCAL and REMOTE modes).
    - 5) Centrifuge Clean-In-Place (CIP) initiation (In Local mode).
  - f. Display (at a minimum):
    - 1) Alarms.
    - 2) Status and control of each system component.
    - 3) Bowl speed.
    - 4) Backdrive gear shaft speed, if gearbox is supplied.
    - 5) Main drive motor amperage (rms value).
    - 6) Differential Speed: Scroll versus bowl.
    - 7) Bearing temperatures.
    - 8) Backdrive torque.
    - 9) Vibration.
    - 10) Centrifuge Control Mode: LOCAL/REMOTE.
    - 11) Backdrive Control Mode: TORQUE/DIFFERENTIAL.
    - 12) The specific shutdown condition.
    - 13) Sludge and polymer flow rates.
    - 14) All inputs from and outputs to the plant SCADA system.
  - g. The OIT shall have operator adjustable parameters for backdrive control. In addition, there should be one set of backdrive control parameters for use during cleaning or flush cycles. Backdrive control should be automatically changed to cleaning parameters in auto shutdown of the centrifuge or in CIP mode and return to the previous parameter set afterwards.
2. Controller Sequencing: Each centrifuge PLC shall contain all programming necessary to safely start and stop the associated centrifuge, in either the Local or Remote mode. The following minimum sequences and control shall be provided.
- a. Local/Remote: In the Local mode, centrifuge control shall only be available through the centrifuge control and VFD panel. All outputs to the plant SCADA system shall still be available in Local mode. In the Remote mode, Start, Stop, Backdrive Control mode, torque set point, differential set point, and other specified centrifuge controls shall be from the plant SCADA system.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Start: This command shall instruct the centrifuge control system to begin its start sequence. The centrifuge control system shall confirm the successful initiation and/or completion of each step in the startup sequence before continuing with the next step in the sequence.
- 1) The start sequence can only begin when the centrifuge feed pump and polymer feed pump are not running (OFF status).
  - 2) Provided all interlocks are in the normal state, the centrifuge control system shall bring the bowl and scroll up to speed and signal when proper conditions have been attained to begin feeding polymer and sludge.
  - 3) Initiate start of polymer and centrifuge feed pumps.
  - 4) Upon reaching an operator entered torque setpoint, initiate closing of the thickened solids transfer screw slide gate.
  - 5) If the start sequence is interrupted for any reason, including, but not limited to equipment failure, interlock failure, or manual (operator initiated) interrupt, the centrifuge controller shall generate a FAIL TO START alarm. Stop the centrifuge and polymer feed pumps, and allow the machine to coast to a standstill.  
If the start sequence is successful, discontinue monitoring interlock status of polymer feed and sludge feed.
- c. Normal Stop: This command shall instruct the centrifuge control system to begin its normal stop sequence. The centrifuge control system shall confirm the successful initiation and/or completion of each step in the stop sequence. If any step in the sequence fails, the centrifuge controller shall generate an alarm specifying the failed step.
- 1) Stop the centrifuge feed pump and polymer feed pump (disable ENABLE commands).
  - 2) Maintain a preset differential speed to clear the remaining thickened solids from the bowl.
  - 3) On the Stop Command, initiate opening the flush water valve to discharge to the centrate piping.
  - 4) Close the flush water valve after the machine reaches a preset bowl speed. The machine shall then coast to a standstill.
- d. The control system shall cause a “Shutdown” of the centrifuge and alert this condition to the plant SCADA system in the event that any of the following interlocks are triggered. These automatic shutdown interlocks shall include, but are not limited to:
- 1) Backdrive controller malfunction.
  - 2) Left/right bearing HIGH HIGH temperature alarms.
  - 3) Backdrive malfunction.
  - 4) HIGH HIGH torque.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 5) HIGH HIGH vibration.  
In the event that shutdown is caused by any of the above conditions, the control system shall require operator intervention to determine the cause of the shutdown and for restarting the system.
- e. The control system may also cause an automatic “Shutdown” sequence of the centrifuge and alert this condition to the plant SCADA system in the event that any of the following interlocks are triggered. These automatic shutdown interlocks shall include, but are not limited to:
- 1) Backdrive HIGH temperature alarm.
  - 2) Drive motor over temperature.
  - 3) Drive motor overload.
- f. During normal operation, an excessive solids build-up shall be detected by the centrifuge control system as a higher than normal torque requirement or by sensing excessive vibration. Should the torque or vibration exceed a preset point, the HIGH torque or vibration switch shall close, sending a signal to the centrifuge control system which shall initiate shutdown of the sludge and polymer feeds. When the torque or vibration falls to an acceptable limit, operator may reinitiate start of sludge and polymer feeds upon determining that the solids build-up is no longer a problem. The high torque control shall be not more than twice the normal operating torque or pressure. The controls shall also allow operation at a set differential speed allowed to vary within the normal operating limits. Controls shall include adjustable timers and or a count of HIGH torque or vibration events in order to initiate an automatic “Normal Stop” in the event of repeated torque or vibration excursions.
- g. In the event that the above clearing action fails to remedy the high torque or vibration situation and the torque or vibration continues to increase, the centrifuge control system shall respond by issuing a torque or vibration HIGH HIGH alarm at the control panel and similar signal to the plant SCADA system in addition to initiating a “Controlled Shutdown”.
- h. Controlled Shutdown: Controlled Shutdown shall require reset action at the control panel before the unit can be restarted.
- 1) This command shall de-energize the centrifuge main drive motor. The centrifuge shall be allowed to coast to a standstill. If available, the backdrive shall remain active until the bowl has coasted to a standstill, controlled to clear as much solids as possible from the bowl.
  - 2) The sludge and polymer feeds shall be stopped (disable ENABLE commands).

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 3) Initiate the bowl flush water valve open for flushing and subsequently initiate close after an achieving a preset bowl speed.
  - i. Emergency Stop: Emergency Stop initiated via E-stop pushbutton at the centrifuge control and VFD panel or from the plant SCADA system shall stop the centrifuge and all associated equipment instantaneously with no flush water.
    - 1) This command shall stop the centrifuge system.
    - 2) The sludge and polymer feeds shall be stopped (disable ENABLE commands).
  - j. Provide clean-in-place (CIP) function to clean solids out of the bowl. In a CIP cycle a “CIP Start” pushbutton is pressed, the flush water valve OPEN is initiated, the backdrive energized and begin to rotate in the reverse (if required by the manufacturer’s particular design) direction at a low speed for a predetermined time. At the end of the set time, the backdrive shall toggle direction, causing a water “sloshing” effect within the centrifuge bowl and conveyor. The process shall continue until the predetermined overall times ends, a “CIP Stop” key is depressed, or a fault occurs. Any shutdown fault shall terminate the CIP cycle.
3. Controller Interface (Data Exchange with the plant SCADA system):  
Provide provisions to make available and receive in contiguous registers the following data to and from the plant control system, through the centrifuge PLC Ethernet network communication module.
- a. Discrete outputs to the plant control system:
    - 1) Centrifuge LOCAL/REMOTE status.
    - 2) Centrifuge READY status.
    - 3) Centrifuge RUNNING status.
    - 4) Backdrive TORQUE/DIFFERENTIAL control mode status.
    - 5) Sludge feed ENABLE signal.
    - 6) Polymer feed ENABLE signal.
    - 7) Bowl flush water valve OPEN/CLOSE command.
    - 8) Chute flush water valve OPEN/CLOSE command.
    - 9) Emergency Stop alarm.
    - 10) HIGH vibration (warning) alarm.
    - 11) HIGH-HIGH vibration (shutdown) alarm.
    - 12) HIGH torque (warning) alarm.
    - 13) HIGH-HIGH torque (overload) alarm.
    - 14) Main bearing HIGH temperature alarm.
    - 15) Bowl motor HIGH temperature alarm.
    - 16) Scroll motor HIGH temperature alarm.
    - 17) Bowl motor VFD FAIL alarm.
    - 18) Scroll motor VFD FAIL alarm.
    - 19) Lube oil system alarm.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 20) Centrifuge common alarm.
- 21) Scroll motor bearing temperature.
- 22) Quantity of six spare discrete outputs.
- b. Analog outputs to the plant control system:
  - 1) Bowl speed.
  - 2) Scroll gearbox shaft speed.
  - 3) Bowl/scroll differential speed.
  - 4) Backdrive torque.
  - 5) Bowl motor amperage (rms value).
  - 6) Solids-side main bearing vibration value.
  - 7) Liquids-side main bearing vibration value.
  - 8) Solids-side main bearing temperature.
  - 9) Liquids-side main bearing temperature.
  - 10) Bowl motor winding temperature.
  - 11) Bowl motor bearing temperature.
  - 12) Scroll motor bearing temperature.
  - 13) Quantity of three spare analog outputs.
- c. Discrete inputs from the plant control system:
  - 1) Emergency stop command.
  - 2) Centrifuge START command.
  - 3) Centrifuge SHUTDOWN command.
  - 4) Centrifuge CIP START command.
  - 5) Backdrive control mode (TORQUE/DIFFERENTIAL).
  - 6) Centrifuge feed pump ON status.
  - 7) Polymer feed pump ON status.
  - 8) Bowl flush water valve OPEN/CLOSE status.
  - 9) Chute flush water valve OPEN/CLOSE status.
  - 10) Quantity of six spare discrete inputs.
- d. Analog inputs from the plant control system:
  - 1) Backdrive torque set point (in TORQUE control mode).
  - 2) Differential speed set point (in DIFFERENTIAL control mode).
  - 3) Bowl speed set point.
  - 4) Quantity of three spare analog inputs.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. Polymer pump START/STOP and flow control loop will be controlled by the plant SCADA system. The centrifuge PLC shall communicate ENABLE (start) signal for polymer pump as specified for centrifuge startup and shutdown functions.
- f. Sludge feed pump START/STOP and flow control loop will be controlled by the plant SCADA system. The centrifuge PLC shall communicate ENABLE (start) signal for sludge feed pump as specified for centrifuge startup and shutdown functions.

2.24 ACCESSORIES

- A. Equipment Identification Plates: Provide a 16-gauge stainless steel identification plate for all equipment, valves, appurtenances, and instruments with equipment/component numbers, securely mounted on the equipment in a readily visible location. The plate shall bear the 1/4-inch die-stamped equipment identification numbers indicated in this Specification and as shown on Drawings.

2.25 CENTRIFUGE FACTORY TESTS

- A. The Owner reserves the right to witness the tests specified herein and to inspect the fabrication procedures at any time during the fabrication stage(s) of the centrifuges and associated equipment. Owner's travel expenses will be borne by the Owner.
- B. Perform manufacturer's standard functional tests on each centrifuge system as follows:
  - 1. Gather and furnish test information necessary to show conformance to specified requirements.
  - 2. Manufacturer's Test Representative shall certify test results.
  - 3. Perform tests on all components and actually furnished.
  - 4. Vibration measurement with bowl empty.
  - 5. Vibration measurement with bowl filled with water.
  - 6. Operation of machine for minimum of 4 hours with water.
  - 7. Motor starting amperage.
  - 8. Notify Engineer of the test schedule not less than 45 days in advance.
  - 9. Obtain acceptance of test reports from Engineer prior to shipment of equipment.
- C. Noise Test: Measure noise levels with dBA meter of centrifuge running at the normal operating speed with bowl empty.
- D. Motor Tests: See Section 26 20 00, Low-Voltage AC Induction Motors.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

E. Scratch Abrasion Test:

1. A representative sample of each batch of the sintered tungsten carbide tiles to be used on the wearing face of the conveyor shall be subjected to a dry sand rubber wheel abrasion test. This test shall be conducted in accordance with the current ASTM G65 Procedure A. The test shall be conducted with the following requirements:
  - a. Wheel Load: 30 pounds.
  - b. Grit: AFS 50/70.
  - c. Grit Flow Rate: 250 to 350 grams per minute.
  - d. Shape of Sand Curtain: Streamlined.
  - e. Test Duration: 6,000 revolutions.
  - f. Rubber Wheel: Chlorobutyl rubber with a Durometer A of 58-62.
  - g. Wheel Speed: 200 rpm (plus or minus 10 rpm).
  - h. Wheel Diameter: 8.50 to 9 inches.
  - i. Linear Abrasion Distance: 14,138 feet.
  - j. Sand Nozzle: Special fabricated design.
2. Test one tile from each lot of tiles used in manufacturing the centrifuges, or four tiles total, whichever requires the greater number of tiles to be tested. The following laboratories are equipped to conduct these tests in accordance with the ASTM Standards and can provide certification of the results:
  - a. Colorado School of Mines, Golden, Colorado 80401.
  - b. Falex Corp., Aurora, Illinois 60505.
  - c. FMC Corp., 1205 Coleman Avenue, Santa Clara, California.
3. The volume loss of the proposed wear resistant material shall not exceed 3 cubic millimeters per tile during the 30-minute test period. Any material that exceeds 3.0 cubic millimeters loss in 30 minutes will not be allowed.

2.26 PANEL FACTORY TESTS

- A. The Owner reserves the right to witness the tests specified herein and to inspect the fabrication procedures at any time during the fabrication stage(s) of the centrifuge control and VFD panel and associated equipment. Owner's travel expenses will be borne by the Owner.
- B. Notify the Owner as specified below and Owner will travel to the factory and inspect and witness the panel factory testing.
- C. Perform manufacturer's standard functional tests on each centrifuge control and VFD panel as follows:
  1. Gather and furnish test information necessary to show conformance to specified requirements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Manufacturer's Test Representative shall certify test results.
  3. Perform tests on panels actually furnished with each associated centrifuge at the manufacturer's facility.
  4. Test panel for proper construction, electrical connection, and function.
  5. Check all alarms, shutdown conditions, and automatic sequences to verify proper function.
  6. Simulate interlocks and signals from other connected equipment in order to demonstrate specified operator interface functions and controls.
  7. Notify Engineer of the test schedule not less than 45 days in advance.
  8. Obtain acceptance of test reports from Engineer prior to shipment of equipment.
- D. VFD Tests: See Section 26 29 23, Low-Voltage Variable Frequency Drive System.

**PART 3 EXECUTION**

**3.01 INSTALLATION**

- A. Install equipment in conformance with the manufacturer's written instructions, with supervision and inspection performed by manufacturer's representative.
- B. Equipment anchoring and mounting shall be in accordance with manufacturer's requirements for the load criteria specified in Section 01 61 00, Common Product Requirements.
- C. Accurately place anchor bolts per the drawings furnished by the manufacturer in accordance with Section 05 50 00, Metal Fabrications.

**3.02 FIELD QUALITY CONTROL**

- A. The timing and scheduling for testing shall be coordinated with and be dependent upon the Owner's schedule and quantity of sludge available for testing.
- B. Coordination and testing shall be in accordance with Sections 01 31 13, Project Coordination, and 01 91 14, Testing, Integration and Startup.
- C. Functional Test (and clean water test):
  1. Prior to startup, all equipment described herein shall be inspected for proper alignment, quiet operation, proper connection, and satisfactory performance of all components by means of a functional test conducted by the manufacturer's representative, assisted by the installing contractor and Owner, and as approved by the Engineer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Functional testing shall be conducted after the installation of the centrifuge and all appurtenances.
3. Perform on the completed centrifuge system without sludge feed prior to startup.
4. Each unit shall be submitted to complete normal start and normal stop cycles. Each unit shall then be submitted to a 2-hour running test. At the beginning and end of the test, and at periodic intervals between, all thermometers shall be observed and recorded. The belt tension shall be adjusted at the start of the test, checked and readjusted if necessary at the end of the test. All safety devices and the differential speed control for the backdrive unit shall be checked for satisfactory operation. Instrumentation and control systems shall be checked for conformance with the specifications.
5. After approximately 1 hour of runtime, each centrifuge shall be measured for proper vibration. Vibration velocities shall not exceed 7 mm/sec RMS at the main bearings. If units exhibit vibration in excess of the limits specified, manufacturer shall adjust or modify the unit as necessary. After adjustment and/or modification, unit shall be retested to prove conformance.
6. As part of the test, each centrifuge shall be operated with water feed for a minimum of 30 minutes. At the beginning and end of the 30-minute water test, observe and record all thermometers, pressure gauges, and flow indicator readings.
7. Proposed test procedures shall be developed by the centrifuge manufacturer and submitted to the Engineer for review, comment, and approval. Testing shall not begin until the test procedures have been approved by the Engineer.
8. A qualified representative of the manufacturer shall supervise each test, analyze data, and certify the centrifuge's performance during the test.
9. Submit test log to Engineer upon completion of each test.
10. Complete and sign Manufacturer's Certificate of Equipment Installation Services, as specified in Section 01 43 33, Manufacturers' Field Services.
11. Complete successful functional testing prior to pre-performance testing.

D. Pre-Performance Test:

1. Manufacturer's representative, assisted by the installing contractor and Owner, shall conduct testing to demonstrate continuous, reliable operation, not performance, while thickening the Design Feed Sludge.
2. Centrifuge manufacturer shall notify Owner in writing at least 14 days prior to when the Pre-Performance Test will occur. Prior to any testing, the centrifuge manufacturer shall have provided complete Operation and Maintenance Manuals and conducted Pre-Startup classroom training on the centrifuges. Field training may occur during the Pre-Performance

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- Test. The Functional Test shall be successful before the Pre-Performance Test may be conducted.
3. Pre-Performance Test shall include operation of the centrifuges for a period of 5 working days (one 5-day week with 10-hour working days) without shutdown due to equipment or system failures.
  4. Stoppages due to any failure of provided equipment and instrumentation, such as the centrifuge control and VFD panel, shall not exceed 30 minutes, and such stoppages shall not number more than three over the 5-day period for all centrifuges. A greater number of stoppages or a stoppage longer than 30 minutes shall be deemed a failure of the Pre-Performance Test and the test will stop. Stoppages caused by the Owner may occur without causing failure of the test.
  5. Proposed test procedures shall be developed by the centrifuge manufacturer and submitted to the Engineer for review, comment, and approval. Testing shall not begin until the test procedures have been approved by the Engineer.
  6. A qualified representative of the manufacturer shall supervise each test, analyze data, and certify the centrifuge's performance during the test.
  7. If, in the opinion of the Engineer, the Pre-Performance Test is successful and meets the requirements specified herein, the Engineer will recommend to the Owner, by letter, the acceptance of the Pre-Performance Test and that the centrifuges may begin the Performance Test, providing other requirements for the Performance Test to begin are satisfied.
  8. Should the centrifuges be unable to achieve the Pre-Performance Test requirements as a result of failure(s) of the equipment or systems provided by the centrifuge manufacturer, the centrifuge manufacturer shall perform whatever equipment modifications are deemed necessary such that the equipment can achieve the performance specified. All modifications shall be documented and submitted to the Engineer. Following completion of the equipment modifications, the Pre-Performance Test shall be run again in its entirety. For any Pre-Performance Test performed after the first Pre-Performance Test that are needed due to failure(s) of the equipment or systems provided by the centrifuge manufacturer, the centrifuge manufacturer shall pay for the Owner and Engineer to observe the Pre-Performance Test. This cost will be \$3,000 for the Engineer and \$3,000 for the Owner for each additional Pre-Performance Test, regardless of the length of the test.
  9. For the initial and any subsequent Pre-Performance Tests, the costs for polymer, power, feed sludge, and solids disposal shall be borne by the Owner. Centrifuge manufacturer shall be responsible for recommending the Mannich polymer to use and centrifuge operational settings, and submit to the Owner at least 30 days prior to the test.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

E. Performance Test:

1. Performance testing shall be done to demonstrate the actual system operating conditions and verify that the centrifuges meet or exceed the minimum performance requirements specified in Article Performance Requirements while thickening the Design Feed Sludge stream specified in Article Service Conditions. Performance testing shall be performed at the solids loading rates specified in Article Performance Requirements.
2. Centrifuge manufacturer shall notify the Owner in writing at least 14 days prior to when the Performance Test will occur. Performance Test shall not proceed until after the Pre-Performance Test is successfully concluded.
3. Manufacturer's representative, assisted by the installing contractor and Owner, shall startup and operate each centrifuge on the sludge stream specified herein, for a period of 8 hours per day for 2 days, with no interruptions allowed during the 8-hour period. All centrifuge operations and associated manufacturer's field services required to adjust machine settings shall be performed prior to and exclusive of the above specified performance test duration.
4. Proposed test procedures shall be developed by the centrifuge manufacturer and submitted to the Engineer for review, comment and approval. Testing shall not begin until the test procedures have been approved by the Engineer.
5. A qualified representative of the manufacturer shall supervise each test, analyze data, and certify the centrifuge's performance during the test.
6. Steady state operation at the specified sludge feed solids rates shall be maintained throughout the test and all hourly quantities shall be the average during the test period. The centrifuge shall maintain acceptable performance while thickening feed sludge with properties within plus or minus 10 percent of the specified criteria listed in Article Service Conditions.
7. During each performance test, take measurements and collect all required samples for analysis in order to make the following determinations:
  - a. Sludge Feed Rate: gpm.
  - b. Sludge Feed Concentration: The total dry solids concentration of the feed sludge entering the centrifuge (percent TS).
  - c. Thickened Solids Concentration: The total dry solids concentration of the thickened solids discharged from the centrifuge (percent TS). Take two duplicate samples per sample interval.
  - d. Centrate Concentration: The total suspended solids concentration of the centrate discharged from the centrifuge (percent TSS).
  - e. Solids Capture: Percent.
  - f. Feed Hydraulic Loading Rate (Exclusive of Polymer): gpm.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- g. Feed Solids Loading Rate (Exclusive of Polymer): lbs/hr of total dry solids.
        - h. Polymer Feed Rate: gpm.
        - i. Polymer Dose: Pounds active per dry ton of feed solids.
- 8. Collect samples at approximate 1 hour intervals.
- 9. Variations in sludge feed characteristics
  - a. Make compensating calculations for the effects if feed sludge characteristics are not within the ranges specified herein. Provide supporting data to be considered by the Engineer in determining conformance with the specified design conditions. The Engineer will be sole judge of conformance with performance testing requirements.
  - b. If retesting to document compliance is required due solely to feed sludge characteristics outside of the specified range, The Owner may waive retesting or may compensate the Supplier for reasonable costs to witness retesting at the Owner's sole option.
- 10. Performance will be based upon the arithmetic average of the test results obtained during the test period. The Owner reserves the right to discard obviously high or low erroneous test results. As specified below, laboratory testing will be performed by the Owner. Turnaround time for thickened solids concentration samples are approximately 24 hours. Performance results shall be based on the laboratory standard methods results.
- 11. Prepare a formal test report including all laboratory analysis reports, all measured flows, the mass balance calculations, and the percent capture. Six copies of the final report shall be submitted to the Engineer within 20 days after completion of the test.
- 12. In the event that a centrifuge does not meet the requirements of the specifications during the performance test, the representative of the manufacturer shall make such changes in the equipment and methods of operation as deemed necessary and as approved by the Engineer. The necessary adjustments shall be made as soon as practical, but within a period not to exceed 30 days. Following the adjustments, make a second test run similar to the first run. In the event that the centrifuge still does not achieve specified performance during the second test, then the equipment will be subject to rejection. The centrifuge manufacturer shall retain responsibility for the centrifuges until the acceptance test has been successfully completed. However, after initial startup the Owner shall have the right to use the centrifuge as needed to process sludge.
- 13. If, after a maximum of two test runs, in the opinion of the Engineer, a centrifuge meets the performance requirements specified herein, the Engineer will recommend the acceptance of the centrifuge. If, in the opinion of the Engineer, the performance test results do not meet the

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

requirements specified herein, the Engineer will notify the centrifuge manufacturer and the Owner of the nonacceptable performance.

14. The cost of all laboratory tests necessary to confirm the sludge characteristics for the initial performance test on a centrifuge will be borne by the Owner. All laboratory tests for performance testing shall be performed by the Owner in conformance with the applicable portions of standard methods. If retesting is required, the centrifuge manufacturer shall pay the Owner for all laboratory tests subsequent to the initial test.
15. Mannich polymer used shall be as recommended by the centrifuge manufacturer. Polymer costs for initial testing and for one retest shall be borne by the Owner. Polymer costs for all subsequent testing required shall be the responsibility of the centrifuge manufacturer unless the retesting is a result of other equipment failure or the Owner. Polymer costs for operation of the centrifuges after successful performance testing shall be borne by the Owner.
16. The cost of power, water, feed sludge, and disposal shall be borne by the Owner.

F. Optimization Testing:

1. Optimization Testing shall not begin until 6 weeks after successful completion of the Performance Test on the Design Feed Sludge stream.
2. A qualified representative of the manufacturer, assisted by the Owner, shall operate the centrifuges on the Design Feed Sludge stream and optimize machine settings to maximize thickened solids concentration while maintaining acceptable centrate capture efficiency, dry solids throughput rate, and polymer dose. Optimization period shall be 15 working days.
3. The performance targets for this testing are indicated in the table in Article Performance Requirements, as Enhanced Performance Targets.
4. Proposed test procedures shall be developed by the centrifuge manufacturer and submitted to the Engineer for review, comment, and approval. Testing shall not begin until the test procedures have been approved by the Engineer.
5. A qualified representative of the manufacturer shall supervise the testing, analyze data, and provide a report summarizing trials, measured performance, and recommendations.
6. During optimization testing, take measurements as specified for performance testing, collecting samples at approximately 2-hour intervals, or when operation has stabilized at each trial condition.
7. The cost of all laboratory tests will be borne by the Owner. All laboratory tests for performance testing shall be performed by the Owner in conformance with the applicable portions of standard methods.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

8. Emulsion polymer used shall be as recommended by the centrifuge manufacturer. Polymer costs shall be borne by the Owner.
9. The cost of power, water, feed sludge, and disposal shall be borne by the Owner.

G. Manufacturer's Field Services:

1. Manufacturer's Authorized Representative: Present at Work site or classroom designated by the Owner, for the minimum person-days listed below, travel time excluded. A minimum of four trips shall be required.
2. Minimum services to include:
  - a. 4 person-days for installation assistance, inspection, and certification of installation.
  - b. 3 person-days for functional testing.
  - c. 3 person-days for prestartup classroom or jobsite training.
  - d. 5 person-days for pre-performance testing.
  - e. 5 person-days for performance testing and operator training during facility startup.
  - f. 15 person-days for optimization testing (optional).
  - g. 5 person-days for post-startup training within 1 year of initial startup.
3. Manufacturer shall video-record all classroom training sessions and provide original video-recordings and three copies of recordings on CD or DVD.
4. The periods stated above are minimums only and the manufacturer is required to be onsite for all of the functions listed above to the extent that is required to complete those functions to the satisfaction of the Owner and Engineer.
5. For additional field services regarding the VFDs, see Section 26 29 23, Low-Voltage Variable Frequency Drive System.

**PART 1 GENERAL**

**1.01 GENERAL REQUIREMENTS**

- A. Contractor shall furnish dry-pit chopper pump, appurtenances, and mixing nozzles as specified. Pump shall be specifically designed to pump digested sludge at high concentrations without plugging or dewatering of solids. Materials shall be chopped/macerated and conditioned by pump as an integral part of pumping action. Mixing nozzles shall be of a suitable material for handling abrasive material and shall be designed to operate without plugging.

**1.02 INTENT OF SECTION**

- A. This section covers supply, delivery, site storage, installation, testing and placement into operation of pumping equipment and includes motors, drives,

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

control equipment, supports, and all appurtenances necessary for an operating system.

- B. Provide all pumps of similar design from one manufacturer.
- C. Pumps and mixing nozzles shall be from the same manufacturer.

1.03 SUBMITTALS

A. Action Submittals:

- 1. Shop Drawings:
  - a. General layout of each set of pumps complete with motor and drive showing anchor bolt locations, casing position, direction of rotation and electric motor terminal box location.
  - b. Cross-sectional details of each pump and pump seal with complete cross-referenced materials list.
  - c. Baseplate and structural steel base, complete with anchor bolt details.
  - d. Certified, characteristic curves including head, capacity, efficiency, net positive suction head and horsepower.
  - e. Details of impeller size, pump rpm, and solid sphere passing capacity.
  - f. Dimensional drawings of motors and drives, including full output power, rpm, and slip.
  - g. Seal lubricating and cooling water requirements.
  - h. Electrical wiring diagrams.
  - i. Details of storage and offloading requirements.
  - j. Sample warranty.
  - k. Motor information as specified in Section 26 22 00, Low Voltage Transformers.
  - l. Product data for mixing nozzles
  - m. General layout of nozzle assemblies inside the existing digesters
- 2. Anchorage and bracing Drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.
- 3. Reference installation list as described in this section. Provide contact name and telephone number for each installation provided.

B. Informational Submittals:

- 1. Operation and Maintenance Data: As specified in Section 01 78 23, Operation and Maintenance Data.
- 2. Quality Control Submittals:
  - a. Performance affidavit.
  - b. Certified, nonwitnessed, shop test results for all pumps.
  - c. Manufacturer's installation manuals.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. List of recommended spare parts with current prices and anticipated delivery times.
- e. Certificate of proper installation.
3. Anchorage and bracing Drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.
4. Manufacturer's recommended spare parts list.

1.04 QUALIFICATIONS

- A. Manufacturer must have experience with installation of chopper pumps in similar service applications.

1.05 QUALITY ASSURANCE

- A. Provide manufacturer's standard warranty and a performance affidavit for equipment to be furnished in accordance with this Specification.

**PART 2 PRODUCTS**

2.01 MANUFACTURERS

A. General:

1. The following specifications do not purport to cover all details entering into the design of pumping units required, but rather to call attention to certain special features.
2. Provide workmanship, materials, and methods of construction that conform to best practice and highest standard of the industry.
3. Supply and install units complete in all particulars and ready for operation.
4. Design and proportion all parts to have liberal strength, stability, stiffness, and to be specially adapted to the conditions of service.
5. Tailor pump capacities and impeller diameters to actual pump speeds imparted by pump drives and belts.
6. Provide pumping units that satisfy the performance specified for the service indicated. Pumps may be certified on water; however, pumps will not be accepted until performance specified is demonstrated on the service indicated.

B. Manufacturers:

1. Vaughan Company, Inc.
2. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 SERVICE CONDITIONS

A. Axial Mixing Pumps:

1. Quantity: Ten, nine installed, one shelf spare.
2. Type: Chopper pump.
3. Design Flow: 4,400 gpm.
4. Total Dynamic Head: 26 feet.
5. Discharge size: 12-inch
6. Motor: 60 hp, 1,800 rpm, 480V, three-phase, 60-Hz.
  - a. Constant Speed.
  - b. Side-mounted with belt drive system.
7. Solids Concentration: 3.0 percent to 3.5 percent TS.

B. Digester Mix Pumps:

1. Quantity: Nine.
2. Type: Chopper pump.
3. Design flow: 2,200 gpm.
4. Total Dynamic Head: 20 feet.
5. Discharge size: 10-inch.
6. Motor: 25 hp, 1,800 rpm, 480V, three-phase, 60-Hz.
  - a. Constant Speed.
  - b. Overhead-mounted with belt drive system.
7. Solids Concentration: 3.0 percent to 4.0 percent TS.

C. Digester Recirculation Pumps:

1. Quantity: Six.
2. Type: Chopper pump.
3. Design flow: 550 gpm.
4. Total Dynamic Head: 58 feet.
5. Discharge size: 6-inch.
6. Motor: 20 hp, 1,800 rpm, 480V, three-phase, 60-Hz.
  - a. Constant Speed.
  - b. Overhead-mounted with belt drive system.
7. Solids Concentration: 3.0 percent to 3.5 percent TS.

D. Mixing Nozzles:

1. Quantity: 36.
2. Design Flow: 1,100 gpm per nozzle.
3. Diameter: As shown on Drawings.
4. Solids Concentration: 3.0 percent to 3.5 percent.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.03 PUMP CONSTRUCTION

A. Casing and Back Pull-Out Adapter Plate:

1. Casing: Semi-concentric design, with first half of circumference being cylindrical beginning after the pump outlet, and the remaining circumference spiraling outward to the 125-pound flanged centerline discharge.
2. Back Pull-out Adapter Plate: Shall allow removal of pump components from above casing and allow external adjustment of impeller-to-cutter clearance.
3. Casing and adapter plate shall be ASTM A536 ductile cast iron with all water passages to be smooth, and free of blowholes and imperfections for good flow characteristics.

B. Impeller:

1. Semi-open chopper type.
2. Chopping/maceration of materials must be accomplished by action of the curved, cupped and sharpened leading edges at bottom of impeller blades as they move across cutter bar, creating a smooth efficient slicing effect.
3. Pump-out vanes must be provided across entire diameter of impeller on backing plate in order to reduce pressure in seal area, and to draw lubricant down from reservoir should seal leakage occur.
4. Either threaded in place or held in place with a key and shall have no axial adjustments or set screws, and shall not extend past the cutter bar.
5. ASTM A148 cast alloy steel and heat treated to a minimum 60 Rockwell C Hardness, and dynamically balanced.

C. Cutter Bar:

1. Shall be single cast component recessed into pump bowl with a funnel shaped inlet opening.
2. As a part of the casting, segment bars shall extend inwardly, to within 0.010 to 0.060 inch of the cutter nut.
3. Set clearance between cutter bar and impeller shall be adjustable to 0.010 inch to 0.015 inch.
4. ASTM A148 cast alloy steel and heat treated to a minimum 60 Rockwell C Hardness.

D. Upper Cutter Assembly:

1. Impeller pump-out vanes shall be specially modified to shear against upper cutter assembly mounted into back side of casing, in order to

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

eliminate buildup of hair, or other stringy material in seal area or between impeller and pump casing.

2. No more than two cutting anvils to minimize potential for binding.
3. The upper cutter teeth are positioned as closely as possible to the center of shaft rotation to minimize cutting torque and nuisance motor tripping. The ratio of upper cutter cutting diameter to shaft diameter in the upper cutter area of the pump shall be 3.6 or less.
4. AISI 8620 alloy steel case hardened to a minimum 60 Rockwell C Hardness.

E. Cutter Nut:

1. Use to affix impeller to shaft and to eliminate binding or wrapping of stringy materials at pump inlet.
2. Shall consist of hex head sufficiently sized for ease of removal, and shall include integral cast anvil which shears against adjacent surface of segment bars on cutter bar.
3. AISI 8620 alloy steel case hardened to a minimum 60 Rockwell C Hardness.
4. Alternatively pumps 8 inch and larger to utilize an external cutter which shall consist of opposing cutter wings which shear against the outside surface of the shear bars and the anvil, an integral cast tooth which shears against the adjacent surface to the shear bars and a hex head sufficiently sized for ease of removal.

F. Pump Shafting:

1. Pump shaft and impeller shall be supported by ball bearings.
2. AISI 4140 heat treated steel.
3. Minimum diameter of 1-1/2 inches to minimize deflection during solids chopping.

G. Bearing Housing:

1. ASTM A536 ductile cast iron and machined with piloted bearing fits for concentricity of all components.
2. Piloted motor mount shall firmly align motor on top of bearing housing.

H. Thrust Bearings:

1. Shaft thrust in both directions shall be taken up by two back-to-back mounted single-row angular contact ball bearings.
2. Overhang from centerline of lower thrust bearing to seal faces shall be a maximum of 1.2 inches.
3. Shall be oil bath lubricated in bearing housing by ISO Grade 46 turbine oil, with a minimum B-10 life rated 100,000 hours.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

I. Pump Mechanical Seal:

1. Provide to isolate bearings from pumped media.
2. Shall be fitted with tungsten carbide seal faces to provide long life expectancy in the presence of grit and abrasive solids.
3. Seal shall ride on Type 316 stainless steel shaft sleeve with seal tension held by three set screws.
4. Seal shall be tested for flatness within two helium light bands under a helium light source and optical flat.
5. Single-spring rubber bellows-type mechanical seals are unacceptable.
6. Seal shall not require external seal water to pump lubrication system.

J. Automatic Oil Level Monitor:

1. Mount oil level switch at top of wet well, with hose feeding down to the side of bearing housing to detect oil level and shut off motor in event of low oil level.
2. Include sensitive relay for mounting in motor control panel.

K. Shaft Coupling:

1. Submersible motor shall be close coupled directly to pump shaft using solid sleeve coupling that is keyed to both pump and motor shaft.
2. Slip clutches and shear pins between shaft and motor are unacceptable.

L. Stainless Steel Nameplates: Attach to pump and drive motor giving manufacturer's model and serial number, rated capacity, head, speed and all pertinent data.

M. Base:

1. Support pump and motor on fabricated steel base with adequate grout holes.
2. Provide machined mounting surfaces for pump and motor.
3. For belt driven pump furnish adjustable brackets to support overhead or side-mounted motor.
4. Sheaves and belts shall be sized for 1-1/2 times the rated horsepower of the motor.
5. Provide OSHA-approved guard for pump drive system.

N. Venting: An automatic venting system shall be provided to vent the pump casing prior to startup. The automatic venting system shall have an upstream isolation ball valve to isolate the air relief system. For a top-discharge configuration, the vent shall be two-in NPT and tapped into the piping provided by the Contractor and the Shop Drawings shall clearly show this requirement including installation of a suitable valve. For a side-discharge

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

configuration, the vent shall be through a 1/2-inch NPT threaded connection on the side of the pump casing and an increaser for a 2-inch pipe. The Shop Drawings shall clearly show that the Contractor connects to the increaser with a suitable valve. For either type of pump casing, the discharge may be to either drain piping or back to the tank being mixed as shown on Drawings.

2.04 ELECTRIC MOTOR

- A. Provide motor in accordance with Section 26 20 00, Low-Voltage Induction Motors.

2.05 SURFACE PREPARATION AND PAINTING

- A. All wetted parts shall be SSPC-SP5 white metal sandblast.
- B. Finish coat all surfaces with a total of 4-mil minimum dry film thickness of stainless steel pigment epoxy top coat, or approved equivalent.

2.06 CONTROL PANEL

- A. Pump shall be controlled from a local NEMA 4X control panel.

2.07 NOZZLES

- A. Nozzles shall be constructed of ASTM A536 Glass-lined cast ductile iron with a minimum 1.0-inch wall thickness to protect against abrasive conditions and a long straight taper length of at least 12 inches.

2.08 SOURCE QUALITY CONTROL

- A. Factory Tests and Adjustments: Test all equipment actually furnished.
- B. Factory Test Report: Include test data sheets, curve test results, performance test logs, certified correct by a registered professional engineer.
- C. Functional Test: Perform manufacturer's standard test on equipment. Functional test shall be run for at least 30 minutes with an operating head (TDH) within 10 percent of the design point.
  - 1. Adjust, realign, or modify units and retest in accordance with Hydraulic Institute Standards if necessary.
- D. Motor Test: See Section 26 20 00, Low-Voltage AC Induction Motors.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 3 EXECUTION**

3.01 FIELD QUALITY CONTROL

- A. Field test pump in presence of Engineer or Owner's representative to demonstrate that installation is correctly completed and each pump is operating satisfactorily without vibration or cavitation.
- B. Field test shall be supervised by pump manufacturer's representative.
- C. Engineer requires 72 working hours written notice prior to such tests.
- D. Field test pump with water prior to or during testing of process equipment. Perform second field test on specified service fluid during initial process startup.
- E. Supply required metering devices and gauges necessary to demonstrate pump performance. Supply and install gauge connections as required.
- F. Test results must be properly documented and presented to Engineer.
- G. Successful field tests done on water shall not constitute acceptance of pumping unit. Pump will be accepted only after successful performance tests on specified service.

3.02 MANUFACTURERS SERVICES

- A. See Section 01 43 33, Manufacturers' Field Services, and Section 01 91 14, Testing, Integration, and Startup, for more requirements.
- B. Manufacturer's Representative: Present at Site for minimum person-days listed below, travel time excluded:
  - 1. 3 person-days for installation assistance and inspection.
  - 2. 3 person-days for functional and performance testing and completion of Manufacturer's Certificate of Proper Installation.
  - 3. 1 person-day for prestartup classroom or site training.
  - 4. 1 person-day for facility startup.
  - 5. 1 person-day for post-startup training of Owner's personnel. Training shall not commence until accepted lesson plan for each training activity has been reviewed by Owner and Engineer.

**1.01 REFERENCES**

A. The following is a list of standards which may be referenced in this section:

1. American Bearing Manufacturers' Association (ABMA):
  - a. 9, Load Ratings and Fatigue Life for Ball Bearings.
  - b. 11, Load Rating and Fatigue Life for Roller Bearings.
2. American Society of Mechanical Engineers (ASME):
  - a. B16.1, Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.
  - b. B106.1, Design of Transmission Shafting.
3. ASTM International (ASTM): A48/A48M, Standard Specification for Gray Iron Castings.
4. Department of Defense (DoD) Test Method Standard: MIL STD 167, Mechanical Vibrations of Shipboard Equipment.
5. Hydraulic Institute Standards (HIS):
  - a. 9.6.4, Rotodynamic Pumps for Vibration Measurements and Allowable Values.
  - b. 11.6, Rotodynamic Submersible Pumps for Hydraulic Performance, Hydrostatic Pressure, Mechanical, and Electrical Acceptance Tests.
6. National Electrical Manufacturer's Association (NEMA): MG 1, Motors and Generators.
7. Occupational Safety and Health Administration (OSHA).
8. ISO 1940 Balance Quality Requirements of Rigid Rotors.

**1.02 DEFINITIONS**

A. Terminology pertaining to pumping unit performance and construction shall conform to the ratings and nomenclature of the Hydraulic Institute Standards.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 SUBMITTALS

A. Action Submittals:

1. Shop Drawings:
  - a. Make, model, weight, and horsepower of each pump assembly.
  - b. Complete pump and motor catalog information, descriptive literature, specifications, and identification of materials of construction.
  - c. Plan and section dimensional outline drawings of the pumps and motors identifying all components, anchor bolts, external connections, and appurtenances.
    - 1) Include all components identified with quantity, part name and corresponding materials of construction complete with ASTM designation on sectional drawings.
  - d. Performance data curves showing head, capacity, horsepower demand, net positive suction head required (NPSHR), and pump efficiency over entire operating range of pump, from shutoff to maximum capacity.
    - 1) Include the pump's preferred operating range (POR) and the manufacturer's defined maximum allowable operating range (AOR) for continuous steady state service on performance curves.
    - 2) Indicate separately head, capacity, horsepower demand, NPSHR, and overall efficiency required at the AOR's minimum and maximum continuous stable flow conditions and at the Rated Conditions and at Secondary Conditions (if applicable).
  - e. For variable speed motors, provide performance data curves for 50, 60, 70, 80, and 90 percent of nominal speed.
  - f. Certified detail structural, mechanical, and electrical drawings showing equipment dimensions, arrangement, assembly, including locations and type of connections and weights of major equipment and components.
  - g. Lateral and torsional critical speed analysis.
  - h. Structural response frequency analysis.
  - i. Power and control wiring diagrams, including terminals and numbers.
  - j. Complete motor nameplate data, as defined by NEMA, motor manufacturer, and including any motor modifications.
  - k. Factory finish system.
  - l. Bearing life calculation confirming compliance with L10 bearing life requirement.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- m. Seismic anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals:

1. Seismic anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
2. Manufacturer's design analyst qualifications.
3. Special shipping, storage and protection, and handling instructions.
4. Manufacturer's printed installation instructions.
5. Manufacturer's Certificate of Compliance, in accordance with Section 01 61 00, Common Product Requirements, that factory finish system is identical to requirements specified herein.
6. Factory functional and performance test reports and log.
7. Field vibration and performance test reports and log.
8. Manufacturer's Certificate of Proper Installation, in accordance with Section 01 43 33, Manufacturers' Field Services.
9. Suggested spare parts list to maintain equipment in service for period of 1 year and 5 years. Include a list of special tools required for checking, testing, parts replacement, and maintenance with current price information.
10. List special tools, materials, and supplies furnished with equipment for use prior to and during startup and for future maintenance.
11. Operation and Maintenance Data as specified in Section 01 78 23, Operation and Maintenance Data.

1.04 EXTRA MATERIALS

A. Furnish for each set of pumps:

1. One complete set bearings.
2. One complete set gaskets and O-ring seals.
3. One complete set of shaft sleeves.
4. One complete set keys, dowels, pins, etc.
5. One complete mechanical seal.
6. One impeller.
7. One impeller shaft.
8. One set of impeller and casing wear rings.
9. One complete set of any special tools required to dismantle pump.

## **PART 2 PRODUCTS**

### **2.01 GENERAL**

- A. Provide a complete, coordinated, and fully functional operating system.
- B. Coordinate pump requirements with motor manufacturer and be responsible for pump and motor requirements.
- C. Where variable speed drives are required, furnish a coordinated operating system complete with pump, motor, and variable speed controller. See Section 26 29 23, Low-Voltage Variable Frequency Drive System.
- D. Pumps supplied under this section to be a standard product of manufacturer and to have proven reliability.
- E. Provide a complete lateral and torsional critical speed analysis of each pump-motor rotating assembly and structural analysis of complete pump and motor assembly performed by pump manufacturer or qualified third party.
  - 1. Analyst Qualifications: Experienced in performing analyses for pump and motor units of comparable size and complexity.
  - 2. Prepare a written report for each completed analysis documenting analysis and calculation procedures.
  - 3. Submit results of each analysis for review and acceptance prior to pump and motor fabrication.
- F. Lateral Analysis:
  - 1. Identify lateral critical speeds for both pump and motor shafts.
  - 2. Include both dry and wet impeller cases.
  - 3. Provide a critical speed map demonstrating that a critical speed does not occur below 1.25 times the maximum rated speed of the pump and motor and does not occur between 0.75 times the blade pass frequency associated with the minimum speed of the pump and 1.25 times the blade pass frequency associated with the maximum specified speed of the pump.
  - 4. Calculate the damped vibration response to unbalance for the shafts and compare to applicable specified requirements to verify acceptable vibration amplitudes.
- G. Torsional Analysis:
  - 1. Calculate system torsional natural frequencies, corresponding mode shapes, and steady-state and transient torsional response.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Provide an interference diagram demonstrating the following:
  - a. No critical speeds occur between 0.80 times the minimum specified operating speed and 1.20 times the maximum rated speed of the pump and motor.
  - b. No critical speed associated with the mechanical running speed (one times shaft speed) excitation frequency occurs below 1.20 times the maximum rated operating speed.
3. Forced Response Analysis:
  - a. Perform a forced response analysis for all critical speeds determined to occur below 1.20 times the maximum rated operating speed.
  - b. Expected excitation frequencies for steady-state operation include as a minimum, but not limited to, electrical line frequency, two times electrical line frequency, current modulating frequencies produced by the variable frequency drive, mechanical running speed (one times shaft speed), two times mechanical running speed (two times shaft speed), and blade pass frequency.
  - c. Confirm that calculated steady-state and transient dynamic torsional shaft stresses are below allowable levels, such that the motor shaft, pump shaft, and associated drive train components are capable of an unlimited number of startup and shutdown cycles associated with 0 rpm up to the maximum rated speed.
  - d. Determine allowable stresses (endurance limits) for the pump and motor shafts in accordance with ASME B106.1 (Design of Transmission Shafting) or MIL STD 167, whichever is lower.
  - e. Include a factor of safety of at least two in the allowable stress levels and demonstrate stresses on a modified Goodman diagram.

H. Structural Response Frequency Analysis:

1. Perform a structural response frequency analysis for the pump and motor assembly.
2. At a minimum, model the motor, pump, and fabricated support, including any other critical components based upon mounting details shown on Drawings.
3. Confirm that the minimum structural natural frequency of the complete pump and motor assembly is a minimum of 1.25 times the maximum rated pump and motor speed, and does not occur between 0.75 times the blade pass frequency associated with the minimum speed of the pump and 1.25 times the blade pass frequency associated with the maximum specified speed of the pump.
4. Verification of calculated natural frequencies of the pump and motor assembly shall be performed by pump manufacturer, or pump

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

manufacturer's authorized representative, when unit is fully installed at the Project Site.

2.02 SUPPLEMENTS

- A. Specific service, performance, and design requirements are attached to this section as supplements.

2.03 EQUIPMENT

A. Pump:

1. Heavy-duty, solids handling, non-clog, dry pit design.
2. Configuration: See Supplements.
3. See Drawings for pump orientation and rotation.
4. Continuously rising head-capacity curve from runout to shutoff.
5. Designed to operate continuously at any point on specified operating range of performance curve without cavitation, overheating, or excessive vibration.
6. Motor nameplate horsepower rating not to be exceeded by pump brake horsepower required at any point on nominal pump performance curve.

B. Casing:

1. Back pullout design allowing for removal of rotating element without disturbing piping connections.
2. Heavy wall, one-piece volute construction with integral flanged discharge flange and smooth fluid passages. Provide drilled and tapped volute priming and drain connections.
3. Wear ring securely fastened to casing (or suction cover) with recessed stainless steel screws.
4. Provide handhole for cleanout purposes at volute centerline located to provide access to interior of pump.
5. Flanges:
  - a. Conform to ASME B16.1, Class 125-pound, flat face standard.
  - b. Provide 1/2-inch gauge connection drilled and tapped in discharge flange.
6. Diffusion vanes or stationary guides are not allowed.

C. Suction Cover (Fronthead):

1. Single-piece construction designed to provide even flow to impeller eye.
2. Flanged connection conforming to ASME B16.1, Class 125-pound, flat face standard.
3. Machine register fitted to casing.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

D. Stuffing Box Cover (Backhead):

1. Single-piece construction designed with integral stuffing box suitable for use of either conventional packing or mechanical seal. Drilled and tapped 3/4-inch drain connection and large openings to allow easy access to stuffing box.
2. Designed for installation of a minimum of five rings of packing and a split type lantern ring and a split type gland follower. Provide stuffing box with 1/4-inch minimum drilled and tapped connection for injection or venting of the stuffing box.
3. Machine register fitted to casing.

E. Bearing Frame and Bearings:

1. Removable, single-piece construction.
2. Machined for accurate bearing alignment and completely enclosing shaft between bearings.
3. Provide with retainer covers on inboard and outboard ends of frame equipped with lip-type grease seals to prevent entrance of contaminants.
4. Single or double row bearings at inboard and outboard ends designed to take radial, weight, and thrust loads of pump and associated shafting loads. Bearings to be designed for an L10 life in accordance with ABMA at best efficiency point.
5. Provide jacking screws for adjustment of impeller.
6. Grease packed at factory and provided with grease fittings for bearing lubrication.

F. Impeller:

1. Single suction, enclosed, non-clogging type design with extremely smooth passageways to prevent clogging.
2. Single-piece construction.
3. Secure to shaft with stainless steel bolt, washer, and key to prevent loosening from either forward or reverse rotation.
4. Dynamically balanced to assure vibration limits for pump are not exceeded.
5. Wear ring securely fastened to impeller with recessed stainless steel screws. Impeller wear ring to be a minimum of 50 Brinell softer than suction head wear ring.

G. Shaft:

1. Accurately machined over entire length and precision ground at bearing locations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Designed to transmit full motor horsepower with a liberal safety factor to carry maximum loads imposed and to meet pump vibration requirements.
3. Provide keyways at both ends.
4. Provide renewable, hooked shaft sleeve positively secured to shaft to prevent leakage.

H. Shaft Seals:

1. Sealing system shall be mechanical seal as indicated in pump data sheet.
  2. Mechanical Seal Requirements:
    - a. Nonfretting type.
    - b. If provided, sleeves shall be Type 316 stainless steel.
    - c. Shafts for pumps specified with mechanical seals shall be furnished with no reduction in size through the seal area.
    - d. Arrangement shall allow removal of seal without disturbing pump or driver.
    - e. Seal Materials:
      - 1) Faces: Homogeneous construction. Surface treatments and plated faces are unacceptable.
      - 2) Face/Primary Ring: Silicon carbide.
      - 3) Seat/Mating Ring: Silicon carbide.
      - 4) Metals:
        - a) Loaded Parts Over 0.060-inch Cross Section: Type 316 stainless steel minimum.
        - b) Thinner Parts (springs): Hastelloy-C, Alloy 20, AMS5876 Elgiloy, or other alloy that is not vulnerable to chloride stress corrosion.
      - 5) Elastomers: Fluorocarbon Viton, preferred unless seal manufacturer recommends ethylene propylene for service conditions.
    - f. Manufacturers and Products:
      - 1) John Crane; 5610 or 5611 cartridge seal.
      - 2) Or approved equal.
- I. Pump Base: Rugged, heavy duty, with ample strength for support of entire pump and imposed static and operational loads.

2.04 ACCESSORIES

- A. Lifting Lugs: Provide suitably attached for equipment assemblies and components weighing over 100 pounds.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Equipment Identification Plates: Provide 16-gauge, Type 316 stainless steel identification plate securely mounted on each separate equipment component and control panel in a readily visible location. Plate shall bear 3/8-inch high engraved block type black enamel filled equipment identification number and letters indicated in this Specification and as shown in the Contract Documents.
- C. Anchor Bolts: Type 316 stainless steel, sized by equipment manufacturer, 1/2-inch minimum diameter, and as specified in Section 05 50 00, Metal Fabrications. Coat in accordance with Section 09 90 00, Painting and Coating.

2.05 FACTORY FINISHING

- A. Manufacturer shall prepare, prime, and finish coat in accordance with Section 09 90 00, Painting and Coating.
- B. Manufacturer's standard enamel finish.

2.06 SOURCE QUALITY CONTROL

- A. Factory Tests and Adjustments:
  - 1. Factory testing to be in accordance with the standards of the Hydraulic Institute, latest edition.
    - a. Pump Test Acceptance Grade: 2B.
  - 2. Test one pumps actually furnished. Use manufacturer's standard test motor for factory tests.
  - 3. Factory tests to include the following:
    - a. Hydrostatic testing of pump pressure containing components, to include as a minimum, pump volute, suction cover, and stuffing box cover. Test pressure to be the greater of 150 percent of rated condition or 125 percent of pressure at rated speed with discharge valve closed. Test for 3 minutes.
    - b. Performance testing of fully assembled pump, in accordance with Hydraulic Institute Standard 14.6. Performance testing to be at rated speed.
    - c. Dynamically balance rotating assembly to ISO 1940 Grade G6.3 or better prior to final assembly.
    - d. Vibration testing of fully assembled pump with the Project motor at full rated speed.
      - 1) Limits of Vibration of Fully Assembled Pump: Less than 90 percent of those established in standards of the Hydraulic Institute.
    - e. Include complete test records and performance curves certified correct by an authorized representative of the pump manufacturer of each test performed.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- f. Motor Test: See Section 26 20 00, Low-Voltage AC Induction Motors.
- g. Make necessary adjustments, realignments, and retest to bring pumps into compliance.
- h. Witnessing of factory testing shown on supplements at end of this section.

**PART 3 EXECUTION**

**3.01 INSTALLATION**

- A. Install in accordance with manufacturer's printed instructions.
- B. Level base by means of steel wedges (steel plates and steel shims). Wedge taper not greater than 1/4 inch per foot. Use double wedges to provide level bearing surface for pump and driver base. Accomplish wedging so there is no change of level or springing of baseplate when anchor bolts are tightened.
- C. Adjust pump assemblies such that driving units are properly aligned, plumb, and level with driven units and all interconnecting shafts and belts. Do not compensate for misalignment by use of flexible couplings.
- D. After pump and driver have been set in position, aligned, and shimmed to proper elevation, grout space between bottom of baseplate or pump pedestals and concrete foundation with a poured, nonshrinking grout of the proper category, as specified in Section 03 62 00, Grouting. Remove wedges after grout is set and pack void with grout.
- E. Connect suction and discharge piping without imposing strain to pump flanges.
- F. Anchor Bolts: Accurately place using equipment templates and as specified in Section 05 50 00, Metal Fabrications.

**3.02 FIELD FINISHING**

- A. Equipment as specified in Section 09 90 00, Painting and Coating.

**3.03 FIELD QUALITY CONTROL**

- A. Functional Tests:
  - 1. Conduct on each pump, system, and subsystem as specified in Section 01 91 14, Testing, Integration, and Startup.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Alignment:
  - a. Test complete assemblies for correct rotation, proper alignment and connection, and quiet operation.
  - b. Shafting manufacturer's authorized representative shall verify installation alignment and prepare and submit a report confirming compliance.
3. Flow Output: Measure using plant instrumentation and storage volumes.
4. Operating Temperatures and Vibration: Monitor bearing areas on pump and motor abnormally high temperatures or vibrations.
5. Vibration Test:
  - a. Test with units installed and in normal operation, and discharging to connected piping systems at rates between low discharge head and high discharge head conditions specified, at 20 percent speed increments over the anticipated operating speed range of the pump and with actual building structures and foundations provided.
    - 1) Confirm vibration is below 90 percent of limits specified in HIS 9.6.4.
  - b. If units exhibit vibration in excess of the limits specified adjust or modify as necessary to bring units into compliance. Units that cannot be adjusted or modified to conform as specified shall be replaced.
  - c. Provide instrumentation in current calibration to measure pump vibration at locations outlined in the Hydraulic Standards.
  - d. Prepare test report, including test records for each pump.
6. Performance Test: Conduct on each pump as specified in Section 01 91 14, Testing, Integration, and Startup.
7. Test in accordance with Hydraulic Institute Standard 1.6, Centrifugal Pump Test.
8. Perform under simulated operating conditions at full rated speed.
9. Test for a continuous 3-hour period without malfunction.
10. Test Records and Report: Prepare and submit a complete test report along with the test records in accordance with Hydraulic Institute Standard 1.6.
11. Use of plant instrumentation is allowed for tests. Provide additional instrumentation required to obtain required test data per the Hydraulic Institute.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.04 MANUFACTURER’S SERVICES

- A. Manufacturer’s Representative: Present at Site or classroom designated by Owner for minimum person-days listed below, travel time excluded:
  - 1. 2 person-days for installation assistance and inspection.
  - 2. 2 person-days for functional and performance testing and completion of Manufacturer’s Certificate of Proper Installation.
  - 3. 2 person-days for prestartup classroom or Site training.
  - 4. 1 person-day for facility startup.
  - 5. 2 person-days for post-startup training of Owner’s personnel. Training shall not commence until an accepted detailed lesson plan for each training activity has been reviewed by Owner.
  
- B. See Section 01 43 33, Manufacturers’ Field Services, and Section 01 91 14, Testing, Integration, and Startup.

3.05 SUPPLEMENTS

- A. The supplements listed below, following “End of Section,” are a part of this Specification.
  - 1. Raw Solids Feed Pumps 1, 2, and 3 Data Sheet.

1.01 REFERENCES

- A. The following is a list of standards which may be referenced in this section:
1. American Bearing Manufacturers' Association (ABMA).
  2. Hydraulic Institute Standards.
  3. National Electrical Manufacturer's Association (NEMA): MG 1, Motors and Generators.
  4. Occupational Safety and Health Administration (OSHA).

1.02 DEFINITIONS

- A. Terminology pertaining to pumping unit performance and construction shall conform to the ratings and nomenclature of the Hydraulic Institute Standards.

1.03 SUBMITTALS

- A. Action Submittals:
1. Shop Drawings:
    - a. Make, model, weight, and horsepower of each equipment assembly.
    - b. Complete catalog information, descriptive literature, specifications, and identification of materials of construction.
    - c. Performance data curves showing head, capacity, horsepower demand, and pump efficiency over entire operating range of pump from shutoff to maximum capacity. Indicate separately the head, capacity, horsepower demand, overall efficiency, and minimum submergence required at guarantee point.
    - d. Detailed mechanical, and electrical drawings showing equipment dimensions, size, and locations of connections and weights of associated equipment.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. Flywheel size, shape, materials of construction, connection to motor shaft, and enclosure.
- f. Power and control wiring diagrams, including terminals and numbers.
- g. Complete motor nameplate data, as defined by NEMA, motor manufacturer.
- h. Factory finish system data sheets.
- i. Lateral and torsional analysis for rotating assembly. Analysis report shall include the specific items as specified herein and the applicable requirements of API 610, Part 2.8, Dynamics.
- j. Anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals:

- 1. Anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
- 2. Factory functional test reports.
- 3. Manufacturer's Certificate of Compliance, in accordance with Section 01 61 00, Common Product Requirements, that factory finish system is identical to the requirements specified herein.
- 4. Special shipping, storage and protection, and handling instructions.
- 5. Manufacturer's printed installation instructions.
- 6. Suggested spare parts list to maintain the equipment in service for a period of 5 years. Include a list of special tools required for checking, testing, parts replacement, and maintenance with current price information.
- 7. List special tools, materials, and supplies furnished with equipment for use prior to and during startup and for future maintenance.
- 8. Operation and Maintenance Data: As specified in Section 01 78 23, Operation and Maintenance Data.
- 9. Manufacturer's Certificate of Proper Installation, in accordance with Section 01 43 33, Manufacturers' Field Services.

1.04 EXTRA MATERIALS

A. Furnish for each pump:

- 1. Complete set bearings.
- 2. Complete set gaskets and O-ring seals.
- 3. Complete mechanical seal.
- 4. One complete set of special tools required to dismantle pump.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Provide a complete, coordinated, and fully functional operating system. Provide each specified pumping unit. Each pumping unit shall consist of a pump, motor, moment of inertia flywheel, variable frequency drive, couplings, bases, and all appurtenances to provide a complete pumping system.
- B. The physical depiction of the pumps on Drawings represents the product of one manufacturer specified herein. The depiction of the product is not intended to confer any advantage to this product. Dimensional variations in equipment may exist between manufacturers. All costs for modifications to new piping, concrete equipment supports and pads, and electrical and instrumentation wire, cable, and conduit to accommodate pumps different than those shown on Drawings shall be the responsibility of the Contractor.
- C. Coordinate pump requirements with drive manufacturer and be responsible for pump and drive requirements.
- D. Coordinate pump and drive requirements with flywheel manufacturer and be responsible for pump, drive and flywheel requirements.
- E. Where variable speed drives are required, furnish a coordinated operating system complete with pump, flywheel, drive, and speed controller.
- F. The complete pumping unit rotational element, including pump, motor, intermediate shafting, flywheel rotors, and all other elements in the power train, shall be designed and manufactured to limit lateral and torsional vibration and stresses in accordance with the requirements in this Specification.
  1. A complete lateral and torsional critical speed analysis of each pump coupling and flywheel motor rotating assembly shall be performed by the pump manufacturer or a qualified third party. The analyst shall be experienced in performing these analyses for pump, flywheel, and motor units of comparable size and complexity as defined in the applicable specification sections and the requirements of this provision. A written report shall be submitted for each completed analysis, documenting the analysis and calculation procedures. The results of each completed analysis shall be submitted for review and acceptance prior to pump and motor fabrication. The report shall include calculations, tables, results, recommendations to achieve compliance, a plain-English Executive Summary, and sufficient graphical depictions to describe the results clearly to technical persons not conversant in rotodynamic technology.

HORIZONTAL END SUCTION  
CENTRIFUGAL PUMPS

44 42 56.10 - 3

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. The lateral analysis shall identify the lateral critical speeds for both the pump and motor shafts. The pump shaft analysis shall include both the dry and wet impeller cases. A critical speed map shall be provided demonstrating that a critical speed does not occur below 1.5 times the maximum rated speed of the pump and motor. The damped vibration response to unbalance shall be calculated for the shafts and compared to amplitudes.
3. The torsional analysis shall include calculation of the system torsional natural frequencies and corresponding mode shapes, and the steady-state transient torsional response. An interference diagram shall be provided demonstrating no critical speeds occur between 0.25 times the maximum rated operating speed of the pump. In no case shall a critical speed associated with the mechanical running speed (1 times shaft speed) excitation frequency below 1.25 times the maximum rated operating speed. A forced response analysis shall be performed for all critical speeds that have been determined to occur below 1.25 times the maximum rated operating speed of the pump and motor. The expected excitation frequencies for steady-state operation shall include, but not be limited to, electrical line frequency, two times the electrical line frequency, current modulating frequencies produced by the variable frequency drives, mechanical running speed (1 times shaft speed), two times mechanical running speed (2 times shaft speed), and blade pass frequency. The calculated steady-state and transient dynamic torsional shaft stresses and coupling torques shall be shown to be below allowable levels such that the motor shaft, pump shaft, and associated drive train components are capable of an unlimited number of startup and shutdown cycles associated with 0 rpm up to the maximum rated pump speed. The allowable stresses (endurance limits) for the pump and motor shafts shall be determined in accordance with ASME B106.1 (Design of Transmission Shafting) or MIL STD 167. A factor of safety of at least 2 shall be included in the allowable stress levels. The allowable dynamic torque in the couplings shall be in accordance with the coupling manufacturer's requirements.

2.02 SUPPLEMENTS

- A. Some specific requirements are attached to this section as supplements.

2.03 SPECIAL FEATURES AND ACCESSORIES

- A. Moment of Inertia Flywheels:
  1. Pumps 94-P-01, 94-P-02, and 94-P-03 shall be equipped with flywheels. See the attached datasheet at the end of this section for flywheel sizing.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. The flywheel shall be designed by the motor and pump manufacturer to insure compatibility of rotating parts.
3. Motor shafts, bearings, pumps, and variable frequency drives shall be coordinated and designed to accommodate moment of inertia flywheels.
4. Each flywheel shall have a minimum moment of inertia of 400 pounds per square foot.
5. The flywheel shall be attached to the motor or pump as recommended by the pump manufacturer. Minimize laying length of the pump, motor, and flywheel assembly so that the flywheel and associated bearings adds no more than 24 inches to the assembly laying length.
6. Flywheels shall be made of the material specified on the attached datasheet. Welded parts shall be stress relieved after fabrication. The flywheel hub shall be shrink fitted to the shaft and secured with key and keyway set screws.

2.04 ACCESSORIES

- A. Equipment Identification Plate: 16-gauge stainless steel with 1/4-inch die-stamped equipment tag number securely mounted in a readily visible location.
- B. Lifting Lugs: Equipment weighing over 100 pounds.
- C. OSHA-approved coupling guard for direct coupled or belt driven pumps.
- D. Anchor Bolts: Type 316 stainless steel, sized by equipment manufacturer, and as specified in Section 05 50 00, Metal Fabrications.

2.05 FACTORY FINISHING

- A. Prepare, and prime, coat in accordance with Section 09 90 00, Painting and Coating.

2.06 SOURCE QUALITY CONTROL

- A. Factory Inspections: Inspect control panels for required construction, electrical connection, and intended function.
- B. Factory Tests and Adjustments: Test all equipment and control panels actually furnished.
- C. Factory Test Report: Include test data sheets, certified correct by a registered professional engineer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Functional Test: Perform manufacturer's standard, motor test on equipment. Include vibration test, as follows:
1. Dynamically balance rotating parts of each pump and its driving unit before final assembly.
  2. Limits:
    - a. Driving Unit Alone: Less than 80 percent of NEMA MG 1 limits.
    - b. Complete Rotating Assembly Including Coupling, Drive Unit, and Motor: Less than 90 of limits established in the Hydraulic Institute Standards.
- E. Performance Test:
1. Conduct on each pump.
  2. In accordance with Hydraulic Institute Standards.
  3. Adjust, realign, or modify units and retest in accordance with Hydraulic Institute Standards if necessary.
- F. Motor Test: See Section 26 20 00, Low-Voltage AC Induction Motors.
- G. Hydrostatic Tests: Pump casing(s) tested at 150 percent of shutoff head. Test pressure maintained for not less than 5 minutes.

**PART 3 EXECUTION**

**3.01 INSTALLATION**

- A. Install in accordance with manufacturer's printed instructions.
- B. Level base by means of steel wedges (steel plates and steel shims). Wedge taper not greater than 1/4 inch per foot. Use double wedges to provide a level bearing surface for pump, flywheel and driver base. Accomplish wedging so there is no change of level or springing of baseplate when anchor bolts are tightened.
- C. Adjust pump assemblies such that the flywheel and driving units are properly aligned, plumb, and level with the driven units and all interconnecting shafts and couplings. Do not compensate for misalignment by use of flexible couplings.
- D. After pump, flywheel and driver have been set in position, aligned, and shimmed to proper elevation, grout the space between the bottom of the baseplate and the concrete foundation with a poured, nonshrinking grout of the proper category, as specified in Section 03 62 00, Grouting. Remove wedges after grout is set and pack void with grout.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Connect suction and discharge piping without imposing strain to pump flanges.
- F. Anchor Bolts: Accurately place using equipment templates and as specified in Section 05 50 00, Metal Fabrications.

3.02 FIELD FINISHING

- A. Finish equipment as specified in Section 09 90 00, Painting and Coating.

3.03 FIELD QUALITY CONTROL

- A. Functional Tests: Conduct on each pump.
  - 1. Alignment: Test complete assemblies for correct rotation, proper alignment and connection, and quiet operation.
  - 2. Vibration Test:
    - a. Test with unit installed and in normal operation, and discharging to the connected piping systems at rates between low discharge head and high discharge head conditions specified, and with actual building structures and foundations provided shall not develop vibration exceeding 80 percent of the limits specified in HIS 9.6.4.
    - b. If units exhibit vibration in excess of the limits specified, adjust or modify as necessary. Replace units which cannot be adjusted or modified to conform as specified.
  - 3. Flow Output: Measured by plant instrumentation and storage volumes.
- B. Operating Temperatures: Monitor bearing areas on pump, flywheel, and motor for abnormally high temperatures.
- C. Performance Test:
  - 1. Conduct on each pump.
  - 2. In accordance with Hydraulic Institute Standards.

3.04 MANUFACTURER'S SERVICES

- A. Manufacturer's Representative:
  - 1. Present at Site or classroom designated by Owner, for minimum person-days listed below, travel time excluded:
    - a. 2 person-days for installation assistance and inspection.
    - b. 1 person-day for functional and performance testing and completion of Manufacturer's Certificate of Proper Installation.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. 1/2 person-day for pre-startup classroom or Site training.
  - d. 1 person-day for facility startup.
  - e. 1/2 person-day for post-startup training of Owner's personnel.
- B. See Section 01 43 33, Manufacturers' Field Services, and Section 01 91 14, Testing, Integration, and Startup.

3.05 SUPPLEMENTS

- A. The supplement listed below, following "End of Section," is a part of this Specification.
- 1. Centrate Pumps 1, 2, 3 Data Sheet.

**PART 1 GENERAL**

**1.01 REFERENCES**

A. The following is a list of standards which may be referenced in this section:

1. American Bearing Manufacturers' Association (ABMA).
2. Hydraulic Institute Standards (HIS).
3. National Electrical Manufacturer's Association (NEMA): MG 1, Motors and Generators.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.02 DEFINITIONS

- A. Terminology pertaining to pumping unit performance and construction shall conform to the ratings and nomenclature of the Hydraulic Institute Standards.

1.03 SUBMITTALS

A. Action Submittals:

1. Shop Drawings:
  - a. Make, model, weight, and horsepower of each equipment assembly.
  - b. Complete catalog information, descriptive literature, specifications, and identification of materials of construction.
  - c. Performance data curves showing head, capacity, horsepower demand, and pump efficiency over the entire operating range of the pump, from shutoff to maximum capacity. Indicate separately the head, capacity, horsepower demand, overall efficiency, and minimum submergence required at the guarantee point.
  - d. Detailed mechanical, and electrical drawings showing the equipment dimensions, size, and locations of connections and weights of associated equipment.
  - e. Power and control wiring diagrams, including terminals and numbers.
  - f. Complete motor nameplate data, as defined by NEMA, motor manufacturer, and including any motor modifications.
  - g. Factory finish system.
  - h. Seismic anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals:

1. Seismic anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
2. Manufacturer's Certificate of Compliance that factory finish system is identical to the requirements specified herein.
3. Factory Functional and Performance Test Reports and Log
4. Special shipping, storage and protection, and handling instructions.
5. Manufacturer's printed installation instructions.
6. Suggested spare parts list to maintain the equipment in service for a period of 1 year and 5 years. Include a list of special tools required for checking, testing, parts replacement, and maintenance with current price information.
7. List special tools, materials, and supplies furnished with equipment for use prior to and during startup and for future maintenance.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

8. Operation and Maintenance Data: As specified in Section 01 78 23, Operation and Maintenance Data.
9. Manufacturer's Certificate of Proper Installation, in accordance with Section 01 43 33, Manufacturers' Field Services.

1.04 EXTRA MATERIALS

A. Furnish for each set of pumps:

1. Complete mechanical seal.
2. Complete set of bearings.
3. Complete set gaskets and O-ring seals.
4. Complete set rod washers.
5. Complete set keys, dowels, pins, etc.
6. One stator.
7. One rotor.
8. One connecting rod with one pair of universal joint(s), as required by pump type.
9. One complete set of special tools required to dismantle pump.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Coordinate pump requirements with drive manufacturer and be responsible for pump and drive requirements.
- B. Where adjustable speed drives are required, furnish a coordinated operating system complete with pump, drive, and speed controller.

2.02 SUPPLEMENTS

- A. Some specific requirements are attached to this section as supplements.

2.03 ACCESSORIES

A. Stator Thermal Protection:

1. Provide for pumps where indicated in supplements and as specified below:
  - a. Stator thermal protection (run dry protection) shall shut pump down before stator damage occurs.
  - b. Provide thermowell drilled and tapped into stator and thermocouple for measurement of temperature at pump stator to rotor interface.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Provide temperature controller in NEMA 4X enclosure, with dual display for stator temperature and alarm set-point with adjustable hysteresis to prevent on/off cycling of pump when coming off an alarm.
  - d. Provide thermocouple cable between thermocouple and temperature controller.
- B. Equipment Identification Plate: 16-gauge stainless steel with 1/4-inch die-stamped equipment tag number securely mounted in a readily visible location.
- C. Lifting Lugs: Equipment weighing over 100 pounds.
- D. Anchor Bolts: Type 316 stainless steel, sized by equipment manufacturer, and as specified in Section 05 50 00, Metal Fabrications.

2.04 FACTORY FINISHING

- A. Prepare, prime, and finish coat in accordance with Section 09 90 00, Painting and Coating.

2.05 SOURCE QUALITY CONTROL

- A. Factory Tests and Adjustments: Test all equipment actually furnished.
- B. Factory Test Report: Include test data sheets, curve test results, performance test logs, certified correct by a registered professional engineer.
- C. Functional Test: Perform manufacturer's standard test on equipment.
- D. Motor Test: See Section 26 20 00, Low-Voltage AC Induction Motors.
- E. Performance Test:
- 1. Conduct on each pump.
  - 2. Conduct in accordance with Hydraulic Institute Standards.
  - 3. Perform under simulated operating conditions.
  - 4. Test for a continuous 3-hour period without malfunction.
  - 5. Test Log:
    - a. Record the following:
      - 1) Total head.
      - 2) Capacity.
      - 3) Horsepower requirements.
      - 4) Flow measured by factory instrumentation and storage volumes.
      - 5) Field head.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 6) Driving motor voltage and amperage measured for each phase.
6. Adjust, realign, or modify units and retest in accordance with Hydraulic Institute Standards if necessary.

**PART 3 EXECUTION**

**3.01 INSTALLATION**

- A. Install in accordance with manufacturer's printed instructions.
- B. Level base by means of steel wedges (steel plates and steel shims). Wedge taper not greater than 1/4 inch per foot. Use double wedges to provide a level bearing surface for pump and driver base. Accomplish wedging so there is no change of level or springing of the baseplate when anchor bolts are tightened.
- C. Adjust pump assemblies such that driving units are properly aligned, plumb, and level with driven units and interconnecting shafts and couplings. Do not compensate for misalignment by use of flexible couplings.
- D. After pump and driver have been set in position, aligned, and shimmed to the proper elevation, grout space between bottom of baseplate and concrete foundation with a poured, nonshrinking grout of the proper category, as specified in Section 03 62 00, Grouting. Remove wedges after grout is set and pack void with grout.
- E. Connect suction and discharge piping without imposing strain to pump flanges.
- F. Anchor Bolts: Accurately place using equipment templates and as specified in Section 05 50 00, Metal Fabrications.
- G. Pipe pump drain(s) to hub drain.

**3.02 FIELD FINISHING**

- A. Equipment as specified in Section 09 90 00, Painting and Coating.

**3.03 FIELD QUALITY CONTROL**

- A. Functional Tests: Conduct on each pump.
  1. Alignment: Test complete assemblies for correct rotation, proper alignment and connection, and quiet operation.
  2. Flow Output: Measured by plant instrumentation and storage volumes.
  3. Operating Temperatures: Monitor bearing areas on pump and motor for abnormally high temperatures.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Performance Test: In accordance with Hydraulic Institute Standards.

3.04 MANUFACTURER'S SERVICES

A. Manufacturer's Representative:

1. Present at Site or classroom designated by Owner, for minimum person-days listed below, travel time excluded:
  - a. 1 person-day for installation assistance and inspection.
  - b. 3 person-days for functional and performance testing and completion of Manufacturer's Certificate of Proper Installation.
  - c. 1 person-day for pre-startup classroom or Site training.
  - d. 1 person-day for facility startup.
  - e. 1 person-day for post-startup training of Owner's personnel. Training shall not commence until an accepted detailed lesson plan for each training activity has been reviewed by Owner.

B. See Section 01 43 33, Manufacturers' Field Services and Section 01 91 14, Testing, Integration, and Startup.

3.05 SUPPLEMENTS

A. The supplements listed below, following "End of Section," are a part of this Specification.

1. Dewatering Centrifuge Sludge Feed Pump 1, 2, 3, 4, 5, 6, 7, 8 Data Sheet.
2. Dewatering Polymer Feed Pumps 1, 2, 3, 4, 5, 6, 7, 8 Data Sheet.

**SECTION 44 42 56.16  
PERISTALTIC HOSE PUMP**

**EQUIPMENT AND COMPONENT NUMBERS**

Spare: Peristaltic Feed Pump

**PART 1 GENERAL**

**1.01 REFERENCES**

A. The following is a list of standards which may be referenced in this section:

1. American Bearing Manufacturers Association (ABMA).
2. American Gear Manufacturers Association (AGMA).
3. American National Standards Institute (ANSI).
4. ASTM International (ASTM): A48/A48M, Standard Specification for Gray Iron Castings.
5. Hydraulic Institute Standards.
6. National Electrical Manufacturer's Association (NEMA): MG 1, Motors and Generators.

**1.02 DEFINITIONS**

A. Terminology pertaining to pumping unit performance and construction conforms to the ratings and nomenclature of the Hydraulic Institute Standards.

**1.03 SUBMITTALS**

A. Action Submittals:

1. Shop Drawings:
  - a. Complete catalog information, descriptive literature, specifications, and identification of materials of construction.
  - b. Detailed mechanical and electrical drawings showing equipment dimensions, size, and locations of connections and weights of associated equipment.
  - c. Make, model, weight, and horsepower of each equipment assembly.
  - d. Performance data curves showing head, capacity, and horsepower demand over entire operating range of pump, from shutoff to maximum capacity. Indicate head, capacity, and horsepower demand required at guarantee point.
  - e. Complete motor nameplate data, as defined by NEMA, motor manufacturer, and including any motor modifications.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- f. Control panel elevation drawings showing construction and placement of operator interface devices and other elements.
- g. Power and control wiring diagrams, including terminals and numbers.
- h. Listing of extra materials supplied for this section.
- i. Factory finish system.
- j. Seismic anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals:

- 1. Manufacturer’s Certificate of Compliance, in accordance with Section 01 61 00, Common Product Requirements, signed by an authorized representative of manufacturer that equipment and factory-applied coating system(s) meet requirements specified herein.
- 2. Seismic anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
- 3. Factory test reports.
- 4. Special shipping, storage and protection, and handling instructions.
- 5. Manufacturer’s printed installation instructions.
- 6. List special tools, materials, and supplies furnished with equipment for use prior to and during startup, and for future maintenance.
- 7. Suggested spare parts list to maintain equipment in service for a period of 1 year and 5 years. Include a list of special tools required for checking, testing, parts replacement, and maintenance with current price information.
- 8. Operation and Maintenance Data: As specified in Section 01 78 23, Operation and Maintenance Data.

1.04 EXTRA MATERIALS

- A. Furnish, tag, and box for shipment and storage the following spare parts, special tools, and materials:

Item	Quantity
Gasket Kit	One complete set per pump
Hoses	One per pump
Hose Lubricant Refill	One per pump
Special tools required to maintain or dismantle	One complete set for each different size unit

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Coordinate pump requirements with motor manufacturer and be responsible for pumps and motors.
- B. Where variable speed drives are required, furnish and be responsible for a coordinated operating system complete with pump, motor, and variable speed drive.
- C. Design Requirements: In accordance with Section 01 61 00, Common Product Requirements.

2.02 SUPPLEMENTS

- A. Specific product requirements are attached to this section as supplements.

2.03 ACCESSORIES

- A. Lifting Lugs: Provide suitably attached for equipment assemblies and components weighing over 100 pounds.
- B. Equipment Identification Plates: Provide 16-gauge stainless steel identification plate securely mounted on each separate equipment component and control panel in a readily visible location with 3/8-inch high engraved or die-stamped block type black enamel filled equipment identification number and letters indicated in this Specification.
- C. Anchor Bolts: Type 316 stainless steel, sized by equipment manufacturer, 1/2-inch minimum diameter, and as specified in Section 05 50 00, Metal Fabrications.
- D. Leak Detection Switch:
  - 1. Locate near top of pump to detect leakage of pumped product into pump housing.
  - 2. Mount sensor on rear of pump housing.
  - 3. Supply sensor Normally Closed with ability for field adjustment to Normally Open.
  - 4. Float Switch Rating: Vmax equals 240V ac, Imax equals 1 amp, Pmax equals 50VA.
- E. Revolution Sensor:
  - 1. Provide inductive type revolution sensor located to detect rotor revolutions.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Pump manufacturer to supply and mount sensor and triggering device.
3. Inductive Sensor Rating: Vmax equals 30V dc, Imax equals 150 mA, Pmax equals 4.5 VA.

F. Inlet Pulsation Accumulators and Discharge Pulsation Dampeners:

1. Inlet size same as pump connecting pipe size. Provide ANSI Class 150 flanged inlet.
2. Housing: Epoxy coated steel.
3. Bladder: Compatible with chemical service.
4. Accessories: Pressure gauge, air fill valve, and cap.
5. Fasteners: Stainless steel.
6. Capacity: Sized by manufacturer.
7. Manufacturers and Products:
  - a. Blacoh Fluid Control; Sentry Series.
  - b. "Or approved equal."

2.04 FACTORY FINISHING

- A. Prepare, and prime and finish coat in accordance with Section 09 90 00, Painting and Coating.

2.05 SOURCE QUALITY CONTROL

A. Factory Tests:

1. Pumps: Assemble, check, and shim all pumps for the specific application prior to shipment.
2. Inspect pump construction, electrical connections, and intended functions.
3. Test all pump equipment, including start stop and speed controls in local and remote, interface signals (inputs and outputs), and leak detection that is actually furnished with the pump.

**PART 3 EXECUTION**

3.01 INSTALLATION

- A. This pump unit is to be stored as a shelf spare to existing peristaltic hose pumps.

3.02 FIELD FINISHING

- A. As specified in Section 09 90 00, Painting and Coating. Touch up manufacturer's finish using manufacturer's recommended coating repair system.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.03 FIELD QUALITY CONTROL

- A. Perform preoperational checks in accordance with manufacturer’s printed instructions.
- B. Functional Tests:
  - 1. Conduct on Each Pump: Test complete assemblies for correct rotation, proper connections, and normal operational characteristics.
- C. Performance Tests:
  - 1. Conduct on Each Pump:
    - a. Perform under simulated or actual operating conditions.
    - b. Test for a continuous 30-minute period for each pump.
    - c. Test and Test Log: Record the following:
      - 1) Pump suction head relative to suction flange centerline.
      - 2) Pump discharge head relative to pump discharge flange centerline.
      - 3) Pump flow using pump rpm and gallons per revolution.
      - 4) Pump flow using plant flowmeter instrumentation, if available.
      - 5) Motor voltage and amperage measured for each phase.

3.04 SUPPLEMENTS

- A. The supplement listed below, following “End of Section,” is a part of this Specification:
  - 1. Peristaltic Feed Pump Data Sheet.

**END OF SECTION**

- 7. Operation and Maintenance Data: As specified in Section 01 78 23, Operation and Maintenance Data.
- 8. Manufacturer’s Certificate of Proper Installation, in accordance with Section 01 43 33, Manufacturers’ Field Services.
- 9. Service records for maintenance performed during construction.

1.03 EXTRA MATERIALS

- A. Furnish, tag, and box for shipment and storage the following materials:

<u>Item</u>	<u>Quantity</u>
Automatic Drip Trap: Gaskets	Three complete sets
Manual Drip Traps: Gaskets and O-rings	Three complete sets

- B. Delivery: In accordance with Section 01 61 00, Common Product Requirements.

**PART 2 PRODUCTS**

2.01 SERVICE CONDITIONS

- A. Material Handled: Digester gas consisting of approximately 61 percent methane, 33 percent carbon dioxide, 5 percent water vapor, and 1 percent hydrogen sulfide. Specific gravity approximately 0.86.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.02 WASTE GAS BURNER/IGNITION SYSTEM

A. Equipment Identification:

1. Name: Gas Flare No. 3.
2. Tag Number: 80-GFL-03.

B. General:

1. Design Capacity: 33,000 scfh digester gas at maximum pressure drop of 1/2-inch WC. Digester gas will have a minimum heat content of 550 Btu per cubic foot and will be saturated with water at 90 degrees F.
2. Size: 12 inches, with 1/2-inch pilot line.
3. Pilot Fuel: Natural gas.

C. Emission Requirements:

1. Emission range (design capacity) at 1,500 degrees F to 1,800 degrees F operating temperature range:
  - a. Overall destruction efficiency: 99 percent.
  - b. NO<sub>x</sub>, pounds per MMBtu: 0.060 maximum.
  - c. CO, pounds per MMBtu: 0.300 maximum.
  - d. VOC, pounds per MMBtu: 0.028 maximum.
2. Flare manufacturer must provide guarantee of compliance with emission requirements.

D. Pilot Gas Burner:

1. Pressure regulating valve to be installed in the 1/2-inch pilot line.
  - a. Reduce a maximum upstream pressure of 40 psig to a constant downstream pressure as required by burner pilots. Downstream pressure and pilot orifice size shall be as required for proper pilot operation and main burner ignition.
  - b. Pressure gauges of appropriate range for upstream and downstream of the pressure regulating valve.
2. Pilot Solenoid Valve: Dual coil, energized open and energized closed, two-way with NEMA 4, Class 1 Division 1 enclosure and high temperature coils.
3. Equip burner with the following:
  - a. Steel pedestal, internally insulated.
  - b. Pedestal baseplate suitable for mounting as shown on Drawings.
  - c. Iron-alloy ignition ring to ensure positive ignition under flow conditions.
  - d. Air/gas mixture adjustment.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. Stainless steel pilot orifices.
- f. All Other Parts: Stainless steel.

E. Ignition System:

1. Automatic, using flame-sensing electrode that shall energize a pilot ignition electrode if the pilot flame has been extinguished.
2. Safety shutdown alarm to provide flame failure contact to the plant's Instrumentation and Control System. Contact shall be rated at 5 amps, 120 volts ac.
3. Power: 120-volt, 60-Hz power source installed in a NEMA 7 enclosure field adjacent to burner pedestal.
4. Controls: Integral ON/OFF and HAND/OFF/COMPUTER switches on face of panel.
  - a. 3-second flame response time and 30-second safety switch timing.
  - b. In the COMPUTER position, operate in response to a dry contact closure provided by control panel.
5. Furnish with ignition and flame lead cable. Field mount control unit adjacent to burner pedestal. Control unit and cable shall be suited for operation at ambient temperatures to 115 degrees F. Provide access to pilot burner so that it can be manually ignited.
6. Suitable relay, mounted in control box to open solenoid valve when system is in the ON position or close the solenoid valve when system is in the OFF position from either HAND or COMPUTER control stations. Valve shall remain in last position on power failure.

F. Waste Gas Burner:

1. Materials:
  - a. Type 316 stainless steel for pilot nozzles, piping, and fittings.
  - b. Integral Type 304 stainless steel shroud of 10-gauge minimum thickness.
2. 12-inch flanged digester gas connection.
3. Self-supporting, mounted vertically on a matching ASME B16.1 150-pound raised face flange.
4. Integral 2-inch continuous burning pilot and 1/2-inch flame retention pilot.
5. 8 to 1 turn down ratio, minimum.
6. Furnish with 1/2-inch thick, Type 316 stainless steel thermowell housing, 1/4-inch magnesium filled Incoloy 600 sheath Type K thermocouple mounted in the continuous pilot nozzle.
7. Provide 12-inch electric actuated butterfly valve on inlet piping that will shut upon failure alarm.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

G. Ignition System:

1. Venturi: 2-inch NPT, aspirating, to supply a combustible air/gas mixture to the continuous flame nozzle.
  - a. Include a combustion chamber, spark plug, and flashback preventer.
  - b. Furnish 1/2-inch NPT inlet connection.
2. Regulator Assembly: Valve and regulator package to provide pressure reduction and isolation of pilot gas as required.
  - a. Consist of isolation valves, pressure regulators, pressure gauges, explosion-proof solenoid valve, and interconnecting fittings.
  - b. Components shall be copper free and affixed to a backplate.
3. To ignite waste gas burner pilot flame, the following shall occur in sequence:
  - a. Pilot gas solenoid valve and flame retention solenoid valve shall be commanded to OPEN.
  - b. A spark shall be generated to ignite air/gas mixture at exit of venturi assembly.
  - c. Flame generated by spark ignites gas exiting from flame retention nozzle.
  - d. When thermocouple located inside the continuous flame nozzle heats up to a preset temperature setting, flame retention solenoid valve shall be commanded to CLOSE.
  - e. Pilot flame remains lit using air/gas mixture supplied by the continuous flame nozzle.
  - f. If pilot flame goes out, a re-ignition cycle will automatically be initiated.
4. If pilot flame is lit and LOW temperature is detected by pilot thermocouple, a BURNER SYSTEM FAIL output shall be provided. A discrete output shall also be provided for remote indication of pilot FLAME ON.
5. Power Requirements: Power supply to control panel shall be 120V ac, single-phase, 60-Hz.

H. Stack:

1. A stack constructed of Type 304 stainless steel chambers, pipes, and all other parts shall be provided. Chamber walls are to be 11-gauge, minimum 2B thickness.
2. Stack shall be constructed and installed to withstand a service level wind load of 100 mph. Complete structural calculations sealed by a professional engineer licensed by the State of California shall be provided.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Install two sets of thermocouples to monitor stack discharge temperature. Maintain stack temperature at 1,450 degrees F by adjusting air intake dampers. Flare system must shut down if temperature rises above 1,800 degrees F or below 1,400 degrees F.
4. Provide test ports for emission source testing, and provide OSHA-approved personnel access to the test ports.
5. If required, provide two air dampers, one manually adjusted, the other with an actuator that will adjust intake air based on the flare stack temperature.
6. Provide blower to purge stack upon failure alarm.

I. Manufacturers:

1. Aereon; Model FEF.
2. Varec Biogas, Model 244E.
3. John Zink, Model ZTOF.
4. Or approved equal.

J. Controls:

1. In accordance with general control requirements and component qualities specified in Section 40 99 90, Package Control Systems. Provide panels and controls as follows:

Panel No.	NEMA 250 Rating	Material
80-GFL-03.LCP	7	316 stainless steel

2. Operator Controls and Indicators:
  - a. HAND/OFF/COMPUTER control of waste gas burner.
  - b. IGNITION pushbutton to generate spark for burner in HAND mode.
  - c. Spark ON, flame retention solenoid valve OPEN, pilot ON, and pilot OFF indicating lights mounted inside of panel.
  - d. Control power ON/OFF switch mounted inside panel.
  - e. AUTO START simulator switch mounted inside panel.
3. Programmable Controller (PLC) Hardware:
  - a. PLC system shall be Allen-Bradley Logix family including ControlLogix, or CompactLogix, as specified below. No substitutes allowed.
  - b. All products shall be the latest version of each module.
  - c. CPU: Latest version of AB Logix family with appropriate memory size.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. Power Supply Module: Shall use the latest version, 120V ac, 60 Hz or 24V dc.
- e. Input/Output:
  - 1) Discrete Input Modules:
    - a) Voltage: 120V ac, 60-Hz or 24V dc.
    - b) Operating Power: 2 watts.
    - c) Points per Module: 16 maximum.
    - d) LED status indicator for each point.
    - e) Isolation: Between input point and PLC, 1,500 volts rms.
  - 2) Discrete Output Modules:
    - a) Voltage: 120V ac, 60-Hz or 24V dc.
    - b) Operating Power: 2 watts.
    - c) Load Rating: 2 amps continuous.
    - d) Isolation: Between PLC and output point, 1,500 volts rms.
    - e) Points per Module: 16 maximum.
    - f) LED status indicator for each point.
  - 3) Isolated Discrete Output Modules:
    - a) Type: Isolated Form C relay.
    - b) Voltage: 120V ac, 60-Hz or 24V dc.
    - c) Isolated Outputs per Module: 8.
    - d) Load Rating: 5 amps continuous.
    - e) Operating Power: 2.5 watts.
    - f) Points Per Module: 8 maximum.
    - g) LED status indicator and fuse for each point.
    - h) Isolation: Between PLC and output point, 1,500 volts rms.
  - 4) Analog Input/Output Modules:
    - a) Voltage: 4 mA to 20 mA and 1 volt to 5 volts.
    - b) Power: 3 watts.
    - c) Differential Analog Points Per Module: 8 maximum.
    - d) Isolated Analog Output Points Per Module: 8 maximum.
    - e) Isolation: Between PLC and I/O point and between I/O points, 1,500 volts rms.
    - f) Inputs modules shall be HART Compatible.
  - 5) Pulse Input Modules:
    - a) Input Voltage: 5V or 12V to 24V (user selectable).
    - b) Input Current: 7 mA at 5V; 7 mA to 1.5 mA at 12V to 24V.
    - c) Points per Module: 4 maximum.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d) Maximum Input Frequency: 100 KHz in counter mode.
- e) Maximum Count Value: 0 to 999,999 (programmable).
- 6) Communication Network Module: Latest version of Ethernet Network module from AB Logix family product line for Ethernet/IP protocol.
- 7) Interface Products: Provide any hardware, such as interfacing cables required for accessing/programming/modifying logic or I/O configuration.
- f. PLC Programming:
  - 1) PLC Programming Software Tool:
    - a) Provide one copy of the latest Version AB Studio 5000 PLC programming software.
    - b) Provide all licenses to facilitate the communications, such as, Modbus, EIP, etc.
    - c) Provide all development software used to create the application software, such as Studio 5000, containing the exact software revision level used to develop the logic.
  - 2) Application Program: Provide final PLC application program at the end of the Project to the City. If it is password protected, the password shall be provided. Provide complete annotated soft copies of the developed application software complete with I/O assignments and network configurations.
  - 3) Application program shall be programmed based on City's standard using IEC 1131-3 standard languages including FB, ladder logic, structured text, and sequential flow chart.
- 4. External Interfaces:
  - a. Provide PLC control of flare. Use Ethernet/IP to communicate the following signals to the DCS.

Hand/Off/Computer	(80QI9118)	(DCS Read)
Start/Stop	(80HS9118A)	(PLC Read)
Reset	(80HS9118B)	(PLC Read)
Flame Proved	(80BI9115)	(DCS Read)
Plugged	(80PDAH9114)	(DCS Read)
Flame Failed	(80UA9113)	(DCS Read)

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Control Power status	(80JA9118)	(DCS Read)
Temperature	(80TT9112)	(DCS Read)
Gas Pressure	(80PI9113)	(DCS Read)
Gas Pressure Start Setpoint	(80PC9118A)	(PLC Read)
Gas Pressure Stop Setpoint	(80PC9118B)	(PLC Read)

5. Functional Requirements:
  - a. Provide HAND/OFF/COMPUTER control of pilot flame for waste gas burner. In OFF mode, pilot gas supply shall be shut off and pilot ignition system shall be disabled. In HAND mode, pilot gas supply shall be turned on and pilot flame shall be manually ignited by IGNITION pushbutton.
  - b. In COMPUTER mode, pilot flame shall be automatically ignited and extinguished depending upon the availability of waste gas, as sensed by a pressure switch on waste gas inlet. When sufficient pressure exists at waste gas inlet, pilot shall be automatically ignited, after an adjustable time delay. When pressure at waste gas inlet falls below pressure setpoint, pilot shall be extinguished after an adjustable time delay. Allow gas pressure setpoints to be adjusted from the DCS, restrict the setpoints to be within the minimum and maximum gas pressures for safe operation of the waste gas flare. When in COMPUTER mode allow DCS to issue START/STOP command to the flare. To assist in startup and troubleshooting, AUTO ignition system and AUTO-START simulator switch shall be provided.
  - c. If a failure is detected, the air actuated butterfly valve and pilot gas solenoid must close and the blower must purge the stack.

2.03 CONDENSATE TRAPS

A. Features:

1. Materials: Type 316 stainless steel.
2. 13-gallon size, 35 psig design pressure, 20-inch water column maximum operating pressure.
3. Connections:
  - a. Provide following connections as minimum:
    - 1) Inlet: 4-inch groove connection.
    - 2) Outlet: 1-inch NPT.
    - 3) Drain: 2-inch NPT.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 4) Sight Glass: Two 1/2-inch with Type 316 stainless steel isolation valves.
- 5) Level Switches: Two appropriate size connections for high and low level switches.
4. Storage Capacity: 13 gallons of condensate, minimum per unit. Provide 24-inch minimum water seal depth for outlet.
5. Level switches shall be suitable for biogas application with Type 316 stainless steel wetted parts.
6. Alarm horn with attached amber colored strobe shall be metal encased and suitable for outdoor hazardous locations. The horn will 120-volt powered with a 5 Joule strobe.
7. Sight glass assembly shall include Type 316 stainless steel isolation and drain valves, glass and stainless steel guard rods.
8. Orientation of sight glasses and other connections may be nonstandard and shall be submitted for approval prior to starting any fabrications.

B. Manufacturers and Products:

1. Varec; Model 248 condensate accumulator.
2. Or approved equal.

## 2.04 AUTOMATIC DRIP TRAPS

A. Features:

1. Design to prevent gas from escaping while draining.
2. Materials:
  - a. Cast-iron or 356 HT cast aluminum body, cover plate, disc, and handle.
  - b. Internal working parts and fasteners shall be stainless steel.
  - c. Compressed asbestos-free gasket.
3. Size: 1-inch threaded inlet and outlet, minimum.
4. Provide with electric motor actuator and timer to automatically open and close drip trap.
  - a. Electric components shall be single-phase, 120V ac, 60-Hz, and rated for Class 1, Division 1, Group D environment.
  - b. Provide stainless steel shaft coupling with stainless steel hardware to secure actuator to drip trap.

B. Manufacturers and Products:

1. Varec; Figure 246 AT.
2. Groth; Model 8460 EADT.
3. Or approved equal.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.05 FLAME TRAP ASSEMBLY

- A. One 12-inch size, mounted on waste gas burner supply.
- B. Includes thermal shutoff valve.
- C. Manufacturers and Products:
  - 1. Varec; 450 Series.
  - 2. Groth; Model 8500A.
  - 3. Or approved equal.

2.06 ACCESSORIES

- A. Lifting Lugs: Provide suitably attached for equipment assemblies and components weighing over 100 pounds.
- B. Equipment Anchor Bolts: Type 316 stainless steel sized by equipment manufacturer at least 1/2 inch in diameter, or as shown, and as specified in Section 05 50 00, Metal Fabrications.
- C. Equipment Identification Plates: Provide 16-gauge Type 316 stainless steel identification plate securely mounted on each separate equipment component and control panel(s) in a readily visible location. Plate shall bear 3/8-inch high engraved block type identification number and letters indicated in this specification.

2.07 FACTORY FINISHING

- A. For carbon steel and cast-iron equipment and accessories, factory prepare, prime, and finish paint with manufacturer's standard coating as specified in Section 09 90 00, Painting and Coating, for exposed or high temperature surfaces.

**PART 3 EXECUTION**

3.01 INSTALLATION

- A. In accordance with manufacturer's instructions.
- B. Accurately place anchor bolts using templates furnished by manufacturer and in accordance with Section 05 50 00, Metal Fabrications.

DIGESTER GAS SAFETY  
EQUIPMENT AND SPECIALTIES

44 46 20 - 11

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.02 FIELD QUALITY CONTROL

- A. Functional Test: Conduct on each unit.
- B. Performance Test: Conduct performance testing of exhaust from waste gas burner. Emissions must not exceed requirements listed above.
  - 1. If waste gas burner does not meet requirements of the specifications during performance test:
    - a. Make changes in equipment and methods of operation as required by manufacturer and as approved by Engineer as soon as practical, but within a period not to exceed 30 days.
    - b. Following adjustments, repeat the performance test.
  - 2. If waste gas burner still does not achieve specified performance during the retest, equipment will be subject to rejection.

3.03 MANUFACTURER'S SERVICES

- A. Manufacturer's Representative:
  - 1. Present at Site or classroom designated by Owner, for minimum person-days listed below, travel time excluded:
    - a. 1 person-day for installation assistance and inspection.
    - b. 1 person-day for functional testing and completion of Manufacturer's Certificate of Proper Installation.
    - c. 1 person-day for prestartup classroom or Site training.
    - d. 1 person-day for facility startup.
    - e. 1/2 person-day for post-startup training of Owner's personnel. Training shall not commence until an accepted detailed lesson plan for each training activity has been reviewed by Engineer.

1.02 SUBMITTALS

- A. Action Submittals:
1. Shop Drawings:
    - a. Make, model, weight, and horsepower of each equipment assembly.
    - b. Manufacturer's catalog information, descriptive literature, specifications, and identification of materials of construction.
    - c. Performance data curves showing pressure, capacity, horsepower demand, and compressor efficiency over the entire operating range of the unit, from shutoff to maximum capacity. Equipment manufacturer shall indicate pressure, capacity, horsepower demand, with 20 degrees F, 68 degrees F, and 100 degrees F ambient air, and overall efficiency, which is defined as wire-to-air efficiency at guarantee point, and capacity above which units should be operated to preclude surging.
    - d. Manufacturer's suggestion of minimum and maximum operating flows the unit can safely operate continuously.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- e. Detailed mechanical, and electrical drawings showing the equipment fabrications and interface with other items. Include dimensions, size, and locations of connections to other work, and weights of associated equipment.
- f. Functional description of internal and external instrumentation and controls to be supplied including list of parameters monitored, controlled, or alarmed.
- g. Control panel elevation drawings showing construction and placement of operator interface devices and other elements.
- h. Power and control wiring diagrams, including terminals and numbers.
- i. Shop and Field Painting Systems Proposed: Include manufacturer's descriptive technical catalog literature and specifications.
- j. Seismic anchorage and bracing drawings and cut sheets, as required by Section 01 88 15, Anchorage and Bracing.

B. Informational Submittals:

- 1. Manufacturer's Certificate of Compliance, in accordance with Section 01 61 00, Common Product Requirements.
- 2. Seismic anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
- 3. Special shipping, storage and protection, and handling instructions.
- 4. Manufacturer's written/printed installation instructions.
- 5. Factory test results, reports, and certifications. Include:
  - a. Functional test certificates.
  - b. Vibration test certificates.
  - c. Test results of control panels for proper operation, construction, electrical connection, and function.
- 6. Routine maintenance requirements prior to plant startup.
- 7. Field performance test procedures.
- 8. Operation and Maintenance Data: As specified in Section 01 78 23, Operation and Maintenance Data.
- 9. Manufacturer's Certificate of Proper Installation, in accordance with Section 01 43 33, Manufacturers' Field Services, including field vibration test.

1.03 EXTRA MATERIALS

- A. Furnish, tag, and box for shipment and storage, the following spare parts and special tools:

<u>Item</u>	<u>Quantity</u>
Seals and gaskets	One complete set
Bearings	One complete set
Special tools required to maintain or dismantle unit	One complete set

- B. Delivery: In accordance with Section 01 61 00, Common Product Requirements.

**PART 2 PRODUCTS**

2.01 MANUFACTURERS

- A. Materials, equipment, and accessories specified in this section shall be products of:
1. Hoffman and Lamson, Series 510.
  2. Or approved equal.

2.02 SUPPLEMENTS

- A. See supplements at the end of this section for additional product information.

2.03 SERVICE CONDITIONS

- A. Material Handled: Digester gas consisting of approximately 61 percent methane, 33 percent carbon dioxide, 5 percent water vapor, and 1 percent or less hydrogen sulfide.
- B. Minimum inlet gas pressure at each compressor will be 8-inch water column gauge. Inlet gas temperature will be 90 degrees F plus or minus 10 degrees F. Specific gravity of digester gas will be 0.94 plus or minus 0.05.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.04 COMPRESSOR

- A. Type: Multistage centrifugal with outboard mounted bearing construction and diaphragm cast integrally with casing.
  - 1. Under specified inlet conditions, capable of continuously compressing 600 scfm of digester gas to a discharge pressure of 5 psig without entering a surge condition.
  - 2. Tip speed of rotating assembly not to exceed 530 feet per second, with first critical speed 20 percent above its operating speed.
  
- B. Shaft: Type 416 stainless steel.
  - 1. Through Inlet Head:
    - a. One carbon ring seal, including Type 304 stainless steel ring retainers and adapters.
    - b. Stuffing box consisting of adjustable packing gland, nonasbestos packing material, and closed bearing housing.
  - 2. Through Outlet Head: Two carbon ring seals, including Type 304 stainless steel ring retainers and adapters.
  
- C. Seals and Bearings:
  - 1. Replaceable without having to disconnect inlet or discharge piping.
  - 2. Bearings:
    - a. Antifriction, designed for ABMA 9, L-10 rating life of 50,000 hours.
    - b. Able to be lubricated, inspected, or replaced without disassembling the blower's rotating element.
  
- D. Inlet and Outlet Connections: ASME B16.1 125-pound drilled and tapped flange pattern; integral part of the heads. Furnish 1/4-inch NPT pressure indicator taps.
  
- E. Casing: Carbon steel with baked phenolic heresite coating.
  
- F. Impellers: Aluminum with baked phenolic heresite coating.
  
- G. Mounting for Each Assembly: Common fabricated steel baseplate with flexible coupling and coupling guard.
  - 1. Mounting Pads: Manufacturer's standard resilient foundation pads.
  - 2. Flexible connections for each compressor suction and discharge.
    - a. 125-pound ASME B16.1 flange single arch type, multiple, rubber or synthetic elastomer.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Include steel backing rings.
  3. Coupling: Falk or Fast sprung grid or gear type with OSHA coupling guard.
- H. Controls: In accordance with general control requirements and component qualities specified in Section 40 99 90, Package Control Systems.
  1. Control Panels:
    - a. Furnish a NEMA 7, skid mounted control panel with each compressor. Each control panel shall provide the following operator controls and indicators:
      - 1) ON/OFF/REMOTE hand switch for each motor.
      - 2) Dual scale (amps and acfm) motor current indicator and LOW CURRENT (low flow or surge) indicating lights.
      - 3) A blower ON indicating light.
      - 4) RESET pushbutton.
  2. External Interfaces:
    - a. Provide the following discrete contact outputs:
      - 1) Blower RUN.
    - b. Receive the following signal inputs:
      - 1) A 0-amp to 5-amp analog signal from a current transformer in motor starter. Signal shall be proportional to motor current.
      - 2) A discrete ON signal from the motor starter to indicate status (energized or de-energized) of motor.
      - 3) A discrete RUN signal from the DCS.
  3. Functional Requirements:
    - a. Provide devices and interlocks to shut down blower upon low airflow (surge) after a suitable startup delay.
    - b. Provide logic to maintain indication of condition that causes blower shutdown and inhibit restarting of blower until RESET button is pressed.
  4. Power Requirements: 120 volts, single-phase, 60-Hz.

2.05 ACCESSORIES

- A. Lifting Lugs: Provide suitably attached for equipment assemblies and components weighing over 100 pounds.
- B. Anchor Bolts: Type 316 stainless steel sized by equipment manufacturer and as specified in Section 05 50 00, Metal Fabrications. Coat in accordance with Section 09 90 00, Painting and Coating.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. Equipment Identification Plates: Provide 16-gauge Type 316 stainless steel identification plate securely mounted on each separate equipment component and control panel in a readily visible location. Plate shall bear 3/8-inch high die-stamped block type black enamel filled equipment identification number indicated in this Specification.

2.06 FABRICATION

- A. Install current transformer in blower motor starter to sense motor current in one phase and transmit a signal to dual scale motor current indicator in blower panel. Coordinate installation of current transformer with motor control center supplier.
- B. Shop Painting:
  - 1. Interior Surfaces: Factory prepare, prime, and finish coat in accordance with Section 09 90 00, Painting and Coating.
  - 2. Exterior Surfaces: Factory prepare, prime, and finish coat in accordance with Section 09 90 00, Painting and Coating.

2.07 SOURCE QUALITY CONTROL

- A. Factory Inspections: Inspect control panels for required construction, electrical connection, and intended function.
- B. Factory Tests and Adjustments: Test all equipment and control panels actually furnished.
- C. Functional Test: Perform manufacturer's standard test on equipment. Include vibration test, as follows:
  - 1. Dynamically balance rotating parts of each blower and its driving unit before final assembly.
  - 2. Dynamically balance blower, coupling, and its driving unit. Ensure that mechanical vibration does not exceed 1.25 mils double (total) amplitude, when measured on the bearing housing at design speed.

**PART 3 EXECUTION**

3.01 INSTALLATION

- A. In accordance with manufacturer's instructions.
- B. Accurately place anchor bolts using templates furnished by the manufacturer and in accordance with Section 05 50 00, Metal Fabrications.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.02 FIELD QUALITY CONTROL

- A. Functional Tests: Conduct on each unit.
  - 1. Vibration Test: Test with units installed and in normal operation.
- B. Performance Test:
  - 1. Conduct on each unit.
  - 2. Perform under actual or approved simulated operating conditions.
  - 3. Test for a continuous 3-hour period without malfunction.
  - 4. Perform with the Engineer present.
  - 5. Test Log:
    - a. Upon completion of test, record the following:
      - 1) Flow measured by plant instrumentation.
      - 2) Blower inlet and discharge pressure.
      - 3) Driving motor voltage and amperage measured for each phase.
  - 6. Adjust, realign, or modify units and retest, if necessary.

3.03 MANUFACTURER'S SERVICES

- A. Manufacturer's Representative:
  - 1. Present at Site or classroom designated by Owner, for minimum person-days listed below, travel time excluded:
    - a. 1/2 person-day for inspection.
    - b. 1/2 person-day for functional and performance testing and completion of Manufacturer's Certificate of Proper Installation.
    - c. 1 person-day for post-startup training of Owner's personnel. Training shall not commence until an accepted detailed lesson plan for each training activity has been reviewed by Engineer.
- B. See Section 01 43 33, Manufacturers' Field Services, and Section 01 91 14, Testing, Integration, and Startup.

3.04 SUPPLEMENTS

- A. The supplement listed below, following "End of Section," is a part of this Specification.
  - 1. Biogas Compressor No. 1, No. 2, & No. 3 Induction Motor Data Sheet.

**END OF SECTION**

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

<b>BIOGAS COMPRESSOR NO. 1, NO. 2, &amp; NO. 3            INDUCTION MOTOR DATA SHEET</b>	
Project: <u>Metropolitan Biosolids Center Improvements</u>	
Owner: <u>City of San Diego</u>	
Equipment Name: <u>Biogas Compressor No. 1, No. 2, &amp; No. 3</u>	
Equipment Tag Number(s): <u>80-C-01, 80-C-02, &amp; 80-C-03</u>	
Type: Squirrel-cage induction meeting requirements of NEMA MG 1	
Manufacturer: For multiple units of the same type of equipment, furnish motors and accessories of a single manufacturer; or approved equal.	
Hazardous Location: <input type="checkbox"/> Furnish motors for hazardous (classified) locations that conform to UL 674 and have an applied UL listing mark.	
Motor Horsepower: <u>30</u>	Guaranteed Minimum Efficiency at Full Load: ___ percent
Voltage: <u>460</u>	Guaranteed Minimum Power Factor at Full Load: ___ percent
Phase: <u>3</u>	Service Factor (@ rated max. amb. temp.): <input type="checkbox"/> 1.0 <input checked="" type="checkbox"/> 1.15
Frequency: <u>60 Hz</u>	Enclosure Type: <u>Explosion proof</u>
Synchronous Speed: <u>3600</u> rpm	<input type="checkbox"/> Multispeed, Two-Speed: ___ / ___ rpm
<input checked="" type="checkbox"/> Thermal Protection: _____	Winding: <input type="checkbox"/> One <input type="checkbox"/> Two
<input checked="" type="checkbox"/> Space Heater: <u>120</u> volts, single-phase	Mounting Type: <input checked="" type="checkbox"/> Horizontal <input type="checkbox"/> Vertical
	<input type="checkbox"/> Vertical Shaft: <input type="checkbox"/> Solid <input type="checkbox"/> Hollow
	<input type="checkbox"/> Vertical Thrust Capacity (lb): Up ___ Down ___
	<input type="checkbox"/> Variable Speed Drive: See Section 26 29 23, Low-Voltage Variable Frequency Drive System.
	Operating Speed Range: ___ to ___% of Rated Speed
	<input type="checkbox"/> Variable Torque
	<input type="checkbox"/> Constant Torque
Additional Motor Requirements: <input checked="" type="checkbox"/> See Section 26 20 00, Low-Voltage AC Induction Motors.

**SECTION 44 46 23  
DIGESTER CLEANING**

**EQUIPMENT AND COMPONENT NUMBERS**

80-T-11: Digester 1  
80-T-12: Digester 2  
80-T-13: Digester 3

**PART 1 GENERAL**

**1.01 SCOPE OF WORK**

- A. Provide all labor and materials to remove, treat, and dispose of residuals in Metro Biosolids Center (MBC's) three digesters. Pressure wash with clean water the entire inside of the tank. Treated residuals shall be greater than or equal to 40 percent solids, as determined by the City.
- B. Work shall be confined to the locations shown on the Drawings.
- C. MBC is under federal regulations for Site Specific Control and Countermeasures (SPCCP) and by permit must report any significant quantity of petroleum product that spills. In the event of a spill, the Contractor shall be responsible for fines levied by regulators and the cost of City staff time dedicated to a Contractor-caused spill including, but not limited to, the following tasks:
  - 1. The Contractor shall not take grit to a landfill for disposal without written approval by the City in advance. The City must approve use of any landfill for disposal of MBC grit.
- D. The Contractor shall provide all equipment, labor, material, monitoring, fuel, and all other appurtenances and services required to remove and dispose of digester cleanings including, but not limited to, the following tasks:
  - 1. The Contractor shall submit to the City all permits and licenses not provided by the City, but required for the removal, cleaning, and disposal of digester cleanings.
  - 2. Obtain and maintain licenses and regulatory permits which are not specifically provided by the City.
  - 3. Provide administrative services and a Superintendent continuously on-site to oversee all Contractor and subcontractor operations.
  - 4. Provide a Supervisor as the key contact person to coordinate with the City staff representative, particularly concerning emergencies, scheduling, and progress.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. Provide odor control (if required), decanting, loading, hauling, removal and disposal services.
6. Vehicles used for hauling solids for disposal shall be weighed at a certified scale off-site. Weigh tickets shall be kept with the Contractor's records and made available to the City immediately on request.
7. Pay all permit fees.
8. Pay all disposal fees.
9. Provide any sampling, laboratory testing, monitoring and reporting functions above those provided by the City.
10. All work is subject to prevailing wages law.

1.02 SUBMITTALS REQUIRED

A. Schedule of Digester Cleanout:

1. A proposed schedule due at or prior to the kickoff meeting.
2. When the current schedule does not represent the actual progress of work, the Contractor is required to update and submit a revised schedule in 24 hours.

B. Permits.

C. Licenses.

D. Safety Plan.

E. Informational Submittals:

1. Work Plan:
  - a. Prepare and submit within 14 days of execution of Contract.
  - b. Work shall not begin until work plan has been reviewed by Engineer.
  - c. Include the following information:
    - 1) Site layout plan that includes the following:
      - a) Work areas.
      - b) Support zone.
      - c) Material/equipment staging area.
      - d) Roof dome temporary equipment weights and sizes.
  - d. Digester Dome Access Plan.
  - e. Description of proposed equipment, procedures, and materials for performing the Work.
  - f. Proposed sequence and schedule for performing the Work.
  - g. Written Safety Plan, including a confined space program, for approval by City.
  - h. Written procedures for controlling, handling, and disposing of digester contents and spill prevention requirements.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- i. Proposed Staging Area, including:
  - 1) Layout.
  - 2) Drainage controls.
  - 3) Containers.
  - 4) Spill containment measures.
- j. Proposed Transportation and Disposal Subcontractors:
  - 1) Name and letter of acceptance from disposal facilities proposed for disposal of screened digester contents.
  - 2) Name, qualifications, and licensing information for transportation subcontractor proposed for removing digester contents.
  - 3) All water from cleaning operations shall be trucked to the septage discharge location for disposal.

F. Personnel Qualifications:

- 1. Contractor shall have experience performing work of similar scope and size to this Project.
- 2. Where Work requires health and safety trained and medically screened personnel, provide documentation of training and medical qualifications for personnel working inside exclusion zone.

G. Digester Loading Criteria:

- 1. Loading from any source (dead load, live load, snow, etc.) is limited to a maximum, uniform load of 25 pounds per square foot.
- 2. Local or point loads shall be distributed to achieve the above uniform load.
- 3. Unbalanced load conditions shall be avoided. Loads shall be distributed to achieve a balanced condition on the dome structure.
- 4. The Engineer will evaluate whether additional restrictions are necessary based on the submitted access plan.

H. Digester Dome Access Plan:

- 1. The plan shall consist of:
  - a. Drawing(s) locating equipment and range and number of staff to be located on the dome, sequentially or simultaneously.
  - b. Cut sheets of equipment to be located on the dome, indicating:
    - 1) Weight of equipment.
    - 2) Foot print area of equipment.
    - 3) Other parameters that might affect weight distribution.
  - c. Calculations stamped by an engineer licensed in the State of California indicating overall uniform load distribution to the dome, both sequential and simultaneous.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 BACKGROUND AND GENERAL INFORMATION

A. Background:

1. The Work of this Section includes providing all labor and materials to clean the MBC digester(s).
2. The digester tank cleanings are from a municipal biosolids treatment plant. The mixture contains organic and inorganic solids, grit, grease, scum, hair, plastics, rags, silt, industrial solvents and other material normally found in digesters in a biosolids treatment plant. Optimum operating pH is near neutral but may vary from 4 to 11. Ferric chloride has been added to the influent stream and in the sludge and cleanings. Thick hair mats and heavy concentration of grit on the digester floors may be present.
3. Previous tank cleanings have generated Title 22 reports. For information purposes a sample of this data is included in Supplement 1. Prior to assigning work to the Contractor, a Title 22 report will be generated for cleaning the digester. In the unlikely event that tank residuals are found to be hazardous under Title 22, the City will proceed as follows:
  - a. Solicit a bid from the Contractor for dewatering, hauling the waste to a Class III landfill, and cleaning the tank and piping. Revised Contract Drawings and Specifications will be provided.
  - b. If the bid for item above is unacceptable, the City shall solicit bids through the City's open bidding process or purchase order process.

B. General Information:

1. The City is contracting for cleaning services of Digester(s) 1, 2 and 3.
2. The Contractor shall be responsible for removing, decanting, staging, processing, and final disposal of all large tank cleanings. The material may be temporarily stored on-site at designated staging areas, but must be hauled to and disposed at a landfill the same day as grit is loaded in the truck. Prior to disposal at any landfill, the Contractor is required to have approval by the City.
3. Prior to starting work, the Contractor shall submit a plan for City approval with a plan view of the equipment layout including proposed truck loading station and truck ingress and egress, and a list of all equipment used in the dewatering process.
4. The City retains the right to cancel this contract, whole or in part, should new digester cleanings disposal regulations be adopted that cause a disposal option to become illegal or unworkable or should the nature or quality of the digester cleanings change to make disposal under the terms of the contract illegal or undesirable.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. All work shall be coordinated in advance with MBC Senior Operations, Senior Plant Maintenance Staff, and MBC Engineering. Contractor shall provide a complete list of all employees working on-site to the City.
6. The Contractor shall furnish and install two 1/4-inch by 8-foot by 8-foot steel plates over the concrete slab expansion joint located between Digesters 1 and 3, prior to work in Area 80. An asphalt transition shall be provided between the steel plate and the existing concrete slab. Contractor shall maintain the asphalt daily or as needed. The steel plate is for heavy traffic loads. Contractor shall remove the asphalt and steel plate and transition material before demobilizing is completed and the Contractor moves off the site. A submittal for the method and material is required prior to any work or ordering materials.
7. Exceptional Contractor housekeeping is required at MBC, which has a policy of zero spills at the street level. Therefore, the Contractor is required to have containment above ground (i.e., the street level) at all locations a spill is possible. No underground containment in the gallery is required. Spill locations include, but are not limited to, the belt press, portable centrifuge, settling tanks, pumps, hoses, semi-tractor trailers, truck lanes, vactor trucks, etc. It is the Contractor's responsibility to identify a potential spill in advance and take action to contain the potential spill. Drips from hoses, truck trailers, conveyors, holding tanks, dewatering equipment, etc., are not acceptable and will also require immediate repair. The Contractor shall place containment (typically sandbags) around all storm drain inlets that can receive runoff water from the work area or locations loaded semi-trucks are idling or parked.
8. Contractor is required to attend the following mandatory meetings with City:
  - a. An initial kickoff meeting with MBC senior staff prior to the start of any work. The Contractor shall schedule this meeting to be held at MBC at a day and time of mutual convenience. It is anticipated that this meeting will last 1-1/2 hours. Meeting minutes will be taken.
  - b. A daily coordination meeting to be held at MBC at 7:00 a.m. or another convenient time mutually agreed to in advance. It is expected that the meeting will last 20 minutes or less. Serious issues will require longer meetings. Meetings will be held in MBC's small conference room. Meeting minutes will be taken if required.

1.04 DEFINITIONS

- A. Cal-OSHA: California Occupational Safety and Health Administration.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Competent Person: One who is capable of identifying existing and predictable hazards in the surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.
- C. Contractor: The firm or business under contract with the Owner to demolish, construct, repair, expand, rehabilitate or upgrade a facility, equipment, or process systems. A Contractor may also be considered to be a consultant or out-source management group.
- D. Emergency Action Plan: A written plan prepared by the Contractor to describe the various response activities that take place in the event of an emergency.
- E. First Aid Case: Any personal injury that does not require more than first aid, i.e., scratch, minor bruise, et al.
- F. Incident: Any personal injury, property damage, near miss, security breach, environmental or other business interruption, associated with Owner's projects.
- G. Job Safety Analysis: A method of analyzing the steps of a task to identify potential hazards, and inserting control measures to prevent an Incident.
- H. Lost Work Day Cases: The number of cases where an employee would have worked but could not because of a work-related illness/injury; or the number of recordable cases on which, because of an injury or illness: (1) the employee was assigned to other duties on a temporary basis; or (2) the employee worked less than full time; or (3) the employee worked at his/her assigned function but could not perform all duties connected with it.
- I. Process Safety Management: An OSHA regulation that specifies safety requirements for operating and maintaining systems that contain highly hazardous chemicals.
- J. Qualified Person(s): One who, by possession of a recognized degree, certificate or professional standing, or who by extensive knowledge, training, and experience, has successfully demonstrated the ability to solve or resolve problems relating to the subject matter, the work or Project.
- K. Recordable Injury: Any work-related illness or injury that requires medical treatment beyond first aid such as, prescribed medication, sutures, therapy, surgery, fracture setting, lost days from work, etc.
- L. Site Specific Safety Plan: A written plan prepared by the Contractor that details specific Project site safety issues and assigns responsibility for control of those issues.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- M. Subcontractor: A party that provides services to another Contractor who in turn is contracted to Owner or other City of San Diego department or agency.
- N. Man-hours: The sum of hours worked on a Project for a specified period of time that includes the labor of all Contractor and subcontractor employees, including Consultants and other on-site labor for which the Contractor has responsibility.

1.05 REGULATORY PERMITTING AND MONITORING

- A. The Contractor shall provide approved Federal, State, and Local regulatory permits for all activities identified in these contract documents. All necessary permits must be obtained and submitted to the City as part of the bid documents. Permits shall accommodate handling the estimated quantity of digester cleanings specified herein and throughout the entire term of the contract. All costs associated with obtaining the required permits and related testing, monitoring, and record keeping, shall be the responsibility of the Contractor and shall be included in the price bid.
- B. Contractor shall comply with existing, revised, proposed, and new Federal, State, and Local rules and regulations covering its activities in connection with this work. Changes in regulations or practices necessitated by any revision in rules and regulations shall be brought to the attention of the City sufficiently in advance of their implementation. Changes in regulations will not constitute justification for contract amendments or relaxation of the responsibility of the Contractor to provide the required services.
- C. Contractor shall meet all monitoring and reporting requirements imposed by all regulatory agencies having jurisdiction over Contractor's operations. Monitoring records shall always be kept on site and made available to the City immediately on request.
- D. All necessary permits and/or regulatory-monitoring requirement information shall be obtained and submitted to the City prior to the start of the Work. Permits shall be kept on site at all times and made available to the City immediately on request.
- E. City personnel shall be permitted to inspect the Contractor's disposal site(s) and weigh scales at any time and without prior notification to the Contractor.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.06 SUBCONTRACTOR NAMES

- A. The Contractor shall provide to the City a list of all subcontractor and sub-haulers including their company name, address, telephone number, PUT/ICC numbers, State and local contractor license numbers, and a contact person, type of transport truck, a list of all truck numbers and trailer numbers, and a list of all driver's names. The Contractor shall advise the City immediately, in advance, of any changes to subcontractor agreements.

1.07 DIGESTER CLEANING QUANTITIES

- A. Digester Data: The anaerobic digesters at MBC are 105 feet in inside diameter. Digester tanks have a fixed dome cover. The bottom floor is a cone that drops an additional 10 feet at the tank centerline. Refer to the Contract Drawings in Supplement 2 for additional information. The approximate volumes of the existing digester tank components are as follows:
1. Digester's Total (Approximate) Calculated Operating Volume: 3,131,000 gallons.
  2. Digester's (Approximate) Calculated Cone Volume: 216,000 gallons.
  3. Residuals are expected up to 3 feet above the top of the cone. These residuals are estimated at 194,300 gallons.
  4. The total amount of residuals to be removed is estimated to be 410,300 gallons.
  5. The City will have transferred as much of the digester contents as possible prior to turning over the digester to the Contractor for cleaning. The volume of sludge remaining in the digester for removal by the Contractor will be calculated by the Contractor and the City based upon measurement of the digester sludge surface elevation, with the resultant geometric volume determined from the most accurate Digester drawings available at the time of cleaning.

1.08 ODOR CONTROL REQUIREMENTS FOR THE CONTRACTOR

- A. Odor control shall be an immediate concern of the Contractor. If an odor problem occurs, the Contractor shall take all necessary actions to abate the odor. Prior to work, the Contractor shall submit to the City the proposed odor control system to be used, if required.
- B. The City reserves the right to require that the Contractor enclose odorous areas to contain potential odor emission sources. Areas include but are not limited to staged cleanings, e.g., bins, centrifuges, cleaning processes, truck load out in and around a large tank or transport between the digester and the staging areas, and the decant staging. The Contractor shall treat foul air discharges to remove odors using granular activated carbon units designed for this application. Ventilation and treatment flow rates shall be as required to

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

prevent detectable odor emissions at the property limits of the treatment plant. The carbon unit bed depth shall be not less than 3 feet-0 inch. The carbon loading rate shall result in a superficial force velocity of not greater than 55 feet per minute. Carbon shall be new virgin material with design criteria as follows:

1. Mesh Size, U.S. Sieve: Minimum 4 by 10.
  2. Maximum Moisture Content as Packed, Percent by Weight: 5.0.
  3. CC14 Number, % by Weight, Minimum (per ASTM D3467): 60.
  4. Hardness Number, Minimum (per ASTM D3802): 92.
  5. Retentivity, Percent: 35.
- C. If required, startup of odor treatment of malodorous emissions shall occur after commencing the Work.
- D. Odor treatment of emissions from the digester tanks is not required.
- E. Contractor shall comply with San Diego Air Pollution Control District Rule 51, below:
1. Rule 51 – Nuisance:
    - a. “A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance or annoyance to any considerable number of persons or the public or which endanger the comfort, repose, health or safety of any such persons or the public or which cause or have a natural tendency to cause injury or damage to business or property. The provisions of this rule do not apply to odors emanating from agricultural operations in the growing of crops or raising of fowls or animals.”

1.09 HAULING AND HAULING ROUTES

- A. All hauling routes used throughout this Contract shall be approved by the City prior to the start of any work. The City retains the right to withdraw its approval of any hauling route and require the use of alternative routes. In no case will approval be given for any route which passes through the community of Borrego Springs, California. Deviation from approved routes may be grounds for immediate cancellation of the Work.
- B. The Contractor’s hauler shall not stop for a prolonged period after leaving MBC until the truck reaches the landfill or disposal site. The Contractor shall report mechanical breakdowns of trucks hauling grit to landfill to the City within 24 hours of the breakdown.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. The Contractor shall be responsible for all costs associated with traffic violations or other claims incurred from hauling operations for the duration of the Work. This includes ensuring that all loads are within legal limits.
- D. The Contractor or subcontractor shall provide to the City upon request any or all driver's license(s) of truck drivers or any employee of the Contractor or the subcontractor working on-site. Having a current, unrevoked license is required for operating a motor vehicle or heavy equipment at MBC. Refusal to provide a driver's license, or failure to produce a valid driver's license will result in that individual not being allowed to drive any vehicle at MBC, or drive a truck carrying grit from MBC to a landfill.

1.10 TRUCKING SPILL RESPONSE PLAN

- A. The Contractor shall prepare a spill response plan defining a course of action in the event a hauling vehicle is involved in an accident and/or digester cleaning residuals are spilled. The spill response plan shall define a course of action in the event a hauling vehicle is involved in an accident and/or cleaning residuals are spilled.
- B. Prior to any work, the Contractor shall submit a copy of the spill response plan to the City. At all times copies of the plan shall be on-site and in each vehicle hauling grit.
- C. The draft contingency plan shall be submitted to the City for review and comment 10 days after of award of the contract and a final plan 10 days after receipt of the City's draft comments. The final contingency plan shall incorporate all of the City's comments.
- D. The Contractor shall provide formal training (e.g., tailgate training) for drivers and dispatchers on the spill response contingency plan. The Contractor shall submit to the City written confirmation that all drivers and dispatchers have received training. The Contractor shall include a list of names of those drivers and dispatchers having received spill contingency response plan training. Only those drivers and dispatchers with spill contingency response plan training shall work with MBC's tank cleanings.

1.11 DISPOSAL SITE DOCUMENTATION AND LOCATION

- A. The City will provide documentation showing the City as the point of origin, and the Contractor's involvement as it relates to any disposal activities.
- B. The City's intent is to ensure that its own actions and that of the Contractor and subcontractor actions achieve full regulatory compliance and continuous, strict oversight of all aspects of this contract. For this reason, disposal locations are limited to sites within the United States.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.12 TRIBAL LANDS – NATIVE AMERICAN LANDS

- A. If the Contractor proposes to process, store, or apply digester cleanings on tribal lands, the following documentation shall be included with the Bid:
1. Copies of certified resolutions documenting that the Tribal Council has adopted standards provided in 40 CFR 503 and has designated an individual or authorized Tribal organization to enforce and administer the 40 CFR 503 standards.
  2. Copies of a lease defining the rights of the Contractor to process, store, or apply digester cleanings on Tribal land. The lease shall include:
    - a. Express approval in writing by the Tribal Council and Bureau of Indian Affairs (BIA).
    - b. Express written documentation proving that authority has been granted by both the Tribal Council and Bureau of Indian Affairs to receive and process cleanings upon Tribal Lands.
    - c. Express written proof regarding the nature and extent of this authorization, including any conditions, restrictions or limitations relating to this authorization.
    - d. Express documentation establishing that pertinent federal regulations (40 CFR 503) have been adopted by the Tribal Council and will be strictly adhered to by the bidder.
  3. Copies of a Finding of No Significant Impacts or a certified Environmental Impact Statement, all in accordance with the National Environmental Policy Act (NEPA).
- B. Further to the agreement of general indemnification provided in Section 51 of the City of San Diego General Provisions (Appendix B of the Request for Bids), the Contractor specifically agrees to defend, indemnify, and hold harmless the City from any and all claims or regulatory liability to the Tribal Council, tribe members, the Bureau of Indian Affairs, the Environmental Protection Agency, the Regional Water Quality Control Board, or any other party that may be caused or alleged to be caused as a result of disposal of digester cleanings on Tribal Lands.
- C. The City expressly reserves the right to determine whether a bidder has sufficiently satisfied the above conditions relating to tank cleanings beneficial use on Tribal Lands. Documentation may be in the form of a lease, Tribal Council resolutions, agreements with the Bureau of Indian Affairs, or other written instruments demonstrating binding authority acceptable to the City. The City reserves the right to determine the sufficiency of submitted documentation, to seek further assurances if necessary, and to reject any Bid that it reasonably finds to be deficient.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.13 SAFETY

- A. An approved ‘Site Specific Safety and Health Plan’ including a ‘Job Safety Analysis Report’ is required from the Contractor and subcontractors for all work at MBC. Also, all workers for the Contractor or subcontractor are required to attend an MBC ‘Site Specific Safety Training’ class. Training is approximately 1 hour. These safety requirements shall be satisfied prior to commencing work.
1. The Contractor will be working in a Class 1, Division 1 area and shall meet all Cal-OSHA standards. All State of California rules and regulations will be strictly enforced. The work shall comply with the State of California General Safety Orders and the Construction Safety Orders regarding work in confined spaces (please refer to Drawings). The Contractor is advised to contact the local office of Cal-OSHA for information about the local safety regulations.
  2. A comprehensive site-specific safety plan that covers all aspects of on-site construction operations and activities associated with the contract.
  3. The plan must comply with applicable safety and health regulations and Owner safety requirements, and must include an Emergency Action Plan.
  4. The Contractor will allow 10 working days before the scheduled pre-construction meeting for safety plan review.
  5. Acceptance of the Contractor’s safety plan only signifies that the plan generally conforms to the requirements of the contract. It does not relieve the Contractor of the responsibility for providing employees with a safe and healthful work environment nor will it replace the requirement for Job Safety Analysis (JSA).
    - a. A list of hazardous substances brought to the workplace with accompanying SDS.
    - b. Documentation of site safety orientation for employees, subcontractors and visitors.
    - c. Job Safety Analysis (JSA).
    - d. Certifications and Proof of training when required by Owner.
  6. Two continuous oxygen deficiency and lower explosive limit monitors shall be furnished by the Contractor for each digester undergoing cleaning. The monitors shall be in operation at all times. If one unit fails, work may continue on the digester while the unit is being repaired. If both units fail, all work shall stop inside the digester.
  7. Contractor shall provide blower induced ventilation to meet the requirements of Cal-OSHA. The blowers shall be in operation at all times work is in progress inside the digester. The Contractor shall provide emergency air packs for employees and inspectors.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.14 POLICY

- A. All contractors, their employees, visitors, subcontractors, vendors, and delivery personnel are required to comply with all safety regulations contained in this document including its appendices, the Owner Contractor Environment Safety and Health Manual, applicable portions of the Department Health and Safety Manual, and applicable portions of the California Code of Regulations and Federal OSHA regulations.
- B. Construction and maintenance activities at this site may present situations or conditions that may adversely impact the safety and health of a Contractor and subcontractor employees, City employees, or the general public. Therefore, the highest level of safety performance is required of the Contractor as demonstrated by a Contractor's willingness to adopt a "Safety First" culture, quickly address safety concerns brought up by its employees, subcontractors or City staff, providing quality training, open lines of communication on safety issues and concerns, and enforcement of regulations and policies.
- C. Contractor and subcontractor employees shall be responsible for their actions and the impact their actions have on others. Substandard safety performance of individuals shall be sufficient grounds to dismiss and deny access to Owner project sites. Employees shall obey safety rules and follow safe work procedures in general, and specifically as outlined in required 'Site Specific Safety Plans and Job Safety Analysis'.

1.15 ENVIRONMENTAL HEALTH AND SAFETY REQUIREMENTS

- A. Each Contractor shall:
  - 1. Provide a safe and healthy workplace for their employees.
  - 2. Notify the Construction Manager of work schedules, locations, and special precautions or concerns prior to the start of a project.
  - 3. Provide for frequent and regular safety inspections of work site(s), materials, equipment, and behavior.
  - 4. Promptly notify the Construction Manager of OSHA complaint notifications and/or OSHA inspections of the job site.
  - 5. Bear sole and exclusive responsibility for protecting the safety and health of their employees, visitors, subcontractors, and delivery persons.
  - 6. Ensure their employees, visitors, and subcontractors are given an appropriate safety orientation prior to site activity. The orientation will include general safety procedures and all required Metro Wastewater Department general and project-specific rules, regulations, and known hazards.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

7. Advise employees that failure to comply with MBC rules, or federal, state, and City regulations, will result in corrective action that may include removal from the project site.
8. Act immediately on reported unsafe conditions or activities and implement controls to eliminate the hazard or exposure as soon as possible.
9. Investigate accidents and incidents that result in personal injury or illness to their employees, subcontractors, visitors, or delivery persons and for any damage caused to public or private buildings and/or equipment.
  - a. In the event of an accident or incident that results in a personal injury or illness to Contractor's employees, subcontractors, visitors, or delivery persons, the Contractor shall notify the Contract Representative and Safety Officer or designee immediately. The Contractor shall contact all federal, state, and local agencies when required by law and complete all required reports. The Contractor shall cooperate with all investigations by Metro Wastewater Department, City, State, or Federal officials.
10. Ensure that a "Competent Person" is provided at all their job sites including their subcontractors and vendors as required by CCR, Title 8.
11. Provide and maintain an appropriate number and type of sanitary facilities for their employees, and subcontractors.
12. Inform and disseminate to their employees, subcontractors, visitors, and delivery persons, all safety information provided by Owner.
13. Have a written safety and health plan that includes the following elements:
  - a. Management Commitment and Employee Involvement.
  - b. Written policy.
  - c. Establish and communicate goals and objectives.
  - d. Provide for top management visibility.
  - e. Assign and communicate responsibilities:
    - 1) Provide authority and resources.
    - 2) Hold all personnel accountable.
    - 3) Program review annually for synergy with goals.
    - 4) Complies with Cal-OSHA Title 8, Section 3203.
14. Prioritize Hazard Prevention and Control efforts using the following guide:
  - a. Engineering techniques.
  - b. Procedures for safe work.
  - c. Provisions for personal protective equipment.
  - d. Administrative controls.
  - e. Preventative maintenance.
  - f. Emergency planning.
  - g. Medical program.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

15. Reinforce safety performance expectations by:
  - a. Ensuring that employees understand hazards and how to protect themselves.
  - b. Supervisors analyzing the work-site and employee performance for optimum effectiveness.
  - c. Maintaining physical protection.
  - d. Scheduling ongoing, effective quality training.
  - e. Ensuring line management understands responsibility and methodology to provide a safe work environment for their employees.
  - f. Maintaining records of employees training and safety meetings.
16. Unless otherwise specified, provide the services of a full-time safety representative and provide verification of the selected individual's qualifications. Such representative shall:
  - a. Have experience with Occupational Safety or closely related discipline with construction experience in the field.
  - b. Interface directly with the MWWDC Construction Manager, and/or MWWDC Construction Safety Officer or their designees.
  - c. Report directly to the Contractor's Corporate Safety Manager or Company President or Vice President.
  - d. Have authority to correct any hazard or unsafe practice by any means necessary including stoppage of work if necessary.
  - e. Demonstrate knowledge in construction-related safe practices, Cal-OSHA regulations, and any other regulations or practices pertinent to the work being performed.
17. Perform employee training including:
  - a. New employee orientations of company safety policies and practices as well as specific safety procedures for the employee's work function.
  - b. An educational program to familiarize employees with their company management system.
  - c. "Toolbox" or "Tailgate" safety meeting at least weekly to address specific safety issues and awareness of project related topics.
  - d. Additional training for new job functions or whenever a new or previously unrecognized hazard is discovered.
  - e. Safe operating procedures and related hazards of specific tools and equipment used by employees.

B. Enforcement:

1. Each Contractor and their subcontractor(s) shall establish in writing and enforce effective disciplinary measures in accordance with California Code of Regulations (CCR) Title 8 Section 3203.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Owner reserves authority to require the Contractor to remove from the job site, any person who demonstrates an unwillingness to comply with safety rules.
3. Failure to comply with all applicable federal, state, and local safety rules and regulations will be considered as non-compliance with the contract. The Construction Safety Officer or their designee will advise the Construction Manager of any substandard safety performance issues. Such issues will be documented and placed in the Contractor's file. A copy of the document will be presented to the Contractor to correct violations or hazards. Grounds will have been established to withhold progress payments, terminate the contract, and/or seek disbarment should the Contractor fail to promptly make corrections or continue to violate safety rules.
4. Owner has authority to stop work immediately and without prior notification when either real or perceived conditions or practices present an imminent danger. Work will remain stopped until such conditions or practices are corrected or otherwise dealt with in a manner acceptable to Owner. Note: Imminent danger may be described as actions and situations that may result in serious injury or death, or considerable property damage.
5. The Construction Manager or designee may issue to the responsible Contractor a Notice of Non-Compliance for issues other than imminent danger. Verbal communication with the Contractor to correct simple issues is acceptable.
6. Prior to resuming work, the responsible Contractor shall agree to abate the hazard(s), document how the hazard will be abated, and agree upon a date with Owner to complete the corrective action(s).
7. If the Contractor fails to take corrective action by the agreed upon date, Owner has authority to stop work or retain the necessary craftsman to make the corrections with all labor and materials costs to be charged back to the responsible Contractor. The Contractor shall have no recourse against Owner for damages that may arise as a result of such actions the Department takes.

C. Preconstruction Meetings:

1. Representatives of the Contractor shall meet with the Construction Manager and Construction Safety Officer or their designees prior to the start of construction to review ESH requirements and discussing how those requirements will be implemented. A site visit may also occur to ensure appropriate safety equipment, tools, and personnel are ready for work to begin.
2. The Contractor shall submit their site-specific safety plan and JSA to be reviewed by the Construction Safety Officer or designee. Work may not proceed until the aforementioned have been reviewed and approved.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. The Contractor Environmental Safety and Health Matrix Requirements will be reviewed with the Contractor.

D. Reports:

1. The Contractor shall provide the following to the Construction Manager:
  - a. Bi-weekly total of person-hours worked at the project(s) site including those of the Contractor, subcontractor, and consultants.
  - b. Number of First Aid Cases, Recordable Injuries, and Lost Work Day Cases incurred on the Project for the same period.
  - c. Certification of New Employee Orientation.
  - d. Safety Meeting Minutes.
  - e. Tailgate Meeting Topic and signed attendance roster.
  - f. List of competent persons assigned to the project and competency type.
  - g. Safety Inspection reports.
  - h. Copies of Incident/Accident Reports.
  - i. Other safety related data as required.

1.16 MBC AFFILIATION WITH ISO 14001

- A. MBC is voluntarily affiliated with ISO 14001 an International Standards Organization promoting environmental awareness in all aspects of manufacturing or labor activities. MBC is audited annually by ISO for maintaining and improving our environmental way of doing business. Digester cleaning is an opportunity to observe the principals of ISO 14001. By carefully planning the work in advance and continuing with a conscientious effort during work activities, the environment will be protected.
- B. Contact Wastewater Operations Supervisor Richard Pithford at (858) 614-5822, MBC's Environmental Coordinator, for further information about ISO 14001.

**PART 2 PRODUCTS**

2.01 CLEANING EQUIPMENT

- A. Cleaning equipment shall be capable of removing digester contents that may contain organic and inorganic solids, plastics, rubber, bones, rags, fibrous material, etc., from digesters.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. Mechanically and/or electrically powered cleaning equipment shall be capable of the minimum:
  - 1. Reducing (grinding) the digester contents down to a maximum particle size of 1-1/4 inches by 3/8 inch by 5/16 inch.
  - 2. Digester contents that cannot be reduced shall be loaded and transported, without leakage, over roadways and disposed at an offsite location.

2.02 DIGESTER CLEANINGS HAULING VEHICLES

- A. The Contractor shall provide and maintain all vehicles and containers required for hauling described under this contract. After approval of this equipment by the City, the Contractor can remove, haul, and dispose of digester cleanings.
- B. The Contractor shall provide water-tight sealed containers for hauling the dewatered digester cleanings. Leaking truck trailers shall be repaired and the leaking stopped immediately. The Contractor shall capture all leaking fluid and waste in MBC's centrate/sewer system.
- C. All open-top trucks or bins shall be covered with heavy tarps before leaving the MBC.
- D. All trucks shall be identified on the driver and passenger doors, in bold letters and numbers, clearly stating the Company name (greater than or equal to 8-inch tall letters), truck number (greater than or equal to 6-inch tall letters/numbers) and Company phone number (greater than or equal to 6-inch tall numbers) for easy identification by the public and City staff. The same identification is required of semi's trailers and storage bins that are used for hauling.
- E. All vehicles, trailers, bins and containers shall be delivered to the site in a clean, well-maintained, and water-tight condition. The City has the right to reject a container for any reason and to ask that it be substituted with a clean, well-maintained container.
- F. Contractor shall be responsible for erecting temporary barriers around vital MBC pipes, equipment or other assets that could be damaged by the Contractors dewatering, truck loading, or truck hauling operations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

**PART 3 EXECUTION**

3.01 DIGESTER 1, 2 AND 3 TANK AND PIPE CLEANING

- A. The Contractor shall clean all interior tank surfaces and pipes embedded in the concrete floor. All solids and debris from the cleaning shall be removed, dewatered, and disposed.
- B. The Contractor shall clean and flush all piping associated with the digester mixing pumps, recirculation pumps, and axial pumps. All solids and debris from the cleaning shall be removed and disposed.
- C. The Contractor shall clean with high pressure water and remove all solids and scale in all pipes embedded in the sump of the tank. The Contractor shall use non-abrasive tools and acceptable water pressure to prevent damage to the pipes. These ductile iron pipes are encased in concrete and have glass liners. A submittal of the Contractor's plan and approval by the City is required prior to this work.
- D. Plant process water and/or reclaimed water may be used by the Contractor without charge. MBC's water is City of San Diego water. The MBC water is separated from the City water supply by an air gap tank. Use of process water or reclaimed water by the Contractor will be determined solely by the City.
- E. The Contractor's use of plant water is limited to a total instantaneous flow of 150 gallons per minute, and a total daily usage of 75,000 gallons.
- F. The Contractor shall provide construction water meters and a reduced pressure back flow preventer for each connection to the plant water system. The back-flow preventer shall be Febco Model 825, Beeco Model G-C, "or-equal."
- G. The Contractor shall record water hourly usage and daily usage. Record water usage in a log book and make the log book available to the City staff on request.
- H. The City will provide all electrical power at no cost. The Contractor shall provide compressed air, pumps, vacuum trucks, piping and appurtenances, hoses, generators, forklifts and all other tools and equipment required for the work.
- I. Contractor shall visit the MBC before bidding to determine if the existing power connections are sufficient. If not, the Contractor shall provide temporary portable generators for power requirements. The City will not modify any electrical connection points for the Contractor. The Contractor shall be responsible for all air quality permits associated with portable engines.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- J. MBC staff is available to discuss any power issues. Contractor's plan for this phase shall be submitted prior to this work.
- K. Following removal of all digester cleanings, the entire interior surface of the tank shall be water-cleaned, including columns and appurtenances. The blast pressure used shall be sufficient to remove all remaining materials on the digester walls and not so powerful that water damages the digester's concrete or PVC lined concrete surfaces. Clumps of hair, rags and other material shall be removed or work will not be accepted.
- L. The Contractor shall remove all residual water inside the digester from the Contractor's cleaning activities and dispose of this water appropriately.
- M. Any damage from the Contractor's cleaning activity to City property shall be repaired by the Contractor immediately, to the satisfaction of the City, and at no additional cost to the City.

3.02 ON SITE DEWATERING (IF SELECTED)

- A. Decant piping from the dewatering area shall be routed to the designated discharge point into the plant's centrate system located at the Emergency Biosolids Tank. All sludge and decant piping shall be installed and maintained to not interfere with Plant street traffic. All sludge and decant piping shall be routed, installed, and maintained to prevent any leakage or spillage from entering the Plant storm drain system.
- B. Contractor shall return their dewatering operation to the plant drain.
- C. Decant samples will be analyzed by the MBC's Process Control Laboratory. City will be the sole judge of whether decant complies with the quality constraints specified herein. The Contractor will be notified and additional sampling will be performed. The Contractor shall modify operations to comply at all times.
- D. Contractor shall provide instantaneous and total flow metering of decant flow. Plant personnel shall be allowed access to the flow meter for observation/determination of accuracy of meter and precision of calibration unit.
- E. Contractor will provide a 24-hour, refrigerated, discrete, programmable sampler with 24-1,000 mL bottles, and provide one 1-liter sample for each hour of decant operation. Each 1-liter sample will be a composite of individual 100-mL aliquots taken every 0.1 hour. Samples will be taken within 10 feet of the decant discharge in a settling tank or from the connection point to the plant drain. Plant personnel shall be allowed access to the sampler to verify accurate sampling.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- F. Decant flow shall be de-gritted by the use of tea cup, snail type de-gritter or other equipment approved by the City.
- G. Contractor shall haul grit from the plant site to landfill approved by the City.

3.03 RESIDUALS TREATMENT AND TESTING

- A. The Contractor is responsible for discharging the liquid content of the digester cleanings into the plant centrate system.
- B. Digester cleaning liquid decant shall be discharged into the 6-inch tee connection to Plant Drainage at the Emergency Biosolids Tank, J-Tube.
- C. The Contractor shall be responsible for removing sufficient liquid from residuals removed from the digester cleanings so that all grit and solids sent to a landfill has the minimum solids content specified herein.
- D. The concentration of solids in the decant discharged into MBC's centrate system shall be below the following limits (for items 1 through 4):
  - 1. Total Suspended Solids (max): 750 mg/L on any instantaneous grab.
  - 2. Total Suspended Solids (avg): 400 mg/L.
  - 3. Settleable Solids (max): 10.0 mL/L on any instantaneous grab.
  - 4. Settleable Solids (avg): 5.0 mL/L.
  - 5. Volatile Solids: 35 percent.
- E. The City shall be responsible for testing the grit and decanted material and reporting the test results to the Contractor. The Contractor shall be responsible for immediately correcting any deficiencies in the decanting operation to meet the specified limits. Failure to meet the percentage solids limits will require shut down of the Contractor's operation and submittal of plans for obtaining these limits by the Contractor.
- F. The Contractor shall allow up to 48 hours for test results from a Certified Laboratory. A Certified Laboratory report is required to allow cleaning materials to leave the MBC.

3.04 WEIGHING PROCEDURE

- A. The Contractor shall be responsible, at its own expense, to obtain a Certified Weigh Ticket from a scale approved by the City, at or near the processing/disposal site. The ticket shall be used for determining billable tonnages hauled (if required), as well as verifying disposal destination. This certified ticket must meet the criteria as stated in the following paragraphs.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. The Certified Weigh Ticket shall show gross weight, tare weight, net weight, date and time of weighing, tractor and trailer, license/equipment numbers, name of Contractor, subcontractor, driver and City manifest number. The type of material hauled and the operators name must appear on the ticket. No predetermined tare weight will be accepted. Once the information is completed and correctly filled out, the driver shall sign the ticket. Tickets in non-compliance shall be rejected and no payment shall be made for that portion of the work.
- C. Should the Contractor use scales which are not Public Certified Scales, the Contractor shall provide the Certified Weighmaster's name, and a copy of their certification, along with a telephone number and a list of the Deputy Weighmaster which are authorized to sign weigh tickets under Certified Weighmaster.
- D. Prior to receiving payment for any load, the Contractor shall provide a hauler's manifest, and Certified Weigh Ticket showing receipt and disposal/unloading at the processing/disposal site. All discrepancies between the City Weigh Ticket and the Certified Weight Ticket will be investigated by the City prior to payment.

3.05 LOADING PROCEDURE

- A. The landfill gate hours are 5:30 a.m. to 5:00 p.m., Monday through Friday. The locked landfill gate can be opened by MBC staff on request. Landfill hours may be different than those above. The Contractor is responsible for determining landfill hours of operation.
- B. Administrative requirements before and during construction:
  - 1. Attend various meetings.
  - 2. Submit and keep current a written schedule.
  - 3. Make timely technical, data and updated schedule submittals as required.
- C. Hauling activities on weekends shall require notification by the Contractor no later than noon on the Wednesday preceding the weekend hauling. Making special arrangements with the landfill is advised.
- D. The Contractor shall provide to the City landfill weight slips for all quantities sent to the landfill. Copies of weight slips shall be submitted on a weekly basis, although daily submittals are preferred. The weight slips are required for MBC permit requirements. Failure to provide all required landfill weight slips is cause for the City to refuse to pay Contractor invoices.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.06 DIGESTER CLEANINGS DISPOSAL

- A. It is requested that the Contractor's first choice for disposal of digester cleanings is the Miramar Landfill. If another landfill is selected, the Contractor shall provide documentation to the City substantiating the selection.
- B. All sampling, testing, chemical analysis processing, or other requirements to meet a specific landfill's permit requirements for digester cleanings disposal or other requirements shall be performed by the City. Grit testing and analysis shall be in accordance with this specification.
- C. The Contractor shall not dispose of any digester cleanings in the City of San Diego sewer system, sewage pumping facility, or sewage treatment facility. However, decant and wash water disposal is allowed into MBC's centrate system. Decant testing and analysis shall be in accordance with this specification.

3.07 VERIFICATION OF CLEANING

- A. The digester will be considered clean if less than 1/8 inch thin layer of material and no single piece of debris larger than 1/2 inch in any dimension remain after a washdown by the Contractor.

3.08 SITE RESTORATION

- A. The Contractor shall restore the Site to its original condition at the completion of the digester cleaning activities.

3.09 SUPPLEMENTS

- A. The supplements listed below, following "End of Section," are a part of this Specification:
  - 1. Title 22 Reports.
  - 2. Contract Drawings.

TTLc = Total Threshold Limit Concentration.  
STLC = Soluble Threshold Limit Concentration.  
W.E.T. = Waste Extraction Technique.  
\* = The total concentration is less than 10 times the STLC. Therefore by definition, this substance is present in concentrations that are less than the limits for hazardous wastes.  
\*\* = Limits are in mg/Kg (dry weight) based on 40 CFR part 503.13 Table 3 "Limits for Land Application".  
\*\*\* = The California State Health and Safety Code 25157.8 establishes a lower limit for Lead.  
ND = Not Detected  
NA = Not Analyzed  
NS = Not Sampled  
MDL = Method Detection Limit (are in mg/Kg per dry weight; except for pH and Total and Volatile Solids)  
M&C\_DIG2 = Metro Biosolids Center Digester Cleanings from Digester #2.

**SECTION 46 23 00  
GRIT SEPARATORS**

**EQUIPMENT AND COMPONENT NUMBERS**

76-GSR-01: Grit Separator 1 (existing, replacement parts only)  
76-GSR-02: Grit Separator 2 (existing, replacement parts only)  
76-GSR-03: Grit Separator 3 (existing, replacement parts only)  
76-GSR-04: Grit Separator 4 (new unit)  
76-GSR-02.LCP: Grit Separator Control Panel

**PART 1 GENERAL**

1.01 DESCRIPTION

A. Scope: This section specifies equipment for separating grit slurries from raw primary and secondary solids. Grit separator unit supplier shall design and supply supports for equipment specified in this section. Grit separator unit performance and compatibility shall be identical to existing sludge grit separators in all respects, except as specified herein.

B. Operating Requirements:

<b>Equipment Number</b>	<b>Inlet Flow Rate, gpm</b>	<b>Inlet Sludge Pressure, psig</b>	<b>Process Stream</b>
76-GSR-04	1,040	20.0 (maximum)	Raw solids (RSL)

C. All mechanical, electrical, and structural components (including those not specifically listed herein) for both new and existing grit separators shall be inspected for corrosion and to ensure proper working status. Defective, corroded, or inoperable equipment shall be repaired or replaced to restore working status, as approved by the Engineer or Owner. Coatings shall be reapplied to new and existing equipment according to the Contract Documents, as necessary.

1.02 QUALITY ASSURANCE

A. Performance:

1. The grit separator unit shall be designed to separate solids from a grit slurry generated from domestic wastewater solids containing up to 1.0 percent solids by volume. The grit slurry will include sand, sticks, gravel, petroleum products, industrial solvents, organic solids, detergents, and paper products. Grit separator unit shall remove no less

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

than 95 percent of all grit particles in the inlet slurry having a diameter equal to or greater than that retained on a 200-mesh U.S. standard sieve and specific gravity of 2.7 or greater.

2. Grit separator unit shall be the top overflow, bottom discharge type. Unit shall be all hydraulic, high efficiency vortex separator designed to remove grit, sediment, and sand from wastewater solids using vortex motion and boundary layer effects to aid in organics removal.
3. Grit separator unit shall be designed for continuous operation. Ambient air temperatures are expected to vary from 50 degrees F to 100 degrees F with maximum humidity of 100 percent.

B. Related Sections: Section 40 99 90, Package Control Systems.

### 1.03 SUBMITTALS TO BE PROVIDED

A. The following submittals shall be provided in accordance with the Contract Documents:

1. Fabrication drawings with full dimensions.
2. Plan, cross section views, and details showing fabrication details of proposed mounting supports for each separator.
3. Anchorage and structural calculations signed and sealed by a Professional Engineer registered in the State of California. Anchorage design shall be in accordance with Section 01 88 15, Anchorage and Bracing.
4. Manufacturer's written certification that the grit separator unit will achieve the grit removal performance specified in this section.
5. Operations and maintenance manual in accordance with the Contract Documents.
6. Manufacturer's standard warranty, in accordance with the requirements specified herein.

## **PART 2 PRODUCTS**

A. Acceptable Products:

1. Grit separator unit shall be Hydro International TeaCup modified as necessary to provide the specified features.
2. Or approved equal.

### 2.02 GRIT SEPARATOR UNIT DESIGN

A. Design Data:

1. Number of Units: One.
2. Size: 76-inch diameter.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Performance: 95 percent removal of all grit (specific gravity 2.65).
4. Greater than or equal to 75 microns in the flow range.
5. Influent Solids Concentration: Less than or equal to 1.0 percent.
6. Design Flow/Unit: 1,040 gpm with 276 inches water column headloss.
7. Influent Connection: 8-inch flanged pipe.
8. Effluent Connection: 8-inch flanged pipe.
9. Underflow Connection: 3-inch NPT pipe.
10. NPW Connection: 1.5-inch NPT.
11. Material of Construction: Type 304 stainless steel.

B. Operation:

1. The unit shall be designed to handle grit slurry.
2. The unit shall be characterized by a dominant, strong free vortex which uses centrifugal and gravitational forces and secondary boundary layer velocities to affect the separation, collection, and classification of grit from the unit's inflow.
3. Defining characteristics of the dominant free vortex / secondary boundary layer velocity type units are as follows:
  - a. Dominating increasing tangential velocity profile toward the center of the unit.
  - b. The ability to handle increasing flows with no loss of the specified grit removal efficiency and with increasing headloss requirements.
  - c. The ability to classify (wash) the grit from lighter organic material to meet the specified organic solids content.
  - d. No requirements for electrical or mechanical components, flow deflecting / guiding weirs or baffles, or compressed air lines within the unit to meet the specified performance.
  - e. Continuous removal of washed, clean grit.
4. The unit shall be all-hydraulic with no moving parts within the unit.
5. Grit underflow shall be transported to the Grit Dewatering units.
6. Fluidizing water shall be continuously supplied to the unit.

C. Construction:

1. The unit shall be fabricated from stainless steel. The dished and flanged heads shall be 1/4-inch thick. The vessel walls shall be 3/16-inch thick.
2. A coating of Belzona shall be applied to the inside bottom part of the unit body to add a secondary layer of abrasion resistance.
3. The unit shall be designed to withstand a maximum working pressure of 20 psig. The actual maximum pressure at the inlet shall be no more than 20 psig.
4. A minimum 24-inch diameter access hatch shall be provided in the top of the unit. All internal elements shall be removable from inside the unit.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. The unit shall be free standing on three supports. The main support frame shall be flanged so the legs can be removed for shipping and installation and reinstalled by the General Contractor in the field.
6. The unit shall include a hydraulic valve (HV) to deliver a continuous flow of “washed” grit slurry to the dewatering unit. The HV shall have no mechanical or moving parts.
7. The unit shall have one 1-inch NPT pipe stub for connection of the system water.
8. The unit shall have one 2-inch NPT connection on the lid for a sewage air release valve, one 1.5-inch NPT grit underflow connection, one 3-inch NPT threaded drain connection, and one 1.5-inch NPT fluidizing water connection for the HV supply and HV backwash.

D. Valves and Accessories:

1. Work to be provided on 76-GSR-01, 76-GSR-02, and 76-GSR-03:
  - a. Unit supplier shall furnish and Contractor shall install new PITs (76PIT-1104A, 76PIT-1109A, and 76PIT-1114A).
  - b. Unit supplier shall furnish and Contractor shall install new PDITs (76PDIT-1104B, 76PDIT-1109B, and 75PDIT-1114B).
  - c. Contractor shall salvage existing 4-inch plug valves (76MV1101, 76MV1102, 76MV1106, 76MV1107, 76MV1111, and 76MV1112) and re-install and re-name if necessary as shown on Drawings. Others shall be kept as shelf-spares.
  - d. Unit supplier shall furnish and Contractor shall install new 3-inch motorized valves (76MV1101, 76MV1106, and 76MV1111).
  - e. Unit supplier shall furnish and Contractor shall install new 1.5-inch solenoid valves (76SV1138A, 76SV1139A, and 76SV1140A).
  - f. Unit Supplier shall furnish and Contractor shall install new 1.25-inch motorized valves (76MV1104B, 76MV1109B, and 76MV1114B).
  - g. Contractor shall furnish and install new manual valves as shown on Drawings.
  - h. Contractor shall furnish and install new flushing connections as shown on Drawings.
2. Unit supplier shall supply 76-GSR-04 with valving and piping required for their standard hydraulic valve unit, including the following equipment (or approved equal):
  - a. One 4-inch motorized modulating valve (76MV1123).
  - b. One 3-inch motorized valve (76MV1124).
  - c. One 1.25-inch bronze ball valve.
  - d. One 1.25-inch modulating ball valve to regulate water flow to the HV (76MV1125B).
  - e. One 1.5-inch bronze ball valve for utility water supply shut off.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- f. One 1.5-inch NEMA 4X brass solenoid valve to automate system water to the HV (76SV1125A).
- g. One 1.5-inch stainless steel ball valve.
- h. One 1.5-inch stainless steel solenoid valve to regulate flow to drain pipe (76SV1125C).
- i. One gauge pressure indicating transmitter (76PIT-2123).
- j. One differential pressure indicating transmitter (76PDIT-2126).

2.03 CONTROL PANEL: 76-GSR-02.LCP

- A. One control panel shall be furnished, completely pre-wired, and tested.
- B. In accordance with general control requirements and component qualities specified in Section 40 99 90, Package Control Systems. Provide panels and controls as follows:
  - 1. Enclosure Rating: NEMA 4X.
  - 2. Material: Type 304 stainless steel.
  - 3. Voltage: 120 volt.
  - 4. Phase: One-phase.
  - 5. Frequency: 60 Hz.
  - 6. Logic:
    - a. Programmable relay.
    - b. Single loop controller.
- C. The control panel shall contain all timers, switches, indicator lights, and other components necessary to operate the unit.
- D. The control panel shall be supplied with applicable control relays and time delay relays with a minimum one extra normally closed and one extra normally opened contact provided for each relay.
- E. Where remote monitoring is required, the panel shall be provided with all dry contacts necessary.
- F. The panel door layout shall include the following items:
  - 1. Front panel mounted combination main disconnect switch and circuit breaker.
  - 2. Back lit, push-to-test Power On indicating light.
  - 3. System three position HOA switch.
  - 4. System Emergency Stop push button.
  - 5. System Alarm Reset push button.
  - 6. Three position HOA switch.
  - 7. Supply water three position HOA switch.
  - 8. Backwash water valve three position HOA switch.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

9. Auxiliary backwash pushbutton.
10. RUNNING indicating light.
11. Supply valve OPEN light.
12. Backwash valve OPEN light.
13. BLOWDOWN light.
14. WET/DRY/REMOTE three position switch.
15. SYSTEM BLOWDOWN three position HOA switch.
16. Inlet/outlet high pressure alarm.

2.04 SEQUENCE OF OPERATION

- A. The system shall be controlled to provide automatic or manual operation and unit shut down when a fault is detected.
- B. Grit Separator Unit:
  1. Unit shall be designed to run continuously.
  2. During operation, a washed/classified grit slurry shall continuously underflow from the unit. Control of the grit slurry underflow rate shall be via the HV mounted on the bottom of the unit. A portion of the system water shall be continuously introduced to the HV.
  3. Twice per hour during heavy grit loads and once per hour during light grit loads, a backwash sequence shall be initiated by cycling solenoid valves, which shall flush the grit underflow gap inside the unit. Frequency and duration of backwash cycles shall be adjustable.
  4. Once every four backwashes, a blowdown sequence shall be initiated to flush accumulations of debris inside the unit. Blowdown shall be accomplished by stopping the influent to the unit, cycling solenoid valves, and resuming operation. Frequency and duration of blowdown cycles shall be adjustable.

2.05 CONTROL REVISIONS

- A. General Contractor or grit separator supplier shall revise the grit separator system controls for all units:
  1. To delay overpressure shutdowns for 30 minutes to allow backwash and blowdown at higher pressures, as indicated in this section.
  2. Furnish, replace and tune existing under flow controls, including: Single loop controllers, modulating control valves, differential pressure (flow) and pressure transmitters.
    - a. Differential Pressure and Pressure Transmitters models to match data sheets.
      - 1) Section 40 90 00, Instrumentation and Control, Supplement 02C P03, Pressure Differential Transmitter.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 2) Section 40 90 00, Instrumentation and Control, Supplement 02F P09, Pressure Transmitter.
- b. Coordinate the procurement of instrumentation to be the same manufacture and model as other instrumentation provided under the Metropolitan Biosolids Center Improvements Project.
3. Modify existing control panel relay logic to remove the following control logic:
  - a. Individual grit separator will select the dewatering unit based on the operator selection of one of two grit discharge valves.
  - b. Start Stop commands to Grit Dewatering Units No. 1 and 2 from 76MV1101, 76MV1106, 76MV1111, and 76MV1112.
4. Modify existing control panel relay logic to add the following control logic:
  - a. Valve 76MV1102 will control all grit flow and Start Stop commands to Grit Dewatering Unit No. 1.
  - b. Valve 76MV1107 will control all grit flow and Start Stop commands to Grit Dewatering Unit No. 2.
  - c. Individual grit separator will have one grit discharge valve.
  - d. Furnish and install new two position switch, Local / Computer, and three position switch, Open / Stop / Close, for 76MV1101, 76MV1106, and 76MV1111.

2.06 UTILITY REQUIREMENTS

A. Water:

1. The unit shall use non-potable water supplied at a regulated 50 psig plus or minus 5 psi. The water requirements shall be as follows:
  - a. A continuous supply of 50 gpm for normal operation of the unit.
  - b. An intermittent supply of 47 gpm for a periodic short duration during backwash.

B. Electrical: The system shall require one 120V ac, single-phase electrical service connection to operate.

2.07 STANDBY COMPONENTS

- A. The following spare parts shall be provided for the grit separator unit: One baffle.

**PART 3 EXECUTION**

3.01 GENERAL

- A. Supports, fabricated or structural steel, shall be provided for the grit separator unit. Connections shall be located to match existing units.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- B. The General Contractor shall be responsible for the compatibility of the grit separator and grit dewatering units.

3.02 DELIVERY AND INSTALLATION

- A. The equipment and material shall be shipped complete except where partial disassembly is required by transportation regulations, for protection of components, or to transport, mount, and install the unit inside the existing building.
- B. Spare parts shall be packed in containers bearing packing lists clearly designating contents and pieces of equipment for which they are intended.
- C. The General Contractor shall inspect equipment prior to unloading and notify the manufacturer of any damage to equipment within 5 days. Failure to notify the manufacturer of damage to equipment prior to unloading shall void all warranties pertaining to subject equipment.
- D. The General Contractor shall unload, store, and safeguard equipment, materials, and spare parts in accordance with manufacturer's recommendations.

3.03 STARTUP, TRAINING, AND MANUFACTURER'S SERVICES

- A. A factory-trained representative for the equipment specified herein shall be present at the jobsite and/or classroom designated by the Owner for a maximum of one 8-hour person-day (1 visit) for installation inspection, plant startup, functional testing, and operator instructions; travel time excluded. A minimum of 30 days' notice to the manufacturer shall be provided to schedule manufacturer's services. Any services with less than 30 days' notice shall be billed to the General Contractor for service time and actual travel costs.

3.04 FIELD TESTING

- A. Prior to plant startup, all equipment shall be inspected for proper alignment, operation, connection, and satisfactory operation by means of a functional test. It is the General Contractor's responsibility to notify the manufacturer of any inability to perform functional testing prior to operator training.

3.05 MANUFACTURER'S CERTIFICATE(S)

- A. Provide manufacturer's certificate of installation and commissioning following functional testing and startup.
- B. Provide manufacturer's OEM software licensing agreement following acceptance and final payment.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3.06 WARRANTY

- A. Manufacturer shall warranty to the City that any installed equipment will be free from workmanship defects for a period of 1 year after completion of field testing, as determined by the manufacturer.
- B. The workmanship warranty shall cover all defects related to installed work only. Manufacturer shall provide service without charge throughout warranty period if a problem occurs due to workmanship or material defects. Services shall be rendered by the Manufacturer within 2 weeks of notification of defect and shall occur between 8:00 a.m. and 5:00 p.m. Pacific time on weekdays.

**END OF SECTION**

**SECTION 46 23 10**  
**GRIT DEWATERING UNIT REHABILITATION**

**EQUIPMENT AND COMPONENT NUMBERS**

76-GS-01: Grit Dewatering Unit 1

76-GS-02: Grit Dewatering Unit 2

**PART 1 GENERAL**

**1.01 EXISTING EQUIPMENT**

A. Existing grit dewatering units (grit snails) were manufactured by Hydro International (previously Eutek). The units use a slow moving cleated belt to dewater grit by gently escalating grit from the clarifier pool without resuspending fine grit particles in the clarifier overflow. Existing equipment information is below.

1. Model Number: GS1296.
2. Capacity: Up to 2.0 cubic yards of dewatered grit per hour.
3. Belt Width: 12 inches.
4. Clarifier: 96 inches square.
5. Motor: 1 hp, totally enclosed non-ventilated (TENV), 480V, three-phase, 60-Hz.
6. Overflow Connection: 6-inch flanged pipe.
7. Drain Connection: 3-foot flanged pipe.
8. Nonpotable Water (NPW) Connection: 1.5-inch NPT.
9. NPW Requirement/Unit: Continuous 10 gpm at 50 psig.
10. Material of Construction: Type 304 stainless steel housing/rubber cleated belt.

**1.02 WORK INCLUDES**

- A. Repair and replacement of mechanical, electrical, and other systems for existing grit dewatering units. Work shall be performed in the field.
- B. Contractor shall coordinate with Hydro International, Hydro International's manufacturer's representative, or Engineer-approved equal to refurbish both existing grit dewatering units. All parts used in the refurbishment shall be compatible with existing equipment. At least one grit dewatering unit shall be available for operation at all times during the rehabilitation period.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- C. At a minimum, the following components of each grit dewatering unit shall be replaced:
1. One 12-inch belt.
  2. One scraper; internal 1/4-inch HDPE; 12-inch belt.
  3. One scraper; head roll 12 inches; 1/4-inch HDPE.
  4. One liner, tail-roll retainer 12-inch.
  5. One retainer liner, head roll.
  6. Two filler skirts.
  7. Two drip skirts.
  8. Two side skirts, head roll drive side.
  9. Two side skirts, head roll non-drive side.
  10. One liner, drain side 12-inch.
  11. One liner, non-drain side.
  12. One liner, bottom.
  13. One sprocket; 70-tooth bored and faced for TTA-50.
  14. One sprocket; Martin 15-tooth 1-1/4-inch bore; 1/4-inch KW stainless steel.
  15. One Dodge Torque Tamer; No. 50 x 1-1/4 inch.
  16. One bushing; Dodge Torque Tamer; No. 50 x 1/4 inch.
  17. One chain; 40-pound with connection link.
  18. Two bearings; Dodge flange 1-1/4-inch; F4BSC104 HI-VOL ball.
  19. Four gaskets; tail-roll flange bearing.
  20. Two bearings; Dodge 1/2-inch SC pillow block.
  21. Two bearings; Dodge 1-1/4-inch SC pillow block.
  22. Two bushings; B-Loc 1-1/4-inch with socket head cap screws.
  23. One tail roll (lagged).
  24. One head roll (lagged).
  25. One sponge rubber strip 3/16-inch by 2-inch by 50 feet long Neoprene/EPDM/SBR.
- D. All mechanical, electrical, and structural components (including those not specifically listed herein) shall be inspected for corrosion and to ensure proper working status. Defective, corroded, or inoperable equipment shall be repaired or replaced to restore working status, as approved by the Engineer or Owner. Coatings shall be reapplied to new and existing equipment according to Section 09 90 00, Painting and Coating, as necessary.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.03 SUBMITTALS

A. Action Submittals:

1. Shop Drawings:
  - a. Product Data:
    - 1) Complete scope of supply, including narrative and bill of materials, for rehabilitation work.
    - 2) Make, model, weight, and horsepower.
    - 3) Descriptive literature, specifications, dimensional layout, and identification of materials of construction.
    - 4) Painting/Coating System(s): Manufacturer's descriptive technical catalog of literature and specifications.
  - b. Detailed Drawings:
    - 1) Mechanical and Electrical: Show equipment fabrication drawings, interface with other items (including dimensions, size, and locations of connections to other work), and weights of associated equipment.
    - 2) Include piping, control valves, and seal between fixed and rotating parts.

B. Informational Submittals:

1. Refurbishing Contractor's qualifications.
2. Installation schedule.
3. Certificates:
  - a. Manufacturer's Certification of Compliance, in accordance with the Contract Documents.
  - b. Manufacturer's certificate that coating system(s) meet or exceed specified requirements, if applicable.
4. Special shipping, storage, protection, and handling instructions.
5. Test procedures and schedule, in accordance with the requirements specified herein.
6. Test results, reports, and certifications.
7. Manufacturer's Certificate of Proper Installation, in accordance with the Contract Documents.
8. Service records for maintenance performed during construction.
9. Manufacturer's standard warranty, in accordance with the requirements specified herein.

1.04 QUALIFICATIONS

- A. Refurbishing Contractor shall have experience performing the type of Work specified herein.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.05 DELIVERY

- A. Delivery shall be in accordance with Contract Documents.

**PART 2 PRODUCTS**

2.01 SERVICE CONDITIONS

- A. General: Products shall be suitable for installation indoors and exposed to site conditions as described below.
- B. Material Handled: Liquid slurry containing grit fraction of municipal wastewater solids.
- C. Influent Liquid Temperature Range: 50 degrees F minimum to 85 degrees F maximum.
- D. Influent pH Range: 6.5 minimum to 7.5 maximum.
- E. Site Conditions:
  - 1. Ambient Temperature Range: Minimum 0 degrees F to maximum 100 degrees F.
  - 2. Ambient Relative Humidity Range: Minimum 10 percent to maximum 98 percent.

**PART 3 EXECUTION**

3.01 INSTALLATION

- A. In accordance with manufacturer's written instructions.
- B. No field welding, except seal welding, shall be allowed. Seal weld continuously for tightness against leakage. Seal welding shall comply with applicable requirements of AWS D1.1/D1.1M.

3.02 FIELD QUALITY CONTROL

- A. Functional Tests:
  - 1. Conduct on each grit dewatering unit.
  - 2. Test for continuous 24-hour period without malfunction.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

B. Performance Test:

1. Conduct on each grit dewatering unit in accordance with the original equipment manufacturer-accepted test procedure.
2. Perform under actual or approved simulated operating conditions.
3. Grit in the dumpster shall contain greater than or equal to 60 percent by weight total solids and less than or equal to 20 percent by weight volatile solids. Analyze samples according to EPA Method 1684 or Engineer-approved equal. At least three samples shall be collected over a 24-hour period from the grit dewatering unit discharge or screw conveyor discharge. Samples shall be collected no less than 8 hours apart.

3.03 MANUFACTURER'S SERVICES

- A. A factory-trained representative for the equipment specified herein shall be present at the jobsite and/or classroom designated by the Owner for a maximum of four 8-hour person-days (2 visits) for installation inspection, plant startup, functional testing, and operator instructions; travel time excluded.

3.04 MANUFACTURER'S CERTIFICATE(S)

- A. Provide manufacturer's certificate of installation and commissioning following functional testing and startup.
- B. Provide manufacturer's standard warranty, including the following,
1. Manufacturer shall warranty to the City that any installed equipment will be free from workmanship defects for a period of 1 year after completion of functional testing, as determined by the manufacturer.
  2. The workmanship warranty shall cover all defects related to installed work only. Manufacturer shall provide service without charge throughout warranty period if a problem occurs due to workmanship or material defects. Services shall be rendered by the manufacturer within 2 weeks of notification of defect. Repair work by the manufacturer shall occur between 8:00 a.m. and 5:00 p.m. Pacific time on weekdays, excluding holidays.

**SUPPLEMENTARY SPECIAL PROVISIONS**  
**APPENDICES**

**APPENDIX A**  
**MITIGATION MEASURES**

---

## **MITIGATION MONITORING AND REPORTING PROGRAM**

Section 21081.6 of the California Environmental Quality Act (CEQA) requires that a mitigation, monitoring, and reporting program (MMRP) be adopted upon certification of an Environmental Impact Report (EIR) to ensure that the mitigation measures are enforceable and implemented. It stipulates that "the public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during project implementation."

This MMRP has been developed in compliance with Section 21081.6 of CEQA and identifies (1) mitigation measures to be implemented prior to, during, and after construction of the North City Project; (2) the individual/agency responsible for that implementation; and (3) criteria for completion or monitoring of the specific measures.

The Environmental Impact Report/Environmental Impact Statement (EIR/EIS), incorporated herein as referenced, focused on issues determined to be potentially significant by the City. Public Resources Code Section 21081.6 requires mitigation of only those impacts identified as significant or potentially significant. The environmental analysis resulted in the identification of mitigation measures that would reduce potentially significant impacts for the following issue areas: air quality; biological resources; health and safety/hazards; historical resources; noise; paleontological resources; public utilities; and transportation, circulation, and parking.

### **GENERAL**

1. Prior to issuance of a Notice to Proceed (NTP) or any construction permits, including but not limited to, the first Demolition Plans/Permits, and Building Plans/Permits, the Assistant Deputy Director (ADD) Environmental Designee of the Land Development Review Division shall verify that all mitigation measures listed in this EIR/EIS have been included in entirety on the submitted construction documents and contract specifications, and included under the heading, "Environmental Mitigation Requirements." In addition, the requirements for a Preconstruction Meeting shall be noted on all construction documents.
2. Prior to the commencement of work, a Preconstruction Meeting (Pre-con) shall be conducted and include the City of San Diego's Mitigation Monitoring Coordination (MMC) Section, Construction Manager (CM), Resident Engineer, Building Inspector, Project Consultant, Applicant and other parties of interest.

- 
3. Evidence of compliance with other permitting authorities is required, if applicable. Evidence shall include either copies of permits issued, letters of resolution issued by the Responsible Agency documenting compliance, or other evidence documenting compliance and deemed acceptable by the ADD Environmental Designee.
  4. Pursuant to Section 1600 et seq. of the State of California Fish & Game Code, evidence of compliance with Section 1602 is required, if applicable. Evidence shall include either copies of permits issued, letters of resolution issued by the Responsible Agency documenting compliance, or other evidence documenting compliance and deemed acceptable by the ADD Environmental Designee.

### **SPECIFIC MMRP ISSUE AREA CONDITIONS/REQUIREMENTS**

#### **AIR QUALITY Miramar**

##### **Reservoir Alternative**

The following mitigation measures outline the steps necessary to reduce the construction emissions from all components of the Miramar Reservoir Alternative.

**MM-AQ-1** The following best management practices shall be implemented during construction to comply with applicable San Diego Air Pollution Control District (SDAPCD) rules and regulations and to further reduce daily construction emissions:

- Best management practices that could be implemented during construction to reduce particulate emissions and reduce soil erosion and trackout include the following:
  - Cover or water, as needed, any on-site stockpiles of debris, dirt, or other dusty material.
  - Use adequate water and/or other dust palliatives on all disturbed areas in order to avoid particle blow-off. Due to current drought conditions, the contractor shall consider use of a SDAPCD-approved dust suppressant where feasible to reduce the amount of water to be used for dust control. Use of recycled water in place of potable water shall also be considered provided that the use is approved by the City of San Diego and other applicable regulatory agencies prior

---

to initiation of construction activity.<sup>1</sup> Use of recycled water shall be in compliance with all applicable City of San Diego Rules and Regulation for Recycled Water (City of San Diego 2016a), particularly for the protection of public health per the California Code of Regulations, Title 22, Division 4.

- Wash down or sweep paved streets as necessary to control trackout or fugitive dust.
- Cover or tarp all vehicles hauling dirt or spoils on public roads if sufficient freeboard is not available to prevent material blow-off during transport.
- Use gravel bags and catch basins during ground-disturbing operations.
- Maintain appropriate soil moisture, apply soil binders, and plant stabilizing vegetation.

**MM-AQ-2** The following measures shall be adhered to during construction activities associated with the North City Project to reduce oxides of nitrogen (NO<sub>x</sub>):

- a. All diesel-fueled construction equipment shall be equipped with Tier 3 or better (i.e., Tier 4 Interim or Tier 4 Final) diesel engines.
- b. The engine size of construction equipment shall be the minimum size suitable for the required job.
- c. Construction equipment shall be maintained in accordance with the manufacturer's specifications.

Mitigation measure MM-AQ-3 is provided to reduce odor impacts for the Miramar Reservoir Alternative.

---

<sup>1</sup> The use of recycled water for construction purposes requires approval of the City and other regulatory agencies on a case-by-case basis. The permit shall be obtained prior to beginning construction. Recycled water used for construction purposes may only be used for soil compaction during grading operations, dust control, and consolidation and compaction of backfill in trenches for non-potable water, sanitary sewer, storm drain, gas and electric pipelines. Equipment operators shall be instructed about the requirements contained herein and the potential health hazards involved with the use of recycled water. Water trucks, hoses, drop tanks, etc. shall be identified as containing non-potable water and not suitable for drinking. Determinations as to specific uses to be allowed shall be in accordance with the standards set forth in Title 22, Division 4 of the California Code of Regulations and with the intent of this ordinance to preserve the public health. The City may, at its discretion, set forth specific requirements as conditions to providing such services and/or require specific approval from the appropriate regulatory agencies (City of San Diego 2016a).

---

**MM-AQ-3** The City shall implement odor control systems at the NCWRP Expansion, Morena Pump Station, and Morena Wastewater Forcemain specifically designed to abate the potential odors of the facility. Odor control systems would be similar to those currently employed at City of San Diego wastewater treatment facilities to reduce odor impacts. The following odor control systems or equivalent measures shall be implemented to mitigate nuisance odors:

- a. North City Water Reclamation Plant Expansion and the Morena Pump Station: NaOCl/NaOH Wet Scrubber plus carbon or Biofilter plus carbon.
- b. Air/vacuum relief valves at high points along the wastewater forcemain: ferric chloride and/or High Purity Oxygen injection.

Alternatively, odors could be abated through the addition of chemicals such as iron chloride, nitrate, hydrogen peroxide, sodium hypochlorite, high purity oxygen, magnesium hydroxide, and/or caustic solutions to reduce the liquid phase concentration and thus, reduce the amount volatilized into the gas phase.

## **BIOLOGICAL RESOURCES Miramar**

### **Reservoir Alternative**

Refer to Section 6.4, Biological Resources, for specific impact summary tables for the Miramar Reservoir Alternative.

**MM-BIO-3 Nesting Birds.** To avoid any direct impacts any species identified as a candidate, sensitive, or special status species in the MSCP or other local or regional plans, policies or regulations, or by CDFW or USFWS, removal of habitat that supports active nests in the proposed area of disturbance should occur outside of the breeding season for these species (February 1 to September 15). If removal of habitat in the proposed area of disturbance must occur during the breeding season, the Qualified Biologist shall conduct a pre-construction survey to determine the presence or absence of nesting birds on the proposed area of disturbance. The pre-construction survey shall be conducted within 10 calendar days prior to the start of construction activities (including removal of vegetation). The applicant shall submit the results

---

of the pre-construction survey to the City's Development Services Department for review and approval prior to initiating any construction activities. If nesting birds are detected, a letter report or mitigation plan in conformance with the City's Biology Guidelines and applicable State and Federal Law (i.e. appropriate follow up surveys, monitoring schedules, and construction barriers/buffers, etc.) shall be prepared and include proposed measures to be implemented to ensure that take of birds or eggs is avoided. The report or mitigation plan shall be submitted to the City for review and approval and implemented to the satisfaction of the City. The City's MMC Section and Biologist shall verify and approve that all measures identified in the report or mitigation plan are in place prior to and/or during construction.

**MM-BIO-4a Coastal California Gnatcatcher.** Prior to the preconstruction meeting, the Assistant Deputy Director (ADD) or MMC shall verify that the MHPA boundaries and the Project requirements regarding the coastal California gnatcatcher, as specified below, are shown on the construction plans.

No clearing, grubbing, grading, or other construction activities shall occur during the coastal California gnatcatcher breeding season (March 1 to August 15), until the following requirements have been met to the satisfaction of the ADD/MMC:

1. A Qualified Biologist (possessing a valid Endangered Species Act Section 10(a)(1)(a) Recovery Permit) shall survey those habitat areas within the MHPA that would be subject to construction noise levels exceeding 60 decibels [dB(A)] hourly average for the presence of the coastal California gnatcatcher. Surveys for coastal California gnatcatcher shall be conducted pursuant to the protocol survey guidelines established by the USFWS within the breeding season prior to the commencement of any construction. If coastal California gnatcatchers are present, then the following conditions must be met:
  - a. Between March 1 and August 15, no clearing, grubbing, or grading of occupied coastal California gnatcatcher habitat shall be permitted. Areas restricted from such activities shall be staked or fenced under the supervision of a Qualified Biologist; and
  - b. Between March 1 and August 15, no construction activities shall occur within any portion of the site where construction activities would result in noise levels exceeding 60 dB(A) hourly average at

---

the edge of occupied coastal California gnatcatcher habitat. An analysis showing that noise generated by construction activities would not exceed 60 dB(A) hourly average at the edge of occupied habitat must be completed by a Qualified Acoustician (possessing current noise engineer license or registration with monitoring noise level experience with listed animal species) and approved by the ADD/MMC at least 2 weeks prior to the commencement of construction activities. Prior to the commencement of construction activities during the breeding season, areas restricted from such activities shall be staked or fenced under the supervision of a Qualified Biologist; or

- c. At least 2 weeks prior to the commencement of construction activities, under the direction of a Qualified Acoustician, noise attenuation measures (e.g., berms, walls) shall be implemented to ensure that noise levels resulting from construction activities would not exceed 60 dB(A) hourly average at the edge of habitat occupied by the coastal California gnatcatcher. Concurrent with the commencement of construction activities and the construction of necessary noise attenuation facilities, noise monitoring shall be conducted at the edge of the occupied habitat area to ensure that noise levels do not exceed 60 dB(A) hourly average. If the noise attenuation techniques implemented are determined to be inadequate by the Qualified Acoustician or Biologist, then the associated construction activities shall cease until such time that adequate noise attenuation is achieved or until the end of the breeding season (August 16). Construction noise monitoring shall continue to be monitored at least twice weekly on varying days, or more frequently depending on the construction activity, to verify that noise levels at the edge of occupied habitat are maintained below 60 dB(A) hourly average or to the ambient noise level if it already exceeds 60 dB(A) hourly average. If not, other measures shall be implemented in consultation with the biologist and the ADD/MMC, as necessary, to reduce noise levels to below 60 dB(A) hourly average or to the ambient noise level if it already exceeds 60 dB(A) hourly average. Such measures may include, but are not limited to, limitations on the placement of construction equipment and the simultaneous use of equipment.

2. If coastal California gnatcatchers are not detected during the protocol survey, the Qualified Biologist shall submit substantial evidence to the

---

ADD/MMC and applicable resource agencies which demonstrates whether or not mitigation measures such as noise walls are necessary between March 1 and August 15 as follows:

- a. If this evidence indicates that the potential is high for coastal California gnatcatcher to be present based on historical records or site conditions, then Condition 1(a) shall be adhered to as specified above.
- b. If this evidence concludes that no impacts to this species are anticipated, no mitigation measures would be necessary.

**MM-BIO-4b Coastal California Gnatcatcher.** Ambient noise levels on MCAS Miramar, in particular in the vicinity of the airfield, exceed typical construction noise level. On MCAS Miramar, construction noise levels are not anticipated to exceed ambient noise levels. Potential impacts associated with construction activities on MCAS Miramar would be mitigated through the following:

1. Qualified Biologist (possessing a valid federal Endangered Species Act (FESA) Section 10(a)(1)(a) Recovery Permit) shall conduct a pre-construction survey within suitable habitat. Between February 15 and August 31, no clearing, grubbing, or grading of occupied coastal California gnatcatcher habitat shall be permitted. Areas restricted from such activities shall be staked or fenced under the supervision of a Qualified Biologist; and
2. For potential impacts associated with construction noise, presence or absence of coastal California gnatcatcher would be determined by pre-construction surveys conducted by a Qualified Biologist adjacent to the Project area. Coastal sage scrub outside of the impact area would be flagged to protect it from construction equipment as directed by the Project Biologist. Between February 15 and August 31, no noise-generating construction activities that exceed ambient noise levels would occur in close proximity to occupied habitat. If necessary, other measures shall be implemented in consultation with the Project Biologist as necessary, to reduce noise levels. Measures may include, but are not limited to, limitations on the placement of construction equipment and the simultaneous use of equipment.

---

## ***Introduction to MM-BIO-9***

Mitigation measure MM-BIO-9 will be included in the design and construction documents for each Project component and will reduce the potential for short-term and long-term indirect impacts to sensitive vegetation communities. A biological monitor will be present during construction within or adjacent to sensitive resources and would ensure that the Project adheres to and implements the appropriate measures to protect sensitive resources.

**MM-BIO-9** The following measures will be included in the design and construction documents for each Project component to reduce potential impacts to sensitive resources:

- a. **Qualified Biologist.** The owner/permittee shall provide a letter to the City's Mitigation Monitoring Coordination (MMC) section stating that a Project Biologist (Qualified Biologist) as defined in the City of San Diego Municipal Code, Land Development Code—Biology Guidelines (City of San Diego 2012), has been retained to implement the Project's biological monitoring program. The letter shall include the names and contact information of all persons involved in the biological monitoring of the Project.
- b. **Preconstruction Meeting.** The Qualified Biologist shall attend the preconstruction meeting, discuss the Project's biological monitoring program, and arrange to perform any follow up mitigation measures and reporting including site-specific monitoring, restoration or revegetation, and additional fauna/flora surveys/salvage.
- c. **Documentation.** The Qualified Biologist shall submit all required documentation to MMC verifying that any special mitigation reports including but not limited to, maps, plans, surveys, survey timelines, or buffers are completed or scheduled per City Biology Guidelines, Multiple Species Conservation Program (MSCP), Environmentally Sensitive Lands Ordinance, project permit conditions; California Environmental Quality Act (CEQA); National Environmental Policy Act (NEPA); endangered species acts (federal Endangered Species Act and California Endangered Species Act); and/or other local, state or federal requirements.
- d. **Biological Construction Mitigation/Monitoring Exhibit.** The Qualified Biologist shall present a Biological Construction

---

Mitigation/Monitoring Exhibit (BCME), which includes the biological documents above. In addition, the BCME would include restoration/revegetation plans, plant salvage/relocation requirements (e.g., burrowing owl exclusions, etc.), avian or other wildlife surveys/survey schedules (including general avian nesting and U.S. Fish and Wildlife (USFWS) protocol), timing of surveys, wetland buffers, avian construction avoidance areas/noise buffers/barriers, other impact avoidance areas, and any subsequent requirements determined by the Qualified Biologist and the City Assistant Deputy Director (ADD)/MMC. The BCME shall include a site plan, written and graphic depiction of the Project's biological mitigation/monitoring program, and a schedule. The BCME shall be approved by MMC and referenced in the construction documents.

- e. **Construction Fencing.** Prior to construction activities, the Qualified Biologist shall supervise the placement of orange construction fencing or equivalent along the limits of disturbance adjacent to sensitive biological habitats and verify compliance with any other project conditions as shown on the BCME. This phase shall include flagging plant specimens and delineating buffers to protect sensitive biological resources (e.g., habitats/flora and fauna species, including nesting birds) during construction. Appropriate steps/care should be taken to minimize attraction of nest predators to the site.
- f. **On-site Education.** Prior to commencement of construction activities, the Qualified Biologist shall meet with the owner/permittee or designee and the construction crew and conduct an on-site educational session regarding the need to avoid impacts outside of the approved construction area and to protect sensitive flora and fauna (e.g., explain the avian and wetland buffers, flag system for removal of invasive species or retention of sensitive plants, and clarify acceptable access routes/methods and staging areas).
- g. **Biological Monitoring.** During construction, a Qualified Biologist would be present to assist in the avoidance of impacts to native vegetation, jurisdictional aquatic resources, sensitive plants and wildlife, and nesting birds. Specific biological monitoring and or mitigation measures for sensitive wildlife, sensitive vegetation communities, and jurisdictional aquatic resources are described further in the mitigation measures.

---

j. **Best Management Practices/Erosion/Runoff.** The City will incorporate methods to control runoff, including a Stormwater Pollution Prevention Plan (SWPPP) to meet National Pollutant Discharge Elimination System (NPDES) regulations or batch discharge permit from the City. Implementation of stormwater regulations are expected to substantially control adverse edge effects (e.g., erosion, sedimentation, habitat conversion) during and following construction both adjacent and downstream from the study area. Typical construction Best Management Practices (BMPs) specifically related to reducing impacts from dust, erosion, and runoff generated by construction activities would be implemented. During construction, material stockpiles shall be placed such that they cause minimal interference with on-site drainage patterns. This will protect sensitive vegetation from being inundated with sediment-laden runoff. Dewatering shall be conducted in accordance with standard regulations of the Regional Water Quality Control Board (RWQCB). An NPDES permit, issued by RWQCB to discharge water from dewatering activities, shall be required prior to start of dewatering. This will minimize erosion, siltation, and pollution within sensitive communities. Design of drainage facilities shall incorporate long-term control of pollutants and stormwater flow to minimize pollution and hydrologic changes.

k. **Toxics/Project Staging Areas/Equipment Storage.** Projects that use chemicals or generate by-products such as pesticides, herbicides, and animal waste, and other substances that are potentially toxic or impactive to native habitats/flora/fauna (including water) shall incorporate measures to reduce impacts caused by the application and/or drainage of such materials into the MHPA. No trash, oil, parking, or other construction/development-related material/activities shall be allowed outside any approved construction limits. Where applicable, this requirement shall be incorporated into leases on publicly owned property when applications for renewal occur. Provide a note in/on the CDs that states: "All construction-related activity that may have potential for leakage or intrusion shall be monitored by the Qualified Biologist/Owners Representative or Resident Engineer to ensure there is no impact to the MHPA."

---

## HEALTH AND SAFETY/HAZARDS Miramar

### Reservoir Alternative

Potential impacts due to hazardous materials release would be reduced by implementation of the following mitigation measures:

**MM-HAZ-1** A Construction Fire Prevention/Protection Plan shall be prepared by the City of San Diego or its contractors prior to construction of the North City Project, as determined necessary by the City of San Diego. Construction within or immediately adjacent to areas of dense foliage during periods of low humidity and/or high winds (Red Flag Warning periods) shall be prohibited. During all other non-Red Flag Warning periods, necessary brush fire prevention and management practices shall be incorporated and shall address common construction-related ignition prevention and hot-works (any spark-, heat-, or flame-producing activity) policies, as well as necessary fire prevention equipment to be on site during all construction activities. Details of the Construction Fire Prevention/Protection Plan shall be determined as site plans for each component are finalized to the satisfaction of the City of San Diego Fire Marshal. Plans shall also contain fire safety information to be disseminated to construction crews during regular safety meetings. Fire prevention techniques shall be applied during construction as deemed necessary by the City of San Diego Fire Marshal based on the vegetation (fuels) within the site and surrounding areas.

**MM-HAZ-2** A Hazardous Materials Reporting Form shall be prepared, as determined necessary by the City of San Diego, and a Hazardous Materials Review conducted by the Development Services Department for each North City Project component in compliance with the City of San Diego's Information Bulletin 116.

**MM-HAZ-3** A Spill Prevention and Emergency Response Plan shall be completed, as determined necessary by the City of San Diego, for each North City Project component which includes on-site storage of hazardous materials (i.e., Morena Pump Station, NCWRP Expansion, North City Renewable Energy Facility, NCPWF, and Dechlorination Facility) prior to the commencement of operation. Other safety programs, including a worker safety program, fire response program, a plant safety program, and the facility's standard operating procedures, shall be developed addressing hazardous materials storage locations, emergency response procedures, employee training

---

requirements, hazard recognition, fire safety, first aid/emergency medical procedures, hazard communication training, and release reporting requirements.

## **HISTORICAL RESOURCES Miramar**

### **Reservoir Alternative**

The mitigation measures (MMs) provided in this section have been designed to fulfill the requirements of Section 106 of the National Historic Preservation Act, the CEQA Guidelines, and the City of San Diego Historic Resource Guidelines. The City of San Diego will be the lead agency implementing cultural resource mitigation measures and will provide information to the Bureau of Reclamation for their ongoing Section 106 oversight and consultation obligations.

**MM-HIS-3** To reduce potential impacts to unknown archaeological resources and/or grave sites during construction of all Project components (i.e., Components Common to the Project Alternatives, Miramar Reservoir Alternative, and San Vicente Reservoir Alternative) the following measures shall be implemented:

#### **I. Prior to Permit Issuance or Bid Opening/Bid Award**

##### **A. Entitlements Plan Check**

1. Prior to permit issuance or bid opening/bid award, whichever is applicable, the Assistant Deputy Director (ADD) environmental designee shall verify that the requirements for archaeological monitoring and Native American monitoring have been noted on the applicable construction documents through the plan check process.

##### **B. Letters of Qualification have been submitted to ADD**

1. Prior to bid award, the applicant shall submit a letter of verification to Mitigation Monitoring Coordinator (MMC) identifying the Principal Investigator (PI) for the Project and the names of all persons involved in the archaeological monitoring program, as defined in the City Historical Resources Guidelines (HRG). If applicable, individuals involved in the archaeological monitoring program must have completed the 40-hour HAZWOPER training with certification documentation.
2. MMC will provide a letter to the applicant confirming the qualifications of the PI and all persons involved in the archaeological

---

monitoring of the Project meet the qualifications established in the City Historical Resources Guidelines.

3. Prior to the start of work, the applicant must obtain written approval from MMC for any personnel changes associated with the monitoring program.

## **II. Prior to Start of Construction**

### **A. Verification of Records Search**

1. The PI shall provide verification to MMC that a site-specific records search (0.25-mile radius) has been completed. Verification includes, but is not limited to a copy of a confirmation letter from South Coastal Information Center, or, if the search was in-house, a letter of verification from the PI stating that the search was completed.
2. The letter shall introduce any pertinent information concerning expectations and probabilities of discovery during trenching and/or grading activities.
3. The PI may submit a detailed letter to MMC requesting a reduction to the 0.25-mile radius.

### **B. PI Shall Attend Preconstruction Meetings**

1. Prior to beginning any work that requires monitoring, the applicant shall arrange a Preconstruction Meeting that shall include the PI, Native American consultant/monitor (where Native American resources may be impacted), Construction Manager (CM), Grading Contractor, Resident Engineer (RE), Building Inspector (BI), if appropriate, and MMC. The qualified archaeologist and Native American monitor shall attend any grading/excavation related Preconstruction Meetings to make comments and/or suggestions concerning the archaeological monitoring program with the CM and/or Grading Contractor.
  - a. If the PI is unable to attend the Preconstruction Meeting, the applicant shall schedule a focused Preconstruction Meeting with MMC, the PI, RE, CM, if appropriate, prior to the start of any work that requires monitoring.
2. Acknowledgment of Responsibility for Curation (Capital Improvement Program or Other Public Projects)

---

The applicant shall submit a letter to MMC acknowledging their responsibility for the cost of curation associated with all phases of the archaeological monitoring program.

3. Identify Areas to be Monitored

- a. Prior to the start of any work that requires monitoring, the PI shall submit an Archaeological Monitoring Exhibit (AME) (with verification that the AME has been reviewed and approved by the Native American consultant/monitor when Native American resources may be impacted) based on the appropriate construction documents (reduced to 11×17) to MMC identifying the areas to be monitored, including the delineation of grading/excavation limits.
- b. The AME shall be based on the results of a site-specific records search as well as information regarding the age of existing pipelines, laterals and associated appurtenances, and/or any known soil conditions (native or formation).
- c. MMC shall notify the PI that the AME has been approved.

4. When Monitoring Will Occur

- a. Prior to the start of any work, the PI shall also submit a construction schedule to MMC through the RE indicating when and where monitoring will occur.
- b. The PI may submit a detailed letter to MMC prior to the start of work or during construction requesting a modification to the monitoring program. This request shall be based on relevant information such as review of final construction documents which indicate conditions such as age of existing pipe to be replaced, depth of excavation and/or site graded to bedrock, etc., which may reduce or increase the potential for resources to be present.

5. Approval of AME and Construction Schedule

After approval of the AME by MMC, the PI shall submit to MMC written authorization of the AME and Construction Schedule from the CM.

---

### III. During Construction

#### A. Monitor Shall be Present During Grading/Excavation/Trenching

1. The Archaeological Monitor shall be present full-time during all soil-disturbing and grading/excavation/trenching activities that could result in impacts to archaeological resources as identified on the AME. **The CM is responsible for notifying the RE, PI, and MMC of changes to any construction activities such as in the case of a potential safety concern within the area being monitored. In certain circumstances Occupational Safety and Health Administration safety requirements may necessitate modification of the AME.**
2. The Native American consultant/monitor shall determine the extent of their presence during soil-disturbing and grading/excavation/trenching activities based on the AME and provide that information to the PI and MMC. If prehistoric resources are encountered during the Native American consultant/monitor's absence, work shall stop, and the Discovery Notification Process detailed in Section III.B–III.C and IV.A–IV.D shall commence.
3. The PI may submit a detailed letter to MMC during construction requesting a modification to the monitoring program when a field condition such as modern disturbance post-dating the previous grading/trenching activities, presence of fossil formations, or when native soils are encountered that may reduce or increase the potential for resources to be present.
4. The archaeological and Native American consultant/monitor shall document field activity via the Consultant Site Visit Records. The Consultant Site Visit Records shall be emailed by the CM to the RE the first day of monitoring, the last day of monitoring, monthly (Notification of Monitoring Completion), and in the case of ANY discoveries. The RE shall forward copies to MMC.

---

## B. Discovery Notification Process

1. In the event of a discovery, the Archaeological Monitor shall direct the contractor to temporarily divert all soil-disturbing activities, including but not limited to digging, trenching, excavating, or grading activities in the area of discovery and in the area reasonably suspected to overlay adjacent resources and immediately notify the RE or CM, as appropriate.
2. The Archaeological Monitor shall immediately notify the PI (unless monitor is the PI) of the discovery.
3. The PI shall immediately notify MMC by phone of the discovery, and shall also submit written documentation to MMC within 24 hours by email with photos of the resource in context, if possible.
4. No soil shall be exported off site until a determination can be made regarding the significance of the resource specifically if Native American resources are encountered.

## C. Determination of Significance

1. The PI and Native American consultant/monitor, where Native American resources are discovered shall evaluate the significance of the resource. If Human Remains are involved, follow protocol in Section IV below.
  - a. The PI shall immediately notify MMC by phone to discuss significance determination and shall also submit a letter to MMC indicating whether additional mitigation is required.
  - b. If the resource is significant, the PI shall submit an Archaeological Data Recovery Program (ADRP) and obtain written approval of the program from MMC, CM, and RE. The ADRP and any mitigation must be approved by MMC, RE, and/or CM before ground-disturbing activities in the area of discovery will be allowed to resume. **Note: If a unique archaeological site is also an historical resource as defined in CEQA Guidelines Section 15064.5, then the limits on the amount(s) that a Project applicant may be required to pay to cover mitigation costs as indicated in CEQA Section 21083.2 shall not apply.****
- (1) Note: For pipeline trenching and other linear projects in the public Right-of-Way, the PI shall implement the

---

Discovery Process for Pipeline Trenching projects identified below under "D."

- c. If the resource is not significant, the PI shall submit a letter to MMC indicating that artifacts will be collected, curated, and documented in the Final Monitoring Report. The letter shall also indicate that that no further work is required.
  - (1) Note: For pipeline trenching and other linear projects in the public right-of-way, if the deposit is limited in size, both in length and depth; the information value is limited and is not associated with any other resource; and there are no unique features/artifacts associated with the deposit, the discovery should be considered not significant.
  - (2) Note: For pipeline trenching and other linear projects in the public right-of-way, if significance cannot be determined, the Final Monitoring Report and Site Record (DPR Form 523A/B) shall identify the discovery as potentially significant.

D. Discovery Process for Significant Resources – Pipeline Trenching and Other Linear Projects in the Public Right-of-Way

The following procedure constitutes adequate mitigation of a significant discovery encountered during pipeline trenching activities or for other linear project types within the public right-of-way, including but not limited to excavation for jacking pits, receiving pits, laterals, and manholes to reduce impacts to below a level of significance:

- 1. Procedures for documentation, curation, and reporting
  - a. One hundred percent (100%) of the artifacts within the trench alignment and width shall be documented in situ, to include photographic records, plan view of the trench and profiles of side walls, recovered, photographed after cleaning and analyzed and curated. The remainder of the deposit within the limits of excavation (trench walls) shall be left intact.
  - b. The PI shall prepare a Draft Monitoring Report and submit to MMC via the RE as indicated in Section VI-A.
  - c. The PI shall be responsible for recording (on the appropriate State of California Department of Parks and Recreation forms

---

DPR 523 A/B) the resource(s) encountered during the Archaeological Monitoring Program in accordance with the City's HRG. The DPR forms shall be submitted to the South Coastal Information Center for either a Primary Record or SDI Number and included in the Final Monitoring Report.

- d. The Final Monitoring Report shall include a recommendation for monitoring of any future work in the vicinity of the resource.

#### **IV. Discovery of Human Remains**

If human remains are discovered, work shall halt in that area, and no soil shall be exported off site until a determination can be made regarding the provenance of the human remains; and the following procedures as set forth in CEQA Guidelines Section 15064.5(e), the California Public Resources Code Section 5097.98, and the California Health and Safety Code Section 7050.5, shall be undertaken:

##### **A. Notification**

1. Archaeological Monitor shall notify the RE or CM as appropriate, MMC, and the PI, if the monitor is not qualified as a PI. MMC will notify the appropriate Senior Planner in the Environmental Analysis Section of the Development Services Department to assist with the discovery notification process.
2. The PI shall notify the Medical Examiner after consultation with the RE, either in person or via telephone.

##### **B. Isolate discovery site**

1. Work shall be directed away from the location of the discovery and any nearby area reasonably suspected to overlay adjacent human remains until a determination can be made by the Medical Examiner in consultation with the PI concerning the provenience of the remains.
2. The Medical Examiner, in consultation with the PI, will determine the need for a field examination to determine the provenience.
3. If a field examination is not warranted, the Medical Examiner will determine with input from the PI, if the remains are or are most likely to be of Native American origin.

##### **C. If human remains are determined to be Native American**

- 
1. The Medical Examiner will notify the Native American Heritage Commission (NAHC) within 24 hours. By law, only the Medical Examiner can make this call.
  2. NAHC will immediately identify the person or persons determined to be the Most Likely Descendant (MLD) and provide contact information.
  3. The MLD will contact the PI within 24 hours or sooner after the Medical Examiner has completed coordination, to begin the consultation process in accordance with CEQA Guidelines Section 15064.5(e) and the California Public Resources and Health and Safety Codes.
  4. The MLD will have 48 hours to make recommendations to the property owner or representative, for the treatment or disposition with proper dignity, of the human remains and associated grave goods.
  5. Disposition of Native American human remains will be determined between the MLD and the PI, and, if:
    - a. The NAHC is unable to identify the MLD, OR the MLD failed to make a recommendation within 48 hours after being notified by the Commission, OR
    - b. The landowner or authorized representative rejects the recommendation of the MLD and mediation in accordance with California Public Resources Code Section 5097.94(k), by the NAHC fails to provide measures acceptable to the landowner, THEN
    - c. To protect these sites, the landowner shall do one or more of the following:
      - (1) Record the site with the NAHC,
      - (2) Record an open space or conservation easement, or
      - (3) Record a document with the County.
    - d. Upon the discovery of multiple Native American human remains during a ground-disturbing land development activity, the landowner may agree that additional conferral with descendants is necessary to consider culturally appropriate treatment of multiple Native American human remains. Culturally appropriate treatment of such a discovery may be ascertained from review of the site

---

utilizing cultural and archaeological standards. Where the parties are unable to agree on the appropriate treatment measures, the human remains and items associated and buried with Native American human remains shall be reinterred with appropriate dignity, pursuant to Section 5.c.

D. If human remains are not Native American

1. The PI shall contact the Medical Examiner and notify them of the historic era context of the burial.
2. The Medical Examiner will determine the appropriate course of action with the PI and City staff (California Public Resources Code, Section 5097.98).
3. If the remains are of historic origin, they shall be appropriately removed and conveyed to the San Diego Museum of Man for analysis. The decision for internment of the human remains shall be made in consultation with MMC, Environmental Analysis Section, the applicant/landowner, any known descendant group, and the San Diego Museum of Man.

**V. Night and/or Weekend Work**

A. If night and/or weekend work is included in the contract

1. When night and/or weekend work is included in the contract package, the extent and timing shall be presented and discussed at the Preconstruction Meeting.
2. The following procedures shall be followed.

a. No Discoveries

In the event that no discoveries were encountered during night and/or weekend work, the PI shall record the information on the Consultant Site Visit Record and submit to MMC by email by 8 a.m. of the next businessday.

b. Discoveries

All discoveries shall be processed and documented using the existing procedures detailed in Sections III – During Construction, and IV – Discovery of Human Remains. Discovery of human remains shall always be treated as a significant discovery.

c. Potentially Significant Discoveries

---

If the PI determines that a potentially significant discovery has been made, the procedures detailed under Section III – During Construction and IV – Discovery of Human Remains shall be followed.

- d. The PI shall immediately contact the RE and MMC, or by 8 a.m. of the next business day to report and discuss the findings as indicated in Section III-B, unless other specific arrangements have been made.
- B. If night and/or weekend work becomes necessary during the course of construction
1. The CM shall notify the RE, as appropriate, a minimum of 24 hours before the work is to begin.
  2. The RE, or CM, as appropriate, shall notify MMC immediately.
- C. All other procedures described above shall apply, as appropriate.

## **VI. Post Construction**

- A. Submittal of Draft Monitoring Report
1. The PI shall submit two copies of the Draft Monitoring Report (even if negative), prepared in accordance with the HRG (Appendix C/D) that describes the results, analysis, and conclusions of all phases of the Archaeological Monitoring Program (with appropriate graphics) to MMC via the RE for review and approval within 90 days following the completion of monitoring. **It should be noted that if the PI is unable to submit the Draft Monitoring Report within the allotted 90-day time frame as a result of delays with analysis, special study results or other complex issues, a schedule shall be submitted to MMC establishing agreed due dates and the provision for submittal of monthly status reports until this measure can be met.**
    - a. For significant archaeological resources encountered during monitoring, the ADRP or Pipeline Trenching Discovery Process shall be included in the Draft Monitoring Report.
    - b. Recording Sites with State of California Department of Parks and Recreation

The PI shall be responsible for recording (on the appropriate State of California Department of Parks and Recreation forms DPR 523 A/B) any significant or potentially significant

---

resources encountered during the Archaeological Monitoring Program in accordance with the City's HRG, and submittal of such forms to the South Coastal Information Center with the Final Monitoring Report.

2. MMC shall return the Draft Monitoring Report to the PI via the RE for revision or for preparation of the Final Report.
3. The PI shall submit revised Draft Monitoring Report to MMC via the RE for approval.
4. MMC shall provide written verification to the PI of the approved report.
5. MMC shall notify the RE or CM, as appropriate, of receipt of all Draft Monitoring Report submittals and approvals.

B. Handling of Artifacts

1. The PI shall be responsible for ensuring that all cultural remains collected are cleaned and catalogued
2. The PI shall be responsible for ensuring that all artifacts are analyzed to identify function and chronology as they relate to the history of the area; that faunal material is identified as to species; and that specialty studies are completed, as appropriate.

C. Curation of Artifacts: Accession Agreement and Acceptance Verification

1. The PI shall be responsible for ensuring that all artifacts associated with the survey, testing and/or data recovery for this project are permanently curated with an appropriate institution. This shall be completed in consultation with MMC and the Native American representative, as applicable.
2. When applicable to the situation, the PI shall include written verification from the Native American consultant/monitor indicating that Native American resources were treated in accordance with state law and/or applicable agreements. If the resources were reinterred, verification shall be provided to show what protective measures were taken to ensure no further disturbance occurs in accordance with Section IV – Discovery of Human Remains, Subsection C.

- 
3. The PI shall submit the Accession Agreement and catalogue record(s) to the RE or CM, as appropriate for donor signature with a copy submitted to MMC.
  4. The RE or CM, as appropriate shall obtain signature on the Accession Agreement and shall return to PI with copy submitted to MMC.
  5. The PI shall include the Acceptance Verification from the curation institution in the Final Monitoring Report submitted to the RE or CM and MMC.
- D. Final Monitoring Report(s)
1. The PI shall submit one copy of the approved Final Monitoring Report to the RE or CM as appropriate, and one copy to MMC (even if negative), within 90 days after notification from MMC of the approved report.
  2. The RE shall in no case issue the Notice of Completion until receiving a copy of the approved Final Monitoring Report from MMC which includes the Acceptance Verification from the curation institution.

## **NOISE**

### **Miramar Reservoir Alternative**

Potential impacts due to construction noise would be reduced by implementation of the following mitigation measures:

**MM-NOI-4** A noise and vibration study shall be conducted during the final design phase for the NCPWF Influent Pump Station, Morena Pump Station, North City Pump Station, North City Renewable Energy Facility (both Project Alternatives), and the Mission Trails Booster Station (San Vicente Reservoir Alternative only). Pump station machinery and/or generators shall be housed within concrete structures with acoustically absorptive treatments where necessary, and additional measures such as sound enclosures, separate rooms for high noise equipment, etc. shall be incorporated into the final project design as necessary to assure that noise and vibration produced by operation of the facility shall not exceed the applicable limits in the municipal code.

---

## **PALEONTOLOGICAL RESOURCES Miramar**

### **Reservoir Alternative**

Potential impacts paleontological resources would be reduced by implementation of the following mitigation measure:

**MM-PALEO-1** If construction of a project would occur within a formation with a moderate to high resource potential, monitoring during construction would be required, and a paleontological resources mitigation program consisting of the following components shall be implemented:

#### **I. Prior to Permit Issuance or Bid Opening/Bid Award**

##### **A. Entitlements Plan Check**

1. Prior to permit issuance or Bid Opening/Bid Award, whichever is applicable, the Assistant Deputy Director (ADD) Environmental designee shall verify that the requirements for Paleontological Monitoring have been noted on the appropriate construction documents.

##### **B. Letters of Qualification have been submitted to ADD**

1. Prior to Bid Award, the applicant shall submit a letter of verification to Mitigation Monitoring Coordinator (MMC) identifying the Principal Investigator (PI) for the Project and the names of all persons involved in the paleontological monitoring program, as defined in the City of San Diego Paleontology Guidelines.
2. MMC will provide a letter to the applicant confirming the qualifications of the PI and all persons involved in the paleontological monitoring of the Project.
3. Prior to the start of work, the applicant shall obtain approval from MMC for any personnel changes associated with the monitoring program.

#### **II. Prior to Start of Construction**

##### **A. Verification of Records Search**

1. The PI shall provide verification to MMC that a site-specific records search has been completed. Verification includes, but is not limited

---

to, a copy of a confirmation letter from San Diego Natural History Museum, other institution or, if the search was in-house, a letter of verification from the PI stating that the search was completed.

2. The letter shall introduce any pertinent information concerning expectations and probabilities of discovery during trenching and/or grading activities.

**B. PI Shall Attend Precon Meetings**

1. Prior to beginning any work that requires monitoring, the applicant shall arrange a Precon Meeting that shall include the PI, Construction Manager (CM), Grading Contractor, Resident Engineer (RE), Building Inspector (BI), if appropriate, and MMC. The qualified paleontologist shall attend any grading/excavation related Precon Meetings to make comments and/or suggestions concerning the Paleontological Monitoring program with the Construction Manager and/or Grading Contractor.
  - a. If the PI is unable to attend the Precon Meeting, the applicant shall schedule a focused Precon Meeting with MMC, the PI, RE, CM or BI, if appropriate, prior to the start of any work that requires monitoring.
2. Acknowledgement of Responsibility for Curation (CIP or Other Public Projects)

The applicant shall submit a letter to MMC acknowledging their responsibility for the cost of curation associated with all phases of the paleontological monitoring program.

3. Identify Areas to be Monitored
  - a. Prior to the start of any work that requires monitoring, the PI shall submit a Paleontological Monitoring Exhibit (PME) based on the appropriate construction documents (reduced to 11x17) to MMC for approval identifying the areas to be monitored including the delineation of grading/excavation limits. Monitoring shall begin at depths below 10 feet from existing grade or as determined by the PI in consultation with MMC. The determination shall be based on site-specific records search data which supports monitoring at depths less than 10 feet.

- 
- b. The PME shall be based on the results of a site-specific records search as well as information regarding existing known soil conditions (native or formation).
  - c. MMC shall notify the PI that the PME has been approved.
4. When Monitoring Will Occur
- a. Prior to the start of any work, the PI shall also submit a construction schedule to MMC through the RE indicating when and where monitoring will occur.
  - b. The PI may submit a detailed letter to MMC prior to the start of work or during construction requesting a modification to the monitoring program. This request shall be based on relevant information such as review of final construction documents which indicate conditions such as depth of excavation and/or site graded to bedrock, presence or absence of fossil resources, etc., which may reduce or increase the potential for resources to be present.

5. Approval of PME and Construction Schedule

After approval of the PME by MMC, the PI shall submit to MMC written authorization of the PME and Construction Schedule from the CM.

### **III. During Construction**

A. Monitor Shall be Present During Grading/Excavation/Trenching

- 1. The monitor shall be present full-time during grading/excavation/trenching activities including, but not limited to mainline, laterals, jacking and receiving pits, services and all other appurtenances associated with underground utilities as identified on the PME that could result in impacts to formations with high and/or moderate resource sensitivity. The Construction Manager is responsible for notifying the RE, PI, and MMC of changes to any construction activities such as in the case of a potential safety concern within the area being monitored. In certain circumstances Occupational Safety and Health Administration safety requirements may necessitate modification of the PME.

- 
2. The PI may submit a detailed letter to MMC during construction requesting a modification to the monitoring program when a field condition such as trenching activities that do not encounter formational soils as previously assumed, and/or when unique/unusual fossils are encountered, which may reduce or increase the potential for resources to be present.
  3. The monitor shall document field activity via the Consultant Site Visit Record (CSVR). The CSVR shall be emailed by the CM to the RE the first day of monitoring, the last day of monitoring, monthly (Notification of Monitoring Completion), and in the case of ANY discoveries. The RE shall forward copies to MMC.

B. Discovery Notification Process

1. In the event of a discovery, the Paleontological Monitor shall direct the contractor to temporarily divert trenching activities in the area of discovery and immediately notify the RE or CM, as appropriate.
2. The Monitor shall immediately notify the PI (unless Monitor is the PI) of the discovery.
3. The PI shall immediately notify MMC by phone of the discovery, and shall also submit written documentation to MMC within 24 hours by email with photos of the resource in context, if possible.

C. Determination of Significance

1. The PI shall evaluate the significance of the resource.
  - a. The PI shall immediately notify MMC by phone to discuss significance determination and shall also submit a letter to MMC indicating whether additional mitigation is required. The determination of significance for fossil discoveries shall be at the discretion of the PI.
  - b. If the resource is significant, the PI shall submit a Paleontological Recovery Program (PRP) and obtain written approval of the program from MMC, MC and/or RE. PRP and any mitigation must be approved by MMC, RE, and/or CM before ground-disturbing activities in the area of discovery will be allowed to resume.

- 
- (1) Note: For pipeline trenching projects only, the PI shall implement the Discovery Process for Pipeline Trenching projects identified below under "D."
- c. If resource is not significant (e.g., small pieces of broken common shell fragments or other scattered common fossils) the PI shall notify the RE, or CM as appropriate, that a non-significant discovery has been made. The Paleontologist shall continue to monitor the area without notification to MMC unless a significant resource is encountered.
- d. The PI shall submit a letter to MMC indicating that fossil resources will be collected, curated, and documented in the Final Monitoring Report. The letter shall also indicate that no further work is required.
- (1) Note: For Pipeline Trenching Projects Only. If the fossil discovery is limited in size, both in length and depth; the information value is limited and there are no unique fossil features associated with the discovery area, then the discovery should be considered not significant.
- (2) Note, for Pipeline Trenching Projects Only: If significance can not be determined, the Final Monitoring Report and Site Record shall identify the discovery as Potentially Significant.
- D. Discovery Process for Significant Resources - Pipeline Trenching Projects

The following procedure constitutes adequate mitigation of a significant discovery encountered during pipeline trenching activities including but not limited to excavation for jacking pits, receiving pits, laterals, and manholes to reduce impacts to below a level of significance.

1. Procedures for documentation, curation, and reporting
  - a. One hundred percent (100%) of the fossil resources within the trench alignment and width shall be documented in-situ photographically, drawn in plan view (trench and profiles of side walls), recovered from the trench and photographed after cleaning, then analyzed and curated consistent with Society of Invertebrate Paleontology Standards. The

---

remainder of the deposit within the limits of excavation (trench walls) shall be left intact and so documented.

- b. The PI shall prepare a Draft Monitoring Report and submit to MMC via the RE as indicated in Section VI-A.
- c. The PI shall be responsible for recording (on the appropriate forms for the San Diego Natural History Museum) the resource(s) encountered during the Paleontological Monitoring Program in accordance with the City's Paleontological Guidelines (PG). The forms shall be submitted to the San Diego Natural History Museum and included in the Final Monitoring Report.
- d. The Final Monitoring Report shall include a recommendation for monitoring of any future work in the vicinity of the resource.

#### **IV. Night and/or Weekend Work**

- A. If night and/or weekend work is included in the contract
  1. When night and/or weekend work is included in the contract package, the extent and timing shall be presented and discussed at the precon meeting.
  2. The following procedures shall be followed.
    - a. No Discoveries

In the event that no discoveries were encountered during night and/or weekend work, the PI shall record the information on the CSV and submit to MMC via the RE by email by 8 am on the next business day.
    - b. Discoveries

All discoveries shall be processed and documented using the existing procedures detailed in Sections III - During Construction.
    - c. Potentially Significant Discoveries

If the PI determines that a potentially significant discovery has been made, the procedures detailed under Section III - During Construction shall be followed.

- 
- d. The PI shall immediately contact the RE and MMC, or by 8:00 a.m. on the next business day to report and discuss the findings as indicated in Section III-B, unless other specific arrangements have been made.
- B. If night and/or weekend work becomes necessary during the course of construction
    1. The Construction Manager shall notify the RE, as appropriate, a minimum of 24 hours before the work is to begin.
    2. The RE, or CM, as appropriate, shall notify MMC immediately.
  - C. All other procedures described above shall apply, as appropriate.

## **V. Post Construction**

- A. Preparation and Submittal of Draft Monitoring Report
  1. The PI shall submit two copies of the Draft Monitoring Report (even if negative), prepared in accordance with the PG, which describes the results, analysis, and conclusions of all phases of the Paleontological Monitoring Program (with appropriate graphics) to MMC via the RE for review and approval within 90 days following the completion of monitoring.
    - a. For significant paleontological resources encountered during monitoring, the Paleontological Recovery Program or Pipeline Trenching Discovery Process shall be included in the Draft Monitoring Report.
    - b. Recording Sites with the San Diego Natural History Museum

The PI shall be responsible for recording (on the appropriate forms) any significant or potentially significant fossil resources encountered during the Paleontological Monitoring Program in accordance with the City's PG, and submittal of such forms to the San Diego Natural History Museum with the Final Monitoring Report.
  2. MMC shall return the Draft Monitoring Report to the PI via the RE for revision or for preparation of the Final Report.
  3. The PI shall submit revised Draft Monitoring Report to MMC via the RE for approval.

- 
4. MMC shall provide written verification to the PI of the approved report.
  5. MMC shall notify the RE or CM, as appropriate, of receipt of all Draft Monitoring Report submittals and approvals.
- B. Handling of Fossil Remains
1. The PI shall be responsible for ensuring that all fossil remains collected are cleaned and catalogued.
- C. Curation of Fossil Remains: Deed of Gift and Acceptance Verification
1. The PI shall be responsible for ensuring that all fossil remains associated with the monitoring for this project are permanently curated with an appropriate institution.
  2. The PI shall submit the Deed of Gift and catalogue record(s) to the RE or CM, as appropriate for donor signature with a copy submitted to MMC.
  3. The RE or CM, as appropriate shall obtain signature on the Deed of Gift and shall return to PI with copy submitted to MMC.
  4. The PI shall include the Acceptance Verification from the curation institution in the Final Monitoring Report submitted to the RE or CM and MMC.
- D. Final Monitoring Report(s)
1. The PI shall submit two copies of the Final Monitoring Report to MMC (even if negative), within 90 days after notification from MMC of the approved report.
  2. The RE shall, in no case, issue the Notice of Completion until receiving a copy of the approved Final Monitoring Report from MMC which includes the Acceptance Verification from the curation institution.

**MITIGATION SUMMARY**

The applicability of mitigation measures to each Project component is outlined below in Table 10-1.

**Table 10-1

**APPENDIX B**  
**FIRE HYDRANT METER PROGRAM**

<b>CITY OF SAN DIEGO CALIFORNIA DEPARTMENT INSTRUCTIONS</b>	<b>NUMBER DI 55.27</b>	<b>DEPARTMENT Water Department</b>
<b>SUBJECT  FIRE HYDRANT METER PROGRAM (FORMERLY: CONSTRUCTION METER PROGRAM)</b>	<b>PAGE 1 OF 10</b>	<b>EFFECTIVE DATE  October 15, 2002</b>
	<b>SUPERSEDES DI 55.27</b>	<b>DATED April 21, 2000</b>

1. **PURPOSE**

- 1.1 To establish a Departmental policy and procedure for issuance, proper usage and charges for fire hydrant meters.

2. **AUTHORITY**

- 2.1 All authorities and references shall be current versions and revisions.
- 2.2 San Diego Municipal Code (NC) Chapter VI, Article 7, Sections 67.14 and 67.15
- 2.3 Code of Federal Regulations, Safe Drinking Water Act of 1986
- 2.4 California Code of Regulations, Titles 17 and 22
- 2.5 California State Penal Code, Section 498B.0
- 2.6 State of California Water Code, Section 110, 500-6, and 520-23
- 2.7 Water Department Director

**Reference**

- 2.8 State of California Guidance Manual for Cross Connection Programs
- 2.9 American Water Works Association Manual M-14, Recommended Practice for Backflow Prevention
- 2.10 American Water Works Association Standards for Water Meters
- 2.11 U.S.C. Foundation for Cross Connection Control and Hydraulic Research Manual

3. **DEFINITIONS**

- 3.1 **Fire Hydrant Meter:** A portable water meter which is connected to a fire hydrant for the purpose of temporary use. (These meters are sometimes referred to as Construction Meters.)

<b>CITY OF SAN DIEGO CALIFORNIA DEPARTMENT INSTRUCTIONS</b>	<b>NUMBER DI 55.27</b>	<b>DEPARTMENT Water Department</b>
<b>SUBJECT  FIRE HYDRANT METER PROGRAM (FORMERLY: CONSTRUCTION METER PROGRAM)</b>	<b>PAGE 2 OF 10</b>	<b>EFFECTIVE DATE  October 15, 2002</b>
	<b>SUPERSEDES DI 55.27</b>	<b>DATED April 21, 2000</b>

- 3.2 **Temporary Water Use:** Water provided to the customer for no longer than twelve (12) months.
- 3.3 **Backflow Preventor:** A Reduced Pressure Principal Assembly connected to the outlet side of a Fire Hydrant Meter.

4. **POLICY**

- 4.1 The Water Department shall collect a deposit from every customer requiring a fire hydrant meter and appurtenances prior to providing the meter and appurtenances (see Section 7.1 regarding the Fees and Deposit Schedule). The deposit is refundable upon the termination of use and return of equipment and appurtenances in good working condition.
- 4.2 Fire hydrant meters will have a 2 ½" swivel connection between the meter and fire hydrant. The meter shall not be connected to the 4" port on the hydrant. All Fire Hydrant Meters issued shall have a Reduced Pressure Principle Assembly (RP) as part of the installation. Spanner wrenches are the only tool allowed to turn on water at the fire hydrant.
- 4.3 The use of private hydrant meters on City hydrants is prohibited, with exceptions as noted below. All private fire hydrant meters are to be phased out of the City of San Diego. All customers who wish to continue to use their own fire hydrant meters must adhere to the following conditions:
  - a. Meters shall meet all City specifications and American Water Works Association (AWWA) standards.
  - b. Customers currently using private fire hydrant meters in the City of San Diego water system will be allowed to continue using the meter under the following conditions:
    - 1. The customer must submit a current certificate of accuracy and calibration results for private meters and private backflows annually to the City of San Diego, Water Department, Meter Shop.

<b>CITY OF SAN DIEGO CALIFORNIA DEPARTMENT INSTRUCTIONS</b>	<b>NUMBER DI 55.27</b>	<b>DEPARTMENT Water Department</b>
<b>SUBJECT  FIRE HYDRANT METER PROGRAM (FORMERLY: CONSTRUCTION METER PROGRAM)</b>	<b>PAGE 3 OF 10</b>	<b>EFFECTIVE DATE  October 15, 2002</b>
	<b>SUPERSEDES DI 55.27</b>	<b>DATED April 21, 2000</b>

2. The meter must be properly identifiable with a clearly labeled serial number on the body of the fire hydrant meter. The serial number shall be plainly stamped on the register lid and the main casing. Serial numbers shall be visible from the top of the meter casing and the numbers shall be stamped on the top of the inlet casing flange.
3. All meters shall be locked to the fire hydrant by the Water Department, Meter Section (see Section 4.7).
4. All meters shall be read by the Water Department, Meter Section (see Section 4.7).
5. All meters shall be relocated by the Water Department, Meter Section (see Section 4.7).
6. These meters shall be tested on the anniversary of the original test date and proof of testing will be submitted to the Water Department, Meter Shop, on a yearly basis. If not tested, the meter will not be allowed for use in the City of San Diego.
7. All private fire hydrant meters shall have backflow devices attached when installed.
8. The customer must maintain and repair their own private meters and private backflows.
9. The customer must provide current test and calibration results to the Water Department, Meter Shop after any repairs.
10. When private meters are damaged beyond repair, these private meters will be replaced by City owned fire hydrant meters.

<b>CITY OF SAN DIEGO CALIFORNIA DEPARTMENT INSTRUCTIONS</b>	<b>NUMBER DI 55.27</b>	<b>DEPARTMENT Water Department</b>
<b>SUBJECT  FIRE HYDRANT METER PROGRAM (FORMERLY: CONSTRUCTION METER PROGRAM)</b>	<b>PAGE 4 OF 10</b>	<b>EFFECTIVE DATE  October 15, 2002</b>
	<b>SUPERSEDES DI 55.27</b>	<b>DATED April 21, 2000</b>

11. When a private meter malfunctions, the customer will be notified and the meter will be removed by the City and returned to the customer for repairs. Testing and calibration results shall be given to the City prior to any re-installation.
  12. The register shall be hermetically sealed straight reading and shall be readable from the inlet side. Registration shall be in hundred cubic feet.
  13. The outlet shall have a 2 ½ “National Standards Tested (NST) fire hydrant male coupling.
  14. Private fire hydrant meters shall not be transferable from one contracting company to another (i.e. if a company goes out of business or is bought out by another company).
- 4.4 All fire hydrant meters and appurtenances shall be installed, relocated and removed by the City of San Diego, Water Department. All City owned fire hydrant meters and appurtenances shall be maintained by the City of San Diego, Water Department, Meter Services.
- 4.5 If any fire hydrant meter is used in violation of this Department Instruction, the violation will be reported to the Code Compliance Section for investigation and appropriate action. Any customer using a fire hydrant meter in violation of the requirements set forth above is subject to fines or penalties pursuant to the Municipal Code, Section 67.15 and Section 67.37.
- 4.6 **Conditions and Processes for Issuance of a Fire Hydrant Meter**
- Process for Issuance
- a. Fire hydrant meters shall only be used for the following purposes:
    1. Temporary irrigation purposes not to exceed one year.

<b>CITY OF SAN DIEGO CALIFORNIA DEPARTMENT INSTRUCTIONS</b>	<b>NUMBER DI 55.27</b>	<b>DEPARTMENT Water Department</b>
<b>SUBJECT  FIRE HYDRANT METER PROGRAM (FORMERLY: CONSTRUCTION METER PROGRAM)</b>	<b>PAGE 5 OF 10</b>	<b>EFFECTIVE DATE  October 15, 2002</b>
	<b>SUPERSEDES DI 55.27</b>	<b>DATED April 21, 2000</b>

2. Construction and maintenance related activities (see Tab 2).
  - b. No customer inside or outside the boundaries of the City of San Diego Water Department shall resell any portion of the water delivered through a fire hydrant by the City of San Diego Water Department.
  - c. The City of San Diego allows for the issuance of a temporary fire hydrant meter for a period not to exceed 12 months (365 days). An extension can only be granted in writing from the Water Department Director for up to 90 additional days. A written request for an extension by the consumer must be submitted at least 30 days prior to the 12 month period ending. No extension shall be granted to any customer with a delinquent account with the Water Department. No further extensions shall be granted.
  - d. Any customer requesting the issuance of a fire hydrant meter shall file an application with the Meter Section. The customer must complete a "Fire Hydrant Meter Application" (Tab 1) which includes the name of the company, the party responsible for payment, Social Security number and/or California ID, requested location of the meter (a detailed map signifying an exact location), local contact person, local phone number, a contractor's license (or a business license), description of specific water use, duration of use at the site and full name and address of the person responsible for payment.
  - e. At the time of the application the customer will pay their fees according to the schedule set forth in the Rate Book of Fees and Charges, located in the City Clerk's Office. All fees must be paid by check, money order or cashiers check, made payable to the City Treasurer. Cash will not be accepted.
  - f. No fire hydrant meters shall be furnished or relocated for any customer with a delinquent account with the Water Department.
  - g. After the fees have been paid and an account has been created, the

<b>CITY OF SAN DIEGO CALIFORNIA DEPARTMENT INSTRUCTIONS</b>	<b>NUMBER DI 55.27</b>	<b>DEPARTMENT Water Department</b>
<b>SUBJECT  FIRE HYDRANT METER PROGRAM (FORMERLY: CONSTRUCTION METER PROGRAM)</b>	<b>PAGE 6 OF 10</b>	<b>EFFECTIVE DATE  October 15, 2002</b>
	<b>SUPERSEDES DI 55.27</b>	<b>DATED April 21, 2000</b>

meter shall be installed within 48 hours (by the second business day). For an additional fee, at overtime rates, meters can be installed within 24 hours (within one business day).

#### 4.7 Relocation of Existing Fire Hydrant Meters

- a. The customer shall call the Fire Hydrant Meter Hotline (herein referred to as “Hotline”), a minimum of 24 hours in advance, to request the relocation of a meter. A fee will be charged to the existing account, which must be current before a work order is generated for the meter’s relocation.
- b. The customer will supply in writing the address where the meter is to be relocated (map page, cross street, etc). The customer must update the original Fire Hydrant Meter Application with any changes as it applies to the new location.
- c. Fire hydrant meters shall be read on a monthly basis. While fire hydrant meters and backflow devices are in service, commodity, base fee and damage charges, if applicable, will be billed to the customer on a monthly basis. If the account becomes delinquent, the meter will be removed.

#### 4.8 Disconnection of Fire Hydrant Meter

- a. After ten (10) months a “Notice of Discontinuation of Service” (Tab 3) will be issued to the site and the address of record to notify the customer of the date of discontinuance of service. An extension can only be granted in writing from the Water Department Director for up to 90 additional days (as stated in Section 4.6C) and a copy of the extension shall be forwarded to the Meter Shop Supervisor. If an extension has not been approved, the meter will be removed after twelve (12) months of use.
- b. Upon completion of the project the customer will notify the Meter Services office via the Hotline to request the removal of the fire hydrant meter and appurtenances. A work order will be generated

<b>CITY OF SAN DIEGO CALIFORNIA DEPARTMENT INSTRUCTIONS</b>	<b>NUMBER DI 55.27</b>	<b>DEPARTMENT Water Department</b>
<b>SUBJECT  FIRE HYDRANT METER PROGRAM (FORMERLY: CONSTRUCTION METER PROGRAM)</b>	<b>PAGE 7 OF 10</b>	<b>EFFECTIVE DATE  October 15, 2002</b>
	<b>SUPERSEDES DI 55.27</b>	<b>DATED April 21, 2000</b>

for removal of the meter.

- c. Meter Section staff will remove the meter and backflow prevention assembly and return it to the Meter Shop. Once returned to the Meter Shop the meter and backflow will be tested for accuracy and functionality.
- d. Meter Section Staff will contact and notify Customer Services of the final read and any charges resulting from damages to the meter and backflow or its appurtenance. These charges will be added on the customer's final bill and will be sent to the address of record. Any customer who has an outstanding balance will not receive additional meters.
- e. Outstanding balances due may be deducted from deposits and any balances refunded to the customer. Any outstanding balances will be turned over to the City Treasurer for collection. Outstanding balances may also be transferred to any other existing accounts.

5. **EXCEPTIONS**

- 5.1 Any request for exceptions to this policy shall be presented, in writing, to the Customer Support Deputy Director, or his/her designee for consideration.

6. **MOBILE METER**

- 6.1 Mobile meters will be allowed on a case by case basis. All mobile meters will be protected by an approved backflow assembly and the minimum requirement will be a Reduced Pressure Principal Assembly. The two types of Mobile Meters are vehicle mounted and floating meters. Each style of meters has separate guidelines that shall be followed for the customer to retain service and are described below:

- a) **Vehicle Mounted Meters:** Customer applies for and receives a City owned Fire Hydrant Meter from the Meter Shop. The customer mounts the meter on the vehicle and brings it to the Meter Shop for

<b>CITY OF SAN DIEGO CALIFORNIA DEPARTMENT INSTRUCTIONS</b>	<b>NUMBER DI 55.27</b>	<b>DEPARTMENT Water Department</b>
<b>SUBJECT  FIRE HYDRANT METER PROGRAM (FORMERLY: CONSTRUCTION METER PROGRAM)</b>	<b>PAGE 8 OF 10</b>	<b>EFFECTIVE DATE  October 15, 2002</b>
	<b>SUPERSEDES DI 55.27</b>	<b>DATED April 21, 2000</b>

inspection. After installation is approved by the Meter Shop the vehicle and meter shall be brought to the Meter Shop on a monthly basis for meter reading and on a quarterly basis for testing of the backflow assembly. Meters mounted at the owner's expense shall have the one year contract expiration waived and shall have meter or backflow changed if either fails.

b) **Floating Meters:** Floating Meters are meters that are not mounted to a vehicle. **(Note: All floating meters shall have an approved backflow assembly attached.)** The customer shall submit an application and a letter explaining the need for a floating meter to the Meter Shop. The Fire Hydrant Meter Administrator, after a thorough review of the needs of the customer, (i.e. number of jobsites per day, City contract work, lack of mounting area on work vehicle, etc.), may issue a floating meter. At the time of issue, it will be necessary for the customer to complete and sign the "Floating Fire Hydrant Meter Agreement" which states the following:

- 1) The meter will be brought to the Meter Shop at 2797 Caminito Chollas, San Diego on the third week of each month for the monthly read by Meter Shop personnel.
- 2) Every other month the meter will be read and the backflow will be tested. This date will be determined by the start date of the agreement.

If any of the conditions stated above are not met the Meter Shop has the right to cancel the contract for floating meter use and close the account associated with the meter. The Meter Shop will also exercise the right to refuse the issuance of another floating meter to the company in question.

Any Fire Hydrant Meter using reclaimed water shall not be allowed use again with any potable water supply. The customer shall incur the cost of replacing the meter and backflow device in this instance.

<b>CITY OF SAN DIEGO CALIFORNIA DEPARTMENT INSTRUCTIONS</b>	<b>NUMBER DI 55.27</b>	<b>DEPARTMENT Water Department</b>
<b>SUBJECT  FIRE HYDRANT METER PROGRAM (FORMERLY: CONSTRUCTION METER PROGRAM)</b>	<b>PAGE 9 OF 10</b>	<b>EFFECTIVE DATE  October 15, 2002</b>
	<b>SUPERSEDES DI 55.27</b>	<b>DATED April 21, 2000</b>

7. **FEE AND DEPOSIT SCHEDULES**

- 7.1 **Fees and Deposit Schedules:** The fees and deposits, as listed in the Rate Book of Fees and Charges, on file with the Office of the City Clerk, are based on actual reimbursement of costs of services performed, equipment and materials. These deposits and fees will be amended, as needed, based on actual costs. Deposits, will be refunded at the end of the use of the fire hydrant meter, upon return of equipment in good working condition and all outstanding balances on account are paid. Deposits can also be used to cover outstanding balances.

All fees for equipment, installation, testing, relocation and other costs related to this program are subject to change without prior notification. The Mayor and Council will be notified of any future changes.

8. **UNAUTHORIZED USE OF WATER FROM A HYDRANT**

- 8.1 Use of water from any fire hydrant without a properly issued and installed fire hydrant meter is theft of City property. Customers who use water for unauthorized purposes or without a City of San Diego issued meter will be prosecuted.
- 8.2 If any unauthorized connection, disconnection or relocation of a fire hydrant meter, or other connection device is made by anyone other than authorized Water Department personnel, the person making the connection will be prosecuted for a violation of San Diego Municipal Code, Section 67.15. In the case of a second offense, the customer's fire hydrant meter shall be confiscated and/or the deposit will be forfeited.
- 8.3 Unauthorized water use shall be billed to the responsible party. Water use charges shall be based on meter readings, or estimates when meter readings are not available.
- 8.4 In case of unauthorized water use, the customer shall be billed for all applicable charges as if proper authorization for the water use had been obtained, including but not limited to bi-monthly service charges, installation charges and removal charges.

<b>CITY OF SAN DIEGO CALIFORNIA DEPARTMENT INSTRUCTIONS</b>	<b>NUMBER DI 55.27</b>	<b>DEPARTMENT Water Department</b>
<b>SUBJECT  FIRE HYDRANT METER PROGRAM (FORMERLY: CONSTRUCTION METER PROGRAM)</b>	<b>PAGE 10 OF 10</b>	<b>EFFECTIVE DATE  October 15, 2002</b>
	<b>SUPERSEDES DI 55.27</b>	<b>DATED April 21, 2000</b>

- 8.5 If damage occurs to Water Department property (i.e. fire hydrant meter, backflow, various appurtenances), the cost of repairs or replacements will be charged to the customer of record (applicant).

**SAMPLE CERTIFICATION LETTER FOR AMERICAN IRON AND STEEL (AIS)  
COMPLIANCE**

## SAMPLE CERTIFICATION LETTER

The following information is provided as a sample letter of **step** certification for AIS compliance. Documentation must be provided on company letterhead.

Date

Company Name

Company Address

City, State Zip

Subject: American Iron and Steel Step Certification for Project (XXXXXXXXXX)

I, (company representative), certify that the (melting, bending, coating, galvanizing, cutting, etc.) process for (manufacturing or fabricating) the following products and/or materials shipped or provided for the subject project is in full compliance with the American Iron and Steel requirement as mandated in EPA's State Revolving Fund Programs.

Item, Products and/or Materials:

1. XXXX
2. XXXX
3. XXXX

Such process took place at the following location:

\_\_\_\_\_

If any of the above compliance statements change while providing material to this project we will immediately notify the prime contractor and the engineer.

Signed by company representative

**APPENDIX H**  
**MONTHLY DRINKING WATER DISCHARGE MONITORING FORM**

# DRINKING WATER DISCHARGE MONITORING FORM

(Use for All Discharges to the Storm Drain)

All discharge activities related to this project comply with the State Water Resources Control Board ORDER WQ 2014-0194-DWQ, STATEWIDE GENERAL NPDES PERMIT FOR DRINKING WATER SYSTEMS DISCHARGES as referenced by ([http://www.waterboards.ca.gov/water\\_issues/programs/npdes/docs/drinkingwater/final\\_statewide\\_wqo2014\\_0194\\_dwq.pdf](http://www.waterboards.ca.gov/water_issues/programs/npdes/docs/drinkingwater/final_statewide_wqo2014_0194_dwq.pdf)), and as follows:

<b>Project Name:</b>		<b>WBS No.:</b>		<b>Watershed No.</b>	
<b>Qualified Person Conducting Tests:</b>		<b>signature</b>			

BMPs MUST BE IN PLACE PRIOR TO ANY SCHEDULED DISCHARGE

By signing, I certify that all of the statements and conditions for drinking water discharge events are correct.

## Receiving Water Monitoring

(Complete only if limits exceed on Page 1 of 2)

<b>Event #1</b>	
1) Go to the location where the discharge enters the receiving water.	
<input type="checkbox"/> Accessible <input type="checkbox"/> Unable to Determine <input type="checkbox"/> No Safe Access	
2) If accessible, take photos and complete the visual monitoring below. If unable to determine, stop here. If no safe access, stop here.	
3) Visual Monitoring: Is the discharge into the receiving water...	
...causing erosion	<input type="checkbox"/> Yes <input type="checkbox"/> No
...carrying floating or suspended matter	<input type="checkbox"/> Yes <input type="checkbox"/> No
...causing discoloration	<input type="checkbox"/> Yes <input type="checkbox"/> No
...causing and impact to the aquatic life present	<input type="checkbox"/> Yes <input type="checkbox"/> No
...observed with visible film	<input type="checkbox"/> Yes <input type="checkbox"/> No
...observed with an sheen or coating	<input type="checkbox"/> Yes <input type="checkbox"/> No
...causing potential nuisance conditions	<input type="checkbox"/> Yes <input type="checkbox"/> No
3) If all answers are NO, stop here.	
<b>4) If any answers are YES, Notify the RE immediately for further action</b>	

<b>Event #2</b>	
1) Go to the location where the discharge enters the receiving water.	
<input type="checkbox"/> Accessible <input type="checkbox"/> Unable to Determine <input type="checkbox"/> No Safe Access	
2) If accessible, take photos and complete the visual monitoring below. If unable to determine, stop here. If no safe access, stop here.	
3) Visual Monitoring: Is the discharge into the receiving water...	
...causing erosion	<input type="checkbox"/> Yes <input type="checkbox"/> No
...carrying floating or suspended matter	<input type="checkbox"/> Yes <input type="checkbox"/> No
...causing discoloration	<input type="checkbox"/> Yes <input type="checkbox"/> No
...causing and impact to the aquatic life present	<input type="checkbox"/> Yes <input type="checkbox"/> No
...observed with visible film	<input type="checkbox"/> Yes <input type="checkbox"/> No
...observed with an sheen or coating	<input type="checkbox"/> Yes <input type="checkbox"/> No
...causing potential nuisance conditions	<input type="checkbox"/> Yes <input type="checkbox"/> No
3) If all answers are NO, stop here.	
<b>4) If any answers are YES, Notify the RE immediately for further action</b>	

## Instructional Notes

- 1) Log the location of the inlet or discharge point. For example: Albatross St & 5th Av. Log the start date and time and the end date and time of the discharge.
- 2) Log the discharge category. "Superchlorinated" are discharges where additional chlorine is added in order to adequately disinfect and sanitize drinking water system facilities. This does NOT include potable water containing residual chlorine from the water treatment process. "Large Volume" discharges are greater than 325,850 gallons of total volume for one event. "Well Dev/Rehab" are discharges of potable ground water from a well. This is not typical. If none of these categories apply, then select "Small Volume/Other."
- 3) Notifications of the location, date, time, category, and estimated volume of discharge must be made to the contacts and per the requirements below:

Contact	When to Notify	Email
TSW	3 days prior to all discharges	<a href="mailto:SWPPP@SanDiego.gov">SWPPP@SanDiego.gov</a>
PUD	3 days prior to all discharges	<a href="mailto:CompReports@SanDiego.gov">CompReports@SanDiego.gov</a> <a href="mailto:Rdavenport@SanDiego.gov">Rdavenport@SanDiego.gov</a>
San Diego Water Board	3 days prior to Large Volume discharges	<a href="mailto:SanDiego@WaterBoards.ca.gov">SanDiego@WaterBoards.ca.gov</a> <a href="mailto:Ben.Neill@WaterBoards.ca.gov">Ben.Neill@WaterBoards.ca.gov</a>
County of San Diego	3 days prior if 100,000 gal and within 1/4 mile of ocean/bay	DEH: <a href="mailto:Joseph.Palmer@SDCounty.ca.gov">Joseph.Palmer@SDCounty.ca.gov</a> <a href="mailto:Dominique.Edwards@SDCounty.ca.gov">Dominique.Edwards@SDCounty.ca.gov</a>
	3 days prior if enter county MS4 or unincorporated County	WPP: <a href="mailto:Nicholas.DeValle@SDCounty.ca.gov">Nicholas.DeValle@SDCounty.ca.gov</a> <a href="mailto:LUEG.Watersheds@sdcounty.ca.gov">LUEG.Watersheds@sdcounty.ca.gov</a>

- 4) At a minimum, sweep gutters prior to starting discharge and use dechlorination BMPs. The contractor and RE must monitor and determine if BMPs need to be removed or modified. For example if inlet protection is causing flooding at a storm drain inlet, contractor may elect to remove BMPs. Document any modification to BMPs in the notes
- 5) Total volume must be logged for all discharges. If discharge water is reused for other purposes such as watering a golf course, log that volume under "Reused"
- 6) Sampling is required for categories per the following table:

Category	Measure	Sample Frequency
Superchlorinated	Chlorine, Turbidity, pH	first 10 min, 50-60 min, last 10 min
Large Volume	Chlorine Turbidity	first 10 min, 50-60 min, last 10 min
Well Dev/Rehab	Chlorine Turbidity	first 10 min, 50-60 min, last 10 min
Small Volume/Other	None required	N/A

- 7) Effluent limitations must be monitored not to exceed per the following table:

Measure	Method	Limit
Chlorine	Field Measure	0.10 mg/L-Cl
Turbidity	Visual Estimate	20 NTU for inland waters
		225 NTU for ocean 100 NTU for wells
pH	Field Measure	6.5 - 8.5

# INCIDENT/RELEASE ASSESSMENT FORM <sup>1</sup>

## If you have an emergency, Call 911

Handlers of hazardous materials are required to report releases. The following is a tool to be used for assessing if a release is reportable. Additionally, a non-reportable release incident form is provided to document why a release is not reported (see back).

### Questions for Incident Assessment:

	YES	NO
1. Was anyone killed or injured, or did they require medical care or admitted to a hospital for observation?	<input type="checkbox"/>	<input type="checkbox"/>
2. Did anyone, other than employees in the immediate area of the release, evacuate?	<input type="checkbox"/>	<input type="checkbox"/>
3. Did the release cause off-site damage to public or private property?	<input type="checkbox"/>	<input type="checkbox"/>
4. Is the release greater than or equal to a reportable quantity (RQ)?	<input type="checkbox"/>	<input type="checkbox"/>
5. Was there an uncontrolled or unpermitted release to the air?	<input type="checkbox"/>	<input type="checkbox"/>
6. Did an uncontrolled or unpermitted release escape secondary containment, or extend into any sewers, storm water conveyance systems, utility vaults and conduits, wetlands, waterways, public roads, or off site?	<input type="checkbox"/>	<input type="checkbox"/>
7. Will control, containment, decontamination, and/or clean up require the assistance of federal, state, county, or municipal response elements?	<input type="checkbox"/>	<input type="checkbox"/>
8. Was the release or threatened release involving an unknown material or contains an unknown hazardous constituent?	<input type="checkbox"/>	<input type="checkbox"/>
9. Is the incident a threatened release (a condition creating a substantial probability of harm that requires immediate action to prevent, reduce, or mitigate damages to persons, property, or the environment)?	<input type="checkbox"/>	<input type="checkbox"/>
10. Is there an increased potential for secondary effects including fire, explosion, line rupture, equipment failure, or other outcomes that may endanger or cause exposure to employees, the general public, or the environment?	<input type="checkbox"/>	<input type="checkbox"/>

If the answer is YES to any of the above questions – report the release to the California Office of Emergency Services at 800-852-7550 and the local CUPA daytime: (619) 338-2284, after hours: (858) 565-5255. Note: other state and federal agencies may require notification depending on the circumstances.

\*Call 911 in an emergency\*

If all answers are NO, complete a Non Reportable Release Incident Form (page 2 of 2) and keep readily available. Documenting why a “no” response was made to each question will serve useful in the event questions are asked in the future, and to justify not reporting to an outside regulatory agency.

If in doubt, report the release.

---

<sup>1</sup> This document is a guide for accessing when hazardous materials release reporting is required by Chapter 6.95 of the California Health and Safety Code. It does not replace good judgment, Chapter 6.95, or other state or federal release reporting requirements.

## **EMERGENCY RELEASE FOLLOW-UP NOTICE REPORTING FORM INSTRUCTIONS**

### **GENERAL INFORMATION:**

Chapter 6.95 of Division 20 of the California Health and Safety Code requires that written emergency release follow-up notices prepared pursuant to 42 U.S.C. § 11004, be submitted using this reporting form. Non-permitted releases of reportable quantities of Extremely Hazardous Substances (listed in 40 CFR 355, appendix A) or of chemicals that require release reporting under section 103(a) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 [42 U.S.C. § 9603(a)] must be reported on the form, as soon as practicable, but no later than 30 days, following a release. The written follow-up report is required in addition to the verbal notification.

### **BASIC INSTRUCTIONS:**

- The form, when filled out, reports follow-up information required by 42 U.S.C § 11004. Ensure that all information requested by the form is provided as completely as possible.
- If the incident involves reportable releases of more than one chemical, prepare one report form for each chemical released.
- If the incident involves a series of separate releases of chemical(s) at different times, the releases should be reported on separate reporting forms.

### **SPECIFIC INSTRUCTIONS:**

**Block A:** Enter the name of the business and the name and phone number of a contact person who can provide detailed facility information concerning the release.

**Block B:** Enter the date of the incident and the time that verbal notification was made to OES. The OES control number is provided to the caller by OES at the time verbal notification is made. Enter this control number in the space provided.

**Block C:** Provide information pertaining to the location where the release occurred. Include the street address, the city or community, the county and the zip code.

**Block D:** Provide information concerning the specific chemical that was released. Include the chemical or trade name and the Chemical Abstract Service (CAS) number. Check all categories that apply. Provide best available information on quantity, time and duration of the release.

**Block E:** Indicate all actions taken to respond to and contain the release as specified in 42 U.S.C. § 11004(c).

**Block F:** Check the categories that apply to the health effects that occurred or could result from the release. Provide an explanation or description of the effects in the space provided. Use Block H for additional comments/information if necessary to meet requirements specified in 42 U.S.C. § 11004(c).

**Block G:** Include information on the type of medical attention required for exposure to the chemical released. Indicate when and how this information was made available to individuals exposed and to medical personnel, if appropriate for the incident, as specified in 42 U.S.C. § 11004(c).

**Block H:** List any additional pertinent information.

**Block I:** Print or type the name of the facility representative submitting the report. Include the official signature and the date that the form was prepared.

### **MAIL THE COMPLETED REPORT TO:**

**State Emergency Response Commission (SERC)  
Attn: Section 304 Reports  
Hazardous Materials Unit  
3650 Schriever Avenue  
Mather, CA 95655**

NOTE: Authority cited: Sections 25503, 25503.1 and 25507.1, Health and Safety Code. Reference: Sections 25503(b)(4), 25503.1, 25507.1, 25518 and 25520, Health and Safety Code.

## **APPENDIX J**

### **ADVANCED METERING INFRASTRUCTURE (AMI) DEVICE PROTECTION**

## Protecting AMI Devices in Meter Boxes and on Street Lights

The Public Utilities Department (PUD) has begun the installation of the Advanced Metering Infrastructure (AMI) technology as a new tool to enhance water meter reading accuracy and efficiency, customer service and billing, and to be used by individual accounts to better manage the efficient use of water. **All AMI devices shall be protected per Section 402-2, "Protection", of the 2018 Whitebook.**

AMI technology allows water meters to be read electronically rather than through direct visual inspection by PUD field staff. This will assist PUD staff and customers in managing unusual consumption patterns which could indicate leaks or meter tampering on a customer's property.

Three of the main components of an AMI system are the:

- A. Endpoints, see Photo 1:

**Photo 1**

B. AMI Antenna attached to Endpoint (antenna not always required), see Photo 2:

---

Network Devices, see Photo 3:

**Photo 3**

AMI endpoints transmit meter information to the AMI system and will soon be on the vast majority of meters in San Diego. These AMI devices provide interval consumption data to the PUD's Customer Support Division. If these devices are damaged or communication is interrupted, this Division will be alerted of the situation. The endpoints are installed in water meter boxes, coffins, and vaults adjacent to the meter. A separate flat round antenna may also be installed through the meter box lid. This antenna is connected to the endpoint via cable. The following proper installation shall be implemented when removing the lid to avoid damaging the antenna, cable, and/or endpoint. Photo 4 below demonstrates a diagram of the connection:

**Photo 4**

The AMI device ERT/Endpoint/Transmitter shall be positioned and installed as discussed in this Appendix. If the ERT/Endpoint/Transmitter is disturbed, it shall be re-installed and returned to its original installation with the end points pointed upwards as shown below in Photo 5.

**The PUD's code compliance staff will issue citations and invoices to you for any damaged AMI devices that are not re-installed as discussed in the Contract Document**

Photo 5 below shows a typical installation of an AMI endpoint on a water meter.

**Photo 5**

Photo 6 below is an example of disturbance that shall be avoided:

**Photo 6**

**You are responsible when working in and around meter boxes.** If you encounter these endpoints, use proper care and do not disconnect them from the registers on top of the water meter. If the lid has an antenna drilled through, do not change or tamper with the lid and inform the Resident Engineer immediately about the location of that lid. Refer to Photo 7 below:

**Photo 7**

Another component of the AMI system are the Network Devices. The Network Devices are strategically placed units (mainly on street light poles) that collect interval meter reading data from multiple meters for transmission to the Department Control Computer. **If you come across any of these devices on street lights that will be removed or replaced (refer to Photos 8 and 9 below), notify AMI Project Manager Arwa Sayed at (619) 362-0121 immediately.**

Photo 8 shows an installed network device on a street light. On the back of each Network Device is a sticker with contact information. See Photo 9. **Call PUD Water Emergency Repairs at 619-515-3525 if your work will impact these street lights.** These are assets that belong to the City of San Diego and you shall be responsible for any costs of disruption of this network.

**Photo 8**

**Network Device**

**Photo 9**

**If you encounter any bad installations, disconnected/broken/buried endpoints, or inadvertently damage any AMI devices or cables, notify the Resident Engineer immediately. The Resident Engineer will then immediately contact the AMI Project Manager, Arwa Sayed, at (619) 362-0121.**

## CONTRACT AGREEMENT

### CONSTRUCTION CONTRACT

This Phase-Funded contract is made and entered into between THE CITY OF SAN DIEGO, a municipal corporation, herein called "City", and PCL Construction, Inc., herein called "Contractor" for construction of **Pure Water Program: Metro Biosolids Center Improvements**; Bid No. **K-21-1867-DBB-3**; in the total amount Forty Million Eighty Six Thousand Six Hundred Ninety Dollars and Zero Cents (**\$40,086,690.00**), which is comprised of the Base Bid, consisting of an amount not to exceed **\$3,483,072.00** for **Phase 1**; **\$10,613,623.00** for **Phase 2**; **\$20,467,495.00** for **Phase 3** and **\$5,522,500.00** for **Phase 4**.

IN CONSIDERATION of the payments to be made hereunder and the mutual undertakings of the parties hereto, City and Contractor agree as follows:

1. The following are incorporated into this contract as though fully set forth herein:
  - (a) The attached Faithful Performance and Payment Bonds.
  - (b) The attached Proposal Included in the Bid documents by the Contractor.
  - (c) Reference Standards listed in the Instruction to Bidders and the Supplementary Special Provisions (SSP).
  - (d) Phased Funding Schedule Agreement.
  - (e) That certain documents entitled **Pure Water Program: Metro Biosolids Center Improvements**, on file in the office of the City Clerk as Document No. **K-21-1867-DBB-3**, as well as all matters referenced therein.
2. The Contractor shall perform and be bound by all the terms and conditions of this contract and in strict conformity therewith shall perform and complete in a good and workmanlike manner  
**Pure Water Program: Metro Biosolids Center Improvements**, Bid Number **K-21-1867-DBB-3**, San Diego, California.
3. For such performances, the City shall pay to Contractor the amounts set forth at the times and in the manner and with such additions or deductions as are provided for in this contract, and the Contractor shall accept such payment in full satisfaction of all claims incident to such performances (See WHITEBOOK, Section 7-3.10, Phased Funding Compensation).
4. No claim or suit whatsoever shall be made or brought by Contractor against any officer, agent, or employee of the City for or on account of anything done or omitted to be done in connection with this contract, nor shall any such officer, agent, or employee be liable hereunder.
5. This contract is effective as of the date that the Mayor or designee signs the agreement and is approved by the City Attorney in accordance with San Diego Charter Section 40.

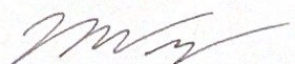

CONTRACT AGREEMENT (continued)

IN WITNESS WHEREOF, this Agreement is signed by the City of San Diego, acting by and through its Mayor or designee, pursuant to Resolution No. R-312062 authorizing such execution.

**ESCROW BID DOCUMENTS**

## **1. ESCROW BID DOCUMENTS**

### **1.1. Definition and Purpose**

The Escrow Bid Documents (EBD) are a compilation of all the documentary information generated in preparation of bid prices for this project. EBDs will be used to assist in the negotiation of price adjustments and variations and in the settlement of disputes, claims and other controversies. They will not be used for pre-award evaluation of the Contractor's anticipated methods of construction or to assess the Contractor's qualifications for performing the Work.

### **1.2. General**

**1.2.1.** All bidders shall submit a copy of the EBD within 4 working days of the bid opening.

**1.2.2.** The successful bidder agrees, as a condition of award of the Contract, that the Escrow Bid Documents constitute the only complete documentary information used in preparation of his bid. No other bid preparation information shall be considered in resolving disputes.

**1.2.3.** Nothing in the Escrow Bid Documents shall change or modify the terms or conditions of the Contract.

### **1.3. Ownership**

**1.3.1.** The EBDs are and shall always remain the property of the Contractor subject only to joint review by the City and the Contractor, except as provided for herein.

**1.3.2.** The City stipulates and expressly acknowledges that the EBDs, as defined herein, constitute trade secrets. This acknowledgment is based on the City's express understanding that the information contained in the EBDs is not known outside the Contractor's business, is known only to a limited extent and only by a limited number of employees of the Contractor, is safeguarded while in the Contractor's possession, and is extremely valuable to competitors by virtue of its reflecting the Contractor's contemplated techniques of construction.

**1.3.3.** The City acknowledges that EBDs and the information contained therein are made available to the City only because such action is an express prerequisite to award of the Contract. The City acknowledges that the EBDs include a compilation of information used in the Contractor's business, intended to give the Contractor an opportunity to obtain an advantage over competitors who do not know of or use the contents of the documentation. The City agrees to safeguard the EBDs and all information contained therein to the fullest extent permitted by law.

**1.3.4.** The City agrees to safeguard the EBDs and all information contained therein from any California Public Act Request to the fullest extent permitted by law.

### **1.4. Format and Contents**

**1.4.1.** Bidders may submit EBDs in their usual cost estimating format. It is not intended that extra work is required in preparing the bid but to ensure that the EBDs will be adequate to enable complete and proper understanding and proper interpretation for their intended use. The EBDs shall be in the English language only.

- 1.4.2.** The EBDs shall clearly itemize the estimated costs of performing the work of each item contained in the Bid Schedule. Items should be separated into sub-items as required to present a complete and detailed cost estimate and allow a detailed cost review. The EBDs shall include all quantity take-offs, crews, equipment, calculations of rates of production and progress, copies of quotations from sub-contractors and suppliers, and memoranda, narratives, consultants reports, add/deduct sheets and all other information used by the Contractor to arrive at the prices contained in the bid. Estimated costs shall be broken down into the Contractor's usual estimate categories such as direct labor, repair labor, equipment operation, equipment ownership, expendable materials, permanent material and subcontract costs as appropriate. Plant and equipment and indirect costs should be detailed in the Contractor's usual format. The Contractor's allocation of plant and equipment, indirect costs, contingencies, mark-up and other items to each bid item shall be clearly indicated.
- 1.4.3.** The EBDs shall clearly show in calculations, text, or both, the relationship between baseline indications presented in the Contract Documents and assumptions that form the basis for the Contractor's means, methods, equipment selection, rates of production, and costs.
- 1.4.4.** All costs shall be identified. For bid items where the extended amount is less than \$10,000, estimated unit costs are acceptable without a detailed cost estimate, provided that labor, equipment, materials and subcontracts, as applicable, are included and provided that indirect costs, contingencies, and mark-up, as applicable, are allocated.
- 1.4.5.** Bid Documents provided by the City should not be included in the EBDs unless needed to comply with the above requirements.

## **1.5. Submittal**

- 1.5.1.** All bidders shall submit their EBDs within 4 working days of the bid opening. The EBDs shall be submitted in a sealed container (e.g., sealed envelope, box or carton sealed with tape, locked strongbox, etc.), and the container shall be clearly marked on the outside with the Bidder's name, date of submittal, project name, Contract Number and the words "Escrow Bid Documents". The EBDs shall be submitted to:

Engineering & Capital Projects Department, Contracts Division  
525 B Street, Suite 750 (7<sup>th</sup> Floor)  
San Diego, California, 92101  
Attention: Rosa Riego

- 1.5.2.** The EBDs shall be signed by an individual authorized by the bidder to execute the bid, stating that the material in the Escrow Bid Documentation constitutes all the documentary information used in the preparation of the bid and that he or she has personally examined the contents of the EBDs submission and has found that the documents are complete:

**"ESCROW BID DOCUMENT CERTIFICATION"**

THE UNDERSIGNED HEREBY CERTIFIES THAT THE BID DOCUMENTATION CONTAINED HEREIN CONSTITUTES ALL THE INFORMATION USED IN PREPARATION OF THE BID AND THAT I HAVE PERSONALLY EXAMINED THESE CONTENTS AND HAVE FOUND THAT THIS BID DOCUMENTATION IS COMPLETE.

SIGNATURE: \_\_\_\_\_

NAME: \_\_\_\_\_  
(Print)

TITLE: \_\_\_\_\_

FIRM: \_\_\_\_\_

DATE: \_\_\_\_\_

- 1.5.3.** Prior to award of the contract, the EBDs of the apparent low bidder will be examined, organized and inventoried by representatives of the City, and members of the Contractor’s staff who are knowledgeable in how the bid was prepared. This examination is to ensure that the EBDs are authentic, legible, and complete (as defined in 1.4). It will not include review of and will not constitute approval of proposed construction methods, estimating assumptions, or interpretations of the contract documents. Examination will not alter any condition(s) or term(s) of the Contract.
- 1.5.4.** If the Contract is not awarded to the apparent low bidder, the EBDs of the next apparent low bidder to be considered for award shall be processed, as described above.
- 1.5.5.** The City may reject the bid as non-responsive and ineligible for further consideration if the necessary EBDs are not submitted.
- 1.5.6.** If the bidder's proposal is based on subcontracting any part of the Work, each subcontractor whose total subcontract price exceeds five percent of the total contract price proposed by the bidder, shall provide separate EBDs to be included with those of the bidder. These documents will be opened and examined in the same manner and at the same time as the examination described above for the apparent successful bidder. The failure to submit subcontractor EBDs may render contractor’s bid non-responsive.
- 1.5.7.** If the Contractor wishes to substitute a subcontractor for a portion of the Work which exceeds five percent of the total contract price proposed by the bidder after award, the City retains the right to require the Contractor to submit EBDs from the subcontractor before the subcontract is approved. This section is not intended to and shall not be interpreted as a waiver by the City of any of the requirements or provisions of public contract code section 4100 et seq. known as the Subletting and Subcontracting Fair Practices Act.

## **1.6. Storage**

**1.6.1.** Absent a request from the Contractor to place the EBDs in possession of a third-party escrow agent the EBDs will be stored by the City of San Diego, Engineering & Capital Projects Department, Contracts Division. Upon written request from the Contractor, the EBDs shall be placed in escrow with a mutually agreeable institution for the life of the Contract, unless examination is required, which shall be conducted in accordance with this section. The cost of storage by third-party escrow agent will be borne by the Contractor.

## **1.7. Examination**

**1.7.1.** The EBDs shall be examined by both the City and the Contractor, at any time deemed necessary by either the City or the Contractor, to assist in the negotiation of price adjustments and change orders, or the settlement of disputes.

**1.7.2.** Examination of the EBDs is subject to the following conditions:

**1.7.2.1.** As trade secrets, the EBDs are proprietary and confidential as described above

**1.7.2.2.** The City and the Contractor shall each designate, in writing to the other party a minimum of ten days prior to examination, representatives who are authorized to examine the EBDs. No other person shall have access to examine the EBDs.

**1.7.2.3.** Examination of the EBDs will take place only in the presence of duly designated representatives of both the City and the Contractor.

**1.7.2.4.** As escrow bid documents shall be examined by both the City and the Contractor to assist in the negotiation of price adjustments and change orders or the settlement of disputes as either party sees fit.

## **1.8. Final Disposition**

**1.8.1.** The EBDs will be returned to the awarded Contractor upon completion and final settlement of the contract.

**1.8.2.** The EBDs submitted by unsuccessful bidders will be returned unopened, unless opened as provided for above, following execution of the Contract.

**CITY OF SAN DIEGO**  
**PROJECT LABOR AGREEMENT**  
**FOR CONSTRUCTION OF PURE WATER PROGRAM**  
**PHASE I COVERED PROJECTS**

This Project Labor Agreement (hereinafter, “PLA” or “Agreement”) is entered into this 16<sup>th</sup> day of June, 2020 by and between the San Diego Building and Construction Trades Council (hereinafter “Council”), and the signatory Craft Unions (hereinafter, together with the Council, collectively, the “Union” or “Unions”), and the Contractors performing work on Covered Projects that are subject to this Agreement. The City of San Diego is not a signatory Party to this Agreement, but shall be considered a “negotiating party” and will be responsible for implementing and administering the Agreement as described herein together with the Council, Unions and Contractors.

**ARTICLE 1**

**RECITALS**

WHEREAS, the City desires the completion of the Pure Water Program Phase I Projects in a professional, safe, efficient, and economical manner, without undue delay or work stoppage; and

WHEREAS, the successful completion of the City’s Pure Water Program Phase I Projects are of the utmost importance to the rate payers and the City; and

WHEREAS, the Parties have pledged their full commitment to work towards a mutually satisfactory completion of the Pure Water Program Phase I Projects; and

WHEREAS, large numbers of workers of various skills will be required in the performance of the construction work on the Pure Water Program Phase I Projects, including workers affiliated with and/or represented by the Unions; and

WHEREAS, it is recognized that on construction projects with multiple contractors and bargaining units on the job site at the same time over an extended period of time, the potential for work disruption is substantial without an overriding commitment to maintain continuity of work; and

WHEREAS, the Parties agree that by establishing and stabilizing wages, hours, and working conditions for the workers employed on the Pure Water Program Phase I Projects, a

satisfactory, continuous, and harmonious relationship will exist among labor and management that will lead to the efficient and economical completion of Covered Projects; and

WHEREAS, in recognition of the special needs of the Project Work and to maintain a spirit of harmony, labor-management relations, peace, and stability during the term of this PLA, the Parties agree to establish effective and binding methods for the settlement of all misunderstandings, disputes and grievances without any strikes, slowdowns, work interruptions, or disruption of Project Work, and the Contractors agree not to engage in any lockout.

WHEREAS, the City places high priority upon the development of comprehensive programs for the recruitment, training, and employment of City Residents and Targeted Workers, and also recognizes the ability of local Apprenticeship Programs to provide meaningful and sustainable careers in the building and construction industry. The Parties will encourage City Residents and Targeted Workers to participate in Project Work through programs and procedures jointly developed to prepare and encourage such individuals for entrance into Apprenticeship Programs and formal employment on the Project Work through the referral programs sponsored and/or supported by the Parties to this PLA.; and

WHEREAS, the Project Work will provide opportunities for Disadvantaged Business Enterprises to participate as Contractors, subcontractors, or suppliers, and the Parties therefore agree that they will cooperate with all efforts of the City, the Project Labor Coordinator, and other organizations retained by the City for this purpose, to encourage and assist the participation of Disadvantaged Business Enterprises in the Project Work. Specifically, all Parties understand that the City has established and quantified goals which place a strong emphasis on the utilization of Disadvantaged Business Enterprises on the Project. Each Party agrees that it shall participate in outreach programs and provide education, and assistance to businesses not familiar with working on projects of this scope. Further, the Parties shall ensure that the provisions of this PLA do not inadvertently establish impediments to participation of such Disadvantaged Business Enterprises, City Residents and Targeted Workers.

WHEREAS, it is further understood that the City is a real party in interest to this Agreement and shall actively administer and enforce the obligations of this PLA to ensure that the benefits of this Agreement flow to all signatory Parties, craft persons working under it, and the rate payers and residents of the City. The City will send a letter to the Council to signify that the City will be performing its obligation under this Agreement and will designate a "Project Labor Coordinator," either from its own staff and/or an independent contractor acting on behalf of the City, to monitor and enforce compliance with this PLA. In addition, this letter will state that the City will include and incorporate this Agreement into each Covered Project's construction documents. The Project Labor Coordinator, as the authorized representative of the City, will assist with the development and implementation of the programs referenced in this PLA, all of which are critical to fulfilling the intent and purposes of the Parties and this PLA.

NOW, THEREFORE, IT IS AGREED BETWEEN AND AMONG THE PARTIES AS FOLLOWS:

## ARTICLE 2

### DEFINITIONS

Capitalized terms utilized in this PLA which are not otherwise defined herein shall have the meanings ascribed to said terms below.

“Agreement” means this Project Labor Agreement (PLA).

“Applicable Prevailing Determination” means the prevailing wage determinations applicable to Project Work pursuant to the State of California Labor Code.

“Apprentice” means an apprentice properly registered in an Apprenticeship Program for the entire time they are employed on a Covered Project.

“Apprenticeship Program” as used in this PLA shall be defined as an apprenticeship program certified by the State of California.

“City” means the City of San Diego and its departments delivering the Covered Projects.

“City Resident” means a City of San Diego permanent resident at the time of initial employment on a Covered Project or a Veteran residing anywhere.

“Contractor” means any contractor to whom the City awards a Construction Contract for Project Work and all subcontractors utilized by such Contractors for Project Work. The term “Contractor” includes any individual, firm, partnership, corporation, owner operator, or combination thereof, including joint ventures, that has entered into a contract with the City for Project Work, or any subcontractor who has signed a contract with a Contractor or another subcontractor for Project Work.

“Core Employees” are defined in Article 4, Section 4.6 (e).

“Council” means the San Diego County Building & Construction Trades Council.

“Covered Contract” means a contract awarded to a Contractor by the City for a Pure Water Program Phase I Project identified in Appendix A.

“Covered Project” or “Project Work” means a Pure Water Program Phase I Project that is identified in Appendix A and is limited to the construction site of work.

“Disadvantaged Business Enterprise” means a firm that has been certified via the Department of Transportation, but also includes: Minority Business Enterprises or Woman Business Enterprises certified by the Department of Transportation or the California Public Utilities Commission; and Small Local Business Enterprises or Emerging Local Business Enterprises certified by the City.

“Prime Contractor” means the prime Contractor awarded a Covered Contract in privity directly with the City.

“Project Labor Coordinator” means the designee of the City, either from its own staff and/or an independent entity acting on behalf of the City, to monitor compliance with this Agreement and assist with developing, implementing and administering the requirements, policies and programs referenced herein.

“Schedule A’s” means the local master labor agreements of the Unions.

“Targeted Worker” means any individual qualifying for one (1) or more of the following Targeted Worker categories:

- (a) Is a Veteran, or is the eligible spouse of a “Veteran of the United States armed forces, under Section 2(a) of the Jobs for Veterans Act (38 United States Code [U.S.C.] 4215[a]);
- (b) At initial time of employment on a Covered Project, is an Apprentice with less than ten (10) percent of the work hours required for graduation to become a Journeyman;
- (c) Has no high school diploma or general education diploma (GED);
- (d) Is homeless or has been homeless within the last year;
- (e) Is a former foster youth;
- (f) Is a custodial single parent;
- (g) Is experiencing protracted unemployment (receiving unemployment benefits for at least three [3] months);
- (h) Is a current recipient of government cash or food assistance benefits;
- (i) Has a documented income at or below 100 percent of the Federal Poverty Level;

(j) Is formerly incarcerated with a history of involvement with the criminal justice system.

“Union” or “Unions” means any labor organization signatory to this Agreement acting in their own behalf and on behalf of their respective affiliates and member organizations whose names are subscribed hereto and who have, through their officers, executed this Agreement.

“Veteran” means a veteran or the eligible spouse of a veteran of the United States armed forces, under Section 2(a) of the Jobs for Veterans Act (38 U.S.C. 4215[a]);

### ARTICLE 3

#### **SCOPE OF THE AGREEMENT**

**Section 3.1** This PLA is limited to covering all onsite construction work within the scope of each Covered Contract.

**Section 3.2** Exclusions. Items specifically excluded from the scope of this PLA include the following:

(a) Work of non-manual employees including but not limited to, superintendents, supervisors, staff engineers, quality control and quality assurance personnel, timekeepers, mail carriers, clerks, office workers, messengers, guards, safety personnel, emergency medical and first aid technicians, and other professional, engineering, administrative, supervisory, and management employees; and

(b) All offsite manufacturing, fabrication, deliveries, maintenance, and handling of materials, equipment, or machinery, and the offsite hauling of materials of any kind to or from the Covered Project site. However, any lay down or storage areas for equipment or material and manufacturing (i.e. prefabrication) sites dedicated solely for the project, and the movement of materials or goods between locations on a Covered Project site are within the scope of the PLA. On-site fabrication work includes work done for the Project in temporary yards or areas near the Project. On-site construction shall also include the site of any batch plant constructed solely to supply materials to the Project; and

(c) All employees of the City, Project Labor Coordinator, design teams (including, but not limited to, architects, engineers, and master planners), or any other consultants for the City (including, but not limited to, project managers and

construction managers and their employees where not engaged in Project Work) and their subconsultants, and other employees of professional service organizations, not performing manual labor within the scope of this PLA. Notwithstanding the foregoing, however, this exclusion shall not apply to the classifications for Surveyors and/or Building/Construction Inspectors and/or Field Soils and Material Testers (Inspectors) unless they are City employees. This inclusion applies to the scope of work defined in the State of California Wage Determination for Surveyors and/or Building/Construction Inspectors and/or Field Soils and Material Testers (Inspectors). This shall also specifically include such work where it is referred to by utilization of such terms as “quality control” or “quality assurance.” Every Inspector performing under these classifications on Covered Projects pursuant to a professional services agreement, a contract entered into directly with the City, or a contract with a Contractor shall be bound to all applicable requirements of this Agreement; and

(d) Any work performed on or near or leading to or into a site of work covered by this PLA and undertaken by state, county, city, or other governmental bodies, or their contractors (other than work within the scope of this PLA undertaken by contractors to the City); or by private utilities, or their contractors; and

(e) Work performed by employees of a manufacturer or vendor on the manufacturer’s or vendor’s equipment, if required by the warranty agreement in order to maintain the warranty or guarantee, and provided that the warranty agreement is the manufacturer’s or vendor’s usual and customary warranty agreement for such equipment and is consistent with industry practice; and

(f) Specialized or technical work requiring specialized training, unique skills, or a level of specific technical experience which employees represented by the Union do not possess. At least ten (10) working days notice shall be given to the Council before any work is performed pursuant to this exemption.; and

(g) Laboratory work for testing; and

(h) Non-construction support services contracted by the City, Project Labor Coordinator, or Contractor in connection with this Project.

**Section 3.3** Awarding of Contracts.

(a) The City has the absolute right to bid or award Covered Contracts regardless of delivery method to any Contractor notwithstanding the existence or non-existence of any agreements between such Contractor and any Union Parties,

provided only that such Contractor is willing, ready, and able to execute and comply with this PLA should such Contractor be awarded work covered by this PLA.

(b) It is agreed that all Contractors who have been awarded a contract for Project Work shall be required to accept and be bound by the terms and conditions of this PLA. Contractors shall evidence their acceptance of this Agreement by executing a Letter of Assent as set forth in Attachment A hereto. The Prime Contractor must sign and submit the Letter of Assent as a condition of award prior to the execution of a Covered Contract. No Contractor shall commence Project Work without first providing a copy of the signed Letter of Assent to the Project Labor Coordinator.

(c) The City and Prime Contractors agree that to the extent permitted by law and consistent with the economy and efficiency of construction and operation, it will use its best efforts to purchase materials, equipment, and supplies that will not create labor strife. Under all circumstances, however, the City and Prime Contractors shall retain the absolute right to select the lowest responsive and responsible bidder for the award of contracts on all Covered Projects.

**Section 3.4** Coverage Exception. The Parties agree and understand that this PLA shall not apply to any work that would otherwise be covered Project Work if a governmental agency or granting authority partially or fully funding such work determines that it will not fund the Project Work if it is covered by this PLA. The City agrees that it will make every effort to establish the inclusion of this PLA with any governmental agency or granting authority funding a Covered Project.

**Section 3.5** Schedule A's.

(a) The provisions of this PLA, including the Schedule A's (which are the local Master Labor Agreements of the signatory Unions having jurisdiction over the work on the Project, as such may be changed from time to time consistent with Section 21.3, and which are incorporated herein by reference), shall apply to the work covered by this PLA, notwithstanding the provisions of any other local, area and/or national agreement that may conflict with or differ from the terms of this PLA. Where a subject covered by the provisions of this PLA is also covered by a Schedule A, the provisions of this PLA shall prevail. Where a subject is covered by a provision of a Schedule A and not covered by this PLA, the provisions of the Schedule A shall prevail. Any dispute as to the applicable source between this PLA and any Schedule A shall be resolved under the procedures established in Article 10.

(b) It is understood that this PLA, together with the referenced Schedule A's, constitutes a self-contained, stand-alone agreement and, by virtue of having become bound to this PLA, the Contractor will not be obligated to sign any other local, area, or national collective bargaining agreement as a condition of performing work within the scope of this PLA (provided, however, that the Contractor may be required to sign a uniformly applied non-discriminatory Participation or Subscription Agreement at the request of the trustees or administrator of a trust fund established pursuant to Section 302 of the Labor Management Relations Act, and to which such Contractor may be bound to make contributions under this PLA, provided that such Participation or Subscription Agreement does not purport to bind the Contractor beyond the terms and conditions of this PLA and/or expand its obligation to make contributions pursuant thereto). It shall be the responsibility of the Prime Contractor to have each of its Contractors of any tier sign the documents with the appropriate Union prior to the Contractor beginning Project Work.

**Section 3.6** The Parties agree that this PLA will be made available to, and will fully apply to, any successful bidder for Project Work, without regard to whether that successful bidder performs work at other sites on either a Union or non-Union basis. This PLA shall not apply to any work of any Contractor other than that on Project Work specifically covered by this PLA.

**Section 3.7** Binding Signatories Only. This PLA and Letter of Assent shall only be binding on the signatory Parties hereto, and shall not apply to the parents, affiliates, subsidiaries, or other ventures of any such Party.

**Section 3.8** Other City Work. Nothing contained herein shall be interpreted to prohibit, restrict, or interfere with the performance of any other operation, work, or function not covered by this PLA, which may be performed by City employees or contracted for by the City for its own account, on its property, or in and around a project site.

**Section 3.9** Separate Liability. It is understood that the liability of the Contractor(s) and the liability of the separate Unions under this PLA shall be several and not joint. The Unions agree that this PLA does not have the effect of creating any joint employment status between or among the City or Project Labor Coordinator and/or any Contractor.

**Section 3.10** Completed Project Work. As areas of Project Work are accepted by the City, this PLA shall have no further force or effect on such items or areas except where the Contractor is directed by the City or its representatives to engage in repairs, modification and/or check-out functions required by its contract(s) with the City.

**Section 3.11** Except for all work performed under the NTL Articles of Agreement, the National Stack/Chimney Agreement, and the National Cooling Tower Agreement, all instrument calibrations work and loop checking shall be performed under the terms of the UA/IBEW Joint National Agreement for Instrument and Control Systems Technicians, and the National Agreement of the International Union of Elevator Constructors, with the exception of Article 7 (Work Stoppages and Lockouts), Article 8 (Work Assignments and Jurisdictional Disputes) and Article 10 (Settlement of Grievances and Disputes) of this PLA, which shall apply to such work.

## ARTICLE 4

### **UNION RECOGNITION AND EMPLOYMENT**

**Section 4.1** **Recognition.** The Contractor recognizes the Unions as the exclusive bargaining representative for the employees engaged in Project Work. Such recognition does not extend beyond the period when the employee is engaged in Project Work.

**Section 4.2** **Contractor Selection of Employees.** The Contractor shall have the right to determine the competency of all employees, the number of employees required, the duties of such employees within their craft jurisdiction, and shall have the sole responsibility for selecting employees to be laid off, consistent with this Article. The Contractor shall also have the right to reject any applicant referred by a Union for any reason, subject to any reporting time requirements of the applicable Schedule A; provided, however, that such right is exercised in good faith and not for the purpose of avoiding the Contractor's commitment to employ qualified workers through the procedures endorsed in this PLA.

**Section 4.3** **Referral Procedures.**

(a) For signatory Unions to this Agreement having a job referral system contained in a Schedule A, the Contractor agrees to comply with such system and it shall be used exclusively by such Contractor, except as modified by this PLA. Such job referral system will be operated in a nondiscriminatory manner and in full compliance with federal, state, and local laws and regulations that require equal employment opportunities and non-discrimination. All of the foregoing hiring procedures, including related practices affecting apprenticeship, shall be operated so as to consider the goals of the City to encourage employment of City Residents, Targeted Workers, and utilization of Disadvantaged Business Enterprises on the Project Work, and to facilitate the ability of all Contractors to meet their employment needs.

(b) The local Unions will exert their best efforts to recruit and refer sufficient numbers of skilled craft workers to fulfill the labor requirements of the Contractor, including specific employment obligations to which the Contractor may be legally and/or contractually obligated; and to refer Apprentices as requested to develop a larger, skilled workforce. The Unions will work with the Project Labor Coordinator and others designated by the City, to identify and refer competent craft persons as needed for Project Work, and to identify individuals, particularly City Residents and Targeted Workers, for entrance into Apprenticeship Programs, or participation in other identified programs and procedures to assist individuals in qualifying and becoming eligible for such Apprenticeship Programs, all maintained to increase the available supply of skilled craft personnel for Project Work and future construction work to be undertaken by the City.

(c) The Union shall not knowingly refer an employee currently employed by a Contractor on Project Work to any other Contractor.

**Section 4.4** Non-Discrimination in Referral, Employment, and Contracting. The Unions and Contractors agree that they will not discriminate against any employee or applicant for employment on the basis of race, color, religion, gender, national origin, age, Union status, sex, sexual orientation, marital status, political affiliation, or disability. Further, it is recognized that the City has certain policies, programs, and goals for the utilization of Disadvantaged Business Enterprises. The Parties shall jointly endeavor to assure that these commitments are fully met, and that any provisions of this PLA that may appear to interfere with Disadvantaged Business Enterprises successfully bidding for work on Covered Projects shall be carefully reviewed, and adjustments made as may be appropriate and agreed upon among the Parties, to ensure full compliance with the spirit and letter of the City's policies and commitment to its goals for the significant utilization of Disadvantaged Business Enterprises as Contractors, vendors or suppliers on Project Work.

**Section 4.5** Employment of City Residents and Targeted Workers.

(a) In recognition of the City's mission to serve the City and its residents, the Unions and Contractors agree that, to the extent allowed by law, and as long as they possess the requisite skills and qualifications, residents of the City of San Diego, hereafter "City Residents", shall be first referred for Project Work. A "City Resident" is defined as a City of San Diego permanent resident at the time of initial employment on a Covered Project or a Veteran residing anywhere. The

list of qualifying zip codes for City Residents is included within Attachment B-1, Workforce Dispatch Request Form.

(b) The Contractors and Unions agree to work together to achieve a goal of at least thirty-five (35) percent of the total construction craft hours worked on each Covered Project be performed by City Residents.

(c) The Contractors and Unions agree to work together to achieve a goal of at least ten (10) percent of the total construction craft hours worked on each Covered Project be performed by Targeted Workers. Hours worked by Targeted Workers who are also City Residents may be applied to the City Resident participation goal.

(d) Professional services agreements entered into by the City for covered surveying or inspection services, which are separate and apart from the Construction Contract for a Covered Project, are exempt from the foregoing City Resident and Targeted Worker hiring goals.

(e) To facilitate the dispatch of City Residents, as well as all Contractor requests for referral and dispatch of workers from the applicable Union referral system, all Contractors are required to utilize the Workforce Dispatch Request Form for Covered Projects, a sample of which is attached as Attachment B-1.

(f) The Project Labor Coordinator shall work with the Unions and Contractors in the administration, monitoring, and the reporting of the foregoing City Resident and Targeted Worker hiring goals.

(g) The Parties recognize that the Pure Water Program Phase I Projects have multiple funding sources. If a particular funding source applied by the City to a Covered Project does not allow geographic preference for hiring local craft workers, the foregoing City Resident participation requirement will not be applicable to that Covered Project. The City reserves the right to apply Pure Water Program Phase I funding as it chooses and will make every effort to fund the Covered Projects to encourage inclusivity of City Residents.

**Section 4.6** Core Employees. This Section only applies to Contractors who are not directly signatory to an applicable Schedule A.

(a) Disadvantaged Business Enterprise. The Parties recognize the City's interest in promoting competition and inclusion of Disadvantaged Business Enterprises, which may not be signatory to a current Schedule A. In order to promote participation and attract Disadvantaged Business Enterprises to work

under this Agreement, and subject to the limitations set forth below, each Contractor that is a Disadvantaged Business Enterprise may first employ three (3) of its core employees per craft on each Covered Project prior to employing an employee through the appropriate Union hiring hall. The next (fourth) employee shall be hired from the appropriate Union hiring hall and thereafter, such Contractor may employ, as needed, two (2) additional Core Employees in an alternating manner with Union referrals, up to a total of five (5) Core Employees. Thereafter, all additional employees in the affected trade or craft shall be requested and referred from the appropriate Union hiring hall.

The foregoing Core Employee hiring procedure for Disadvantaged Business Enterprises is subject to the following limitations:

(1) Disadvantaged Business Enterprises with an individual subcontract value of \$500,000 or less and;

(2) Disadvantaged Business Enterprises are limited to utilizing the foregoing Core Employee hiring procedure to one (1) subcontract per Covered Project and;

(3) The total value of all subcontracts utilizing the foregoing Core Employee hiring procedure shall not exceed ten (10) percent of the total value of each Covered Project; and

(4) In order to assist the Project Labor Coordinator monitor compliance with this Section, each Prime Contractor will be responsible for tracking, reporting and providing notice to the Project Labor Coordinator describing each Disadvantaged Business Enterprise subcontract that qualifies for the foregoing hiring procedure prior to work commencing.

(b) Employers who do not qualify for the hiring procedure set forth in Section 4.6(a), and who are not otherwise signatory to a current Schedule A, may employ, as needed, first, a Core Employee, then an employee through a referral from the appropriate Union hiring hall, then a second Core Employee, then a second employee through the referral system, and so on until a maximum of three (3) Core Employees are employed per craft on each Covered Project. Thereafter, all additional employees in the affected trade or craft shall be requested and referred from the appropriate Union hiring hall in accordance with this Article. Contractors employing more than fifty (50) craft workers at the same time in a specific trade on a Covered Project may hire an additional two (2) Core Employees.

(c) Section 4.6 only applies to Contractors who are not directly signatory to a current Schedule A for the craft worker in its employ and is not intended to limit the transfer provisions of the Schedule A of any trade. As part of this process, and in order to facilitate the contract administration procedures, as well as appropriate fringe benefit fund coverage, all Contractors shall require their Core Employees and any other persons employed other than through the referral process, to register with the appropriate Union hiring hall, if any, prior to their first day of employment working under the Construction Contract at the project site.

(d) Prior to each Contractor performing any work on a Covered Project, each Contractor shall provide a list of Core Employees to the Project Labor Coordinator and the Council. After submitting the Core Employee list prior to commencing work, Contractors shall not make any changes or substitutions to the Core Employee list for the duration of the Covered Project. Failure to submit the Core Employee list prior to work commencing will prohibit the Contractor from using any Core Employees for 30 calendar days after the list is provided to the Project Labor Coordinator and Council.

(e) Upon request by any Party to this Agreement, the Contractor hiring any Core Employee shall provide satisfactory proof (i.e., payroll records, quarterly tax records, and such other documentation) evidencing the Core Employee's qualification as a Core Employee to the Project Labor Coordinator and the Council.

(f) Core Employees must meet the following eligibility requirements to qualify for employment on Covered Projects:

(1) A Core Employee must be either a journeyman or Apprentice and appear on the Contractor's active payroll for at least ninety (90) of the last one-hundred-eighty (180) working days prior to being designated as a Core Employee. The date a Core Employee is designated is the date the Core Employee list is submitted to the Project Labor Coordinator and Council prior to the Contractor commencing work; and

(2) A Core Employee must possess any license required by state or federal law for the Project Work to be performed; and

(3) A Core Employee must have the ability to safely perform the basic functions of the applicable trade.

(g) In addition to the core employee provisions set forth herein, all Contractors may avail themselves of any opportunity provided for in the applicable Schedule A's to call for specific employees by name.

(h) During any layoffs or reductions in workforce, Contractors shall layoff employees in an order and manner consistent with the Core Employee hiring procedures and maintain the required Core Employee-to-Union referral ratios required by this Section for the duration of each Covered Project.

**Section 4.7** Time for Referral. If any Union's registration and referral system does not fulfill the requirements for specific classifications of covered employees (including City Residents) requested by any Contractor within forty-eight (48) hours (excluding Saturdays, Sundays, and holidays), that Contractor may employ Core Employees without reference to the ratio requirements in Section 4.6 or use employment sources other than the Union registration and referral services, and may employ applicants from any other available source. The Contractor should promptly inform the Union of any applicants hired from other sources, and such applicants shall register with the appropriate hiring hall, if any.

**Section 4.8** Lack of Referral Procedure. If a signatory local Union does not have a job referral system as set forth in Section 4.3 above, the Contractors shall give the Union equal opportunity to refer applicants. The Contractors shall notify the Union of employees so hired, as set forth in Section 4.7.

**Section 4.9** Union Membership. Employees are not required to become or remain union members as a condition of performing Covered Work under this Agreement. Employers shall make and transmit all deductions for union dues, fees, and assessments that have been authorized by employees in writing in accordance with the applicable Schedule A. Nothing in this Section 4.9 is intended to supersede the requirements of the applicable Schedule A's as to those Employers otherwise signatory to such Schedule A and as to the employees of those Employers who are performing Covered Work.

**Section 4.10** Foremen. The selection and number of craft foremen and/or general foremen shall be the responsibility of the Contractor, consistent with the Schedule A's. All foremen shall take orders exclusively from the designated Contractor representatives. Craft foremen shall be designated as working foreman at the request of the Contractors.

**Section 4.11** Skilled and Trained Workforce. All Contractors performing Project Work are required to provide the City with an enforceable commitment that a skilled and

trained workforce will be used to complete the construction contract or project, in accordance with City Council Resolution Number R-312062.

## ARTICLE 5

### UNION ACCESS AND STEWARDS

**Section 5.1** Access to Project Sites. Authorized representatives of the Union shall have access to Project Work, provided that they do not interfere with the work of employees and further provided that such representatives fully comply with posted visitor, security, and safety rules.

**Section 5.2** Stewards.

(a) Each signatory local Union shall have the right to dispatch a working journeyman as a steward for each shift, and shall notify the Contractor in writing of the identity of the designated steward or stewards prior to the assumption of such person's duties as steward. Such designated steward or stewards shall not exercise any supervisory functions. There will be no non-working stewards. Stewards will receive the regular rate of pay for their respective crafts.

(b) In addition to his/her work as an employee, the steward should have the right to receive, but not to solicit, complaints or grievances and to discuss and assist in the adjustment of the same with the employee's appropriate supervisor. Each steward should be concerned only with the employees of the steward's Contractor and not with the employees of any other Contractor. The Contractor will not discriminate against the steward in the proper performance of his/her Union duties.

(c) When a Contractor has multiple, non-contiguous work locations at one site, the Contractor may request and the Union shall appoint such additional working stewards as the Contractor requests to provide independent coverage of one or more such locations. In such cases, a steward may not service more than one work location without the approval of the Contractor.

(d) The stewards shall not have the right to determine when overtime shall be worked or who shall work overtime.

**Section 5.3** Steward Layoff/Discharge. The Contractor agrees to notify the appropriate Union twenty-four (24) hours before the layoff of a steward, except in the case of

disciplinary discharge for just cause. If the steward is protected against such layoff by the provisions of the applicable Schedule A, such provisions shall be recognized when the steward possesses the necessary qualifications to perform the remaining work. In any case in which the steward is discharged or disciplined for just cause, the appropriate Union will be notified immediately by the Contractor, and such discharge or discipline shall not become final (subject to any later filed grievance) until twenty-four (24) hours after such notice has been given.

**Section 5.4** Employees on Non-Project Work. On work where the personnel of the City may be working in close proximity to the construction activities covered by this PLA, the Union agrees that the Union representatives, stewards, and individual workers will not interfere with the City personnel, or with personnel employed by any other employer not a Party to this PLA.

## ARTICLE 6

### WAGES AND BENEFITS

**Section 6.1** Wages. At a minimum, all employees covered by this PLA shall be classified in accordance with work performed and paid the hourly wage rates for those classifications in compliance with the Applicable Prevailing Wage Determination established pursuant to the California Labor Code by the California Department of Industrial Relations.

**Section 6.2** Benefits.

(a) Subject to the exception set forth below for Disadvantaged Business Enterprises, otherwise, for all employees performing Project Work, Contractors shall pay all fringe benefits and other required employer contributions to the established Union employee benefit funds in the amounts required by the applicable Schedule A. In addition, the Contractors and Unions agree that only such bona fide employee benefits that accrue to the direct benefit of the employees (such as pension and annuity, health and welfare, vacation, apprenticeship, and training funds) shall be included in this requirement and required to be paid by the Contractor on Covered Projects. These Contractor contributions shall not exceed the contribution amounts set forth in the Applicable Prevailing Wage Determination.

Union Benefit Fund Contributions for Disadvantaged Business Enterprises.

Disadvantaged Business Enterprises are exempt from paying fringe benefits and

other required employer contributions on behalf of their Core Employees to the Union employee benefit funds, subject to the following exemption limitations:

(1) The exemption is only applicable to Disadvantaged Business Enterprises with an individual subcontract value of \$500,000 or less and;

(2) Disadvantaged Business Enterprises are limited to utilizing this exemption for one subcontract per Covered Project and;

(3) The total value of all subcontracts utilizing this exemption shall not exceed ten (10) percent of the total value of each Covered Project; and

(4) Disadvantaged Business Enterprises utilizing this exemption are still required to pay all fringe benefits and other required employer contributions to the established Union employee benefit funds for all employees other than their Core Employees, and must comply with the applicable prevailing wage requirements, including the payment of fringe benefits, for all employees performing Project Work; and

(5) In order to assist the Project Labor Coordinator monitor utilization of this exemption, each Prime Contractor will be responsible for tracking, reporting and providing notice to the Project Labor Coordinator about each Disadvantaged Business Enterprise subcontract that qualifies and intends to utilize this exemption prior to work commencing.

(b) Where applicable, the Contractor adopts and agrees to be bound by the written terms of the applicable, legally established, Union trust agreement(s) specifying the detailed basis how payments will be made into, and benefits paid out of, such trust funds for its employees. The Contractor authorizes the Parties to such trust funds to appoint trustees and successors' trustees to administer the trust funds and hereby ratifies and accepts the trustees so appointed as if made by the Contractor. The Contractor obligations to the applicable Union benefit fund(s) and trust agreement(s) are limited to work performed on a Covered Project. The applicable Union benefit funds and trust agreement(s) to each Contractor are determined by the pre-job conference and Union work assignment process described in Articles 8 and 16.

(c) Each Contractor is required to certify to the Project Labor Coordinator that it has paid all benefit contributions due and owing to the appropriate Union trust(s) and benefit funds prior to the receipt of its final payment and/or retention. Further, upon timely notification by a Union to the Project Labor Coordinator, the Project Labor Coordinator shall work with any Contractor who is delinquent in

payments to assure that proper benefit contributions are made, to the extent of requesting the City or the prime Contractor to withhold payments otherwise due such Contractor, until such contributions have been made or otherwise guaranteed.

(d) Notwithstanding any other provisions, this Agreement is an agreement under Section 8(f) of the National Labor Relations Act (NLRA), which covers work performed in the building and construction industry. In addition, the work performed under this Agreement qualifies for the Construction Industry Exemption under the Employee Retirement and Income Security Act of 1974 (“ERISA”), as amended as well. If any Union Pension Trust Fund (“Fund”) covered by the terms and conditions of this Agreement does not qualify for the Construction Industry Exemption authorized by Section 4203 (B)(1)(i), of the Employee Retirement Income Security Act of 1974 (“ERISA”) as amended, 29 U.S.C. 1383(b)(1)(i), or has not taken the necessary steps to amend the Fund documents to qualify for the Construction Industry Exemption as authorized by Section 4203(B)(1)(ii) of ERISA, as amended, 29 U.S.C. 1383(b)(1)(B)(ii); and to recognize the work performed under this Agreement to qualify for the Construction Industry Exemption, the Contractors signatory to this Agreement will not be obligated to make pension fund contributions to that Fund. In such an event, the Contractor shall pay all required amounts otherwise allocated for payment toward the non-exempt Fund to the employees’ wages or other bona fide retirement plan program pursuant to applicable prevailing wage requirements.

**Section 6.3** Wage Premiums. Wage premiums, including, but not limited to, pay based on height of work, shift premiums, hazard pay, scaffold pay, and special skills shall not be applicable to work under this PLA, except to the extent provided for in any applicable prevailing wage determination.

**Section 6.4** Compliance with Prevailing Wage Laws. All complaints regarding possible prevailing wage violations may be referred to the Project Labor Coordinator or Labor Compliance Program, if any, for processing, investigation and resolution, and if not resolved within thirty (30) calendar days, may be referred by any Party to the State Labor Commissioner. To facilitate compliance with applicable prevailing wage laws, the City and each Contractor agree to provide copies of certified payroll reports, redacted only to the extent required by law, to the Unions (or to any Labor Management Cooperation Committee in which a Union or its affiliate participates) within ten (10) days of their request.

## ARTICLE 7

### WORK STOPPAGES AND LOCKOUTS

**Section 7.1** No Work Stoppages or Disruptive Activity. The Council and the Unions signatory hereto agree that they, nor their respective officers, or agents or representatives, shall incite or encourage, condone or participate in any strike, walk-out, slowdown, picketing, observation of picket lines, or other activity of any nature or kind whatsoever, for any cause or dispute whatsoever with respect to or any way related to Project Work, or which interferes with or otherwise disrupts Project Work, or with respect to or related to the City or Contractors or subcontractors, including, but not limited to, economic strikes, unfair labor practice strikes, safety strikes, sympathy strikes, and jurisdictional strikes whether or not the underlying dispute is arbitrable. Any such actions by the Council, or Unions, or their members, agents, representatives, or the employees they represent shall constitute a material violation of this PLA. The Council and the Union shall take all steps necessary to obtain compliance with this Article.

**Section 7.2** Employee Violations. The Contractor may discharge any employee violating Section 7.1 above, and any such employee will not be eligible for rehire under this PLA.

**Section 7.3** Standing to Enforce. The City, the Project Labor Coordinator, or any Contractor affected by an alleged violation of Section 7.1 shall have standing and the right to enforce the obligations established therein.

**Section 7.4** Expiration of Schedule A's. If a collective bargaining agreement between a signatory Contractor and one or more of the Union(s) expires before the Contractor completes the performance of a Covered Contract for a Covered Project, and the Union or the Contractor gives notice of demand for a new or modified collective bargaining agreement, the Unions agree that they will not strike the Contractor on any Covered Project, and the Union and the Contractor agree that the expired collective bargaining agreement will continue in full force and effect for the Project Work until a new or modified collective bargaining agreement is reached between the Union and the Contractor. If the new or modified collective bargaining agreement reached between the Union and the Contractor provides that any terms of the collective bargaining agreement shall be retroactive, the Contractor agrees to comply, consistent with the terms of this PLA and the Prevailing Wage Statute, with any retroactive terms of the new or modified collective bargaining agreement which are applicable to employees of said Contractor that are employed on a Covered Project within seven (7) days at

no cost to the City. All employees shall continue to work and to perform all their obligations with respect to Project Work despite the expiration of a Schedule A agreement. Should a Contractor engaged in Project Work enter into an interim agreement with the Unions for work being performed elsewhere after the expiration, and before the renewal of a local collective bargaining agreement forming the basis for Schedule A, such interim agreement shall be utilized by that Contractor for Project Work, subject to the provisions of Section 21.3.

**Section 7.5** No Lock Outs. Contractors shall not cause, incite, encourage, condone or participate in any lock-out of employees with respect to Project Work during the term of this PLA. The term “lock-out” refers only to a Contractor's exclusion of employees in order to secure collective bargaining advantage, and does not refer to the discharge, termination, or layoff of employees by the Contractor for any reason in the exercise of rights pursuant to any provision of this PLA, or any other agreement, nor does “lock-out” include the City's decision to stop, suspend, or discontinue any Project Work or any portion thereof for any reason.

**Section 7.6** Best Efforts to End Violations.

(a) If a Contractor contends that there is any violation of this Article, it shall, at least twenty-four (24) hours prior to invoking the procedures of Section 7.7, provide written notification to the Council of the involved Union(s) and to the Project Labor Coordinator, setting forth the facts which the Contractor contends violates this Article. The Council and the leadership of the involved Union(s) will immediately instruct, order, and use their best efforts to cause the cessation of any violation of the Article.

(b) If the Union contends that any Contractor has violated this Article, it will notify the Contractor and the Project Labor Coordinator, setting forth the facts which the Union contends violate this Article, at least twenty-four (24) hours prior to invoking the procedures of Section 7.7. The Project Labor Coordinator shall promptly order the involved Contractor(s) to cease any violation of the Article.

**Section 7.7** Expedited Enforcement Procedure. Any Party, including the City, which is an intended beneficiary of this Article, or the Project Labor Coordinator, may institute the following procedures, in lieu of or in addition to any other action at law or equity, when a breach of this Article is alleged.

(a) The Party invoking this procedure shall notify Thomas Pagan, who has been selected by the negotiating Parties, and whom the Parties agree shall be the permanent arbitrator under this procedure, or Barry Winograd, as the alternate

arbitrator under this procedure. If the permanent arbitrator is unavailable at any time, the alternate will be contacted. If neither is available, then a selection shall be made from the list of arbitrators as set forth in Article 10. Notice to the arbitrator shall be by the most expeditious means available, with notices to the Parties alleged to be in violation, and to the Project Labor Coordinator and Council. For purposes of this Article, written notice may be given by email, facsimile, hand delivery, or overnight mail and will be deemed effective upon receipt.

(b) Upon receipt of said notice, the arbitrator named above or his/her alternate shall sit and hold a hearing within twenty-four (24) hours if it is contended that the violation still exists, but not sooner than twenty-four (24) hours after notice has been dispatched to the Council of the involved Union(s) and/or Contractor as required by Section 7.6, above.

(c) The arbitrator shall notify the Parties of the place and time chosen for this hearing. Said hearing shall be completed in one session, which, with appropriate recesses at the arbitrator's discretion, shall not exceed twenty-four (24) hours unless otherwise agreed upon by all Parties. A failure of any Party or Parties to attend said hearings shall not delay the hearing of evidence or the issuance of any award by the arbitrator.

(d) The sole issue at the hearing shall be whether or not a violation of this Article has in fact occurred. The arbitrator shall have no authority to consider any matter in justification, explanation, or mitigation of such violation or to award damages, (except for damages as set forth in Section 7.8 below) which issue is reserved for court proceedings, if any. The award shall be issued in writing within three (3) hours after the close of the hearing and may be issued without an opinion. If any Party desires a written opinion, one shall be issued within fifteen (15) days, but its issuance shall not delay compliance with, or enforcement of, the award. The arbitrator may order cessation of the violation of the Article and other appropriate relief, and such award shall be served on all Parties by hand or registered mail upon issuance.

(e) Such award shall be final and binding on all Parties and may be enforced by any court of competent jurisdiction upon the filing of this PLA and all other relevant documents referred to herein above in the following manner. Written notice of the filing of such enforcement proceedings shall be given to the other Party. In any judicial proceeding to obtain a temporary order enforcing the arbitrator's award as issued under Section 7.7(d) of this Article, all Parties waive the right to a hearing and agree that such proceedings may be ex parte. Such

agreement does not waive any Party's right to participate in a hearing for a final order of enforcement. The court's order or orders enforcing the arbitrator's award shall be served on all Parties by hand or by delivery to their address as shown on this PLA (for a Union), as shown on their business contract for work under this PLA (for a Contractor) and to the representing Union (for an employee), by certified mail by the Party or Parties first alleging the violation.

(f) Any rights created by statute or law governing arbitration proceedings inconsistent with the above procedure or which interfere with compliance hereto are hereby waived by the Parties to whom they accrue.

(g) The fees and expenses of the arbitrator shall be equally divided between the Party or Parties initiating this procedure and the respondent Party or Parties.

**Section 7.8** Liquidated Damages.

(a) If the arbitrator determines in accordance with Section 7.7 above that a work stoppage has occurred, the respondent Union(s) shall, within eight (8) hours of receipt of the Award, direct all the employees they represent on the project to immediately return to work. If the craft(s) involved do not return to work by the beginning of the next regularly scheduled shift following such eight (8) hour period after receipt of the arbitrator's Award, and the respondent Union(s) have not complied with their obligations to immediately instruct, order, and use their best efforts to cause a cessation of the violation and return the employees they represent to work, then the non-complying Union(s) shall each pay a sum as liquidated damages to the City, and each will pay an additional sum per shift, as set forth in (c), below, for each shift thereafter on which the craft(s) has not returned to work.

(b) If the arbitrator determines in accordance with Section 7.7 above that a lock out has occurred, the respondent Contractor(s) shall, within eight (8) hours after receipt of the award, return all the affected employees to work on the Project, or otherwise correct the violations found by the arbitrator. If the respondent Contractor(s) do not take such action by the beginning of the next regular scheduled shift following the eight (8) hour period, each non-complying respondent Contractor shall pay or give as liquidated damages, to the affected Union(s) (to be apportioned among the affected employees and the benefit funds to which contributions are made on their behalf, as designated by the arbitrator) and each shall pay an additional sum per shift, as set forth in (c), below, for each shift thereafter in which compliance by the respondent Contractor(s) has not been completed.

(c) The Parties agree that project delays caused by violations of this Article will cause the City to sustain damages. They agree that it would be impractical or extremely difficult to fix the amount of such damages. Therefore, the Parties agree that, in the event of a breach of either of these provisions, the Party in breach shall pay to the City the sum of not less than \$10,000.00 and no more than \$20,000.00 per shift from the time the arbitrator determines that a delay has occurred until the arbitrator determines that the project is again on construction schedule. The payment, when made, shall constitute a damages remedy of the City for the delay specified, but shall not prevent the City from seeking an injunctive or other monetary relief, including termination of this PLA. Payment of these sums as liquidated damages is not intended as a forfeiture or penalty within the meaning of California Civil Code sections 3275 or 3369, but instead, is intended to constitute liquidated damages to the City pursuant to section 1671 of the California Civil Code.

## ARTICLE 8

### **WORK ASSIGNMENTS AND JURISDICTIONAL DISPUTES**

**Section 8.1** No Jobsite Disruption. There will be no strikes, work stoppages, picketing, sympathy strikes, slowdowns, or other interferences with the work because of jurisdictional disputes between Unions. The assignment of work will be solely the responsibility of the Contractor performing the work involved; and such work assignments will be in accordance with the Plan for Settlement of Jurisdictional Disputes in the Construction Industry (the “Plan”) or any successor Plan.

**Section 8.2** All jurisdictional disputes on this project shall be settled and adjusted according to the present Plan established by the Building and Construction Trades Department or any other plan or method of procedure that may be adopted by the Building and Construction Trades Department. Decisions rendered shall be final and binding and conclusive on the Contractors and Unions parties to this PLA.

All jurisdictional disputes shall be resolved without the occurrence of any of the activities prohibited in Article 7 (Work Stoppages and Lockouts), and the Contractor’s assignment shall be adhered to until the dispute is resolved. Individuals violating this section shall be subject to immediate discharge.

**Section 8.2.1** If a dispute arising under this Article involves the Southwest Regional Council of Carpenters or any of its subordinate bodies, an arbitrator shall be chosen by the procedures specified in Article V, Section 5, of the Plan from a list composed of Thomas Pagan, Thomas Angelo, Robert Hirsch, and John Kagel, and the

arbitrator's hearing on the dispute shall be held at the offices of the Council within fourteen (14) days of the selection of the arbitrator. All other procedures shall be as specified in the Plan.

**Section 8.3** Failure to Comply. If any Union or Contractor fails to immediately and fully comply with the final decision rendered by the Plan, affected Union(s) or Contractor(s) may seek legal redress for such conduct, including, but not limited to, injunctive relief and/or damages.

**Section 8.4** Pre-job Conference. It is required that a pre-job conference be held not later than fourteen (14) calendar days prior to the start of work by each Contractor for the Covered Project in accordance with the procedure described in Article 16.

## ARTICLE 9

### MANAGEMENT RIGHTS

**Section 9.1** Contractor and City Rights. The Contractors and the City have the sole and exclusive right and authority to oversee and manage construction operations on Project Work without any limitations unless expressly limited by a specific provision of this PLA. In addition to the following and other rights of the Contractors enumerated in this PLA, the Contractors expressly reserve their management rights and all the rights conferred upon them by law. The Contractor's rights include, but are not limited to, the right to:

- (a) Plan, direct, and control operations of all work; and
- (b) Hire, promote, transfer, and layoff their own employees, respectively, as deemed appropriate to satisfy work and/or skill requirements; and
- (c) Promulgate and require all employees to observe reasonable job rules and security and safety regulations; and
- (d) Discharge, suspend, or discipline their own employees for just cause; and
- (e) Utilize, in accordance with City approval, any work methods, procedures, or techniques, and select, use, and install any types or kinds of materials, apparatus, or equipment, regardless of source of manufacture or construction; and
- (f) Assign and schedule work at their discretion; and

(g) Assign overtime, determine when it will be worked and the number and identity of employees engaged in such work, subject to such provisions in the applicable Schedule A(s) requiring such assignments be equalized or otherwise made in a nondiscriminatory manner.

**Section 9.2** Specific City Rights. In addition to the following and other rights of the City enumerated in this PLA, the City expressly reserves its management rights and all the rights conferred on it by law and contract. The City's rights (and those of the Project Labor Coordinator on its behalf) include, but are not limited to the right to:

(a) Inspect any construction site or facility to ensure that the Contractor follows the applicable safety and other work requirements; and

(b) At its sole option, terminate, delay, and/or suspend any and all portions of the Project Work at any time; prohibit some or all work on certain days or during certain hours of the day to accommodate the ongoing operations of the City and/or to mitigate the effect of ongoing Project Work on businesses and residents in the neighborhood of the Project sites; and/or require any other operational or schedule changes it deems necessary, in its sole judgment, to meet Project deadlines and remain a good neighbor to those in the area of the Covered Projects. (In order to permit the Contractors and Unions to make appropriate scheduling plans, the City will provide the Project Labor Coordinator, and the affected Contractor[s] and Union[s] with reasonable notice of any changes it requires pursuant to this section); and

(c) Approve any work methods, procedures, and techniques used by Contractors whether or not these methods, procedures, or techniques are part of industry practices or customs; and

(d) Investigate and process complaints or disagreements, through its Project Labor Coordinator.

**Section 9.3** Use of Materials. There should be no limitations or restrictions by the Union upon a Contractor's choice of materials or design, nor, regardless of source or location, upon the full use and utilization of equipment, machinery, packaging, precast, prefabricated, prefinished, or preassembled materials, tools, or other labor-saving devices, subject to the application of the California Public Contract and Labor Codes. Generally, the onsite installation or application of such items shall be performed by the craft having jurisdiction over such work.

**Section 9.4** Special Equipment, Warranties, and Guaranties.

(a) It is recognized that certain equipment of a highly technical and specialized nature may be installed at Covered Project sites. The nature of the equipment, together with the requirements for manufacturer's warranties, may dictate that it be prefabricated, pre-piped, and/or pre-wired and that it be installed under the supervision and direction of the City's and/or manufacturer's personnel. The Unions agree that such equipment is to be installed without incident.

(b) The Parties recognize that the Contractor will initiate from time to time the use of new technology, equipment, machinery, tools, and other labor-savings devices and methods of performing Project Work. The Unions agree that they will not restrict the implementation of such devices or work methods. The Unions will accept and will not refuse to handle, install, or work with any standardized and/or catalogue parts, assemblies, accessories, prefabricated items, preassembled items, partially assembled items, or materials whatever their source of manufacture or construction.

(c) If any disagreement between the Contractor and the Unions concerning the methods of implementation or installation of any equipment, device, or item, or method of work arises, or whether a particular part or pre-assembled item is a standardized or catalog part or item, the work will proceed as directed by the Contractor, and the Parties shall immediately consult over the matter. If the disagreement is not resolved, the affected Union(s) shall have the right to proceed through the procedures set forth in Article 10.

## **ARTICLE 10**

### **SETTLEMENT OF GRIEVANCES AND DISPUTES**

#### **Section 10.1** Cooperation and Harmony on Site.

(a) This PLA is intended to establish and foster continued close cooperation between management and labor. The Council shall assign a representative to this Project for the purpose of assisting the local Unions, and working with the Project Labor Coordinator, together with the Contractors, to complete construction of the Project Work economically, efficiently, continuously, and without any interruption, delays, or work stoppages.

(b) The Project Labor Coordinator, the Contractors, Unions, and employees collectively and individually, realize the importance to all Parties of maintaining continuous and uninterrupted performance of Project Work, and agree to resolve

disputes in accordance with the grievance provisions set forth in this Article or, as appropriate, those of Article 7 or 8.

(c) The Project Labor Coordinator shall observe the processing of grievances under this Article and Articles 7 and 8, including the scheduling and arrangements of facilities for meetings, selection of the arbitrator from the agreed-upon panel to hear the case, and any other administrative matters necessary to facilitate the timely resolution of any dispute; provided, however, it is the responsibility of the principal Parties to any pending grievance to ensure the time limits and deadlines are met.

**Section 10.2** Processing Grievances. Any questions arising out of and during the term of this PLA involving its interpretation and application, which includes applicable provisions of the Schedule A's, but not alleged violations of Articles 7 or 8, shall be considered a grievance and subject to resolution under the following procedures.

Step 1. (a) Employee Grievances. When any employee subject to the provisions of this PLA feels aggrieved by an alleged violation of this PLA, the employee shall, through his local Union business representative or job steward, within ten (10) working days after the occurrence of the violation, give notice to the work site representative of the involved Contractor stating the provision(s) alleged to have been violated, the details of the alleged violation and the remedy sought to resolve the matter. A grievance shall be considered null and void if notice of the grievance is not given within the ten (10) day period. A business representative of the local Union or the job steward and the work site representative of the involved Contractor shall meet and endeavor to adjust the matter within ten (10) working days after timely notice has been given. If they fail to resolve the matter within the prescribed period, the grieving Party may, within ten (10) working days thereafter, pursue Step 2 of this grievance procedure provided the grievance is reduced to writing, setting forth the relevant information, including a short description thereof, the date on which the alleged violation occurred, and the provision(s) of the applicable agreement alleged to have been violated. Grievances and disputes settled at Step 1 shall be non-precedential except as to the Parties directly involved.

(b) Union or Contractor Grievances. Should the Union(s) or any Contractor have a dispute with the other Party(ies) and, if after conferring within ten (10) working days after the disputing Party knew or should have known of the facts or occurrence giving rise to the dispute, a settlement is not reached within five (5) working days, the dispute shall be reduced to writing and processed to Step 2 in

the same manner as outlined in Step 1(a) above for the adjustment of an employee complaint.

Step 2. The business manager of the involved local Union or his designee, together with the site representative of the involved Contractor, and the labor relations representative of the Project Labor Coordinator shall meet within seven (7) working days of the referral of the dispute to this second step to arrive at a satisfactory settlement thereof. If the Parties fail to reach an agreement, the dispute may be appealed in writing in accordance with the provisions of Step 3 within seven (7) calendar days after the initial meeting at Step 2.

Step 3. (a) If the grievance shall have been submitted but not resolved under Step 2, either the Union or Contractor Party may request in writing to the Project Labor Coordinator (with copy[ies] to the other Party[ies]) within seven (7) calendar days after the initial Step 2 meeting, that the grievance be submitted to an arbitrator selected from the agreed-upon list below, on a rotational basis in the order listed. Those arbitrators are: (1) Thomas Pagan; (2) David Hart; (3) Edna Francis; (4) Mike Rappaport; (5) Michael Prihar; (6) Fred Horowitz; and (7) Sara Adler. The decision of the arbitrator shall be final and binding on all Parties, and the fee and expenses of such arbitrations shall be borne equally by the involved Contractor(s) and the involved Union(s).

(b) Failure of the grieving Party to adhere to the time limits established herein shall render the grievance null and void. The time limits established herein may be extended only by written consent of the Parties involved at the particular step where the extension is agreed upon. The arbitrator shall have the authority to make decisions only on issues presented and shall not have the authority to change, amend, add to, or detract from any of the provisions of this PLA.

**Section 10.3** Limit on Use of Procedures. Procedures contained in this Article shall not be applicable to any alleged violation of Article 7 or 8, with a single exception that any employee discharged for violation of Section 7.2 may resort to the procedures of this Article to determine only if he/she was, in fact, engaged in that violation.

**Section 10.4** Notice. The Project Labor Coordinator (and the City, in the case of any grievance regarding the Scope of this PLA), shall be notified by the involved Contractor of all actions at Steps 2 and 3, and further, the Project Labor Coordinator shall, upon its own request, be permitted to participate fully in all proceedings at such steps.

## ARTICLE 11

### COMPLIANCE

**Section 11.1** Compliance with All Laws. The Council and all Unions, Contractors, and their employees shall comply with all applicable federal and state laws, ordinances, and regulations including, but not limited to, those relating to safety and health, employment, and applications for employment. All employees shall comply with the safety regulations established by the City, the Project Labor Coordinator, and the Contractor. Employees must promptly report any injuries or accidents to a supervisor.

**Section 11.2** Monitoring Compliance. The Parties agree that the City shall require, and that the Project Labor Coordinator and Council shall monitor, compliance by all Contractors with all federal and state laws and regulations that, from time to time may apply to Project Work. It shall be the responsibility of both the Council and the Project Labor Coordinator (on behalf of the City) to investigate or monitor compliance with these various laws and regulations. The Council may recommend to the Project Labor Coordinator and/or the City procedures to encourage compliance with these laws and regulations.

**Section 11.3** Prevailing Wage Compliance. The Council or Union may refer all complaints regarding any potential prevailing wage violation to the Project Labor Coordinator, who may process, investigate, and resolve such complaints. The Council or Union, as appropriate, shall be advised in a timely manner with regard to the facts and resolution, if any, of any complaint. It is understood that this Section does not restrict any individual rights as established under the State Labor Code, including the rights of an individual to file a complaint with the State Labor Commissioner.

**Section 11.4** Violations of Law. Based upon a finding of violation by the City of a federal and state law, and upon notice to the Contractor that it is in such violation, the City, in the absence of the Contractor remedying such violation, shall take such action as it is permitted by law or contract to encourage the Contractor to come into compliance, including, but not limited to, assessing fines and penalties and/or removing the offending Contractor from Project Work.

## ARTICLE 12

### **SAFETY AND PROTECTION OF PERSON AND PROPERTY**

#### **Section 12.1** Safety.

(a) It shall be the responsibility of each Contractor to ensure safe working conditions and employee compliance with all applicable safety laws and regulations and any safety rules contained herein or established by the City, the Project Labor Coordinator, or the Contractor. It is understood that employees have an individual obligation to use diligent care to perform their work in a safe manner and to protect themselves and the property of the Contractor and the City.

(b) All Parties and Contractor employees shall be bound by the safety, security, and visitor rules established by the Contractor, the Project Labor Coordinator, and the City. These rules will be published and posted. An employee's failure to satisfy his/her obligations under this Section will subject him/her to discipline, up to and including discharge.

**Section 12.2** Drug and Alcohol Testing Policy. The Parties agree to adopt the Drug and Alcohol Testing Policy attached hereto as Attachment C, which is the exclusive Drug and Alcohol Testing Policy for Covered Projects.

**Section 12.3** Inspection. The inspection of shipments of equipment, machinery, and construction materials of every kind shall be performed at the discretion of the Contractor by individuals of its choice.

## ARTICLE 13

### **TRAVEL AND SUBSISTENCE**

**Section 13.1** Travel expenses, travel time, subsistence allowances and/or zone rates, and parking reimbursements shall not be applicable to work under this PLA, except to the extent provided for in any applicable prevailing wage determination. Parking for employees covered by this PLA shall be provided by the Contractor(s) according to the provision of the Schedule A(s) existing on the Effective Date of this PLA and upon presentation of proof of any expense incurred.

## ARTICLE 14

### APPRENTICES

**Section 14.1** Importance of Training. The Parties recognize the need to maintain continuing support of the programs designed to develop adequate numbers of competent workers in the construction industry, the obligation to capitalize on the availability of the local work force in the area served by the City, and the opportunities to provide continuing work on Covered Projects for City Residents and Targeted Workers. To these ends, and consistent with any laws or regulations, the Parties will facilitate, encourage, and assist City Residents and Targeted Workers commence and progress in Apprenticeship Programs and/or apprenticeship readiness programs in the construction industry leading to participation in such Apprenticeship Programs. The City, the Project Labor Coordinator, other City consultants, the Contractors, and the Council and Unions, will work cooperatively to identify, or establish and maintain, effective programs and procedures for persons interested in entering the construction industry and which will help prepare them for the entry into Apprenticeship Programs. Apprentices, if utilized, must be enrolled in a California Apprenticeship Council-approved Apprenticeship Program.

**Section 14.2** Use of Apprentices.

(a) The Unions and Contractors agree to cooperate in referring and employing Apprentices up to the maximum percentage allowed by the State Labor Code and the standards of each State-Approved Apprenticeship Program. The minimum ratios for Apprentice to journey person hours worked shall be in compliance, at a minimum, with the applicable provisions of the State Labor Code relating to utilization of Apprentices. The City, unless otherwise required by law, shall encourage such utilization, and, both as to Apprentices and the overall supply of experienced workers, the Project Labor Coordinator will work with the Council, Apprenticeship Programs, and Contractors to assure appropriate and maximum utilization of Apprentices and the continuing availability of both Apprentices and journey persons.

(b) The Parties agree that all Contractors will comply with all applicable laws and regulations in the request for dispatch and employment of Apprentices.

(c) The Parties agree that Apprentices will not be dispatched to Contractors working under this PLA unless there is a journeyman or other Contractor employee working on the Project where the Apprentice is to be employed who is

qualified to assist and oversee the Apprentice's progress through the program in which he/she is participating.

## ARTICLE 15

### LEGAL ACTION

**Section 15.1** Legal Action. The City, Council and Unions recognize the substantial legal costs (including all attorney's fees and associated disbursements) that might accrue with regard to any legal challenge over the adoption by the City of this PLA, and related to claims directly challenging the legality of this PLA, or a particular section or language that has been adopted herein. In the event of a legal challenge, the Council, on behalf of itself and affiliated Unions, agrees to seek to intervene in the legal action and actively participate in the litigation or other action to defend the legality of this PLA, or a particular section or language herein. The failure of the Council to seek to intervene in the legal action and actively participate to defend the legality of this PLA will constitute a material breach of this PLA. In the event the Council is denied leave to intervene in the legal action, the Council shall have its counsel coordinate with the City's counsel, at the Council's own expense, regarding how the Council can best support the City's legal position.

## ARTICLE 16

### PRE-JOB CONFERENCE

**Section 16.1** Each Contractor is required to conduct a pre-job conference with the Unions not later than fourteen (14) calendar days prior to commencing work. The purpose of the conference will be to, among other things, convey craft manpower needs, the schedule of work for the Covered Project, project work rules, and propose preliminary Union work assignments. The Project Labor Coordinator may work with the Prime Contractor and Council to facilitate the scheduling of all pre-job conferences, but ensuring each Contractor conducts a pre-job conference in accordance with this Agreement is the responsibility of the Prime Contractor. All preliminary Union work assignments shall be disclosed by each Contractor at a pre-job conference. Should there be work within the scope of a Construction Contract for a Covered Project that was not previously assigned at a pre-job conference, or additional work be added to the scope of the Covered Project, the Contractor(s) performing such work will conduct a separate pre-job conference.

Any Union in disagreement with a proposed assignment shall notify the affected Contractor of its position in writing, with a copy sent to the Project Labor Coordinator, within seven (7) calendar days after the pre-job conference occurred. Within seven (7) calendar days after the period allowed for Union notices of disagreement with the Employer's proposed assignments, but prior to the commencement of any work, the Employer shall make final assignments in writing with copies sent to the Project Labor Coordinator and Council.

## ARTICLE 17

### **LABOR/MANAGEMENT AND COOPERATION**

**Section 17.1** Joint Committee. The Parties to this PLA will form a joint committee consisting of three (3) representatives selected by the Council and three (3) representatives selected by the Project Labor Coordinator, to be chaired jointly by a representative of the Project Labor Coordinator and the Council. The purpose of the Committee shall be to promote harmonious and stable labor management relations on this Project, to ensure effective and constructive communication between labor and management Parties, to advance the proficiency of work in the industry, and to evaluate and ensure an adequate supply of skilled labor for all Project Work. Representatives of the City may participate upon its request, and all Parties will be invited to attend.

**Section 17.2** Functions of Joint Committee. The Committee shall meet on a schedule to be determined by the Committee or at the call of the joint chairs, to discuss the administration of the PLA, the progress of the project, general labor management problems that may arise, and any other matters consistent with this PLA. Substantive grievances or disputes arising under Articles 7, 8, or 10 shall not be reviewed or discussed by this Committee, but shall be processed pursuant to the provisions of the appropriate Article.

The Project Labor Coordinator shall be responsible for scheduling of the meetings and the preparation of the agenda topics for the meetings, with input from the Unions, the Contractors, and the City. Notice of the date, time and place of meetings, shall be given to the Committee members at least three (3) days prior to the meeting. The City shall be notified of the meetings and invited to send a representative(s) to participate.

The Project Labor Coordinator shall prepare quarterly reports on Apprentice utilization and the training and employment of City Residents, and a schedule of Project work and estimated number of craft workers needed. The Committee, or

an appropriate subcommittee, may review such reports and make any recommendations for improvement, if necessary, including increasing the availability of skilled trades, and the employment of local residents or other individuals who should be assisted with appropriate training to qualify for Apprenticeship Programs.

**Section 17.3** Subcommittees. The Committee may form subcommittees to consider and advise the full Committee with regard to safety and health issues affecting the Project and other similar issues affecting the overall Project, including any workers' compensation program initiated under this PLA.

## ARTICLE 18

### **SAVINGS AND SEPARABILITY**

**Section 18.1** Savings Clause. It is not the intention of the City, the Project Labor Coordinator, Contractor, or the Union Parties to violate any laws governing the subject matter of this PLA. The Parties hereto agree that in the event any provision of this PLA is finally held or determined to be illegal or void as being in contravention of any applicable law or regulation, the remainder of the PLA shall remain in full force and effect unless the part or parts so found to be void are wholly inseparable from the remaining portions of this PLA. Further, the Parties agree that if and when any provision(s) of this PLA is finally held or determined to be illegal or void by a court of competent jurisdiction, the Parties will promptly enter into negotiations concerning the substantive effect of such decision for the purposes of achieving conformity with the requirements of any applicable laws and the intent of the Parties hereto. If the legality of this PLA is challenged and any form of injunctive relief is granted by any court, suspending temporarily or permanently the implementation of this PLA, then the Parties agree that all Project Work that would otherwise be covered by this PLA should be continued to be bid and constructed without application of this PLA so that there is no delay or interference with the ongoing planning, bidding, and construction of any Project Work.

**Section 18.2** Effect of Injunctions or Other Court Orders. The Parties recognize the right of the City to withdraw, at its absolute discretion, the utilization of the PLA as part of any bid specification should a court of competent jurisdiction issue any order, or any applicable statute that could result, temporarily or permanently, in delay of the bidding, awarding, and/or construction on the Project.

## ARTICLE 19

### WAIVER

**Section 19.1** Waiver. A waiver of or a failure to assert any provisions of this PLA by any or all of the Parties hereto shall not constitute a waiver of such provision for the future. Any such waiver shall not constitute a modification of the PLA or change in the terms and conditions of the PLA and shall not relieve, excuse or release any of the Parties from any of their rights, duties, or obligations hereunder.

## ARTICLE 20

### AMENDMENTS

**Section 20.1** Amendments. The provisions of this PLA can be renegotiated, supplemented, rescinded, or otherwise altered only by mutual agreement in writing, hereafter signed by the Parties.

## ARTICLE 21

### DURATION OF THE PLA

**Section 21.1** Duration. This Agreement shall be effective on June 16, 2020, provided that the Council has signed the Agreement. The Agreement shall continue in full force and effect until all of the work within the scope of a Covered Contract is completed and accepted by the City.

**Section 21.2** Turnover and Final Acceptance of Completed Work.

(a) Construction of any phase, portion, section, or segment of Project Work shall be deemed complete when such phase, portion, section or segment has been turned over to the City by the Contractor and the City has accepted such phase, portion, section, or segment. As areas and systems of the Project are inspected and construction-tested and/or approved and accepted by the City or third parties with approval of the City, the PLA shall have no further force or effect on such items or areas, except when the Contractor is directed by the City to engage in repairs or modifications required by its Contract(s) with the City.

(b) Notice of each final acceptance received by the Contractor will be provided to the Council with the description of what portion, segment, etc. has

been accepted. Final acceptance may be subject to a “punch” list, and in such case, the PLA will continue to apply to each such item on the list until it is completed to the satisfaction of the City and Notice of Acceptance is given by the City or its representative to the Contractor.

**Section 21.3** Continuation of Schedule A’s. Schedule A's incorporated as part of this PLA shall continue in full force and effect, as previously stated, until the Contractor and Union Parties to the collective bargaining agreement(s), which are the basis for such Schedule A's, notify the Project Labor Coordinator of the mutually agreed upon changes in such agreements and their effective date(s).

The Parties agree to recognize and implement all applicable changes on their effective dates, except as otherwise provided by this PLA; provided, however, that any such provisions negotiated in said collective bargaining agreements will not apply to work covered by this PLA if such provisions are less favorable to the Contractor under the PLA than those uniformly required of Contractors for construction work normally covered by those agreements; nor shall any provision be recognized or applied if it may be construed to apply exclusively or predominantly to work covered by this PLA. Any disagreement between the Parties over the incorporation into a Schedule A of any such provision agreed upon in a negotiation of the local collective bargaining agreement that is the basis for a Schedule A shall be resolved under the procedures established in Article 10.

**Section 21.4** Final Termination. Final termination of all obligations, rights, and liabilities, and disagreements shall occur upon receipt by the Council of a Notice from the City saying that no work remains within the scope of the PLA.

**Section 21.5** Pure Water Program Phase II Projects. The City and the Unions intend to have this Agreement or a succeeding Agreement include all construction projects in Pure Water Program Phase II. The Pure Water Program Phase II Projects are in the early development stage and cannot be specifically identified at this time to be included in the scope of this Agreement. Therefore, to reopen negotiations to include Pure Water Program Phase II Projects into this Agreement, the Council shall send written notice to the City’s Project Labor Coordinator after the City has approved Pure Water Program Phase II Projects' Environmental Impact Report and no later than ninety (90) days after the City’s final approval of the Environmental Impact Report.

## ARTICLE 22

### WORK AND ECONOMIC OPPORTUNITY

**Section 22.1** The magnitude, duration, and complexity of the Pure Water Program Phase I Projects will require large numbers of skilled craft personnel and create significant economic opportunities for City Residents, Targeted Workers, Disadvantaged Business Enterprises and other businesses. It is therefore the understanding and intention of the Parties to use the opportunities provided by the extensive amount of work to collaborate and implement programs and procedures, which may include, for example, North America's Building Trades Unions Multi-Craft Core Curriculum (MC3) apprenticeship readiness programs, to prepare persons, especially City Residents and Targeted Workers, for entrance into Apprenticeship Programs to begin or continue their construction careers on Covered Projects. Further, the Parties agree to maximize the inclusion of Disadvantage Business Enterprises through outreach, training, and subcontracting for Covered Projects. With assistance from the Project Labor Coordinator, the City, the Contractors, the Unions and their affiliated regional and national organizations will work jointly to promptly develop and implement procedures for the identification of craft needs, the scheduling of work to facilitate the utilization of available craft workers, and the securing of services of craft workers in sufficient numbers to meet the high demands of the Project Work to be undertaken.

**Section 22.2** The City, together with the Parties, supports the development of increased numbers of skilled construction workers who are City Residents and Targeted Workers to meet the labor needs of Covered Projects. Towards that end, the Parties, together with the City and its Project Labor Coordinator, agree to develop and implement a work opportunities program for City Residents and Targeted Workers to maximize construction career opportunities and create a construction career pipeline to becoming employed on Covered Projects. Further, the City together with the Parties, will create opportunities for Disadvantaged Business Enterprises consistent with the City's goals and inclusion programs for such businesses. In furtherance of the foregoing, the Council and Unions specifically agree to work with the City and the Project Labor Coordinator to:

- (a) Collaborate with existing or newly created MC3 apprenticeship readiness programs in San Diego to offer opportunities for City Residents and Targeted Workers, including students, to enroll in free short-term construction apprenticeship readiness training to prepare them to enter into Apprenticeship Programs and become employed by a Contractor on a Covered Project. The

Project Labor Coordinator, with the assistance of the Parties, will assist with the recruitment, career placement, and tracking of such City Residents and Targeted Workers who graduate from these apprenticeship readiness programs; and

(b) The Parties will cooperate and collaborate with the City and Project Labor Coordinator to conduct outreach to and include City Residents and Targeted Workers from traditionally underrepresented segments of the City's population in the construction craft workforce for each Covered Project; and

(c) The Council will provide accurate data on a quarterly basis to the City and Project Labor Coordinator pertaining to their level of economic support provided to meet these objectives. Further, the Project Labor Coordinator shall produce detailed quarterly reports for the City and Council to measure and report the outcomes of the policies, requirements, and programs established in this Agreement; and

(d) The Unions will partner with the City and Project Labor Coordinator to conduct outreach and recruitment activities by establishing or continuing to maintain existing centers, programs, and events to facilitate the entry of City Residents and Targeted Workers into the building and construction trades. These programs shall serve as a resource for preliminary orientation, assessment of construction aptitude, referral to MC3 apprenticeship readiness programs or Apprenticeship Programs, referral to hiring halls, and provide tailored orientation and mentoring for women and Targeted Workers; and

(e) The Unions shall assist City Residents and Targeted Workers with contacting the Apprenticeship Programs for the crafts and trades they are interested in. The Unions shall assist City Residents and Targeted Workers who are seeking employment on Covered Projects and provide opportunities for Union membership by assessing their work experience and giving them credit for provable past experience in their relevant craft or trade, including experience gained working for non-Union Contractors. The Unions shall put on their rolls qualified bona fide City Residents and Targeted Workers for employment on Covered Projects.

**Section 22.3** Joint Subcommittee on Work and Economic Opportunity. To carry out the intent and purpose of this Article, a subcommittee of the Labor Management Committee established pursuant to Article 17 shall be established, jointly chaired by a designee of the City and a designee of the Council, to oversee the effective development and implementation of the programs and policies described herein, and to work with representatives of each apprenticeship committee and representatives of the MC3 apprenticeship readiness programs to maximize

employment opportunities for City Residents and Targeted workers who reflect the diversity of the communities surrounding each Covered Project and who may not be previously qualified for the construction career opportunities created by the Covered Projects. The subcommittee will meet as necessary at the call of the joint chairs to promptly facilitate its purposes in an expeditious manner as soon as this PLA becomes effective. In addition to the joint chairs, the membership of the committee will consist of at least three (3) representatives of the signatory local Unions and three (3) representatives of Contractors (or organization to which the Contractors belong) signatory to this PLA and experienced in overseeing and participating in Apprenticeship Programs.

## ARTICLE 23

### **HELMETS TO HARDHATS**

**Section 23.1** Veterans Entry into Building and Construction Trades. The Parties recognize a desire to facilitate the entry into the building and construction trades of Veterans who are interested in careers in the building and construction industry. The Contractors and Unions agree to utilize the services of the Center for Military Recruitment, Assessment and Veterans Employment (hereinafter “Center”) and the Center’s “Helmets to Hardhats” program to serve as a resource for preliminary orientation, assessment, and construction aptitude, referral to Apprenticeship Programs or hiring halls, counseling and mentoring, support network, employment opportunities, and other needs as identified by the Parties.

**Section 23.2** Integrated Database. The Unions and Contractors agree to coordinate with the Center to create and maintain an integrated database of Veterans interested in working on this Covered Project and of apprenticeship and employment opportunities for this Covered Project.

In witness whereof, the Parties have caused this Project Labor Agreement for City of San Diego Pure Water Program Phase I Projects to be executed as of the date and year above stated.

Address

Attention: \_\_\_\_\_

**Re: City of San Diego Project Labor Agreement for  
Pure Water Program Phase I Project**

Dear Sir:

This is to confirm [Name of Company] agrees to be party to and bound by the City of San Diego Project Labor Agreement for Construction of Pure Water Program Phase I Projects, effective May 1, 2020, as such Agreement may from time to time be amended by the negotiating Parties or interpreted pursuant to its terms. Such obligation to be a Party and bound by this Agreement shall extend to all work covered by the Agreement undertaken by this Company on the Project pursuant to [City Contract No. \_\_\_\_\_ and Name of Covered Project], and this Company shall require all of its subcontractors of whatever tier to be similarly bound for all work within the scope of the Agreement by signing and furnishing to you an identical Letter of Assent prior to their commencement of work.

Sincerely,

[Name of Construction Company]

By:

[Name and Title of Authorized Executive]

[Copies of this Letter must be submitted to the Project Labor Coordinator and to the Council consistent with Article 3, Section 3.3(b)]

## ATTACHMENT B-1 – WORKFORCE DISPATCH REQUEST FORM

The City of San Diego’s Project Labor Agreement for Pure Water Program Phase I Projects establishes a goal of at least thirty-five percent (35%) of the total craft hours on each Covered Project be performed by City Residents. The Unions and Contractors agree that, to the extent allowed by law, and as long as they possess the requisite skills and qualifications, City Residents shall be first referred for Project Work. A “City Resident” is defined as a City of San Diego permanent resident at the time of initial employment on a Covered Project or a Veteran residing anywhere.

\*The list of qualifying zip codes for City Residents includes: 92014, 92037, 92038, 92067, 92093, 92101, 92102, 92103, 92104, 92105, 92106, 92107, 92108, 92109, 92110, 92111, 92113, 92114, 92115, 92116, 92117, 92119, 92120, 92121, 92122, 92123, 92124, 92126, 92127, 92128, 92129, 92130, 92131, 92132, 92134, 92137, 92138, 92139, 92145, 92154, 92166, 92167, 92169, 92171, 92173, 92177.

### C O N T R A C T O R U S E O N L Y

Please complete and fax or email this form to the applicable union to request craft workers that fulfill the hiring requirements for this project. After faxing your request, please call the Local to verify receipt and substantiate their capacity to furnish workers as specified below. Please print your Fax or Email Transmission Verification Reports and keep copies for your records.

In accordance with the Project Labor Agreement, Article 4, Section 4.6 (f), a Core Employee must be either a journeyman or Apprentice and appear on the Contractor’s active payroll for at least ninety (90) of the last one-hundred-eighty (180) working days prior to being designated as a Core Employee; and must possess any license required by state or federal law for the Project Work to be performed; and must have the ability to safely perform the basic functions of the applicable.

Prior to each Contractor performing any work on a Covered Project, each Contractor shall provide a list of Core Employees to the Project Labor Coordinator and the Council. After submitting the Core Employee list prior to commencing work, Contractors shall not make any changes or substitutions to the Core Employee list for the duration of the Covered Project. Failure to submit the Core Employee list prior to work commencing will prohibit the Contractor from using any Core Employees for 30 calendar days after the list is provided to the Project Labor Coordinator and Council.

***Please check all that apply:***

Our firm will not be self-performing any work on this project.  
We will be subcontracting our work to: \_\_\_\_\_

PLA Section 4.6 regarding Core Employees is not applicable to Contractors that are signatory to one or more Schedule As, which are the Master Labor Agreements of the Unions. If your company is signatory, please list the union and local number below. For crafts that you are not signatory, please complete the core employee list below.

Indicate Signatory Union Trade: \_\_\_\_\_ Local # \_\_\_\_\_  
 Indicate Signatory Union Trade: \_\_\_\_\_ Local # \_\_\_\_\_  
 Indicate Signatory Union Trade: \_\_\_\_\_ Local # \_\_\_\_\_

We are not a union signatory contractor and will be using core employees on this project as indicated below:

## ATTACHMENT C – DRUG AND ALCOHOL TESTING POLICY

The Parties recognize the problems that drug and alcohol abuse have created in the construction industry and the need to develop drug and alcohol abuse prevention programs. Accordingly, the Parties agree that in order to enhance the safety of the workplace and to maintain a drug and alcohol-free work environment, individual Contractors shall require applicants or employees to undergo drug and alcohol testing in accordance with this PLA and this policy, Attachment C – Drug and Alcohol Testing Policy, hereafter “Policy.”

1. It is understood that the use, possession, transfer, or sale of illegal drugs, narcotics, or other unlawful substances, as well as being under the influence of alcohol and the possession of or consuming alcohol is absolutely prohibited while employees are on the Contractor’s job premises or while working on any jobsite in connection with work performed under the PLA.
2. No Contractor may implement a drug and alcohol testing program that does not conform in all respects to the provisions of this Policy.
3. No Contractor may implement drug and alcohol testing at any jobsite unless written notice is given to the Union setting forth the location of the jobsite, a description of the project under construction, and the name and telephone number of the Prime Contractor's project manager. Said notice shall be provided at the pre-job conferences for each Covered Project. Failure to give such notice shall make any drug and alcohol testing engaged in by the Contractor a violation of the Agreement and subject to the Article 10 grievance procedure.
4. A Contractor who elects to implement drug and alcohol testing pursuant to this Policy shall require all craft employees on the Covered Project to be tested. With respect to individuals who become employed on the Covered Project subsequent to the proper implementation of a valid drug and alcohol testing program, such test shall be administered upon the commencement of employment on the project, whether by referral from a Union Dispatch Office, transfer from another project, or another method. Individuals who were employed on the project prior to proper implementation of a valid drug and alcohol testing program may only be subjected to testing for the reasons set forth in paragraphs 5(g)(1) through 5(g)(3) and paragraphs 6(a) through 6(e) of this Policy. Refusal to undergo such testing shall be considered sufficient grounds to deny employment on the project.
5. The following procedure shall apply to all drug and alcohol testing:
  - a. The Contractor may request urine samples only. The applicant or employee shall not be observed when the urine specimen is given. An applicant or employee, at his or her sole option, shall, upon request, receive a blood test in lieu of a urine test. No employee of the Contractor shall draw blood from a bargaining unit employee, touch

- or handle urine specimens, or in any way become involved in the chain of custody of urine or blood specimens. A Union Business Representative, subject to the approval of the individual applicant or employee, shall be permitted to accompany the applicant or employee to the collection facility to observe the collection, bottling, and sealing of the specimen.
- b. A Contractor may request an applicant or employee promptly, within four (4) hours of the Contractor's request, perform an alcohol breathalyzer test at a certified laboratory only, and cutoff levels shall be those mandated by applicable state or federal law.
  - c. The testing shall be done by a laboratory approved by the Substance Abuse & Mental Health Services Administration (SAMHSA), which is chosen by the Contractor and the Union.
  - d. An initial test shall be performed using the Enzyme Multiplied Immunoassay Technique (EMIT). In the event a question or positive result arises from the initial test, a confirmation test must be utilized before action can be taken against the applicant or employee. The confirmation test will be by Gas Chromatography/Mass Spectrometry (GC/MS). Cutoff levels for both the initial test and confirmation test will be those established by SAMHSA and this Policy. Should these SAMHSA levels be changed during the course of the PLA or new testing procedures are approved, then these new regulations will be deemed as part of this existing PLA. Confirmed positive samples will be retained by the testing laboratory in secured long-term frozen storage for a minimum of one (1) year. Handling and transportation of each sample must be documented through strict chain-of-custody procedures.
  - e. In the event of a confirmed positive test result, the applicant or employee may request, within forty-eight (48) hours, a sample of his/her specimen from the testing laboratory for purposes of a second test to be performed at a second laboratory, designated by the Union and approved by SAMHSA. The retest must be performed within ten (10) days of the request. Chain of custody for this sample shall be maintained by the Contractor between the original testing laboratory and the Union's designated laboratory. Retesting shall be performed at the applicant's or employee's expense. In the event of conflicting test results, the Contractor may require a third test, at the Contractor's expense.
  - f. If, as a result of the above testing procedure, it is determined that an applicant or employee has tested positive, this shall be considered sufficient grounds to deny the applicant or employee his/her employment on the project.
  - g. No individual who tests negative for drugs and alcohol pursuant to the above procedure and becomes employed on the project shall again be subjected to drug and alcohol testing with the following exceptions:
    - 1) Employees who are involved in industrial accidents resulting in damage to plant, property, or equipment or injury to him/her or others may be tested for drugs or alcohol pursuant to the procedures stated hereinabove.

- 2) The Contractor may test employees following thirty (30) days' advance written notice to the employee(s) to be tested and to the applicable Union. Notice to the applicable Union shall be sent by certified mail to the affected Union with a copy to the Project Labor Coordinator. Such testing shall be pursuant to the procedures stated hereinabove.
  - 3) The Contractor may test an employee where the Contractor has reasonable cause to believe that the employee is impaired from performing his/her job. Reasonable cause shall be defined as being aberrant or unusual behavior, the type of which is a recognized and accepted symptom of impairment (e.g., slurred speech, unusual lack of muscular coordination). Such behavior must be actually observed by at least two (2) persons, one (1) of whom shall be a supervisor who has been trained to recognize the symptoms of drug and alcohol abuse or impairment and the other of whom shall be the Job Steward. If the Job Steward is unavailable or there is no Job Steward on the Covered Project, the other person shall be a member of the applicable Union's bargaining unit. Testing shall be pursuant to the procedures stated hereinabove. Employees who are tested pursuant to the exceptions set forth in this paragraph and who test positive will be removed from the Contractor's payroll.
  - h. Applicants or employees who do not test positive shall be paid for all time lost while undergoing drug and alcohol testing. Payment shall be at the applicable wage and benefit rates set forth in the applicable Union's Master Labor Agreement. Applicants who have been dispatched from the Union and who are not put to work pending the results of a test will be paid waiting time until such time as they are put to work. It is understood that an applicant must pass the test as a condition of employment. Applicants who are put to work pending the results of a test will be considered probationary employees.
6. The Contractors will be allowed to conduct periodic jobsite drug and alcohol testing on the Project under the following conditions:
- a. The entire jobsite must be tested, including any employee or subcontractor's employee who worked on that project three (3) working days before or after the date of the test;
  - b. Jobsite testing cannot commence sooner than fifteen (15) days after start of the work on the project;
  - c. Prior to start of periodic testing, a Business Representative will be allowed to conduct an educational period on company time to explain periodic jobsite testing program to affected employees;
  - d. Testing shall be conducted by an SAMHSA-certified laboratory, pursuant to the provisions set forth in paragraph 5 hereinabove.
  - e. Only two (2) periodic tests may be performed in a twelve (12)-month period.

7. It is understood that the unsafe use of prescribed medication, or where the use of prescribed medication impairs the employee's ability to perform work, is a basis for the Contractor to remove the employee from the jobsite.
8. Any grievance or dispute that may arise out of the application of this Policy shall be subject to the grievance and arbitration procedures set forth in the PLA.
9. The establishment or operation of this Policy shall not curtail any right of any employee found in any law, rule, or regulation. Should any part of this Policy be found unlawful by a court of competent jurisdiction or a public agency having jurisdiction over the Parties, the remaining portions of the Agreement shall be unaffected, and the Parties shall enter negotiations to replace the affected provision.
10. Present employees, if tested positive, shall have the prerogative for rehabilitation program at the employee's expense. When such program has been successfully completed, the Contractor shall not discriminate in any way against the employee. If work for which the employee is qualified exists, he/she may be reinstated.
11. The Contractor agrees that results of urine and blood tests performed hereunder will be considered medical records held confidential to the extent permitted or required by law. Such records shall not be released to any persons or entities other than designated Contractor representatives and the applicable Union. Such release to the applicable Union shall only be allowed upon the signing of a written release by the employee, and the information contained therein shall not be used to discourage the employment of the individual applicant or employee on any subsequent occasion.
12. Employees who seek voluntary assistance for substance abuse may not be disciplined for seeking such assistance. Requests from employees for such assistance shall remain confidential and shall not be revealed to other employees or management personnel without the employee's consent. Employees enrolled in substance abuse programs will be subject to all Contractor rules, regulations, and job performance standards with the understanding that an employee enrolled in such a program is receiving treatment for an illness.
13. The Contractor shall indemnify and hold the Union harmless against any and all claims, demands, suits, or liabilities that may arise out of the application of this Policy.
14. This Policy shall constitute the only Policy in effect between the Parties concerning drug and alcohol abuse, prevention, and testing. Any modifications thereto must be accomplished pursuant to collective bargaining negotiations between the Parties.

## SPECIMEN REPORTING CRITERIA

Initial Test Analyte	Initial Test Cutoff <sup>1</sup>	Confirmatory Test Analyte	Confirmatory Test Cutoff Concentration
Marijuana metabolites (THCA) <sup>2</sup>	50 ng/ml <sup>3</sup>	THCA	15 ng/ml
Cocaine metabolite (Benzoylecgonine)	150 ng/ml <sup>3</sup>	Benzoylecgonine	100 ng/ml
Codeine/ Morphine	2000 ng/ml	Codeine Morphine	2000 ng/ml 2000 ng/ml
Hydrocodone/ Hydromorphone	300 ng/ml	Hydrocodone Hydromorphone	100 ng/ml 100 ng/ml
Alcohol	0.02%	Ethanol	0.02%
Oxycodone/ Oxymorphone	100 ng/ml	Oxycodone Oxymorphone	100 ng/ml 100 ng/ml
6-Acetylmorphine	10 ng/ml	6-Acetylmorphine	10 ng/ml
Phencyclidine	25 ng/ml	Phencyclidine	25 ng/ml
Amphetamine/ Methamphetamine	500 ng/ml	Amphetamine Methamphetamine	250 ng/ml 250 ng/ml
MDMA <sup>4</sup> /MDA <sup>5</sup>	500 ng/ml	MDMA MDA	250 ng/ml 250 ng/ml
Initial Test Analyte	Initial Test Cutoff	Confirmatory Test Analyte	Confirmatory Test Cutoff Concentration
Barbiturates	300 ng/ml	Barbiturates	200 ng/ml
Benzodiazepines	300 ng/ml	Benzodiazepines	300 ng/ml
Methadone <sup>6</sup>	300 ng/ml	Methadone	100 ng/ml
Methaqualone	300 ng/ml	Methaqualone	300 ng/ml
Propoxyphene	300 ng/ml	Propoxyphene	100 ng/ml

<sup>1</sup> For grouped analytes (i.e., two or more analytes that are in the same drug class and have the same initial test cutoff):

**Immunoassay:** The test must be calibrated with one analyte from the group identified as the target analyte. The cross-reactivity of the immunoassay to the other analyte(s) within the group must be 80 percent or greater; if not, separate immunoassays must be used for the analytes within the group.

**Alternate technology:** Either one analyte or all analytes from the group must be used for calibration, depending on the technology. At least one analyte within the group must have a concentration equal to or greater than the initial test cutoff or, alternatively, the sum of the analytes present (i.e., equal to or greater than the laboratory's validated limit of quantification) must be equal to or greater than the initial test cutoff.

<sup>2</sup> An immunoassay must be calibrated with the target analyte, 9-tetrahydrocannabinol-9- carboxylic acid (THCA).

<sup>3</sup> **Alternate technology (THCA and benzoylecgonine):** The confirmatory test cutoff must be used for an alternate technology initial test that is specific for the target analyte (i.e., 15 ng/ml for THCA, 100 ng/ml for benzoylecgonine).

<sup>4</sup> Methylenedioxyamphetamine (MDMA)

<sup>5</sup> Methylenedioxymphetamine (MDA)

<sup>6</sup> Employees with a prescription for methadone who are using the medication as prescribed, and are not impaired and can safely perform their work, will not be considered to have violated this Policy.

**MEMORANDUM OF UNDERSTANDING REGARDING  
“QUICK” DRUG SCREENING TESTS PURSUANT TO  
ATTACHMENT C – DRUG AND ALCOHOL TESTING POLICY**

It is hereby agreed between the Parties hereto that a Contractor who has otherwise properly implemented drug and alcohol testing, as set forth in the Policy, shall have the right to offer an applicant or employee a "quick" drug screening test. This “quick” screen test shall consist either of the “ICUP” urine screen or similar test or an oral screen test. The applicant or employee shall have the absolute right to select either of the two “quick” screen tests, or to reject both and request a full drug test.

An applicant or employee who selects one of the "quick" screen tests, and who passes the test, shall be put to work immediately. An applicant or employee who fails the "quick" screen test, or who rejects the "quick" screen tests, shall be tested pursuant to the procedures set forth in the Policy. The sample used for the "quick" screen test shall be discarded immediately upon conclusion of the test. An applicant or employee shall not be deprived of any rights granted to them by the Policy as a result of any occurrence related to the “quick” screen test.

## APPENDIX A – SAN DIEGO PURE WATER PROGRAM PHASE I COVERED PROJECTS

### 1. Morena PS/PL Construction Package 1: Morena Pump Station

- **Associated Pure Water Project:** Morena PS/PL Project
- **Summary:** The package is the construction of a new pump station that will transport approximately 32 mgd of wastewater to the NCWRP, where it will be treated before being sent to the NCPWF for further purification. Construction of the pump station will be on Sherman Street.
- **Summary of Major Construction Package Components**
  - 4+1 Dual Stage Sewer Pump Station
  - Screening Facility
  - High Purity Oxygen System
  - 48-inch to 60-inch diameter influent diversion sewers in Friars Road
  - 66-inch Overflow Sewer
  - Electrical and Instrumentation

#### Morena Pump Station Rendering and Site Plan

## 2. Morena PS/PL Construction Package 2: Morena Northern Alignment and Tunnels

- **Associated Pure Water Project:** Morena PS/PL Project
- **Summary:** Two pipelines that will start at approximately Genesee Avenue/Highway 52, and will continue through University City to the NCWRP. Three short length tunnels are included in this section, each approximately 1000 feet; one at Highway 52, one at Rose Creek in University City and one at Interstate 805. One pipeline will transport wastewater to the NCWRP, while the other will transport salt and contaminants removed from the water at the NCPWF to the Point Loma Wastewater Treatment Plant.
- **Summary of Major Construction Package Components**
  - 4 miles of 48-inch force main
  - 4 miles of 36-inch brine/centrate pipeline
  - Tunnel crossing of I-805
  - Tunnel crossing of MTS/NCTD railroad at Rose Creek Canyon
  - Tunnel crossing at San Clemente Creek

### Morena Conveyance Northern, Middle and Southern Segments Site Plan

### **3. Morena PS/PL Construction Package 3: Morena Middle Alignment**

- **Associated Pure Water Project:** Morena PS/PL Project
- **Summary:** Two pipelines will start at Iroquois Avenue and will terminate at Genesee Avenue/Highway 52. One pipeline will transport wastewater to the NCWRP, while the other will transport salt and contaminants removed from the water at the NCPWF to the Point Loma Wastewater Treatment Plant.
- **Summary of Major Construction Package Components**
  - 3.6 miles of 48-inch welded steel force main
  - 3.6 miles of 36-inch brine/centrate high density polyethylene pipeline

### **4. Morena PS/PL Construction Package 4: Morena Southern Alignment**

- **Associated Pure Water Project:** Morena PS/PL Project
- **Summary:** Two pipelines will start at Sherman Street, follow West Morena Boulevard and terminate at Iroquois Avenue. One pipeline will transport wastewater to the NCWRP, while the other will transport salt and contaminants removed from the water at the NCPWF to the Point Loma Wastewater Treatment Plant. A 36-inch diameter welded steel water transmission main will be constructed and a 16 inch steel water distribution main will be replaced by 16 inch PVC in this package.
- **Summary of Major Construction Package Components**
  - 3.2 miles of 48-inch force main
  - 3.2 miles of 30-inch brine/centrate pipeline
  - Brine/centrate pressure reducing station
  - 3.2 Miles of existing 16-inch steel water distribution main replacement with PVC
  - 3.3 miles of new 36-inch water transmission main

## 5. NCWRP Expansion Construction Package 1: NCWRP Flow Equalization Basin

- **Associated Pure Water Project:** NCWRP Expansion
- **Summary:** This package includes the construction of one concrete equalization tank that will balance high/low wastewater flows from primary effluent and will provide for consistent flow to the biological treatment basins.
- **Summary of Major Construction Package Components**
  - 2.35-million-gallon flow equalization basin
  - Grading, yard piping and stormwater basin
  - Electrical and instrumentation

### NCWRP Equalization Basin Package 1 Rendering

## 6. NCWRP Construction Packages 2 and 3: NCWRP Expansion and NCPWF Influent Conveyance

- **Associated Pure Water Project:** NCWRP Expansion
- **Summary:** This package will increase the amount of recycled water that the plant produces to meet the needs of both the non-potable reuse recycled water system and the new NCPWF. Plant expansion includes the construction of a 42.5 mgd pump station that will convey water to the NCPWF across Eastgate Mall Road.
- **Summary of Major Construction Package Components**
  - Plant expansion from 30 mgd to 52 mgd
  - 42-mgd Influent Pump Station and pipeline to the NCPWF
  - New primary clarifiers, new bioreactor basins and retrofit of existing basins, secondary clarifiers, new tertiary filter, chemical facilities, and yard piping
  - Equipment and electrical substation replacements
  - Electrical and instrumentation

### *NCWRP Expansion Rendering*

## 7. NCPWF Construction Package 1: NCPWF and NCPW Pump Station

- **Associated Pure Water Project:** NCWPF
- **Summary:** A new Pure Water Facility will be built on Eastgate Mall across the street from the existing NCWRP to clean the recycled water further and produce 30 mgd of a safe, high-quality drinking water source. A new pump station will be constructed adjacent to the NCPWF on Eastgate Mall Road to pump an annual average of 30 mgd to Miramar Reservoir. The package includes widening a portion of Eastgate Mall Road.
- **Summary of Major Construction Package Components**
  - New 34-mgd Pure Water Facility, including:
    - Ozone Generation and Contactor
    - Biologically Active Carbon (BAC) Filters
    - Membrane Filtration (MF) System
    - Reverse Osmosis (RO)
    - Ultraviolet Disinfection and Advanced Oxidation (UV/AOP)
  - Chemical Feed Systems
  - Operations Building
  - 30-mgd Pump Station (3 + 1 vertical turbine pumps)
  - Electrical and instrumentation

### NCPWF and NCPW Pump Station Rendering

## 8. NCPW PS/PL Construction Package 1: NCPW Pipeline and Dechlorination Facility

- **Associated Pure Water Project:** NCPW PS/PL
- **Summary:** This package includes infrastructure to convey 30 mgd of purified water produced by the NCPWF to Miramar Reservoir. The pipeline will start on Eastgate Mall, follow Miramar Road, continue through Scripps Ranch and end at Miramar Reservoir. The package includes the replacement of 6.4 miles of asbestos cement watermains with PVC.
- **Summary of Major Construction Package Components**
  - 8 Miles of 48-inch welded steel pipe transmission main (purified water pipeline)
  - Dechlorination Facility
  - Standpipe
  - 6.4 miles of watermain replacement of 6, 12 and 16-inch asbestos cement (AC) pipe with 16-inch polyvinylchloride (PVC) pipe.

### Pure Water Pipeline Alignment

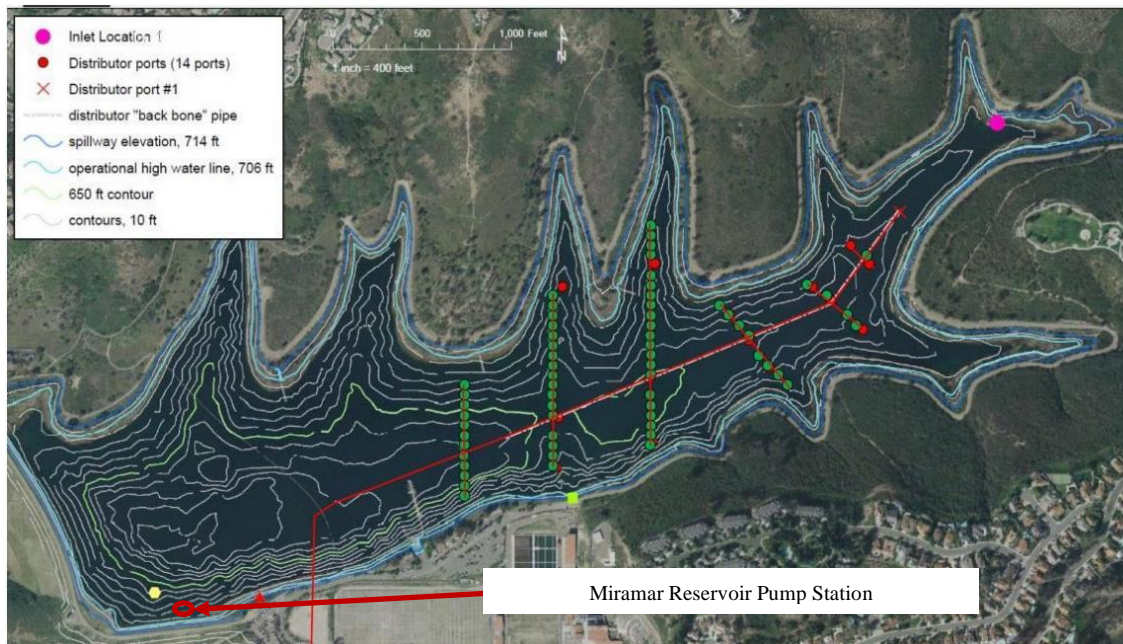

### Dechlorination Facility Rendering

## 9. NCPW PS/PL Construction Package 2: Subaqueous Pipeline and Miramar Reservoir Pump Station Improvements

- **Associated Pure Water Project:** NCPW PS/PL
- **Summary:** This package includes 0.9 miles of pipeline with duckbill outlets placed at the bottom of Miramar Reservoir together with the rehabilitation of a 100 mgd pump station that delivers raw water from Miramar Reservoir to the Miramar Water Treatment Plant.
- **Summary of Major Construction Package Components**
  - 54-inch to 8-inch Subaqueous pipe
  - 94 Dual duckbill valve outlet ports
  - Miramar Reservoir Pump Station Improvements
  - Electrical and instrumentation

### Subaqueous Pipeline Site Plan

## 10. MBC Construction Package 1: Metropolitan Biosolids Center Improvements

- **Associated Pure Water Project:** MBC Improvements
- **Summary:** This package will consist of improvements to the existing City biosolids center.
- **Summary of Major Construction Package Components**
  - Thickening centrifuges, sludge feed and polymer pumps, transfer pumps and supply pipeline
  - Digester mixing pump replacements, nozzles, overflow lines, biogas compressors, flare and biogas pipeline
  - Dewatering sludge feed pumps and polymer pumps
  - Centrate Pump Station pump and VFD replacements
  - Electrical and instrumentation

### Metropolitan Biosolids Center Improvements Site Plan

**APPENDIX B**

**MEMORANDUM OF UNDERSTANDING #1**

**PROJECT LABOR AGREEMENT SECTION 3.1**

The City and the Parties agree that Project Work includes all onsite physical craft work that is part of startup and commissioning, including, but not limited to, system flushes and testing, loop checks, rework and modifications, and functional and operational testing up to and including the final running test. It is understood that the City's personnel and/or its representatives, together with the manufacturer's and/or vendor's representatives, and/or plant operating personnel may supervise and direct the startup, commissioning, rework, and modification activity, and that the onsite physical craft work is typically performed as part of a joint effort with these representatives and personnel. A manufacturer or its representatives may perform industry standard startup and commissioning work to satisfy its guarantee or warranty on a piece of equipment, and such work will be exempt from the Project Labor Agreement to the extent the work is excluded by Section 3.2(e) and/or Section 3.2(f).

**MEMORANDUM OF UNDERSTANDING #2**

**NO DISCRIMINATION AND HARASSMENT**

The City hereby provides notice that the City and its Contractors must not unlawfully discriminate, harass, or allow harassment against any employee or applicant for employment because of sex, race, color, ancestry, religious creed, national origin, sexual orientation, physical disability (including HIV and AIDS), mental disability, medical condition (cancer), age (over 40), marital status, denial of family care leave, or genetic information, gender, gender identity, gender expression, or military and veteran status. The City and Contractors will ensure that the evaluation and treatment of their employees and applicants for employment are free from such discrimination and harassment. The City and Contractors must comply with the provisions of the Fair Employment and Housing Act and the applicable regulations promulgated thereunder. (Govt. Code §12990, subs. (a)-(f) et seq.; Cal. Code Regs., tit. 2 §7285, et seq.) These terms will be incorporated into every contract and subcontract for the Covered Project.

Tom Lemmon, Business Manager

## **CERTIFICATIONS AND FORMS**

The Bidder, by submitting its electronic bid, agrees to and certifies under penalty of perjury under the laws of the State of California, that the certifications, forms and affidavits submitted as part of this bid are true and correct.

## **BIDDER'S GENERAL INFORMATION**

To the City of San Diego:

Pursuant to "Notice Inviting Bids", specifications, and requirements on file with the City Clerk, and subject to all provisions of the Charter and Ordinances of the City of San Diego and applicable laws and regulations of the United States and the State of California, the undersigned hereby proposes to furnish to the City of San Diego, complete at the prices stated herein, the items or services hereinafter mentioned. The undersigned further warrants that this bid is not made in the interest of, or on behalf of, any undisclosed person, partnership, company, association, organization, or corporation; that the bid is genuine and not collusive or sham; that the bidder has not directly or indirectly induced or solicited any other bidder to put in a false or sham bid, and has not directly or indirectly colluded, conspired, connived, or agreed with any bidder or anyone else to put in a sham bid, or that anyone shall refrain from bidding; that the bidder has not in any manner, directly or indirectly, sought by agreement, communication, or conference with anyone to fix the bid price of the bidder or any other bidder, or to fix any overhead, profit, or cost element of the bid price, or of that of any other bidder, or to secure any advantage against the public body awarding the contract of anyone interested in the proposed contract; that all statements contained in the bid are true; and, further, that the bidder has not, directly or indirectly, submitted his or her bid price or any breakdown thereof, or the contents thereof, or divulged information or data relative thereto, or paid, and will not pay, any fee to any corporation, partnership, company, association, organization, bid depository, or to any member or agent thereof to effectuate a collusive or sham bid.

The undersigned bidder(s) further warrants that bidder(s) has thoroughly examined and understands the entire Contract Documents (plans and specifications) and the Bidding Documents therefore, and that by submitting said Bidding Documents as its bid proposal, bidder(s) acknowledges and is bound by the entire Contract Documents, including any addenda issued thereto, as such Contract Documents incorporated by reference in the Bidding Documents.

**NON-COLLUSION AFFIDAVIT TO BE EXECUTED BY BIDDER AND SUBMITTED WITH BID  
UNDER 23 UNITED STATES CODE 112 AND PUBLIC CONTRACT CODE 7106**

State of California

County of San Diego

The bidder, being first duly sworn, deposes and says that he or she is authorized by the party making the foregoing bid that the bid is not made in the interest of, or on behalf of, any undisclosed person, partnership, company, association, organization, or corporation; that the bid is genuine and not collusive or sham; that the bidder has not directly or indirectly induced or solicited any other bidder to put in a false or sham bid, and has not directly or indirectly colluded, conspired, connived, or agreed with any bidder or anyone else to put in a sham bid, or that anyone shall refrain from bidding; that the bidder has not in any manner, directly or indirectly, sought by agreement, communication, or conference with anyone to fix the bid price of the bidder or any other bidder, or to fix any overhead, profit, or cost element of the bid price, or of that of any other bidder, or to secure any advantage against the public body awarding the contract of anyone interested in the proposed contract; that all statements contained in the bid are true; and further, that the bidder has not, directly or indirectly, submitted his or her bid price or any breakdown thereof, or the contents thereof, or divulged information or data relative thereto, or paid, and will not pay, any fee to any corporation, partnership, company association, organization, bid depository, or to any member or agent thereof to effectuate a collusive or sham bid.

## **CONTRACTOR CERTIFICATION**

---

### **DRUG-FREE WORKPLACE**

I hereby certify that I am familiar with the requirements of San Diego City Council Policy No. 100-17 regarding Drug-Free Workplace as outlined in the WHITEBOOK, Section 5-1.3, "Drug-Free Workplace", of the project specifications, and that;

This company has in place a drug-free workplace program that complies with said policy. I further certify that each subcontract agreement for this project contains language which indicates the subcontractor's agreement to abide by the provisions of subdivisions a) through c) of the policy as outlined.

## **CONTRACTOR CERTIFICATION**

---

### **AMERICANS WITH DISABILITIES ACT (ADA) COMPLIANCE CERTIFICATION**

I hereby certify that I am familiar with the requirements of San Diego City Council Policy No. 100-4 regarding the Americans With Disabilities Act (ADA) outlined in the WHITEBOOK, Section 5-1.2, "California Building Code, California Code of Regulations Title 24 and Americans with Disabilities Act", of the project specifications, and that:

This company has in place workplace program that complies with said policy. I further certify that each subcontract agreement for this project contains language which indicates the subcontractor's agreement to abide by the provisions of the policy as outlined.

## **CONTRACTOR CERTIFICATION**

---

### **CONTRACTOR STANDARDS – PLEDGE OF COMPLIANCE**

I declare under penalty of perjury that I am authorized to make this certification on behalf of the company submitting this bid/proposal, that as Contractor, I am familiar with the requirements of City of San Diego Municipal Code § 22.3004 regarding Contractor Standards as outlined in the WHITEBOOK, Section 5-1.4, ("Contractor Standards and Pledge of Compliance"), of the project specifications, and that Contractor has complied with those requirements.

I further certify that each of the Contractor's subcontractors has completed a Pledge of Compliance attesting under penalty of perjury of having complied with City of San Diego Municipal Code § 22.3004.

## **CONTRACTOR CERTIFICATION**

---

### **EQUAL BENEFITS ORDINANCE CERTIFICATION**

I declare under penalty of perjury that I am familiar with the requirements of and in compliance with the City of San Diego Municipal Code § 22.4300 regarding Equal Benefits Ordinance.

## **CONTRACTOR CERTIFICATION**

---

### **EQUAL PAY ORDINANCE CERTIFICATION**

Contractor shall comply with the Equal Pay Ordinance (EPO) codified in the San Diego Municipal Code (SDMC) at section 22.4801 through 22.4809, unless compliance is not required based on an exception listed in SDMC section 22.4804.

Contractor shall require all of its subcontractors to certify compliance with the EPO in their written subcontracts.

Contractor must post a notice informing its employees of their rights under the EPO in the workplace or job site.

By signing this Contract with the City of San Diego, Contractor acknowledges the EPO requirements and pledges ongoing compliance with the requirements of SDMC Division 48, section 22.4801 et seq., throughout the duration of this Contract.

**AFFIDAVIT OF DISPOSAL**

(To be submitted upon completion of Construction pursuant to the contracts Certificate of Completion)

**WHEREAS**, on the \_\_\_\_\_ DAY OF \_\_\_\_\_, 2\_\_\_\_\_ the undersigned entered into and executed a contract with the City of San Diego, a municipal corporation, for:

**Pure Water Program: Metro Biosolids Center Improvements**

(Project Title)

as particularly described in said contract and identified as Bid No. **K-21-1867-DBB-3-A**; SAP No. (WBS) **B-17006, S-17013**; and **WHEREAS**, the specification of said contract requires the Contractor to affirm that "all brush, trash, debris, and surplus materials resulting from this project have been disposed of in a legal manner"; and **WHEREAS**, said contract has been completed and all surplus materials disposed of:

\_\_\_\_\_  
\_\_\_\_\_

**NOW, THEREFORE**, in consideration of the final payment by the City of San Diego to said Contractor under the terms of said contract, the undersigned Contractor, does hereby affirm that all surplus materials as described in said contract have been disposed of at the following location(s)

\_\_\_\_\_  
\_\_\_\_\_

and that they have been disposed of according to all applicable laws and regulations.

Dated this \_\_\_\_\_ DAY OF \_\_\_\_\_, \_\_\_\_\_.

By: \_\_\_\_\_  
Contractor

**ATTEST:**

State of \_\_\_\_\_ County of \_\_\_\_\_

On this \_\_\_\_\_ DAY OF \_\_\_\_\_, 2\_\_\_\_\_, before the undersigned, a Notary Public in and for said County and State, duly commissioned and sworn, personally appeared \_\_\_\_\_ known to me to be the \_\_\_\_\_ Contractor named in the foregoing Release, and whose name is subscribed thereto, and acknowledged to me that said Contractor executed the said Release.

Notary Public in and for said County and State

**LIST OF SUBCONTRACTORS**

**\*\*\* PROVIDED FOR ILLUSTRATIVE PURPOSES ONLY \*\*\* TO BE SUBMITTED IN ELECTRONIC FORMAT ONLY\*\*\* SEE INSTRUCTIONS TO BIDDERS, FOR FURTHER INFORMATION**

In accordance with the requirements of the "Subletting and Subcontracting Fair Practices Act", Section 4100, of the California Public Contract Code (PCC), the Bidder is to list below the name, address and license number of each Subcontractor who will perform work, labor, render services or specially fabricate and install a portion [type] of the work or improvement, in an amount of or in excess of 0.5% of the Contractor's total Bid. Failure to comply with this requirement may result in the Bid being rejected as non-responsive. The Contractor is to list only one Subcontractor for each portion of the Work. The Bidder's attention is directed to the Special Provisions - Section 3-2, "SELF-PERFORMANCE", which stipulates the percentage of the Work to be performed with the Bidder's own forces. The Bidder is to also list all SLBE, ELBE, DBE, DVBE, MBE, WBE, OBE, SDB, WoSB, HUBZone, and SDVOSB Subcontractors for which the Bidders are seeking recognition towards achieving any mandatory, voluntary, or both subcontracting participation percentages.

NAME, ADDRESS AND TELEPHONE NUMBER OF SUBCONTRACTOR	CONSTRUCTOR OR DESIGNER	SUBCONTRACTOR LICENSE NUMBER	TYPE OF WORK	DOLLAR VALUE OF SUBCONTRACT	MBE, WBE, DBE, DVBE, OBE, ELBE, SLBE, SDB, WoSB, HUBZone, OR SDVOSB <sup>①</sup>	WHERE CERTIFIED <sup>②</sup>	CHECK IF JOINT VENTURE PARTNERSHIP
Name: _____ Address: _____ City: _____ State: _____ Zip: _____ Phone: _____ Email: _____							
Name: _____ Address: _____ City: _____ State: _____ Zip: _____ Phone: _____ Email: _____							

- ① As appropriate, Bidder shall identify Subcontractor as one of the following and shall include a valid proof of certification (except for OBE, SLBE and ELBE):
- |   |        |  |         |
|---|--------|--|---------|
| Certified Minority Business Enterprise        | MBE    | Certified Woman Business Enterprise            | WBE     |
| Certified Disadvantaged Business Enterprise   | DBE    | Certified Disabled Veteran Business Enterprise | DVBE    |

**The Bidder will not receive any subcontracting participation percentages if the Bidder fails to submit the required proof of certification.**

# City of San Diego Pure Water Project OCIP Notice of Subcontract Award

Today's Date \_\_\_\_\_

<b>To:</b>	<b>From:</b>
<b>Email:</b>	<b>Email:</b>
<b>Phone #:</b>	<b>Phone #:</b>
<b>Fax #:</b>	<b>Fax #:</b>

The subcontractor named below will be issued a contract to perform work on the following:

Project: \_\_\_\_\_

Contract Number: \_\_\_\_\_ Contract Value: \$ \_\_\_\_\_

- Check here if the subcontractor is to be enrolled in the OCIP
- Check here if the subcontractor is to be excluded from the OCIP
- Check here if the subcontractor will be an excluded prime tier fabricator with eligible (enrolled) sub-tier erector/installer

1. Name of subcontractor:	
2. Prime sub or GC name:	
3. Subcontractor FEIN:	
4. Subcontractor contact person:	
5. Subcontractor phone number:	
6. Subcontractor address:	
7. Subcontractor email address:	
8. General description of work:	
9. Date of award:	
10. Anticipated on-site start date:	
11. Anticipated completion date:	

**INSURANCE COST WORKSHEET**  
**(Fixed Price Type Contracts)**  
 Numbers reference attached instructions

**City of San Diego Pure Water OCIP**  
 Project Name:

**Complete a separate form for each contractor, known subcontractor and trade not currently awarded to a subcontractor. Duplicate this form as needed. Completion of this form is a required part of your bid and must accompany your bid documents.**

**A. Contractor Information**

1. Enter your company's Federal ID number. This number can be found on filings made to the federal government such as your tax return.
2. Enter your company's name, mailing address and phone/fax number for your company's main office location in the space provided below.
3. Enter the name of the person AON should contact if questions arise. Include the mailing address, phone/fax and e-mail address if different than A-2.

**B. Bid Information**

1. Enter the Bid Package Number, Contract Number or Purchase Order Number that was included in The City of San Diego originating documentation.
2. Provide a brief description of the work you will be performing at the project site.
3. Identify the total amount of your bid. Include both labor and material.
4. Identify the amount of work that you anticipate will be self-performed. Include both labor and material.
5. Check the appropriate box that identifies if you contract directly with The City of San Diego or are a subcontractor.
6. If you are a subcontractor identify the entity with whom you are under contract.

**C. Workers Compensation Insurance Information**

- 1
  - a. Enter the two letter abbreviation for the state in which the work will be performed.
  - b. Enter each Workers Compensation class code that applies to your work identified in B2. (Most states use a 4 digit Number).
  - c. Enter the Workers Compensation class code description that applies to each class code identified in C1b.
  - d. Enter the Workers Compensation rate that applies to the specified class code.
  - e. Enter the estimated Work Hours required to complete the described work for each Workers Compensation class code.
  - f. Enter the estimated Payroll required to complete your work. Use only unburdened payroll and exclude the premium portion of any overtime pay.
  - g. Calculate the WC Premium by multiplying the Payroll (C1f) by the Rate (C1d) and dividing the result by 100. Repeat this calculation for each WC class code.
2. Total the estimated Work Hours for each class code. Be sure to include information from additional pages if used.
3. Total the estimated Payroll for each class code. Be sure to include information from additional pages if used.
4. Total the Workers Compensation Premium for each class code. Be sure to include information from additional pages if used.
5. Enter the amount of the Claim Retention/ Deductible your company has on their existing Worker's Compensation.
6. Enter you WC experience Modifier. This information can be located on your Workers Compensation policy or on your NCCI Bureau Rating Sheet.
7. Calculate the Modified Premium by multiplying the WC Premium (C4) by the Experience Modifier (C6).
8. Enter your Employer's Liability Insurance Rate. This information can be found in your Workers Compensation Policy.
9. Calculate your Employer's Liability Premium by multiplying the Modified Premium (C7) by the Employer's Liab. Rate (C8).
10. Identify the Modifiers that apply to your Workers Compensation Premium. This information can be located on your Workers Compensation Policy.
11. Enter the rate for each identified Modifier. The information can be located on your Workers Compensation Policy.
12. Calculate the Modified Premium Factor Amount by multiplying the Modified Premium (C7) by the Modified Premium Rate (C11) and dividing by 100. Be sure to identify if the Modification factor is an addition or reduction to your premium.
13. Total the Modified Premium Amounts by adding the numbers in column C12.
14. Calculate the Total Workers Compensation Premium by adding the Modified Premium (C7) to the Employer's Liab Premium (C9) and adding the Premium Modifications (C12).

**D. General Liability & Umbrella/Excess Liability Insurance**

1. Enter the general liability Rate. This number can be found on your General Liability Policy.
2. Identify the base the General Liability Rate applies to. If the base is other than Payroll or Revenue, enter the amount and the description in the space provided.
3. Identify the General Liability Rate factor by marking the box.
4. Identify the amount of your Claim Retention.
5. Calculate the General Liability Premium by multiplying the Bases (D2) by the Rate and dividing by the factor (D3).
6. Enter the Excess/Umbr Liability Rate. This number can be found on your Excess/Umbr Liability Policy.
7. Identify the base the Excess/Umbr Liab. Rate applies to. If the base is other than Payroll or Revenue, enter the amount and description in the space provided.
8. Identify the Excess/Umbr Liability Rate factor by marking the box.
9. Calculate the Excess/Umbr Liability Premium by multiplying the Bases (D7) by the Rate (D6) and dividing by the factor (100 or 1,000).

**E. Builder's Risk / Installation Floater**

1. Enter the Builder's Risk / Installation Floater Rate. Locate this information on your Property Policy or Builder's Risk Policy.
2. Identify the base factor that it applies to (100 or 1,000).
3. Calculate the Premium by multiplying the Proposed Contract Price (B3) by the Rate (E1) and dividing it by the Factor (E2).

**F. Other Insurance Premiums**

1. For each of the Insurance Lines of Coverage identified below, identify the Rate, Base and Factor. Calculate the Premium by multiplying the Base x Rate ÷ Factor. Total the Other Insurance Premiums in the space provided and carry that amount to the front page.

Line of Coverage	Rate	Base	Factor	Premium	Total Premium
------------------	------	------	--------	---------	---------------

**G. Totals**

1. Calculate the Total of all Insurance Premium by adding Workers Compensation (C14), General Liability (D5), Excess/Umbr Liability (D9), Builder's Risk/Installation Floater (E3), and Other Insurance Premiums (F1).
2. Identify the Overhead & Profit Percentage that was applied to this project during the tabulation of the Proposed Contract Price.
3. Calculate the Overhead & Profit Amount by Multiplying the Total of all Insurance Costs (G1) by your Overhead & Profit Percentage (G2).
4. Calculate the Total Initial Insurance Cost by adding the Overhead & Profit Amount (G3) with the Total of all Insurance Premium (G1).
5. Calculate your rate by Dividing the Total Initial Insurance Cost (G4) by the Estimated Payroll (C3) and multiplying by 100.

**H. Signature Block**

**Note: Please provide copies of the following documents as part of your submittal:**

- |  |   |
|--|---|
| <input type="checkbox"/> Rate Pages                                      | <input type="checkbox"/> General Liability declaration and rate pages   |
| <input type="checkbox"/> Workers Compensation declaration and rate pages | <input type="checkbox"/> Umbrella / Excess Liability declaration and rate pages   |
|  | <input type="checkbox"/> 5 years actual loss experience for each line of coverage in which Contractor retains more than \$5,000 |

The completed Certificate of Insurance and Workers Compensation insurance policy will be mailed to the Enrolled party.**

**A. Contractor Information**

- 1 Enter your company's Federal ID number. This number can be found on filings made to the federal government such as your tax return.
- 2 Enter your company's name, mailing address and phone/fax number for your company's primary office location.
- 3 Enter the name of the person Aon should contact if questions arise. Include mailing address, phone/fax and email address, if different than A2.
- 4 Identify your company's legal structure by checking the box that applies. If the correct legal structure is not specifically listed, please check the "Other" box and specify in the space provided.

**B. Contract Information**

- 1 Enter the Contract Number or Purchase Order Number that was included in The City of San Diego's originating documentation.
- 2 Supply the Date this Contract was awarded to your organization.
- 3 Provide a brief description of the work you will be performing at the project site.
- 4 Identify the total amount of your contract. Include both labor and material.
- 5 Identify the amount of work that you anticipate will be self-performed. Include both labor and material.
- 6 Check the appropriate box that identifies if you contract directly with The City of San Diego or are a Subcontractor.
- 7 If you are a Subcontractor, identify the entity with whom you are under contract.
- 8 Enter the Date you anticipate starting work and then mark whether the date provided is actual or estimated.
- 9 Enter the Date you anticipate completing the described work and then mark whether the date provided is actual or estimated.

**C. Contacts** *(Requested Contact information is for specific functions. It is possible to have a single person fulfill multiple responsibilities.)*

- 1 Identify the name of the person and their title for each function. These individuals should be located, if at all possible, on-site.
- 2 Provide the phone number for each person identified above.
- 3 Provide the fax number for each person identified above.
- 4 Provide the email address for each person identified above, if applicable.
- 5 Identify the physical location where your payroll records are retained. Provide the Address, City, State, Zip Code, Telephone, Fax Number and Email Address of the person responsible for maintaining the payroll information.

**D. Workers Compensation Information** (Duplicate or attach additional sheets if necessary. You may create an electronic version of this document if all requested information is included.):

- 1
  - a Enter the two letter abbreviation for the state in which the work will be performed.
  - b Enter each Workers Compensation class code that applies to the work identified in B2. (Most states use a 4 digit Number)
  - c Enter the Workers Compensation class code description that applies to the work identified in D1b.
  - d Enter the estimated Work Hours required to complete the described work by Workers Compensation class code.
  - e Enter the estimated Payroll required to complete the described work for each Workers Compensation class code. Use only unburdened payroll and exclude the premium portions of any overtime pay.
- 2 Total all estimated Work Hours for each class code. Be sure to include information from additional pages if used.
- 3 Total all estimated Payroll for each class code. Be sure to include information from additional pages if used.

**E. Current Off-Site Workers Compensation Information** (Information relates to your corporation's existing coverage; identify each modification factor that applies.)

- 1 Enter the State that the Modification Information applies to.
- 2 Enter your Bureau File Number also referred to as your Risk Identification Number. This number can also be found on your Modification worksheets.
- 3 Enter the Bureau Rating Agency. In most states this is NCCI.
- 4 Provide your Company's Anniversary Rating Date. Information can be located on your bureau's WC Experience Modification worksheets.
- 5 Identify your insurance carrier for Workers Compensation Coverage.
- 6 Provide your Workers Compensation Policy Number.
- 7 Provide the effective date of your Workers Compensation policy.
- 8 Provide the expiration date of your Workers Compensation policy.

**F. Subcontractor Information** (Provide the following information for each Subcontractor that will be performing work at the project site. Use additional sheets, if necessary.)

- 1 Identify the name of the Subcontracting firm.
- 2 Provide the estimated value of the subcontracted activity.
- 3 Provide a contact name, preferably the project manager, for the Subcontractor.
- 4 Provide the mailing address for the Subcontractor.
- 5 Provide the phone number for the Subcontractor.
- 6 Provide the date the Subcontractor is scheduled to begin work.

**G. Enrollment Questions**

- 1 Determine if you will have any locations, off-site, that will be 100% dedicated to this project. Include material/supply storage as a possible location. Mark the appropriate box (yes/no). If you answer yes – provide the address of each location you identified as 100% dedicated.
- 2 Mark the box or boxes that apply. Contemplate only work performed under this contract.
- 3 Mark the box or boxes that apply. Employee Leasing Firm are those firms that supply the labor force for your company (You direct the activities of the Leasing Company's employees). Temporary Labor Firms supplement your labor force.

**H. Warranty Statements:**

- 1-6 Read each Warranty statement thoroughly. If you have questions regarding any of these statements, contact the Aon administrator identified on page 2.

**I. Signature Block:** This form must be signed by a representative of your company knowledgeable of its accuracy.

**Forward the completed Enrollment Application to the Aon administrator identified at the bottom of page 2 of this form. The administrator prior to the start of your work on-site must receive this form.**

**Skilled and Trained Workforce Certification Form**

Month: \_\_\_\_\_ Year: \_\_\_\_\_

In accordance with Public Utilities Code section 132354.7 and Public Contract Code sections 2600-2602, \_\_\_\_\_ (the "Prime Contractor") certifies that all the workers performing work in an

(Prime Contractor Name)

apprenticeable occupation utilized on the project known as \_\_\_\_\_ (the "Project") during this monthly reporting period are either skilled journeypersons or apprentices registered in an apprenticeship

(Project Name)

program approved by the Chief of the Division of Apprenticeship Standards of the California Department of Industrial Relations (the "Chief").

"Skilled journeyperson" means a worker who either:

- (1) Graduated from an apprenticeship program for the applicable occupation that was approved by the Chief or apprenticeship program located outside California and approved for federal purposes, pursuant to the apprenticeship regulations adopted by the Federal Secretary of Labor.
- (2) Has at least as many hours of on-the-job experience in the applicable occupation as would be required to graduate from an apprenticeship program that is approved by the Chief.

In addition, the Prime Contractor certifies that it has met the requirements of Public Contract Code 2601(d), subject to certain exceptions set forth therein, that the required percentage of the skilled journeypersons or skilled journeyperson hours employed to perform work on the Project by the Prime Contractor and all subcontractors are graduates of an apprenticeship program for the applicable apprenticeable occupation<sup>1</sup>.

A graduate of an apprenticeship program means either of the following:

- (1) An individual that has been issued a certificate of completion under the authority of the California Apprenticeship Council for completing an apprenticeship program approved by the Chief pursuant to Section 3075 of the Labor Code, or
- (2) An individual that has completed an apprenticeship program located outside California and approved for federal purposes pursuant to the apprenticeship regulations adopted by the federal Secretary of Labor.

I declare, under penalty of perjury under the laws of the State of California, that the foregoing is true and correct. I certify that the attached Skilled and Trained Workforce Monthly Compliance Reports are complete and accurate.

Full Name: \_\_\_\_\_

Title: \_\_\_\_\_

Signature: \_\_\_\_\_ Date Signed: \_\_\_\_\_

Please upload the completed form to the Labor Compliance Monitoring System (LCMS) monthly.

**BID BOND**

**See Instructions to Bidders, Bidder Guarantee of Good Faith  
(Bid Security)**

KNOW ALL MEN BY THESE PRESENTS,

That PCL Construction, Inc. as Principal,  
and Fidelity and Deposit Company of Maryland as Surety, are held and firmly bound unto The City of San Diego hereinafter called "OWNER," in the sum of **10% OF THE TOTAL BID AMOUNT** for the payment of which sum, well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors, and assigns, jointly and severally, firmly by these presents.

WHEREAS, said Principal has submitted a Bid to said OWNER to perform the WORK required under the bidding schedule(s) of the OWNER's Contract Documents entitled

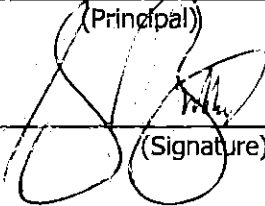

Pure Water Program: Metro Biosolids Center Improvements

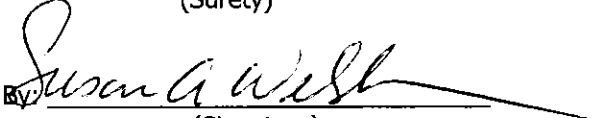

NOW THEREFORE, if said Principal is awarded a contract by said OWNER and, within the time and in the manner required in the "Notice Inviting Bids" enters into a written Agreement on the form of agreement bound with said Contract Documents, furnishes the required certificates of insurance, and furnishes the required Performance Bond and Payment Bond, then this obligation shall be null and void, otherwise it shall remain in full force and effect. In the event suit is brought upon this bond by said OWNER and OWNER prevails, said Surety shall pay all costs incurred by said OWNER in such suit, including a reasonable attorney's fee to be fixed by the court.

Rosa,

Per our conversation we believe the forms are correct in stating 0% interest for the following reasons:

1. PCL Construction, Inc. is a wholly owned subsidiary of PCL Infrastructure Management, Inc.
2. PCL Family of Companies include a number of operating units that roll up to a parent company (see attached chart).
3. PCL is 100% employee owned.

Please call me if you'd like to discuss further.

Regards,

**Shawn Britton**

**DEBARMENT AND SUSPENSION CERTIFICATION  
PRIME CONTRACTOR  
FAILURE TO COMPLETE AND SUBMIT AT TIME OF BID SHALL RENDER BID NON-RESPONSIVE**

**EFFECT OF DEBARMENT OR SUSPENSION**

To promote integrity in the City's contracting processes and to protect the public interest, the City shall only enter into contracts with responsible- bidders and contractors. In accordance with San Diego Municipal Code §22.0814 (a): *Bidders and contractors* who have been *debarred* or *suspended* are excluded from submitting bids, submitting responses to requests for proposal or qualifications, receiving *contract* awards, executing *contracts*, participating as a *subcontractor*, employee, agent or representative of another *person* contracting with the City.

As part of its bid or proposal (Non-Price Proposal in the case of Design-Build contracts), the Bidder shall provide to the City a list of Names of the Principal Individual owner(s).

The names of all persons interested in the foregoing proposal as Principals are as follows:

NAME	TITLE
Mike McKinney	President
Shawn Britton	Secretary / Treasurer
Richard Hewitt	Operations Manager
Jeff Newman	Area Manager

**IMPORTANT NOTICE:** If Bidder or other interested person is a corporation, state secretary, treasurer, and manager thereof; if a co-partnership, state true name of firm, also names of all individual co-partners composing firm; if Bidder or other interested person is an individual, state first and last names in full.

The Bidder, under penalty of perjury, certifies that, except as noted below, he/she or any person associated therewith in the capacity of owner, partner, director, officer, manager:

- Is not currently under suspension, debarment, voluntary exclusion, or determination of ineligibility by any Federal, State or local agency;
- has not been suspended, debarred, voluntarily excluded or determined ineligible by any Federal, State or local agency within the past 3 years;
- does not have a proposed debarment pending; and
- has not been indicted, convicted, or had a civil judgment rendered against it by a court of competent jurisdiction in any matter involving fraud or official misconduct within the past 3 years.

If there are any exceptions to this certification, insert the exceptions in the following space.

N/A

Exceptions will be considered in determining bidder responsibility. For any exception noted above, indicate below to whom it applies, initiating agency, and dates of action.

## **LOBBY PROHIBITION, CERTIFICATION AND DISCLOSURE**

In acknowledgment that funds received under this agreement have been provided pursuant to a Federal grant, recipient hereby recognizes the prohibitions against lobbying the Federal government with any of these funds. Recipient agrees that it shall comply with the laws set forth at 31 U.S.C. § 1352 (1989) and 24 C.F.R. part 87, to wit:

### A. Conditions on use of funds

Recipient shall not expend any funds received pursuant to this agreement to pay any person to influence an officer or employee of Federal agency, a member of Congress, an officer or employee of Congress, or an employee of a member of Congress in connection with any of the following Covered Federal actions:

- (1) The awarding of any federal contract
- (2) The making of any Federal grant
- (3) The making of any Federal Loan
- (4) The entering into of any cooperative agreement
- (5) The extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

For purposes of defining the terms of this part of the agreement, the definitions set forth in 24 C.F.R. § 87.105 are hereby adopted and incorporated herein by reference.

### B. Certification and Disclosure

Each recipient at every tier under this agreement shall file a certification regarding lobbying, and a Disclosure Form-LLL, where required by 24 C.F.R. § 87.110. The certification form and Disclosure Form-LLL are attached to this agreement.

### C. Certifications must be filed:

- (1) By any person upon each submission that initiates agency consideration for an award of a Federal contract, grant, or cooperative agreement exceeding \$100,000, or a Federal loan or loan guarantee exceeding \$150,000.
- (2) Upon receipt by any person of a Federal contract, grant, or cooperative agreement exceeding \$100,000, or upon receipt of a Federal loan or loan guarantee exceeding \$150,000.
- (3) By any person who requests or receives from a person referred to in subsections 1 and 2 of this paragraph:
  - a. A subcontract exceeding \$100,000 at any tier under a Federal contract;
  - b. A subgrant, contract or subcontract exceeding \$100,000 at any tier under a Federal grant;
  - c. A contract or subcontract exceeding \$100,000 at any tier under a Federal loan exceeding \$150,000;
  - d. A contract or subcontract exceeding \$100,000 at any tier under a Federal cooperative agreement.

D. Disclosure Forms-LLL must be filed in every instance when a person applies for, requests, or receives Federal appropriations exceeding \$100,000 pursuant to a contract, subcontract, grant, subgrant, loan, or cooperative agreement when such person has paid or expects to pay any sum, in cash or in kind, to influence or attempt to influence any officer or employee of an agency, a member of Congress, an officer or employee of Congress, or an employee of a member of Congress. Further, Disclosure Form-LLL must be filed by recipients at any tier at the end of each calendar quarter in which there occurs any event that requires disclosure or materially affects information submitted in prior disclosures. Such events include:

- (1) 1. An increase of \$25,000 in the amount paid or expected to be paid for influencing or attempting to influence a covered Federal action;
- (2) 2. A change in the person(s) influencing or attempting to influence a covered action;
- (3) 3. A change in the officer(s), employee(s), or member(s) contacted to influence a covered action.

All disclosure Forms-LLL, but not certifications, shall be forwarded from tier to tier until received by the principal recipient, which in turn will file them with the appropriate Federal agency.

## INSTRUCTIONS FOR COMPLETION OF SF-LLL, DISCLOSURE OF LOBBYING ACTIVITIES

This disclosure form shall be completed by the reporting entity, whether subawardee or prime Federal recipient, at the initiation or receipt of a covered Federal action, or a material change to a previous filing, pursuant to title 31 U.S.C. section 1352. The filing of a form is required for each payment or agreement to make payment to any lobbying entity for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with a covered Federal action. Use the SF-LLLA Continuation Sheet for additional information if the space on the form is inadequate. Complete all items that apply for both the initial filing and material change report. Refer to the implementing guidance published by the Office of Management and Budget for additional information.

1. Identify the type of covered Federal action for which lobbying activity is and/or has been secured to influence the outcome of a covered Federal action.
2. Identify the status of the covered Federal action.
3. Identify the appropriate classification of this report. If this is a follow up report caused by a material change to the information previously reported, enter the year and quarter in which the change occurred. Enter the date of the last previously submitted report by this reporting entity for this covered Federal action.
4. Enter the full name, address, city, State and zip code of the reporting entity. Include Congressional District, if known. Check the appropriate classification of the reporting entity that designates if it is, or expects to be, a prime or subaward recipient. Identify the tier of the subawardee, e.g., the first subawardee of the prime is the 1st tier. Subawards include but are not limited to subcontracts, subgrants and contract awards under grants.
5. If the organization filing this report in item 4 checks "Subawardee," then enter the full name, address, city, State and zip code of the prime Federal recipient. Include Congressional District, if known.
6. Enter the name of the Federal agency making the award or loan commitment. Include at least one organizational level below agency name, if known. For example, Department of Transportation, United States Coast Guard.
7. Enter the Federal program name or description for the covered Federal action (item 1). If known, enter the full Catalog of Federal Domestic Assistance (CFDA) number for grants, cooperative agreements, loans, and loan commitments.
8. Enter the most appropriate Federal identifying number available for the Federal action identified in item 1 (e.g., Request for Proposal (RFP) number; Invitation for Bid (IFB) number; grant announcement number; the contract, grant, or loan award number; the application/proposal control number assigned by the Federal agency). Include prefixes, e.g., "RFP-DE-90-001."
9. For a covered Federal action where there has been an award or loan commitment by the Federal agency, enter the Federal amount of the award/loan commitment for the prime entity identified in item 4 or 5.
10. (a) Enter the full name, address, city, State and zip code of the lobbying entity engaged by the reporting entity identified in item 4 to influence the covered Federal action.  
(b) Enter the full names of the individual(s) performing services, and include full address if different from 10 (a). Enter Last Name, First Name, and Middle Initial (MI).
11. Enter the amount of compensation paid or reasonably expected to be paid by the reporting entity (item 4) to the lobbying entity (item 10). Indicate whether the payment has been made (actual) or will be made (planned). Check all boxes that apply. If this is a material change report, enter the cumulative amount of payment made or planned to be made.
12. Check the appropriate box(es). Check all boxes that apply. If payment is made through an in-kind contribution, specify the nature and value of the in-kind payment.
13. Check the appropriate box(es). Check all boxes that apply. If other, specify nature.
14. Provide a specific and detailed description of the services that the lobbyist has performed, or will be expected to perform, and the date(s) of any services rendered. Include all preparatory and related activity, not just time spent in actual contact with Federal officials. Identify the Federal official(s) or employee(s) contacted or the officer(s), employee(s), or Member(s) of Congress that were contacted.
15. Check whether or not a SF-LLLA Continuation Sheet(s) is attached.
16. The certifying official shall sign and date the form, print his/her name, title, and telephone number.

According to the Paperwork Reduction Act, as amended, no persons are required to respond to a collection of information unless it displays a valid OMB Control Number. The valid OMB control number for this information collection is OMB No. 0348-0046. Public reporting burden for this collection of information is estimated to average 30 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Management and Budget, Paperwork Reduction Project (0348-0046), Washington, DC 20503.

# DISCLOSURE OF LOBBYING ACTIVITIES

File No. - 200

**RE: SMALL BUSINESS ENTERPRISE (PROPRIETARY) CERTIFICATION APPROVAL**

Dear Mr. Gunter:

Based on a thorough review of the submitted documents, we are pleased to inform you that your firm has been certified as a Small Business Enterprise (Proprietary) and has been placed in the SBE (Proprietary) Database as a firm specializing in:

**NAICS Code**

**Description**

**238120**

**Structural Steel & Preset Concrete Contractors**

This certification is valid for two years from the date of this letter. If there are any changes in your firm that may affect your eligibility as a small business, you are required to notify this office of those changes in writing. Also, please include your file number on each page of correspondence relating to these matters.

The City reserves the right to withdraw this certification if at any time, it is determined certification was knowingly obtained by false, misleading or incorrect information. The City also reserves the right to request additional information at any time during the certification period to verify any documentation submitted with your application. By accepting certification, the firm of G.T.E. Metal Erectors, Inc. hereby consents to the examination of its books, records and documents by the City.

Your SBE (Proprietary) certification status will be honored by each of the Proprietary Departments of the City of Los Angeles (i.e. LAWA, Harbor, and DWP).

For information on contracting opportunities, and to register your firm as certified SBE (Proprietary), please register or update your profile at <http://LABAVN.org>.

If you have any questions, please contact me at (213) 847-2650 or e-mail at [shaun.shimoda-kobayashi@lacity.org](mailto:shaun.shimoda-kobayashi@lacity.org).

Sincerely,

SHAUN SHIMODA-KOBAYASHI, LAWA Certification Manager  
Office of Contract Compliance  
Bureau of Contract Administration

Certified Small Business Enterprise

**Vendor Account Number:** 165786

Scott Gunter  
GTE Metal Erectors, Inc.  
24530 S. Cass Rd.  
Canby, OR 97013

Thank you for submitting your Vendor Application seeking Small Business Enterprise recognition with the Coalition of Southern California Public Agencies. Per our evaluation of the information you provided in your application and the North American Industry Classification System codes you identified, your status as a Small Business Enterprise (SBE) has been approved. This certification is recognized by the following organizations:

- Metropolitan Water District of Southern California**
- Port of Long Beach**
- San Diego County Water Authority**
- Los Angeles Unified School District**
- Los Angeles Community College District**

Metropolitan is pleased to issue this SBE Certificate subject to the terms and conditions identified below:

**NAICS code(s) for which SBE status is recognized:**

- 332999 - All Other Miscellaneous Fabricated Metal Product Manufacturing**
- 336612 - Boat Building**
- 236220 - Commercial and Institutional Building Construction**
- 332312 - Fabricated Structural Metal Manufacturing**
- 236210 - Industrial Building Construction**
- 332323 - Ornamental and Architectural Metal Work Manufacturing**

**SBE Certificate Effective Date: 06/30/20**  
**SBE Certificate Expiration Date: 06/30/23**

Work Performed by your firm that falls within the above-mentioned NAICS code(s) will be counted as SBE participation for work performed on contracts procured by the above agencies.

The agencies reserve the right to withdraw this certification if at any time it is determined that certification was knowingly obtained by false, misleading or incorrect information and reserve the right to audit all statements. If any firm attempts to falsify or misrepresent information to obtain certification, the firm may be disqualified from participation in any contracts for a period of up to five years.

**SBE Certification is valid for a period of three (3) years. To maintain SBE status, firms must update their existing SBE Vendor Application on or before the expiration date mentioned above. All information is subject to verification.**

If there are any changes in your status that may impact your certification, you are required to update your account information online. A copy of your information can be viewed by logging into your Vendor Profile, and visiting the Small Business Certification tab.

Sincerely,  
John J. Arena

**FORM 4500-4 (DBE Subcontractor Utilization Form)**

## COMMITMENT TO COMPLY WITH SKILLED AND TRAINED WORKFORCE REQUIREMENTS

Bidder, on behalf of itself and its subcontractor(s) at every tier, hereby commits that a skilled and trained workforce will be used to perform all work on the Project that falls within an apprenticeship occupation in the building or construction trades in accordance with Chapter 2.9 (commencing with Section 2600) of Part 1 of Division 2 of the Public Contract Code. Pursuant to Public Contract Code section 2601, as of January 1, 2018:

"Skilled and trained workforce" means a workforce that meets all of the following conditions: All the workers performing work in an apprenticeable occupation in the building and construction trades are either skilled journeypersons or apprentices registered in an apprenticeship program approved by the chief.

For work performed on or after January 1, 2018, at least 40 percent of the skilled journeypersons employed to perform work on the contract or project by every contractor and each of its subcontractors at every tier are graduates of an apprenticeship program for the applicable occupation. This requirement shall not apply to work performed in the following occupations: acoustical installer, bricklayer, carpenter, cement mason, drywall installer or lather, marble mason, finisher, or setter, modular furniture or systems installer, operating engineer, pile driver, plasterer, roofer or waterproofer, stone mason, surveyor, teamster, terrazzo worker or finisher, and tile layer, setter, or finisher.

For work performed on or after January 1, 2019, at least 50 percent of the skilled journeypersons employed to perform work on the contract or project by every contractor and each of its subcontractors at every tier are graduates of an apprenticeship program for the applicable occupation. This requirement shall not apply to work performed in the following occupations: acoustical installer, bricklayer, carpenter, cement mason, drywall installer or lather, marble mason, finisher, or setter, modular furniture or systems installer, operating engineer, pile driver, plasterer, roofer or waterproofer, stone mason, surveyor, teamster, terrazzo worker or finisher, and tile layer, setter, or finisher.

For work performed on or after January 1, 2020, at least 60 percent of the skilled journeypersons employed to perform work on the contract or project by every contractor and each of its subcontractors at every tier are graduates of an apprenticeship program for the applicable occupation. This requirement shall not apply to work performed in the following occupations: acoustical installer, bricklayer, carpenter, cement mason, drywall installer or lather, marble mason, finisher, or setter, modular furniture or systems installer, operating engineer, pile driver, plasterer, roofer or waterproofer, stone mason, surveyor, teamster, terrazzo worker or finisher, and tile layer, setter, or finisher.

**NOTE:** The above commitment is required by California Public Utilities Code section 132354.7 and must be submitted by Bidder in order for the Bid to be responsive to the IFB.

80MCC8006	Sht. 80-E-616

A1. Referenced MCCS are Cutler Hammer 2100 Series.

Q2. Specification 01-50-00:  
2.01.F. A Standard trailer is 24 x 60 is this acceptable?

A2. Yes, one 24' x 60' or two 12' x 60' trailers would be acceptable for CM trailer.

Q3. Specification 01-50-00:  
2.01.G. A Standard trailer is 1440 square feet. Is this acceptable?

A3. Yes.

Q4. Specification 01-50-00:  
2.01.H. A Standard trailer is T111 Hardy Board or pressed hard board. Is this acceptable?

A4. Confirmed, no exception taken to material change but trailer shall be submitted for approval.

- Q5. Specification 01-50-00:  
2.01.H. What is meant by "insulated double walls, floor, roof"?
- A5. Bid as specified.
- Q6. Specification 01-50-00:  
3.01.I Please confirm there is 568B currently available at the "D Mark" at the site.
- A6. Question is unclear, define "D Mark". 568B is available at site.
- Q7. Specification 01-50-00:  
3.02.A.1. & 2. Please confirm power is available at or near the site for 6ea (12 x 60) office trailers. The last time we did a project at this plant, there was no available power for even one small trailer.
- A7. North side of Area 76 has an outdoor disconnect switch with a 400A fuse, 480 Volts, 3 phase, 3-wire that is fed from 76MCCD01-F3D that will be available to Contractor for CM Trailer.
- Q8. Specification 01-50-00:  
3.02.A.2. I can't image you want a generator running for 3.3 years. Please clarify if and where power is available.
- A8. Plant power will be made available to Contractor and coordinated during construction. Contractor shall propose locations, and all facilities to step down and convey power as needed.
- Q9. Specification 01-50-00:  
3.02.F.1. & 3.01.G. & 2.01.P.15. Are cells phones acceptable?
- A9. Yes.
- Q10. Will a site visit be allowed to bidders?
- A10. No, due to the current Covid-19 restrictions the City is unable to allow site visits. However, Notice Inviting Bids Item 14 provides links for site videos, narrative and site map. Refer to modification to Instruction to Bidders Item 23 in this Addendum.
- Q11. With the number of projects bidding concurrently through the month of March and April we are concerned that we will not attract DBEs to propose on this contract (K-21-1867-DBB-3) and therefore request the bid due date be moved to May 4, 2021.
- A11. Bid as specified.

Q12. Please reference spec 01 31 13 1.10-E. Time Lapse Construction Video.

Please review this requirement to determine feasibility. The majority of the scope of the work is inside buildings, so one camera mounted at the site will show little if any work being completed. Can this requirement be removed from the specifications?

A12. Time lapse video cameras are being installed on other North City projects and will serve as construction record, support public outreach efforts and monitoring. Bid as specified.

Q13. Sht. 76-E-140 shows DC Polymer Feed Pumps 76-P-61 thru 76-P-68, What is the physical location for the VFD's feeding this equipment?

Sht. 76-E-150 shows TC Polymer Feed Pumps 76-P-21 thru 76-P25, what is the physical location for the VFD's feeding this equipment?

Please provide the room location for these VFD's.

A13. There are no modifications to these VFDs under the Work, so locations are not shown on the Drawings.

Q14. The RFP contains a section for "Certifications and Forms" that includes the form "Named Equipment/Material Supplier List" which is not listed on the list of Electronically Submitted Forms due with the bid. Please clarify if the "Named Equipment/Material Supplier List" form is due with the bid.

If yes, please confirm that the "Named Equipment/Material Supplier List" is for equipment/material suppliers who will provide equipment/material in an amount of or in excess of 0.5% of the Contractor's total bid.

Also, if yes please provide electronic versions of the above referenced forms.

A14. Named Equipment/Material Supplier List is due at the precon.

Q15. Please confirm that the Debarment Suspension Certification for Subcontractors/Suppliers/Manufacturers is only asking for list of individual principal owners, and not specify any exceptions to the Debarment Suspension Certification.

A15. Confirmed.

Q16. Please confirm that the "Debarment Suspension Certification for Subcontractors/Suppliers/Manufacturers" must be submitted only for the List of Subcontractors that are in accordance with the requirements of the

Subletting and Subcontracting Fair Practices Act Section 4100 of the California Public Contract Code, and the suppliers listed in the "Named Equipment Material Supplier List".

- A16. No, All KNOWN subcontractors at time of bid.
- Q17. In the Instruction to Bidders page 20, item 23 "EXAMINATION OF PLANS, SPECIFICATIONS, AND SITE OF WORK", The Bidder shall examine carefully the Project Site, the Plans and Specifications, other materials as described in the Special Provisions, Section 3-9, "TECHNICAL STUDIES AND SUBSURFACE DATA", and the proposal forms (e.g., Bidding Documents). The submission of a Bid shall be conclusive evidence that the Bidder has investigated and is satisfied as to the conditions to be encountered, as to the character, quality, and scope of Work, the quantities of materials to be furnished, and as to the requirements of the Bidding Documents Proposal, Plans, and Specifications.
- a. With the extensive mechanical demolition scope and installation of new scope Filanc requests access to the site to examine the Project Site to be in compliance with the bid documents.
- A17. No, due to the current Covid-19 restrictions the City is unable to allow site visits. However, Notice Inviting Bids Item 14 provides links for site videos, narrative and site map. Refer to modification to Instruction to Bidders Item 23 in this Addendum.
- Q18. When overlaying sheets 27 and 185, it looks as though there are multiple trees required to be removed in order complete the installation of new BG system. Please confirm the tree diameters, height and species so to price the removal.
- A18. Trees shall be removed for installation of the biogas system as noted on Drawing C-100 and coordinated during construction. Trees are visible on-site videos and publicly available mapping such as Google Earth.
- Q19. Sheet 31 shows the biogas yard pipe. There are multiple trees shown very close to the alignment from station 21+00 to 22+00. Please confirm that these trees to not need to be removed to facilitate installation of the pipe. If they require removal, please provide the tree diameters, height and species so to price the removal.
- A19. Trees shall be protected as specified in Specification Sections 01 50 00 and 01 56 39 and any removals coordinated during construction.

### C. NOTICE INVITING BIDS

1. To Item 3, ESTIMATED CONSTRUCTION COST, page 7, **DELETE** in its entirety and **SUBSTITUTE** with the following:
  3. **ESTIMATED CONSTRUCTION COST:** The City's estimated total construction cost for this project is **\$40,798,000**.

### D. INSTRUCTIONS TO BIDDERS

1. To Item 23, EXAMINATION OF PLANS, SPECIFICATIONS, AND SITE OF WORK, page 20, **DELETE** in its entirety and **SUBSTITUTE** with the following:
  23. **EXAMINATION OF PLANS, SPECIFICATIONS, AND SITE OF WORK:** The Bidder shall examine carefully the Project Site via the Video Link and Narrative and Site Map, the Plans and Specifications, other materials as described in the Special Provisions, Section 3-9, "TECHNICAL STUDIES AND SUBSURFACE DATA", and the proposal forms (e.g., Bidding Documents). The submission of a Bid shall be conclusive evidence that the Bidder has investigated and is satisfied as to the conditions to be encountered, as to the character, quality, and scope of Work, the quantities of materials to be furnished, and as to the requirements of the Bidding Documents Proposal, Plans, and Specifications.

### E. ATTACHMENTS

1. To Attachment D, FUNDING AGENCY PROVISIONS, pages 32 through 92, **DELETE** in their entirety and **SUBSTITUTE** with pages 11 through 75 of this Addendum.

### F. SUPPLEMENTARY SPECIAL PROVISIONS

1. To SECTION 6 – PROSECUTION AND PROGRESS OF THE WORK, page 145. **ADD** the following:

- 6-1.1 Construction Schedule.** To the "GREENBOOK", paragraph (1), sentence (1), **DELETE** in its entirety and **SUBSTITUTE** with the following:

After notification of award of the Contract and prior to the start of any Work, you shall submit your proposed Cost Loaded Construction Schedule to the Engineer at the pre-construction meeting.

**6-1.1.2 Contracts More Than \$500,000 In Value.** To the "WHITEBOOK", item 1, DELETE in its entirety and SUBSTITUTE with the following:

1. Provide the Schedule to the Engineer in accordance with 6-1.1, "Construction Schedule" and 6-1.2, "Commencement of the Work".

To the "WHITEBOOK", item 2, DELETE in its entirety.

**6-1.2 Commencement of the Work.** To the "WHITEBOOK", ADD the following:

5. You shall submit a Cost Loaded Construction Schedule in accordance with 6-1.1, "Construction Schedule" at the scheduled pre-construction meeting.
  6. If a Cost Loaded Construction Schedule is not provided, the pre-construction meeting will still be held. The Contract Time shall commence at issuance of the NTP, but you shall be limited to the following activities until the Cost Loaded Construction Schedule has been submitted to the Resident Engineer with no exceptions taken:
    - a) Mobilization of your trailers, associated utility setup, and grading for trailer area
    - b) Permit Procurement
    - c) Fencing and temporary utilities for your storage areas
    - d) Submittal of anticipated critical path submittals
2. To Technicals, Section 01 29 00, PAYMENT PROCEDURES, PART 1, GENERAL, Section 1.10, BID ITEMS, sub-section J, Page 175, **DELETE** Items 2 and 3 and **SUBSTITUTE** with the following:
2. General: New larger dewatering centrifuges (2) and dewatering centrifuge feed pumps (8) and polymer pumps (8).
  3. Payment is made for this item for all Work required to upgrade the sludge dewatering system. Payment for this item includes the following:
    - a. Two new increased capacity dewatering centrifuges.
    - b. Eight new feed pumps and polymer pumps, all pumps with new ASDs.

- c. Payment under this Bid Item shall be made as the lump sum price in the Bid Schedule.
- 2. To Technicals, Section 40 90 00, INSTRUMENTATION AND CONTROL, page 1037, ADD CONTROL STRATEGIES, 1 CENTRIFUGE BUILDING, 1.01 DEWATERING CENTRIFUGES on pages 76 through 79 of this Addendum.
- 3. To Technicals, Section 40 90 06, DCS BILL OF MATERIALS AND QUANTITIES, page 1096, ADD TABLE A-11, DROP 16 – 76PCM06 DCS HARDWARE on page 80 of this Addendum.
- 4. To Technicals, Section 40 90 07, SCOPE OF WORK, PART 3, EXECUTION, Section 3.03, SPECIFIC REQUIREMENTS OF PROJECT PROCUREMENT, STAGING, PROGRAMMING AND TESTING PHASE, sub-section B, Programming and Testing Phase, Item 2, sub-item e, page 1101, ADD the following item 8):
  - 8) For the Dewatering Centrifuge upgrade an additional two three-dimensional main graphic process screens, three main graphic process screens, two sub graphic (windows) process screens, and two trend groups as defined by user workshops
- 5. To Technicals, Section 40 94 24, PROCESS INPUTS/OUTPUTS (I/O), Supplement 1, DCS Input/Output List, page 1140, ADD DROP 7, 60PCM05 Input/Output List on pages 81 through 169 of this Addendum.
- 6. To Technicals, Section 40 94 24, PROCESS INPUTS/OUTPUTS (I/O), Supplement 2, Deleted DCS Input/Output List, pages 1217 through 1234, DELETE in its entirety and SUBSTITUTE DELETED DCS INPUT/OUTPUT LIST page 170 through 189 of this Addendum.
- 7. To Technicals, Section 40 98 03, INSPECTION AND TESTING SERVICES, PART 3, EXECUTION, Section 3.03, PACKAGE SYSTEM FACTORY ACCEPTANCE TESTS, sub-section A, page 1312, ADD the following item:
  - 3) Section 44 22 24, Dewatering Centrifuges.
- 8. To Technicals, ADD Section 44 22 24, DEWATERING CENTRIFUGES on pages 190 through 231 of this Addendum.

## G. ADDITIONAL CHANGES

- The following are additional changes to the Line Items in the PlanetBids Tab:

For clarity where applicable, **ADDITIONS**, if any, have been **Underlined** and **DELETIONS**, if any, have been **~~Stricken-out~~**.

Section	Item Code	Description	UoM	Quantity	Payment Reference

**FUNDING AGENCY PROVISSIONS**

**CLEAN WATER STATE REVOLVING FUND (CWSRF) AND ENVIRONMENTAL  
PROTECTION AGENCY (EPA) REQUIREMENTS:**

**CLEAN WATER STATE REVOLVING FUND (CWSRF)**

**DRINKING WATER STATE REVOLVING FUND (CWSRF)**

**BUREAU OF RECLAMATION (BOR)**

## FUNDING AGENCY PROVISIONS

**IN THE EVENT THAT THESE REQUIREMENTS CONFLICT WITH THE CITY'S GENERAL EOC REQUIREMENTS, THE FUNDING AGENCY'S REQUIREMENTS WILL CONTROL.**

**1. WATER INFRASTRUCTURE FINANCE AND INNOVATION ACT (WIFIA) PROGRAM, 2014 LOCAL RESOURCES PROGRAM, AND CALIFORNIA STATE REVOLVING FUND (CASRF) REQUIREMENTS.**

The City anticipates receiving financial assistance from the Federal Government, the Metropolitan Water District of Southern California, and the State of California for this project. The following requirements are conditions of the receipt of financial assistance from the United States Environmental Protection Agency under the Federal **Water Infrastructure Finance and Innovation Act (WIFIA)**, the **Metropolitan Water District** under the **2014 Local Resources Program**, and the State Water Resources Control Board under the **California Water State Revolving Fund (CASRF)** and **Proposition 68** programs. The firm contracting with the City (Contractor) shall comply with all of the following requirements. If there are other provisions in the Contract Documents that address the same subjects as this exhibit, Contractor shall comply with both provisions, with the more stringent requirements controlling. If there is a direct conflict between the Agreement and this exhibit, the requirements of this Exhibit shall control in order to preserve the City's eligibility to receive financial assistance.

**1.1. RECORDS.** The Contractor must maintain separate books, records and other material relative to the Project. The Recipient must also retain such books, records, and other material for itself and for each contractor or subcontractor who performed or performs work on this project for a minimum of thirty-six (36) years after Completion of Construction. The Recipient must require that such books, records, and other material are subject at all reasonable times (at a minimum during normal business hours) to inspection, copying, and audit by the State Water Board, the California State Auditor, the Bureau of State Audits, the United States Environmental Protection Agency (USEPA), the Office of Inspector General, the Internal Revenue Service, the Governor, or any authorized representatives of the aforementioned. The Recipient must allow and must require its contractors to allow interviews during normal business hours of any employees who might reasonably have information related to such records. The Recipient agrees to include a similar duty regarding audit, interviews, and records retention in any contract or subcontract related to the performance of this Agreement. The provisions of this section survive the term of this Agreement. (CWSRF Agmt. § 2.17(b); DWSRF Agmt. Ex. C § C.3.2(d)).

**1.2. BONDS.** Where contractors are used, the Recipient must not authorize construction to begin until each contractor has furnished a performance bond in favor of the Recipient in the following amounts: faithful performance (100%) of contract value; labor and materials (100%) of contract value. This requirement shall not apply to any contract for less than \$25,000.00. (CWSRF Agmt. § 4.3; DWSRF Agmt. Ex. C § C.3.6).

**1.3. COMPLIANCE WITH APPLICABLE LAWS, RULES, AND REQUIREMENTS.** The Recipient must, at all times, comply with and require its contractors and subcontractors to comply with all applicable federal and state laws, rules, guidelines, regulations, and requirements. Without limitation of the foregoing, to the extent applicable, the Recipient must:

- (a) Comply with the provisions of the adopted environmental mitigation plan, if any, for the term of this Agreement;
- (b) Comply with the Policy; and

- (c) Comply with and require compliance with the state and federal requirements set forth elsewhere in this Agreement. (CWSRF Agmt. § 4.5; DWSRF Agmt. Ex. C § C.3.8).

**1.4. INDEMNIFICATION.**

- a) Contractor shall defend, indemnify and hold harmless the State Water Quality Control Board, the California Infrastructure and Economic Development Bank (Bank), and any trustee, and their officers, employees, and agents for the Bonds issued by the Bank, if any, to the same extent Contractor is obligated to defend, indemnify, and hold harmless the City under the Agreement. Contractor shall require its subcontractors to similarly defend, indemnify, and hold harmless the State Water Quality Control Board, the Bank, and any trustee, and their officers, employees, and agents for the Bonds issued by the Bank, if any, to the same extent its subcontractors are obligated to defend, indemnify, and hold harmless the Contractor. CWSRF Agmt. § 4.11; DWSRF Agmt. Ex. C § C.3.17).

**1.5. NO DISCRIMINATION.**

- (a) The Contractor must comply with Government Code section 11135 and the implementing regulations (Cal. Code Regs, tit. 2, § 11140 et seq.), including, but not limited to, ensuring that no person is unlawfully denied full and equal access to the benefits of, or unlawfully subjected to discrimination in the operation of, the Project or System on the basis of sex, race, color, religion, ancestry, national origin, ethnic group identification, age, mental disability, physical disability, medical condition, genetic information, marital status, or sexual orientation as such terms are defined under California law, for as long as the Contractor retains ownership or possession of the Project.
- (b) If Project Funds are used to acquire or improve real property, the Contractor must include a covenant of nondiscrimination running with the land in the instrument effecting or recording the transfer of such real property.
- (c) The Contractor must comply with the federal American with Disabilities Act of 1990 and implementing regulations as required by Government Code section 11135(b).
- (d) The Contractor's obligations under this section shall survive the term of this Agreement.
- (e) During the performance of this Agreement, Recipient and its contractors and subcontractors must not unlawfully discriminate, harass, or allow harassment against any employee or applicant for employment because of sex, race, color, ancestry, religious creed, national origin, sexual orientation, physical disability (including HIV and AIDS), mental disability, medical condition (cancer), age (over 40), marital status, denial of family care leave, or genetic information, gender, gender identity, gender expression, or military and veteran status.
- (f) The Recipient, its contractors, and subcontractors must ensure that the evaluation and treatment of their employees and applicants for employment are free from such discrimination and harassment.
- (g) The Recipient, its contractors, and subcontractors must comply with the provisions of the Fair Employment and Housing Act and the applicable regulations

promulgated thereunder. (Gov. Code, §12990, subs. (a)-(f) et seq.; Cal. Code Regs., tit. 2, § 7285 et seq.) Such regulations are incorporated into this Agreement by reference and made a part hereof as if set forth in full.

- (h) The Recipient, its contractors, and subcontractors must comply with all applicable federal civil rights regulations, including statutory and national policy requirements. (2 CFR § 200.300). This includes, to the greatest extent practicable and to the extent permitted by law, the requirement to respect and protect the freedom of persons and organizations to engage in political and religious speech. (Executive Order 13798).
- (i) The Recipient, its contractors, and subcontractors must give written notice of their obligations under this clause to labor organizations with which they have a collective bargaining or other agreement.
- (j) The Recipient must comply with and include the following nondiscrimination and compliance provision in all subcontracts under this Agreement:

During the performance of this contract, the contractor agrees as follows:

"(a) The contractor will not discriminate against any employee or applicant for employment because of race, creed, color, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, creed, color, or national origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this nondiscrimination clause.

"(b) The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, creed, color, or national origin.

"(c) The contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the agency contracting officer, advising the labor union or workers' representative of the contractor's commitments under Section 202 of Executive Order No. 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

"(d) The contractor will comply with all provisions of Executive Order No. 11246 of Sept. 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

"(e) The contractor will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or

pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

"(f) In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be cancelled,

terminated or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order No.11246 of Sept 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order No. 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

"(g) The contractor will include the provisions of Paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to Section 204 of Executive Order No. 11246 of Sept. 24, 1965, so that such

provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as the contracting agency may direct as a means of enforcing such provisions including sanctions for noncompliance: Provided, however, That in the event the contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the contracting agency, the contractor may request the United States to enter into such litigation to protect the interests of the United States."

**1.6. INSURANCE.** For any policy of insurance concerning or covering the construction of the Project, it will cause, and will require its contractors and subcontractors to cause, a certificate of insurance to be issued showing, the State, the State Water Board, its officers, agents, employees, and servants as additional insured; and must provide the Division with a copy of all such certificates prior to the commencement of construction of the Project. (CWSRF Agmt. § 4.17; DWSRF Agmt. Ex. C § C.3.25).

**1.7. EXCLUDED PARTIES.** Contractor shall not contract with any party who is debarred or suspended or otherwise excluded from or ineligible for participation in any work overseen, directed, funded, or administered by the State Water Board program for which this funding is authorized. For any work related to this Agreement, Contractor shall not contract with any individual or organization on the State Water Board's List of Disqualified Businesses and Persons that is identified as debarred or suspended or otherwise excluded from or ineligible for participation in any work overseen, directed, funded, or administered by the State Water Board program for which funding under this Agreement is authorized. The State Water Board's List of Disqualified Businesses and Persons is located at:

[http://www.waterboards.ca.gov/water\\_issues/programs/enforcement/fwa/dbp.shtm](http://www.waterboards.ca.gov/water_issues/programs/enforcement/fwa/dbp.shtm)  
(CWSRF Agmt. § 4.18; DWSRF Agmt. Ex. C § C.3.26).

**1.8. PREVAILING WAGES.** The Contractor agrees to be bound by all applicable provisions of State Labor Code regarding prevailing wages. The Contractor must monitor all agreements subject to reimbursement from this Agreement to ensure that the prevailing wage provisions of the State Labor Code are being met. In addition, the Contractor agrees to comply with the Davis-Bacon provisions incorporated by reference in Section 3 of this Agreement. (CWSRF Agmt. § 4.19; DWSRF Agmt. Ex. C § C.3.28).

**1.9. SIGNAGE.** The Contractor shall place a sign at least four feet tall by eight feet wide made of ¾ inch thick exterior grade plywood or other approved material in a prominent location on the Project site and shall maintain the sign in good condition for the duration

of the construction period. The sign must include the following disclosure statement and color logos (available from the Division):

- a)  Clean Water State Revolving Fund
- b) "Funding for this \$x.x million [name of project] project has been provided in full or in part by the Clean Water State Revolving Fund through an agreement with the State Water Resources Control Board. California's Clean Water State Revolving Fund is capitalized through a variety of funding sources, including grants from the United States Environmental Protection Agency and state bond proceeds."

The Project sign may include another agency's required promotional information so long as the above logos and disclosure statement are equally prominent on the sign. The sign shall be prepared in a professional manner. (CWSRF Agmt. Ex. A § 9; DWSRF Agmt. Ex. A § A.2.3).

See **Attachment E – Supplementary Special Provisions, Section 3-11.2, "Project Identification Sign"** for more information.

- 1.10. DISCLAIMER.** Funding for this project has been provided in full or in part through an agreement with the State Water Resources Control Board. California's Clean Water State Revolving Fund is capitalized through a variety of funding sources, including grants from the United States Environmental Protection Agency and state bond proceeds. The contents of this document do not necessarily reflect the views and policies of the foregoing, nor does mention of trade names or commercial products constitute endorsement or recommendation for use." (DWSRF Agmt. Ex. A § A.2.1).
- 1.11. FEDERAL AWARD CONDITIONS.** Contractor must comply with the following federal conditions:
- 1.12. American Iron and Steel.** Unless the City has obtained a waiver from USEPA on file with the State Water Board or unless this Project is not a project for the construction, alteration, maintenance or repair of a public water system or treatment work, Contractor shall not purchase "iron and steel products" produced outside of the United States on this Project. Unless the City has obtained a waiver from USEPA on file with the State Water Board or unless this Project is not a project for the construction, alteration, maintenance or repair of a public water system or treatment work, Contractor shall ensure that all "iron and steel products" used in the Project were or will be produced in the United States. For purposes of this section, the term "iron and steel products" means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials. "Steel" means an alloy that includes at least 50 percent iron, between .02 and 2 percent carbon, and may include other elements. CWSRF Agmt. Ex. E § A(1); DWSRF Agmt. Ex. C § C.4.3.i; WIFIA Agmt. §§ 12(j), 14(l))
- 1.13. Wage Rate Requirements (Davis-Bacon).** Contractor must include in its subcontracts the full the language provided in Attachment D, Section 10, regarding federal prevailing wages. CWSRF Agmt. Ex. E § A(2); DWSRF Agmt. Ex. C § C.4.3.ii; WIFIA Agmt. §§ 12(j), 14(l)).
- 1.14. Reserved.**

**1.15. Copyright and Patent.** USEPA and the State Water Board have the right to reproduce, publish, use and authorize others to reproduce, publish and use copyrighted works or other data developed pursuant to this Agreement. Where an invention is made with Project Funds, USEPA and the State Water Board retain the right to a worldwide, nonexclusive, nontransferable, irrevocable, paid-up license to practice the invention owned by Contractor. Contractor must utilize the Interagency Edison extramural invention reporting system at <http://Edison.gov> and shall notify the State Water Board when an invention report, patent report, or utilization report is filed. (CWSRF Agmt. Ex. E § A(5)(e); DWSRF Agmt. Ex. C § C.4.3.i)

**1.16. Credit.** Contractor agrees that any reports, documents, publications or other materials developed for public distribution supported by this Agreement shall contain the following statement (CWSRF Agmt. Ex. E § A(5)(f)):

*"This project has been funded wholly or in part by the United States Environmental Protection Agency and the State Water Resources Control Board. The contents of this document do not necessarily reflect the views and policies of the Environmental Protection Agency or the State Water Resources Control Board, nor does the EPA or the Board endorse trade names or recommend the use of commercial products mentioned in this document."*

**1.17. Trafficking in Persons.** The Recipient, its employees, contractors and subcontractors and their employees warrants that it will not engage in severe forms of trafficking in persons, procure a commercial sex act during the term of this Agreement, or use forced labor in the performance of this Agreement. The Recipient must include this provision in its contracts and subcontracts under this Agreement. The Recipient must inform the State Water Board immediately of any information regarding a violation of the foregoing. The Recipient understands that failure to comply with this provision may subject the State Water Board to loss of federal funds. The Recipient agrees to compensate the State Water Board for any such funds lost due to its failure to comply with this condition, or the failure of its contractors or subcontractors to comply with this condition. The State Water Board may unilaterally terminate this Agreement if the Recipient that is a private entity is determined to have violated the foregoing. (CWSRF Agmt. Ex. E § A(5)(h); DWSRF Agmt. Ex. C § C.4.3.xiii).

**1.18. Influencing.** The Contractor certifies to the best of its knowledge and belief that:

- a. No federal appropriated funds have been paid or will be paid, by or on behalf of the Contractor, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any federal contract, the making of any federal grant, the making of any federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any federal contract, grant, loan, or cooperative agreement.
- b. If any funds other than federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress in connection with this Agreement, the Contractor shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions, and notify the State Water Board.

The Contractor shall require this certification from all parties to any contract or agreement that the Recipient enters into and under which the Recipient incurs costs for which it seeks disbursements under this Agreement.

**1.19. CIVIL RIGHTS OBLIGATIONS.** Contractor shall comply with the following federal non-discrimination requirements CWSRF Agmt. Ex. E § B; DWSRF Agmt. Ex. C § C.4.3.xv; WIFIA Agmt. Ex. E):

- a) Title VI of the Civil Rights Act of 1964, which prohibits discrimination based on race, color, and national origin, including limited English proficiency (LEP).
- b) Section 504 of the Rehabilitation Act, 29 USC 794, supplemented by EO 11914, 41 FR 17871, April 29, 1976 and 11250, 30 FR 13003, October 13, 1965, which prohibits discrimination against persons with disabilities.
- c) The Age Discrimination Act of 1975, which prohibits age discrimination.
- d) Section 13 of the Federal Water Pollution Control Act Amendments of 1972, which prohibits discrimination on the basis of sex.
- e) 40 CFR Part 7, as it relates to the foregoing.
- f) If the Project relates to construction of a publicly owned treatment works, where the Recipient contracts for program management, construction management, feasibility studies, preliminary engineering, design, engineering, surveying, mapping, or architectural related services, the Recipient shall ensure that any such contract is negotiated in the same manner as a contract for architectural and engineering services is negotiated under chapter 11 of title 40, United States Code, or an equivalent State qualifications-based requirement as determined by the State Water Board.
- g) If the Project relates to construction of a publicly owned treatment works, the Recipient certifies that it has developed and is implementing a fiscal sustainability plan for the Project that includes an inventory of critical assets that are a part of the Project, an evaluation of the condition and performance of inventoried assets or asset groupings, a certification that the Recipient has evaluated and will be implementing water and energy conservation efforts as part of the plan, and a plan for maintaining, repairing, and, as necessary, replacing the Project and a plan for funding such activities.
- h) Executive Order No. 11246. Contractor shall include in its subcontracts related to the Project the following provisions (41 CFR § 60-1.4(b)):
  - "During the performance of this contract, the contractor agrees as follows:
    - (1) The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, sexual orientation, gender identity, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, religion, sex, sexual orientation, gender identity, or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the City setting forth the provisions of this nondiscrimination clause.
    - (2) The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants

will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, or national origin.

- (3) The contractor will not discharge or in any other manner discriminate against any employee or applicant for employment because such employee or applicant has inquired about, discussed, or disclosed the compensation of the employee or applicant or another employee or applicant. This provision shall not apply to instances in which an employee who has access to the compensation information of other employees or applicants as a part of such employee's essential job functions discloses the compensation of such other employees or applicants to individuals who do not otherwise have access to such information, unless such disclosure is in response to a formal complaint or charge, in furtherance of an investigation, proceeding, hearing, or action, including an investigation conducted by the employer, or is consistent with the contractor's legal duty to furnish information.
- (4) The contractor will send to each labor union or representative of workers with which it has a collective bargaining agreement or other contract or understanding, a notice to be provided by the City advising the labor union or workers' representatives of the contractor's commitments under section 202 of Executive Order 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.
- (5) The contractor will comply with all provisions of Executive Order 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.
- (6) The contractor will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.
- (7) In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be canceled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.
- (8) The contractor will include the provisions of paragraphs (1) through (8) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or

purchase order as may be directed by the Secretary of Labor as a means of enforcing such provisions, including sanctions for noncompliance: Provided, however, that in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such, the contractor may request the United States to enter into such litigation to protect the interests of the United States."

- i) **Disadvantaged Business Enterprises (40 CFR Part 33).** Contractor agrees to comply with the requirements of USEPA's Program for Utilization of Small, Minority and Women's Business Enterprises. The DBE rule can be accessed at [www.epa.gov/osbp](http://www.epa.gov/osbp). Contractor shall comply with 40 CFR Section 33.301, and retain all records documenting compliance with the six good faith efforts. The Contractor shall not discriminate on the basis of race, color, national origin or sex in the performance of this contract. The Contractor shall carry out applicable requirements of 40 CFR part 33 in the award and administration of contracts awarded under EPA financial assistance agreements. Failure by the Contractor to carry out these requirements is a material breach of this contract which may result in the termination of this contract or other legally available remedies. (CWSRF Agmt. Ex. E § D(2); DWSRF Agmt. Ex. A § A.2.2.5; WIFIA Agmt. Ex. E, 40 CFR 33.302(i))

**1.20. PROCUREMENT PROHIBITIONS UNDER SECTION 306 OF THE CLEAN AIR ACT AND SECTION 508 OF THE CLEAN WATER ACT, INCLUDING EXECUTIVE ORDER 11738, ADMINISTRATION OF THE CLEAN AIR ACT AND THE FEDERAL WATER POLLUTION CONTROL ACT WITH RESPECT TO FEDERAL CONTRACTS, GRANTS, OR LOANS; 42 USC § 7606; 33 USC § 1368.**

Except where the purpose of this Agreement is to remedy the cause of the violation, Contractor may not procure goods, services, or materials from suppliers excluded under the federal System for Award Management: <http://www.sam.gov/>.

**1.21. SECURE CONNECTION.** Contractor agrees that if its network or information system is connected to USEPA networks to transfer data using systems other than the Environmental Information Exchange Network or USEPA's Central Data Exchange, it will ensure that any connections are secure. (CWSRF Agmt. Ex. E § D(5); DWSRF Agmt. Ex. C § C.4.3.xxii).

**1.22. GEOSPATIAL DATA STANDARDS.** All geospatial data created pursuant to this Agreement that is submitted to the State Water Board for use by USEPA or that is submitted directly to USEPA must be consistent with Federal Geographic Data Committee endorsed standards. Information on these standards may be found at [www.fgdc.gov](http://www.fgdc.gov). (CWSRF Agmt. Ex. E § E; DWSRF Agmt. Ex. C § C.4.3.xxiii)

**1.23. TELECOMMUNICATIONS.** The Contractor certifies that no Project Funds will be used on:

- a. Video surveillance or telecommunications equipment produced by Huawei Technologies Company or ZTE Corporation (or any subsidiary or affiliate of such entities), telecommunications equipment produced by Hytera Communications Corporation, Hangzhou Hikvision Digital Technology Company, or Dahua Technology Company (or any subsidiary or affiliate of such entities);
- b. Telecommunications or video surveillance services produced by such entities;
- c. Telecommunications or video surveillance equipment or services produced or provided by an entity that the Secretary of Defense, in consultation with the

Director of the National Intelligence or the Director of the Federal Bureau of Investigation, reasonably believes to be an entity owned or controlled by, or otherwise connected to, the government of a covered foreign country; or

- d. Other telecommunications or video surveillance services or equipment in violation of [2 CFR 200.216](#).

**2. NOTICE OF REQUIREMENT FOR AFFIRMATIVE ACTION TO ENSURE EQUAL EMPLOYMENT OPPORTUNITY (EXECUTIVE ORDER 11246) located at 41 CFR § 60-4.2.**

**2.1.** The goal and timetables for minority and female participation, expressed in percentage terms for the Contractor’s aggregate workforce in each trade on all construction work in the covered area, as follows:

	<u>Goal</u>
1. Minority Participation:	16.9%
2. Female Participation:	6.9%

**2.2.** These goals are applicable to all the Contractor’s construction work (whether or not it is Federal or federally assisted) performed in the covered area. If the Contractor performs Work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical area where the Work is actually performed. With regard to this second area, the Contractor also is subject to the goals for both federally involved and non-federally involved Work.

**2.3.** The Contractor’s compliance with the Executive Order and the regulations in 41 CFR Part 60-4 shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and its efforts to meet the goals.

**2.4.** The hours of minority and female employment and training shall be substantially uniform throughout the length of the Contract, and in each trade, and the Contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from Contractor to Contractor or from project to project for the sole purpose of meeting the Contractor’s goals shall be a violation of the Contract, the Executive Order, and the regulations in 41 CFR Part 60-4. Compliance with the goals will be measured against the total work hours performed.

**2.5.** The Contractor shall provide written notification to the Director the Office of Federal Contract Compliance Programs within 10 Working Days of award of any Subcontract in excess of \$10,000 at any tier for Work under the Contract resulting from this solicitation. The notification shall list the name, address and telephone number of the Subcontractor; employer identification number of the Subcontractor; estimated dollar amount of the Subcontract; estimated starting and completion dates of the Subcontract; and the geographical area in which the subcontract is to be performed. The “covered area” is the City of San Diego.

**3. EQUAL OPPORTUNITY CLAUSES:**

**3.1** The following equal opportunity clauses are incorporated by reference herein:

- 1. The equal opportunity clause located 41 CFR 60.1.4(a), which specifies the obligations imposed under Executive Order 11246.

2. The equal opportunity clause located at 41 CFR 60-741.5, which contains the obligations imposed by Section 503 of the Rehabilitation Act of 1973.
3. The "Equal Opportunity Clause" (Resolution No. 765092) filed on December 4, 1978, in the Office of the City Clerk, San Diego, California and incorporated in the "Standard Federal Employment Opportunity Construction Contract Specifications (Executive Order 11246 - Document No. 769023, filed September 11, 1984, in the Office of the City Clerk, San Diego, California) is applicable to all non-exempt City construction contracts and subcontracts of \$2,000 or more.
4. Age Discrimination Act of 1975, Pub. L. 94-135.
5. Title VI of the Civil Rights Act of 1964, Pub. L. 88-352.
6. Section 13 of the Federal Water Pollution Control Acts Amendments of 1972, Pub. L. 92-5200 (the Clean Water Act).
7. Section 504 of the Rehabilitation Act of 1973, Pub. L. 93-112 (Executive Orders 11914 and 11250).
8. Women's Minority Business Enterprises, Executive Orders 11625, 12138 and 12432.
9. Section 129 of the Small Business Administration Reauthorization and Amendment Act of 1988, Pub. L. 100-590.

**4. STANDARD FEDERAL EQUAL EMPLOYMENT SPECIFICATIONS:**

**1.1** The Contractor is required to comply with the 15 "Standard Federal Equal Employment Specifications" in section 4.2 below and also located in 41 CFR 60-4.3 for federal and federally assisted construction contracts in excess of \$10,000.

**1.2** Standard Federal Equal Employment Specifications.

1. As used in these specifications:
  - a) Covered area" means the geographical area described in the solicitation from which this contract resulted;
  - b) "Director" means Director, Office of Federal Contract Compliance Programs, United States Department of Labor, or any person to whom the Director delegates authority;
  - c) "Employer identification number" means the Federal Social Security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941.
  - d) Minority" includes:
    - i. Black (all persons having origins in any of the Black African racial groups not of Hispanic origin);
    - ii. Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American or other Spanish Culture or origin, regardless of race);

- iii. Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands); and
    - iv. American Indian or Alaskan Native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).
2. Whenever the Contractor, or any Subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of \$10,000 the provisions of these specifications and the Notice which contains the applicable goals for minority and female participation and which is set forth in the solicitations from which this contract resulted.
3. If the Contractor is participating (pursuant to [41 CFR 60-4.5](#)) in a Hometown Plan approved by the U.S. Department of Labor in the covered area either individually or through an association, its affirmative action obligations on all work in the Plan area (including goals and timetables) shall be in accordance with that Plan for those trades which have unions participating in the Plan. Contractors must be able to demonstrate their participation in and compliance with the provisions of any such Hometown Plan. Each Contractor or Subcontractor participating in an approved Plan is individually required to comply with its obligations under the EEO clause, and to make a good faith effort to achieve each goal under the Plan in each trade in which it has employees. The overall good faith performance by other Contractors or Subcontractors toward a goal in an approved Plan does not excuse any covered Contractor's or Subcontractor's failure to take good faith efforts to achieve the Plan goals and timetables.
4. The Contractor shall implement the specific affirmative action standards provided in item 7, paragraphs "a" through "p", of this section below. The goals set forth in the solicitation from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and female utilization the Contractor should reasonably be able to achieve in each construction trade in which it has employees in the covered area. Covered Construction contractors performing construction work in geographical areas where they do not have a Federal or federally assisted construction contract shall apply the minority and female goals established for the geographical area where the work is being performed. Goals are published periodically in the Federal Register in notice form, and such notices may be obtained from any Office of Federal Contract Compliance Programs office or from Federal procurement contracting officers. The Contractor is expected to make substantially uniform progress in meeting its goals in each craft during the period specified.
5. Neither the provisions of any collective bargaining agreement, nor the failure by a union with whom the Contractor has a collective bargaining agreement, to refer either minorities or women shall excuse the Contractor's obligations under these specifications, [Executive Order 11246](#), or the regulations promulgated pursuant thereto.
6. In order for the nonworking training hours of apprentices and trainees to be counted in meeting the goals, such apprentices and trainees must be employed by the Contractor during the training period, and the Contractor must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees must be trained pursuant to training programs approved by the U.S. Department of Labor.

7. The Contractor shall take specific affirmative actions to ensure equal employment opportunity. The evaluation of the Contractor's compliance with these specifications shall be based upon its effort to achieve maximum results from its actions. The Contractor shall document these efforts fully, and shall implement affirmative action steps at least as extensive as the following:
- a) Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which the Contractor's employees are assigned to work. The Contractor, where possible, will assign two or more women to each construction project. The Contractor shall specifically ensure that all foremen, superintendents, and other on-site supervisory personnel are aware of and carry out the Contractor's obligation to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities
  - b) Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority and female recruitment sources and to community organizations when the Contractor or its unions have employment opportunities available, and maintain a record of the organizations' responses.
  - c) Maintain a current file of the names, addresses and telephone numbers of each minority and female off-the-street applicant and minority or female referral from a union, a recruitment source or community organization and of what action was taken with respect to each such individual. If such individual was sent to the union hiring hall for referral and was not referred back to the Contractor by the union or, if referred, not employed by the Contractor, this shall be documented in the file with the reason therefor, along with whatever additional actions the Contractor may have taken.
  - d) Provide immediate written notification to the Director when the union or unions with which the Contractor has a collective bargaining agreement has not referred to the Contractor a minority person or woman sent by the Contractor, or when the Contractor has other information that the union referral process has impeded the Contractor's efforts to meet its obligations.
  - e) Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the Contractor's employment needs, especially those programs funded or approved by the Department of Labor. The Contractor shall provide notice of these programs to the sources compiled under 7b above.
  - f) Disseminate the Contractor's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting the Contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.
  - g) Review, at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any

responsibility for hiring, assignment, layoff, termination or other employment decisions including specific review of these items with onsite supervisory personnel such as Superintendents, General Foremen, etc., prior to the initiation of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.

- h) Disseminate the Contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing the Contractor's EEO policy with other Contractors and Subcontractors with whom the Contractor does or anticipates doing business.
  - i) Direct its recruitment efforts, both oral and written, to minority, female and community organizations, to schools with minority and female students and to minority and female recruitment and training organizations serving the Contractor's recruitment area and employment needs. Not later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the Contractor shall send written notification to organizations such as the above, describing the openings, screening procedures, and tests to be used in the selection process.
  - j) Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer and vacation employment to minority and female youth both on the site and in other areas of a Contractor's work force.
  - k) Validate all tests and other selection requirements where there is an obligation to do so under [41 CFR part 60-3](#).
  - l) Conduct, at least annually, an inventory and evaluation at least of all minority and female personnel for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.
  - m) Ensure that seniority practices, job classifications, work assignments and other personnel practices, do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the Contractor's obligations under these specifications are being carried out.
  - n) Ensure that all facilities and company activities are nonsegregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.
  - o) Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.
  - p) Conduct a review, at least annually, of all supervisors' adherence to and performance under the Contractor's EEO policies and affirmative action obligations.
8. Contractors are encouraged to participate in voluntary associations which assist in fulfilling one or more of their affirmative action obligations (item 7, paragraphs "a" through "p", of this section). The efforts of a contractor association, joint

contractor-union, contractor-community, or other similar group of which the contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under item 7, paragraphs "a" through "p", of this section that the contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the Contractor's minority and female workforce participation, makes a good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the Contractor. The obligation to comply, however, is the Contractor's and failure of such a group to fulfill an obligation shall not be a defense for the Contractor's noncompliance.

9. A single goal for minorities and a separate single goal for women have been established. The Contractor, however, is required to provide equal employment opportunity and to take affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, the Contractor may be in violation of the Executive Order if a particular group is employed in a substantially disparate manner (for example, even though the Contractor has achieved its goals for women generally, the Contractor may be in violation of the Executive Order if a specific minority group of women is underutilized).
10. The Contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex, sexual orientation, gender identity, or national origin.
11. The Contractor shall not enter into any Subcontract with any person or firm debarred from Government contracts pursuant to [Executive Order 11246](#).
12. The Contractor shall carry out such sanctions and penalties for violation of these specifications and of the Equal Opportunity Clause, including suspension, termination and cancellation of existing subcontracts as may be imposed or ordered pursuant to [Executive Order 11246](#), as amended, and its implementing regulations, by the Office of Federal Contract Compliance Programs. Any Contractor who fails to carry out such sanctions and penalties shall be in violation of these specifications and [Executive Order 11246](#), as amended.
13. The Contractor, in fulfilling its obligations under these specifications, shall implement specific affirmative action steps, at least as extensive as those standards prescribed in item 7 of these specifications, so as to achieve maximum results from its efforts to ensure equal employment opportunity. If the Contractor fails to comply with the requirements of the Executive Order, the implementing regulations, or these specifications, the Director shall proceed in accordance with 41 CFR 60-4.8.
14. The Contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government and to keep records. Records shall at least include for each employee the name, address, telephone numbers, construction trade, union affiliation if any, employee identification number when assigned, social security number, race, sex, status (e.g., mechanic, apprentice trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in an easily

understandable and retrievable form; however, to the degree that existing records satisfy this requirement, contractors shall not be required to maintain separate records.

15. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents (e.g., those under the [Public Works Employment Act of 1977](#) and the Community Development Block Grant Program).

- 1.3** Segregated Facilities (41 CFR 60-1.8). The contractor must ensure that facilities provided for employees are provided in such a manner that segregation on the basis of race, color, religion, sex, sexual orientation, gender identity, or national origin cannot result. The contractor may neither require such segregated use by written or oral policies nor tolerate such use by employee custom. The contractor's obligation extends further to ensuring that its employees are not assigned to perform their services at any location, under the contractor's control, where the facilities are segregated. This obligation extends to all contracts containing the equal opportunity clause regardless of the amount of the contract. The term "facilities," as used in this section, means waiting rooms, work areas, restaurants and other eating areas, time clocks, restrooms, wash rooms, locker rooms, and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing provided for employees; Provided, That separate or single-user restrooms and necessary dressing or sleeping areas shall be provided to assure privacy between the sexes.

## **5. VIOLATION OR BREACH OF REQUIREMENTS:**

- 5.1** If at any time during the course of the Contract there is a violation of the Affirmative Action or Equal Employment Opportunity requirements by the Contractor, or the Subcontractors, the City will notify the Contractor of the breach. The City may withhold any further progress payments to the Contractor until the City is satisfied that the Contractor and Subcontractors are in full compliance with these requirements.

## **6. MONTHLY EMPLOYMENT UTILIZATION REPORTS:**

- 6.1** Refer to GENERAL EQUAL OPPORTUNITY CONTRACTING PROGRAM REQUIREMENTS, CONSTRUCTION CONTRACTOR REQUIREMENTS in The WHITEBOOK and the following:
  1. Federal and Non-Federal Work in San Diego County. Submit an updated list only if work is complete or new contracts have been awarded during the span of this project.

## **7. RECORDS OF PAYMENTS TO DBEs:**

- 7.1** The Contractor shall maintain records and documents of payments to DBEs for 5 years following the NOC. These records shall be made available for inspection upon request by any authorized representative of the City, funding agency, or both. The reporting requirement shall be extended to any certified DBE Subcontractor.

## **8. FEDERAL WAGE REQUIREMENTS FOR FEDERALLY FUNDED PROJECTS:**

- 8.1** The successful Bidder's work shall be required to comply with Executive Order 11246, entitled "Equal Employment Opportunity," as amended by Executive Order 11375, and as supplemented in Department of Labor regulations (41 CFR chapter 60).

- 8.2** This Executive Order pertains to Equal Employment Opportunity regulations and contains significant changes to the regulations including new goals and timetables for women in construction and revised goals and time-tables for minorities in construction.
- 8.3** Minimum wage rates for this project have been predetermined by the Secretary of Labor and are set forth in the Decision of the Secretary and bound into the specifications book. Should there be any difference between the state or federal wage rates, including health and welfare funds for any given craft, mechanic, or similar classifications needed to execute the Work, it shall be mandatory upon the Contractor or subcontractor to pay the higher of the two rates.
- 8.4** The minimum wage rate to be paid by the Contractor and the Subcontractors shall be in accordance with the Federal Labor Standards Provisions (see below) and Federal Wage Rates (see Wage Rates below) and General Prevailing Wage Determination made by the State of California, Director of Industrial Relations pursuant to California Labor Code Part 7, Chapter 1, Article 2, Sections 1770, 1773 and 1773.1, whichever is higher.
- 8.5** A Contractor having 50 or more employees and its Subcontractors having 50 or more employees and who may be awarded a contract of \$50,000 or more will be required to maintain an affirmative action program, the standards for which are contained in the specifications.
- 8.6** To be eligible for award, each Bidder shall comply with the affirmative action requirements which are contained in the specifications
- 8.7** Women will be afforded equal opportunity in all areas of employment. However, the employment of women shall not diminish the standards of requirements for the employment of minorities.
- 9. PREVAILING WAGE RATES:** Pursuant to San Diego Municipal Code section 22.3019, construction, alteration, demolition, repair and maintenance work performed under this Contract is subject to State prevailing wage laws. For construction work performed under this Contract cumulatively exceeding \$25,000 and for alteration, demolition, repair and maintenance work performed under this Contract cumulatively exceeding \$15,000, the Contractor and its subcontractors shall comply with State prevailing wage laws including, but not limited to, the requirements listed below.
- 9.1 Compliance with Prevailing Wage Requirements.** Pursuant to sections 1720 through 1861 of the California Labor Code, the Contractor and its subcontractors shall ensure that all workers who perform work under this Contract are paid not less than the prevailing rate of per diem wages as determined by the Director of the California Department of Industrial Relations (DIR). This includes work performed during the design and preconstruction phases of construction including, but not limited to, inspection and land surveying work.
- 9.1.1** Copies of such prevailing rate of per diem wages are on file at the City and are available for inspection to any interested party on request. Copies of the prevailing rate of per diem wages also may be found at <http://www.dir.ca.gov/OPRL/DPreWageDetermination.htm>. Contractor and its subcontractors shall post a copy of the prevailing rate of per diem wages determination at each job site and shall make them available to any interested party upon request.
- 9.1.2** The wage rates determined by the DIR refer to expiration dates. If the published wage rate does not refer to a predetermined wage rate to be paid after the expiration date, then the published rate of wage shall be in effect for the life of this Contract. If the published wage rate refers to a predetermined wage rate to

become effective upon expiration of the published wage rate and the predetermined wage rate is on file with the DIR, such predetermined wage rate shall become effective on the date following the expiration date and shall apply to this Contract in the same manner as if it had been published in said publication. If the predetermined wage rate refers to one or more additional expiration dates with additional predetermined wage rates, which expiration dates occur during the life of this Contract, each successive predetermined wage rate shall apply to this Contract on the date following the expiration date of the previous wage rate. If the last of such predetermined wage rates expires during the life of this Contract, such wage rate shall apply to the balance of the Contract.

- 9.2 Penalties for Violations.** Contractor and its subcontractors shall comply with California Labor Code section 1775 in the event a worker is paid less than the prevailing wage rate for the work or craft in which the worker is employed. This shall be in addition to any other applicable penalties allowed under Labor Code sections 1720 – 1861.
- 9.3 Payroll Records.** Contractor and its subcontractors shall comply with California Labor Code section 1776, which generally requires keeping accurate payroll records, verifying and certifying payroll records, and making them available for inspection. Contractor shall require its subcontractors to also comply with section 1776. Contractor and its subcontractors shall submit weekly certified payroll records online via the City’s web-based Labor Compliance Program. Contractor is responsible for ensuring its subcontractors submit certified payroll records to the City.
- 9.3.1** Contractor their subcontractors shall also furnish records specified in Labor Code section 1776 directly to the Labor Commissioner in the manner required by Labor Code section 1771.4.
- 9.4 Apprentices.** Contractor and its subcontractors shall comply with California Labor Code sections 1777.5, 1777.6 and 1777.7 concerning the employment and wages of apprentices. Contractor is held responsible for the compliance of their subcontractors with sections 1777.5, 1777.6 and 1777.7.
- 9.5 Working Hours.** Contractor and their subcontractors shall comply with California Labor Code sections 1810 through 1815, including but not limited to: (i) restrict working hours on public works contracts to eight hours a day and forty hours a week, unless all hours worked in excess of 8 hours per day are compensated at not less than 1½ times the basic rate of pay; and (ii) specify penalties to be imposed on contractors and subcontractors of \$25 per worker per day for each day the worker works more than 8 hours per day and 40 hours per week in violation of California Labor Code sections 1810 through 1815.
- 9.6 Required Provisions for Subcontracts.** Contractor shall include at a minimum a copy of the following provisions in any contract they enter into with a subcontractor: California Labor Code sections 1771, 1771.1, 1775, 1776, 1777.5, 1810, 1813, 1815, 1860 and 1861.
- 9.7 Labor Code Section 1861 Certification.** Contractor in accordance with California Labor Code section 3700 is required to secure the payment of compensation of its employees and by signing this Contract, Contractor certifies that “I am aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for workers’ compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the work of this Contract.”
- 9.8 Labor Compliance Program.** The City has its own Labor Compliance Program authorized in August 2011 by the DIR. The City will withhold contract payments when payroll records

are delinquent or deemed inadequate by the City or other governmental entity, or it has been established after an investigation by the City or other governmental entity that underpayment(s) have occurred. For questions or assistance, please contact the City of San Diego's Prevailing Wage Unit at 858-627-3200.

**9.9 Contractor and Subcontractor Registration Requirements.** This project is subject to compliance monitoring and enforcement by the DIR. A contractor or subcontractor shall not be qualified to bid on, be listed in a bid or proposal, subject to the requirements of section 4104 of the Public Contract Code, or engage in the performance of any contract for public work, unless currently registered and qualified to perform public work pursuant to Labor Code section 1725.5. It is not a violation of this section for an unregistered contractor to submit a bid that is authorized by Section 7029.1 of the Business and Professions code or by Section 10164 or 20103.5 of the Public Contract Code, provided the contractor is registered to perform public work pursuant to Section 1725.5 at the time the contract is awarded.

**9.9.1** A Contractor's inadvertent error in listing a subcontractor who is not registered pursuant to Labor Code section 1725.5 in response to a solicitation shall not be grounds for filing a bid protest or grounds for considering the bid non-responsive provided that any of the following apply: (1) the subcontractor is registered prior to bid opening; (2) within twenty-four hours after the bid opening, the subcontractor is registered and has paid the penalty registration fee specified in Labor Code section 1725.5; or (3) the subcontractor is replaced by another registered subcontractor pursuant to Public Contract Code section 4107.

**9.9.2** By submitting a bid or proposal to the City, Contractor is certifying that he or she has verified that all subcontractors used on this public work project are registered with the DIR in compliance with Labor Code sections 1771.1 and 1725.5, and Contractor shall provide proof of registration for themselves and all listed subcontractors to the City at the time of bid or proposal due date or upon request.

**9.10 Stop Order.** For Contractor or its subcontractors engaging in the performance of any public work contract without having been registered in violation of Labor Code sections 1725.5 or 1771.1, the Labor Commissioner shall issue and serve a stop order prohibiting the use of the unregistered contractors or unregistered subcontractor(s) on ALL public works until the unregistered contractor or unregistered subcontractor(s) is registered. Failure to observe a stop order is a misdemeanor.

**9.11 List of all Subcontractors.** The City may ask Contractor for the most current list of subcontractors (regardless of tier), along with their DIR registration numbers, utilized on this Agreement at any time during performance of this contract, and Contractor shall provide the list within ten (10) working days of the City's request. Additionally, Contractor shall provide the City with a complete list of all subcontractors utilized on this contract (regardless of tier), within ten working days of the completion of the contract, along with their DIR registration numbers. The City shall withhold final payment to Contractor until at least 30 days after this information is provided to the City.

**9.12 Exemptions for Small Projects.** There are limited exemptions for installation, alteration, demolition, or repair work done on projects of \$25,000 or less. The Contractor shall still comply with Labor Code sections 1720 et. seq. The only recognized exemptions are listed below:

**9.12.1 Registration.** The Contractor will not be required to register with the DIR for small projects. (Labor Code section 1771.1)

**9.12.2 Certified Payroll Records.** The records required in Labor Code section 1776 shall be required to be kept and submitted to the City of San Diego, but will not be required to be submitted online with the DIR directly. The Contractor will need to keep those records for at least three years following the completion of the Contract. (Labor Code section 1771.4).

**9.12.3 List of all Subcontractors.** The Contractor shall not be required to hire only registered subcontractors and is exempt from submitting the list of all subcontractors that is required in section 4.20.11 above. (Labor code section 1773.3).

**10. DAVIS-BACON WAGE RATES AND PROVISIONS:**

**10.1. WAGE RATES** This contract shall be subject to the following Davis-Bacon Wage Decisions:

"General Decision Number: CA20210001 03/05/2021

Superseded General Decision Number: CA20200001

State: California

Construction Types: Building, Heavy (Heavy and Dredging),  
Highway and Residential

County: San Diego County in California.

BUILDING CONSTRUCTION PROJECTS; DREDGING PROJECTS (does not include hopper dredge work); HEAVY CONSTRUCTION PROJECTS (does not include water well drilling); HIGHWAY CONSTRUCTION PROJECTS; RESIDENTIAL CONSTRUCTION PROJECTS (consisting of single family homes and apartments up to and including 4 stories)

Note: Under Executive Order (EO) 13658, an hourly minimum wage of \$10.95 for calendar year 2021 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least \$10.95 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2021. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate, if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at [www.dol.gov/whd/govcontracts](http://www.dol.gov/whd/govcontracts).

Workers required to suit up and work in a hazardous material environment: \$2.00 per hour additional. Combination mixer and compressor operator on gunite work shall be classified as a concrete mobile mixer operator.

SEE ZONE DEFINITIONS AFTER CLASSIFICATIONS

POWER EQUIPMENT OPERATORS CLASSIFICATIONS

GROUP 1: Bargeman; Brakeman; Compressor operator; Ditch Witch, with seat or similar type equipment; Elevator operator-inside; Engineer Oiler; Forklift operator (includes loed, lull or similar types under 5 tons; Generator operator; Generator, pump or compressor plant operator; Pump operator; Signalman; Switchman

GROUP 2: Asphalt-rubber plant operator (nurse tank operator); Concrete mixer operator-skip type; Conveyor operator; Fireman; Forklift operator (includes loed, lull or similar types over 5 tons; Hydrostatic pump operator; oiler crusher (asphalt or concrete plant); Petromat laydown machine; PJU side dum jack; Screening and conveyor machine operator (or similar types); Skiploader (wheel type up to 3/4 yd. without attachment); Tar pot fireman; Temporary heating plant operator; Trenching machine oiler

GROUP 3: Asphalt-rubber blend operator; Bobcat or similar type (Skid steer); Equipment greaser (rack); Ford Ferguson (with dragtype attachments); Helicopter radioman (ground); Stationary pipe wrapping and cleaning machine operator

GROUP 4: Asphalt plant fireman; Backhoe operator (mini-max or similar type); Boring machine operator; Boxman or mixerman (asphalt or concrete); Chip spreading machine operator; Concrete cleaning decontamination machine operator; Concrete Pump Operator (small portable); Drilling machine operator, small auger types (Texoma super economatic or similar types - Hughes 100 or 200 or similar types - drilling depth of 30' maximum); Equipment greaser (grease truck); Guard rail post driver operator; Highline cableway signalman; Hydra-hammer-aero stomper; Micro Tunneling (above ground tunnel); Power concrete curing machine operator; Power concrete saw operator; Power-driven jumbo form setter operator; Power sweeper operator; Rock Wheel Saw/Trencher; Roller operator (compacting); Screed operator (asphalt or concrete); Trenching machine operator (up to 6 ft.); Vacuum or much truck

GROUP 5: Equipment Greaser (Grease Truck/Multi Shift).

GROUP 6: Articulating material hauler; Asphalt plant engineer; Batch plant operator; Bit sharpener; Concrete joint machine operator (canal and similar type); Concrete planer operator; Dandy digger; Deck engine operator; Derrickman (oilfield type); Drilling machine operator, bucket or auger types (Calweld 100 bucket or similar types - Watson 1000 auger or similar types - Texoma 330, 500 or 600 auger or similar types - drilling depth of 45' maximum); Drilling machine operator; Hydrographic seeder machine operator (straw, pulp or seed), Jackson track maintainer, or similar type; Kalamazoo Switch tamper, or similar type; Machine tool operator; Maginnis internal full slab vibrator, Mechanical berm, curb or gutter (concrete or asphalt); Mechanical finisher operator (concrete, Clary-Johnson-Bidwell or similar); Micro tunnel system (below ground); Pavement breaker operator (truck mounted); Road oil mixing machine operator; Roller operator (asphalt or finish), rubber-tired earth moving equipment (single engine, up to and including 25 yds. struck); Self-propelled tar pipelining machine operator; Skiploader operator (crawler and wheel type, over 3/4 yd. and up to and including 1-1/2 yds.); Slip form pump operator (power driven hydraulic lifting device for concrete forms); Tractor operator-bulldozer, tamper-scraper (single engine, up to 100 h.p. flywheel and similar types, up to and including D-5 and similar types); Tugger hoist operator (1 drum); Ultra high pressure waterjet cutting tool system operator; Vacuum blasting machine operator

GROUP 8: Asphalt or concrete spreading operator (tamping or finishing); Asphalt paving machine operator (Barber Greene or similar type); Asphalt-rubber distribution operator; Backhoe operator (up to and including 3/4 yd.), small ford, Case or similar; Cast-in-place pipe laying machine operator; Combination mixer and compressor operator (gunite work); Compactor operator (self-propelled); Concrete mixer operator (paving); Crushing plant operator; Drill Doctor; Drilling machine operator, Bucket or auger types (Calweld 150 bucket or similar types - Watson 1500, 2000 2500 auger or similar types - Texoma 700, 800 auger or similar types - drilling depth of 60' maximum); Elevating grader operator; Grade checker; Gradall operator; Grouting machine operator; Heavy-duty repairman; Heavy equipment robotics operator; Kalamazoo balliste regulator or similar type; Kolman belt loader and similar type; Le Tourneau blob compactor or similar type; Loader operator (Athey, Euclid, Sierra and similar types); Mobark Chipper or similar; Ozzie padder or similar types; P.C. slot saw; Pneumatic concrete placing machine operator (Hackley-Presswell or similar type); Pumpcrete gun operator; Rock Drill or similar types; Rotary drill operator (excluding caisson type); Rubber-tired earth-moving equipment operator (single engine, caterpillar, Euclid, Athey Wagon and similar types with any and all attachments over 25 yds. up to and including 50 cu. yds. struck); Rubber-tired earth-moving equipment operator (multiple engine up to and including 25 yds. struck); Rubber-tired scraper operator (self-loading paddle wheel type-John Deere, 1040 and similar single unit); Self-propelled curb and gutter machine operator; Shuttle buggy; Skiploader operator (crawler and wheel type over 1-1/2 yds. up to and including 6-1/2 yds.); Soil remediation plant operator; Surface heaters and planer operator; Tractor compressor drill combination operator; Tractor operator (any type larger than D-5 - 100 flywheel h.p. and over, or similar-bulldozer, tamper, scraper and push tractor single engine); Tractor operator (boom attachments), Traveling pipe wrapping, cleaning and bending machine operator; Trenching machine operator (over 6 ft. depth capacity, manufacturer's rating); trenching Machine with Road Miner attachment (over 6 ft depth capacity): Ultra high pressure waterjet cutting tool system mechanic; Water pull (compaction) operator

GROUP 9: Heavy Duty Repairman

GROUP 10: Drilling machine operator, Bucket or auger types (Calweld 200 B bucket or similar types-Watson 3000 or 5000 auger or similar types-Texoma 900 auger or similar types-drilling depth of 105' maximum); Dual drum mixer, dynamic compactor LDC350 (or similar types); Monorail

locomotive operator (diesel, gas or electric); Motor patrol-blade operator (single engine); Multiple engine tractor operator (Euclid and similar type-except Quad 9 cat.); Rubber-tired earth-moving equipment operator (single engine, over 50 yds. struck); Pneumatic pipe ramming tool and similar types; Prestressed wrapping machine operator; Rubber-tired earth-moving equipment operator (single engine, over 50 yds. struck); Rubber tired earth moving equipment operator (multiple engine, Euclid, caterpillar and similar over 25 yds. and up to 50 yds. struck), Tower crane repairman; Tractor loader operator (crawler and wheel type over 6-1/2 yds.); Woods mixer operator (and similar Pugmill equipment)

GROUP 11: Heavy Duty Repairman - Welder Combination, Welder - Certified.

GROUP 12: Auto grader operator; Automatic slip form operator; Drilling machine operator, bucket or auger types (Calweld, auger 200 CA or similar types - Watson, auger 6000 or similar types - Hughes Super Duty, auger 200 or similar types - drilling depth of 175' maximum); Hoe ram or similar with compressor; Mass excavator operator less tha 750 cu. yards; Mechanical finishing machine operator; Mobile form traveler operator; Motor patrol operator (multi-engine); Pipe mobile machine operator; Rubber-tired earth- moving equipment operator (multiple engine, Euclid, Caterpillar and similar type, over 50 cu. yds. struck); Rubber-tired self- loading scraper operator (paddle-wheel-auger type self-loading - two (2) or more units)

GROUP 13: Rubber-tired earth-moving equipment operator operating equipment with push-pull system (single engine, up to and including 25 yds. struck)

GROUP 14: Canal liner operator; Canal trimmer operator; Remote- control earth-moving equipment operator (operating a second piece of equipment: \$1.00 per hour additional); Wheel excavator operator (over 750 cu. yds.)

GROUP 15: Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (single engine, Caterpillar, Euclid, Athey Wagon and similar types with any and all attachments over 25 yds. and up to and including 50 yds. struck); Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (multiple engine-up to and including 25 yds. struck)

GROUP 16: Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (single engine, over 50 yds. struck); Rubber-tired earth-moving equipment operator, operating equipment with push-pull system

(multiple engine, Euclid, Caterpillar and similar, over 25 yds. and up to 50 yds. struck)

GROUP 17: Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (multiple engine, Euclid, Caterpillar and similar, over 50 cu. yds. struck); Tandem tractor operator (operating crawler type tractors in tandem - Quad 9 and similar type)

GROUP 18: Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps and similar types in any combination, excluding compaction units - single engine, up to and including 25 yds. struck)

GROUP 19: Rotex concrete belt operator (or similar types); Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps and similar types in any combination, excluding compaction units - single engine, Caterpillar, Euclid, Athey Wagon and similar types with any and all attachments over 25 yds. and up to and including 50 cu. yds. struck); Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps and similar types in any combination, excluding compaction units - multiple engine, up to and including 25 yds. struck)

GROUP 20: Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps and similar types in any combination, excluding compaction units - single engine, over 50 yds. struck); Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps, and similar types in any combination, excluding compaction units - multiple engine, Euclid, Caterpillar and similar, over 25 yds. and up to 50 yds. struck)

GROUP 21: Rubber-tired earth-moving equipment operator, operating in tandem (scrapers, belly dumps and similar types in any combination, excluding compaction units - multiple engine, Euclid, Caterpillar and similar type, over 50 cu. yds. struck)

GROUP 22: Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (single engine, up to and including 25 yds. struck)

GROUP 23: Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (single engine, Caterpillar, Euclid, Athey Wagon and similar types with any and all attachments over 25 yds. and up to and including 50 yds. struck); Rubber-tired earth-moving equipment operator, operating with the tandem push-pull system (multiple engine, up to and including 25 yds. struck)

GROUP 24: Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (single engine, over 50 yds. struck); Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (multiple engine, Euclid, Caterpillar and similar, over 25 yds. and up to 50 yds. struck)

GROUP 25: Concrete pump operator-truck mounted; Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (multiple engine, Euclid, Caterpillar and similar type, over 50 cu. yds. struck)

#### CRANES, PILEDRIVING AND HOISTING EQUIPMENT CLASSIFICATIONS

GROUP 1: Engineer oiler; Fork lift operator (includes loed, lull or similar types)

GROUP 2: Truck crane oiler

GROUP 3: A-frame or winch truck operator; Ross carrier operator (jobsite)

GROUP 4: Bridge-type unloader and turntable operator; Helicopter hoist operator

GROUP 5: Hydraulic boom truck; Stinger crane (Austin-Western or similar type); Tugger hoist operator (1 drum)

GROUP 6: Bridge crane operator; Cretor crane operator; Hoist operator (Chicago boom and similar type); Lift mobile operator; Lift slab machine operator (Vagtborg and similar types); Material hoist and/or manlift operator; Polar gantry crane operator; Self Climbing scaffold (or similar type); Shovel, backhoe, dragline, clamshell operator (over 3/4 yd. and up to 5 cu. yds. mrc); Tugger hoist operator

GROUP 7: Pedestal crane operator; Shovel, backhoe, dragline, clamshell operator (over 5 cu. yds. mrc); Tower crane repair; Tugger hoist operator (3 drum)

GROUP 8: Crane operator (up to and including 25 ton capacity); Crawler transporter operator; Derrick barge operator (up to and including 25 ton capacity); Hoist operator, stiff legs, Guy derrick or similar type (up to and including 25 ton capacity); Shovel, backhoe, dragline, clamshell operator (over 7 cu. yds., M.R.C.)

GROUP 9: Crane operator (over 25 tons and up to and including 50 tons mrc); Derrick barge operator (over 25 tons up to and including 50 tons mrc); Highline cableway operator; Hoist operator, stiff legs, Guy derrick or similar type

(over 25 tons up to and including 50 tons mrc); K-crane operator; Polar crane operator; Self erecting tower crane operator maximum lifting capacity ten tons

GROUP 10: Crane operator (over 50 tons and up to and including 100 tons mrc); Derrick barge operator (over 50 tons up to and including 100 tons mrc); Hoist operator, stiff legs, Guy derrick or similar type (over 50 tons up to and including 100 tons mrc), Mobile tower crane operator (over 50 tons, up to and including 100 tons M.R.C.); Tower crane operator and tower gantry

GROUP 11: Crane operator (over 100 tons and up to and including 200 tons mrc); Derrick barge operator (over 100 tons up to and including 200 tons mrc); Hoist operator, stiff legs, Guy derrick or similar type (over 100 tons up to and including 200 tons mrc); Mobile tower crane operator (over 100 tons up to and including 200 tons mrc)

GROUP 12: Crane operator (over 200 tons up to and including 300 tons mrc); Derrick barge operator (over 200 tons up to and including 300 tons mrc); Hoist operator, stiff legs, Guy derrick or similar type (over 200 tons, up to and including 300 tons mrc); Mobile tower crane operator (over 200 tons, up to and including 300 tons mrc)

GROUP 13: Crane operator (over 300 tons); Derrick barge operator (over 300 tons); Helicopter pilot; Hoist operator, stiff legs, Guy derrick or similar type (over 300 tons); Mobile tower crane operator (over 300 tons)

#### TUNNEL CLASSIFICATIONS

GROUP 1: Skiploader (wheel type up to 3/4 yd. without attachment)

GROUP 2: Power-driven jumbo form setter operator

GROUP 3: Dinkey locomotive or motorperson (up to and including 10 tons)

GROUP 4: Bit sharpener; Equipment greaser (grease truck); Slip form pump operator (power-driven hydraulic lifting device for concrete forms); Tugger hoist operator (1 drum); Tunnel locomotive operator (over 10 and up to and including 30 tons)

GROUP 5: Backhoe operator (up to and including 3/4 yd.); Small Ford, Case or similar; Drill doctor; Grouting machine operator; Heading shield operator; Heavy-duty repairperson; Loader operator (Athey, Euclid, Sierra and similar types); Mucking machine operator (1/4 yd., rubber-tired, rail or

track type); Pneumatic concrete placing machine operator (Hackley-Presswell or similar type); Pneumatic heading shield (tunnel); Pumpcrete gun operator; Tractor compressor drill combination operator; Tugger hoist operator (2 drum); Tunnel locomotive operator (over 30 tons)

GROUP 6: Heavy Duty Repairman

GROUP 7: Tunnel mole boring machine operator

#### ENGINEERS ZONES

\$1.00 additional per hour for all of IMPERIAL County and the portions of KERN, RIVERSIDE & SAN BERNARDINO Counties as defined below:

That area within the following Boundary: Begin in San Bernardino County, approximately 3 miles NE of the intersection of I-15 and the California State line at that point which is the NW corner of Section 1, T17N, R14E, San Bernardino Meridian. Continue W in a straight line to that point which is the SW corner of the northwest quarter of Section 6, T27S, R42E, Mt. Diablo Meridian. Continue North to the intersection with the Inyo County Boundary at that point which is the NE corner of the western half of the northern quarter of Section 6, T25S, R42E, MDM. Continue W along the Inyo and San Bernardino County boundary until the intersection with Kern County, as that point which is the SE corner of Section 34, T24S, R40E, MDM. Continue W along the Inyo and Kern County boundary until the intersection with Tulare County, at that point which is the SW corner of the SE quarter of Section 32, T24S, R37E, MDM. Continue W along the Kern and Tulare County boundary, until that point which is the NW corner of T25S, R32E, MDM. Continue S following R32E lines to the NW corner of T31S, R32E, MDM. Continue W to the NW corner of T31S, R31E, MDM. Continue S to the SW corner of T32S, R31E, MDM. Continue W to SW corner of SE quarter of Section 34, T32S, R30E, MDM. Continue S to SW corner of T11N, R17W, SBM. Continue E along south boundary of T11N, SBM to SW corner of T11N, R7W, SBM. Continue S to SW corner of T9N, R7W, SBM. Continue E along south boundary of T9N, SBM to SW corner of T9N, R1E, SBM. Continue S along west boundary of R1E, SBM to Riverside County line at the SW corner of T1S, R1E, SBM. Continue E along south boundary of T1S, SBM (Riverside County Line) to SW corner of T1S, R10E, SBM. Continue S along west boundary of R10E, SBM to Imperial County line at the SW corner of T8S, R10E, SBM. Continue W along Imperial and Riverside county line to NW corner of T9S, R9E, SBM. Continue S along the boundary between Imperial and San Diego Counties, along the west edge of R9E, SBM to the south boundary of Imperial County/California state line. Follow the California state line west to Arizona state line, then north to Nevada state line, then continuing NW back

to start at the point which is the NW corner of Section 1, T17N, R14E, SBM

\$1.00 additional per hour for portions of SAN LUIS OBISPO, KERN, SANTA BARBARA & VENTURA as defined below:

That area within the following Boundary: Begin approximately 5 miles north of the community of Cholame, on the Monterey County and San Luis Obispo County boundary at the NW corner of T25S, R16E, Mt. Diablo Meridian. Continue south along the west side of R16E to the SW corner of T30S, R16E, MDM. Continue E to SW corner of T30S, R17E, MDM. Continue S to SW corner of T31S, R17E, MDM. Continue E to SW corner of T31S, R18E, MDM. Continue S along West side of R18E, MDM as it crosses into San Bernardino Meridian numbering area and becomes R30W. Follow the west side of R30W, SBM to the SW corner of T9N, R30W, SBM. Continue E along the south edge of T9N, SBM to the Santa Barbara County and Ventura County boundary at that point which is the SW corner of Section 34. T9N, R24W, SBM, continue S along the Ventura County line to that point which is the SW corner of the SE quarter of Section 32, T7N, R24W, SBM. Continue E along the south edge of T7N, SBM to the SE corner to T7N, R21W, SBM. Continue N along East side of R21W, SBM to Ventura County and Kern County boundary at the NE corner of T8N, R21W. Continue W along the Ventura County and Kern County boundary to the SE corner of T9N, R21W. Continue North along the East edge of R21W, SBM to the NE corner of T12N, R21W, SBM. Continue West along the north edge of T12N, SBM to the SE corner of T32S, R21E, MDM. [T12N SBM is a thin strip between T11N SBM and T32S MDM]. Continue North along the East side of R21E, MDM to the Kings County and Kern County border at the NE corner of T25S, R21E, MDM, continue West along the Kings County and Kern County Boundary until the intersection of San Luis Obispo County. Continue west along the Kings County and San Luis Obispo County boundary until the intersection with Monterey County. Continue West along the Monterey County and San Luis Obispo County boundary to the beginning point at the NW corner of T25S, R16E, MDM.

\$2.00 additional per hour for INYO and MONO Counties and the Northern portion of SAN BERNARDINO County as defined below:

That area within the following Boundary: Begin at the intersection of the northern boundary of Mono County and the California state line at the point which is the center of Section 17, T10N, R22E, Mt. Diablo Meridian. Continue S then SE along the entire western boundary of Mono County, until it reaches Inyo County at the point which is the NE corner of the Western half of the NW quarter of Section 2, T8S, R29E, MDM. Continue SSE along the entire western boundary of Inyo County, until the intersection with Kern County at the point which is the SW corner of the SE 1/4 of Section 32, T24S, R37E, MDM.

Continue E along the Inyo and Kern County boundary until the intersection with San Bernardino County at that point which is the SE corner of section 34, T24S, R40E, MDM. Continue E along the Inyo and San Bernardino County boundary until the point which is the NE corner of the Western half of the NW quarter of Section 6, T25S, R42E, MDM. Continue S to that point which is the SW corner of the NW quarter of Section 6, T27S, R42E, MDM. Continue E in a straight line to the California and Nevada state border at the point which is the NW corner of Section 1, T17N, R14E, San Bernardino Meridian. Then continue NW along the state line to the starting point, which is the center of Section 18, T10N, R22E, MDM.

LABORER (RESIDENTIAL CONSTRUCTION - See definition below)		
(1) Laborer.....	\$ 30.82	18.80
(2) Cleanup, Landscape, Fencing (Chain Link & Wood).	\$ 29.53	18.80

RESIDENTIAL DEFINITION: Wood or metal frame construction of single family residences, apartments and condominiums - excluding (a) projects that exceed three stories over a garage level, (b) any utility work such as telephone, gas, water, sewer and other utilities and (c) any fine grading work, utility work or paving work in the future street and public right-of-way; but including all rough grading work at the job site behind the existing right of way

LABORER CLASSIFICATIONS

GROUP 1: Cleaning and handling of panel forms; Concrete Screeding for Rought Strike-off; Concrete, water curing; Demolition laborer; Flagman; Gas, oil and/or water pipeline laborer; General Laborer; General clean-up laborer; Landscape laborer; Jetting laborer; Temporary water and air lines laborer; Material hoseman (walls, slabs, floors and decks); Plugging, filling of Shee-bolt holes; Dry packing of concrete; Railroad maintenance, Repair Trackman and road beds, Streetcar and railroad construction trac laborers; Slip form raisers; Slurry seal crews (mixer operator, applicator operator, squeegee man, Shuttle man, top man), filling of cracks by any method on any surface;

Tarman and mortar man; Tool crib or tool house laborer; Window cleaner; Wire Mesh puling-all concrete pouring operations

GROUP 2: Asphalt Shoveler; Cement Dumper (on 1 yard or larger mixer and handling bulk cement); Cesspool digger and installer; Chucktender; Chute man, pouring concrete, the handling of the chute from ready mix trucks, such as walls, slabs, decks, floors, foundations, footings, curbs, gutters and sidewalks; Concrete curer-impervious membrane and form oiler; Cutting torch operator (demolition); Guinea chaser; Headboard man-asphalt; Laborer, packing rod steel and pans; membrane vapor barrier installer; Power broom sweepers (small); Riiprap, stonepaver, placing stone or wet sacked concrete; Roto scraper and tiller; Tank sealer and cleaner; Tree climber, faller, chain saw operator, Pittsburgh Chipper and similar type brush shredders; Underground laborers, including caisson bellower

GROUP 3: Buggymobile; Concrete cutting torch; Concrete cutting torch; Concrete pile cutter; Driller, jackhammer, 2 1/2 feet drill steel or longer; Dri Pak-it machine; High sealer (including drilling of same); Hydro seeder and similar type; Impact wrench, multi-plate; Kettlemen, potmen and men applying asphalt, lay-kold, creosote, line caustic and similar type materials (applying means applying, dipping, brushing or handling of such materials for pipe wrapping and waterproofing); Operators of pneumatic, gas, electric tools, vibrating machines, pavement breakers, air blasting, come-along, and similar mechanical tools not separately classified herein; Pipelayers back up man coating, grouting, making of joints, sealing, caulking, diapering and including rubber gasket joints, pointing and any and all other services; Rotary Scarifier or multiple head concrete chipping scarifier; Steel header board man and guideline setter; Tampers, Barko, Wacker and similar type; Trenching machine, handpropelled

GROUP 4: Asphalt raker, luterman, ironer, asphalt dumpman and asphalt spreader boxes (all types); Concrete core cutter (walls, floors or ceilings), Grinder or sander; Concrete saw man; cutting walls or flat work, scoring old or new concrete; Cribber, shorer, lagging, sheeting and trench bracing, hand-guided lagging hammer; Laser beam in connection with laborer's work; Oversize concrete vibrator operator 70 pounds and over; Pipelayer performing all services in the laying, installation and all forms of connection of pipe from the point of receiving pipe in the ditch until completion of operation, including any and all forms of tubular material, whether pipe, metallic or non-metallic, conduit, and any other stationary type of tubular device used for the conveying of any substance or

element, whether water, sewage, solid, gas, air or other product whatsoever and without regard to the nature of material from which the tubular material is fabricated; No joint pipe and stripping of same; Prefabricated manhole installer; Sandblaster (nozzleman), Porta shot-blast, water blasting

GROUP 5: Blasters Powderman-All work of loading holes, placing and blasting of all powder and explosives of whatever type, regardless of method used for such loading and placing; Driller-all power drills, excluding jackhammer, whether core, diamond, wagon, track, multiple unit, and any and all other types of mechanical drills without regard to the form of motive power.

LABORER CLASSIFICATIONS

GROUP 1: Laborer: General or Construction Laborer, Landscape Laborer. Asphalt Rubber Material Loader. Boring Machine Tender (outside), Carpenter Laborer (cleaning, handling, oiling & blowing of panel forms and lumber), Concrete Laborer, Concrete Screeding for rough strike-off, Concrete water curing. Concrete Curb & Gutter laborer, Certified Confined Space Laborer, Demolition laborer & Cleaning of Brick and lumber, Expansion Joint Caulking; Environmental Remediation, Monitoring Well, Toxic waste and Geotechnical Drill tender, Fine Grader, Fire Watcher, Limbers, Brush Loader, Pilers and Debris Handlers. flagman. Gas Oil and Water Pipeline Laborer. Material Hoseman (slabs, walls, floors, decks); Plugging, filling of shee bolt holes; Dry packing of concrete and patching; Post Holer Digger (manual); Railroad maintenance, repair trackman, road beds; Rigging & signaling; Scaler, Slip-Form Raisers, Filling cracks on any surface, tool Crib or Tool House Laborer,

Traffic control (signs, barriers, barricades, delineator, cones etc.), Window Cleaner

GROUP 2: Asphalt abatement; Buggymobile; Cement dumper (on 1 yd. or larger mixers and handling bulk cement); Concrete curer, impervious membrane and form oiler; Chute man, pouring concrete; Concrete cutting torch; Concrete pile cutter; driller/Jackhammer, with drill steel 2 1/2 feet or longer; Dry pak-it machine; Fence erector; Pipeline wrapper, gas, oil, water, pot tender & form man; Grout man; Installation of all asphalt overlay fabric and materials used for reinforcing asphalt; Irrigation laborer; Kettleman-Potman hot mop, includes applying asphalt, lay-klold, creosote, lime caustic and similar tyhpes of materials (dipping, brushing, handling) and waterproofing; Membrane vapor barrier installer; Pipelayer backup man (coating, grouting, making of joints, sealing caulkiing, diapering including rubber basket joints, pointing); Rotary scarifier, multiple head concrete chipper; Rock slinger; Roto scraper & tiller; Sandblaster pot tender; Septic tank digger/installer; Tamper/wacker operator; Tank scaler & cleaner; Tar man & mortar man; Tree climber/faller, chainb saw operator, Pittsburgh chipper & similar type brush shredders.

GROUP 3: Asphalt, installation of all frabrics; Buggy Mobile Man, Bushing hammer; Compactor (all types), Concrete Curer - Impervious membrane, Form Oiler, Concrete Cutting Torch, Concrete Pile Cutter, Driller/Jackhammer with drill steel 2 1/2 ft or longer, Dry Pak-it machine, Fence erector including manual post hole digging, Gas oil or water Pipeline Wrapper - 6 ft pipe and over, Guradrail erector, Hydro seeder, Impact Wrench man (multi plate), kettleman-Potman Hot Mop includes applying Asphalt, Lay-Kold, Creosote, lime caustic and similar types of materials (dipping, brushing or handling) and waterproofing. Laser Beam in connection with Laborer work. High Scaler, Operators of Pneumatic Gas or Electric Tools, Vibrating Machines, Pavement Breakers, Air Blasting, Come-Alongs and similar mechanical tools, Remote-Controlled Robotic Tools in connection with Laborers work. Pipelayer Backup Man (Coating, grouting, m makeing of joints, sealing, caulking, diapering including rubber gasket joints, pointing and other services). Power Post Hole Digger, Rotary Scarifier (multiple head concrete chipper scarifier), Rock Slinger, Shot Blast equipment (8 to 48 inches), Steel Headerboard Man and Guideline Setter, Tamper/Wacker operator and similar types, Trenching Machine hand propelled.

GROUP 4: Any worker exposed to raw sewage. Asphalt Raker, Luteman, Asphalt Dumpman, Asphalt Spreader Boxes, Concrete

Core Cutter, Concrete Saw Man, Cribber, Shorer, Head Rock Slinger. Installation of subsurface instrumentation, monitoring wells or points, remediation system installer; Laborer, asphalt-rubber distributor bootman; Oversize concrete vibrator operators, 70 pounds or over. Pipelayer, Prefabricated Manhole Installer, Sandblast Nozzleman (Water Blasting-Porta Shot Blast), Traffic Lane Closure.

GROUP 5: Blasters Powderman-All work of loading holes, placing and blasting of all powder and explosives of whatever type, regardless of method used for such loading and placing; Horizontal directional driller, Boring system, Electronic tracking, Driller: all power drills excluding jackhammer, whether core, diamond, wagon, track, multiple unit, and all other types of mechanical drills without regard to form of motive power. Environmental remediation, Monitoring well, Toxic waste and Geotechnical driller, Toxic waste removal. Welding in connection with Laborer's work.

=====  
Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at [www.dol.gov/whd/govcontracts](http://www.dol.gov/whd/govcontracts).

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

-----  
The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical

order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

#### Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

#### Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

#### Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

-----

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- \* an existing published wage determination
- \* a survey underlying a wage determination
- \* a Wage and Hour Division letter setting forth a position on a wage determination matter
- \* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations  
 Wage and Hour Division  
 U.S. Department of Labor  
 200 Constitution Avenue, N.W.  
 Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator  
 U.S. Department of Labor  
 200 Constitution Avenue, N.W.  
 Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board  
 U.S. Department of Labor  
 200 Constitution Avenue, N.W.  
 Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

=====

END OF GENERAL DECISION"

**10.2. CWSRF DAVIS BACON PROVISIONS.** Contractor shall include the following language in this section in all of its subcontracts for the Project. Contractor and all subcontractors working on the Project shall comply with any provisions herein applicable to contractors and subcontractors, respectively:

(1) Minimum wages.

- (i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in § 5.5(a)(4).

Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph (a)(1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

Sub recipients may obtain wage determinations from the U.S. Department of Labor's web site, [www.dol.gov](http://www.dol.gov).

- (ii) (A) The sub recipient(s), on behalf of EPA, shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The State award official shall approve a request for an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

- (1) The work to be performed by the classification requested is not performed by a classification in the wage determination; and
- (2) The classification is utilized in the area by the construction industry; and
- (3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the sub recipient(s) agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), documentation of the action taken and the request, including the local wage determination shall be sent by the sub recipient (s) to the State award official. The State award official will transmit the request, to the Administrator of the Wage and Hour Division, Employment Standards

Administration, U.S. Department of Labor, Washington, DC 20210 and to the EPA DB Regional Coordinator concurrently. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification request within 30 days of receipt and so advise the State award official or will notify the State award official within the 30- day period that additional time is necessary.

(C) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the sub recipient(s) do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the award official shall refer the request and the local wage determination, including the views of all interested parties and the recommendation of the State award official, to the Administrator for determination. The request shall be sent to the EPA DB Regional Coordinator concurrently. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt of the request and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(D) The wage rate (including fringe benefits where appropriate) determined pursuant to paragraphs (a)(1)(ii)(B) or (C) of this section, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

- (iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

- (iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.
  
- (2) Withholding. The sub recipient(s), shall upon written request of the EPA Award Official or an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the (Agency) may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.
  
- (3) Payrolls and basic records.
  - (i) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

- (ii) (A)The contractor shall submit weekly, for each week in which any contract work is performed, a copy of all payrolls to the sub recipient, that is, the entity that receives the sub-grant or loan from the State capitalization grant recipient. Such documentation shall be available on request of the State recipient or EPA. As to each payroll copy received, the sub recipient shall provide written confirmation in a form satisfactory to the State indicating whether or not the project is in compliance with the requirements of 29 CFR 5.5(a)(1) based on the most recent payroll copies for the specified week. The payrolls shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on the weekly payrolls. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at <https://www.dol.gov/whd/forms/index.htm> or its successor site.

The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker and shall provide them upon request to the sub recipient(s) for transmission to the State or EPA if requested by EPA, the State, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the sub recipient(s).

(B)Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

1. That the payroll for the payroll period contains the information required to be provided under § 5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under § 5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;
2. That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;
3. That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of

work performed, as specified in the applicable wage determination incorporated into the contract.

(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph (a)(3)(ii)(B) of this section.

(D) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under paragraph (a)(3)(i) of this section available for inspection, copying, or transcription by authorized representatives of the State, EPA or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency or State may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

(4) Apprentices and trainees

(i) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's

hourly rate) specified in the contractor's or sub contractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

- (ii) Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.
- (iii) Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal

employment opportunity requirements of Executive Order 11246, as amended and 29 CFR part 30.

- (5) Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.
- (6) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the EPA determines may be appropriate, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.
- (7) Contract termination; debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.
- (8) Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.
- (9) Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and sub recipient(s), State, EPA, the U.S. Department of Labor, or the employees or their representatives.
- (10) Certification of eligibility.
  - (i) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).
  - (ii) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).
  - (iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001

## **5. Contract Provision for Contracts in Excess of \$100,000.**

- (a) Contract Work Hours and Safety Standards Act. The sub recipient shall insert the following clauses set forth in paragraphs (a)(1), (2), (3), and (4) of this section in full in any contract in an amount in excess of \$100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These clauses shall be inserted in addition to the

clauses required by Item 3, above or 29 CFR 4.6. As used in this paragraph, the terms laborers and mechanics include watchmen and guards.

- (i) Overtime requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.
  - (ii) Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in paragraph (a)(1) of this section the contractor and any subcontractor responsible therefore shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (a)(1) of this section, in the sum of \$25 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (a)(1) of this section.
  - (iii) Withholding for unpaid wages and liquidated damages. The sub recipient, upon written request of the EPA Award Official or an authorized representative of the Department of Labor, shall withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (b)(2) of this section.
  - (iv) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (a)(1) through (4) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (a)(1) through (4) of this section.
- (b) In addition to the clauses contained in Item 3, above, in any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other statutes cited in 29 CFR 5.1, the Sub recipient shall insert a clause requiring that the contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number,

correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid.

Further, the Sub recipient shall insert in any such contract a clause providing that the records to be maintained under this paragraph shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the (write the name of agency) and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

## **6. Compliance Verification**

(a) The sub recipient shall periodically interview a sufficient number of employees entitled to DB prevailing wages (covered employees) to verify that contractors or subcontractors are paying the appropriate wage rates. As provided in 29 CFR 5.6(a)(3), all interviews must be conducted in confidence. The sub recipient must use Standard Form 1445 (SF 1445) or equivalent documentation to memorialize the interviews. Copies of the SF 1445 are available from EPA on request.

(b) The sub recipient shall establish and follow an interview schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. Sub recipients must conduct more frequent interviews if the initial interviews or other information indicated that there is a risk that the contractor or subcontractor is not complying with DB.

Sub recipients shall immediately conduct interviews in response to an alleged violation of the prevailing wage requirements. All interviews shall be conducted in confidence.

(c) The sub recipient shall periodically conduct spot checks of a representative sample of weekly payroll data to verify that contractors or subcontractors are paying the appropriate wage rates. The sub recipient shall establish and follow a spot check schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. At a minimum, if practicable, the sub recipient should spot check payroll data within two weeks of each contractor or subcontractor's submission of its initial payroll data and two weeks prior to the completion date the contract or subcontract. Sub recipients must conduct more frequent spot checks if the initial spot check or other information indicates that there is a risk that the contractor or subcontractor is not complying with DB. In addition, during the examinations the sub recipient shall verify evidence of fringe benefit plans and payments there under by contractors and subcontractors who claim credit for fringe benefit contributions.

(d) The sub recipient shall periodically review contractors and subcontractors use of apprentices and trainees to verify registration and certification with respect to apprenticeship and training programs approved by either the U.S Department of Labor or a state, as appropriate, and that contractors and subcontractors are not using disproportionate numbers of, laborers, trainees and apprentices. These reviews shall be conducted in accordance with the schedules for spot checks and interviews described in Item 5(b) and (c) above.

(e) Sub recipients must immediately report potential violations of the DB prevailing wage requirements to the EPA DB contact listed above and to the appropriate DOL Wage and Hour District Office listed at <http://www.dol.gov/whd/america2.htm>.

## 11. AGENCY SPECIFIC PROVISIONS:

Note: Failure to comply with these specifications e.g., taking the specified steps prior to Bid opening and submitting the forms with the Bid, will lead to the Bid being declared **non-responsive** and, therefore, shall be rejected.

### 11.1 EPA Requirements:

1. Federal Disadvantaged Business Enterprise (DBE) regulations apply to this project. (Reference 40 Code of Federal Regulations Part 33 - Participation by Disadvantaged Business Enterprises in U.S. Environmental Protection Agency Programs).
2. The responsive Bid shall conform to GFE to increase DBE awareness of procurement opportunities through race and gender neutral efforts. Race and gender neutral efforts are ones which increase awareness of contracting opportunities in general, including outreach, recruitment and technical assistance.
3. Bidder agrees that it will cooperate with and assist the City in fulfilling the DBE Good Faith Effort Requirement achieving "fair share objectives" and will exercise GFE to achieve such minimum participation of small, minority and women owned businesses. In particular, in submitting a bid, the Bidder shall, in the selection of Subcontractors, and Suppliers for the procurement of equipment, supplies, construction, and services related to the project, at a minimum, undertake the affirmative GFE steps.
4. In accordance with EPA's Program for Utilization of Small, Minority Disadvantaged and Women Business Enterprises in procurement under Federal assistance programs, the Contractor agrees to the applicable "fair share objectives" as specified in **Attachment D**.
5. The provisions in the Contract Documents have been incorporated to prevent unfair practices that adversely affect DBEs.
6. If a DBE Subcontractor fails to complete the Work under the subcontract for any reason, the Contractor shall employ the 6 GFE if soliciting a replacement Subcontractor. The Contractor shall employ the 6 GFE described below even if the Contractor has achieved its fair share objectives.
7. Good Faith Efforts:
  - a. The Contractor shall demonstrate that efforts were made to attract DBEs on this contract. The "Good Faith" effort requires the Contractor and any Subcontractors to take the steps listed in these specifications to assure that DBEs are used whenever possible as sources of supplies, construction, equipment, or services even if the Contractor has achieved its fair share objectives.
  - b. If the Contractor awards subcontracts, it shall require the Subcontractors to take the steps in these specifications.
  - c. For the EPA defined GFE, see the steps below:

- i. Ensure DBEs are made aware of contracting opportunities to the fullest extent practicable through outreach and recruitment activities. For Indian Tribal, State and Local and Government recipients, this will include placing DBEs on solicitation lists and soliciting them whenever they are potential sources.
- ii. Make information on forthcoming opportunities available to DBEs and arrange time frames for contracts and establish delivery schedules, where the requirements permit, in a way that encourages and facilitates participation by DBEs in the competitive process. This includes posting solicitations for bids or proposals for a minimum of 30 Calendar Days (refer to 33 CFR 33.301) before the bid or proposal closing date.
- iii. Consider in the contracting process whether firms competing for large contracts could subcontract with DBEs. For Indian Tribal, State and local Government recipients, this will include dividing total requirements when economically feasible into smaller tasks or quantities to permit maximum participation by DBEs in the competitive process. Include with the GFE documentation a completed copy of the form AA61, "List of Work Made Available".
- iv. Encourage contracting with a consortium of DBEs when a contract is too large for one of these firms to handle individually.
- v. Use the services and assistance of the U.S. Small Business Administration (SBA) and the Minority Business Development Agency (MBDA) of the Department of Commerce (DOC). See "DBE Potential Resources Centers" Section in a later part these specifications.
- vi. If the Contractor awards Subcontracts, the Contractor shall take the steps in the paragraphs above.

**11.2 California State Revolving Fund (CASRF) Requirements:**

**11.2.1** Refer to Subsection 11.1, "EPA Requirements" above and the following:

**11.2.1.1** The Bidder shall take affirmative steps prior to Bid opening to assure that MBE's and WBE's are used whenever possible as sources of supplies, construction and services.

**11.2.1.2** The affirmative steps are defined for contracts funded by the California State Water Resources Control Board as follows:

1. Utilization of US Small Business Administration and Minority Business Development Agency (MBDA) resources is required at no cost. These agencies offer several services, including Internet access to databases of DBEs.
2. For additional assistance, the Contractor can telephone the local offices of both agencies in their area (SBA Minority Enterprise Development Offices and DOC MBDA Regional Centers). The Internet web sites also include names, addresses, and phone or fax numbers of local SBA and MBDA centers. There are contact phone numbers listed in Step 3 that will assist you in reaching the 2 offices if the Internet is unavailable. Do not write to these sources.

3. The Contractor shall provide documentation that the local SBA/MBDA offices or web sites were notified of the contracting bid opportunity at least 30 Calendar Days prior to Bid opening and solicitation to DBE Subcontractors at least 15 Calendar Days prior to Bid opening. Documentation shall not only include the efforts to contact the information sources and list the Contract opportunity, but also the solicitation and response to the bid request.
4. Include qualified DBEs on solicitation lists and record the information. Solicitation shall be as broad as possible.
5. If DBE sources are not located, explain why and describe the efforts made.
6. The Contractor shall send invitations to at least 10 (or all, if less than 10) DBE vendors for each item of the Work referred by sources contacted. The invitations shall adequately specify the items for which bids are requested. The record of GFE shall indicate a real desire for a positive response, such as a certified mail receipt or a documented telephone conversation.
7. A regular letter or an unanswered telephone call is not an adequate "good faith" effort. A list of all Subcontractors, including the bidders not selected and non DBE Subcontractors, and bid amount for each item of the Work shall be submitted on Form AA62. If a low bid was not accepted, an explanation shall be provided.

**11.2.1.3** See "DBE Potential Resources Centers" Section in a later part these specifications.

**11.2.1.4 Annual DBE Utilization Reporting:**

The Contractor shall report to the City on an annual basis, their utilization of Minority Business Enterprise and Women's Business Enterprise Subcontractors and Suppliers using California State Revolving Funds (CASRF) Form UR-334.

**12. DBE POTENTIAL RESOURCES CENTERS:**

- 12.1** Utilization of US Small Business Administration and Minority Business Development Agency (MBDA) resources is required at no cost. These agencies offer several services, including Internet access to databases of DBEs.
- 12.2** For additional assistance the recipient or contractor can telephone the local offices of both agencies in their area (SBA Minority Enterprise Development Offices and DOC MBDA Regional Centers). The Internet web sites also include names, addresses, and phone or fax numbers of local SBA and MBDA centers. Do not write to these sources
- 12.3** The Contractor shall provide documentation that the local SBA/MBDA offices or web sites were notified of the contracting bid opportunity at least 30 Calendar Days prior to Bid opening and solicitation to DBE subcontractors at least 15 Calendar Days prior to Bid opening. Documentation shall not only include the efforts to contact the information sources and list the Contract opportunity, but also the solicitation and response to the bid request.

- 12.4** Include qualified DBEs on solicitation lists and record the information on Form AA63. Solicitation shall be as broad as possible.
- 12.5** If DBE sources are not located, explain why and describe the efforts made.
- 12.6** The Contractor shall send invitations to at least 10 (or all, if less than 10) DBE vendors for each item of work referred by sources contacted. The invitations shall adequately specify the items for which bids are requested. The record of "good faith" efforts shall indicate a real desire for a positive response, such as a certified mail receipt or a documented telephone conversation.
- 12.7** A regular letter or an unanswered telephone call is not an adequate "good faith" effort. A list of all sub-bidders, including the bidders not selected and non DBE Subcontractors, and bid amount for each item of the Work shall be submitted on Form AA62. If a low bid was not accepted, an explanation shall be provided.
- 12.8** Federal Agencies (must be contacted and solicitations posted on their websites):

Name and Address	Telephone and Web Site
<b>U.S. Small Business Administration</b>	(415) 744-6820 Extension 0

Notes:

1. The Contractor shall use the SBA's Dynamic Business Search database to search for potential subcontractors, suppliers, and/or manufacturers. Bidder must provide a copy of all search records for items of work made available with GFE documentation.
2. Contractor shall use SUB-Net to post subcontracting opportunities. Contractor shall post Subcontractor opportunities at least 15 Working Days prior to bid opening. Small businesses can review this web site to identify opportunities in their areas of expertise. The web site is designed primarily as a place for large businesses to post solicitations and notices. Bidder **must** provide copy of the Display Solicitation Record identifying the date solicitation notice was posted with GFE documentation.
3. Contractor may use MBDA web portal to post subcontracting opportunities. If utilized, the Contractor shall post subcontractor opportunities at least 30 Calendar Days prior to Bid opening. Small businesses can review this web site to identify opportunities in their areas of expertise. The web site is designed primarily as a place for large businesses to post solicitations and notices. Provide copy of the Offer Overview with the GFE documentation.
4. Based on the federal DBE program, CALTRANS maintains a database and provides directories of minority and woman-owned firms. Bidder must provide a copy of all search records for items of work made available with GFE documentation.
5. CPUC maintains a database of DBE-owned business enterprises and serves to inform the public. Bidder **must** provide a copy of all search records for items of work made available with GFE documentation.

**13. GOOD FAITH EFFORT DOCUMENTATION SUBMITTALS:**

- 13.1** The affirmative GFE steps documentation shall be submitted by **5 PM 4 Working Days after the Bid Opening**. If this documentation is not submitted when due, the City will declare the Bid **non-responsive** and reject it.

**13.2** The required documentation shall be submitted and logged in at the following address:

CITY OF SAN DIEGO  
ENGINEERING & CAPITAL PROJECTS DEPARTMENT, CONTRACTS DIVISION  
525 B STREET, SUITE 750  
SAN DIEGO, CA 92101

SUBJECT: AFFIRMATIVE GOOD FAITH EFFORT DOCUMENTATION

BID NO. **K-21-2005-DBB-3**

**13.3** The Contractor shall maintain the records documenting compliance with requirements including documentation of its GFE and data relied upon in formulating its fair share objectives.

**14. FORMS:**

**14.1** The Contractor shall demonstrate that efforts were made to attract DBEs on this contract. The Contractor and Subcontractors shall take the steps listed in these specifications to assure that DBEs are used whenever possible as sources of supplies, construction, equipment, or services. In addition to the specified GFE documentation, the Bidder shall submit the following forms.

**14.1.1** The following forms shall be submitted **with the Bid submittal**. Failure to include any of the forms shall cause the Bid to be deemed **non-responsive**.

1. Form 4500-3: DBE Subcontractor Performance Form
2. Form 4500-4: DBE Subcontractor Utilization Form

**14.1.2** The following forms shall be completed and submitted within **4 Working Days after the Bid opening by 5 PM**. Failure to include any of the forms shall cause the Bid to be deemed **non-responsive**.

1. Form AA61: List of Work Made Available
2. Form AA62: Summary of Bids Received
3. Form AA63: Good Faith Effort List of Subcontractors Solicited

**14.1.3** The following additional forms shall be submitted annually in accordance with Section 11 "AGENCY SPECIFIC PROVISIONS".

1. Form UR-334: California State Revolving Funds (CASRF)

**14.1.4** Bidder is to provide the following form to all DBE subcontractors participating on this contract. Submittal of form is dependent on DBE subcontractor and is to be forwarded to the DBE coordinator at any time during the project period of performance.

1. Form 4500-2: DBE Subcontractor Participation Form.

**CONTROL STRATEGIES** <sup>[ADD 1]</sup>

**CENTRIFUGE BUILDING**

1.01 DEWATERING CENTRIFUGES

- A. Reference P&ID: 76-I-121, 128.
- B. Loop Mission: There are eight dewatering centrifuges. Centrifuges 1 and 8 will be upgraded as a part of the project. The dewatering centrifuges receive digested biosolids in a concentration of 2 percent to 4 percent and dewater the biosolids to 28 percent solids. The dewatered biosolids will be discharged to the dewatered centrifuge bins. The centrate will be discharged to the centrate wetwell in the wastewater pump station. The dewatering centrifuges and centrifuge discharge diverter gates are automatically controlled by the dedicated PLCs and control panels. The dewatering centrifuges and centrifuge discharge diverter gates are automatically controlled by the dedicated PLCs and control panels.
- C. General DCS Function:
  - 1. Use Ethernet communications to allow for DCS control and interaction with the dewatering centrifuge(s).
    - a. Display dewatering centrifuge status.
    - b. Display and notify operations of dewatering centrifuge alarms.
    - c. Display operator adjustable dewatering centrifuge setpoints.
- D. DCS Manual Control Mode:
  - 1. Set dewatering centrifuge control mode.
    - a. Differential speed mode.
    - b. Auto torque mode.
  - 2. Start / Stop each dewatering centrifuge.
  - 3. Open / Close motor operated routing valves.
  - 4. Start / Stop each dewatering centrifuge feed pump.
  - 5. Select mode or position of each dewatering centrifuge Diverter Gate - solids or centrate. Note: this will also position the Cake to Centrate (C2C) Valve in the opposite position as both of these valves are interlocked.
  - 6. Select mode or position of each dewatering centrifuge Flush Valve - open or close.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. DCS Automatic Control Mode:
1. Operator to select dewatering centrifuge strategy.
  2. Operator to select centrifuge(s) to operate from the dewatering centrifuge strategy.
  3. For each selected centrifuge, operator to input polymer dosage ratio and biosolids flow rate (adjustable 0 - 400 GPM). When the pump is commanded to start the inlet valve will open first. Upon open position confirmation the pump will start and will start modulating its speed to meet the flow setpoint. Time should be allowed for the valve to open, (nominal 30 seconds). This procedure allows the feed loop to be maintained at operational pressure by eliminating blow by at the centrifuge that is not demanding sludge feed.
  4. Select first polymer day tank to be used (If the tank is available).
  5. Select Cake Pump(s), once selections have been made issue cake pump strategy READY status to the centrifuge.
  6. Operator to select back drive mode of operation – AUTO LOAD or DIFFERENTIAL SPEED.
    - a. If AUTO LOAD is selected, adjust the setpoint (Top of scale 20-80 percent, range will be set as defined by parameters that will be adjusted in the back drive controller during field testing and start-up).
    - b. If DIFFERENTIAL SPEED is selected, adjust the setpoint (0.1-5.0 rpm).
  7. The LOAD and DIFFERENTIAL selection logic will be programmed in the Centrifuge PLC. DCS will interface the PLC logic and allow changing between the modes and adjusting setpoints from the DCS graphics. These parameters can be also changed in parallel from the local PLC HMI.
  8. Diverter Gate, Cake to Centrate and Flush valves control will be programmed in the Centrifuge PLC. DCS will interface the PLC logic and allow changing between AUTO/MANUAL modes and OPEN/CLOSE when in MANUAL mode from the DCS graphics. These modes can be also changed in parallel from the local PLC HMI.
  9. DCS to scan all I / O associated with the strategy and indicate a ready or not ready status as detailed on the Strategy Check list displayed on the Centrifuge Control Strategy Graphic.
  10. Operator must ensure that a polymer day tank is selected and that a Mixed Polymer Pump has been selected to be lead.
  11. When the operator initiates start - up, strategy will:
    - a. Open, if available, the first day tanks polymer outlet valves; upon confirmation.
    - b. For each selected centrifuge, check that at least one of the polymer feed line hand valves is open; upon confirmation.
    - c. Start - up each selected centrifuge.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- d. DCS will monitor and display the following Centrifuge operating modes programmed in the centrifuge control panel PLC:
    - 1) Step 0 - Idle Step - Waiting for start request.
    - 2) Step 1 - Lube Step - Turns on lube system and gets flow established (timed step).
    - 3) Step 2 - Starting Step – Main drive and back drive motors start to rotate.
    - 4) Step 3 - Transition Step - Waiting for main drive motor to ramp to full speed (timed step).
    - 5) Step 4 - Transition Step - Waiting for main drive motor to ramp to full speed (timed step).
    - 6) Step 5 - Standby Step - Waiting for operator to select "Production" from HMI or DCS.
    - 7) Step 6 - Offline Step - Active Alarm (Turns off feed and polymer permissive signal).
    - 8) Step 7 - Production Step - Centrifuge Feed Permissive to DCS "On".
    - 9) Step 8 - Offdelay Step - Stop request received, feed off, full speed cleanout (timed step).
    - 10) Step 9 - Flush Step - Flush water valve open, and main drive ramping down (timed step).
    - 11) Step 10 - Coasting Step - Flush water valve closed, waiting for bowl to stop.
    - 12) Step 11 - CIP Step - Centrifuge in cleaning sequence.
  - e. DCS will monitor alarms issued by the centrifuge PLC. These alarms are classified as either: warning, alert or shutdown. Each of these alarms can be rest from the DCS centrifuge control strategy screen.
  - f. Once the centrifuge is up to full speed it can automatically advance to the “Production Mode” or can be configured to wait at the “Standby Mode” until Operator manually selects it to advance to the “Production Mode”
  - g. When the centrifuge is in “Production Mode” it will issue a “Feed Permissive” signal and the DCS will initiate control of the feed pumps.
  - h. Operator can switch the centrifuge back to the “Standby Mode”. It will keep the centrifuge running but the system will stop the feed pumps.
  - i. If any of the feed pumps fails during “Production Mode” the centrifuge will be returned to the “Standby Mode”
12. When the operator selects to place a centrifuge OUT OF SERVICE, strategy will inhibit control of the centrifuge and its associated auxiliary equipment. When selected to be placed back IN SERVICE, strategy will reestablish control of the centrifuge from the DCS.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

13. The Operator will be able to place in MANUAL mode and then STOP sludge feed pump and polymer feed pump. When these pumps stop the sludge feed pump inlet valve will close.
14. The flush valve will be controller by the Centrifuge PLC. DCS will interface the PLC logic and allow changing between AUTO/MANUAL modes and OPEN/CLOSE in when in MANUAL mode from the DCS graphics. These modes can be also changed in parallel from the local PLC HMI.
15. Failure Responses:
  - a. DCS Controller will monitor the datalink status between the ELC (Ethernet Link Controller) module and the PLC. The PLC will also monitor the datalink status. When the links fails the DCS will stop feed pumps and close respective feed vales while the PLC continue to run the centrifuge until it is requested to STOP by the Operator.

**SECTION 44 22 24 <sup>[ADD 1]</sup>**  
**DEWATERING CENTRIFUGES**

**EQUIPMENT NAME AND COMPONENT(S)**

76-DC-01:	Dewatering Centrifuge 1.
76-DC-01.LCP:	Dewatering Centrifuge 1 Control Panel.
76-DC-01.VFD:	Dewatering Centrifuge 1 VFD Panel.
76-DC-08:	Dewatering Centrifuge 8.
76-DC-08.LCP:	Dewatering Centrifuge 8 Control Panel.
76-DC-08.VFD:	Dewatering Centrifuge 8 VFD Panel.

**PART 1 GENERAL**

1.01 WORK OF THIS SECTION

- A. This section covers the work necessary to provide two dewatering centrifuges, two centrifuge control panels, two variable frequency drive (VFD) control panels, and all appurtenances as specified herein.

1.02 GENERAL

- A. **Unit Responsibility:** A single centrifuge manufacturer shall be responsible for supplying the dewatering centrifuges, complete with all accessories and appurtenances (including, but not necessarily limited to, electric motors, VFDs, control panels, VFD panels, shafting, safety guards, speed reducers, and spare parts) and for the design, assembly, delivery, installation supervision, startup, and testing of the centrifuges. The centrifuge manufacturer shall furnish all components and accessories of the system to enhance compatibility, ease of operation and maintenance, and as necessary to place the equipment in operation in conformance with the specified performance, features, and functions. The centrifuges shall be produced and assembled by the manufacturer at a facility owned and operated by the manufacturer and under the direct supervision and control of the manufacturer.
- B. Like items of equipment provided hereunder shall be the end products of one manufacturer in order to achieve standardization for operation, maintenance, spare parts, and manufacturers' services.
- C. **General Requirements:** See Division 1, General Requirements, which contains information and requirements that apply to the Work specified herein and are mandatory for this Project.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. The control functions contained and described herein are intended to provide proposed minimum performance requirements. They do not necessarily identify each and every control function, connection, communications, or equipment to achieve the requirements. Additional specificity and details shall be coordinated at time of submittals.

1.03 REFERENCES

- A. The following is a list of standards which may be referenced in this section:

1. American Bearing Manufacturers Association (ABMA).
2. American Gear Manufacturers Association (AGMA).
3. American National Standards Institute (ANSI).
4. American Society of Mechanical Engineers (ASME): PTC-36, Measurement of Industrial Sound.
5. American Welding Society (AWS).
6. ASTM International (ASTM): G65, Procedure A, Standard Practice for Conducting Dry Sand/Rubber Wheel Abrasion Tests.
7. British Standards Institute (BSI): BS 5490.
8. German Industrial Standards (DIN).
9. Institute of Electrical and Electronics Engineers (IEEE).
10. Instrument Society of American (ISA).
11. National Electric Code (NEC).
12. National Electrical Manufacturers Association (NEMA): MG - Motors and Generators.
13. Occupational Safety and Health Act (OSHA).
14. Society of Protective Coatings (SSPC).
15. UL.

1.04 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00, Submittal Procedures. In addition, the following specific information shall be provided:

- B. Action Submittals

1. Shop Drawings:
  - a. Documentation of modifications to the manufacturer's standard design to meet the requirements specified in this section.
  - b. Document where the manufacturer's design does not comply with the specified performance, features, functions, and materials of construction specified herein by submitting a copy of this specification with notation of the specific clarifications, deviations, substitutions, and exceptions to the specification.
  - c. Bill of materials listing major system components, special tools, spare parts, and part number of each component and spare part.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- Include make, model, weight, and horsepower of each equipment assembly.
- d. List of submitted centrifuge model reference installations including location, sludge stream, number of units, starting date of operation, and reference contact information.
  - e. Manufacturer's catalog information, descriptive literature, specifications, and identification of materials of construction for the centrifuge, drive motor, backdrive motor, variable frequency drives, control panels, VFD control panels, power supply, lubrication system, and flexible connectors. Provide listing of materials of construction to match the listing in Paragraph Materials of Construction.
  - f. Data on the characteristics and performance of the units to indicate ability to meet the system performance specified herein, including backdrive gear box rated torque capacity and torque capacity required to meet performance requirements.
  - g. Certified general arrangement and dimensional drawings.
  - h. Detailed structural, mechanical, electrical, and instrumentation drawings showing equipment fabrications, arrangements, components, and interfaces with all equipment that are coordinated with and compatible with existing as-built drawings. Include dimensions, descriptions, materials, quantities, and other information for a complete system.
  - i. Detailed structural, mechanical, electrical, and instrumentation drawings showing the equipment fabrications, arrangements, components, and interfaces. Include:
    - 1) Dimensions, size, and locations of connections to other work, and weights of equipment associated therewith.
    - 2) Weights of individual pieces of equipment and live (dynamic loads) created by the total weight of each centrifuge and ancillary equipment.
    - 3) Scroll hard surfacing materials and coverage.
    - 4) Sizes and locations of space for incoming and outgoing conduits.
    - 5) Minimum clearance distances around equipment required to access equipment for service/repair/removal.
    - 6) Control and VFD panel drawings showing panel size and sizes and locations of raceway connections.
  - j. Outside utility requirements such as air, water, power, drain, etc., for each component.
  - k. Calculated AFBMA L-10 bearing life or DIN ISO 281 L-10 bearing life, and type of lubrication recommended for all equipment.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- l. Design data for the following:
  - 1) Main drive motor sizing.
  - 2) Backdrive motor sizing.
  - 3) Adjustable frequency drive sizing.
  - 4) Maximum measured sound power levels, octave frequency band data at 3 feet, all sides of equipment.
  - 5) Heat generation for panels.
- m. Motor submittals in conformance with Section 26 20 00, Low-Voltage AC Induction Motors.
- n. VFD submittals in conformance with Section 26 29 23, Low-Voltage Variable Frequency Drive System.
- o. Certificate(s) demonstrating that the centrifuge production and assembly facilities are currently ISO 9001 certified.
- p. Functional description of internal and external instrumentation and controls to be supplied including list of parameters monitored, controlled, or alarmed.
- q. Sequential description of operation under various modes of control, describing the complete control circuit and equipment operation and logic, including interlocks and permissives.
- r. Description of all automatic shutdown features and interfaces with the plant instrumentation and control systems, in both word and schematic form. Standard Instrument Society of America symbols shall be used on all schematics.
- s. Centrifuge Control Panel and VFD Control Panel interconnection diagrams showing wiring interconnections between all centrifuge system components and between centrifuge system components and remote components provided by others. Include MCA (minimum circuit amps) and MOCP (maximum overcurrent protection) information.
- t. Centrifuge Control Panel and VFD Control Panel Elevation Drawings showing construction and placement of operator interface devices and other elements.
- u. Instrumentation and Control Submittals: In conformance with Section 40 99 90, Package Control Systems.
- v. VFD submittals including electronic downloadable backup copies and pdf copies of VFD configuration files.
- w. Power and control wiring diagrams including terminals and numbers.
- x. Shop and Field Painting Systems: Include Manufacturer's descriptive technical catalog literature and specifications, and hazardous communication data sheets.
- y. Seismic anchorage and bracing data sheets and drawings as required by Section 01 88 15, Anchorage and Bracing.
- z. Manufacturer's required alignment tolerances and method for achieving alignment tolerances.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2. Samples:
  - a. Submit the following items with Shop Drawings:
    - 1) Scroll abrasive resistant tile, quantity of two.
- C. Informational Submittals:
  1. Factory Quality Control Submittals:
    - a. Obtain Engineer's review and approval of the information listed below prior to equipment shipment.
    - b. Manufacturer's Certificate of Compliance.
    - c. Factory test results, reports, and certifications. Include:
      - 1) Vibration Test Reports and Certificates.
      - 2) Noise Test Reports and Certificates.
      - 3) For each ac motor, provide a certified copy of a test report for an identical motor tested in accordance with NEMA MG 1-12.53a and IEEE Standard 112, Test Method B. The test report shall show full-load efficiency and power factor meeting or exceeding the specified minimum guaranteed values. Motors not as specified will be rejected.
      - 4) Certified Scratch Abrasion Test results of the abrasion protection tiles.
    - d. Submit certified copies of mill test results for the stainless steel castings and abrasion-resistant materials to be used. The test reports shall certify that the materials supplied are in accordance with the applicable standards and shall include:
      - 1) The actual material analysis.
      - 2) Applicable standards.
      - 3) Date of manufacture.
      - 4) Place of manufacture.
      - 5) Manufacturer's name.
      - 6) Markings on the materials to denote the batch number.
      - 7) Mechanical property test for rotating parts.
    - e. Test results of the control and VFD control panels for proper operation, construction, electrical connection, and function.
    - f. Test results of controls interface with PCS programmed by Owner Software Integrator.
    - g. Shipping, storage and protection, and handling instructions.
    - h. Design calculations for items covered by these Shop Drawings. Calculations shall show design stresses in structural members and connections for loading combinations.
    - i. Seismic anchorage and bracing calculations as required by Section 01 88 15, Anchorage and Bracing.
    - j. Manufacturer's written/printed installation instructions.
    - k. Routine maintenance requirements prior to plant startup.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- l. Spare parts list as specified in Section 01 33 00, Submittal Procedures.
    - m. Special tools list as specified in Section 01 33 00, Submittal Procedures.
  2. Operation and Maintenance Manual with Maintenance Summary Form shall be provided in accordance with Section 01 78 23, Operation and Maintenance Data, and the following requirements:
    - a. Operation, maintenance, recommended spare parts, and renewal parts information for all equipment furnished under this section.
    - b. Set of complete as-reviewed Shop Drawing submittals.
    - c. As-built electric and instrumentation and control wiring diagrams and equipment drawings.
    - d. Index of all equipment suppliers listing current names, addresses, and telephone numbers of those who should be contacted for service, information, and assistance.
    - e. Detailed operational procedures including step-by-step startup, normal operation, shutdown, and troubleshooting procedures.
    - f. Detailed preventative maintenance requirements and recommended schedule.
    - g. Listing of normal values and abnormal value settings for all monitored vibration and bearing temperatures.
    - h. Bill of materials for all components, including part numbers, description, manufacturer, quantity, and seller.
  3. Equipment Field Quality Control Testing Procedure Submittals:
    - a. Centrifuge manufacturer shall submit test procedures for the following tests for review, comment, and approval at least 30 days in advance of the notice to conduct the specific testing:
      - 1) Functional Testing.
      - 2) Pre-Performance Testing.
      - 3) Performance Testing.
      - 4) Optimization Assistance.
  4. Field Quality Control Submittals:
    - a. Obtain Engineer's review and approval of the information listed below prior to project completion. Centrifuge manufacturer shall submit test reports within 20 days after completing field testing.
    - b. Field test results, reports, and certifications. Include:
      - 1) Functional Test Report and Certificates.
      - 2) Pre-Performance Test Report and Certificates.
      - 3) Performance Test Report and Certificates.
      - 4) Optimization Assistance results.
      - 5) Vibration Test Report summarizing readings on the HMI screen during field testing.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.05 EXTRA MATERIALS

A. Spare Parts and Special Tools:

<u>Item</u>	<u>Quantity</u>
Plate Dams	One complete set per centrifuge
Drive Belts	Two complete sets
Main Bearings	Two complete sets
Scroll Conveyor Bearings	Two complete sets
Thrust Bearings, Seals, and Lock Washers	Two complete sets
Gaskets, O-rings, and Seals	Two complete sets
Speed Proximity Sensors	Two complete sets
Scroll Conveyor Tiles	One Hundred (100)
Replacement Indicating Lamps	One complete set

B. Special Tools and Accessories: Provide manufacturer’s recommended special tools and accessories beyond those specified above as required to install, startup, and commission the centrifuge including but not limited to, bowl lifter, conveyor lifter and bowl truck.

C. Lubricants: All necessary lubricants shall be provided for the initial startup of the centrifuges. Lubricants and filters shall be provided and changed by the manufacturer as frequent as required during the period between successfully completed functional testing and equipment acceptance, up to a maximum period of 12 months. New lubricants and filters shall be provided and be put into the equipment by manufacturer at Substantial Completion.

D. Delivery: In accordance with Section 01 61 00, Common Product Requirements.

1.06 SAFETY REQUIREMENTS

A. All equipment furnished shall be designed and manufactured with due regard to safety of operation, accessibility, and durability of parts, and shall comply with all applicable Occupational Health and Safety Act, federal, state, and local safety regulations.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

1.07 EXTENDED WARRANTY

- A. Provide manufacturer's extended guarantee or warranty, with Owner named as beneficiary, in writing, as special guarantee. Special guarantee shall provide for correction, or removal and replacement of the portion of the Work provided under this Specification (including but not limited to the centrifuges, drive motors, gearboxes, control panels, VFD control panels, and VFDs) found defective during a warranty period of 2 years past the normal one year warranty period. With the exception of warranty period, all other requirements specified in Article 36 of the General Conditions remain in effect. Duties and obligations for correction or removal and replacement of defective Work shall be as specified in the General Conditions.

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Each centrifuge system shall consist of a solid bowl, horizontal, continuous feed, scroll type unit, specifically designed to handle the sludges specified herein. Each unit shall be capable of continuous operations with a minimum of maintenance.
- B. Each centrifuge system shall be equipped with:
1. Variable frequency drive electric main drive motor assembly.
  2. Belt guards.
  3. Variable frequency drive electric backdrive motor assembly.
  4. Automatic lubrication system for the rotating assembly's main bearings.
  5. Vibration isolators.
  6. Flexible connectors.
  7. Centrate sampling provisions.
  8. Dewatered cake sampling provisions.
  9. Control panel and VFD control panel and instrumentation and controls specified herein.
  10. Centrifuge main drive and backdrive adjustable frequency drives.

2.02 MANUFACTURER

- A. The centrifuge manufacturer shall have at least 10 years' experience in the design, application, and supply of centrifuges for dewatering of sewage sludge from municipal sewage treatment works. Centrifuge manufacturer's production and assembly facilities shall be ISO 9001 certified.
- B. The centrifuge manufacturer shall have provided centrifuges with a minimum bowl diameter of 28.35 inches at a minimum of five municipal wastewater sludge dewatering reference installations in North America, with each unit

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

operational for a minimum of 5 years. Centrifuge manufacturers not meeting the above minimum reference installation requirement shall not be acceptable. Submit list of reference installations including model number, location, sludge stream, number of units, starting date of operation, and reference contact information.

- C. Modifications to Standard Equipment Model Offerings: Equipment provided shall be furnished, modified as necessary, to conform to the performance, functions, features, and materials of construction as specified herein.
- D. The dewatering centrifuges shall be from the following listed manufacturers:
  - 1. Alfa Laval, Inc. Model G3-125.
  - 2. No accepted substitution.

2.03 SERVICE CONDITIONS

- A. The centrifuges, motors, auxiliary equipment, and appurtenances shall be suitable for exposure to continuous 95 percent relative humidity conditions, for operation in ambient air temperature from 55 degrees F to 104 degrees F, and for exposure to intermittent water or sludge splash and spill conditions.
- B. The centrifuge control panels, centrifuge VFD control panels, and appurtenances will be located in an electrical room separate from the centrifuge process space and shall be suitable for exposure to continuous 95 percent relative humidity conditions, for continuous operation in ambient air temperature from 55 degrees F to 95 degrees F.
- C. The material to be dewatered will be digested sludge resulting from anaerobic digestion of thickened waste activated sludge (WAS) and primary sludge (PS) resulting from biological treatment of municipal wastewater preceded by primary clarification. Performance requirements to be confirmed via the field performance testing specified herein shall be conducted on the following sludge stream:

<b>Parameter</b>	<b>Digested Sludge</b>
Nominal Sludge Composition, Total Dry Solids Weight Basis	65% PS / 35% WAS to 80% PS / 20% WAS
Sludge Feed Concentration, % Total Dry Solids Exclusive of Polymer Solution	1.5 to 3.0 (2.3% average)

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Parameter	Digested Sludge
Sludge Volatile Solids Concentration, % Volatile Solids Dry Weight Basis	52 to 73
Sand Content (mg/L) based on previous field testing at the MBC. Alfa Laval shall provide the best available hard surfacing including the full tungsten carbide feed zone to minimize wear based on sand content	50-60

2.04 PERFORMANCE REQUIREMENTS

- A. Each centrifuge shall continuously receive, condition, and dewater the feed sludges specified herein, and continuously discharge the dewatered solids into an existing piston cake pump. Each unit shall be able to operate continuously on demand; shall be suitable for dewatering the specified sludges continuously for up to 24 hours per day, 7 days per week; and shall operate without spillage of sludge beyond the nominal solids discharge chute and piping envelope or spillage of centrate beyond the liquid (centrate) discharge chute and piping envelope.
- B. Manufacturer shall guarantee that the centrifuges shall be capable of the minimum performance requirements specified below, to be confirmed via the field performance testing specified herein. Feed hydraulic loading rates for sludge dry solids concentrations between points specified will be linearly interpolated between the points specified (i.e., maintaining the specified feed dry solids loading rates).

Parameter	Digested Sludge Guaranteed Performance Normal Operation	Machine Sizing Throughput Criteria
Feed Solids Loading Rate <sup>(1)</sup> , lbs/hr, Total Dry Solids (DS) Basis	2,500	4,600
Feed Hydraulic Loading Rates <sup>(1)</sup> , gpm	278 @ 1.8% DS 217 @ 2.3% DS 200 @ 2.5% DS	400 @ 2.3% DS 306 @ 3.0% DS 263 @ 3.5% DS

Parameter	Digested Sludge Guaranteed Performance Normal Operation	Machine Sizing Throughput Criteria
Minimum Dewatered Cake Concentration <sup>(2)</sup> , % Total Dry Solids	28	Range 26 to 32
Minimum Total Solids Capture <sup>(3)</sup> , %	95	Range 92 to 96
Maximum Polymer Dose <sup>(2)</sup> , lbs Active per Dry Ton of Feed Solids	20	Range 15 to 30
Notes: (1) The range of feed hydraulic loading rates are calculated based on the total dry solids dry mass loading rate at the expected range of total dry solids concentrations, and are exclusive of polymer solution. (2) Performance Testing results shall be no greater than a 5% deviation from the value specified above (i.e., less than the minimum or greater than the maximum), with the average of test results rounded to one decimal place. Assumes use of the existing Mannich polymer. (3) Performance Testing results shall be no greater than a 2.5% deviation from the value specified above (i.e., less than the minimum), with the average of test results rounded to one decimal place.		

- C. The goal of the specified Optimization Assistance is to minimize polymer dose and electrical use and maximize cake solids and solids capture efficiency of the centrifuge. This will reduce the Owner’s operating cost of sludge dewatering. Optimization Assistance shall be performed after equipment acceptance.

Solids Capture:

$$\% \text{ Capture} = \frac{T}{F} \times \frac{F - C}{T - C} \times 100$$

where: T = Cake total solids concentration (mg/L).

F = Feed sludge total solids concentration, excluding any dilution due to polymer solution addition (mg/L).

C = Centrate total suspended solids concentration, excluding any dilution due to polymer solution addition and centrifuge purge water (mg/L).

- D. Polymer: Make-down of a polymer solution will be from only liquid solution Mannich polymers. Centrifuge manufacturer shall be responsible for polymer selection, in coordination with Owner and Owner’s contracted polymer supplier.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- E. Water Supply Provided to Centrifuges to Allow For:
  - 1. Bowl Flushing/High Speed Flush: 250 gpm up to the sludge feed rate at 45 psi.
  - 2. CIP Flushing/Low Speed Flush: 110 gpm at 45 psi.
  - 3. Water Temperature: 40 to 90 degrees F.
- F. Cake capacity during a power loss condition: 26.2 cubic feet or 0.97 cubic yard.

2.05 CENTRIFUGE EQUIPMENT

- A. General Description: Each centrifuge shall be of the high-speed, dry solids, solid bowl horizontal, continuous feed, scroll conveyor type specifically configured for dewatering only applications. No disc type or nozzle bowl type or basket type centrifuges will be allowed. The centrifuge design shall limit air leakage into or from the body of the centrifuges by providing gaskets on the casing flange and labyrinth-type seals on both hub ends. The centrifuge equipment shall be designed and built to operate continuously. A variable frequency drive (VFD) main drive system shall be provided to drive the centrifuge rotating assembly. A VFD backdrive system shall be supplied with each centrifuge to provide speed variation between the conveyor and the centrifuge bowl. The centrifuge shall be designed to be mounted on a steel frame allowing discharge into discharge chutes directly beneath the centrifuge bowl.
- B. Materials of Construction:
  - 1. Unless otherwise specified, materials shall conform to the following:
    - a. All sintered tungsten carbide abrasion resistant materials shall be tested in accordance with the ASTM G65, Procedure A, Standard Practice for Conducting Dry Sand/Rubber Wheel Abrasion Tests with volume loss less than 3 cubic millimetres.
    - b. Anchor Bolts, Nuts and Washers: Stainless steel, Type 316, minimum 3/4 inch in diameter for all anchor bolts under the centrifuge frame.
    - c. Bottom Case: Fabricated carbon steel or cast steel, with all surfaces in contact with process material coated with epoxy and Type 316 stainless steel liner. Provide Type 316 stainless steel liner in centrifuge discharge chamber. The bottom casing shall be fully clad with 316 stainless steel.
    - d. Bowl: Stainless steel, ANSI SC2205 or ANSI SC2304 duplex stainless steel centrifugal castings.
    - e. Bowl Wear Strips: Stainless steel, Type 316, minimum 3 mm thickness or longitudinal grooves.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- f. Fasteners (Wetted): Minimum Type 316 stainless steel.
  - g. Feed Zone: Fully covered with solid sintered tungsten carbon components.
  - h. Feed Tube: Stainless steel, Type 316.
  - i. Main Centrifuge Bearings: Lubricated with grease, L-10 life of 100,000 hours minimum at machine rated operating speed and machine sizing solids loading rate specified in Article Performance Requirements.
  - j. Scroll Conveyor: Stainless steel, ANSI SC2205 or ANSI SC2304 duplex stainless steel.
  - k. Scroll Conveyor Bearings: Grease lubricated, L-10 life of 100,000 hours minimum.
  - l. Scroll Conveyor Tips: Sintered Tungsten Carbide tiles – up to two wraps beyond feed zone. Remaining flight tips protected with flame sprayed tungsten carbide.
  - m. Upper Case: Stainless steel, Type 316.
  - n. Sludge Feed Nozzles: Replaceable Sintered Tungsten Carbide. Part of fully covered feed zone.
  - o. Solids Discharge Nozzles: Replaceable Sintered Tungsten Carbide.
- C. Bowl: The bowl shall be designed to withstand, with an adequate factor of safety, all forces encountered during operation.
- 1. Bowl Inside Diameter: Minimum 28.35 inches.
  - 2. Bowl Inside Length: Minimum 108 inches.
  - 3. Normal Operating Speed: Minimum 1,500 rpm to maximum 2,800 rpm.
  - 4. The minimum bowl wall thickness shall be 0.6-inch. All surfaces shall be examined for cracks, shrinkage, porosity, or other defects by means of an eddy current technology test.
  - 5. Pool depth level must be readily adjustable via weir plates (dams) located at the large diameter end of the bowl where liquid is discharged.
  - 6. Centrate discharges shall be provided with deflector plates or nozzles or power plate or tube weirs to reduce overall centrifuge electrical power consumption. The power plate weirs will direct the centrate in the opposite direction of the bowl rotation to provide additional lower energy consumption for bowl rotation.
  - 7. Solids shall be conveyed through a conical section of the bowl and discharged from the small diameter end of the bowl through multiple solids discharge ports spaced evenly around the bowl end. Solids discharge ports shall be protected against abrasion by field replaceable tungsten carbide wear saddles.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

8. The casting of the centrifugally cast bowls shall be tested with eddy current technology. Casting testing certificates for each component will be required with each centrifuge. Rolled and welded or statically cast bowls shall not be allowed.
9. Bowl shall be provided with a minimum of eight evenly spaced longitudinal bowl strips the entire length of the bowl to trap solids and form a layer to protect the bowl from wear.
10. Material to be processed shall be introduced to the bowl through a compartment which shall evenly distribute the feed. The feed compartment shall be protected against abrasion with liner or flame sprayed hard surfacing.

D. Scroll Conveyor:

1. Centrifuge shall include a horizontal cylindrical-conical scroll conveyor supported by anti-friction bearings and equipped with helical flights independently mounted concentrically within the centrifuge bowl.
2. The scroll conveyor shall be an energy efficient design that will provide increased centrifuge capacity while providing a reduction in power consumption. This design should allow for increased G-Volume capacity without increase in bowl size. This design shall also allow the pond discharge radius to be reduced keeping a deep pond during normal consistent process conditions.
3. Conveyor shall include solids feed ports protected against abrasion by field replaceable solid sintered tungsten carbide wear liners.
4. The conveyor edge and face of the flights shall be protected against abrasion by a series of welded-on sintered tungsten carbide tile assemblies from two wraps beyond the feed zone through to the solids discharge end. Each tile assembly shall be weight correct, and consist of a solid sintered tungsten carbide wear part attached to a stainless steel backup holder. Spray hard surfacing applied to a backup plate is not allowed. Each assembly shall be individually replaceable, and shall include the ability to monitor wear by means of visual inspection. The tile assemblies shall extend a minimum of 0.3-inch beyond the radial edge of the conveyor flight. Remaining portion of scroll edge and face shall be protected with flame sprayed hardsurfacing.
5. All sintered tungsten carbide tiles shall be able to meet ASTM G65 Test Procedure A with a volume loss as specified in Article Centrifuge Factory Tests.
6. One full turn of the conveyor flight in front of the baffle disc will be additionally stiffened. If any flight deflection is observed during the warranty or extended warranty period, the flights will be restraightened, additional stiffeners added, and the conveyor rebalanced at no cost to the Owner.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

E. Case:

1. Centrifuge shall be enclosed in a fabricated case, the purpose of which shall be to contain and direct the solids and liquid discharge from the centrifuge, to act as a protective guard, and to provide complete enclosure for noise reduction and odor control. Case shall be protected at the solids discharge end with a field replaceable Type 316 stainless steel liner. The casing assembly shall be provided with a Type 316 stainless steel per manufacturer's standard, specifically designed for rigidity and noise reduction, Lower case shall be fabricated carbon steel or cast steel, with all surfaces in contact with process material coated with epoxy and Type 316 stainless liner. Provide Type 316 stainless steel liner in centrate discharge chute. The case top shall be bolted in place. Lifting eyes shall be provided for lifting of the case top.
2. A flanged and gasketed seal shall be provided between the upper and lower case components. Flange bolts shall be Type 316 stainless steel.
3. Casing cover hinges: The case top shall have spring loaded hinges located on the left or right side to allow for ease of opening during maintenance or inspection (spring loading prevents cover from closing on its own).

F. Frame:

1. The centrifuge shall be supported on a fabricated carbon steel or combination cast iron and steel base which shall in turn be mounted on vibration isolators.
2. The vibration isolators shall be provided to isolate the centrifuge from the building structure. The number, capacity, and vibration constant of the isolators shall be as recommended by the isolator manufacturer for the load and impact resulting from operation of the centrifuge provided.
3. The bottom portion of the frame shall be provided with machined outlets for the attachment of the solids and centrate flexible connectors.
4. Lifting eyes or solid lifting bars shall be provided for lifting of the frame.

- G. Main Drive System: The bowl drive system shall consist of an electric main drive motor with variable frequency drive and V-belt drive system complete with necessary vibration isolators for the individual support of the motor and centrifuge. The belt drive system shall consist of multiple V-belts as required

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

to provide full load capacity and to withstand the full starting torque of the system.

1. Centrifuge Main Drive Motor:
  - a. Provide squirrel-cage ac induction motor meeting the requirement of Section 26 20 00, Low-Voltage AC Induction Motors, and as specified herein.
  - b. Motor shall meet the following specific requirements:
    - 1) Motor Horsepower: 125 HP
    - 2) Nominal Speed: 1,800 rpm.
    - 3) Voltage Rating: 460V, three-phase.
    - 4) Enclosure Type: TEFC.
    - 5) Mounting: Horizontal.
    - 6) Inverter duty rated motor.
  - c. Provide motor modifications as follows:
    - 1) With the motor at ambient temperature (COLD), it shall be capable of making two complete starts in succession with coasting to rest between starts within a 1-hour time period. With the motor running (HOT), it shall be capable of at least one restart within 1 hour after any shutdown. The motor insulation temperature classification shall not be exceeded.
    - 2) The motor shall be of the quiet type design. The noise level shall not exceed 90 dBA sound pressure measured at 3 feet from the motor in all directions.
    - 3) Provide PTC thermistors for thermal protection.

H. Backdrive Systems:

1. Provide a variable frequency drive backdrive system for each centrifuge as specified below. Hydraulic Backdrive systems are not acceptable.
2. Gear Box For Electric Motor Based Backdrive Systems: a two-stage or four-stage planetary gear unit shall maintain a differential speed between the conveyor and bowl. Each of the above devices shall be suitable for 24 hour per day continuous service. The gear box shall have a minimum torque capacity of 30 kNm to meet the specified service conditions and performance requirements with the design required torque not to exceed 80 percent of the gear box full rated torque capacity. Gear boxes shall be capable of withstanding a 200 percent momentary overload and 150 percent intermittent overload. A torque overload control shall be provided to initiate centrifuge shutdown in the event of conveyor overload. Manufacturer shall select the reduction gear ratio as required for the solids to be handled and to be consistent with satisfactory operation. The gear unit shall be oil lubricated with its housing serving as a lubricant reservoir.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. An inverter duty backdrive motor shall be supplied and connected to the pinion shaft of the differential gear box. Backdrive system shall provide step-wise or infinite speed variation between the conveyor and the bowl shell of the centrifuge.
  - a. Centrifuge Backdrive Motor:
    - 1) Provide squirrel-cage ac induction motor meeting the requirement of Section 26 20 00, Low-Voltage AC Induction Motors, and as specified herein.
    - 2) Motor shall meet the following specific requirements:
      - a) Motor Horsepower: 50 HP
      - b) Nominal Speed: 1,800 rpm.
      - c) Voltage Rating: 460V, three-phase.
      - d) Enclosure Type: TEFC.
      - e) Mounting: Horizontal.
      - f) Inverter duty rated motor.
    - 3) Provide motor modifications as follows:
      - a) Provide PTC thermistors for thermal protection
      - b) Attach the motor to the pinion shaft of the differential gearbox.
4. The backdrive systems shall be capable of operating in a DIFFERENTIAL or TORQUE control mode that provides for operation at specific adjustable scroll/bowl differential speeds or backdrive torque values. In the DIFFERENTIAL control mode, the backdrive system shall provide for operation at a specific, adjustable scroll differential speed with internal torque allowed to vary up to the maximum allowable scroll shaft torque. In the TORQUE control mode, the backdrive system shall continuously monitor changes in internal torque created by variations in influent feed solids and automatically maintain a preset torque input to the scroll by allowing the differential speed to vary. Backdrive torque controller shall incorporate an auto-tuning feature to automatically adjust the proportional, integral, and derivative constants in order to automatically adjust to sludge and scroll conveyor torque feedback changes.
5. The systems shall provide for automatic shutdown in the event that excessive torque is detected. Torque shall be measured as a function of input in the drive unit. In the event that torque exceeds the normal operating range, monitoring instrumentation shall detect this condition and stop the sludge feed to allow the machine to clear itself. The torque monitoring system shall automatically reset when the torque approaches the normal operating range. In the event that the torque approaches the limit of the backdrive, the centrifuge's controller shall initiate centrifuge shutdown and shutdown of both sludge and polymer feeds.
6. The direct backdrive system shall only require enough power to operate the backdrive system for process control.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- I. Fasteners: All internal fasteners furnished with the centrifuges which are subject to contact with sludge, centrate, or vapors of wash water and wastewater shall be a minimum Type 316 stainless steel.
- J. Bearings:
1. The entire rotating assembly of each centrifuge shall be supported by two main bearings. Each main bearing shall be lubricated ball or cylindrical roller type bearings. Main bearings shall be housed in one piece pillow blocks with dowel pins for proper alignment. Provide each pillow block bearing with a threaded female connection to permit the use of a lifting eye to facilitate inspection and maintenance.
  2. Bearing temperature monitors shall be provided on each main bearing pillow block, with an analog output signal sent to the control panel for display and monitoring. Provide 100 ohm three-wire platinum resistance temperature detectors (RTDs). Bring the RTD leads out to terminal blocks in threaded cast aluminum junction boxes.
  3. Scroll conveyor bearings shall be anti-friction ball or roller type bearings sealed from process contamination. Bearings shall be permanently greased or have external grease fitting for lubrication.
  4. Drive and non-drive end bearing shall be insulated.
  5. Bearings shall have an AFBMA L-10 or DIN ISO 281 L-10 life of 100,000 hours minimum at machine rated operating speed and machine sizing solids loading rate specified in Article Performance Requirements.
- K. Main Bearing Lubrication System:
1. Lubrication of centrifuge main bearings shall be provided by means of an automatic grease feed system. Lubrication feed system shall be the following type, and include, at a minimum but not limited to:
    - a. Grease Type:
      - 1) Frame-mounted grease pump and tubing
      - 2) Grease reservoir with sight level gauge per bearing.
      - 3) Grease reservoir low level switch and alarm per bearing.
  2. The lubrication system shall be interlocked with the centrifuge main drive motor such that low pressure, low flow, low level and/or high grease temperature will de-energize the centrifuge main drive motor. In all cases, the starter for the grease pump motor controls or metering controller shall be interlocked with the main drive motor so that bearings are lubricated whenever the centrifuge is running and a delayed trip so that bearings continue to be lubricated while the centrifuge coasts to a stop. The grease pump shall also be independently operable. The grease pump, duration between greasing and length of a grease cycle shall be controlled from the centrifuge control panel.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. All lubrication system signals shall be wired to a common junction box for connection to the external control panel.
- L. Guards: Fabricated guards shall be provided for all gear boxes, pulleys, and belt drives.
1. Guards shall be 11-gauge minimum thickness Type 304 stainless steel.
  2. The guards shall meet OSHA standards and completely enclose the rotating parts of drive system and shall be designed to minimize vibration and noise.
  3. Guards shall include expanded metal sections, painted flat black, with holes coincident with the shafts and belting of all equipment to facilitate the use of a strobe light for inspection and maintenance of the shafts and belts.
  4. Fasteners shall be externally accessible.
- M. Feed Tube: Sludge shall be fed to the centrifuge by means of a removable feed tube suitable to minimize turbulence. The feed connection to the centrifuge shall be a 3-inch 150-pound ASME flange connection. The maximum inlet pressure required at the centrifuge inlet flange shall be 10 psig at 400 gpm (when based on water with the viscosity of 1 Centipoise). The feed tube shall also include a 3/4-inch NPT connection for polymer.
- N. Flexible Connection: All mechanical and electrical connections to the centrifuge, including, but not necessarily limited to, the feed sludge (minimum 23 inches long black neoprene hose with a 3-inch diameter hose clamp fitting mounted on a 4-inch 150 pound flange connection), polymer (minimum 12 inches long with a custom connector on the centrifuge feed tube side and a 3/4-inch NPT polymer connection to sludge feed piping), centrate (minimum 9 inches long) and dewatered cake (minimum 12 inches long) connections, compressed air piping, cooling water supply and return piping, sample line, vents, and electrical raceways shall be equipped with flexible connections. All flexible connections shall isolate centrifuge vibrations from fixed, rigid external connections. No exterior loads shall be transferred to a centrifuge by external connections to the machine. Centrate and dewatered cake flexible connections shall be flanged and fabricated from neoprene, with Type 316 stainless steel bolts with Type 316 stainless steel retainer plates at each end. Piping flexible connectors shall be metal reinforced elastomer with flanged connections. Tubing flexible connectors shall be metal reinforced hose with Type 316 stainless steel hose clamps. Flexible electrical connections shall be made with liquid-tight conduit.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- O. Chutes: Provide centrifuge centrate and dewatered cake discharge chutes. Chutes shall be nominally 4 feet-long but shall match the required distance from the new centrifuges to the existing centrate and dewatered cake discharge flanges (Contractor to review drawings and coordinate with centrifuge manufacturer), fabricated from minimum 3/16-inch thick Type 316 stainless steel and have flanged and gasketed ends. Provide each chute with support flange and gasket for support/sealing concrete floor penetrations. Provide each chute with 12-inch high by 18-inch wide bolted access plate, located to provide inspection access.
1. Provide integral functional centrate sample provisions as part of the centrate discharge chute. Provide 2-inch Type 316 stainless steel pipe, with top of pipe slotted to collect representative centrate sample. Pipe shall be horizontal, extend through centrate chute and include tees, threaded ends, and threaded cleanout ports.
  2. Dewatered cake chute shall be rectangular with no reduction in cross-sectional area.
  3. Provide integral dewatered cake sample provisions as part of the centrifuge case or dewatered cake discharge chute extension bolted directly to the centrifuge discharge flange. Sample connection shall allow sampling from the centrifuge operating floor. Sample connection shall be through minimum 2-inch Type 316 stainless steel pipe welded to the centrifuge case or discharge chute extension located to enable representative sampling while not interfering with the rotating elements of the centrifuge. Dewatered cake sample connection shall have a hinged cap and plastic pipe insertion device.
  4. Provide centrate and dewatered cake chutes with nozzles and vent piping for venting the centrifuge to the atmosphere as required by centrifuge design. Configure vent piping to be self-draining and so as to not be filled with centrate or dewatered cake.
- P. Noise: Centrifuge shall be designed such that when running at the normal operating speed, the average noise level measured at 3 feet around the periphery of the complete centrifuge assembly shall not exceed 90 dBA, when tested at the manufacturing facility, without feed and with inlet and discharge connections sealed.
- Q. Vibration Monitoring System:
1. A vibration monitoring system shall be provided for each centrifuge to perform the following functions:
    - a. Convert vibration into velocity.
    - b. Sound a warning and initiate stop of sludge feed if the velocity reaches a certain preset level (HIGH).

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. Sound a warning and shut the centrifuge down if the velocity reaches a separate pre-set level (HIGH-HIGH).
  - d. Provide an adjustable time delay during centrifuge startup to account for initial acceleration and feed induced vibration.
  - e. Provide an adjustable time delay, not to exceed 5 seconds, during operation to account for momentary excursions due to process changes.
2. Provide two vibration sensors (one per pillow block bearing) installed on each centrifuge and wired to a common terminal junction box, positioned to measure both horizontal and vertical displacement.
  3. The centrifuge, when running at the normal operating speed, shall not produce vibration velocities greater than 6.5 mm per second at the main bearings when tested at the manufacturing facility without feed.

2.06 ELECTRICAL

A. General:

1. Conform with Division 26, Electrical.
2. Provide all necessary electrical components and wiring for a complete, functional system.
3. All motor variable frequency drives and starters for the centrifuge system shall be provided in the VFD Panel provided as part of this section.
4. Control and electrical panels and interior components shall be rated for continuous operation in 40 degrees C (104 degrees F) ambient conditions.

B. Wiring: Size conductors and conduits for power circuits to all equipment. Factory prewire (size, furnish, install, and connect) all skid mounted equipment control conductors and instrumentation cables to skid mounted terminal junction boxes for connection to the control and VFD panels by Division 26, Electrical. The electrical wiring requirements and proper documentation shall be included as part of the package system scope of supply. All conductors shall be stranded copper, and all wiring shall meet the requirements of NFPA 70, the 2008 National Electrical Code. Conductors shall be stranded copper. Insulation shall be rated 600 volts, minimum. Low-voltage (24V) signals shall be run in 600-volt twisted shielded pair cable. Analog and power circuits shall not be run in the same conduits.

C. Electrical Raceways: All conductors and cables not subject to vibration between prewired devices and skid-mounted terminal junction boxes shall be installed in PVC-coated rigid galvanized steel conduits. Flexible, nonmetallic, liquid-tight conduits shall be provided where flexible conduits are required.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- D. Terminal Junction Boxes: All skid-mounted devices, except for motor leads, shall be prewired to skid-mounted terminal junction boxes (TJBs). Separate TJBs shall be provided for (a) 120V power and (b) 4 mA to 20 mA analog and 24V dc discrete signals. Size, furnish, and install NEMA 4X, stainless steel TJBs on the centrifuge skid.
- E. Centrifuge Main Drive VFD: Main drive motor shall be controlled by an active front end ABB ACS800 variable frequency drive provided in the Centrifuge VFD Panel.
1. The system shall be sized in accordance with manufacturer’s design requirements and shall be as specified in Section 26 29 23, Low-Voltage Variable Frequency Drive System.
  2. The motor shall be capable of delivering full load torque across a 10:1 turndown ratio.
  3. Drive system shall be capable of flying restart.
- F. Centrifuge Backdrive VFD: Backdrive motor shall be controlled by an active front end ABB ACS800 variable frequency drive provided in the Centrifuge VFD Panel.
1. The backdrive system shall provide infinite speed variation between the scroll conveyor and bowl shell of the centrifuge.
  2. The system shall be sized in accordance with manufacturer’s design requirements and shall be as specified in Section 26 29 23, Low-Voltage Variable Frequency Drive System.
  3. The motor shall be capable of delivering full load torque across a 10:1 turn down ratio.
  4. Drive systems shall be capable of flying restart.
- G. Centrifuge VFD Panels: Provide an VFD Panel for each centrifuge.

<b>Panel Nos.</b>	<b>Name</b>	<b>NEMA Enclosure</b>	<b>Material</b>
76-DC-01.VFD	Centrifuge 1 VFD Panel	12	Painted Steel
76-DC-08.VFD	Centrifuge 8 VFD Panel	12	Painted Steel

1. Each VFD Panel shall be a freestanding enclosure, containing the following:
  - a. A main circuit breaker with a through the door lockable handle.
  - b. VFD controls for main drive motor.

CITY OF SAN DIEGO  
 METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. VFD controls for backdrive motor.
- d. E-stop pushbutton.
- 2. Variable frequency drives shall be sized in accordance with NEC and Division 26, Electrical.
- 3. The fused disconnect switch in accordance with centrifuge system requirements.
- 4. Power Supply: 480-volt, three-phase, three-wire, 60-Hz.

2.07 CONTROLS

A. General:

- 1. In accordance with general control requirements specified in Section 40 99 90, Package Control Systems.
- 2. Instrumentation component qualities shall be in accordance with components specified in 40 90 00, Instrumentation and Control.
- 3. Provide centrifuge controls equipment in a dedicated compartment of the Control and VFD Panel specified herein, in Article Electrical.

<b>Panel Nos.</b>	<b>Name</b>	<b>NEMA Enclosure</b>	<b>Material</b>
76-DC-01.LCP	Centrifuge 1 Control Panel	12	Painted Steel
76-DC-08.LCP	Centrifuge 8 Control Panel	12	Painted Steel

- 4. Control Panels: Provide a control panel for each centrifuge.
- 5. The controls for all components of each centrifuge shall be provided by a dedicated programmable logic controller (PLC), mounted in the Centrifuge Control Panel. The PLC shall provide all control and monitoring functions as required for the operation and monitoring of the centrifuge including, but not limited to, timing, interlocks, startup sequencing, normal and emergency shutdowns, and permissive functions required for safe operation of each centrifuge.
  - a. Critical field alarm instruments and contacts will be wired for failsafe operation where an open circuit will alarm. PLC communications and faults shall be monitored.
  - b. All indicating lights shall be in accordance with Section 40 99 90, Package Control Systems, with equipment tag numbering as specified herein and as shown on Drawings.
- 6. Provide uninterruptible power supply (UPS) backup power for all PLC OIT, network, and instrument components of the centrifuge control

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

system. Size UPS to supply power for a minimum of 20 minutes under connected load.

7. PLC Manufacturer and Products: As specified in Section 40 99 90, Package Control Systems.
8. Provide Application software for all digital, programmable components of the centrifuge systems as specified in Section 40 99 90, Package Control Systems.
9. Provide Ethernet TCP/IP 100 Mbps network communications module to support communications between the PLC and the Owner's Plant Control System network.

B. Control Panel Functions:

1. Operator Interface Terminal (OIT):
  - a. Provide a panel-mounted OIT on the Centrifuge Control Panel.
  - b. OIT Manufacturer and Product: As specified in Section 40 99 90, Package Control Systems.
  - c. The OIT for each centrifuge shall provide the primary method for an operator to monitor the status of the centrifuge and to affect its operation by command or directive entry. The OIT shall provide the graphics-based interface between the operator and the centrifuge controller. The graphics and their layout/presentation shall be manufacturer's standard.
  - d. The OIT shall provide all displays and control screens needed to monitor and control the associated dewatering centrifuge system safely and efficiently.
  - e. The OIT shall provide for selection of the following:
    - 1) Centrifuge Control Mode: LOCAL/REMOTE.
    - 2) Backdrive Control Mode: TORQUE/DIFFERENTIAL.
    - 3) Centrifuge START (in LOCAL mode).
    - 4) Centrifuge STOP (in both LOCAL and REMOTE modes).
    - 5) Centrifuge Clean-In-Place (CIP) initiation (in both LOCAL and REMOTE modes).
  - f. Display (at a minimum):
    - 1) Alarms.
    - 2) Status and control of each system component.
    - 3) Bowl speed.
    - 4) Backdrive gear shaft speed if gearbox is supplied.
    - 5) Main drive motor amperage (rms value).
    - 6) Differential Speed: Scroll versus bowl.
    - 7) Bearing temperatures.
    - 8) Backdrive torque.
    - 9) Vibration.
    - 10) Centrifuge Control Mode: LOCAL/REMOTE.
    - 11) Backdrive Control Mode: TORQUE/DIFFERENTIAL.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 12) The specific shutdown condition.
- 13) Sludge and polymer flow rates.
- 14) All inputs from and outputs to the plant SCADA system.
- g. The OIT shall have operator adjustable parameters for backdrive control. In addition, there should be one set of backdrive control parameters for use during cleaning or flush cycles. Backdrive control should be automatically changed to cleaning parameters in auto shutdown of the centrifuge or in CIP mode and return to the previous parameter set afterwards
2. Controller Sequencing: The centrifuge PLC shall contain all programming necessary to safely START and STOP the centrifuge, in either the LOCAL or REMOTE mode. Provide STANDBY and PRODUCTION modes. The following minimum sequences and control shall be provided.
  - a. LOCAL/REMOTE: In the LOCAL model, centrifuge control shall only be available through the centrifuge control and VFD panel. All outputs to the Plant Control System shall still be available in LOCAL mode. In the REMOTE mode, Centrifuge Start, Stop, Backdrive Control mode, torque set point, differential speed set point, and other specified centrifuge controls shall be from the Plant SCADA System. In the LOCAL mode, provide controls to Start and Stop the sludge feed pump and polymer feed pump. In the LOCAL mode, provide for operator entry of sludge feed and polymer feed flow rate setpoints. Start, stop, and setpoint commands shall be communicated to the Plant Control System.
  - b. Start: This command shall instruct the centrifuge control system to begin its start sequence. The centrifuge shall not be allowed to start more than the stated number of times per hour (two if cold, one if hot). The centrifuge control system shall confirm the successful initiation and/or completion of each step in the startup sequence before continuing with the next step in the sequence.
    - 1) The start sequence can only begin when the sludge pump and polymer blend system are not running (OFF status).
    - 2) Provided all interlocks are in the normal state, the centrifuge control system shall bring the bowl and scroll up to speed and signal when proper conditions have been attained to begin feeding polymer and sludge.
    - 3) Initiate open of the Bypass (Cake) To Centrate valve to direct mixed solids/liquids discharge to the centrate piping system.
    - 4) Initiate start of the polymer feed pump.
    - 5) Initiate start of the sludge feed pump (after a preset time delay).
    - 6) Upon reaching an operator entered torque set point, initiate close of the Bypass (Cake) To Centrate valve.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 7) If the start sequence is interrupted for any reason, including, but not limited to equipment failure, interlock failure, or manual (operator initiated) interrupt, the centrifuge controller shall generate a time delayed FAIL TO START alarm, with an operator adjustable delay from 0 minute to 5 minutes. Initiate stop of the sludge feed pump and polymer feed pump, and allow the machine to coast to a standstill.
  - 8) If the start sequence is successful, discontinue monitoring interlock status of polymer feed and sludge feed.
- c. Normal Stop: This command shall instruct the centrifuge control system to begin its normal stop sequence. The centrifuge control system shall confirm the successful initiation and/or completion of each step in the stop sequence. If any step in the sequence fails, the centrifuge controller shall generate an alarm specifying the failed step.
- 1) Stop the sludge feed pump and polymer feed pump (disable ENABLE commands).
  - 2) Maintain a preset differential speed to clear the remaining solids from the bowl.
  - 3) After a set adjustable time for removal of resident solids or upon reaching an operator entered falling backdrive torque set point, initiate opening of the Bypass (Cake) To Centrate valve, opening of the centrifuge flush valve to direct mixed solids/liquids discharge to the centrate piping system.
  - 4) After a predetermined (adjustable) time period, initiate closing of the centrifuge flush water valve. The machine shall then coast to a standstill.
- d. The control system shall cause a “Controlled Shutdown” of the centrifuge and alarm this condition to the plant SCADA system in the event that any of the following interlocks are triggered. These automatic shutdown interlocks shall include, but are not limited to:
- 1) Backdrive controller malfunction.
  - 2) Left/right bearing HIGH-HIGH temperature alarms.
  - 3) Backdrive malfunction.
  - 4) HIGH-HIGH torque.
  - 5) HIGH-HIGH vibration.
- e. The control system shall cause an automatic “Shutdown” sequence shutdown of the centrifuge and alarm this condition to the plant SCADA system in the event that any of the following interlocks are triggered. These automatic shutdown interlocks shall include, but are not limited to:
- 1) Backdrive HIGH temperature alarm.
  - 2) Drive motor over temperature.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 3) Drive motor overload.
- f. During normal operation an excessive solids build-up shall be detected by the centrifuge control system as a higher than normal torque requirement or by sensing excessive vibration. Should the torque or vibration exceed a preset point, the HIGH torque or vibration switch shall close, sending a signal to the centrifuge control system which shall initiate shutdown of the sludge and polymer feeds. This action will normally result in a reduction of torque and vibration as the buildup is removed from the bowl. When the torque or vibration falls to an acceptable limit, reinitiate start of sludge and polymer feeds. The high torque control shall be not more than twice the normal operating torque or pressure. The controls shall also allow operation at a set differential speed allowed to vary within the normal operating limits. Controls shall include adjustable timers and or a count of HIGH torque or vibration events in order to initiate an automatic “Normal Stop” in the event of repeated torque or vibration excursions.
- g. In the event that the above clearing action fails to remedy the high torque or vibration situation and the torque or vibration continues to increase, the centrifuge control system shall respond by issuing a torque or vibration HIGH-HIGH alarm at the control panel and similar signal to the plant SCADA system in addition to initiating a “Controlled Shutdown”.
- h. In the event of a power loss the Decanter Monitoring System shall have the ability to provide Power Loss Ride Through Protection that will allow the centrifuge to run through a short duration power blip, generally defined as 3-5 seconds. If the power outage extends past the 3-5 seconds the system will down the feed pump and polymer pump and put the centrifuge into the production standby mode for a programmed set time. If power is restored during this time the feed pump and polymer pump will automatically restart and production will resume. Should the power not be restored, the control system must allow the centrifuge to be brought to a stop in a normal shutdown mode (as if it had power), including a normal flush cycle along with maintaining the differential speed during the coast down period. This system will allow the centrifuge to scroll the solids out and be available for an immediate restart once power is restored. During the power loss ride through sequence, the centrifuge must produce its own power back to the controller so as to not lose any control or supervisory signals going to the DCS. The Power Loss Ride Through Protection shall be demonstrated during the pre-performance testing phase (see section 3.04.C) with the procedure agreed to by Alfa Laval on February 8, 2020 after discussion with the City MBC staff and summarized in submittal No. 31R1,

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

“Power Loss Ride Through Feature,” dated February 27, 2017 and shown below:

- 1) Prerequisite:
  - a) Operations to determine which Centrifuge will be used for the test. Run this Centrifuge in normal Production Mode. Site is to have a means of tripping Feeder Breaker in instead of Main Disconnect. Site to provide an externally powered source of 120V ac at the chosen centrifuge’s control panel. Flush Valve and Diverter Gate Valves are to be put in Hand to simulate loss of site power.
- 2) Procedure for Test
  - a) Power Down from Starter Panel Disconnect.
  - b) Connect Fiber Optic cable from Laptop to Main Drive Control card.
  - c) Hook up Ethernet cable from Laptop to Ethernet Switch in Control Panel.
  - d) Temporarily take out Type 2 Alarms with Power Loss Alarm in PLC Code.
  - e) Power Up Starter Panel in Estop. Connect the Drives Windows software to the ABB Main Drive. Connect the AB RSLogix 5000 software to the PLC Processor. Trend points are defined in the submittals stated above.
  - f) Emerson to monitor the Trend points defined in the submittal stated above.
  - g) Jumper (or force) the external drive run enable from the PLC and jump Type 2 Alarms in PLC to prevent the PLC from prematurely stopping the PLRT due to potential software glitch or other undetected condition.
  - h) City to set up the robot for triggering the corresponding Feeder Breaker to trip off if required.
  - i) City to perform a startup on selected centrifuge and put into operation with feed following normal startup procedures.
  - j) Prior to performing PLRT test, located one person out by Centrifuge, one person observing Drive keypads to see if any faults occur, and one person in the Control Room to monitor Plant SCADA. All people should have a common communication path to coordinate testing. Flush Water Valve and Diverter Gate Valve to be turned off manually.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- k) With the Decanter running in production and with a stable load, test can begin. Trending to start on observed points.
  - l) Open Incoming Disconnect Switch/Feeder Breaker to Designated Starter Panel. This will initiate PLRT Test.
  - m) Trending will continue until it is determined that the PLRT function has transitioned to a Coast Mode. This would be DC Voltage Undervoltage.
  - n) An observer will continue to monitor the four drive keypads.
  - o) At this time Centrifuge is Coasting down.
  - p) PLC Trends can continue. Drive Trends will end. Emerson Trends can continue.
  - q) When Centrifuge comes to a mechanical stop, results of Test will be reviewed, any issues identified and resolved
  - r) Restart test from step f above, this time skipping step g.
  - s) Assuming second test is successful, continue to step s.
  - t) All test equipment will be disconnected.
  - u) Power will be restored to Starter Panel and machine turned over to Operations.
- i. Controlled Shutdown: Controlled Shutdown shall require reset action at the centrifuge control panel before the unit can be restarted.
- 1) This command shall de-energize the centrifuge main drive motor. The centrifuge shall be allowed to coast to a standstill. If available, the backdrive shall remain active until the bowl has coasted to a standstill, controlled to clear as much solids as possible from the bowl.
  - 2) Initiate stop of the sludge feed pump and polymer feed pump.
  - 3) Initiate the centrifuge flush water valve open for flushing and subsequently initiate close after an adjustable time period.
- j. Emergency Stop: Emergency Stop initiated via E-STOP pushbutton at the centrifuge control and VFD panel or from the plant SCADA system shall stop the centrifuge and all associated equipment instantaneously with no flush water.
- 1) This command shall de-energize the centrifuge system.
  - 2) Initiate stop of the sludge feed pump and polymer feed pump.
- k. Provide clean-in-place (CIP) function to clean solids out of the bowl. In a CIP cycle a CIP START pushbutton is pressed, the

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

centrifuge flush water valve OPEN is initiated, the backdrive energized and begin to rotate in the reverse (if required by the manufacturer's particular design) direction at a low speed for a predetermined time. At the end of the set time, the backdrive shall toggle direction, causing a water "sloshing" effect within the centrifuge bowl and conveyor. The process shall continue until the predetermined overall times ends, a CIP STOP key is depressed, or a fault occurs. Any shutdown fault shall terminate the CIP cycle.

3. Controller Interface (Data Exchange with the plant SCADA System): Provide provisions to make available and receive in contiguous registers the following data to and from the plant control system, through the centrifuge PLC Ethernet network communication module.
  - a. Discrete Outputs to the Plant Control System:
    - 1) Emergency Stop.
    - 2) Centrifuge RUNNING status.
    - 3) Centrifuge READY status.
    - 4) Centrifuge FAILED TO START status.
    - 5) Centrifuge FAILED TO STOP status.
    - 6) Centrifuge control mode LOCAL/REMOTE status.
    - 7) Backdrive TORQUE/DIFFERENTIAL control mode status.
    - 8) Clean mode status.
    - 9) Vibration warning (HIGH) alarm.
    - 10) Vibration shutdown (HIGH-HIGH) alarms.
    - 11) Motor faults.
    - 12) High torque alarm.
    - 13) Torque overload (HIGH-HIGH) alarm.
    - 14) Drive-end/idle-end main bearing HIGH temperature alarm.
    - 15) Drive motor HIGH temperature alarm.
    - 16) Backdrive motor HIGH temperature alarm.
    - 17) Backdrive controller (VFD) malfunction alarm.
    - 18) Main drive controller (VFD) malfunction alarm.
    - 19) Sludge feed pump ENABLE signal.
    - 20) Polymer feed pump ENABLE signal.
    - 21) Centrifuge flush water valve OPEN command.
    - 22) Centrifuge flush valve AUTO/MANUAL status.
    - 23) Bypass (Cake) To Centrate valve OPEN /CLOSE status.
    - 24) Bypass (Cake) To Centrate valve AUTO/MANUAL status.
    - 25) Diverter gate OPEN/CLOSE status.
    - 26) Diverter gate AUTO/MANUAL status.
    - 27) Centrifuge common alarm.
    - 28) Quantity of 12 additional discrete outputs.
  - b. Analog outputs to the plant control system:
    - 1) Bowl speed.
    - 2) Scroll drive gear shaft speed if gearbox is supplied.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- 3) Bowl/scroll differential speed.
  - 4) Backdrive torque.
  - 5) Main drive motor amperage (rms value).
  - 6) Drive-end main bearing temperature.
  - 7) Idle-end main bearing temperature.
  - 8) Drive-end main bearing vibration value.
  - 9) Idle-end main bearing vibration value.
  - 10) Sludge feed pump flowrate setpoint (in LOCAL mode).
  - 11) Polymer feed pump flowrate setpoint (in LOCAL mode).
  - 12) Quantity of six additional analog outputs.
- c. Discrete Inputs from the Plant Control System:
- 1) Emergency STOP.
  - 2) Centrifuge START command.
  - 3) Centrifuge SHUTDOWN command.
  - 4) Centrifuge CIP START command.
  - 5) Backdrive control mode (TORQUE/DIFFERENTIAL).
  - 6) Sludge feed pump ON status.
  - 7) Polymer feed pump ON status.
  - 8) Centrifuge flush valve OPEN/CLOSE command.
  - 9) Centrifuge flush valve AUTO/MANUAL command.
  - 10) Bypass (Cake) To Centrate valve OPEN/CLOSE command.
  - 11) Bypass (Cake) To Centrate valve AUTO/MANUAL command.
  - 12) Diverter gate OPEN/CLOSE command.
  - 13) Diverter gate AUTO/MANUAL command.
  - 14) Cake pump strategy READY status.
  - 15) Quantity of six additional discrete inputs.
- d. Analog inputs from the plant control system:
- 1) Backdrive torque set point (torque control mode).
  - 2) Differential speed set point (differential control mode).
  - 3) Bowl speed set point.
  - 4) Quantity of three additional analog inputs.
- e. Any other data or status considered by manufacturer as essential to safe operation.
- f. Sludge feed pump START/STOP and flow control loop will be controlled by the Plant Control System. The centrifuge PLC shall communicate ENABLE (start) signal for the sludge feed pump as specified for centrifuge startup and shutdown functions.
- g. Polymer feed pump START/STOP and flow control loop will be controlled by the Plant Control System. The centrifuge PLC shall communicate ENABLE (start) signal for the polymer feed pump as specified for centrifuge startup and shutdown functions.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

2.08 ACCESSORIES

- A. Equipment Identification Plates: Provide a 16-gauge stainless steel identification plate for all equipment, valves, appurtenances, and instruments with equipment/component numbers, securely mounted on the equipment in a readily visible location. The plate shall bear the 1/4-inch die-stamped equipment identification numbers indicated in this Specification and as shown on Drawings.
- B. Lifting Lugs: Equipment and each component thereof weighing over 50 pounds shall be provided with lifting lugs for easy handling.

2.09 PAINTING

- A. The paint system shall be a catalyzed epoxy primer with a top coating of aliphatic acrylic urethane in accordance with manufacturer's typical paint specifications.
- B. All carbon steel and cast iron shall be properly prepared and cleaned in accordance with the best standard practices. Minimum surface preparation shall include solvent cleaning, SSPC SP-1 followed by abrasive blasting to near white metal, SSPC SP-10. Or other surface preparation methods will be considered, provided that the method results in the minimum surface profile required by the paint manufacturer. Apply 3 mils minimum dry film thickness of lead-free catalyzed epoxy polyamide metal primer and one finish coat of aliphatic acrylic urethane, 3 mils minimum dry film thickness. Prepare all surfaces and apply all paint in accordance with the paint manufacturer's written directions. The color shall be the manufacturers standard.

2.10 CENTRIFUGE FACTORY TESTS

- A. The Owner reserves the right to witness the tests specified herein and to inspect the fabrication procedures at any time during the fabrication stage(s) of the centrifuge and associated equipment. Owner's travel expenses will be borne by the Owner.
- B. Notify the Owner of the schedule for centrifuge system testing not less than 45 days in advance and Owner will travel to the factory and inspect and witness the centrifuge system factory testing.
- C. Perform manufacturer's standard functional tests on each centrifuge unit as follows:
  - 1. Gather and furnish test information necessary to show conformance to specified requirements.
  - 2. Manufacturer's Test Representative shall certify test results.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Perform tests on all components and actually furnished. Use of factory control panels and factory motors are acceptable.
  4. Vibration measurement with bowl empty.
  5. Vibration measurement with bowl filled with water.
  6. Operation of machine for minimum of 2 hours with water.
  7. Motor starting amperage.
  8. Obtain acceptance of test reports from Engineer prior to shipment of equipment.
- D. Noise Test: Measure free field sound pressure levels of centrifuge running at the normal operating speed with bowl filled with water and/or with water feed.
- E. Scratch Abrasion Test:
1. The sintered tungsten carbide tiles to be used on the wearing face of the conveyor shall be subjected to a dry sand rubber wheel abrasion test. This test shall be conducted in accordance with the current ASTM G65 Procedure A. The test shall be conducted with the following requirements:
    - a. Wheel Load: 30 pounds.
    - b. Grit: AFS 50/70.
    - c. Grit Flow Rate: 250 grams to 350 grams per minute.
    - d. Shape of Sand Curtain: Streamlined.
    - e. Test Duration: 6,000 revolutions.
    - f. Rubber Wheel: Chlorobutyl rubber with a Durometer A of 58-62.
    - g. Wheel Speed: 200 rpm (plus or minus 10 rpm).
    - h. Wheel Diameter: 8.50 inches to 9 inches.
    - i. Linear Abrasion Distance: 14,138 feet.
    - j. Sand Nozzle: Special fabricated design.
  2. Provide historical abrasion test data for tiles identical to the ones used for the provided centrifuges.
    - a. The following laboratories are equipped to conduct these tests in accordance with the ASTM Standards and can provide certification of the results:
      - 1) Colorado School of Mines, Golden, Colorado 80401.
      - 2) Falex Corp., Aurora, Illinois 60505.
      - 3) FMC Corp., 1205 Coleman Avenue, Santa Clara, California.
  3. The volume loss of the proposed wear resistant material shall not exceed 3 cubic millimeters per tile during the 30-minute test period. Any material that exceeds 3.0 cubic millimeters loss in 30 minutes will not be allowed.

2.11 PANEL FACTORY TESTS

- A. The Owner reserves the right to witness the tests specified herein and to inspect the fabrication procedures at any time during the fabrication stage(s) of the centrifuge control panel and centrifuge VFD control panel and associated equipment. Owner's travel expenses will be borne by the Owner.
- B. Notify the Owner of the schedule for panel factory testing not less than 45 days in advance and Owner will travel to the factory and inspect and witness the panel factory testing.
- C. Perform manufacturer's standard functional tests on each centrifuge control panel and centrifuge VFD control panel as follows:
  - 1. Gather and furnish test information necessary to show conformance to specified requirements.
  - 2. Manufacturer's Test Representative shall certify test results.
  - 3. Perform tests on centrifuge control panel and centrifuge VFD control panel actually furnished.
  - 4. Test panel for proper construction, electrical connection, and function.
  - 5. Test all PLC inputs and outputs for proper connection and function.
  - 6. Check all alarms, shutdown conditions, and automatic sequences to verify proper function.
  - 7. Simulate interlocks and signals from other connected equipment in order to demonstrate specified operator interface functions and controls.
  - 8. Obtain acceptance of test reports from Engineer prior to shipment of equipment.

**PART 3 EXECUTION**

3.01 INSTALLATION

- A. Contractor will install equipment in conformance with the manufacturer's written instructions, with supervision and inspection performed by manufacturer's representative.
- B. Equipment anchoring and mounting shall be in accordance with manufacturer's requirements for the load criteria specified in Section 01 61 00, Common Product Requirements.
- C. Alignment shall meet or exceed manufacturer's required alignment tolerances.

3.02 PRE-INSTALLATION CONFERENCE

- A. Centrifuge manufacturer service technician and centrifuge manufacturer's local equipment representative shall attend pre-installation conference with

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

Owner and installing Contractor to coordinate. Conference shall be held at the plant and be 3 hours long.

3.03 FIELD TESTS

- A. Field Motor Tests: At the time of equipment delivery to the jobsite and after installation prior to startup, the Contractor, manufacturer's representative, or another subcontractor shall megger test (500-volt megger) each motor phase-to-phase and phase-to-ground in the presence of the Engineer. The Engineer record the test values and provide the data to the centrifuge manufacturer. Centrifuge manufacturer shall document the motor resistance test values in the installation report or in the field functional test report. Values of resistance less than 1 megohm will not be acceptable.

3.04 FIELD QUALITY CONTROL

- A. The timing and scheduling for testing shall be coordinated with and be dependent upon the Owner's schedule and quantity of sludge available for testing.
- B. Functional Test:
1. Functional tests specified herein shall be performed for the two centrifuge units furnished as part of the Work of this section.
  2. Prior to startup, all equipment described herein shall be inspected for proper alignment, quiet operation, proper connection, and satisfactory performance of all components by means of a functional test conducted by the manufacturer's representative, assisted by the Owner, and as approved by the Engineer.
  3. Perform on each completed centrifuge system without sludge feed prior to startup. Test to be in coordination with the DCSP and include verification of all communications with DCS including DCS graphics, alarms, status, and control functions.
  4. Each unit shall be submitted to complete normal start, normal stop, and controlled shutdown cycles. The unit shall then be submitted to a 2-hour running test. At the beginning and end of the test, and at periodic intervals between, all temperature monitoring devices shall be observed and recorded. The belt tension shall be adjusted at the start of the test, checked and readjusted if necessary at the end of the test. All safety devices and the differential speed control for the backdrive unit shall be checked for satisfactory operation. Instrumentation and control systems shall be checked for conformance with the specifications.
  5. After approximately 1 hour of runtime, the centrifuge shall be measured for proper vibration. Vibration velocities shall not exceed 6.5 mm per second RMS at the main bearings. If units exhibit vibration in excess of

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

the limits specified, manufacturer shall adjust or modify the unit as necessary. After adjustment and/or modification, unit shall be retested to prove conformance.

6. As part of the test, each centrifuge shall be operated with water feed for a minimum of 30 minutes. At the beginning and end of the 30-minute water test, observe and record all thermometer, pressure gauges, and flow indicator readings.
7. Proposed test procedures shall be developed by the centrifuge manufacturer and submitted to the Engineer for review, comment, and approval. Testing shall not begin until the test procedures have been approved by the Engineer.
8. A qualified representative of the manufacturer shall supervise each test, analyze data, and certify the centrifuge's performance during the test.
9. Submit test log to Engineer upon completion of each test.
10. Complete successful functional testing prior to pre-performance testing.

C. Pre-Performance Test:

1. Pre-Performance tests specified herein shall be performed for the two centrifuge units furnished as part of the Work of this section.
2. Manufacturer's representative, assisted by the Owner, shall conduct testing to demonstrate continuous, reliable operation, not performance, while dewatering all of the sludge streams specified herein for durations for each as determined by the Owner.
3. Centrifuge manufacturer shall notify Owner in writing at least 14 days prior to when the Pre-Performance Test will occur. Prior to any testing, the centrifuge manufacturer shall have provided complete Operation and Maintenance Manuals and conducted Prestartup classroom training on the dewatering centrifuge. Field training may occur during the Pre-Performance Test. The Functional Test shall be successful before the Pre-Performance Test may be conducted.
4. Pre-Performance Test shall include operation of each dewatering centrifuge for a period of 5 working days (one 5-day, 8-hour work day week) without shutdown due to equipment or system failures. No more than one centrifuge shall be operated at a time.
5. Stoppages due to any failure of provided equipment and instrumentation, such as the centrifuge control panel, centrifuge VFD panel, or other auxiliary equipment shall not exceed 30 minutes, and such stoppages shall not number more than three over the 5-day test period. A greater number of stoppages or a stoppage longer than 30 minutes shall be deemed a failure of the Pre-Performance Test and the test will stop. Stoppages caused by the Owner may occur without causing failure of the test.
6. Proposed test procedures shall be developed by the centrifuge manufacturer and submitted to the Engineer for review, comment, and

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- approval. Testing shall not begin until the test procedures have been approved by the Engineer.
7. Include the Power Loss Ride Through Feature during this pre-performance testing phase.
  8. A qualified representative of the manufacturer shall supervise each test, analyze data, and certify the centrifuge's performance during the test.
  9. If, in the opinion of the Engineer, the Pre-Performance Test is successful and meets the requirements specified herein, the Engineer will recommend to the Owner, by letter, the acceptance of the Pre-Performance Test and that the dewatering centrifuge may begin the Performance Test, providing other requirements for the Performance Test to begin are satisfied.
  10. Should the dewatering centrifuges be unable to achieve the Pre-Performance Test requirements, the centrifuge manufacturer shall perform whatever equipment modifications are deemed necessary such that the equipment can achieve the performance specified. All modifications shall be documented and submitted to the Engineer. Following completion of the equipment modifications, the Pre-Performance Test shall be run again in its entirety.
  11. If, in the opinion of the Engineer, any one centrifuge did not meet the pre-performance requirements specified herein after a second pre-performance test, then the equipment shall be subject to rejection.
  12. For the first and second (if required) Pre-Performance Tests, the cost and responsibility for supplying polymer shall be the responsibility of the Owner. The costs for power, feed sludge, centrate disposal, and dewatered cake disposal shall be borne by the Owner. Centrifuge manufacturer shall be responsible for recommending the Mannich polymer to use and centrifuge operational settings.

D. Performance Test:

1. General:
  - a. Performance tests specified herein shall be performed for the two centrifuge units furnished as part of the Work of this section.
  - b. Performance testing shall be done to demonstrate the actual system operating conditions and verify that each dewatering centrifuge meets or exceeds the minimum performance requirements specified in Article Performance Requirements while dewatering the digested sludge stream specified in Article Service Conditions. Performance testing shall be performed at the solids loading rate specified in Article Performance Requirements and under stable operating conditions.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- c. The centrifuge manufacturer shall notify the Owner in writing at least 14 days prior to when the Performance Test will occur. Performance Test shall not proceed until after the Pre-Performance Test is successfully concluded.
  - d. The cost of all laboratory tests necessary to confirm the sludge characteristics for the initial performance test on a centrifuge will be borne by the Owner. All laboratory tests for performance testing shall be performed by the Owner in conformance with the applicable portions of standard methods. If retesting is required, the centrifuge manufacturer shall pay the Owner for all laboratory tests subsequent to the initial test. Payment rate for Owner performed laboratory testing shall be as documented by Owner and agreed prior to testing. If desired by the centrifuge manufacturer for initial performance test and/or retesting, centrifuge manufacturer may take duplicate samples and have laboratory tests performed by an independent laboratory at centrifuge manufacturer's expense.
  - e. Polymer used shall be as recommended by the centrifuge manufacturer. The cost and responsibility for supplying polymer shall be the responsibility of the Owner until the equipment is accepted.
  - f. The cost of power, water, and feed sludge shall be borne by the Owner.
2. Performance Test Procedures:
- a. Manufacturer's representative, assisted by the Owner, shall startup and operate each centrifuge system on the digested sludge dewatering scenario specified herein, for a period of 2 working days, with 8 hours per day, once stable operation is achieved, with no interruptions allowed during each 8-hour period. All centrifuge operations and associated manufacturer's field services required to adjust machine settings shall be performed prior to and exclusive of the above specified performance test duration. No more than one centrifuge shall be operated at a time.
  - b. Proposed test procedures shall be developed by the centrifuge manufacturer and submitted to the Engineer for review, comment and approval. Testing shall not begin until the test procedures have been approved by the Engineer.
  - c. A qualified representative of the manufacturer shall supervise each test, analyze data, and certify the centrifuge's performance during the test.
  - d. Steady state operation at the specified sludge feed solids rates shall be maintained throughout the test and all hourly quantities shall be the average during the test period. The centrifuge shall maintain acceptable performance while dewatering feed sludge

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- with properties within plus or minus 10 percent of the specified criteria listed in Article Service Conditions.
- e. Centrifuge manufacturer shall verify accuracy of instrumentation used to confirm performance prior to conducting the Performance Test.
  - f. During each performance test, take measurements and collect all required samples for analysis in order to make the following determinations:
    - 1) Sludge Feed Concentration: The total dry solids concentration of the feed sludge entering the centrifuge (percent TS), taken by sample.
    - 2) Dewatered Cake Concentration: The total dry solids concentration of the dewatered cake discharged from the centrifuge (percent TS), taken by sample. Take two duplicate samples per sample interval.
    - 3) Centrate Concentration: The total suspended solids concentration of the centrate discharged from the centrifuge (percent TSS), taken by sample.
    - 4) Solids Capture: Percent, by calculation specified herein.
    - 5) Feed Hydraulic Loading Rate (Exclusive of Polymer): gpm, as measured by sludge feed flowmeter.
    - 6) Feed Solids Loading Rate (Exclusive of Polymer): Pounds per hour of total dry solids, by calculation.
    - 7) Polymer Feed Rate: gpm, as measured by polymer feed flowmeter.
    - 8) Polymer Dose: Pounds active per dry ton of feed solids, by calculation.
  - g. Collect samples at approximate 1 hour intervals for a minimum of eight samples for each test period. Additional sampling may be made at centrifuge manufacturer's option.
  - h. Performance evaluation will be based upon the arithmetic average of the test results obtained during the test period, with the average rounded to one decimal place. The Owner reserves the right to discard obviously high or low erroneous test results. As specified below, laboratory testing will be performed by the Owner. Turnaround time for dewatered cake concentration samples are approximately 24 hours. For more immediate dewatered cake results, centrifuge manufacturer may supply their own instrumentation. Performance results shall be based on the laboratory standard methods results.
  - i. Prepare a formal test report including all laboratory analysis reports, all measured flows, the mass balance calculations, polymer dose, and solids capture. Submit final report to the Engineer within 20 days after completion of the test.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

3. Performance Test Acceptance Procedures:
  - a. If, in the opinion of the Engineer, the Performance Test is successful and meets the requirements specified herein, the Engineer will recommend to the Owner, by letter, the acceptance of the Performance Test.
  - b. If, in the opinion of the Engineer, the centrifuge does not meet the minimum performance requirements specified in Article Performance Requirements, the representative of the manufacturer shall make such changes in the equipment and methods of operation as deemed necessary and as approved by the Engineer. The necessary adjustments shall be made as soon as practical, but within a period not to exceed 30 days.
  - c. Following the adjustments, centrifuge manufacturer and shall repeat the Performance Test (“retest”). Prepare a formal test report including all laboratory analysis reports, all measured flows, the mass balance calculations, polymer dose, and solids capture. Submit the final report to the Engineer within 20 days after completion of the retest.
  - d. If, in the opinion of the Engineer, the retest Performance Test is successful and meets the requirements specified herein, the Engineer will recommend to the Owner, by letter, the acceptance of the Performance Test.
  - e. If, in the opinion of the Engineer, the centrifuge did not meet the minimum performance requirements specified in Article Performance Requirements during the retest, then the equipment shall be subject to rejection.
4. Equipment Rejection: Equipment subject to rejection shall be removed by the centrifuge manufacturer, at centrifuge manufacturer’s expense, as defined in the Contract Documents.

E. Optimization Assistance:

1. Optimization Assistance shall not begin until a minimum of 6 weeks after successful completion of the Performance Test.
2. Optimization Assistance shall include Supplemental Training and Performance Optimization as further specified herein with specified services to be provided within 3 months following successful completion of the Performance Test.
3. Supplemental Training:
  - a. Supplemental Training shall consist of additional classroom and hands-on training by a qualified representative of the manufacturer to refresh Owner’s staff on operation and maintenance procedures and to respond to questions once Owner’s staff have operated the equipment. Durations as specified herein.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

- b. Conduct additional classroom training.
  - c. Hands-on training shall include a demonstration of equipment breakdown, inspection of internal components, assembly, and on-line adjustments for equipment performance. In addition to operations and maintenance staff, include training for controls and electrical staff.
4. Performance Optimization:
- a. Provide a qualified representative of the manufacturer, assisted by the Owner, to operate the centrifuges to optimize machine settings to maximize solids concentration and solids capture efficiency and minimize polymer and electrical power consumption.
  - b. Proposed optimization procedures shall be developed by the centrifuge manufacturer and submitted to the Engineer for review, comment, and approval. Optimization services shall not begin until the test procedures have been approved by the Engineer.
  - c. A qualified representative of the manufacturer shall supervise the testing, analyze data, and provide a report summarizing trials, measured performance, and recommendations.
  - d. During optimization testing, take measurements as specified for performance testing, collecting samples at approximately 2-hour intervals, or when operation has stabilized at each trial condition.
  - e. The cost of all laboratory tests will be borne by the Owner. All laboratory tests for performance testing shall be performed by the Owner in conformance with the applicable portions of standard methods.
  - f. Mannich polymer used shall be as recommended by the centrifuge manufacturer. The cost of polymer, power, water, and feed sludge shall be borne by the Owner. Prepare and submit optimization results.

3.05 MANUFACTURER'S FIELD SERVICES

- A. Manufacturer's Authorized Representative: Present at Work site or classroom designated by the Owner, for the minimum person-days listed below, travel time excluded. A minimum of five trips shall be required.
- B. Minimum Services to Include:
  - 1. 3 person-days for inspection and functional testing.
  - 2. 2 person-days for prestartup classroom or jobsite training.
  - 3. 4 person-days for pre-performance testing.
  - 4. 5 person-days for performance testing and operator training during facility startup.

CITY OF SAN DIEGO  
METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

5. 4 person-days for optimization assistance consisting of the following activities:
  - a. 1/2 person-day for supplemental classroom training.
  - b. 1/2 person-day for supplemental hands-on training.
  - c. 3 person-days for performance optimization.
  
- C. The periods and trips stated above are minimums only and the manufacturer is required to be onsite for all of the functions listed above to the extent that is required to complete those functions to the satisfaction of the Owner and Engineer.

**END OF SECTION**

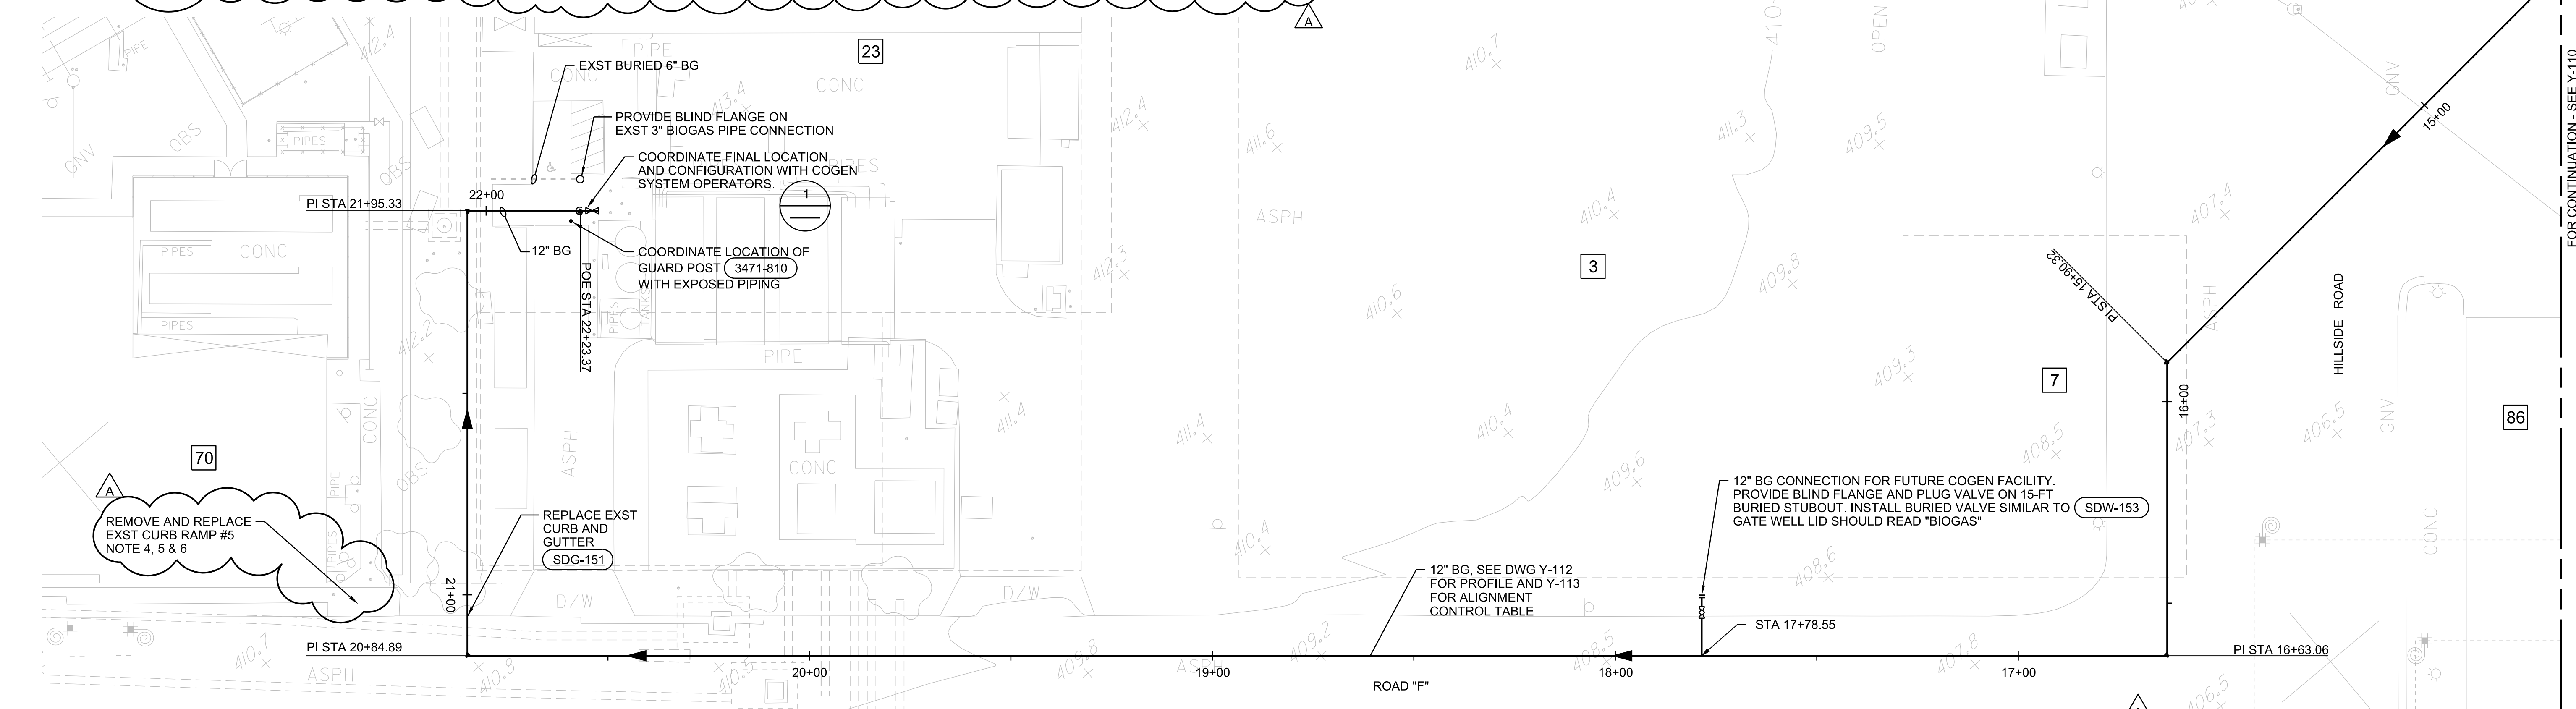

FOR CONTINUATION - SEE Y-110

**GENERAL NOTES:**

1. THE DESIGN OF THE CURB RAMP SHALL NOT AFFECT THE DRAINAGE PATTERN ON THE STREET.
2. CONTRACTOR TO REPLACE LIFTED, DAMAGED, OR MISSING SIDEWALK PANELS WITHIN THE CURB RETURN AND WITHIN THE ADJACENT AREAS OF THE CURB RETURN.
3. COUNTER SLOPES (CURB RAMP SLOPE PLUS STREET SLOPE) WHEN ADDED CANNOT EXCEED 13.0%.
4. CONTRACTOR TO PROTECT EXISTING PERMITTED WALLS/FENCES DURING DEMOLITION AND CONSTRUCTION OF CURB RAMP.
5. ALL CROSSWALKS TO BE REPLACED OR AFFECTED BY IMPROVEMENTS FOR THIS PROJECT SHALL BE RESTRIPTED AND STRAIGHTENED AS REQUIRED BY THE MUTCD AND SDM-116.
6. PATCH AND REPAIR SURFACE DAMAGES, WHERE APPLICABLE, ALONG THE BOTTOM OF THE CURB RAMP, CROSS GUTTERS, AND AT THE PEDESTRIAN CROSSING AREA SERVING THE CURB RAMP. COORDINATE WORK WITH RESIDENT ENGINEER.
7. CONTRACTOR TO VERIFY POLE SIGN(S) WITHIN OR NEAR CURB RETURNS. PROVIDE AT LEAST 70" CLEARANCE BETWEEN THE BOTTOM OF THE SIGN(S) AND THE SIDEWALK SURFACE. IF 70" MINIMUM CLEARANCE DOES NOT EXIST, ADJUST HEIGHT OF THE SIGN(S).
8. CONTRACTOR TO REMOVE ANY PORTIONS OF EXISTING MEDIANS THAT MAY ENCRACH ON THE CROSSWALK AREA THAT ARE BEING UPGRADED PER SDM-116. NEW CROSSWALK STRIPING SHALL NOT BE RE-ALIGNED TO AVOID EXISTING RAISED MEDIAN.

CURB RAMP NOTES TABLE

**1** **DETAIL**  
3/8"=1'-0"

**NOTES:**

1. FURNISH AND INSTALL 10" V733 BACK PRESSURE REGULATOR AS PER SPECIFICATION AND IN ACCORDANCE WITH VALVE MANUFACTURER'S INSTRUCTIONS.
2. BACK PRESSURE REGULATOR SHALL OPEN WHEN INLET PRESSURE REACHES SET POINT. INITIAL SET POINT IS 2.5 PSIG (ADJUSTABLE).
3. THIS DETAIL SHOWS GENERAL PIPING CONFIGURATION ONLY. CONTRACTOR SHALL COORDINATE WITH COGEN FACILITY TO FIELD DETERMINE PIPING LOCATION, ORIENTATION AND ELEVATIONS.
4. AS-BUILT SURVEY WILL BE CONDUCTED BY CITY OF SAN DIEGO SURVEY CONSULTANT AND WILL BE PROVIDED TO CITY CM PRIOR TO DEMOLITION OF EXISTING FACILITIES FOR USE IN NOTE 6 BELOW.
5. CITY PM WILL PROVIDE POT HOLE SURVEY FILE TO CITY SURVEY CONSULTANT FOR USE DURING AS-BUILT SURVEY ACTIVITIES. CITY SURVEY CONSULTANT SHALL TIE POT HOLE SURVEY TO RECORD OF SURVEY 14492 WITH MINIMUM TWO (2) POINTS CALLED OUT SHOWING COORDINATE VALUES ON SITE SPECIFIC COORDINATE SYSTEM AND RECORD OF SURVEY 14492.
6. ONCE AS-BUILT SURVEY IS COMPLETE CITY SURVEY CONSULTANT WILL PROVIDE CURB STAKING FOR LOCATION OF REPLACEMENT CURB AND CURB RAMP USING THE AS-BUILT SURVEY IN NOTE 4 ABOVE.

NOTES:

1. AS ONE OF THE FIRST TASKS, CONTRACTOR TO FIELD VERIFY DIMENSIONS FOR DEWATERING CENTRIFUGE NO. 1 AND NO. 8 FOR INLET PIPING, CENTRATE CHUTE, AND SOLIDS CHUTE DIMENSIONS AND ALL DIMENSIONS SHOWN ON DRAWINGS. CONTRACTOR SHALL SUBMIT VERIFIED FIELD DIMENSIONS TO ENGINEER FOR COORDINATION.
2. FOR THE COMPLETE SECOND FLOOR PLAN, SEE THE ORIGINAL CONTRACT DRAWING NO. 76-M-121.
3. EXISTING INLET PIPING FOR DEWATERING CENTRIFUGES NO. 1 AND NO. 8 SHALL BE REMOVED, MODIFIED AND REUSED IN THE INSTALLATION OF THE NEW DEWATERING CENTRIFUGES NO. 1 AND NO. 8 TO SUIT THE RAISED INLET OF THE NEW CENTRIFUGES, THE EXISTING INLET PIPING SHALL BE MODIFIED AS SHOWN ON DRAWING NO. 76-D-322
4. PRIOR TO INSTALLATION OF NEW DEWATERING CENTRIFUGES NO. 1 AND NO. 8, CONTRACTOR SHALL MODIFY EXISTING STRUCTURAL CONCRETE AS SHOWN ON DRAWING NO. 76-D-321.
5. CONTRACTOR SHALL FURNISH, INSTALL, COMMISSION, AND TEST THE NEW DEWATERING CENTRIFUGES NO. 1 AND NO. 8 AS SPECIFIED AND AND AS INDICATED UNDER, AND COMMISSIONING REQUIREMENTS IN TECHNICAL SPECIFICATIONS 44 22 24.
6. HORIZONTAL ALIGNMENT OF CENTRIFUGES: THE PROPOSED CENTRIFUGES SHALL BE ALIGNED SO THAT THE SLUDGE CAKE DISCHARGE CONNECTION FOR EACH NEW CENTRIFUGE ALIGNS WITH THE EXISTING SLUDGE CAKE DISCHARGE.
7. CONTRACTOR TO FURNISH AND INSTALL PIPING SPACERS AND MAKEUP SPOOL PIECES REQUIRED TO REUSE THE EXISTING INLET PIPING AND RECONNECT EXISTING INLET PIPING TO THE EXISTING RISERS.
8. VERTICAL ALIGNMENT OF CENTRIFUGES: THE VERTICAL ALIGNMENT OF THE CENTRIFUGE INLET WILL BE DETERMINED BY THE EXISTING TOP OF PAD ELEVATION AND THE ALFA LAVAL SHOP DRAWINGS. CONTRACTOR SHALL FIELD-VERIFY PAD ELEVATIONS AND DETERMINE THE NEW CENTERLINE ELEVATION FOR USE IN MAKING THE INLET PIPING MODIFICATIONS SHOWN ON 76-D-322. ESTIMATED EXISTING CENTRIFUGE CENTERLINE ELEVATION = 431.63', ESTIMATED PROPOSED CENTRIFUGE CENTERLINE ELEVATION = 435.0.
9. REMOVE EXISTING CONTROL PANEL, ISOLATION TRANSFORMER AND TRANSFORMER PAD FOR EACH CORRESPONDING EXISTING CENTRIFUGE. SEE STRUCTURAL DRAWINGS FOR SLAB MODIFICATION FOR NEW ELECTRICAL ENCLOSURE.
10. SEE ELECTRICAL DRAWINGS FOR ELECTRICAL WORK ASSOCIATED WITH NEW ENCLOSURES.
11. SEE STRUCTURAL DRAWINGS FOR STRUCTURAL WORK ASSOCIATED WITH NEW CENTRIFUGES.

## ENGINEER OF WORK

The Engineering Specifications and Special Provisions contained herein have been prepared by or under the direction of the following Registered Engineer:

3/22/2021

Seal:

1) Registered Engineer

Date

3/22/2021

Seal:

2) For City Engineer

Date

## **A. CHANGES TO CONTRACT DOCUMENTS**

The following changes to the Contract Documents are hereby made effective as though originally issued with the bid package. Bidders are reminded that all previous requirements to this solicitation remain in full force and effect.

THE SUBMITTAL DATE FOR THIS PROJECT HAS BEEN **EXTENDED AS STATED ON THE COVER PAGE.**

## **B. BIDDER'S QUESTIONS**

Q1. Per the Pipe Schedule on Sheet G-100, the buried portion of the Biogas pipe is covered under Specification Section 33 05 01.10. This specification section does not provide details on the pipe zone backfill material that is called out on standard detail 3123-110 (Sheet 246). However, Specification Section 31 23 23.15 does specify pipe zone backfill for other buried utilities. Please confirm that pipe zone backfill material as specified in section 31 23 23.15 should also be applied to the buried biogas pipe.

A1. Refer to Section 33 05 01 Conveyance Piping - General that provides information for trench materials.

Q2. Refer to Standard Detail 0330-056 on sheet 241 of 364.

Note 8 states concrete anchors may be used in lieu of cast in place anchor bolts less than 3/4" diameter. It is assumed this includes any type of post installed anchor as long as it is approved by the equipment manufacturer. Can post installed anchors including 3/4" and large be used as long as the manufacturer approves?

A2. Requests to use post-installed anchors for sizes larger than 3/4" are subject to engineer approval on an individual basis for each type of equipment anchored and the anchors chosen will need to be certified by ICC for seismic loading or vibratory loadings, where necessary. Request shall be made prior to placing equipment pads.

Q3. General Note 1 on drawing Y-112 states that utilities shown are based in information from as-builts and pot holing. It appears that some of the existing utilities are conflicting with the new 12" BG line. Please confirm who will re-locate utilities in conflict with the new line.

A3. Profile on drawing Y-112 shows the conflicts with existing lines and provides information about the existing lines including a reference to Note 3 which indicates to "RELOCATE UTILITY AS REQUIRED".

Q4. Refer to Drawing G-40.

Per note 10 pipe supports determined to be in "Special Condition" may be reused upon the approval of the Engineer. Please clarify the definition of "Special Condition".

A4. New pipe supports shall be provided as specified. Reuse of existing supports as a Special Condition will be determined in the Field by the Owner and Construction Manager.

Q5. Drawings or specifications do not mention seal water piping. Please confirm that seal water at all the pumps does not need to be re-installed and that Contractor is just to use the existing seal water.

A5. Demo sheets show limits of seal water piping work. Where no new seal water piping is shown, pumps are being provided with seals that do not need external seal water.

Q6. Refer to Technical Specification Section 02 41 00, Part 3.06, "Title to Materials," for reference.

Section 3.06, B, 1 states that, "With the exception of the following listed salvaged equipment and materials, all items designated to be removed shall become the property of Contractor," including, "Two of the six valves to be re-installed and re-named as indicated in these construction documents."

Please confirm that all valves called out in the construction documents to be re-installed shall remain the property of the Owner.

Please provide a list of valves that shall be salvaged and re-installed.

A6. Valves listed in Article 3.06 B. 1. are part of the grit separator system. Article 2.02 D. of Spec Section 46 23 00 Grit Separators provides a detailed list of salvaged and new valves.

Q7. Refer to Technical Specification Section 02 41 00, Part 3.06, "Title to Materials," for reference.

Section 3.06, B, 2 state that, the owner may identify additional equipment and materials that must be salvaged on the project.

Please confirm that for the purposes of bidding the contract should assume that all material that is called to be demolished and is not listed in Section 3.06, B, 1 or otherwise identified in the contract documents or by addendum as salvage, will become the property of the contractor and will require removal from the jobsite in accordance with the applicable disposal requirements.

A7. Confirmed.

Q8. RFP 12.8 Note 3 says the Contractor may use MBDA web portal to post subcontracting opportunities. The Pasadena MBDA website (link in 12.8) does not provide a web portal to post subcontracting opportunities. Please clarify website address to the MBDA web portal for posting subcontracting opportunities.

A8. Please utilize the contact information listed under Attachment D – Funding Agency Provisions, Section 12.8 for website address to the MBDA web portal for posting subcontracting opportunities. For guidance on the process, refer to Attachment D – Funding Agency Provisions, Section 11.2.1.2, under the California State Revolving Fund (CASRF) Requirements.

Q9. Refer to Drawing 80-D-121 for reference.

There is a note pointing to the 6" BG line stating to "Plug with concrete to top of slab". Please confirm this is only referring to plugging the vertical stub out of the pipe and not the entire underground 6" BG line to the Cogen Facility.

A9. Confirmed, plug with concrete to top of slab down to change of pipe to horizontal direction.

Q10. Referencing section 01 12 01 and Whitebook section 3-14.1, notes that Formal Partnering Facilitator costs shall be split equally by the City and the Contractor. Please provide a budgetary value the City would expect to pay for the Partnering Consultant. Please confirm based on the duration of the project there will be a total of 10 each 8-hour sessions.

A10. Bidders should estimate shared cost of providing a partnering facilitator and a workshop site. Approximately 14 each 8-hour sessions are anticipated for the initial and quarterly partnering sessions through Substantial Completion.

Q11. Sheet 30 shows the biogas yard pipe. The installation of the 12" BG system looks to require a lot more site work removal and reinstatement than shown. The extents of the removal and reinstatement of curb and gutters, sidewalks and asphalt are not clear on this sheet.

A11. For sidewalk and curb and gutter replacement see modification Addendum A.

Q12. Sheet 31 detail 1 note 3, indicates that the pipe configuration shown in detail 1 is for informational purposes only and the contractor is to coordinate with the cogen facility to determine actual the installation. Please confirm the contractor is to base their bid proposal on the location shown and the configuration in detail 1 and anything additional required by the cogen facility will be an issued change order to the project.

- A12. Confirmed, bid based on the piping location and configuration shown on the Drawings.
- Q13. Referencing Section 01 91 14 3.11 and Supplement 1. Please confirm that this project is not linked or reliant on any other projects listed.
- A13. The Contractor shall coordinate the Work with the Separate Contractors listed in Supplementary Special Provisions 3-15.2 and 3-15.3. Coordination may include planning and scheduling of any shutdowns or change in operation of the blended sludge pipeline and centrate pipeline with NCWRP Expansion Contractors, site access for MBC Dewatering Centrifuge Replacement Project, and Integration Period commissioning and testing.
- Q14. Referencing the Scope of Work Attachment, A, 4.2 Milestone 2 Start of 120-Day Integration Period – “The 120-Day Integration Period starts with the Intermediate Substantial Completion of the Morena Pump Station and Conveyance, North City Water Reclamation Plant Expansion, North City Pure Water Facility, North City Pure Water Pump Station, and North City Pure Water Pipeline and Dechlorination Facility”.
- a. Does this mean that in order for the MBC Improvement project will start the 120 Integration Period after all of the other listed projects will be started?
  - b. What are the means for compensation for this project if the integration of the other facilities is not on schedule?
- A14. Yes, the intent is for the Integration Period to start after Intermediate Substantial Completion of the other Phase 1 North City projects as specified and illustrated in Section 01 91 14. The City may omit other Phase 1 North City projects from the Integration Period if determined to avoid delays. A modification to the scheduled start of Integration Period specified in Supplementary Special Provision 6-9 will be considered a change or mitigated through alternate testing and commissioning plan.
- Q15. Reference spec section 44 46 23 1.07 Digester Cleaning Quantities – the specifications state the approximate volume of the sludge expected to be in the digesters. Section 3.04 Weighing Procedure Subsection A – “requires certified weights for billing (if required)”. Subsection B states “Tickets in non-compliance shall be rejected and no payment shall be made for that portion of the work. The bid form does not contemplate any breakout for the digester cleaning.
- a. Is the contractor going to be paid for the digester cleaning on a unit price basis? \$/gallon?, \$/ton?

- b. If the answer is based on volume, then what specific unit of weight can be expected for the materials within the digesters (in situ)?
  - c. What is the cost for disposal of the cleaned and dewatered content from digesters at the City's Miramar landfill?
- A15. a. Digester cleaning is included in the lump sum bid item price.
- b. Digester cleaning is included in the lump sum bid item price.
- c. Contractor is responsible for removal and proper disposal.
- Q16. Will the digester cleaning contractor need to provide scaffolding for inspection?
- A16. See specification Section 01 45 16.13 CONTRACTOR QUALITY CONTROL for inspection requirements.
- Q17. Referencing sheets 25 & 26, note 1 says that valves that are part of a package system are not listed. Referencing sheets 253 to 347, there is no clear indication on any P & ID's of which valves outside of the "package system" are required to be provided by the process package systems suppliers. Please confirm that all valves outside the "package system" boxes on sheets 253 to 347 are listed on sheets 25 and 26.
- A17. Provide all valves for a complete, operable system as specified and shown on Process & Instrumentation Drawings and Valve Schedules.
- Q18. Referencing section 40 27 02-3.03 and 01 43 33, these specifications note that training and field services is required, please clarify which valves require such training. Currently there is no such indication.
- A18. All valves require training and field services as specified.
- Q19. Referencing sheets 160 and 180, there are new 10" OF lines shown coming from the Biosolids Storage and Emergency Storage Tanks. Are these existing lines that need to be demolished and replaced? Please provide any demolition requirements in this area.
- A19. Demolition of existing OF lines is indicated on drawing 80-X-111, Note 2; Y-123; and Y-124.
- Q20. When was the last time digesters number 1, 2 and 3 were cleaned?
- A20. Digester 1 was cleaned and placed into service in June 2020. Digester 2 is clean, empty and has been out of service for over 15 years. Digester 3 was cleaned in June 2020 and is empty and out of service.

- Q21. Sht. 80-E-121 shows conduit 80/010 serving Biogas Compressor No. 3. Note 1 is referenced for said conduit and identifies existing conduit to be used. Sht. 80-E-613 depicts this conduit on the one line and references note 3 to reuse the existing conduit.

Sht. 80-E-621 Circuit & Raceway Schedule calls for the Conduit To be new in the routing information Colum.

We assume that the conduit is existing and will bid as such, unless directed otherwise.

- A21. All conduits associated with Biogas Compressor No. 3 will be new.
- Q22. We're interested in supplying the end suction centrifugal pumps specified in section 44 42 56.10. Can you please clarify why flywheels have been specified for this application?

Flywheels are uncommon for the type of pump specified and typically used only on high head applications, which this is not. Further, this is specified as a variable speed application so we're thinking that the VFD ramp-up & ramp-down settings should be sufficient to cover any function provided by a flywheel.

- A22. Flywheels are to be provided for pipeline surge protection.
- Q23. Electric Panelboard 80IP1A, (new) and 80IP1, 80IP2, 80IP3, 80IP5 (existing) are all located in the Gallery.

I do not see a plan view of the gallery which shows the location of these panelboards.

Please provide a plan view of the gallery showing the location of these panelboards.

- A23. All conduits and conductors from panels 80IP1A, 80IP1, 80IP2, 80IP3 and 80IP5 shown on the Contract Drawings are feeding new motorized valves which are replacing existing motorized valves in the same location. The intent is to reuse the existing power conductors. This information is not required for bidding.
- Q24. Referencing sheet 25 and specification section 40 27 02-2.05. D.3 & 4. Sheet 25 has valve 60MV1303 as type V406 designation, per sheet 25 this valve is on the BG system should this designation be type V408?
- A24. There is no 60MV1303 on the valve schedule. There is an 80MV1303 and it is a V408 on the schedule.

- Q25. Drawings Y-111 and Y-112 show the profile views of the various yard pipelines. Please provide the existing pavement thickness required for reinstatement per detail 3123-115.
- A25. Per Record Drawings, the pavement section is 3" Asphalt Concrete and 11.5" Cement Treated Base. Contractor shall install pavement section as identified in record drawings.
- Q26. Detail 3123-115 note 2 "if the location of trench saw cut is within 2 feet of an existing joint or edge of concrete, replace entire concrete to the joint or edge. Please confirm that the reinstatement shown on the civil drawings takes into account this requirement and the contractor is only required to replace what is shown on the drawings.
- A26. For sidewalk and curb and gutter replacement see modification in Addendum A. Asphalt concrete restoration will be required up to the lip of gutter as required based on trench width.
- Q27. Sht. 80-E-121 shows conduit 80/010 going to 80-JB-C03. This should be conduit 80/010A.

We assume that the correct conduit is 80/010A, and conduit 80/010 is feeding the disconnect switch for 80-C-03.

The conduit schedule calls out 80/010A to be new conduit.

Note 4 on sht. 80-E-121 calls out existing conduit.

We assume that conduit 80/010A is existing and will bid as such, unless directed otherwise.

- A27. The assumption of the conduit being 80/010A is correct. All conduits associated with Biogas Compressor No. 3 will be new.

- Q28. 46 23 10

1.02: Please confirm if the control panel refurbishment for the dewatering equipment is to be performed by the Contractor or equipment supplier.

3.02.B.3: Please specify which party (contractor or equipment supplier) is responsible for taking the samples, lab analysis, and report.

3.03.A. Please confirm if equipment supplier is to provide field service support to assist the Contractor in replacing the refurbished parts of the Grit Dewatering unit.

A28. Answer to 1.02: In addition to requirements of paragraph 1.02, please review all specification requirements including paragraph 1.03 B.

Answer to 3.02.B.3: In addition to requirements of paragraph 1.02, please review all specification requirements including paragraph 1.03 B.

Answer to 3.03.A: In addition to requirements of paragraph 3.03 A., please review all specification requirements including paragraph 1.03 B.

Q29. 40 90 00 (as it pertains to the equipment in 46 23 00 and 46 23 10).

The pressure indicating transmitter and differential pressure transmitter are 2-wire, loop powered, 4-20mA. The specified control panel is relay logic based so additional control components to process these analog signals would need to be specified and supplied. The programmable relay control system is not capable of processing the analog signals. Does the equipment supplier need to provide an alarm based on a pressure set point for each of these transmitters? Please advise if there is any special sequencing associated with the pressure signals.

A29. 40.90.00 analog instrumentation as it pertains to 46.23.00 is tied to one single loop controller per Grit Separator. The loop controller make and model should be coordinated with the new Grit Separator package so that all four units controls match when the project is complete. See 46.23.00.2.05.A.2 Furnish, replace and tune existing under flow controls, including: Single loop controllers, modulating control valves, differential pressure (flow) and pressure transmitters.

No pressure alarms are needed.

Unit supplier to provide proper control sequencing of under flow controls.

There is no 40 90 00 equipment as it pertains to 46 23 10.

Q30. Dwgs

76-S-311: Please confirm the equipment supplier will only be supplying the legs for the TeaCup down to elevation 415.00. The grating and platform will be supplied by others.

76-I-14: Please confirm the air vac valve 76ARV0020 will be supplied by others.

76-I-14 & N-100: Please confirm if 76-LCP-01A local station is to be provided by the equipment supplier.

76-I-14: Please confirm the location of panel 76-GRS-02.LCP.

76-I-14: This drawing includes panel 76-GRS-02.LCP receiving signals from 76MV1118 (inlet valve), 76MV1119, 76SV1125A, and flow switch 76FSL2127. Please confirm if equipment supplier is required to provide power connections for these valves and instruments in the control panel.

A30. Answer to 76-S-311: Refer to Details 3 and 4 on sheet 76-S-511.

Answer to 76-I-14 (1): Valve 76ARV0020 is shown on the self-regulated valve schedule on sheet G-111. Per note 1, valves not shown on this schedule are part of a package system.

Answer to 76-I-14 & N-100: 76-LCP-01A is not indicated as part of the supplier's package on the plans or in the specifications.

Answer to 76-I-14 (2): Location of Panel 76-GSR-02.LCP is shown on drawing 76-E-111.

Answer to 76-I-14 (3): See sheets 76-E-110, 76-E-111, and 76-E-631 for details. Power for the 76MV1118 and 76MV1119 is from 76-RP6-40 and 76-RP6-41. 76SV1125A, and flow switch 76FSL2127 are powered from 76-GRS-02.LCP.

Q31. If I have overlooked it, can you point me in the direction of the Bid Form/schedule? I see that the "Payment and Procedures" seems to list "bid Items", however despite the mention of "Bid Items" and a "Bid Schedule", I am not able to find it.

i. Please provide bid schedule.

A31. The Bid Schedule is the "Line Items" tab in PlanetBids.

Q32. Spec 33 05 01.10, 2.01 B, 1 a calls for 316SS back-up rings, whereas spec 40 27 00, 2.03, F 2 (Process pipe, General) calls for 304SS back-up rings.

i. Please confirm HDPE back-up ring materials.

A32. HDPE back-up Ring material to be 316SS, as per Spec 33 05 01.10, 2.01 B, 1

Q33. P&ID SHTs 76-1-14 (for Grit unit 4) there is a new 2" ball valve on the UWLP line – Valve type? (301, 306, 307?)

i. Please provide valve type for 2" UWLP for Grit unit 4.

A33. The new 2" ball valve will be valve type, V-301.

Q34. 44 46 20

1.01 Suggest removing the following specifications as they are not applicable:

B16.1 (There is no gray iron on this equipment).

BPVC Section VIII (The system will be operated at a pressure considerably less than the 15 psig where Section VIII becomes applicable).

Suggest adding the following applicable reference specifications:

ANSI/CSA B149.6 Code for digester gas, landfill gas, and biogas generation and utilization.

NFPA 820 Standard for Fire Protection in Wastewater Treatment and Collection Facilities.

A34. Bid as specified.

Q35. Add 1.02.A.2

2. Manufacturer's/Supplier's Certificate of Compliance:

Manufacturer's Suppliers Certificate of Compliance shall include a copy of this specification section, with addendum updates and all referenced and applicable sections:

- a. Provide each paragraph, check -marked to indicate specification compliance or marked to indicate requested deviations from specification requirements or those parts which are to be provided by the Contractor or others.
- b. Checkmarks shall denote full compliance with a paragraph as a whole. If deviations from the specifications are indicated, and therefore requested by the Contractor, each deviation shall be underlined and denoted by a number in the margin to the right of the identified paragraph, referenced to a detailed written explanation of the reasons for requesting the deviation.
- c. The Engineer shall be the final authority for determining the acceptability of requested deviations.
- d. The remaining portions of the paragraph not underlined shall signify compliance on the part of the Contractor with the specifications. Failure to include a copy of the marked -up

specification sections, along with justification(s) for any requested deviations to the specification requirements shall be cause for rejection of the entire submittal and no further submittal material will be reviewed.

A35. Bid as specified.

Q36. 3. Manufacturer's Certificate of Unit Responsibility

The Digester Gas Safety Equipment and Specialties supplied under this Section shall be furnished by one (1) manufacturer, who shall have responsibility for the performance and compatibility of all equipment specified herein.

A36. Bid as specified.

Q37. Add under 1.02.B

10. Manufacturer of flares shall have a minimum of 25 operating installations with equipment of the size specified and in the same service as specified operating for not less than five (5) years.

Para. 2.02.C Emissions Requirement.

Add:

3. Manufacturer shall submit at least three (3) certified test reports for a similar sized facility from an independent emissions testing company showing proof of compliance with the emissions requirements of this specification. Minimum Flow rate during these tests should be close to 33,000 scfh.

Paragraph 2.02.D.2. Delete the words "Dual coil, energized open and". Add the words "Explosion proof and watertight, all stainless-steel construction."

Delete Para. 2.02.D.3 and replace with:

The Pilot ignition system shall consist of the following components:

- a. Continuous pilot nozzle that shall burn a stoichiometric air/gas mixture.
- b. Retention flame retention nozzle that flows pilot gas upon demand during the ignition cycle.

- c. Type K 316SS thermocouple with thermowell installed in the continuous pilot nozzle.
- d. 2" NPT inspirating venturi for delivery of combustible air/gas mixture to continuous nozzle. Venturi shall include combustion chamber, spark plug, and backflash preventer.
- e. Valve and regulator package for controlling the pilot fuel gas. Package shall include isolation valves, pressure regulators, pressure gauges, and explosion proof solenoid valve, (blower and air/gas mixing chamber included with the blower-driven system when pilot gas pressure available is less than 10 psig).
- f. All components shall be copper free and shall be installed on a mounting panel. Provide with 316L Stainless Steel weather hood and 304L SS mounting stand.
- g. Gas inlet connection shall be 1/2" NPT. Gas outlet connections shall be 2" NPT to the continuous flame line and 1/2"NPT to the flame retention line.
- h. Spark plug.

A37. Bid as specified.

Q38. Delete para. 2.02.E and replace with:

E. Ignition System

- a. The waste gas burner ignition occurs at the venturi exit which is installed a minimum of 15 feet from the waste gas burner stack assembly.
- b. Either a plant signal, or a pressure transmitter installed on the main gas line, initiates start-up sequence through the remote start contacts. The start-up sequence will open the continuous pilot solenoid valve and the flame retention solenoid valve.
- c. The continuous pilot line receives a constant air/gas supply from the inspirating venturi the transformer sends voltage to the spark plug.
- d. This generates a flame front. The Retention Nozzle catches the Flame Front and lights the Continuous Nozzle.

- e. The thermocouple located inside the continuous flame nozzle heats up. When it exceeds its temperature set point, the retention solenoid valve closes. Pilot ON indication comes on in the control panel.
- f. The three-way explosion proof solenoid valve on the pressure relief regulator and flame trap assembly) is energized, opening the regulator, and permitting flow of digester gas to the burner for combustion.
- g. LOCAL START OPERATION – In “AUTO” mode, the burner and the pilot will remain lit and will attempt re- ignition in case the pilot is lost. Ignition will continue to occur until PILOT ON indication is achieved. If the flare system fails to reignite in a set amount of Spark On attempts, the flare goes into system failure. The solenoid valves closes, the blower shuts down (blower- driven system only), and, the System Failure Dry Contact changes state.
- h. REMOTE START OPERATION
  - 1. The flare system will be in standby until it receives the Remote Start Permissive signal.
  - 2. If the Remote Start Permissive signal is not present, the Remote Start Time Delay starts to time. Once it times out, the flare goes into stand by and waits for the Permissive signal to start up again.
- i. The additional flare zones are controlled by motorized ball valves that will open based on the pressure transmitter signal or from the Plant signal.

A38. Bid as specified.

Q39. 2.02.F. Delete this paragraph. It is covered by 2.02.H and 2.05.

A39. Bid as specified.

Q40. 2.02.G.2.b Replace the word “backplate” with “Stainless Steel backplate with weather hood and mounting stand.”

A40. Bid as specified.

Q41. 2.02.H.1 Delete and replace with:

1. Material of Construction
  - a. The flare shall be constructed to allow combustion air to be naturally inspirated to obtain proper air-gas mixture. This shall be done without the use of motorized dampers, blowers or like devices. Refractory lining on the combustion chamber is not allowed.
  - b. The flare stack shall be constructed with 304 stainless chambers having 10 Ga # 2B wall thickness. All stack piping will be 1-1/4" 304 SS SCH 40, all other stack materials to be 304SS.
  - c. The burner base, pedestal and waste gas inlet manifold shall be constructed 304SS. The burner base and pedestal are designed to secure the stack firmly to the foundation and comes with 1" diameter bolt holes.
  - d. Operator shall have complete access to the main manifold in the base of the flare for removal and replacement of the individual flare nozzles, and for maintenance on the piping. Unit shall not have any screens blocking access to the burners. Flare shall have a sectional manifold to accommodate removal and repair of the individual headers. Manifold shall have a 1" drain connection and shall be supplied with a drip trap. Manifold shall also have a 10" x 10" removable cover to allow clean out of the manifold.
  - e. Venturi housings shall be cast 316 Stainless Steel with lock-in place flow conditioners. Fabricated venturi nozzles shall not be allowed.

A41. Bid as specified.

Q42. 2.02.H.3 Delete and replace with:

3. Provide a thermocouple to monitor combustion temperature. Provide outputs to the flare panel for plant DCS recording.

A42. Bid as specified.

Q43. 2.02.H.5 Delete.

A43. Bid as specified.

- Q44. 2.02.H.6 Delete.
- A44. Bid as specified.
- Q45. 2.02.J.1 Change NEMA 7 rating to NEMA 4X.
- A45. Bid as specified.
- Q46. 2.02.J.2.a Change the word "COMPUTER" to "AUTO".
- A46. Bid as specified.
- Q47. Add 2.02.J.2.f Selector button for Plant signal/pressure.
- A47. Bid as specified.
- Q48. 2.02.J.4.a
- Change Hand/Off/Computer to Hand/Off/Auto.
- Delete the Plugged signal as that is not applicable.
- A48. Bid as specified.
- Q49. 2.02.J.5.a
- Change the word COMPUTER to AUTO.
- A49. Bid as specified.
- Q50. 2.02.J.5.B
- Change the word COMPUTER to AUTO.
- Change the word pressure switch to pressure transmitter.
- Replace the sentence "When in COMPUTER mode allow DCS to issue START/STOP command to the flare" with "A selector switch on the HMI for DCS Signal or Pressure will determine how the flare is operated in AUTO mode."
- A50. Bid as specified.
- Q51. 2.02.J.5.c Delete.
- A51. Bid as specified.

Q52. 2.03.A.3.a.

- 1) Change the word "groove" to "fill".

A52. Bid as specified.

Q53. Add 2.03.A.3.a.4) Make-up water connection: 1" NPT on the vessel.

A53. Bid as specified.

Q54. Replace para. 2.05. with:

2.05 Pressure regulator and flame trap assembly

A. Provide a 10" Pressure Relief and Flame Trap Assembly on the gas header to the burner. Unit must be installed no more than 15 feet from the burner and shall be designed as follows:

- 1) The regulator shall operate normally closed and be set to relieve pressure to the burner for combustion with an adjustable set pressure range of 7"– 15" WC pressure.
- 2) A large spring-loaded diaphragm shall control regulator valve. Regulator shall provide tight shut-off. It shall maintain a back pressure within approximately 10% of the setting. The spring barrel shall include a glass-enclosed pointer and scale to indicate setting. A spring adjusting screw shall permit setting adjustments without disassembling the diaphragm housing.
- 3) Construction shall be low copper cast aluminum body, diaphragm and spring housings, and diaphragm inner plate. Inner valve shall include low copper aluminum pallet with 304 SS stems and bushings. Diaphragm shall be molded Buna-N rubber with Nylon reinforcement. Setting spring shall be zinc plated steel.
- 4) Valve shall include 1/2" NPT connections for the pressure sensing line.
- 5) Flame arrester net free area through the bank assembly shall be not less than three times the corresponding size standard pipe. Entire bank assembly shall slide easily out of the arrester housing to facilitate inspection and cleaning. Removing or replacing the bank assembly shall not require support for alignment, jackscrew for extending the housing, and shall not place a strain on the connecting piping. Bank

frame shall be extensible and shall be filled with corrugated rectangular shaped bank sheets. Flame arresters shall include an offset housing with a 1/2" NPT drip trap connection at the low point.

- 6) Arrester housing construction shall be low copper cast aluminum. Bank assembly shall include a low copper aluminum frame and 316 stainless steel bank sheets.
- 7) The assembly shall be interconnected with a thermal bypass shut-off valve. Valve shall be the spring-actuated double acting needle type. Bypass valve shall operate within 15 seconds when the thermal element reaches 260° F (127° C).
- 8) Bypass valve shall automatically close the regulator by applying full upstream gas pressure on the upper portion of the diaphragm. Fusible element shall be replaceable without disassembling the valve. By-pass valve assembly shall be constructed of aluminum and stainless steel with Buna-N "O" rings.
- 9) The regulator will be provided with a three-way solenoid valve that will energize open on PILOT ON in the flare panel.
- 10) Regulator, flame arrester, and bypass valve shall be factory assembled as a single unit. Flanges shall be drilled to ASA 125 FF Flanged dimensions. Assembly shall be leak proof to 5 psig (34.5 kPa).

A54. Bid as specified.

Q55. Add 3.03.A.2

2. Provide a minimum of three working days for Manufacturer to assist in source emissions test. Source emissions test shall be conducted by a third party by the Contractor.

A55. Bid as specified.

## C. ADDENDUM

1. To Addendum A, Section E, ATTACHMENTS, page 7, **DELETE** in its entirety and **SUBSTITUTE** with the following:
  1. To Attachment D, FUNDING AGENCY PROVISIONS, pages 32 through 60, **DELETE** in its entirety and **SUBSTITUTE** with pages 22 through 50 of this addendum.

## D. SUPPLEMENTARY SPECIAL PROVISIONS

1. To Technicals, Section 01 13 13 Project Coordination, Part 1 General, Item 1.05 Project Milestones, Sub-Item A, Page 183, **DELETE** in its entirety and **SUBSTITUTE** with the following:
  - A. Project Milestones shall be as specified in Attachment A Scope of Work and Supplementary Special Provisions 6-9 Liquidated Damages.
2. To Technicals, Section 01 61 00 Common Product Requirements, Part 2 Products, Page 303, **ADD** the following after Item 2.03 Source Quality Control:

### 2.04 TELECOMMUNICATIONS

- A. The Contractor certifies that no Project Funds will be used on:
  1. Video surveillance or telecommunications equipment produced by Huawei Technologies Company or ZTE Corporation (or any subsidiary or affiliate of such entities), telecommunications equipment produced by Hytera Communications Corporation, Hangzhou Hikvision Digital Technology Company, or Dahua Technology Company (or any subsidiary or affiliate of such entities);
  2. Telecommunications or video surveillance services produced by such entities;
  3. Telecommunications or video surveillance equipment or services produced or provided by an entity that the Secretary of Defense, in consultation with the Director of the National Intelligence or the Director of the Federal Bureau of Investigation, reasonably believes to be an entity owned or controlled by, or otherwise connected to, the government of a covered foreign country; or

4. Other telecommunications or video surveillance services or equipment in violation of 2 CFR 200.216.

James Nagelvoort, Director  
Engineering & Capital Projects Department

Dated: *March 23, 2021*  
San Diego, California

JN/AJ/rd

**10. DAVIS-BACON WAGE RATE AND PROVISIONS:**

**10.1. WAGE RATES:** This contract shall be subject to the following Davis-Bacon Wage Decisions:

General Decision Number: CA20210001 03/19/2021

Superseded General Decision Number: CA20200001

State: California

Construction Types: Building, Heavy (Heavy and Dredging), Highway and Residential

County: San Diego County in California.

BUILDING CONSTRUCTION PROJECTS; DREDGING PROJECTS (does not include hopper dredge work); HEAVY CONSTRUCTION PROJECTS (does not include water well drilling); HIGHWAY CONSTRUCTION PROJECTS; RESIDENTIAL CONSTRUCTION PROJECTS (consisting of single family homes and apartments up to and including 4 stories)

Note: Under Executive Order (EO) 13658, an hourly minimum wage of \$10.95 for calendar year 2021 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least \$10.95 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2021. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate, if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at [www.dol.gov/whd/govcontracts](http://www.dol.gov/whd/govcontracts).

PREMIUM PAY:

\$3.75 per hour shall be paid on all Power Equipment Operator work on the following Military Bases: China Lake Naval Reserve, Vandenberg AFB, Point Arguello, Seely Naval Base, Fort Irwin, Nebo Annex Marine Base, Marine Corp Logistics Base Yermo, Edwards AFB, 29 Palms Marine Base and Camp Pendleton

Workers required to suit up and work in a hazardous material environment: \$2.00 per hour additional. Combination mixer and compressor operator on gunite work shall be classified as a concrete mobile mixer operator.

SEE ZONE DEFINITIONS AFTER CLASSIFICATIONS

POWER EQUIPMENT OPERATORS CLASSIFICATIONS

GROUP 1: Bargeman; Brakeman; Compressor operator; Ditch Witch, with seat or similar type equipment; Elevator operator-inside; Engineer Oiler; Forklift operator (includes loed, lull or similar types under 5 tons; Generator operator; Generator, pump or compressor plant operator; Pump operator; Signalman; Switchman

GROUP 2: Asphalt-rubber plant operator (nurse tank operator); Concrete mixer operator-skip type; Conveyor operator; Fireman; Forklift operator (includes loed, lull or similar types over 5 tons; Hydrostatic pump operator; oiler crusher (asphalt or concrete plant); Petromat laydown machine; PJU side dum jack; Screening and conveyor machine operator (or similar types); Skiploader (wheel type up to 3/4 yd. without attachment); Tar pot fireman; Temporary heating plant operator; Trenching machine oiler

GROUP 3: Asphalt-rubber blend operator; Bobcat or similar type (Skid steer); Equipment greaser (rack); Ford Ferguson (with dragtype attachments); Helicopter radioman (ground); Stationary pipe wrapping and cleaning machine operator

GROUP 4: Asphalt plant fireman; Backhoe operator (mini-max or similar type); Boring machine operator; Boxman or mixerman (asphalt or concrete); Chip spreading machine operator; Concrete cleaning decontamination machine operator; Concrete Pump Operator (small portable); Drilling machine operator, small auger types (Texoma super economatic or similar types - Hughes 100 or 200 or similar types - drilling depth of 30' maximum); Equipment greaser (grease truck); Guard rail post driver operator; Highline cableway signalman; Hydra-hammer-aero stomper; Micro Tunneling (above ground tunnel); Power concrete curing machine operator; Power concrete saw operator; Power-driven jumbo form setter operator; Power sweeper operator; Rock Wheel Saw/Trencher; Roller operator (compacting); Screed operator (asphalt or concrete); Trenching machine operator (up to 6 ft.); Vacuum or much truck

GROUP 5: Equipment Greaser (Grease Truck/Multi Shift).

GROUP 6: Articulating material hauler; Asphalt plant engineer; Batch plant operator; Bit sharpener; Concrete joint machine operator (canal and similar type); Concrete planer operator; Dandy digger; Deck engine operator; Derrickman (oilfield type); Drilling machine operator, bucket or auger types (Calweld 100 bucket or similar types - Watson 1000 auger or similar types - Texoma 330, 500 or 600 auger or similar types - drilling depth of 45' maximum); Drilling machine operator; Hydrographic seeder machine operator (straw, pulp or seed), Jackson track maintainer, or similar type; Kalamazoo Switch tamper, or similar type; Machine tool operator; Maginnis internal full slab vibrator, Mechanical berm, curb or gutter (concrete or asphalt); Mechanical finisher operator (concrete, Clary-Johnson-Bidwell or similar); Micro tunnel system (below ground); Pavement breaker operator (truck mounted); Road oil mixing machine operator; Roller operator (asphalt or finish), rubber-tired earth moving equipment (single engine, up to and including 25 yds. struck); Self-propelled tar pipelining machine operator; Skiploader operator (crawler and wheel type, over 3/4 yd. and up to and including 1-1/2 yds.); Slip form pump operator (power driven hydraulic lifting device for concrete forms); Tractor operator-bulldozer, tamper-scraper (single engine, up to 100 h.p. flywheel and similar types, up to and including D-5 and similar types); Tugger hoist operator (1 drum); Ultra high pressure waterjet cutting tool system operator; Vacuum blasting machine operator

GROUP 8: Asphalt or concrete spreading operator (tamping or finishing); Asphalt paving machine operator (Barber Greene or similar type); Asphalt-rubber distribution operator; Backhoe operator (up to and including 3/4 yd.), small ford, Case or similar; Cast-in-place pipe laying machine operator; Combination mixer and compressor operator (gunite work); Compactor operator (self-propelled); Concrete mixer operator (paving); Crushing plant operator; Drill Doctor; Drilling machine operator, Bucket or auger types (Calweld 150 bucket or similar types - Watson 1500, 2000 2500 auger or similar types - Texoma 700, 800 auger or similar types - drilling depth of 60' maximum); Elevating grader operator; Grade checker; Gradall operator; Grouting machine operator; Heavy-duty repairman; Heavy equipment robotics operator; Kalamazoo balliste regulator or similar type; Kolman belt loader and similar type; Le Tourneau blob compactor or similar type; Loader operator (Athey, Euclid, Sierra and similar types); Mobark Chipper or similar; Ozzie padder or similar types; P.C. slot saw; Pneumatic concrete placing machine operator (Hackley-Presswell or similar type); Pumpcrete gun operator; Rock Drill or similar types; Rotary drill operator (excluding caisson type); Rubber-tired earth-moving equipment operator (single engine, caterpillar, Euclid, Athey Wagon and similar types with any and all attachments over 25 yds. up to and including 50 cu. yds. struck); Rubber-tired earth-moving equipment operator (multiple engine up to and including 25 yds. struck); Rubber-tired scraper operator (self-loading paddle wheel type-John Deere, 1040 and similar single unit); Self-propelled curb and gutter machine operator; Shuttle buggy; Skiploader operator (crawler and wheel type over 1-1/2 yds. up to and including 6-1/2 yds.); Soil remediation plant operator; Surface heaters and planer operator; Tractor compressor drill combination operator; Tractor operator (any type larger than D-5 - 100 flywheel h.p. and over, or similar-bulldozer, tamper, scraper and push tractor single engine); Tractor operator (boom attachments), Traveling pipe wrapping, cleaning and bending machine operator; Trenching machine operator (over 6 ft. depth capacity, manufacturer's rating); trenching Machine with Road Miner attachment (over 6 ft depth capacity): Ultra high pressure waterjet cutting tool system mechanic; Water pull (compaction) operator

GROUP 9: Heavy Duty Repairman

GROUP 10: Drilling machine operator, Bucket or auger types (Calweld 200 B bucket or similar types-Watson 3000 or 5000 auger or similar types-Texoma 900 auger or similar types-drilling depth of 105' maximum); Dual drum mixer, dynamic compactor LDC350 (or similar types); Monorail locomotive operator (diesel, gas or electric); Motor patrol-blade operator (single engine); Multiple engine tractor operator (Euclid and similar type-except Quad 9

cat.); Rubber-tired earth-moving equipment operator (single engine, over 50 yds. struck); Pneumatic pipe ramming tool and similar types; Prestressed wrapping machine operator; Rubber-tired earth-moving equipment operator (single engine, over 50 yds. struck); Rubber tired earth moving equipment operator (multiple engine, Euclid, caterpillar and similar over 25 yds. and up to 50 yds. struck), Tower crane repairman; Tractor loader operator (crawler and wheel type over 6-1/2 yds.); Woods mixer operator (and similar Pugmill equipment)

GROUP 11: Heavy Duty Repairman - Welder Combination, Welder - Certified.

GROUP 12: Auto grader operator; Automatic slip form operator; Drilling machine operator, bucket or auger types (Calweld, auger 200 CA or similar types - Watson, auger 6000 or similar types - Hughes Super Duty, auger 200 or similar types - drilling depth of 175' maximum); Hoe ram or similar with compressor; Mass excavator operator less tha 750 cu. yards; Mechanical finishing machine operator; Mobile form traveler operator; Motor patrol operator (multi-engine); Pipe mobile machine operator; Rubber-tired earth- moving equipment operator (multiple engine, Euclid, Caterpillar and similar type, over 50 cu. yds. struck); Rubber-tired self- loading scraper operator (paddle-wheel-auger type self-loading - two (2) or more units)

GROUP 13: Rubber-tired earth-moving equipment operator operating equipment with push-pull system (single engine, up to and including 25 yds. struck)

GROUP 14: Canal liner operator; Canal trimmer operator; Remote- control earth-moving equipment operator (operating a second piece of equipment: \$1.00 per hour additional); Wheel excavator operator (over 750 cu. yds.)

GROUP 15: Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (single engine, Caterpillar, Euclid, Athey Wagon and similar types with any and all attachments over 25 yds. and up to and including 50 yds. struck); Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (multiple engine-up to and including 25 yds. struck)

GROUP 16: Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (single engine, over 50 yds. struck); Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (multiple engine, Euclid, Caterpillar and similar, over 25 yds. and up to 50 yds. struck)

GROUP 17: Rubber-tired earth-moving equipment operator, operating equipment with push-pull system (multiple engine,

Euclid, Caterpillar and similar, over 50 cu. yds. struck);  
Tandem tractor operator (operating crawler type tractors in  
tandem - Quad 9 and similar type)

GROUP 18: Rubber-tired earth-moving equipment operator,  
operating in tandem (scrapers, belly dumps and similar  
types in any combination, excluding compaction units -  
single engine, up to and including 25 yds. struck)

GROUP 19: Rotex concrete belt operator (or similar types);  
Rubber-tired earth-moving equipment operator, operating in  
tandem (scrapers, belly dumps and similar types in any  
combination, excluding compaction units - single engine,  
Caterpillar, Euclid, Athey Wagon and similar types with any  
and all attachments over 25 yds. and up to and including 50  
cu. yds. struck); Rubber-tired earth-moving equipment  
operator, operating in tandem (scrapers, belly dumps and  
similar types in any combination, excluding compaction  
units - multiple engine, up to and including 25 yds. struck)

GROUP 20: Rubber-tired earth-moving equipment operator,  
operating in tandem (scrapers, belly dumps and similar  
types in any combination, excluding compaction units -  
single engine, over 50 yds. struck); Rubber-tired  
earth-moving equipment operator, operating in tandem  
(scrapers, belly dumps, and similar types in any  
combination, excluding compaction units - multiple engine,  
Euclid, Caterpillar and similar, over 25 yds. and up to 50  
yds. struck)

GROUP 21: Rubber-tired earth-moving equipment operator,  
operating in tandem (scrapers, belly dumps and similar  
types in any combination, excluding compaction units -  
multiple engine, Euclid, Caterpillar and similar type, over  
50 cu. yds. struck)

GROUP 22: Rubber-tired earth-moving equipment operator,  
operating equipment with the tandem push-pull system  
(single engine, up to and including 25 yds. struck)

GROUP 23: Rubber-tired earth-moving equipment operator,  
operating equipment with the tandem push-pull system  
(single engine, Caterpillar, Euclid, Athey Wagon and  
similar types with any and all attachments over 25 yds. and  
up to and including 50 yds. struck); Rubber-tired  
earth-moving equipment operator, operating with the tandem  
push-pull system (multiple engine, up to and including 25  
yds. struck)

GROUP 24: Rubber-tired earth-moving equipment operator,  
operating equipment with the tandem push-pull system  
(single engine, over 50 yds. struck); Rubber-tired  
earth-moving equipment operator, operating equipment with  
the tandem push-pull system (multiple engine, Euclid,

Caterpillar and similar, over 25 yds. and up to 50 yds. struck)

GROUP 25: Concrete pump operator-truck mounted; Rubber-tired earth-moving equipment operator, operating equipment with the tandem push-pull system (multiple engine, Euclid, Caterpillar and similar type, over 50 cu. yds. struck)

#### CRANES, PILEDRIVING AND HOISTING EQUIPMENT CLASSIFICATIONS

GROUP 1: Engineer oiler; Fork lift operator (includes loed, lull or similar types)

GROUP 2: Truck crane oiler

GROUP 3: A-frame or winch truck operator; Ross carrier operator (jobsite)

GROUP 4: Bridge-type unloader and turntable operator; Helicopter hoist operator

GROUP 5: Hydraulic boom truck; Stinger crane (Austin-Western or similar type); Tugger hoist operator (1 drum)

GROUP 6: Bridge crane operator; Cretor crane operator; Hoist operator (Chicago boom and similar type); Lift mobile operator; Lift slab machine operator (Vagtborg and similar types); Material hoist and/or manlift operator; Polar gantry crane operator; Self Climbing scaffold (or similar type); Shovel, backhoe, dragline, clamshell operator (over 3/4 yd. and up to 5 cu. yds. mrc); Tugger hoist operator

GROUP 7: Pedestal crane operator; Shovel, backhoe, dragline, clamshell operator (over 5 cu. yds. mrc); Tower crane repair; Tugger hoist operator (3 drum)

GROUP 8: Crane operator (up to and including 25 ton capacity); Crawler transporter operator; Derrick barge operator (up to and including 25 ton capacity); Hoist operator, stiff legs, Guy derrick or similar type (up to and including 25 ton capacity); Shovel, backhoe, dragline, clamshell operator (over 7 cu. yds., M.R.C.)

GROUP 9: Crane operator (over 25 tons and up to and including 50 tons mrc); Derrick barge operator (over 25 tons up to and including 50 tons mrc); Highline cableway operator; Hoist operator, stiff legs, Guy derrick or similar type (over 25 tons up to and including 50 tons mrc); K-crane operator; Polar crane operator; Self erecting tower crane operator maximum lifting capacity ten tons

GROUP 10: Crane operator (over 50 tons and up to and including 100 tons mrc); Derrick barge operator (over 50 tons up to and including 100 tons mrc); Hoist operator,

stiff legs, Guy derrick or similar type (over 50 tons up to and including 100 tons mrc), Mobile tower crane operator (over 50 tons, up to and including 100 tons M.R.C.); Tower crane operator and tower gantry

GROUP 11: Crane operator (over 100 tons and up to and including 200 tons mrc); Derrick barge operator (over 100 tons up to and including 200 tons mrc); Hoist operator, stiff legs, Guy derrick or similar type (over 100 tons up to and including 200 tons mrc); Mobile tower crane operator (over 100 tons up to and including 200 tons mrc)

GROUP 12: Crane operator (over 200 tons up to and including 300 tons mrc); Derrick barge operator (over 200 tons up to and including 300 tons mrc); Hoist operator, stiff legs, Guy derrick or similar type (over 200 tons, up to and including 300 tons mrc); Mobile tower crane operator (over 200 tons, up to and including 300 tons mrc)

GROUP 13: Crane operator (over 300 tons); Derrick barge operator (over 300 tons); Helicopter pilot; Hoist operator, stiff legs, Guy derrick or similar type (over 300 tons); Mobile tower crane operator (over 300 tons)

#### TUNNEL CLASSIFICATIONS

GROUP 1: Skiploader (wheel type up to 3/4 yd. without attachment)

GROUP 2: Power-driven jumbo form setter operator

GROUP 3: Dinkey locomotive or motorperson (up to and including 10 tons)

GROUP 4: Bit sharpener; Equipment greaser (grease truck); Slip form pump operator (power-driven hydraulic lifting device for concrete forms); Tugger hoist operator (1 drum); Tunnel locomotive operator (over 10 and up to and including 30 tons)

GROUP 5: Backhoe operator (up to and including 3/4 yd.); Small Ford, Case or similar; Drill doctor; Grouting machine operator; Heading shield operator; Heavy-duty repairperson; Loader operator (Athey, Euclid, Sierra and similar types); Mucking machine operator (1/4 yd., rubber-tired, rail or track type); Pneumatic concrete placing machine operator (Hackley-Presswell or similar type); Pneumatic heading shield (tunnel); Pumpcrete gun operator; Tractor compressor drill combination operator; Tugger hoist operator (2 drum); Tunnel locomotive operator (over 30 tons)

GROUP 6: Heavy Duty Repairman

GROUP 7: Tunnel mole boring machine operator

ENGINEERS ZONES

\$1.00 additional per hour for all of IMPERIAL County and the portions of KERN, RIVERSIDE & SAN BERNARDINO Counties as defined below:

That area within the following Boundary: Begin in San Bernardino County, approximately 3 miles NE of the intersection of I-15 and the California State line at that point which is the NW corner of Section 1, T17N, R14E, San Bernardino Meridian. Continue W in a straight line to that point which is the SW corner of the northwest quarter of Section 6, T27S, R42E, Mt. Diablo Meridian. Continue North to the intersection with the Inyo County Boundary at that point which is the NE corner of the western half of the northern quarter of Section 6, T25S, R42E, MDM. Continue W along the Inyo and San Bernardino County boundary until the intersection with Kern County, as that point which is the SE corner of Section 34, T24S, R40E, MDM. Continue W along the Inyo and Kern County boundary until the intersection with Tulare County, at that point which is the SW corner of the SE quarter of Section 32, T24S, R37E, MDM. Continue W along the Kern and Tulare County boundary, until that point which is the NW corner of T25S, R32E, MDM. Continue S following R32E lines to the NW corner of T31S, R32E, MDM. Continue W to the NW corner of T31S, R31E, MDM. Continue S to the SW corner of T32S, R31E, MDM. Continue W to SW corner of SE quarter of Section 34, T32S, R30E, MDM. Continue S to SW corner of T11N, R17W, SBM. Continue E along south boundary of T11N, SBM to SW corner of T11N, R7W, SBM. Continue S to SW corner of T9N, R7W, SBM. Continue E along south boundary of T9N, SBM to SW corner of T9N, R1E, SBM. Continue S along west boundary of R1E, SMB to Riverside County line at the SW corner of T1S, R1E, SBM. Continue E along south boundary of T1S, SBM (Riverside County Line) to SW corner of T1S, R10E, SBM. Continue S along west boundary of R10E, SBM to Imperial County line at the SW corner of T8S, R10E, SBM. Continue W along Imperial and Riverside county line to NW corner of T9S, R9E, SBM. Continue S along the boundary between Imperial and San Diego Counties, along the west edge of R9E, SBM to the south boundary of Imperial County/California state line. Follow the California state line west to Arizona state line, then north to Nevada state line, then continuing NW back to start at the point which is the NW corner of Section 1, T17N, R14E, SBM

\$1.00 additional per hour for portions of SAN LUIS OBISPO, KERN, SANTA BARBARA & VENTURA as defined below:

That area within the following Boundary: Begin approximately 5 miles north of the community of Cholame, on the Monterey County and San Luis Obispo County boundary at the NW corner of T25S, R16E, Mt. Diablo Meridian. Continue south along the west side of R16E to the SW corner of T30S, R16E, MDM. Continue E to SW corner of T30S, R17E, MDM. Continue S to SW corner of T31S,

R17E, MDM. Continue E to SW corner of T31S, R18E, MDM. Continue S along West side of R18E, MDM as it crosses into San Bernardino Meridian numbering area and becomes R30W. Follow the west side of R30W, SBM to the SW corner of T9N, R30W, SBM. Continue E along the south edge of T9N, SBM to the Santa Barbara County and Ventura County boundary at that point which is the SW corner of Section 34. T9N, R24W, SBM, continue S along the Ventura County line to that point which is the SW corner of the SE quarter of Section 32, T7N, R24W, SBM. Continue E along the south edge of T7N, SBM to the SE corner to T7N, R21W, SBM. Continue N along East side of R21W, SBM to Ventura County and Kern County boundary at the NE corner of T8N, R21W. Continue W along the Ventura County and Kern County boundary to the SE corner of T9N, R21W. Continue North along the East edge of R21W, SBM to the NE corner of T12N, R21W, SBM. Continue West along the north edge of T12N, SBM to the SE corner of T32S, R21E, MDM. [T12N SBM is a think strip between T11N SBM and T32S MDM]. Continue North along the East side of R21E, MDM to the Kings County and Kern County border at the NE corner of T25S, R21E, MDM, continue West along the Kings County and Kern County Boundary until the intersection of San Luis Obispo County. Continue west along the Kings County and San Luis Obispo County boundary until the intersection with Monterey County. Continue West along the Monterey County and San Luis Obispo County boundary to the beginning point at the NW corner of T25S, R16E, MDM.

\$2.00 additional per hour for INYO and MONO Counties and the Northern portion of SAN BERNARDINO County as defined below:

That area within the following Boundary: Begin at the intersection of the northern boundary of Mono County and the California state line at the point which is the center of Section 17, T10N, R22E, Mt. Diablo Meridian. Continue S then SE along the entire western boundary of Mono County, until it reaches Inyo County at the point which is the NE corner of the Western half of the NW quarter of Section 2, T8S, R29E, MDM. Continue SSE along the entire western boundary of Inyo County, until the intersection with Kern County at the point which is the SW corner of the SE 1/4 of Section 32, T24S, R37E, MDM. Continue E along the Inyo and Kern County boundary until the intersection with San Bernardino County at that point which is the SE corner of section 34, T24S, R40E, MDM. Continue E along the Inyo and San Bernardino County boundary until the point which is the NE corner of the Western half of the NW quarter of Section 6, T25S, R42E, MDM. Continue S to that point which is the SW corner of the NW quarter of Section 6, T27S, R42E, MDM. Continue E in a straight line to the California and Nevada state border at the point which is the NW corner of Section 1, T17N, R14E, San Bernardino Meridian. Then continue NW along the state line to the starting point, which is the center of Section 18, T10N, R22E, MDM.

LABORER (BUILDING and all other Residential Construction)		
Group 1.....	\$ 34.18	20.48
Group 2.....	\$ 34.86	20.48

Group 3.....	\$ 35.57	20.48
Group 4.....	\$ 36.37	20.48
Group 5.....	\$ 38.30	20.48

LABORER (RESIDENTIAL  
CONSTRUCTION - See definition  
below)

(1) Laborer.....	\$ 30.82	18.80
(2) Cleanup, Landscape, Fencing (Chain Link & Wood).	\$ 29.53	18.80

RESIDENTIAL DEFINITION: Wood or metal frame construction of single family residences, apartments and condominiums - excluding (a) projects that exceed three stories over a garage level, (b) any utility work such as telephone, gas, water, sewer and other utilities and (c) any fine grading work, utility work or paving work in the future street and public right-of-way; but including all rough grading work at the job site behind the existing right of way

LABORER CLASSIFICATIONS

GROUP 1: Cleaning and handling of panel forms; Concrete Screeding for Rought Strike-off; Concrete, water curing; Demolition laborer; Flagman; Gas, oil and/or water pipeline laborer; General Laborer; General clean-up laborer; Landscape laborer; Jetting laborer; Temporary water and air lines laborer; Material hoseman (walls, slabs, floors and decks); Plugging, filling of Shee-bolt holes; Dry packing of concrete; Railroad maintenance, Repair Trackman and road beds, Streetcar and railroad construction trac laborers; Slip form raisers; Slurry seal crews (mixer operator, applicator operator, squeegee man, Shuttle man, top man), filling of cracks by any method on any surface; Tarman and mortar man; Tool crib or tool house laborer; Window cleaner; Wire Mesh puling-all concrete pouring operations

GROUP 2: Asphalt Shoveler; Cement Dumper (on 1 yard or larger mixer and handling bulk cement); Cesspool digger and installer; Chucktender; Chute man, pouring concrete, the handling of the cute from ready mix trucks, such as walls, slabs, decks, floors, foundations, footings, curbs, gutters and sidewalks; Concrete curer-impervious membrane and form oiler; Cutting torch operator (demoliton); Guinea chaser; Headboard man-asphlt; Laborer, packing rod steel and pans; membrane vapor barrier installer; Power broom sweepers (small); Riiprap, stonepaver, placing stone or wet sacked concrete; Roto scraper and tiller; Tank sealer and cleaner; Tree climber, faller, chain saw operator, Pittsburgh Chipper and similar type brush shredders; Underground laborers, including caisson bellower

GROUP 3: Buggymobile; Concrete cutting torch; Concrete cutting torch; Concrete pile cutter; Driller, jackhammer, 2

1/2 feet drill steel or longer; Dri Pak-it machine; High sealer (including drilling of same); Hydro seeder and similar type; Impact wrench, mult-plate; Kettlemen, potmen and men applying asphalt, lay-kold, creosote, line caustic and similar type materials (applying means applying, dipping, brushing or handling of such materials for pipe wrapping and waterproofing); Operators of pneumatic, gas, electric tools, vibrating machines, pavement breakers, air blasting, come-along, and similar mechanical tools not separately classified herein; Pipelayers back up man coating, grouting, making of joints, sealing, caulking, diapering and including rubber gasket joints, pointing and any and all other services; Rotary Scarifier or multiple head concrete chipping scarifier; Steel header board man and guideline setter; Tampers, Barko, Wacker and similar type; Trenching machine, handpropelled

GROUP 4: Asphalt raker, luterman, ironer, asphalt dumpman and asphalt spreader boxes (all types); Concrete core cutter (walls, floors or ceilings), Grinder or sander; Concrete saw man; cutting walls or flat work, scoring old or new concrete; Cribber, shorer, lagging, sheeting and trench bracing, hand-guided lagging hammer; Laser beam in connection with laborer's work; Oversize concrete vibrator operator 70 pounds and over; Pipelayer performing all services in the laying, installation and all forms of connection of pipe from the point of receiving pipe in the ditch until completion of operation, including any and all forms of tubular material, whether pipe, metallic or non-metallic, conduit, and any other stationary type of tubular device used for the conveying of any substance or element, whether water, sewage, solid, gas, air or other product whatsoever and without regard to the nature of material from which the tubular material is fabricated; No joint pipe and stripping of same; Prefabricated manhole installer; Sandblaster (nozzleman), Porta shot-blast, water blasting

GROUP 5: Blasters Powderman-All work of loading holes, placing and blasting of all powder and explosives of whatever type, regardless of method used for such loading and placing; Driller-all power drills, excluding jackhammer, whether core, diamond, wagon, track, multiple unit, and any and all other types of mechanical drills without regard to the form of motive power.

LABORER CLASSIFICATIONS

GROUP 1: Laborer: General or Construction Laborer, Landscape Laborer. Asphalt Rubber Material Loader. Boring Machine Tender (outside), Carpenter Laborer (cleaning, handling, oiling & blowing of panel forms and lumber), Concrete Laborer, Concrete Screeding for rough strike-off, Concrete water curing. Concrete Curb & Gutter laborer, Certified Confined Space Laborer, Demolition laborer & Cleaning of Brick and lumber, Expansion Joint Caulking; Environmental Remediation, Monitoring Well, Toxic waste and Geotechnical Drill tender, Fine Grader, Fire Watcher, Limbers, Brush Loader, Pilers and Debris Handlers. flagman. Gas Oil and Water Pipeline Laborer. Material Hoseman (slabs, walls, floors, decks); Plugging, filling of shee bolt holes; Dry packing of concrete and patching; Post Holer Digger (manual); Railroad maintenance, repair trackman, road beds; Rigging & signaling; Scaler, Slip-Form Raisers, Filling cracks on any surface, tool Crib or Tool House Laborer, Traffic control (signs, barriers, barricades, delineator, cones etc.), Window Cleaner

GROUP 2: Asphalt abatement; Buggymobile; Cement dumper (on 1 yd. or larger mixers and handling bulk cement); Concrete curer, impervious membrane and form oiler; Chute man, pouring concrete; Concrete cutting torch; Concrete pile cutter; driller/Jackhammer, with drill steel 2 1/2 feet or longer; Dry pak-it machine; Fence erector; Pipeline wrapper, gas, oil, water, pot tender & form man; Grout man; Installation of all asphalt overlay fabric and materials used for reinforcing asphalt; Irrigation laborer; Kettleman-Potman hot mop, includes applying asphalt, lay-klold, creosote, lime caustic and similar tyhpes of materials (dipping, brushing, handling) and waterproofing; Membrane vapor barrier installer; Pipelayer backup man (coating, grouting, making of joints, sealing caulkiing,

diapering including rubber basket joints, pointing); Rotary scarifier, multiple head concrete chipper; Rock slinger; Roto scraper & tiller; Sandblaster pot tender; Septic tank digger/installer; Tamper/wacker operator; Tank scaler & cleaner; Tar man & mortar man; Tree climber/faller, chain saw operator, Pittsburgh chipper & similar type brush shredders.

GROUP 3: Asphalt, installation of all fabrics; Buggy Mobile Man, Bushing hammer; Compactor (all types), Concrete Curer - Impervious membrane, Form Oiler, Concrete Cutting Torch, Concrete Pile Cutter, Driller/Jackhammer with drill steel 2 1/2 ft or longer, Dry Pak-it machine, Fence erector including manual post hole digging, Gas oil or water Pipeline Wrapper - 6 ft pipe and over, Guradrail erector, Hydro seeder, Impact Wrench man (multi plate), kettleman-Potman Hot Mop includes applying Asphalt, Lay-Kold, Creosote, lime caustic and similar types of materials (dipping, brushing or handling) and waterproofing. Laser Beam in connection with Laborer work. High Scaler, Operators of Pneumatic Gas or Electric Tools, Vibrating Machines, Pavement Breakers, Air Blasting, Come-Alongs and similar mechanical tools, Remote-Controlled Robotic Tools in connection with Laborers work. Pipelayer Backup Man (Coating, grouting, making of joints, sealing, caulking, diapering including rubber gasket joints, pointing and other services). Power Post Hole Digger, Rotary Scarifier (multiple head concrete chipper scarifier), Rock Slinger, Shot Blast equipment (8 to 48 inches), Steel Headerboard Man and Guideline Setter, Tamper/Wacker operator and similar types, Trenching Machine hand propelled.

GROUP 4: Any worker exposed to raw sewage. Asphalt Raker, Luteman, Asphalt Dumpman, Asphalt Spreader Boxes, Concrete Core Cutter, Concrete Saw Man, Cribber, Shorer, Head Rock Slinger. Installation of subsurface instrumentation, monitoring wells or points, remediation system installer; Laborer, asphalt-rubber distributor bootman; Oversize concrete vibrator operators, 70 pounds or over. Pipelayer, Prefabricated Manhole Installer, Sandblast Nozzleman (Water Blasting-Porta Shot Blast), Traffic Lane Closure.

GROUP 5: Blasters Powderman-All work of loading holes, placing and blasting of all powder and explosives of whatever type, regardless of method used for such loading and placing; Horizontal directional driller, Boring system, Electronic tracking, Driller: all power drills excluding jackhammer, whether core, diamond, wagon, track, multiple unit, and all other types of mechanical drills without regard to form of motive power. Environmental remediation, Monitoring well, Toxic waste and Geotechnical driller, Toxic waste removal. Welding in connection with Laborer's work.

=====  
Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information

on contractor requirements and worker protections under the EO is available at [www.dol.gov/whd/govcontracts](http://www.dol.gov/whd/govcontracts).

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

---

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

#### Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

#### Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the

wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

#### Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

---

#### WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- \* an existing published wage determination
- \* a survey underlying a wage determination
- \* a Wage and Hour Division letter setting forth a position on a wage determination matter
- \* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations  
Wage and Hour Division  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

=====

END OF GENERAL DECISION"

## ENGINEER OF WORK

The Engineering Specifications and Special Provisions contained herein have been prepared by or under the direction of the following Registered Engineer:

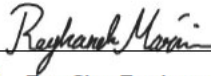

1) Registered Engineer

## **A. CHANGES TO CONTRACT DOCUMENTS**

The following changes to the Contract Documents are hereby made effective as though originally issued with the bid package. Bidders are reminded that all previous requirements to this solicitation remain in full force and effect.

## **B. BIDDER'S QUESTIONS**

Q1. RFI #1: Section 44 42 56.16 Supplement -1 Peristaltic Hose Pump. Specified manufacturer is Watson Marlow/Bredel Pumps Bredel 620DUN/RE. I'd like to inquire about the Blue-White M-4 metering pump being accepted as an approved equal for this spec section. Please see attached cutsheet and specification.

A1. Bid as specified.

Q2. Detail 4027-607 Note 1 calls out core drill on existing wall. The detail shows a sleeve embedded in the wall with a modular seal. If we are core drill existing concrete do, we need to embed a sleeve as shown in the drawing or can the modular seal make tier seal directly against the concrete cored hole?

A2. See modification in this Addendum.

Q3. Sheet 27, 187 and 193 show the civil, mechanical and section view for the new BG pipe system installation and tie-ins. There is no clear shut off shown in order to facilitate the tie-in. Please confirm this system will be shut down and purged by the City prior to tie-in of the new 18x12" reducer/spool as shown in section B on sheet 193. In addition, there are no clear removal and reinstatement requirements shown for the slab at the existing Gas Flare 80-GFL-01. Please provide details for demolishing and reinstatement for the concrete slab.

A3. For demolishing and reinstatement of the concrete slab see note 5 on sheet 80-D-122.

Q4. Sht. 80-E-121 calls out Conduit 80/014 & 80/015 and the Conduit Schedule on Sht. 80-E-622 calls out the conduits to be new.

Please confirm if these conduits are new.

If said conduits are new, please define the physical routing of these conduits on plan view drawings, and how they are routed to the Gallery.

Panel 80IP4A is located in the Gallery but I do not see this on the drawings.

Please provide a plan view of the Panel and the conduits being Routed to this panel.

A4. See drawing modification in this addendum. Sheets Y-122, Y-123 and Y-124 have been revised.

Q5. Sht. Y-320 shows Details A, B, C, (cross sections of the pipe gallery).

What is the vertical distance from the top of the pipe gallery to finished grade?

A5. Per record drawings the distance from the top of the pipe gallery to finished grade ranges from 0 feet to 11 feet.

Q6. Valve 76MV1125B is shown on the valve schedule to be provided by the Contractor, drawing 76-I-14 has it within the scope of the manufacture. Please clarify who is to provide the valve.

A6. See modified valve schedule in this Addendum.

Q7. Valve 76MV0101A is shown on drawing 76-I-41, this valve is not shown on the valve schedule, please confirm who is to provide this valve.

A7. See modified valve schedule in this Addendum.

Q8. Valve 76SV0101B is shown on drawing 76-I-41, this valve is not shown on the valve schedule, please confirm who is to provide this valve.

A8. See modified valve schedule in this Addendum.

Q9. Valve 76MV0102A is shown on drawing 76-I-42, this valve is not shown on the valve schedule, please confirm who is to provide this valve.

A9. See modified valve schedule in this Addendum.

Q10. Valve 76SV0102B is shown on drawing 76-I-42, this valve is not shown on the valve schedule, please confirm who is to provide this valve.

A10. See modified valve schedule in this Addendum.

Q11. Valve 76MV0103A is shown on drawing 76-I-43, this valve is not shown on the valve schedule, please confirm who is to provide this valve.

A11. See modified valve schedule in this Addendum.

Q12. Valve 76SV0103B is shown on drawing 76-I-43, this valve is not shown on the valve schedule, please confirm who is to provide this valve.

- A12. See modified valve schedule in this Addendum.
- Q13. Valve 76MV0104A is shown on drawing 76-I-44, this valve is not shown on the valve schedule, please confirm who is to provide this valve.
- A13. See modified valve schedule in this Addendum.
- Q14. Valve 76SV0104B is shown on drawing 76-I-44, this valve is not shown on the valve schedule, please confirm who is to provide this valve.
- A14. See modified valve schedule in this Addendum.
- Q15. Valve 76MV0105 is shown on drawing 76-I-45, this valve is not shown on the valve schedule, please confirm who is to provide this valve.
- A15. See modified valve schedule in this Addendum.
- Q16. Valve 76SV0105B is shown on drawing 76-I-45, this valve is not shown on the valve schedule, please confirm who is to provide this valve.
- A16. See modified valve schedule in this Addendum.
- Q17. Valve 80MV1129 is shown on drawing 80-I-1, this valve is not shown on the valve schedule, please confirm who is to provide this valve.
- A17. Valve is existing and will not be replaced. See modification in this Addendum.
- Q18. Valve 80MV1107 is shown on drawing 80-I-1, this valve is not shown on the valve schedule, please confirm who is to provide this valve.
- A18. Valve is existing and will not be replaced. See modification in this Addendum.
- Q19. Valve 80MV1229 is shown on drawing 80-I-51, this valve is not shown on the valve schedule, please confirm who is to provide this valve.
- A19. Valve is existing and will not be replaced. See modification in this Addendum.
- Q20. Valve 80MV1207 is shown on drawing 80-I-51, this valve is not shown on the valve schedule, please confirm who is to provide this valve.
- A20. Valve is existing and will not be replaced. See modification in this Addendum.

- Q21. Valve 80MV1329 is shown on drawing 80-I-101, this valve is not shown on the valve schedule, please confirm who is to provide this valve.
- A21. Valve is existing and will not be replaced. See modification in this Addendum.
- Q22. Valve 80MV1307 is shown on drawing 80-I-101, this valve is not shown on the valve schedule, please confirm who is to provide this valve.
- A22. Valve is existing and will not be replaced. See modification in this Addendum.
- Q23. Valve 23PCV0001 is shown on drawing 80-I-272, this valve is called out as 10" on the valve schedule but shown as 12" on 80-I-272. Please confirm the diameter of 23PCV0001.
- A23. See modification in this Addendum.
- Q24. Valves 80M1810, 80PCV1811, and 80SV1812 are shown on the valve schedule to be provided by the Contractor, drawing 80-I-280 has it within the scope of the manufacture. Please clarify who is to provide these valves.
- A24. See modified valve schedule in this Addendum.
- Q25. 46 23 00
- 2.02.D.1.f: Please confirm the 1.25-inch valve is a modulating ball valve. Also confirm the attached Don Johns modulating ball valve is acceptable as none were specified in section 40 90 00.
- 2.02.D.2.a.b.d: Please confirm if the controls need to modulate the ball and plug valves or are for Open/Close service only. We won't have that capability to modulate with the specified programmable relay logic controls specified.
- 2.05.A. Please confirm if the existing control panel refurbishment is to be performed by the Contractor or equipment supplier.
- 3.06.A: Please confirm when the testing period will commence during the 889-day project timeline to so we can assess our warranty coverage accordingly.
- A25. Answer to 2.02.D.1.f: Valves 76MV1104B, 76MV1109B, and 76MV1114B are modulating ball valves with the same functionality as 76MV1125B, described in paragraph 2.02.D.2.d. Ball valves shall be in accordance with specification section 40 27 02 paragraph 2.05.C. Alternate valve manufacturers will be evaluated during submittal review.

Answer to 2.02.D.2.a.b.d: These valves may be open/close, so long as they are per the manufacturer's recommendation and do not impair the function of the grit separator. The existing system uses Single Loop Controllers to provide flow control. Controllers have been specified 2.03.B.6.b.

Answer to 2.05.A: The specification allows for these services to be provided by either the contractor or the supplier.

Answer to 3.06.A: Warranty shall start on the date the Work is accepted by the City unless the City has Beneficial Use or takes Occupancy of the project earlier as specified in Supplementary Special Provisions Section 3-13.3. The warranty period for specific items covered under manufacturers or suppliers' warranties shall commence on the date they are placed into service at the direction of the Engineer in writing. See modification to Specification Section 01 91 14 this Addendum. The start of overall Facility Acceptance Testing will be as Specified in Section 01 91 14 and Supplementary Special Provisions Section 6-9 Milestones.

Q26. Drawing 80-D-121 shows a flame arrester to be refurbished. Please provide make and model of arrester.

A26. The make and model of the flame arrester is a Varec 12".

Q27. Valves 80MV1129 and 80MV1107 are shown on drawing 80-I-1, these valves are not shown on the valve schedule, please confirm who is to provide these valves.

A27. Valve is existing and will not be replaced. See modification in this Addendum.

Q28. Valves 80MV1229 and 80MV1207 are shown on drawing 80-I-51, these valves are not shown on the valve schedule, please confirm who is to provide these valves.

A28. Valve is existing and will not be replaced. See modification in this Addendum.

Q29. Valves 80MV1329 and 80MV1307 are shown on drawing 80-I-101, these valves are not shown on the valve schedule, please confirm who is to provide these valves.

A29. Valve is existing and will not be replaced. See modification in this Addendum.

- Q30. Please consider adding Fluid Components International (FCI) as an approved manufacturer for the Thermal Mass Flowmeters (F51 Flow Element & Transmitter, Thermal Mass Flow).

FCI is #1 in the world for thermal mass flowmeters in this application, and is headquartered in San Diego County, San Marcos, CA. In addition, with an installed base at the Metro Biosolids Center and Point Loma WWTP, the City of San Diego, along with nearly all other WWTP's in San Diego County are current customers of FCI.

Please see attached and let us know if you have questions or need any additional information.

- A30. Bid as specified.
- Q31. Attachment A – Scope of Work, Section 3, states that the overall time for completion of the work is 889 Working Days. Section 4 provides the descriptions of four (4) Milestones. Attachment E - Supplementary Special Provision, Section 6-9, sets forth the required completion dates in working days for each of the 4 milestones. However, Section 01 32 00, Item 1.02.U. states "Contract duration is measured in calendar days against contract milestones". Please confirm that the contract duration for all milestones and final completion will be measured in working days and not in calendar days.
- A31. Confirmed. See modification to Specification Section 01 32 00 in this Addendum.
- Q32. Since this project is subject to a Project Labor Agreement (PLA), has an agreement been made between the Laborers and Pipefitters Unions as to which will provide labor for installation of piping, valves, and process equipment inside of the pipe galleries and buildings? Please advise so that we can determine which labor rates to use in our estimate.
- A32. Any questions about agreements between PLA-signatory union(s) regarding union jurisdiction may be directed to the affected union(s). The PLA requirements for union work assignments and jurisdictional disputes are addressed in PLA Article 8. The PLA requirements for wages and benefits are addressed in PLA Article 6.
- Q33. Section 01 31 13 - 1.05.A includes a description of only 2 Milestones that is different from the 4 Milestones listed in Attachment E, Section 6-9. Please confirm that we are to use the milestones listed in Attachment E, Section 6-9.

- A33. Refer to modification to Section 01 13 13 in Addendum B.
- Q34. Please confirm this project is subject to the California Acts of God statute which relieves the contractor from the cost associated with damage caused by an earthquake exceeding 3.5 on the Richter Scale in excess of 5% of the contractor's bid.
- A34. All Pure Water projects are exempt from mandatory requirements of California Public Contract Code 7105 (a).
- Q35. Drawing Volume 7 N-003 shows Drop 7/57 and Drop 8/58 highlighted in black. Are these Drops (and all other Drops shown in a similar manner) highlighted in black due to new I/O modules being provided in existing PCM cabinets or are completely new PCM cabinets required?
- A35. All drops highlighted in black are to upgrade per 40.90.07.3.01.B, see 40.90.06 for the quantity of IO modules required and 40.94.24 for the IO affected.
- Q36. When was the last time the Digesters have been cleaned?
- A36. Refer to Addendum B, Answer 20.
- Q37. Due to the scope of work added in addendum #1 we request the bid date be extended.
- A37. Refer to Addendum B.
- Q38. Refer to Section 12.5 from the Notice Inviting Bids.
- This section appears to be missing the information that is referred to, "as follows." Please provide this additional information or clarify what information is being referenced.
- A38. Refer to 12.6 for agreeable fair share objective.

## **C. SUPPLEMENTARY SPECIAL PROVISIONS**

1. To Technicals, Section 01 29 00, Payment Procedures, Part 1, Item 1.10 Bid Items, Sub-Item E Site Civil Grading – Lump Sum, Item 3, Page 174, **DELETE** in its entirety and **SUBSTITUTE** with the following:
  3. Payment is made for this item for the following:
    - a. Civil demolition work and grading as shown on Drawings and as specified, including protection of existing facilities, excavation, grading, erosion control, tree trimming and protection, tree removal and replacement, fencing removal and replacement, irrigation system removal and replacement, and all appurtenant work, complete.

- b. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.
2. To Technicals, Section 01 32 00, Construction Progress Documentation, Part 1 General, Item 1.02 Definitions, Sub-Item U, Page 200, **DELETE** in its entirety and **SUBSTITUTE** with the following:
  - U. Calendar Day: All days in a calendar year including weekends and holidays.
3. To Technicals, Section 01 91 14, Testing, Integration and Startup, Part 3 Execution, Item 3.08, Equipment Performance Testing, Page 358, **ADD** the following after Sub-Item C:
  - D. Equipment and systems may be placed into service for beneficial use after successful completion of factory acceptance testing, function testing, pre-performance and performance testing. Warranties for equipment and systems placed into service shall commence after successful completion of all functional and performance testing and meeting all specified requirements as notified in writing by the Engineer. Placing equipment and systems into service and beneficial use does not relieve the Contractor of any of the Integration Period, Facility Acceptance Testing and Digester Stress Testing requirements.

#### **D. PLANS**

1. To Drawing Numbers 44198-1001-D, 44198-1025-D, 44198-1026-D, 44198-1036-D, 44198-1037-D, 44198-1038-D, 44198-1249-D, 44198-1302-D, 44198-1311-D, 44198-1320-D, and 44198-1338-D, **DELETE** in their entirety and **REPLACE** with pages 11 through 21 in this Addendum.

James Nagelvoort, Director  
Engineering & Capital Projects Department

# SAN DIEGO METROPOLITAN BIOSOLIDS CENTER IMPROVEMENTS

CITY OF SAN DIEGO, CA 92111

## EXISTING LEGAL DESCRIPTION

LOT 78, PARTITION OF RANCHO MISSION OF SAN DIEGO, MAP 330.

## SCOPE OF WORK

1. THE MBC IMPROVEMENTS PROJECT INCREASES PLANT CAPACITY BY MODIFYING THE GRIT SEPARATION SYSTEM; THE SLUDGE THICKENING SYSTEM; THE SLUDGE DEWATERING SYSTEM; THE DIGESTER MIXING AND RECIRCULATION SYSTEM; THE BIOGAS COLLECTION AND TRANSFER SYSTEM; THE BIOGAS FLARE SYSTEM; AND THE CENTRATE SYSTEM. THE PROJECT INCLUDES MODIFICATIONS TO THE CONTROL AND ELECTRICAL SYSTEMS, AS WELL AS OTHER WORK SHOWN WITHIN THE CONTRACT DOCUMENTS.

## CONTRACTOR'S RESPONSIBILITIES

1. PURSUANT TO SECTION 4216 OF THE GOVERNMENT CODE, AT LEAST 2 WORKING DAYS PRIOR TO EXCAVATION, YOU MUST CONTACT THE REGIONAL NOTIFICATION CENTER (E.G. UNDERGROUND SERVICE ALERT OF SOUTHERN CALIFORNIA) AND OBTAIN AN INQUIRY IDENTIFICATION NUMBER.
2. NOTIFY SDG&E AT LEAST 10 WORKING DAYS PRIOR TO EXCAVATING WITHIN 10' OF SDG&E UNDERGROUND HIGH VOLTAGE TRANSMISSION POWER LINES. (I.E., 69 KV & HIGHER)
3. THE LOCATIONS OF EXISTING BUILDINGS AS SHOWN ON THE PLAN ARE APPROXIMATE.
4. STORM DRAIN INLETS SHALL REMAIN FUNCTIONAL AT ALL TIMES DURING CONSTRUCTION.
5. UNLESS OTHERWISE NOTED AS PREVIOUSLY POTHOLED (PH), ELEVATIONS SHOWN ON THE PROFILE FOR EXISTING UTILITIES ARE BASED ON A SEARCH OF THE AVAILABLE RECORD INFORMATION ONLY AND ARE SOLELY FOR THE CONTRACTOR'S CONVENIENCE. THE CITY DOES NOT GUARANTEE THAT IT HAS REVIEWED ALL AVAILABLE DATA. THE CONTRACTOR SHALL POTHOLE ALL EXISTING UTILITIES EITHER SHOWN ON THE PLANS OR MARKED IN THE FIELD IN ACCORDANCE WITH THE SPECIFICATIONS SECTION 5-UTILITIES.
6. EXISTING UTILITY CROSSING AS SHOWN ON THE PLANS ARE APPROXIMATE AND ARE NOT REPRESENTATIVE OF ACTUAL LENGTH AND LOCATION OF CONFLICT AREAS. SEE PLAN VIEW.
7. ALL ADVANCE METERING INFRASTRUCTURE (AMI) DEVICES ATTACHED TO THE WATER METER OR LOCATED IN OR NEAR WATER METER BOXES, COFFINS, OR VAULTS SHALL BE PROTECTED AT ALL TIMES IN ACCORDANCE WITH THE CONTRACT DOCUMENTS.

## BUILDING DATA

1. REFER TO DRAWING G-034 FOR BUILDING DATA OF EXISTING BUILDINGS.

## CONSTRUCTION STORM WATER PROTECTION NOTES

1. TOTAL SITE DISTURBANCE AREA (ACRES) : 0.14 AC  
HYDROLOGIC UNIT/ WATERSHED : PENASQUITOS HU/ MISSION BAY WATERSHED  
HYDROLOGIC SUBAREA NAME & NO. : MIRAMAR HSA 906.4
2. THE CONTRACTOR SHALL COMPLY WITH THE REQUIREMENTS OF THE
  - WPCP  
THE PROJECT IS SUBJECT TO MUNICIPAL STORM WATER PERMIT NO. R9-2013-0001 AS AMENDED BY R9-2015-0001 AND R9-2015-0100
  - SWPPP  
THE PROJECT IS SUBJECT TO MUNICIPAL STORM WATER PERMIT NO. R9-2013-0001 AS AMENDED BY R9-2015-0001 AND R9-2015-0100 AND CONSTRUCTION GENERAL PERMIT ORDER 2009-0009-DWQ AS AMENDED BY ORDER 2010-0014-DWQ AND 2012-0006-DWQ

## DECLARATION OF RESPONSIBLE CHARGE

\* I HEREBY DECLARE THAT I AM THE ENGINEER OF WORK FOR THIS PROJECT THAT I HAVE EXERCISED RESPONSIBLE CHARGE OVER THE DESIGN OF THE PROJECT AS DEFINED IN SECTION 6703 OF THE BUSINESS AND PROFESSIONS CODE AND THAT THE DESIGN IS CONSISTENT WITH CURRENT STANDARDS. I UNDERSTAND THAT THE CHECK OF PROJECT DRAWINGS AND SPECIFICATIONS BY THE CITY OF SAN DIEGO IS CONFINED TO A REVIEW ONLY AND DOES NOT RELIEVE ME, AS ENGINEER OF WORK, OF MY RESPONSIBILITIES FOR PROJECT DESIGN.

- NOTES:
- MOTORIZED VALVES THAT ARE PART OF A PACKAGE SYSTEM ARE NOT LISTED.
  - GPM FOR LIQUID AND SLUDGE SERVICES, CFM FOR AIR SERVICE
  - M = MODULATING  
O/C = OPEN/CLOSE
  - AT VALVE MAXIMUM AND MINIMUM POSITION, THE VALVE SHALL BE +/- 10% OF THE LISTED VALUE AT THE SPECIFIED CV.
  - LINE SIZE SAME AS VALVE SIZE UNLESS OTHERWISE NOTED.
  - SEE SPECIFICATION SECTION 40 27 02 FOR VALVE TYPE.

COMPRESSOR #3 CONDUIT ROUTING  
NOTE: THERE IS AN EXISTING CONDUIT SUPPORTING SYSTEM ALREADY INSTALLED ALONG THIS PROPOSED ROUTING. IT SHOULD BE POSSIBLE TO RUN NEW CONDUITS IN THIS CONDUIT SUPPORTING SYSTEM.

THERE IS A PULL BOX ON THE OUTSIDE OF THE BUILDING THAT MAY BE USEFUL IN ROUTING THE CIRCUITS FROM THE OUTSIDE OF THE BUILDING TO THE REQUIRED MCC. BUT THIS WILL REQUIRE INVESTIGATION. PLAN TO EXIT THE GALLERY AT THIS LOCATION. PENETRATE THE WEST WALL OF THE BUILDING SHOWN ON DRAWING 80-E-201

## **A. CHANGES TO CONTRACT DOCUMENTS**

The following changes to the Contract Documents are hereby made effective as though originally issued with the bid package. Bidders are reminded that all previous requirements to this solicitation remain in full force and effect.

## **B. BIDDER'S QUESTIONS**

Q1. Refer to Drawing Y-120, Sheet 34 of 364.

General Note 3 on drawing Y-120 states to refer to construction sequencing of the new 6" TSL lines in the specifications. Could not locate this, please advise.

A1. See modification to Specification Section 01 31 13 in this Addendum.

Q2. Spec 40 90 00 (73PI20XXB-RSL discharge) are all listed as 8", however the plans (SHT 73-D-101) indicate 6". P&IDs also indicate 6". The specifications for these pumps (44 42 56.09 – data sht) also calls for the discharge to be 6". I have listed a few examples of the conflicts found so far. (Unless I am reading this incorrectly), there appear to be additional conflicts. Please have a look at this section.

i. Please confirm that annular seal 73PI2023B is to be 6".

Please also clarify the sizes for 76PI1104C, 09C14C & 26C as these all (appear) to be on 2" lines and yet, they are called out as 10".

Please also clarify the sizes for 76PI12505A (and the others for Dewatering-suction) as these all appear to follow the bellows on the plan SHT 76-D-320, which would make them 8". P&ID SHTs (76-1-101 – 108) isn't entirely clear where reduction takes place.

A2. See modification to Specification Section 40 90 00 in this Addendum.

Q3. I would like to confirm that the plug valve (currently labeled 76MV1157) on SHT 76-D131 is actually supposed to be 76HV1156.

i. Please confirm valve type and tag as noted above.

A3. Plug valve 75MV1157 as shown on 76-D-131 is the correct tag name. See G-110 MBC-Power Operated Valve Schedule for valve type. 75HV1157 shown on 76-D-331 should be 75MV1157.

Q4. Detail 4 / 76S-515 shows a Stud / Machine Bolt config for Grating attachment. In our past projects, this config has been difficult to shop weld to ensure the studs will be centered between the Grating Bars. They often

need to be cut off in the field for re-welding or shipped loose for field welding. Is it acceptable to use Self-drilling screws? If not, Struct-Fast ([www.structfast.com](http://www.structfast.com)) offers alternative types of grating clips that eliminate the need for field welding. If either of these alternative config is acceptable, it will save the cost for field welding of studs in between bearing bars.

- A4. Struct-fast grating clips or approved equal would be acceptable.
- Q5. SHT 76-I-41 – 45 show motorized valves for UWLP (76MV0101A – 105A), which appears to fall outside of the package being provided. I see no asterisk indicating that the unit or pump supplier will provide it however, it is not listed on the valve schedule provided on plan SHT G110. The P&ID sheet also indicates that this valve is a ball valve, however (per the valve schedule) I can find only 2" and small ball valves.
- a. Additionally, the 2" solenoid valves are shown on the P&ID sheets as gate valves however, the plans list them as V301 (ball valve). These valves are also not included on valve schedule.
    - 1. Please also provide/confirm 4" valve type (ball, globe, etc).
      - a. Please confirm 2" solenoid valve type and whether it is "normally closed" or open?
- A5. Refer to Addendum C for valve schedule revisions. Solenoid valves are to be Normally Closed. See drawing modification in this Addendum.
- Q6. PRW materials less than 4" – not listed on pipe schedule. My inclination is to quote CPVC as SHTs 76-I-31 - 35 show a ball check valve, which per the valve schedule (in this size range) is CPVC.
- i. Additionally, plan SHT 76-D-330 calls out PRW to be 1" (with 1" service saddle), whereas as P&ID SHTs 76-I-31 - 35 call out for 1-1/2". Can we also assume that the existing PRW to which we are connecting is 4" as shown on 76-D-131? (Or is there a tap or stub of the appropriate size that we are connection to?)
  - ii. Please provide materials less than 4" for PRW.
    - 1. Please confirm size and POC for PRW from existing to 10" RSL suction.
- A6. See updated pipe schedule and drawing modification in this Addendum.

Q7. I would like to clarify the scope or extent of the DR 13.5 HDPE. Spec section 33 05 01, 2.01 A, 1 states, "...where shown on Drawing 41198-1192D." based on this statement alone, it would suggest that only the transition, riser pipe and 90 are to be DR 13.5 and the rest of the buried pipe will be DR 17 per spec section 33 05 01.10; is this correct?

i. Please confirm complete scope/extent of DR 13.5 HDPE for biogas.

A7. Confirmed. See 80-D-320 for details.

Q8. Section 44 46 20 Paragraph 2.02.B.1 states the unit should be sized with a 1/2" WC pressure drop. This is normally how open flares are sized, not enclosed. Please provide us with an operating pressure range at the inlet to the flare, or at an inlet to the flame arrester.

A8. See 40 90 00 Supplement 4 Control Strategies Digester Complex for operating pressures.

Q9. There appears to be a discrepancy (relating to the axial mixing pumps) between SHT 80-D-113 and SHT 80-D-311, Sect E. SHT 113 shows a filler flange and a bellows-type expansion joint with an instrument tap in the 90, whereas 311 shows a spool with a centered tap for instrumentation. P&ID SHTs 80-I-20 – 22, 70 – 72 & 120 – 122 offer no additional information that would clarify this issue. (I am aware that 3 of the pumps are noted to be different than the others). Is SHT 311, Sect E supposed to be a general representation of all pumps with the specifics are shown in the enlarged plans?

Please confirm materials required for/at digester axial mixing pumps.

A9. Yes, Section E is a general representation of the axial mixing pumps. See pipe schedule for DSL service.

Q10. Referencing Specification Section 44 46 23 Digester Cleaning and Specification Section 01 29 00 pages 7 thru 11. There does not appear to be a bid item associated with the Digester Cleaning. Please confirm which bid item the Digester Cleaning is to go in.

A10. Digester cleaning is included in lump sum Bid Item 11. See modification to Specification Section 01 29 00 in this Addendum.

Q11. Per our previous emails and conversations, we are looking to find out how to get our Andritz Centrifuges approved as an "Or-Equal" in the bid documents, and the "Whitebook" cites or equal and alternates to be addressed after award of project.

Can you please direct me here on how to go about getting our products evaluated for this bid?

- A11. Alpha Laval centrifuges have been sole sourced by the City and no proposed "or equals" will be accepted.
- Q12. Please provide a specification for the dole valves shown on drawings 76-I-41 thru 76-I-45.
- A12. Valve type is V960 as called out on Drawing 76-D-630.
- Q13. Please confirm that valve type for valves 80HV0260, 80HV0261, and 80HV062 shown on drawing 80-I-159, these valves are not shown on the valve schedule.
- A13. Per Drawing Y-124 Valves are on overflow service. See Manual Operated Valves schedule on Drawing G-111.
- Q14. For the BG pipe system, please provide the plug valve type to use for 2" and smaller. For reference 80HV0256 and 80HV257 are shown on 80-I-272.
- A14. See drawing modification in this addendum.
- Q15. Assuming that the contract time will be measured in working days, the Milestone No. 1 for Intermediate Substantial Completion of 619 Working Days, excluding weekends and holidays, converts to about 126 weeks (about 29 months or 882 calendar days). The longest lead time equipment items on this project are the five (5) new thickening centrifuges. Alfa-Laval, Inc. is listed as the centrifuge manufacturer, and we have contacted them in order to understand their procurement and submittal process as well as their fabrication and shipment time frame. Alfa-Laval, Inc. has provided the estimated time frames listed below.

According to the submittal process listed on page 233 of the Attachment E – Technicals, item F, the following are the anticipated submittal preparation and review times:

- Alfa-Laval prepare first submittal after NTP – 3 Months.
- Design Engineer (review #1) – 1 Month.
- Alfa-Laval, Inc. (revise & resubmit #1) – 1 Month.
- Design Engineer (review #2) – 1 Month.
- AHJ submittal review after Design Engineer approval – 1.5 Months.
- Submittal Review and Approval Total Duration – 7.5 Months.

The fabrication and delivery times of the Alfa-Laval equipment after final approval of submittals is estimated as follows:

- Fabrication/factory testing of the first 2 units: 9 Months.
- Shipment: 2 Months
- Alfa-Laval Total Delivery time after approved submittals: 11 Months.

Our understanding of the contract documents and specifications testing, and commissioning requirements needed for the Centrifuge System is as follow:

- Mechanical/Equipment/Electrical Functional Testing (as required) – Assume 1 Month
- PIC Readiness/Auxiliary Systems/Facility Commissioning (as required) – Assume 1 Month
- Facility Commissioning-(Functional testing of Unit Processes) – 1 Month
- Testing and Commissioning Total Duration for each set of centrifuges– 3 Months

There are a total of 5 thickening centrifuges to be demolished and replaced in this contract. Our interpretation and understanding of the testing/integration requirements and Alfa-Laval's, Inc. submittal process, fabrication time frame, and shipment, we believe that there will not be enough time in the contract to install and commission the 5 thickening centrifuge units.

If we follow the contract specification, sequencing of MOPO's and Alfa-Laval's Inc. schedule; the contract duration will over run the 619 working days allowed for Milestone 1 by several months due to the following schedule sequence:

- Submittal Review Process – 7.5 Months.
- Alfa-Laval, Inc. First Delivery to MBC – 11 Months.
- Unit 1 and 2 go Offline (demolish centrifuge system and install new system) – 3 Months.
- Testing, Commissioning, and Integration – 3 Months.
- Unit 3 and 4 go Offline (demolish centrifuge system and install new system) – 3 Months.
- Testing, Commissioning, and Integration – 3 Months.

- Unit 5 go Offline (demolish centrifuge system and install new system) – 3 Months.
- Testing, Commissioning, and Integration – 3 Months.
- Total duration for the replacement and commissioning of 5 new Thickening Centrifuges – 36.5 Months.

The total estimated time from Notice to Proceed to installation and commissioning of all 5 centrifuges is 36.5 months. Assuming an average of 21 working days per month, we will need at least 767 working days to achieve Intermediate Substantial Completion. Therefore, we request that the duration for Milestone 1 be increased by 151 working days from 619 working days to 770 working days, and that the 3 subsequent Milestone Durations each be increased by 151 calendar days, and that the overall time for completion of the work is increased from 889 working days to 1040 working days.

- A15. See modification to Supplementary Special Provisions Section 6-9 in this Addendum.
- Q16. Attachment E - Supplementary Special Provision, Section 6-9, lists Milestone 1 - Intermediate Substantial Completion, as 619 working days after NTP, and Milestone 2 - Start of Integration Period, as 736 Working Days after NTP. The time between the completion of Milestone 1 and the start of the Milestone 2 is 117 working days, which is about 23 weeks or 5 months. It appears that this gap in time is driven by the completion of the North City Pure Water Facility (NCPWF), which is the last of the eight (8) Pure Water projects scheduled to be completed before the Integration Period can start. Does the contractor need to maintain staff on site during this 5-month down time period if we have already attained Intermediate Substantial Completion?
- A16. The Contractor is not required to maintain staff on site between Intermediate Substantial Completion and the start of Integration Period, except as may be required for maintenance, troubleshooting, corrections and repairs.
- Q17. Attachment E - Supplementary Special Provision, Section 6-9, lists Milestone 2 - Start of Integration Period, as 736 Working Days after NTP and Milestone 3 - Substantial Completion as 838 working days after NTP. The time between the start of Milestone 2 and the completion of the Milestone 3 is 102 working days, which is about 20 weeks. During the period between Milestone 2 and Milestone 3 we are required to participate in the 120-Day Integration Period followed by a 30-Day Facility Acceptance Test period, a total of 150 calendar days, which is 21 weeks plus 3 days. Therefore, we

request that the working day duration between Milestones 2 and 3 be increased to at least 110 working days, which is equivalent to 22 weeks.

- A17. See modification to Supplementary Special Provisions Section 6-9 in this Addendum.
- Q18. Section 01 50 00 - 3.01.A requires that we make the Construction Manager's Field Office available for use prior to start of work on the site but does not specify how far in advance of the work on site. Since this project involves submittal review and procurement of major process equipment with long lead times, it will likely be several months after NTP before we mobilize to the site to begin construction. We plan to install the CM Field Office about 30 days before start of construction. Please confirm that this is acceptable to the City and that we will not be required to provide the CM Field Office any sooner.
- A18. See modification to Section 01 50 00 in this Addendum.
- Q19. Section 01 29 00 does not describe which bid item is to include the Digester Cleaning as specified in Section 44 46 23. We assume these costs should be included in Bid Item 11 – Digester Complex Facility 80. Please confirm.
- A19. Digester cleaning is included in lump sum Bid Item 11. See modification to Specification Section 01 29 00 in this Addendum.
- Q20. Section 01 91 14 -1.02. O states that the Owner will perform the Digester Stress Testing concurrent with the Integration Period. Section 01 91 14 - 3.12 - Digester Stress Testing, does not specifically describe what is entailed in the Digester Stress Test and what will be used as the benchmark for "successful completion". Please provide this information. Also, since the Owner will be performing the Digester Stress Testing, please advise what, if any, support will be required of the Contractor.
- A20. The Contractor shall provide the support services specified for the Integration Period and Acceptance Testing.
- Q21. Bidding Documents, Performance Bond, Labor and Materialmen's Bond Form. It would appear that a new sentence has been added to the existing bond form that automatically eliminates the ability of the Surety to consider using the Principal as its completion contractor. While we understand that the preceding sentence provides the City with the ability to reject any contractor proposed by the Surety, specifically eliminating the ability of the Surety to utilize the Principal may be prejudicial to the Surety and to the completion of the project itself. When a Surety makes the decision to utilize its Principal to complete the project, it does so after an independent investigation of, among other things, the most cost effective and

expeditious means of completing the work. Effectively, the Surety becomes the intermediary between the Principal and the City and the City's future communication regarding project completion is directly with the Surety, as opposed to having to maintain a direct relationship with the Principal. As a result, it may be in the best interests of the City and the Surety to discuss the use of a particular completion contractor during the course of the Surety's investigation, as opposed to foreclosing the option at the outset. Accordingly, please consider the below revision:

~~"The Surety shall not utilize the Principal in completing the improvements and work specified in the Agreement in the event the City terminates the Principal for default."~~

- A21. Bid as specified.
- Q22. Specification Section 40 94 24 Supplement 1 DCS Input/Output List states 3rd party devices being connected to Drops via ELC, but does not indicate the number of soft I/O. Please, confirm the total number of new soft I/O coming into Ovation.
- A22. The total number of new soft IO coming into Ovation will be confirmed during construction, per 40 98 00 3.05.B.
- Q23. Specification section 40 90 03 – 15 subsection 3.02 A. 4. states DCSP shall "Execute field verification and documentation of all conditions and develop installation drawings and accurate as-constructed documents to successfully complete the Work." Please, clarify the extent of details and scope required for the installation design. For example, does the installation package include demo drawings, new loop drawings, panel installation details, and/or cable schedules for all loops coming into Ovation?
- A23. See 40.90.03 1.01.B.4 Table 3 and subsection 1.05 for details.
- Q24. Volume 7 Drawing N-003 and N-005 show new FLRs. Please, confirm if these FLRs should be provided as redundant pairs.
- A24. Redundant pairs are not required.
- Q25. Specification Section 40 96 00 – 3 subsection 1.06 E. states the DCSP shall ensure that new graphics development conforms with existing COMNET DCS standards. Please, confirm if the existing standards or the City's new COMNET DCS High Performance Graphics standards should be used.
- A25. The graphics should be done in accordance with the current COMNET standards.

- Q26. Specification Section 40 98 00 – 6 Subsection 3.5 E. states Maintenance Phase requirements. Please, confirm the DCS maintenance will be conducted under a separate contract with the City.
- A26. There will be no need for "maintenance" requirements under this Contract. See modification to Specification Section 40 98 00 in this Addendum.
- Q27. The following instruments are shown on the Instrumentation and Control Drawings.
- a. 76PI0101 shown on Dwg. 76-I-41
  - b. 76PI0102 shown on Dwg. 76-I-42
  - c. 76PI0103 shown on Dwg. 76-I-43
  - d. 76PI0104 shown on Dwg. 76-I-44
  - e. 76PI0105 shown on Dwg. 76-I-45
- They are not listed on the Instrument list provided in the specifications. Please confirm if they are needed and, if so, please provide the associated Data Sheets.
- A27. Pressure gauges are not needed and have been removed from P&ID Drawings in this Addendum.
- Q28. Raceway tags 80/015 80/016 80/017 80/020 80/021 80/022 80/025 80/026 80/027 80/030 indicate they are running to/from series 80 panels (80IP1-80IP6A). The panel schedule states that these panels are located in the Gallery. When looking at the Gallery Plans (pg 80-E-129), there are series 73 panels but no indication of the series 80 panels. Please provide the location of the series 80 panels on the plans.
- A28. See drawing modification for added and revised panel locations in this Addendum.
- Q29. On drawing C-101, please provide existing fence height for removal and new fence to be installed.
- A29. Height of existing chain link fence may vary and will be determined during construction.
- Q30. On drawing C-100, please provide quantities for tree and irrigation bubblers removal for estimating purposes.
- A30. Approximately six irrigation bubblers are anticipated. Trees shall be protected as specified in Specification Sections 01 50 00 and 01 56 39 and any removals coordinated during construction.

- Q31. On drawing C-100, please provide existing height of trees to be removed for estimating purposes.
- A31. Trees shall be protected as specified in Specification Sections 01 50 00 and 01 56 39 and any removals coordinated during construction.
- Q32. On drawing C-101, please verify if the existing curb and gutter will be removed for the construction of the new driveway.
- A32. Yes, see modification to Addendum C, see Specification Section 01 29 00 as part of this Addendum.
- Q33. Please confirm which milestone the Construction Manager Filed Offices supplied by the contractor per Specification 01 50 00 can be demobilized from the site. Please note there will be a long down time between Milestone 1 (619/working days) Intermediate Substantial and Milestone 4 (889/working days) Final Acceptance.
- A33. The Construction Manager's Field Office is to remain on site for a minimum of 60 days after final acceptance of the Work (Milestone 4) per Specification Section 01 50 00, 3.01.A.
- Q34. Per specification 44 46 23-1.07 Digester Cleaning Quantities have been provided as an estimated quantity of 410,300/gal per digester. Due to that this quantity could vary would the owner consider changing this scope of work to a Unit Price per Gal or TN bid item? Or would the owner consider if the actual quantity varies more than 10% higher or lower it would be consider a change of condition.
- A34. Bid as specified.
- Q35. Drawing Y-113, Volume 5 shows the profile of the 20" BG line. Station 50+83.28 shows an unknown concrete utility that requires relocation. Please verify the Identity of the concrete utility and if the line is active or abandoned.
- A35. Utility is unknown.
- Q36. Standard detail 3123-110 on sheet SD-006 shows typical trench. Trench Stabilization material is mentioned and is being used where required. Nothing in the drawings or the specifications call out trench stabilization material being used. Please confirm if there is to be trench stabilization material for trenches or if there will be an allowance issued.
- A36. Refer to Specification Section 31 23 23.15 - 2.03.

- Q37. Confirm specification valve type for 76MV0101A,02A,03A,04A & 05A.
- A37. See Addendum C.
- Q38. Future connection BG valve shown on Y-111 is not shown on PIDs, Confirm specification valve type for this location.
- A38. See manual-operated valves schedule on Drawing G-111.
- Q39. Confirm Expansion bellows in SS biogas and Digester Gas applications is Rubber/Flexible EPDM and not a Stainless-Steel Expansion Bellows.
- A39. Refer to Specification Section 40 27 01 - 2.02.A.
- Q40. There is significant Mechanical work at the Overflow connections in the gallery between the Biosolids tank and Emergency Storage Tank on Sheet Y-123 as well as the Raw Solids Feed Pump area, the site visit videos do not address these areas in detail, and the video through the gallery for the new TSR dual run appears sped up and it's challenging to get details on existing utilities and supports. Can we receive photos and / or additional videos of these areas?
- A40. No additional video is available.
- Q41. Specifications suggest all new Pipe support material is galvanized material or Stainless for exposed process areas – is galvanized material acceptable for stainless steel biogas systems supports or are stainless steel supports required?
- A41. Refer to Specification Section 40 05 15 - Table 1.
- Q42. Drawings 80-D-120 and 80-D-121 show that the existing underground 6" and 12" BG lines are to be plugged and abandoned. Please confirm whether the pipe is to be slurry filled also or only be plugged and abandoned.
- A42. Refer to Addendum B, Answer 9.
- Q43. Refer to Drawing 80-X-320 Note 2.
- a. Note 2 in reference to the underground abandoned pipe states to "plug abandoned in place pipe with mass concrete below grade". Please confirm this is just for the vertical riser of the pipe and that the entire pipe below grade does not need to be filled with concrete.
  - b. Also, please confirm that the concrete used shall not be Mass Concrete as defined by Caltrans Standard Specs 2018, Section 49-3.01B (2).

- A43. a. Refer to Addendum B, Answer 9.  
b. Concrete shall be as specified.

Q44. Refer to Drawing 80-D-111.

Note 1 states to install gas flow meter in accordance with manufacturer's instructions. No Note 1 or gas meter is shown in the plan view. Please advise whether any flow meters need to be installed.

A44. See Project P&IDs Volume 7 and Specification 40.90.00 Supplement 1 - Instrument list, for quantity of instruments to be installed.

Q45. Drawing 76-X-131 calls for demo of the 4" PRW line, can this line be shut down for demo and install of the new line.

A45. Yes, limited shutdown will be permitted for demolition and connection to existing line.

Q46. Refer to Drawing 76-D-110, 76-D-111.

There is a 14"x8" tee to be installed on the common RSL header to the Grit Separators. Specification 01 31 13 1.07.H.1.b states that two grit separators and one grit clarifier must remain in service at all times. The issue is that in order to install the 14"x8" tee shown the whole 14" RSL line needs to be taken down which would shut down inlet line to all the Grit Separators trains at the same time. Is this allowable and if so what is the time limit on this shutdown. The same is true of the 14"x8" Tee on the discharge line as shown on 76-D-111. Please advise.

A46. See Spec 01 31 13 SUPPLEMENT 1. Any additional limited shutdowns required will be considered and coordinated during construction.

Q47. Refer to Drawing 76-D-131.

There is a note on this drawings which states to install a 10"x6" Tee at the tie in of each 6" DSL lines to the main 10" DSL line. Specification 01 31 13 1.07.H.1.g states that only one dewatering centrifuge may be taken out of service at a time for feed pump and polymer pump replacement. The issue is that in order to install the 10"x6" tee shown the whole 10" DSL line needs to be taken down which would shut down multiple dewatering trains at one time. Is this allowable and if so what is the time limit on this shutdown. Please advise.

A47. See Spec 01 31 13 SUPPLEMENT 1. Any additional limited shutdowns required will be considered and coordinated during construction.

- Q48. Specification 01 31 13 1.07.H.1 does not indicate how many Thickened Solids Transfer Pumps must be online at all times. Please advise.
- A48. See Spec 01 31 13 SUPPLEMENT 1. Any additional limited shutdowns required will be considered and coordinated during construction.
- Q49. Drawing 76-D-130 shows installation of a new cross on the common header to the Thickened Solids Transfer Pumps. Please advise if a full shutdown of all three pumps can be taken to install this cross and if so, how long is allowed during this shutdown.
- A49. See Spec 01 31 13 SUPPLEMENT 1. Any additional limited shutdowns required will be considered and coordinated during construction.
- Q50. Drawing 76-D-131 shows the 4" HUWLP and 4"UWLP feeding up to the Thickening Centrifuges. Are these lines looped (i.e. feed from both directions) or rather are the fed from a single service point.
- A50. The lines that go to each thickening centrifuge are fed from a single line but have isolation valves at each centrifuge.
- Q51. Specification 01 31 13 1.07.H.1 is detailed about how many service trains need to remain in service at all times. In order to achieve this the removal and install of pumps and pipes will need to be sequenced such that only isolated service trains will have to be taken down separately at different times. In order to isolate the service trains isolation valves are needed to cut off flow. In many of the lines servicing the train there are no isolation valves present. In general, is it acceptable to install insertion valves into existing line as an isolation valve in order to isolate service trains to complete the work according to the required sequencing.
- A51. Yes, installation of isolation valves to perform the Work will be acceptable. Valves and couplings shall meet the Specifications requirements as applicable.
- Q52. Drawing Y-123 shows the new EOF and OF piping at Digester 2 tying into the existing OF and EOF pipe and drawing Y-124 shows the new OF and EOF piping from Digesters 1 and 3 tying into the existing OF and EOF pipe. Please confirm it is acceptable to shut down the common OF and EOF headers in order to install the new OF and EOF pipe all the way to the new isolation valves on the new OF and EOF pipes. If so, how long is allowed for this shutdown.
- A52. Either the EOF or OF piping must be in service at all times. The Contractor shall isolate as necessary to keep one in service while the other is being installed. As long as this requirement is met, there is no required outage duration.

- Q53. Drawing Y-123 shows the new EOF and OF piping between the Emergency Storage Tank and the Biosolids Storage Tank. The new OF and EOF pipe is in the footprint of the existing OF and EOF pipe. Please confirm it is acceptable shutdown the EOF line while the new EOF line is installed and then when the new EOF line is back online to shut down the OF line to install the new OF line.
- A53. Either the EOF or OF piping must be in service at all times. The Contractor shall isolate as necessary to keep one in service while the other is being installed. As long as this requirement is met, there is no required outage duration.
- Q54. Drawing 76-D-330 calls out a 1" PRW line at the suction to the Thickening Centrifuge Feed Pumps. In the pipe schedule on Drawing G-100 there is no line item for PRW < 4" so we cannot determine what type of pipe this is. Please advise.
- A54. See updated pipe schedule in this Addendum.
- Q55. Specification 01 29 00 1.10.Q states that the Integration Period Services are to be calculated based on a factor of the Controls, System Integration bid item above. The factor is based on the number of days beyond the specified 120-day integration period. In order to level the playing field between all bidding Contractors can the City specify how many extra days we are to include? If not, then is the Contractor entitled to this full lump sum amount regardless of whether the system integration is delayed? Should the City make this bid item an allowance and provide all Contractors with a lump sum amount that will be billed to if the project is delayed?
- A55. Integration Period Services Lump Sum Bid Item is for the planned systemwide 120-Day Integration Period that precedes the 30-Day Facility Acceptance Test, as specified in Section 01 91 14. Payment for the Integration Period Services will be made at the lump sum price named in the Bid Schedule for the 120-Day Integration Period. No allowance will be provided, bid as specified.

The example calculation shown in 01 29 00 1.10.Q.c would be the amount to be paid (on a per day basis) in the event the 120-Day Integration Period is extended due to other related Pure Water Projects not being ready. This would not apply to any delay or extension of the Integration Period due to the Contractor's own delay on the MBC Improvements Project for which they are responsible.

Q56. Refer to Addendum A, Part F, Paragraph 5.

Confirm that the intent is to delete the existing Process Inputs/Outputs (I/O), Supplement 1 and replace with the Supplement 1 document included in this Addendum.

A56. Confirmed.

Q57. RFI - Clarification of Scope Regarding the Distributed Control System Provider (DCSP).

Question: Please confirm that all scope designated as "DCSP" in the project specifications Table 1: Matrix of Responsibilities – Equipment/ Devices/ Materials in section 40 94 00 - 5 D.4 on page 1107 will be provided by The City as described in section 40 90 00 Part 1 - 1.02 C and is not to be included in the Contractors scope of work.

Detail: Section 40 90 00 of the project specifications states the following:

"A distributed control system (DCS), when applicable, as specified in section 40 90 03, General Requirements, will be provided by the City's DCS provider, Emerson Process Management (EPM). The Contractor shall be responsible for terminating and integrating all I&C equipment with the EPM DCS systems."

Section 40 94 00 of the project specifications clarifies the distributed control system provider (DCSP) as a separate entity from the general contractor (GC). The scope split between these two entities is further defined in Table 1 – Matrix of Responsibilities beginning in section 40 94 00 - 5 D.4 on page 1107 of the project specifications.

These two sections combined elude to the fact that the DCSP is procured and managed by The City separately.

A57. DCSP is procured and managed by the General Contractor.

Q58. Refer to Specification Section 01 31 13.

Section 01 31 13, Part 1, 1.01, A states, "Surveying will be performed by a surveyor contracted with the City or Construction Manager. The Contractor will not be responsible for performing surveying."

Section 01 31 13, Part 1, 1.11, B provides a list of contractor responsibilities including, "Retain professional land surveyor or civil engineer registered in California who shall perform or supervise engineering surveying necessary for construction staking and layout."

Please clarify who is responsible for construction surveying on the project.

A58. Survey services provided by the City, via City Consultant Surveyor, are specified in Supplementary Special Provisions Section 3-10.2. The Contractor shall provide any additional survey work required per Supplementary Special Provisions Section 3-10.1.

Q59. Refer to Section 5-15.1 from the Notice Inviting Bids.

This section says that if construction activities encounter flammable liquids the contractor shall provide HAZWOPER training for all Construction Staff including; City Engineers, City Laboratory Technicians, and City Staff that perform onsite inspections.

Please clarify if this is intended to include working around process systems such as the biogas system and/or working around fuels that are typical on a construction site?

Please also clarify the number of City Staff that the contractor should expect to train.

A59. You shall be responsible for submitting verification to the Engineer that construction staff have the required HAZWOPER certification before the Notice to Proceed (NTP) has been issued. Prior to beginning Work in that area, you shall coordinate with the Construction Manager in implementing and training assigned construction staff who do not possess the HAZWOPER certification.

See modification to Bid Sheets in this Addendum.

Q60. Refer to Addendum A and Specification Section 01 29 00.

Addendum A added Bid Items Number 18 to 24. However, no language was added to Specification Section 01 29 00, 1.1- Bid Items to describe the payment terms for these added Bid Items. Please provide the payment terms for these items. (Measurement, Scope, Etc.).

A60. Refer to WHITEBOOK References listed for measurement and payment terms.

Q61. Can you please advise the make & model of the existing centrate pumps? Tag numbers for the pumps in question are 94-P-01, -02 & -03.

A61. The make and model of the centrate pumps are Yeomans Model #108518-4A.

- Q62. In review of the above listed specification section 44 42 56.16 – Peristaltic Hose Pumps, I have found that the specification has some generalized contradictions.

The entirety of the specification EXCEPT the pump supplemental sheet is written around a peristaltic hose pump, but the supplemental pump sheets explicitly name the 620 DUN/RE model peristaltic pump which is NOT a hose pump.

This model pump does not comply with some of the features with the specification and materials of construction listed in the supplemental sheets. In addition, the explicitly named 620 DUN/RE model peristaltic pump is not capable of pumping against the explicit requirement of 100psi discharge pressure.

Watson-Marlow kindly requests clarification on the application details of this specification section to ensure an accurate scope of supply. Most importantly, Watson-Marlow must know if the listed capacity (0.5 GPM) and discharge pressure (100 PSI) are accurate.

- A62. The record listed capacity and discharge pressure is 0.5 GPM and 100 PSI.
- Q63. The Centrate Pumps specified in spec section 44 42 56.10 - tag #'s 94-P-01, -02 & -03 requires a flywheel to be provided by the pump manufacturer. We are trying to source pump manufacturers who furnish a flywheel for this type of pump. No manufacturer(s) is listed in the specification. Please provide sources for this pump. Also, please provide nameplate information for the pumps currently installed, and we will try to contact that manufacturer.
- A63. Manufacturers are listed in the Data Sheet attached at the end of Section 44 42 56.10.

The make and model of the centrate pumps are Yeomans Model # 108518-4A.

- Q64. Attachment D – Funding Agency Provisions, Section 9.1.2, states that the published DIR wage rates with predetermined wages beyond the current expiration dates shall be in effect for the life of this Contract. The current Operator, Laborer, and Carpenter wage rates listed in the DIR wage determination will expire on June 30, 2021, and there are predetermined wage increases listed for each of these trades that will take effect on July 1, 2021. There are no predetermined wage increases listed beyond July 1, 2021. Therefore, we assume that the current DIR wage rates plus the predetermined wage increases on July 1, 2021 will remain in effect for the entire duration of this contract for Operators, Laborers, and Carpenters. Please confirm.

- A64. Pursuant to sections 1720 through 1861 of the California Labor Code, applicable wage determinations are based on call for bids (bid advertisement date) of the contract and they will stay in effect for the life of the project. All predetermined increases for the specific trades referenced will be included and go into effect on the DIR issued dates. No further increases will be applicable to the determinations after that.
- Q65. The response to Question 20 in Addendum B states that Digesters 2 and 3 are not in service and that they have previously been cleaned. This statement conflicts with Section 44 46 23 - 1.01, which states that all three (3) digesters are to be cleaned. Please confirm that only the cleaning of Digester 1 is included in the scope of this contract.
- A65. Perform digester cleaning, as specified.
- Q66. Section 44 46 23 -1.07 A.4. states that the total amount of residuals to be removed from the digesters is estimated to be 410,300 gallons. Assuming that only Digester 1 is to be cleaned, please confirm that this is the estimated volume of residuals contained in Digester 1 alone.
- A66. Assume total volume of digester residuals, as specified.
- Q67. Section 01 31 13 -1.07. H.1.d. states that only one digester system may be taken out of service at a time. Since two digesters are currently not in service, can we work on Digesters 2 and 3 concurrently and complete their improvements before taking Digester 1 out of service to clean it and construct its improvements?
- A67. No, bid as specified.
- Q68. Question Q3 in Addendum C asked two questions, the first about the tie-in to the existing 12" biogas piping and the second about the reinstatement of the concrete slab at the Gas Flare facility. Answer A3 responded to the question about the demolition and reinstatement of the concrete slab but did not respond to the first question about the biogas piping tie-in. Please provide a response this question: "Sheet 27, 187 and 193 show the civil, mechanical and section view for the new BG pipe system installation and tie-ins. There is no clear shut off shown in order to facilitate the tie-in. Please confirm this system will be shut down and purged by the City prior to tie-in of the new 18x12" reducer/spool as shown in section B on sheet 193."
- A68. The Contractor is responsible for all work related to the installation of the biogas piping including shutdown and purging of the biogas piping.

- Q69. On drawing 76-S-322 (added in Addendum A) please verify if installed grating is to be aluminum or STL and what specification we should adhere to.
- A69. The grating shall be aluminum and conform to specification Section 05 53 00 Metal Gratings.
- Q70. Refer to drawing 76-S-312. Please provide a connection detail for the Extren Fiberglass Reinforced plates to HSS partition wall beams.
- A70. Attach with #10 SST self-drilling screws at 12-inches on center.
- Q71. Drawing 80-E-122. The added Dewatering Centrifuge details are unclear. Please provide section cut of platform and dimensions.
- A71. For section cuts of Dewatering Centrifuges see Addendum A, 76-S-322, 76-D-124, and 76-D-322.
- Q72. Please provide a standard detail for the ductbank run shown on 80-E-122.
- A72. No duct bank is called out, see Detail 2605-423C for trench and conduit placement details.
- Q73. Please verify if circuits 73/005 and 73/006 on drawing 73-E-615 will be installed with ductbanks, and if so, please provide a routing layout for estimating purposes.
- A73. No ductbanks will be installed, conduit to be surface routed along side existing raceway.
- Q74. Sheet 80-X-313 Section B shows the 8" BG SST pipe being demoed down to the underground pipe. Drawing 80-D-313, Section B shows the new pipe connecting at the existing valve 80HV0110. Please clarify.
- A74. See Drawing 80-X-313 modification in this Addendum.
- Q75. Per drawing 80-D-321, please provide a pipe encasement standard detail for the new biogas pipe under the existing pad.
- A75. No pipe encasement under slab is required.
- Q76. Refer to section 01 91 14, parts 3.11.F, 3.12.E and 3.14.F. The parts mention that the Contractor is to provide resources for 24-hour standby. Please clarify by providing the minimum amount of personnel, the amount of shifts and days per week required. Do the personnel need to be properly trained, experienced and qualified to operate and maintain the Work?

- A76. Bid as specified.
- Q77. Note 2 on drawing 76-X-132 states there is a 20-ton traveling bridge crane in the Centrifuge Building to assist with the demo work there. When was the last time this crane was certified? Will the Contractor be responsible for recertification, if necessary?
- A77. The Contractor will not be responsible for recertification of the traveling bridge crane.
- Q78. Who will be responsible for seeding the digesters, if necessary? Please provide specification requirements if the Contractor is responsible.
- A78. The Contractor shall support City operations staff.
- Q79. Regarding addendum A, raceway schedule 76-E-634. Please provide the quantity and size of wire for each raceway item containing note 2 or note 3 in the remarks section. The following are the raceway numbers: 76DC1-11, 76DC8-11, 76C-115, 76C-99, 76C-136, 76S-152, 76S-196, 76S-79, 76S-38, 76S-93, 76S-129, 76S-145, 76S-299, 76C-92, 76C-108, 76S-190.
- A79. Quantity and size of wire for each existing raceway containing Note 2 or Note 3 is unknown.
- Q80. Per spec section 09 90 00 3.07 F, we are to paint galvanized metals with an epoxy primer. Per section F, "after application of System No. 10, apply System No. 4 as a finish coat." Per section C, System No. 4 requires a SP 10, Near-White Blast Cleaning. Is it the owner's intent that:
- a. we are to blast-clean off the galvanized coating of the metal
  - b. we are to epoxy-coat galvanized metals

Please clarify the painting and coating instructions for galvanized metals.

- A80. In addition to references provided in the question, refer to Specification section 09 90 00 PAINTING AND COATING, paragraph 3.06 B. for information about coating of galvanized metal, copper and nonferrous metal alloys.
- Q81. Specification section 40 94 24 – 4 3.01 C. Valve Network Communications, states convert communications protocol from Serial to Modbus/TCP where existing wiring infrastructure supports this change. From review of 40 94 24 Supplement 1 and the P&IDs it is not clear if any valve communications will need converted from serial to Ethernet between the valve head stations (Pakscan 3 controller or Flowserve controller) and Ovation DCS. Please

confirm the number of valve datalinks that need to be converted from serial to Ethernet.

A81. If during detailed design of the PCM upgrade it is determined that the existing serial cables are too short, repull conductors as CAT6 and Modbus TCP.

Q82. For valve datalinks that need to be converted from serial to Ethernet please confirm if the number and type of signals that Ovation DCS reads from and writes to for each valve via the valve head stations will remain identical to the existing configuration.

A82. Yes, the number and type of signals that Ovation DCS reads from and writes to for each valve via the valve head stations will remain identical to the existing configuration.

Q83. Section 26 29 23.

Paragraph 2.01 and Section 44 22 24, paragraph 2.06.E.

We ask deviation to supply ACS-880-34 (main drive) in lieu of ACS-880-37 to comply to the panel enclosure seismic requirements.

A83. Yes, ACS-880-34 is acceptable.

Q84. Section 40 99 90.

a. Paragraph 2.03.B. We ask exception on the 120V IO signals for safety reasons. We are considering 24VDC signals, as approved by section 40 94 43, 2.02.B.

b. Paragraph 2.01.A.1.a and Section 44 22 23 paragraph 2.23.I. We ask exception to supply ABB ACS880-34, in order to comply 2 the section 44 22 23 that requires only 2 distinct enclosures: control panel (PLC + HMI) and VFD panel (main and back drive VFDs).

A84. a. Yes, 24VDC signals, as approved by Section 40 94 43, 2.02.B are acceptable.

b. Yes, ACS-880-34 is acceptable.

Q85. Section 40 94 43.

a. Paragraph 2.02.B.3.a.5, b.4, c8, and d.5 Section 40 94 24, Paragraph 2.01.A We ask deviation to supply 1734 Point IO cards, with isolation of 1,250V rms/V ac.

- b. Paragraph 2.02.B.3.h.2, For safety reasons, the centrifuge software provided is blocked for editing. The torque calculation routine and few AOIs are blocked for visualization as well. Please note this has been accepted in the Dewatering Centrifuge spec.
  - c. Paragraph 2.02.C, We ask exception on PLC programmed by the Contractor. Alfa Laval as the centrifuge manufacturer reserves the right on the centrifuge PLC source code programming.
- A85.
- a. Yes, 1734 Point IO cards are acceptable. Engineer would recommend the use of Compact 5000 I/O modules.
  - c. Yes, this is acceptable.
  - d. Yes, it is expected that Alfa Laval will program the centrifuges they provide.
- Q86. Section 40 91 13.
- a. Paragraph 1.01.C.3, We ask deviation to provide tubular ferrules in lieu of spade lugs because the IEC screw clamp terminals does not fit spade lugs.
  - b. Paragraph 2.01.L, We ask exception on supplying door limit switches on the panels since it is not supposed to be open while energized due safety reasons.
  - c. Paragraph 2.01.T.3, We ask deviation to keep the internal wiring numbering according to the schematics line number.
  - d. Paragraph 2.02.B.1, No redundant devices are considered since the centrifuge source code is fail-safe programmed.
  - e. Paragraph 2.01.T.15, We ask deviation to apply UL 1059 rated IEC type screw clamp terminal blocks (600V insulated, 15A) because the internal limited space in the enclosure and because the better protection against exposed live contacts.
- A86.
- a. Yes, tubular ferrules installed in compliance with UL 508 are acceptable.
  - b. Ok.
  - c. Schematics line numbers are acceptable, all wires must be labeled.
  - d. Redundant devices not required.

- e. Yes, UL 1059 rated IEC type screw clamp terminal blocks (600V insulated, 15A) are acceptable.

Q87. Section 40 99 90

- a. Paragraph 1.01.E.11.d It is the intent to comply the spec, but the logical sequence steps may vary according to Alfa Laval recommendation.
- b. Paragraph 1.01.E.12 We ask a deviation to consider the modes "Local Mode" (DCS cannot operate the centrifuge) and "Remote Mode" (Local cannot operate the centrifuge) in lieu of "Out of Service" and "In Service" functions because they basically perform the same task.

A87. a. OK. The centrifuge manufacturer operational sequence recommendations are acceptable.

- b. Modes "Local Mode" (DCS cannot operate the centrifuge) and "Remote Mode" (Local cannot operate the centrifuge) are acceptable.

Q88. Section 44 22 23.

- a. Paragraph 1.04.B.1.i.3 Main drive sheave and belt design data sizing is not provided. Please note this requirement was removed from the Dewatering Centrifuge spec, section 44 22 24.

- b. Paragraph 1.04.B.1.i.5 Main bearing design data sizing is not provided. Please note this requirement was removed from the Dewatering Centrifuge spec, section 44 22 24.

- c. Paragraph 1.04.B.1.i.7 Alfa Laval will provide heat calculations for control panels only as accepted in Dewatering Centrifuge spec, section 44 22 24.

- d. Paragraph 1.04.C.1.c.1 Please note this requirement has been removed from the Dewatering Centrifuge spec. We request that it be removed here as well.

- e. Paragraph 1.04.C.1.c.5, 2.06.A.4, 2.06.A.13, 2.08.E., 2.10.E., 2.25.E Historical abrasion test report shall be provided as it has been accepted in the Dewatering Centrifuge spec, section 44 22 24, paragraph 2.10.E.2.

A88. a. OK. No need to provide main drive sheave and belt design data and thickening centrifuge submittal requirements shall be similar to dewatering centrifuge submittal requirements.

- b. OK. No need to provide main drive sheave and belt design data and thickening centrifuge submittal requirements shall be similar to dewatering centrifuge submittal requirements.
- c. OK. No need to provide heat calculations for control panels and thickening centrifuge submittal requirements shall be similar to dewatering centrifuge submittal requirements.
- d. OK. No need to provide data and thickening centrifuge submittal requirements shall be similar to dewatering centrifuge submittal requirements.
- e. OK to provide historical abrasion test report and thickening centrifuge submittal requirements shall be similar to dewatering centrifuge submittal requirements.

Q89. Section 44 22 23.

- a. Paragraph 1.04.C.5.b.5 Vibration will be monitored on the HMI during testing; readings will be included in the field test report as this was accepted in the Dewatering Centrifuge Spec, Section 44 22 24.
- b. Paragraph 2.07.A.4. – Operating speed range is 1,700-2,000 rpm.
- c. Paragraph 2.07.A.5, 2.07.A.8, We use eddy-current method for testing in lieu of liquid dye penetrant as accepted in Dewatering Centrifuge spec.
- d. Paragraph 2.09.A. We noticed the specifications require a casing top to be bolted in place; however, we recommend utilizing hinges to readily access and maintain the unit as the cover is heavy and requires an overhead crane to lift.
- e. Paragraph 2.10.C.6, 2.25.B.6 Factory test shall be 2 hours with water, not 4 as accepted in the Dewatering Centrifuge spec.

- A89.
- a. OK that vibration will be monitored on the HMI during testing and the readings will be included in the field test report and make thickening centrifuge submittal requirements similar to dewatering centrifuge submittal requirements.
  - b. OK. Operating speed range of 1,700-2,000 rpm is acceptable.
  - c. OK. Eddy-current method for testing is acceptable and make thickening centrifuge submittal requirements similar to dewatering centrifuge submittal requirements.

- d. OK. Hinges on the cover are acceptable, should be provided and preferred to readily access and maintain the top of the centrifuge instead of the originally specified casing top that must be bolted in place.
- e. OK. 2-hour water factory test is acceptable and make thickening centrifuge requirements similar to dewatering centrifuge requirements.

Q90. Section 44 22 23.

Paragraph 2.22.B and Section 26 05 05 Paragraph 2.02.D, Section 44 22 24, paragraph 2.06.B.

- a. We ask exception for the instrumentation cable between the centrifuge junction box and the centrifuge panel. The Alfa Laval recommended multi-vias instrumentation cable between the centrifuge panel and the centrifuge junction box is Belden 1477A (12 Pr #18+22 Str BC, PVC Ins E1, IS/OS, Blk PVC Jkt, 300V PLTC-ER ITC-ER CMG). Despite the 300V insulation, the power circuit protection applied is rated to Class1/Div2, in accordance with UL requirements.

Paragraph 2.23.I and Section 44 22 24, paragraph 2.06.G.

- b. We ask deviation to split the VFD panel in two distinct enclosures, to comply the Seismic Zone 4 requirements of up to 1000 pounds equally distributed loads. We propose one distinct enclosure to the ULH main drive VFD and the other enclosure to the Back drive VFD and additional components.

A90. a. Contractor to bid as specified in the raceway schedule.

- b. Ok. Coordinate during construction if equipment pad sizes change.

Q91. Section 44 22 23.

Paragraph 2.23.A.4 and Section 44 22 24, paragraph 2.07.A.3.

- a. We ask deviation to provide the Control Panel enclosure rated to Nema 12 in lieu Nema 4X because we could not find an enclosure supplier that could provide Nema 4X enclosures rated to Seismic Zone 4 requirements (Section 40 95 13, item 2.01.H).
- b. Paragraph 2.23.B.2, The operational sequence may vary according to the centrifuge manufacturer recommendations.
- c. Paragraph 2.25.B.3, Factory control panels will be used for the factory (functional) test as accepted in the Dewatering Centrifuge spec.

- d. Paragraph 2.26.C.3, Section 40 98 03 Paragraph 3.02.  
Control panels are tested at the panel builder's facilities, not at the centrifuge factory with the centrifuge.
- A91.
- a. Yes, NEMA 12 is acceptable.
  - b. OK. The centrifuge manufacturer operational sequence recommendations are acceptable.
  - c. OK. The use of factory control panels for the factory functional tests are acceptable and make thickening centrifuge requirements similar to dewatering centrifuge requirements.
  - d. OK. It is acceptable to test the control panels at the panel builder's facilities not at the centrifuge factory with the centrifuge.
- Q92. Section 44 22 24.
- a. Paragraph 1.04.C.1.c.4, Historical abrasion test report can be provided as accepted in paragraph 2.10.E.2.
  - b. Paragraph 1.04.C.1.f, Test results of controls interface with PCS to be provided by owner's software integrator.
  - c. Paragraph 2.05.M, The feed tube on the G3-125 is a 3" hose connection not a 150# ANSI flange. The polymer connection is a 1" ISO 226-G connection.
  - d. Paragraph 2.06.F, Since the Back Drive VFD is fed by the ULH Main Drive VFD DC- Link, we ask deviation to provide ACS880-01 drive to the Back Drive motor.
  - e. Paragraph 3.03.A, Since the motors will be provided with their factory test reports already, the megger test is basically testing the electrical installation. We are not considering this procedure in Alfa Laval's scope of supply.
  - f. Drawing 76-D-123-124 and D-322.  
Existing lube oil slab/piping can be removed. We are supplying a frame mounted auto- grease system, not a lube oil system with piping.
  - g. Drawing 76-E-638-639 Lube oil pump motor power is not applicable and replaced by 120V power for the auto-greasing system.
- A92.
- a. The historical abrasion test report as required in Section 2.10.E.2 is acceptable.
  - b. Paragraph 1.04.C.1.f to be deleted from specification.

- c. OK. See drawing modification this Addendum. Revise the 2.05.M specification section to show the more updated 3" hose feed tube connection and the 1" ISO 226-G polymer connection.
  - d. Yes. ACS-880-01 is acceptable.
  - e. Ok. Contractor to conduct test.
  - f. OK. See drawing modification in this Addendum.
  - g. OK. See drawing modification in this Addendum.
- Q93. Electrical demo drawings 76-X-132, notes 1 and 3 state to pull conductors to disconnect, protect and reuse; this note is applicable to power, comm and signal wires. However, Note 2 on Drawing 76-E-619 states to re-use conduit but install new wires for power and control, Note 2 is in line with raceway schedule requirements. Please clarify the conflict.
- A93. Follow the Raceway Schedule.
- Q94. Please provide a complete/overall plan view drawing that shows the process centrifuge building or area that allows to measure distances from the equipment to electrical rooms being replaced. The overall location of equipment and electrical rooms do not allow proper measurement of distances between these work elements.
- A94. See Drawing modification in this Addendum.
- Q95. Raceway schedule in drawing 76-E-633 calls for new conduit and wiring for Circuit ID's: 76/285 to 76/289. Is there existing conduit and wiring for Thickening Centrifuges to be demolished for these circuits?
- A95. Circuit ID's: 76/285 to 76/289 are new.
- Q96. With reference to drawings 80-E-127, 80-E-128 and 80-E-129, please provide ductbank detail with reinforcement requirements, if needed, for conduits; 80/038, 80/039, 80/040 & 80/118 feeding to gas flare #3 from panel 73RPI. Also, please advise if the conduit run will make a transition from ductbank/direct buried to sublevel electrical area.
- A96. No duct bank is called out, see detail 2605-423C for trench and conduit placement details.
- Q97. With reference to drawing 80-E-122, please provide installation detail 2605-005a, not shown in the plans.
- A97. Drawing 80-E-122 Note 3 should read "Detail 2605-005b".

- Q98. Please specify if new upsized electrical gear items will require electrical pads to be extended or demo'd and rebuilt. If electrical pads are needed to be rebuilt, please provide equipment pad details for newly installed electrical equipment.
- A98. The Contractor shall be responsible for design of all concrete 'house-keeping pads' required by the cabinets.
- Q99. Drawing 76-E-121. Please provide dimensions of new VFD panels and new dewatering centrifuge panels #1 & #8 in Addendum A so we can size a proper equipment pad for these four units.
- A99. See drawing modification in this addendum. Sheets Y-122, Y-123 and Y-124 have been revised.
- Q100. Unable to properly quantify length of wire/conduit being installed or demolished in Addenda A. Please provide scaled drawing of Addenda A, drawing 76-E-121. Also, please provide locations of all electrically powered valves and FIT's shown in raceway schedule of addendum A.
- A100. See drawing modification in this Addendum. Sheets Y-122, Y-123 and Y-124 have been revised.
- Q101. Drawing 73-E-101, Notes 3, 5 & 6 states to use existing conductors and raceways between JB and VFD. This is in conflict with raceway schedule in drawing 73-E-615 which calls for new feeder and new conduit for control circuits 73/005 and 73/006. Also, circuit 73/004 states to put new and existing control feeders in existing raceway. Please Clarify. If new conductors are required, we would have to demo and replace the existing circuits. If we need to add a new raceway, we will require details for the routing, such as ductbank details for underground or above ground routing.
- A101. Follow Raceway Schedule.
- Q102. On drawings Y-110, Y-111, and per Addendum B question 25, please provide record drawings showing the pavement section detail for contractor to install. Please also provide detail for new PCC pavement/sidewalk detail for contractor to install.
- A102. Pavement thickness provided in Addendum B answer.  
See Addendum A drawings for sidewalk detail callout.
- Q103. On drawings 80-E-122, 127, 128, 129, please provide record drawings showing existing utilities crossing the ductbank runs for estimating purposes.

A103. Record drawings will be provided during construction.

Q104. Specification 01 31 13 MBC Operations During Construction Criteria supplement states short "shutdowns will be required..." for several process facilities. Please clarify the amount of a short shutdown and how much time each shutdown is given to demo & install new pumps & process systems.

A104. Demo and installation of equipment will follow Specification 01 31 13.

Duration of shutdowns will be coordinated during construction.

Q105. Specification 01 31 13 Supplement MBC Operation During Construction Criteria states "...brief shutdowns to tie into new equipment and facilities" for the Grit Building Facility. Please clarify how much time is a "brief shutdown" and if a full shutdown is acceptable to install new equipment & piping at this facility.

A105. As stated, brief facility shutdowns will be acceptable and coordinated during construction.

Q106. Specification 01 31 13 Supplement MBC Operation During Construction Criteria states "Three solids thickening centrifuges and one thickened sludge pump need to remain in service at all times, except for a short duration tie-in.." Please clarify how much time is a "short duration" and if a full shutdown is acceptable to install new equipment & piping at this facility.

A106. As stated, brief facility shutdowns will be acceptable and coordinated during construction.

Q107. Specification 01 31 13 Supplement MBC Operation During Construction Criteria states "The digester improvement should rotate through the three digesters one-by-one. Short shutdowns will be required..." Please clarify the duration of a "short shutdown" and if a full shutdown is acceptable to install new equipment & piping at this facility.

A107. As stated, brief facility shutdowns will be acceptable and coordinated during construction.

Q108. Sheet 80-X-120 shows the demolition of 2 Biogas Compressors.

Sheet 80-D-121 shows the Installation of one new compressor. Please confirm if it is acceptable to run the Biogas System on only one compressor in order to Install a bypass system with only one compressor running in order to proceed with the demolition of the existing compressors.

A108. Confirmed. It is acceptable to run one compressor to proceed with demolition of the existing compressor.

Q109. Refer to Sheet Y-123, Y-124, 80-X-111, & 80-X-313. Please confirm if one 6" OF/EOF line can be demolished at a time for the Biosolids storage tank & emergency storage tank. Please clarify what is the duration of the shutdown at this location?

A109. Either the EOF or OF piping must be in service at all times. The Contractor shall isolate as necessary to keep one in service while the other is being installed. As long as this requirement is met, there is no required outage duration.

Brief facility shutdowns will be coordinated during construction.

Q110. Please confirm that Isolation valves can be shutoff for each pump & pipe to be demolished & replaced.

A110. Condition of all isolation valves for each pump and pipe are unknown.

Q111. Will the contractor be required to have staff on site 24 hours a day during the 120 Day Integration Period?

A111. No, the Contractor shall keep resources on 24-hour standby and provide services Specified in Section 01 91 14 – 3.11 Integration Period Testing.

Q112. Per the BIOGAS Compressor layout shown on Sheet 186 and Demo on Sheet 162 the construction cannot be concurrent or done in a 8 Hr. Shutdown of the Bio Gas Facility due to the new and existing equipment and pipe occupying the same location. Please confirm all biogas shall be flared during new compressor & 12" BG System replacement if not temporary compressors and piping will be required to maintain compressed BG to COGEN Facility.

A112. Confirmed. All biogas may be flared during system cutovers.

Q113. Unit Price Bid Items 18-24 were added per addendum. The curb and sidewalk quantities provided are close to the quantities identified in the yard pipe drawings. Please confirm Bid Items 18-24 shall be used for the yard pipe curb and sidewalk remediation and no curb and sidewalk remediation shall be carried in other bid items.

A113. Unit Price Bid Items 18 through 24 are intended to be used for the 12-inch diameter biogas pipeline construction. Curb and gutter removal and replacement under Bid Item 5 Site Civil Grading is intended to be used for the biogas flare area construction.

Q114. Drawing 80-X-111, note 1 states to pull conductors from Motor of axial mixing pumps to disconnect and protect in place for reuse and termination. However, drawing 80-E-113, note 1 states to reuse existing raceway only; new conductors are to be installed per the raceway schedule. Please clarify if we need to pull old conductors from the existing raceway for the axial mixing pumps to the MCC and install new conductors.

A114. Follow the Raceway Schedule.

Q115. Drawing 76-D-122 Note 2 refers to a drawing 76-M-121, please provide 76-M-121.

A115. Reference to Drawing 76-M-121 means Record Drawing 76-M-121 that will be made available during construction.

Q116. Drawing 76-S-312 on Elevation D & E refers to 76-D-112, please provide 76-D-112.

A116. Reference to Drawing 76-D-112 means Drawing 76-D-110.

Q117. Refer to Specification Section 01 50 00, Part 2.01, B.

There is a reference made to a, "Supplement Temporary Construction Facilities General Arrangement." This document appears to be missing from the bid documents. Please provide this supplemental document.

A117. No general arrange drawing is provided. The Contractor shall provide facilities in an arrangement coordinated with the Construction Manager and Owner as specified in Specification Section 01 50 00 – 2.01.B.

Q118. Refer to Specification Section 01 50 00, Part 2.01, K & P.

Per section K the CMs Field Office shall include 4 private offices, however desks are included in the list of Office Equipment.

Please review the office equipment and ensure that Section P includes all Office Equipment that will be required.

A118. Contractor shall provide office desks for private offices specified in Part 2.01, K.

Q119. Refer to Specification Section 01 31 13, Par1 1.10, E, "Time Lapse Construction Video."

The specified camera is capable of continuous video monitoring; however, this requires a monthly service agreement. Will the contractor be required to provide continuous video monitoring to the City?

A119. Bid as specified.

Q120. Refer to Addendum B Q&A 20

The answer to Question 20 in Addendum B was: "Digester 2 is clean, empty and has been out of service for over 15 years. Digester 3 was cleaned in June 2020 and is empty and out of service."

Please confirm we are to include no cost at all for Digester Cleaning of Digesters 2 and 3.

A120. Bid as specified.

Q121. Refer to drawing G-100.

The table on G-100 provides test pressures for pipelines. Is it acceptable to test up against existing valves and/or fittings/connections?

A121. See specification section 40 80 01 PROCESS PIPING LEAKAGE TESTING for testing requirements.

Q122. Refer to Specification Section 01 50 00, Part 2.01, Q.

- a. Per section Q part 2; the contractor shall supply one power supply surge protector per computer. However, no computers are listed as required to be supplied. Please confirm that no computers shall be supplied and clarify the number of surge protectors that are required.
  - b. Per section Q part 3, confirm that only one UPS is required.
  - c. Per section Q part 4, confirm that only one printer is required.
  - d. Per section Q part 6, please clarify what hardware is required.
  - e. Per section Q part 7, please confirm that only one P6 license is required.
- A122.
- a. A total of four computers, HP Workstation Z2 G5 or approved equal, with dual 24-inch flat screen monitors shall be provided.
  - b. Yes.
  - c. Yes.
  - d.
  - e. Four total. One for each computer.

Q123. Refer to specification 10 14 00 2.02 B for Equipment Labels.

The specification refers to Aluminum or stainless steel in section B.4 and then Fiberglass material in B.5. Please clarify material type. Spec B.6 indicated the size is to be 14"-18" long which seems more like a sign rather than a label. Please clarify if this is really the size intended.

A123. Fiberglass equipment labels are acceptable.

Q124. Refer to Alfa Laval Shop Drawing for Centrifuges

The Alfa Laval manufacturer drawing for the centrifuges call for a minimum pick height from the crane hook to the base plate of the centrifuges of 141.73". Adding in the height of the centrifuge concrete pads the crane hook would need to have a clearance height of at least 13' above finish floor in order to lift and set the centrifuges. Please confirm the overhead crane in the centrifuge room has at least 13' clearance height from the crane hook to the finish floor.

A124. Confirmed.

## C. ADDENDUM

1. To Addendum C, Section C SUPPLEMENTARY SPECIAL PROVISIONS, Item 1, page 9, **DELETE** in its entirety and **SUBSTITUTE** with the following:
  1. To Technicals, Section 01 29 00 Payment Procedures, Part 1, General, Section 1.10 Bid Items, Subsection E Site Civil Grading – Lump Sum, Item 3, Page 174, **DELETE** in its entirety and **SUBSTITUTE** with the following:
    3. Payment is made for this item for the following:
      - a. Civil demolition work and grading as shown on Drawings and as specified, including protection of existing facilities, excavation, grading, erosion control, tree trimming and protection, tree removal and replacement, fencing removal and replacement, driveway, curb and gutter removal and replacement at flare area, irrigation system removal and replacement, and all appurtenant work, completed.
      - b. Payment under this Bid Item shall be made as the lump sum price named in the Bid Schedule.
2. To Addendum A, Section 44 22 24 DEWATERING CENTRIFUGES, PART 1, GENERAL, Section 1.04, SUBMITTALS, Sub-section C, Informational Submittals, Item 1, Subitem F, page 194, **DELETE** in its entirety.

3. To Addendum A, Section 44 22 24 DEWATERING CENTRIFUGES, PART 2, PRODUCTS, Section 2.05, CENTRIFUGE EQUIPMENT, page 210, **ADD** the following:
  - R. Provide all materials and supports, construct and install a permanent maintenance platform around the dewatering centrifuges that will provide operators with safe and reliable access to the main body of the centrifuge including the top of the hinged case and back drive motor as shown on Sheet 76-S-322. Ensure that field measurements are performed and summarized and submitted in the shop drawing for approval prior to manufacture and installation so that the platform does not interfere with centrifuge equipment. The platform will be accessed by a permanent ships ladder and be fully surrounded on the outside by a railing and kickplate. The platform is not to be anchored in any way to the centrifuge. Match materials shown for the Thickening Centrifuge platforms.

#### **D. NOTICE INVITING BIDS**

1. To Item 3, **ESTIMATED CONSTRUCTION COST**, page 7, **DELETE** in its entirety and **SUBSTITUTE** with the following:
  3. **ESTIMATED CONSTRUCTION COST:** The City's estimated total construction cost for this project is **\$40,820,000**.

#### **E. SUPPLEMENTARY SPECIAL PROVISIONS**

1. To Section 2, SCOPE OF THE WORK, Subsection 2-10.1.4, City's Final Determination, page 110, **DELETE** in its entirety and **SUBSTITUTE** with the following:
  - 2-10.1.4 City's Final Determination.** To the "WHITEBOOK", item 2, **DELETE** in its entirety and **SUBSTITUTE** with the following
    2. If you disagree with the City's Final Determination, notify the Engineer in writing of your objection within 15 Working Days after receipt of the written determination in accordance with 2-10.2.1.4, "DRB Traditional Dispute Meeting".
2. To Section 2, SCOPE OF THE WORK, Subsection 2-10.2 and its subsections, DISPUTE RESOLUTION PROCESS, pages 111 through 115, **DELETE** in its entirety and **SUBSTITUTE** with the following:
  - 2-10.2 Dispute Resolution Process.** To the "WHITEBOOK", **DELETE** all sections and subsections in their entirety and **SUBSTITUTE** with the following:

## **2-10.2 Dispute Resolution Process**

1. A mandatory Dispute Resolution Board process shall be established in accordance with 2-10.2.1, "Dispute Resolution Board (DRB)" prior to the mandatory mediation as described in 2-10.2.2, "Mandatory Non-binding Mediation".

### **2-10.2.1 Dispute Resolution Board (DRB).**

1. The DRB is a 3-member board that you and the City establish prior to beginning work.

#### **2-10.2.1.1 DRB Member Selection.** Within 45 Working Days of Contract approval, you and the City shall select DRB members and establish the DRB using the following procedure:

1. You and the City will each nominate one DRB member candidate to participate on the DRB. The City has approved the use of the Caltrans DRB members list for this Project. Before being nominated to the project DRB, the prospective candidates will be contacted and provided with all available project details by the City. The candidate will then need to confirm intent to participate in the DRB prior to nomination for the project board.

You can find Caltrans' approved DRB member's list at Caltrans' website:

<https://dot.ca.gov/programs/construction/drb-information-and-candidate-list/drb-candidates-list>

2. If you or the City nominates someone who is not on the Caltrans DRB list, the candidate shall:
  - a) Be knowledgeable in the type of construction and contract documents anticipated by the Contract.
  - b) Have completed training by the Dispute Resolution Board Foundation.
  - c) Have no prior direct involvement on this Contract.

- d) Have no financial interest in the Contract or with the parties, subcontractors, suppliers, consultants, or associated legal or business services within 6 months before award and during the Contract, except for payments for City DRA or DRB services, or payments for retirement or pensions from either party not tied to, dependent on, or affected by the net worth of the party.
3. You and the City shall request a disclosure statement from each nominated DRB member candidate and must each furnish it to the other party. The statement shall include:
- a) Resume of the candidate's experience.
  - b) Declaration statement that describes past, present, anticipated, and planned professional or personal relationships with each of the following:
    - i. Parties involved in the Contract
    - ii. Parties' principals
    - iii. Parties' counsel
    - iv. Associated subcontractors and suppliers
4. You and the City are allowed:
- a) One-time objection to the other's candidate without stating a reason.
  - b) Objection to any of the other's subsequent candidates based on a specific breach of the candidate's responsibilities or qualifications under items 1 and 3 of this section.
5. If you or the City objects to the other's candidate, the party whose candidate was objected to must nominate another DRB candidate within 15 Working Days.
6. The 1st candidate from a party that receives no objection becomes that party's DRB member.

7. You and the City each provide written notification to your selected DRB member.
8. Within 15 Working Days of their notifications, the selected DRB members recommend to you and the City the 3rd DRB member candidate and provide that candidate's disclosure statement.
9. Within 15 Working Days of the recommendation, you and the City must each notify the first 2 DRB members whether you approve or disapprove of the recommended 3rd DRB member candidate.
10. If the 2 DRB members cannot agree on the 3rd DRB candidate, they will submit a list of candidates to you and the City for final selection and approval.
11. If the 2 DRB members do not recommend a 3rd DRB candidate within 15 Working Days of notification of their selections, or if you and the City do not agree on the 3rd DRB member candidate within 15 Working Days of the recommendation, or if you and the City do not agree on any of the candidates on the list provided by the first 2 selected DRB members, you and the City each must select 3 candidates from the current list of arbitrators certified by the Public Works Contract Arbitration Committee established by Pub Cont Code § 10245 et seq. who will be willing to serve as a DRB member. The first 2 selected  
  
DRB members must select the 3rd member in a blind draw of these 6 candidates.
12. The 3 DRB members then decide which of the three will act as the DRB chairman. If you and the City do not agree with the selected chairman, the 3rd member will act as the DRB chairman.

#### **2-10.2.1.2 DRB Member Replacement.**

1. The service of a DRB member may end at any time with a notice of at least 15 Working Days if any of the following occurs:
  - a) A member resigns

- b) The City replaces its selected member
  - c) You replace your selected member
  - d) The City's and your selected members replace the 3rd member
2. Either you or the City replace any member for failing to comply with the required employment or financial disclosure conditions of DRB membership as described in the Contract and in the Dispute Resolution Board Agreement form.
  3. Replacing any DRB member shall be accomplished by written notification to the DRB and the other party with substantiation for replacing the member.
  4. A replacement DRB member is selected the same way as the original DRB member. Selecting a replacement must start upon determination of the need for a replacement and must be completed within 15 Working Days. The Dispute Resolution Board Agreement form shall be amended to reflect the change to the DRB.

#### **2-10.2.1.3 DRB Progress Meetings.**

1. You and the City shall periodically meet with the DRB and visit the job site so the DRB members can keep abreast of construction activities and develop familiarity with the work in progress.
2. The progress meetings shall occur at the start of the project and at least once every 4 months after that.
3. Both parties shall attend each progress meeting.
4. You and the City may agree to waive scheduled progress meetings when the only work remaining is plant establishment.

#### **2-10.2.1.4 DRB Traditional Dispute Meeting.**

1. If you disagree with the City's Final Determination, notify the Engineer and DRB in writing of your objection within 15 Working Days after receipt of the determination.

2. A DRB dispute meeting shall be held no sooner than 30 Calendar Days and no later than 60 Calendar Days after the DRB receives your written notice unless you and the City otherwise agree.
3. At least 15 Calendar Days before the scheduled dispute meeting, each party shall furnish the DRB documentation that supports its position and any additional information requested by the DRB.
4. If the DRB requests additional information within 10 Calendar Days after the dispute meeting, the party receiving the request shall furnish this information within 10 Calendar Days of receiving the request.
5. The DRB shall provide a written recommendation report within 30 Calendar Days of the dispute meeting unless you and the City agree to allow more time.
6. Within 10 Calendar Days of receiving the DRB's recommendation report, either you or the City may request clarification of any part of the report. Only one request for clarification from each party is allowed per dispute.
7. Within 30 Calendar Days after receiving the DRB's recommendation, each party shall furnish a written response to the DRB indicating acceptance or rejection of the recommendation. If a party rejects the recommendation and has new information that supports its position, the party may request reconsideration. The reconsideration request shall be made within 30 Calendar Days after receiving the DRB's recommendation. Only one request for reconsideration from each party is allowed per dispute.
8. If both you and the City accept the DRB's recommendation but cannot agree on the time or payment adjustment within 60 Calendar Days of accepting the recommendation, either party may request that the DRB recommend an adjustment.
9. If you reject the DRB's recommendation, notify the Resident Engineer and DRB in writing of your objection within 15 Working Days after receipt of the DRB's

recommendation and file a "Request for Mediation" in accordance with 2-10.2.2, "Mandatory Non-binding Mediation".

### **2-10.2.2 Mandatory Non-binding Mediation.**

1. If a dispute arises out of or relates to the Contract, or the breach thereof, and if said dispute cannot be settled through contract provisions provided for the Dispute Resolution Board process, claim settlement, or negotiations, the parties agree to first endeavor to settle the dispute in an amicable manner, using mandatory mediation under the Construction Industry Mediation Rules of the American Arbitration Association or any other neutral organization agreed upon before having recourse in a court of law.

#### **2-10.2.2.1 Mandatory Mediation Costs.**

1. The expenses of witnesses for either side shall be paid by the party producing such witnesses. All other expenses of the mediation, including required traveling and other expenses of the mediator and the cost of any proofs or expert advice produced at the direct request of the mediator, shall be borne equally by the parties, unless they agree otherwise.

#### **2-10.2.2.2 Selection of Mediator.** To the "WHITEBOOK", DELETE in its entirety and SUBSTITUTE with the following:

1. A single mediator, knowledgeable in construction aspects and acceptable to both parties, shall be used to mediate the dispute.
2. To initiate mediation, the initiating party shall serve a Request for Mediation at the American Arbitration Association (AAA) on the opposing party.
3. If AAA is used, the initiating party shall concurrently file with AAA a "Request for Mediation" along with the appropriate fees, a copy of requested mediators marked in preference order, and a preference for available dates.
4. If AAA is selected to coordinate the mediation (Administrator), within 10 Working Days from the

receipt of the initiating party's Request for Mediation, the opposing party shall file the following:

- a) A copy of the list of the preferred mediators listed in preference order after striking any mediators to which they have any objection.
  - b) A preference for available dates.
  - c) Appropriate fees.
5. If the parties cannot agree on a mediator, then each party shall select a mediator and those mediators shall select the neutral third party to mediate the matter.

#### **2-10.2.2.3 Conduct of Mediation Sessions.**

1. Mediation hearings shall be conducted in an informal manner and discovery shall not be allowed.
2. Discussions, statements, and/or admissions shall be confidential to the proceedings and shall not be used for any other purpose as it relates to the party's legal position. The parties may agree to exchange any information they deem necessary.
3. Both parties shall have an authorized representative attend the mediation. Each representative shall have the authority to recommend entering into a settlement. Either party may have attorney(s), witnesses, or expert(s) present. Either party may request a list of witnesses and notifications of whether attorney(s) shall be present.
4. Any resulting agreements from mediation shall be documented in writing. Mediation results and documentation, by themselves, shall be "non-binding" and inadmissible for any purpose in any legal proceeding, unless such admission is otherwise agreed upon in writing by both parties. Mediators shall not be subject to any subpoena or liability and their actions shall not be subject to discovery.

### **2-10.2.3 Payment.**

1. Pay each DRB member \$2,000 per day for DRB's participation at each on-site meeting
  - a) If a DRB member serves on more than one DRB, the \$2,000 shall be divided evenly among the contracts.
2. On-site meetings include:
  - a) Initial project meeting
  - b) Scheduled progress meetings for a project with a DRB
  - c) Dispute meetings
3. This payment includes full compensation for on-site time, travel expenses, transportation, lodging, travel time, and incidentals for each day or portion thereof that the DRB member is at a DRB meeting.
4. Before a DRB member spends any time reviewing plans and specifications, evaluating positions, preparing recommendations, or performs any other off- site DRB-related tasks, you and the City shall agree to pay for the tasks. Pay the DRB member \$200 per hour for these tasks. This payment includes full compensation for incidentals such as expenses for telephone, fax, and computer services.
5. The City shall reimburse you for 1/2 of the invoiced costs to the DRB and 1/2 of the costs of any technical services agreed to. Submit a change order bill and associated invoices with the original supporting documents in the form of a canceled check or bank statement to receive reimbursement. Do not add mark-ups to the change order bill.
6. The City will not pay for any DRB-related work performed after Contract acceptance.
7. The City will not pay your cost of preparing for and attending a dispute resolution meeting.

3. To Section 6 – PROSECUTION AND PROGRESS OF WORK, Subsection 6-9 LIQUIDATED DAMAGES, Page 148, **DELETE** table in its entirety and **SUBSTITUTE** with the following:

Milestone No.	Milestone Description	Required Completion Date	Amount of Liquidated Damages
Milestone 1	Intermediate Substantial Completion	660 Working Days after Notice to Proceed	\$4,600/Calendar Day
Milestone 2	Start of Integration Period	774 Working Days after Notice to Proceed	\$4,600/Calendar Day
Milestone 3	Substantial Completion	875 Working Days after Notice to Proceed	\$4,600/Calendar Day
Milestone 4	Final Acceptance and Completion	926 Working Days after Notice to Proceed	\$4,600/Calendar Day

4. To Technicals, Section 01 29 00, Payment Procedures, Part 1 General, Section 1.10 Bid Items, Subsection K, item 3, subitem f, Page 176, **DELETE** in its entirety and **SUBSTITUTE** with the following:

f. Digesters cleaning and addition of nozzles to digester mixing system.

5. To Technicals, Section 01 29 00, PAYMENT PROCEDURES, PART 1, GENERAL, Section 1.10, BID ITEMS, Page 177, **ADD** the following:

R. HAZARDOUS WASTE OPERATIONS AND EMERGENCY RESPONSE (HAZWOPER) CERTIFICATION – Allowance:

1. No measurement shall be made for this Item.
2. Payment is made for this Item as an allowance towards 40-hour HAZWOPER training and 8-hour annual refresher training for City and Construction Manager staff.

6. To Technicals, Section 01 31 13, Project Coordination, Supplement MBC Operations During Construction Criteria table, Solids Thickening row, Page 192, **DELETE** in its entirety and **SUBSTITUTE** with the following:

<b>Description</b>	<b>Criteria</b>	<b>MOPO Considerations</b>
Solids Thickening	Three solids thickening centrifuges and one thickened sludge pump and one TSL pipeline need to remain in service at all times, except for a short duration tie-in for MBC to maintain solids handling.	Modifications to the thickened sludge pump suction and discharge piping may remove multiple pumps out of service.

7. To Technicals, Section 01 50 00, Temporary Facilities and Controls, Part 3 Execution, Item 3.01, Construction Manager’s and Engineer’s Field Office, Sub-item A, Page 274, **DELETE** in its entirety and **SUBSTITUTE** with the following:
- A. Make available for Construction Manager’s use within 30 Calendar Days after Construction Notice to Proceed. The Construction Manager’s Field Office shall remain on Site for minimum of 60 Calendar Days after final acceptance of the Work.
8. To Technicals, Section 40 90 00, INSTRUMENTATION AND CONTROL, Supplement 02d P04 Pressure Gauge, Pages 812 through 905, **DELETE** in their entirety and **SUBSTITUTE** with Supplement 02d P04 Pressure Gauge on pages 48 through 141 of this Addendum.
9. To Technicals, Section 40 98 00, PROJECT MANAGEMENT SERVICES, Part 3, Execution, Section 3.05, PROJECT IMPLEMENTATION, Subsection E, Maintenance Phase, Page 1297, **DELETE** in its entirety.

**F. ADDITIONAL CHANGES**

- The following are additional changes to the Line Items in the PlanetBids Tab:

For clarity where applicable, **ADDITIONS**, if any, have been **Underlined** and **DELETIONS**, if any, have been **~~Stricken-out~~**.

Section	Item Code	Description	UoM	Quantity	Payment Reference	Extension
Main Bid	541820	DISPUTE RESOLUTION BOARD (EOC Type I)	AL	1	2-10.2.3	<del>51000</del> <u>68000</u>
<u>Main Bid</u>	<u>237110</u>	<u>Hazardous Waste Operations and Emergency Response (HAZWOPER) Certification (EOC Type I)</u>	<u>AL</u>	<u>1</u>	<u>Section 01 29 00</u>	<u>5160</u>

**G. PLANS**

- To Drawing Numbers 44198-1001-D, 44198-1024-D, 44198-1038-D, 44198-1106B-D, 44198-1106C-D, 44198-1115B-D, 44198-1126A-D, 44198-1158A-D, 44198-1159C-D, 44198-1159D-D, 44198-1165-D, 44198-1186-D, 44198-1192-D, 44198-1264-D, 44198-1265-D, 44198-1266-D, 44198-1267-D, 44198-1268-D, 44198-1269-D, 44198-1270-D, 44198-1271-D, 44198-1272-D, 44198-1273-D, and 44198-1338-D **DELETE** in their entirety and **REPLACE** with pages 142 through 165 of this Addendum.

James Nagelvoort, Director  
Engineering & Capital Projects Department

Dated: *April 9, 2021*  
San Diego, California

# P04 PRESSURE GAUGE

GENERAL	1	Tag Number	P&ID	73PI2021A	73-I-32
	2	Loop Title		Raw Solids Pump No. 1 Suction Pressure	
	3				
	4	Area Classification		Unclassified	
	5	Line Number	Equipment Number		
	6	Line Size	Line Schedule	6 inch	Ductile Iron
	7				
PROCESS CONDITIONS	8	Fluid		Raw Solids	
	9	Min Pressure	Max Pressure	0 psi	30 psi
	10	Temperature		Ambient	
	11	Specific Gravity	Viscosity	1.0	
	12	Conductivity	Density		
	13	Vapor Pressure	Critical Pressure		
	14				
INDICATOR	15	Type		Bourdon Tube	
	16	Range		0-30 psig	
	17	Dial Size	Dial Color	4.5 Inches	White
	18	Process Connection	Mounting	0.5-inch MNPT	Lower Stem
	19	Movement Dampening		Glycerin	
	20	Case Material	Window Material	Black Thermoplastic	Glass or Acrylic
	21				
	22	Blowout Protection		Case Back	
	23	Wetted Parts	Socket Material	Stainless Steel	Stainless Steel
24					
TRANSMITTER	25	Mounting			
	26	Enclosure NEMA Rating			
	27	Power Supply	Voltage		
	28	Output Signal			
	29	Communication Protocol			
	30	Range			
	31				
DIAPHRAGM SEAL - ANNULAR SEAL	32	Type		Annular Seal	
	33	Process Connection		6 inch Class 150 ANSI Flange	
	34	Body Material		Carbon Steel	
	35	Diaphragm / Sleeve Material		Viton	
	36	Capillary Material			
	37	Capillary Length			
	38	Fill Fluid		Glycerin	
	39	Flushing Connection		No	
	40				
	41	Manufacturer		Ashcroft	
42	Model Number		81		
CALIBRATION	43	Calibrated Range		0-30 psig	
	44	Vendor Calibration		Factory calibrate - Provide calibration certificate	
	45	Accuracy	Repeatability	+/- 0.5 Pct of Range	
	46				
OPTIONS	47	Tagging		Stainless steel tag with Tag Number	
	48				
	49				
PURCHASE	50	Manufacturer		Ashcroft	WIKA
	51	Model Number		1279	233.34
	52	Purchase Note		1 year warranty

<b>PRESSURE GAUGE</b>			<b>80PI2350A</b>		

GENERAL	1	Tag Number	P&ID	80PI2350B	80-I-120
	2	Loop Title		Digester No. 3 Axial Pump No. 1 Discharge Pressure	
	3				
	4	Area Classification		As Noted	
	5	Line Number	Equipment Number		
	6	Line Size	Line Schedule	20 inch	Ductile Iron Cement Lined
	7				
PROCESS CONDITIONS	8	Fluid		Digested Solids	
	9	Min Pressure	Max Pressure	0 psi	15 psi
	10	Temperature		Ambient	
	11	Specific Gravity	Viscosity	1.0	
	12	Conductivity	Density		
	13	Vapor Pressure	Critical Prssure		
	14				
INDICATOR	15	Type		Bourdon Tube	
	16	Range		0-30 psig	
	17	Dial Size	Dial Color	4.5 Inches	White
	18	Process Connection	Mounting	0.5-inch MNPT	Lower Stem
	19	Movement Dampening		Glycerine	
	20	Case Material	Window Material	Black Thermoplastic	Glass or Acrylic
	21				
	22	Blowout Protection		Case Back	
	23	Wetted Parts	Socket Material	Stainless Steel	Stainless Steel
TRANSMITTER	25	Mounting			
	26	Enclosure NEMA Rating			
	27	Power Supply	Voltage		
	28	Output Signal			
	29	Communication Protocol			
	30	Range			
	31				
DIAPHRAGM SEAL - ANNULAR SEAL	32	Type		Diaphragm	
	33	Process Connection		0.75 Inch NPT	
	34	Body Material		316L Stainless Steel	
	35	Diaphragm / Sleeve Material		316L Stainless Steel	
	36	Capillary Material			
	37	Capillary Length			
	38	Fill Fluid		Glycerine	
	39	Flushing Connection		Yes	
	40				
	41	Manufacturer		Ashcroft	
CALIBRATION	42	Model Number		101	
	43	Calibrated Range		0-30 psig	
	44	Vendor Calibration		Factory calibrate - Provide calibration certificate	
	45	Accuracy	Repeatability	+/- 0.5 Pct of Range	
	46				
OPTIONS	47	Tagging		Stainless steel tag with Tag Number	
	48				
	49				
PURCHASE	50	Manufacturer		Ashcroft	WIKA
	51	Model Number		1279	233.34
	52	Purchase Note		1 year warranty	
	53

**NOTES:**

1. SYMBOLS: < : LESS THAN  
> : GREATER THAN  
<= : LESS THAN OR EQUAL TO  
>= : GREATER THAN OR EQUAL TO
2. PIPE SPECIFICATIONS: SEE SPECIFICATION SECTIONS FOR THEIR REFERENCED DATA SHEETS.
3. PIPE MATERIALS: ANY DEVIATIONS FROM THE DESIGNATED MATERIALS IN THIS SCHEDULE SHALL BE NOTED ON THE DRAWINGS. NOT ALL MATERIALS LISTED WILL BE USED IN THIS PACKAGE.
- |      |                                 |
|------|---------------------------------|
| CLDI | CEMENT-LINED DUCTILE IRON       |
| CPVC | CHLORINATED POLYVINYL CHLORIDE  |
| CS   | CARBON STEEL                    |
| CU   | COPPER                          |
| GLDI | GLASS-LINED DUCTILE IRON        |
| GSP  | GALVANIZED STEEL                |
| HDPE | HIGH DENSITY POLYETHYLENE       |
| PLDI | POLYETHYLENE LINED DUCTILE IRON |
| PP   | POLYPROPYLENE                   |
| PPLS | POLYPROPYLENE LINED STEEL       |
| PVC  | POLYVINYL CHLORIDE              |
| SST  | STAINLESS STEEL                 |
| STL  | MILL TYPE STEEL                 |
| WS   | FABRICATED WELDED STEEL         |
4. TESTING TYPE: X=H : HYDROSTATIC TEST  
X=P : PNEUMATIC TEST

5. INSPECTION AND TESTING SHALL BE IN ACCORDANCE WITH THE CALIFORNIA PLUMBING CODE.
6. VENT, OVERFLOW, AND DRAIN PIPING FOR PROCESS SERVICES SHALL BE THE SAME MATERIAL AS THE ASSOCIATED SERVICE PIPING. THIS PIPING IS IDENTIFIED BY A TWO SYMBOL DESIGNATION. THE FIRST SYMBOL SHALL INDICATE THE PIPING MATERIALS TO BE USED.
7. HYDROSTATIC TEST WITH WATER SURFACE 5 FEET ABOVE MAXIMUM OPERATING PRESSURE SHOWN. GRAVITY SURFACES SHALL BE TESTED WITH WATER SURFACE 5 FEET ABOVE THE INSIDE TOP OF PIPE.
8. ALLOWABLE LEAKAGE SHALL BE AS FOLLOWS:  
(A) PIPES SO DESIGNATED SHALL SHOW ZERO LEAKAGE.  
(B) PIPES SO DESIGNATED SHALL SHOW ZERO LEAKAGE, EXCEPT NOT MORE THAN 0.02 GALLONS PER HOUR PER INCH DIAMETER PER 100 FEET OF BURIED PIPE.  
(C) PIPES SO DESIGNATED SHALL SHOW A LOSS OF PRESSURE NOT MORE THAN 5 PERCENT OVER A PERIOD OF 2 HOURS.  
(D) PIPES SO DESIGNATED SHALL SHOW A LOSS OF VACUUM NOT MORE THAN 4 INCHES MERCURY COLUMN OVER A PERIOD OF 2 HOURS.
9. TEST PIPING SYSTEM TO TEST PRESSURE INDICATED WITH EXPANSION JOINTS ISOLATED FROM THE PIPING SYSTEM TO AVOID THEIR EXPOSURE TO OVERPRESSURE. EXPANSION JOINTS SHALL BE INITIAL SERVICE LEAK TESTED AT THE OPERATING PRESSURES SHOWN.

**COMPRESSOR #3 CONDUIT ROUTING**  
 NOTE: THERE IS AN EXISTING CONDUIT SUPPORTING SYSTEM ALREADY INSTALLED ALONG THIS PROPOSED ROUTING. IT SHOULD BE POSSIBLE TO RUN NEW CONDUITS IN THIS CONDUIT SUPPORTING SYSTEM.

THERE IS A PULL BOX ON THE OUTSIDE OF THE BUILDING THAT MAY BE USEFUL IN ROUTING THE CIRCUITS FROM THE OUTSIDE OF THE BUILDING TO THE REQUIRED MCC. BUT THIS WILL REQUIRE INVESTIGATION. PLAN TO EXIT THE GALLERY AT THIS LOCATION. PENETRATE THE WEST WALL OF THE BUILDING SHOWN ON DRAWING 80-E-201

## ENGINEER OF WORK

The Engineering Specifications and Special Provisions contained herein have been prepared by or under the direction of the following Registered Engineer:

4/14/2021

Seal:

1) Registered Engineer

Date

4/14/2021

Seal:

2) For City Engineer

Date

## **A. CHANGES TO CONTRACT DOCUMENTS**

The following changes to the Contract Documents are hereby made effective as though originally issued with the bid package. Bidders are reminded that all previous requirements to this solicitation remain in full force and effect.

## **B. BIDDER'S QUESTIONS**

Q1. Currently there is no bid item for the Digester cleaning. How much estimated volume of existing digester contents should we as the Contractor expect in each Digester for cleaning? This is needed for the basis of estimate. What is the expected volume quantity in the active digester? What is the expected volume quantity in the digesters that are offline?

A1. Digester cleaning is included in lump sum Bid Item 11. See modification to Specification Section 01 29 00 in Addendum D. Assume total volume of digester residuals, as specified.

Q2. Specification 44 46 23 states "The total amount of residuals to be removed is estimated to be 410,300 gallons." Please confirm if this is per digester for a total of 1,230,900 gallons. Or this is total quantity for all three digesters.

A2. Assume total volume of digester residuals, as specified.

Q3. After my review of addendum "D" (#4), Q&A #3 – regarding a plug valve labeling issue.

1. I am not able to find any "75" series valve on SHT G-110 (even from addendum 3/C).

a. Do you mean "76"?

b. Also, please correct SHT 76-D-331, Sect B as it reflects that this valve is 76HV1157

A3. The response for Addendum D Question 3 should be:

A3. Plug valve 76MV1157 as shown on 76-D-131 is the correct tag name. See G-110 MBC-Power Operated Valve Schedule for valve type. 76HV1157 shown on 76-D-331 should be 76MV1157.

a. There is no 75 series in this project. 76 is correct.

b. Section B/Sheet 76-D-331 is corrected by this Addendum Answer.

- Q4. Please confirm performance and payment bonds shall be valid for one year after final acceptance.
- A4. Per the Whitebook, Section 1-7.2 Contract Bonds, the bond shall be in full force and effect until acceptance and until all claims for materials and labor are paid and shall otherwise comply with the Government Code.
- Q5. Please confirm that builders risk policy covering contractor and subcontractors under OCIP includes off-site and in-transit coverage. Please confirm sub-limits of such coverage.
- A5. Confirmed. \$10M sub-limit for each per Occurrence.
- Q6. Please confirm that builders risk policy covering contractor and subcontractors under OCIP provides for replacement cost coverage.
- A6. Confirmed, unless the property is not replaced and then the loss shall be settled on ACV.
- Q7. Please confirm that builders risk policy covering contractor and subcontractors under OCIP provides for terrorism coverage.
- A7. No Terrorism Coverage.
- Q8. Attachment E, section 7-4.9 OCIP Builder's Risk Insurance – states that the builders risk policy under the OCIP does not provide for earthquake coverage. Please confirm that Owner is responsible for all losses as related to earthquake.
- A8. No earthquake coverage and owner is not responsible for all losses related to earthquake or earth movement.
- Q9. Would Owner furnish Contractor with a builder's risk policy for review?
- A9. Yes.
- Q10. Please confirm that OCIP builder's risk policy is DE5 or LEG3 level of coverage?
- A10. LEG3 coverage.
- Q11. In an effort to adequately quantify risk would the Owner consider a total limit of liability for Contractor.
- A11. No.

- Q12. In an effort to provide the best possible price to the Owner and adequately quantify risk would the Owner consider a mutual waiver of consequential damages on this project.
- A12. No.
- Q13. Can Owner confirm whether or not all funding is in place for this project?
- A13. Project is Phase Funded. Funding for Phase 1 is in place. Funding for subsequent phases is expected to be available the fiscal year in which it will be used.
- Q14. Please confirm that a San Diego Business Tax certificate is not required until project award.
- A14. Yes, confirmed.
- Q15. Will the owner furnish the contractor with the Workers Compensation, General Liability, and Excess Liability Insurance for review?
- A15. Yes.
- Q16. Please confirm that the General Liability policy covering the contractor and subcontractors under the OCIP will amend Damage to Your Work Exclusion will be deleted in its entirety or amended to clarify that the exclusion only applies to that particular part of your work which must be restored, repaired or replaced.
- A16. Yes, Exclusion L – Damage to Your Work is deleted in its entirety.
- Q17. Please confirm that the General Liability policy covering the contractor and subcontractors under the OCIP the Damage to your Product exclusion will be deleted in its entirety.
- A17. Yes, Exclusion K – Damage to Your Product is deleted in its entirety.
- Q18. Please confirm that the General Liability policy covering the contractor and subcontractors under the OCIP will be endorsed to modify the professional liability exclusion to the Contractors Professional Liability Limited Exclusion coverage provided by ISO endorsement CG 22 80.
- A18. No, the policy contains the CG 22 79 Professional Liability Exclusion.
- Q19. Please confirm that builders risk policy covering contractor and subcontractors under OCIP will not exclude resultant property damage caused by wind driven precipitation.

- A19. Confirmed.
- Q20. Please confirm that builders risk policy covering contractor and subcontractors under OCIP will not exclude resultant water damage to property that is not enclosed by a building envelope (i.e, Blue Tarp).
- A20. Confirmed.
- Q21. Please confirm that builders risk policy covering contractor and subcontractors under OCIP will provide for limits in an equal amount to the full contract value plus any additional soft costs or delay in startup values as it relates to Water Damage.
- A21. Each project is scheduled with separate total project value limit applicable to that project. \$250,000 sublimit for soft costs.
- Q22. Please confirm that builders risk policy covering contractor and subcontractors under OCIP will provide for limits in an equal amount to the full contract value plus any additional soft costs or delay in startup values for the perils of Flood and Named Windstorm.
- A22. \$250,000 sublimit for soft costs. Flood sublimit is \$200,000,000 per Occurrence and in the Annual Aggregate per project and in all projects combined except Flood for Insured Property located in Flood Zone A including any sub zones is \$25,000,000.
- Q23. Please confirm that builders risk policy covering contractor and subcontractors under OCIP will provide for limits in an equal amount to the full contract value plus any additional soft costs or delay in startup values as it relates to Water Damage, perils of flood, named windstorm or any other peril.
- A23. Sub limits include:
- Water Damage Included (to declared project total project value).
  - Flood Sublimit: \$200,000,000 per Occurrence and in the Annual Aggregate per project and in all projects combined except for Insured Property located in Flood Zone A including any sub zones \$25,000,000.
  - Flood Zone V is excluded.
  - Named Windstorm Included (to declared project total project value).
  - Delay/Soft Costs sublimit \$250,000 per occurrence.
- Q24. Please confirm the following are not listed as exclusions under the OCIP builders risk policy. Piling, Serial Loss, Micro cracking, Unsealed Road, HDD,

Wet Works, Underground tunneling, Boiler and Machinery Explosion Exclusion, and Frost and Freezing Exclusion.

A24. The Builders Risk Policy contains the following:

Frost and Freezing sublimit of 10%.

There is not a microcracking exclusion but there is the typical exclusion for normal settling, shrinkage and/or expansion of buildings and/or foundations.

Trench Limitation: It is hereby understood and agreed that the Company shall not be liable for loss of or damage to more than 2,000 feet of open trench, partially or completely excavated.

Tunnel Clause:

This Policy will not indemnify the Insured in respect of expenses incurred for:

- (i) Alterations in the construction method or due to unforeseen ground conditions or obstructions,
- (ii) Measures which become necessary to improve or stabilize ground conditions or to seal against water ingress unless necessary to reinstate otherwise insured loss or damage,
- (iii) Removing material which has been excavated, or due to overbreak in excess of the design profile and/or for refilling cavities resulting therefrom,
- (iv) Dewatering unless necessary to reinstate otherwise insured loss or damage,
- (v) Loss or damage due to breakdown of the dewatering system if such loss or damage could have been avoided by use of standby facilities,
- (vi) The abandonment or recovery of tunnel-boring machines,
- (vii) Loss or damage to existing road surface, roadbed, paving, curbs, medians, signage, sidewalks, or above ground structures,
- (viii) The loss of bentonite, suspensions, or any media or substance used for excavation support or as a ground-conditioning agent.

In the event of otherwise insured loss or damage to Insured Property, the maximum amount payable under this Policy shall be limited to the expenses incurred to reinstate the Insured Property to a standard or condition technically equivalent to that which existed immediately before the Occurrence of loss or damage but not in excess 115% (percent) of the original average dollar-per-linear foot construction cost of the immediate damaged area.

Exclusions: in addition to the exclusions in the form, the policy will also exclude with respect to Wet Work, expenses incurred for:

- (i) Loss or damage to the Insured Property due to normal action of the sea and/or river which could have reasonably be foreseen to occur based on its previous meteorological and/or in the case of the sea its oceanographical history;
- (ii) Loss of or damage to fill underwater excavations, excavated material, bedding material or other underwater fill rock or protection unless accompanied by indemnifiable damage to other Insured Property;
- (iii) The cost of redredging, retro filling, trenching, or retrenching any dredged trench or area unless necessitated by indemnifiable damage to other parts of the Insured Property;

Q25. It is unclear if limits for General Liability insurance are exclusive for the project for product-completed operations (PCO). Limits could be diluted by other projects if the PCO extension is shared between all projects. Please confirm PCO limit is available exclusively for the project.

A25. No, there is one Products-Completed Operations aggregate limit for all projects contemplated under the Pure Water OCIP.

Q26. Section F, 80-D-311 shows the 10" EOF and 10" OF penetrating the pipe gallery deck. What are the elevations of the pipe gallery deck at the penetration points?

A26. Ground level is EL 411'.

Q27. What is the elevation the 10" OF and 10" EOF at the point of where they meet the pipe gallery piping shown on Y-123?

A27. EL 404' see Y-123.
