SECTION 318 – OUTFALL REPAIR

318.1

REPAIR PROCESS. Repairs will be conducted inside the pipe between 2:00 AM and 5:00 AM for as many nights as are required to complete the scope of work. The contractor may mobilize/demobilize onsite each day before and after this time frame. The phasing of work activities should be made in consideration of the operational difficulty to hold the flow at PLWWTP and any repair effort should be coordinated with PLWWTP operations as the windows of time available to accomplish the repairs is limited. The operation window will provide a safe diving time based on consultation with City staff. The divers will enter the outfall as soon as the flow is subsided and is safe to enter. A crane with basket will be used to hoist the divers into the outfall through the vortex structure. The City will be responsible for removing the Vortex lid and installing a temporary wood lid before the work begins. The contractor shall remove and replace the temporary lid at the beginning and end of each shift. The City will reinstall the permanent Vortex lid after completion of the work.

The repair work shall include;

- A. Removal of broken and loose anodes in the steel pipe transition segment of the ocean outfall. Some of the twelve (12) 3" x 7' long anodes have come loose and are damaged. Any anodes still tightly secured to the pipe can be left in place. This Scope of Work (SOW) covers the removal of up to 6 anodes located between the bottom of the Vortex elbow and station 4+50.
- B. Remove the accumulated debris and damaged Weko-Seal at station 3+27 and install a new Weko-Seal to cover the 7/8 inch joint gap. The damaged Weko-Seal is 10-inch to 12-inch in width, and there is only one band left on the downstream side. Installation shall be performed by authorized installer.
- C. Patch the concrete pipe joint gaps at station 3+05 (open void in the pipe at 12 o' clock, 12-inch long, 1.25-inch long, 4-inch deep, with sand and mud trapped), utilizing different materials that can be monitored for performance at the next inspection in 2021. Repairs shall be made with one each of the following; Sikadur-UA Concrete Fix and Splash Zone Underwater Epoxy Paste product number 2702.
- D. Measure the size of the spalled area at station 7+10 and 12+40 so they can be monitored for changes during next inspection in 2021. Contractor shall measure the depth of the spalling in one foot increments in length and width at these locations.
