MEMORANDUM

DATE:

TO:

James Nagelvoort, Director & City Engineer, Engineering & Capital Projects

FROM:

Claudia C. Abarca, Deputy Director, Engineering & Capital Projects

SUBJECT:

Sole Source Agreement for Emergency Repair of Storm Drain at Saint Therese

Way

Estimated Amount:

\$650,000 (Not-to-Exceed)

Contractor:

Orion Construction

Estimated Completion:

September 3, 2022

Recommended Action:

Approve Sole Source Request

Pursuant to SDMC §22.3108 (a), "Exceptions to Advertisement and Competitive Award of Engineering & Capital Projects Contracts", this is to certify that a sole source agreement with the contractor named above is necessary and that strict compliance with a competitive process would be unavailing or would not produce an advantage, and soliciting bids or proposals would be undesirable, impractical or impossible for the following reasons:

JUSTIFICATION:

A report was received from the Streets Division on August 16, 2020, reporting a failing 18-inch corrugated metal pipe (CMP) storm drain located northwest corner of the intersection of Saint Therese Way and Bernadette Lane in the Del Cerro area.

The failing storm drainpipe is approximately 73 feet in length and starts from a Type A-4 cleanout west of the sinkhole location. The pipe then traverses east upstream to another A-4 cleanout. Upon inspection of the pipe from inside the downstream cleanout, the subject pipe is completely corroded, and the pipe is missing from 5 o'clock to 7 o'clock position in both upstream and downstream directions.

The pipe failure has caused a sink hole that is approximately 3.5 feet wide by 8 feet long at the surface. The depth of the sinkhole was unable to be determined due to the heavy cement cap that was obscuring the hole below, and may also be obscuring damage beyond what was visible from the surface. Therefore, the eastbound lane of Saint Therese Way is now compromised.

The necessary repair is beyond the capabilities of the Transportation and Storm Water Department, Storm Water Division, therefore, it is requested this project be designated an emergency and a sole source contract be approved.

Additional information related to this request can be found in Enclosure 1.

AGREEMENT VALUE & DURATION:

Unless a modification to the agreement and this sole-source request is issued, the total fee for these services shall not exceed the amount noted above. The term of the agreement will be in effect from date of the agreement execution and shall not exceed the contract completion date noted above.

SUBJECT: Emergency Repair of 18-inch Corrugated Metal Pipe (CMP) Pipe at

Saint Therese Way and Bernadette Lane

This memorandum is being sent to request expedited Public Works contracting to make urgent repairs to the storm drain pipe, causing a sinkhole failure at the intersection of Saint Therese Way and Bernadette Lane. The report was received from the Streets Division on August 16, 2020 and was forwarded to the Storm Water Operations and Maintenance Section on August 17, 2020. The report reflected a failing 18-inch corrugated metal pipe (CMP) storm drain located at the northwest corner of the intersection of Saint Therese Way and Bernadette Lane in the Del Cerro area.

The failing storm drain pipe is approximately 73-feet in length and starts from a Type A-4 cleanout west of the sinkhole location. The pipe then traverses east upstream to another A-4 cleanout. Upon inspection of the pipe from inside the downstream cleanout, the subject pipe is completely corroded, and the pipe is missing from 5 o'clock to 7 o'clock position in both upstream and downstream directions.

The pipe failure has caused a sink hole that is approximately 3.5-feet (W) X 8-foot (L) at the surface. The depth of the sinkhole was unable to be determined due to the heavy cement cap that was obscuring the hole below. The concrete cap may also be obscuring damage beyond what was visible from the surface and therefore the eastbound lane of Saint Therese Way is now compromised.

As a result, the CMP and roadway need to be quickly repaired to halt further infrastructure damage and more importantly prevent risk to residents in the area. With the coming rainy season, this failure will continue to grow at an alarming rate unless the pipe is repaired.

The necessary repair is beyond the capabilities of the TSW, Storm Water Division. TSW requests expedited Public Works contracting to make urgent repairs to the storm drain.

Staff from TSW are ready to assist ECP with the necessary contract actions. If you have any questions, please contact Senior Civil Engineer Chris Gascon at (619) 527-7411.

The miscellaneous listing is updated daily.

Changes

Books are no longer available in hard copy and should be downloaded from the internet and printed.

Changes to the equipment rates in the April 1, 2020 book are the result of: 1) fuel costs increased; 2) interest rates decreased; 3) Producers' Price Index increased; 4) no change in sales tax; and 5) no change in freight (F.O.B.) rates.

Labor Surcharge

The labor surcharge compensates the contractor for statutory payroll items stipulated by various governmental agencies. The six items included are worker's compensation, social security, Medicare, Federal unemployment insurance, State unemployment insurance, and State training taxes. The general rate is an average of the job classifications common to Caltrans projects. The labor surcharges in the April 1, 2020 book are the result of some changes in worker's compensation rates. The rates were derived from using the pure premium rate approved by the Insurance Commissioner effective January 1, 2020 and increasing it by the historical statewide average expense. In the calculation of the labor surcharge for overtime work, the worker's compensation is not included on the premium portion of overtime, as provided by worker's compensation regulations.

The surcharge percentage to be applied to the actual wages paid as provided in Section 9-1.04B [9-1.03A(1b)] of the *Standard Specifications* will be 10 percent for regular time (RT) and 10 percent for overtime (OT).

Exceptions to the general rate are listed below. These classifications were chosen because of high worker's compensation insurance costs. Forward questions, regarding worker's compensation rating and proper labor surcharge usage, to the rental rate personnel in the Division of Construction.

An appropriate labor surcharge will be established by the Division of Construction for work that is determined by the resident engineer to be covered by Longshoreman and Harbor Worker's Act.

Background

By the authority described in Section 9-1.04 [9-1.03A] of the *Standard Specifications*, compensation for work paid by force account is determined to be the total of the direct equipment costs (rental rate) plus a 15 percent markup for all overhead not included as direct costs. The direct costs include fuel, oil, lubrication, supplies, small tools, necessary attachments, repairs and maintenance, depreciation, storage, cost of facilities capital, overhaul and all incidentals. The labor costs required to provide the above listed items are also included. The operator cost is not included in the equipment rate.

The calculated rate represents the cost of owning and operating the equipment, which is likely to be lower than the rate charged by a rental yard. The rental yard rate may include additional overhead and profit as well as a premium for short-term rentals. In certain situations, factors are applied to the calculated rates to provide ownership-only rates for delay situations or operating-only rates for overtime situations. The rates are calculated using factors for the direct cost items described above. The factors represent an average and are applied to all makes and models of equipment within the class. All rates are hourly, unless stated otherwise.

Overtime and Multiple Shifts

Certain equipment costs are fixed on an annual basis, no matter how many hours are worked. Once an estimate of the costs and hours of use is made, a rate can be determined. When more than the estimated number of hours are worked (Overtime or Multiple Shift), a duplication of payment occurs on the fixed cost portion of the equipment rate.

In order to avoid this duplication, Caltrans uses a reduced rate for the Overtime or Multiple Shift situations. The definition of Overtime or Multiple Shift periods is:

Overtime hours occur after the equipment has worked at force account, eight hours per day (or after the daily equivalent of forty hours per week for special work schedules - 4/10 or 9/80). Multiple shift hours will be paid at the same rate as overtime hours.

The hours shown on the Daily Extra Work Bill will determine when the Overtime and Multiple Shift is to be used. When the hours worked on force account are eight or less, straight time rates will be used. When the hours worked on force account are more than eight, Overtime and Multiple Shifts rates will be used. Saturday, Sunday or holiday work will be paid at the overtime rate except in those cases where these days are considered working days in the special provisions.

Be advised the computed overtime rates are no longer rounded and now equal the product of the straight time rate and overtime factor. The Overtime and Multiple Shift Factors are recalculated annually to reflect changes in the operating costs.

Delays

As described in Section 8-1.07C [8-1.09] of the *Standard Specifications*, the Delay Factor may be applied to the equipment rental rate. The Delay Factor may be the basis for compensation for idle equipment time on an excusable delay. The factor has been calculated to include the ownership costs without including operating costs. The Delay Factor recovers all the contractor's non-operating costs in an eight-hour day. If payment is made for equipment on an excusable delay, it is limited to eight hours per day or forty hours per week maximum.

The NONOP class for non-operated items and the TRAFC class for traffic safety devices have been separated from traditional "rolling stock" equipment when calculating the Delay Factor. These classes are comprised of items whose depreciable lives are related to the number of uses per year, rather than the number of hours per year. Accordingly, the reasonable compensation for the contractor's actual loss has been estimated to equal the cost of facilities capital. It should be recognized that these items must be out of service before the Delay Factor is applied. For example, if work behind K-rail is delayed, the K-rail should be paid straight time until it is no longer controlling traffic.

Any use of this factor must have the prior approval of the resident engineer. The Delay Factor is recalculated annually to reflect changes in the operating costs.

Use of Daily Extra Work Bill

Identification codes and rates are intended to be used with the Department's Internet change order billing system. The class is abbreviated using a 5-digit alpha-code, the make (manufacturer), a 4-digit alpha-code, and the code a 7-digit alpha-numeric code. All three codes must be used to define the equipment when using the automated pay system. Since the majority of items are described by per hour rates, each line has an entry for hours with an allowable maximum of 24. Special items with other than hourly rates should be appropriately checked and then entered in the Regular Hours column. For example, 50 Traffic Cones used 3 days (converts to 1.5, 100-cone-days) requires 1.5 be entered in the Regular Hours column. Note that any entry in the Delay Factor column will automatically apply the Delay Factor to every equipment entry on the current report.

Whenever an identification code cannot be found or the rate for a particular date of work performed is not available, updated information should be requested from the resident engineer. It is the resident engineer's responsibility to establish rates for equipment not found in the *Labor Surcharge* and Equipment Rental Rates publication. Support for this determination is available from both District and Headquarters Construction Offices. Rates are regularly superseded during contract periods, so avoid the use of old publications or expired rates.

The equipment is presented with a standard configuration capable of performing work commonly encountered on Caltrans projects. Special attachments or accessories are described under the classification heading in the *Labor Surcharge and Equipment Rental Rates* publication. Attachments other than those described by these remarks will be paid only upon direction of the resident engineer.

Note various units for different items. The following allowance is entered on the extra work bill by using the (unit listed x number of days) in the hours worked column. The following list is limited to items with long estimated lives. Additional traffic related items such as cones and barricades, are still listed under TRAFC in this publication. Other non-operated items with short estimated lives should be treated as materials and should not be "rented". Non rented items are 1) intended to be job specific (amortized over the life of the project) and 2) have an estimated life measured by number of uses rather than a length of time.
