1. INTRODUCTION

Ninyo & Moore has performed a Hazardous Materials Technical Study (HMTS) for the Midway-Pacific Highway (Hwy) Corridor (Midway) and Old Town San Diego (Old Town) Community Plan Updates in San Diego, California. The communities of Midway and Old Town comprise approximately 1,187 acres located in the City of San Diego. These communities are generally bounded to the east by Juan and Taylor Streets; to the north by Interstate 8 (I-8); to the west by Midway Drive, Barnett Avenue and Pacific Hwy; and Laurel Street to the south (Figure 1). For the purposes of this report, the Midway and Old Town communities have been collectively referred to as the project area.

The purpose of this HMTS is to document the presence of properties, which may have been impacted by hazardous materials or wastes, and to document, with respect to the California Environmental Quality Act (CEQA), the significance of impacts from the project area with respect to hazardous materials and wastes, and to discuss measures that can be implemented to reduce or mitigate the potential impacts. This report addresses existing environmental conditions in the project area, to assist the planning process with future land use changes that may be affected by hazardous materials or wastes.

2. SCOPE OF WORK

Ninyo & Moore's scope of work for this HMTS included the activities listed below.

- Reviewed readily available maps (e.g., topographic, geologic, etc.) and environmental reports pertaining to the project area. Documented the existing environmental setting based on available information.
- Performed a project area reconnaissance to document areas of readily apparent, possibly contaminated surficial soil or surface water, improperly stored hazardous materials and wastes, possible sources of polychlorinated biphenyls (PCBs), and possible sources of contamination from activities in the project area and adjacent properties.
- Reviewed readily available historical documents, including aerial photographs, Sanborn© Fire Insurance Maps (Sanborn maps), reverse city directories, and topographic maps, to document the presence or likely presence of hazardous materials or wastes.

- Documented the locations of sensitive receptors such as schools and daycare facilities within the project area and on abutting properties.
- Reviewed federal, state, and local regulatory agency databases for the project area and vicinity to American Society for Testing and Materials (ASTM) standard search distances. The purpose of this review was to document the locations of facilities with unauthorized releases of hazardous materials or wastes to soil and/or groundwater as well as the regulatory status, where available.
- Reviewed the State Water Resources Control Board (SWRCB) GeoTracker website and the California Department of Toxic Substances Control (DTSC) EnviroStor website, to supplement information in the database report and provide a brief description of open unauthorized release cases, regulatory status and/or contaminated properties in the project area vicinity.
- Reviewed readily available local regulatory agency files for the project area and nearby properties of potential environmental concern.
- Evaluated the findings with respect to Questions A, B, and D of Section 8, “Hazards and Hazardous Materials” within Appendix G, “Environmental Checklist Form” of the “Guidelines for Implementation of CEQA.”
- Prepared this HMTS report documenting findings and providing opinions and recommendations regarding possible environmental impacts to the project area from potential releases of hazardous materials or wastes and potential impacts from hazardous materials or wastes from implementation of the Community Plan. Provided programmatic and mitigation measures for identified impacts, where applicable.

The following, which is not intended to be all inclusive, represents out-of-scope items with respect to this HMTS, and, therefore, were not addressed: human health risk assessment, asbestos-containing materials, underground pipelines, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic risk, industrial hygiene, health and safety, ecological resources, endangered species, mold, indoor air quality (including vapor intrusion), underground pipelines, and high-voltage power lines. In addition, Ninyo & Moore will not address interpretations of zoning regulations, building code requirements, or property title issues.

3. PROJECT PURPOSE AND PROJECT AREA DESCRIPTION

The City of San Diego is preparing a comprehensive update of the Midway and Old Town Community Plans. The purpose of the Community Plan Update is to reflect the long-term vision for these communities.

The adjacent communities of Midway and Old Town comprise approximately 1,187 acres located in the City of San Diego. These communities are generally bounded to the east by Juan and Taylor Streets; to the north by I-8; to the west by Midway Drive, Barnett Avenue and Pacific Hwy; and to the south by Laurel Street (Figures 1 and 2).

3.1. Midway Community

The Midway community is situated north of the area between Old Town and Peninsula. Midway encompasses approximately 902 acres and includes approximately 3,900 residents (SANDAG, 2010). Although the majority of land use in the Midway community is non-residential, a few multi-family residential complexes are located in the western portion, adjacent to the Peninsula community. The Midway community is comprised of two distinct geographic elements: the Central Midway Area and the narrow Pacific Hwy Corridor.

3.1.1. Central Midway Area

The Central Midway Area comprises the portion of Midway north of Barnett Avenue and Witherby Street (Figure 3). This area consists of numerous shopping centers and institutional facilities. The main focal point of the Central Midway Area is the San Diego Sports Arena. Significant industry in the Central Midway Area includes the Navy's approximately 60 acre Space and Naval Warfare Systems Command (SPAWAR) and West Coast In-Service Engineering Division (NISE West) facilities, located east of Pacific Hwy, west of the railroad tracks, south of Rosecrans Street, and north of Witherby Street. This facility has been used for various aircraft, rocket and missile assembly from approximately 1950 to 1970 by Consolidated Vultee Aircraft Corporation (later known as Convair Aircraft Manufacturing), and the Navy since the 1970s.

3.1.2. Pacific Highway (Hwy) Corridor

The Pacific Hwy Corridor is located south and east of the Central Midway Area, located between I-5 on the northeast, Lindberg Field and Pacific Hwy on the southwest, Laurel Street to the south, and Witherby Street to the north (Figure 4). The Pacific Hwy Corridor contains industrial facilities historically supporting aviation services. More recent development includes conversion of industrial buildings to residential and mixed-use facilities, as well as the recently developed Veterans Village of San Diego (VVSD).

3.2. Old Town Community

The Old Town Community contains approximately 285 acres and is bounded on the north by I-8 and Mission Valley, to the west by I-5, and on the south and east by the Mission Hills/Uptown hillsides (Figure 5). Land use in Old Town is commercially oriented towards the visitor industry. Old Town consists of single and multi-family uses (approximately 700 residents), restaurants, retail shops, offices, parks and museums (SANDAG, 2010). Parklands include Old Town State Park, Presidio Park, and Heritage Park. Old Town also includes a major rail transit station and the CalTrans District 11 Headquarters.

4. ENVIRONMENTAL SETTING

The following sections include discussions of the general topographic, geologic, and hydrogeologic conditions within the project area.

4.1. Topography

Based on the United States Geological Survey (USGS), the Central Midway Area is relatively flat at an elevation of approximately 10 feet above mean sea level (MSL). The Loma Portal Hills are located southwest of the Central Midway Area. The Pacific Hwy Corridor elevation ranges from approximately 20 to 40 feet above MSL, sloping from I-5 towards Lindbergh Field (the San Diego airport). The Old Town Community ranges in elevation from approximately 10 to 20 feet above MSL, near the I-5/I-8 interchange, to approximately 160 feet above MSL at Presidio Park (USGS, 1994; USGS, 1996). The San Diego River and associated Mission Valley are present on the north side of I-8.

4.2. Geology

The Midway community and the western portion of the Old Town community are underlain by artificial fill. The eastern portion of the Old Town area is underlain by very old, undivided, paralic deposits. Areas of landslide deposits are located near the north-central portion of the Old Town area (California Geological Survey, 2008). A more detailed analysis of geologic conditions, including faults, landslides, or other geologic hazards, was not part of the scope of work for this HMTS.

4.3. Surface Waters

The San Diego River is located along the northern boundary of the project area, to the north of I-8. According to the Regional Water Quality Control Board (RWQCB) Water Quality Control Plan for the San Diego Basin, the San Diego River has been assigned beneficial uses for municipal, agricultural, industrial process, industrial service, recreational uses, and wildlife habitat (RWQCB, 2007). A Navy boat channel is located to the south of Lytton Street and Barnett Avenue.

4.4. Groundwater

According to the RWQCB Water Quality Control Plan for the San Diego Basin, the project area is situated within several hydrologic areas, including:

- Lindbergh Hydrologic Subarea of the San Diego Mesa Hydrologic Area, within the Pueblo San Diego Hydrologic Unit (on the southern portion).
- Point Loma Hydrologic Area within the Pueblo San Diego Hydrologic Unit (on the western portion).
- Mission San Diego Hydrologic Sub-area of the Lower San Diego Hydrologic Area within the San Diego Hydrologic Unit (on the eastern portion).

According to the Water Quality Control Plan, there are no existing or potential beneficial uses of groundwater in the Lindbergh Hydrologic Subarea or Point Loma Hydrologic Area. Existing beneficial uses for groundwater in the Mission San Diego Hydrologic Sub-area include agricultural, industrial service supply, and industrial process supply (RWQCB, 2007).

Based on research conducted for properties within the project area (obtained from Geo-Tracker and previously prepared in-house reports), groundwater is present at relatively shallow depths and generally follows local topography. Groundwater appears to flow to the west in the vicinity of Old Town (influenced by Mission Hills), to the north to northeast in the vicinity of the Central Midway Area (influenced by Loma Portal Hills), and towards the southwest along the Pacific Hwy Corridor (towards San Diego Bay). Depth to groundwater also appears to be affected by the presence of these local hills. Groundwater has been encountered on the southern portions of Old Town between 32 to 38 feet below grade, on the Pacific Hwy Corridor between 10 and 20 feet below grade, and on the northern portions of the Central Midway Area between 7 and 11 feet below grade.

5. PROJECT AREA HISTORY

The following sections discuss the general historical development of the project area, as noted during a review of historical aerial photographs, topographic maps, Sanborn maps and city directories.

In general, more intense development in the project area began in the 1800s, with the residential and commercial development of the present day Old Town Area. Aircraft manufacturing and related military facility development along Pacific Hwy and the Central Midway Area coincided with World War II, and included development of the present day SPAWAR facilities. This period also saw major roadway development in the project area, facilitated by construction of a sea wall along the northern portion of the Central Midway Area. Increased industrial development along major roadways and residential development in outlying areas also coincide with World War II. The Sports Arena was present by 1962. Construction of the I-5 and I-8 freeways began in the 1960s.

5.1. Aerial Photographs

Review of aerial photographs is useful in evaluating general land usage, such as residential, commercial, agricultural, or industrial use. Aerial photographs for the years 1953, 1964, 1972, 1981, 1990, 2003, and 2005 were reviewed online at www.historicaerials.com. In general, dense commercial, industrial, and residential development has been present within the project area since at least 1953. By 1972, I-5 and I-8 were present, and the majority of roads had been constructed in their present-day configuration.

The Central Midway Area was primarily developed with residential properties since at least 1953, which were gradually replaced by commercial and industrial facilities. By 1964, the San Diego Sports Arena was present, along with commercial and industrial buildings. The Pacific Hwy Corridor was developed with large industrial buildings since at least 1953. The Old Town community was densely developed with residential and commercial development and parks since at least 1953.

5.2. Topographic Maps

The USGS La Jolla Quadrangle topographic maps dated 1903, 1943, and 1953 were reviewed to evaluate the presence of facilities of potential environmental concern. Due to the small scale of these maps, individual property features were generally not depicted, however, the overall development of the project area was apparent.

In 1903, railroad tracks were depicted in their present location. Pacific Hwy, from the San Diego River to the south, was present in its current location. Several streets and small structures were depicted in Old Town. The roadway presently known as Morena Boulevard appeared to cross the San Diego River. The roadway presently known as Camino Del Rio appeared to parallel the San Diego River to the south, in the vicinity of Old Town. Rosecrans Street was apparent southwest of Pacific Hwy. The project area was denoted as Old Town.

In 1943, Pacific Hwy extended to the north, beyond the San Diego River. Presidio Park and the Junipero Serra Museum were depicted in Old Town. Portions of Sports Arena Boulevard were depicted as an unimproved roadway. Midway Drive was identified as Mission Bay Causeway. Fremont School was depicted on Congress Street. The airport was depicted south of Rosecrans Street.

In 1953, Camino del Rio extended to Rosecrans Street. Pacific Hwy was depicted as four lanes north of Camino del Rio and six lanes south of Camino del Rio. The present day SPAWAR facilities were depicted between the railroad tracks and Pacific Hwy. A seawall was depicted along the northern portion of the Midway community along with additional roadways. Sports Arena Boulevard was known as Frontier Street. Frontier School was depicted in the western parking lot of the present day Sports Arena Complex. Barnard School, Midway School, and George Dewey School were depicted south of Midway Drive.

5.3. Sanborn Fire Insurance Maps

Select Sanborn maps on file at Ninyo & Moore or provided by EDR were reviewed for the project area, where available. A summary of notable environmental conditions is presented in the table below.

Table 1 – Summary of Sanborn Maps by Street

Street Number	Notable Environmental Conditions	Year(s)
Camino Del Rio		
3212	Gas and oil, and auto repair facilities depicted on the eastern corner of Camino Del Rio and Moore Street.	1958
Unaddressed	Auto repair facility depicted on the 3500 block of Camino Del Rio between San Diego Avenue and Congress Street.	1965
3711	Gas and oil facility depicted on the east side of Camino Del Rio between Hancock Street and Moore Street.	
3810, 3846	Gas and oil facility depicted on the northwest corner of Camino Del Rio and Kurtz Street in 1958, and an additional auto repair facility in 1965.	1958, 1965
Congress Street		
3119	Sheet metal and shop facility	1958
3210	Auto repair and auto body facility depicted on the northern corner of Congress Street and Riley Street.	1958, 1965

Table 1 – Summary of Sanborn Maps by Street

Street Number	Notable Environmental Conditions	Year(s)
Couts Street		
3684	Machine shop depicted on the southwest corner of Couts Street and Kurtz Street.	1958, 1959, 1965
Estudillo Street		
3715	Rio Grande Oil Co was depicted on the central portion of the east side of Estudillo Street in 1950 and 1956. Three gasoline tanks were depicted on the southeastern corner of the property and an oil warehouse was depicted on the northern portion of the property. Similar features were depicted in the 1958 and 1959 maps under the name of Armour Oil Co. The 1965 map depicts three additional gasoline tanks but does not indicate a business name.	1950, 1956, 1958, 1959, 1965
Frontier Street		
3150	Gas and oil facility depicted west of Camino Del Rio and Frontier Street intersection.	1958, 1965
Gaines Street		
3985	Auto repair facility depicted with gasoline tanks and a pump house. The facility was located between Congress Street and San Diego Avenue.	1950, 1958, 1965
Hancock Street		
Unaddressed	San Diego Gas & Electric gas regulating plant depicted on the southeast corner of Hancock Street and Witherby Street.	1965
Kurtz Street		
2196	Chemical warehouse depicted on the southwest corner of the intersection of Witherby Street and Kurtz Street.	1956, 1958, 1959, 1965.
2166 or 2170	Adjacent to the chemical warehouse to the east was a structure labeled “dry cleaning & laundry supplies.”	1958, 1959, 1965
Lytton Street		
2844	Property depicted on the northeast side of Lytton Street between Rosecrans Street and St. Charles Street was developed with a gas and oil station in 1950 and 1958, and an auto repair facility in 1965.	1950, 1958, 1965
2846	Auto body paint shop	1958
2902	Gas and oil facility	1965
2916, 2918	Auto repair facility	1950, 1958

Table 1 – Summary of Sanborn Maps by Street

Street Number	Notable Environmental Conditions	Year(s)
Midway Drive		
2754	Gas and oil facility	1965
2811	Gas and oil facility depicted southeast of Rosecrans Street.	1965
3002	Gas and oil facility depicted on the northwest corner of Midway Drive and Rosecrans Street.	1958, 1965
3003	Auto sales and service facility depicted on the southwest corner of Midway Drive and Rosecrans Street.	1965
3020	Auto repair facility	1965
3164	Auto repair facility depicted west of the Midway Drive and Riley Street intersection.	1958, 1965
3166	Gas and oil facility	1958, 1965
3170	Auto repair facility	1958
3189	Gas and oil facility	1965
3800	Auto repair facility	1958
3838	Gas and oil facility depicted on the eastern corner of Frontier Street and Midway Drive.	1958, 1965
Moore Street		
2075	Spray painting depicted on the southern portion of the “electric brooder factory.”	1956, 1958, 1959
3206	Auto repair facility depicted on the north corner of Riley Street and Moore Street.	1965
Pacific Hwy		
3939	Gas and oil facility depicted on the northeast corner of Pacific Hwy and Estudillo Street.	1950 and 1956
3985	Gas and oil facility located on the northeast corner of Wright Street and Pacific Hwy.	1950 and 1956
4085 - 4091	A “cleaning laundry” was depicted on the eastern portion of the building, on the northeast corner of Pacific Hwy and Coutts Street.	1958, 1959, 1965
4149	Gas and oil facility depicted on the northeast corner of Witherby Street and Pacific Hwy.	1940, 1950, 1956
4300 block	Consolidated Vultee Aircraft Corporation in 1950, and later occupied by Convair Aircraft Manufacturing in 1958 and 1965. Activities depicted include machine shop, tool manufacturing, paint spray, metal treating, boiler house, auto repair building, gas and oil facility at 4306 Pacific Hwy.	1950, 1958, 1965
4535	San Diego County Operations Center, warehouses and shop buildings including auto repairs.	1950, 1958, 1965
4594	Oil and gas facility, located on southern corner of Pacific Hwy and Rosecrans intersection.	1940, 1950, 1958
4597	Oil and gas facility, located on eastern corner of Pacific Hwy and Rosecrans intersection.	1940
4602 or 4620	Oil and gas facility, located on northern corner of Pacific Hwy and Rosecrans intersection.	1940, 1950, 1958
4615, 4639, 4649	U.S. Navy Warehouses	1950, 1958, 1965

Table 1 – Summary of Sanborn Maps by Street

Street Number	Notable Environmental Conditions	Year(s)
Riley Street		
3944	Aluminum Foundry & Machine Shop depicted on the west corner of Riley Street and Congress Street.	1958
Rosecrans Street		
3405, 3411	Gas and oil station depicted on the south corner of Rosecrans Street and Midway Drive. An auto wash facility was depicted adjacent to the southwest at 3405.	1958, 1965
3647	Gas and oil facility and incinerator, depicted southeast of Rosecrans Street, along Frontier Street.	1958, 1965
3760	Auto painting facility depicted on northern corner of Rosecrans Street and Kurtz Street.	1950
4004	Gas and oil facility, between Pacific Hwy and Taylor Street.	1950, 1958, 1965
San Diego Avenue		
2250 or 2254	Unidentified facility with "gas and oil in yard," depicted on north corner of Hortensia Street and San Diego Avenue.	1958, 1965
2870	Gas and oil facility depicted on the east corner of Rosecrans Street/Taylor Street and San Diego Avenue.	1940, 1950, 1958, 1965
Taylor Street		
4024, 4070, 4080	State Highway Department Maintenance Yard and Shops, between Juan Street and ATASF railroad tracks.	1940, 1950, 1958, 1965
4100	Gas and oil facility depicted on the north corner of Taylor Street and Juan Street.	1950
Unaddressed	Auto repair facility, between Chestnut Street and Whitman Street.	1965
Wright Street		
3590	Spray painting was depicted on the southwest corner of Kurtz Street and Wright Street.	1965

5.4. City Directories

Available city directories on file at Ninyo & Moore were reviewed for Pacific Hwy and Sports Arena Boulevard within the project area, where available. A summary of notable listings is presented below.

Table 2 – Summary of City Directories by Street

Street Number	General Listing	Year(s)
Pacific Hwy		
Years Reviewed: 1940, 1945, 1955, 1960, 1970, 1975, 1980, 1985, 1990, 1993, 1995, 2003, 2005		
2535, 2843, 3305, 3355, 3359, 3682, 3743, 3753, 3787, 3939, 4090, 4144, 4149, 4176, 4185, 4594, 4597, 4602, 4714	Gas Station/ Service Station/ Oil Company	1940
2843, 3625, 3743, 3787, 3939	Gas Station/ Service Station	1945
2521	Garrett's Union Service Stivers Shell	1955-1970 1975-2005
3743, 3935, 4159, 4636	Gas Station/ Service Station	1955
2905, 4306, 4594, 4620, 4636	Gas Station/ Service Station	1960
4606	Gas Station/ Service Station	1970
3555, 4306, 4606,	Gas Station/ Service Station	1980
3555, 4306, 4606, 4903	Gas Station/ Service Station	1985
3565, 4005	Gas Station/ Service Station	1995
3565, 3569, 4005	Gas Station/ Service Station	2003
3565, 4005, 4035	Gas Station/ Service Station	2005
3605 (Jet Chem Co Mfg), 4081 (Chemisphere Inc chem. mfr)	Chemical mfg	1960 1960
3165 (1945-1960), 3090 (1970), 3150 (1985-1993), 3302 (1945-1995)	Consolidated Vultee Aircraft Corp/ General Dynamics Corp	1945-1995
3885 (Don's Photo Services) 3885 (Affordable Printing Services)	Photo Services	1970-2003 2005
4085 (Pacific Services) 4955 (Belmont Laundry)	Dry Cleaners	1970-2003 1975-1985
4297	Navy Lockheed Martin	1970-1995 2003-2005
4301	Navy	2003
4901 (ERJ Plastics, Precision Plastics)	Plastics	1980-1985
3923	Coatings, Sandblasting	
Limited coverage for Pacific Hwy available for the following years: 1945 (thru 4139), 1965 (thru 2980), 1975 (thru 3957), 1990 and 1995 (thru 4297)		
Sports Arena Boulevard		
Years Reviewed: 1968, 1970, 1975, 1980, 1985, 1990, 1995, 1999, 2004		
2911	Preston Auto Body Shop Westwerk Auto	1980 1985
3106	Earl Scheib Auto	1968
3145	Earl Scheib Auto	1970
3174	Save-Co Cleaners Cal Stores Cleaners	1968 1970
3176	Cal Stores Automotive Center tires and gas station	1975
3589	Dorman's Inc tires and brakes, sales and service	1975-1990
3640	Union Oil Service	1968, 1970
3655	Evans Tire & Service Centers	2004
4109	All Pro Paint & Body	2004
Limited coverage for Sports Arena Boulevard available for the following years: 1975 (beginning 3176), 1990 (beginning 1990)		

6. ENVIRONMENTAL DATABASE SEARCH AND REGULATORY INFORMATION

Computerized, environmental information database searches were performed by EDR. The EDR search included federal, state, and local databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted sites of environmental concern, is presented in the associated EDR reports along with a complete description of the assumptions and approach to the database search. The databases searched and their respective search radii were generally consistent with those described in the ASTM Standard for Phase I Environmental Site Assessments (ESAs) and the United States Environmental Protection Agency (EPA) All Appropriate Inquiry (AAI) regulation.

The review was conducted to evaluate whether properties within the project area or properties within a specified distance of the boundaries of the project area have been identified as having experienced unauthorized releases of hazardous substances or other events with potentially adverse environmental effects. The database report was completed on January 17, 2011. The Executive Summary, along with an electronic copy of the entire database report is provided in Appendix A.

The database search identified numerous properties of potential environmental concern on various databases. In addition, unmapped properties were identified in the vicinity of the project area. Some of these unmapped listings were properly addressed in other databases and are discussed below (includes SPAWAR, Air Force Plant #19, Public Auto Service, and Old Town Burn Dump). Based on the address information provided and/or the types of databases on which the remaining unmapped properties were listed, there is a low likelihood that the environmental integrity of the project area has been adversely affected by these off-site sources.

Facilities and/or properties are identified in the database report by their business name, address and/or an EDR Map ID number, where available. A total of 307 Map IDs were assigned by EDR, which includes properties up to one mile from the project area boundary. Some of the Map IDs refer to different street addresses in close proximity to each other. Of these 307 map locations, approximately 195 Map IDs were mapped within the project area, 25 were mapped to the north, 20 to the east, 37 to the south, and 30 to the west, as follows:

Location	Map ID Numbers
Central Midway Area	26, 28, 29-34, 36, 40-46, 48-52, 54, 57, 59, 60, 62, 63, 67-75, 77-81, 83, 85-87, 90, 92, 93, 95-97, 99, 100, 102, 103, 106, 109, 110, 113, 115, 120-122, 124, 125, 129-131, 133, 134, 136-140, 142, 146, 147, 151, 153, 154, 156, 158, 159, 161-167, 170-172, 175, 176, 178, 180, 182, 186-188, 191, 192, 194, 196, 197, 198, 201, 205, and 209
Pacific Hwy Area	168, 169, 173, 174, 177, 179, 181, 183, 185, 189, 190, 193, 203, 206-208, 210-215, 217, 218, 220, 223, 224, 227, 229, 230, 233, 235, 241, 244, 248, 250-258, 260, 262, 265, and 266
Old Town	27, 35, 37-39, 53, 56, 58, 64-66, 82, 89, 94, 101, 105, 107, 108, 111, 114, 116-119, 123, 126, 128, 132, 144, 145, 148, 149, 155, and 157
North of the project area	1-25
East of project area	47, 91, 127, 143, 152, 160, 195, 199, 202, 216, 219, 221, 228, 231, 232, 237, 243, 245, 263, and 264
South of Laurel Street	267, 268, 270, 271, 273, and 276 - 307
West of Pacific Hwy and Barrett Avenue	55, 61, 76, 84, 86, 88, 98, 104, 112, 135, 141, 150, 184, 200, 204, 222, 225, 226, 234, 236, 238-240, 242, 246, 247, 249, 253, 259, and 261.

Properties with Map IDs 1-21 are located on the north side of the San Diego River and are separated from the project area by this natural hydrogeologic divide. As such, releases at these 21 properties are not anticipated to impact the groundwater quality within the project area.

Based on reports reviewed during this assessment, groundwater flows to the west in the vicinity of Old Town (due to Mission Hills), to the north to northeast in the vicinity of the Central Midway Area (due to the Loma Portal Hills), and towards the southwest along the Pacific Hwy Corridor (towards San Diego Bay). As such, properties to the east of the project (in Old Town) area and properties south of Midway Drive and Lytton Street (in the Central Midway Area) are located in the presumed upgradient location.

The following paragraphs describe the individual databases that identified properties of potential environmental concern, and includes a discussion of the regulatory status of the facilities and potential environmental impact to the project area.

FEDERAL RECORDS

EPA Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) List

The CERCLIS database contains data on potentially hazardous waste sites that have been reported to the EPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

One property within the project area was listed: SPAWAR (AF Plant 19), located at 4297 Pacific Hwy, Building 3 (Map ID 139). Two properties were listed west of the project area (Marine Corp and Naval Training Center, Map IDs 236 and 242), in presumed downgradient locations.

SPAWAR (also referred to as NISE-West), is listed as a federal facility, which is not on the NPL. Site discovery was completed in 1995.

EPA CERCLIS No Further Remedial Action Planned (NFRAP) List

The CERCLIS NFRAP database contains sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a property has been completed and that the EPA has determined no further steps will be taken to list the property on the NPL. This decision does not necessarily mean that there is no hazard associated with a given site, it only means that, based upon available information, the location is not judged to be a potential NPL site.

Seven properties within the project area were listed. Each of these facilities were not federal facilities or listed on the NPL. A summary of these facilities is provided below.

- Sackett & Pendlebury Boat Builders, located at 3630 Hancock Street, Map ID 29: Discovery completed in 1987, preliminary assessment completed in 1990 - NFRAP, archived in 1990. According to the Envirostor database, the property was developed in 1980 with four warehouses for rent. From 1980 to 1983, Sackett & Pendlebury rented office space. Actual boat building was performed across the street, at Clark Custom Boats. This property was not listed on any other databases. There is no indication of a release at this location.
- The Burke Company 08, located at 3870 Houston Street, Map ID 42: Discovery completed in 1987, preliminary assessment completed in 1988 - NFRAP, archived in 1988. The CalSites validation program confirmed NFRAP in 1994.
- Don Pollock Excavating, located at 3370 Kurtz Street, Map ID 77: Discovery completed in 1987, preliminary assessment completed in 1988 - NFRAP, archived in 1988. This property was not listed on any other database. There is no indication of a release at this property.

-
- Fogerty Oil Company, located at 3148 Midway Drive, Map ID 131: Discovery completed in 1984, preliminary assessment completed in 1985, assigned low priority for further assessment, subsequent preliminary assessment completed in 1988 - NFRAP, archived in 1988. This address is the subject of an open LUST case (under Poor Boy Rental). See below for further information.
 - American Agar & Chem Company, located at 1751 Hancock Street, Map ID 214: Discovery completed in 1987, preliminary assessment completed in 1988 - NFRAP, archived in 1988. This address is also listed in the LUST database (case closed). According to the Envirostor database, stained soil was observed at the property during the Site Screening. The DEH reportedly oversaw cleanup activities and the property was redeveloped (prior to 1994).
 - Baron-Blakeslee Division of Purex, located at 3596 California Street, Map ID 227: Discovery completed in 1986, preliminary assessment completed in 1986, assigned low priority for further assessment, subsequent preliminary assessment completed in 1988 - NFRAP, archived in 1988. See the CORRACTS section below for additional information on this property.
 - Neyenesch Printers Incorporated, located at 2750 Kettner Boulevard, Map ID 260: Discovery completed in 1987, preliminary assessment completed in 1988 - NFRAP, archived in 1988. This facility is also identified as a RCRA-LQG and in the WDS database (discussed below). There is no indication of a release at this property.

An abutting property was listed:

- General Dynamics Convair Division, located at 3302 Pacific Hwy, Map ID 247: Discovery completed in 1986, preliminary assessment completed in 1986 - NFRAP, archived in 1986. Site reassessment performed in 2007, priority level not reported. This property is located downgradient of the project area and is presently used as an at grade parking lot.

Four properties were listed on the CERCLIS NFRAP database outside the project area: Map IDs 278, 287, 292, and 300, located south (downgradient) of the project area.

EPA RCRA Corrective Action (CORRACTS) Facilities List

CORRACTS is a list of handlers with Resource Conservation and Recovery Act (RCRA) Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

One facility was identified in the project area: Baron-Blakeslee Division of Purex, located at 3596 California Street, Map ID 227, and discussed below. Two properties were listed on the CORRACTS database outside the project area: Map IDs 278 and 287, located south (downgradient) of the project area.

Baron-Blakeslee Division of Purex was identified in the CORRACTS database as a hazardous waste treatment and disposal facility. According to the database report, there are two parcels of land located across the street from each other, known as North and South Parcels. The North Parcel contained a solvent tank farm with 13 above ground storage tanks (ASTs) and one UST. The South Parcel contained the main facility operations and included a distillation unit area, a storm/wash water tank area and a Container Storage Area (CSA). Multiple RCRA Facility Assessments (RFAs) and RCRA Facility Investigations (RFIs) were approved for the entire facility, the North Parcel, the tank farm, and/or the South Parcel in the 1990s and early 2000s. The entire facility was assigned a low corrective action priority in 1988 and 1992.

Other database information indicates that the facility was a former solvent recycling facility that accepted both halogenated and non-halogenated solvents. Waste solvent was processed by distillation to reclaim the solvents as usable product. The facility received a Hazardous Waste Facility Permit in November 1992, however, closed one month later. The DTSC approved the facility closure plan as part of the permit approval process. The closure process was implemented in 1993. The facility was certified closed in October 1994, with the exception of the CSA, where underlying soils were impacted with chlorinated solvents.

Several rounds of soil and groundwater sampling were performed between 1993 and 1996. Soils and groundwater on both the North and South Parcels were found to be contaminated with halogenated volatile organic compounds (VOCs), particularly tetrachloroethene (PCE) and trichloroethene (TCE). Soil gas surveys were performed in 2003 and 2004 to evaluate the indoor air pathway and risk to human health. Results of the studies indicated that VOC levels were above indoor air standards and would require engineering controls on any future building on the site.

On the North Parcel, a leak from a sump at the tank farm released PCE and TCE to underlying soils. Seven groundwater monitoring wells were installed and quarterly groundwater monitoring was initiated. The November 2006 sampling results indicated PCE up to 9 milligrams per liter (mg/ℓ) and TCE up to 76 mg/ℓ. Concentrations of 1,4-dioxane have also been reported. A soil vapor extraction (SVE) pilot test was underway in 2008. This location is presently developed with an at grade parking lot.

In April 2008, the facility submitted a proposal to develop the South Parcel as an airport parking facility (no buildings).

EPA RCRA Treatment, Storage and Disposal Facilities (TSDF) List

The RCRA TSDF database contains selective information on sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store or dispose of the wastes.

One facility was identified in the project area: Baron-Blakeslee Division of Purex, located at 3596 California Street, Map ID 227. See the above CORRACTS section above for historical details on this property. This business is no longer in operation at this location.

Three properties were listed on the RCRA TSDf database outside the project area: Map IDs 278, 283 and 287, located south (downgradient) of the project area.

EPA RCRA Generator List

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database identifies facilities that report generation of reportable quantities of hazardous waste under the RCRA program for the identification and tracking of hazardous waste. The list consists of properties that generate hazardous waste, and is not necessarily indicative of sites where a release of hazardous substances has occurred.

Large Quantity Generators (LQG) generate over 1,000 kilograms of hazardous waste or over 1 kilogram of acutely hazardous waste per month. Four facilities within the project area and four facilities outside the project area were identified. Facilities within the project area include:

- SPAWAR (AF Plant 19), located at 4297 Pacific Hwy, Bldg 3, Map ID 139 (active facility, see Historical Calsites section)
- Baron-Blakeslee Division of Purex, located at 3596 California Street, Map ID 227 (no longer operating at this address, see CORRACTS section)
- Neyenesch Printers Incorporated, located at 2750 Kettner Boulevard, Map ID 260 (see CERCLIS-NFRAP section, no documented release)
- Shell Service Station, located at 2521 Pacific Hwy, Map ID 266 (closed LUST case, see below)

Small Quantity Generators (SQG) generate between 100 and 1,000 kilograms of hazardous waste per month. A total of 67 listings were identified within the project area and 18 listings were identified outside the project area. Note that several of the addresses were listed more than once.

Conditionally Exempt Small Quantity Generators (CESQG) generate less than 100 kilograms of hazardous waste, or less than 1 kilogram of acutely hazardous waste per month. One facility outside the project area was listed.

Non-Generators do not presently generate hazardous waste. Twelve facilities within and five facilities outside of the project area were listed.

EPA Emergency Response Notification System (ERNS) Database

The ERNS database records and stores information on reported releases of oil and hazardous substances.

Eleven ERNS listings were identified in the project area.

- 3760 Hancock Street, Map ID 34. A caller reported that World Forklift Locators was taking old forklift batteries (2600 pounds) out on his boat and dumping the contents in the ocean, during the past couple years. Given the release description, the reported releases do not appear to apply to the project area.
- 4200 Taylor Street, Map ID 35. A small quantity of sodium hydroxide was spilled while making soap.
- 3992 Rosecrans Street, Map ID 65. An unspecified quantity of petroleum solvent was released to the storm drain. The storm drain was pumped by City.
- 3200 Hancock Boulevard, Map ID 78. One gallon of isobutyl alcohol and one gallon of ethyl alcohol was abandoned. No release was reported. Containers were removed by a disposal contractor.
- 3112 Midway Drive, Map ID 131. A caller reported that the September 10, 2007 fire at an auto repair facility caused water run off to enter a storm drain that discharges to the San Diego River.
- 3860 Old Town Avenue, Map ID 148. A gasoline spill (6 gallons) was reported on July 12, 2007 from a hole in the fuel tank of a passenger car. Cleanup was reportedly completed.
- 4297 Pacific Hwy, Map ID 165. A 500 parts per million (ppm) PCB wall unit fan reportedly blew in 1992. General Dynamics was to perform clean up.
- 3535 Enterprise Drive, Map ID 171. A resident reportedly washed approximately 10 gallons of a mixed waste solvent (adhesive remover) to the street. Waste was reportedly generated while removing tile from a floor.
- 2074 Hancock Street, Map ID 179. Asbestos contaminated soil was going onto the sidewalk during cleanup activities. The cleanup was reportedly monitored by the County Department of Health (CODOH).
- 1429 West Palm Avenue, Map ID 257. An unknown material was found in hollow core doors after a fire, later identified as 8% asbestos. CODOH monitored cleanup.
- 1101 West Laurel Street, Map ID 275. An unspecified quantity of TCE was released during a business fire. Materials spilled and burned. No waterways were affected. CODOH monitored cleanup.

The above ERNS listings appeared to be minimal in nature and were cleaned up, as appropriate. These releases are considered insignificant.

Four ERNS listings were identified on abutting properties (downgradient of the project area):

- 3698C Pacific Hwy, Map ID 240. In 2008, a caller reported a leak in a pipe connected to a storage tank. Approximately 200 gallons of jet fuel were released to the ground and the storm drain. Booms were reportedly applied and the released materials cleaned up.
- 3302 Pacific Hwy (Pacific Treatment Company), Map ID 247:
 - An estimated 300 gallons of chromic acid wash was released from the vacuum truck due to operator error. Cleanup was performed.
 - An estimated 150 gallons of rinse water containing 1.8 ppm chrome was released to the storm drain due to overflow on rinse line sump. Cleanup was performed.
 - Five gallons of 1% 2-butoxyethanol, a steam cleaning agent, was spilled by workers doing cleanup at plant. No action was required.

EPA Hazardous Materials Incident Report System (HMIRS) Database

The HMIRS contains hazardous material spill incidents reported to the Department of Transportation (DOT).

Five HMIRS listings were identified in the project area.

- 2221 West Washington (Federal Express), Map ID 217. Four separate reports regarding various damaged or leaking packages were recorded. Leaking containers were placed into salvage drums. Reported releases were minor in nature, cleaned up and are not anticipated to impact the site.
- 1411 West Palm, Map ID 257. A vapor release of ethylene dichloride was reported.

Department of Defense (DOD) List

The DOD list consists of federally owned or administered lands, administered by the DOD, that have any area equal to or greater than 640 acres.

The San Diego Naval Submarine Base was identified southwest (downgradient) of the project area.

EPA Toxic Chemical Release Inventory System (TRIS) List

The TRIS list identifies facilities that release toxic chemicals to the air, water, and land in reportable quantities under the Superfund Amendments and Reauthorization Act (SARA) Title III, Section 313.

Solar Turbines International, located at 2200 Pacific Hwy, Map ID 287, was identified south (downgradient) of the project area.

EPA FIFRA/TSCA Tracking System (FTTS)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), Toxic Substance Control Act (TSCA), and the Emergency Planning and Community Right-to-Know Act (EPCRA) over the previous five years. A historical FTTS database tracks cases older than five years.

Five FTTS listings were identified in the project area.

- San Diego County Health Dept, located at 3851 Rosecrans Street, Map ID 85. A FIFRA inspection was performed in 1990; no violations were noted.
- Design for Health Training Center, 3574 Kettner Boulevard, Map ID 230. A TSCA lead, section 402 inspection was performed in 2005; no violations were noted.
- San Diego Unified Port District, located at 3165 Pacific Hwy, Map ID 251. A TSCA lead, section 1018 inspection was performed; no violations were reported.
- Jesses Plating, located at 2680 Kettner Boulevard, Map ID 262:
 - A TSCA PCB inspection was performed in 1994; no violations were reported.
 - An EPCRA violation was reported in 1991 for failure to report to the EPA.

None of these listings were indicative of an unauthorized release within the project area.

One FTTS was identified on an abutting property.

- General Dynamics Corp, located at 3202 Pacific Hwy, Map ID 250. A 1985 TSCA PCB inspection was performed based on a citizen complaint; a violation was reported.

One historical FTTS was identified south of the project area.

Integrated Compliance Information System (ICIS)

The ICIS supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Two ICIS listings were identified in the project area and one listing was identified on an abutting property. Civil judicial actions were brought against CalTrans District 11 (Map ID 56) and General Dynamics Corporation (Map ID 247). An EPCRA 325 Action for Penalty was brought against Jesses Plating (Map ID 262).

Facility Index System

The FINDS database contains both facility information and points to other sources of information that contain more detail (FIFRA, TSCA, CERCLIS, TRIS).

A total of 137 FINDS listings were identified, of which 26 were outside the project area. The FINDS database does not generally contain pertinent information regarding releases. Please refer to the database report for further FINDS information.

STATE AND LOCAL

DTSC Historical Cal-Sites

Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. This list is no longer updated by the DTSC and has been replaced by ENVIROSTOR.

One facility within the project area was identified:

San Diego NISE-West, located at 4297 Pacific Coast Hwy, Map ID 165, was identified as a DTSC Annual Workplan (AWP) site. Site Screening was performed in 1992 and a Preliminary Endangerment Assessment was performed in 1997. Background information indicated that the SPAWAR Old Town Campus was an active satellite of SPAWAR Point Loma. The campus encompasses approximately 60 acres of which 95% is covered with building or pavement. Occupied by Lockheed-Martin and the Navy, the base has been utilized for various aircraft, rocket and missile assembly and manufacturing. Contamination is present at various locations and includes heavy metals, PCBs, VOCs, semi-volatile organic compounds (SVOCs), and petroleum hydrocarbons.

According to the city directories and Sanborn maps, this facility was occupied by Consolidated Vultee Aircraft Corporation (later known as Convair Aircraft Manufacturing) from at least 1950 to 1965 and the Navy from 1970 to present. Historical features include machine shops, tool manufacturing, spray painting, and metal treating.

One facility outside and downgradient of the project area (Tow Basin Facility, Map ID 276) was identified.

DTSC School Sites

This listing contains proposed and existing school sites that are being evaluated by the DTSC for possible hazardous materials contamination.

Two school sites were identified west of the project area (Correia Middle School, Map ID 150 and Point Loma High School Addition, Map ID 226).

SWRCB Toxic Pits Listing

The Toxic Pits Cleanup Act Sites database identified sites suspected of containing hazardous substances where cleanup has not yet been completed.

The San Diego International Airport, Lindbergh, Map ID 246 was identified southwest of the project area.

California Water Resources Control Board - Waste Discharge System (WDS)

Four facilities within the project area were identified on the WDS.

- Pacific Hwy Maintenance Facility, located at 4765 Pacific Hwy, Map ID 39. Primary waste was identified as storm water runoff. Primary waste type was listed as non-hazardous solid wastes (trash/garbage/debris-related).
- CalTrans District 11, located at 2829 Juan Street, Map ID 56. Waste types were not reported.
- Port of San Diego, located at 3165 Pacific Hwy, Map ID 251. Active facility that treats sewage. Primary waste is storm water runoff containing high concentrations of chloride, hardness, inorganic salts, or heavy metals or have a high biological oxygen demand (BOD).
- Neyenesch Printers Incorporated, located at 2750 Kettner Boulevard, Map ID 260. Waste types were not reported. Identified as a minor threat to water quality.

NPDES Permits

The NPDES permit database includes a listing of NPDES permits, including storm water. Listing on this database is not indicative of an unauthorized release.

Nineteen properties within and three properties outside the project area were identified as having NPDES permits.

SWRCB Waste Management Unit Database System (WMUDS)/Solid Waste Disposal Sites (SWAT) Database

The WMUDS/SWAT is used for program tracking and inventory of waste management units.

Two properties were identified west and south of the project area (downgradient, Map IDs 222 and 283).

Recycling Facilities (SWRCY)

The SWRCY contains a listing of recycling facilities in California.

Two properties were identified within the project area: Tomra Pacific In, located at 3515 Sports Arena Boulevard, Map ID 87 and Old Town Recyclers, located at 2161 Hancock Street, Map ID 169. Both recyclers accept aluminum, glass and plastic.

Multiple Agency – Release Databases

The LUST Information System is maintained by the SWRCB, pursuant to Section 25295 of the Health and Safety Code, and contains information on leaking USTs. The SWRCB also maintains the Spills, Leaks, Investigations and Cleanup (SLIC) database, which contains similar LUST information as well as information regarding other spills or releases, which may not involve USTs. Many of the facilities identified in the LUST database are also repeated in the CORTESE or HIST

CORTESE databases. The CORTESE database is no longer updated and contains sites that were listed on LUST, SWF/LF, and the DTSC Cal-Sites.

Of the 188 LUST and 77 SLIC listings identified, approximately half were located outside the project area. Also note that many addresses had multiple listings. In these instances, the case number is referenced. Multiple releases at the same property are denoted by sequential numbers (i.e., H21148-001, -002, -003, etc.). A summary of facilities within the project area with documented releases are summarized in the following table along with the release status (i.e., closed or open). Open and closed release cases are depicted on Figures 2 through 5, by Map ID.

The closure date has been provided, where applicable. Note that although most of the release cases have been reported as closed by the overseeing regulatory agency, standards for closure have varied over the years, and may not meet current standards. Research into each of the closed cases is outside the scope of this assessment. However, if redevelopment of a closed release case property is proposed, additional research into the release investigation and/or remediation should be obtained and evaluated.

Table 3 – Project Area Documented Release Summary

Map ID Database Listing-Facility Name	Address	Status
32L-Benton Roofing	3691 Hancock Street	Closed 2000
41LS-Lyle Butler	3612 Kurtz Street	Closed 1998
42L-Golden Boy Pies	3465 Hancock Street	Closed 1990
42LS-Jensen Meat Company	3477 Hancock Street	Closed 1986
44S-Activcare at Point Loma	3423 Channel Way	Closed 1998
53L-San Diego NISE-WEST - SPAWAR Old Town Campus	4635 Pacific Hwy	Open
54L-Contractors Equipment Corp	3860 Sherman Street	Closed 2001
58L-CalTrans	4050 Taylor Street	Closed 2001
59LS-Golden Chariot Trucking	3495 Kurtz Street	Closed 2001
65L-San Diego Trust and Savings Listed twice - One release, case no. H12810-001	4606 Pacific Hwy	Closed 1992
66L-Old Town State Park	4005 Taylor Street	Closed 1988
68L-Nielson Construction Co	3127 Jefferson	Closed 1993
70LS-Texaco. Six releases, case nos. H21148-001 (closed 1987), -002 (closed 1993), -003 (closed 1987), -004 (closed 1997), -005 (open), -006 (open)	3711 W Camino Del Rio	Open
78L-Arco Service Station	3720 W Camino Del Rio	Open
81L-U Haul International	3820 Midway Drive	Closed 2001
85L-Callahan Brothers	3025 Moore Street	Closed 1998
99S-Midas Muffler Shop	3848 W Camino Del Rio	Closed 1994
103L-Mobil Sports Arena	3229 Sports Arena Boulevard	Closed 1993
106L-San Diego Fire Station #20 Two releases, case nos. H21149-001, -002	3305 Kemper Street	Both closed 2002
108S-Santa Fe Shopping Depot	2461 San Diego Avenue	Closed 1999
109L-California Sports Car	3750 Rosecrans Street	Closed 1992
110L-University Real Estate Partner	3106 Sports Arena Boulevard	Closed 1997
113L-Sports Arena Dodge	2950 Kurtz Street	Closed 1991

Table 3 – Project Area Documented Release Summary

Map ID Database Listing-Facility Name	Address	Status
115LS-Howard Taylor Dodge	3740 Rosecrans Street	Closed 1998
120S-RTE Deltec	2727 Kurtz Street	Closed 2009
120L-Public Shuttle/ Golden Arrow Dairy Listed twice - One release, case no. H21150-001	2750 Kurtz Street	Closed 1988
120S-Real Estate Review	2771 Kurtz Street	Closed 1995
122L-Causeway Cleaners & Laundry	3426 Midway Drive	Closed 1990
123L-Fremont Elementary School Listed twice - One release, case no. H36175-001	2375 Congress Street	Closed 2003
125LS-Goodwill Industries	3663 Rosecrans Street	Closed 1992
129L-Foremost Motors	3252 Midway Drive	Closed
131L-First San Diego Properties	3146 Midway Drive	Closed 1984
131LS-Poor Boy Rental	3148 Midway Drive	Open
134LS-Value Motors	3189 Midway Drive	Closed 1986
136S-Sea Breeze Cleaners	3555 Rosecrans Street	Closed 1998
139-SPAWAR (AF PLANT 19)	4297 Pacific Hwy	Open
140L-Peck Buick Inc/Walgreens/Jeep-Eagle. Two releases, case nos. H01561-001 (closed 1987), -002 (closed 1993)	3005 Midway Drive	Closed
143LS-Erry Pinto	4014 Coutts Street	Closed 1991
146LS-Sunbelt Towing/Randolph Strada. Two releases, case nos. H28656-001 (closed 1990), -002 (open)	4370 Pacific Hwy	Open
147LS-Chevron USA Four releases, case nos. H12451-001 (closed 1990), -002 (closed 2008), -003 (closed 2005), H12458-001 (closed 2000)	2959 Midway Drive	Closed
148LS-Thrifty Service Station/Arco Seven releases, case nos. H16531-001 (closed 1987), -002 (closed 1991), -003 (closed 1993), -004 (closed 1993), -005 (closed 1993), -006 (closed 1993), -007 (open)	3860 Old Town Avenue	Open
151LS-Auto Scrubber Car Wash Two releases, case nos. H00779-001, -002	3405 Rosecrans Street	Closed
154L-Public Auto Service, case no. H288269-002	4350 Pacific Hwy	Closed 2007 (GeoTracker)
154L- Estate of Dollie Herbert, case no. H288269-001	4350 Pacific Hwy	Closed 1991
156L-Coast Cleaners	3333 Rosecrans Street	Closed 2002
157L-Bob Stivers Shell	2290 Moore Street	Open
161L-Dewey Elementary School Listed twice - One release, case no. H36169-001	3251 Rosecrans Street	Closed 2004
163LS-US Postal Service. Two releases, case nos. H04474-001 (closed 2000), -002 (closed 1998)	2535 Midway Drive	Closed
165L-General Dynamics	4297 Pacific Hwy	Closed 1993
165L- Space & Naval Warfare	4297 Pacific Hwy	Closed 1999
169L-Empire Lumber Sales Co	2175 Hancock Street	Closed 1995
169S-Pacific Plating. Two releases, case nos. H08560-001 (closed 1997), -002 (open)	2182 Hancock Street	Open
172L-Armored Transport of California	3610 Barnett Avenue	Closed 1994

Table 3 – Project Area Documented Release Summary

Map ID Database Listing-Facility Name	Address	Status
179S-Hoyco Inc	2050 Hancock Street	Closed 1987
179S-Lyon Rural Electric	2074 Hancock Street	Closed 1991
181LS-Vietnam Veterans of SD. Two releases, case nos. H02853-002 (closed 2006), -001 (open)	4141 Pacific Hwy	Open
183S-Old Town Trolley	2115 Kurtz Street	Open
185LS-Simon Levi Co Ltd. Two releases, case nos. H05332-001 (closed 1989), -002 (closed 2007)	2015 Hancock Street	Closed
187S-Loma Portal HD Start Preschool	2905 Cadiz Street	Open
189L-Brad Jacobs	1929 Hancock Street	Closed 1989
190L-Robert McMullan and Sons Listed twice - One release, case no. H03909-001	2053 Kurtz Street	Closed 1988
191L-Nugo Inc/ Arco Service Station Listed twice - One release, case no. H05188-001	2940 Lytton Street	Open
193S-Pacific Services Company	4085 Pacific Hwy	Open
194LS-Hawley Auto Body & Paint/Complete Auto Services. Two releases, case nos. H12948-001 (closed 1988), -002 (closed 2006)	2844 Lytton Street	Closed
198L-O.B. Amour Co Terminal. Two releases, case nos. H03838-001 (closed 1999), -002 (closed 2004)	3540 Estudillo Street	Closed
201L-Gateway Naval Housing	2601 Gearing Drive	Closed 2010 (GeoTracker)
206L-San Diego Storm Station #L	3894 Pacific Hwy	Closed 2001 (GeoTracker)
206L-B's Rental Store	3959 Pacific Hwy	Closed 1998
207L-Arise Scaffolding Equipment/Kenneth Golden Listed twice - One release, case no. H03593-001	3485 Noell Street	Open
209L-Former Admiral Service Station	2702 Lytton Street	Closed 2005
214L-American Agar and Chemical Co	1751 Hancock Street	Closed 1997
215LS-Warehouse	3441 Sutherland Street	Closed 1987
215L-Gray Line San Diego/Goodall Bus Service Listed twice - One release, case no. H31269-001	3442 Sutherland Street	Closed 2001
227L-Baron-Blakeslee Division of Purex	3596 California Street	Open
241S-Hertz Corporation Kettner	3420 Kettner Boulevard	Closed 1991
254L-Alamo Rent-A-Car. Three releases, case nos. H04878-001 (closed 1998), -002 (closed 1993), -003 (closed 2008)	2942 Kettner Boulevard	Closed
256L-\$6.95 a Day Rent-A-Car/Southwest Car Rental Listed twice - One release, case no. H04041-001	2975 Pacific Hwy	Closed 1990
257LS-Ones Family Trust	1411 Palm Street	Closed 1996
260L-Former General Rent-A-Car	2727 Kettner Boulevard	Closed 1999
266L-Dollar Rent A Car	2499 Pacific Hwy	Closed 2004
266L-Bob Stivers Shell #2	2521 Pacific Hwy	Closed 2005

Table 3 – Project Area Documented Release Summary

Map ID Database Listing-Facility Name	Address	Status
266L-Budget Rent-A-Car Listed twice - One release, case no. H03610-001	2535 Pacific Hwy	Closed 2000
274LS-Laurel Street Annex/Solar Turbines Inc Two releases, case nos. H21335-001, -002	1020 West Laurel Street	Both closed 1987
275L-Dollar Rent-A-Car/Thrifty Car Rental Listed twice - One release, case no. H12035-001	1120 West Laurel Street	Closed 1996
BORDER PROPERTIES		
240L-Lindbergh Field Listed twice - One release, case no. H21052-001	3698 Pacific Hwy	Closed 1988
247LS-General Dynamics. 16 releases - H04497-002 (closed 1990), -003 and -004 (both closed 1991), -005 (closed 1992), -001, -006, -007, -008, -009, 010, -011, and -013 (all closed 1997), -012 and -014 (both closed 1998), -015 (closed 2000), SLIC open	3302 Pacific Hwy	LUSTs Closed SLIC Open
247S- United States Air Force	3302 Pacific Hwy	Open
253S-Lockheed Lo-Speed Wind Tunnel	3050 Pacific Hwy	Open
259L-Execair Maintenance Inc/Jimsair Aviation Services/ABX Air Inc. Two releases, case nos. H30614-001 (closed 1995), -002 (closed 2007)	2904 Pacific Hwy/Lindbergh	Closed
Map ID followed by L indicates LUST, S indicates SLIC		

As summarized in the table above, a total of 17 properties within the project area were listed as having open release cases. These properties were further researched in the GeoTracker database (refer to Section 7.1 for additional information obtained from GeoTracker), with one exception. The former Arco station, located at 3720 W. Camino del Rio (78), was listed in 1984 for a gasoline release to groundwater, discovered during UST closure activities. Remedial action was reportedly initiated in 1984. No further information was provided in the database report. This property was not listed in the GeoTracker database. This location has been redeveloped and is presently occupied by a restaurant (Coxitar Mexican Food).

Releases outside of the project area were also evaluated for their potential to impact the project area. Migration of impacted groundwater onto the project area was considered to be the most likely source of impact. Accordingly, upgradient release cases (located west of Old Town and south of Midway/Lytton) within one-quarter mile of the project area were evaluated, as follows:

West of Old Town

- 2440 Hotel Circle Place (Map ID 22) - Two releases, closed 1995 and 2003.
- 2432 Hotel Circle North (Map ID 24) - Closed 1989.
- 4314 Altamirno Way (Map ID 47) - Closed 2000.
- 4014 Coutts Street (Map ID 143) - Closed 1991.
- 1832 West Washing Street (Map ID 202) - Closed 2001.
- 3585 India Street (Map ID 221) - Closed 2001.

- 3535 India Street (Map ID 228/231) - Three releases, closed 1993, 1995, and 2000.
- 2615 State Street (Map ID 263) - Closed 2002.
- 2553 State Street (Map ID 264) - Closed 1999.

South of Midway Drive/Lytton Street

- 3949 West Point Loma Boulevard (Map ID 76) - Open. The Genie Car Wash had a LUST discovered in 1991 during UST removal. Minor soil and groundwater impacts have been delineated. Plume reported as shrinking. A human health risk is being performed.
- 4049 West Point Loma Boulevard (Map ID 84) - Two releases, closed 1993 and 2009.
- 4101 West Point Loma Boulevard (Map ID 88) - Open. Arco operated a gasoline service station between 1959 and 1978 on this property (located on the southern corner of W. Point Loma Boulevard and Barnard Street). According to the November 19, 2010 Site Assessment Report prepared by Stantec Consulting (available on GeoTracker), groundwater is present between 7 to 8 feet below grade and flows towards the north-northeast. Limited soil and groundwater impact was reported on the northern portion of the site. total petroleum hydrocarbons (TPH) as gasoline (TPH-g) was detected in groundwater. The extent of impact is undefined.
- 3475 Kenyon Street (Map ID 141) - Open. Diesel release to soil reported. According to the January 11, 2011 Continued Soil & Groundwater Assessment Report prepared by DPRA Inc. (available on GeoTracker), the property has since been developed with residential condominiums. During redevelopment, soil impacted with petroleum hydrocarbons was encountered and removed in 2006. During initial sampling, TPH as diesel (TPH-d) was detected in soil and groundwater on the eastern portion of the site, near the southwest corner of Kenyon Street and Cabrillo Bay Lane. Subsequent delineation sampling generally defined the extent of impact, which is limited to the property.

In summary, identified releases outside of the project area do not appear to have the potential to impact the project area at this time, due to distance to the project area and/or the reported case status (i.e., closed or soil impact only).

Multiple Agency – UST and Aboveground Storage Tank (AST) Registration List

Information regarding underground and aboveground storage tanks registered with the California SWRCB is provided on the agency's UST list and AST list. Also listed are facilities within a one-quarter mile of the subject site that fall under the jurisdiction of the DEH's UST program. The UST and AST lists consist of properties that have registered tanks, and are not necessarily indicative of properties where a release of hazardous substances has occurred.

A total of 24 facilities were listed in the UST database. Of those 24 properties, ten are located outside the project area. A total of 78 USTs were identified in the Historical UST Registered Database, of which 32 were located outside the project area. A total of 128 properties were identified on the SWEEPS UST database, which was maintained in the 1990s. This database is no longer updated. Of the 128 SWEEP UST listings, 44 were located outside the project area. A total of six ASTs were listed on the AST database, of which two were located outside the project area. Refer to the Release Database section above for a summary of reported releases from USTs.

California Hazardous Materials Incident Report System (CHMIRS)

The CHMIRS contains information on hazardous materials incidents (accidents or spills) reported to the California Office of Emergency Services. Reported releases may include sewage releases from blocked or broken pipes, which is not considered an environmental concern for the purposes of this report.

A total of 35 releases were reported on the database, of which five were located outside the project area. In general, other than the release date, relevant information was not provided in the database listing. Where information is available, releases appear to be limited to minor releases to the storm drain, or from minor vehicle accidents involving petroleum products, or blocked/broken sewage pipes resulting in sewage overflow. Several of the petroleum releases were also reported in ERNS (see above). Significant releases of environmental concern to the soil and/or groundwater appear on other databases (e.g., SLIC, LUST). These reported ERNS releases are not anticipated to have a negative impact on the project area.

SWRCB MCS Database

The SWRCB and RWQCBs partner with the DOD to oversee the investigation and remediation of water quality issues at military facilities.

A total of 32 MCS sites were identified. These listings were generally associated with the SPAWAR facilities (Map ID 53 and 162). Also listed were Map IDs 140, 165 and 305. The SPAWAR listings contained links to the GeoTracker website. According to the addresses provided (e.g., Gate Road, Craig Road, Patterson Road, Gatchell Road) on the GeoTracker database, many of the listings appear to apply to the Point Loma SPAWAR facilities, located southwest of the project area on the Point Loma peninsula. Listed below are the status and available summaries obtained from GeoTracker, and located within or abutting the project area.

- San Diego NISE-West SPAWAR, Map ID 53, Formerly Air Force Plant #19 (AF#19), IR Site 100, Taylor Street Complex, 4635 Pacific Hwy. Open - remediation as of 1/1/2004.
- San Diego MCRD, base-wide issues, 3000 Midway Avenue, Map ID 140. Open - site assessment as of 1/1/1990.
- Space and Naval Warfare Systems, USN-SSC/Pacific Hwy Headquarters, 4297 Pacific Hwy, Map ID 165. Completed - case closed as of 12/15/1999.

SPAWAR, 4301 Pacific Hwy, Map ID 162

- (AF#19), Site 11 Building 3 sanitary sewer line break. Open - site assessment as of 10/28/1996.
- (AF#19), IR Site 21. Completed - case closed as of 10/28/2002.
- (AF#19), Site 1 Building 8, rail road spur; Site 2 Building 8, Disposal Area; Site 7, Building 2, outdoor drain; Site 9 Building 2, floor vaults; and Site 13. Open - site assessment as of 7/1/2003.
- (AF#19), AOCs 1, 2, 3, 4. Open - site assessment as of 5/20/2010.

SWRCB Notify 65

Notify 65 records contain facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk.

A total of 31 Notify 65 releases were reported on the database, of which 25 were located outside the project area. Details regarding these releases were not provided in the database report. Significant releases of environmental concern to the soil and/or groundwater appear on other databases (e.g., SLIC, LUST). These reported releases are not anticipated to have a negative impact on the project area.

DTSC DEED

The DTSC maintains a list of properties which have recorded deed restrictions. The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes.

Solar Turbines Inc, located at 2200 Pacific Hwy (downgradient, Map ID 287), was listed in the DEED database.

Drycleaners

The drycleaners database is a list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; dry-cleaning plants except rugs; carpet and upholstery cleaning; industrial launderers; laundry and garment services.

A total of 22 drycleaners facilities were identified, of which five are located outside the project area. The following table summarizes facilities listed within the project area, and associated release status, if any.

Drycleaner Sites	Address	Map ID
Traditional Boatworks Inc	3665 Hancock Street	31
Seaworld Creative Services	3505 Hancock Street	42
Bay Side Paint Co	3603 W Camino Del Rio	52

Drycleaner Sites	Address	Map ID
Exponents Inc	3280 Kurtz Street	77
Ital Automotive	3101 Moore Street	80
Practical Cleaners (Listed twice)	3810 Rosecrans Street	93
Ogdens Cleaners	3619A Midway Drive	106
Mr. J's Cleaners	3639 Midway Drive	106
Causway Cleaners & Laundry (LUST closed 1990)	3426 Midway Drive	122
Sea Breeze Cleaners (SLIC closed 1998)	3555 Rosecrans Street	136
Old Town Cleaners	2240 San Diego Avenue	155
Dry Clean for Less	3333 Rosecrans #239	156
Coast Cleaners (LUST closed 2002)	3345 Rosecrans Street	156
US Postal Service (LUST/SLIC closed 1998 and 2000)	2535 Midway Drive	163
Midway Cleaners/Old Town Cleaners #2 (Listed twice)	2383 Midway Drive	170
Pacific Services Company (open SLIC)	4085 Pacific Hwy	193
Boat Depot Inc	4005 Pacific Hwy	203

DTSC Response

The Response database identified confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Two properties were identified on the Response database. San Diego NISE-West, located at 4297 Pacific Coast Hwy (Map ID 165) was identified within the project area (see the Historical Calsites and MCS sections above). Tow Basin Facility, located at 3380 North Harbor Drive (Map ID 276), was identified outside (and downgradient) of the project area.

DTSC HAZNET Database

The HAZNET database contains facility and manifest data extracted from hazardous waste manifests.

A total of 380 HAZNET sites were identified. Listing on this database is not indicative of a release. Refer to the database report for additional information on HAZNET listings.

Air Pollution Control District's (APCD's) Emission Inventory (EMI) Database

The EMI database contains toxic and criteria pollutant emissions data collected by the APCD.

A total of 52 EMI sites were identified, of which nine were located outside the project area. Several of the addresses had multiple listings. Listing on this database is not indicative of an unauthorized release.

DTSC ENVIROSTOR

The DTSC Site Mitigation and Brownfields Reuse Program's Envirostor database identified sites that have known contamination for which there may be reasons to investigate further. Envirostor contains similar information to that which was provided in CalSites.

A total of 29 facilities were listed in the Envirostor database, of which 16 are located outside the project area. See Section 7.2 for additional information on Envirostor information available on line.

Haulers

The Haulers database contains a listing of registered waste tire haulers.

One facility was listed, Performance Team Tires & Wheel, located at 3540 Rosecrans Street (Map ID 136). Listing on this database is not indicative of a release.

DTSC HWP

The HWP database contains a listing of permitted hazardous waste facilities and corrective action (“cleanups”) tracked in Envirostor.

Four HWP sites were identified, of which three were located outside the project area. Baron-Blakeslee Division of Purex, located at 3596 California Street (Map ID 42), was identified within the project area. See the CORRACTS section above for additional information on this property.

7. ONLINE ENVIRONMENTAL DATABASES AND FILE REVIEWS

Online regulatory databases were reviewed by Ninyo & Moore in January 2011 to supplement the environmental database search conducted by EDR. Note that these databases are constantly being updated and it is possible that additional relevant information has been posted since our review. Additionally, files at the City of San Diego Solid Waste Local Enforcement Agency (LEA) for the Old Town Burn Dump were reviewed to obtain more information regarding this dump location. The following is a summary of pertinent information.

7.1. SWRCB Geotracker Database

The SWRCB Geotracker database contains information on properties that impact or have the potential to impact groundwater, including those that require groundwater cleanup as well as permitted facilities such as operating USTs and land disposal sites. The Geotracker database was used to supplement the information in the environmental database report (Section 6.) and provide additional information on open release cases identified within the project areas. Following is a brief summary of available information obtained from GeoTracker in January 2011.

-
- The Old Town Burn Dump, located southeast of the I-5/I-8 intersection. The case was listed as open, but inactive since February 2002. Additional information is provided in the City of San Diego's Report on Refuse Dumps, prepared by the City Planning Commission, Doc No. 306491, filed January 31, 1938 (1938 Report), and summarized in Section 7.4.
 - Kettner Parking Structure, located at 2680 Kettner Boulevard, was entered into the DEH Voluntary Assistance Program (VAP) in December 2010. Investigations performed prior to property redevelopment indicated the presence of heavy metals, polynuclear aromatic hydrocarbons (PAHs) and TPH in subsurface soils. The suspected source of impact was former plating shop operations.
 - Texaco Refining and Marketing, located at 3711 West Camino Del Rio, Map ID 70, had a LUST case opened in 2007. Soil and groundwater has been impacted with gasoline. The extent of soil and groundwater impact has been generally delineated and for the most part, appears to be limited to the property boundaries. Groundwater monitoring has been performed since January 2008. Groundwater is present between approximately 8 to 10 feet below grade and flows towards the southeast. The latest groundwater analytical data (April 2010) indicates TPH-g up to 2,700 micrograms per liter ($\mu\text{g}/\ell$) and benzene up to 480 $\mu\text{g}/\ell$.
 - Parsley-Kennedy Inc (a.k.a. Poor Boy Rental), located at 3148 Midway Drive, Map ID 131, had a LUST case opened in 2007 for a gasoline release to groundwater. Reportedly, in 1984, four USTs were removed from the property. Gasoline-impacted soils were encountered during the removal and limited soil excavation was performed. Groundwater monitoring wells were installed in 1993, at which time free product was reported in three of the five wells. Free product removal began in 1996. The latest groundwater monitoring report (April to September 2010 period) reports that 100 gallons of liquid petroleum hydrocarbons have been recovered through September 2010. Free product still exists beneath the central portion of the property. Groundwater monitoring indicated that impacted groundwater is generally limited to the property boundaries, although the up-gradient extent of the release, beneath Midway Drive, has not been fully delineated (due to access issues). Depth to groundwater ranges between 7 and 10 feet below grade and flows towards the north-northeast. Groundwater monitoring indicates that the plume appears to have stabilized.
 - SPAWAR - Old Town Campus, located on Pacific Hwy, Map IDs 139 and 165, is a 60-acre facility occupied by Lockheed-Martin and the Navy and used in the assembly and manufacturing of aircrafts, rockets and missiles. Contamination is present from previous waste handling practices. Contaminants of concern include heavy metals, PCBs, VOCs, SVOCs, and TPH. Source areas include leaking transformers, USTs, and various spills.
 - Sunbelt Towing Inc, located at 4370 Pacific Hwy, Map ID 146, was entered into the VAP in 2005. The database report indicated a release to soil. No other information was provided.

- Arco #9599, located at 3860 Old Town Avenue, Map ID 148, had an identified release in August 1986. Assessment activities revealed hydrocarbon degraded soil and groundwater at the site. Liquid phase hydrocarbons (LPH) was detected in monitoring wells. Mobile high-vacuum dual phase extraction (HVDPE) events were implemented at the site in late 2008 to address potential LPH, as indicated by excessively high TPH concentrations. The latest document on file is a letter dated November 12, 2010 prepared by Thrifty Oil Co., regarding a request for site closure consideration. Reportedly, during the September to October 2010 45-day and earlier 2007 and 2008 HVDPE events, an estimated 2,780 pounds of hydrocarbons were removed by vapor extraction and approximately 190,000 gallons of groundwater were extracted and treated. During the last event, hydrocarbon removal rates indicated that asymptotic conditions had been reached. Additionally, an estimated 585 pounds of hydrocarbons were believed to have been removed by soil excavation in 2001 and an estimated 200 pounds of hydrocarbons were removed through free product recovery performed between 1996 and 2004. During groundwater monitoring in April 2008, depth to groundwater ranged from 34 to 38 feet below grade. The gradient has been variable and relatively flat. Prior to 2000, the gradient was southerly. In April 2000, the gradient was east-northeast. More recent monitoring indicated flow was southeast.
- Public Auto Service, located at 4350 Pacific Hwy, Map ID 154, was listed as case closed as of February 8, 2007. The closure letter was on file.
- Shell Service Station, located at 2290 Moore Street, Map ID 157, had a case opened in June 2007 based on the results of a due diligence subsurface investigation. This Shell Station is located approximately 50 feet southeast of the Arco Service Station (Map ID 148). According to the November 17, 2009 Site Assessment Report and Updated Site Conceptual Model, prepared by Conestoga-Rovers & Associates, depth to groundwater at Shell ranges from 32 to 35 feet below grade. Groundwater flow at Shell was towards the southwest at 0.004 ft/ft, whereas the Arco Station was reported to the east. However, the two sets of wells have not been benchmarked to a common point. Groundwater plumes from the Arco and Shell facility appear to be co-mingled. Maximum groundwater concentrations at Shell were 36 mg/ℓ TPH-g, 4.3 mg/ℓ TPH-d, 8.8 mg/ℓ benzene, and 0.29 mg/ℓ MTBE. Additional soil and groundwater delineation was needed to the south and east of Shell.
- Pacific Plating, located at 2182 Hancock Street, Map ID 169, had a release discovered in November 2001. The case status is listed as open - remediation as of January 2002. Chlorinated hydrocarbons have reportedly impacted groundwater. This site was entered in the VAP. Electronic reports were not available for this property. See Section 8 for a summary of work performed at this facility by Ninyo & Moore.
- VVSD, located at 4141 Pacific Hwy, Map ID 181, was entered into the VAP in 2002 for a gasoline release to soil. No further information was provided. See Section 8 for a summary of work performed at this facility by Ninyo & Moore.

- Old Town Trolley, located at 2115 Kurtz Street, Map ID 183, was identified as having a release of chlorinated hydrocarbons. No further information was provided.
- Loma Portal Head Start Preschool, located at 2905, Map ID 187, had an oil release to groundwater reported in January 2001. The case is listed as open - remediation. This site was entered in the VAP. Electronic reports were not available for this property.
- Nugo Inc (Arco Facility No. 5007), located at 2940 Lytton Street, Map ID 191, began site assessment activities in 1986. UST removal activities identified additional site impacts. SVE, ground water extraction (pump and treat), and separate-phase hydrocarbons removal activities have been performed. On file was a Site Assessment Report dated January 15, 2010, prepared by Stantec Consulting. According to this report, an estimated 27,000 pounds of hydrocarbons were reportedly removed by the SVE system between 1987 and 1992. The groundwater pump and treat system operated from late 1987 to December 1990. Additional assessment was performed subsequent to these remedial actions. A soil vapor survey performed in 2005 did not indicate a risk to human health from vapor intrusion into site buildings. A 2006 study indicated that natural attenuation through aerobic and anaerobic degradation was occurring. Depth to groundwater ranged from 30 to 43 feet below grade at the site and 13 to 14 feet on off-site properties. The groundwater gradient has been relatively consistent, to the east. Although historically, benzene and MTBE impacted groundwater appears to have migrated off-site, towards the Peninsula Center Office Buildings located at 3065 Rosecrans Street and Hawley Automotive at 2918 Lytton Street, benzene and MTBE concentrations in groundwater appear to be decreasing since 2005. Petroleum hydrocarbon plumes were now generally limited to the property boundaries by 2008.
- Pacific Services Dry Cleaners, located at 4085 Pacific Hwy, Map ID 193, had a case opened in 1993. Groundwater has been impacted with chlorinated hydrocarbons. No further information was available.
- Gateway Naval Housing, located at 2601 Gearing Drive, Map ID 201, had an old UST that was discovered during a preliminary site assessment. The tank was removed under permit, along with 808 tons of contaminated soil. Following completion of the excavation, soil samples confirmed that impact had been removed. A DEH letter dated April 23, 2010 stated that no further action was needed and proposed site closure.
- Kenneth Golden, located at 3485 Noell Street, Map ID 207, was listed in the LUST database for a release of gasoline to groundwater in 1988. The release was discovered when a 550-gallon gasoline UST was closed in place. Liquid phase hydrocarbons were reportedly discovered in January 1998. Groundwater reportedly ranges between 10 and 26 feet below grade and flows to the southwest. Free product has been encountered in nine of the 19 wells located at the property. A vapor extraction system (VES) reportedly operated at this property for one year.

The following information was available for abutting properties.

- United States Air Force, 3302 Pacific Hwy, Map ID 247, had a release reported in April 2009. This case is listed as open assessment and interim remedial action. No further information was provided.
- General Dynamics - Convair Div, located at 3302 Pacific Hwy, Map ID 247, had a case was opened in October 2005. The case status is listed as open and referred to the Regional Board in August 2010.
- Northside San Diego International Airport, located at 3050 Pacific Hwy, Map ID 253, was mapped. Note this location is identified as the Lockheed Lo-Speed Wind Tunnel in the EDR database report. This site is also the former General Dynamics Convair Division facility location. Between 1935 and 1995, General Dynamics and its predecessors (including Consolidated Aircraft Company, Consolidated Vultee Aircraft Company and Convair) performed aircraft and aerospace manufacturing activities at the facility. Facility decommissioning began in 1995 and ended in 1997. Chemicals used at the site included fuels, oils, solvents, paints, acids, metals, and paints. Additionally PCB-bearing building materials were used. Prior to plant decommissioning, impact was found in soil and groundwater. Several phases of investigations took place. Remedial actions were initiated during plant decommissioning. Recent soil and groundwater investigations encountered impact in soil and groundwater. The San Diego County Regional Airport Authority plans on redevelopment of the site to airport related businesses and is conducting additional investigations to assess the potential risk relative to the new site use. The case status is listed as open - assessment and interim remedial action as of September 23, 2010.

7.2. DTSC EnviroStor Database

The EnviroStor database is an online search and Geographic Information System tool for documenting properties with known or potential contamination, and properties where DTSC's environmental oversight or review has been requested or required. A review of the EnviroStor database in January 2011 found five military evaluation/formerly used defense sites (FUDS) properties within the Plan Areas, as follows.

- San Diego Manufacturing Plant, located south of Taylor Street and East of Pacific Hwy, listed as inactive and in need of evaluation as of July 2005. This facility was found to be ineligible on April 18, 1994 since it was never DOD-owned or operated (was a defense plant corporation site).
- Manufacturing Plant Annex (DPC), Pacific Hwy near Barnett Avenue. Ruled as an active DOD site on June 26, 1989.

- San Diego Gun Towers #3 and #4, located at Hicock Street and Midway Drive/ Enterprise Street. Listed as inactive and needs evaluation as of July 2005. No further information provided.
- Midway Drive (a.k.a. Causeway) could not be located but presumed to be along Midway Drive, listed as inactive and needs evaluation as of July 2005. A letter dated October 27, 1945 from the Stickney family indicated that they owned a parcel of land on Midway Drive which was condemned by the U.S. government at the beginning of World War II. This property was reportedly established as a trailer court.

A review of the EnviroStor database found two properties, which were evaluated by the DTSC.

- Pacifica Companies, located at 4350 Pacific Hwy, Map ID 154, was referred to a local agency.
- Truck Terminal, located at 3495 Kurtz Street, was referred to a local agency. A VAP application was submitted on March 15, 2001 for an apparent UST release of gasoline impacting groundwater.

One tiered permit property was listed, Photic of San Diego, located at 3515 Hancock Street. No further information was provided.

The San Diego NISE-West Old Town Campus facility, located at 4297 Pacific Hwy, was listed in the active CORTESE database. According to Envirostor, a Human Health Risk Assessment was completed in September 30, 2010. The DTSC provided its comments to the Navy and granted permission to proceed with the Work Plan. A final Remedial Investigation Report was completed on May 28, 2010. Copies of the reports were not available on line.

7.3. CALRECYCLE Solid Waste Information System

The SWIS database contains information on solid waste, operations, and disposal facilities throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites. No SWIS facilities were graphically depicted on the SWIS database as being located within 1/8 mile of the project area.

7.4. City of San Diego Solid Waste Local Enforcement Agency (LEA)

Files at the LEA were reviewed by Ninyo & Moore on November 8, 2011 for the Old Town Burn Dump. The dump was referred to as the Old Town Bridge Dump in the Report on Refuse Dumps in the City of San Diego, prepared by the City Planning Commission, Doc No. 306491, filed January 31, 1938 (1938 Report). Maps in the file indicated that the dump is located north of I-8, east of the Morena Boulevard bridge, and south of the San Diego River. The Assessor Parcel Number (APN) for the property was identified as 436-700-0200. The 1938 Report stated that the dump included tree trimmings dumped by the Presidio Park. Testing was performed by the City in August 2000. Elevated concentrations of lead were detected in samples collected from apparent burn materials. No activity appears to have been performed since the 2000 sampling event.

8. PREVIOUS REPORTS OF FACILITIES WITHIN PROJECT AREA

Ninyo & Moore conducted a review of previous in-house assessment reports and other files to obtain information regarding areas of potential environmental concern within the project area. Previous work performed in the project area by Ninyo & Moore for the City of San Diego Redevelopment Agency (SDRA) included environmental assessments at the Sports Arena property and VVSD. UST investigation work was performed by Ninyo & Moore for the San Diego City Schools, Facilities Management (SDCFM) division at the Dewey and Fremont Elementary Schools. Assessment and remediation support under the VAP was provided by Ninyo & Moore at the Former Pacific Plating Facility. A summary of available in house information is provided below.

8.1. San Diego Sports Arena

The SDRA retained Ninyo & Moore to prepare a limited Phase II ESA for areas within the parking lot of the San Diego Sports Arena Complex located at Sports Arena Boulevard and Hancock Streets in San Diego, California. The services included a soil vapor survey in two areas identified as potential environmental concerns. In preparation for the survey, previous environmental reports pertaining to the Sports Arena were reviewed and a limited Phase I ESA was performed for the Sports Arena Square property.

Based on the review of historical information and available records, “The Strip Shop” occupied the building addressed 3360 Sports Arena Boulevard from at least as early as 1984 until approximately 1991. Hazardous materials and wastes located on the site during this time period included methylene chloride (paint stripper) and waste methylene chloride (sludge). Records indicated the presence of a 550-gallon strip tank and waste rinse booth within the building. Inspection reports, dating from 1984 to 1998, were on file; no violations relating to unauthorized releases were noted. Based on the results of the Sports Arena Square Property historical survey, a Limited Phase II ESA was recommended at the former location of the “The Strip Shop.”

A report titled “Soil Investigation for the Proposed Sports Arena Square,” prepared by Woodward-Clyde Consultants, dated 1976, was reviewed. The proposed Sports Arena Square was described as being located in an alluvial flood plain area that was filled in with hydraulically placed or dumped fill in the 1940s. According to the report, eight test borings were drilled to a maximum depth of approximately 80 feet bgs in June 1976. The report stated that the area was underlain by fill soils with minor amounts of rubble and debris to approximately 3 feet below grade, followed by alluvial and embayment type deposits. The deposits were described as silty fine sands and fine sandy silts with some layers of clayey silt and some thin lenses of silty clay. Groundwater was encountered at approximately 11.5 feet bgs in the test borings.

The former Sports Arena Landfill (also known as the historic West Point Loma Dump site or CA-SDi-10, 530H) was identified in previous reports as being located within and adjacent to the southwestern portion of the Sports Arena. This landfill was reportedly utilized by the City of San Diego for trash disposal from approximately 1899 to 1908. Archaeological monitoring reports prepared for various construction activities within the assumed boundaries of the Sports Arena Landfill indicated early 1900 artifacts beneath the Arco gas station facility located at 3580 Sports Arena Boulevard. The report stated that an extensive deposit of late 1800 and early 1900 refuse remains at 6 to 10 feet below grade within the area defined as the dump boundaries.

In September 2004, Ninyo & Moore conducted a soil vapor survey on the Sports Arena Complex. Twenty-four soil vapor samples were collected from the site at 5 feet bgs. Soil vapor samples did not exhibit detectable concentrations of VOCs.

8.2. 3500 Barnett Avenue

Ninyo & Moore prepared a Phase I ESA for a private client in 2002 in relation to the 3500 Barnett Avenue property, located near the intersection of Enterprise Street and Barnett Avenue. Historical resources indicated that the property was occupied by a gasoline service station between approximately 1932 and 1957. Regulatory file reviews indicated the presence of two 1,000-gallon USTs and one 550-gallon UST, all containing gasoline and reportedly abandoned in place in 1973. Ninyo & Moore subsequently performed a geophysical survey which identified four potential UST locations. Trenches were installed in each of the identified anomalies, however, USTs were not encountered nor were visual signs of petroleum hydrocarbons. Groundwater was encountered at the approximate depth of 13.5 feet below grade.

8.3. Midway Adult Education Center - 3249 Fordham Street

Ninyo & Moore performed a Phase I ESA for the 3249 Fordham Street property on behalf of the San Diego Community College District. The property was used as an educational facility since 1944. A building plan dated 1944 identified two 1,000-gallon heating oil USTs on the property.

In 1996, Ninyo & Moore oversaw the removal of two 1,000-gallon USTs and associated piping. Several small holes were observed in each of the USTs. No soil staining or odors were reported. Four UST excavation and 17 UST piping soil samples were collected and analyzed for TPH. TPH was not detected above the reporting limits in any of the samples. The UST excavation and pipeline trenches were backfilled with the excavated soil.

8.4. Veterans Village - 2165 Kurtz Street and 3684 Coutts Street

Ninyo & Moore was retained by the SDRA to perform a Phase I ESA of the Hickman Hall Vietnam Veterans facility located at 2165 Kurtz Street and 3684 Coutts Street. Historical research, document review, and site assessment activities were conducted between March and May 2006. At the time of the ESA, the Hickman Hall facility consisted of approximately one acre of land developed with two commercial/light industrial buildings. The building addressed 2165 Kurtz Street was occupied by VVSD and used as a treatment and rehabilitation center, and the building addressed 3684 Coutts Street was occupied by Sonabend Company, a tailor.

Historical sources indicated that the site was used for storage of lumber until the construction of the current site buildings in the middle 1950s. Historical tenants of the 2165 Kurtz Street building included Spayer Manufacturing, Bradson Gardening Equipment, Gamma Scientific, ARA Food Services, Reynolds Graphics, The Burke Company, SOS Metals, Safeway Steel Products, and VVSD. Historical tenants of the 3684 Cousts Street building included a machine shop, Coast Gear, Inc., and a tailor.

Ninyo & Moore reviewed previous reports and documents pertaining to the subject and adjacent properties. A 2003 Phase I ESA for ServPac properties, adjacent to the north of the site across Kurtz Street, was reviewed. The report indicated that previous occupants of the ServPac properties included a chemical company, manufacturing facilities, oil distributor, and possibly a cleaners.

Files were reviewed at the DEH and the City of San Diego for 4141 Pacific Hwy, located adjacent to the south of the Hickman Hall facility. According to a 2001 Phase I ESA report, the property was previously occupied by a gasoline service station (between 1936 and 1952), a dry cleaner, and a heating company. A geotechnical investigation performed concurrently with the 4141 Pacific Hwy Phase I ESA reportedly indicated the potential presence of groundwater contamination on 4141 Pacific Hwy. A Phase II ESA was recommended.

In April 2003, a Phase II ESA was performed at the 4141 Pacific Hwy property. Soil samples were collected at 16 locations and five groundwater monitoring wells were installed. Three of the soil boring locations and one monitoring well were within the boundaries of what was considered to be the Hickman Hall facility. Soil and groundwater samples were analyzed for total recoverable petroleum hydrocarbons (TRPH), TPH-g, TPH-d, VOCs, SVOCs, and/or organic lead. None of these compounds were detected above the reporting limits in the Hickman Hall samples.

A second round of groundwater sampling in October 2003 indicated the presence of PCE (4.3 $\mu\text{g}/\ell$) and MTBE (1.2 $\mu\text{g}/\ell$) in the Hickman Hall well.

In July 2006, Ninyo & Moore conducted a soil gas survey at the Hickman Hall facility. Soil vapor samples (SV-1 through SV-15) were collected from 15 locations at an approximate depth of 5 feet below grade. Soil vapor samples exhibited concentrations of benzene ranging from below the laboratory reporting limit to 0.15 µg/ℓ, toluene ranging from 0.079 to 0.46 µg/ℓ, 1,2,4-trimethyl benzene (TMB) ranging from below the laboratory reporting limit to 0.061 µg/ℓ, and 1,3,5-TMB ranging from below the laboratory reporting limit to 0.1 µg/ℓ. No other VOCs were detected above the laboratory reporting limit.

A cancer risk analysis was performed using the soil gas survey data. The results of the cancer risk analysis indicated that soil vapors from residual concentrations of benzene presented an excess cancer risk (ECR) of approximately 1 in 73,500,000, less than the default acceptable cancer risk of 1 in 1 million. The results of the non-cancer risk analysis indicated that soil vapors from residual concentrations of benzene and toluene presented a health hazard index to an adult of 0.000238, less than the default acceptable non-cancer health hazard index of 1.0.

8.5. 3229 Sports Arena Boulevard, Map ID 103

The 3229 Sports Arena Boulevard operated as a gasoline station in the 1980s with three 10,000-gallon gasoline USTs. The USTs were removed in 1989. Poned product was apparent within the southern portion of the UST excavation area. Five soil borings were advanced and four groundwater monitoring wells were subsequently installed. Groundwater was encountered between 10 and 11 feet below grade. Soil sample analysis indicated TPH up to 30,400 milligrams per kilogram (mg/kg), varying levels of benzene, toluene, ethyl benzene, and xylenes (BTEX), and organic lead up to 5.8 mg/kg. Groundwater samples exhibited TPH up to 63 mg/ℓ and varying levels of BTEX.

In 1989, Ninyo & Moore advanced eight soil borings and installed five groundwater monitoring wells. Soil and groundwater samples were analyzed for TPH, BTEX and/or organic lead. Based on all available analytical data, the extent of impact appeared to be delineated and limited to the former UST area. An estimated 1,200 cubic yards of petroleum impacted soils exhibiting TPH concentrations above 1,000 mg/kg were identified. A plume of petroleum impacted groundwater in excess of regulatory thresholds appeared to be emanating from the former UST area.

In 1990, Ninyo & Moore oversaw the excavation of impacted soils in excess of 1,000 mg/kg TPH to a depth of approximately 10 feet below grade. Soil sampling and on site laboratory analysis was employed in an effort to remove soils in excess of 1,000 mg/kg TPH. The stockpiled soil was then managed to expedite natural chemical and biological degradation by adjusting the moisture and oxygen content by wetting and covering in black plastic. After a sufficient length of time, 42 soil samples were collected from the stockpiled soils and analyzed for TPH using simple, random, non-stratified sampling procedures. TPH confirmation soil samples were generally below the reporting limits. Six of the samples exceeded 100 mg/kg; the highest reported concentration was 658 mg/kg. All samples were below the industrial action level of 1,000 mg/kg. Stockpiled soils were recommended for re-use as backfill material from the UST excavation area.

Groundwater sampling was conducted after excavation of petroleum-impacted soils, gauging indicated that groundwater beneath the property flows to the north. Groundwater samples were collected from eight wells and analyzed for BTEX. The highest concentrations were detected in the well located downgradient of the former UST area. Wells located upgradient and downgradient of NM-3 were generally below the reporting limits for BTEX constituents. According to the GeoTracker database, this case was closed in 1993.

8.6. Fremont Elementary School - 2375 Congress Street, Map ID 123

The SDCSFM retained Ninyo & Moore to conduct a Phase II ESA for a 1,500-gallon UST abandoned in place in 1998. The UST was located in the sidewalk near the intersection of Ampudia Street and Jefferson Street. This UST was removed of product, purged of vapors, cleaned and abandoned in place by filling with approximately ten cubic yards of cement

slurry in March 1998. During the abandonment, a soil sample was collected from the northeastern end of the UST at approximately 16 feet below grade (approximately 3.5 feet below the UST bottom). Soil sample analysis indicated TPH-d at a concentration of 32,263 mg/kg.

In March 2002, Ninyo & Moore installed two soil borings: one near the northeastern end of the UST where the confirmation soil sample was collected and one between the UST and nearest school building. Soil samples were collected at 5-foot intervals to a maximum depth of 40 feet below grade. Soils encountered during the assessment included dense to very dense silty, clayey fine sand. A total of 12 soil samples were submitted for TPH analysis; TPH was not detected above the reporting limits in any of the samples. Additionally, a 20 foot sample, collected near the northeastern end of the UST, was additionally analyzed for VOCs and SVOCs, which were not detected above the reporting limits. Sample analysis indicated that the TPH-d release was limited and had not migrated beneath the school site.

8.7. Dewey Elementary School - 3251 Rosecrans Street, Map ID 161

The SDCSFM retained Ninyo & Moore to conduct a Phase II ESA for 2,000-gallon heating oil UST removed from the Dewey Elementary School in 1997. The UST was formerly located in the courtyard between Buildings 01-01 and 01-02. According to the DEH UST System Closure Report, the UST contained multiple large holes and soil samples appeared saturated with petroleum hydrocarbons. Post-removal soil sample analysis indicated TPH-d at 9,300 and 21,200 mg/kg.

In August 1998, five soil borings were installed to evaluate the extent of impact. Impacted soils were encountered between depths of 5 to 15 feet below grade. TPH concentrations ranged from 480 to 22,000 mg/kg in the samples collected from the 10 foot intervals. Groundwater was present at a depth of approximately 11 feet below grade.

In March 2002, Ninyo & Moore installed five soil borings to further evaluate the extent of impact. Soil samples were collected from each boring at approximately 10 feet below grade. Groundwater samples were collected from each location using a temporary slotted casing. Samples were analyzed for TPH, PAHs, BTEX, MTBE and other fuel oxygenates. TPH was detected in three of the five soil samples at concentrations of 200, 650 and 3,300 mg/kg.

VOCs and PAHs were generally not detected above the reporting limits in the soil samples. TPH was detected in each of the groundwater samples at concentrations ranging from 0.12 to 80 mg/ℓ. Varying concentrations of BTEX constituents were detected in each of the groundwater samples. PAHs were detected in one groundwater sample, corresponding to the soil sample location with the highest contamination. MTBE and other fuel oxygenates were not detected above the reporting limits in either the soil or groundwater samples.

Analytical results indicated that the lateral extent of petroleum impact was defined to the south and east. Petroleum impact appeared to have migrated to the north and west via the supply and return lines left in place from the former boiler to the UST. In April 2003, the remote fill pipeline was grouted and approximately three feet of 2-inch diameter supply/return lines were removed. Seven soil samples were collected from beneath the pipelines. All seven samples were analyzed for TPH, which was detected above the reporting limits in two samples at concentrations of 16 and 670 mg/kg. Two soil samples were analyzed for BTEX and MTBE, which were not detected above the reporting limits.

8.8. Former Pacific Plating Facility - 2182 Hancock Street, Map ID 169

The former Pacific Plating facility was entered into the VAP in November 2001, prior to construction and earthwork activities associated with the new 3-story, 100,000-square foot self-storage facility. Previous subsurface assessments documented the presence of chromium and nickel contaminated soil underneath existing pavement from former plating shop operations. Analytical results were reportedly below the EPA's Preliminary Remediation Goals (PRGs) for industrial soils.

Metal impacted soils located beneath the former plating facility were excavated and re-located to the parking lot area on the southern portion of the property during initial site development. These impacted soils were then covered with two feet of clean fill material and subsequently paved.

During grading activities, an undocumented 200-gallon UST was encountered in the proposed parking lot area. The UST was removed and observed to have several holes. Moderate soil staining and hydrocarbon odors were also observed. No product piping was associated with the UST. Soils beneath the former UST were excavated to an approximate depth of 10 feet below grade

(3 feet below the tank bottom). Approximately two cubic yards of potentially impacted soil was stockpiled. Four confirmation sidewall samples were collected from the excavation area and analyzed by a mobile laboratory for TPH. TPH was not detected above the reporting limits in any of the samples. A composite sample collected from the soil stockpile exhibited TPH-g at 3,800 mg/kg and TPH-d at 700 mg/kg along with various VOCs. Metals were not detected above hazardous waste thresholds. The excavated soils were transported off-site for disposal.

During the removal, soil samples were also collected from the east and west ends of the UST excavation bottom, approximately two feet below each of the UST ends. Samples were analyzed for petroleum hydrocarbons, BTEX and fuel oxygenates; none of which were detected above the reporting limits. The pH levels were relatively neutral (6 to 7.59). By this time, sidewall excavation sample results were available, and it was judged that additional soil sample analyses for possible plating facility contaminants would not be necessary. Based on analytical results, the DEH required no further action in relation to the UST. According to GeoTracker, this case was closed in 1997. An open case is identified for this address in the GeoTracker database. See Section 7.1.

In 2000, prior to construction of the new self-storage facility, Ninyo & Moore was retained to perform a geotechnical evaluation of the property. Terrace deposits were encountered beneath the property and generally consisted of either granular or cohesive materials. Sandy materials were medium to very dense, clayey, silty or poorly graded sand. Cohesive materials generally consisted of hard sandy clay. Groundwater was encountered at depths of approximately 19 to 21.5 feet below grade.

8.9. Vietnam Veterans of San Diego - 4141 Pacific Hwy, Map ID 181

As mentioned above in Section 8.1, in April 2003, soil samples were collected at 16 locations and five groundwater monitoring wells were installed at 4141 Pacific Hwy. Petroleum hydrocarbons, VOCs, SVOCs, and Title 22 metals were detected in soil samples, especially in the vicinity of the former gasoline station on the eastern corner of the intersection of Witherby Street and Pacific Hwy. Elevated concentrations of VOCs and SVOCs, including PCE at 17,900 µg/l, were detected in groundwater samples.

In September and October 2003, four additional groundwater monitoring wells were installed, and groundwater samples were collected from nine wells. Groundwater samples were below the reporting limits for TPH-g and TPH-d. VOCs continued to be detected at elevated concentrations. A vapor risk assessment was performed for the property and indicated that with the installation of a vapor barrier and ventilation system, the risks associated with the existing solvent contamination would be mitigated to within acceptable levels.

Four unregistered USTs were reportedly discovered during earthwork and construction for the proposed VVSD facilities in April 2004. The tanks were subsequently removed under the supervision of the DEH along with approximately 900 tons of contaminated soil. Diesel and gasoline were not detected in post-excavation confirmation soil samples. Low concentrations of TRPH were detected in surface soil samples. Subsequent to the removals, development of the property continued and the existing buildings were constructed. According to the Geo-Tracker database, this is an open case (see Section 7.1).

9. COMMONLY ENCOUNTERED CONDITIONS

The following sections describe additional environmental conditions that are commonly encountered.

9.1. Asbestos-Containing Materials

Potentially asbestos-containing materials may be present within the project area in older structures (e.g., pre-1980). In addition, commonly encountered asbestos-containing materials in street rights of way may include insulated subsurface natural gas lines and cementitious water lines (e.g., transite).

9.2. Polychlorinated Biphenyl Containing Transformers

Pad- and/or pole-mounted transformers associated with public utilities in the project area are owned and operated by San Diego Gas & Electric (SDG&E). SDG&E states that it is responsible for ensuring that its transformers comply with EPA regulations. SDG&E states that it has not specified PCB transformers for its electrical distribution system; however, some older (pre-

1980) mineral transformers could have been inadvertently contaminated with PCBs by the manufacturer. Based on SDG&E’s statistical sampling and testing program, SDG&E states that it is unlikely that its transformers are PCB-contaminated. Privately-operated transformers in the project area may also contain PCBs.

9.3. Lead-Based Paint

Painted surfaces within the project area may contain lead-based paint. The Consumer Product Safety Commission has banned the use of paint containing lead above certain thresholds for residential uses. However, lead-based paint may be used in industrial settings or may be present on older structures (e.g., pre-1980) within the project area.

9.4. Miscellaneous Hazardous Materials

Materials falling under the Universal Waste Rule (UWR) requirements may be present in buildings within in the project area including, but not limited to: potentially mercury-containing fluorescent light tubes and/or vapor lights, and potentially PCB-containing light ballasts.

10. SENSITIVE RECEPTORS

The locations of potential sensitive receptors to hazardous materials/waste impacts, such as schools and hospitals, were documented during review of background information (e.g., Thomas Brothers Guide maps, topographic maps, online resources such as Google Earth). The DTSC EnviroStor online database was also consulted for locations of existing and proposed schools (in February 2011). Schools, daycare, and/or education-related facilities and hospitals noted in the project area are depicted on Figures 6 through 9, and listed in the table below.

Table 4 – Sensitive Receptors

Map ID	Sensitive Receptors	Address	Planning Area
A	Early Learners Children’s Academy	4050 Taylor Street	Old Town
B	San Diego University English School	3900 Harney Street	Old Town
C	Old Town Program	3939 Conde Street	Old Town
C	Harold J Ballard Parent Center	2375 Congress Street	Old Town
C	Fremont Elementary School	2375 Congress Street	Old Town

Table 4 – Sensitive Receptors

Map ID	Sensitive Receptors	Address	Planning Area
D	Audeo Charter School	2245 San Diego Avenue #125	Old Town
E	Dewey Elementary School	3251 Rosecrans Street	Central Midway
F	Loma Portal Charter School	2911 Cadiz Street	Central Midway
F	St. Charles Borromeo Academy	2808 Cadiz Street	Central Midway
G	International Academy - English	3445 Midway Drive	Central Midway
G	San Diego Community College	3249 Fordham Street	Central Midway
H / 141	Sharp Coronado Hospital	3475 Kenyon Street	Central Midway
I	Montessori School	1323 West Spruce Street	East of Pacific Corridor
J	County of San Diego Psychiatric Hospital	3851 Rosecrans Street	Central Midway

11. SUMMARY OF FINDINGS

The purpose of this HMTS was to document the presence of properties, which may have been impacted by hazardous materials or wastes. This was accomplished by reviewing federal, state, and local databases (EDR Database Report), online regulatory databases (GeoTracker and EnviroStor websites), readily available in house historical reports, and other historical resources (Sanborn maps and city directories). This report addresses existing environmental conditions in the project area, to assist the planning process with future land use changes that may be affected by hazardous materials or wastes.

A review of available reports, databases, and online information has identified 17 open release cases (LUST/SLIC) within the project area. These properties represent a moderate to high risk of encountering impact during potential future redevelopment. Closed release cases represent a moderate to low risk of encountering impact during potential future redevelopment. Note, however, that cases which were closed in the 1990s may not meet current standards and may require additional investigation and/or remediation prior to redevelopment. Also, most of these cases were closed under the presumption of continued industrial or commercial usage. Closure conditions may not be appropriate if the future land uses changes (e.g., from industrial to residential use). Open and closed release cases are depicted on Figures 2 through 5.

Historical usage of potential environmental concern was documented in Sanborn maps and city directories for many properties within the project area. These properties represent a moderate risk of encountering impact during potential future redevelopment.

A summary of open and closed cases as well as general historical use is discussed below by area.

Old Town Community

Three open release cases were identified in the Old Town Community. The Thrifty/Arco gas station, located at 3860 Old Town Avenue (Map ID 148) and the Old Town Shell station, located at 2290 Moore Street (Map ID 157), are active gasoline stations with open, documented releases to groundwater. These gas stations are located across the street from each other and their groundwater plumes appear to have co-mingled. Several phases of remediation have occurred at the Thrifty/Arco station (between 1996 and 2010), removing an estimated 3,565 pounds of hydrocarbons. The Shell station release was more recently discovered in 2007 and is still under investigation. Additional groundwater delineation is needed to the south and the east of the Shell station. Immediately downgradient of these stations is Moore Street followed by I-5. The third open release case is the NISE-West / SPAWAR – Old Town Campus (formerly Air Force Plant #19) located at 4635 Pacific Hwy (Map ID 53). This facility is part of a 60-acre parcel that has been used in the assembly and manufacturing of aircrafts, rockets and missiles from at least 1950. The majority of the facility is located in the Central Midway Planning Area and is further discussed in that section.

Five closed release case properties were identified in the Old Town Community.

- 2461 San Diego Avenue (Map ID 108)
- 2375 Congress Street (Map ID 123)
- 4050 and 4005 Taylor Street (Map ID 58 and 66)
- 4606 Pacific Hwy (Map ID 65)

The Old Town Burn Dump (aka Old Town Bridge Dump) is located north of Old Town, on the north side of I-8, east of the Morena Boulevard bridge and south of the San Diego River. Elevated concentrations of lead were reported in burn materials collected from the dump in 2000.

Historical industrial usage was documented in Sanborn maps and city directories for the Old Town area. These historical uses include numerous gasoline, oil and auto repair facilities along major roadways, including Congress Street, San Diego Avenue, Taylor Street.

Central Midway Area

Eight properties with open release cases were identified in the Central Midway Area.

The Texaco station (presently operated by Shell) located at 3711 West Camino Del Rio (Map ID 70) had a LUST case opened in 2007. Soil and groundwater has been impacted with gasoline. The extent of soil and groundwater impact has been generally delineated and for the most part appears to be limited to the property boundaries.

The former Arco station (redeveloped with a restaurant) located at 3720 W Camino del Rio (Map ID 78) was listed in 1984 for a gasoline release to groundwater. Remedial action was reportedly initiated in 1984. No further information was provided in the database report and this property was not listed in the GeoTracker database.

The former Poor Boy Rental facility (redeveloped with a two-story commercial building) located at 3148 Midway Drive (Map ID 131) had a gasoline release to soil and groundwater. Free product was discovered in 1993 and free product removal began in 1996. Approximately 100 gallons of free product have been removed from the property through September 2010. Free product reportedly still exists beneath the central portion of the property. Impacted groundwater is generally limited to the property boundaries, although the upgradient extent of the release, beneath Midway Drive, is not fully delineated (due to access issues). Groundwater monitoring indicates that the plume appears to have stabilized.

The NISE-West / SPAWAR - Old Town Campus, and former Air Force Plant #19, is located on Pacific Hwy (addresses of 4297, 4301 and 4635) between Rosecrans Street to the north, Pacific Hwy to the west, Witherby Street to the south, and the rail lines to the east (Map IDs 53, 139 and 165). This facility is a 60-acre parcel that has been used in the assembly and manufacturing of aircrafts, rockets and missiles from at least 1950. Contamination is present from previous waste handling practices. Contaminants of concern include heavy metals, PCBs, VOCs, SVOCs, and TPH. Source areas include leaking transformers, USTs, and various spills. Several open and closed cases are related to this facility, including cases regarding a rail road spur, disposal area, outdoor drain, and floor vaults. Reports were not on file for this property in GeoTracker or Envirostor (presumably due to the military/confidential nature of this facility).

Sunbelt Towing Inc, located at 4370 Pacific Hwy (Map ID 146), was entered into the VAP in 2005 for a release to soils. This facility is presently operating as Perfection Autobody. No other information was provided in GeoTracker. The LUST database report indicated that soils only were impacted and remediation was underway.

The Loma Portal Head Start Preschool, located at 2905 Cadiz Street (Map ID 187), had an oil release to groundwater reported in January 2001. The case is listed as open - remediation. This site was entered in the VAP. Reports were not available for this property via GeoTracker.

The Arco facility, located at 2940 Lytton Street (Map ID 191), began site assessment and remedial activities in 1986. SVE, groundwater extraction (pump and treat), and separate-phase hydrocarbons removal activities have been performed since discovery. An estimated 27,000 pounds of hydrocarbons were reportedly removed by the SVE system between 1987 and 1992. The groundwater pump and treat system operated from late 1987 to December 1990. Additional assessment was performed following these remedial actions. A soil vapor survey performed in 2005 did not indicate a risk to human health from vapor intrusion into site buildings. A 2006 study indicated that natural attenuation of petroleum hydrocarbons was occurring through aerobic and anaerobic degradation. Impacted soils and groundwater have been generally delineated. Although historically, benzene and MTBE impacted groundwater appears to have migrated off-site, towards the Peninsula Center Office Buildings located at 3065 Rosecrans Street and Hawly Automotive at 2918 Lytton Street, benzene and MTBE concentrations in groundwater appear to be decreasing (since 2005). Petroleum hydrocarbon plumes were now generally limited to the property boundaries by 2008.

The present VVSD facility (Map ID 181) located at 4141 Pacific Hwy was previously occupied by a gasoline service station (between 1936 and 1952), a dry cleaner, and a heating company. A 2003 soil and groundwater investigation identified petroleum hydrocarbon impact in the vicinity of the former gasoline station (eastern corner of Witherby Street and Pacific Hwy). Elevated concentrations of PCE and other VOCs were detected in groundwater samples. A vapor risk assessment was performed for the property, which indicated that with the installation of a vapor barrier and ventilation system, the risks associated with the existing solvent contamination would be mitigated to within acceptable levels.

Four unregistered USTs were reportedly discovered during earthwork and construction for the proposed VVSD facilities in April 2004. The tanks were subsequently removed along with approximately 900 tons of contaminated soil. TPH-d and TPH-g were not detected in post-excavation confirmation soil samples. Low concentrations of TRPH were detected in surface soil samples. According to the GeoTracker database, this property was entered into the VAP in 2002 for a gasoline release to soil. This facility is listed as an open case.

Numerous closed release cases were identified in the Midway Area.

- 3423 Channel Way (Map ID 44),
- 3860 Sherman Street (Map ID 54),
- 3127 Jefferson (Map ID 68),
- 3025 Moore Street (Map ID 85),
- 3848 West Camino Del Rio (Map ID 99),
- 3305 Kemper Street (Map ID 106),
- 3610 Barnett Avenue (Map ID 172),
- 2601 Gearing Drive (Map ID 201),
- Hancock Street: 3691 (Map ID 32), 3465 (Map ID 42), 3477 (Map ID 42),
- Kurtz Street: 3612 (Map ID 41), 3495 (Map ID 59), 2950 (Map ID 113), 2727 (Map ID 120), 2750 (Map ID 120), 2771 (Map ID 120),
- Lytton Street: 2844 (Map ID 194), 2702 (Map ID 209)
- Midway Drive: 3820 (Map ID 81), 3426 (Map ID 122), 3252 (Map ID 129), 3189 (Map ID 134), 3005 (Map ID 140), 2959 (Map ID 147), 2535 (Map ID 163)
- Pacific Hwy: 4350 (Map ID 154), 4297 (Map ID 165),
- Rosecrans Street: 3750 (Map ID 109), 3740 (Map ID 115), 3663 (Map ID 125), 3555 (Map ID 136), 3405 (Map ID 151), 3333 (Map ID 156), 3251 (Map ID 161)
- Sports Arena Boulevard: 3229 (Map ID 103), 3106 (Map ID 110)

The historic West Point Loma Dump site was identified in a 1976 report as being located within and adjacent to the southwestern portion of the Sports Arena. This landfill was reportedly utilized by the City of San Diego for trash disposal from approximately 1899 to 1908. Archaeological monitoring reports prepared for various construction activities within the assumed boundaries of the Sports Arena Landfill indicated early 1900 artifacts beneath the Arco gas station facility located at 3580 Sports Arena Boulevard. The report stated that an extensive deposit of late 1800 and early 1900 refuse remains at 6 to 10 feet below grade within the area defined as the dump boundaries.

Historical industrial usage was documented in Sanborn maps and city directories for the Central Midway Area. These historical uses included:

- Numerous gasoline, oil and auto repair facilities along major roadways, including West Camino Del Rio, Lytton Street, Midway Drive, Pacific Hwy, and Rosecrans Street
- Aircraft manufacturing (Convair Aircraft/NISE-West/SPAWAR on Pacific Hwy)
- Drycleaners (Sports Arena Boulevard)

Pacific Hwy Corridor

Five open release cases were identified within the Pacific Hwy Corridor.

Soils beneath the former Pacific Plating facility, located at 2182 Hancock Street (Map ID 169), contained elevated levels of chromium and nickel contaminated soil due to historical releases. During redevelopment of this property into a storage facility, impacted soils were excavated and re-located to the parking lot area on the southern portion of the property, where they were covered with two feet of clean fill material and paved. During grading activities, an undocumented 200-gallon UST was encountered in the proposed parking lot area. Soils beneath the former UST were excavated to an approximate depth of 10 feet below grade (3 feet below the tank bottom). All confirmation soil samples were below the reporting limits. Pacific Plating was also reported to have a release of chlorinated hydrocarbons to groundwater, discovered in November 2001, prior to construction of the self-storage facility. The case status is listed as open - remediation as of January 2002. Maps and laboratory data available on the GeoTracker database relate to the tank removal, described in the preceding paragraph.

Old Town Trolley, located at 2115 Kurtz Street (Map ID 183), was identified as having a release of chlorinated hydrocarbons. No further information was provided in GeoTracker.

Pacific Services Dry Cleaners, located at 4085 Pacific Hwy, Map ID 193, had a case opened in 1993. Groundwater has been impacted with chlorinated hydrocarbons. No further information was available in GeoTracker.

Kenneth Golden, located at 3485 Noell Street, Map ID 207, was listed in the LUST database for a release of gasoline to groundwater in 1988. Free product has been encountered in nine of the 19 wells located at the property. A vapor extraction system (VES) reportedly operated at this property for one year. No other information was available in GeoTracker. This property has been redeveloped into the A-1 Self Storage facility (present address 3911 Pacific Hwy).

Baron-Blakeslee Division of Purex, located at 3596 California Street, Map ID 227, was listed in the CORRACTS database as a RCRA hazardous waste treatment and disposal facility. The facility formerly consisted of a solvent tank farm, a distillation unit area, and a container storage area. The facility accepted both halogenated and non-halogenated solvents for recycling. The facility was certified closed in October 1994, with the exception of the chemical storage area, where underlying soils and groundwater were impacted with chlorinated solvents (particularly PCE and TCE). Soil gas surveys performed in 2003 and 2004 indicated that VOC levels were above indoor air standards and would require engineering controls on any future building on the site. A SVE pilot test was reportedly underway in 2008. Associated facilities and structures have since been removed and the property is an at grade parking lot.

Numerous closed release cases were identified in the Pacific Hwy Corridor.

- 4014 Coutts Street (Map ID 143)
- 3540 Estudillo Street (Map ID 198)
- 2053 Kurtz Street (Map ID 190)
- 1411 Palm Street (Map ID 257)

- Hancock Street: 2175 (Map ID 169), 2050 (Map ID 179), 2074 (Map ID 179), 2015 (Map ID 185), 1929 (Map ID 189), 1751 (Map ID 214)
- Kettner Boulevard: 3420 (Map ID 241), 2942 (Map ID 254), 2727 (Map ID 260)
- Pacific Hwy: 3894 (Map ID 206), 3959 (Map ID 206), 2975 (Map ID 256), 2499 (Map ID 266), 2521 (Map ID 266), 2535 (Map ID 266)
- Sutherland Street: 3441 (Map ID 215), 3442 (Map ID 215)
- West Laurel Street: 1020 (Map ID 274), 1120 (Map ID 275)

Historical industrial usage was documented in Sanborn maps and city directories for the Pacific Hwy Corridor. These historical uses include:

- Numerous gasoline, oil and auto repair facilities along major roadways, including Pacific Hwy
- Machine shops (at Coutz and Kurtz)
- An oil company (Rio Grande Oil Co at 3715 Estudillo Street)
- Chemical warehouse (at Witherby and Kurtz)
- Drycleaners (on Kurtz Street, and at Pacific and Coutz)

Abutting properties listed include:

- General Dynamics Convair Division, located at 3302 Pacific Hwy, Map ID 247: Discovery completed in 1986, preliminary assessment completed in 1986 - NFRAP, archived in 1986. Site reassessment performed in 2007, priority level not reported. This property is located downgradient of the project area and is presently used as an at grade parking lot.
- United States Air Force, 3302 Pacific Hwy, Map ID 247, had a release reported in April 2009. This case is listed as open assessment and interim remedial action. No further information was provided.
- General Dynamics - Convair Div, located at 3302 Pacific Hwy, Map ID 247, had a case was opened in October 2005. The case status is listed as open and referred to the Regional Board in August 2010.
- Northside San Diego International Airport, located at 3050 Pacific Hwy, Map ID 253, was mapped. Note this location is identified as the Lockheed Lo-Speed Wind Tunnel in the EDR database report. This site is also the former General Dynamics Convair Division facility location. Between 1935 and 1995, General Dynamics and its predecessors (including Consolidated Aircraft Company, Consolidated Vultee Aircraft Company and Convair) performed aircraft and aerospace manufacturing activities at the facility. Facility decommissioning began in 1995 and ended in 1997. Chemicals used at the site included fuels, oils, solvents, paints, acids, metals,

and paints. Additionally PCB-bearing building materials were used. Prior to plant decommissioning, impact was found in soil and groundwater. Several phases of investigations took place. Remedial actions were initiated during plant decommissioning. Recent soil and groundwater investigations encountered impact in soil and groundwater. The San Diego Regional Airport Authority plans on redevelopment of the site to airport related businesses and is conducting additional investigations to assess the potential risk relative to the new site use. The case status is listed as open - assessment and interim remedial action as of September 23, 2010.

12. IMPACT ANALYSIS

The following sections include a general discussion of potential impacts from hazardous materials issues, including exposure of sensitive receptors to hazardous materials, increased construction costs and community health and safety concerns. Potential impacts are then evaluated with respect to selected CEQA significance criteria established by the City of San Diego.

12.1. Overview of Impacts

Overall, implementation of the Community Plan is not anticipated to result in increased generation of hazardous emissions or handling of hazardous or acutely hazardous materials, substances, or wastes. However, soil and/or groundwater that has been impacted by releases of hazardous materials/petroleum products, such as from surficial spills, subsurface releases from USTs, or other sources, may be considered a waste. If the concentrations of constituents of concern in the affected media are found to exceed state and/or federal screening criteria, the waste may be considered hazardous. As discussed in Section 9, other hazardous materials that may be disturbed during redevelopment activities include lead-based paint, potentially asbestos-containing materials, and miscellaneous materials falling under the UWR. However, these potentially hazardous materials/wastes are already located within the project area. Implementation of the Community Plan would not result in additional handling of hazardous materials or generation of hazardous wastes beyond short-term construction phase activities, such as exposing soil during redevelopment activities or abatement of asbestos-containing materials during demolition.

Properties/facilities of potential environmental concern documented in the project area may have a higher likelihood of being associated with impacted soil and/or groundwater. Redevelopment of potentially contaminated properties (e.g., from industrial to residential) may increase the exposure of sensitive receptors in residential populations to constituents of concern. It is unlikely that potential impacts from hazardous materials would be significant, with the incorporation of mitigation measures discussed in Section 13. The following summary of significance determination thresholds from the City of San Diego is provided.

12.2. City of San Diego Significance Determination Thresholds

Potential impacts from hazardous materials/waste issues were evaluated with respect to City of San Diego CEQA Significance Determination Thresholds established by the Development Services Department (City of San Diego, 2011). The following summary of thresholds and significance is provided.

1. “Projects which propose the handling, storage, and treatment of hazardous materials (e.g., a Hazardous Waste Facility) falling under Municipal Code Section 141.1001 Hazardous Waste Research Facilities and Section 141.1002:” As the project does not specifically propose increased handling, storage, and/or treatment of hazardous materials, it would not be considered a Hazardous Waste Facility project.
2. “Project sites on or near known contamination sources:” The guideline lists the following sources of information to be reviewed to determine the significance threshold:
 - a. “San Diego County Environmental Assessment Listing:” The County of San Diego DEH is the Certified Unified Program Agency (CUPA) responsible for tracking and maintaining hazardous materials/hazardous waste files in the County of San Diego. The DEH maintains listings of properties associated with unauthorized releases of hazardous materials/petroleum products and wastes. These listings, including LUST and SLIC cases, were reviewed in the EDR environmental database report (Section 6). Several facilities were reported to be located on properties within the project area.
 - b. “State Department of Toxic Substances Control [DTSC] “Cortese List” of hazardous waste sites compiled pursuant to Section 65962.5 of the California Government Code:” The DTSC’s Cortese List was reviewed (DTSC, 2011). One site within the project area was reported on the Cortese List, the San Diego NISE-West Old Town Campus facility, located at 4297 Pacific Hwy.

- c. “Other possible sources - Sanborn maps, Fire Department records, topographic/ existing conditions surveys:” Sanborn maps were available for select portions of the project area (Section 5). Topographic maps, aerial photographs, environmental databases, and city directories, among other sources, were reviewed for this assessment. Various properties of potential environmental concern were noted in the project area during review of the environmental database report, including the unauthorized release facilities depicted on Figure 2. Historical industrial usage was also noted along certain streets within the project area, as summarized in Section 11.
 - d. “Site-specific emission data from the San Diego Air Pollution Control District:” As the project does not specifically propose the construction of new industrial facilities, which would emit hazardous air pollutants, this criterion is considered non-applicable to the project. However, please refer to the air quality technical study report prepared by others for the project for potential transportation-related air emissions.
3. Project sites that meet one or more of the following criteria may result in a significant impact.
- a. “Located within 1,000 feet of a known contamination site:” Based on review of the environmental database search report, known contamination sites, such as those associated with unauthorized releases of hazardous materials and wastes (e.g., LUST cases), are located in the project area.
 - b. “Located within 2,000 feet of a known ‘border zone property’ (also known as a ‘Superfund’ site) or a hazardous waste property subject to corrective action pursuant to the Health and Safety Code:” The DTSC has stated that it has not designated any hazardous waste property or border zone property pursuant to Government Code Section 65962.5(a). It also states that there are two hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, which are not located in San Diego County (DTSC, 2011).
 - c. “Sites with DEH Site File Closed:” Based on review of the environmental database search report, properties associated with unauthorized release/LUST/SLIC cases are located in the project area. Some of the properties are associated with unauthorized release cases that remain open with regulatory agencies, generally indicating that impacts to soil and/or groundwater have not been delineated/assessed, and/or that remedial activities are ongoing.

A case-closed status generally indicates a lower likelihood that a release continues to be a significant source of impacts to soil and/or groundwater; however, earlier cases, such as those in the 1980s and early 1990s, were often justified for closure using rationale and/or methodology that may not be considered to be the current standard of care, and closure is generally based on regulatory action levels, which can change over time. Therefore, while there is a lower likelihood compared to potential impacts from open cases, it is possible that unauthorized releases, which have been granted closure, are associated with contamination within the project area.

- d. “Located in Centre City San Diego, Barrio Logan, or other areas known or suspected to contain contamination sites:” The project is not located in Centre City or in Barrio Logan. However, based on review of historical and regulatory sources indicating facilities of potential environmental concern, known and/or suspected contamination sites are located in the project area.
- e. “Located on or near an active or former landfill:” Two properties within the project area were identified as former landfills: the Old Town Burn Dump and the Point Loma Burn Dump. These former landfill/burn dumps were not identified on the CIWMB Solid Waste Information System (SWIS) online database. According to the SWRCB Geotracker website, the Old Town Burn Dump is located north of I-8 and east of the Morena Boulevard Bridge, in the proximity of Old Town, and in the approximate location of the CalTrans District 11 facility. The historic West Point Loma Dump site was identified in previous reports as being located within and adjacent to the southwestern portion of the Sports Arena. This landfill was reportedly utilized by the City of San Diego for trash disposal from approximately 1899 to 1908.

Review of the 1938 City of San Diego City Planning Commission Report on Refuse Dumps and the County of San Diego Solid Waste Disposal Facilities map dated January 1985 did not reveal evidence that known refuse (trash) dumps or solid waste disposal facilities were historically located within or near the project area.

- f. “Properties historically developed with industrial or commercial uses, which involved dewatering (the removal of groundwater during extraction) in conjunction with major excavation in an area with high groundwater (such as downtown):” Based on review of previous environmental reports in the project area, groundwater is present at relatively shallow depths in the Central Midway Area (as shallow as 7 feet below grade). Therefore, the project area is considered to be in a location with relatively high groundwater. Some properties within the project area may have been associated with dewatering activities, the identification of which was beyond the scope of work for this HMTS.
- g. “Projects located in the Runway Protection Zone [RPZ], the Airport Environs Overlay Zone [AEOZ] or the Airport Approach Overlay Zone [AAOZ] or where the Federal Aviation Administration [FAA] has reached a determination of ‘hazard’ through FAA Form 7460-1, ‘Notice of Proposed Construction or Alteration’ as required by FAA regulations in the Code of Federal Regulations Title 14 Section 77.13:” Based on review of online resources provided by the City of San Diego City Clerk’s office, the project area is located in an AAOZ (City of San Diego, 2011).
- h. “Located on a site presently or previously used for agricultural purposes:” Previous agricultural land usage can result in concentrations of constituents of concern (e.g., pesticides, herbicides) in soil and/or groundwater. Agricultural land usage in the project area was generally not noted during review of historical sources.

12.3. California Environmental Quality Act Initial Study Checklist

The City of San Diego's Significance Determination Threshold guidance contains a subset of significance determination questions, some of which are related to the CEQA Appendix G Initial Study checklist. The following questions were evaluated.

Would the project "result in hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within a quarter-mile of an existing or proposed school?"

Several existing schools and/or day care/educational centers are located within the project area (Figure 3), and other proposed and/or existing schools may be located within a quarter-mile of the project area. While it is possible that hazardous materials/wastes may be disturbed during project activities, implementation of the Community Plan would be expected to result in the overall decreased exposure of sensitive receptors to hazardous materials. It is unlikely that the project would result in a significant impact with the incorporation of the mitigation framework discussed in Section 13.

Would the project "be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or environment?"

According to the DTSC, Government Code Section 65962.5 requires that DTSC compile a list of facilities/properties in the categories discussed below (DTSC, 2011).

- *Hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code* - The DTSC has designated two facilities in the state of California that fall under this category. These two facilities are located outside of San Diego County.
- *Land designated as "hazardous waste property" or "border zone property"* - The DTSC has indicated that no facilities or properties are listed under this provision because DTSC has not designated any hazardous waste property or border zone properties pursuant to the provisions cited in the Health and Safety Code.
- *Properties with hazardous waste disposals on public land* - The DTSC has indicated that it does not maintain separate records of reports that relate to public lands/properties.
- *Hazardous substance release sites selected for (and subject to) a response action* - The DTSC has specified that the list of sites that meet this criteria are listed on the "Cortese List." Review of the Cortese List indicated one property located within the project area: San Diego NISE-West Old Town facility on Pacific Hwy.

- *Sites included in the Abandoned Site Assessment Program* - The Abandoned Site Assessment Program was intended to include properties in “rural unsurveyed counties.” The program concluded in the early 1990s, and properties in the program were transferred to the Cal-Sites database, which has been incorporated into the DTSC’s current EnviroStor database. However, the EnviroStor database does not indicate whether a specific site was at one time included in the Abandoned Site Assessment Program and does not have a separate category for abandoned sites. Several properties/facilities within the project area were depicted on the DTSC EnviroStor database, which generally correspond to those properties/facilities listed in the environmental database report (Section 6). Based on the fact that these properties/facilities are not located in “rural unsurveyed counties,” they would not be considered to have been in the Abandoned Site Assessment Program.

Based on the information provided above, one property within the project area is located on a site included in a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (NISE-West).

Would the project “expose people to toxic substances, such as pesticides and herbicides, some of which have long-lasting ability, applied to the soil during previous agricultural uses?”

As discussed previously in Section 12.2, question 3(h), former agricultural uses were generally not noted within the project area. Properties within the project area would be expected to have a similar likelihood of containing agriculturally-related contaminants, if any, as other nearby properties within San Diego. Implementation of the Community Plan would not be expected to result in additional exposure beyond short-term construction phase activities, such as exposing soil during redevelopment activities. Based on the urban development of the project area, and the length of time since agricultural uses, if any, it is not likely that residual agricultural contaminants, if any, would result in a significant impact to project redevelopment with incorporation of the mitigation framework discussed in Section 13.

13. MITIGATION FRAMEWORK

The following mitigation framework measures relating to hazardous materials/wastes are provided.

- Property-specific due diligence processes shall be conducted by qualified environmental professionals, in accordance with applicable guidelines and regulations, on specific properties within the project area prior to property transactions and/or redevelopment. Phase I ESAs should be conducted by qualified environmental professionals in accordance with the standard of care at that time (currently the ASTM Standard Practice E1527-05) and applicable regulations (currently the EPA 40 Code of Federal Regulations §312 titled “Standards and Practices for All Appropriate Inquiries”).
- For properties within the project area with suspected or documented soil and/or groundwater contamination or other potential environmental concerns, further evaluation, such as Phase II ESAs and/or remediation activities, should be conducted prior to or during redevelopment activities by appropriately certified and/or registered professionals in accordance with a work plan that is approved by the regulatory agency having oversight of the activities. Results of previous assessment activities for a property (e.g., previous Phase II ESAs, UST removal sampling data), if any, shall be evaluated by certified and/or registered professionals prior to redevelopment activities.
- The “case closure” regulatory status shall be reevaluated prior to redevelopment activities by a qualified environmental professional in conjunction with the regulatory agency having oversight of the activities for unauthorized release properties when a site use change is part of the planned redevelopment (e.g., from industrial to residential use).
- For properties with documented or suspected impacts to soil and/or groundwater, appropriate worker and community health and safety measures shall be implemented by the contractor, under the oversight of a qualified environmental professional, during soil/groundwater disturbance activities (e.g., dust control, air monitoring, stockpile management).
- Soil generated during construction activities for redevelopment (e.g., subsurface excavation, grading) at contaminated properties may require chemical characterization (e.g., analytical testing) by a qualified environmental professional prior to reuse, export, or disposal.
- Further assessment is recommended to be performed by a qualified environmental professional if discolored soil or other potential environmental issues are encountered in the project area during construction/redevelopment activities. If contamination is discovered, regulatory agencies may require additional environmental investigation and/or mitigation to be conducted by the property owner, particularly if there is the potential to affect public health, safety, and/or the environment.

- Future redevelopment of impacted or potentially impacted properties involving soil excavation, grading, or other subsurface disturbance shall include implementation of a soil and groundwater management plan to address the possibility of encountering localized areas of potential environmental concern. The plan shall be prepared by a qualified environmental consultant and should be implemented during soil/groundwater disturbance activities by the contractor under the oversight of an environmental professional on behalf of the property owner/developer. The plan shall address monitoring of excavated soil, community and worker health and safety, and soil and groundwater handling, stockpiling, characterization, on-site reuse, export, and disposal protocols. Appropriate references to the potential to encounter contaminated soils and/or groundwater shall be included in construction specifications and bid documents so that the contractor can consider various factors (e.g., groundwater pumping rates, soil disposal) in their work.
- Groundwater at certain locations within the project area has been documented as being impacted. Based on evidence of shallow groundwater depths (i.e., as shallow as 7 feet below adjacent ground surface) at some locations, if dewatering activities are planned for construction or other proposed improvements, they may be subject to increased disposal costs or other environmental surcharges (e.g., permitting) as a result of the presence of contaminated groundwater. A discharge permit will likely be required for dewatering, and water may need to be characterized by a qualified environmental consultant and/or treated prior to discharge. The RWQCB and/or agency providing oversight of wastewater discharge shall be contacted by a qualified environmental consultant in conjunction with the contractor and/or property owner for guidance on the requirements for discharge of dewatering effluent, prior to initiation of construction activities. The groundwater management plan mentioned in the previous bullet shall be implemented by a contractor during construction activities if groundwater is expected to be encountered.
- Prior to renovation or demolition of structures, surveys shall be conducted for the presence of hazardous building materials such as asbestos-containing materials, lead-containing surfaces, and other materials falling under UWR requirements. The surveys shall be conducted by California Department of Public Health Certified Lead Inspector/Assessors and California Division of Occupational Safety and Health Certified Asbestos Consultants in accordance with applicable local, state, and federal guidelines and regulations. Prior to renovation or demolition of buildings, appropriate abatement measures shall be implemented by a licensed abatement contractor using trained and certified workers and supervisors.

14. LIMITATIONS

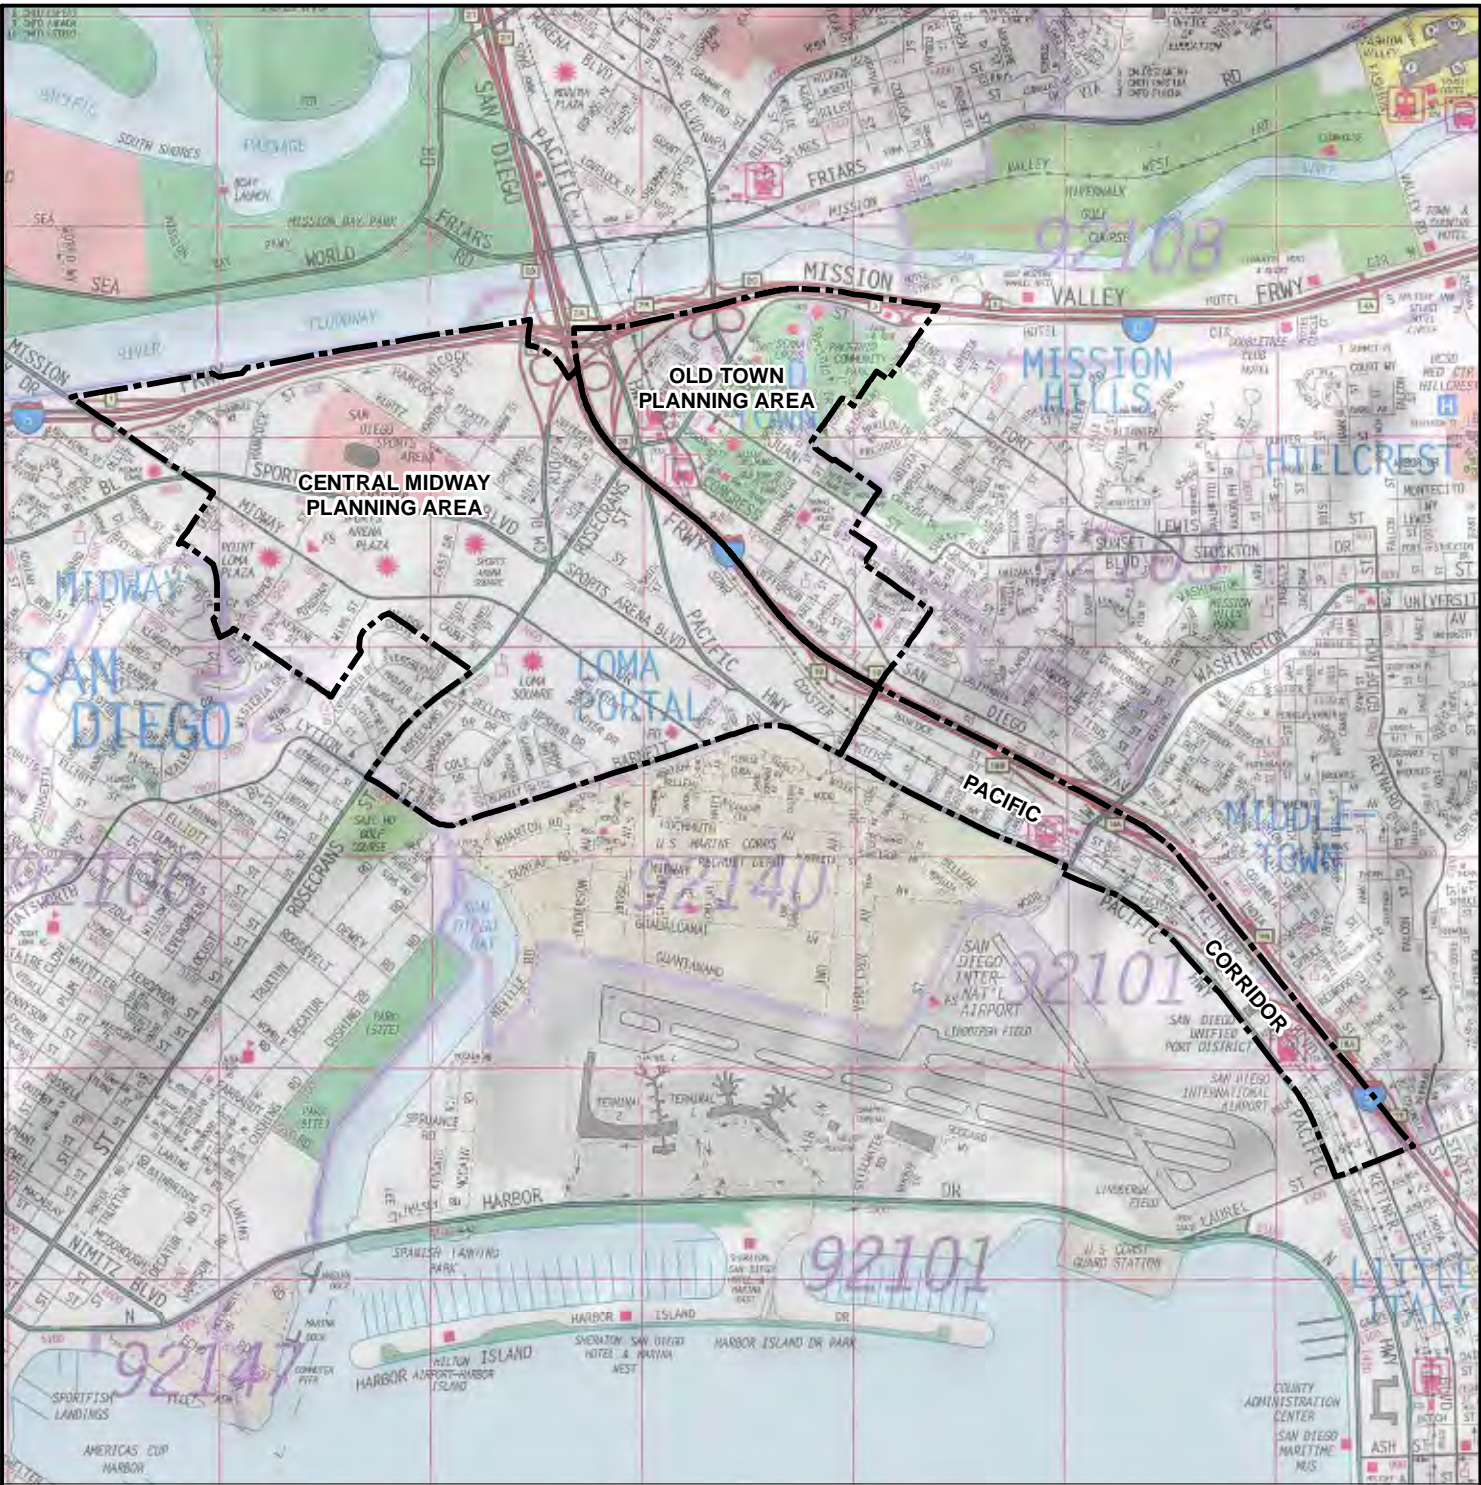

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Please note that this study did not include an evaluation of geotechnical conditions or potential geologic hazards.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

Our conclusions, recommendations, and opinions are based on an analysis of the observed project area conditions and the referenced literature. It should be understood that the conditions within the project area could change with time as a result of natural processes or the activities of man at a particular property. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 01/29/2010 has revealed that there are 3 CERCLIS sites within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
<i>SPAWAR (AF PLANT 19)</i>	<i>4297 PACIFIC HWY BLDG 3</i>	<i>139</i>	<i>1102</i>

<i>U S NAVY NAVAL TRAINING CENTER</i>	<i>NIMITZ AND ROSECRANS ST</i>	<i>242</i>	<i>1881</i>

EXECUTIVE SUMMARY

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are 12 CERC-NFRAP sites within the searched area.

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 05/25/2010 has revealed that there are 3 CORRACTS sites within the searched area.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/17/2010 has revealed that there are 4 RCRA-TSDF sites within the searched area.

EXECUTIVE SUMMARY

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 8 RCRA-LQG sites within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 85 RCRA-SQG sites within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/17/2010 has revealed that there is 1 RCRA-CESQG site within the searched area.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 02/17/2010 has revealed that there are 17 RCRA-NonGen sites within the searched area.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 7 HIST FTTS sites within the searched area.

EXECUTIVE SUMMARY

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 128 SWEEPS UST sites within the searched area.

EXECUTIVE SUMMARY

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2009 has revealed that there are 380 HAZNET sites within the searched area.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/18/2010 has revealed that there are 29 ENVIROSTOR sites within the searched area.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 1987-06-02 00:00:00
 Comments: SITE SCREENING DONE WILL BE WORKED ON UNDER NEW CERCLA GRANT EVIDENCE OF ACID SPILLS WHICH ATE THROUGH CONCRETE

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 1991-02-08 00:00:00
 Comments: PA report was reviewed by Region 4 staff. The site consists of a 15,000 sf bldg., a paved storage area, & a concrete loading dock. 99% of chemicals handled were detergent, wax and window cleaner. Presently, the bldg is used as an auto parts warehouse by Volks Parts. A driveby in 1983 by SDDHS reported that concrete was eroded outside the bldg. No sampling was done to determine if there is a hazard at the site. Staff recommends PEARM to determine if there is a hazard DTSC should address.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
LOC Case Number:	H39730-002
File Location:	Not reported
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Diesel, Gasoline
Site History:	This case was opened in February 2010, after the laboratory results from a Supplemental Subsurface Assessment Report dated September 2008 indicated that soil and groundwater in the general area of the former underground storage tanks were impacted with petroleum hydrocarbons. Total petroleum hydrocarbons (TPH) as gasoline were detected at a maximum of 6,600 mg/kg in the soil and TPH as diesel was detected a maximum of 1,500 mg/kg. Gasoline related compounds, benzene (5,300 ug/l), ethylbenzene (970 ug/l), toluene (8,910 ug/l) and tert-butyl alcohol (3,300 ug/l) were also detected in groundwater. The site was a Texaco Station prior to 1979.

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	9UT759
LOC Case Number:	H01782-001
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	

The Western Division Police Station became operational around May 1984, and is currently utilized as a fueling station and maintenance garage. In late 1986, gasoline odors were reported in local bathrooms, and free floating product (gasoline) was reported in an abandoned sewer line leading to the site. The sewer line was subsequently plugged with concrete. In February 1987, it was determined that there was a leaking turbine pressure feed line from one of the five underground storage tanks at the site (UST #2), and an estimated 41,000 to 55,000 gallons of gasoline was released. An Official Notice was issued to the City of San Diego on February 25, 1987. Product extraction wells were installed at the site in 1987, and a vapor survey was conducted. In addition, the City operated a vapor extraction system (VES) at the site from approximately 1990 to 1997. An estimated 60,674 pounds of petroleum hydrocarbons were extracted from the site and destroyed by oxidation. Three of the five USTs were removed in 1998 (2 gas, one diesel), and during the tank removal activities, a reported 200 cubic yards of impacted soil was excavated. The other 2 USTs (waste oil and motor oil) were later removed. A total of 20 extraction and/or groundwater monitoring wells have been installed at the site between 1987 and 2007, along with soil borings, to help define the extent of soil and groundwater contamination at the site. Groundwater at the site is generally present at a depth of between approximately 11 to 17 feet below grade, with a west to southwest flow direction. The groundwater has designated beneficial uses, and some reported contaminant concentrations, including benzene and MTBE, exceed their respective Maximum Contaminant Levels (MCLs). The City of San Diego plans for the 2010/11 fiscal year include conducting further soil gas monitoring, conducting semiannual groundwater monitoring and sampling, and preparing a Corrective Action Plan (CAP) for site mitigation.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 RB Case Number: Not reported
 LOC Case Number: H11498-002
 File Location: Local Agency
 Potential Media Affect: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Gasoline
 Site History: An unauthorized release was discovered during removal of two underground storage tanks (USTs) associated with a pest control business on October 29, 1998. Each of the USTs had a 10,000-gallon capacity and had contained gasoline to service company vehicles. The

former USTs were located adjacent to a building that parallels the southeastern property boundary. Upon removal of the USTs, the County DEH inspector noted the presence of ponded water at the base of the excavation that exhibited a petroleum hydrocarbon sheen. Staining was also observed in excavation soils. Analytical results for soil samples collected during the removal inspection indicated a maximum gasoline concentration of 188 milligrams per kilogram (mg/kg) and a maximum concentration of benzene, toluene, ethylbenzene, and xylenes (BTEX) of 12.6 mg/kg. The maximum detected concentration of methyl-tert-butyl ether (MTBE) was 12.2 mg/kg. Five hundred gallons of a product/water mixture were removed from the excavation by vacuum truck on the day following the UST removal. Ten groundwater monitoring wells were installed in association with site assessment activities from November 2002 through November 2007. Three of the existing wells are located off site. An additional off-site well is planned for installation in early 2010. Groundwater sampling results through March 2009 indicate that the chemicals of concern are benzene and methyl-tert-butyl ether (MTBE). Dissolved gasoline and MTBE have migrated off site in a westerly direction. The maximum detected concentration of dissolved gasoline and MTBE in March 2009 were 100 and 107 micrograms per liter, respectively. Benzene was not detected in groundwater samples collected during the sampling round. A soil vapor survey was performed for the concrete block building that adjoins the former UST excavation in December 2004 in association with a human health risk assessment. The consultant concluded that benzene vapors did not pose a risk to employees that occupy the building. Once the dissolved contaminant plume is adequately delineated, a Corrective Action Plan will be prepared for the site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 1991-02-08 00:00:00
 Comments: The PA Report was reviewed by Region 4 staff. The property was purchased in the '70s by Wilber & Betty Hanger. In 1980 they built a commercial building with 4 small warehouses for rent. From 1980 to 1983, Sackett & Pendlebury Boat Builders rented office space. The boat building was done accross the street at Clark Custom Boats. No evidence of any handling of hazardous substances at the site. Staff recommends NFA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

39 PACIFIC HIGHWAY MAINT. FACILIT WDS S105558051
 4764 PACIFIC HIGHWAY N/A
 SAN DIEGO, CA 92110

CA WDS:
 Facility ID: San Diego 000001007
 Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAS000003 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
 Subregion: 9
 Facility Telephone: Not reported
 Facility Contact: BILL CROWLEY
 Agency Name: CALTRANS DISTRICT 11
 Agency Address: 2829 JUAN STREET PO BOX 85406
 Agency City,St,Zip: SAN DIEGO 922865406
 Agency Contact: CORY BINNS
 Agency Telephone: 6196883626
 Agency Type: State
 SIC Code: 1611
 SIC Code 2: Not reported
 Primary Waste: Stormwater Runoff
 Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).
 Secondary Waste: Not reported
 Secondary Waste Type: Not reported
 Design Flow: 0
 Baseline Flow: 0
 Reclamation: No reclamation requirements associated with this facility.
 POTW: The facility is not a POTW.
 Treat To Water: Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
 Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Caseworker:	Not reported
Local Agency:	DEPARTMENT OF TOXIC SUBSTANCES CONTROL
RB Case Number:	16537-100
LOC Case Number:	400495 -- 15
File Location:	Regional Board
Potential Media Affect:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Not reported
Site History:	Space and Naval Warfare Systems Center, Old Town Campus (SPAWAR-OTC), an active satellite of SPAWAR Point Loma, is located north of the Marine Corps Recruit Depot and the San Diego International Airport. It encompasses approximately 60 acres and is 95% covered by buildings or pavement. Occupied by Lockheed-Martin and the Navy, the base has been utilized for various aircraft, rocket, and missile assembly and manufacturing. The contamination resulted from past waste handling practices is encountered at various locations inside and outside of the buildings. Known or suspected contaminants in soil and ground- water include heavy metals, polychlorinated biphenyls, volatile and semi-volatile organic compounds, and petroleum products.

 SAN DIEGO, CA 92186

WDS S105689582
 N/A

CA WDS:
 Facility ID: San Diego 000001030
 Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAS000003 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
 Subregion: 9
 Facility Telephone: 6196883626
 Facility Contact: CORY BINNS
 Agency Name: CALTRANS DISTRICT 11
 Agency Address: 2829 JUAN STREET PO BOX 85406
 Agency City,St,Zip: SAN DIEGO 922865406
 Agency Contact: CORY BINNS
 Agency Telephone: 6196883626
 Agency Type: State
 SIC Code: 0
 SIC Code 2: Not reported
 Primary Waste: Not reported
 Primary Waste Type: Not reported
 Secondary Waste: Not reported
 Secondary Waste Type: Not reported
 Design Flow: 0
 Baseline Flow: 0
 Reclamation: No reclamation requirements associated with this facility.
 POTW: The facility is not a POTW.
 Treat To Water: Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
 Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No
 Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
 Waste name: BENZENE

Waste code: D039
 Waste name: TETRACHLOROETHYLENE

Waste code: D040
 Waste name: TRICHLOROETHYLENE

Description:	Started at 9am, 3gpm, ongoing on private property. It is going underground on the property in their drainage system, staying underground and entering the storm drain and being intercepted by a storm pump prior to going into public waters and returned to the sewer system . Storm drain flows into an interceptor pump station which diverts it back into sewer station. It is near the San Diego river so there are diverters all along here so as not to leak into the river. This is a large apartment complex. Per R/P no clean-up needed. Once again, R/P stated it is not getting into any waterways. Responsible party is merely the maintenance man for the apartment complex, R/P did not have name of the apartment manager. He has also spoken with three plumbers and has almost gotten it taken care of.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:

Owner/operator name: ROBERT LIEPER
 Owner/operator address: 3330 KURTZ ST
 SAN DIEGO, CA 92110
 Owner/operator country: Not reported
 Owner/operator telephone: (619) 260-1670
 Legal status: Private
 Owner/Operator Type: Owner
 Owner/Op start date: Not reported
 Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): Unknown
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No
 Off-site waste receiver: Verified to be non-commercial

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 07/24/2003
 Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
 Area of violation: Not reported
 Date achieved compliance: Not reported
 Evaluation lead agency: State Contractor/Grantee

FINDS:

Registry ID: 110002903332

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): Unknown
 Recycler of hazardous waste: No
 Transporter of hazardous waste: Yes
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: Yes
 Off-site waste receiver: Verified to be non-commercial

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: F001
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D009
 Waste name: MERCURY

Waste code: D016
 Waste name: 2,4-D

Waste code: D018
 Waste name: BENZENE

Waste code: D035
 Waste name: METHYL ETHYL KETONE

Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	The case was opened in November 1987 when a release of fuel to both soil and groundwater was discovered during the replacement of the five underground storage tanks (USTs). Site investigation began in December 1987 and has continued to present. Currently the consultant is finalizing their assessment and their site conceptual model (SCM) for the site and then will be developing a corrective action plan (CAP). Groundwater is shallow at the site (5 to 11 feet bgs) with the free-product on-site and the dissolved plume extending off-site into the roadway to the north and east of the site and into the Famosa Slough to the west of the site.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No
 Off-site waste receiver: Verified to be non-commercial

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
