PART 2 - PRODUCTS

2.1 BIOFILTER MEDIA

- A. General: Biofilter media shall be comprised of forest industry waste materials that are specifically processed to meet the requirements specified herein. The media shall be a mixture of two processed media components. Each media component shall be processed specifically for this project and shall be independently stockpiled prior to mixing. The mixing process used to combine the two media components shall be controlled to produce a uniform mixture for the entire quantity of biofilter media required for this project. Following mixing, the media shall be stockpiled and stabilized at the media production facility for a one-month period. Stabilization shall be comprised of a one-month aging period and turning the stockpiled media three times, once every 7 days after production of the entire project quantity. Turning shall be accomplished by exchanging the core of the stockpile with the exterior of the stockpile and vice versa.
- B. Media Component Requirements: The origin of media components shall be all organic materials, wood based, with no chemical or animal manure additives. Raw materials shall be aged in the media supplier yard for at least one month prior to processing for this project. Major and minor components of the biofilter media are described below:
 1. Major Component: The major media component shall be processed from raw materials generally available from the log debarking process employed in the lumber milling industry. The raw material is referred to herein as "Wood Hog" and is considered to be an approximate mixture of 70% wood fibers and 25% bark fibers. After processing for this project, this major component shall constitute approximately 95% of the required media volume as measured on a Loose-Pile Volume Basis. "Loose-Pile Volume Basis" shall mean the volume as measured in a pile of processed material resulting from dropping the processed material from the end of an elevated conveyor belt. This component of the media shall meet the following additional requirements:
 - a. The raw materials shall be from stockpiles aged one month or longer and shall be free of odors.

- b. A sample of wood material, when subjected to gradation analysis shall be shredded wood (no Cedar or Eucalyptus) and have the following gradation:

Less than 1" - Max. 10%

1" - 3" - Max. 20%

3" - 6" - Max. 60%

Over 6" - Max. 10%

- c. The majority of the retained wood and bark particles shall be fibrous with a general splintered or crushed appearance. The retained particles will have some adhering fine particles that were not removed during the mechanical screening process.

- d. A sample of bark material, when subjected to a gradation analysis shall be Nugget Bark (Fir Bark) and the following gradation:

Less than 1/2" - Max. 10%

1/2" - 2" - Max. 20%

2" - 4" - Min. 60%

Over 4" - Max. 10%

- 2. Minor Component: The minor media component shall be processed from compost material produced by the media supplier and shall be free of green materials. After processing for this project, this minor processed component shall constitute approximately 5% of the required media volume as measured on a Loose-Pile Volume Basis. "Loose-Pile Volume Basis" shall mean the volume as measured in a pile of processed material resulting from dropping the processed material from the end of an elevated conveyor belt. This component of the media shall meet the following additional requirements:

- a. The compost material shall be the product of a thermophilic aerobic decomposing process and shall be rated for use in domestic home and garden applications. The material shall be adequately stabilized so as to be free of odors.

- b. The material shall be wood materials and biosolids aerobically composted and stabilized with the following gradation:

Less than 1/2" - Min. 50%

Over 1/2" - Max. 50%

- C. Component Mixing: The major and minor media components shall be blended together to produce a uniform homogeneous mixture for the entire quantity of biofilter media required on the project.

2.2 MEDIA SUPPLIERS, OR-EQUAL

- A. Named Media Suppliers: Three potential sources for the supply of media are named below. These suppliers are believed to have the necessary facilities and resources to produce the biofilter media in accordance with this Section.
 - 1. O.F. Wolfinbarger, Inc. 5675 Francis Ave., Chino, CA 91710.
 - 2. McFarlane's Bark, Inc. 13345 S.E. Johnson Road, Milwaukie, Oregon 97222.
 - 3. Rexius Forest By-Products, Inc. 750 Chambers St. Eugene, Oregon 97402.
- B. Or-Equal Media Suppliers: Alternate media suppliers having necessary facilities and resources to produce the biofilter media in accordance with this Section may be proposed.

PART 3 - EXECUTION

3.1 DELIVERY AND HANDLING

- A. The CONTRACTOR shall take measures to prevent the media from becoming contaminated with dirt or other foreign matter during transport, offloading at the site, handling, and during installation. Media shall be delivered and offloaded at the site by the media supplier. Media shall not be dumped into the biofilters from delivery vehicles. Media shall be offloaded at the site for CONTRACTOR re-handling and installation. The CONTRACTOR shall direct the media supplier deliveries as necessary to accommodate the CONTRACTOR's biofilter media and irrigation system installation schedule. Media handling methods shall prevent reducing the media particle size gradation.

3.2 INSTALLATION

- A. The CONTRACTOR shall install the media employing means and methods that result in the media being placed in a uniformly loose and uncompacted state throughout the entire media volume in each biofilter. (Note: Specialized high-speed spreading conveyor belt type equipment has been successfully employed to install media on other projects.) No direct equipment or foot traffic will be allowed on the media during or after installation. Work that must be performed inside the biofilters during or after media installation (such as irrigation system installation Work) shall be accomplished by placing 3/4-inch thick by 4-foot by 8-foot plywood sheets on top of the media at work areas, and other CONTRACTOR determined means and methods as necessary to limit media surface loading below 10 pounds per square foot. Media installations that fail to meet these criteria shall be removed and reinstalled by the CONTRACTOR at no additional cost to the OWNER. The top of the installed media shall be level to within +/- 0.10 foot.

The Fire Hydrant Meter Administrator, after a thorough review of the needs of the customer, (i.e. number of jobsites per day, City contract work, lack of mounting area on work vehicle, etc.), may issue a floating meter. At the time of issue, it will be necessary for the customer to complete and sign the "Floating Fire Hydrant Meter Agreement" which states the following:

- 1) The meter will be brought to the Meter Shop at 2797 Caminito Chollas, San Diego on the third week of each month for the monthly read by Meter Shop personnel.
- 2) Every other month the meter will be read and the backflow will be tested. This date will be determined by the start date of the agreement.

If any of the conditions stated above are not met the Meter Shop has the right to cancel the contract for floating meter use and close the account associated with the meter. The Meter Shop will also exercise the right to refuse the issuance of another floating meter to the company in question.

Any Fire Hydrant Meter using reclaimed water shall not be allowed use again with any potable water supply. The customer shall incur the cost of replacing the meter and backflow device in this instance.

INCIDENT/RELEASE ASSESSMENT FORM ¹

If you have an emergency, Call 911

Handlers of hazardous materials are required to report releases. The following is a tool to be used for assessing if a release is reportable. Additionally, a non-reportable release incident form is provided to document why a release is not reported (see back).

Questions for Incident Assessment:

	YES	NO
1. Was anyone killed or injured, or did they require medical care or admitted to a hospital for observation?	<input type="checkbox"/>	<input type="checkbox"/>
2. Did anyone, other than employees in the immediate area of the release, evacuate?	<input type="checkbox"/>	<input type="checkbox"/>
3. Did the release cause off-site damage to public or private property?	<input type="checkbox"/>	<input type="checkbox"/>
4. Is the release greater than or equal to a reportable quantity (RQ)?	<input type="checkbox"/>	<input type="checkbox"/>
5. Was there an uncontrolled or unpermitted release to the air?	<input type="checkbox"/>	<input type="checkbox"/>
6. Did an uncontrolled or unpermitted release escape secondary containment, or extend into any sewers, storm water conveyance systems, utility vaults and conduits, wetlands, waterways, public roads, or off site?	<input type="checkbox"/>	<input type="checkbox"/>
7. Will control, containment, decontamination, and/or clean up require the assistance of federal, state, county, or municipal response elements?	<input type="checkbox"/>	<input type="checkbox"/>
8. Was the release or threatened release involving an unknown material or contains an unknown hazardous constituent?	<input type="checkbox"/>	<input type="checkbox"/>
9. Is the incident a threatened release (a condition creating a substantial probability of harm that requires immediate action to prevent, reduce, or mitigate damages to persons, property, or the environment)?	<input type="checkbox"/>	<input type="checkbox"/>
10. Is there an increased potential for secondary effects including fire, explosion, line rupture, equipment failure, or other outcomes that may endanger or cause exposure to employees, the general public, or the environment?	<input type="checkbox"/>	<input type="checkbox"/>

If the answer is YES to any of the above questions – report the release to the California Office of Emergency Services at 800-852-7550 and the local CUPA daytime: (619) 338-2284, after hours: (858) 565-5255. Note: other state and federal agencies may require notification depending on the circumstances.

Call 911 in an emergency

If all answers are NO, complete a Non Reportable Release Incident Form (page 2 of 2) and keep readily available. Documenting why a “no” response was made to each question will serve useful in the event questions are asked in the future, and to justify not reporting to an outside regulatory agency.

If in doubt, report the release.

¹ This document is a guide for accessing when hazardous materials release reporting is required by Chapter 6.95 of the California Health and Safety Code. It does not replace good judgment, Chapter 6.95, or other state or federal release reporting requirements.

ADVANCED METERING INFRASTRUCTURE (AMI) DEVICE PROTECTION

Protecting AMI Devices in Meter Boxes and on Street Lights

The Public Utilities Department (PUD) has begun the installation of the Advanced Metering Infrastructure (AMI) technology as a new tool to enhance water meter reading accuracy and efficiency, customer service and billing, and to be used by individual accounts to better manage the efficient use of water. **All AMI devices shall be protected per Section 5-2, "Protection", of the 2015 Whitebook.**

AMI technology allows water meters to be read electronically rather than through direct visual inspection by PUD field staff. This will assist PUD staff and customers in managing unusual consumption patterns which could indicate leaks or meter tampering on a customer's property.

Three of the main components of an AMI system are the:

- A. Endpoints, see Photo 1:

Photo 1

B. AMI Antenna attached to Endpoint (antenna not always required), see Photo 2:

Photo 2

Network Devices, see Photo 3:

Photo 3

AMI endpoints transmit meter information to the AMI system and will soon be on the vast majority of meters in San Diego. These AMI devices provide interval consumption data to the PUD's Customer Support Division. If these devices are damaged or communication is interrupted, this Division will be alerted of the situation. The endpoints are installed in water meter boxes, coffins, and vaults adjacent to the meter. A separate flat round antenna may also be installed through the meter box lid. This antenna is connected to the endpoint via cable. The following proper installation shall be implemented when removing the lid to avoid damaging the antenna, cable, and/or endpoint. Photo 4 below demonstrates a diagram of the connection:

Photo 4

The AMI device ERT/Endpoint/Transmitter shall be positioned and installed as discussed in this Appendix. If the ERT/Endpoint/Transmitter is disturbed, it shall be re-installed and returned to its original installation with the end points pointed upwards as shown below in Photo 5.

The PUD's code compliance staff will issue citations and invoices to you for any damaged AMI devices that are not re-installed as discussed in the Contract Document

Photo 5 below shows a typical installation of an AMI endpoint on a water meter.

Photo 5

Photo 6 below is an example of disturbance that shall be avoided:

Photo 6

You are responsible when working in and around meter boxes. If you encounter these endpoints, use proper care and do not disconnect them from the registers on top of the water meter. If the lid has an antenna drilled through, do not change or tamper with the lid and inform the Resident Engineer immediately about the location of that lid. Refer to Photo 7 below:

Photo 7

Another component of the AMI system are the Network Devices. The Network Devices are strategically placed units (mainly on street light poles) that collect interval meter reading data from multiple meters for transmission to the Department Control Computer. **If you come across any of these devices on street lights that will be removed or replaced (refer to Photos 8 and 9 below), notify AMI Project Manager Arwa Sayed at (619) 362-0121 immediately.**

Photo 8 shows an installed network device on a street light. On the back of each Network Device is a sticker with contact information. See Photo 9. **Call PUD Water Emergency Repairs at 619-515-3525 if your work will impact these street lights.** These are assets that belong to the City of San Diego and you shall be responsible for any costs of disruption of this network.

Photo 8

Network Device

Photo 9

If you encounter any bad installations, disconnected/broken/buried endpoints, or inadvertently damage any AMI devices or cables, notify the Resident Engineer immediately. The Resident Engineer will then immediately contact the AMI Project Manager, Arwa Sayed, at (619) 362-0121.
