

# Micromobility Safety Rules for Riders

## Safe Rides, Good Vibes

**Micromobility** refers to small, low-speed vehicles that are non-electric or electric, including bicycles, scooters, mopeds, skateboards and other similar vehicles.

**Always be alert and yield to pedestrians.**

Stay safe while riding by staying alert and keeping an eye out for anything in your path. Refrain from using cell phones and earbuds while riding. If necessary, restrict usage to only one earbud. Be sure to give way to pedestrians while riding, making sure they can walk safely at all times.

**Dress in appropriate riding attire.**

Wear closed-toed shoes and bright-colored, fitted clothing. Make sure to avoid loose articles of clothing that hang down over the wheels or pedals.

**Use proper gear and equipment.**

Always wear your helmet and equip your vehicle with the appropriate lights and reflectors.

**Ride in the same direction as traffic.**

Never ride in a direction opposing traffic. If riding on the street, follow first come, first served protocols.

**Ride where your vehicle belongs.**

All micromobility vehicles (except for skateboards) are permitted to ride in the street, unless otherwise prohibited by local laws and regulations. Electronic or motorized vehicles are prohibited from riding on sidewalks.

**Signal your intentions.**

Use hand signals to show where you're going while riding, making sure others know your next move.

**Use a safe battery and charge appropriately.**

Make sure to use or buy a micromobility vehicle with a safety-tested battery. When charging, verify that charging protocols are in place to avoid EV (electric vehicle) battery fires. Follow the manufacturer's guidelines for charging and storage and supervise the vehicle while charging. Ensure regular maintenance and inspection of the vehicle and battery systems.
