BLUEPRINT SD INITIATIVE, HILLCREST FOCUSED PLAN AMENDMENT,  
AND UNIVERSITY COMMUNITY PLAN UPDATE  
PROGRAM EIR**

**San Diego, CA  
SCH No. 2021070359  
July 2024**

**FINAL DRAFT**  
**PROGRAM ENVIRONMENTAL**  
**IMPACT REPORT**

SCH No. 2021070359

**SUBJECT: BLUEPRINT SD INITIATIVE, HILLCREST FOCUSED PLAN AMENDMENT TO THE UPTOWN COMMUNITY PLAN, AND UNIVERSITY COMMUNITY PLAN AND LOCAL COASTAL PROGRAM UPDATE**

**Applicant:** City of San Diego City Planning Department

**DRAFT DOCUMENT – July 11~~March 14~~, 2024:**

In response to comments received during public review, minor revisions and clarifications have been made to the document which do not change the conclusions of the Draft Program Environmental Impact Report (PEIR) regarding the project’s potential environmental impacts and required mitigation. As defined in CEQA Guidelines Section 15088.5, minor revisions and clarifications to the document – which are shown in ~~strikeout~~/underline format – do not represent “significant new information” and, therefore, recirculation of the Draft PEIR is not warranted. No new significant environmental impacts would occur from these modifications, and similarly, no substantial increase in the severity of environmental impacts would occur.

**PROJECT DESCRIPTION:**

*Blueprint SD Initiative*

The General Plan provides a policy framework for land use decisions that balances the needs of the City as required by state law (Government Code Section 65300). It expresses a Citywide vision and provides a comprehensive approach for how the City should develop, provide public services, and maintain and enhance the qualities that define the City of San Diego. The overarching strategy of the General Plan is based on the City of Villages, which focuses growth into mixed-use activity centers that are pedestrian-friendly districts linked to the planned regional transit system.

The General Plan provides a vision and policy framework to guide the development of each of the City’s 52 community planning areas. Community plans are written to refine the General Plan’s citywide policies and provide location-based policies and recommendations to guide development over a 20-to-30-year timeframe. Community plans provide more detailed land use designations and community-specific policies on a wide array of topics including housing, mobility, open space and parks, public facilities, safety, noise, sustainability, environmental justice, urban design, and historic preservation.

The General Plan and community plans play a critical role in meeting the City’s Climate Action Plan (CAP) goals and contributing to the region’s mobility vision and needs. They also help the City implement other citywide policy documents such as the City’s Climate Resilient SD Plan

and the Parks Master Plan. The General Plan and community plans identify land uses and public improvements that work toward achieving the citywide mobility mode share goals. As such, the City has shifted away from accommodating additional vehicular travel to instead focus on reducing vehicular travel through strategic land use planning, primarily by locating new development within walking distance to transit stops and stations, and through investments in walking/rolling, bicycling, and transit improvements.

The Blueprint SD Initiative includes a comprehensive amendment to the General Plan to better align the City of Villages Strategy to reflect the latest goals, policies, and plans for housing, mobility and transit, environmental protection, and climate change adaptation and sustainable growth. The Blueprint SD Initiative would amend the General Plan to reflect an updated citywide land use framework designed around the 2050 regional transportation network in the San Diego Association of Government's (SANDAG's) Regional Plan to promote reductions in per capita greenhouse gas (GHG) emissions and vehicle miles traveled (VMT). The Blueprint SD Initiative identifies complementary land use, transportation, and related policies to support future development according to the revised land use framework. The land use and policy amendments would build upon the climate goals outlined in the City's CAP and Climate Resilient SD Plan.

#### *Hillcrest Focused Plan Amendment to the Uptown Community Plan (Hillcrest FPA)*

The Hillcrest FPA proposes an amendment to the Uptown Community Plan to redesignate approximately 380 acres of the Hillcrest and Medical Complex neighborhoods with land uses that follow a similar pattern to the planned land uses from the 2016 Uptown Community Plan Update with increases to the planned residential density and non-residential development capacity. The Hillcrest FPA establishes an updated vision and objectives that align with the SANDAG Regional Plan and the City's General Plan policies, including those proposed and amended by the Blueprint SD Initiative and the City of Villages Strategy, as well as recently adopted policies from the CAP, Parks Master Plan, and Climate Resilient SD. The amendment would provide the opportunity for additional homes in the Hillcrest FPA area and is intended to encourage active transportation and provide more opportunities for quality public spaces. By providing the opportunity for additional homes near the employment center of the Medical Complex neighborhood, in an area with access to high frequency public transit and coupled with mobility improvements, the Hillcrest FPA would encourage active transportation and reduce automobile trips for work commutes.

The Hillcrest FPA will update the land use plan and zoning for the Hillcrest FPA area, amend the existing Community Plan Implementation Overlay Zone (CPIOZ) - Type A - Building Heights within the Uptown Community Plan area, create three new CPIOZ areas (the Hillcrest District, the Hillcrest Historic District, and the Commercial and Entertainment Activity Area), and provide Supplemental Development Regulations (SDRs) for these CPIOZ areas.

#### *University Community Plan and Local Coastal Plan Update (University CPU)*

The University CPU is a comprehensive update to the existing University Community Plan and Local Coastal Program. The University CPU establishes an updated vision and objectives that align with the SANDAG Regional Plan, and the City's General Plan policies, including those proposed and amended by the Blueprint SD Initiative and the City of Villages Strategy, as well as recently adopted policies from the CAP, Parks Master Plan, and Climate Resilient SD. The University Community Plan will update the land use plan and zoning for the community plan area to help achieve the desired vision and objectives for the community. The University CPU

identifies several guiding principles, plan goals and policies, and identifies procedures for plan implementation, as well.

#### **PROJECT LOCATION:**

##### *Blueprint SD Initiative*

The project location is the entire City of San Diego municipal area, as land use policy, community plan updates and future San Diego Municipal Code amendments to implement the Blueprint SD Initiative may apply citywide. Consistent with the Blueprint SD Initiative, the City anticipates that future community ~~Plan-plan~~ updates, specific plans, and focused plan amendments would involve redesignation of existing land uses within specific areas, referred to as the Climate Smart Village Areas. These are areas that have access to existing or planned transit and demonstrate the greatest likelihood to encourage walking/rolling, biking, and transit use.

##### *Hillcrest Focused Plan Amendment to the Uptown Community Plan*

The Hillcrest FPA area is located in the center of the Uptown Community Plan area and encompasses approximately 380 acres of the Hillcrest and Medical Complex neighborhoods. The Hillcrest FPA area is bound by a series of streets and canyons, including Park Boulevard to the ~~west~~east, Walnut Avenue to the south, Dove Street to the west, and the hilltop bluffs along the northern edge of the Medical Complex neighborhood. State Route (SR-) 163 splits the Uptown Community Plan area and the Hillcrest FPA area.

##### *University Community Plan and Local Coastal Plan Update*

The University CPU area is located approximately 13 miles north of Downtown San Diego and includes prominent regional parks and institutions such as Torrey Pines State Natural Reserve, Torrey Pines Golf Course, and the University of California, San Diego (UCSD). Interstate (I-) 5 traverses the center of the community, SR-52 forms the southern border of the community and I-805 runs along the eastern edge within and outside of the community. Marine Corps Air Station (MCAS) Miramar is located along the southeastern border of the community.

#### **ENVIRONMENTAL DETERMINATION:**

The purpose of this document is to inform decision-makers, agencies, and the public of the significant environmental effects that could result if the project is approved and implemented, identify possible ways to minimize the significant effects, and describe a reasonable range of alternatives to the project.

Based on the analysis conducted for the project described above, the City of San Diego has prepared the following ~~Draft~~ PEIR in accordance with CEQA. The analysis conducted identified that the proposed project could result in significant and unavoidable impacts in the areas of **Aesthetics, Air Quality, Biological Resources, Cultural Resources, Noise, Hydrology, Public Services, Recreation, Transportation, Tribal Cultural Resources, Utilities and Service Systems, and Wildfire**. All other impacts analyzed in this Draft PEIR were found to be less than or not significant.

This document has been prepared by the City of San Diego's City Planning Department and is based on the City's independent analysis and determinations made pursuant to Section 21082.1 of the California Environmental Quality Act (CEQA) and Section 128.0103(a) and (b) of the San Diego Municipal Code.

**RESULTS OF PUBLIC REVIEW:**

- ( ) No comments were received during the public input period.
- ( ) Comments were received but did not address the accuracy or completeness of the draft environmental document. No response is necessary, and the letters are incorporated herein.
- (-X-) Comments addressing the accuracy or completeness of the draft environmental document were received during the public input period. The letters and responses are incorporated herein.

Rebecca Malone, Program Manager  
City Planning Department

# Blueprint SD Initiative, Hillcrest FPA, and the University CPU Program EIR Letters of Comment and Responses

The following letters of comment were received from agencies, organizations, and individuals during the public review period (March 14, 2024, to April 29, 2024) of the Draft Program Environmental Impact Report (PEIR). A copy of each comment letter along with corresponding staff responses is included here. Some of the comments did not address the adequacy of the environmental document; however, staff has attempted to provide appropriate responses to all comments as a courtesy to the commenter. The comments received did not affect the conclusions of the document. Where responses to comments required minor revisions to the Draft PEIR, changes to the text are shown in strikeout, underline format. Such format shows deletions as strikeout text and additions as underline text.

Ms. Elena Pascual  
 City of San Diego  
 Planning Department  
 202 C Street  
 San Diego, CA 92101

Dear, Ms. Pascual:

Thank you for including the California Department of Transportation (Caltrans) in the review process for the Blueprint SD Initiative, Hillcrest FPA, and University CPU Program Draft Environmental Impact Report (DEIR). The mission of Caltrans is to provide a safe and reliable transportation network that serves all people and respects the environment. The Local Development Review (LDR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities.

A1-2

Safety is one of Caltrans’ strategic goals. Caltrans strives to make the year 2050 the first year without a death or serious injury on California’s roads. We strive for more equitable outcomes for the transportation network’s diverse users. To achieve these ambitious goals, we will pursue meaningful collaboration with our partners. We encourage the implementation of new technologies, innovations, and best practices that will enhance the safety of the transportation network. These pursuits are ambitious and urgent, and their accomplishment involves a focused departure from the status quo as we continue to institutionalize safety in all our work.

A1-3

Caltrans is committed to prioritizing projects that are equitable and provide meaningful benefits to historically underserved communities, to ultimately improve transportation accessibility and quality of life for people in the communities we serve.

A1-4

**Traffic Analysis**

At the time of development, each development shall submit a VMT analysis and Local Mobility Analysis (LMA) including Multi-Modal and Safety Analysis. Proper mitigation measures for each project development shall be determined in the VMT/LMA for Multi-Modal and Safety Analysis.

A1-5

## Multimodal System Planning

Please consider incorporating further review of impacts on the State Highway System (SHS). There are several Comprehensive Multimodal Corridor Plans (CMCP's) that provide more information specific to SHS routes.

A1-6

- [South Bay to Sorrento CMCP](#): This document incorporates the areas of the University CPU and parts of the City of San Diego.
- [Central Mobility Hub and Connections](#) and [Draft Kumeyaay Corridor](#) CMCP's: These documents incorporate the City of San Diego and Hillcrest FPA related to multi-modal planning. As an example, please see the [Draft Kumeyaay Corridor Appendix E - Transportation Solutions, Cost Estimates, and Phasing Results](#), page 14 of the PDF, solution AT267, regarding multi-modal improvements to University Avenue.

Please review the [South Bay to Sorrento CMCP](#) and [SANDAG 2021 Regional Plan](#) for information on the [Purple Line, a new-proposed commuter rail service](#). The [SANDAG 2021 Regional Plan](#) also includes information about light rail improvements and the integration of California High-Speed Rail in the San Diego Region.

A1-7

Please consider the [Smart Mobility Framework 2010](#) and [California Transportation Plan 2050](#), documents: to supplement discussion of the Climate Smart Village Areas and Vehicle Miles Traveled (VMT).

A1-8

Please review the accuracy of the boundaries of the Hillcrest FPA. The draft PEIR states that the Hillcrest FPA is bounded by Park Boulevard to the west (it should state that the Hillcrest FPA is bounded by Park Boulevard to the east in relation to the other listed streets). Here are some of the sections where this information is listed:

A1-9

- Memo, pg. 3 (PDF pg. 3)
- Chapter 2.1.1.2 Hillcrest Focused Plan Amendment Area, pgs. 2-4 (PDF pg. 73)
- Chapter 3.4 Project Location, pg. 3-8 (PDF pg. 94)
- Chapter 4.1.1 Physical Setting, pg. 4.1-2 (PDF pg. 166)

## Broadband

Caltrans recognizes that teleworking and remote learning lessen traffic impacts on our roadways and surrounding communities. This reduces the amount of VMT and decreases the amount of GHG and other pollutants. The availability of affordable and reliable, high-speed broadband is key in supporting travel demand management and reaching the state's transportation and climate action goals.

A1-10

**Complete Streets and Mobility Network**

Caltrans views all transportation improvements as opportunities to improve safety, access, and mobility for all travelers in California and recognizes bicycle, pedestrian, and transit modes as integral elements of the transportation network.

A1-11

Caltrans supports improved transit accommodation through the provision of Park and Ride facilities, improved bicycle and pedestrian access and safety improvements, signal prioritization for transit, bus on shoulders, ramp improvements, or other enhancements that promote a complete and integrated transportation network.

A1-12

**Noise**

The applicant must be informed that in accordance with 23 Code of Federal Regulations (CFR) 772, the Department of Transportation (Caltrans) is not responsible for existing or future traffic noise impacts associated with the existing configuration of I-5, I-8, I-805, SR-15, and SR-163.

A1-13

**Right of Way (R/W)**

Any work performed within Caltrans' Right-of-Way (R/W) will require discretionary review and approval by Caltrans and an encroachment permit will be required for any work within the Caltrans' R/W prior to construction. As part of the encroachment permit process, the applicant must provide an approved final environmental document including the California Environmental Quality Act (CEQA) determination addressing any environmental impacts with the Caltrans' R/W, and any corresponding technical studies.

A1-14

If you have any questions or concerns, please contact Roger Sanchez, LDR Coordinator, at (619) 987-1043 or by e-mail sent to [roger.sanchez-rangel@dot.ca.gov](mailto:roger.sanchez-rangel@dot.ca.gov).

A1-15

Sincerely,

*Melina Pereira*

**A1: Response to California Department of Transportation (Caltrans) Comment Letter**

**A1-1:** The comment is an introduction to the attached comment letter. No response is necessary.

**A1-2:** The comment is an introduction to the comment letter. No response is necessary.

**A1-3:** The comment informs the reader of Caltrans' strategic goals. No response is necessary.

**A1-4:** The comment informs the reader of Caltrans' strategic goals. No response is necessary.

**A1-5:** Comment noted. Mitigation measure TRANS-1, would apply to all future discretionary projects. In addition, all future discretionary and ministerial projects that meet certain criteria defined in the San Diego Municipal Code (SDMC) Section 143.1102 would be required to demonstrate compliance with the City's Mobility Choices Ordinance (SDMC Section 143.1103 et seq.). The requirement for a Local Mobility Analysis (LMA) and/or Vehicle Miles Traveled (VMT) analysis is defined in the City's Transportation Study Manual (TSM). The City's TSM, updated September 2022, states that all discretionary projects must complete a LMA unless they meet the trip generation screening criteria listed in the TSM under the section titled "Transportation Significance Determination: Question B." The requirement for a VMT analysis applies to all land development projects, except for those that meet at least one of the screening criteria outlined in the TSM (pages 19 – 22 and Appendix D).

**A1-6:** Comment noted. The requirement to prepare an LMA is detailed in the City's TSM, as noted above in response to comment A1-5. As part of an LMA, project specific impacts to State Highway System facilities would be conducted, if warranted. If the City LMA identifies required improvements to Caltrans facilities, those would be coordinated with the agency at that time. The Program Environmental Impact Report (PEIR) was prepared to assess potential impacts at the program-level, which generally assesses the project's impact under the CEQA significance thresholds regarding transportation policy consistency, vehicle miles travelled, hazards due to design features, and emergency access.

**A1-7:** Comment noted. As noted under Section 4.14.4 Issue 1, the project would allow for an increase in transit-supportive residential densities and nonresidential intensities in locations where existing or planned transit would be available consistent with the planned 2050 regional transportation network, which assumes implementation of the proposed Purple line and other 2050 SANDAG transportation network components. While implementation of the Purple line cannot be guaranteed at this time due to it being in the planning stages and funding not being identified, this improvement is identified in the SANDAG 2050 Regional Transportation Plan, is actively being planned, and therefore, is a reasonable assumption for a program-level planning document. As noted in the transportation analysis in Section 4.14, Issue 2(a-c), of the PEIR, the VMT generated by future development in accordance with the Blueprint SD Initiative, the University CPU, and the Hillcrest FPA (see Tables 4.14-3, 4.14-5, and 4.14-7 in Section 4.14 of the PEIR) assume implementation of future SANDAG regional transit projects; however, the impacts related to VMT are considered significant and unavoidable in the buildout conditions because implementation of regional transit projects cannot be guaranteed.

**A1-8:** Comment noted. The City has considered these documents and no further revisions to the Final PEIR are required. The comment does not raise an issue regarding the adequacy of the PEIR.

**A1-9:** The location of Park Boulevard has been corrected in Chapter 3, Section 3.4 Project Location. The other referenced locations correctly identified Park Boulevard to the east of the Hillcrest Focused Plan Amendment (FPA) area and the Hillcrest FPA is correctly depicted and described. The comment is unclear which memo (Memo, pg. 3 (PDF pg.3) is being referenced; therefore, no revisions were made.

**A1-10:** The comment does not raise an issue regarding the adequacy of the Draft PEIR. The City acknowledges the comment regarding broadband accessibility and its impact on travel demand management and in reaching the state's transportation and climate action goals. Broadband accessibility is noted in the City's Climate Action Plan, with which this project is consistent.

**A1-11:** The comment does not raise an issue regarding the adequacy of the Draft PEIR. The comment informs the reader of Caltrans' recognition of bicycle, pedestrian, and transit modes as integral elements of the transportation network. No response is necessary.

**A1-12:** The comment does not raise an issue regarding the adequacy of the Draft PEIR. No response is necessary.

**A1-13:** Comment noted.

**A1-14:** Comment noted. Section 4.14.2.1(b) includes acknowledgement of future projects that may physically affect Caltrans facilities, Caltrans requires encroachment permits before any construction work may be undertaken.

**A1-15:** The comment is a conclusion to the attached comment letter. No response is necessary.

**SUBJECT: BLUEPRINT SD INITIATIVE, HILLCREST FPA, AND UNIVERSITY CPU PROGRAM, DRAFT PROGRAM ENVIRONMENTAL IMPACT REPORT SCH#2021070359; SAN DIEGO COUNTY, CA**

Dear Elena Pascual:

The California Department of Fish and Wildlife (CDFW) received a Notice of Availability of a Draft Program Environmental Impact Report (DPEIR) from the City of San Diego (City) for the Blueprint San Diego (SD) Initiative, Hillcrest Focused Plan Amendment (FPA), and University Community Plan Update (CPU) (Project) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.<sup>1</sup>

A2-2

Thank you for the opportunity to provide comments and recommendations regarding the activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

**CDFW Role**

CDFW is California’s **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the State [Fish & G. Code, §§ 711.7, subdivision (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect state fish and wildlife resources.

A2-3

<sup>1</sup> CEQA is codified in the California Public Resources Code in section 21000 et seq. The “CEQA Guidelines” are found in Title 14 of the California Code of Regulations, commencing with section 15000.

*Conserving California’s Wildlife Since 1870*

Elena Pascual  
City of San Diego  
May 3, 2024  
Page 2 of 22

CDFW is also submitting comments as a **Responsible Agency** under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 et seq.). Likewise, to the extent implementation of the Project as proposed may result in “take” (see Fish & G. Code, § 2050) of any species protected under the California Endangered Species Act (CESA; Fish & G. Code, § 2050 et seq.) or the Native Plant Protection Act (NPPA; Fish & G. Code, §1900 et seq.), CDFW recommends the Project proponent obtain appropriate authorization under the Fish and Game Code.

A2-3 cont.

CDFW also administers the Natural Community Conservation Planning (NCCP) program, a California regional habitat conservation planning program. The City participates in the NCCP by implementation of its approved Subarea Plan (SAP) and Implementation Agreement (IA) under the subregional Multiple Species Conservation Program (MSCP). The City’s Multi-Habitat Planning Area (MHPA) delineates core biological resource areas and corridors targeted for conservation under the SAP.

## PROJECT DESCRIPTION SUMMARY

**Proponent:** City of San Diego

**Objective:** In 2008, the City adopted a General Plan to provide policy guidance on long-term development based on several elements including land use and community planning, mobility, economic prosperity, public facilities, services and safety, urban design, recreation, historic preservation, conservation, noise, and housing. Currently, the City implements 48 different Community Plans that tier off from the General Plan’s Land Use and Community Planning Element and provide community-specific policies and land use designation maps.

The Project proposes to amend the General Plan through adoption of the Blueprint SD Initiative, which will update the City’s land use planning framework and policies to ensure projected development is consistent with the housing, climate, and mobility goals outlined in the City’s 2022 Climate Action Plan (CAP) and San Diego Association of Governments’ (SANDAG) 2021 Transportation Plan. Under Blueprint SD, future land use changes would be implemented through Community Plan Updates (CPU), Specific Plans, and Focused Plan Amendments (FPA), with the goal of focusing development of mixed-use “Climate Smart Village” areas near transit and recreational areas to support community sustainability, mobility, and quality of life.

A2-4

The Project also proposes immediate updates to the University CPU and Hillcrest FPA within the Uptown Community Plan that incorporate amendments to the City’s Land Development Code (LDC) and zoning designations. The Project may include future MSCP Boundary Line Corrections (BLCs) to address MSCP mapping errors (e.g.

Elena Pascual  
City of San Diego  
May 3, 2024  
Page 3 of 22

removing pre-SAP development). The Project may also include Boundary Line Adjustments (BLAs) to remove the MHPA designation over lands to allow additional development encroachment (more than 25 percent of the parcel) in certain areas in exchange for additional conservation areas added elsewhere contingent on the exchange yielding an equal or greater biological value. The Project specifically proposes a BLC within the University CPU to add 25.97 acres of City-owned land into the MHPA (25 percent developable, 75 percent conserved) in areas along Nobel Drive and Sorrento Valley Road. In addition, the City will also vacate 2.70 acres of City-owned right-of-way traversing Rose Canyon that will change from 75 percent conserved designation to 100 percent conserved MHPA. The DPEIR Mitigation Measure (MM) BIO-1 stipulates that “any future projects that could directly and/or indirectly impact sensitive species, sensitive habitats and/or wetlands shall comply with the City’s Environmentally Sensitive Lands (ESL) Regulations, Biology Guidelines, and applicable federal, state, and local Habitat Conservation Plans including, but not limited to, the City’s [SAP] and Vernal Pool Habitat Conservation Plan (VPHCP) and shall implement avoidance, minimization, and mitigation measures in accordance with the City’s ESL Regulations, Biology Guidelines, and [SAP] and VPHCP” (DPEIR page 4.3-64).

A2-4  
cont.

**Location:** The City of San Diego covers approximately 372 square miles in the southwest corner of California. It is bound to the west by the Pacific Ocean, and to the east and south by the cities of Santee, La Mesa, and Lemon Grove, unincorporated County of San Diego lands, and National City. The Project area is bound to the north by the cities of Del Mar, Solana Beach, Escondido, and Poway, and unincorporated County of San Diego lands.

University City encompasses approximately 8,676 acres in the north-central area of the City, classified as the ‘Northern Area’ and ‘Urban Area’ in the SAP. It is bound to the south by State Route 52 and is crisscrossed by Interstate 5 and Interstate 805. It is bound to the east by the community of Mira Mesa and Marine Corps Air Station Miramar and to the west by the Pacific Ocean and the community of La Jolla. This area currently supports a mix of educational, commercial, and industrial facilities, residential development, urban parks, and open space/MHPA lands including portions of Rose Canyon, Torrey Canyon, Carroll Canyon, Sorrento Canyon, and Miramar Canyon.

A2-5

The Hillcrest FPA is nested within the Uptown community and is located just north of downtown San Diego and covers approximately 380 acres. It is bound to the north by Interstate 8, east by Park Boulevard and Balboa Park, and to the west and south by Old Town San Diego and Interstate 5.

**Biological Setting:** Per the DPEIR, thirty-one vegetation communities and land cover types are present throughout the City (DPEIR; Table 4.3-1; Attachment A). Vegetation communities and land cover types were classified following Holland (1986) as modified by Oberbauer et al. (Oberbauer et al. 2008). Per the DPEIR, there are 12 special status plant species known to occur within the Project area, with seven species reported within the City’s proposed Climate Smart Village Areas (DPEIR; Table 4.3-2; Attachment B). In

A2-6

Elena Pascual  
City of San Diego  
May 3, 2024  
Page 4 of 22

addition, there are 12 special status wildlife species known to occur within the Project area, with 11 of those species reported within the City’s proposed Climate Smart Village Areas (DPEIR; Table 4.3-3; Attachment C). Four of the wildlife species are sensitive nesting birds including California least tern (*Sternula anatillarum browni*; CESA and Endangered Species Act (ESA)-listed endangered, California Fully Protected Species), coastal California gnatcatcher (*Polioptila californica californica*; ESA-listed threatened, California Species of Special Concern (SSC)), least Bell’s vireo (*Vireo bellii pusillus*; CESA-listed endangered, ESA-listed endangered; vireo), and American peregrine falcon (*Falco peregrinus anatum*). One species, Crotch’s bumble bee (*Bombus crotchii*), was left off the list in the DPEIR of species that have occurred or are likely occur within the City limits. Crotch’s bumble bee is currently a candidate for listing under CESA; therefore, future projects under the DPEIR will need to address all potential impacts to the species (CDFW 2024a).

A2-6  
cont.

**Project History:** CDFW previously provided comments on the Notice of Preparation for the Blueprint SD Initiative component of the Project in a letter dated August 18, 2021.

## COMMENTS AND RECOMMENDATIONS

The DPEIR provides a foundation for second tier CEQA documents for subsequent projects but does not analyze the project-specific impacts of individual projects. These analyses will be performed on individual project sites as construction of each project is needed. CDFW offers the following comments and recommendations to assist the City in adequately identifying and/or mitigating the Project’s significant, or potentially significant, direct, and indirect impacts on fish and wildlife (biological) resources, and to ensure regional conservation objectives in the City’s SAP and VPHCP would not be eliminated by implementation of the Project. Furthermore, CDFW recommends the City provide Biological Resources Mitigation Measures for the Project and condition the environmental document to include the mitigation measures recommended in this letter. CDFW has provided the City with a summary of our suggested mitigation measures and recommendations in the form of an attached Draft Mitigation and Monitoring Reporting Plan (Attachment D).

A2-7

### COMMENT #1: Proposed Amendments to Land Development Code (LDC)

**Issue:** Section 3.5.1.3 of the DPEIR states that “future LDC amendments may include, but not be limited to, the following: amendments to facilitate ministerial processing of residential and mixed-use development...and changes to support development and mobility improvements” (DPEIR page 3-26). CDFW and City staff (Dan Monroe, Senior Planner) discussed this item briefly in the field on April 23, 2024, and the City relayed that these amendments will likely involve rezoning of

A2-8

Elena Pascual  
City of San Diego  
May 3, 2024  
Page 5 of 22

land use designations and that an amended LDC document has not yet been prepared or included in the DPEIR.

**Specific Impact:** Proposed amendments to the City’s LDC may result in changes to the City’s standards for determination of impact and mitigation under CEQA and implementation of their SAP.

**Why impact would occur:** There is insufficient detail provided in the DPEIR for CDFW to determine if proposed amendments to the LDC will be consistent with the conservation measures provided in the SAP, IA, and NCCP Permit (CDFW 1997).

**Evidence that impact would be significant:** The City has an approved and permitted NCCP that they implement in partnership with CDFW. As the permitting entity, CDFW has a compelling interest in reviewing any changes to the City’s implementation framework such as the LDC. Any amendments to the LDC inconsistent with the SAP may result in noncompliance with the NCCP Permit.

A2-8 cont.

#### **Recommended Potentially Feasible Mitigation Measure(s)**

**Recommendation #1 CDFW Review of Future Amendments to the LDC:** All proposed amendments to the LDC shall be consistent with the City’s SAP, IA, and NCCP Permit. CDFW would appreciate the opportunity to review and comment on any proposed amendments to the LDC to ensure consistency with the SAP.

#### **COMMENT #2: Impacts to Crotch’s Bumble Bee**

**Issue:** Future projects associated with the DPEIR may impact suitable habitat for Crotch’s bumble bee (*Bombus crotchii*), a candidate species for CESA listing that is not covered under the SAP. The DPEIR or the Biological Technical Report does not discuss or provide mitigation measures to reduce the Project’s impacts to Crotch’s bumble bee.

**Specific impact:** Future projects may result in temporal or permanent loss of suitable nesting and foraging habitat of Crotch’s bumble bee. Project ground-disturbing activities may cause death or injury of adults, eggs, and larva; burrow collapse; nest abandonment; and reduced nest success.

A2-9

**Why impact would occur:** According to the [California Natural Diversity Database](#), observations of Crotch’s bumble bee have been recorded within the City (CDFW 2024b). Additionally, [iNaturalist](#) has recent recorded observations of Crotch’s bumble bee within the City (iNaturalist 2024). As with any flying species, Crotch’s bumble bee may utilize areas that have suitable nesting habitat and floral resources

Elena Pascual  
City of San Diego  
May 3, 2024  
Page 6 of 22

throughout the City. The BTR identifies vegetation throughout the Project site that has the potential to provide suitable nesting, overwintering, and foraging habitat for this species. Crotch's bumble bee primarily nest underground in late February through late October in abandoned small mammal burrows but may also nest under perennial bunch grasses or thatched annual grasses, under-brush piles, in old bird nests, and in dead trees or hollow logs (Williams et al. 2014; Hatfield et al. 2018). Overwintering sites utilized by Crotch's bumble bee mated queens include soft, disturbed soil (Goulson 2010), or under leaf litter or other debris (Williams et al. 2014). Foraging habitat for Crotch's bumble bee includes both native and non-native floral resources in a variety of vegetation types within approximately 0.5 km of a nest. Ground disturbance and vegetation removal associated with Project implementation during the breeding season could result in the incidental loss of breeding success or otherwise lead to nest abandonment in areas adjacent to the Project site. The BTR and DPEIR does not discuss the Project's impact on Crotch's bumble bee. Furthermore, the DPEIR does not provide specific avoidance and minimization measures directly related to Crotch's bumble bee. Without sufficient species-specific avoidance, minimization, or mitigation measures impacts to Crotch's bumble bee may occur.

**Evidence impact would be significant:** Impacts to CESA-listed species and their habitat meet the definition of endangered, rare, or threatened under CEQA (CEQA Guidelines § 15380). Impacts to CESA listed species and their habitats may result in a mandatory finding of significance because the Project has the potential to substantially reduce the number or restrict the range of an endangered, rare, or threatened species (CEQA Guidelines § 15065).

A2-9 cont.

The California Fish and Game Commission accepted a petition to list the Crotch's bumble bee as endangered under CESA (Fish & G. Code, § 2050 et seq.), determining the listing "may be warranted" and advancing the species to the candidacy stage of the CESA listing process. The Project may substantially reduce and adversely modify habitat as well as reduce and potentially impair the viability of populations of Crotch's bumble bee. The Project may also reduce the number and range of the species without considering the likelihood that special status species on adjacent and nearby natural lands may rely upon the habitat that occurs on the proposed Project site. In addition, Crotch's bumble bee has a State ranking of S1/S2. This means that the Crotch's bumble bee is considered critically imperiled or imperiled and is extremely rare (often 5 or fewer populations). Lastly, Crotch's bumble bee is listed as an invertebrate of conservation priority under the [California Terrestrial and Vernal Pool Invertebrates of Conservation Priority](#) (CDFW 2017).

### **Recommended Potentially Feasible Mitigation Measure(s)**

**Mitigation Measure #1: Crotch's Bumble Bee Surveys** - Within one year prior to vegetation removal and/or grading, a qualified entomologist with appropriate handling permits and who is familiar with the species behavior and life history, shall

Elena Pascual  
City of San Diego  
May 3, 2024  
Page 7 of 22

conduct focused surveys to determine the presence/absence of Crotch's bumble bee within and adjacent to a proposed project site. Focused surveys shall follow CDFW's [Survey Considerations for California Endangered Species Act Candidate Bumble Bee Species](#) (CDFW 2023) or the latest guidance from CDFW. Focused surveys shall also be conducted throughout the entire project site during the appropriate flying season to ensure no missed detection of Crotch's bumble bee occurs. Survey results, including negative findings, shall be submitted to CDFW and the City prior to implementing project-related ground-disturbing activities. At minimum, a survey report shall provide the following:

- 1) a description and map of the survey area, focusing on areas that could provide suitable habitat for Crotch's bumble bee;
- 2) field survey conditions that shall include name(s) of qualified entomologist(s) and brief qualifications; date and time of survey; survey duration; general weather conditions; survey goals, and species searched;
- 3) map(s) showing the location of observations and any nests/colonies; and
- 4) a description of physical (e.g., soil, moisture, slope) and biological (e.g., plant composition) conditions where each nest/colony is found. A sufficient description of biological conditions, primarily impacted habitat, shall include native plant composition (e.g., density, cover, and abundance) within impacted habitat (e.g., species list separated by vegetation class; density, cover, and abundance of each species).

A2-9 cont.

**Mitigation Measure #2: Avoidance Plan** - If Crotch's bumble bee is detected, the applicant in consultation with a qualified entomologist shall develop a plan to fully avoid impacts to Crotch's bumble bee, if feasible. The plan shall include effective, specific, and enforceable measures. An avoidance plan shall be submitted to the CDFW and City for approval prior to implementing Project-related ground-disturbing activities and/or vegetation removal where there may be impacts to Crotch's bumble bee.

**Mitigation Measure #3: Incidental Take Permit** - If Crotch's bumble bee is detected and if impacts to Crotch's bumble bee cannot be feasibly avoided, the Project applicant shall consult with CDFW and obtain appropriate take authorization from CDFW (pursuant to Fish & G. Code, § 2080 et seq.). The Project applicant shall comply with the mitigation measures detailed in the take authorization issued by CDFW. The Project applicant shall provide a copy of a fully executed take authorization prior to the issuance of a grading permit and before any ground disturbance and vegetation removal.

### Additional Comments

1. Trails Proposed within Multi-Habitat Planning Area (MHPA) Lands. The DPEIR depicts several proposed trails within and adjacent to MHPA lands (DPEIR Figures 3-15 and 3-26).

**Recommendation #2 Proposed Trails:** Although CDFW acknowledges that trails are allowed within and adjacent to the MHPA lands consistent with Section 1.5.2 of the City's SAP, we strongly recommend that proposed trails are not pre-emptively depicted in the DPEIR given the programmatic nature of the document. Prior to implementation of any trail projects, CDFW would appreciate the opportunity to evaluate site-specific species and habitat information to analyze biological impacts and determine if the proposed trails and consequent recreational activity are consistent with the MSCP.

A2-10

To facilitate our review of proposed trails, CDFW recommends that the following information be provided as subsequent trail projects move forward: an aerial photograph with an overlay of the proposed alignment of the trail in relation to any designated or proposed open space, specifications of trail design, measures to avoid/minimize impacts related to users straying off-trail or trail use by unauthorized vehicles such as electric bicycles, responsibility entity and activities related to maintenance, and a discussion of how the proposed location and use of the trail would be consistent with the SAP.

2. Multi-Habitat Planning Area (MHPA) Boundary Line Adjustments (BLA). CDFW recommends that the City consult with the Wildlife Agencies early on to review any future proposed BLA under the Project.

**Recommendation #3 Wildlife Agencies' Concurrence on Boundary Line Adjustments:** To ensure consistency with the MSCP's conservation goals and objectives, future projects under the DPEIR should provide full disclosure and functional equivalency analysis of any proposed BLA per Sections 1.1.1 and 5.42 of the MSCP SAP (City of San Diego 1997). The Wildlife Agencies will need to agree and provide written concurrence for the requested BLA after we have had the opportunity to review all information provided by the City. When evaluating a proposed BLA and habitat equivalency assessment, the Wildlife Agencies generally consider the following biological goals:

A2-11

- No net loss of MHPA acreage;
- No net reduction of higher sensitivity vegetation communities (i.e., Tier I, II, IIIa and IIIb);
- Net impacts/conservation of covered listed species resulting from the BLA;
- Net impacts/conservation of covered non-listed sensitive species resulting from the BLA; and

Elena Pascual  
City of San Diego  
May 3, 2024  
Page 9 of 22

- Landscape configuration to maintain connectivity of the MHPA (i.e., net effects to 'Preserve Design')

A2-11  
cont.

3. Lake and Streambed: Future projects may impact local lakes, rivers, or streams within the City of San Diego. CDFW has regulatory authority over activities in streams and/or lakes that will divert or obstruct the natural flow, or change the bed, channel, or bank (which may include associated riparian resources) of any river, stream, or lake or use material from a river, stream, or lake. For any such activities, the Project applicant (or "entity") must provide written notification to CDFW pursuant to section 1600 et seq. of the Fish and Game Code. Based on this notification and other information, CDFW determines whether a Lake and Streambed Alteration Agreement (LSAA) with the applicant is required prior to conducting the proposed activities. CDFW's issuance of a LSAA for a Project that is subject to CEQA will require CEQA compliance actions by CDFW as a Responsible Agency.

A2-12

**Recommendation #4 Fish and Game Code 1600 Notification:** To minimize additional requirements by CDFW pursuant to section 1600 et seq. and/or under CEQA, the DPEIR should fully identify the potential impacts to the stream or riparian resources and provide adequate avoidance, mitigation, monitoring, and reporting commitments for issuance of the LSAA. CDFW recommends the Applicant submit a Lake and Streambed Alteration Notification to CDFW. Notifications can be submitted through CDFW's Environmental Permit Information Management System (EPIMS), which can be found at [Environmental Permit Information Management System \(ca.gov\)](https://www.cdpr.ca.gov/Environmental-Permit-Information-Management-System) (CDFW 2024c).

## ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDDB). The CNDDDB field survey form can be found at the following link: <https://wildlife.ca.gov/Data/CNDDDB/Submitting-Data> (CDFW 2024d). The completed form can be mailed electronically to CNDDDB at the following email address: [CNDDDB@wildlife.ca.gov](mailto:CNDDDB@wildlife.ca.gov). The types of information reported to CNDDDB can be found at the following link: <https://wildlife.ca.gov/Data/CNDDDB/Plants-and-Animals> (CDFW2024e).

A2-13

## ENVIRONMENTAL DOCUMENT FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be

A2-14

Elena Pascual  
City of San Diego

Page 10 of 22

operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

A2-14 cont.

## CONCLUSION

CDFW appreciates the opportunity to comment on the DPEIR to assist the City of San Diego in identifying and mitigating Project impacts on biological resources. CDFW requests an opportunity to review and comment on any response that the Lead Agency has to our comments and to receive notification of any forthcoming hearing date(s) for the Project [CEQA Guidelines, § 15073(e)].

Table 4.3-2 Sensitive Plant Species that Occur or have a Potential to Occur within the Project Areas <sup>1</sup>				
Species	Sensitivity	Description	Potential to Occur within Climate Smart Village Areas	Potential to Occur within Hillcrest FPA Area
San Diego button-celery ( <i>Eryngium aristulatum</i> var. <i>parishii</i> )	FE SE CRPR 1B.1 City of San Diego NE, VPHCP	Biennial/perennial herb; vernal pools, mesic areas of coastal sage scrub and grasslands, blooms April-June; elevation less than 2,000 feet. Known from San Diego and Riverside counties. Additional populations occur in Baja California, Mexico.	<b>Present.</b> Known from 49 locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
California Orcutt grass ( <i>Orcuttia californica</i> )	FE SE CRPR 1B.1 City of San Diego NE, VPHCP	Annual herb; vernal pools; blooms April-August; elevation 50–2,200 feet.	<b>Potential.</b> No historical records occur (CDFW 2024); however, suitable habitat is present throughout the Climate Smart Village Areas.	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
Salt marsh bird's beak ( <i>Chloropyron maritimum</i> ssp. <i>Maritimum</i> [= <i>Cordylanthus maritimus</i> ssp. <i>Maritimus</i> ])	FE SE CRPR 1B.2 City of San Diego MSCP	Annual herb (hemiparasitic); coastal dunes, coastal salt marshes and swamps; blooms May–October; elevation less than 100 feet.	<b>Present.</b> Known from 5 locations in La Jolla (CDFW 2024).	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
Spreading navarretia ( <i>Navarretia fossalis</i> )	FT CRPR 1B.1 City of San Diego NE, VPHCP	Annual herb; vernal pools, marshes and swamps, chenopod scrub; blooms April–June; elevation 100–4,300 feet.	<b>Potential.</b> No historical records occur (CDFW 2024); however, suitable habitat is present throughout the Climate Smart Village Areas.	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
Thread-leaved brodiaea ( <i>Brodiaea filifolia</i> )	FT SE CRPR 1B.1 City of San Diego NE, MSCP	Perennial herb (bulbiferous); cismontane woodland, coastal sage scrub, playas, valley and foothill grassland, vernal pools; often clay soils; blooms March–June; elevation less than 2,850–3,675 feet. California endemic. Known from San Diego, Riverside, Orange, Los Angeles, and San Bernardino counties.	<b>Potential.</b> No historical records occur (CDFW 2024); however, suitable habitat is present throughout the Climate Smart Village Areas.	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.

Table 4.3-2 Sensitive Plant Species that Occur or have a Potential to Occur within the Project Areas <sup>1</sup>				
Species	Sensitivity	Description	Potential to Occur within Climate Smart Village Areas	Potential to Occur within Hillcrest FPA Area
Orcutt's spineflower ( <i>Charizantha orcuttiana</i> )	FE SE CRPR 1B.1	Annual herb; maritime chaparral, closed-cone coniferous forest, coastal sage scrub; sandy openings; blooms March–May; elevation less than 400 feet. San Diego County endemic. Known from fewer than 20 occurrences.	<b>Present.</b> Known from 20 locations in La Jolla and Point Loma (CDFW 2024).	<b>Potential.</b> Although no historical records occur (CDFW 2024), this species has potential to occur within suitable coastal sage scrub habitat along the canyon in the northern corner of the Hillcrest FPA Area.
Willow monardella ( <i>Monardella viminea</i> [= <i>Monardella linoides</i> ])	FE SE CNPS 1B.1 City of San Diego MSCP	Perennial herb; closed-cone coniferous forest, chaparral, coastal sage scrub, riparian scrub, riparian woodlands, sandy seasonal dry washes; blooms June–August; elevation 160–740 feet. San Diego County endemic.	<b>Present.</b> Known from 66 locations throughout the Climate Smart Village Areas.	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
San Diego mesa mint ( <i>Pogogyne abramsii</i> )	FE SE CRPR 1B.1 City of San Diego NE, VPHCP	Annual herb; vernal pools; blooms March–July; elevation 300–700 feet. San Diego County endemic.	<b>Present.</b> Known from 208 locations throughout the Climate Smart Village Areas.	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
Otay mesa mint ( <i>Pogogyne nudiuscula</i> )	FE SE CRPR 1B.1 City of San Diego NE, VPHCP	Annual herb; vernal pools; blooms May–July; elevation 300–820 feet. In California, known from approximately 10 occurrences in Otay Mesa in San Diego County. Additional populations occur in Baja California, Mexico.	<b>Present.</b> Known from 77 locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
San Diego thornmint ( <i>Acanthomintha ilicifolia</i> )	FT SE CRPR 1B.1 City of San Diego NE, MSCP	Annual herb; chaparral, coastal sage scrub, and grasslands; friable or broken clay soils; blooms April–June; elevation less than 3,200 feet.	<b>Present.</b> Known from 60 locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Not Expected.</b> One historical record occurs from 1936 (CDFW 2024); however, this species is possibly extirpated.
Del Mar manzanita ( <i>Arctostaphylos glandulosa</i> ssp. <i>Crossifolia</i> )	FE CRPR 1B.1 City of San Diego MSCP	Perennial evergreen shrub; southern maritime chaparral; sandy soil; blooms December–June; elevation less than 1,200 feet.	<b>Potential.</b> No historical records occur (CDFW 2024); however, suitable habitat is present throughout the Climate Smart Village Areas.	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.

Table 4.3-3 Sensitive Wildlife Species with a Potential to Occur within the Project Areas				
Species	Sensitivity	Habitat	Potential to Occur within Climate Smart Village Areas	Potential to Occur within Hillcrest FPA Area
<i>Invertebrates</i>				
Quino checkerspot butterfly ( <i>Euphydryas editha quino</i> )	FE	Open, dry areas in foothills, mesas, lake margins. Larval host plant <i>Plantago erecta</i> . Adult emergence mid-January through April.	<b>Present.</b> Known from 74 historical locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
Riverside fairy shrimp ( <i>Streptocephalus woottoni</i> )	FE City of San Diego VPHCP	Vernal pools.	<b>Present.</b> Known from 55 historical locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
San Diego fairy shrimp ( <i>Branchinecta sandiegonensis</i> )	FE City of San Diego VPHCP	Vernal pools.	<b>Present.</b> Known from 783 historical locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
<i>Amphibians</i>				
Western spadefoot ( <i>Spea hammondi</i> )	FPT SSC	Vernal pools, floodplains, and alkali flats within areas of open vegetation.	<b>Present.</b> Known from 464 historical locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Not Expected.</b> Although 1 historical record occurs for this species in 1946 (CDFW 2024), much of this species' natural habitat has been destroyed due to development and no suitable habitat is present within the Hillcrest FPA Area.
Arroyo toad ( <i>Anaxyrus californicus</i> [= <i>Bufo microscaphus californicus</i> ])	FE SSC City of San Diego MSCP	Open streamside sand/gravel flats. Quiet, shallow pools along stream edges are breeding habitat. Nocturnal except during breeding season (March-July).	<b>Present.</b> Known from 94 historical locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
<i>Reptiles</i>				
Southwestern pond turtle ( <i>Emys marmorata</i> )	SSC MSCP	Ponds, small lakes, marshes, slow-moving, sometimes brackish water.	<b>Potential.</b> Suitable ponds, small lakes and marshes with slow-moving water habitats are present throughout the Climate Smart Village Areas.	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.

Table 4.3-3 Sensitive Wildlife Species with a Potential to Occur within the Project Areas				
Species	Sensitivity	Habitat	Potential to Occur within Climate Smart Village Areas	Potential to Occur within Hillcrest FPA Area
San Diegan legless lizard ( <i>Anniella stebbinsi</i> [= <i>Anniella pulchra</i> ])	SSC	Herbaceous layers with loose soil in coastal scrub, chaparral, and open riparian. Prefers dunes and sandy washes near moist soil.	<b>Present.</b> Known from 385 historical locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Potential.</b> Known from 1 historical location in 1976 (CDFW 2024) and suitable coastal scrub and chaparral habitat occurs in the northwestern corner of the Hillcrest FPA Area.
California glossy snake ( <i>Arizona elegans occidentalis</i> )	SSC	Scrub and grassland habitats, often with loose or sandy soils.	<b>Present.</b> Known from 184 historical locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Potential.</b> Known from 1 historical location in 1942 (CDFW 2024) and marginally suitable scrub habitat occurs in the northwestern corner of the Hillcrest FPA Area.
<i>Birds</i>				
American peregrine falcon ( <i>Falco peregrinus anatum</i> )	City of San Diego MSCP	Open coastal areas, mud flats. Rare inland. Rare fall and winter resident, casual in late spring and early summer. Local breeding populations extirpated.	<b>Present.</b> Known from 278 historical locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Not Expected.</b> Known from 1 historical location in 1990 (CDFW 2024); however, no suitable habitat is present.
California least tern ( <i>Sternula</i> [= <i>Sterna</i> ] <i>antillarum browni</i> )	FE SC, CFP City of San Diego MSCP	Bays, estuaries, lagoons, shoreline. Resident. Localized breeding.	<b>Present.</b> Known from 32 historical locations in Point Loma and La Jolla (CDFW 2024).	<b>Not Expected.</b> No historical records occur (CDFW 2024) and no suitable habitat is present.
Coastal California gnatcatcher ( <i>Polioptila californica californica</i> )	FT SSC City of San Diego MSCP	Coastal sage scrub, maritime succulent scrub. Resident.	<b>Present.</b> Known from 1,648 historical locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Potential.</b> No historical records occur (CDFW 2024); however, suitable Diegan coastal sage scrub is present along the northern site boundary.
Least Bell's vireo ( <i>Vireo bellii pusillus</i> )	FE SE City of San Diego MSCP	Willow riparian woodlands. Summer resident.	<b>Present.</b> Known from 820 historical locations throughout the Climate Smart Village Areas (CDFW 2024).	<b>Not Expected.</b> Although 1 historic record occurs from 1921 (CDFW 2024), much of this species' natural habitat has been destroyed due to development and no suitable habitat is present within the Hillcrest FPA Area.

**Attachment D. Draft Mitigation and Monitoring Reporting Plan**

<b>Biological Resources (BIO)</b>			
<b>Mitigation Measure (MM) or Recommendation (REC)</b>		<b>Timing</b>	<b>Responsible Party</b>
<b>Recommendation #1 CDFW Review of Future Amendments to the LDC</b>	All proposed amendments to the LDC shall be consistent with the City’s SAP, IA, and NCCP Permit. CDFW would appreciate the opportunity to review and comment on any proposed amendments to the LDC to ensure consistency with the SAP.	Prior to City approval of amendments to the LDC	City
<b>MM-BIO-1-Crotch’s Bumble Bee Surveys</b>	Within one year prior to vegetation removal and/or grading, a qualified entomologist with appropriate handling permits and who is familiar with the species behavior and life history, shall conduct focused surveys to determine the presence/absence of Crotch’s bumble bee within and adjacent to a proposed project site. Focused surveys shall follow CDFW’s <a href="#">Survey Considerations for California Endangered Species Act Candidate Bumble Bee Species</a> (CDFW 2023). Focused surveys shall also be conducted throughout the entire project site during the appropriate flying season to ensure no missed detection of Crotch’s bumble bee occurs. Survey results, including negative findings, shall be submitted to CDFW and the City prior to implementing project-related ground-disturbing activities. At minimum, a survey report shall provide the following:	Prior to vegetation removal and ground-disturbing activities	Project Applicant/Qualified Entomologist

A2-19

Elena Pascual  
 City of San Diego  
 May 3, 2024  
 Page 19 of 22

	<ol style="list-style-type: none"> <li>5) a description and map of the survey area, focusing on areas that could provide suitable habitat for Crotch’s bumble bee;</li> <li>6) field survey conditions that shall include name(s) of qualified entomologist(s) and brief qualifications; date and time of survey; survey duration; general weather conditions; survey goals, and species searched;</li> <li>7) map(s) showing the location of observations and any nests/colonies; and,</li> <li>8) a description of physical (e.g., soil, moisture, slope) and biological (e.g., plant composition) conditions where each nest/colony is found. A sufficient description of biological conditions, primarily impacted habitat, shall include native plant composition (e.g., density, cover, and abundance) within impacted habitat (e.g., species list separated by vegetation class; density, cover, and abundance of each species).</li> </ol>		
<p><b>MM-BIO-2-Avoidance Plan</b></p>	<p>If Crotch’s bumble bee is detected, the applicant in consultation with a qualified entomologist shall develop a plan to fully avoid impacts to Crotch’s bumble bee, if feasible. The plan shall include effective, specific, and enforceable measures. An avoidance plan shall be submitted to the CDFW and City for approval prior to implementing Project-related ground-disturbing activities and/or vegetation removal where there may be impacts to Crotch’s bumble bee.</p>	<p>Prior to vegetation removal and ground-disturbing activities</p>	<p>Project Applicant/City</p>

A2-19 cont.

**A2: Response to California Department of Fish and Wildlife Comment Letter**

**A2-1:** The comment is an introduction to the attached comment letter. No response is necessary.

**A2-2:** The comment is an introduction to the comment letter. No response is necessary.

**A2-3:** The comment is an overview of the California Department of Fish and Wildlife's (CDFW's) role in the CEQA process. No response is necessary.

**A2-4:** The comment is a summary of the Blueprint SD Initiative, the University Community Plan Update (CPU), and the Hillcrest Focused Plan Amendment (FPA) and analysis contained in the PEIR. The comment does not raise an issue regarding the adequacy of the PEIR. It should be noted that the City has 52 community plans, not 48 as stated in the letter. The remainder of the summary is correct. The City of San Diego looks forward to continuing to monitor and manage potential biological impacts through the Implementing Agreement between the Wildlife Agencies.

**A2-5:** The comment is a summary of the project's location. No response is necessary.

**A2-6:** The comment is a summary of the biological setting as reported in the Draft PEIR. The comment notes that Crotch's Bumble Bee was not listed in the Draft PEIR list of species that have occurred or are likely to occur within the project areas. The Final PEIR Section 4.3.4, under Issue 1 has been revised to note that Crotch's Bumble Bee may be present throughout the City including within Blueprint SD Initiative's Climate Smart Village Areas, Hillcrest FPA area, and University CPU area. The City acknowledges that Crotch's Bumble Bee is a candidate for listing under the California Endangered Species Act (CESA) and will continue to work closely with CDFW to ensure impacts to the species are addressed as individual projects proceed. The City has been engaged with CDFW in ensuring projects include appropriate surveys, mitigation, and project conditions as necessary to address potential impacts to Crotch's Bumble Bee, consistent with CDFW recommendations. Through regular City and Wildlife Agency project meetings and coordination related to implementation of the MSCP and VPHCP, the City is ensuring implementation of CDFW guidance at the project level through required protocol surveys, consistent with the City's Biology Guidelines which requires surveys for candidate species and mitigation, as needed.

**A2-7:** The Draft Mitigation and Monitoring Reporting Plan (Attachment D to the comment letter) is noted. The City's existing mitigation framework, specifically MM-BIO-1, is sufficient to address the potential impacts of the project. MM-BIO-1 refers to City regulations and plans that have incorporated detailed performance standards from the City's Environmentally Sensitive Lands (ESL) Regulations, Multiple Species Conservation Program Subarea Plan (MSCP SAP), Vernal Pool Habitat Conservation Plan (VPHCP), and Biology Guidelines. The Draft Mitigation and Monitoring Reporting Plan provided by CDFW are measures that could be applied by individual projects; however, future site-specific surveys and evaluation would be required in order to confirm the specific mitigation requirements of individual projects. At a program level, it would not be appropriate to define project-specific mitigation requirements at this time.

**A2-8:** Updates to the City's Land Development Code (LDC) are detailed in Section 3.5.1.4 of the PEIR. As specified therein, updates would focus on implementation of the City's vision as defined in the General Plan, Climate Action Plan (CAP), and other City policy plans and documents. Anticipated

future LDC amendments would include amendments that facilitate ministerial processing of residential and mixed-use development, update the Historical Resources Regulations, modify parking regulations, or make changes to support development and mobility improvements. At this time, updates to the LDC that relate to biological resource protection and/or implementation of the MSCP SAP and/or VPHCP are not anticipated. The PEIR would not cover future changes to the LDC that remove or reduce any existing regulatory protections for biological resources. However, consistent with the City's implementing agreement with the Wildlife Agencies, if updates to the LDC are proposed that would affect the level of regulations and protections for sensitive biological resources, the City would consult with the Wildlife Agencies prior to any such action.

**A2-9:** The City's Biology Guidelines include guidance for conducting biological surveys. According to Section III(A)(1) of the Biology Guidelines, biological surveys are necessary "for all proposed development projects which are subject to ESL, and/or where the CEQA review has determined that there may be a significant impact on other biological resources considered sensitive under CEQA." Additionally, page 81 of the Biology Guidelines states, "If sensitive species (e.g., listed threatened or endangered species, candidate species, etc.) are on the site or are likely to be present, Focused Survey Reports will be required. Focused Survey Reports shall follow any required state or federal agency protocols where appropriate." Site-specific development is not proposed as part of this project, but as determined in the PEIR, development in accordance with the Blueprint SD Initiative, the University CPU, and the Hillcrest FPA could result in significant and unavoidable biological impacts related to sensitive species, sensitive habitats, and wetlands. Mitigation measure MM-BIO-1 requires future discretionary development projects to comply with the Biology Guidelines, therefore, to conduct site specific surveys. As Crotch's Bumble Bee is currently a candidate for sensitivity status under CESA and CDFW is currently working on guidance regarding surveys for Crotch's Bumble Bee, mitigation would be applied as future site-specific surveys are conducted and projects are implemented. Survey requirements would be determined in coordination with the City and Wildlife Agencies, as required by the Biology Guidelines. Currently, the City is incorporating Crotch's Bumble Bee surveys with current CDFW guidance on development projects outside of the scope of this PEIR. The City looks forward to continuing to work with CDFW in incorporating applicable focused surveys to protect Crotch's Bumble Bee and mitigate any future impacts to the species from future site-specific projects.

**A2-10:** The proposed trails have been removed from the University CPU, the project description in Section 3.5.3(e) of the PEIR, from Figure 3-26 of the PEIR, and from the impact analysis in Section 4.3.4, Issue 4, of the PEIR.

**A2-11:** Comment noted. As discussed in Section 4.3.4, Issue 5, of the PEIR, the University CPU would add City-owned lands to the MSCP, which requires a boundary line correction (BLC). Any future project proposing a Boundary Line Adjustment (BLA) would continue to require Wildlife Agency concurrence and would be required to follow the BLA regulations set forth in Section 1.1.1 and 5.4.3 of the MSCP SAP. Please see response to Comment A3-13 in comment letter A3.

**A2-12:** Comment noted. Any future development or policy plan projects would be required to notify CDFW if any part or policy of the project could potentially affect the natural flow of, change the bed, channel, or bank of, or use material from a river, stream, or lake. Per Section 1600 et seq. of the

California Fish and Game Code, future applicants would be required to coordinate with CDFW complete a Lake and Streambed Alteration Agreement, if necessary.

As discussed in Section 4.3.4, Issue 3, the project could result in impacts to wetlands and other jurisdictional areas. Per the proposed mitigation, future projects that could directly and/or indirectly impact sensitive species, sensitive habitats, and/or wetlands shall comply with the City's ESL Regulations, Biology Guidelines, and applicable federal, state, and local Habitat Conservation Plans, including but not limited to, the City's MSCP SAP and VPHCP. Future projects shall also implement avoidance, minimization, and mitigation measures in accordance with the City's ESL Regulations, Biology Guidelines, and MSCP SAP and VPHCP.

**A2-13:** The PEIR is a program level analysis and no site-specific species surveys were conducted; therefore, no field survey data is available to report. As future project-level surveys are conducted, appropriate reporting to the California Natural Diversity Database would be conducted.

**A2-14:** Comment noted.

**A2-15:** Comment noted.

**A2-16:** Attachment A to the CDFW letter is an excerpt from the PEIR identifying vegetation communities land cover types present throughout the City. No response is required.

**A2-17:** Attachment B to the CDFW letter is an excerpt from the PEIR identifying the special status plant species found in the project areas. No response is required.

**A2-18:** Attachment C to the CDFW letter is an excerpt from the PEIR identifying the special status plant wildlife species found in the project areas). No response is required.

**A2-19:** Attachment D includes CDFW's suggested mitigation measures and recommendations in the form a Draft Mitigation and Monitoring Reporting Plan. These measures are not proposed to be adopted as part of the Mitigation and Monitoring Reporting Plan but would inform future project requirements and mitigation consistent with MM-BIO-1. Refer to response A2-7.

Subject: Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan, and University Community Plan (Hillcrest FPA) and Local Coastal Program (University CPU)

Dear Elena Pascual:

The U.S. Fish and Wildlife Service (Service) has reviewed the above-referenced Blueprint SD Initiative (Blueprint), Hillcrest Focused Plan Amendment to the Uptown Community Plan (FPA), and University Community Plan Update (UCPU) and Local Coastal Program (LCP) and associated Draft Program Environmental Impact Report (DPEIR) dated March 14, 2024. We received an extension allowing us to provide comments up to May 17, 2024. The Service appreciates the City of San Diego’s (City) flexibility and the additional time. Our comments and recommendations are based on our knowledge of sensitive and declining vegetation communities and species in San Diego, and the City’s Multiple Species Conservation Program (MSCP) Subarea Plan (SAP) and Vernal Pool Habitat Conservation Plan (VPHCP).

A3-2

The mission of the Service is working with others to conserve, protect, and enhance fish, wildlife, plants and their habitats for the continuing benefit of the American people. The Service also has legal responsibility for the welfare of migratory birds, anadromous fish, and threatened and endangered animals and plants occurring in the United States and is responsible for administering the Federal Endangered Species Act of 1973 (Act), as amended (16 U.S.C. 1531 *et seq.*), including habitat conservation plans (HCP) developed under section 10(a)(1) of the Act. The City participates in the HCP program by implementing its approved SAP and VPHCP.

A3-3

Blueprint is an update to the City’s General Plan that provides a policy framework for land use decisions, balancing the needs of the City and providing a City-wide vision and comprehensive approach for development, public services, and maintenance and enhancement of San Diego’s characteristic features. The strategy of the General Plan is based on a City of Villages concept that focuses growth into mixed-use, pedestrian-friendly districts linked by the planned regional transit system (City 2024a). The City’s community plans are guided by the General Plan and provide policies and recommendations pertaining to community-specific development over a

A3-4

20- to 30-year timeframe. Community plans provide more detailed land use designations and community-specific policies on topics including housing, mobility, open space and parks, public facilities, safety, noise, sustainability, environmental justice, urban design, and historic preservation (City 2024a).

Blueprint serves as an amendment to the General Plan and reflects the City’s goals, policies, and plans for housing, mobility and transit, environmental protection, and climate change adaptation and sustainable growth. The Blueprint identifies land use, transportation, and related policies to support future development according to the revised land use framework designed around the 2050 transportation network in the San Diego Association of Government’s (SANDAG) plan. The land use and policy amendments would build upon the climate goals outlined in the City’s Climate Action Plan (CAP) and Climate Resilient SD Plan (City 2024a).

The FPA proposes an amendment to the Uptown Community Plan to re-designate approximately 380 acres of the Hillcrest and Medical Complex neighborhoods with increases to the planned residential density and non-residential development capacity. The FPA establishes an updated vision and objectives that align with the SANDAG Regional Plan and the City’s General Plan policies, as proposed and amended by the Blueprint and the City of Villages Strategy, as well as adopted policies from the CAP, Parks Master Plan, and Climate Resilient SD. The FPA will update the land use plan and zoning for the FPA area, amend the existing Community Plan Implementation Overlay Zone (CPIOZ) - Type A - Building Heights within the Uptown Community Plan area, create three new CPIOZ areas (the Hillcrest District, the Hillcrest Historic District, and the Commercial Activity Area), and provide Supplemental Development Regulations (SDRs) for these CPIOZ areas (City 2024a).

The UCPU is a comprehensive update to the existing University Community Plan and Local Coastal Program. The UCPU revises the community plan consistent with the SANDAG Regional Plan, and the City’s General Plan policies, as proposed and amended by the Blueprint and recently adopted policies from the CAP, Parks Master Plan, and Climate Resilient SD. The UCPU includes changes to the land use plan and zoning and identifies several guiding principles, plan goals and policies, and procedures for plan implementation (City 2024a).

As stated above, the City participates in the HCP program through its SAP and VPHCP, and the Service issued the City permits to “take” federally threatened and endangered wildlife species pursuant to section 10 of the Act based on the City’s preparation and implementation of the SAP and VPHCP. Therefore, the Service recommends the direct incorporation of language from the SAP and VPHCP into Blueprint, the FPA, and UCPU to ensure compliance with these plans.

The Conservation Element of Blueprint, for example, identifies broad conservation goals such as “...protect, restore and enhance urban canyons and other important community open spaces...including those that have been designated in community plans...” (Section CE-B1c) and “protect, restore and preservation of wetland and upland areas on City managed lands, prioritizing areas with the greatest needs” (Section CE-B1g). However, conservation guidelines and priorities (Section 1.2), land use considerations (Section 1.4), and management goals, objectives, and priorities within a framework management plan for City managed MHPA lands

**A3-4  
cont.**

**A3-5**

(Section 1.5) already have been developed in coordination with the Wildlife Agencies [Service and California Department of Fish and Wildlife (CDFW) respectively] and presented in the SAP and incorporated into the VPHCP. By utilizing the SAP and VPHVP as the framework/basis of all conservation strategy discussed in planning documents, the City reinforces its commitment to implementing these activities consistent with the SAP and implementing agreement (IA) and the VPHCP.

A3-5 cont.

The relevance of the SAP and VPHCP as the guiding conservation documents for the City pertains, for example, to the current direction provided in the Blueprint Conservation Element to “Maximize the incorporation of trails and greenways linking local and regional open space and recreation areas into the planning and development review processes (CE-B5).” Section 1.5.2 of the SAP provides general management directives and priorities to address Public Access, Trails, and Recreation relative to the MHPA. Section 4.2.6 of the VPHVP also states that use of designated trails is considered a covered activity under the VPHCP, subject to conditions of the VPHCP and approved area-specific Natural Resource Management Plans (NRMPs). We recommend that Blueprint’s Conservation Element specifically reference or incorporate these general management directives, priorities, and conditions to ensure that any trails and greenways established under Blueprint are consistent with the SAP and VPHCP.

A3-6

The SAP should be similarly highlighted as the established conservation strategy in the UCPU. Currently, the UCPU states that “The Community Plan provides guidance for the design of building, structures, public facilities, parks, open space, and streets. The chapters of this Community Plan contain goals that express a broad intent for future development or preservation” (City 2024b, page 11). Guidance to encourage public access to open space in the context of species and habitat conservation and management of resources has been provided in the SAP. Including general management directives and priorities from the SAP would facilitate a cohesive approach to conservation for the City rather than redefining goals through general or community plan updates. Public access and the importance of public enjoyment of open space is acknowledged throughout the SAP, particularly in Section 1.5. By incorporating language from the SAP into the UCPU, the City would ensure that its previous commitment to species and habitat conservation through its SAP will be consistently applied in its updated planning documents.

A3-7

The Service is also concerned that graphics provided in Blueprint, UCPU, and the DPEIR prematurely depict alignments for anticipated recreational or mobility features without acknowledging or providing analysis of potential impacts to the MHPA. For example, the open space map in the Recreation Element of Blueprint (Figure RE-1), and figures throughout the Urban Design, Mobility, and Parks and Recreation sections of the UCPU include connections, paths, and trails that appear to border or cross the MHPA but provide no MHPA overlay. Figure 6 Urban Design Recommendations of the UCPU, for example, depicts enhanced multi-modal paths connected to linear parks and open space connections that appear to cross areas of designated open space, but also fails to show areas designated as MHPA (City 2024b, Page 50). Trails are also depicted in the UCPU (Figure 27, Page 129) and PEIR (Figures 3-15 and 3-26). These figures raise concerns as future users of Blueprint, UCPU, or the DPEIR would not be alerted to the potential constraints on recreational uses due to the necessary protection of sensitive biological resources associated with the SAP preserve.

A3-8

Therefore, we recommend the addition of an MHPA overlay to all maps depicting recreational or mobility uses in or adjacent to open space as well as accompanying text to clearly indicate that the alignments are conceptual and that final alignments will be determined in compliance with General and Specific Management Directives in the SAP as approved by the Wildlife Agencies. Overall, we recommend that recreational or mobility uses in or adjacent to the MHPA be planned as part of the NRMPs envisioned by the SAP and VHHCP to help ensure the long-term biological integrity of the MHPA.

**A3-8  
cont.**

The Service is also concerned with the City's proposed procedure for processing subsequent development projects following the preparation of this PEIR. According to the DPEIR, all future CPUs consistent with the DPEIR, as well as future projects deemed consistent with the General Plan or the amended CPU, would be evaluated in the context of this PEIR (Sections 1.2 and 3.5.1.3). While we anticipate continuing to work in partnership with the City on the implementation of the SAP and VPHCP, review of CEQA documents frequently provides the Wildlife Agencies an opportunity to review and comment on proposed projects to ensure that they are implemented consistent with the MSCP, SAP and IA, and VPHCP. Section 9.8 D of the IA for the City's SAP envisions tiering off the "program" EIR/EIS prepared for the City's SAP pursuant to CEQA to determine if additional environmental review is required. Section 8.6.2 of the VPHCP also states that additional review and approval by the Wildlife Agencies will be required for projects that include Environmentally Sensitive Lands (ESL; San Diego Municipal Code §113.0103)/Wetland Deviation/biologically superior options; reviewing and commenting on CEQA documents will be a key means for the Wildlife Agencies to ensure/monitor compliance with the requirements of the VPHCP. Consistent with our permits, the City's SAP and IA, and VPHCP, the Wildlife Agencies review ESL/Wetland Deviation/biologically superior options and CEQA documents to ensure/monitor compliance with the requirements of the City's SAP or VPHCP. Therefore, to ensure consistency with the City's SAP and VPHCP, we recommend that following language be added to Blueprint, the FPA and UCPU:

**A3-9**

"For future projects that have biological resources in or adjacent to the project site and the option of tiering from the programmatic documents (e.g., PEIR for General Plans, Community Plans, CPUs or other programs), the City will coordinate with the U.S. Fish and Wildlife Service and the California Department of Fish and Wildlife (i.e., Wildlife Agencies) during the environmental review and permitting process and prior to staff-level CEQA determinations. If the City determines that the appropriate environmental documentation does not require circulation for public review, the Wildlife Agencies will be provided an opportunity to review and confirm project consistency with the City's SAP or VPHCP."

Furthermore, Section 3.5.1.3 of the PEIR also indicates that this DPEIR will likely serve as the basis for future changes to the Land Development Code. The VPHCP and Section 9.12 of the IA state that any modifications to the City's *Biology Guidelines* for the *Environmentally Sensitive Lands Regulations*, the *Open Space Residential Zone (OR-1-2)* and the *CEQA* require approval of the Wildlife Agencies.

**A3-10**

Therefore, we recommend that the City include a provision in Blueprint and the PEIR that requires all future changes to the Land Development Code to be consistent with the VPHCP and Section 9.12 of the IA.

**A3-10  
cont.**

Section 4.3.4 of the DPEIR states, “Although the Blueprint SD Initiatives’ policy and land use framework would apply Citywide, it is anticipated that potential impacts associated with implementation of the Blueprint SD Initiative are most likely to be concentrated within the Climate Smart Village Areas” (Page 4.3-53). If only Climate Smart Village Areas were analyzed for Blueprint, it is unclear if an analysis of Blueprint impacts to sensitive biological resources was completed and if that analysis included the FPA and UCPU project areas. It is also unclear how Blueprint can apply Citywide or how the City determined the significant impacts of the plan in the DPEIR if only Climate Smart Village Areas were analyzed.

**A3-11**

Section 4.10.2.2.i of the DPEIR states that impacts to land identified as 100 percent baseline conservation in the VPHCP can be addressed through a Boundary Line Adjustments (BLA) consistent with the VPHCP. In 1997, the City Subarea Plan under the MSCP was approved by the Wildlife Agencies. In 2017, the Service approved the City’s VPHCP. Both plans designated areas as MHPA that would be established as biological preserves as developments were entitled, while also identifying areas of permanently conserved lands. Infrastructure such as roads and utilities are allowed uses in the MHPA consistent with established guidelines; however, permanently conserved lands (defined as Preserve<sup>1</sup> lands or Conserved<sup>2</sup> lands/100 percent conserved lands in the MSCP and VPHCP) are not anticipated or authorized to be impacted by development, including infrastructure. Therefore, this section should be amended to clarify that impacts to general/non-conserved MHPA can be addressed through a BLA but substantive impacts to 100 percent baseline conservation lands would require an amendment to the VPHCP.

**A3-12**

Finally, the Service would like to clarify the procedure anticipated for the comprehensive community wide MHPA Boundary Line Correction (BLC) proposed as part of the University Community plan update. This is described in the Biological Technical Report for the UCPU (Busby 2024) and includes the proposed addition of 25.97 acres to the MHPA, and the exclusion of legally developed and required uses (i.e., structures, streets, brush management zone 1). We appreciate the proposed addition of 25.97 acres to the MHPA, but no acreages or maps were provided for the proposed exclusions. Because the Service has not had the opportunity to review supporting information or maps depicting the proposed exclusions anticipated with this comprehensive BLC, we request the UCPU clarify that these will be presented to the Wildlife Agencies at the time of future project permitting.

**A3-13**

Additional specific comments on Blueprint, the FPA, UCPU and LCP and the PEIR are appended (see appendix). We appreciate the opportunity to comment on these documents. If you have any

<sup>1</sup> The Preserve is defined as “areas within the MHPA that have been conserved and existing baseline conservation areas” (VPHCP, p. xi).

<sup>2</sup> Conserved lands are defined as “Lands with 100 percent hardline conservation (no development is permitted)” (VPHCP, p. ix).

## APPENDIX

Specific comments on Blueprint, the FPA, UCPU and LCP and the PEIR:

### Comments on the University CPU:

1. Section 1 Introduction. We recommend that the UCPU include a summary description of the City's SAP and VPHCP along with the descriptions of the CAP, Parks Master Plan, and Climate Resilient SD.
2. Section 3.0 Urban Design. Pages 90, 92, and 94 depict potential connections and trails without corresponding analysis of biological resources in the UCPU BTR to confirm that these alignments comply with the SAP. Given that specific project-level information is not currently available, we recommend the addition of language from section 1.5.2 of the SAP to UCPU to guide design of future trail alignments. A mitigation measure also should be included in the PEIR to offset program impacts to open space and associated wildlife corridor and linkages. The measure should require that proposed trail and pathway connections in the vicinity of the MHPA must be designed consistent with Section 1.5.2 of the SAP and 4.2.6 of the VPHCP and developed in coordination with the Wildlife Agencies to ensure the consideration of only those alignments consistent with SAP and VPHCP implementation.
3. Figure 24 of the UCPU (Page 117) depicts 2-lane collector roads and 4-lane arterial roads approaching or adjacent to conserved lands. The UCPU BTR Figure 4 (Page 9) depicts Open Space areas to be included in the MHPA as 100 percent conserved lands. We recommend an additional figure with an MHPA overlay on the UCPU street network map as well as added language to clarify to future users of the plan that development that encroaches on MHPA is restricted and encroachment into 100 percent conserved lands is prohibited.
4. Section 5.0 Parks and Recreation (Page 121). Currently, the presentation of parks and open space in the UCPU could mislead users of the plan to view parks and open space interchangeably. In the Parks and Recreation section, for example, goal 4 recommends: "Improve overall park connectivity by linking population-based parks with resource-based parks and open space lands through a system of pedestrian paths, bikeways, and transit." We recommend revisions to the UCPU to incorporate language directly from Sections 1.5.2 and 4.2.6 of the SAP and VPHCP, respectively. Coordinating language between the UCPU and the established goals and objectives of the SAP and VPHCP would reinforce the City's responsibility to protection and management of open spaces in accordance with its permit under Section 10(a) of the Act while considering recreation priorities.
5. Section 6.0 Open Space and Conservation Element (Page 136) should include a summary of MSCP SAP and VPHCP objectives. The MSCP already addresses most issues presented in Goal No. 4 and 6.

A3-14

Goal No. 6 should be revised to limit public access to portions of the MHPA until further project-level analysis can confirm that such access is compatible with specific areas in the MHPA in accordance with the SAP and VPHCP.

Goal No. 2 should be revised to include restoration of wetland resources and to specify that enhancement would not involve the installation of man-made structures in wetland resources.

- 6. Open Space Dedications (page 142). The dedication of 183.6 acres of City-owned properties as open space pursuant to Charter Section 55 was presented as an informational item to the Wildlife Agencies on Jan. 19, 2024. Following the MHPA boundary line correction and dedication, these properties would be MHPA – 100 percent Conserved. Please add this information to the description of Open Space Dedications in the UCPU.
- 7. Section 8.0 Implementation (page 177, Table 1 Subcategory B and F). Implementation of the MSCP SAP and VPHCP is the City’s responsibility in accordance with its permit and IA under section 10 of the Act and would not be considered a Community Plan policy that applies only to Trails, Overlooks, and Trailhead Pocket Parks. The UCPU should be revised accordingly.
- 8. Section 8.0 Implementation (Page 177, Table 1 Subcategory G). Compliance with the ESL Regulations, Biology Guidelines and MSCP SAP are required by the City’s Municipal Code. It is the City’s responsibility in accordance with its section 10 permit and IA to ensure project compliance with its ESL regulations. This compliance would not be considered a Community Plan policy.

A3-14  
cont.

**Comments on the DPEIR:**

- 9. Page 4.1-15 “The University CPU does not propose any development within its open space areas.” This statement is not consistent with potential connections and trail opportunities (page 94–95) and pocket parks (page 98–99) depicted within canyon open space areas. The DPEIR should be updated to correct this discrepancy and disclose the project impact on open space. We also recommend that the DPEIR include a mitigation measure to require that potential connections and trail opportunities be designed in accordance with the SAP and VPHCP. Proposed alignments in the vicinity of MHPA open space would require coordination with the Service (see comment 2).

A3-15

- 10. On DPEIR page 4.3-48 please include the complete text taken from the Municipal Code to include the reference to the MSCP, MHPA, and SAP:

“It is further intended for the Development Regulations for Environmentally Sensitive Lands and accompanying Biology, Steep Hillside, and Coastal Bluffs, and Beaches Guidelines to serve as standards for the determination of impacts and mitigation under the California Environmental Quality Act and the California Coastal Act. These standards will also serve to implement the Multiple Species Conservation Program by placing priority on the preservation of biological resources within the

A3-16

Multiple Habitat Planning Area, as identified in the City of San Diego Subarea Plan. The habitat-based level of protection which will result through implementation of the Multiple habitat Planning Area is intended to meet the mitigation obligations of the Covered Species addressed.”

**A3-16  
cont.**

- 11. Section 4.3.4 Impact Analysis states, “Although the Blueprint SD Initiatives’ policy and land use framework would apply Citywide, it is anticipated that potential impacts associated with implementation of the Blueprint SD Initiative are most likely to be concentrated within the Climate Smart Village Areas” (Page 4.3-53). The Impact Analysis further states that (Page 4.3-53):

“Sensitive plant species habitat in the City is typically concentrated in areas designated as Open Space that may be located within the MHPA. Although development per the Blueprint SD Initiative, Hillcrest FPA, and University CPU is anticipated to occur within urban areas that are already developed with commercial, industrial, residential, or employment uses where there is a low potential to support extensive sensitive plant species habitat, the details of future site-specific projects are unknown at this time, and it is possible that some project areas may support sensitive plant species habitat.”

In Blueprint, a program-level analysis of Project impacts to sensitive biological resources was completed only for Climate Smart Village Areas. Program-level impacts on the sensitive biological resources on the rest of the City are not adequately analyzed in the PEIR because the presence and nature of the biological resources must be established before a determination of significance of an impact can be made (City 2018, page 71).

**A3-17**

The DPEIR recognizes that sensitive plants and wildlife are likely to occur within the Open Spaces of Blueprint, Hillcrest FPA, and UCPU (City 2024a, pages 4.3-53, 54, 56; City 2024b, pages 139 and 140). We recommend that the program-level of analysis in the DPEIR include baseline biological conditions for all undeveloped land included within the boundaries of Blueprint, not only within the Climate Smart Village Areas. The literature used to inform the impact analysis should include current species data for undeveloped lands (including MHPA and all open space) in order to develop a program-level mitigation framework for the sensitive biological resources existing within the plan area. Mitigation for species identified in Table 4.3-2 and 4.3-3 of the DPEIR should be provided to guide the development of future project specific mitigation that would include, but not be limited to, mitigation identified at the program level. Alternatively, the PEIR should specify that the policy and land use framework described in Blueprint applies only to the Climate Smart Village Areas and future tiering would be limited to projects located in those areas.

- 12. Though future regulatory compliance is anticipated at the project level, specific measures are necessary to address the anticipated program impacts from the implementation of Blueprint, FPA, and UCPU. To offset program-level significant impacts to sensitive species and their habitats, we recommend the addition of a

**A3-18**

mitigation measure to the PEIR to facilitate future project avoidance of the MHPA, requiring that that project design will be consistent with the SAP and VPHCP.

**A3-18 cont.**

We also recommend that the Blueprint PEIR include, in Table ES-1 and in Chapter 4.0, the following language from the SAP and Biology Guidelines to recognize the restrictions on development in the MHPA: “Within the MHPA, development is limited (SAP page 1). Development impacts on private lands within the remainder of the MHPA will be restricted to no more than 25 percent of the parcel (75 percent preservation). Development within the MHPA will be directed to areas of lower quality habitat and/or areas considered less important to the long-term viability of the MHPA. Documented populations of covered species within the City’s portion of the MHPA will be protected to the extent feasible (SAP page 43).” We also recommend the following language from the Biology Guidelines, “The City’s permit to ‘take’ Covered Species under the MSCP is based on the concept that 90 percent of lands within the MHPA will be preserved. Any encroachment into the MHPA (in excess of the allowable encroachment by a project) would be considered significant and require a boundary line adjustment which would include a habitat equivalency assessment to ensure that what will be added to the MHPA is at least equivalent to what would be removed (Biology Guidelines page 73).” The PEIR should also clarify that Boundary Line Adjustments and Boundary Line Corrections must be reviewed and approved by the Wildlife Agencies.

**A3-19**

**A3-20**

**A3-21**

- 13. Table ES-1 Summary of Impacts, Section 4.3 Biological Resources Issue 3 states that “Although wetlands in the project areas are concentrated in the MHPA, including canyons, and creeks, since site-specific future development is unknown at this time, there is a potential that wetlands could be affected. Implementation of the City’s ESL Regulations, Biology Guidelines, MSCP SAP, and VPCHP would ensure impact to wetlands would be avoided to the extent feasible and a wetland buffer provided around all wetlands as appropriate to protect the functions and values of the wetland (City 2018).”

We recommend the addition of the following direction from the City’s Biology Guidelines to Table ES-1 and the corresponding impact analysis in Section 4.0 of the DPEIR: “Under the ESL, impacts to wetlands should be avoided. Unavoidable impacts should be minimized to the maximum extent practicable. Whether or not an impact is unavoidable will be determined on a case-by-case basis. Examples of unavoidable impacts include those necessary to allow reasonable use of a parcel entirely constrained by wetlands, roads where the only access to the developable portion of the site results in impacts to wetlands, and essential public facilities (essential roads, sewer, water lines, etc.) where no feasible alternative exists. Unavoidable impacts will need to be mitigated in accordance with Section III.B.1.a of these Guidelines (Biology Guidelines pages 11–12).”

**A3-22**

Furthermore, the PEIR concludes project impacts to wetlands are significant after mitigation, but mitigation measures to facilitate avoidance and minimization of wetland impacts from the program have not been provided. Future review in accordance with

**A3-23**

the City’s ESL Regulations does not directly offset the impact of the project analyzed by the PEIR. To offset program level impacts, we recommend that the DPEIR include a mitigation measure that requires compliance with the Biology Guidelines and its directive to avoid impacts to wetlands.

A3-23  
cont.

14. The DPEIR states, “As no specific projects have been identified, it cannot be guaranteed that every future project would be able to demonstrate no net loss of wetland habitat. Therefore, at a program level of review, impacts would be significant.” (Page 4.3-59). This conflicts with the City’s policy of no-net-loss of wetlands (City 2018, page 37) and Section 9.8 of the IA that requires compliance with the federal policy of “no net loss” of wetland functions and values. We agree that net loss of wetlands would constitute a significant impact but recommend that the DPEIR include the goal of no-net-loss of wetlands in its mitigation measures (see Comment 13).

A3-24

15. Table ES-1 Summary of Impacts, under Section 4.3 Biological Resources Issue 4 states that, “Regional and local wildlife corridors are not located within the project areas due to their location within open space and MHPA lands. Open Space land use designation would not be changed by the proposed plans.” While open space designations are not changed by the proposed plans, Blueprint represents the MHPA as a recreational asset in the Recreation Element without acknowledging its importance as a preserve area and the associated limitations on the extent and intensity of recreation that is appropriate in these areas. The MHPA is included in the list of lands considered General Plan - designated open space and parks and followed by a discussion of various recreation priorities such as equitable access to a diversity of recreation facilities and programs; partnerships in planning and design of park and recreation facilities; identification of recreation needs; and preservation of existing park uses (City 2024d, page RE-19).

The Conservation Element similarly adds undefined “recreational opportunities” to CE-B1c, a policy that previously focused on the protection, restoration, and enhancement of urban canyons and other community open spaces for their many local and regional benefits as part of a Citywide open space system (City 2024c, page CE-18). Such revisions to the language in these Elements of the General Plan cause concern, particularly given that these documents were updated for consistency with the MSCP SAP and VPHCP at the time of the City’s Federal permit issuance. In order to ensure continued consistency with these permits, the SAP and VPHCP should guide the proposed recreational uses of MHPA within the City. We request that where MHPA is referenced in Blueprint, FPA, and UCPU, language taken directly from the IA, SAP, and VPHCP be included or referenced to provide consistent guidance on appropriate recreational uses in the preserve.

A3-25

16. The analysis of Issue 4 on page 4.3-59 states “The University CPU identifies potential new trails in the Open Space area next to Marcy Neighborhood Park; however, implementation of these trails is not proposed at this time.” While no specific trail project has been identified at this time, the inclusion of multiple conceptual trails throughout open space areas within City limits through Blueprint, Hillcrest FPA,

A3-26

and UCPU introduce the possibility of recreational uses that have not been analyzed. We recommend the addition of mitigation in the PEIR for program-level impacts to open space and associated wildlife use. The measure should require design of trails in accordance with Section 1.5.2 of the SAP and Section 4.2.6 of the VPHCP.

**A3-26  
cont.**

**A3: Response to US Fish and Wildlife Service Comment Letter**

**A3-1:** The comment is an introduction to the attached comment letter. No response is necessary.

**A3-2:** The comment is an introduction to the comment letter. No response is necessary.

**A3-3:** The comment is an overview of the US Fish and Wildlife Service's (USFWS's) mission. No response is necessary.

**A3-4:** The comment is a summary of the Blueprint SD Initiative, the University Community Plan Update (CPU), and the Hillcrest Focused Plan Amendment (FPA). No response is necessary.

**A3-5:** As stated in the comment, the City has a Multiple Species Conservation Program (MSCP) Subarea Plan (SAP) and a Vernal Pool Habitat Conservation Plan (VPHCP). As described in Section 4.10.2.2(f) of the PEIR, the MSCP establishes adjacency guidelines to be addressed on a project-by-project basis to minimize direct and indirect impacts and maintain the function of the Multi-Habitat Planning Area (MHPA). The Land Use Adjacency Guidelines would be incorporated as project conditions of approval, which would preclude indirect impacts to the MHPA. Note that the MHPA Land Use Adjacency Guidelines would apply to land within the MHPA and the expanded MHPA as adopted by the VPHCP. The conservation goals of the General Plan Conservation Element, as updated by the Blueprint SD Initiative, provide high-level policy guidance that supports the implementation of the MSCP SAP or VPHCP. Additional language directly from the MSCP SAP and VPHCP are not warranted as the suggested language would not increase implementation requirements of the existing regulatory framework.

**A3-6:** This comment on the Blueprint SD Initiative is noted. See response to Comment A3-5 above.

**A3-7:** As stated in the comment, the University CPU includes overarching goals with the intention of guiding development within the University CPU area. As a land use policy framework, the University CPU is intended to guide development with the intention of supporting and reinforcing existing land use plans, such as the MSCP SAP and VPHCP. Additional language directly from the MSCP SAP and VPHCP is not warranted as suggested language would not increase protections for sensitive biological resources beyond the existing regulatory framework.

**A3-8:** This comment is noted. The proposed trails have been removed from the project description in Section 3.5.3I, from Figure 3-26, and from the impact analysis in Section 4.3.4, Issue 4.

**A3-9:** The City as the lead agency on future development projects within the City's land use jurisdiction is responsible for making environmental determinations. In the event no CEQA public review is required for a development project, the City would continue to consult with the California Department of Fish and Wildlife (CDFW) and USFWS in association with the review of proposed MHPA Boundary Line Adjustments and Biologically Superior Option wetland deviations processed under the City's ESL Regulations. Specifically, the Biology Guidelines (page 33) requires the City to seek input and concurrence on proposed Biologically Superior Option wetland deviations. Specifically, it states, "concurrence shall be in writing and be provided prior to or during the public review of the CEQA document in which the biologically superior project design has been fully described and analyzed." In the case of no public review, the City would be required to obtain

concurrence prior to project approval. The City's MSCP Subarea Plan (SAP) also requires wildlife agency concurrence for any boundary line adjustments. Specifically, Section 1.1.1 of the MSCP SAP states, "The determination of the biological value of a proposed boundary change will be made by the City in accordance with the MSCP plan, with the concurrence of the wildlife agencies."

Additionally, the requirements of MSCP Implementing Agreement (Section 14.0) requires the City to prepare and submit to the USFWS and the CDFW each year a public report containing an annual accounting, by project and cumulatively, of habitat acreage lost and conserved within the Subarea during the previous calendar year. This accounting shall specify acres conserved within the MHPA by habitat type, as well as acres committed to land development both within and outside of the MHPA and compare these figures with results obtained utilizing the Habitat Conservation Accounting Model (HabiTrak). This report shall also describe how habitat preservation is proceeding in rough step with development. The report will be used by the USFWS and CDFW to evaluate whether adequate progress toward implementation of the MSCP and the Subarea Plan is being achieved. A public workshop or meeting will be jointly conducted on an annual basis by staff from the USFWS, the CDFW and the City to disseminate and discuss the annual report. The Parties review the Annual Report for the purposes of evaluating the implementation of the MSCP during the preceding year and the adequacy of the overall progress being made towards reaching the conservation goals of the MSCP and the Subarea Plan, utilizing HabiTrak. Items to be considered in the evaluation include, but are not limited to, all contributions towards the preservation of habitat lands, such as public lands, private mitigation lands, land donations, land acquisitions, and management activities undertaken or proposed on habitat lands. Habitat management issues are also be discussed. If the USFWS and the CDFW determine that adequate progress towards implementation of the Subarea Plan is not being achieved, the USFWS, the CDFW, and the City will take the actions specified in the Subarea Plan and the Implementing Agreement to remedy that situation. If the USFWS and CDFW determine that adequate progress towards implementation of the Subarea Plan is being achieved but is nevertheless not providing sufficient protection to Covered Species, then the Parties work cooperatively and take appropriate actions consistent with the MSCP and Subarea Plan (such as altering management activities or redirecting mitigation and acquisition) in order to address the situation.

**A3-10:** Updates to the City's Land Development Code (LDC) are detailed in Section 3.5.1.4. As specified therein, updates would focus on implementation of the City's vision as defined in the General Plan, CAP, and other City policy plans and documents. Anticipated future LDC amendments would include amendments that facilitate ministerial processing of residential and mixed-use development, update the Historical Resources Regulations, modify parking regulations, or make changes to support development and mobility improvements. At this time, updates to the LDC that relate to biological resource protection and/or implementation of the MSCP SAP and/or VPHCP are not anticipated. The PEIR would not cover future changes to the LDC that remove or reduce any existing regulatory protections for biological resources. Additionally, consistent with the City's implementing agreement with the wildlife agencies, if updates to the LDC are proposed that would affect the level of regulations and protections for sensitive biological resources, the City would consult with the wildlife agencies prior to any such action.

**A3-11:** In Section 4.3.4, the biological resources of each planning area—the Blueprint SD Initiative area, the Hillcrest FPA area, and the University CPU area—were each assessed separately. For the

University CPU, a separate biological report and survey were conducted because of the higher quantity of biological resources in that area. The tiering of future CEQA documentation from the Blueprint SD Initiative, University CPU, and Hillcrest FPA PEIR would be allowed for projects that fall within the scope of these project components as defined in Chapter 3.0, Project Description. As described in the significance determination of Section 4.3.5 of the PEIR, the potential biological resource impacts of future projects consistent with the Blueprint SD Initiative, the Hillcrest FPA, and the University CPU development areas would be assessed at the time future development is proposed.

**A3-12:** As described in Section 8.4.2 of the VPHCP, “[BLAs] to the MHPA within the VPHCP Plan Area may be made without the need for a major amendment to the VPHCP in cases where the new boundary results in an area of equivalent or higher biological value in the MHPA.” The triggers for minor and major amendments are identified in Sections 8.4.3 and 8.4.4 of the VPHCP, respectively. Minor amendments are made in relation to two airports: Montgomery-Gibbs Airport and the Brown Field Airport. Major amendments are made in special cases when the following conditions occur:

- Increased level of take/impact of a covered species.
- Addition of a covered species.
- Addition or substantial modification to a Covered Activity that could reduce conservation commitments in the VPHCP.
- Annexations that are inconsistent with the VPHCP.
- A material amendment, revision or update to the ESL or Biology Guidelines, General Plan or other local land use laws or ordinances that would affect implementation of the VPHCP in accordance with the Permit.

The USFWS suggested revision does not align with the definition of a major amendment in section 8.4.4 of the VPHCP, and the suggested “substantive impacts to the 100% baseline conservation lands” is not clearly defined. Nevertheless, the City would ensure future development would be in compliance with the VPHCP and consult with USFWS as necessary to ensure successful implementation of the VPHCP.

**A3-13:** Comment noted. No MHPA Boundary Line Corrections (BLCs) exclusions are proposed as part of the University CPU. As future site-specific projects are proposed, BLC exclusions would be considered at the staff level where there is evidence of a mapping error due to when the subject parcel in question was developed prior to MSCP SAP adoption. The language regarding comprehensive BLCs is in regard to future CPUs and brings forward BLC criteria language prepared in coordination with the Wildlife Agencies. The University CPU’s comprehensive BLC addition was presented at Wildlife coordination meeting on January 19, 2024 and was clarified that no MHPA deletions were proposed. The City looks forward to continuing to work with USFW and CDFW on future comprehensive MHPA BLCs.

**A3-14:** The comments relate to the content of the Blueprint SD Initiative, the University CPU, and the Hillcrest FPA. See A3-5 through A3-7. The comments are not related to the adequacy of the analysis in the PEIR. No response is required.

**A3-15:** See response to comment A3-8.

**A3-16:** Comment noted. This language has been added to the Final PEIR, in Section 4.3.2.3(a).

**A3-17:** The Biological Resources Report was prepared to support a program-level evaluation of potential impacts. For purposes of implementation of the Blueprint SD Initiative, the primary location of land use change is anticipated to occur within Climate Smart Village Areas; therefore, the PEIR discloses the resources present within these areas to provide a good faith effort to disclose the potentially significant impacts of the project. The City does not agree that the disclosure of baseline biological conditions should have covered the entire City because that information would not provide meaningful information about the nature and scope of anticipated impacts.

At a program level of review, it would not be appropriate to develop mitigation frameworks for specific species or resources at this time. The City's Biology Guidelines and regulatory framework ensures appropriate project level mitigation is identified. Furthermore, the mitigation framework MM-BIO-1 identified for the project would apply Citywide as the measure reflects the regulatory requirements that the City would apply in order to develop project specific mitigation. Please also see response to comment A3-11.

**A3-18:** As discussed under Section 4.3.4, Issue 1 (b), of the Draft PEIR, all ministerial and discretionary projects must comply with the City's MSCP SAP, VPHCP, ESL Regulations and Biology Guidelines. Additionally, mitigation measure MM-BIO-1, in section 4.3.6 of the PEIR, reinforces this compliance. Additional mitigation measures are not warranted due to the existing regulatory framework in place under the MSCP SAP and VPHCP.

**A3-19:** Table ES-1, the Summary of Environmental Impacts table, in the Executive Summary of the PEIR, discusses the results of the impact analysis, not necessarily the regulatory conditions. This information is, however, provided in Section 4.10.2.2 (h) of the PEIR under the heading "MHPA Boundary Line Adjustments."

**A3-20:** The requested information is found in Section 4.10.2.2 (h) of the PEIR under the heading "MHPA Boundary Line Adjustments." The information about 90 percent of the lands being preserved has been added to the Final PEIR.

**A3-21:** In Section 4.10.4, Issue 2 (f), of the PEIR, the necessity of coordination with the Wildlife Agencies is stated: "Furthermore, Wildlife Agency concurrence would be required for boundary line adjustments consistent with the City's MSCP Implementing Agreement."

**A3-22:** The requested information is found in Section 4.3.4, Issue 3, of the PEIR (see the bulleted items). As mentioned in response to comment A3-19, the Summary of Environmental Impacts table, in the Executive Summary of the PEIR, discusses the results of the impact analysis, not necessarily the regulatory conditions.

**A3-23:** Mitigation measure BIO-1, in section 4.3.6 of the PEIR, reinforces required project compliance with the City's Biology Guidelines and, therefore, its directive to avoid wetland impacts. Additional mitigation measures are not warranted as the suggested language would not increase protections for wetlands beyond the existing regulatory framework and MM-BIO-1.

**A3-24:** The existing mitigation measure (MM-BIO-1) reinforces required compliance with the City's ESL Regulations and Biology Guidelines. The Biology Guidelines already includes language enforcing the "no-net-loss" requirement as detailed in Section B.1.a of the City's Biology Guidelines; therefore, it is not necessary to restate this information in the measure. Future development projects would be required to demonstrate no-net-loss for consistency with the City's ESL Regulations and City's Biology Guidelines.

**A3-25:** This comment on the Blueprint SD Initiative's proposed changes to the General Plan Conservation Element are noted. MHPA and VPHCP areas within the City's designated open space are protected through the City's regulatory restrictions as described in the City's ESL Regulations and Biology Guidelines. Additionally, per Section 131.0204 of the City's Municipal Code (SDMC), open space zones "...implement the habitat preservation goals of the City and the MHPA by applying development restrictions to lands wholly or partially within the boundaries of the MHPA." Not all lands that are designated as open space are located within the MHPA , but for those that are, the ESL Regulations, Biology Guidelines, MSCP SAP, and VPHCP would be applicable to future proposed recreational projects within the MHPA.

**A3-26:** See response to comment A3-8.

Dear Heidi -

On behalf of Circulate San Diego, whose mission is to create excellent mobility choices and vibrant, healthy neighborhoods, I am writing to express our support for adopting the most robust and pro-housing, pro-climate options for the University City Community Plan Update.

O1-1

Circulate, alongside our allies, has championed a plan addressing the urgent need for increased homes and access to transit in our region. Our report "[Making the Most of The Mid-Coast Trolley](#)" highlights the significant benefits the University City community could enjoy from expanding housing options in the area.

O1-2

We appreciate City Staff for including [the most robust plan as an alternative for the Environmental Impact Report](#) and are thrilled to see that it is recognized as the "environmentally superior alternative." Adopting this robust alternative would be a significant win for our region.

O1-3

Furthermore, Circulate recognizes that the land use plans must account for the changing needs of the University City area. We support and concur with BioCom California, as outlined in their attached March 27, 2024 letter, that adopting Urban Flex and Prime Flex land use in the EMX-1 zone in the North Torrey Pines area would open new and important opportunities. Fortunately, including those designations would not have a significant impact on the City's environmental

O1-4

analysis

O1-4  
cont.

University City will be a pivotal regional hub for San Diego for generations to come, and we are heartened to see that the present EIR and draft Community Plan Update reflect this reality. As we await the City Council's decision, Circulate remains committed to making the most of the Mid-Coast Trolley.

O1-5

Please do not hesitate to contact me if you would like to discuss this further.

**Re: University Community Plan Update (CPU)**

To Whom It May Concern:

On behalf of a coalition of life science organizations, Biocom California is writing to request that the city adopt Urban Flex and Prime Flex land use designations and the EMX-1 zone in an area of the North Torrey Pines mesa. A graphic of the area is attached for reference purposes.

Biocom California would first like to thank planning department staff for their extensive efforts to bring the draft CPU forward. The CPU is an innovative, long-range plan that will govern and control the development of the University Community for the next 30 plus years and will help implement goals and policies relating to housing, climate, and quality of life.

What we are seeking for the North Torrey Pines mesa through appropriate land use designations and zoning will help the city meet these goals. This change can bring housing and jobs closer together and provide flexibility and creativity to further long-range development on the North Torrey Pines mesa, ensuring that it remains a vibrant national resource of health innovation.

North Torrey Pines is the crown jewel of the San Diego life science cluster because it is home to a high concentration of renowned research institutions and life science companies. These companies have made it clear that quality workforce housing near employers has become the number one factor in employee attraction and retention.

San Diego's main competitors, Boston/Cambridge and the San Francisco Bay Area, have long been providing mixed use and residential opportunities within their life science clusters, which is a major reason they are successful at both attracting companies and producing therapies, research tools, and diagnostics. San Diego needs to provide the same opportunities to remain competitive and continue to deliver life changing treatments and cures.

A significant amount of private investment has occurred on the North Torrey Pines mesa to foster walkability, micro-mobility, and connectivity to transit, along with providing the amenities and services that life science employees ask for. The industry is actively working with transit authorities to provide shuttle services to the Blue Line Trolley, COASTER, and rapid bus stations, and to increase bus frequency. The proposed Urban Flex designation and EMX-1 zone adds the critical third component of housing to pursue the city's goal of fostering communities where residents can live, work and play.

01-7

There are currently substantial land use constraints that limit development on all or most of the North Torrey Pines mesa, including the Coastal Height Limit Overlay Zone and MCAS Miramar Accident Potential Zone (APZ) II and Transition Zone (TZ). Such constraints will continue to govern and limit development regardless of the land use designation and base zone chosen for the area.

As such, making the change to Urban Flex with an EMX-1 implementing zone in the small requested area does not have a significant impact on the environmental analysis for the CPU. We have engaged a traffic consultant to undertake a preliminary analysis, which did not identify any impact to vehicle miles traveled (VMT) or other traffic impacts and should not cause a delay to the CPU review process. Based on final comment processing times for previous community plan updates such as Mira Mesa, this change should not present any challenge in being accomplished in this final phase.

If left unchanged, these zones will remain stagnant for two plan cycles, or more than 60 years, and this portion of the community will fall short of realizing the vision set forth in the Plan to create, *“A diverse and dynamic community with renowned higher education, healthcare, scientific research and technology institutions and businesses connected through a robust multi-modal transportation network to a vibrant, mixed-use urban core and varied residential neighborhoods, which protects its unique natural habitat and canyon systems.”*

The revised CPU was released on March 15 and we recognize that the CPU process is nearing completion. However, we believe it is critical that the city evaluate and incorporate this request into the CPU as it will govern development in the University Community for the next 30 years or longer. This change would help the city meet its climate and housing goals and facilitate the growth of the San Diego life science cluster in a way that increases its competitiveness while providing the housing proximity that employees are demanding.

Sincerely,

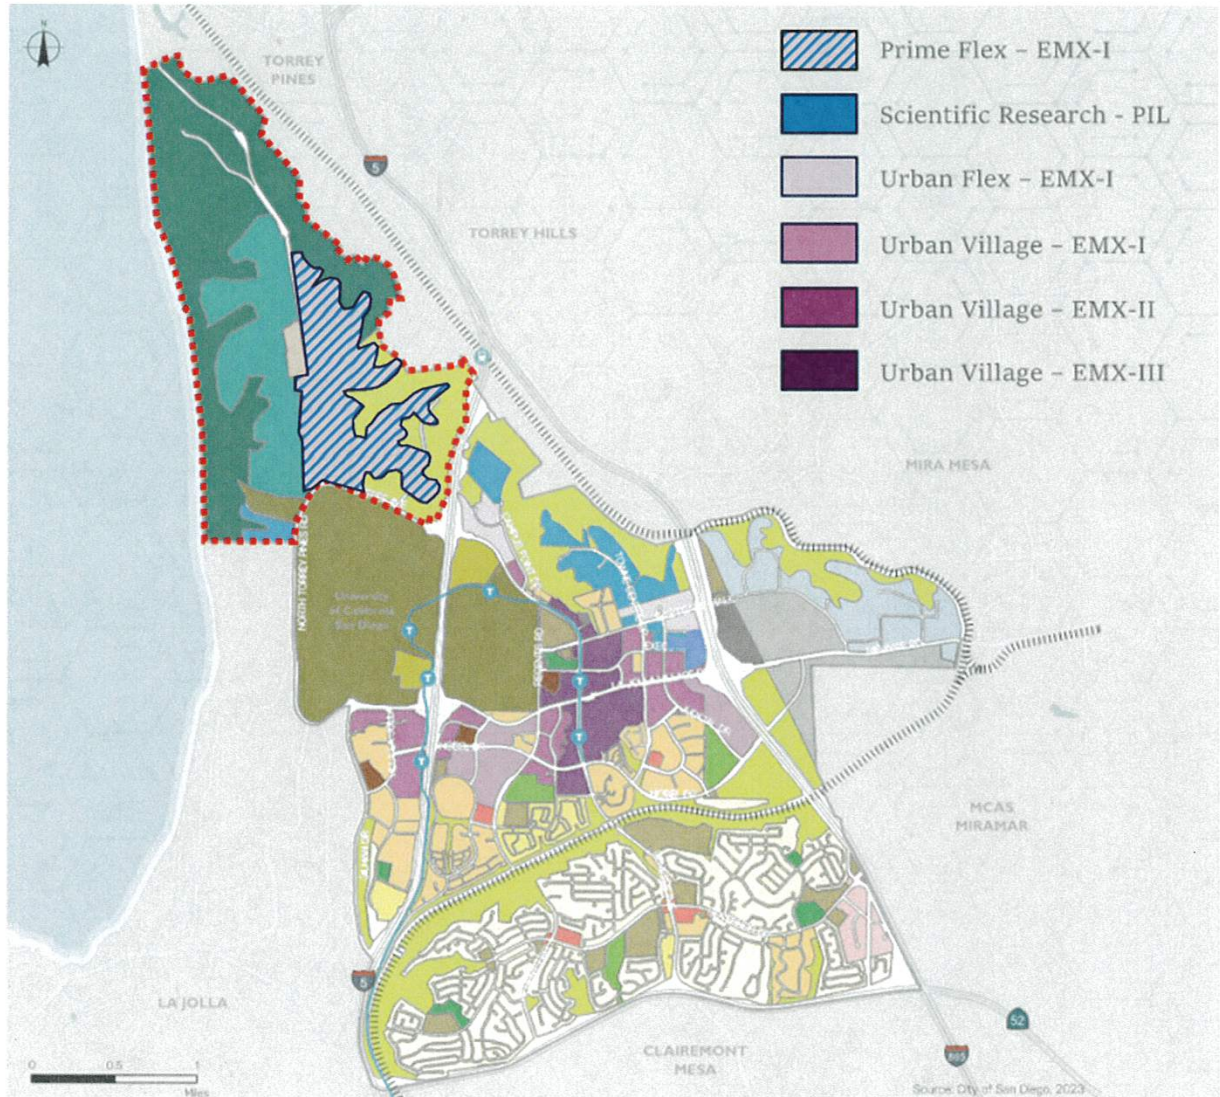

Melanie Cohn  
Sr. Director, Regional Policy & Government Affairs

**(Proposed Land Use for North Torrey Pines)**

Conversion of Scientific Research/IP1-1 to Urban Flex and Prime Flex/EMX-1. Proposal indicated with diagonal cross hatch below in the North Torrey Pines Village area bounded by Genesee to the south.

**O1: Responses to Circulate San Diego Comment Letter**

**O1-1:** The introductory comment is noted. This comment does not relate to the adequacy of the Draft Program Environmental Impact Report (PEIR). No further response is required.

**O1-2:** Comment noted.

**O1-3:** The commenter appreciates the inclusion of the High Density Alternative in the Draft PEIR and agrees with the recognition of the alternative as an environmentally superior alternative in the alternatives section (Chapter 8) of the Draft PEIR. The comment is noted, and no further response is required.

**O1-4:** The commenter supports Urban Flex and Prime Flex land use designations in the North Torrey Pines area. These land uses are not proposed as part of the University Community Plan Update, but this suggestion has been noted by the City. These comments do not relate to the adequacy of the Draft PEIR. No further response is required.

**O1-5:** The comment is in general support of the proposed project. Comment noted.

**O1-6:** Comment noted. This comment reiterates portions of the comment letter from O1-1 through O1-5, and responses to those comments are incorporated here by reference.

**O1-7:** The comments from Biocom California are noted. These comments do not relate to the adequacy of the Draft PEIR. No further response is required.

**Re: General Plan Amendment, Blueprint SD, and PEIR Climate Action Campaign Comments**

Climate Action Campaign (CAC), is a non-profit organization based in San Diego and Orange County, CA with a simple mission: create a zero carbon future through effective and equitable policy action.

San Diegans deserve access to high quality, sustainable, reliable, and affordable housing and transportation networks that are connected to important resources like schools, high road high wage jobs, healthcare centers, grocery stores, and recreation.

The current draft form of the General Plan Amendment referred to as Blueprint SD Initiative (Blueprint SD), Hillcrest Focused Plan Amendment (FPA), University Community Plan Update (CPU) as well as the draft Program Environmental Impact Report (PEIR) do not demonstrate a land use growth strategy that will address the sustainable and net zero greenhouse gas (GHG) emissions future Climate Action Plan (CAP) 2.0 legally promises to all residents.

CAC stands firm in its commitment to ensure the city achieves net zero emissions and 50% mode shift to walking/rolling, cycling, and public transit by 2035, therefore we insist on a Blueprint SD, Hillcrest FPA, University CPU and PEIR that helps the city of San Diego attain critical CAP milestones.

**Natural Gas and Building Decarbonization**

O2-1

Natural gas used as a source of energy is unsafe and aids in the deterioration of our climate. CAP 2.0 set guidelines for reducing GHGs from natural gas in Strategy 1. The decarbonization of new development is foundational to achieving GHG reductions set in CAP 2.0.

Gas stoves and heating/cooling systems are just a few appliances that utilize natural gas. The use of these appliances indoors creates a hazardous secondary condition; the air pollution generated by burning fossil fuels indoors significantly impacts residents and workers health leading to significant health disparities between those with electric appliances and those powered by natural gas.

The City of San Diego emissions GHG inventory for 2019 shows 18% from natural gas. Blueprint SD does not, at the time of its drafting, implement performance measures nor does it set the bare minimum threshold of no more natural gas for new development. In fact, the PEIR states, “new development occurring under the project may result in the need for new electric and natural gas transmission lines....” And it cites “residential consumption of natural gas for heating and cooking is the second highest percentage....”

O2-2

Without the adoption of a City Building Electrification policy that sets performance standards, reduction in GHG emissions from natural gas will not be met. While the Zero Emissions Municipal Buildings & Operations Policy (ZEMBOP) aids the city in removing natural gas from new municipal facilities, without creating and adopting a policy that helps move the city towards reductions in natural gas use in residential and commercial buildings, GHG emissions will continue to grow.

Higher density development will not result in “less energy” consumption as stated in the PEIR unless there are regulatory mechanisms to incentivize the development of all electric buildings. In fact, the PEIR admits that “as new development is constructed, new or renovated buildings would use electricity and natural gas to run various appliances and equipment, including space and water heaters, air conditioners, ventilation equipment, lights, and numerous other devices. Generally, electricity use is higher in the warmer months due to increased air conditioning needs, and natural gas use is highest when the weather is colder as a result of high heating demand.” The impacts would certainly be found significant with the addition of more natural gas in new developments. The PEIR however, inaccurately states the impact would be “less than significant.”

O2-3

CAC insists that this inaccuracy be rectified in the current draft of Blueprint SD, Hillcrest FPA, University CPU and the PEIR. Without this change, the public has no transparency of the PEIR’s impact on increasing GHG emissions and the city will certainly not achieve net zero emissions by 2035.

### **50% Mode Shift by 2035**

CAP 2.0 set the stage for the reduction of GHG emissions from the most GHG intense sector, transportation. The creation of land use and mobility actions and policies are critical first steps

O2-4

but these alone will not help the city achieve its CAP goal of shifting all trips to 50% non-vehicular. Blueprint SD and DEIR are negligent regarding mobile source emissions.

Blueprint SD and PEIR need to be consistent with CAP Strategy 3. The impact analysis of greenhouse gas emissions highlights the discrepancy between the PEIR and CAP 2.0. The cornerstone of Strategy 3 is the Mobility Master Plan (MMP). In its current draft form, the MMP is not sufficient to reach CAP mode share targets of 50% of all trips via walking/rolling, cycling, and public transit. The MMP does not benchmark for annual progress for these targets. The 135 project prioritization list falls short of implementing mobility projects as many of the projects are not shovel ready and lack funding. The Land Use and Community Planning Element and the Mobility Element of the General Plan Amendment and the PEIR do not take into account the increase of GHG emissions from transportation and the significant GHG impact growth and land use will have under the status quo.

This is detailed in the modeling done in the memo titled “Making Progress Toward Mode Share Goals” that is additional material for the draft Blueprint SD. The three model runs illustrate the discrepancy between CAP mode share targets and Blueprint SD. Even when projected to 2050, under the best case scenario, the vehicular total would be 72.3%. The CAP calls for 50% vehicular total by 2035.

O2-4  
cont.

Daily Mode Choice	Climate Action Plan (2035 Target)	Model Run 1 (2050) <sup>1</sup>	Model Run 2 (2050) <sup>1</sup>	Model Run 3 (2050) <sup>1</sup>
Walk	25%	13.8%	15.3%	16.8%
Bike	10%	2.6%	2.8%	3.0%
Transit	15%	7.3%	7.5%	7.9%
Vehicular (Total)	50%	76.4%	74.5%	72.3%
Vehicular (High-Occupancy Vehicle)	None	37.9%	37.0%	36.0%
Vehicular (Single-Occupancy Vehicle)	None	38.5%	37.5%	36.3%

<sup>1</sup> Model run 1, 2 and 3 apply additional dwelling units to the existing dwelling units in 2022 within Blueprint identified priority areas. The model runs also adds commensurate citywide increases to employment and enrollment.

The vehicular mode share data in this table is an important first step in assessing mode shift targets however it falls short of the type of comprehensive mode share data needed to plan growth in a more sustainable manner. This table only addresses land use. It is silent on mode share projections from various mobility policies, programs, and projects that are discussed in the draft MMP. The MMP needs a projected mode share table such as this for testing the general mode shift if MMP projects, policies, and programs are implemented.

In the draft MMP, Figure 6-7 displays the MMP Focus Areas. There are 11 focus areas. In comparing the Mobility Element Figure ME-18, the Land Use and Community Planning Element Figure LU-1, and MMP Figure 6-7, there are some overlaps between Village Propensity, current

O2-5

mobility infrastructure and transit service, and future MMP focus area projects. The issue remains that between the MMP focus areas and high level Village Propensity areas there are little to no strategies, policy, programs, projects that help facilitate mobility options outside of driving. Due to the lack of these planning documents accounting for more vehicular traveling, there is absolutely no way that impacts associated with GHG emissions should be considered as less than significant.

O2-5  
cont.

Blueprint SD and the PEIR need to have mode share modeling that includes both land use and mobility projects, policies, and programs. The latter should be part of the MMP as the MMP should feed into Blueprint SD and the PEIR. CAC insists this discrepancy is rectified.

### **Conclusion**

While steps have been taken to address growth and development within the CAP framework, the scope is too limited. The potential of new development to include natural gas would have significant impacts on the city's ability to achieve its 2030 and 2035 CAP targets for reducing GHG emissions via elimination of fossil fuels in the form of natural gas for residential and commercial development.

As the number one contributor to GHG emissions, transportation emissions will have a significant impact on GHG emissions if the growth and development in Blueprint SD and the PEIR do not include GHGs from increased vehicular use in the absence of implemented mobility options. The MMP does not include mode share data for the focus areas and the SANDAG Regional Transportation Plan falls short of meeting the city's mobility needs between now and 2050 as was detailed in CAC's [Missing the Mark](#) report. More must be done to create reliable, sustainable, and affordable mobility options to reach CAP 2.0 GHG reduction targets. These documents do not meet the needs of the city.

Blueprint SD and the PEIR need to be reconfigured with transparency and accountability for achieving CAP 2.0 targets.

Sincerely,

Corinna Contreras  
Policy Advocate  
Climate Action Campaign

---

**O2: Response to Climate Action Campaign Comment Letter**

**O2-1:** Introductory comment noted. As discussed in Chapter 3.0 of the Draft Program Environmental Impact Report (PEIR), a key objective of the project is to align the City's land use plan with the goals of the Climate Action Plan (CAP). As detailed in Section 3.5.1 of the Draft PEIR,

"The Blueprint SD Initiative includes a comprehensive amendment to the General Plan to better align the City of Villages Strategy to reflect the latest goals, policies, and plans for housing, environmental protection, and climate change adaptation and sustainable growth. The Blueprint SD Initiative would amend the General Plan to reflect an updated citywide land use and policy framework designed around the 2050 regional transportation network to promote reductions in per capita greenhouse gas (GHG) emissions and vehicle miles traveled (VMT). The Blueprint SD Initiative identifies complementary land use, transportation, and related policies to support future development according to the revised land use framework. The land use and policy amendments would build upon climate goals outlined in the CAP and Climate Resilient SD Plan."

The project has been designed with a land use and mobility network that would reduce VMT per capita to the maximum extent feasible to achieve GHG reductions goals of the CAP (see Appendix N of the PEIR). While the project supports CAP implementation, this project alone is not intended to demonstrate a net zero GHG emissions future, as no plan alone, with no additional actions can do so. The City anticipates adoption of future actions, programs and regulations that implement the CAP, as well as implementation of VMT-reducing capital project investments. The Blueprint SD Initiative sets a framework supporting future City actions to achieve the net zero goals of the CAP. The environmental impacts of the CAP were addressed in the Final PEIR for the CAP (Project No. 416603 /SCH No. 2015021053), and the environmental impacts of the 2022 CAP Update and CAP Consistency Regulations were addressed in the Final Addendum to the CAP PEIR for the 2022 CAP Update (Project No. 416603/SCH No. 2015021053).

**O2-2:** Comment noted. See response to comment O2-1 and O2-3.

**O2-3:** Refer to response to comment O2-1. The analysis correctly applies the City's CEQA thresholds of significance for GHG and concludes impacts would be less than significant based on project consistency with the CAP and key CAP and General Plan policies. The project does not preclude future actions to limit natural gas in new developments that may be needed to achieve CAP goals. Adoption of prohibitions on natural gas and an adoption of a City Building Electrification Policy is outside of the scope of the project. Additionally, Section 4.5.4 of the Draft PEIR states that "future projects facilitated by the Blueprint SD Initiative, the Hillcrest FPA, and the University CPU would be required to meet the mandatory energy requirements of the California Green Building Code (CALGreen; Title 24, Part 11 of the California Code of Regulations [CCR]) and the Energy Code (Title 24, Part 6 of the CCR) in effect at the time of issuance of a building permit. Adherence to the state mandatory energy requirements would reduce future operational impacts in regard to energy resources.

**O2-4:** Comment noted. GHG impacts are discussed in Section 4.7.4, Issue 1 of the Draft PEIR. The method for determining significance as it relates to the project's consistency with the CAP is accomplished through evaluation of the project's consistency with General Plan policies LU-A.8,

ME-D.16, CE-J.2, and CE-J.3 and consistency with the CAP's strategies, specifically Strategy 3. Quantification of GHG emissions is not required for the project based on the City's CEQA Significance Determination Thresholds (2022). Pursuant to the City Planning Department's June 17, 2022, memorandum—Climate Action Plan Consistency for Plan- and Policy-Level Environmental Documents and Infrastructure Projects—the environmental analysis for plan- and policy-level documents such as the Blueprint SD Initiative, University CPU, and Hillcrest FPA should address the ways in which the plan or policy is consistent with the goals and policies of the General Plan and CAP. A key goal of the project is to support a shift in mode share. The focus of the project is to establish and update the General Plan, University Community Plan, and Uptown Community Plan's policy, land use, and mobility framework consistent with the CAP that would support GHG reduction goals and help meet CAP targets. The project is supportive of the CAP, and demonstrates a commitment to meet CAP goals. In fact, the Blueprint SD Initiative land use framework is based on a model that shows the areas of the City with the greatest propensity to achieve the City's mode share goals. Future City actions, such as the adoption of a Mobility Master Plan as suggested in CAP Strategy 3: Mobility and Land Use, would be needed to aid CAP GHG reduction targets. However, the City's Mobility Master Plan is not a part of this project and has not been adopted by the City. The commenters' comment on the draft Mobility Master Plan have been noted. It is important to note that a land use framework alone cannot feasibly achieve GHG reductions and shift mode share. On a very simplified level, to achieve the desired mode shift, there must be a land use framework that supports investments in walking/rolling, biking and transit, and then the corresponding investment in that infrastructure. The Blueprint SD Initiative provides the land use framework and includes policies that would support the necessary infrastructure investment to ultimately achieve the mode share and GHG reduction goals. This information is detailed in the Draft PEIR Section 4.7 related to GHG emissions. See also response to comment O2-1 and response to comment O11-8 under comment letter O11.

**O2-5:** Comment noted. GHG emissions are discussed in Section 4.7 of the Draft PEIR. Mode share modeling is not required per CEQA but has been included as Appendix N of the Draft PEIR. While the Blueprint SD Initiative focuses on land use changes and growth, the Mobility Master Plan, a separate project, will continue to build off those established transportation and land use relationships acknowledged in Blueprint SD Initiative. See response to comment O2-4.

## Comment Letter O3 - Forest Advisory Board

**From:** [Jim Smith](#)  
**To:** [PLN\\_PlanningCEQA](#)  
**Subject:** [EXTERNAL] Blueprint comment on trees  
**Date:** Sunday, April 28, 2024 8:42:34 PM

---

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

I appreciate all of the attention on trees.

- My first suggestion is to put more effort into measuring where the city is relative to goals. The climate action plan calls for an aggressive goal of 35% canopy by 2035. However, the city hasn't measured tree canopy in a decade. The city has planted thousands of trees but there is no follow-up to know which trees are still living or why. Data is scattered in many different formats. So, the city should invest in a modern system of tracking progress towards the great goals that exist. Much of this is in the draft Climate Action Implementation Plan Measure 5.2.
- More tree code enforcement is needed. Development Services permits eight times more trees than the transportation & parks departments combined. Yet there is no follow-up to know if those trees were planted or most importantly survived.
- City tree codes should be revised. Developers do the minimum preparation required to plant a tree even when the horticulturist knows that the tree will be stunted and dead in a decade. To get the benefits of trees we need mature trees.
- Increase focus on native trees and shrubs. Conservation Element A11 mentions natives and that they should be planted for their drought tolerance. Many foreign species will provide drought tolerance but the native species provide ecological services for insects, pollinators, reptiles, and birds.
- More fruit trees. I commonly get asked about fruit trees. Especially in food deserts in economically challenged areas. The city might consider giving away a limited selection of fruit trees to designated communities along with educational material on how to care for the trees.

O3-1

Best regards,  
Jim Smith  
Chair of San Diego's Community Forest Advisory Board

**O3: Response to Forest Advisory Board Comment Letter**

**O3-1:** Comment noted. Comments relating to tracking progress and data collection, tree code enforcement, tree codes, increased focus on native trees and shrubs, and encouraging fruit trees are outside of the scope of the project. The comment does not raise an issue regarding the adequacy of the Draft Program Environmental Impact Report. No further response is required.

Re: Comments on Draft Program EIR for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan, and University Community Plan and Local Coastal Program Update

Dear City of San Diego Planning Department:

This firm represents Friends of Rose Canyon in matters related to the University Community Plan and Local Coastal Plan Update (“UCP Update”), Blueprint San Diego, (collectively the “Project”) and the City’s associated environmental review for adoption of the proposed Project, the Draft Program EIR for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan, and University Community Plan and Local Coastal Program Update (“DPEIR”).

There are several changes in the draft UCP Update that will place the City on good footing to protect critical natural resources. Friends of Rose Canyon appreciates that the Draft UCP Update proposes to dedicate several City-owned properties as open space pursuant to Charter Section 55. Friends of Rose Canyon also appreciates that the Plan includes Multi Habitat-Planning Area (“MHPA”) boundary line corrections to add a total of approximately 25.97 acres of City-owned land into the MHPA and, critically, that approximately 2.70 acres of City-owned right-of-way traversing Rose Canyon, located within the MHPA, would be vacated and the MHPA conservation status changed from MHPA 75 percent conserved to MHPA 100 percent conserved. Likewise, Friends of Rose Canyon appreciates that the Plan adds park space at the dead ends of Regents Road. These are important measures to protect Multiple Species Conservation Plan (MSCP) lands, and special status species and their habitats and Friends of Rose Canyon fully supports these updates.

O4-1  
cont.

Friends of Rose Canyon is concerned, however, that the Draft UCP Update includes several proposed new and formalized trails within the MHPA. *See, e.g.* Draft UCP Update Figure 27, p. 130, and Project #32, p. 212 to 213. Trails within the MHPA cannot be proposed until the City has conducted recent, adequate biological surveys and a thorough environmental review, considered consistency with MSCP policies, prepared Resource Management Plans. We discussed these issues in detail in August 12, 2022 and June 30, 2023 letters to the City’s Planning Department (Attachments 1 and 2, attached hereto and incorporated herein).

In an April 15, 2024 email to our client, after the City released the draft UCP Update, the City’s Community Planning Program Manager stated that “we are removing proposed/ existing informal trails from the trails map in the draft plan. We had updated policies in the plan to reflect feedback, however had missed the map (apologies).”

Currently, the DPEIR is wholly deficient for failing to analyze the biological impacts associated with the proposed new and formalized trails in MHPA lands. These legal deficiencies, however, would be largely corrected if the City indeed entirely removed the proposed trails in the final Draft UCP Update figures, maps, and text.<sup>1</sup> We hope that the City will do so, as indicated, in the Final UCP Update. Because the trails are currently in the draft plan and DPEIR, to assist with the removal, we detail the DPEIR’s legal deficiencies below, in order to submit these comments within the 45 day comment period.

On behalf of Friends of Rose Canyon, we respectfully submit these comments to ensure that the City’s decision-makers fully comply with the California

---

<sup>1</sup> This includes removing references to the proposed trails in the Draft UCP Update on Figure 27 and the textual reference on page 130, as well as Project number 32 on page 212 and 213 that recommends constructing new trails within Rose Canyon. The City has not yet determined if *any* new trails can be constructed within Rose Canyon consistent with the MSCP, in part because they have not prepared area-specific management directives such as a NRMP. Project number 32 should instead refer to closing existing informal trails, as required by the MSCP. The DPEIR must also be revised to remove Figure 3-26 and the textual reference on page 3-63. In addition, trails in the MHPA are referenced or depicted on the following pages of the Draft UCP Update: 50 (Figure 6), 110 (Figure 20), 82/83, 84/85, 86/87, 88/89, 90/91, 92/93, 94/95, 96/97, 98/99, and 100/101. Any other references to establishing new or formalizing existing informal trails in the MHPA in the Draft UCP, the DPEIR, and the Draft Blueprint San Diego must also be removed.

O4-2

Environmental Quality Act (“CEQA”), Public Resources Code § 21000 *et seq.*, and the CEQA Guidelines, California Code of Regulations, title 14, § 15000 *et seq.* (“CEQA Guidelines”). After carefully reviewing the DPEIR for the Project, we have concluded that the DPEIR fails to comply with CEQA in numerous respects.

We are also submitting comments prepared by a third-party expert biologist retained by Friends of Rose Canyon, Robert Hamilton at Hamilton Biological, to review and comment on the Project and the DPEIR. Hamilton Biological’s report, dated April 27, 2024, is attached to this letter as Attachment 3 and incorporated herein by reference. The report also constitutes independent comments to the City by Robert Hamilton on the inadequacy of the DPEIR. Incorporated herein by reference are previous comments provided to the City by Robert Hamilton, dated June 30, 2023 and July 7, 2023, included as Attachments 4 and 5 to this letter.

O4-2  
cont.

An EIR is “the heart of CEQA.” *Laurel Heights Improvement Ass’n v. Regents of Univ. of Cal.* (1988) 47 Cal.3d 376, 392. It is “an environmental ‘alarm bell’ whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return. The EIR is also intended ‘to demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action.’ Because the EIR must be certified or rejected by public officials, it is a document of accountability.” *Id.* (citations omitted).

Where, as here, the DPEIR fails to fully and accurately inform decision-makers, and the public, of the environmental consequences of proposed actions, it does not satisfy the basic goals of the statute. *See* Pub. Res. Code § 21061 (“The purpose of an environmental impact report is to provide public agencies and the public in general with detailed information about the effect that a proposed project is likely to have on the environment; to list ways in which the significant effects of such a project might be minimized; and to indicate alternatives to such a project.”)

O4-3

As a result of the DPEIR’s numerous and serious inadequacies, there can be no meaningful public review of the proposed Project. The City must revise and recirculate the DPEIR in order to permit an adequate understanding of the environmental issues at stake.

///

///

## I. Species and Habitat Protection in the City of San Diego MSCP Subarea Plan

The City must recognize its legal obligations under the state and federal Endangered Species Acts when planning for and analyzing the impacts of the use of MHPA lands. We provide an overview of these obligations here.

In 1997, the City of San Diego finalized the MSCP Subarea Plan (“MSCP”) to meet the requirements of California’s Natural Communities Conservation Planning (NCCP) Act and to allow the City to issue take permits under the state and federal Endangered Species Acts. The Legislative purpose of NCCPs is “*to sustain and restore those species and their habitat identified by the department that are necessary to maintain the continued viability of those biological communities impacted by human changes to the landscape.*” Fish & Game Code § 2800(i). NCCPs achieves this by allowing development over some habitat in exchange for conserving larger habitat areas where viability can be maintained. As the Legislature explained “Natural community conservation planning promotes coordination and cooperation among public agencies, landowners, and other private interests, provides a mechanism by which landowners and development proponents can effectively address cumulative impact concerns, *promotes conservation of unfragmented habitat areas, [and] promotes multispecies and multihabitat management and conservation.*” *Id.* § 2800(d).

O4-4

Similarly, as the U.S. District Court for the Southern District of California has emphasized, the Federal Endangered Species Act establishes a strict conservation and recovery standard for listed species and measures implementing the City of San Diego’s MSCP Subarea Plan must be adequate to actually achieve that standard. *Southwest Center For Biological Diversity v. Bartel* (S.D. Cal. 2006) 470 F.Supp.2d 1123-24.

As the MSCP itself explains that “the overarching MSCP goal is to maintain and enhance biological diversity in the region and conserve viable populations of endangered, threatened, and key sensitive species and their habitats, thereby preventing local extirpation and ultimate extinction, and minimizing the need for future listings, while enabling economic growth in the region.” MSCP at 49.

The MSCP sets out to achieve this goal (and authorize development in unreserved lands) by establishing the Multi-Habitat Planning Area (MHPA), which “delineates core biological resource areas and corridors targeted for conservation.” MSCP at 1. Rose Canyon is one of these critical conservation areas, among others. This context helps explain why development within MHPA lands is extremely limited and is only allowed to the extent consistent with maintaining and conserving the protected biological resources. We discuss these limits in detail below.

**A. The MSCP Requires the City to Prioritize Protection of Biological Resources**

The creation of the MHPA was not the end of the City’s legal obligations under state and federal Endangered Species Acts. The City is obligated, under the MSCP, to continually manage these lands to protect the conserved resources. As the MSCP emphasizes, “management is necessary to continue to ensure that the biological values are *maintained over time*, and that the species and habitats that have been set aside are *adequately protected and remain viable*.” MSCP at 49.

The MSCP establishes core objectives that the City’s management of MHPA lands must achieve “to assure that the goal of the MHPA is attained and fulfilled.” *Id.* Specifically, management must:

1. “*ensure the long-term viability and sustainability of native ecosystem function and natural processes throughout the MHPA.*”
2. “*protect the existing and restored biological resources from intense or disturbing activities within and adjacent to the MHPA while accommodating compatible public recreational uses.*”
3. “*enhance and restore, where feasible, the full range of native plant associations in strategic locations and functional wildlife connections to adjoining habitat in order to provide viable wildlife and sensitive species habitat.*”
4. “*facilitate monitoring of selected target species, habitats, and linkages in order to ensure long-term persistence of viable populations of priority plant and animal species and to ensure functional habitats and linkages.*”
5. “*provide for flexible management of the preserve that can adapt to changing circumstances to achieve the above objectives.*”

The City’s current management of MHPA lands, and Rose Canyon in particular, is falling woefully short of these objectives. To begin with, the City has not conducted site-specific biological resource assessments or developed management directives to ensure the long-term viability of protected ecosystems. Further, the City’s lack of enforcement against off-trail use and the creation of illegal trails is failing to protect existing biological resources. And the City is not restoring those resources that have been disturbed by unauthorized uses. For a discussion of these current, degraded conditions see Hamilton Biological report

O4-5

O4-6

pages 10-12 (discussing numerous illegal trails through sensitive resources, Attachment 3). Finally, while the MSCP imposes ongoing monitoring requirements on the City (MSCP page 96), it has failed to conduct monitoring of MHPA lands in the UC Plan area, even before proposing the new trails in this UCP Update.

O4-6  
cont.

In light of the degradation currently occurring in protected MHPA lands, the City must focus its efforts on meeting the MSCP's management objectives for current use of these areas. It must not expand and intensify use of Rose Canyon and other MHPA lands by proposing new trails, when the use of existing trails already threatens protected ecosystems.

Further, as the MSCP's second management objective makes clear, recreational uses in MHPA lands are only allowed where they are compatible with protecting existing and restored biological resources. The MSCP's description of management policies for Urban Habitat Lands, such as Rose Canyon, states as follows: "The optimum future condition for the urban habitat lands scattered throughout the City of San Diego is a system of canyons that provide habitat for native species remaining in urban areas, "stepping stones" for migrating birds and those establishing new territories, and environmental educational opportunities for urban dwellers of all ages."

O4-7

These areas were not intended to serve as commuter corridors or to host uses that would impact protected habitats and covered species. The Hamilton Biological Report discusses fragmentation, edge, and recreation/trail effects that caution against any intensified use of MSCP Urban Habitat Lands. Hamilton Biological Report, pp. 21-25, Attachment 3.

With this regulatory background, we discuss a few of the DPEIR's most glaring legal inadequacies below.

## **II. The DPEIR Fails to Adequately or Accurately Describe the Project's Existing Biological Setting.**

It is essential that an EIR accurately and fully describe a project's environmental setting, because this description forms the baseline for evaluating the project's environmental impacts. *See* CEQA Guidelines § 15125(a). This requirement is crucial to a valid EIR: "[k]nowledge of the regional setting is critical to the assessment of environmental impacts . . . . The EIR must demonstrate that the significant environmental impacts of the proposed project were adequately investigated and

O4-8

discussed and it must permit the significant effects of the project to be considered *in the full environmental context.*” CEQA Guidelines § 15125(c) (emphasis added). In other words, it is impossible for an EIR to fulfill its informational purpose when it does not adequately describe the existing environment that may be impacted by a project.

Here, the DPEIP fails to provide basic information about the presence and location of sensitive biological species within MHPA lands, and some of the information it does provide is flatly inaccurate.

The Hamilton Biological report describes how the DPEIR provides inadequate and erroneous information on locations of special-status plant and wildlife species. *See* Hamilton Biological report, Attachment 3, pages 19-20. For instance, the DPEIR fails to provide information on where various special-status species are known or expected to occur within the UCP area. Instead, all the DPEIR does is state *whether* the species might occur within this entire planning area, not where it would occur. Further, the DPEIR fails to acknowledge that certain endangered species, such as the Least Bell’s Vireo, are present at all. The City has failed to provide even basic, readily available information about the location of sensitive species. For instance, Hamilton Biological explains that the DPEIR failed to provide maps from the California Natural Diversity Data Base (“CNDDDB”) showing the locations of the Project area where special-status species have been documented. *Id.* at 20.

O4-8  
cont.

In addition, Figure 29 in the DPEIR incorrectly identifies the MSCP Core Biological Resource Area Corridor running north/south on the wrong side of I-805. It should be on the east side of I-805, where there is open space (the west side is developed).

The City must revise and recirculate the DPEIR to provide adequate information about the biological environmental setting. Without this information, it is impossible for the document to provide an accurate analysis of the Project’s biological impacts.

O4-9

### III. The DPEIR Fails to Adequately Analyze Biological Impacts

The Draft UCP Update, Figure 27 (current and Proposed Trail Facilities) lists three entirely new trails and four formal trails in the location where existing illegal trails currently exist. Figure 27 notes that the exact location for the entirely new trails will be determined later. But the maps are actually specific about the locations within MSCP areas where the new trails would be located—within certain side-canyons or connecting to specific roads and informal trails. And of course, the exact location of the proposed

O4-10

formalized trails along existing informal trails is known. While “exact alignments” of the new trails within the marked locations may still be developed in the design phase, in fact, it is not feasible to place *any* trail within the areas marked for the topographic, biological, and legal reasons discussed herein and in our August 12, 2022 and June 30, 2023 letters, attached to this letter as Attachments 1 and 2, and incorporated herein by reference.

O4-10  
cont.

Despite the fact that the Project proposes specific new and formalized trails in specific locations, the DPEIR entirely refuses to analyze the impacts of these trails—at *any* level of detail. This omission violates core CEQA principles and black letter law.

The PDEIR lists five thresholds for determining significant biological impacts. DPEIR, p. 4.3-52. The first asks if the Project would have a substantial adverse effect on certain (1) sensitive species, (2) sensitive habitats, and (3) wetlands. The fourth threshold asks if the project would substantially interfere with wildlife corridors or nursery sites. The fifth threshold asks if the Project would conflict with the provisions of the MSCP or other habitat conservation plans.

O4-11

CEQA sets a high bar for the City’s evaluation of the Project, and the DPEIR does not come close to clearing it. The “fundamental purpose of an EIR is ‘to provide public agencies and the public in general with *detailed* information about the effect which a proposed project is likely to have on the environment.’” *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 428 (emphasis added).

The DPEIR’s analysis of impacts to sensitive species illustrates the flaws for all of the first four thresholds. To begin with, despite the proposed trails being listed in the DPEIR’s Project description (page 3-63), the impacts analysis omits any discussion of these trails and assumes that no development or changes will occur within MHPA lands. For example, it states “Sensitive plant species habitat in the City is typically concentrated in areas designated as Open Space that may be located within the MHPA. Although development per the [Project] is anticipated to occur with urban areas that are already developed . . . the details of future site-specific projects are unknown at this time, and it is possible that some project areas my support sensitive plant species habitat.” DPEIR, p. 4.3-53.

O4-12

This statement is factually incorrect because the project *does* propose development outside of urban areas that are not developed. Further, these MHPA lands in support sensitive plant and animal species, and this fact is well known. The DEIR is thus fatally flawed for failing to analyze the impacts of the full proposed Project. *See San Joaquin Raptor Rescue Ctr. v. County of Merced* (2007) 149 Cal.App.4th 645, 654 (an

O4-13

agency is obligated to analyze the impacts from the whole of the project, and “not some smaller portion of it.”).

O4-13  
cont.

Having generally acknowledged that it is possible that some projects may impact sensitive species (even though the DPEIR assumes that this will occur from development outside MHPA lands), the DPEIR states that as projects are proposed in those areas “site specific surveys ... will be required to determine the potential occurrence of sensitive plant species in the project area [and] impacts would be mitigated and/or conserved in accordance with” existing plans. The DPEIR suggests that mitigation will “reduce” biological impacts, but does not disclose what those impacts would be or how much they will be reduced by. The DPEIR thus impermissibly delays any analysis of the specific proposed trails. *Friends of Mammoth v. Town of Mammoth Lakes Redevelopment Agency* (2000) 82 Cal.App.4th 511, 535-36; *Cleveland National Forest Foundation v. San Diego Assn. of Govs.* (2017) 17 Cal.App.5th 413, 440-43 (“fact that more precise information may be available during the next tier of environmental review does not excuse [the agency] from providing what information it reasonably can now”).

The DEIR’s generic approach prevents the sort of environmental analysis that CEQA envisions. CEQA requires public agencies to evaluate a Project’s impacts to the extent “reasonably feasible.” CEQA Guidelines § 15151. An EIR must make a “good faith effort at full disclosure.” Here, however, the City has made no effort to disclose the location of species and habitats in relation to the proposed trails, or to analyze the impacts of the trails on those protected resources.

O4-14

The fact that the City is preparing a program-level EIR is no excuse for failing to analyze the impacts of the proposed trails. “The degree of specificity required in an EIR will correspond to the degree of specificity involved in the underlying activity which is described in the EIR.” CEQA Guidelines, § 15146; *Cleveland National Forest Foundation*, 17 Cal.App.5th at 426, 439 (rejecting agency argument that its CEQA analysis was sufficiently detailed for a program-level EIR.”).

Here, the Project proposes specific trails, and it is more than possible, and entirely reasonable, to collect and analyze information about existing biological conditions in those locations, as the expert biological report by Hamilton Biological discusses. Hamilton Biological Report, Attachment 3, pp. 19-20. Even where the Project proposes trails in Rose Canyon generally (Draft UCP Update pages 212 to 213), that provides sufficient information to analyze potential impacts to sensitive species and habitats known to be present in this Canyon. The DPEIR must consider impacts to these biological resources caused directly by construction of proposed trails, as well as by

increased illegal trail use resulting from the new trails, and the expected increased population in the University Community Plan Area.

O4-14  
cont.

This includes an analysis of the impacts to MSCP lands from densifying the “village” areas. Those village areas are along the edges of steep slopes and MSCP habitat. Densification will increase light, noise, human intrusion, invasives, and barriers to wildlife movement. Hamilton Biological’s expert report describes the well-documented fragmentation, edge, and recreation trail/effects that adversely affect protected biological resources. Hamilton Biological Report, Attachment 3, pp. 22-27.

By failing to analyze the direct and indirect impacts to biological resources, the DPEIR violates CEQA’s requirement for a detailed analysis of project impacts. In short, because the City failed to “find out and disclose all that it reasonably can” regarding the Project’s impacts on biological resources, it violated CEQA. *Berkeley Keep Jets Over the Bay v. Board of Port Cmrs.* (2001) 91 Cal.App.4th 1344, 1370 (“*Berkeley Keep Jets*”) (quoting Guidelines § 15144).

In an attempt to paper over this lack of analysis, the DPEIR baldly concludes that the first four biological impacts will be significant. DPEIR, pp. 4.3-62 to 63 (“at a program level of review it cannot be ensured that all impacts could be reduced to less than significant; therefore, impacts to [the protected species/resources] would be considered significant.”). Courts have rejected this sloppy approach, however. *Galante Vineyards v. Monterey Peninsula Water Mgmt. Dist.* (1997) 60 Cal.App.4th 1109, 1123 (“acknowledgement is inadequate”; “a sufficient degree of *analysis*” is required”) (emphasis added).

O4-15

For instance, in *Galante Vineyards*, plaintiffs challenged an EIR for dam and reservoir construction as inadequately addressing impacts on viticulture and horticulture. The EIR acknowledged that impacts from fugitive dust caused by additional traffic and construction would be “significant and unavoidable, even with mitigation measures.” *Galante Vineyards*, at 1123. The court determined that this acknowledgment of potentially significant impacts was inadequate, stating that an EIR should contain “a *sufficient degree of analysis* to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences.” *Id.* at 1123. The court thus concluded that the EIR’s discussion of impacts to viticulture were inadequate. *Id.* at 1124.

The DPEIR fails to comply with CEQA in the same respect as the EIR in *Galante Vineyards*. It cannot avoid analyzing the Project’s biological impacts by simply declaring those impacts to be significant.

Further, there is no guarantee of comprehensive future environmental review that will provide a detailed analysis of or consideration of alternatives or mitigation for, the Project’s biological impacts. Preparing a “program EIR” does not excuse a lax analysis; it necessitates an even more comprehensive review. Because CEQA “allows agencies to limit future environmental review for later activities that are found to be ‘within the scope’ of the program EIR,” once a program EIR is approved, “a court generally cannot compel an agency to perform further environmental review for any known or knowable information about the project’s impacts omitted from the EIR.” *Forest Foundation*, 17 Cal.App.5th at 425-26; *id.* at 440 (impacts not analyzed in a program EIR “may potentially escape analysis in a later tier EIR”).

O4-16

This is why it is so critical that the City remove discussion of proposed trails on MHPA lands from the UCP Update. At the very least the City must commit that no trails will be proposed until biological surveys and local-specific management directives are prepared. Otherwise, the City must fully analyze and consider alternatives and mitigation for the potentially significant biological impacts from these trails to sensitive species. There is no doubt that these impacts exist, *See* Hamilton Biological Report, Attachment 3, pages 2, 9, 12, 13, 17 (discussing potentially significant impacts on protected species from proposed trails). The public and decisionmakers, and the state and federal wildlife agencies, must be given this information.

**A. The Proposed Trails are Inconsistent with the MSCP**

The DPEIR’s fifth threshold for significant biological impacts asks whether the project would “conflict with the provisions of the MSCP, VPHCP” or other adopted conservation plans. The DPEIR, however, entirely fails to analyze the Project’s consistency with the policies and directives of the MSCP or VHCP. DPEIR, pp. 43.-63, 4.10-79 to 80. Instead, the DPEIR defers all analysis, stating that “future development within the project areas would be evaluated for compliance with the City’s MSCP [and other plans].” *Id.* It then concludes, in a circular manner, that because future projects will be required to comply with the MSCP and other plans, the Project would not conflict with such plans and this biological impact is therefore less than significant. *Id.* at 4.3-64, 4.10-80.

O4-17

Such an approach makes a mockery of this significance threshold. As discussed above, the City may not defer analysis in this manner. It must analyze consistency with the MSCP and other plans reflective of the level of detail in the Project. Here, the Project proposes *specific trails* through MHPA lands that are, in fact, not consistent with the MSCP.

The MSCP includes the following General Management Directive for Public Access Trails, and Recreation, Priority 1, Number 2 (MSCP, p. 52):

Locate trails, view overlooks, and staging areas *in the least sensitive areas* of the MHPA. Locate trails *along the edges of urban land uses adjacent to the MHPA*, or the seam between land uses (e.g., agriculture/habitat), and follow existing dirt roads as much as possible *rather than entering habitat* or wildlife movement areas. Avoid locating trails between two different habitat types (ecotones) for longer than necessary due to the typically heightened resource sensitivity in those locations.

The MSCP requires the City to comply with this and other Priority 1 Directives, which “protect the resources in the MHPA, including management actions that are necessary to ensure that Covered Species are adequately protected.” MSCP, p. 50.

In contravention of this Directive, the Project proposes new and formalized trails that are not “located along the edges of urban land uses adjacent to the MHPA.” *See* DPEIR Figure 3-26. Further, as explained in detail in the Hamilton Biological Report (Attachment 3, pages 2-17) and our June 30, 2023 letter (pages 3-9), these trails are in fact “entering habitat” and “sensitive areas,” locations prohibited by the MSCP.

The Project also conflicts with the MSCP’s Priority 1, General Management Directive 1 (MSCP, p. 52), which provides as follows:

Provide sufficient signage to clearly identify public access to the MHPA. Barriers such as vegetation, rocks/boulders or fencing may be necessary to protect highly sensitive areas. Use appropriate type of barrier based on location, setting and use. For example, use chain link or cattle wire to direct wildlife movement, and natural rocks/boulders or split rail fencing to direct public access away from sensitive areas. Lands acquired through mitigation may preclude public access in order to satisfy mitigation requirements.

While the Project proposes to close a handful of existing informal trails, it allows numerous other informal trails to remain in use. *See* DPEIR Figure 3-26, and Hamilton Biological Report, pp. 10-12. This conflicts with Directive 1, because it is not

O4-17  
cont.

proposing sufficient signage and barriers to protect highly sensitive areas, and direct public access away from those areas.

Further, proposing *any* new trails in Rose Canyon prior to preparing area-specific management directives (such as a Natural Resource Management Plan) for this Rose Canyon itself conflicts with the MSCP. *See* Implementing Agreement To Establish a Multiple Species Conservation Program (“MSCP”) for the Conservation of Threatened, Endangered, and other Species in the Vicinity of San Diego, California, section 10.4 (requiring the City to maintain protected lands “for habitat value” “until such time that area-specific management directives are formulated and applied to logical and discrete areas within the subarea Plan.”); MSCP p. 74 (requiring preparation of NRMP for natural resource parks); Hamilton Biological Report, Attachment 3, p. 27.

O4-17  
cont.

#### **IV. Failure to Disclose Significant Land Use Impacts**

Because the proposed trails in MSCP lands conflict with the MSCP, as discussed above, the DPEIR also fails to disclose significant land use impacts under section 4.10 of the DPEIR. *See* DPEIR p. 4.10-80.

In addition, as described in the attached Hamilton Biological Report, the proposed trails will significantly impact sensitive biological resources, including vernal pools. The trails will also be located on steep hillsides that are not suitable for public access trails. *See* Hamilton Report, Attachment 3, p. 17. Accordingly, the Project will conflict with the City’s Environmentally Sensitive Lands Regulations, and VPHCP—significant impacts that the PDEIR fails to disclose. PDEIR p. 4.10-72.

#### **V. Inadequate Mitigation of Biological Impacts**

##### **A. The Biological Mitigation is Not Sufficiently Detailed**

The DEIR’s description of the Project’s mitigation lacks adequate detail to properly inform decision-makers and the public. CEQA requires that a lead agency adopt all feasible mitigation measures that can substantially lessen a project’s significant impacts. Pub. Res. Code § 21002. California courts have clarified that an EIR is inadequate where its proposed mitigation measures are so undefined that it is impossible to evaluate their effectiveness. *San Franciscans for Reasonable Growth v. City & County of San Francisco* (1984) 151 Cal.App.3d 61, 79. In particular, a mitigation measure must include criteria or performance standards against which the mitigation’s actual implementation can be measured. *See San Joaquin Raptor Rescue Ctr. v. County of Merced* (2007) 149 Cal.App.4th 645, 670 (“*County of Merced*”). The reader must be

O4-18

able to discern what steps will be taken to mitigate the project’s impacts. *Id.* Without such detail, there is no way for decision-makers and the public to weigh whether the proposed measures will sufficiently mitigate a project’s impacts, causing the EIR to fail in its core, informational purpose.

The DPEIR’s proposed biological mitigation fails to satisfy CEQA’s mandate, because it is vague, poorly-defined, and infeasible. The single mitigation measure for the Project’s numerous significant biological impacts vaguely provides as follows:

MM-BIO-1 – Impacts to Sensitive Biological Resources

Future projects that could directly and/or indirectly impact sensitive species, sensitive habitats and/or wetlands shall comply with the City’s Environmentally Sensitive Lands (ESL) Regulations, Biology Guidelines, and applicable federal, state, and local Habitat Conservation Plans including, but not limited to, the City’s Multiple Species Conservation Program (MSCP) Subarea Plan and Vernal Pool Habitat Conservation Plan (VPHCP) and shall implement avoidance, minimization, and mitigation measures in accordance with the City’s ESL Regulations, Biology Guidelines, and MSCP Subarea Plan and VPHCP.

This sweeping measure does not allow the public and decisionmakers to know what “avoidance, minimization, and mitigation measures” are contained in these plans or to evaluate their effectiveness in reducing significant biological impacts.

Moreover, these existing laws are insufficient to avoid significant biological impacts. For example, the City’s lack of area-specific management directives in a NRMP and drastically inadequate funding for monitoring and enforcement has led to illegal trail creation and use within Rose Canyon and associated significant biological impacts. As another example, measures must be proposed to avoid trail construction impacts during nesting seasons. Accordingly, additional measures must be considered and adopted here.

///

///

O4-18  
cont.

O4-19

## **B. The Biological Mitigation Impermissibly Delays Development Of Specific Mitigation Measures**

As a general rule, CEQA requires that the EIR fully describe a project’s proposed mitigation measures. CEQA prohibits deferral of mitigation, except in the following narrow circumstances: (1) there must be practical considerations that preclude development of the measures at the time of project approval, (2) the EIR must contain specific criteria to govern the future actions implementing the mitigation, and (3) the agency must have assurances that the future mitigation will be both “feasible and efficacious.” *Californians for Alternatives to Toxics v. Dept. of Food & Agric.* (2005) 136 Cal.App.4th 1, 17.

Conversely, deferral is not permitted “when an EIR puts off analysis or orders a report without either setting standards or demonstrating how the impact can be mitigated in the manner described in the EIR.” *Preserve Wild Santee v. City of Santee* (2012) 210 Cal.App.4th 260, 280-81.

Here, the DPEIR fails to satisfy CEQA’s requirements because it relies on mitigation measures that are improperly deferred. It states that “Mitigation measures are provided at the program level to serve as the basis for more specific refinement of future mitigation measures to be developed as specific projects are proposed.” However, specific trails through sensitive biological habitats and where protected species are known to occur *are* being proposed in the UCP Update.

O4-20

In addition, the DPEIR fails to provide any performance standards for its deferred mitigation, or for evaluating whether compliance with existing plans would be sufficient mitigation. CEQA Guidelines § 15126.4(a)(1). Instead, it simply states that “MM-BIO-1 would be implemented to minimize and avoid impacts related to sensitive species, habitats, and wetlands *to the extent feasible.*” DPEIR, p. 4.3-64. “To the extent feasible” is not a legally adequate performance standard. *King & Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814, 857–859 (“The terms “increase” and “reduce”—even though preceded by the mandatory term “shall” and modified by the phrase “to the extent feasible”—are not specific performance standards.).

The DPEIR neither explains why deferral of mitigation for the significant biological impacts of these trails is necessary nor provides the criteria necessary to ensure that feasible and effective mitigation will be developed in the future. As discussed, the DEIR must contain a high level of detail now, both in analyzing impacts to protected biological resources in MHPA lands, and in developing alternatives and mitigation measures to avoid or lessen those impacts.

### **C. The Biological Mitigation is Misleading**

As it stands, the DPEIR misleads the public and decisionmakers into thinking that trails proposed in MHPA lands can be developed and significant biological impacts reduced through compliance with the MSCP. This is not correct. As discussed in detail above, it is not possible for the Project’s proposed trails to comply with the MSCP because they conflict with the Subarea Plan’s Priority 1 General Management Directive No. 2’s requirements for where trails are located. The DPEIR must acknowledge that compliance with this Mitigation Measure will prohibit the proposed trails from being constructed. *Mira Monte Homeowners Assn. v. County of Ventura* (1985) 165 Cal.App.3d 357, 365 (EIR protects “the right of the public to be informed in such a way that it can intelligently weigh the environmental consequences of a[] contemplated action”). Without doing so, the UCP Update erroneously assumes that additional trails will be constructed in Rose Canyon, and that these trails will provide additional Recreational Park Value. See Draft UCP Update page 212-213 (despite the fact that the City’s own policies make clear that “the Value Standard is not intended to be applied to . . . open space parks.”) (DPEIR, p. 4.13-5).

O4-21

### **VI. The DPEIR’s Analysis of Alternatives is Legally Flawed**

Every EIR must describe a range of alternatives to the proposed project and its location that would feasibly attain the project’s basic objectives while avoiding or substantially lessening the project’s significant impacts. Pub. Resources Code § 21100(b)(4); CEQA Guidelines § 15126(f). A proper analysis of alternatives is essential to comply with CEQA’s mandate that significant environmental damage be avoided or substantially lessened where feasible. Pub. Resources Code § 21002; CEQA Guidelines §§ 15002(a)(3), 15021(a)(2), 15126(f); *Citizens for Quality Growth v. City of Mount Shasta* (1988) 198 Cal.App.3d 433, 443-45. Additionally, as stated in *Laurel Heights I*, “[w]ithout meaningful analysis of alternatives in the [D]EIR, neither the courts nor the public can fulfill their proper roles in the CEQA process. . . . [Courts will not] countenance a result that would require blind trust by the public, especially in light of CEQA’s fundamental goal that the public be fully informed as to the environmental consequences of action by their public officials.” 47 Cal.3d at 404. By contrast, this DPEIR fails to adequately identify, evaluate, and clearly present a comparison of the alternatives to the proposed Project.

O4-22

#### **A. The DPEIR Fails to Analyze a Reasonable Range of Alternatives.**

A “reasonable range” of alternatives should be guided by the purpose of offering substantial environmental advantages over the Proposed Project which may be

O4-23

“feasibly accomplished in a successful manner” considering the economic, environmental, social, and technological factors involved. *See Citizens of Goleta Valley v. Bd. of Supervisors* (1990) 52 Cal.3d 553, 564-66.

A fundamental mandate of CEQA is that “public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects.” Pub. Resources Code § 21002; see also *id.* § 21081. By examining a range of alternatives, the Lead Agency can demonstrate that it has taken a “hard look” at the project objectives to select alternatives that allow for meaningful comparison. See *Residents Ad Hoc Stadium Committee v. Bd. of Trustees* (1979) 89 Cal.App.3d 274, 287. This DEIR side-steps a thorough analysis of alternatives, as explained in the following sections.

CEQA Guidelines §15126.6(c) states: “The range of potential alternatives to the Proposed Project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency’s determination. . . . Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.”

Here, the DPEIR did not include any alternatives (aside from the mandated no-project alternative), that would “substantially lessen” the significant environmental effects of the Project as CEQA required. Pub. Resources Code §§ 21002, 21081. Instead, the selected alternatives make only minor adjustments to the impacts of the Project, at times increasing some and reducing others. *See* DPEIR p. 8-4, Table 8-1 (Alternatives Comparison to the Project).

**B. Labeling the High Density Alternative as the Environmentally Superior Alternative is Misleading and Incorrect.**

A result of the DPEIR’s inadequate range of alternatives is that an alternative that would actually *increase* numerous project impacts is misleadingly labeled “the environmentally superior alternative.” Under CEQA, “if the environmentally superior alternative is the ‘no project’ alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.” CEQA Guidelines §

O4-23  
cont.

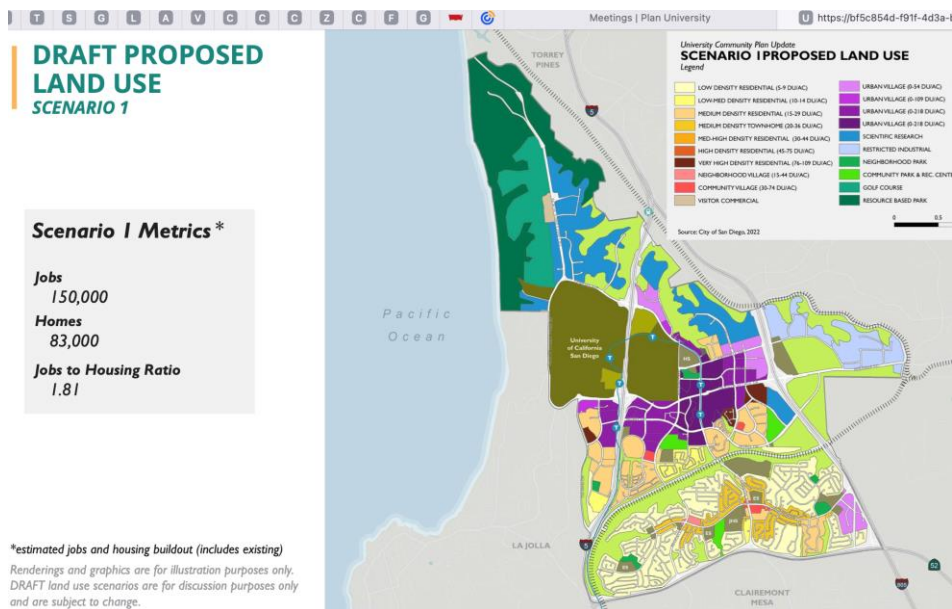

O4-24

15126.6 (e)(2). Because the DPEIR failed to include an alternative that actually substantially lessens the Project’s significant effects, the University Community Plan Update and Hillcrest Focused Plan Amendment High Density Alternative was selected as the claimed next-best alternative, making it the putative environmentally superior alternative. This is an entirely misleading label, however, because there are several alternatives that the DPEIR did not evaluate that would actually be environmentally superior to this high-density alternative.

In addition, based on the City’s own analysis the High-Density Alternative increases four of the Project’s significant impacts. Tellingly, this is the same number of impacts it decreases in the City’s analysis. DEIR p. 8-4. And in fact, the High-Density Alternative actually increases five significant impacts, because the City incorrectly concluded that its biological impacts would be the same as the Project’s. See subsection D, below. As a result, this alternative is not superior to the Project.

Further, the University High-Density Alternative was already rejected by the City as infeasible during the UCP update process (during which time the City called it Alternative 1, and presented it at numerous public meetings before withdrawing it). See, e.g., City’s presentation at Feb. 22, 2022 public meeting of the UC Plan Update Subcommittee Meeting, pasted below:

O4-24  
cont.

It thus should not have been included in the DPEIR’s alternatives analysis at all. CEQA Guidelines §15126.6(c) (“The range of potential alternatives to the

Proposed Project shall include those that could feasibly accomplish most of the basic objectives of the project.”).

O4-24  
cont.

**C. The DPEIR Must Include an Alternative that Substantially Lessens the Project’s Significant Effects, which Would Be a Proper Environmentally Superior Alternative.**

To comply with CEQA, and to provide decision-makers with the information they need, the DPEIR should have considered a range of alternatives that would reduce or avoid the Project’s impacts, and it should have selected from among these alternatives the environmentally superior project. Without this analysis, the public and decision-makers cannot make a fully-informed decision about whether or not the Proposed Project is worth its environmental consequences. If there are feasible alternatives that could provide some benefits while limiting the impacts, the public and the City deserve to know—and CEQA requires that the EIR inform them. The DPEIR fails to meet this obligation.

O4-25

The DPEIR should evaluate the Community Planning Group Subcommittee Input Scenario, which was based on extensive input from the Subcommittee and the community at large. *See* Discussion Draft UCP, PDF page 204-212, included after the end of the April 2023 Discussion Draft as numbered page 30-37. It would accommodate a reduced level of development: 22,000 new homes (compared to the 30,000 in the Draft Plan) and 55,000 new jobs (compared to 70,000 new jobs in the Draft Plan). This alternative would achieve the project objectives, and, because of its reduced development intensity, would reduce several significant Project impacts, including aesthetics, air quality, biological resources, hydrology, and water quality, among others.

**D. The DPEIR Fails to Discuss the City’s Rejection of Proposed Alternatives**

The Discussion Draft of the UC Plan included a map and description of the Community Planning Group Subcommittee Input Scenario Alternative and committed the City to studying this alternative during environmental review. *See* Discussion Draft UCP, PDF page 204-212, included after the end of the April 2023 Discussion Draft as numbered page 30-37 (“This scenario will be considered throughout the Environmental Review process.”). The DPEIR, however, contains no mention of the Community Planning Group Subcommittee Input Scenario, or explanation of why the City rejected it. This failure to address an alternative that the City considered and rejected violates CEQA. CEQA Guidelines §15126.6(c) (The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the

O4-26

scoping process and briefly explain the reasons underlying the lead agency’s determination”).

O4-26  
cont.

### **E. The DPEIR Improperly Analyzed the Alternatives**

The DPEIR fails to adequately analyze and compare the biological impacts of the project Alternatives. For instance, because the No Project Alternative would not propose new trails in MHPA lands or increase the intensity of use in these areas, it would have a reduced biological impact compared to the Project. The DPEIR, however, concludes that the impacts would be the same, failing to recognize this difference. DPEIR p, 8-6.

Similarly, for the High Density Alternative, the DPEIR incorrectly concludes that this alternative would result in the same level of biological resource impacts as the project. DPEIR, p. 8-20. But this conclusion fails to account for the increased impacts from edge and recreation/trail effects that this Alternative would have on MHPA lands. *See* Hamilton Biological Report, Attachment 3, pp. 21-25. The High Density Alternative would increase these adverse biological impacts as a result of increased development intensity on property adjacent to MHPA lands and the intensified recreational use that would occur on MHPA lands as population increases while the City does not build other recreational facilities to serve that population. *See* DPEIR p. 4.13-9 (acknowledging that future developments could result in an increased use and deterioration of existing recreational facilities). This is another reason that this High Density Alternative is not, in fact, the environmentally superior alternative.

O4-27

### **VII. A Revised DPEIR Must Be Recirculated for Public Review and Comment.**

Because of the inadequacies discussed above, the DPEIR cannot form the basis of a Final PEIR. CEQA requires lead agencies to prepare and recirculate a supplemental draft “[w]hen significant new information is added to an environmental impact report” after public review and comment on the earlier draft EIR. Pub. Res. Code § 21092.1. The opportunity for meaningful public review of significant new information is essential “to test, assess, and evaluate the data and make an informed judgment as to the validity of the conclusions to be drawn therefrom.” *Sutter Sensible Planning, Inc. v. Sutter County Board of Supervisors* (1981) 122 Cal.App.3d 813, 822; *see also City of San Jose v. Great Oaks Water Co.* (1987) 192 Cal.App.3d 1005, 1017. An agency cannot simply release a draft report “that hedges on important environmental issues while deferring a more detailed analysis to the final [EIR] that is insulated from public review.” *Mountain Lion Coalition v. California Fish and Game Comm’n* (1989) 214 Cal.App.3d 1043, 1052.

O4-28

In order to cure the egregious flaws in the DPEIR identified in this letter, the City must obtain substantial new information to adequately assess the proposed Project's environmental impacts, and to identify effective mitigation and alternatives capable of alleviating the Project's significant impacts. CEQA then requires that the public be given a meaningful opportunity to review and comment upon this significant new information in the form of a recirculated DPEIR.

Re: The City Cannot Propose New Trails in Rose Canyon Open Space at this Time.

Dear Ms. Vonblum:

This firm represents Friends of Rose Canyon in matters related to the University Community Plan Update and the adoption of Blueprint San Diego, the City's General Plan Update.

Friends of Rose Canyon is a community-based organization dedicated to the protection, preservation and restoration of Rose Canyon and the Rose Creek watershed. It has an active Board of Directors and dedicated membership base. Since 2019, Friends of Rose Canyon Executive Director Deborah Knight has participated in the University Community Plan ("UCP") Update Subcommittee, which the City convened to include resident, business and non-profit organization representatives.

At a July 21, 2020 meeting of the Subcommittee, the Planning Department provided a status update on the project and information on open space, habitat, and trails. This presentation included a "Draft Proposed Trails Network" that, unfortunately, suggested proposing new and new formal trails within Rose Canyon as part of the UCP Update. Such a proposal, however, is premature under both state law and City policies.

The City of San Diego Multiple Species Conservation Program ("MSCP") and the City's recently approved Parks Master Plan requires the City to take additional steps before any new trail locations can be proposed for Rose Canyon. Specifically, the

City must adopt a Natural Resource Management Plan (NRMP) for Rose Canyon, and it must then engage in the planning process committed to for a Citywide Trails Master Plan.

As discussed in more detail below, because the City has not yet undergone these critical assessments, the Draft UCP Update released for public review cannot blindly propose new trails in Rose Canyon and other MSCP lands in the University Community Plan area. Instead it could include policy language reiterating that any new trail proposals for Rose Canyon and other MSCP lands in the Plan area must come after and be informed by a completed NRMP and the Trails Master Planning process.

**The City of San Diego must create and fund implementation of a reliable Natural Resource Management Plan for Rose Canyon to ensure that covered species are adequately protected.**

In 1997, the City of San Diego finalized a Multiple Species Conservation Program (MSCP) Subarea Plan to meet the requirements of the California Natural Communities Conservation Planning (NCCP) Act and to allow the City to issue take permits under the state and federal Endangered Species Acts. The City's Multi-Habitat Planning Area (MHPA) delineates core biological resource areas and corridors targeted for conservation as part of the Subarea Plan. The Subarea Plan document identifies Rose Canyon as one of these critical conservation areas.

Like other urban habitat areas within the MHPA, Rose Canyon provides habitat for native species and shelter for migrating species. The MSCP also protects habitat linkages that occur in the UC Plan area. In fact, the Subarea Plan document indicates that seventeen species covered under the MSCP are found in urban habitat areas such as Rose Canyon (MSCP, 1997). Several of these species are unique to San Diego County. Some of the species are classified as threatened. One, the Coastal California Gnatcatcher, is listed as federally threatened. It is found in both Rose Canyon and other MSCP lands within the UC Plan area. Preserving Rose Canyon's habitat and natural resources is essential to the survival of these covered species. The City must not propose further trail development that could jeopardize species survival and recovery.

The City must approach Rose Canyon with particular caution in light of its failure to comply with the Subarea Plan's requirements. The Subarea Plan calls for specific management policies for urban habitats—like Rose Canyon—that form part of a natural resource park. In fact, the Subarea Plan notes that the Park and Recreation Department “has prepared or is preparing a Natural Resource Management Plan for adoption by City Council to govern management of these lands.” (MSCP, 1997). Twenty-five years later, the City has yet to adopt such a plan for Rose Canyon. As a result, the

City has not identified appropriate management policies and has not conducted site-specific biological resource assessments. It may not expand uses within Rose Canyon until the requisite plan is complete and potential mitigation measures are assessed.

The failure to complete a Natural Resource Management Plan is exacerbated by the City's lack of monitoring, management, and enforcement of activities currently taking place in Rose Canyon. The natural resources that were intended to be protected through the MSCP process are not being properly safeguarded and are experiencing degradation due to unauthorized activities as well as erosion and invasive species. These impacts are evident throughout Rose Canyon and must be assessed in a Natural Resource Management Plan before adding additional impacts to this environmentally sensitive resource.

Indeed, as the U.S. District Court for the Southern District of California has emphasized, the Endangered Species Act establishes a strict conservation and recovery standard for listed species and mitigation measures in the City of San Diego's MSCP Subarea Plan must be adequate to actually achieve that standard. (*Southwest Center For Biological Diversity v. Bartel* (S.D. Cal. 2006) 470 F.Supp.2d 1123-24.) The court thus held that conservation measures within the City's MHPA cannot be "ineffective" or "untested." (*Id.*, 470 F.Supp.2 at 1141.)

The City's failure to develop and enforce a Natural Resource Management Plan means that it is relying on unevaluated and ineffective measures to preserve the habitat and natural resources of Rose Canyon. As *Bartel* indicates, this is impermissible. The City must assess existing resources and have a plan to properly manage and support covered species before it can consider expanding uses with new trails.

**Adopted City policies also require comprehensive assessments of resource conservation and use as part of the Trails Master Plan before new trails are proposed.**

In its recently-adopted Parks Master Plan, the City likewise emphasized that Natural Resource Management Plans and criteria and guidelines for establishing thresholds of access and use in MSCP lands must be prepared before new trails may be proposed for evaluation by the City. In particular, the City committed to the following specific policies:

**PP10:** To ensure the City adheres to its conservation commitments, all proposals for new or revised access, trails, and active uses in resource/open space parklands must

comply with all applicable limitations, such as the MSCP consistency findings, Environmentally Sensitive Land regulations, Natural Resource Management Plans, etc. before being formally proposed for City evaluation and funding (see policies CSR25 and RP5).

**CSR 25:** Develop, adopt, and update a Citywide Trails Master Plan to guide the provision and enhancement of open space multi-purpose trails that accommodate pedestrians, hikers, bicyclists, mountain bikers, and equestrians, where appropriate, and to provide safe and convenient linkages to parks, recreation facilities, and open space areas consistent with policies PP10, CO3, CO10, CSR16, and CSR22. A Trails Master Plan shall include a set of criteria and guidelines for evaluating and establishing thresholds of access and use for Open Space parks that prioritize habitat management planning and other requirements in ESL policy and MSCP obligations in advance of specific trails planning. These criteria and guidelines will reflect and encompass the current science of recreation ecology.

The City’s adopted policies thus emphasize that new trails should not be proposed in open space parklands such as Rose Canyon before specific resource assessments and plans have been prepared. To propose new trails in Rose Canyon as part of the draft University Community Plan Update before those steps have been taken would run counter to these policies.

Ensuring that the UCP Update does not propose new trails uninformed by the required assessments is also consistent with your own commitments. When the Parks Master Plan was adopted on August 3, 2021, you assured the City Council that a comprehensive review of the state of San Diego’s MSCP lands would be incorporated into the Trails Master Planning process as a first step. This comprehensive review is critical. It will allow the City (with community input) to make informed decisions about what can and should be prioritized in order to provide the necessary habitat quantity, quality, and connectivity and the necessary resources for monitoring, management, and enforcement to support the viability of San Diego’s unique biodiversity .

\* \* \* \*

Friends of Rose Canyon appreciates your commitment to good planning, and is confident that you share the same goal of ensuring that Rose Canyon and other MSCP lands in the UC Plan area continue to be a community amenity and high-functioning habitat resource that fulfills the requirements of the MSCP. Completing a Natural Resource Management Plan for Rose Canyon and the planning process for the

Heidi Vonblum  
August 12, 2022  
Page 5

Trails Mater Plan are required steps before proposing new trails in Rose Canyon and other MSCP lands. Friends of Rose Canyon looks forward to discussing new trail proposals informed by these planning processes at those times.

Very truly yours,

SHUTE, MIHALY & WEINBERGER LLP

Re: Comments on the University Community Plan and Local Coastal Plan Community Discussion Draft (April 2023)

Dear UCP Project Manager:

This firm represents Friends of Rose Canyon in matters related to the University Community Plan and Local Coastal Plan Update (“UCP/LCP Update” or “UCP”) and the adoption of Blueprint San Diego, the City’s General Plan Update.

Friends of Rose Canyon remains concerned about an issue that has been brought to the City’s attention before: the premature identification of new trails in Rose Canyon Open Space Park and other sensitive habitat areas within the UCP boundary. We provided a comment letter to Planning Director Heidi Vonblum dated August 12, 2022 regarding the “Draft Proposed Trails Network” that was presented at the July 21, 2020 meeting of the Subcommittee. In our letter, provided again as Exhibit A, we noted that proposing new (or formalizing illegitimate) trails within Rose Canyon, or other MSCP-designated properties, as part of the UCP Update is premature under both State law and City policies. However, the recently-released UCP Discussion Draft (April 2023) does just that. In fact, new trail locations are identified liberally throughout the UCP, including in Figures 5, 17, and 24 as well on illustrative graphics on pages 77-79, 81, 83-85, and 87-92. For several marked new trails, the UCP notes that the exact location will be determined later. But it is not feasible to place *any* trail within the areas marked for the topographic, biological, and legal reasons discussed in this letter.

We are also submitting expert biological comments prepared by Robert Hamilton, President of Hamilton Biological, Inc., which are included as Exhibit B to this letter. Mr. Hamilton's analysis has concluded the following:

[T]he City's exclusion of the relevant MSCP Management Policies and Directives from the UCP violates the Parks Master Plan, undermines the UCP's credibility as a planning document, and puts the City's MSCP Take Authorization at risk of revocation by the resource agencies. Furthermore, by prematurely proposing new trails in the absence of a current biological technical report that credibly demonstrates the UCP's consistency with the MSCP and Subarea Plan, the City is improperly raising expectations among the public that these trails can and will be built. The predictable result is unwarranted conflict between environmental and recreational user groups. For these important reasons, the City should withdraw all proposed trails through the MHPA until a credible analysis of MSCP consistency can be completed.

We also urge the City to remove the proposed new trails and proposed formal trails from the draft UCP. Attempting to consider new trails as a part of this process has shortcut necessary MSCP consistency and biological analysis and will only lead to further conflict and delay of the General Plan Update.

**I. The City Must Complete the Citywide Trails Master Plan Process Before Proposing New Trails in MSCP Lands.**

New proposed trails should not be identified on the exhibits within the UCP for two key reasons: (1) This sets expectations for future trail locations, many of which will not be feasible due to topographic constraints, damage to biological resources, or conflicts with other land use and resource policy plans; and (2) Identifying trail locations without first demonstrating compliance with the City's Multiple Species Conservation Program ("MSCP"), the City's Parks Master Plan, and conducting adequate environmental review runs afoul of local regulations and State law.

The Parks Master Plan requires the City to take additional steps before any new trail locations can be proposed for sensitive areas, including Rose Canyon. Specifically, the City must first engage in the planning process committed to for a Citywide Trails Master Plan. Policy CSR 25 from the Parks Master Plan states that the City shall: "Develop, adopt, and update a Citywide Trails Master Plan to guide the provision and enhancement

of open space multi-purpose trails that accommodate pedestrians, hikers, bicyclists, mountain bikers, and equestrians, where appropriate, and to provide safe and convenient linkages to parks, recreation facilities, and open space areas consistent with policies PP10, CO3, CO10, CSR16, and CSR22. A Trails Master Plan shall include a set of criteria and guidelines for evaluating and establishing thresholds of access and use for Open Space parks that prioritize habitat management planning and other requirements in ESL policy and MSCP obligations in advance of specific trails planning. These criteria and guidelines will reflect and encompass the current science of recreation ecology.” (underline added)

To propose new trails in Rose Canyon and other MSCP lands in the UCP before criteria and guidelines for prioritizing habitat management and other MSCP obligations have been developed through the Trails Master Plan runs counter to this policy, responsible planning, and good stewardship practices of the City’s recognized open space resources.

As noted in our August 12, 2022 letter, ensuring that the UCP Update does not propose new trails uninformed by required assessments is also consistent with the commitment expressed by Planning Director Heidi Vonblum. When the Parks Master Plan was adopted on August 3, 2021, Ms. Vonblum assured the City Council at the public hearing that a comprehensive review of the state of San Diego’s MSCP lands would be incorporated into the Trails Master Planning process as a first step. Ms. Vonblum was right to make this commitment – this comprehensive review is critical. It will allow the City (with community input) to make informed decisions about what can and should be prioritized in order to provide the necessary habitat quantity, quality, and habitat connectivity and the necessary resources for monitoring, management, and enforcement to support the viability of San Diego’s unique biodiversity. To propose new trail locations in the UCP at this time runs counter to these commitments.

## **II. The City Must Consider Consistency with the MSCP Before Proposing New Trails.**

In 1997, the City of San Diego finalized the MSCP Subarea Plan to meet the requirements of the California Natural Communities Conservation Planning (NCCP) Act and to allow the City to issue take permits under the state and federal Endangered Species Acts. The City’s Multi-Habitat Planning Area (MHPA) delineates core biological resource areas and corridors targeted for conservation as part of the Subarea Plan. The Subarea Plan document identifies Rose Canyon as one of these critical conservation areas. The City must abide by the MSCP protections in place for Rose Canyon and other MHPA lands as part of its legal obligations to comply with the California Natural

Communities Conservation Planning Act (NCCP) and the Federal Endangered Species Act (ESA).

Indeed, as the U.S. District Court for the Southern District of California has emphasized, the Endangered Species Act establishes a strict conservation and recovery standard for listed species and measures implementing the City of San Diego’s MSCP Subarea Plan must be adequate to actually achieve that standard. (*Southwest Center For Biological Diversity v. Bartel* (S.D. Cal. 2006) 470 F.Supp.2d 1123-24.) The court thus held that conservation measures within the City’s MHPA cannot be “ineffective” or “untested.” (*Id.*, 470 F.Supp.2 at 1141.)

The UCP Discussion Draft itself notes that “trails and recreation on lands subject to the Multi-Habitat Planning Areas (“MHPA”) should comply with the MSCP for compatibility. For adjacent areas not deemed sensitive, there are opportunities to improve existing trail systems and pedestrian connections for public use to better promote active and passive recreation. However, development not in compliance with MHPA policies is not allowed within the MHPA (refer to the Parks Master Plan section on Conservation, Sustainability, and Resilience Policies for more information).” *See* UCP at 126. Further, the Parks Master Plan (PMP) section on Conservation, Sustainability, and Resilience referenced above contains additional policies that support the prioritization of MHPA protections and allowing recreation *if and when* habitat is not jeopardized. These include Policy CSR 25 (noted previously in this letter), which calls for “criteria and guidelines for evaluating and establishing thresholds of access and use for Open Space parks that prioritize habitat management planning and other requirements in ESL policy and MSCP obligations in advance of specific trails planning.”

Despite acknowledging the City’s adopted policy guidance, the UCP Community Discussion Draft released for public review errs by blindly proposing new trails in Rose Canyon and other MSCP lands without considering resource values or whether the trails could comply with MHPA policies. In fact, many of the proposed trails directly conflict with the MSCP and MHPA. The City should remove all these proposed trails from all exhibits in the UCP.

Furthermore, in its recently-adopted Parks Master Plan, the City likewise emphasized that criteria and guidelines for establishing thresholds of access and use in MSCP lands must be prepared *before* new trails may be proposed for evaluation by the City. In addition to the policies listed above, the City also committed to the following specific policy in the Parks Master Plan:

**PP10:** To ensure the City adheres to its conservation commitments, all proposals for new or revised access, trails, and active uses in resource/open space parklands must comply with all applicable limitations, such as the MSCP consistency findings, Environmentally Sensitive Land regulations, Natural Resource Management Plans, etc. before being formally proposed for City evaluation and funding (see policies CSR25 and RP5).

The City must therefore consider whether new and formal trails within MHPA lands could be consistent with the MSCP resource preservation mandates before proposing areas for these trails in the draft UCP. The City cannot propose trails in this Plan that will never be able to move forward because they conflict with the MSCP.

**A. The MSCP Subarea Plan prioritizes protection of biological resources and prohibits activities that disturb those resources.**

The MSCP Subarea Plan makes clear that “[T]he overarching MSCP goal is to maintain and enhance biological diversity in the region and conserve viable populations of endangered, threatened, and key sensitive species and their habitats.” *See* MSCP Subarea Plan at 49. Furthermore, the Subarea Plan lists management objectives for the MHPA, which includes “[T]o protect the existing and restored biological resources from intense or disturbing activities within and adjacent to the MHPA while accommodating compatible public recreational uses.” *See* MSCP Subarea Plan at 50. All of the proposed trails identified in Figure 24 of the UCP (Exhibit C) are in MHPA lands, which are shown in Exhibit D.

While the UCP Discussion Draft acknowledges the habitat value of Rose Canyon and other MSCP lands on page 145, it fails to appreciate the MSCP Subarea Plan goals and objectives that protection of special status species and habitat is the overriding aim, and passive recreation is only appropriate to the extent that it is compatible with maintaining those resources. Activities that degrade or disturb them are prohibited.

To reflect these MSCP requirements, the text on page 145 of the UCP must be amended as follows “[T]he approximately 8,676-acre University community area supports a variety of vegetation communities and land cover types in its open space including both upland and wetland vegetation communities. The majority of these open space areas are subject to compliance with the City’s MSCP Subarea Plan where ~~preservation balances the protection of~~ natural resources must be preserved, with the allowance of public passive recreation only where compatible with that mandate.”

**B. The MSCP Subarea Plan prohibits locating trails in sensitive habitat areas and requires trails to follow existing dirt roads.**

The MSCP Subarea Plan lists the following as one of the General Management Directives: “Locate trails, view overlooks, and staging areas in the least sensitive areas of the MHPA. Locate trails along the edges of urban land uses adjacent to the MHPA, or the seam between land uses (e.g., agriculture/habitat), and follow existing dirt roads as much as possible rather than entering habitat or wildlife movement areas. Avoid locating trails between two different habitat types (ecotones) for longer than necessary due to the typically heightened resource sensitivity in those locations.” *See* MSCP Subarea Plan at 52.

Contrary to this Directive, the draft UCP proposes several new and formalized trails directly through some of the most sensitive, least fragmented habitats in the MHPA and extends trails beyond existing dirt roads. Specific examples are discussed below.

**III. Several of the Proposed Trails are Inconsistent with MSCP Subarea Plan Policies or are Otherwise Infeasible.**

Despite failing to conduct any type of analysis for consistency with the MSCP, the draft UCP charges ahead to blindly propose areas for new and formalized trails. Figure 24 of the UCP shows the “Existing Formal Trail” in Rose Canyon, which is the only approved trail in the Rose Canyon Open Space Park. Additional trails, identified as “Existing Informal Trail – to be Closed”, have been illegally created – some through sensitive habitat. Thankfully, those trails are proposed to be eliminated. Figure 24 identifies two remaining types of trail, however: “Proposed New Trail (location to be determined)” and “Existing Informal Trail, Proposed as a Formal Trail.” Most of these trails would require extensive grading and/or intrusion into sensitive habitat, and must therefore be removed from further consideration on all UCP maps.

A Biological Resources Report was prepared in June 2020 as part of the UCP Update (“Bio Report”), but it did not examine any of the areas within the UCP in detail or evaluate the proposed trails in the discussion draft UCP. The report contains broad information regarding the regulatory environment, an incomplete compendium of sensitive species that could exist in the Plan Area, and a summary of existing conditions. Friends of Rose Canyon has deep concerns regarding the adequacy and accuracy of this Bio Report. Yet, even the high-level summary of existing conditions in the Bio Report and the most cursory assessment of topographic conditions indicates that the proposed trails will conflict with the MSCP’s conservation mandates or are otherwise infeasible.

Many of the proposed trails would also conflict with policies in the draft UCP recognizing the need to respect hillside and canyon areas and to avoid degradation to these areas. The UCP contains policies that identify the need to preserve topography and minimize grading, which would be impossible to accomplish given the locations of several proposed trails in steep canyon areas. For example, UCP Implementation Policy 5.4A states, “Prevent development, grading, or alterations of steep slopes greater than 25 percent grade or in open space canyons.” All of the proposed trails discussed below are in steep open space canyons, so by the UCP’s own policy guidance, these trails should not be considered.

**A. The Two Blue “Proposed New Trail, location to be Determined” Sections in Rose Canyon are Infeasible.**

These two proposed trail locations (identified by “A” label on Exhibit C) are in steep canyon areas with sensitive resources and are completely infeasible and inappropriate for consideration. No additional trails should be proposed anywhere in these two canyon “fingers”. The trail designation on Figure 24, “Location to be determined,” suggests that there is a location within these canyon areas that might be suitable, but that is misleading. Figure 7-2 from the UCP Bio Report illustrates the Sensitive Vegetation Communities that exist in this area (Exhibit E), which includes Wetlands, Tier I Native Grasslands, and Tier II Coastal Sage Scrub. The City of San Diego’s Land Development Manual – Biology Guidelines states that “Vegetation Communities within the MSCP study area have been divided into four tiers of sensitivity (the first includes the most sensitive, the fourth the least) based on rarity and ecological importance.”<sup>1</sup> *See* Land Development Manual at 7. Furthermore, these guidelines note that “lands containing Tier I, II, IIIa and IIIb [communities] and all wetlands . . . are considered sensitive and declining habitats. As such, impacts to these resources may be considered significant.” *See* Land Development Manual at 73.

In addition to containing documented sensitive resources, this area consists of steep topography that cannot accommodate public trails. There is also serious erosion occurring in these locations that would only be exacerbated if trails were somehow constructed in this steep terrain.

---

1

[https://www.sandiego.gov/sites/default/files/amendment to the land development manual biology guidelines february 2018 - clean.pdf](https://www.sandiego.gov/sites/default/files/amendment%20to%20the%20land%20development%20manual%20biology%20guidelines%20february%202018%20-%20clean.pdf)

**B. The Proposed Formal Trail and Trailhead that Links Rose Canyon to Nobel Drive Traverses Critical Habitat.**

This proposed trail location is identified by “B” label on Exhibit C. Under the Federal Endangered Species Act (ESA), the U.S. Fish and Wildlife Service designates certain areas as “critical habitat” if they determine that these geographic areas are essential for the conservation and/or recovery of a federally listed threatened or endangered species, whether or not the species currently occupies the area. The UCP Biological Resources Report notes that “[U]nder the FESA, USFWS designates certain areas as “critical habitat” if they determine that these geographic areas are essential for the conservation and/or recovery of a federally listed threatened or endangered species, whether or not the species currently occupies the area.” See UCP Bio Report at 95.

Figure 8 in the UCP Bio Report identifies locations of USFWS Critical Habitat and demonstrates that the Informal Trail section connecting to Nobel Drive is routed directly through Critical Habitat for Spreading navarretia, a rare species of flowering plant. See Exhibit F. This trail should not only be removed as a proposed formal trail from the UCP exhibits, but it should be eliminated and the area protected from future informal trail establishment. In addition, there are roughly six other informal trails in this area that the UCP should also identify and designate as “To Be Closed.”

**C. The Proposed Formal Trail on the south side of Rose Canyon from Genesee Avenue east towards I-805 Passes Through Sensitive Habitat.**

These proposed trail locations are identified by “C” label on Exhibit C. The Sensitive Vegetation Communities figure from the UCP Bio Report (Exhibit E) illustrates that this proposed trail location is in perennial stream/wetland habitat. It also encroaches on private railroad property. If a trail were to avoid the perennial stream and private property, it would be located on steep slopes with high-quality habitat. Only the western third of this trail is potentially feasible and consistent with MSCP policies, given it would be located on the San Diego Unified School District’s existing dirt road.

Where the proposed trail turns south and heads towards the proposed tail head, it passes through Tier II Coastal Sage Scrub and Tier IIIA Mixed Chaparral, which are considered sensitive and declining habitats, and into steep topography. This southern stretch is extremely steep and narrow with very unsafe conditions.

The City cannot meet its connectivity goals with unsafe trails through sensitive habitats in MHPA lands. The Community Discussion draft already includes appropriate

connectivity infrastructure for this area of the plan with protected bike lanes on Genesee Avenue and Governor Drive.

**D. The Blue Proposed New Trail Section between Campus Point Drive and Towne Center Drive north of Eastgate Mall Passes Through Sensitive Habitat.**

This proposed trail location is identified by “D” label on Exhibit C. -This area east of Campus Point Drive and northwest of Towne Centre Drive, all of which is in the MHPA (Exhibit D). The area is covered in sensitive habitat (Exhibit G). The location of the blue “Proposed New Trail”, in particular, is *directly* through sensitive habitat.

**E. SANDAG’s Antiquated Bike Network Trail Should be Removed from the UCP.**

UCP Figure 17 contains an outdated reference to a previous alignment of the Coastal Rail Trail (CRT). Exhibit H is Figure 3-3 from SANDAG’s 2021 Regional Plan, which incorrectly notes the CRT alignment on the north side of Rose Canyon (Trail ID #11) instead of identifying the “Gilman Connector” (Trail ID #17) as the official CRT alignment. Gilman Drive is the route that the City has selected and approved in accordance with the process identified for each city to “plan, design and construct segments of the trail within their respective jurisdictions.”<sup>2</sup> The UCP correctly shows the alignment of the Coastal Rail Trail on pages 84-85, so the SANDAG trail included on Figure 17 can be removed. This is especially critical since the SANDAG Rose Canyon alignment is through Spreading navarretia and Cuyamaca larkspur habitat, as shown in the Impacted Listed Plant Species table in the 2021 Regional Plan (Exhibit I).

**IV. New and Amended Draft Policies**

In addition to removing proposed trails from the exhibits throughout the UCP, there are also additional policy considerations that should be addressed in the UCP, including:

Suggested new policies:

- “New and formalized trails for passive recreation in Rose Canyon and other MSCP lands will only be considered after sustained habitat conservation and MHPA/MCSP compliance is demonstrated. New trails will be located and

---

<sup>2</sup> Coastal Rail Trail information on City of San Diego website:

<https://www.sandiego.gov/cip/projectinfo/featuredprojects/railtrail>

designed so as not interfere with the primary purpose of Rose Canyon and other MSCP lands as open space for the preservation of sensitive habitat areas.”

*Background:* Ensures compliance with Policy PP10 of the Parks Master Plan, language in the UCP itself (page 126), and the goals of the MSCP Subarea Plan.

- “Identify ongoing sources of funding for open space trail enforcement. Actively manage MHPA lands and enforce trail boundaries to ensure conservation directives are met.”

*Background:* The existing trails within Rose Canyon and other MSCP lands experience constant degradation and the construction of new, illegal trails that are damaging to sensitive resources. Electric mountain bikes are enabling motorized travel through the canyon trails that did not exist several years ago. Such motorized uses are not passive recreation allowed under the MSCP. There is limited monitoring of illegal uses on trails within the MHPA boundaries, and habitat resources are suffering. The MSCP Subarea Plan states that “[W]here land is preserved as part of the MSCP through acquisition, regulation, mitigation or other means, management is necessary to continue to ensure that the biological values are maintained over time, and that the species and habitats that have been set aside are adequately protected and remain viable. The City will be responsible for and will continue the management and maintenance of its existing public lands (including those with conservation easement), at current levels. The City will also manage and maintain lands obtained as mitigation where those lands have been dedicated to the City in fee title or easement, and land acquired with regional funds within the City’s MHPA boundaries.” *See* MSCP Subarea Plan at 49. Furthermore, the MSCP Subarea Plan lists the following as one of the General Management Directives: “Clearly demarcate and monitor trails for degradation and off-trail access and use. Provide trail repair/maintenance as needed.” *See* MSCP Subarea Plan at 52. This work is not currently being done, and financial resources to support trail enforcement and habitat protection in Rose Canyon is paramount.

- “To ensure preservation of sensitive areas, new and formalized trails within MHPA boundaries shall be proposed only where they follow alignment of existing roads/rights of way. New trails can be exempt from this policy if the new trail is proposed for an area that is documented to contain no sensitive biological resources and dedicated funding for ongoing enforcement is established.”

*Background:* The MCSP Subarea Plan lists the following as one of the General Management Directives: “Locate trails, view overlooks, and staging areas in the least sensitive areas of the MHPA. Locate trails along the edges of urban land uses adjacent to the MHPA, or the seam between land uses (e.g., agriculture/habitat), and follow existing dirt roads as much as possible rather than entering habitat or wildlife movement areas. Avoid locating trails between two different habitat types (ecotones) for longer than necessary due to the typically heightened resource sensitivity in those locations.” See MSCP Subarea Plan at 52. This proposed UCP policy reiterates and restates anew this important guidance.

In addition to the creation of the new policy statement noted above, there are several existing UCP policies that should be clarified and/or strengthened to support the protection of the University Community Plan area’s important natural assets. The revisions to existing policies include (shown in red underline for suggested additions and ~~strikethrough~~ for suggested deletions):

- Policy 2.9B: Design buildings to ~~reduce~~ eliminate light and glare on building frontages facing canyons and open space.
- Policy 2.9C: Where possible and permitted by governing codes and regulations, developments that are adjacent to natural open space should consider providing ~~provide~~ multi-use trails for hiking, bicycling, jogging, and other uses on their site adjacent to the open space and consistent with MHPA adjacency guidelines so that residents have visual access to and can appreciate the open space.
- Policy 2.9D: Maximize views from the development to open spaces ~~the canyon~~ by orienting the building to the ~~canyon~~ open space, and by locating common amenities and private open spaces adjacent to the ~~canyon edge~~ public open space, and providing direct access to the canyon edge from the development. For MHPA adjacent development, common amenities that involve outdoor lighting and potential noise should be located away from the open space or other MHPA edge and on the other side of buildings from the open space or MHPA edge.
- Policy 4.2C: Through the Citywide Trails Master Plan process, examine locations where neighborhoods and communities can be connected to adjacent parks and trails (if in conformance with MCSP and MHPA guidelines). ~~Connect adjacent communities to trails and trail-adjacent parks by extending existing trails or providing new ones.~~

- Policy 5.1A: Promote open space conservation of natural lands and provide open space linkages ~~(where appropriate)~~, trailheads and bike/pedestrian access with clearly marked entrances where appropriate and in conformance with MCSP and MHPA guidelines.
- Policy 5.1B: Connect open space trails with major canyons, neighborhood parks, schools and private open space areas where feasible and where appropriate and in conformance with MCSP and MHPA guidelines. The proposed trail system is illustrated in Figure ~~11-24 in the Transportation Element and in the Urban Design Element~~.
- Policy 5.1C: Provide opportunities for public access to open space, including portions of the MHPA, through low impact recreation, scenic overlooks, environmental education and research where appropriate and in conformance with MCSP and MHPA guidelines.
- ~~Policy 5.1E: Connect adjacent communities to trails and trail adjacent parks by extending existing trails or providing new ones~~ Suggest deleting – repetitive and same as Policy 4.2C
- ~~Policy 5.13I: Consider the topography, vegetation and scenic value of Rose Canyon for future uses. Passive recreational uses are recommended rather than active uses requiring major grading and construction~~ Suggest deleting – adds no value and “for future uses” is confusing.

## V. **Mobility and Connectivity Improvements on Existing City Streets Should be Prioritized.**

The City cannot meet its connectivity goals with unsafe trails through sensitive habitats in MHPA lands. Instead, the City should use its limited dollars on upgrading existing on-street bike facilities, installing bike-safe infrastructure, and creating protected bike lanes on existing streets. It will also advance important public safety goals. Proposing new and formalized trails in MHPA lands detract from these important priorities.

## VI. **Conclusion.**

This is a pivotal point in the planning process, and we urge the City to produce a Draft UCP that complies with its MSCP obligations. New trails in Rose Canyon and other MHPA lands should follow the appropriate process of assessment *before* identification, as required and as promised by City staff.

We look forward to reviewing the Draft UCP and its accompanying CEQA document.

Very truly yours,

SHUTE, MIHALY & WEINBERGER LLP

Re: The City Cannot Propose New Trails in Rose Canyon Open Space at this Time.

Dear Ms. Vonblum:

This firm represents Friends of Rose Canyon in matters related to the University Community Plan Update and the adoption of Blueprint San Diego, the City's General Plan Update.

Friends of Rose Canyon is a community-based organization dedicated to the protection, preservation and restoration of Rose Canyon and the Rose Creek watershed. It has an active Board of Directors and dedicated membership base. Since 2019, Friends of Rose Canyon Executive Director Deborah Knight has participated in the University Community Plan ("UCP") Update Subcommittee, which the City convened to include resident, business and non-profit organization representatives.

At a July 21, 2020 meeting of the Subcommittee, the Planning Department provided a status update on the project and information on open space, habitat, and trails. This presentation included a "Draft Proposed Trails Network" that, unfortunately, suggested proposing new and new formal trails within Rose Canyon as part of the UCP Update. Such a proposal, however, is premature under both state law and City policies.

The City of San Diego Multiple Species Conservation Program ("MSCP") and the City's recently approved Parks Master Plan requires the City to take additional steps before any new trail locations can be proposed for Rose Canyon. Specifically, the

City must adopt a Natural Resource Management Plan (NRMP) for Rose Canyon, and it must then engage in the planning process committed to for a Citywide Trails Master Plan.

As discussed in more detail below, because the City has not yet undergone these critical assessments, the Draft UCP Update released for public review cannot blindly propose new trails in Rose Canyon and other MSCP lands in the University Community Plan area. Instead it could include policy language reiterating that any new trail proposals for Rose Canyon and other MSCP lands in the Plan area must come after and be informed by a completed NRMP and the Trails Master Planning process.

**The City of San Diego must create and fund implementation of a reliable Natural Resource Management Plan for Rose Canyon to ensure that covered species are adequately protected.**

In 1997, the City of San Diego finalized a Multiple Species Conservation Program (MSCP) Subarea Plan to meet the requirements of the California Natural Communities Conservation Planning (NCCP) Act and to allow the City to issue take permits under the state and federal Endangered Species Acts. The City's Multi-Habitat Planning Area (MHPA) delineates core biological resource areas and corridors targeted for conservation as part of the Subarea Plan. The Subarea Plan document identifies Rose Canyon as one of these critical conservation areas.

Like other urban habitat areas within the MHPA, Rose Canyon provides habitat for native species and shelter for migrating species. The MSCP also protects habitat linkages that occur in the UC Plan area. In fact, the Subarea Plan document indicates that seventeen species covered under the MSCP are found in urban habitat areas such as Rose Canyon (MSCP, 1997). Several of these species are unique to San Diego County. Some of the species are classified as threatened. One, the Coastal California Gnatcatcher, is listed as federally threatened. It is found in both Rose Canyon and other MSCP lands within the UC Plan area. Preserving Rose Canyon's habitat and natural resources is essential to the survival of these covered species. The City must not propose further trail development that could jeopardize species survival and recovery.

The City must approach Rose Canyon with particular caution in light of its failure to comply with the Subarea Plan's requirements. The Subarea Plan calls for specific management policies for urban habitats—like Rose Canyon—that form part of a natural resource park. In fact, the Subarea Plan notes that the Park and Recreation Department “has prepared or is preparing a Natural Resource Management Plan for adoption by City Council to govern management of these lands.” (MSCP, 1997). Twenty-five years later, the City has yet to adopt such a plan for Rose Canyon. As a result, the

City has not identified appropriate management policies and has not conducted site-specific biological resource assessments. It may not expand uses within Rose Canyon until the requisite plan is complete and potential mitigation measures are assessed.

The failure to complete a Natural Resource Management Plan is exacerbated by the City's lack of monitoring, management, and enforcement of activities currently taking place in Rose Canyon. The natural resources that were intended to be protected through the MSCP process are not being properly safeguarded and are experiencing degradation due to unauthorized activities as well as erosion and invasive species. These impacts are evident throughout Rose Canyon and must be assessed in a Natural Resource Management Plan before adding additional impacts to this environmentally sensitive resource.

Indeed, as the U.S. District Court for the Southern District of California has emphasized, the Endangered Species Act establishes a strict conservation and recovery standard for listed species and mitigation measures in the City of San Diego's MSCP Subarea Plan must be adequate to actually achieve that standard. (*Southwest Center For Biological Diversity v. Bartel* (S.D. Cal. 2006) 470 F.Supp.2d 1123-24.) The court thus held that conservation measures within the City's MHPA cannot be "ineffective" or "untested." (*Id.*, 470 F.Supp.2 at 1141.)

The City's failure to develop and enforce a Natural Resource Management Plan means that it is relying on unevaluated and ineffective measures to preserve the habitat and natural resources of Rose Canyon. As *Bartel* indicates, this is impermissible. The City must assess existing resources and have a plan to properly manage and support covered species before it can consider expanding uses with new trails.

**Adopted City policies also require comprehensive assessments of resource conservation and use as part of the Trails Master Plan before new trails are proposed.**

In its recently-adopted Parks Master Plan, the City likewise emphasized that Natural Resource Management Plans and criteria and guidelines for establishing thresholds of access and use in MSCP lands must be prepared before new trails may be proposed for evaluation by the City. In particular, the City committed to the following specific policies:

**PP10:** To ensure the City adheres to its conservation commitments, all proposals for new or revised access, trails, and active uses in resource/open space parklands must

comply with all applicable limitations, such as the MSCP consistency findings, Environmentally Sensitive Land regulations, Natural Resource Management Plans, etc. before being formally proposed for City evaluation and funding (see policies CSR25 and RP5).

**CSR 25:** Develop, adopt, and update a Citywide Trails Master Plan to guide the provision and enhancement of open space multi-purpose trails that accommodate pedestrians, hikers, bicyclists, mountain bikers, and equestrians, where appropriate, and to provide safe and convenient linkages to parks, recreation facilities, and open space areas consistent with policies PP10, CO3, CO10, CSR16, and CSR22. A Trails Master Plan shall include a set of criteria and guidelines for evaluating and establishing thresholds of access and use for Open Space parks that prioritize habitat management planning and other requirements in ESL policy and MSCP obligations in advance of specific trails planning. These criteria and guidelines will reflect and encompass the current science of recreation ecology.

The City’s adopted policies thus emphasize that new trails should not be proposed in open space parklands such as Rose Canyon before specific resource assessments and plans have been prepared. To propose new trails in Rose Canyon as part of the draft University Community Plan Update before those steps have been taken would run counter to these policies.

Ensuring that the UCP Update does not propose new trails uninformed by the required assessments is also consistent with your own commitments. When the Parks Master Plan was adopted on August 3, 2021, you assured the City Council that a comprehensive review of the state of San Diego’s MSCP lands would be incorporated into the Trails Master Planning process as a first step. This comprehensive review is critical. It will allow the City (with community input) to make informed decisions about what can and should be prioritized in order to provide the necessary habitat quantity, quality, and connectivity and the necessary resources for monitoring, management, and enforcement to support the viability of San Diego’s unique biodiversity .

\* \* \* \*

Friends of Rose Canyon appreciates your commitment to good planning, and is confident that you share the same goal of ensuring that Rose Canyon and other MSCP lands in the UC Plan area continue to be a community amenity and high-functioning habitat resource that fulfills the requirements of the MSCP. Completing a Natural Resource Management Plan for Rose Canyon and the planning process for the

Heidi Vonblum  
August 12, 2022  
Page 5

Trails Mater Plan are required steps before proposing new trails in Rose Canyon and other MSCP lands. Friends of Rose Canyon looks forward to discussing new trail proposals informed by these planning processes at those times.

Very truly yours,

SHUTE, MIHALY & WEINBERGER LLP

**SUBJECT: COMMENTS ON BIOLOGICAL RESOURCE ISSUES  
UNIVERSITY COMMUNITY PLAN AND LOCAL COASTAL PLAN  
COMMUNITY DISCUSSION DRAFT (APRIL 2023)**

Dear UCP Project Manager,

The Friends of Rose Canyon is a community organization concerned with the protection of sensitive natural resources in Rose Canyon Open Space Park, and other sensitive habitat areas within the UCP planning area, consistent with existing regulations. At the request of the Friends of Rose Canyon, Hamilton Biological has reviewed the University Community Plan and Local Coastal Plan Update (hereafter “UCP/LCP Update” or “UCP”). Hamilton Biological’s review includes the *Biological Resources Report, University Community Plan Update, City Of San Diego, San Diego County, California*, dated June 26, 2020, prepared for the City of San Diego (the City) by Busby Biological Consulting, Inc. (Busby [2020] or the Busby Report).

### **OVERVIEW OF MSCP AND MHPA**

The San Diego Multiple Species Conservation Program (MSCP) was prepared pursuant to an outline developed by the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Wildlife (CDFW) to meet the requirements of the California Natural Communities Conservation Planning (NCCP) Act of 1992. The Subarea Plan forms the basis for the implementing agreement, which is the contract between the City and the wildlife agencies that ensures implementation of the Subarea Plan and thereby allows the City to issue take permits at the local level. The Subarea Plan also qualifies as a stand-alone document to implement the City’s portion of the MSCP preserve.

The City of San Diego Multi-Habitat Planning Area (MHPA) was developed by the City in cooperation with the wildlife agencies, property owners, developers, and environmental groups. The MHPA delineates core biological resource areas and corridors targeted for conservation. The MHPA represents a “hard line” preserve, in which

316 Monrovia Avenue  Long Beach, CA 90803  562-477-2181  [robb@hamiltonbiological.com](mailto:robb@hamiltonbiological.com)

boundaries have been specifically determined. It is considered an urban preserve which is constrained by existing or approved development, and is comprised of linkages connecting several large areas of habitat.

### **Subarea Plan Section 1.5.2, General Management Directives**

Section 1.5.2 of the Subarea Plan outlines the plan's general Management Directives that support the MSCP's Conservation Objectives. The Directives are organized by Priority to assist decisions on where to spend limited funds and direct mitigation efforts. Priority 1 refers to Directives that protect management actions needed to adequately protect MSCP-covered species within the MHPA, and Priority 2 refers to Directives that address the long-term conservation actions that can be implemented during the life of the City Subarea Plan as funds become available. The following Priority 1 Directives, from Section 1.5.2 of the Subarea Plan, apply to projects within the UCP planning area.

### **Priority 1 Directives for Public Access, Trails, and Recreation**

1. Provide sufficient signage to clearly identify public access to the MHPA. Barriers such as vegetation, rocks/boulders, or fencing may be necessary to protect highly sensitive areas. Use an appropriate type of barrier based on location, setting, and use. For example, use chain link or cattle wire to direct wildlife movement, and natural rocks/boulders or split rail fencing to direct public access away from sensitive areas. Lands acquired through mitigation may preclude public access to satisfy mitigation.
2. Locate trails, view overlooks, and staging areas in the least sensitive areas of the MHPA. Locate trails along the edges of urban land uses adjacent to the MHPA, or the seam between land uses (e.g., agriculture/habitat), and follow existing dirt roads as much as possible rather than entering habitat or wildlife movement areas. Avoid locating trails between two different habitat types (ecotones) for longer than necessary because of the typically heightened resource sensitivity in those locations.
3. In general, avoid paving trails unless management and monitoring evidence shows otherwise. Clearly demarcate and monitor trails for degradation and off trail access and use. Provide trail repair/maintenance as needed. Undertake measures to counter the effects of trail erosion, including the use of stone or wood cross joints, edge plantings of native grasses, and mulching of the trail.
4. Minimize trail widths to reduce impacts to critical resources. For the most part, do not locate trails wider than four (4) feet in core areas or wildlife corridors. Exceptions are in the San Pasqual Valley, where other agreements have been made; in Mission Trails Regional Park, where appropriate; and in other areas where necessary to safely accommodate multiple uses or disabled access. Provide trail fences or other barriers at strategic locations when protection of sensitive resources is required.

5. Limit the extent and location of equestrian trails to the less sensitive areas of the MHPA. Locate staging areas for equestrian uses at a sufficient distance (e.g., 300 to 500 feet) from areas with riparian and coastal sage scrub habitats to ensure that the biological values are not impaired.
6. Off-road or cross-country vehicle activity is an incompatible use in the MHPA, except when these vehicles are used for law enforcement, preserve management, or emergency purposes. Restore disturbed areas to native habitat where possible or critical, or allow to regenerate.
7. Limit recreational uses to passive uses such as birdwatching, photography, and trail use. Locate developed picnic areas near MHPA edges or specific areas within the MHPA to minimize littering, feeding of wildlife, and attracting or increasing populations of exotic or nuisance wildlife (e.g., opossums, raccoons, skunks). Where permitted, restrain pets on leashes.
8. Remove homeless and itinerant worker camps in habitat areas as soon as found pursuant to existing enforcement procedures.
9. Maintain equestrian trails on a regular basis to remove manure (and other pet feces) from the trails and preserve system in order to control cowbird invasion and predation. Design and maintain trails where possible to drain into a gravel bottom or vegetated (e.g., grass-lined) swale or basin to detain runoff and remove pollutants.

A portion of the UCP planning area, including Torrey Pines State Park, lies within the “Northern Area” described in Section 1.2.4 of the Subarea Plan. The Subarea Plan does not identify any additional Management Policies and Directives for this portion of the UCP planning area that warrant discussion in these comments.

Most of the UCP planning area lies within the “Urban Area” described in Section 1.2.3 of the Subarea Plan. The following Management Policies and Directives, from Section 1.5.7 of the Subarea Plan, apply to projects within the “Urban Area” portion of the UCP planning area.

### **Overall Management Policies and Directives for Urban Habitat Lands**

1. Where the MHPA’s Urban Habitat Lands are part of a natural resource park, the City Park and Recreation Department shall manage these lands in accordance with a Natural Resource Management Plan (NRMP). The NRMPs for Urban Habitat Lands include the Marian Bear Memorial Park NRMP, Mission Bay Park NRMP, First San Diego River Improvement Project, and Los Peñasquitos Canyon Preserve NRMP.
2. All other Urban Habitat Lands included within the MHPA should be managed, to the extent possible, according to the general management policies and directives as described in the City Subarea Plan and summarized above.

3. Special management needs or issues for specific Urban Habitat Lands should be resolved by the MHPA Preserve Managers according to an appropriate adaptive management strategy and through coordination with the MSCP habitat management technical committee.

## **UCP PURPOSE AND CONTEXT IS INCOMPLETE AND FLAWED FOR FAILING TO INCORPORATE THE SUBAREA PLAN’S MANAGEMENT POLICIES AND DIRECTIVES**

Page 11 of the UCP (Plan Purpose and Context) lists four citywide policy documents and one regional plan that the City took into account in preparing the UCP:

The policies in this plan are based on several previously adopted citywide policy documents, including the General Plan, Climate Action Plan, Parks Master Plan and Climate Resilient SD. The purpose of this Community Plan is to apply and in some instances tailor the strategies and policies in those plans as appropriate for the University Community. In addition, the regional plan prepared by SANDAG, San Diego Forward, serves as a basis for policies related to mobility and how the University community relates to the region as a whole.

Rather than incorporating the Subarea Plan’s adopted Management Policies and Directives into the policies of the UCP, the City treats these requirements as afterthoughts that may be considered in the future, after the UCP has been adopted. For example, page 126 of the UCP states:

Note that trails and recreation on lands subject to the Multi-Habitat Planning Areas (MHPA) should comply with the Multiple Species Conservation Program (MSCP) for compatibility.

Other sections of the UCP state that the ultimate alignments of the new trails proposed within MHPA “shall comply” with the MSCP (versus “should comply”). In either case, the problem is that the UCP proposes trails in areas known to have sensitive biological resources and/or steep topography that would necessitate extensive disturbance for trail construction. The City’s approach violates the Subarea Plan as well as Policy PP10 in the City’s adopted Parks Master Plan:

To ensure the City adheres to its conservation commitments, **all proposals for new or revised access, trails, and active uses in resource/open space parklands must comply with all applicable limitations, such as the MSCP consistency findings**, Environmentally Sensitive Land regulations, Natural Resource Management Plans, etc. **before being formally proposed for City evaluation and funding** (see policies CSR25 and RP5). [emphasis added]

As discussed subsequently in this letter, some or all of the new trails proposed in the UCP cannot possibly be implemented in compliance with the Subarea Plan, regardless of their ultimate alignments. In particular, *Priority 1 Directive No. 2* restricts the construction of trails through sensitive areas:

Locate trails, view overlooks, and staging areas **in the least sensitive areas of the MHPA**. Locate trails along the edges of urban land uses adjacent to the MHPA, or the seam between land uses (e.g., agriculture/habitat), and follow existing dirt roads as much as possible rather than entering habitat or wildlife movement areas. Avoid locating trails between two different

habitat types (ecotones) for longer than necessary because of the typically heightened resource sensitivity in those locations. [emphasis added]

As discussed previously, the City is required to implement all Priority 1 Directives as a condition of its MSCP Take Authorization. Thus the City’s refusal to explicitly incorporate all relevant MSCP Management Policies and Directives into the UCP not only violates the Parks Master Plan and undermines the UCP’s credibility as a planning document, but it puts the City’s MSCP Take Authorization at risk of revocation by the resource agencies.

## VISION AND LAND USE FRAMEWORK IGNORES MSCP REQUIREMENTS

Page 17 of the UCP (Vision and Land Use Framework) lists the seven Goals of the plan. None of the UCP’s goals mentions complying with the City’s existing commitment to MSCP land-use planning by implementing the Subarea Plan.

Pages 20–29 of the UCP list 15 Priorities of the plan. One of them, on page 27, touches upon open-space planning:

**Dedicating and Celebrating Open Space:** Open space defines the character of this community. Within this plan there are opportunities to expand open space dedications to ensure their long term conservation. This plan also seeks to strike a balance to allow access for people to appreciate open space and the benefits its protection affords.

This statement implies that the MSCP places too many restrictions on recreational uses within MHPA, and that increased human access into sensitive habitat areas is needed to “strike a balance” between recreation and conservation. Please refer to Exhibit A, below.

**Exhibit A.** For simplicity, this exhibit focuses on the southern part of the UCP planning area—the triangle formed by Interstate 5, Interstate 805, and State Route 52. No ecologist, or other conservation-minded person, looking at this landscape would conclude that building new trails in the few preserved areas not already serviced by formal trails would somehow “strike a balance” between the needs of humans and the needs of sensitive native plant and wildlife species.

As shown in Exhibit A on the previous page, roads and structures occupy nearly all of the hilltops, ridges, and relatively flat grasslands in the southern part of the UCP planning area. The undeveloped canyons that remain (i.e., the MHPA) are crossed by numerous paved roads and laced with an extensive network of trails – authorized or informal – that facilitates access for large numbers of people, bicycles, e-bikes, and dogs.

MSCP planners, recognizing the tremendous challenge of maintaining important ecological values in a highly fragmented landscape over long periods of time, developed the Subarea Plan’s Management Policies and Directives specifically to establish guardrails against further fragmentation and degradation of the few natural areas that remain. Disregarding these *existing conservation mandates*, the UCP targets for new trails precisely the least disturbed, most intact blocks of sensitive habitats in the MHPA. Without irony, the UCP does so in the name of *striking a balance* between habitat conservation and increased human mobility and recreation. The bottom line is that only trails that satisfy all relevant Management Policies and Directives contained in the Subarea Plan are allowable under the MSCP. The UCP must acknowledge that the primary purpose of MHPA lands is resource conservation, with other uses allowed only to the extent they comply with the MSCP Subarea Plan’s Management Policies and Directives.

## **“NATURE BASED PARK” VS. GENERIC “OPEN SPACE”**

Figure 3 on page 31 of the UCP (Planned Land Use) designates Torrey Pines State Natural Reserve as “Nature Based Park” but designates the remaining MHPA as generic “open space.” Under the MSCP Subarea Plan, MHPA represents a “hard line” preserve consisting of core biological resource areas and corridors targeted for conservation. As an objective and straightforward planning document, the UCP should clearly and consistently identify the Subarea Plan’s MHPA open space designations and acknowledge, rather than obfuscate, the City’s conservation commitments wherever they exist in the UCP planning area.

## **URBAN FORESTRY**

The Urban Forestry section of the UCP proposes plantings of the following species of tree known to be invasive in San Diego County<sup>1</sup>: Evergreen Ash (*Fraxinus uhdei*), Chinese Elm (*Ulmus parvifolia*), Red River Gum (*Eucalyptus camadulensis*), and Mexican Fan Palm (*Washingtonia robusta*). No exotic plant species known to be invasive in San Diego County should be planted in the UCP area. Additional plantings of species native to the local area would be appropriate.

Trees should not be planted along roads adjacent to MHPA, as they can shade native scrub habitat, reduce habitat suitability for the California Gnatcatcher and other scrub-dependent wildlife, and provide suitable nesting habitat for the Cooper’s Hawk, an increasingly common raptor that preys mainly on small birds.

---

<sup>1</sup> <https://www.sandiegocounty.gov/content/dam/sdc/pds/docs/Landscape/WELDManual-Appendix-I.pdf>

## **OPEN SPACE AND CONSERVATION**

The Open Space and Conservation section of the UCP provides brief summaries of the MSCP and other conservation planning efforts that affect the UCP. Lacking, however, is a straightforward listing of the relevant Management Policies and Directives from the Subarea Plan and a credible determination by the City that any new trails proposed in the UCP comply with all MSCP requirements.

### **TABLE 6: UCP PLAN POLICIES**

Because the City has committed to adhering to all Management Policies and Directives contained in the MSCP Subarea Plan, a reader of the UCP should be able to evaluate the extent to which proposed actions comply with these MSCP requirements. Toward this end, the relevant Management Policies and Directives from the Subarea Plan should be included in the Table 6. Excluding these policies establishes a perceptual gap between what is required under the MSCP and what is being proposed in the UCP, a gap that does not serve any legitimate planning purpose.

### **REVIEW OF BIOLOGICAL RESOURCES REPORT (BUSBY 2020)**

As part of my review, I evaluated the adequacy of the *Biological Resources Report, University Community Plan Update, City of San Diego, San Diego County, California*, (Busby 2020 or the Busby Report) as an informational and analytical document provided in support of the UCP.

#### **Busby Report is Out of Date**

As an initial observation, such reports are generally considered valid for one year after preparation, so the Busby Report is two years out of date.

#### **Busby Report Contains No Analyses**

Page 1 of the Busby Report (Introduction) summarizes the report's purpose:

To inform the UCP update (UCPU), this biological resources report provides a summary of the existing biological resources within the UCP area and assesses potential impacts to these biological resources that may occur through implementation of the updated UCP.

The Busby Report summarizes the regulatory framework of federal, state, and local resource-protection policies and regulations that may be relevant to future impact analyses, but the authors did not use them to analyze the potential effects of implementing the UCP on any natural resource.

Page 41 of the Busby Report (Methods) states, "this UCPU biological resources report is intended to provide a broad-scale analysis of biological resources," but the report includes no impact analysis at any scale.

Given that the Busby Report provides no assessment of potential impacts to biological resources, or conflicts with regulatory requirements, that could occur due to

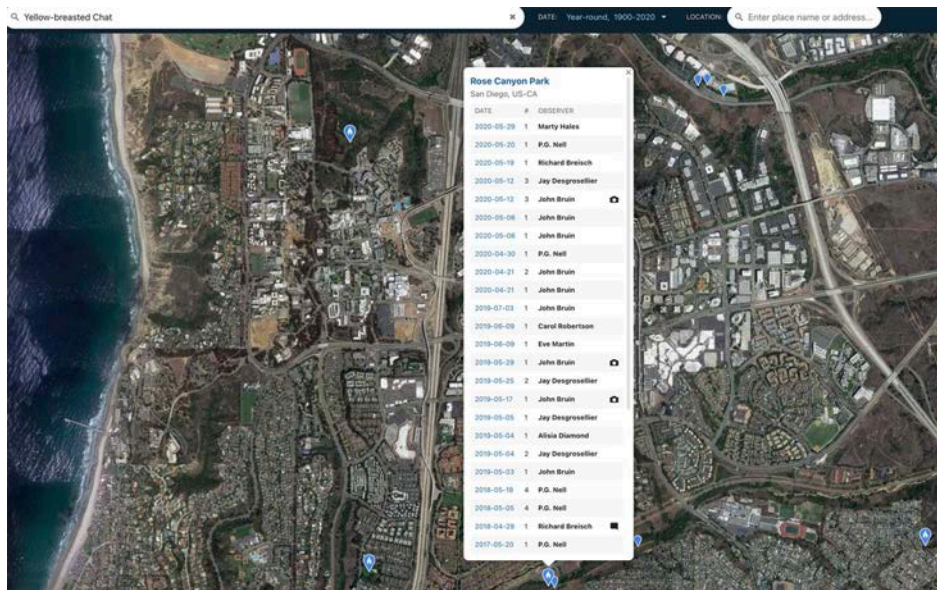

implementation of the UCP, the City would have no basis for referring to this document as supporting any conclusions of the UCP with regard to impact analysis or regulatory compliance.

### Busby Report’s Sensitive Species Information is Incomplete

Much of the Busby Report consists of Table 3, *Sensitive Plant Species with a Potential to Occur within the University Community Plan Update Area*, and Table 4, *Sensitive Wildlife Species with a Potential to Occur in University Community Plan Update Area*. These tables, however, are three years old and fail to incorporate relevant information from public online databases routinely used by field ecologists determining and evaluating the local occurrences of special-status species. Specifically, Busby’s literature review excludes iNaturalist and eBird, both of which document, or at least report, occurrences of special-status species, many of which are never reported to the California Natural Diversity Data Base, Calflora, or other sources referenced in the Busby Report.

The reports in both iNaturalist and eBird are vetted by experts to weed out obviously false reports and to verify evidence that can be confirmed, such as photos showing characteristic field marks. By omitting these important sources of information, the Busby Report provides incomplete and in some cases misleading information on the special-status species known or expected in parts of the UCP planning area. An egregious example is provided by the **Yellow-breasted Chat**, a California Species of Special Concern found in and around riparian areas. Chats have been known to summer in Rose Canyon for more than a decade, yet the species is not mentioned in the Busby Report. The following Exhibit B, a screen-grab from <http://eBird.org>, provides a partial summary of Yellow-breasted Chat records from Rose Canyon Open Space Park that were available at the time the Busby Report was prepared in 2020.

**Exhibit B.** Screen grab from eBird showing a partial list of numerous records of the Yellow-breasted Chat at Rose Canyon Open Space Park from 2017 to 2020, some documented with photographs. The species has also been recorded at several other locations within the UCP planning area.

Page 89 of the Busby Report characterizes the **Least Bell's Vireo**, a species listed as endangered by federal and state governments, as "not expected" as a nesting species in the UCP planning area despite potentially suitable riparian habitat in Rose Canyon and scattered smaller pockets of riparian vegetation elsewhere in the planning area. From May 15 to July 19, 2021, birders P.J. Nell and Jim Roberts repeatedly observed Least Bell's Vireos in Rose Canyon, including an adult feeding a begging juvenile on July 5 (<https://ebird.org/checklist/S91321310>) and July 9 (<https://ebird.org/checklist/S91518140>). Although these observations post-date the 2020 Busby Report, they occurred two years before the UCP was released and would be included in a current and adequate report. This nesting record contradicts the Busby Report's conclusion that nesting by the Least Bell's Vireo is "not expected" within the UCP planning area.

### **No Maps of Special-Status Species or Wildlife Use Areas**

In evaluating the appropriateness of potential trail alignments, biologists and planners normally utilize maps showing the locations where special-status plant and wildlife species have been observed. Also valuable in this regard are maps showing areas used as wildlife denning sites or other forms of refugia for wildlife species that may be sensitive to human disturbance (e.g., nesting raptors, Bobcats). The Busby Report provides no such maps.

### **No Evaluation of Fragmentation, Edge, and Recreation/Trail Effects**

The UCP planning area is mostly developed in the existing condition, with natural open space occurring in fragments constrained by surrounding development (see, for example, Exhibit A on page 5 of this letter). Nevertheless, some of these habitat fragments retain important ecological values, as reflected by their designation as MHPA. If these reserve lands are protected from significant habitat degradation resulting from habitat fragmentation, edge effects, and recreation/trail effects, as required under the MSCP, many sensitive plant and wildlife populations can be expected to persist in these fragments over the long term. Without adequate protection, however, the ecological value of these fragments will degrade over time. Given the importance of addressing these topics across the MHPA, it is surprising and disappointing that the Busby Report contains only four mentions of habitat fragmentation, three of which are in reference to construction policies for roads and utilities passing through MHPA (page 15). The fourth reference, on page 98, is contained in the report's perfunctory and inaccurate discussion of "Wildlife Movement Corridors." Even more surprising is the Busby Report's lack of discussion of edge effects or recreation/trail effects, which are of paramount importance to MSCP planning. The following overview of these concepts, as distilled from the peer-reviewed literature, is offered as a useful contribution to the UCP planning process. The City must take into account these adverse effects before considers proposing any new trails in the MHPA.

#### *Fragmentation and Edge Effects*

Urbanization typically includes residential, commercial, industrial, and road-related development (i.e., the "built" environment). At the perimeter of the built environment is

an area known as the urban/wildland interface, or “development edge.” In ecology, “edges” are places where natural communities interface, vegetation or ecological conditions within natural communities interact (Noss 1983), or patches with differing qualities abut one another (Ries and Sisk 2004). “Edge effects” are spillover effects from the adjacent human-modified matrix that cause physical gradients in light, moisture, noise, etc. (Camargo and Kapos 1995; Murcia 1995, Sisk et al. 1997) and/or changes in biotic factors such as predator communities, density of human-adapted species, and food availability (Soulé et al. 1988; Matlack 1994; Murcia 1995; Ries and Sisk 2004).

Edge effects and habitat fragmentation are among the principal threats to persistence of biological diversity (Soulé 1991). Edge-related impacts may include:

- Introduction/expansion of invasive exotic vegetation carried in from vehicles, people, animals or spread from backyards or fuel modification zones adjacent to wildlands.
- Higher frequency and/or severity of fire as compared to natural fire cycles or intensities.
- Companion animals (pets) that often act as predators of, and/or competitors with, native wildlife.
- Creation and use of undesignated trails that often significantly degrade the reserve ecosystems through such changes as increases in vegetation damage and noise.
- Introduction of or increased use by exotic animals which compete with or prey on native animals.
- Influence on earth systems and ecosystem processes, such as solar radiation, soil richness and erosion, wind damage, hydrologic cycle, and water pollution that can affect the natural environment.

Any of these impacts, individually or in combination, can result in the effective loss or degradation of habitats used for foraging, breeding or resting, with concomitant effects on population demographic rates of sensitive species.

Harrison and Bruna (1999) completed a review of a suite of studies dealing with fragmentation and edge effects and concluded that there is a general pattern of reduction of biological diversity in fragmented habitats compared with more intact ones, particularly with regard to habitat specialists. While physical effects associated with edges were predominant among species impacts, they found evidence for indirect effects including altered ecological interactions. Fletcher et al. (2007) found that distance from edge had a stronger effect on species than did habitat patch size, but they acknowledged the difficulty in separating those effects empirically. Many southern California plant and animal species are known to be sensitive to fragmentation and edge effects; that is, their abundance declines with fragment size and proximity to an edge (Wilcove 1985; Soulé et al. 1992; Bolger et al. 1997a,b; Suarez et al. 1998; Burke and Nol 2000).

Wildlife populations are typically changed in proximity to edges, either by changes in their demographic rates (survival and fecundity), or through behavioral avoidance of or attraction to the edge (Sisk et al. 1997; Ries and Sisk 2004). For example, coastal sage scrub areas within 250 meters of urban edges consistently contain significantly less bare ground and more coarse vegetative litter than do more “intermediate” or “interior” areas, presumably due increased human activity/disturbance of the vegetation structure near edges (Kristan et al. 2003). Increases in vegetative litter often facilitate growth of non-native plants (particularly grasses), resulting in a positive feedback loop likely to enhance plant invasion success (Wolkovich et al. 2009). In another coastal southern California example, the abundance of native bird species sensitive to disturbance is typically depressed within 200 to 500 meters (650 to 1640 feet) of an urban edge, and the abundance of disturbance-tolerant species is elevated up to 1000 meters (3280 feet) from an urban edge, depending on the species (Bolger et al. 1997a).

Habitat fragmentation is usually defined as a landscape scale process involving habitat loss and breaking apart of habitats (Fahrig 2003). Habitat fragmentation is among the most important of all threats to global biodiversity; edge effects (particularly the diverse physical and biotic alterations associated with the artificial boundaries of fragments) are dominant drivers of change in many fragmented landscapes (Laurance and Bierregaard 1997; Laurance et al. 2007).

Fragmentation decreases the connectivity of the landscape while increasing both edge and remnant habitats. Urban and agricultural development often fragments wildland ecosystems and creates sharp edges between the natural and human-altered habitats. Edge effects for many species indirectly reduce available habitat use or utility in surrounding remaining areas; these species experience fine-scale functional habitat losses (e.g., see Bolger et al. 2000; Kristan et al. 2003; Drolet et al. 2016). Losses of coastal sage scrub in southern California have resulted in the increased isolation of the remaining habitat fragments (O’Leary 1990). Fragmentation has a greater relative negative impact on specialist species (e.g., the Coastal Cactus Wren, *Campylorhynchus brunneicapillus*) that have strict vegetation structure and area habitat requirements (Soulé et al. 1992).

Specialist species have an increased risk of extirpation in isolated habitat remnants because the specialized vegetative structures and/or interspecific relationships on which they depend are more vulnerable to disruption in these areas (Vaughan 2010). In studies of the coastal sage scrub and chaparral systems of coastal southern California, fragment area and age (time since isolation) were the most important landscape predictors of the distribution and abundance of native plants (Soulé et al. 1993), scrub-breeding birds (Soulé et al. 1988; Crooks et al. 2001), native rodents (Bolger et al. 1997b), and invertebrates (Suarez et al. 1998; Bolger et al. 2000).

Edge effects that emanate from the human-dominated matrix can increase the extinction probability of isolated populations (Murcia 1995; Woodroffe and Ginsberg 1998). In studies of coastal sage scrub urban fragments, exotic cover and distance to the urban edge were the strongest local predictors of native and exotic carnivore distribution and

abundance (Crooks 2002). These two variables were correlated, with more exotic cover and less native shrub cover closer to the urban edge (Crooks 2002).

The increased presence of human-tolerant “mesopredators” in southern California represents an edge effect of development; they occur within the developed matrix and are thus more abundant along the edges of habitat fragments, and they are effective predators on birds, bird nests, and other vertebrates in coastal sage scrub and chaparral systems and elsewhere (Crooks and Soulé 1999). The mammalian carnivores more typically detected in coastal southern California habitat fragments are resource generalists that likely benefit from the supplemental food resources (e.g., garden fruits and vegetables, garbage, direct feeding by humans) associated with residential developments. As a result, the overall mesopredator abundance, of such species as raccoons (*Procyon lotor*), opossums (*Didelphis virginiana*), and domestic cats (*Felis catus*), increases at sites with more exotic plant cover and closer to the urban edge (Crooks 2002). Although some carnivores within coastal sage scrub fragments seem tolerant of disturbance, many fragments have (either actually or effectively) already lost an entire suite of predator species, including mountain lion, bobcats (*Lynx rufus*), spotted skunks (*Spilogale gracilis*), long-tailed weasels (*Mustela frenata*), and badgers (*Taxidea taxus*) (Crooks 2002). Most “interior” sites within such fragments are still relatively near (within 250 meters of) urban edges (Crooks 2002).

Fragmentation generally increases the amount of edge per unit land area, and species that are adversely affected by edges can experience reduced effective area of suitable habitat (Temple and Cary 1988), which can lead to increased probability of extirpation/extinction in fragmented landscapes (Woodroffe and Ginsberg 1998). For example, diversity of native bees (Hung et al. 2015) and native rodents (Bolger et al. 1997b) is lower, and decomposition and nutrient cycling are significantly reduced (Treseder and McGuire 2009), within fragmented coastal sage scrub ecosystems as compared to larger core reserves. Similarly, habitat fragmentation and alterations of sage scrub habitats likely have reduced both the genetic connectivity and diversity of coastal-slope populations of the Cactus Wren in southern California (Barr et al. 2015). Both Bell’s Sparrows (*Artemisiospiza belli*) and California Thrashers (*Toxostoma redivivum*) show strong evidence of direct, negative behavioral responses to edges in coastal sage scrub; that is, they are edge-averse (Kristan et al. 2003), and California Thrashers and California Quail (*Callipepla californica*) were found to be more vulnerable to extirpation with smaller fragment size of the habitat patch (Bolger et al. 1991), demonstrating that both behavioral and demographic parameters can be involved. Other species in coastal sage scrub ecosystems, particularly the Cactus Wren and likely the California Gnatcatcher and San Diego Pocket Mouse (*Chaetodipus fallax*), are likely vulnerable to fragmentation, but for these species the mechanism is likely to be associated only with extirpation vulnerability from habitat degradation and isolation rather than aversion to the habitat edge (Kristan et al. 2003). Bolger (et al. 1997b) found that San Diego coastal sage scrub and chaparral canyon fragments under 60 acres that had been isolated for at least 30 years support very few populations of native rodents, and they suggested that fragments larger than 200 acres in size are needed to sustain native rodent species populations.

The penetration of exotic species into natural areas can reduce the effective size of a reserve in proportion to the distance they penetrate within the reserve: Argentine Ants serve as an in-depth example of edge effects and fragmentation. Spatial patterns of Argentine Ant abundance in scrub communities of southern California indicate that they are likely invading native habitats from adjacent developed areas, as most areas sampled greater than 200 to 250 meters from an urban edge contained relatively few or no Argentine Ants (Bolger 2007, Mitrovich et al. 2010). The extent of Argentine Ant invasions in natural environments is determined in part by inputs of urban and agricultural water run off (Holway and Suarez 2006).

Native ant species were more abundant away from edges and in areas with predominantly native vegetation. Post-fragmentation edge effects likely reduce the ability of fragments to retain native ant species; fragments had fewer native ant species than similar-sized plots within large unfragmented areas, and fragments with Argentine Ant-free refugia had more native ant species than those without refugia (Suarez et al. 1998). They displace nearly all surface-foraging native ant species (Holway and Suarez 2006) and strongly affect all native ant communities within about 150 to 200 meters from fragment edges (Suarez et al. 1998; Holway 2005; Fisher et al. 2002; Bolger 2007; Mitrovich et al. 2010). Argentine Ants are widespread in fragmented coastal scrub habitats in southern California, and much of the remaining potential habitat for Blainville's Horned Lizards (*Phrynosoma blainvillii*) is effectively unsuitable due to the penetration of Argentine Ants and the subsequent displacement of the native ant species that horned lizards need as prey (Fisher et al. 2002). Invasion of Argentine Ants into coastal sage scrub has also shown a strong negative effect on the abundance of the Gray Shrew (*Notiosorex crawfordi*) (Laakkonen et al. 2001).

### *Recreation and Trail Effects*

In the introduction to their study on the efficacy and perception of trail use enforcement at the 866-acre Del Mar Mesa Preserve in the City of San Diego, Greer et al. (2017:56-57) briefly summarized adverse effects of recreation upon ecological functions and values:

The field of Recreation Ecology studies the impacts of recreation users on various biotic and abiotic elements of the landscape. Studies have shown that various types of passive outdoor recreation can result in displacement and reduction of wildlife, the trampling of native habitat and species, impacts to soil and water resources [although] users may not be aware of their impacts or legality of their actions. This balance between recreational use and natural resource conservation has become a key element of land management around the world. [citations omitted]

Greer et al. (2017) evaluated different approaches to resolving problems associated with creation, use, and maintenance of unpermitted trails at the Del Mar Mesa Preserve, activities that had fragmented and degraded the Preserve's natural communities for at least a decade at that time. They concluded, in part:

This Study showed that soft enforcement aimed at public education and redirecting social norms was not sufficient in curbing illegal trail use in an urban natural area. The movement towards citations and the threat of citations was effective at redirecting behavior by making

non-compliance more risky. This in turn had an unintended consequence of promoting hostility amongst a large user base.

The long-standing resource management problems associated with illegal trails at the Del Mar Mesa Preserve persist, with no clear resolution in sight (e.g., Karen Billing, San Diego Union Tribune, July 6, 2022: *Del Mar Mesa Preserve Tunnel Trail Vandalized* <https://www.sandiegouniontribune.com/local/story/2022-07-06/del-mar-mesa-preserve-trail-vandalized>).

## EVALUATION OF TWO PROPOSED NEW TRAILS IN UCP

All trails, including those that are carefully sited and well-designed, necessarily contribute to habitat fragmentation, edge effects, and recreation impacts. To minimize these insidious forms of habitat degradation, Section 1.5.2 of the Subarea Plan identifies several Priority 1 Directives for Public Access, Trails, and Recreation. As discussed previously in this letter, the most important of these for the UCP project is No. 2:

Locate trails, view overlooks, and staging areas in the least sensitive areas of the MHPA. Locate trails along the edges of urban land uses adjacent to the MHPA, or the seam between land uses (e.g., agriculture/habitat), and follow existing dirt roads as much as possible rather than entering habitat or wildlife movement areas. Avoid locating trails between two different habitat types (ecotones) for longer than necessary because of the typically heightened resource sensitivity in those locations.

I have not yet visited the specific areas that would be impacted by proposed new trails, but examination of aerial imagery and Figure 7-2 in the Busby Report (Sensitive Vegetation Communities) demonstrate to me that construction of at least two of the proposed new trails – from Governor Drive and from Stresemann Street to the bottom of Rose Canyon – would be grossly inconsistent with the MSCP's conservation goals. These two trails would be built through sensitive wetlands, native grasslands, and coastal sage scrub in two major side-canyons to Rose Canyon that lack substantial trails in the existing condition (see Exhibit C on the next page). According to Debby Knight (in litt.):

The canyons there are incredibly steep and are crisscrossed by huge, deep erosion gullies caused by storm drain pipes that empty out from the streets along the edges of development. This causes wide erosion gullies that are 8-10' deep and simply uncrossable. These crisscrossing the whole area. Topo maps should show how steep the terrain is in areas. A few of us tried to walk these two trails several years ago. We tried to walk from the west end of Governor down, and found it nearly impossible to walk due to how steep the slope is, and the fact that we had to repeatedly climb down into deep erosion gullies and back up again. We made it only a small distance of the way in over an hour. We tried to walk from the bottom up of the proposed trail alignment from Stresemann St., and that was also literally impossible to walk - a giant erosion gully about 8' deep and 10' across, and then slopes so steep we could barely keep our footing. We stopped less than half way up.

Because of their prohibitive topography, the sensitive natural communities, and lack of substantial trails, these two side-canyons to Rose Canyon currently provide habitat for those wildlife species that are most sensitive to habitat fragmentation, human presence (hiking, cycling), and presence of dogs. Constructing new trails through these important areas of refuge would be completely antithetical to MSCP conservation goals.

**Exhibit C.** Showing the conceptual, or schematic, alignments for approximately one mile of new trails that the UCP proposes to connect from Governor Drive (northern trail) and Stresemann Street (southern trail) to the southern end of the existing Rose Canyon Trail. Contrary to MSCP planning principles, these trails would be built through steep terrain vegetated with sensitive plant communities (wetlands, native grassland, coastal sage scrub) in canyons that currently lack substantial trails. Such areas are especially valuable for wildlife that is sensitive to habitat fragmentation, human presence (hiking, cycling), and interactions with dogs.

## **ALL PROPOSED TRAILS MUST BE EVALUATED FOR MSCP CONSISTENCY**

The two trails discussed previously and shown in Exhibit C present the most obvious conflicts with the MSCP and the MHPA. Given the hard line reserve status of the urban reserve lands in the MHPA, it is unlikely that any new trails, apart from trails proposed entirely on existing dirt roads, could be legitimately determined to be consistent with MSCP requirements. The City must conduct a thorough and credible evaluation for MSCP consistency before proposing any new trails in the MHPA.

## **CONCLUSION**

As discussed herein, the City’s exclusion of the relevant MSCP Management Policies and Directives from the UCP violates the Parks Master Plan, undermines the UCP’s credibility as a planning document, and puts the City’s MSCP Take Authorization at risk of revocation by the resource agencies. Furthermore, by prematurely proposing new trails in the absence of a current biological technical report that credibly demonstrates the UCP’s consistency with the MSCP and Subarea Plan, the City is improperly raising expectations among the public that these trails can and will be built. The predictable result is unwarranted conflict between environmental and recreational user groups. For these important reasons, the City should withdraw all proposed trails through the MHPA until a credible analysis of MSCP consistency can be completed.

**SUBJECT: COMMENTS ON BIOLOGICAL RESOURCE ISSUES:  
DRAFT PROGRAM EIR FOR BLUEPRINT SD INITIATIVE,  
HILLCREST FOCUSED PLAN AMENDMENT TO THE UPTOWN  
COMMUNITY PLAN, AND UNIVERSITY COMMUNITY PLAN AND  
LOCAL COASTAL PROGRAM UPDATE**

Dear City of San Diego Planning Department,

Friends of Rose Canyon is a community organization concerned with the protection of sensitive natural resources in Rose Canyon Open Space Park, and other sensitive habitat areas within the UCP planning area, consistent with existing regulations. At the request of Friends of Rose Canyon, Hamilton Biological has reviewed the Draft Program EIR for the *Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan, and University Community Plan and Local Coastal Program Update* (hereafter the "DPEIR"). Hamilton Biological's review includes the *Biological Resources Report, University Community Plan Update, City of San Diego, San Diego County, California*, dated March 2024, prepared for the City of San Diego (the City) by Busby Biological Services, Inc. (Busby [2024] or the Busby Report).

O4-30

## OVERVIEW OF MSCP AND MHPA

The San Diego Multiple Species Conservation Program (MSCP) Subarea Plan (City of San Diego 1997) was prepared pursuant to an outline developed by the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Wildlife (CDFW) – collectively referred to as the "wildlife agencies" – to satisfy the requirements of the California Natural Communities Conservation Planning (NCCP) Act of 1992. The Subarea Plan forms the basis for the Implementing Agreement, which is the contract between the City and the wildlife agencies that ensures implementation of the Subarea Plan and thereby allows the City to issue take permits at the local level. The Subarea Plan also qualifies as a stand-alone document to implement the City's portion of the MSCP preserve.

O4-31

The City of San Diego Multi-Habitat Planning Area (MHPA) was developed by the City in cooperation with the wildlife agencies, property owners, developers, and environmental groups. The MHPA delineates core biological resource areas and corridors targeted for conservation. The MHPA represents a “hard line” preserve, in which boundaries have been specifically determined. It is considered an urban preserve which is constrained by existing or approved development, and is comprised of linkages connecting several large areas of habitat.

O4-31  
cont.

## PROPOSED ACTIONS CONFLICT WITH MSCP PRIORITY 1 MANAGEMENT DIRECTIVE NO. 2 AND WOULD HAVE SIGNIFICANT ADVERSE EFFECTS ON SENSITIVE BIOLOGICAL RESOURCES

The MSCP Subarea Plan commits the City to following several specific management directives. As acknowledged on page 4.10-44 of the DPEIR:

Those actions identified as Priority 1 are **required to be implemented** by the City as a condition of the MSCP Take Authorization to ensure that covered species are adequately protected. [emphasis added in bold]

O4-32

Priority 1 Management Directive No. 2 requires the City to “Locate trails, view overlooks, and staging areas in the least sensitive areas of the MHPA.” In violation of this MSCP requirement, the Figure 3-26 in DPEIR (Figure 27 in the Draft University Community Plan Update, hereinafter referred to as “the Project”) proposes the establishment of several new formal trails through extremely sensitive habitat areas. On April 16, 2024, I visited the project area to see and photograph several areas of sensitive MHPA proposed for trail impacts in the University Community Plan area and covered under the DPEIR.

### University Village Park to Genesee Avenue

The DPEIR (Figure 3-26) proposes to establish approximately 1.5 miles of formal trail from University Village Park north and west through existing MHPA conserved lands in the Rose Canyon watershed. The area proposed for establishing the new, formal trail is now served by a narrow, informal trail that passes through sensitive and minimally disturbed coastal sage scrub, chaparral, and riparian natural communities. During my site visit on April 16, 2024, I observed a pair of the federally threatened Coastal California Gnatcatcher (*Polioptila californica californica*) in this area, as well as extensive stands of Nuttall’s Scrub Oak (*Quercus dumosa*), a species with a California Rare Plant Ranking (CRPR) of 1B.1, referring to species “threatened, or endangered in California and elsewhere; seriously threatened in California.” As shown in the following Exhibit 1 and Photos 1–11, there would be no way to establish 1.5 miles of formal trail through this area without incurring large-scale significant impacts to these and other sensitive natural resources in direct violation of MSCP Priority 1 Management Directive No. 2.

O4-33

**Exhibit 1.** Showing the locations of 11 photos depicting current habitat and trail conditions in the Rose Canyon watershed, University Village Park to Genesee Avenue. The image is oriented with North at the left margin, South at the right margin, East at the top margin, and West at the bottom. All photos by Robert Hamilton, April 16, 2024.

**O4-33  
cont.**

**Photo 1.** View to southwest showing the existing narrow, informal trail through sensitive coastal sage scrub habitat. I observed a pair of California Gnat-catchers here at the time of this photo.

**Photo 2.** View to southwest showing a narrow, informal trail through sensitive coastal sage scrub habitat, next to a seasonal drainage.

**Photo 3.** View to north showing narrow, informal trail through sensitive coastal sage scrub and chaparral habitat.

O4-33  
cont.

**Photo 4.** Blossoms of checkerbloom (*Sidalcea malviflora*), a native perennial herb typically found in minimally disturbed riparian habitats.

**Photo 5.** Underside of the leaf of Nuttall's Scrub Oak, a species considered "threatened, or endangered in CA and elsewhere; seriously threatened in California." This species grows in dense stands in the areas shown from Photo 5 through Photo 11. Any trail "improvements" through this area, as proposed in the DPEIR, would necessarily impact large numbers of this highly sensitive plant species.

O4-33  
cont.

**Photo 6.** Photo, facing north, showing narrow, informal trail through sensitive coastal sage scrub and Nuttall's Scrub Oak habitat.

**O4-33  
cont.**

**Photo 7.** A large, healthy specimen of Chalk Dudleya (*Dudleya pulverulenta*) growing with Sticky Monkeyflower (*Diplacus puniceus*), further evidence of intact, minimally disturbed habitat along the existing informal trail.

**Photo 8.** View to the north showing the narrow, informal trail passing through sensitive Nuttall's Scrub Oak and riparian habitat.

O4-33  
cont.

**Photo 9.** Dense stand of Nuttall's Scrub Oak immediately south of the existing informal trail that runs along and through the bottom of Rose Canyon.

**Photo 10.** View to the east showing how the existing informal trail runs straight into the streambed in the bottom of Rose Canyon. Any effort to establish a formal trail here would require impacting the streambed and/or adjacent sensitive habitats (see Photos 9, 11).

**O4-33  
cont.**

**Photo 11.** View to the east showing that the existing informal trail disappears into the streambed in the bottom of Rose Canyon. Any effort to establish a formal trail here would require impacting the streambed and/or adjacent sensitive habitats.

The DPEIR fails to disclose the general magnitude of impacts proposed to special-status species, such as the California Gnatcatcher and Nuttall's Scrub Oak, that are known or likely to occur in the proposed trail impact area.

O4-34

The DPEIR also fails to describe a credible and feasible mitigation approach that would reduce impacts to special-status species and natural communities to less than significant.

O4-35

In the DPEIR's impact analysis, Issue 5, Conservation Planning, asks:

Would the project conflict with the provisions of the MSCP, VPHCP, other an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan, such as introducing a land use within an area adjacent to the MHPA that would result in adverse edge effects or introduce invasive species of plants into a natural open space area?

In response, the DPEIR asserts on page 4.3-60: "The Blueprint SD Initiative, Hillcrest FPA, and University CPU do not propose policies that would conflict with the MSCP." The proposed establishment of 1.5 miles of formal trail through the sensitive habitats shown in Photos 1-11 would conflict with Priority 1 Management Directive No. 2 of the MSCP Subarea Plan, which requires trails to be located "in the least sensitive areas of the MHPA." Because the MSCP Subarea Plan requires the City to implement all Priority 1 directives as a condition of the MSCP Take Authorization, the proposed formal trail between University Village Park and Genesee Avenue, and the other proposed trails discussed in this report, must be removed from the DPEIR. Failure to remove the trails will cause the Project to conflict with the MSCP, and will result in significant impacts to multiple special-status species and sensitive/protected natural communities.

O4-36

Page 4.3-61 of the DPEIR promises, "Future site-specific developments are required to demonstrate compliance with the City's MSCP thereby ensuring potential impacts associated with conflicts with the MSCP would be less than significant." The City's assurances of future compliance lack credibility. For reasons discussed herein, constructing *any* formal trail through this area would violate the Subarea Plan's most important Priority 1 Management Directive, thus negating any potential to demonstrate compliance with the MSCP.

O4-37

Furthermore, as reported on page 109 of Appendix D to the DPEIR, the MSCP Subarea Plan requires: "Where the MHPA's Urban Habitat Lands are part of a natural resource park, the City Park and Recreation Department shall manage these lands in accordance with a Natural Resource Management Plan (NRMP)." Yet, for 27 years, the City has managed the Rose Canyon Open Space Park without benefit of an NRMP.

Agency-approved NRMPs must be prepared for Rose Canyon, Nobel Hill, and all of the City's other natural resource parks, and all trails proposed in sensitive habitat areas must be removed from the project. Until both of these MSCP requirements have been satisfied, the City has no basis for assuring the public that all proposed project actions will comply with the MSCP and other applicable conservation plans.

O4-38

## Nobel Hill

This area supports the federally threatened California Gnatcatcher (I observed a pair there during my site visit on April 16, 2024) and 38 acres of vernal pools designated as Critical Habitat for the federally threatened Spreading Navarretia (*Navarretia fossalis*). The DPEIR (Figure 3-26) proposes to convert approximately 0.3 mile of existing informal trail through this sensitive habitat area into formal trail, and to eliminate one informal trail. Exhibit 2 and Photos 12-14 show existing conditions in this area. Because the proposed trail would be located through sensitive habitat areas, it would conflict with the MSCP.

O4-39

**Exhibit 2.** Showing the locations of three photos depicting current habitat and trail conditions in the Nobel Hill area. Note the extensive network of illegal trails. All photos by Robert Hamilton, April 16, 2024.

**Photo 12.** View to the northwest showing the existing informal trail up Nobel Hill that would be converted to a formal trail. The adjacent habitat is coastal sage scrub.

**Photo 13.** View to north showing the existing informal trail through sensitive coastal sage scrub and chamise chaparral habitats. I observed a pair of California Gnatcatchers in this patch of chamise at the time of this photo.

**O4-39  
cont.**

**Photo 14.** View to northwest showing the existing informal trail through sensitive grass/scrub habitat.

As discussed on page 9 of this letter, the MSCP is predicated upon the City managing important urban habitat areas, such as Nobel Hill, under Natural Resource Management Plans that the City is required to prepare. In the absence of the required plans, and enforcement efforts, we see the unchecked creation of more and more illegal trails through sensitive MHPA – sensitive lands putatively conserved under the MSCP. The Nobel Hill conservation area is crisscrossed by numerous illegal trails that seriously degrade and fragment the sensitive resources in this important area (see Exhibit 2 on page 10 of this letter). The City has taken no meaningful actions to reduce or otherwise mitigate these threats to the sensitive resource in this natural area. The Project, however, proposes to close only one of these illegal trails. Allowing these informal trails to remain is having substantial adverse effects on special status species that will increase over time.

O4-40

Failure of the DPEIR to designate all illegal trails for closure also conflicts with the MSCP Priority 1 Policy #1, which requires barriers and signage to direct public access away from sensitive areas.

The DPEIR's proposed establishment of a formal trail through the Nobel Hill conservation area would only increase human traffic into this sensitive, unmanaged area. This would predictably lead to the creation of even more unauthorized trails through the habitat, with potentially significant adverse effects upon the California Gnatcatcher, Spreading Navarretia, San Diego Fairy Shrimp (*Branchinecta sandiegonensis*), Orcutt's Brodiaea (*Brodiaea orcuttii*), and numerous other special-status plant and wildlife species found on Nobel Hill.

## Proposed New Trails to Lower Rose Canyon Trail

The DPEIR identifies completely new trails, one from the southern terminus of Governor Drive and the other from Marcy Neighborhood Park, that would connect to the lower end of the Rose Canyon Trail in the Rose Canyon Open Space Park. As shown in Exhibit 3 and Photos 15–20, both trail alignments would pass through sensitive wetlands, native grasslands, and coastal sage scrub, incurring massive and significant impacts to these and other sensitive natural resources. This would be a significant biological impact under all five significance thresholds identified in the DPEIR. It is also a significant biological impact because it is in direct violation of MSCP Priority 1 Management Directive No. 2.

O4-41

**Exhibit 3.** Showing in red the two proposed trail alignments, one from the end of Governor Drive (Photos 15–17) and the other from Marcy Neighborhood Park (Photos 18–20). All photos by Robert Hamilton, April 16, 2024.

**Photo 15.** View to southeast showing sensitive coastal sage scrub habitat where the DPEIR proposes a new trail from Governor Drive to the lower Rose Canyon Trail.

**Photo 16.** View to southwest showing sensitive coastal sage scrub and riparian habitat where the DPEIR proposes a new trail from Governor Drive to the lower Rose Canyon Trail.

As described by a local resident, Deborah Knight (in litt.):

The canyons there are incredibly steep and are crisscrossed by huge, deep erosion gullies caused by storm drain pipes that empty out from the streets along the edges of development. This causes wide erosion gullies that are 8-10' deep and simply uncrossable. These crisscross the whole area. Topo maps should show how steep the terrain is in areas. A few of us tried to walk these two trails several years ago. We tried to walk from the west end of Governor down, and found it nearly impossible to walk due to how steep the slope is, and the fact that we had to repeatedly climb down into deep erosion gullies and back up again. We made it only a small distance of the way in over an hour. We tried to walk from the bottom up of the proposed trail alignment from Stresemann St., and that was also literally impossible to walk - a giant erosion gully about 8' deep and 10' across, and then slopes so steep we could barely keep our footing. We stopped less than half way up.

Due to their prohibitive topography, sensitive natural communities, and lack of substantial trails, these two side-canyons to Rose Canyon currently provide habitat for those wildlife species that are most sensitive to habitat fragmentation, human presence (hiking, cycling), and presence of dogs. Constructing new trails through these important areas of refuge would not only directly contradict Priority 1 Management Directive No. 2 of the MSCP Subarea Plan, which requires trails to be located "in the least sensitive areas of the MHPA," but such an undertaking would be antithetical to the MSCP's most basic conservation goals. By identifying these potential new trail alignments in the DPEIR, the City demonstrates a lack of understanding about the MSCP, MHPA, and the City's conservation responsibilities under the MSCP.

If these proposed new trails remain in the proposed Project, they will have substantial adverse effect upon sensitive riparian, coastal sage scrub, and grassland habitats, federally protected wetlands, and wildlife nursery sites. The edge effects and habitat fragmentation effects associated with these new trails would be massive. The DPEIR should disclose and evaluate all of these significant impacts in detail.

### **Proposed New Trail Between Campus Point Drive and Towne Centre Drive**

The DPEIR (Figure 3-26) identifies another new trail through sensitive coastal sage scrub habitat east of Campus Point Drive and northwest of Towne Centre Drive, all of which is designated as MHPA. This would cause significant impacts to sensitive coastal sage scrub habitat and associated special-status species, such as the California Gnatcatcher, and it would violate Priority 1 Management Directive No. 2 of the MSCP Subarea Plan, which requires trails to be located "in the least sensitive areas of the MHPA."

O4-42

O4-43

## DPEIR PROVIDES INADEQUATE AND ERRONEOUS INFORMATION ON LOCATIONS OF SPECIAL-STATUS PLANT AND WILDLIFE SPECIES

The DPEIR provides inadequate, and in some cases erroneous, information on the locations where special-status plant and wildlife species are known or likely to occur within the project area. Page 4.3-23 states:

The Biological Resources Report completed for the University CPU (Appendix D) identified 47 sensitive plant species either known to occur or with a potential to occur within the University CPU area. Refer to Table 4 of Appendix D for additional information regarding the sensitive plant species that occur or have a potential to occur within the University CPU area.

Page 4.3-27 states:

The Biological Resources Report completed for the University CPU (see Appendix D) identified 37 sensitive wildlife species either known to occur or with a potential to occur within the University CPU area. Refer to Table 6 of Appendix D for sensitive species with a potential to occur within the University CPU area.

Referring to Appendix D, the reader finds Table 4, "Sensitive Plant Species with a Potential to Occur in the UCPA" and Table 6, "Sensitive Wildlife Species with a Potential to Occur in the UCPA." These tables provide only vague information on the locations where various special-status species are known or expected to occur within the University CPU planning area. For example, the status of Nuttall's Scrub Oak, a highly sensitive species with an important population in Rose Canyon, is given as follows:

**Present.** Known from many historical locations scattered throughout the UCPA and 1-mile buffer (Alden 2023; Calflora 2023; CDFW 2023a; HELIX 2022; RECON 2023; SDNHM 2023). May occur in other suitable habitat within the UCPA.

As documented in this letter, the DPEIR's proposal to establish approximately 1.5 miles of formal trail from University Village Park north and west through existing MHPA conserved lands in the Rose Canyon watershed would unavoidably impact dense, intact stands of Nuttall's Scrub Oak. Readers of the DPEIR are not given any useful information on the known distribution of Nuttall's Scrub Oak within the DPEIR planning area, on the locations of the most important stands of this rare plant, or on the general magnitude of impacts to this species anticipated from creating the proposed formal trail through Rose Canyon. **In fact, the DPEIR gives no indication that the proposed trail would impact Nuttall's Scrub Oak at all.** The same is true for all sensitive species, such that readers have no way of evaluating the potential adverse effects of constructing any of the trails proposed in the DPEIR.

Table 5 on page 76 of Appendix D characterizes the Least Bell's Vireo (*Vireo bellii pusillus*), a species listed as endangered by federal and state governments, as "not expected" as a nesting species in the UCP planning area despite potentially suitable riparian habitat in Rose Canyon and scattered smaller pockets of riparian vegetation elsewhere in the planning area. In comments submitted to the City on the UCP Community Discussion Draft dated June 29, 2023, I noted that, from May 15 to July 19, 2021, birders P.J. Nell

O4-44

O4-45

and Jim Roberts repeatedly observed Least Bell's Vireos in Rose Canyon, including an adult feeding a begging juvenile on July 5 (<https://ebird.org/checklist/S91321310>) and July 9 (<https://ebird.org/checklist/S91518140>). My earlier letter included these links to the eBird checklists. The observations of Mr. Nell and Mr. Roberts contradict the DPEIR's determination that the Least Bell's Vireo can be excluded from analysis because this listed species is "not expected" within the project area.

O4-45  
cont.

The California Natural Diversity Data Base (CNDDDB) provides maps showing the locations where special-status plants and wildlife have been documented. CEQA practitioners routinely use these occurrence maps to prepare adequate CEQA documents. The Final PEIR (FPEIR) should include maps from CNDDDB showing the locations in the project area where special-status species have been documented, and the FPEIR's impact analysis should identify any and all special-status species known or likely to occur within proposed impacts areas. The FPEIR's impact analysis should take this relevant information into account to avoid or minimize any potentially significant impacts to special-status plant and wildlife species.

O4-46

## DPEIR'S IMPACT ANALYSIS PROVIDES INADEQUATE DETAIL TO EVALUATE IMPACTS OR TO IDENTIFY LESS-DAMAGING ALTERNATIVES

On a practical level, it makes little difference whether the EIR preparer has included or excluded the Least Bell's Vireo or any other special-status species from the DPEIR, because the impact analysis in Section 4.3 fails to describe or analyze the potential effects of any proposed action on any special-status species.

See, for example, the analysis of impacts to sensitive plants on page 4.3-53 of the DPEIR:

As future site-specific projects are proposed, implementation of the City's regulatory framework for addressing biological resources impacts including the MSCP SAP, VPHCP, ESL Regulations, and Biology Guidelines would reduce potential impacts to sensitive plant species. However, at a program level of review and in the absence of project specific analysis, it is unknown whether all impacts to sensitive plant species would be fully mitigated to a less than significant level. **Therefore, at the program level of review, impacts to sensitive plant species resulting from project implementation would be significant.** [emphasis added in bold]

O4-47

The same generic approach applies to sensitive wildlife (DPEIR at page 4.3-54):

As future site-specific projects are proposed, implementation of the City's regulatory framework for addressing biological resources impacts including the MSCP SAP, VPHCP, ESL Regulations and Biology Guidelines would reduce potential impacts to sensitive wildlife species. However, at a program level of review and in the absence of project specific analysis, it is unknown whether all impacts to sensitive wildlife species would be fully mitigated to a less than significant level. **Therefore, at the program level of review, impacts to sensitive wildlife species resulting from project implementation would be significant.** [emphasis added in bold]

The same generic approach applies to critical habitats (DPEIR at page 4.3-55):

Future development anticipated under the project that could potentially impact designated critical habitat would be required to comply with the applicable avoidance, minimization, and mitigation measures of the MSCP SAP and VPHCP, as well as the regulatory requirements of the MSCP SAP, ESL Regulations, and Biology Guidelines. As future site-specific projects are proposed, implementation of the City's regulatory framework for addressing biological resources impacts including the MSCP SAP, VPHCP, ESL Regulations and Biology Guidelines would reduce potential impacts to designated critical habitats. However, at a program level of review and in the absence of project specific analysis, it is not possible to ensure all impacts could be fully mitigated to a less than significant level. **Therefore, at the program level of review, impacts to critical habitat would be significant.** [emphasis added in bold]

The same generic approach applies to sensitive habitats (DPEIR at page 4.3-57):

Required compliance with the established development standards contained in the City's ESL Regulations, Biology Guidelines, MSCP SAP, and VPHCP would reduce potential impacts on sensitive vegetation communities resulting from future development. However, at a program level of review without project specific development proposals, it is cannot be guaranteed that every impact to sensitive habitats can be fully to a less than significant level. **Therefore, at the program level of review, impacts to sensitive habitats would be significant.** [emphasis added in bold]

O4-47  
cont.

The same generic approach applies to wetlands (DPEIR at page 4.3-59):

In addition to the City regulatory requirements, all impacts on wetlands or other jurisdictional areas would be subject to regulation by the U.S. Army Corps of Engineers in accordance with Section 404 of the CWA, Regional Water Quality Control Board in accordance with Section 401 of the CWA, and CDFW under Section 1600 of California Fish and Game Code, as applicable. As no specific projects have been identified, it cannot be guaranteed that every future project would be able to demonstrate no net loss of wetland habitat. **Therefore, at a program level of review, impacts would be significant.** [emphasis added in bold]

The purpose of a Program EIR, or any CEQA document, is not simply to acknowledge that potentially significant impacts may occur from future actions, but to give the public and decision-makers adequate information upon which to evaluate the environmental costs of one or more proposed actions. Would a proposed trail wipe out one Nuttall's Scrub Oak or would it eviscerate a major grove of Nuttall's Scrub Oaks? Both impacts would be considered significant, but their magnitudes and regulatory implications are vastly different. The DPEIR is deficient in not providing the public and decision-makers with enough information to reach informed opinions about the environmental costs of the proposed actions.

Section 15126.6(a) of the CEQA Guidelines requires the lead agency to provide meaningful analysis of alternatives that "would feasibly attain most of the basic objectives of the project, but would avoid or substantially lessen any of the significant effects of the project." Section 15126.6(b) requires the lead agency to "focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly." By providing only vague

O4-48

information about the distribution of special-status plant and wildlife species in the project area, and issuing only generic acknowledgments of significant impacts to various broad categories of resources (sensitive plants, sensitive wildlife, sensitive habitats, etc.), the DPEIR fails to explain whether or how the project's basic objectives could be accomplished while avoiding or substantially lessening any significant adverse effects of the project. This is another serious inadequacy of the DPEIR as a CEQA document.

O4-48  
cont.

### **DPEIR Provides No Information Regarding Fragmentation, Edge, and Recreation/Trail Effects**

Without adequate protection, the ecological value of urban habitats designated as MHPA will degrade over time due to habitat fragmentation, edge effects, and recreation/trail effects. The City did not take these effects into account before proposing new formal trails within the MHPA. Because the DPEIR provides almost no information about these categories of adverse effects, the information is provided here.

O4-49

#### *Fragmentation and Edge Effects*

Urbanization typically includes residential, commercial, industrial, and road-related development (i.e., the "built" environment). At the perimeter of the built environment is an area known as the urban/wildland interface, or "development edge." In ecology, "edges" are places where natural communities interface, vegetation or ecological conditions within natural communities interact (Noss 1983), or patches with differing qualities abut one another (Ries and Sisk 2004). "Edge effects" are spillover effects from the adjacent human-modified matrix that cause physical gradients in light, moisture, noise, etc. (Camargo and Kapos 1995; Murcia 1995, Sisk et al. 1997) and/or changes in biotic factors such as predator communities, density of human-adapted species, and food availability (Soulé et al. 1988; Matlack 1994; Murcia 1995; Ries and Sisk 2004).

Edge effects and habitat fragmentation are among the principal threats to persistence of biological diversity (Soulé 1991). Edge-related impacts may include:

O4-50

- Introduction/expansion of invasive exotic vegetation carried in from vehicles, people, animals or spread from backyards or fuel modification zones adjacent to wildlands.
- Higher frequency and/or severity of fire as compared to natural fire cycles or intensities.
- Companion animals (pets) that often act as predators of, and/or competitors with, native wildlife.
- Creation and use of undesignated trails that often significantly degrade the reserve ecosystems through such changes as increases in vegetation damage and noise.
- Introduction of or increased use by exotic animals which compete with or prey on native animals.

- Influence on earth systems and ecosystem processes, such as solar radiation, soil richness and erosion, wind damage, hydrologic cycle, and water pollution that can affect the natural environment.

Any of these impacts, individually or in combination, can result in the effective loss or degradation of habitats used for foraging, breeding or resting, with concomitant effects on population demographic rates of sensitive species.

Harrison and Bruna (1999) completed a review of a suite of studies dealing with fragmentation and edge effects and concluded that there is a general pattern of reduction of biological diversity in fragmented habitats compared with more intact ones, particularly with regard to habitat specialists. While physical effects associated with edges were predominant among species impacts, they found evidence for indirect effects including altered ecological interactions. Fletcher et al. (2007) found that distance from edge had a stronger effect on species than did habitat patch size, but they acknowledged the difficulty in separating those effects empirically. Many southern California plant and animal species are known to be sensitive to fragmentation and edge effects; that is, their abundance declines with fragment size and proximity to an edge (Wilcove 1985; Soulé et al. 1992; Bolger et al. 1997a,b; Suarez et al. 1998; Burke and Nol 2000).

Wildlife populations are typically changed in proximity to edges, either by changes in their demographic rates (survival and fecundity), or through behavioral avoidance of or attraction to the edge (Sisk et al. 1997; Ries and Sisk 2004). For example, coastal sage scrub areas within 250 meters of urban edges consistently contain significantly less bare ground and more coarse vegetative litter than do more “intermediate” or “interior” areas, presumably due to increased human activity/disturbance of the vegetation structure near edges (Kristan et al. 2003). Increases in vegetative litter often facilitate growth of non-native plants (particularly grasses), resulting in a positive feedback loop likely to enhance plant invasion success (Wolkovich et al. 2009). In another coastal southern California example, the abundance of native bird species sensitive to disturbance is typically depressed within 200 to 500 meters (650 to 1640 feet) of an urban edge, and the abundance of disturbance-tolerant species is elevated up to 1000 meters (3280 feet) from an urban edge, depending on the species (Bolger et al. 1997a).

Habitat fragmentation is usually defined as a landscape scale process involving habitat loss and breaking apart of habitats (Fahrig 2003). Habitat fragmentation is among the most important of all threats to global biodiversity; edge effects (particularly the diverse physical and biotic alterations associated with the artificial boundaries of fragments) are dominant drivers of change in many fragmented landscapes (Laurance and Bierregaard 1997; Laurance et al. 2007).

Fragmentation decreases the connectivity of the landscape while increasing both edge and remnant habitats. Urban and agricultural development often fragments wildland ecosystems and creates sharp edges between the natural and human-altered habitats. Edge effects for many species indirectly reduce available habitat use or utility in surrounding remaining areas; these species experience fine-scale functional habitat losses

O4-50  
cont.

(e.g., see Bolger et al. 2000; Kristan et al. 2003; Drolet et al. 2016). Losses of coastal sage scrub in southern California have resulted in the increased isolation of the remaining habitat fragments (O'Leary 1990). Fragmentation has a greater relative negative impact on specialist species (e.g., the Coastal Cactus Wren, *Campylorhynchus brunneicapillus*) that have strict vegetation structure and area habitat requirements (Soulé et al. 1992).

Specialist species have an increased risk of extirpation in isolated habitat remnants because the specialized vegetative structures and/or interspecific relationships on which they depend are more vulnerable to disruption in these areas (Vaughan 2010). In studies of the coastal sage scrub and chaparral systems of coastal southern California, fragment area and age (time since isolation) were the most important landscape predictors of the distribution and abundance of native plants (Soulé et al. 1993), scrub-breeding birds (Soulé et al. 1988; Crooks et al. 2001), native rodents (Bolger et al. 1997b), and invertebrates (Suarez et al. 1998; Bolger et al. 2000).

Edge effects that emanate from the human-dominated matrix can increase the extinction probability of isolated populations (Murcia 1995; Woodroffe and Ginsberg 1998). In studies of coastal sage scrub urban fragments, exotic cover and distance to the urban edge were the strongest local predictors of native and exotic carnivore distribution and abundance (Crooks 2002). These two variables were correlated, with more exotic cover and less native shrub cover closer to the urban edge (Crooks 2002).

The increased presence of human-tolerant "mesopredators" in southern California represents an edge effect of development; they occur within the developed matrix and are thus more abundant along the edges of habitat fragments, and they are effective predators on birds, bird nests, and other vertebrates in coastal sage scrub and chaparral systems and elsewhere (Crooks and Soulé 1999). The mammalian carnivores more typically detected in coastal southern California habitat fragments are resource generalists that likely benefit from the supplemental food resources (e.g., garden fruits and vegetables, garbage, direct feeding by humans) associated with residential developments. As a result, the overall mesopredator abundance, of such species as raccoons (*Procyon lotor*), opossums (*Didelphis virginiana*), and domestic cats (*Felis catus*), increases at sites with more exotic plant cover and closer to the urban edge (Crooks 2002). Although some carnivores within coastal sage scrub fragments seem tolerant of disturbance, many fragments have (either actually or effectively) already lost an entire suite of predator species, including mountain lion, bobcats (*Lynx rufus*), spotted skunks (*Spilogale gracilis*), long-tailed weasels (*Mustela frenata*), and badgers (*Taxidea taxus*) (Crooks 2002). Most "interior" sites within such fragments are still relatively near (within 250 meters of) urban edges (Crooks 2002).

Fragmentation generally increases the amount of edge per unit land area, and species that are adversely affected by edges can experience reduced effective area of suitable habitat (Temple and Cary 1988), which can lead to increased probability of extirpation/extinction in fragmented landscapes (Woodroffe and Ginsberg 1998). For example, diversity of native bees (Hung et al. 2015) and native rodents (Bolger et al. 1997b) is lower, and decomposition and nutrient cycling are significantly reduced (Treseder and

O4-50  
cont.

McGuire 2009), within fragmented coastal sage scrub ecosystems as compared to larger core reserves. Similarly, habitat fragmentation and alterations of sage scrub habitats likely have reduced both the genetic connectivity and diversity of coastal-slope populations of the Cactus Wren in southern California (Barr et al. 2015). Both Bell's Sparrows (*Artemisiospiza belli*) and California Thrashers (*Toxostoma redivivum*) show strong evidence of direct, negative behavioral responses to edges in coastal sage scrub; that is, they are edge-averse (Kristan et al. 2003), and California Thrashers and California Quail (*Callipepla californica*) were found to be more vulnerable to extirpation with smaller fragment size of the habitat patch (Bolger et al. 1991), demonstrating that both behavioral and demographic parameters can be involved. Other species in coastal sage scrub ecosystems, particularly the Cactus Wren and likely the California Gnatcatcher and San Diego Pocket Mouse (*Chaetodipus fallax*), are likely vulnerable to fragmentation, but for these species the mechanism is likely to be associated only with extirpation vulnerability from habitat degradation and isolation rather than aversion to the habitat edge (Kristan et al. 2003). Bolger (et al. 1997b) found that San Diego coastal sage scrub and chaparral canyon fragments under 60 acres that had been isolated for at least 30 years support very few populations of native rodents, and they suggested that fragments larger than 200 acres in size are needed to sustain native rodent species populations.

O4-50  
cont.

The penetration of exotic species into natural areas can reduce the effective size of a reserve in proportion to the distance they penetrate within the reserve: Argentine Ants serve as an in-depth example of edge effects and fragmentation. Spatial patterns of Argentine Ant abundance in scrub communities of southern California indicate that they are likely invading native habitats from adjacent developed areas, as most areas sampled greater than 200 to 250 meters from an urban edge contained relatively few or no Argentine Ants (Bolger 2007, Mitrovich et al. 2010). The extent of Argentine Ant invasions in natural environments is determined in part by inputs of urban and agricultural water run off (Holway and Suarez 2006).

Native ant species were more abundant away from edges and in areas with predominantly native vegetation. Post-fragmentation edge effects likely reduce the ability of fragments to retain native ant species; fragments had fewer native ant species than similar-sized plots within large unfragmented areas, and fragments with Argentine Ant-free refugia had more native ant species than those without refugia (Suarez et al. 1998). They displace nearly all surface-foraging native ant species (Holway and Suarez 2006) and strongly affect all native ant communities within about 150 to 200 meters from fragment edges (Suarez et al. 1998; Holway 2005; Fisher et al. 2002; Bolger 2007; Mitrovich et al. 2010). Argentine Ants are widespread in fragmented coastal scrub habitats in southern California, and much of the remaining potential habitat for Blainville's Horned Lizards (*Phrynosoma blainvillii*) is effectively unsuitable due to the penetration of Argentine Ants and the subsequent displacement of the native ant species that horned lizards need as prey (Fisher et al. 2002). Invasion of Argentine Ants into coastal sage scrub has also shown a strong negative effect on the abundance of the Gray Shrew (*Notiosorex crawfordi*) (Laakkonen et al. 2001).

### *Recreation and Trail Effects*

In the introduction to their study on the efficacy and perception of trail use enforcement at the 866-acre Del Mar Mesa Preserve in the City of San Diego, Greer et al. (2017:56-57) briefly summarized adverse effects of recreation upon ecological functions and values:

The field of Recreation Ecology studies the impacts of recreation users on various biotic and abiotic elements of the landscape. Studies have shown that various types of passive outdoor recreation can result in displacement and reduction of wildlife, the trampling of native habitat and species, impacts to soil and water resources [although] users may not be aware of their impacts or legality of their actions. This balance between recreational use and natural resource conservation has become a key element of land management around the world. [citations omitted]

Greer et al. (2017) evaluated different approaches to resolving problems associated with creation, use, and maintenance of unpermitted trails at the Del Mar Mesa Preserve, activities that had fragmented and degraded the Preserve's natural communities for at least a decade at that time. They concluded, in part:

This Study showed that soft enforcement aimed at public education and redirecting social norms was not sufficient in curbing illegal trail use in an urban natural area. The movement towards citations and the threat of citations was effective at redirecting behavior by making non-compliance more risky. This in turn had an unintended consequence of promoting hostility amongst a large user base.

The long-standing resource management problems associated with illegal trails at the Del Mar Mesa Preserve persist, with no clear resolution in sight (e.g., Karen Billing, San Diego Union Tribune, July 6, 2022: *Del Mar Mesa Preserve Tunnel Trail Vandalized* <https://www.sandiegouniontribune.com/local/story/2022-07-06/del-mar-mesa-preserve-trail-vandalized>).

## **SUMMARY AND CONCLUSION**

MSCP planners, recognizing the tremendous challenge of maintaining important ecological values in a highly fragmented landscape over long periods of time, developed the Management Policies and Directives specifically to establish guardrails against further fragmentation and degradation of the few natural areas that remain. Specifically, the Subarea Plan requires trails be sited "in the least sensitive areas of the MHPA." Disregarding these existing commitments, the DPEIR targets for the establishment of formal trails some of the least disturbed, most-intact blocks of sensitive habitats in the MHPA.

Furthermore, where the MHPA's Urban Habitat Lands are part of a natural resource park, the Subarea Plan requires that the City manage these lands in accordance with a Natural Resource Management Plan. The City has not complied in Rose Canyon or at Nobel Hill, and is now proposing additional formal trails from which new illegal trails are likely to stem. Until detailed and adequate biological studies are conducted and enforcement strategies and implementation plans are developed, no new formal trails should be proposed in MHPA within the project area.

O4-51

O4-52

Apart from these problems, the DPEIR fails to provide the public and decision-makers with enough information to reach informed opinions about the environmental costs of the proposed actions. Additionally, by providing only vague information about the distribution of special-status species in the project area, and issuing only generic acknowledgments of significant impacts to various broad categories of resources, the DPEIR fails to explain whether or how the project's basic objectives could be accomplished while avoiding or substantially lessening any significant adverse effects of the project. In these ways, the DPEIR is inadequate as a CEQA document.

O4-53

The available data, and the observations I made during my recent site visit, indicate to me that the proposed trails are likely to have significant adverse effects under each of the five thresholds identified in the DPEIR. Apart from the one-time loss of sensitive habitats from Project grading, the proposed trails would result in ongoing, long-term significant adverse effects to the remaining MHPA due to habitat fragmentation, creation of new habitat edges, and increased recreation/trail effects (as reviewed on pages 21-25 of this letter). These classes of impacts, which would be extensive and unavoidable, are not adequately evaluated or disclosed in the DPEIR. For these reasons, all trails through MHPA should be removed from the Project.

O4-54

San Diego, CA 92123  
E-Mail: [planuniversity@sandiego.gov](mailto:planuniversity@sandiego.gov)

**SUBJECT: COMMENTS ON BIOLOGICAL RESOURCE ISSUES  
UNIVERSITY COMMUNITY PLAN AND LOCAL COASTAL PLAN  
COMMUNITY DISCUSSION DRAFT (APRIL 2023)**

Dear UCP Project Manager,

The Friends of Rose Canyon is a community organization concerned with the protection of sensitive natural resources in Rose Canyon Open Space Park, and other sensitive habitat areas within the UCP planning area, consistent with existing regulations. At the request of the Friends of Rose Canyon, Hamilton Biological has reviewed the University Community Plan and Local Coastal Plan Update (hereafter “UCP/LCP Update” or “UCP”). Hamilton Biological’s review includes the *Biological Resources Report, University Community Plan Update, City Of San Diego, San Diego County, California*, dated June 26, 2020, prepared for the City of San Diego (the City) by Busby Biological Consulting, Inc. (Busby [2020] or the Busby Report).

### **OVERVIEW OF MSCP AND MHPA**

The San Diego Multiple Species Conservation Program (MSCP) was prepared pursuant to an outline developed by the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Wildlife (CDFW) to meet the requirements of the California Natural Communities Conservation Planning (NCCP) Act of 1992. The Subarea Plan forms the basis for the implementing agreement, which is the contract between the City and the wildlife agencies that ensures implementation of the Subarea Plan and thereby allows the City to issue take permits at the local level. The Subarea Plan also qualifies as a stand-alone document to implement the City’s portion of the MSCP preserve.

The City of San Diego Multi-Habitat Planning Area (MHPA) was developed by the City in cooperation with the wildlife agencies, property owners, developers, and environmental groups. The MHPA delineates core biological resource areas and corridors targeted for conservation. The MHPA represents a “hard line” preserve, in which

316 Monrovia Avenue  Long Beach, CA 90803  562-477-2181  [robb@hamiltonbiological.com](mailto:robb@hamiltonbiological.com)

boundaries have been specifically determined. It is considered an urban preserve which is constrained by existing or approved development, and is comprised of linkages connecting several large areas of habitat.

### **Subarea Plan Section 1.5.2, General Management Directives**

Section 1.5.2 of the Subarea Plan outlines the plan's general Management Directives that support the MSCP's Conservation Objectives. The Directives are organized by Priority to assist decisions on where to spend limited funds and direct mitigation efforts. Priority 1 refers to Directives that protect management actions needed to adequately protect MSCP-covered species within the MHPA, and Priority 2 refers to Directives that address the long-term conservation actions that can be implemented during the life of the City Subarea Plan as funds become available. The following Priority 1 Directives, from Section 1.5.2 of the Subarea Plan, apply to projects within the UCP planning area.

### **Priority 1 Directives for Public Access, Trails, and Recreation**

1. Provide sufficient signage to clearly identify public access to the MHPA. Barriers such as vegetation, rocks/boulders, or fencing may be necessary to protect highly sensitive areas. Use an appropriate type of barrier based on location, setting, and use. For example, use chain link or cattle wire to direct wildlife movement, and natural rocks/boulders or split rail fencing to direct public access away from sensitive areas. Lands acquired through mitigation may preclude public access to satisfy mitigation.
2. Locate trails, view overlooks, and staging areas in the least sensitive areas of the MHPA. Locate trails along the edges of urban land uses adjacent to the MHPA, or the seam between land uses (e.g., agriculture/habitat), and follow existing dirt roads as much as possible rather than entering habitat or wildlife movement areas. Avoid locating trails between two different habitat types (ecotones) for longer than necessary because of the typically heightened resource sensitivity in those locations.
3. In general, avoid paving trails unless management and monitoring evidence shows otherwise. Clearly demarcate and monitor trails for degradation and off trail access and use. Provide trail repair/maintenance as needed. Undertake measures to counter the effects of trail erosion, including the use of stone or wood cross joints, edge plantings of native grasses, and mulching of the trail.
4. Minimize trail widths to reduce impacts to critical resources. For the most part, do not locate trails wider than four (4) feet in core areas or wildlife corridors. Exceptions are in the San Pasqual Valley, where other agreements have been made; in Mission Trails Regional Park, where appropriate; and in other areas where necessary to safely accommodate multiple uses or disabled access. Provide trail fences or other barriers at strategic locations when protection of sensitive resources is required.

5. Limit the extent and location of equestrian trails to the less sensitive areas of the MHPA. Locate staging areas for equestrian uses at a sufficient distance (e.g., 300 to 500 feet) from areas with riparian and coastal sage scrub habitats to ensure that the biological values are not impaired.
6. Off-road or cross-country vehicle activity is an incompatible use in the MHPA, except when these vehicles are used for law enforcement, preserve management, or emergency purposes. Restore disturbed areas to native habitat where possible or critical, or allow to regenerate.
7. Limit recreational uses to passive uses such as birdwatching, photography, and trail use. Locate developed picnic areas near MHPA edges or specific areas within the MHPA to minimize littering, feeding of wildlife, and attracting or increasing populations of exotic or nuisance wildlife (e.g., opossums, raccoons, skunks). Where permitted, restrain pets on leashes.
8. Remove homeless and itinerant worker camps in habitat areas as soon as found pursuant to existing enforcement procedures.
9. Maintain equestrian trails on a regular basis to remove manure (and other pet feces) from the trails and preserve system in order to control cowbird invasion and predation. Design and maintain trails where possible to drain into a gravel bottom or vegetated (e.g., grass-lined) swale or basin to detain runoff and remove pollutants.

A portion of the UCP planning area, including Torrey Pines State Park, lies within the “Northern Area” described in Section 1.2.4 of the Subarea Plan. The Subarea Plan does not identify any additional Management Policies and Directives for this portion of the UCP planning area that warrant discussion in these comments.

Most of the UCP planning area lies within the “Urban Area” described in Section 1.2.3 of the Subarea Plan. The following Management Policies and Directives, from Section 1.5.7 of the Subarea Plan, apply to projects within the “Urban Area” portion of the UCP planning area.

### **Overall Management Policies and Directives for Urban Habitat Lands**

1. Where the MHPA’s Urban Habitat Lands are part of a natural resource park, the City Park and Recreation Department shall manage these lands in accordance with a Natural Resource Management Plan (NRMP). The NRMPs for Urban Habitat Lands include the Marian Bear Memorial Park NRMP, Mission Bay Park NRMP, First San Diego River Improvement Project, and Los Peñasquitos Canyon Preserve NRMP.
2. All other Urban Habitat Lands included within the MHPA should be managed, to the extent possible, according to the general management policies and directives as described in the City Subarea Plan and summarized above.

3. Special management needs or issues for specific Urban Habitat Lands should be resolved by the MHPA Preserve Managers according to an appropriate adaptive management strategy and through coordination with the MSCP habitat management technical committee.

## **UCP PURPOSE AND CONTEXT IS INCOMPLETE AND FLAWED FOR FAILING TO INCORPORATE THE SUBAREA PLAN'S MANAGEMENT POLICIES AND DIRECTIVES**

Page 11 of the UCP (Plan Purpose and Context) lists four citywide policy documents and one regional plan that the City took into account in preparing the UCP:

The policies in this plan are based on several previously adopted citywide policy documents, including the General Plan, Climate Action Plan, Parks Master Plan and Climate Resilient SD. The purpose of this Community Plan is to apply and in some instances tailor the strategies and policies in those plans as appropriate for the University Community. In addition, the regional plan prepared by SANDAG, San Diego Forward, serves as a basis for policies related to mobility and how the University community relates to the region as a whole.

Rather than incorporating the Subarea Plan's adopted Management Policies and Directives into the policies of the UCP, the City treats these requirements as afterthoughts that may be considered in the future, after the UCP has been adopted. For example, page 126 of the UCP states:

Note that trails and recreation on lands subject to the Multi-Habitat Planning Areas (MHPA) should comply with the Multiple Species Conservation Program (MSCP) for compatibility.

Other sections of the UCP state that the ultimate alignments of the new trails proposed within MHPA "shall comply" with the MSCP (versus "should comply"). In either case, the problem is that the UCP proposes trails in areas known to have sensitive biological resources and/or steep topography that would necessitate extensive disturbance for trail construction. The City's approach violates the Subarea Plan as well as Policy PP10 in the City's adopted Parks Master Plan:

To ensure the City adheres to its conservation commitments, **all proposals for new or revised access, trails, and active uses in resource/open space parklands must comply with all applicable limitations, such as the MSCP consistency findings**, Environmentally Sensitive Land regulations, Natural Resource Management Plans, etc. **before being formally proposed for City evaluation and funding** (see policies CSR25 and RP5). [emphasis added]

As discussed subsequently in this letter, some or all of the new trails proposed in the UCP cannot possibly be implemented in compliance with the Subarea Plan, regardless of their ultimate alignments. In particular, *Priority 1 Directive No. 2* restricts the construction of trails through sensitive areas:

Locate trails, view overlooks, and staging areas **in the least sensitive areas of the MHPA**. Locate trails along the edges of urban land uses adjacent to the MHPA, or the seam between land uses (e.g., agriculture/habitat), and follow existing dirt roads as much as possible rather than entering habitat or wildlife movement areas. Avoid locating trails between two different

habitat types (ecotones) for longer than necessary because of the typically heightened resource sensitivity in those locations. [emphasis added]

As discussed previously, the City is required to implement all Priority 1 Directives as a condition of its MSCP Take Authorization. Thus the City’s refusal to explicitly incorporate all relevant MSCP Management Policies and Directives into the UCP not only violates the Parks Master Plan and undermines the UCP’s credibility as a planning document, but it puts the City’s MSCP Take Authorization at risk of revocation by the resource agencies.

## VISION AND LAND USE FRAMEWORK IGNORES MSCP REQUIREMENTS

Page 17 of the UCP (Vision and Land Use Framework) lists the seven Goals of the plan. None of the UCP’s goals mentions complying with the City’s existing commitment to MSCP land-use planning by implementing the Subarea Plan.

Pages 20–29 of the UCP list 15 Priorities of the plan. One of them, on page 27, touches upon open-space planning:

**Dedicating and Celebrating Open Space:** Open space defines the character of this community. Within this plan there are opportunities to expand open space dedications to ensure their long term conservation. This plan also seeks to strike a balance to allow access for people to appreciate open space and the benefits its protection affords.

This statement implies that the MSCP places too many restrictions on recreational uses within MHPA, and that increased human access into sensitive habitat areas is needed to “strike a balance” between recreation and conservation. Please refer to Exhibit A, below.

**Exhibit A.** For simplicity, this exhibit focuses on the southern part of the UCP planning area—the triangle formed by Interstate 5, Interstate 805, and State Route 52. No ecologist, or other conservation-minded person, looking at this landscape would conclude that building new trails in the few preserved areas not already serviced by formal trails would somehow “strike a balance” between the needs of humans and the needs of sensitive native plant and wildlife species.

As shown in Exhibit A on the previous page, roads and structures occupy nearly all of the hilltops, ridges, and relatively flat grasslands in the southern part of the UCP planning area. The undeveloped canyons that remain (i.e., the MHPA) are crossed by numerous paved roads and laced with an extensive network of trails – authorized or informal – that facilitates access for large numbers of people, bicycles, e-bikes, and dogs.

MSCP planners, recognizing the tremendous challenge of maintaining important ecological values in a highly fragmented landscape over long periods of time, developed the Subarea Plan’s Management Policies and Directives specifically to establish guardrails against further fragmentation and degradation of the few natural areas that remain. Disregarding these *existing conservation mandates*, the UCP targets for new trails precisely the least disturbed, most intact blocks of sensitive habitats in the MHPA. Without irony, the UCP does so in the name of *striking a balance* between habitat conservation and increased human mobility and recreation. The bottom line is that only trails that satisfy all relevant Management Policies and Directives contained in the Subarea Plan are allowable under the MSCP. The UCP must acknowledge that the primary purpose of MHPA lands is resource conservation, with other uses allowed only to the extent they comply with the MSCP Subarea Plan’s Management Policies and Directives.

## **“NATURE BASED PARK” VS. GENERIC “OPEN SPACE”**

Figure 3 on page 31 of the UCP (Planned Land Use) designates Torrey Pines State Natural Reserve as “Nature Based Park” but designates the remaining MHPA as generic “open space.” Under the MSCP Subarea Plan, MHPA represents a “hard line” preserve consisting of core biological resource areas and corridors targeted for conservation. As an objective and straightforward planning document, the UCP should clearly and consistently identify the Subarea Plan’s MHPA open space designations and acknowledge, rather than obfuscate, the City’s conservation commitments wherever they exist in the UCP planning area.

## **URBAN FORESTRY**

The Urban Forestry section of the UCP proposes plantings of the following species of tree known to be invasive in San Diego County<sup>1</sup>: Evergreen Ash (*Fraxinus uhdei*), Chinese Elm (*Ulmus parvifolia*), Red River Gum (*Eucalyptus camadulensis*), and Mexican Fan Palm (*Washingtonia robusta*). No exotic plant species known to be invasive in San Diego County should be planted in the UCP area. Additional plantings of species native to the local area would be appropriate.

Trees should not be planted along roads adjacent to MHPA, as they can shade native scrub habitat, reduce habitat suitability for the California Gnatcatcher and other scrub-dependent wildlife, and provide suitable nesting habitat for the Cooper’s Hawk, an increasingly common raptor that preys mainly on small birds.

---

<sup>1</sup> <https://www.sandiegocounty.gov/content/dam/sdc/pds/docs/Landscape/WELDManual-Appendix-I.pdf>

## **OPEN SPACE AND CONSERVATION**

The Open Space and Conservation section of the UCP provides brief summaries of the MSCP and other conservation planning efforts that affect the UCP. Lacking, however, is a straightforward listing of the relevant Management Policies and Directives from the Subarea Plan and a credible determination by the City that any new trails proposed in the UCP comply with all MSCP requirements.

### **TABLE 6: UCP PLAN POLICIES**

Because the City has committed to adhering to all Management Policies and Directives contained in the MSCP Subarea Plan, a reader of the UCP should be able to evaluate the extent to which proposed actions comply with these MSCP requirements. Toward this end, the relevant Management Policies and Directives from the Subarea Plan should be included in the Table 6. Excluding these policies establishes a perceptual gap between what is required under the MSCP and what is being proposed in the UCP, a gap that does not serve any legitimate planning purpose.

### **REVIEW OF BIOLOGICAL RESOURCES REPORT (BUSBY 2020)**

As part of my review, I evaluated the adequacy of the *Biological Resources Report, University Community Plan Update, City of San Diego, San Diego County, California*, (Busby 2020 or the Busby Report) as an informational and analytical document provided in support of the UCP.

#### **Busby Report is Out of Date**

As an initial observation, such reports are generally considered valid for one year after preparation, so the Busby Report is two years out of date.

#### **Busby Report Contains No Analyses**

Page 1 of the Busby Report (Introduction) summarizes the report's purpose:

To inform the UCP update (UCPU), this biological resources report provides a summary of the existing biological resources within the UCP area and assesses potential impacts to these biological resources that may occur through implementation of the updated UCP.

The Busby Report summarizes the regulatory framework of federal, state, and local resource-protection policies and regulations that may be relevant to future impact analyses, but the authors did not use them to analyze the potential effects of implementing the UCP on any natural resource.

Page 41 of the Busby Report (Methods) states, "this UCPU biological resources report is intended to provide a broad-scale analysis of biological resources," but the report includes no impact analysis at any scale.

Given that the Busby Report provides no assessment of potential impacts to biological resources, or conflicts with regulatory requirements, that could occur due to

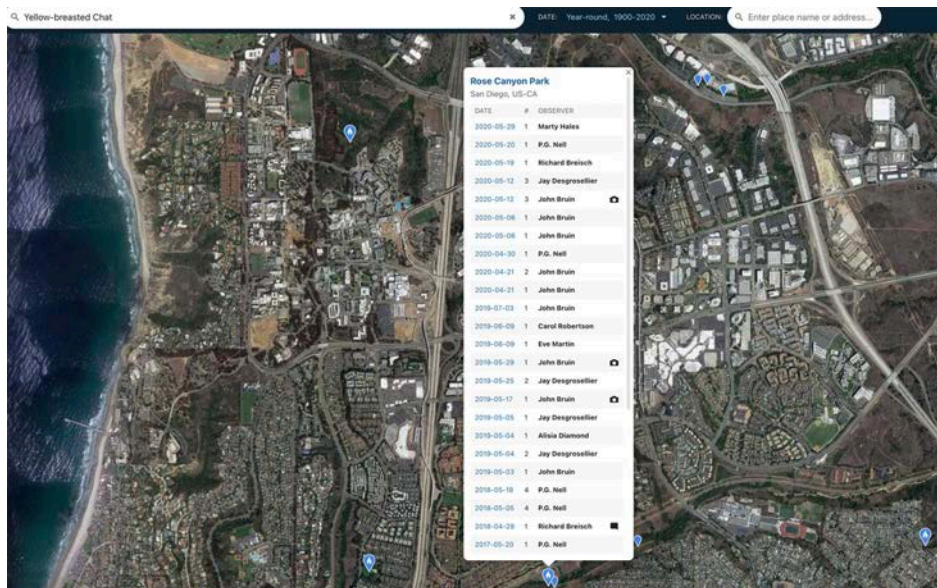

implementation of the UCP, the City would have no basis for referring to this document as supporting any conclusions of the UCP with regard to impact analysis or regulatory compliance.

### Busby Report’s Sensitive Species Information is Incomplete

Much of the Busby Report consists of Table 3, *Sensitive Plant Species with a Potential to Occur within the University Community Plan Update Area*, and Table 4, *Sensitive Wildlife Species with a Potential to Occur in University Community Plan Update Area*. These tables, however, are three years old and fail to incorporate relevant information from public online databases routinely used by field ecologists determining and evaluating the local occurrences of special-status species. Specifically, Busby’s literature review excludes iNaturalist and eBird, both of which document, or at least report, occurrences of special-status species, many of which are never reported to the California Natural Diversity Data Base, Calflora, or other sources referenced in the Busby Report.

The reports in both iNaturalist and eBird are vetted by experts to weed out obviously false reports and to verify evidence that can be confirmed, such as photos showing characteristic field marks. By omitting these important sources of information, the Busby Report provides incomplete and in some cases misleading information on the special-status species known or expected in parts of the UCP planning area. An egregious example is provided by the **Yellow-breasted Chat**, a California Species of Special Concern found in and around riparian areas. Chats have been known to summer in Rose Canyon for more than a decade, yet the species is not mentioned in the Busby Report. The following Exhibit B, a screen-grab from <http://eBird.org>, provides a partial summary of Yellow-breasted Chat records from Rose Canyon Open Space Park that were available at the time the Busby Report was prepared in 2020.

**Exhibit B.** Screen grab from eBird showing a partial list of numerous records of the Yellow-breasted Chat at Rose Canyon Open Space Park from 2017 to 2020, some documented with photographs. The species has also been recorded at several other locations within the UCP planning area.

Page 89 of the Busby Report characterizes the **Least Bell's Vireo**, a species listed as endangered by federal and state governments, as "not expected" as a nesting species in the UCP planning area despite potentially suitable riparian habitat in Rose Canyon and scattered smaller pockets of riparian vegetation elsewhere in the planning area. From May 15 to July 19, 2021, birders P.J. Nell and Jim Roberts repeatedly observed Least Bell's Vireos in Rose Canyon, including an adult feeding a begging juvenile on July 5 (<https://ebird.org/checklist/S91321310>) and July 9 (<https://ebird.org/checklist/S91518140>). Although these observations post-date the 2020 Busby Report, they occurred two years before the UCP was released and would be included in a current and adequate report. This nesting record contradicts the Busby Report's conclusion that nesting by the Least Bell's Vireo is "not expected" within the UCP planning area.

### **No Maps of Special-Status Species or Wildlife Use Areas**

In evaluating the appropriateness of potential trail alignments, biologists and planners normally utilize maps showing the locations where special-status plant and wildlife species have been observed. Also valuable in this regard are maps showing areas used as wildlife denning sites or other forms of refugia for wildlife species that may be sensitive to human disturbance (e.g., nesting raptors, Bobcats). The Busby Report provides no such maps.

### **No Evaluation of Fragmentation, Edge, and Recreation/Trail Effects**

The UCP planning area is mostly developed in the existing condition, with natural open space occurring in fragments constrained by surrounding development (see, for example, Exhibit A on page 5 of this letter). Nevertheless, some of these habitat fragments retain important ecological values, as reflected by their designation as MHPA. If these reserve lands are protected from significant habitat degradation resulting from habitat fragmentation, edge effects, and recreation/trail effects, as required under the MSCP, many sensitive plant and wildlife populations can be expected to persist in these fragments over the long term. Without adequate protection, however, the ecological value of these fragments will degrade over time. Given the importance of addressing these topics across the MHPA, it is surprising and disappointing that the Busby Report contains only four mentions of habitat fragmentation, three of which are in reference to construction policies for roads and utilities passing through MHPA (page 15). The fourth reference, on page 98, is contained in the report's perfunctory and inaccurate discussion of "Wildlife Movement Corridors." Even more surprising is the Busby Report's lack of discussion of edge effects or recreation/trail effects, which are of paramount importance to MSCP planning. The following overview of these concepts, as distilled from the peer-reviewed literature, is offered as a useful contribution to the UCP planning process. The City must take into account these adverse effects before considers proposing any new trails in the MHPA.

#### *Fragmentation and Edge Effects*

Urbanization typically includes residential, commercial, industrial, and road-related development (i.e., the "built" environment). At the perimeter of the built environment is

an area known as the urban/wildland interface, or “development edge.” In ecology, “edges” are places where natural communities interface, vegetation or ecological conditions within natural communities interact (Noss 1983), or patches with differing qualities abut one another (Ries and Sisk 2004). “Edge effects” are spillover effects from the adjacent human-modified matrix that cause physical gradients in light, moisture, noise, etc. (Camargo and Kapos 1995; Murcia 1995, Sisk et al. 1997) and/or changes in biotic factors such as predator communities, density of human-adapted species, and food availability (Soulé et al. 1988; Matlack 1994; Murcia 1995; Ries and Sisk 2004).

Edge effects and habitat fragmentation are among the principal threats to persistence of biological diversity (Soulé 1991). Edge-related impacts may include:

- Introduction/expansion of invasive exotic vegetation carried in from vehicles, people, animals or spread from backyards or fuel modification zones adjacent to wildlands.
- Higher frequency and/or severity of fire as compared to natural fire cycles or intensities.
- Companion animals (pets) that often act as predators of, and/or competitors with, native wildlife.
- Creation and use of undesignated trails that often significantly degrade the reserve ecosystems through such changes as increases in vegetation damage and noise.
- Introduction of or increased use by exotic animals which compete with or prey on native animals.
- Influence on earth systems and ecosystem processes, such as solar radiation, soil richness and erosion, wind damage, hydrologic cycle, and water pollution that can affect the natural environment.

Any of these impacts, individually or in combination, can result in the effective loss or degradation of habitats used for foraging, breeding or resting, with concomitant effects on population demographic rates of sensitive species.

Harrison and Bruna (1999) completed a review of a suite of studies dealing with fragmentation and edge effects and concluded that there is a general pattern of reduction of biological diversity in fragmented habitats compared with more intact ones, particularly with regard to habitat specialists. While physical effects associated with edges were predominant among species impacts, they found evidence for indirect effects including altered ecological interactions. Fletcher et al. (2007) found that distance from edge had a stronger effect on species than did habitat patch size, but they acknowledged the difficulty in separating those effects empirically. Many southern California plant and animal species are known to be sensitive to fragmentation and edge effects; that is, their abundance declines with fragment size and proximity to an edge (Wilcove 1985; Soulé et al. 1992; Bolger et al. 1997a,b; Suarez et al. 1998; Burke and Nol 2000).

Wildlife populations are typically changed in proximity to edges, either by changes in their demographic rates (survival and fecundity), or through behavioral avoidance of or attraction to the edge (Sisk et al. 1997; Ries and Sisk 2004). For example, coastal sage scrub areas within 250 meters of urban edges consistently contain significantly less bare ground and more coarse vegetative litter than do more “intermediate” or “interior” areas, presumably due increased human activity/disturbance of the vegetation structure near edges (Kristan et al. 2003). Increases in vegetative litter often facilitate growth of non-native plants (particularly grasses), resulting in a positive feedback loop likely to enhance plant invasion success (Wolkovich et al. 2009). In another coastal southern California example, the abundance of native bird species sensitive to disturbance is typically depressed within 200 to 500 meters (650 to 1640 feet) of an urban edge, and the abundance of disturbance-tolerant species is elevated up to 1000 meters (3280 feet) from an urban edge, depending on the species (Bolger et al. 1997a).

Habitat fragmentation is usually defined as a landscape scale process involving habitat loss and breaking apart of habitats (Fahrig 2003). Habitat fragmentation is among the most important of all threats to global biodiversity; edge effects (particularly the diverse physical and biotic alterations associated with the artificial boundaries of fragments) are dominant drivers of change in many fragmented landscapes (Laurance and Bierregaard 1997; Laurance et al. 2007).

Fragmentation decreases the connectivity of the landscape while increasing both edge and remnant habitats. Urban and agricultural development often fragments wildland ecosystems and creates sharp edges between the natural and human-altered habitats. Edge effects for many species indirectly reduce available habitat use or utility in surrounding remaining areas; these species experience fine-scale functional habitat losses (e.g., see Bolger et al. 2000; Kristan et al. 2003; Drolet et al. 2016). Losses of coastal sage scrub in southern California have resulted in the increased isolation of the remaining habitat fragments (O’Leary 1990). Fragmentation has a greater relative negative impact on specialist species (e.g., the Coastal Cactus Wren, *Campylorhynchus brunneicapillus*) that have strict vegetation structure and area habitat requirements (Soulé et al. 1992).

Specialist species have an increased risk of extirpation in isolated habitat remnants because the specialized vegetative structures and/or interspecific relationships on which they depend are more vulnerable to disruption in these areas (Vaughan 2010). In studies of the coastal sage scrub and chaparral systems of coastal southern California, fragment area and age (time since isolation) were the most important landscape predictors of the distribution and abundance of native plants (Soulé et al. 1993), scrub-breeding birds (Soulé et al. 1988; Crooks et al. 2001), native rodents (Bolger et al. 1997b), and invertebrates (Suarez et al. 1998; Bolger et al. 2000).

Edge effects that emanate from the human-dominated matrix can increase the extinction probability of isolated populations (Murcia 1995; Woodroffe and Ginsberg 1998). In studies of coastal sage scrub urban fragments, exotic cover and distance to the urban edge were the strongest local predictors of native and exotic carnivore distribution and

abundance (Crooks 2002). These two variables were correlated, with more exotic cover and less native shrub cover closer to the urban edge (Crooks 2002).

The increased presence of human-tolerant “mesopredators” in southern California represents an edge effect of development; they occur within the developed matrix and are thus more abundant along the edges of habitat fragments, and they are effective predators on birds, bird nests, and other vertebrates in coastal sage scrub and chaparral systems and elsewhere (Crooks and Soulé 1999). The mammalian carnivores more typically detected in coastal southern California habitat fragments are resource generalists that likely benefit from the supplemental food resources (e.g., garden fruits and vegetables, garbage, direct feeding by humans) associated with residential developments. As a result, the overall mesopredator abundance, of such species as raccoons (*Procyon lotor*), opossums (*Didelphis virginiana*), and domestic cats (*Felis catus*), increases at sites with more exotic plant cover and closer to the urban edge (Crooks 2002). Although some carnivores within coastal sage scrub fragments seem tolerant of disturbance, many fragments have (either actually or effectively) already lost an entire suite of predator species, including mountain lion, bobcats (*Lynx rufus*), spotted skunks (*Spilogale gracilis*), long-tailed weasels (*Mustela frenata*), and badgers (*Taxidea taxus*) (Crooks 2002). Most “interior” sites within such fragments are still relatively near (within 250 meters of) urban edges (Crooks 2002).

Fragmentation generally increases the amount of edge per unit land area, and species that are adversely affected by edges can experience reduced effective area of suitable habitat (Temple and Cary 1988), which can lead to increased probability of extirpation/extinction in fragmented landscapes (Woodroffe and Ginsberg 1998). For example, diversity of native bees (Hung et al. 2015) and native rodents (Bolger et al. 1997b) is lower, and decomposition and nutrient cycling are significantly reduced (Treseder and McGuire 2009), within fragmented coastal sage scrub ecosystems as compared to larger core reserves. Similarly, habitat fragmentation and alterations of sage scrub habitats likely have reduced both the genetic connectivity and diversity of coastal-slope populations of the Cactus Wren in southern California (Barr et al. 2015). Both Bell’s Sparrows (*Artemisiospiza belli*) and California Thrashers (*Toxostoma redivivum*) show strong evidence of direct, negative behavioral responses to edges in coastal sage scrub; that is, they are edge-averse (Kristan et al. 2003), and California Thrashers and California Quail (*Callipepla californica*) were found to be more vulnerable to extirpation with smaller fragment size of the habitat patch (Bolger et al. 1991), demonstrating that both behavioral and demographic parameters can be involved. Other species in coastal sage scrub ecosystems, particularly the Cactus Wren and likely the California Gnatcatcher and San Diego Pocket Mouse (*Chaetodipus fallax*), are likely vulnerable to fragmentation, but for these species the mechanism is likely to be associated only with extirpation vulnerability from habitat degradation and isolation rather than aversion to the habitat edge (Kristan et al. 2003). Bolger (et al. 1997b) found that San Diego coastal sage scrub and chaparral canyon fragments under 60 acres that had been isolated for at least 30 years support very few populations of native rodents, and they suggested that fragments larger than 200 acres in size are needed to sustain native rodent species populations.

The penetration of exotic species into natural areas can reduce the effective size of a reserve in proportion to the distance they penetrate within the reserve: Argentine Ants serve as an in-depth example of edge effects and fragmentation. Spatial patterns of Argentine Ant abundance in scrub communities of southern California indicate that they are likely invading native habitats from adjacent developed areas, as most areas sampled greater than 200 to 250 meters from an urban edge contained relatively few or no Argentine Ants (Bolger 2007, Mitrovich et al. 2010). The extent of Argentine Ant invasions in natural environments is determined in part by inputs of urban and agricultural water run off (Holway and Suarez 2006).

Native ant species were more abundant away from edges and in areas with predominantly native vegetation. Post-fragmentation edge effects likely reduce the ability of fragments to retain native ant species; fragments had fewer native ant species than similar-sized plots within large unfragmented areas, and fragments with Argentine Ant-free refugia had more native ant species than those without refugia (Suarez et al. 1998). They displace nearly all surface-foraging native ant species (Holway and Suarez 2006) and strongly affect all native ant communities within about 150 to 200 meters from fragment edges (Suarez et al. 1998; Holway 2005; Fisher et al. 2002; Bolger 2007; Mitrovich et al. 2010). Argentine Ants are widespread in fragmented coastal scrub habitats in southern California, and much of the remaining potential habitat for Blainville's Horned Lizards (*Phrynosoma blainvillii*) is effectively unsuitable due to the penetration of Argentine Ants and the subsequent displacement of the native ant species that horned lizards need as prey (Fisher et al. 2002). Invasion of Argentine Ants into coastal sage scrub has also shown a strong negative effect on the abundance of the Gray Shrew (*Notiosorex crawfordi*) (Laakkonen et al. 2001).

### *Recreation and Trail Effects*

In the introduction to their study on the efficacy and perception of trail use enforcement at the 866-acre Del Mar Mesa Preserve in the City of San Diego, Greer et al. (2017:56-57) briefly summarized adverse effects of recreation upon ecological functions and values:

The field of Recreation Ecology studies the impacts of recreation users on various biotic and abiotic elements of the landscape. Studies have shown that various types of passive outdoor recreation can result in displacement and reduction of wildlife, the trampling of native habitat and species, impacts to soil and water resources [although] users may not be aware of their impacts or legality of their actions. This balance between recreational use and natural resource conservation has become a key element of land management around the world. [citations omitted]

Greer et al. (2017) evaluated different approaches to resolving problems associated with creation, use, and maintenance of unpermitted trails at the Del Mar Mesa Preserve, activities that had fragmented and degraded the Preserve's natural communities for at least a decade at that time. They concluded, in part:

This Study showed that soft enforcement aimed at public education and redirecting social norms was not sufficient in curbing illegal trail use in an urban natural area. The movement towards citations and the threat of citations was effective at redirecting behavior by making

non-compliance more risky. This in turn had an unintended consequence of promoting hostility amongst a large user base.

The long-standing resource management problems associated with illegal trails at the Del Mar Mesa Preserve persist, with no clear resolution in sight (e.g., Karen Billing, San Diego Union Tribune, July 6, 2022: *Del Mar Mesa Preserve Tunnel Trail Vandalized* <https://www.sandiegouniontribune.com/local/story/2022-07-06/del-mar-mesa-preserve-trail-vandalized>).

## EVALUATION OF TWO PROPOSED NEW TRAILS IN UCP

All trails, including those that are carefully sited and well-designed, necessarily contribute to habitat fragmentation, edge effects, and recreation impacts. To minimize these insidious forms of habitat degradation, Section 1.5.2 of the Subarea Plan identifies several Priority 1 Directives for Public Access, Trails, and Recreation. As discussed previously in this letter, the most important of these for the UCP project is No. 2:

Locate trails, view overlooks, and staging areas in the least sensitive areas of the MHPA. Locate trails along the edges of urban land uses adjacent to the MHPA, or the seam between land uses (e.g., agriculture/habitat), and follow existing dirt roads as much as possible rather than entering habitat or wildlife movement areas. Avoid locating trails between two different habitat types (ecotones) for longer than necessary because of the typically heightened resource sensitivity in those locations.

I have not yet visited the specific areas that would be impacted by proposed new trails, but examination of aerial imagery and Figure 7-2 in the Busby Report (Sensitive Vegetation Communities) demonstrate to me that construction of at least two of the proposed new trails – from Governor Drive and from Stresemann Street to the bottom of Rose Canyon – would be grossly inconsistent with the MSCP's conservation goals. These two trails would be built through sensitive wetlands, native grasslands, and coastal sage scrub in two major side-canyons to Rose Canyon that lack substantial trails in the existing condition (see Exhibit C on the next page). According to Debby Knight (in litt.):

The canyons there are incredibly steep and are crisscrossed by huge, deep erosion gullies caused by storm drain pipes that empty out from the streets along the edges of development. This causes wide erosion gullies that are 8-10' deep and simply uncrossable. These crisscrossing the whole area. Topo maps should show how steep the terrain is in areas. A few of us tried to walk these two trails several years ago. We tried to walk from the west end of Governor down, and found it nearly impossible to walk due to how steep the slope is, and the fact that we had to repeatedly climb down into deep erosion gullies and back up again. We made it only a small distance of the way in over an hour. We tried to walk from the bottom up of the proposed trail alignment from Stresemann St., and that was also literally impossible to walk - a giant erosion gully about 8' deep and 10' across, and then slopes so steep we could barely keep our footing. We stopped less than half way up.

Because of their prohibitive topography, the sensitive natural communities, and lack of substantial trails, these two side-canyons to Rose Canyon currently provide habitat for those wildlife species that are most sensitive to habitat fragmentation, human presence (hiking, cycling), and presence of dogs. Constructing new trails through these important areas of refuge would be completely antithetical to MSCP conservation goals.

**Exhibit C.** Showing the conceptual, or schematic, alignments for approximately one mile of new trails that the UCP proposes to connect from Governor Drive (northern trail) and Stresemann Street (southern trail) to the southern end of the existing Rose Canyon Trail. Contrary to MSCP planning principles, these trails would be built through steep terrain vegetated with sensitive plant communities (wetlands, native grassland, coastal sage scrub) in canyons that currently lack substantial trails. Such areas are especially valuable for wildlife that is sensitive to habitat fragmentation, human presence (hiking, cycling), and interactions with dogs.

## **ALL PROPOSED TRAILS MUST BE EVALUATED FOR MSCP CONSISTENCY**

The two trails discussed previously and shown in Exhibit C present the most obvious conflicts with the MSCP and the MHPA. Given the hard line reserve status of the urban reserve lands in the MHPA, it is unlikely that any new trails, apart from trails proposed entirely on existing dirt roads, could be legitimately determined to be consistent with MSCP requirements. The City must conduct a thorough and credible evaluation for MSCP consistency before proposing any new trails in the MHPA.

## **CONCLUSION**

As discussed herein, the City's exclusion of the relevant MSCP Management Policies and Directives from the UCP violates the Parks Master Plan, undermines the UCP's credibility as a planning document, and puts the City's MSCP Take Authorization at risk of revocation by the resource agencies. Furthermore, by prematurely proposing new trails in the absence of a current biological technical report that credibly demonstrates the UCP's consistency with the MSCP and Subarea Plan, the City is improperly raising expectations among the public that these trails can and will be built. The predictable result is unwarranted conflict between environmental and recreational user groups. For these important reasons, the City should withdraw all proposed trails through the MHPA until a credible analysis of MSCP consistency can be completed.

### **SUBJECT: COMMENTS ON BIOLOGICAL RESOURCE ISSUES BLUEPRINT SD, DISCUSSION DRAFT**

Dear Blueprint SD Project Manager,

The Friends of Rose Canyon is a community organization concerned with the protection of sensitive natural resources in Rose Canyon Open Space Park, and other sensitive habitat areas in the City of San Diego, consistent with existing regulations. At the request of the Friends of Rose Canyon, Hamilton Biological has reviewed the Blueprint SD proposed amendments to the City of San Diego's General Plan and provides these comments on items relevant to the San Diego Multiple Species Conservation Program (MSCP) and other biological resource issues.

### **CONSERVATION ELEMENT**

#### **Tree Planting, Urban Forestry**

Proposed language that may be improved:

CE-A.12. Identifying City lands and spaces that need trees and identify ways to increase permeable areas for new trees. Prioritize implementation in areas with the greatest needs.

CE-A.13. Plant trees (consistent with habitat and water conservation policies) for their many environmental benefits, including natural carbon sequestration.

CE-J.1.1. Identifying City lands and spaces that need trees and identify ways to increase permeable areas for new trees. Prioritize implementation in areas with the greatest needs.

Existing policies that may be strengthened:

CE-B.1.e. Encourage the removal of invasive plant species and the planting of native plants near open space preserves.

CE-G.1.e. Remove, avoid, or discourage the planting of invasive plant species.

The City of San Diego Multi-Habitat Planning Area (MHPA) delineates core biological resource areas and corridors targeted for conservation. Many rare and declining plant and wildlife species dependent upon maritime succulent scrub and coastal sage scrub vegetation communities – most notably the California Gnatcatcher and Cactus Wren – are deemed to be “covered” under the MSCP based upon determinations that their populations are being effectively conserved within the MHPA.

Scrub-dependent species require open, low-growing habitats such as maritime succulent scrub and coastal sage scrub. Planting tall trees adjacent to scrub habitat can reduce habitat suitability for gnatcatchers, wrens, and other scrub-dependent wildlife, through shading or displacement of scrub, reductions in line-of-sight that may be important to some species, or by creating arboreal nesting habitat for the Cooper’s Hawk, an increasingly common raptor across the region that preys mainly on small birds.

Carefully considered plantings of appropriate native tree species in degraded areas, even within MHPA, can be an effective conservation and management tool. The indiscriminate addition of trees to a natural landscape, however, can be detrimental to existing sensitive resources. Therefore, any proposed plantings of trees within or adjacent to MHPA should be carefully evaluated conducted according to a Natural Resource Management Plan (per policy CE-B.1.h) subject to review and comment by the US Fish and Wildlife Service, California Department of Fish and Game, and members of the public.

Existing General Plan policies CE-B.1.e, which encourages “removal of invasive plant species and the planting of native plants near open space preserves,” and CE-G.1.e which “discourage[s] the planting of invasive plant species,” should both be updated and strengthened to **prohibit all plantings of invasive species**. Even when planted away from preserved lands, the seeds of invasive trees and other landscape plants are carried by birds and the storm drain system into local canyons, resulting in harmful establishment of many exotic plants in the MHPA.

In general, the City’s tree planting policies should more strongly encourage the use of locally native species that are adapted to the San Diego area, and that provide valuable habitat for native pollinators and other forms of wildlife. Plantings of appropriate native species, which require minimal or no irrigation once established, should be encouraged over non-native ones that require more extensive irrigation and that will be increasingly vulnerable to drought-stress as the climate warms.

Please refer to comments submitted to the City in a letter dated June 29, 2023, from the San Diego Chapter of the California Native Plant Society (CNPS) regarding the proposed University Community Plan Update. The letter, prepared by chapter President Justin Thomas Daniel, contains numerous useful and valid suggestions for using drought-tolerant native tree species in landscaping.

## CE-B.1: Recreation in Urban Canyons

Proposed language (bold represents City-proposed additions):

CE-B.1.c. Protect, **restore and enhance** urban canyons and other important community open spaces including those that have been designated in community plans for the many benefits they offer locally, and regionally, **including environmental education and recreation opportunities**, as part of a collective citywide open space system (see also Recreation Element, Sections C and F; Urban Design Element, Section A).

This call for increased “recreation opportunities” in urban canyons echoes proposals for new trails in the City’s University Community Plan Update (UCPU). Some of the trails proposed in the UCPU would pass through areas of sensitive habitat in the MHPA, which is strictly prohibited under the City’s existing MSCP habitat conservation commitments.

The City’s MSCP conservation commitments cannot be subordinated to other land-use priorities without jeopardizing the legitimacy of the MSCP itself. To avoid sending a mixed message about the City’s commitment to the MSCP and Subarea Plan, Blueprint SD should avoid adding any open-ended language to the General Plan that leaves those commitments open to question. See also the comments of Shute, Mihaly & Weinberger regarding suggested wording of General Plan policies to clarify the primacy of conservation over recreation in the MHPA.

### CE-B.1.h: Preparation of Natural Resource Management Plans

The City proposes to add the following language to this policy:

CE-B.1.h. Prepare and update Natural Resource Management Plans on all managed preserved lands and include in plans considering shifting habitat or conditions due to climate change as well as sequestration potential, as the information becomes available.

The preparation of Natural Resource Management Plans for all managed preserved lands, as called for in the Subarea Plan, is a welcome development. The reference to “sequestration potential” in the proposed echoes language proposed in CE-A.13, a policy that encourages planting large numbers of trees. As discussed previously in these comments, the *indiscriminate* planting of trees, especially within or adjacent to MHPA, does not represent sound conservation policy.

Also relevant, a 2018 study<sup>1</sup> by researchers at UC Davis found:

In contrast to the conventional paradigm, we show that the inherent resilience of grassland vegetation to drought and wildfire translates to a more reliable carbon sink than forest ecosystems in response to 21st century climate changes.

---

<sup>1</sup> Dass, P., Houlton, B. Z., Wang, Y., and Warlind, D. 2018. Grasslands may be more reliable carbon sinks than forests in California. *Environmental Research Letters* 13 074027. <https://iopscience.iop.org/article/10.1088/1748-9326/aacb39>

The UC Davis study identified grasslands as “the only viable net CO<sub>2</sub> sink” through the year 2101 because native grasses “have evolved to thrive in semi-arid climates, developing physiological adaptations to overcome the challenges of drought-stress and protecting most of its carbon storage from fires by allocating it belowground.” That is, native grasses sequester large volumes of carbon in their extensive root systems, which are not susceptible to fire. On the other hand, trees are vulnerable to drought-stress, and they release their stored carbon into the atmosphere during fires. This may make trees less valuable than native grasses for carbon sequestration in semi-arid climates like San Diego.

To reiterate a previous comment, carefully considered plantings of appropriate native tree species in degraded areas, even within MHPA, can be an effective conservation and management tool. The *indiscriminate* addition of trees to a natural landscape, however, can be detrimental to existing sensitive resources.

Also, plantings of appropriate native species, which require minimal or no irrigation once established, should be encouraged over non-native ones that require extensive irrigation and that will be increasingly vulnerable to drought-stress as the climate warms.

Until the intended meaning of the term “sequestration potential” is defined, and its inclusion in the policy can be scientifically justified, it may be preferable to remove this term from the language of CE-B.1.h.

## **CE-E.2: Water Quality Protection Measures**

Several of the existing and proposed policies in this section call for use of vegetation to achieve water quality objectives. In general, these policies should encourage the use of locally native plant species that are adapted to the local environment and that provide valuable habitat for native pollinators and other forms of wildlife.

## **Biological Diversity Discussion**

Pages CE-46 and CE-47 state, “the MSCP has streamlined existing permit procedures for development projects while preserving critical habitat.”

The term “critical habitat” is specifically defined under the federal Endangered Species Act: <https://www.fws.gov/sites/default/files/documents/critical-habitat-fact-sheet.pdf>

Because the MSCP conservation lands includes many areas not officially designated as “critical habitat” by the federal government, this term should not be used in the General Plan to refer to the MSCP conservation lands as a whole.

## **Urban Forestry**

As discussed previously, the City’s tree planting policies should more strongly encourage the use of locally native species that are adapted to the local environment and that provide valuable habitat for native pollinators and other forms of wildlife. The planting of non-native, invasive species should be strictly prohibited.

Consider, for example, that the City's currently-proposed University Community Plan Update Discussion Draft calls for plantings of four tree species known to be invasive in San Diego County<sup>2</sup>: Evergreen Ash (*Fraxinus uhdei*), Chinese Elm (*Ulmus parvifolia*), Red River Gum (*Eucalyptus camadulensis*), and Mexican Fan Palm (*Washingtonia robusta*).

The City's Plan also calls for extensive plantings of the exotic Canary Island Palm (*Pinus canariensis*) to "create a sense of place" while ignoring the visually similar Torrey Pine (*Pinus torreyana* ssp. *torreyana*), which is famously endemic to the La Jolla area.

Please refer to the previously referenced comments from the local CNPS chapter, which contains numerous useful and valid suggestions for using drought-tolerant *native* tree species in landscaping.

## **MOBILITY ELEMENT**

Please see the comments of Shute, Mihaly & Weinberger, which recommend that the Mobility Element include an introductory paragraph to clarify that all references to trails are done so with the assumption and understanding that any new trails would be identified through the Trails Master Plan process. Furthermore, new proposed trails would need to be studied to ensure they meet the general Management Directives that support the MSCP's Conservation Objectives to adequately protect MSCP-covered species within the MHPA.

All improvements in connectivity and mobility must be made in conformance with MCSP and MHPA goals, guidelines, and directives.

## **PUBLIC FACILITIES, SERVICES AND SAFETY ELEMENT**

Policy PF-M.4 contains subheadings a through g, but these do not line up with the policies. This should be corrected. For these comments, I have referred to the first four paragraphs of this policy.

The first paragraph of PF-M.4 states:

Cooperatively plan for and design new or expanded public utilities and associated facilities (e.g., telecommunications infrastructure, planned energy generation facilities, gas compressor stations, gas transmission lines, electrical substations and other large scale gas and electrical facilities) to maximize environmental and community benefits.

This paragraph should clarify that these public facilities must be consistent with all relevant MSCP goals, guidelines, and directives.

The second paragraph of PF-M.4 states:

Use transmission corridors to enhance and complement wildlife movement areas and preserved open space habitat as identified in the City's Multiple Species Conservation Program (MSCP).

---

<sup>2</sup> <https://www.sandiegocounty.gov/content/dam/sdc/pds/docs/Landscape/WELDManual-Appendix-I.pdf>

This policy appropriately recognizes the requirement to adhere to MSCP goals, guidelines, and directives.

The third paragraph of PF-M.4 states:

Provide adequate buffering and maintained landscaping between utility facilities and residential and non-residential uses, including the use of non-building areas and/or rear setbacks.

Maximize land use and community benefit by locating compatible/appropriate uses within utility easements/right-of-ways (e.g., passive parkland, natural open space, wildlife movement, urban gardens, plant nurseries, parking, access roads, and trails). Trails can be allowed in these easement/right-of-ways, provided proper indemnification, funding and maintenance is set forth in a written agreement between the public utility, the City, and project developer.

The latter paragraph should state that the efforts to “maximize land use and community benefit” and to utilize public easements or rights of way for trails and other uses must recognize the overarching requirement to adhere to all applicable MSCP goals, guidelines, and directives.

## CONCLUSION

Blueprint SD outlines some new and innovative directions for San Diego’s future. As addressed in these comments, and those of Shute, Mihaly & Weinberger, City planners, engineers, and political leaders implementing land-use policies must remain cognizant of the long-standing and binding commitments that the City has made to the MSCP planning process, and to managing MHPA lands according to the goals, guidelines, and directives provided in the MSCP Subarea Plan.

Sincerely,

Robert A. Hamilton  
President, Hamilton Biological, Inc.

cc: Dan Silver, Endangered Habitats League

**O4: Friends of Rose Canyon, Shute Mihaly & Weinberger LLP on behalf of**

**O4-1:** The introductory comment is noted.

**O4-2:** Comment noted. The proposed trails, showing specific alignments, have been removed from the University Community Plan Update (CPU), the project description in Section 3.5.3(e) of the Final Program Environmental Impact Report (PEIR), from Figure 3-26 of the Final PEIR, and from the impact analysis in Section 4.3.4, Issue 4, of the Final PEIR.

**O4-3:** Comment noted. The comment suggesting recirculation of the Draft PEIR has been noted. The Draft PEIR has not been revised to the extent that new information would require recirculation. The Final PEIR includes modifications to the Draft PEIR, but these modifications clarify the discussions and/or material presented in the Draft PEIR. Recirculation of the Draft PEIR is not required.

**O4-4:** The comment cites various regulatory requirements and requirements of the City's Multiple Species Conservation Program (MSCP) Subarea Plan (SAP) but does not raise a specific issue with the adequacy of the analysis in the Draft PEIR.

**O4-5:** Citations regarding the City's MSCP SAP and management of the City's Multi-Habitat Planning Area (MHPA) are noted.

**O4-6:** Comment noted. The comments address management of the MHPA and do not raise an issue regarding adequacy of the analysis in the Draft PEIR.

**O4-7:** Comment noted. See response to comment O4-2.

**O4-8:** The comment states that the Draft PEIR fails to provide information regarding the presence and location of sensitive biological species within MHPA lands. The presence and location of sensitive biological species is presented in Section 4.3.1 of the PEIR and within the Biological Resources Report prepared for the University CPU (see Appendix D of the PEIR). In addition, the MSCP Core Biological Resource Area Corridor in Figure 3-27 in the Final PEIR has been revised to run north/south along the east side of I-805.

**O4-9:** Comment noted. See response to comment O4-3.

**O4-10:** See response to comment O4-2.

**O4-11:** The comment describes the City's CEQA Significance Determination Thresholds for biological resources and cites regulatory requirements from the CEQA Guidelines. The comment is noted, and no further response is required.

**O4-12:** See response to comment O4-2.

**O4-13:** The comment reiterates that the Draft PEIR does not analyze the potential impacts associated with proposed trails in the MHPA lands. See response to comment O4-2.

**O4-14:** The comment reiterates that the Draft PEIR does not analyze the potential impacts associated with the proposed trails in the MHPA lands. See response to comment O4-2. See Section

4.13 of the PEIR for a discussion of potential impacts to recreational facilities associated with the project.

**O4-15:** The comment states that the potential impacts to MHPA lands resulting from potential increased development adjacent to MHPA lands was insufficiently analyzed. The Draft PEIR addresses the biological impacts of the Blueprint SD Initiative, the Hillcrest Focused Plan Amendment (FPA), and the University CPU in Section 4.3, Biological Resources. While most of the biological resources assessed, including but not limited to, sensitive species, sensitive vegetation communities, wetlands, wildlife corridors and nursery sites, and the resources protected in conservation plans, are present within areas that are designated as Open Space, Environmentally Sensitive Land (ESL), or within the MHPA, and would be preserved from future development, there are some areas where planned land uses could potentially result in direct or indirect impacts to these resources. Such impacts could occur directly through removal or indirectly by placing development adjacent to sensitive vegetation communities. Future site-specific development under the project would be required to comply with the ESL Regulations, Biology Guidelines, MSCP SAP and Vernal Pool Habitat Conservation Plan (VPHCP). However, since the Draft PEIR provides a program-level review of the project, and site-specific plans are not available for review, it cannot be ensured that all impacts to biological resources would be mitigated to a less than significant level. Thus, impacts would be significant at a program level of review. Mitigation measure MM-BIO-1 in Section 4.3.6 of the Draft PEIR reinforces this compliance, and future discretionary development proposals would be required to evaluate potential impacts and identify feasible mitigation measures as detailed in MM-BIO-1 and as otherwise required in the City's Environmentally Sensitive Lands Regulations.

Regarding the proposed trails, see response to comment O4-2.

**O4-16:** As mentioned by the commenter, future land use plan updates and San Diego Municipal Code (SDMC) amendments which help facilitate the implementation of the Blueprint SD Initiative would be reviewed for consistency with the analysis in the PEIR and, depending on the scope of future projects, future environmental review for consistent projects might include tiered Mitigated Negative Declarations (MNDs), tiered EIRs, or other tiered environmental analysis in accordance with CEQA Guidelines Sections 15152, 15153, 15162, 15163, 15164, 15168, and/or 15183. This condition does not preclude the environmental analysis of future projects from happening. As such, the City has assessed the potential biological resource impacts of the proposed project to the extent feasible and included mitigation that would reduce or avoid future biological resource impacts from future development that could occur as a result of the proposed project. Regarding the trails, see response to comment O4-2.

**O4-17:** The project's consistency with the MSCP SAP and VPHCP are assessed in Section 4.10.4, Issue 2 (f) and (g), of the Draft PEIR. As described in this section, implementation of the Blueprint SD Initiative, Hillcrest FPA, and University CPU would be consistent with the City's MSCP SAP and VPHCP at a program level of review as development is planned in primarily urbanized locations and within areas not planned for conservation. Additionally, the project does not propose policies which would conflict with the MSCP SAP. While most future development consistent with the Blueprint SD Initiative, University CPU, and Hillcrest FPA would take place in urbanized areas, the City is taking a conservative approach in indicating there is the potential for it to occur within lands designated as

MHPA or located adjacent to these lands. The MSCP SAP establishes MHPA Land Use Adjacency Guidelines and the VPHCP includes avoidance and minimization measures which would be applied and addressed on a project-by-project basis to minimize direct and indirect impacts and maintain the function of the MHPA. All future development would be required to demonstrate consistency with the MSCP SAP and VPHCP at the project level.

In the University CPU area, an MHPA boundary line correction (BLC) is proposed to add lands to the MHPA. This action was presented and coordinated with the Wildlife Agencies on January 19, 2024.

Regarding the preparation of Natural Resource Management Plans (NRMPs), see response to comment O11-41 under comment letter O11. Regarding the proposed trails, see response to comment O4-2.

**O4-18:** CEQA Guidelines Section 15126.4(a)(1)(B) allows compliance with the City's regulations to be identified as mitigation if compliance results in implementation of measures that would be reasonably expected to reduce the significant impact. The City's regulations provide a standardized process for addressing development impacts across the City and they lay out a process for which impacts can be addressed at a more project-specific level. Because all development projects are subject the City's Land Development Code regulations (e.g., its ESL Regulations), many of which are put in place for the specific purpose of mitigating or reducing environmental impacts through specific performance standards, these regulations are referenced as required mitigation measures. See also response to comment O4-17.

**O4-19:** Comment noted. The funding of the MSCP SAP and VPHCP are not within the scope of the Draft PEIR. See also response to comment O11-43 under comment letter O11. Regarding the proposed trails, see response to comment O4-2.

**O4-20:** As described under response to comments O4-17 and O4-18, the proposed mitigation measure would reinforce the detailed performance standards of the City's ESL Regulations, Biology Guidelines, and the MSCP SAP and VPHCP. As described in Sections 4.3.6 and 4.3.7 of the Draft PEIR, mitigation measures are provided at the program level to serve as the basis for more specific refinement of future mitigation measures to be developed as specific projects are proposed. The mitigation measures refer to City regulations and plans that have incorporated detailed performance standards and are fully enforceable through permit conditions or other legally binding instruments, consistent with CEQA Guidelines Section 15126.4(a)(2). The referenced plans, policies, and regulations in the mitigation measure provide a program-level framework for reducing significant impacts related to biological resources. MM-BIO-1 would be implemented to minimize and avoid impacts related to sensitive species, sensitive habitats, and wetlands to the extent feasible.

The City is taking a conservative approach in determining the potential for significant future biological resource impacts to occur. At a program level of review and without project-specific details, it cannot be known with certainty that it would be feasible to mitigate all significant impacts to less than significant levels due to the potential for deviations from the City's ESL Regulations to be approved. These deviations could allow for limited instances of impacts to occur that are not fully mitigated. Therefore, as described in Section 4.3.7 of the Final PEIR, impacts would remain significant after the implementation of MM-BIO-1.

Regarding the proposed trails, see response to comment O4-2.

**O4-21:** See response to comment O4-2.

**O4-22:** Comment noted. This comment is generally concerned with analysis of the alternatives, but does not provide a specific concern. No response is necessary.

**O4-23:** A reasonable range of alternatives is considered in the Final PEIR. The City carefully considered a range of alternatives that would have the potential to lessen the environmental impacts of the project. Due to the programmatic nature of the impact evaluation, the City was not able to identify an alternative that would completely avoid the significant impacts of the project. In all scenarios, project impacts would occur as a result of growth that is anticipated in the region. Future growth in the region would result in potentially significant impacts under the project and all alternatives related to aesthetics, air quality, biological resources, cultural resources, hydrology, noise, public services, recreation, transportation (VMT), tribal cultural resources, utilities and service systems, and wildfire. As a result, the intent of the project was to identify a land use plan that would minimize these impacts to the greatest extent possible. Therefore, the project alternatives considered variations in how growth would occur throughout the City including a higher density alternative, an alternative that considered growth occurring in a more distributed way, and a reduced density alternative. Each of these alternatives would incrementally affect the significance of impacts of the project, but none would altogether eliminate a significant impact of the project. As no significant impact could be completely avoided, the City evaluated each alternative in terms of which impacts would be incrementally reduced and the degree that the alternative would meet the project objectives. Both the High Density Alternative and Reduced Density Alternative were identified as the environmentally superior alternatives. While the High Density Alternative and Reduced Density Alternative would not eliminate any significant impacts of the project, they would reduce the significance of impacts in comparison to the project. For the High Density Alternative, the significance of impacts would be reduced for the issues of energy, GHG emissions, and transportation. For the Reduced Density Alternative, the significance of impacts would be reduced for the issues of aesthetics, air quality, and noise. The Final PEIR was revised in Section 8.5 to clarify the reason for selecting the environmentally superior alternatives.

In addition, revisions to the Final PEIR were incorporated to clarify the scope of two of the project alternatives, the Reduced Density Alternative and the High Density Alternative. The Draft PEIR "Blueprint SD Initiative Reduced Density Alternative" was renamed in the Final PEIR to the "Reduced Density Alternative". The description of this alternative was revised and clarified in Section 8.4.1 to identify the specific density reductions within the University CPU and Hillcrest FPA. At the request of the University Community Planning Group, the City incorporated an analysis of the University Community Planning Group's Community Preferred Alternative. The Draft PEIR's University CPU and Hillcrest FPA High Density Alternative was revised in Final PEIR Section 8.2.1 to the "High Density Alternative" and the description of this alternative was revised to clarify that throughout the Climate Smart Village Areas, increases in residential and non-residential development intensities would be achieved through corresponding changes to the base zone development regulations contained in the Municipal Code such as allowing for additional height and FAR within the Climate Smart Village Areas. This alternative was analyzed at the request of multiple climate action, housing, bicycle, and public transportation advocacy groups.

**04-24:** See response to comment O4-23.

**04-25:** See response to comment O4-23.

**04-26:** See response to comment O4-23 and response to comment O13-5 under comment letter O13.

**04-27:** The commenter is correct that the No Project Alternative would avoid the placement of trails in the MHPA. However, as mentioned in response to comment O4-2, the proposed trails are no longer a part of this project.

As described in Section 8.2.2 (c), development under the High Density Alternative would be required to comply with the City's ESL Regulations, Biology Guidelines, and the provisions of the MSCP SAP and VPHCP which would reduce potential impacts to sensitive biological resources. Additionally, the City is regional partner in the MSCP and coordinates closely with the San Diego Association of Governments (SANDAG), the San Diego Management and Monitoring Program (SDMMP), various environmental group stakeholders, and the Wildlife Agencies to ensure implementation of the MSCP at a regional scale and any future impacts resulting from increased build out would continue to be monitored through existing regional coordination efforts. Nevertheless, a conservative analysis of biological impacts assumes that even with implementation of existing regulatory protections for biological resources, impacts to sensitive species and habitats and wetlands resulting from future development within the project areas would be significant.

**04-28:** See response to comment O4-3.

**04-29:** The attachments do not contain comments on the Draft PEIR. They are noted; no additional response is required. Attachment 3 is a letter with comments on the Draft PEIR. The responses to these comments are recorded below.

**04-30:** The comment is an introduction to the letter. No response is necessary.

**04-31:** The comment describes the origin and purpose of the MSCP and the MHPA. It does not include comments on the adequacy of the Draft PEIR; no response is necessary.

**04-32:** The comment refers to the previously proposed trails, which are no longer a part of the proposed project. See response to comment O4-2.

**04-33:** See response to comment O4-2 above. The comments on the existing informal trail conditions and the site conditions depicted in the exhibit and photos are noted.

**04-34:** See response to comment O4-2. The PEIR discusses biological impacts to sensitive species, such as the California gnatcatcher and Nuttall's scrub oak, in Section 4.3.4, Issue 1, of the PEIR and in the Biological Resources Report prepared for the University CPU (see Appendix D of the PEIR).

**04-35:** See response to comment O4-20.

**O4-36:** As described in response to comment O4-2, the proposed trails are no longer a part of the project. Regarding the proposed project's consistency with the City's MSCP, see response to comment O4-17.

**O4-37:** The proposed trails have been removed from the University CPU. See response to comment O4-2 above. Future projects that could directly and/or indirectly impact sensitive species, sensitive habitats, and/or wetlands are required to comply with the City's ESL Regulations, Biology Guidelines, and applicable federal, state, and local Habitat Conservation Plans, including but not limited to, the City's MSCP SAP and VPHCP. Future projects shall also implement avoidance, minimization, and mitigation measures in accordance with the City's ESL Regulations, Biology Guidelines, and MSCP SAP and VPHCP.

**O4-38:** See response to comment O11-41 under comment letter O11 for a discussion of the process being undertaken for the development of the City's NRMPs.

**O4-39:** The previously proposed trails have been removed from this project. See response to comment O4-2.

**O4-40:** See response to comment O11-41 under comment letter O11 for a discussion of the process being undertaken for the development of the City's NRMPs. As described in O4-2, the previously proposed trails are no longer a part of the project.

**O4-41:** See response to comment O4-2.

**O4-42:** The comments on existing topography and trail conditions are noted. As mentioned in response to comment O4-2, the proposed trails have been removed from the proposed project.

**O4-43:** The concerns about the location of Nuttall's scrub oak are noted. As described in response to comment O4-2, the project no longer proposes trails in as part of the University CPU. All future development would be required to demonstrate consistency with the MSCP SAP and VPHCP at the project level. See also response to comment O4-17.

**O4-44:** The analysis in the Draft PEIR is intended to be program-level. Data provided is sufficient to characterize the typical species and vegetation communities and land cover types present in the University CPU area. All ministerial and discretionary projects must comply with the City's MSCP SAP, VPHCP, ESL Regulations and Biology Guidelines. As future development is proposed on land adjacent to or containing ESL and/or MHPA, the City would require a site-specific biological analysis to be prepared in accordance with the City's Biology Guidelines in order to verify existing conditions, vegetation communities, and species present. Additionally, mitigation measure MM-BIO-1, in section 4.3.6 of the PEIR, reinforces this compliance. Nevertheless, a conservative analysis of biological impacts assumes that even with implementation of existing regulatory protections for biological resources, impacts to sensitive species and habitats and wetlands resulting from future development within the project areas would be significant. See response to comment O4-2 regarding the proposed trails.

**O4-45:** This comment about the observances of least Bell's vireos is noted. See response to comment I102-13 under comment letter I102. Future development that is proposed on land

adjacent to or containing ESL and/or MHPA would be required to prepare a site-specific biological analysis in accordance with the City's Biology Guidelines in order to verify existing conditions, vegetation communities, and species present. See Section 4.3.4 Issue 1 of the PEIR for an analysis of potential impacts to sensitive species within the project area.

**O4-46:** The Biological Resources Report includes data from the California Natural Diversity Database (CNDDDB). The results from an assessment of the CNDDDB, along with other sources, were used to determine the locations of sensitive wildlife species. See response to comment I102-13 under comment letter I102 for more information.

**O4-47:** See response to comment O4-2 regarding the proposed trails. The programmatic analysis in the PEIR is consistent with that of other program EIRs in that it identifies the potential environmental impacts associated with implementation of the project and provides a mitigation framework to reduce or avoid potential impacts. As a programmatic document, the project description does not provide project-level specifics but does provide feasible development buildout. As described in Section 4.3.6 of the Draft PEIR, mitigation measures are provided at the program level to serve as the basis for more specific refinement of future mitigation measures to be developed as specific projects are proposed. The mitigation measures refer to City regulations (i.e., ESL Regulations and Biology Guidelines) and plans that have incorporated detailed performance standards and are fully enforceable through permit conditions or other legally binding instruments, consistent with CEQA Guidelines Section 15126.4(a)(2). The information provided in the Draft PEIR is appropriate for a program-level analysis, and the mitigation required (MM-BIO-1) would enforce future project compliance with the City's ESL Regulations, Biology Guidelines, and the MSCP SAP and VPHCP. See Section 4.3.1 Issue 1 for a discussion of potential impacts to sensitive species.

**O4-48:** The comment is a general concern about how the project and the project alternatives would be able to meet the project objectives and reduce environmental impacts. Regarding project alternatives, see response to comment O4-23. The project objectives are clearly laid out in Section 3.3 of the PEIR. The ability of the Blueprint SD Initiative, University CPU, and the Hillcrest FPA to meet project objectives is described throughout the environmental analysis of the Draft PEIR and in Chapter 8, which has a description of the project alternatives and their abilities to meet the project objectives in comparison with the proposed project.

**O4-49:** See response to comment O4-2. Impacts to recreation are discussed in Section 4.13 of the PEIR. See response O4-50 regarding edge effects.

**O4-50:** The comment describes the environmental impacts associated with urban development next to undeveloped open space (the urban/wildland interface). As described in Section 4.10.2.2(f) of the Draft PEIR, the MSCP establishes adjacency guidelines to be addressed on a project-by-project basis to minimize direct and indirect impacts and maintain the function of the MHPA. See response to comment A3-5 under comment letter A3.

**O4-51:** The information about trail use in ecological preserves is noted. This comment does not address the adequacy of the analysis in the Draft PEIR, so no further response is required.

**O4-52:** As mentioned in response to comment O4-2, the previously proposed trails would not be a part of the project. Regarding the development of future NRMPs, see response to comment O11-41 under comment letter O11.

**O4-53:** See responses to comments O4-44 and O4-47.

**O4-54:** See response to comment O4-2.

To Whom It May Concern,

Please find attached our comments on the Draft Program Environmental Impact Report for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan, and University Community Plan and Local Coastal Program Update – Document issued March 14, 2024

**O5-1**

Regards,

Help Save UC

April 25, 2024

To: [planningceqa@sandiego.gov](mailto:planningceqa@sandiego.gov)

Re: Comments on the Draft Program Environmental Impact Report for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan, and University Community Plan and Local Coastal Program Update – Document issued March 14, 2024

To Whom It May Concern:

The undersigned individuals of the community group Help Save UC submit the following comments on the Draft Program Environmental Impact Report for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan, and University Community Plan and Local Coastal Program Update Document (hereafter referred to as the “DPEIR”) issued on March 14, 2024 by the City of San Diego (hereafter referred to as the “City”).

O5-2

1. **Combining the Blueprint SD Initiative, Hillcrest Focused Plan Amendment and University Community Plan into one DPEIR was improper.**

For reasons not explained in the DPEIR, three totally unrelated planning proposals/updates were combined into one DPEIR. The “Project” as defined in the DPEIR includes:

O5-3

- A) Blueprint SD, which is a comprehensive amendment to the General Plan that affects the entire City;
- B) the Hillcrest Focused Plan Amendment, which is an amendment to redesignate approximately 380 acres of the Hillcrest and Medical Complex neighborhoods; and
- C) the University Community Plan, which is a comprehensive update to the existing University Community Plan.

O5-3  
cont

While each of these updates involve proposals by the City to increase density, impacts relating to traffic, air quality, biological resources, public services, wildfire, and other areas required a specific analysis of each of the project areas. This did not occur. Instead, the City produced one massive combined document with only a cursory environmental analysis for three highly significant and different projects. This resulted in a document that was cumbersome, overly complicated, three times the length it should have been for any one of the three projects, and clearly designed to discourage the public from engaging in and understanding the project.

First, combining these three projects into one DPEIR resulted in a failure to perform an adequate analysis of any of the three projects. For example, the DPEIR purports to conduct an analysis of 18 separate areas of environmental impact, all of which have subareas, resulting in more than 70 different environmental issues to be analyzed. A comparison of the outcome of the analysis of 70 of these issues reveals that the City reached the same conclusion of environmental impact for all 70 issues for Blueprint SD and the University Plan Update; the Hillcrest Plan Update deviated only once. It is incomprehensible to believe that the results of an environmental analysis for three separate and different projects could be identical on more than 70 issues. This is not analysis by the City; this is a foregone conclusion.

Second, the City attempts to use different variations of Blueprint SD as “alternatives” to the University Plan Update. However, as discussed in Section 6.A below, the Blueprint SD alternatives are not reasonable alternatives for the University Plan Update.

The most telling item is from Section 8.5 of the DPEIR in which the City states that the University CPU and Hillcrest FPA High Density Alternative is considered to be the environmentally superior alternative. As discussed in Section 6.C below, there is no evidence to support this conclusion. However, even if accepted, an environmentally superior alternative that relates only to the University Plan Update and Hillcrest Plan Amendment cannot be used for Blueprint SD, which covers the entire City. One of the most important aspects of an EIR is to identify an environmentally superior alternative, but the City failed to identify such an alternative for Blueprint SD, resulting in an incomplete analysis for this part of the “Project.” This demonstrates that the City was not serious in using this as a final environmental document for Blueprint SD. Thus, its inclusion in this DPEIR could only be to create confusion for the public.

O5-4

Last, combining the University CPU and Hillcrest FPA High Density Alternative as the environmentally superior alternative suggests that these two projects must be considered as one when evaluated by the City Council. This is improper; each Plan Update should be given its own analysis and opportunity for consideration by both the community and the

City Council. The DPEIR is defective on its face for improperly combining these three projects into one DPEIR.

O5-4  
cont

**2. The Environmental Analysis conducted in Chapter 4.0 is inadequate.**

The purpose of a Program EIR should be to evaluate the environmental impacts at full build-out so that each individual project does not have to conduct the same analysis, particularly for cumulative impacts from each project. For this approach to be effective, the original PEIR should conduct a complete analysis of impacts at full build-out. This does not occur in this DPEIR. As a result, each of the environmental analyses are ineffective and incomplete.

O5-5

Furthermore, the DPEIR fails to adequately account for the impact of Complete Communities, which is a density bonus program. The DPEIR discusses that the University Plan Update proposes to add 29,000 housing units to the area; these would be added to the 28,000 currently adopted plan units (of which 26,520 are built), resulting in a total of 57,000 units. This would more than double the number of housing units in the community, which would likely more than double the total population in the community. These numbers will be significantly higher under the Complete Communities density bonus program. However, the environmental analyses conducted in Chapter 4.0 not only fails to adequately analyze impacts from complete build-out, it ignores the additional impacts that could result from the Complete Communities program. The DPEIR is inadequate for the University Plan Update and the Hillcrest Plan Amendment due to its failure to evaluate actual projected population numbers for each area, including population numbers arising from the Complete Communities program.

O5-6

**A. The environmental analysis of Aesthetics is inadequate.**

**1. Scenic Vistas**

With respect to the University Plan Update, on page 4.1-15, the DPEIR states, “While it is unlikely that future development would result in a substantial adverse effect on a scenic vista, including the possible scenic overlooks identified on Figure 27 of the University CPU, it cannot be known at this program-level of review without site-specific plans. At this programmatic level of review, impacts associated with scenic vistas would be considered significant.” This is not an environmental analysis; this is an abdication of responsibility. The whole point of a Program Level EIR is to evaluate full impacts at build-out. The City knows the new zoning proposed in the University Plan Update and knows where new buildings and structures would be built if complete build-out were achieved. Under this DPEIR, the City must conduct an actual analysis of how many buildings might be

O5-7

constructed and what their heights might be, and this evaluation must include consideration of the impact of the Complete Communities program.

Instead, the City did not even try to conduct such an analysis and simply declared the impacts significant, assuming that the City Council will simply adopt a statement of overriding consideration. This approach violates CEQA. California Code of Regulations (CCR) Title 14 §15121(a) states that an EIR is an informational document which will inform public agency decisionmakers and the public generally of the significant environmental effect of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project. By failing to conduct an actual analysis of the number and heights of buildings that could impact scenic vistas, the DPEIR fails to provide the information necessary for both decisionmakers and the public to understand the true environmental impact of the University Plan Update on scenic vistas and other aesthetics, and fails to provide the underlying information necessary to adequately evaluate project alternatives.

O5-7  
cont

It is also inadequate for the City to say that potential impacts to scenic vistas would be minimized through required compliance with the University Plan Update's proposed Supplemental Development Regulations (SDRs) and other regulations regarding transition requirements for certain types of development and development adjacent to open space zoned properties. These regulations change existing conditions; the point of the DPEIR is to evaluate environmental impacts from such changes. Even if the City believes that such changed regulations reduce environmental impacts, it is still required to evaluate the impacts from the changes. It is also inadequate for the City to rely on future project-specific environmental review as a means to mitigate any impacts. By engaging in a Program level EIR, future projects will **not** be subject to the same level of public input.

O5-8

Furthermore, the plan policies in the University Plan Update are vague and unenforceable; almost all language actually *requiring* anything has been removed. For example, Policy 1.1C says, "Support strategies that provide transitions in scale, density, and intensity . . ." "Consider the needs of families and children in the design for mixed used development projects . . ." (Policy 1.1I.) "Encourage site design practices that take advantage of sunlight and prevailing breezes to provide a comfortable environment in open space areas." (Policy 2.2C.) "Support design strategies that help to define the edges, boundaries, and transitions between private and public space areas. . ." (Policy 2.2D.) "Promote attenuating noise through the use of berms, planting, setbacks and architectural design . . ." (Policy 2.4C.) "Encourage a pattern and hierarchy of building massing and forms to help reduce the visual bulk of the development." (Policy 2.5A.) "Consider views into and from sloping areas. Encourage rooflines that emphasize the

O5-9

variety in shape and flowing character of the hillside. Promote varying rooftop treatments on sloping sites over extended horizontal lines.” (Policy 2.7F.) “Promote minimizing the use of retaining walls . . . .” (Policy 2.7G.) “Encourage context-sensitive design by stepping back from the canyon edge . . . .” (Policy 2.9A.) “Promote design strategies that reduce light and glare on building frontages facing canyons and open space.” (Policy 2.9B.) “Promote strategies to transition height, density, and intensity between new development and existing residences.” (Policy 2.19D.) (Underline added to all policies for purposes of this letter; underlines not in the Plan Update document.)

O5-9  
cont

As detailed above, all the language used in the plan policies is vague, unenforceable, and completely discretionary by a City who has developed a Plan Update that rejected almost all suggestions submitted by the community. And a review of the SDRs themselves show that they do not “support,” “encourage” or “promote” the plan policies, but actually impose minimal design requirements to achieve these goals. The City’s suggestion that future City (but not public) review and reliance on plan policies and SDRs will help mitigate impacts provides no actual binding mitigation of future impacts.<sup>1</sup>

Finally, the City asserts that aesthetic and parking impacts of a residential, mixed-used residential, or employment center project on an infill site within a Transportation Priority Area (TPA) shall not be considered significant impacts on the environment. (P. 4.1-15.) It is important to note that some areas in the University area are designated as being in a TPA, but the current transit conditions (i.e., a certain level of bus service at the intersections of Governor Dr. and Genesee Ave. or at other locations along Governor Drive) do not meet the requirements to be a TPA, and there is no evidence that bus service will increase to achieve the requirements to be a TPA. The City should not be able to rely on this Public Resource Code exemption unless the area *actually* meets the definition of a TPA.<sup>2</sup>

O5-10

---

<sup>1</sup> This issue is pervasive throughout the City’s environmental analysis. The City repeatedly suggests that reliance on “plan policies” can mitigate environmental impacts, but as demonstrated above, this approach is inadequate. This argument (that reliance on “plan policies” is insufficient to mitigate impacts) is applicable to all sections in the EIR where the City has relied on the argument that impacts will be mitigated by plan policies.

<sup>2</sup> Again, the City relies on this Public Resource Code exemption throughout its environmental analysis. This argument (that the City can rely on this exemption to not consider certain environmental impacts even at locations where the area does not currently meet the requirements of a TPA is insufficient to mitigate impacts) is applicable to all sections in the EIR where the City has relied on the argument that impacts need not be considered because the area is in a TPA.

The DPEIR is inadequate with respect to the University Plan Update because it fails to conduct an analysis that considers—at full build-out for the Plan Update—how many new buildings would be constructed, what the height of the new buildings might be, where would they be located, and what impact that construction would have on scenic vistas. A similar analysis including increased densities and building heights under the Complete Communities program must also be performed. Omission of this data results in an inadequate environmental analysis and leads to conclusions not based on evidence.

O5-11

## 2. Visual Character or Quality of Public Views and Scenic Quality

The environmental analysis of impacts to visual character or quality of public views and scenic quality for the University Plan update is similarly deficient. On page 4.1-18, the City admits, “future development which utilizes the City’s Complete Communities Housing Solutions Regulations and/or the City’s Affordable Housing Regulations and associated density bonuses could have greater building heights and/or FAR over the City’s base zone regulations,” but the DPEIR ultimately concludes, “However, at this programmatic level of review without site specific plans, impacts would be considered significant.” This approach/conclusion by the City is inadequate and denies both the public and the City Council the necessary analysis required to make informed decisions.

Also, as discussed above, the City should not rely on the Public Resource Code exemption that it need not consider environmental impacts for areas in a TPA for areas that do not currently meet the requirements to be in a TPA. Until the areas actually meet the criteria of a TPA, the area is deserving of a full environmental analysis.

O5-12

The DPEIR is inadequate because it fails to conduct an analysis that considers—at full build-out for the Plan Update—how many new buildings would be constructed, what their heights might be, where would they be located, and what impact that construction would have on visual character and scenic quality. A similar analysis including increased densities and building heights under the Complete Communities program must also be performed. Omission of this data results in an inadequate environmental analysis and leads to conclusions not based on evidence.

## 3. Light, Glare, or Shade

The environmental analysis of impacts to light, glare or shade for the University Plan Update is similarly deficient. On page 4.1-19, the City again simply states, “However, at this programmatic level of review without site specific plans, impacts with shade would be considered significant.” This approach is inadequate and denies both the public and the City Council the necessary analysis required to make informed decisions.

O5-13

The City’s suggestion that future City (but not public) review and reliance on Plan “policies” will help mitigate impacts provides no actual binding mitigation of future impacts.

The DPEIR is inadequate because it fails to conduct an analysis that considers—at full build-out for the Plan Update—how many new buildings would be constructed, what their heights might be, where would they be located, and what impact that construction would have on shade. A similar analysis including increased densities and building heights under the Complete Communities program must also be performed. Omission of this data results in an inadequate environmental analysis and leads to conclusions not based on evidence.

O5-13  
cont

B. The environmental analysis for Air Quality is inadequate.

Some of the issues the DPEIR is supposed to evaluate for Air Quality impacts are:

- 1) whether the Project, at full build-out, would result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under air quality standards;
- 2) whether the project would expose sensitive receptors to substantial pollutant concentrations; and
- 3) if the project would result in odors adversely affecting a substantial number of people. The DPEIR does not adequately analyze these issues for the University Plan Update because it fails to identify the number of new cars or vehicle miles traveled at the completion of full build-out.

O5-14

Page 4.1-18 states that operational emissions are long term and include mobile and area sources including traffic generated by the project. The DPEIR then continues (p. 4.1-18 – 4.1-19) that the project would support additional development in the University Area, that anticipated development densities and intensities would exceed the densities currently anticipated in community plans, and that when increases in densities are proposed, operational emission impacts were found to be significant and unavoidable.

The City then asserts that the University project proposes development that would support the use of public transit, walking, bicycling, etc., but that “operational emissions are assumed to increase due to the increase in proposed densities and intensities.” (P. 4.1-19.) Nowhere, however, does the City discuss the quantitative increase in operational emissions from project build-out. While more people moving into the higher density housing developments might use alternative forms of transit (other than cars), certainly

not all people will. For the University Plan, the Project proposes to add at least 50,000 new residents (based on 30,000 new housing units) at build-out. Even if 50% of those residents use alternative forms of transit (which we submit is an unrealistic assumption), that means 25,000 new residents would be using cars. Note: these excess cars do not include the cars associated with the Complete Communities density bonuses.

O5-14  
cont

The DPEIR must include a quantitative analysis of how many new future residents are expected to drive cars and what the impacts on emissions and odors are on the surrounding community. Such quantitative analysis is imperative to understanding the true impacts of the Project, and to assist with a meaningful alternatives analysis.

The DPEIR is inadequate because it fails to include a quantitative analysis of how many new future residents are expected to drive cars in the University area and what the impacts from such new traffic has on emissions and odors impacting the surrounding community. Omission of this data results in an inadequate environmental analysis and leads to conclusions not based on evidence.

C. The environmental analysis for Biological Resources is inadequate.

To evaluate impacts on Biological Resources, some of the issues the DPEIR is supposed to evaluate are if the Project would have an adverse impact on sensitive habitats and if the Project would interfere substantially with the movement of any native wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. The DPEIR does not adequately analyze these issues for the University Plan Update because it fails to identify the impact on these biological resources due to the number of new residents in the area at the completion of full build-out.

Once again, the City includes its catch-all sentence that, “at a program level of review and in the absence of project specific analysis, it is unknown whether all impacts to sensitive plant species would be fully mitigated to a less than significant level. Therefore, at the program level of review, impacts to sensitive plant species resulting from project implementation would be significant.” This catch-22 cannot be allowed (i.e., that the City wants approval for a Program Level Project, but says it cannot do an impacts analysis at the Project Level because it needs specific projects).

O5-15

Additionally, the University City area has numerous designated open spaces that the public uses for recreation such as Rose Canyon and Marian Bear Canyon. The DPEIR discusses the location of future development and the impact the placement of such development may have on biological resources. However, the DPEIR fails to discuss the impact on sensitive habitats and wildlife corridors that would occur by adding more than 50,000 new residents to the area. Based on the addition of new residents alone, Help

Save UC believes that the City's conclusion that the impact the Project would have on wildlife movement or wildlife corridors would be less than significant is incorrect. The addition of 50,000 (or more) new people living in a community, recreating in the canyons, and driving an unknown number of additional cars on adjacent streets, will most certainly have a significant impact on wildlife movement and corridors.

The DPEIR is inadequate because it fails to conduct an analysis of the impact that 50,000 new residents, and their associated cars, would have on sensitive habitat, wildlife movement and wildlife corridors. Omission of this data results in an inadequate environmental analysis and leads to conclusions not based on evidence.

D. The environmental analysis for Greenhouse Gas Emissions is inadequate.

To evaluate impacts from Greenhouse Gas Emissions, the City states that the following issues are to be addressed:

- 1) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? and
- 2) Would the project conflict with the City's Climate Action Plan or another applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gasses?

The City's environmental analysis is inadequate because it fails to evaluate the first issue entirely.

The City asserts that for plan- and policy-level environmental documents, as well as environmental documents for public infrastructure projects, the City Planning Department prepared a Climate Action Plan Consistency Memorandum, dated June 17, 2022, to provide guidance on significance determination as it relates to consistency with the strategies in the Climate Action Plan. (Page 4.7-13.) The City then states that the City's guidance document requires environmental documents to address the way in which the plan or policy is consistent with the City's goals and policies. Moving to Section 4.7.4 of the DPEIR, on page 4.7-15, the City essentially declares that it is not required to evaluate the Project's net impacts on greenhouse gas emissions; all the City asserts it has to do is evaluate if the Project is consistent with the City's plans and policies.

Help Save UC disagrees with this conclusion and does not agree that under CEQA the City can simply decide that its obligations only require evaluation of consistency with plans and policies, not actual environmental impacts. To the extent the City believes prior state legislation allows circumvention of this requirement, Help Save UC believes that the City

is misinterpreting such statute and associated regulations. Second, the analysis proposed by the City is essentially identical to the second prong of impact analysis (does the project conflict with a plan or policy). This is non-sensical and an abandonment of the City's responsibilities under CEQA. Furthermore, this has led to an incorrect conclusion that the Project's impact on the environment from greenhouse gas emissions is less than significant. When an actual analysis occurs, it seems highly likely that the Project's impact on the environment from greenhouse gas emissions will be significant.

O5-16  
cont

Indeed, there is no question that the Project will increase greenhouse gas emissions. The University Plan Update proposes to add more than 29,000 new housing units, not accounting for Complete Communities density bonuses. While nowhere in the DPEIR does the City acknowledge an estimated number of new cars on the road, most certainly there will be a net increase in vehicle usage and greenhouse gas emissions, and also increases in greenhouse gasses due to delays at intersections and cars sitting for longer periods of time due to traffic increases. Indeed, the City's Vehicle Miles Traveled (VMT) analysis for the University Plan Update says that VMTs associated with employment land uses would exceed the 85 percent threshold at buildout and therefore would exceed the City's proposed policies, and while VMTs per resident or employee might be reduced, the total number of residents and employees creating VMTs in the area will increase. (Appendix J to DPEIR, pg. 13.)

O5-17

Finally, the City asserts that the University Plan update supports a multimodal strategy through improvements to increase bicycle, pedestrian, and transit access. (P. 4.7-20.) However, there is no requirement to actually implement these strategies. Many strategies require significant transportation upgrades, yet the Plan Update provides no mechanism to fund any of these upgrades, and the City Council has adopted new regulations that do not require that development impact fees be spent in the area where the impact has occurred. Instead, these fees go to a central fund to be spent anywhere in the City that the City deems appropriate. Thus, there is no requirement or guarantee that any of these strategies will be implemented to reduce greenhouse gas impacts.

O5-18

Furthermore, the plan policies in the University Plan Update are vague and unenforceable; almost all language actually *requiring* anything has been removed. For example, Policies 3.5A, 3.5D and 3.5H discuss coordination and collaboration with MTS and SANDAG. Policies 3.5F and 3.5G state the Plan Update will "Support opportunities to enhance amenities with and around transit stations . . ." and "Support and encourage collaboration between business and UC San Diego to incorporate [transit] . . ." (Underline added.) Policies 3.5I and 3.5J state the Plan Update will "Promote public education [about transit] . . ." and "Prioritize transit connections . . ." Policy 3.7A "Encourage[s]

O5-19

implementation or accommodation of infrastructure for electric vehicles . . . .” Policies 3.8A – D state the Plan Update will “Work with public and private entities to encourage [transit share programs”, “Encourage employers to participate in and inform employees [about transit programs”, “Coordinate with new development to post information [about transit programs”, and “Encourage unbundled parking to . . . encourage use of alternative transportation modes.”

O5-19  
cont

All of the language in the plan policies are vague, unenforceable and completely discretionary by a City who has developed a Plan Update that rejected almost all suggestions submitted by the community. The City’s assertion that the University Plan Update supports a transportation strategy that will reduce impacts on greenhouse gas emissions is unsupported, as it relies on language that does not require anything to actually be implemented, nor does it state how any of the public transportation upgrades will be funded.

The DPEIR is inadequate because it fails to conduct an adequate analysis of the impact that the Project, especially the University Plan Update, will have on net greenhouse gas emissions, including but not limited to an increased number of cars and an increase of time waiting at intersections. Omission of this data results in an inadequate environmental analysis, leads to conclusions not based on evidence, causes incorrect conclusions regarding impacts on the environment, and provides insufficient information to the public and the City Council, precluding its ability to conduct an appropriate alternatives analysis.

O5-20

E. The environmental analysis for Hydrology is inadequate.

To evaluate impacts to hydrology, some of the issues that the City is required to evaluate include if the project would:

- 1) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;
- 2) If the project would create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems; or
- 3) Provide substantial additional sources of polluted runoff.

O5-21

The DPEIR fails to conduct an adequately analysis of either of these issues.

The City admits on page 4.9-42-43 that, “The alteration of drainage patterns and increase in runoff associated with the addition of impervious surfaces and structures can increase

the frequency and amount of flooding and potentially result in accelerating the rate of erosion and siltation through the watershed. . . . For larger projects involving substantial changes in drainage patterns, impervious surfaces, and resulting surface runoff, additional studies are required to determine compliance with the City’s Stormwater Standards Manual as further detailed in Section 4.9.4, Issue 1.”

With respect to the University Plan Update, the City is proposing densities that will more than double the population, not including the impact from Complete Communities. Projects proposed at the corner of Nobel and Genesee Avenues are already proposing to remove significant green areas, and propose to increase building heights by multiple hundreds of feet. Current stormwater standards allow each project to discharge at rates of up to 10% more than current conditions. The past two stormwater years (2022-2023 and 2023-2024) have demonstrated the impact of Climate Change, with rain events creating greater volumes of rain that occur with significantly greater intensity than in the past. Relying on current stormwater management guidelines is insufficient to declare that impacts on erosion, siltation, surface runoff and stormwater drainage systems would be less than significant, particularly given the cumulative effect of so many additional high rises envisioned by the Plan Amendment.

O5-21  
cont

The City declares, “Furthermore, the City’s Stormwater Department actively maintains and repairs the City’s existing stormwater infrastructure to ensure adequate stormwater conveyance through implementation of the MWMP,” (P. 4.9-44.) The events of this past year, particularly, January 20, 2024, suggest otherwise. Indeed, the City Council has proposed a November ballot measure to increase stormwater fees with a parcel tax. Councilmember Vivian Moreno was quoted as saying, “Funding for stormwater maintenance and infrastructure has never been sufficient in San Diego, and it’s high time we do something about [it].” When discussing the parcel tax for stormwater maintenance, Councilmember Sean Elo-Rivera was quoted as saying, “City leaders have either willfully disregarded the necessary steps to provide folks with services and infrastructure they deserve, or have not been able to understand we simply don’t have the revenue to pay for what our residents wants and deserve.” (See San Diego Union Tribune, February 21, 2024, “San Diego’s proposed flood prevention tax gets one step closer to November ballot.”)

The City cannot, on the one hand, declare in the DPEIR that it provides sufficient stormwater maintenance such that it can more than double the density in a given area without even conducting an environmental impact study, but then on the other hand assert that it must add a new tax to pay for stormwater maintenance activities because the City does not have sufficient resources to provide adequate maintenance.

O5-21  
cont

The DPEIR is inadequate because it fails to conduct an analysis of what the impacts on hydrology, especially for erosion, siltation, runoff, and stormwater drainage, will be on the University Plan area following the proposed increase in construction and density, especially given the City's admission that it has inadequate resources to provide necessary maintenance at this time.

F. The environmental analysis for Noise is inadequate.

The City admits that impacts relating to construction noise would be potentially significant (p. 4.11-15), that impacts relating to stationary sources would be potentially significant (p. 4.11-19), and that the increased traffic-generated noise could result in an increase in ambient noise levels resulting in a significant impact (p. 4.11-19). See also pages 4.11-22-23.

Despite these admissions, nowhere does the City conduct a quantitative analysis of, for example, how many more cars are expected on the road in the University Plan area, and what would be the permanent increase in traffic-related noise. The City asserts that the project is intended to support a shift from vehicle traffic toward transit, pedestrian, and bicycle, but the possibility of some percentage of new residents using these alternative forms of transit does not erase the overall impact that will occur by adding more than 50,000 new residents to an area. It is also important to note that while the University Plan update might encourage building materials for new projects to reduce noise impacts, such regulations do nothing to mitigate the increased noise on wildlife or existing residents. (It is also interesting to note that the DPEIR admits impacts on both air quality and noise from an increase in vehicle traffic, but somehow there are no impacts to greenhouse gas emissions.)

O5-22

The DPEIR is inadequate because it fails to conduct an adequate analysis of the impact on the environment in the University Plan area from the increase in construction noise, non-transportation noise, and traffic-related noise resulting from the increase in construction, density, and new residents proposed in the University Plan Update. Omission of this data results in an inadequate environmental analysis, leads to conclusions not based on evidence, and provides insufficient information to the public and the City Council, precluding the ability to conduct an appropriate alternatives analysis.

G. The environmental analysis for Public Services is inadequate.

The City states that the, "proposed University Plan update would result in a potential buildout of an additional approximately 57,000 dwelling units, or approximately 30,480 additional dwelling units compared to the existing condition." (P. 4.12-34.) The City should clarify this sentence: does the City propose an additional 57,000 dwelling units,

O5-23

or is it a buildout of a total of 57,000 dwelling units with an additional 30,480 dwelling units. The City then continues that, “The increase in residential density and associated demand for fire-rescue services could require the provision of new and/or improved fire stations and fire apparatus in order to maintain fire-rescue service ratios, response times, and other performance objectives . . . .” (P. 4.12-34-35.) The City then asserts that the construction and operation of such new fire stations would result in environmental impacts, but that an environmental review would occur at the time of construction. This is inadequate.

O5-23  
cont

It is clear that doubling the density in the University Plan area will of course require additional fire-rescue services. The City must do an analysis *now* to determine a) where additional stations could be built; or b) could existing stations be expanded in their current locations as necessary to support future demand? And if so, what will the environmental impacts of such construction and operations be? There is no sensible reason to wait for this analysis, and the City’s failure to include such analysis renders the DPEIR inadequate. In order for the City and the public to be adequately informed of the environmental impacts of the proposed Plan Update, such analysis should occur now to ensure that future fire-rescue services can be provided and to adequately advise the City Council and the public of what the environmental impacts of such additional construction and service will be.

The City’s analysis of police services (p. 4.12-36-37), schools (p. 4-12.-41-42), libraries (p. 4.12-44) and cumulative impacts (p. 4.12-44) are similarly inadequate. The San Diego Unified School District has clearly indicated that the University community will need more elementary schools and that the City should identify possible sites for such schools, but the City fails to do so. The City fails to conduct any actual analysis of what the University community will look like at full build-out following the Plan Update, but says it wants to wait to see what is actually built. Of course, after approving a program level EIR, no actual environmental analysis will then be required in the future. This approach to the DPEIR is inadequate, omits critical data for the public and City Council to evaluate the projects and appropriate alternatives, and leads to conclusions not based on evidence.

H. The City’s environmental analysis on Recreation is inadequate.

The DPEIR discusses that the City has abandoned its prior Parks Master Plan, which requires a certain amount of parkland per resident, and transitioned to the “Recreational Value-Based Park standard” which now uses a points system to evaluate parks. The DPEIR is inadequate because it fails to acknowledge that the City has abandoned its prior Parks Master Plan that acknowledges that a certain amount of land (acres) per resident is prudent and required to support adequate recreation systems. The DPEIR also is

O5-24

inadequate because it fails to include an analysis of the extent to which the University Plan Update will be unable to meet or be inconsistent with the City's Parks Master Plan, which requires certain acres of parkland per resident. Failure to include this analysis provides inadequate information to the public and the City Council, and eliminates the ability to conduct an appropriate alternatives analysis.

O5-24  
cont

The DPEIR is also inadequate as it relies on potential parks that are not located near residences and those where it is unclear if the public will actually be able to access such parks (e.g., the Jewish Community Center and the possible park located amidst hospitals).

I. The City's Transportation environmental analysis is inadequate.

Similar to the Greenhouse Gas Emissions analysis, the City decided that it does not need to evaluate for total impact on the area due to an increase in traffic. The City asserts that prior legislation and the City's 2022 analysis allows it to disregard net traffic impacts (i.e., the additional number of cars on the road) and only look at whether the project will increase or decrease Vehicle Miles Traveled (VMTs) on a per capita basis. Help Save UC disagrees that prior legislation and the City's 2022 CEQA Significant Determinations Thresholds allows the City to skip such crucial analysis. The DPEIR is inadequate because it fails to evaluate the environmental impact of the overall net increase in traffic due to a proposal that will likely more than double the population of the University area.

O5-25

Second, the DPEIR is inadequate because it fails to adequately complete an appropriate VMT analysis. First, the VMT analysis relies on 2016 data, which is already 8 years out of date and does not provide accurate conclusions. Second, the VMT analysis assumes that SANDAG will implement the 2050 Regional Plan, but the City acknowledges that, "it cannot be ensured that full implementation of the Regional Plan's transportation investments will occur." (Appendix J, p. 13.)

O5-26

Furthermore, the DPEIR fails to discuss impacts on the environment from the possibility that even if VMTs per resident decrease, this does not account for time required to complete such VMTs. For example, if 20,000 new cars are on the road in the University area, the total miles traveled by each car might be less, but there is a likelihood that the time to travel such miles will increase, including times waiting at intersections and time waiting for scarce parking spaces, causing impacts to Air Quality, greenhouse gas emissions, and overall impacts on transportation.<sup>3</sup>

O5-27

---

<sup>3</sup> The authors of this letter are not planning or land use professionals nor CEQA lawyers. To the extent an issue of adequacy is raised in one section (for example, a section discussing inadequate analysis of transportation impacts), but the concerns overlaps to other areas (such as air quality

The DPEIR is also inadequate with respect to analysis of specific area changes. For example, the University Community Plan Update relies on the installation of “mobility hubs”, but nowhere in either the Plan Update or the DPEIR is there a discussion of what these hubs will look like, whether there is land available for such hubs, or how they will actually work. The University Community Plan Update also proposes to reduce Governor Drive to one lane, but fails to conduct any sort of traffic study or analysis. There is also no analysis of how the reduction of Governor Drive to one lane can accommodate emergency access vehicles when the Plan proposes to add more than one thousand dwelling units to the South University Community area. The City failed to conduct a traffic study based on these proposed changes, but somehow concluded that impacts related to ensure emergency access to the South University Community area (or the University Community area in general) would be less than significant. Omission of this data results in an inadequate environmental analysis, leads to conclusions not based on evidence, and provides insufficient information to the public and the City Council, precluding the ability to conduct an appropriate alternatives analysis.

O5-28

O5-29

J. The City’s environmental analysis of Wildfire impacts is inadequate.

The majority of the University area is located in a very high fire hazard severity zone. (Pg. 4.18-16.) The City then advises the reader of the DPEIR to “Refer to Section 4.18.2.3c for details about local evacuation procedures.” (Pg. 4-18-21.) However, Section 4.18.2.3c is simply one paragraph, which states that the San Diego Fire Department conducts a survey of subdivisions of more than 30 dwelling units that are at significant fire risk. “This program is intended to identify areas of concern relating to the ability of emergency personnel to access an area and to evacuate community members safely and efficiently in the event of an emergency.” (Pg. 4.18-22.) Thus, the City does not actually conduct an analysis to determine if, once the community is at full build-out, an area can be adequately evacuated. The City simply states that another department is supposed to conduct an evaluation, but there is no discussion of whether such evaluation has occurred, or what the results of such evaluation were. This is an inadequate analysis of whether the University community can be safely evacuated during a wildfire following full project build-out.

O5-30

Furthermore, on pg. 4.18-30, with respect to the University area, the City simply states that, “there are adequate evacuation routes within the CPU area in the event of an emergency.” However, there is no discussion of the evacuation routes or what the

---

or greenhouse gas emissions), the fact that the issue has been raised under a heading for a certain area (transportation) does not limit the objection to the EIR to such a specific area.

impacts on such routes might be by more than doubling the population in the area, or reducing Governor Drive to one lane. Failure to include such analysis renders the City's evaluation of wildfire impacts inadequate.

O5-30  
cont

**3. The City's Conclusion that there will be no adverse impacts to Population or Housing is incorrect.**

In Section 5.3, the City asserts that, "No adverse impacts to population or housing are anticipated from implementation of the project" because "development under the project would not support unplanned population growth." (Pg. 5-3.) The DPEIR is inadequate because, for all of the reasons stated above in Section 2, the City completely fails to properly plan for population growth by failing to adequately analyze various environmental impacts, including failure to identify future sites for fire and police stations, future schools or adequate parks.

O5-31

The City also states that, "It is anticipated that most of the new housing units would be absorbed by existing residents of the San Diego area and would assist in accommodating project population growth that would occur without the project." (Pg. 5.3.) The DPEIR is inadequate because this statement is unsupported. The City fails to acknowledge that population numbers have stagnated or actually decreased over the past few years. The City also fails to account for the fact that significant population growth in the University area is due to the increased number of students attending the University of California, San Diego, and fails to account for the additional housing being built on the campus by the University.

O5-32

The City further states that, "The number of additional housing units and the corresponding forecasted number of new residents is not substantial and would contribute to the housing provisions goals of the City's General Plan Housing Element by helping to accommodate regional growth projected for the project areas, the City, and the region as a whole. Therefore, the project is not anticipated to result in overall regional population growth, and there would be no population and housing related impacts." (Pg. 5-3.) This sentence highlights the problem of combining the Blueprint San Diego project with the regional Plan Update for the University area. While the entire Blueprint San Diego project might not cause a substantial increase in new residents, certainly the same cannot be said for the University Plan Update which proposes to double the housing units, and therefore more than double the population, for the University area. Doubling the housing and population in a specific community is a substantial increase. The City's failure to acknowledge this issue and evaluate it separately makes evaluation of this issue inadequate for the purposes of the University Plan update.

Finally, the City states that the City’s target for the 2021-2029 Housing Element cycle is 108,035 housing units. (Pg. 3-4.) If one were to assume that the same number of housing units would be needed for 2030-2039 and 2040-2050, then a total of 324,105 housing units would be needed for the City of San Diego by 2050 (which is the timeline for the University Plan Update). However, recent data indicates that population numbers for the City are stagnant and/or decreasing and this number might actually be less. Regardless, assuming that the 324,105 new housing units number by 2050 is correct, then the addition of 30,430 housing units in the University area allocates approximately 10% of all housing units to be borne by the University area, despite the fact that the City of San Diego has 52 community planning areas. If the total number of housing units were divided among the 52 community planning areas, each planning area would be asked to add only 6,232 housing units until 2050. The University Plan Update asks the University area to add more than 5 times that number – and this is excluding the likely additional housing units that can or will be added under the Complete Communities program.

O5-33

The DPEIR is inadequate in that it fails to analyze why the University Area must absorb so many more housing units than other communities. Proximity to transit could account for some additional units, but given the University Plan Update’s proposal to more than double the number of housing units, and thus at least double the population, the DPEIR must provide an adequate analysis of why the number of additional housing must be added to the University area, and why housing units cannot be distributed more evenly across the 52 community planning areas. Failure to provide this analysis renders the DPEIR’s analysis of housing impacts inadequate.

As a final note, Help Save UC objects to the City’s failure to require onsite affordable and low-income housing. The historical practice of allowing developers to pay in-lieu fees has not created enough affordable housing in the City. Help Save UC believes that the City’s housing crisis is an affordable housing crisis. As detailed in the April 14, 2024 San Diego Union Tribune Article, “Rent Increases Wane,” apartment complexes in the City of San Diego with average rents of approximately \$3,000/month for a one- bedroom apartment have vacancy rates ranging from 16–26 percent. The housing crisis is actually a desperate need for moderate- and low-income housing. The City’s failure to require such on-site housing units with each project will simply add high income housing stock, but will do little to address the critical need for moderate and low income housing.

O5-34

**4. The City’s analysis of Growth Inducement is incorrect.**

For the same reasons as discussed in Section 3, above, the City’s analysis of whether the proposed project could foster population growth and the impacts such growth may have by taxing existing community services facilities (Chapter 6.0) is inadequate. The

O5-35

O5-35  
cont

University Plan Update may assist the City in adding new housing units, however, the DPEIR is inadequate due to its failure to adequately analyze the impacts on the University community, its services, and the environment due to the City’s unexplained decision to place a disproportionate number of housing units in the University area.

5. **The City’s analysis of significant unavoidable impacts / significant irreversible environmental changes is inadequate.**

The City’s analysis of Significant and Unavoidable Impacts is inadequate. First, the City admits that, of the 18 categories of environmental issues to be evaluated, 12 of those 18 have significant and unavoidable impacts. One of the six categories for which the City asserts there are not significant impacts is greenhouse gas emissions. As discussed above, the DPEIR is inadequate in its analysis of greenhouse gas emissions, and a proper evaluation will demonstrate that the project would have significant impacts on greenhouse gas emissions, at least for the University community area.

However, for the same reasons as discussed in Sections 3 and 4, the City’s analysis that significant and unavoidable impacts will occur is inadequate because the City has improperly and inadequately determined that a disproportionate number of housing units should be placed in the University community area. A proper and adequate analysis of where housing units could be placed throughout the 52 community planning areas in the City of San Diego might have resulted in a fair distribution of housing units across the City. Again, it is possible that more units might be placed in the University community area due to proximity to transit, but the City has provided no analysis or justification as to why 10% of housing units over the next 30 years must be placed in just one of 52 communities. The DPEIR is inadequate for its failure to conduct this analysis, as a proper analysis might very well have resulted in a project that resulted in fewer areas of significant and unavoidable impacts. Indeed, many of the impacts could have been avoidable with a proper analysis.

O5-36

6. **The City’s Evaluation of Project Alternatives is inadequate and its conclusions are not based on evidence.**

A. **The City’s selected alternatives are not reasonable.**

CEQA Guidelines clearly state requirements for how the City must conduct the analysis of project alternatives. CCR Title 14 Section 15126.6 states, in relevant and selected parts:

O5-37

- (a) An EIR shall describe a range of reasonable alternatives to the project . . . which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the

comparative merits of the alternatives. An EIR . . . must consider a reasonable range of potentially feasible alternatives that will foster informed decisionmaking and public participation. . . . The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives.

- (b) [A]n EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment . . . the discussion of alternatives shall focus on alternatives to the project . . . which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives . . . .
- (c) The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed.
- (f) The range of alternatives required in an EIR is governed by a “rule of reason” that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency could feasibly attain most of the basic objectives of the project.

O5-3  
cont

The DPEIR alternatives are:

- 1) No Project Alternative;
- 2) University and Hillcrest High Density (HD) alternative;
- 3) Blueprint SD Distributed Growth Alternative; and
- 4) Blueprint SD Initiative Reduced Density Alternative.

On pages 8-1 – 8-3 of the DPEIR the City lists the projects goals and objectives. However, the DPEIR does not provide any specific discussion regarding how or why it selected each of the specific alternatives considered.

First, the Blueprint SD Initiative Distributed Growth Alternative is not an alternative for either the University Plan Update or Hillcrest Plan amendment. The City states, “The University CPU and Hillcrest FPA would remain the same as in the proposed project in this alternative.” (Pg. 8-29.) Thus, for the University Plan update, this is not an alternative.

Second, the Blueprint SD Initiative Reduced Density Alternative is not a reasonable alternative. The Blueprint SD Initiative that is part of the “project” as defined by the DPEIR, “includes adoption of the Hillcrest FPA and the University CPU.” (Pg. 1-1.) Thus, under the Blueprint SD Initiative itself, there is no different analysis for the University Plan Update. Under the Blueprint SD Initiative Reduced Density Alternative, “the General Plan Land Use and Community Planning Element Figure LU-1 would be amended to reduce the overall density allowances within the Climate Smart Village Areas.” (Pg. S-7.) However, unlike the High Density Alternative and the Blueprint SD Initiative Distributed Growth Alternative, figures of which are provided to show the land use applications and zoning densities (see Figures 8-1 and 8-3), the DPEIR provides no figures nor specific discussion of the Blueprint SD Initiative Reduced Density Alternative that explains where the reduced density would be in the University area. In fact, the word “University” does not appear at all in the discussion for the Blueprint SD Initiative Reduced Density Alternative. (See Section 8.4.) There is simply no way for a reader of the DPEIR to understand the difference between the University Plan Update as proposed in the Project, and how the University area would change under the Blueprint SD Initiative Reduced Density Alternative.

“An EIR . . . must consider a reasonable range of potentially feasible alternatives that will foster informed decisionmaking and public participation. . . .” Section 15126.6(a). The DPEIR provides no way for either a decisionmaker or the public to understand how the University Plan Update as proposed in the Project differs from the proposed density in the University area in the Blueprint SD Initiative Reduced Density Alternative. The Blueprint SD Initiative Reduced Density Alternative is not a reasonable alternative when the DPEIR fails to provide any specific discussion that would allow a decisionmaker or the public to compare the two alternatives.

Finally, the DPEIR’s failure to provide any specific discussion regarding how or why it selected each of the alternatives considered is particularly concerning with respect to the decision to use the University and Hillcrest High Density alternative. The City’s Planning Department proposed this High Density alternative for the Plan Update in February 2022. However, the City removed this alternative from consideration in November 2022 and circulated two new alternatives for consideration: A) Scenario A, which is similar to the current proposed University Plan Update / the Project; and B) Scenario B, which proposed to add approximately 22,000 new housing units (less than the 30,000 housing units proposed the Project). The representation to the public was that the High Density alternative was not going to be considered further for the University Plan Update.

Instead, the City indicated that Scenario B, which became the Community Planning Group Subcommittee Input Scenario, would be the alternative evaluated. In fact, the Community

O5-37  
cont

Discussion Draft of the Plan Update issued in April 2023 included a page called “Community Planning Group Subcommittee Input Scenario.” This page said, “The Community Planning Group Subcommittee Input Scenario was developed to reflect early feedback collected from the University Community Planning Group Subcommittee meetings. This scenario will be considered throughout the Environmental Review process . . .” (See April 2023 University Community Plan and Local Coastal Plan, Community Discussion Draft, pg. 204 of the pdf print version of the document; the page is numbered (apparently incorrectly) 30 in the left-hand corner, underline added.) Not only did the City renege on its promise to the community that the lower density Scenario B would be the scenario considered in the Environmental Review process, it provides no explanation as to why it chose to select a High Density alternative removed from consideration for the Plan Update instead of the lower density alternative (Scenario B) that was the community preferred alternative.

The alternatives “shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project.” Section 15126.6(f). “The discussion of alternatives shall focus on alternatives to the project . . . which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives . . . .” Section 15126.6(b). A lower density alternative such as Scenario B (the community preferred alternative) could have lessened significant effects of the project while still achieving project goals, but was not considered as an alternative. On the other hand, the High Density alternative was considered and was found to have greater impacts than the Project. This does not comply with CEQA regulations. An alternative that is capable of avoiding or substantially lessening significant effects of the project, i.e., a lower density alternative, should have been considered.

Furthermore, CEQA regulations repeatedly state that alternatives should be feasible. (Section 15126.6(a), (c), (f).) However, Section 8.2.3 of the DPEIR states, “While this [High Density] alternative would achieve the project objectives to the same degree as the project, it was not selected as the project due to unlikelihood that development at the higher intensities would be feasible and actually implemented.” It was therefore improper and contrary to CEQA guidelines for the City to use the High Density option as an alternative as the City has determined it was not feasible. Furthermore, the City’s conclusion that the High Density option is likely not feasible raises these important questions: At what level of density is the project feasible? Where is the City’s analysis that the project is feasible for the University Plan update when the High Density option is not?

O5-37  
cont

In conclusion, the DPEIR is inadequate because it did not provide reasonable and feasible alternatives for consideration as required by CEQA.

O5-37  
cont

B. The City's inadequate environmental analysis results in an inadequate analysis of project alternatives.

As discussed in Section 2, above, the City fails to conduct an adequate analysis of the environmental impacts in multiple areas. This failure leads to an omission of critical data which leads to faulty conclusions not based on evidence. Thus, it is impossible for the public and the decisionmakers to conduct an appropriate alternatives analysis when the underlying analysis is faulty.

Furthermore, the analysis conducted of each of the alternatives is inadequate. For example, the VMT analysis is only conducted for the project; there are no VMT analyses for any alternatives. However, despite the lack of data, and the admission that, "The increased residential and non-residential development capacity under this [High Density] alternative could result in greater emissions of GHGs due to greater density and associated vehicles trips" (p. 8-22), the City concludes that, "GHG emissions [under the High Density alternative] are assumed to be similar to the project." (P. 8-23, underline added.) The City has no basis to make this assumption.

O5-38

For the High Density alternative, the City concludes that some impacts would be significant and greater than the project (see aesthetics, p. 8-19, air quality, p. air quality, p. 8-20, noise, p. 8-24-25; wildfire, p. 8-28). However, for some areas, the City concludes that the impacts are significant and the same as the project, but there is no basis for this conclusion. For example, for biological resources, the City simply says, "like the project, impacts to wetlands under this alternative would be significant." (P. 8-20.) But there is no analytical discussion demonstrating that the level of impact would in fact be the same. This same problematic analysis occurs for hydrology (p. 8-24), public services (p. 8-25), and recreation (p. 8-25). But it is non-sensical to accept that the same level of impact will occur on public services and recreation when the project proposes to add approximately 30,000 new homes to the University area, but the High Density alternative proposes to add 57,000 new homes to the University area, especially when there is simply no space for any additional meaningful park space.

O5-39

The DPEIR is inadequate because the comparison of impacts between the project and the High Density alternative omits critical data and the conclusions of this comparison are not based on evidence.

C. The City's conclusion that the High Density alternative is the environmentally superior alternative is not based on evidence.

CEQA Guidelines Section 15126.6(e)(2) requires the identification of an environmentally superior alternative among the alternatives analyzed in an EIR.

In Section 8.2.3., the Conclusion to the City's comparison of the Project to the University and Hillcrest High Density Alternative, the City states, "No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project." (Underline added.) Thus, the City clearly concludes in Section 8.2.3 that environmental impacts would increase under the Higher Density alternative.

This is supported by Table 8-1, which compares the impacts of the alternatives. If the reader accepts the City's conclusions, the Project has 12 environmental areas that have significant impacts and 6 areas where the Project has less than significant impacts. For the University High Density alternative, if the reader accepts the City's conclusions, there are 10 environmental areas where the impacts are the same for the Project and the High Density alternative (7 are significant, 3 are less than significant). In four categories, the City finds that both the Project and the High Density alternative have significant impacts, but the impacts from the High Density alternative are even more significant than the impacts from the project. In one category, the City finds that both the Project and the High Density alternative have a significant impact, but the High Density alternative significant impact is slightly less. And finally, for three categories, the City finds that both the Project and the High Density alternative have less than significant impacts, and the High Density alternative impacts are less.

O5-40

Thus, mathematically speaking, both alternatives are the same for 10 categories. For 4 categories, the High Density alternative has greater impacts, and those impacts are significant. For 4 categories the High Density alternative has lesser impacts, but 3 of those are in categories where both projects have less than significant impacts. Thus, by the City's own analysis, the High Density alternative has more significant impacts.

However, the City concludes in Section 8.5 that the "University CPU and Hillcrest FPA High Density Alternative is considered to be the environmentally superior alternative, based on a comparison of the alternatives' overall impacts and their compatibility with the project goals and objectives. While the University CPU and Hillcrest FPA High Density Alternative would not eliminate any significant impacts of the project, it would reduce the significance of impacts in comparison to the project." This conclusion is in direct conflict with the conclusions in Section 8.2.3 (where the City found that the High Density

alternative had greater environmental impacts than the Project) and is contrary to the results of Table 8-1. Furthermore, the City also provides no discussion nor evidentiary support for the assumed conclusion that somehow the alternatives' overall impacts and compatibility with the project goals and objectives must outweigh the greater environmental impacts found in Section 8.2.3 and Table 8-1. Finally, once the City actually performs the appropriate environmental analysis, it will be clear that higher density alternatives (with a higher number of residents), and the increase in greenhouse gas emissions for higher density will have a greater environmental impact.

O5-40  
cont

Thus, the DPEIR is inadequate because it a) provides conflicting statements regarding which alternative is environmentally superior; and b) provides no evidence to support the City's arbitrary conclusion that the High Density alternative is the environmentally superior alternative.

Help Save UC recommends that the DPEIR be revised to redo the analysis of the environmentally superior alternative as it is clear that the conclusion that the High Density alternative is the environmentally superior alternative is in direct conflict with Section 8.2.3 and Table 8-1 of the DPEIR and is not based on evidence.

D. The City's failure to designate an environmentally superior alternative for Blueprint SD renders the EIR inadequate for Blueprint SD.

CEQA Guidelines Section 15126.6(e)(2) requires the identification of an environmentally superior alternative among the alternatives analyzed in an EIR.

The Project includes three separate projects: 1) Blueprint SD; 2) the Hillcrest Plan Amendment; 3) the University Plan Update. The three projects are not related and should have been evaluated separately. Regardless, the DPEIR (erroneously) identifies the Hillcrest and University High Density alternative as the environmentally superior alternative. As this alternative only considers two areas of the City of San Diego, this conclusion cannot be used to support the Blueprint SD project for the entire City of San Diego. As a result, the DPEIR does not identify an environmentally superior alternative for Blueprint SD, and therefore the DPEIR does not satisfy the requirements of Section 15126.6(e)(2).

O5-41

Help Save UC recommends that the DPEIR be revised to remove Blueprint SD from the document as the document clearly does not meet CEQA requirements for Blueprint SD.

## 7. Conclusion.

The DPEIR is inadequate because it falls short of the required informational document that is required to inform public agency decisionmakers and the public of the significant environmental effects of the project and to discuss whether there are feasible and reasonable alternatives that could reduce the significant effects that the project will impose in the University community.

The City's approach to combine the Blueprint San Diego project, the Hillcrest Plan Amendment and the University Community Plan Update into one document created a document that was designed to confuse and discourage the public from providing input on this analysis. The City's failure to identify an environmentally superior alternative that can be used to support a selection of a Blueprint SD project, a required element of an EIR, shows that the City did not intend to use this document to move the Blueprint SD project forward.

O5-42

Second, the DPEIR's environmental analyses of multiple issues is inadequate and does not lead to conclusions based on evidence.

Third, the DPEIR is inadequate because it does not provide reasonable and feasible alternatives for comparison, again leading to conclusions not based on evidence.

Finally, the City's selected environmentally superior alternative conflicts with its own findings in the DPEIR and is not based on evidence.

The DPEIR is inadequate to support the proposed University Community Plan Update and fails to provide the public with a true analysis of environmental impacts from this proposed Plan update, an analysis that both the public and decisionmakers deserve.

Sincerely,

**O5: Response to Help Save UC Comment Letter**

**O5-1:** The comment is an introduction to the attached comment letter. No response is necessary.

**O5-2:** The comment is an introduction to the attached comment letter. No response is necessary.

**O5-3:** See response to comment O13-6 under comment letter O13. The Program Environmental Impact Report (PEIR) provides a program-level analysis of the potential impacts that could occur with implementation of the project. As a programmatic document, the project description of the PEIR does not provide project-level specifics but does provide feasible development buildout which is analyzed throughout the PEIR. The PEIR includes a discussion of environmental impacts related to air quality (Section 4.2), biological resources (Section 4.3), public services (Section 4.12), transportation (Section 4.14), and wildfires (Section 4.18).

**O5-4:** The Final PEIR was revised in Section 8.5 to identify both the High Density Alternative and Reduced Density Alternative as the environmentally superior alternatives. In addition, revisions to the Final PEIR were incorporated to clarify the scope of two of the project alternatives, the Reduced Density Alternative and the High Density Alternative. Refer to response to comment O4-23 under comment letter O4 for additional discussion regarding the selection of the environmentally superior alternative.

Regarding the combination of alternatives, the impacts of these alternatives would be similar in all areas of the City, with the resulting impacts incrementally reduced in comparison to the project. For the High Density Alternative, the significance of impacts would be reduced for the issues of energy, greenhouse gas (GHG) emissions, and transportation. For the Reduced Density Alternative, the significance of impacts would be reduced for the issues of aesthetics, air quality, and noise. A separate alternative addressing only the University CPU would not provide any more information that is not already disclosed in the alternatives.

**O5-5:** The EIR assesses programmatic impacts of full buildout of the Hillcrest Focused Plan Amendment (FPA) and of the University CPU as detailed under Section 3.5.2 and Section 3.5.3, respectively. The Blueprint SD Initiative is a long-range development guide that allows the City to align its General Plan City of Villages Strategy to reflect the City's latest goals, policies, and plans for housing, environmental protection, climate change adaptation, and sustainable growth. The Blueprint SD Initiative uses a land use framework as defined by the Village Climate Goal Propensity Map to identify areas that would support development that would allow the City to reach its climate goals of the CAP. This updated growth framework would guide future land use changes in the forms of Community Plan Updates (CPUs), Specific Plans, and FPAs, and Land Development Code amendments. Where appropriate, the PEIR evaluated anticipated build-out of the University CPU, Hillcrest FPA, in addition to Citywide development anticipated under the Blueprint SD Initiative's planning framework. For example, the vehicle miles travelled (VMT) analysis is based on growth projections throughout the City, including assumptions associated with the Blueprint SD Initiative. As future community plan amendments or other land use amendments are proposed consistent with the Blueprint SD Initiative, the City would conduct additional community specific evaluation based on the specific growth targets identified for each community. Although future analysis is anticipated as the Blueprint SD Initiative is implemented, the PEIR provides a programmatic analysis of Citywide growth, including cumulative impacts.

**O5-6:** Comment noted. The Complete Communities program is not a part of the scope of the project analyzed in the Draft PEIR. The environmental impacts of the Complete Communities program were addressed in Final PEIR for Complete Communities: Housing Solutions and Mobility Choices (SCH No. 2019060003). The Complete Communities Housing Solutions Regulations and the City's Affordable Housing Regulations are included throughout the PEIR as an existing regulation and cumulative consideration. Furthermore, the Draft PEIR considered the potential impacts of the project combined with implementation of density bonus programs. Applicable regulations are cited in Section 4.1.2.2b and analysis of additional density associated with these programs is acknowledged in the impact analysis for Aesthetics (see Section 4.1.4) and Land Use (4.10.4, Issue 3). Please see response to comment O15-5 under comment letter O15.

**O5-7:** The University CPU is a long-range land use plan which would increase the capacity for homes and jobs within the community plan area but does not include site-specific project details. As a programmatic document, the project description does not provide project-level specifics but does provide feasible development buildout, which is analyzed throughout the PEIR. The City cannot reasonably anticipate how many buildings or structures would be built without site specific development proposals and it is speculative to assess site specific developments at the program-level. Future development would be subject to the underlying base zone regulations in the SDMC, which would dictate a development's ultimate height, mass, form, and intensity through the allowable FAR and setback standards, as applicable. Although base zone regulations and other City requirements in the SDMC would ensure impacts would be less than significant in most cases, there is a potential for deviations from the SDMC to be allowed, such as through a Planned Development Permit or allowances for waivers and/or incentives associated with affordable housing; therefore, at the programmatic-level of review, impacts associated with public scenic vistas were found to be significant. See response to comment O5-6 regarding the concern relating to the Complete Communities program. See also response to comment O15-6 under comment letter O15 for additional information regarding public scenic vistas.

**O5-8:** The University CPU Supplemental Development Regulations (SDRs) are appropriately identified as part of the project in the Project Description, Section 3.5.3.1h. The effects of the SDRs have been assessed in Section 4.1.4 and throughout the PEIR, as appropriate. Overall, the purpose of the SDRs are to regulate development, require specific design elements and amenities to implement the vision for the University CPU. As a result, the SDRs are regulations that, once adopted, would support minimization of adverse aesthetic impacts from development. See response O5-7 for additional information. See response to comment O11-11 under comment letter O11 regarding future environmental review.

**O5-9:** Community plans build upon the more general citywide policies established in the General Plan with policy recommendations that apply at the community and neighborhood level. Although the policies are not written to be "required," future discretionary projects would be assessed for consistency with these policies and would be required by the City to incorporate changes if found to be inconsistent.

**O5-10:** Pursuant to Public Resources Code Section 21099(d)(1), aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a Transit Priority Area (TPA) shall not be considered significant impacts on the environment. As discussed in

the Section 4.1.4 of the Draft PEIR, not all future projects would be within a TPA. Therefore, in those instances, where a project is not located within a TPA, at a program-level of review, potential aesthetic impacts are considered to be significant.

**O5-11:** See response O5-7. The Complete Communities program is not a part of the scope of the project analyzed in the Draft PEIR. The environmental impacts of the Complete Communities program were addressed in Final PEIR for Complete Communities: Housing Solutions and Mobility Choices (SCH No. 2019060003). The Complete Communities program is discussed as a part of the regulatory background in Chapter 3.2.3, and is also discussed as a cumulative consideration.

**O5-12:** See response to comments O5-7 and O5-10.

**O5-13:** See response to comments O5-7 and O5-9 and response to comment O15-8 under comment letter O15. The Complete Communities program is not a part of the scope of the project analyzed in the Draft PEIR. The environmental impacts of the Complete Communities program were addressed in Final PEIR for Complete Communities: Housing Solutions and Mobility Choices (SCH No. 2019060003). The Complete Communities program is discussed as a part of the regulatory background in Chapter 3.2.3, and is also discussed as a cumulative consideration.

**O5-14:** Per Section 4.2.4 Issue 2 of the Draft PEIR, the project includes program level actions that do not propose any site-specific, physical development at this time. Future site-specific development projects at the time of permitting would involve an analysis of construction and operational emissions, which could exceed air quality standards resulting in a significant impact.

Therefore, as the City is unable to reasonably predict how many future residents would drive cars and as air quality modelling relies upon site specific projects to accurately model emissions, at this program-level of review, hypothetical projects were used to estimate potential emissions from future buildout of a site-specific project. It can be reasonably assumed that all future site-specific projects would be required to adhere to all existing regulations during construction to protect air quality including San Diego Air Pollution Control District (SDAPCD) rules and regulations, and existing state and City regulations in order to proceed to buildout.

Odors are analyzed in PEIR Section 4.2. The project is not anticipated to introduce land uses that would generate substantial odors adjacent to sensitive receptors. While specific, future developments within the project areas are not known at this program level of analysis, planned land uses would not encourage or support uses that would be associated with significant odor generation within proximity to sensitive receptors. Future projects with the potential to result in objectionable odors shall be required to demonstrate compliance with SDAPCD Rule 51 (Public Nuisance), which prohibits the discharge of air contaminants or other materials that would be a nuisance or annoyance to the public.

**O5-15:** Without site-specific development, the City cannot reasonably rule out impacts to sensitive habitats despite the general assumption that future site-specific development would not be within any known land cover types considered sensitive. A program-level document is meant to conservatively address impacts and propose a mitigation framework that would be applied at the project-level to address future site-specific impacts. Please see response to Comment A3-5, A3-7, A3-9, and A3-11 under comment letter A3.

The Draft PEIR conservatively assesses the project's impacts on sensitive habitat, wildlife movement and wildlife corridors in Section 4.3 per the State California Environmental Quality Act (CEQA) Guidelines. The Draft PEIR addresses the impact of physical development directly on wildlife corridors through habitat destruction or fragmentation. As noted in Section 4.3.1.6(c) of the Draft PEIR, the University area has no designated wildlife corridors within the University CPU area. However, it was noted that the canyon networks within the University CPU area are local wildlife movement corridors that expand on regional wildlife corridors. While development under the project is not anticipated to affect critical habitats or these corridors directly, at a program level of review, the specific locations of development and resources present cannot be known with certainty. Future site-specific development adjacent to urban canyons and other wildlife corridor areas would be required to demonstrate consistency with the MSCP Subarea Plan, the Biology Guidelines and implement the MHPA Land Use Adjacency Guidelines to ensure there would be no adverse direct and/or indirect impacts to MHPA lands that could provide function for wildlife movement.

Indirect impacts from humans on the canyons and trails as the commenter notes in their concerns, is assessed as a recreational facility under Section 4.13.4 Issue 1 of the Draft PEIR.

**O5-16:** The analysis contained in the PEIR applies the City's CEQA Significance Determination Thresholds for GHG emissions. The City's CAP was prepared in accordance with CEQA Guidelines sections 15183.5(b), 15064(h)(3), and 15130(d), and thus, the City may determine that a project's incremental contribution to a cumulative greenhouse gas (GHG) effect is not cumulatively considerable if the project complies with the requirements of a previously adopted GHG emission reduction plan (the City's CAP). As outlined in the City's CEQA Significance Determination Thresholds, and included in Chapter 4.7.4, the significance threshold for determining GHG impacts for plan- or policy-level environmental documents is compliance with the Strategies of the CAP. As outlined in the City Planning Department's memorandum, Climate Action Plan Consistency for Plan- and Policy- Level Documents and Public Infrastructure Projects, dated June 17, 2022, plan- and policy-level environmental documents must demonstrate consistency with the goals and policies of the General Plan and the CAP. Chapter 4.7.4 Issue 2d provides a consistency analysis of the project with the six strategies of the CAP. As the project would be consistent with the CAP, it would be consistent with the CAP GHG emissions inventory and emission projections provided in the CAP. As concluded in the PEIR, the project would be consistent with the CAP and impacts would be less than significant.

**O5-17:** See response to comment O7-4 and comment O7-69 under comment letter O7.

**O5-18:** The project provides policies that support improvements to pedestrian, bicycle, transit, and roadway facilities while reducing per capita VMT and increasing alternative mode share. Future discretionary projects would be subject to the preparation of a Local Mobility Analysis (LMA). The LMA is intended to identify the transportation effects of proposed development projects and to determine the need for any improvements to the adjacent and nearby road system to achieve acceptable mobility for vehicles, bicyclists, pedestrians, and transit. Should the LMA find that road improvements would be necessary to maintain acceptable mobility standards, such improvements would be included as project design features.

**O5-19:** See response to comment O5-9.

**O5-20:** See response to comment O5-16. The City's threshold for traffic-related impacts, as found in the City's CEQA Significance Determination Thresholds, is based on a project's VMT and not traffic congestion.

**O5-21:** All development is required to comply with the City's Stormwater Standards Manual, Drainage Design Manual, and Jurisdictional Runoff Management Plan (JRMP). Generally, smaller infill projects would not substantially increase impervious surface area and implementation of onsite stormwater construction BMPs in compliance with the City's JRMP would minimize impacts. For larger projects involving substantial changes in drainage patterns, impervious surfaces, and resulting surface runoff, additional studies are required to determine compliance with the City's Stormwater Standards Manual as further detailed in Section 4.9.4, Issue 1. Erosion and siltation resulting from increased runoff can be generally avoided or reduced through site design, source control and structural pollutant control BMPs, and hydromodification management requirements, as required for certain types of projects in compliance with the City Stormwater Standards Manual and Drainage Design Manual.

The City's existing regulatory framework would ensure that future development would implement requirements for onsite LID BMPs, such as stormwater detention/retention BMPs set forth in the City's Stormwater Standards Manual, to minimize impervious areas and, as a result, simultaneously reduce project runoff and the potential transport of pollutants to the City's stormwater drainage systems.

**O5-22:** Noise impacts resulting from implementation of the University CPU are analyzed in Section 4.11 of the Draft PEIR. Noise impacts were evaluated based on the applicable criteria in CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022). Future discretionary development within the University CPU area would be reviewed for consistency with University CPU policies and all development in the University CPU area would be required to comply with the SDMC property line noise level limits to ensure stationary noise sources comply with applicable standards at the property line. At a programmatic level of review, it cannot be ensured without site-specific development details, which are not available at this time, whether impacts could be reduced to less than significant in all cases. However, the City's Noise Ordinance property line standards would apply to all future discretionary and ministerial development under the project.

Recent CPU EIR analyses have shown that various roadways within the project areas currently generate roadway noise above the levels described above for specified land uses. Traffic noise levels under the Blueprint SD Initiative, Hillcrest FPA, and University CPU are expected to contribute to additional traffic noise levels in excess of compatible noise levels for specified land uses defined in the City's land use – noise compatibility guidelines. At a program level of review, no additional mitigation is available to support further impact reductions.

See response to comment O15-16 regarding the analysis of GHG emissions.

**O5-23:** As discussed in Section 3.5 of the PEIR, implementation of the University CPU would allow up to approximately 57,000 units as compared to the adopted plan which allows up to approximately 28,000 units.

Impacts to public services and facilities are discussed in Section 4.12 of the PEIR. The project does not propose site specific fire stations, police stations, and libraries. As discussed in Section 4.12, implementation of the University CPU could result in the need for additional public services facilities, the construction and operation of which could result in environmental impacts. At the program level of analysis without project-specific details, the specific impacts and the extent of impacts related to the development of these public services facilities cannot be assessed because the size, type, and location of these projects is not known at this time. Future public service and infrastructure projects would be required to comply with regulations in existence at the time which would reduce potential environmental impacts and would undergo project-specific environmental review, at which time environmental impacts would be identified and addressed. At a program level of analysis, impacts to public services and facilities were determined to be significant.

Please see response to comment O13-4 under comment letter O13 regarding schools. Future projects that are consistent with the University CPU and associated PEIR could tier off of the PEIR and, depending on the scope of future projects, future environmental review for consistent projects might include tiered Mitigated Negative Declarations (MNDs), tiered EIRs, or other tiered environmental analysis in accordance with of CEQA Guidelines Sections 15152, 15153, 15162, 15163, 15164, 15168, and/or 15183. This condition does not preclude the environmental analysis of future projects from happening. Please see response to comment O7-49 under comment letter O7.

**O5-24:** The City's Parks Master Plan established a new park standard, the Recreational Value-Based Park Standard (Value Standard) which outlines the standard for providing population-based parks, known as the Recreational Value -Based Park Standard, which establishes a point value to represent recreational opportunities within population-based parks to assess the need for upgrades and new park facilities. The Parks Master Plan serves as a policy framework to guide future park development efforts in the City. The Parks Master Plan is referenced in Section 4.13.2.2b. of the PEIR Please see response to comment O15-14 under comment letter O15.

The Draft PEIR notes in Section 4.13.4 Issue 2.c. that the University CPU identifies new parks at Regents Road North and South and at Governor Drive, a new pocket park at Nobel Drive, a promenade along Executive Drive, and a new neighborhood park adjacent to Torrey Pines City Park. However, the University CPU does not propose specific parks or recreational facility projects to be implemented at this time and impacts would be assessed at the project-level as future parks and recreational facility projects are proposed.

**O5-25:** Please see response to comments O13-1 and O13-2 under comment letter O13.

**O5-26:** Please see response to comment O13-2 under comment letter O13.

**O5-27:** Please see response to comment O13-1 and O13-2 under comment letter O13.

**O5-28:** The University CPU is a long-range land use plan intended to guide future development within the University CPU area, but it does not provide project-specific details. The mobility hubs proposed within the University CPU area would be designed at the time of proposal and compliance with the existing regulations at the time future projects are proposed as well as project-specific mitigation measures, as applicable, would reduce potential environmental impacts associated with the construction and operation of these mobility hubs.

**O5-29:** Please see response to comment O13-1, O13-2, and O13-3, under comment letter O13.

**O5-30:** Please see response to comment O13-3 under comment letter O13.

**O5-31:** As discussed in the Draft PEIR, buildout of the University CPU could require the construction of new public services facilities to accommodate growing demand, and the construction and operation of these facilities could result in environmental impacts. The University CPU is a long-range planning document that does not include project-specific details for specific public services facilities developments. Therefore, the potential environmental impacts associated with the construction and operation of these future facilities cannot be determined at this time. The development of future public services facilities would be subject to a separate environmental review, and compliance with the regulations existing at the time as well as project-specific mitigation, as applicable, would reduce potential environmental impacts associated with the construction and operation of these new facilities.

**O5-32:** See response to comment O15-3 for a discussion of the University of California, San Diego's Long-Range Development Plan. See also response to comment O11-28 under comment letter O11 and response to comment O15-5 under comment letter O15.

**O5-33:** See response to comment O11-28 under comment letter O11 and response to comment O15-5 under comment letter O15.

**O5-34:** The University CPU includes SDR-J.1 which addresses housing equity and affordability by requiring that development within the University CPU CPIOZ – Type A area that includes a residential use shall satisfy the City's Inclusionary Affordable Housing Regulations (SDMC Chapter 14, Article 2, Division 13) through either the provision of on-site affordable dwelling units or off-site affordable units within a Sustainable Development Area within the University CPU area or shall be required to pay the Inclusionary Affordable Housing In-Lieu Fee. Please see response to comments O15-18 and O15-19 under comment letter O15. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O5-35:** Please see response to comment O11-28 under comment letter O11 and response to comment O15-5 under comment letter O15. Please see response to comment O7-50 under comment letter O7.

**O5-36:** See response to I82-11 regarding the adequacy of the EIR analysis and the appropriate use of the City's Significance Threshold for GHG emissions. See also response to O15-5 under comment letter O15.

**O5-37:** Refer to response to comment O4-23 under comment letter O4.

**O5-38:** The level of analysis for all of the alternatives in Chapter 8 of the PEIR is an appropriate level of analysis because the objective of the alternatives section is to provide public agencies with a range of feasible alternatives, so that they may compare the potential significant impacts of the proposed project with those of the alternative projects. Pursuant to CEQA Guidelines Section 15126.6(d), the analysis should include a comparison of the alternative's potential impacts with those of the proposed project, but the analysis does not need to include an assessment at the same

level of detail as that of the proposed project. The VMT discussion for the Alternatives relies upon the VMT analysis for the project since VMT can be directly correlated to the density of residential development proposed as it is a VMT generating land use. Therefore, as the Alternatives propose a higher or lower density than the project, it can be assumed that VMT would be directly correlated to this increase or decrease. Further, the Final PEIR was revised in Section 8.2.2.g to clarify the conclusions for GHG emissions for the High Density Alternative.

See response to comment I82-11 under comment letter I82 for a discussion of GHG emission impacts.

**O5-39:** See response to comment I82-4 under comment letter I82 and response to comment O4-23 under comment letter O4 regarding the required scope of an Alternatives analysis. The Alternatives analyses relies on a programmatic-level assessment. Regarding biological resources, the impacts of the project and the alternative would be the same because the alternative assumes development would occur within the same footprint but with higher densities (e.g. greater height and FAR). In regard to the High Density Alternative, the EIR notes as the location of potential future parks and recreational facilities cannot be determined at this time, it is unknown what specific physical impacts may occur and the extent of these impacts and thus impacts would be potentially significant. This is similar to the project analysis because specific parks are not proposed for implementation at the time; therefore, the specific impacts cannot be known with certainty. Further, the level of analysis for alternatives need not be as detailed as the analysis for the project.

**O5-40:** See response to comment O5-4 and response to comment O4-23 under comment letter O4.

**O5-41:** See response to comment O13-6 under comment letter O13. See also response to comment O5-4 and response to comment O4-23 under comment letter O4.

**O5-42:** The conclusion of the letter has been noted. Responses to the summary of issues are contained in the preceding responses.

Dear [planningceqa@sandiego.gov](mailto:planningceqa@sandiego.gov):

On April 22, 2024, the Linda Vista Planning Group voted unanimously to provide the following comment on the Programmatic Environmental Impact Report (PEIR) associated with Blueprint SD:

1. Based on the needs of individual community-based plans, that may shift and change over time, tiered CEQA analysis is not appropriate; community plan EIRs should be a requirement.

O6-1

Sincerely,

Felicity Senoski

Linda Vista Planning Group Chair

Re: Blueprint SD Initiative Draft EIR, SCH No. 2021070359

Dear City of San Diego:

This letter is submitted on behalf of Livable San Diego in connection with the proposed Blueprint SD Initiative (“Project”) and related Draft Environmental Impact Report (“EIR”).

O7-2

## I. Introduction

The California Environmental Quality Act (“CEQA”), Pub. Res. Code §§ 21000 – 21177, must be interpreted “so as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language.” *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal. App. 3d 247, 259. If an EIR fails to provide agency decision-makers and the public with all relevant information regarding a project that is necessary for informed decision-making and informed public participation, the EIR is legally deficient and the agency’s decision must be set aside. *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal. App. 3d 692, 712. An EIR is “aptly described as the ‘heart of CEQA’”; its purpose is to inform the public and its responsible officials of the environmental consequences before they are made. *Laurel Heights Improvement Assoc. v. University of California* (1988) 47 Cal.3d 376, 392.

O7-3

“An EIR should be prepared with a sufficient degree of analysis to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences.” CEQA Guidelines § 15151. A sufficient EIR demonstrates “adequacy, completeness and a good-faith effort at full disclosure.” *Berkeley Keep Jets Over the Bay Committee v. Board of Port Commissioners* (2001) 91 Cal.App.4th 1344, 1355 (quoting *Rio Vista Farm Bureau Center v. City of Solano* (1992) 5 Cal.App.4th 351, 368).

II. The Project Description is Inadequate

“An accurate, stable and finite project description is the sine qua non of an informative and legally sufficient EIR.” *County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 193. The DEIR fails to provide an adequate Project description.

The DEIR fails to provide information on the increase of the residential unit capacity and the number of residential units and non-residential square footage for Blueprint SD. Under Project Description the DEIR refers to a land use modeling effort and methodology as part of Vehicle Miles Traveled (“VMT”) analysis in Appendix J, however, without discussing these projections, it merely states “future land use changes within the Climate Smart Village Areas would be further defined as part of future CPUs, specific plans, and/or focused plan amendments.” DEIR at 3-25.

O7-4

The DEIR also discusses amendments to the Land Development Code, but fails to provide any specific information as to the nature of those amendments, merely asserting they “may include, but not be limited to” four general areas. DEIR at 3-26.

III. The DEIR’s Discussion of Project Impacts is Deficient

The DEIR claims “implementation of the planning level actions is addressed [throughout the environmental analysis], in addition to the potential future plan amendments, and future individual development projects that may be implemented consistent with relevant plans.” DEIR at 4-1. Blueprint SD proposes an updated land use framework defined by the Village Climate Goal Propensity Map that would “guide the development of future CPUs, Specific Plans, and FPAs, which would primarily focus future increases in development intensities that support higher density residential and mixed-use development.” DEIR at 4.1-11. While the Blueprint SD is expected to increase density, the DEIR fails to provide a description of such increase, including the increase of the residential unit capacity and the number of residential units and non-residential square footage. This fundamental failure leads to insufficient analysis of the Project’s environmental impacts.

O7-5

The DEIR fails to adequately analyze aesthetic impacts.

O7-6

- The DEIR fails to provide specific information on the increase of the residential unit capacity and the number of residential units and non-residential square footage, thereby failing to address the Project’s significant impacts.
- The DEIR fails to address how extensive aesthetic impacts will be or where they will occur.

O7-7

O7-8

The DEIR fails to adequately analyze impacts to air quality.

O7-9

- The DEIR fails to provide specific information on the increase of the residential unit capacity and the number of residential units and non-residential square footage, thereby failing to address the Project’s significant impacts.
- The DEIR states: “The project includes planning level actions that do not propose any physical development at this time” and concludes that adoption of the Project at this time would not result in impacts related to air quality. DEIR at 4.2-15. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.
- In fact, the VMT analysis provides three model runs that identify number of dwelling units as projection of growth anticipated from 2022 to 2050. DEIR Appendix J. These numbers alone indicate the potential physical development needed to accommodate the anticipated growth induced by Blueprint SD and the resulting potential environmental impacts. The DEIR fails to provide any such analysis.
- The attached comments from SWAPE identify deficiencies in the analysis of impacts.

O7-10

O7-11

O7-12

O7-13

The DEIR fails to adequately analyze traffic impacts.

O7-14

- The DEIR fails to provide specific information on the increase of the residential unit capacity and the number of residential units and non-residential square footage, thereby failing to address the Project’s significant impacts.
- The DEIR states: “The project includes planning level actions that do not propose any physical development at this time” and concludes that adoption of the Project at this time would not result in impacts related to air quality. DEIR at 4.2-15. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.
- In fact, the VMT analysis provides three model runs that identify number of dwelling units as projection of growth anticipated from 2022 to 2050. DEIR Appendix J. These numbers alone indicate the potential physical development needed to accommodate the anticipated growth induced by Blueprint SD and

O7-15

O7-16

O7-17

the resulting potential environmental impacts. The DEIR fails to provide any such analysis.	07-17 cont.
The DEIR fails to adequately analyze impacts to biological resources.	07-18

The DEIR fails to adequately analyze land use impacts.	07-26
<ul style="list-style-type: none"><li>• The DEIR fails to provide specific information on the increase of the residential unit capacity and the number of residential units and non-residential square footage, thereby failing to address the Project’s significant impacts.</li></ul>	07-27

The DEIR fails to adequately analyze noise impacts.

O7-28

- The DEIR fails to provide specific information on the increase of the residential unit capacity and the number of residential units and non-residential square footage, thereby failing to address the Project’s significant impacts.
- The DEIR discusses potentially significant construction and operational noise impacts but chooses to assume they would be less than significant by using an hourly average. But the temporary nature of a noise impact does not make it insignificant. *See Berkeley Keep Jets Over the Bay Comm. v. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344, 1380 – 81.

O7-29

O7-30

The DEIR fails to adequately analyze impacts to waters and drainages.

O7-31

- The DEIR fails to provide specific information on the increase of the residential unit capacity and the number of residential units and non-residential square footage, thereby failing to address the Project’s significant impacts.

O7-32

The DEIR fails to adequately analyze impacts to public services and facilities.

O7-33

- The DEIR fails to provide specific information on the increase of the residential unit capacity and the number of residential units and non-residential square footage, thereby failing to address the Project’s significant impacts.

O7-34

The DEIR fails to adequately analyze water supply impacts.

O7-35

- The DEIR fails to provide specific information on the increase of the residential unit capacity and the number of residential units and non-residential square footage, thereby failing to address the Project’s significant impacts.
- There is an inadequate showing of water supply for the Program. The California Supreme Court recently identified three “principles for analytical adequacy under CEQA”: (1) “CEQA’s informational purposes are not satisfied by an EIR that simply ignores or assumes a solution to a problem of supplying water to a proposed land use project”; (2) “an adequate environmental impact analysis for a large project, to be built and occupied over a number of years, cannot be limited to the water supply for the first stage or the first few years”; and (3) “the future water supplies identified and analyzed must bear a likelihood of actually proving available .... An EIR for a land use project must address the impacts of likely future water sources, and the EIR’s discussion must include a reasoned analysis of the circumstances affecting the likelihood of the water’s availability.” *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova*

O7-36

O7-37

(2007) 40 Cal.4<sup>th</sup> 412, 430 – 32 (emphasis in original) (citations omitted).  
The DEIR fails to comply with these mandates, particularly in light of recent severe water shortages throughout the State.

O7-37  
cont.

The DEIR fails to adequately analyze cumulative impacts.

O7-38

- The DEIR fails to provide specific information on the increase of the residential unit capacity and the number of residential units and non-residential square footage, thereby failing to address the Project’s significant impacts.
- The DEIR fails to consider the impacts associated with development of other density-adding programs and projects in concert with the Project. These include Complete Communities and other recently-approved programs to spur further development.
- Comments from Neighbors for a Better San Diego indicate that the DEIR substantially understates the potential for various programs to provide additional development. This only further demonstrates how the DEIR fails to adequately consider cumulative impacts in a host of areas.

O7-39

O7-40

O7-41

The DEIR fails to adequately analyze growth inducement impacts.

O7-42

- The DEIR claims the implementation of the Project would not be growth inducing, “rather its purpose is to direct planned growth to appropriate locations to implement existing policies.” DEIR at 6-2 and 3. Yet, the DEIR does not provide any explanation on how these policies will be integrated with Project implementation.
- Further, the DEIR provides: “with the proposed project, services will need to expand to keep ratios of personnel to population consistent with General Plan goals; however, this expansion will occur incrementally, allowing the City to adjust over time to the increased demand.” DEIR at 6-2. However, it does not provide further information on how the City plans to accommodate this increase.

O7-43

O7-44

Additionally, the DEIR fails to apply the City’s own CEQA Significance Determination Thresholds (“City CEQA Thresholds”). Those thresholds identify relevant criteria for consideration of environmental impacts, which the DEIR ignores. For example:

O7-45

1. The DEIR fails to address potential aesthetic, visual and neighborhood character impacts by, *inter alia*, assessing whether the activity would:
  - a. “Project bulk, scale, materials, or style which would be incompatible with surrounding development?” City CEQA Thresholds at 73.
  - b. Involve “[s]ubstantial alteration to the existing or planned character of the area ...?” *Id.*

O7-46

- c. Involve “[t]he loss of any distinctive or landmark tree(s), or stand of mature trees as identified in the community plan?” *Id.*
  2. The DEIR fails to address potential air quality impacts by, *inter alia*, assessing whether the activity would:
    - a. “Exceed[] 100 pounds per day of Particulate Matter ....” City CEQA Thresholds at 6.
    - b. Involve “[s]ubstantial alternation of air movement in the area ....” *Id.*
  3. The DEIR fails to address potential noise impacts to by, *inter alia*, assessing whether the activity would:
    - a. “Result in land uses which are not compatible with aircraft noise levels as defined by an adopted airport Comprehensive Land Use Plan (CLUP)?” City CEQA Thresholds at 52.
  4. The DEIR fails to address potential impacts to public services by, *inter alia*, assessing whether the activity would:
    - a. “conflict with the community plan in terms of the number, size, and location of public service facilities.” City CEQA Thresholds at 61.
    - b. “provide for adequate SDFD access ....” *Id.*
    - c. “substantially affect Police or Fire-Rescue response times.” *Id.*
    - d. Comply with the General Plan’s guidelines and standards for libraries. City CEQA Thresholds at 62 – 63.
    - e. Comply with the General Plan’s guidelines and standards for parks and recreation resources. City CEQA Thresholds at 63.
  5. The DEIR fails to address potential growth inducement impacts by, *inter alia*, assessing whether the activity would:
    - a. “Induce substantial population growth in an area ...?” City CEQA Thresholds at 29.
    - b. “Substantially alter the planned location, distribution, density or growth rate of the population in an area?” *Id.*
    - c. “Include extensions of roads or other infrastructure not assumed in the community plan or Capital Improvements Project list ...? *Id.*

O7-46 cont.

O7-47

O7-48

O7-49

O7-50

#### IV. The DEIR’s Discussion of Mitigation and Alternatives is Deficient

CEQA contains a “substantive mandate” that agencies refrain from approving a project with significant environmental effects if “there are feasible alternatives or mitigation measures” that can substantially lessen or avoid those effects. *Mountain Lion Foundation v. Fish and Game Comm.* (1997) 16 Cal.4<sup>th</sup> 105, 134; Pub. Res. Code § 21002. It “requires public agencies to deny approval of a project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects.” *Sierra Club v. Gilroy* (1990) 222 Cal.App.3d 30, 41. The DEIR is required to consider, and the City is required to adopt feasible mitigation and alternatives that can lessen or avoid the significant Project impacts. *City of Marina v. Board of Trustees of the California State Univ.* (2006) 2006 39 Cal.4<sup>th</sup> 341, 360; *see also* CEQA Guidelines § 15126.6(b).

O7-51

The DEIR fails to provide sufficient degree of analysis for the planned city-wide future development and fails to adequately analyze the impacts associated with these substantial changes. Based on the analysis conducted, the DEIR found that the Project would result in significant and unavoidable impacts in 12 areas, the EIR fails to adequately discuss or consider feasible mitigation to address any of these several significant impacts. “If, as so many courts have said, the EIR is the heart of CEQA, then to continue the anatomical metaphor, mitigation is the teeth of the EIR. A gloomy forecast of environmental degradation is of little or no value without pragmatic, concrete means to minimize the impacts and restore ecological equilibrium. Thus, CEQA requires project proponents to mitigate all significant environmental impacts of their project.” *Environmental Council of Sacramento v. City of Sacramento* (2006) 142 Cal.App.4th 1018, 1039.

O7-52

A. The DEIR’s Discussion of Mitigation is Insufficient

The EIR acknowledges significant and/or cumulative environmental impacts to “aesthetics; air quality; biological resources; cultural resources; hazards and hazardous materials, hydrology; noise; public services; recreation; transportation; tribal cultural resources; utilities and services systems; water quality; and wildfire.” EIR at 8-1. Yet the EIR fails to adequately discuss or consider feasible mitigation to address any of these several significant impacts. *See id.* at 7-1 to 2.

O7-53

For example, in discussing aesthetics impacts, the DEIR acknowledges at “this programmatic level of review without site-specific plans, impacts associated with scenic vistas would be significant.” DEIR at 4.1-13. The DEIR claims that the potential impacts would be addressed through compliance with the existing regulatory framework, “it is not possible to ensure all future impacts could be fully mitigated to less than significant” without specific plans. DEIR at 4.1-22. Yet, the DEIR fails to provide any feasible alternatives or mitigation measures at program level.

O7-54

This failure is repeated for each of the acknowledged significant impacts. And in each instance, the City’s claims “of infeasibility [are not] supported by substantial evidence,” particularly since the EIR fails even to discuss or consider possible mitigation. *County of San Diego v. Grossmont-Cuyamaca Community College Dist.* (2006) 141 Cal.App.4th 86, 100 (citing Pub. Res. Code § 21081.5; CEQA Guidelines § 15091(b)).

O7-55

The attached comments from SWAPE identify deficiencies in the analysis of mitigation.

O7-56

B. The DEIR’s Discussion of Alternatives is Insufficient

“Under CEQA, the public agency bears the burden of demonstrating that, notwithstanding a project’s impact on the environment, the agency’s approval of the proposed project followed meaningful consideration of alternatives.” *Pesticide Action*

O7-57

*Network v. California Dept. of Pesticide Regulation* (2017) 16 Cal.App.5<sup>th</sup> 224, 247. As noted above, the EIR identifies several significant impacts. Yet it fails entirely to consider and analyze alternatives that would actually reduce or eliminate those impacts. “Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment [], the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.” CEQA Guidelines § 15126.6(b) (emphasis added).

O7-57  
cont.

The DEIR fails to consider and identify an environmentally superior alternative.

O7-58

The DEIR also fails to identify the specifics of any proposed reduced density alternative, thereby making careful consideration and analysis of such an alternative impossible.

O7-59

Furthermore, the Project and its objectives are defined too narrowly, thereby resulting in a narrowing of the consideration of alternatives to the Program. *City of Santee v. County of San Diego* (1989) 214 Cal.App.3d 1438, 1455.

O7-60

V. The DEIR Should be Recirculated

O7-61

The DEIR is sufficiently lacking that the only way to fix these issues is to revise it and recirculate an adequate report.

VI. Conclusion

For the foregoing reasons, Livable San Diego urges you to reject the Project and EIR as drafted. Thank you for your consideration of these concerns.

O7-62

Sincerely,

Everett DeLano

**Subject: Comments on the Blueprint SD Initiative, Hillcrest Focused Plan Amendment, and University Community Plan Update (SCH No. 2021070359)**

---

Dear Mr. DeLano,

We have reviewed the March 2024 Draft Program Environmental Impact Report (“DPEIR”) for the Blueprint SD Initiative, Hillcrest Focused Plan Amendment, and University Community Plan Update (“General Plan”) located in the City of San Diego (“City”). The General Plan proposes the Blueprint SD Initiative, a comprehensive amendment the General Plan, an amendment to the Uptown Community Plan as part of the Hilcrest Focused Plan Amendment, and an update to the University Community Plan.

O7-65

Our review concludes that the DPEIR fails to adequately evaluate the General Plan’s air quality, health risk, and greenhouse gas (“GHG”) impacts. As a result, emissions and health risk impacts associated with construction and operation of the proposed General Plan may be underestimated and inadequately addressed. A revised Environmental Impact Report (“EIR”) should be prepared to adequately assess and mitigate the potential air quality, health risk, and greenhouse gas impacts that projects included in the General Plan may have on the environment.

O7-66

## Air Quality

### Failure to Implement All Feasible Mitigation to Reduce Emissions

The DPEIR concludes that the General Plan would result in a significant construction-related air quality impact, stating:

O7-67

“Federal, State, and local regulations would provide a framework for developing project-level air quality protection measures for future projects and implementation of mitigation measure MM-AQ-1 would reduce construction-related air quality impacts for future development anticipated

under the project. Nevertheless, the ability of future development to reduce all impacts to less than significant after the analysis required by MM-AQ-1 is implemented cannot be guaranteed at a program level of review. Thus, impacts to air quality standards are considered to be significant” (p. 4.2-33).

The DPEIR continues and concludes that the General Plan would also result in a significant operational air quality impact, stating:

“[I]t is possible that for certain projects, adherence to the regulations may not adequately protect air quality, and such projects would require additional measures to avoid or reduce significant air quality impacts. Because operational emissions associated with development anticipated under the project would be greater for all pollutants when compared to adopted land uses and the assumptions used to develop the RAQS, and because it cannot be known whether certain projects would be able to reduce emissions below the significance thresholds, this impact would be significant” (p. 4.2-33).

Despite the implementation of Mitigation Measure (“MM”) AQ-1, the DPEIR determines that the air quality impacts associated with construction and operation of the proposed development under the General Plan would be significant. Specifically, MM AQ-1 states:

“Construction and operation of individual development projects shall not exceed criteria pollutant significance thresholds detailed in the latest City’s CEQA Significance Thresholds.

If an individual project is found to have the potential to exceed emission thresholds due to operational emissions, the following are example measures that could be implemented to reduce emissions to below a level of significance...” (p. 4.2-30 – 4.2-31).

MM AQ-1 requires future land use development projects to not exceed the City’s significance thresholds and provides examples of mitigation measures for projects that have significant emissions. However, the DPEIR should incorporate mitigation measures that are required of future projects in order to collectively reduce the emissions and impacts associated with the proposed development under the General Plan.

The California Office of Planning and Research (“OPR”) General Plan Guidelines and Technical Advisories provides guidance on the preparation and content of General Plans.<sup>1</sup> According to Chapter 10:

“The EIR must identify mitigation measures and alternatives to avoid or minimize potential impacts, to the extent feasible. The general plan EIR is a particularly useful tool for identifying measures to mitigate the cumulative effects of new development. For example, a general plan might anticipate a significant increase in industrial employment in the community. If this proposal would lead to increased automobile commuting, the EIR could identify measures to reduce peak-hour traffic volumes, such as new transit routes or improved bicycle facilities.

---

<sup>1</sup> “General Plan Guidelines and Technical Advisories.” OPR, October 2023, *available at*: <https://opr.ca.gov/planning/general-plan/guidelines.html>.

Where other agencies are responsible for mitigating the effects of the general plan, they should be identified in the EIR. Pursuant to Public Resources Code section 21081.6, the general plan must incorporate the approved mitigation measures identified in the EIR into its policies and programs.”<sup>2</sup>

O7-67  
cont.

General Plans must identify mitigation measures to avoid or minimize potential impacts. As such, we again reiterate that the DPEIR should have included mitigation measures that are required of all land use development projects, regardless of their future significance determination, in order to reduce the significant cumulative impacts found in the General Plan. Such MMs are suggested in the section of this letter titled “Feasible Mitigation Measures Available to Reduce Emissions.” The General Plan should not be approved until a revised EIR is prepared, incorporating all feasible mitigation to reduce collective emissions to the maximum extent feasible.

### Inadequate Mitigation Addressing Health Risk Impacts

In order to address the potential health risk impacts associated with the buildout of the General Plan, the DPEIR incorporates MM AQ-2, which states:

“Future development that involves heavy industrial land uses such as warehousing and distribution or other land uses that would involve substantial sources of mobile source diesel emissions shall be required to prepare a health risk assessment (HRA) in accordance with APCD HRA Guidelines and the OEHHA Air Toxics “Hot Spots” Program Risk Assessment Guidelines (APCD 2006; OEHHA 2022). The HRA shall include calculation of the excess cancer risk and the non-cancer chronic and acute health hazard index for the maximally exposed individual resident, and the maximally exposed individual worker. The HRA shall identify best available control technology required to reduce risk to less than 10 in 1,000,000” (p. 4.2-32).

O7-68

As demonstrated above, the General Plan requires that heavy industrial land uses prepare an operational mobile-source health risk assessment (“HRA”) through the incorporation of MM AQ-2. However, the DPEIR fails to include the requirement of construction-related HRAs in MM AQ-2. This is incorrect for three reasons.

First, by failing to require a quantified construction HRA, the DPEIR is inconsistent with CEQA’s requirement to make “a reasonable effort to substantively connect a project’s air quality impacts to likely health consequences.”<sup>3</sup> This poses a problem, as individual future projects under the General Plan will produce diesel particulate matter (“DPM”) emissions through the exhaust stacks of on-site heavy-duty construction equipment. However, the DPEIR fails to evaluate the potential toxic air contaminant (“TAC”) emissions generated from future projects or indicate the concentrations at which such pollutants would trigger adverse health effects. Without making a reasonable effort to connect the General Plan’s construction-related TAC emissions to the potential health risks posed to nearby

---

<sup>2</sup> “General Plan Guidelines.” OPR, 2017, available at: <https://opr.ca.gov/planning/general-plan/guidelines.html>, chapter 10, p. 271.

<sup>3</sup> “Sierra Club v. County of Fresno.” Supreme Court of California, December 2018, available at: <https://ceqaportal.org/decisions/1907/Sierra%20Club%20v.%20County%20of%20Fresno.pdf>.

receptors, the DPEIR is inconsistent with CEQA's requirement to correlate the increase in emissions generated by future projects with the potential adverse impacts on human health.

Second, relevant to the industrial land uses within the proposed General Plan, the State of California Department of Justice ("DOJ") recommends that all warehouse projects prepare a quantitative HRA pursuant to the Office of Environmental Health Hazard Assessment ("OEHHA"), the organization responsible for providing guidance on conducting HRAs in California, as well as local air district guidelines.<sup>4</sup> OEHHA released its most recent *Risk Assessment Guidelines: Guidance Manual for Preparation of Health Risk Assessments* in February 2015. This guidance document describes the types of projects that warrant the preparation of an HRA. Specifically, OEHHA recommends that all short-term projects lasting at least 2 months assess cancer risks.<sup>5</sup> Furthermore, according to OEHHA:

"Exposure from projects lasting more than 6 months should be evaluated for the duration of the project. In all cases, for assessing risk to residential receptors, the exposure should be assumed to start in the third trimester to allow for the use of the ASFs (OEHHA, 2009)."<sup>6</sup>

As the construction duration of projects within the General Plan will likely exceed the 2-month and 6-month requirements set forth by OEHHA, construction of these projects meets the threshold warranting a quantified HRA under OEHHA guidance. These recommendations reflect the most recent state health risk policies, and a revised EIR should be prepared to require an analysis of health risk impacts posed to nearby sensitive receptors from DPM emissions generated during construction of industrial projects under the General Plan.

Third, while the DPEIR requires future industrial projects to evaluate the health risk impacts to nearby, existing receptors as a result of operation, the DPEIR fails to require the evaluation of the combined lifetime cancer risk as a result of construction and operation together. According to OEHHA guidance, "the excess cancer risk is calculated separately for each age grouping and then summed to yield cancer risk at the receptor location."<sup>7</sup> However, the DPEIR fails to require the summing of each age bin to evaluate the combined cancer risk of total construction and operations. This is incorrect, and a revised EIR should be prepared to revise MM AQ-2 and require the quantification and summing of construction and operational cancer risks together to compare to the San Diego County Air Pollution Control District ("SDAPCD") threshold of 10 in one million.<sup>8</sup>

## Greenhouse Gas

### Failure to Require Consistency with the City's Climate Action Plan

The DPEIR concludes that the General Plan would result in less-than-significant GHG impacts, stating:

“Impacts related to GHG emissions and consistency with GHG policy would be less than significant; therefore, no mitigation would be required. However, as future development is implemented in accordance with the project, site-specific analysis for project consistency with the City’s General Plan and CAP policies would be required in addition to compliance with the CAP Consistency Regulations. Future project-level review would be required to ensure projects would be consistent with applicable plans and policies. Through required evaluation of policy and regulation consistency for future development, impacts related to GHG emissions would be less than significant” (p. 4.7-23).

O7-69

As demonstrated above, the DPEIR claims that future projects would be *required* to demonstrate consistency with the City’s Climate Action Plan (“CAP”). However, according to the City’s CAP:

“Projects that are consistent with the CAP as determined through the use of this Checklist may rely on the CAP for the cumulative impacts analysis of GHG emissions. Projects that are not consistent with the CAP must prepare a comprehensive project-specific analysis of GHG emissions, including quantification of existing and projected GHG emissions and incorporation of the measures in this Checklist to the extent feasible.”<sup>9</sup>

Furthermore, while the CAP “provides a streamlined review process for proposed new development projects,” such projects are not inherently required to be consistent with the CAP and, rather, are able to conclude less-than-significant GHG impacts several different ways. Thus, the DPEIR should formally require all future projects under the General Plan to demonstrate consistency with the City’s CAP in a mitigation measure.

### Operational Greenhouse Gas Emission Calculations Indicate Significant Impacts

As described above, the DPEIR concludes that the General Plan would result in less-than-significant GHG impacts. In regard to impacts associated with GHG emissions, the DPEIR states:

“The project would support the City in obtaining citywide GHG emissions reduction targets under the CAP. Impacts related to GHG emissions would be less than significant” (p. 4.7-23).

O7-70

We found the DPEIR’s less-than-significant impact determination to be insufficient for several reasons. However, first and foremost, we quantitatively calculated the Project’s operational GHG emissions using the California Emissions Estimator Model (“CalEEMod”) Version 2022.1,<sup>10</sup> as well as Project-specific information provided by the DPEIR and associated documents.

<sup>9</sup> “CLIMATE ACTION PLAN CONSISTENCY CHECKLIST INTRODUCTION.” City of San Diego, February 2017, available at: [https://www.sandiego.gov/sites/default/files/city\\_of\\_san\\_diego\\_cap\\_checklist.pdf](https://www.sandiego.gov/sites/default/files/city_of_san_diego_cap_checklist.pdf).

<sup>10</sup> “CalEEMod Version 2022.1.” California Air Pollution Control Officers Association (CAPCOA), April 2022, available at: <https://www.caleemod.com/>.

CalEEMod provides recommended default values based on site-al information, such as land use type and size, meteorological data, and Project location. We modeled according to the land uses described in the Vehicle Miles Traveled Analysis (“VMT Analysis”), provided as Appendix J to the DPEIR, to provide a general calculation of the GHG emissions associated with the existing and proposed Blueprint SD Initiative land uses (see excerpt below) (Appendix J, Appendix B-1, Table 2, p. 4).

*Table 2 Dwelling Units and Retail Employment Summary by Model Run*

Model Run	Source	Single-family	Multi-family	Mobile home	Retail Employment	Total Dwelling Units
Model Run 1	LUDU22	288,146	260,067	4,872	N/A	553,085
	GP-14 2050	304,367	377,812	4,962	196,551	687,141
	<b>BP 2050</b>	<b>278,790</b>	<b>526,577</b>	<b>3,681</b>	<b>229,930</b>	<b>809,048</b>
Model Run 2	LUDU22	288,146	260,067	4,872	N/A	553,085
	GP-14 2050	304,367	377,812	4,962	196,551	687,141
	<b>BP 2050</b>	<b>273,388</b>	<b>589,850</b>	<b>2,742</b>	<b>243,908</b>	<b>865,980</b>
Model Run 3	LUDU22	288,146	260,067	4,872	N/A	553,085
	GP-14 2050	304,367	377,812	4,962	196,551	687,141
	<b>BP 2050</b>	<b>252,295</b>	<b>713,014</b>	<b>2,426</b>	<b>255,348</b>	<b>967,735</b>

O7-70  
cont.

Specifically, we modeled the dwelling units associated with the Regional Land Use and Dwelling Unit Inventory for the year 2022 (“LUDU22”) to represent an existing scenario. We also modeled the dwelling units associated with the Blueprint SD Initiative Run 2 (“BP 2050 Run 2”) and Blueprint SD Initiative Run 3 (“BP 2050 Run 3”). Because of the size limit in CalEEMod, we prepared multiple models for each scenario – LUDU22, BP 2050 Run 2, and BP 2050 Run – which are provided in Appendix A to this comment letter and defined in the Table of Contents.

Our existing model included 2022 reported emission factors, while our proposed BP 2050 Run 2 and Run 3 models included 2050 forecasted emission factors. Thus, the GHG emissions calculated by the BP 2050 Run 2 and Run 3 models are underestimated, as the buildout of the Blueprint SD Initiative would take place over the next 25 years and, consequently, have higher emission factors than those forecasted for 2050. We additionally did not model construction, which would also increase GHG emissions estimates. All other values were left as default.

As demonstrated in Table 1, the single-family, multi-family, and mobile home dwelling units associated with LUDU22 would result in operational annual GHG emissions of 3,342,706-, 876,752-, and 37,126-metric tons of carbon dioxide equivalents per year (“MT CO<sub>2</sub>e/year”), respectively. In total, the existing land uses would result in operational annual GHG emissions of 4,256,584 MT CO<sub>2</sub>e/year.

**Table 1: Regional Land Use and Dwelling Unit Inventory (LUDU) for the Year 2022  
Annual Operational Greenhouse Gas Emissions (MT CO<sub>2</sub>e/year)**

Project Phase	Single-family	Multi-family	Mobile home	Total
<i>Mobile</i>	1,860,670	78,158	16,311	1,955,139
<i>Area</i>	438,570	395,833	7,415	841,818
<i>Energy</i>	872,170	314,708	11,748	1,198,626
<i>Waste</i>	111,130	27,722	519	139,371
<i>Water</i>	59,500	60,035	1,125	120,660
<i>Refrigeration</i>	666	296	8	970
<b>Annual Operational</b>	<b>3,342,706</b>	<b>876,752</b>	<b>37,126</b>	<b>4,256,584</b>

<sup>1</sup> The emission value provided in the model, “Blueprint SD Initiative Model 2 – Single Family Homes,” are multiplied by 10 to result in the indicated values. Due to the land use size limit in CalEEMod, we were only able to include 1/10 of the total dwelling units in our model.

As demonstrated in Table 2, the single-family, multi-family, and mobile home dwelling units associated with BP 2050 Run 2 would result in operational annual GHG emissions of 2,322,128-, 2,717,392-, and 15,997- MT CO<sub>2</sub>e/year, respectively. In total, the Blueprint SD Initiative Run 2 would result in operational annual GHG emissions of 5,055,427 MT CO<sub>2</sub>e/year.

**Table 2: Blueprint SD Initiative Run 2  
Annual Operational Greenhouse Gas Emissions (MT CO<sub>2</sub>e/year)**

Project Phase	Single-family <sup>1</sup>	Multi-family	Mobile home	Total
<i>Mobile</i>	1,261,080	1,265,624	6,558	2,533,262
<i>Area</i>	416,106	897,777	4,173	1,318,056
<i>Energy</i>	545,535	377,881	4,447	927,863
<i>Waste</i>	42,327	39,185	182	81,694
<i>Water</i>	56,448	136,164	633	193,245
<i>Refrigeration</i>	632	671	4	1,307
<b>Annual Operational</b>	<b>2,322,128</b>	<b>2,717,302</b>	<b>15,997</b>	<b>5,055,427</b>

<sup>1</sup> The emission values provided in the model, “Blueprint SD Initiative Model 2 – Single Family Homes,” are multiplied by 9 to result in the indicated values. Due to the land use size limit in CalEEMod, we were only able to include 1/9 of the total dwelling units in our model.

As demonstrated in Table 3, the single-family, multi-family, and mobile home dwelling units associated with BP 2050 Run 3 would result in operational annual GHG emissions of 2,142,979-, 3,284,692-, and 14,154- MT CO<sub>2</sub>e/year, respectively. In total, the Blueprint SD Initiative Run 3 would result in operational annual GHG emissions of 5,441,825 MT CO<sub>2</sub>e/year.

O7-70  
cont.

**Table 3: Blueprint SD Initiative Run 3  
Annual Operational Greenhouse Gas Emissions (MT CO<sub>2</sub>e/year)**

Project Phase	Single-family <sup>1</sup>	Multi-family <sup>2</sup>	Mobile home	Total
<i>Mobile</i>	1,163,790	1,529,894	5,802	2,699,486
<i>Area</i>	384,003	1,085,238	3,692	1,472,933
<i>Energy</i>	503,451	456,784	3,935	964,170
<i>Waste</i>	39,060	47,368	161	86,589
<i>Water</i>	52,092	164,596	560	217,248
<i>Refrigeration</i>	583	812	4	1,399
<b>Annual Operational</b>	<b>2,142,979</b>	<b>3,284,692</b>	<b>14,154</b>	<b>5,441,825</b>

<sup>1</sup> The emission values provided in the model, “Blueprint SD Initiative Model 3 – Single Family Homes,” are multiplied by 9 to result in the indicated values. Due to the land use size limit in CalEEMod, we were only able to include ⅓ of the total dwelling units in our model.

<sup>2</sup> The emission values provided in the model, “Blueprint SD Initiative Model 3 – Multi Family Residential,” are multiplied by 2 to result in the indicated values. Due to the land use size limit in CalEEMod, we were only able to include ½ of the total dwelling units in our model.

O7-70  
cont.

After accounting for existing emissions, the Blueprint SD Initiative Run 2 and Run 3 would result in *net* annual operational GHG emissions of 798,843- and 1,185,241-MT CO<sub>2</sub>e/year, respectively, which we again emphasize is likely an underestimate of potential GHG emissions.<sup>11, 12</sup>

Next, we modeled the Hillcrest Focused Plan Amendment (“Hillcrest FPA”) and University Community Plan Update (“University CPU”) according to the residential and non-residential land uses described in the DPEIR (p. 3-27, Table 3-1, Table 3-2; p. 3-50 – 3-51, Table 3-4, Table 3-5).<sup>13</sup> These models also accounted for 2050 forecasted emission factors and, thus, are naturally underestimated. All other values were left as default.

As demonstrated in Table 4, the Hillcrest FPA and University CPU would result in net operational annual GHG emissions of 211,320- and 686,154-MT CO<sub>2</sub>e/year.

<sup>11</sup> Run 3 (5,441,825 MT CO<sub>2</sub>e/year) – Existing (4,256,584 MT CO<sub>2</sub>e/year) = Net (1,185,241 MT CO<sub>2</sub>e/year)

<sup>12</sup> Run 3 (5,055,427 MT CO<sub>2</sub>e/year) – Existing (4,256,584 MT CO<sub>2</sub>e/year) = Net (798,843 MT CO<sub>2</sub>e/year)

<sup>13</sup> We used the land uses in the “Change from Existing” column in the above-mentioned tables.

**Table 4: Hillcrest FPA and University CPU Change from Existing Uses  
Annual Operational Greenhouse Gas Emissions (MT CO<sub>2</sub>e/year)**

Project Phase	Hillcrest FPA	University CPU
<i>Mobile</i>	131,038	468,697
<i>Area</i>	45,137	47,006
<i>Energy</i>	22,849	132,084
<i>Waste</i>	2,363	16,564
<i>Water</i>	9,894	21,037
<i>Refrigeration</i>	39	766
<b>Annual Operational</b>	<b>211,320</b>	<b>686,154</b>

As demonstrated in Table 1 through 4 above, we found that the General Plan would result in substantial GHG emissions, potentially exceeding 1,000,000 MT CO<sub>2</sub>e/year in 2050. This poses a problem for three reasons.

First, CEQA requires that EIRs conduct a good-faith effort at fully disclosing environmental impacts, stating:

“CEQA does not require technical perfection in an EIR, but rather adequacy, completeness, and a good-faith effort at full disclosure.”<sup>14</sup>

By failing to quantitatively calculate the GHG emissions associated with the General Plan, the DPEIR did not make a good-faith effort at full disclosure. While projects are able to rely on the City’s CAP to evaluate GHG impacts, the size and scale of the General Plan warrants an exhaustive analysis of the associated GHG emissions.

Second, the City’s CAP establishes a community-wide goal of net zero carbon emissions by 2035.<sup>15</sup> Thus, even by 2050, the General Plan would not be consistent with this goal and the DPEIR’s claim that “[t]he project would support the City in obtaining citywide GHG emissions reduction targets under the CAP” is inaccurate. As a result, the General Plan would result in a potentially significant GHG impact that should be mitigated.

Third, it is clear that buildout of the General Plan would, on a cumulative basis, contribute to the significant adverse environmental impacts of global climate change. As a result, we find that the DPEIR’s

O7-70  
cont.

<sup>14</sup> “2024 CEQA Statute & Guidelines.” Association of Environmental Professionals, *available at*: [https://www.califaep.org/statute\\_and\\_guidelines.php](https://www.califaep.org/statute_and_guidelines.php), p. 174.

<sup>15</sup> “Climate Action Plan.” City of San Diego, *available at*: <https://www.sandiego.gov/sustainability-mobility/climate-action/cap#:~:text=The%202022%20CAP%20establishes%20a,our%20overall%20quality%20of%20life.>

claim that the General Plan would result in a less-than-significant cumulative GHG impact to be incorrect (p. 4.7-22).

In conclusion, the General Plan would result in a potentially significant GHG impact not previously identified or addressed by the DPEIR. A revised EIR should be prepared to include an updated GHG analysis that incorporates mitigation measures to reduce the GHG emissions associated with future projects under the General Plan to the maximum extent feasible.

## Mitigation

### Feasible Mitigation Measures Available to Reduce Emissions

Our analysis demonstrates that the Project would result in potentially significant air quality, health risk, and GHG impacts that should be mitigated further. In an effort to reduce the Project’s emissions, we identified several mitigation measures that are applicable to the proposed Project. To reduce the Project’s emissions, we recommend consideration of SCAG’s 2020 RTP/SCS PEIR’s Air Quality Project Level Mitigation Measures (“PMM-AQ-1”) and Greenhouse Gas Project Level Mitigation Measures (“PMM-GHG-1”), as described below:<sup>16</sup>

<b>SCAG RTP/SCS 2020-2045</b>
<b>Air Quality Project Level Mitigation Measures – PMM-AQ-1:</b>
In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i> , a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:
a) Minimize land disturbance.
b) Suspend grading and earth moving when wind gusts exceed 25 miles per hour unless the soil is wet enough to prevent dust plumes.
c) Cover trucks when hauling dirt.
d) Stabilize the surface of dirt piles if not removed immediately.
e) Limit vehicular paths on unpaved surfaces and stabilize any temporary roads.
f) Minimize unnecessary vehicular and machinery activities.
g) Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.
h) Revegetate disturbed land, including vehicular paths created during construction to avoid future off-road vehicular activities.
i) On Caltrans projects, Caltrans Standard Specifications 10-Dust Control, 17-Watering, and 18-Dust Palliative shall be incorporated into project specifications.

O7-70  
cont.

<sup>16</sup> “4.0 Mitigation Measures.” Connect SoCal Program Environmental Impact Report Addendum #1, September 2020, available at: [https://scag.ca.gov/sites/main/files/file-attachments/fpeir\\_connectsocial\\_addendum\\_4\\_mitigationmeasures.pdf?1606004420](https://scag.ca.gov/sites/main/files/file-attachments/fpeir_connectsocial_addendum_4_mitigationmeasures.pdf?1606004420), p. 4.0-2 – 4.0-10; 4.0-19 – 4.0-23; See also: “Certified Final Connect SoCal Program Environmental Impact Report.” Southern California Association of Governments (SCAG), May 2020, available at: <https://scag.ca.gov/peir>.

j) Require contractors to assemble a comprehensive inventory list (i.e., make, model, engine year, horsepower, emission rates) of all heavy-duty off-road (portable and mobile) equipment (50 horsepower and greater) that could be used an aggregate of 40 or more hours for the construction project. Prepare a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet.
k) Ensure that all construction equipment is properly tuned and maintained.
l) Minimize idling time to 5 minutes—saves fuel and reduces emissions.
m) Provide an operational water truck on-site at all times. Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.
n) Utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators.
o) Develop a traffic plan to minimize traffic flow interference from construction activities. The plan may include advance public notice of routing, use of public transportation, and satellite parking areas with a shuttle service. Schedule operations affecting traffic for off-peak hours. Minimize obstruction of through-traffic lanes. Provide a flag person to guide traffic properly and ensure safety at construction sites.
p) As appropriate require that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. Arrange appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the site.
q) Require projects within 500 feet of residences, hospitals, or schools to use Tier 4 equipment for all engines above 50 horsepower (hp) unless the individual project can demonstrate that Tier 4 engines would not be required to mitigate emissions below significance thresholds.
r) Projects located within the South Coast Air Basin should consider applying for South Coast AQMD “SOON” funds which provides funds to applicable fleets for the purchase of commercially available low-emission heavy-duty engines to achieve near-term reduction of NOx emissions from in-use off-road diesel vehicles.
s) Projects located within AB 617 communities should review the applicable Community Emissions Reduction Plan (CERP) for additional mitigation that can be applied to individual projects.
t) Where applicable, projects should provide information about air quality related programs to schools, including the Environmental Justice Community Partnerships (EJCP), Clean Air Ranger Education (CARE), and Why Air Quality Matters programs.
u) Projects should work with local cities and counties to install adequate signage that prohibits truck idling in certain locations (e.g., near schools and sensitive receptors).
v) As applicable for airport projects, the following measures should be considered...
w) As applicable for port projects, the following measures should be considered: <ul style="list-style-type: none"> <li>- Develop specific timelines for transitioning to zero emission cargo handling equipment (CHE)</li> <li>- Develop interim performance standards with a minimum amount of CHE replacement each year to ensure adequate progress.</li> <li>- Use short side electric power for ships, which may include tugboats and other ocean-going vessels or develop incentives to gradually ramp up the usage of shore power.</li> <li>- Install the appropriate infrastructure to provide shore power to operate the ships. Electrical hookups should be appropriately sized.</li> <li>- Maximize participation in the Port of Los Angeles’ Vessel Speed Reduction Program or the Port of Long Beach’s Green Flag Initiation Program in order to reduce the speed of vessel transiting within 40 nautical miles of Point Fermin.</li> <li>- Encourage the participation in the Green Ship Incentives.</li> <li>- Offer incentives to encourage the use of on-dock rail.</li> </ul>
x) As applicable for rail projects, the following measures should be considered...

O7-7  
0  
cont.

y) Projects that will introduce sensitive receptors within 500 feet of freeways and other sources should consider installing high efficiency of enhanced filtration units, such as Minimum Efficiency Reporting Value (MERV) 13 or better. Installation of enhanced filtration units can be verified during occupancy inspection prior to the issuance of an occupancy permit.

z) Develop an ongoing monitoring, inspection, and maintenance program for the MERV filters.

aa) Consult the SCAG Environmental Justice Toolbox for potential measures to address impacts to low-income and/or minority communities.

bb) The following criteria related to diesel emissions shall be implemented on by individual project sponsors as appropriate and feasible:

- Diesel nonroad vehicles on site for more than 10 total days shall have either (1) engines that meet EPA on road emissions standards or (2) emission control technology verified by EPA or CARB to reduce PM emissions by a minimum of 85%
- Diesel generators on site for more than 10 total days shall be equipped with emission control technology verified by EPA or CARB to reduce PM emissions by a minimum of 85%.
- Nonroad diesel engines on site shall be Tier 2 or higher.
- Diesel nonroad construction equipment on site for more than 10 total days shall have either (1) engines meeting EPA Tier 4 nonroad emissions standards or (2) emission control technology verified by EPA or CARB for use with nonroad engines to reduce PM emissions by a minimum of 85% for engines for 50 hp and greater and by a minimum of 20% for engines less than 50 hp.
- Emission control technology shall be operated, maintained, and serviced as recommended by the emission control technology manufacturer.
- Diesel vehicles, construction equipment, and generators on site shall be fueled with ultra-low sulfur diesel fuel (ULSD) or a biodiesel blend approved by the original engine manufacturer with sulfur content of 15 ppm or less.
- The construction contractor shall maintain a list of all diesel vehicles, construction equipment, and generators to be used on site. The list shall include the following:
  - i. Contractor and subcontractor name and address, plus contact person responsible for the vehicles or equipment.
  - ii. Equipment type, equipment manufacturer, equipment serial number, engine manufacturer, engine model year, engine certification (Tier rating), horsepower, engine serial number, and expected fuel usage and hours of operation.
  - iii. For the emission control technology installed: technology type, serial number, make, model, manufacturer, EPA/CARB verification number/level, and installation date and hour-meter reading on installation date.
- The contractor shall establish generator sites and truck-staging zones for vehicles waiting to load or unload material on site. Such zones shall be located where diesel emissions have the least impact on abutters, the general public, and especially sensitive receptors such as hospitals, schools, daycare facilities, elderly housing, and convalescent facilities.
- The contractor shall maintain a monthly report that, for each on road diesel vehicle, nonroad construction equipment, or generator onsite, includes:
  - i. Hour-meter readings on arrival on-site, the first and last day of every month, and on off-site date.
  - ii. Any problems with the equipment or emission controls.
  - iii. Certified copies of fuel deliveries for the time period that identify:
    - 1. Source of supply
    - 2. Quantity of fuel
    - 3. Quantity of fuel, including sulfur content (percent by weight)

cc) Project should exceed Title-24 Building Envelope Energy Efficiency Standards (California Building Standards Code). The following measures can be used to increase energy efficiency:

- Provide pedestrian network improvements, such as interconnected street network, narrower roadways and shorter block lengths, sidewalks, accessibility to transit and transit shelters, traffic calming measures, parks and public spaces, minimize pedestrian barriers.

O7-70  
cont.

- Provide traffic calming measures, such as:
  - i. Marked crosswalks
  - ii. Count-down signal timers
  - iii. Curb extensions
  - iv. Speed tables
  - v. Raised crosswalks
  - vi. Raised intersections
  - vii. Median islands
  - viii. Tight corner radii
  - ix. Roundabouts or mini-circles
  - x. On-street parking
  - xi. Chicanes/chokers
- Create urban non-motorized zones
- Provide bike parking in non-residential and multi-unit residential projects
- Dedicate land for bike trails
- Limit parking supply through:
  - i. Elimination (or reduction) of minimum parking requirements
  - ii. Creation of maximum parking requirements
  - iii. Provision of shared parking
- Require residential area parking permit.
- Provide ride-sharing programs
  - i. Designate a certain percentage of parking spacing for ride sharing vehicles
  - ii. Designating adequate passenger loading and unloading and waiting areas for ride-sharing vehicles
  - iii. Providing a web site or messaging board for coordinating rides
  - iv. Permanent transportation management association membership and finding requirement.

O7-70  
cont.

**Greenhouse Gas Project Level Mitigation Measures – PMM-GHG-1**

In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:

- b) Reduce emissions resulting from projects through implementation of project features, project design, or other measures, such as those described in Appendix F of the State CEQA Guidelines.
- c) Include off-site measures to mitigate a project’s emissions.
- d) Measures that consider incorporation of Best Available Control Technology (BACT) during design, construction and operation of projects to minimize GHG emissions, including but not limited to:
  - i. Use energy and fuel-efficient vehicles and equipment;
  - ii. Deployment of zero- and/or near zero emission technologies;
  - iii. Use lighting systems that are energy efficient, such as LED technology;
  - iv. Use the minimum feasible amount of GHG-emitting construction materials;
  - v. Use cement blended with the maximum feasible amount of flash or other materials that reduce GHG emissions from cement production;
  - vi. Incorporate design measures to reduce GHG emissions from solid waste management through encouraging solid waste recycling and reuse;
  - vii. Incorporate design measures to reduce energy consumption and increase use of renewable energy;
  - viii. Incorporate design measures to reduce water consumption;
  - ix. Use lighter-colored pavement where feasible;
  - x. Recycle construction debris to maximum extent feasible;

<ul style="list-style-type: none"> <li>xi. Plant shade trees in or near construction projects where feasible; and</li> <li>xii. Solicit bids that include concepts listed above.</li> </ul>
<p>e) Measures that encourage transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies, including, but not limited to the following:</p> <ul style="list-style-type: none"> <li>i. Promote transit-active transportation coordinated strategies;</li> <li>ii. Increase bicycle carrying capacity on transit and rail vehicles;</li> <li>iii. Improve or increase access to transit;</li> <li>iv. Increase access to common goods and services, such as groceries, schools, and day care;</li> <li>v. Incorporate affordable housing into the project;</li> <li>vi. Incorporate the neighborhood electric vehicle network;</li> <li>vii. Orient the project toward transit, bicycle and pedestrian facilities;</li> <li>viii. Improve pedestrian or bicycle networks, or transit service;</li> <li>ix. Provide traffic calming measures;</li> <li>x. Provide bicycle parking;</li> <li>xi. Limit or eliminate park supply;</li> <li>xii. Unbundle parking costs;</li> <li>xiii. Provide parking cash-out programs;</li> <li>xiv. Implement or provide access to commute reduction program;</li> </ul>
<p>f) Incorporate bicycle and pedestrian facilities into project designs, maintaining these facilities, and providing amenities incentivizing their use; and planning for and building local bicycle projects that connect with the regional network;</p>
<p>g) Improving transit access to rail and bus routes by incentives for construction and transit facilities within developments, and/or providing dedicated shuttle service to transit stations; and</p>
<p>h) Adopting employer trip reduction measures to reduce employee trips such as vanpool and carpool programs, providing end-of-trip facilities, and telecommuting programs including but not limited to measures that:</p> <ul style="list-style-type: none"> <li>i. Provide car-sharing, bike sharing, and ride-sharing programs;</li> <li>ii. Provide transit passes;</li> <li>iii. Shift single occupancy vehicle trips to carpooling or vanpooling, for example providing ride-matching services;</li> <li>iv. Provide incentives or subsidies that increase that use of modes other than single-occupancy vehicle;</li> <li>v. Provide on-site amenities at places of work, such as priority parking for carpools and vanpools, secure bike parking, and showers and locker rooms;</li> <li>vi. Provide employee transportation coordinators at employment sites;</li> <li>vii. Provide a guaranteed ride home service to users of non-auto modes.</li> </ul>
<p>i) Designate a percentage of parking spaces for ride-sharing vehicles or high-occupancy vehicles, and provide adequate passenger loading and unloading for those vehicles;</p>
<p>j) Land use siting and design measures that reduce GHG emissions, including:</p> <ul style="list-style-type: none"> <li>i. Developing on infill and brownfields sites;</li> <li>ii. Building compact and mixed-use developments near transit;</li> <li>iii. Retaining on-site mature trees and vegetation, and planting new canopy trees;</li> <li>iv. Measures that increase vehicle efficiency, encourage use of zero and low emissions vehicles, or reduce the carbon content of fuels, including constructing or encouraging construction of electric vehicle charging stations or neighborhood electric vehicle networks, or charging for electric bicycles; and</li> </ul>

O7-70  
cont.

v. Measures to reduce GHG emissions from solid waste management through encouraging solid waste recycling and reuse.
k) Consult the SCAG Environmental Justice Toolbox for potential measures to address impacts to low-income and/or minority communities. The measures provided above are also intended to be applied in low income and minority communities as applicable and feasible.
l) Require at least five percent of all vehicle parking spaces include electric vehicle charging stations, or at a minimum, require the appropriate infrastructure to facilitate sufficient electric charging for passenger vehicles and trucks to plug-in.
m) Encourage telecommuting and alternative work schedules, such as: <ul style="list-style-type: none"> <li>i. Staggered starting times</li> <li>ii. Flexible schedules</li> <li>iii. Compressed work weeks</li> </ul>
n) Implement commute trip reduction marketing, such as: <ul style="list-style-type: none"> <li>i. New employee orientation of trip reduction and alternative mode options</li> <li>ii. Event promotions</li> <li>iii. Publications</li> </ul>
o) Implement preferential parking permit program
p) Implement school pool and bus programs
q) Price workplace parking, such as: <ul style="list-style-type: none"> <li>i. Explicitly charging for parking for its employees;</li> <li>ii. Implementing above market rate pricing;</li> <li>iii. Validating parking only for invited guests;</li> <li>iv. Not providing employee parking and transportation allowances; and</li> <li>v. Educating employees about available alternatives.</li> </ul>

O7-70  
cont.

These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into the future projects, which subsequently, reduce the cumulative emissions under the General Plan. A revised EIR should be prepared to include all feasible mitigation measures, as well as include updated air quality, health risk, and GHG analyses to ensure that the necessary mitigation measures are implemented to reduce emissions to the maximum extent possible.

## Disclaimer

SWAPE has received limited discovery regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

## 5. Activity Data

### 5.9. Operational Mobile Sources

#### 5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Single Family Housing	286,753	289,791	259,718	103,413,630	1,323,989	1,338,014	1,199,164	477,478,553

## 5.10. Operational Area Sources

### 5.10.1. Hearths

#### 5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Single Family Housing	—
Wood Fireplaces	10632
Gas Fireplaces	16707
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	3038
Conventional Wood Stoves	0
Catalytic Wood Stoves	1519
Non-Catalytic Wood Stoves	1519
Pellet Wood Stoves	0

### 5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
119948809.5	39,982,937	0.00	0.00	—

### 5.10.3. Landscape Equipment

Season	Unit	Value
--------	------	-------

Snow Days	day/yr	0.00
Summer Days	day/yr	180

## 5.11. Operational Energy Consumption

### 5.11.1. Unmitigated

#### Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Single Family Housing	186,549,904	170	0.0330	0.0040	866,241,771

## 5.12. Operational Water and Wastewater Consumption

### 5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Single Family Housing	1,067,216,339	6,498,616,902

## 5.13. Operational Waste Generation

### 5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Single Family Housing	20,092	—

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
---------------	----------------	-------------	-----	---------------	----------------------	-------------------	----------------

Single Family Housing	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Single Family Housing	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00

### 5.15. Operational Off-Road Equipment

#### 5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

### 5.16. Stationary Sources

#### 5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
----------------	-----------	----------------	---------------	----------------	------------	-------------

#### 5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)
----------------	-----------	--------	--------------------------	------------------------------	------------------------------

### 5.17. User Defined

Equipment Type	Fuel Type
----------------	-----------

### 5.18. Vegetation

#### 5.18.1. Land Use Change

##### 5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

## 8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Construction not included.
Construction: Off-Road Equipment	Construction not included.

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	Blueprint SD Initiative Model 2 - Multi Family Residential
Operational Year	2050
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	12.6
Location	San Diego, CA, USA
County	San Diego
City	San Diego
Air District	San Diego County APCD
Air Basin	San Diego
TAZ	6400
EDFZ	12
Electric Utility	San Diego Gas & Electric
Gas Utility	San Diego Gas & Electric
App Version	2022.1.1.22

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments High Rise	589,850	Dwelling Unit	9,514	566,256,000	0.00	—	1,645,681	—

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

## 2. Emissions Summary

## 5. Activity Data

### 5.9. Operational Mobile Sources

#### 5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Apartments High Rise	2,624,832	2,672,021	2,117,561	934,073,795	12,119,304	12,337,180	9,777,146	4,312,779,693

### 5.10. Operational Area Sources

#### 5.10.1. Hearths

##### 5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Apartments High Rise	—
Wood Fireplaces	206448
Gas Fireplaces	324418
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	58985

Conventional Wood Stoves	0
Catalytic Wood Stoves	29493
Non-Catalytic Wood Stoves	29493
Pellet Wood Stoves	0

### 5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
1146668400	382,222,800	0.00	0.00	—

### 5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

## 5.11. Operational Energy Consumption

### 5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Apartments High Rise	2,000,104,623	170	0.0330	0.0040	4,175,215,655

## 5.12. Operational Water and Wastewater Consumption

### 5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Apartments High Rise	20,723,244,289	0.00

### 5.13. Operational Waste Generation

#### 5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Apartments High Rise	436,175	—

### 5.14. Operational Refrigeration and Air Conditioning Equipment

#### 5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Apartments High Rise	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Apartments High Rise	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00

### 5.15. Operational Off-Road Equipment

#### 5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

### 5.16. Stationary Sources

#### 5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
----------------	-----------	----------------	---------------	----------------	------------	-------------

#### 5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)
----------------	-----------	--------	--------------------------	------------------------------	------------------------------

### 5.17. User Defined

Equipment Type	Fuel Type
----------------	-----------

### 5.18. Vegetation

#### 5.18.1. Land Use Change

##### 5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

#### 5.18.1. Biomass Cover Type

##### 5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

#### 5.18.2. Sequestration

##### 5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

8. User Changes to Default Data

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	Blueprint SD Initiative Model 2 - Mobile Homes
Operational Year	2050
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	12.6
Location	San Diego, CA, USA
County	San Diego
City	San Diego
Air District	San Diego County APCD
Air Basin	San Diego
TAZ	6400
EDFZ	12
Electric Utility	San Diego Gas & Electric
Gas Utility	San Diego Gas & Electric
App Version	2022.1.1.22

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Mobile Home Park	2,742	Dwelling Unit	345	3,564,600	0.00	—	7,650	—

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

## 2. Emissions Summary

## 5. Activity Data

### 5.9. Operational Mobile Sources

#### 5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Mobile Home Park	13,710	12,641	11,626	4,839,728	63,301	58,364	53,680	22,345,858

### 5.10. Operational Area Sources

#### 5.10.1. Hearths

##### 5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
-------------	----------------------

Mobile Home Park	—
Wood Fireplaces	960
Gas Fireplaces	1508
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	274
Conventional Wood Stoves	0
Catalytic Wood Stoves	137
Non-Catalytic Wood Stoves	137
Pellet Wood Stoves	0

### 5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
7218315	2,406,105	0.00	0.00	—

### 5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

## 5.11. Operational Energy Consumption

### 5.11.1. Unmitigated

#### Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Mobile Home Park	12,889,557	170	0.0330	0.0040	64,725,148

## 5.12. Operational Water and Wastewater Consumption

### 5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Mobile Home Park	96,334,892	0.00

## 5.13. Operational Waste Generation

### 5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Mobile Home Park	2,028	—

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Mobile Home Park	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Mobile Home Park	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00

## 5.15. Operational Off-Road Equipment

### 5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

## 5.16. Stationary Sources

### 5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
----------------	-----------	----------------	---------------	----------------	------------	-------------

### 5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)
----------------	-----------	--------	--------------------------	------------------------------	------------------------------

## 5.17. User Defined

Equipment Type	Fuel Type
----------------	-----------

## 5.18. Vegetation

### 5.18.1. Land Use Change

#### 5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

### 5.18.1. Biomass Cover Type

#### 5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

### 5.18.2. Sequestration

#### 5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

8. User Changes to Default Data

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	Blueprint SD Initiative Model 3 - Single Family Homes
Operational Year	2050
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	12.6
Location	San Diego, CA, USA
County	San Diego
City	San Diego
Air District	San Diego County APCD
Air Basin	San Diego
TAZ	6400
EDFZ	12
Electric Utility	San Diego Gas & Electric
Gas Utility	San Diego Gas & Electric
App Version	2022.1.1.22

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Single Family Housing	28,033	Dwelling Unit	9,102	54,663,960	328,344,178	—	78,212	—

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

## 2. Emissions Summary

### 2.4. Operations Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

8. User Changes to Default Data

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	Blueprint SD Initiative Model 3 - Multi Family Residential
Operational Year	2050
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	12.6
Location	San Diego, CA, USA
County	San Diego
City	San Diego
Air District	San Diego County APCD
Air Basin	San Diego
TAZ	6400
EDFZ	12
Electric Utility	San Diego Gas & Electric
Gas Utility	San Diego Gas & Electric
App Version	2022.1.1.22

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments High Rise	356,507	Dwelling Unit	5,750	342,246,720	0.00	—	994,655	—

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

## 2. Emissions Summary

### 2.4. Operations Emissions Compared Against Thresholds

## 5. Activity Data

### 5.9. Operational Mobile Sources

#### 5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Mobile Home Park	12,130	11,184	10,286	4,281,977	56,006	51,638	47,493	19,770,624

### 5.10. Operational Area Sources

#### 5.10.1. Hearths

##### 5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
-------------	----------------------

Mobile Home Park	—
Wood Fireplaces	849
Gas Fireplaces	1334
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	243
Conventional Wood Stoves	0
Catalytic Wood Stoves	121
Non-Catalytic Wood Stoves	121
Pellet Wood Stoves	0

### 5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
6386445	2,128,815	0.00	0.00	—

### 5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

## 5.11. Operational Energy Consumption

### 5.11.1. Unmitigated

#### Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Mobile Home Park	11,404,109	170	0.0330	0.0040	57,265,941

## 5.12. Operational Water and Wastewater Consumption

### 5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Mobile Home Park	85,232,840	0.00

## 5.13. Operational Waste Generation

### 5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Mobile Home Park	1,794	—

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Mobile Home Park	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Mobile Home Park	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00

## 5.15. Operational Off-Road Equipment

### 5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

## 5.16. Stationary Sources

### 5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
----------------	-----------	----------------	---------------	----------------	------------	-------------

### 5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)
----------------	-----------	--------	--------------------------	------------------------------	------------------------------

## 5.17. User Defined

Equipment Type	Fuel Type
----------------	-----------

## 5.18. Vegetation

### 5.18.1. Land Use Change

#### 5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

### 5.18.1. Biomass Cover Type

#### 5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

### 5.18.2. Sequestration

#### 5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

8. User Changes to Default Data

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	LUDU22 - Single Family Homes
Operational Year	2022
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	12.6
Location	San Diego, CA, USA
County	San Diego
City	San Diego
Air District	San Diego County APCD
Air Basin	San Diego
TAZ	6400
EDFZ	12
Electric Utility	San Diego Gas & Electric
Gas Utility	San Diego Gas & Electric
App Version	2022.1.1.22

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Single Family Housing	28,815	Dwelling Unit	9,355	56,188,470	337,501,290	—	80,393	—

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

## 2. Emissions Summary

### 2.4. Operations Emissions Compared Against Thresholds

## 5. Activity Data

### 5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Single Family Housing	272,010	274,891	246,365	98,096,627	1,255,916	1,269,220	1,137,509	452,929,034

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Single Family Housing	—
Wood Fireplaces	10085
Gas Fireplaces	15848
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	2881
Conventional Wood Stoves	0
Catalytic Wood Stoves	1441
Non-Catalytic Wood Stoves	1441
Pellet Wood Stoves	0

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
113781651.75	37,927,217	0.00	0.00	—

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Single Family Housing	176,958,457	540	0.0330	0.0040	821,704,024

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Single Family Housing	1,012,345,503	6,164,491,073

5.13. Operational Waste Generation

5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Single Family Housing	19,059	—

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Single Family Housing	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Single Family Housing	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
----------------	-----------	----------------	---------------	----------------	------------	-------------

5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)
----------------	-----------	--------	--------------------------	------------------------------	------------------------------

5.17. User Defined

Equipment Type	Fuel Type
----------------	-----------

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

8. User Changes to Default Data

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	LUDU22 - Multi Family Residential
Operational Year	2022
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	12.6
Location	San Diego, CA, USA
County	San Diego
City	San Diego
Air District	San Diego County APCD
Air Basin	San Diego
TAZ	6400
EDFZ	12
Electric Utility	San Diego Gas & Electric
Gas Utility	San Diego Gas & Electric
App Version	2022.1.1.22

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments High Rise	260,067	Dwelling Unit	4,195	249,664,320	0.00	—	725,587	—

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

## 5. Activity Data

### 5.9. Operational Mobile Sources

#### 5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Apartments High Rise	1,157,298	1,178,104	933,641	411,836,517	5,343,445	5,439,507	4,310,779	1,901,520,177

### 5.10. Operational Area Sources

#### 5.10.1. Hearths

##### 5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Apartments High Rise	—
Wood Fireplaces	91023
Gas Fireplaces	143037
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	26007
Conventional Wood Stoves	0
Catalytic Wood Stoves	13003
Non-Catalytic Wood Stoves	13003
Pellet Wood Stoves	0

#### 5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
505570248	168,523,416	0.00	0.00	—

### 5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

### 5.11. Operational Energy Consumption

#### 5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Apartments High Rise	881,853,368	540	0.0330	0.0040	1,840,867,695

### 5.12. Operational Water and Wastewater Consumption

#### 5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Apartments High Rise	9,136,953,416	0.00

### 5.13. Operational Waste Generation

#### 5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Apartments High Rise	192,311	—

### 5.14. Operational Refrigeration and Air Conditioning Equipment

#### 5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Apartments High Rise	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Apartments High Rise	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00

### 5.15. Operational Off-Road Equipment

#### 5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

### 5.16. Stationary Sources

#### 5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
----------------	-----------	----------------	---------------	----------------	------------	-------------

#### 5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)
----------------	-----------	--------	--------------------------	------------------------------	------------------------------

### 5.17. User Defined

Equipment Type	Fuel Type
----------------	-----------

## 5.18. Vegetation

### 5.18.1. Land Use Change

#### 5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

### 5.18.1. Biomass Cover Type

#### 5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

### 5.18.2. Sequestration

#### 5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	LUDU22 - Mobile Homes
Operational Year	2022
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	12.6
Location	San Diego, CA, USA
County	San Diego
City	San Diego
Air District	San Diego County APCD
Air Basin	San Diego
TAZ	6400
EDFZ	12
Electric Utility	San Diego Gas & Electric
Gas Utility	San Diego Gas & Electric
App Version	2022.1.1.22

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Mobile Home Park	4,872	Dwelling Unit	614	6,333,600	0.00	—	13,593	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

Electric Fireplaces	0
No Fireplaces	5
Conventional Wood Stoves	0
Catalytic Wood Stoves	3
Non-Catalytic Wood Stoves	3
Pellet Wood Stoves	0

### 5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
59353357.5	19,784,453	62,814,000	20,938,000	—

### 5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

### 5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Apartments High Rise	103,184,172	170	0.0330	0.0040	215,396,817
Single Family Housing	307,064	170	0.0330	0.0040	1,425,847
Industrial Park	276,183,374	170	0.0330	0.0040	532,959,223
Office Park	299,648,091	170	0.0330	0.0040	578,239,781
Strip Mall	54,967,587	170	0.0330	0.0040	26,985,769
General Office Building	15,598,893	170	0.0330	0.0040	30,101,644

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Apartments High Rise	1,069,099,472	0.00
Single Family Housing	1,756,654	10,696,821
Industrial Park	3,848,693,750	0.00
Office Park	3,209,338,288	0.00
Strip Mall	461,916,244	0.00
General Office Building	167,069,723	0.00

5.13. Operational Waste Generation

5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Apartments High Rise	22,502	—
Single Family Housing	33.0	—

Industrial Park	20,637	—
Office Park	16,793	—
Strip Mall	6,548	—
General Office Building	874	—

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Apartments High Rise	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Apartments High Rise	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00

Electric Fireplaces	0
No Fireplaces	21
Conventional Wood Stoves	0
Catalytic Wood Stoves	11
Non-Catalytic Wood Stoves	11
Pellet Wood Stoves	0

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
58037451.75	19,345,817	3,219,000	1,073,000	—

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Apartments High Rise	99,766,175	170	0.0330	0.0040	208,261,753
Single Family Housing	1,308,092	170	0.0330	0.0040	6,074,107
Medical Office Building	12,835,897	170	0.0330	0.0040	24,769,811
Strip Mall	12,097,982	170	0.0330	0.0040	5,939,379

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Apartments High Rise	1,033,685,333	0.00
Single Family Housing	7,483,345	45,568,456
Medical Office Building	97,059,196	0.00
Strip Mall	101,664,536	0.00

5.13. Operational Waste Generation

5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Apartments High Rise	21,757	—
Single Family Housing	141	—
Medical Office Building	8,354	—
Strip Mall	1,441	—

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Apartments High Rise	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Apartments High Rise	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00
Single Family Housing	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Single Family Housing	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00
Medical Office Building	Household refrigerators and/or freezers	R-134a	1,430	0.45	0.60	0.00	1.00
Medical Office Building	Other commercial A/C and heat pumps	R-410A	2,088	< 0.005	4.00	4.00	18.0
Strip Mall	Other commercial A/C and heat pumps	R-410A	2,088	< 0.005	4.00	4.00	18.0
Strip Mall	Stand-alone retail refrigerators and freezers	R-134a	1,430	0.04	1.00	0.00	1.00
Strip Mall	Walk-in refrigerators and freezers	R-404A	3,922	< 0.005	7.50	7.50	20.0

### 5.15. Operational Off-Road Equipment

#### 5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

### 5.16. Stationary Sources

#### 5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
----------------	-----------	----------------	---------------	----------------	------------	-------------

#### 5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)
----------------	-----------	--------	--------------------------	------------------------------	------------------------------

### 5.17. User Defined

Equipment Type	Fuel Type
----------------	-----------

### 5.18. Vegetation

#### 5.18.1. Land Use Change

##### 5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

#### 5.18.1. Biomass Cover Type

##### 5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

Qualified SWPPP Developer and Practitioner

**Professional Experience:**

Matt has 30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, Matt has developed extensive client relationships and has managed complex projects that include consultation as an expert witness and a regulatory specialist, and a manager of projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014, 2017;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989– 1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

**Senior Regulatory and Litigation Support Analyst:**

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at more than 100 industrial facilities.
- Expert witness on numerous cases including, for example, perfluorooctanoic acid (PFOA) contamination of groundwater, MTBE litigation, air toxins at hazards at a school, CERCLA compliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

**Executive Director:**

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

**Hydrogeology:**

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted

public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

### **Policy:**

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9.

Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific

- principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

### **Geology:**

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

### **Teaching:**

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt is currently a part time geology instructor at Golden West College in Huntington Beach, California where he taught from 2010 to 2014 and in 2017.

### **Invited Testimony, Reports, Papers and Presentations:**

**Hagemann, M.F.**, 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

**Hagemann, M.F.**, 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

**Hagemann, M.F.**, 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Colorado.

**Hagemann, M.F.**, 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

**Hagemann, M.F.**, 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

**Hagemann, M.F.**, 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

**Hagemann, M.F.**, 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

**Hagemann, M.F.**, 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

**Hagemann, M.F.**, 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal representatives, Parker, AZ.

**Hagemann, M.F.**, 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

**Hagemann, M.F.**, 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

**Hagemann, M.F.**, 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

**Hagemann, M.F.**, 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

**Hagemann, M.F.**, 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

**Hagemann, M.F.**, 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

**Hagemann, M.F.**, 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

**Hagemann, M.F.**, 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

**Hagemann, M.F.**, 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

**Hagemann, M.F.**, 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

**Hagemann, M.F.**, 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

## ***Paul Rosenfeld, Ph.D.***

**Chemical Fate and Transport & Air Dispersion Modeling**

*Principal Environmental Chemist*

**Risk Assessment & Remediation Specialist**

### **Education**

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Focus on wastewater treatment.

### **Professional Experience**

Dr. Rosenfeld has over 25 years of experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

## **Professional History:**

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner  
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)  
UCLA School of Public Health; 2003 to 2006; Adjunct Professor  
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator  
UCLA Institute of the Environment, 2001-2002; Research Associate  
Komex H<sub>2</sub>O Science, 2001 to 2003; Senior Remediation Scientist  
National Groundwater Association, 2002-2004; Lecturer  
San Diego State University, 1999-2001; Adjunct Professor  
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager  
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager  
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor  
King County, Seattle, 1996 – 1999; Scientist  
James River Corp., Washington, 1995-96; Scientist  
Big Creek Lumber, Davenport, California, 1995; Scientist  
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist  
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

**Rosenfeld, P.E.,** C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

## **Teaching Experience:**

UCLA Department of Environmental Health (Summer 2003 through 2010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

## **Academic Grants Awarded:**

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

## **Deposition and/or Trial Testimony:**

Re: Hillcrest Focused Plan Amendment and University Community Plan Draft EIR,  
SCH No. 2021070359

Dear City of San Diego:

This letter is submitted on behalf of Uptown United in connection with the proposed Hillcrest Focused Plan Amendment and University Community Plan (“Project”) and related Draft Environmental Impact Report (“EIR”).

## I. Introduction

The California Environmental Quality Act (“CEQA”), Pub. Res. Code §§ 21000 – 21177, must be interpreted “so as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language.” *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal. App. 3d 247, 259. If an EIR fails to provide agency decision-makers and the public with all relevant information regarding a project that is necessary for informed decision-making and informed public participation, the EIR is legally deficient and the agency’s decision must be set aside. *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal. App. 3d 692, 712. An EIR is “aptly described as the ‘heart of CEQA’”; its purpose is to inform the public and its responsible officials of the environmental consequences before they are made. *Laurel Heights Improvement Assoc. v. University of California* (1988) 47 Cal.3d 376, 392.

“An EIR should be prepared with a sufficient degree of analysis to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences.” CEQA Guidelines § 15151. A sufficient EIR demonstrates “adequacy, completeness and a good-faith effort at full disclosure.” *Berkeley Keep Jets Over the Bay Committee v. Board of Port Commissioners* (2001) 91 Cal.App.4th 1344, 1355 (quoting *Rio Vista Farm Bureau Center v. City of Solano* (1992) 5 Cal.App.4th 351, 368).

II. The Project Description is Inadequate

“An accurate, stable and finite project description is the sine qua non of an informative and legally sufficient EIR.” *County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 193. The DEIR fails to provide an adequate Project description.

The DEIR identifies a “future California Coastal Commission action to approve an amended LCP,” but fails to provide any specific information as to the nature of those actions. DEIR at 3-72.

III. The DEIR’s Discussion of Project Impacts is Deficient

The DEIR fails to adequately analyze aesthetic impacts.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.
- The DEIR fails to address how extensive aesthetic impacts will be or where they will occur.

The DEIR fails to adequately analyze impacts to air quality.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.
- The attached comments from SWAPE identify deficiencies in the analysis of impacts.

The DEIR fails to adequately analyze traffic impacts.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-

ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.

The DEIR fails to adequately analyze impacts to biological resources.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.

The DEIR fails to adequately analyze greenhouse gas emission impacts.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.
- The attached comments from SWAPE identify deficiencies in the analysis of impacts.
- The DEIR identifies emissions associated with vehicle trips, yet fails to account for how these trips were calculated, since the traffic analysis failed to include such information.

The DEIR fails to adequately analyze land use impacts.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay*

*Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.

The DEIR fails to adequately analyze noise impacts.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.
- The DEIR discusses potentially significant construction and operational noise impacts but chooses to assume they would be less than significant by using an hourly average. But the temporary nature of a noise impact does not make it insignificant. See *Berkeley Keep Jets Over the Bay Comm. v. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344, 1380 – 81.

The DEIR fails to adequately analyze impacts to waters and drainages.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.

The DEIR fails to adequately analyze impacts to public services and facilities.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.

The DEIR fails to adequately analyze water supply impacts.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.
- There is an inadequate showing of water supply for the Program. The California Supreme Court recently identified three “principles for analytical adequacy under CEQA”: (1) “CEQA’s informational purposes are not satisfied by an EIR that simply ignores or assumes a solution to a problem of supplying water to a proposed land use project”; (2) “an adequate environmental impact analysis for a large project, to be built and occupied over a number of years, cannot be limited to the water supply for the first stage or the first few years”; and (3) “the future water supplies identified and analyzed must bear a likelihood of actually proving available .... An EIR for a land use project must address the impacts of likely future water sources, and the EIR’s discussion must include a reasoned analysis of the circumstances affecting the likelihood of the water’s availability.” *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 430 – 32 (emphasis in original) (citations omitted). The DEIR fails to comply with these mandates, particularly in light of recent severe water shortages throughout the State.

The DEIR fails to adequately analyze cumulative impacts.

- The DEIR fails to provide specific information on the nature or extent of development under the Project, thereby failing to provide a detailed, reasoned analysis of potential impacts. While the Project may not approve on-the-ground construction, the DEIR fails to show a good faith effort to provide an analysis of potential environmental impacts that could result from expected development. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 428; *Berkeley Keep Jets Over the Bay Comm. V. Board of Port Commissioners* (2001) 91 Cal.App.4<sup>th</sup> 1344; CEQA Guidelines §§ 15144 & 15151.
- The DEIR fails to consider the impacts associated with development of other density-adding programs and projects in concert with the Project. These include Complete Communities and other recently-approved programs to spur further development.
- Comments from Neighbors for a Better San Diego indicate that the DEIR substantially understates the potential for various programs to provide

additional development. This only further demonstrates how the DEIR fails to adequately consider cumulative impacts in a host of areas.

The EIR fails to adequately analyze growth inducement impacts.

- The DEIR claims the implementation of the Project would not be growth inducing, “rather its purpose is to direct planned growth to appropriate locations to implement existing policies.” DEIR at 6-2 and 3. Yet, the DEIR does not provide any explanation on how these policies will be integrated with Project implementation.
- Further, the DEIR provides: “with the proposed project, services will need to expand to keep ratios of personnel to population consistent with General Plan goals; however, this expansion will occur incrementally, allowing the City to adjust over time to the increased demand.” DEIR at 6-2. However, it does not provide further information on how the City plans to accommodate this increase.

Additionally, the DEIR fails to apply the City’s own CEQA Significance Determination Thresholds (“City CEQA Thresholds”). Those thresholds identify relevant criteria for consideration of environmental impacts, which the DEIR ignores. For example:

1. The DEIR fails to address potential aesthetic, visual and neighborhood character impacts by, *inter alia*, assessing whether the activity would:
  - a. “Project bulk, scale, materials, or style which would be incompatible with surrounding development?” City CEQA Thresholds at 73.
  - b. Involve “[s]ubstantial alteration to the existing or planned character of the area ...?” *Id.*
  - c. Involve “[t]he loss of any distinctive or landmark tree(s), or stand of mature trees as identified in the community plan?” *Id.*
2. The DEIR fails to address potential air quality impacts by, *inter alia*, assessing whether the activity would:
  - a. “Exceed[] 100 pounds per day of Particulate Matter ....” City CEQA Thresholds at 6.
  - b. Involve “[s]ubstantial alternation of air movement in the area ....” *Id.*
3. The DEIR fails to address potential noise impacts to by, *inter alia*, assessing whether the activity would:
  - a. “Result in land uses which are not compatible with aircraft noise levels as defined by an adopted airport Comprehensive Land Use Plan (CLUP)?” City CEQA Thresholds at 52.
4. The DEIR fails to address potential impacts to public services by, *inter alia*, assessing whether the activity would:
  - a. “conflict with the community plan in terms of the number, size, and location of public service facilities.” City CEQA Thresholds at 61.
  - b. “provide for adequate SDFD access ....” *Id.*

- c. “substantially affect Police or Fire-Rescue response times.” *Id.*
  - d. Comply with the General Plan’s guidelines and standards for libraries. City CEQA Thresholds at 62 – 63.
  - e. Comply with the General Plan’s guidelines and standards for parks and recreation resources. City CEQA Thresholds at 63.
5. The DEIR fails to address potential growth inducement impacts by, *inter alia*, assessing whether the activity would:
- a. “Induce substantial population growth in an area ...?” City CEQA Thresholds at 29.
  - b. “Substantially alter the planned location, distribution, density or growth rate of the population in an area?” *Id.*
  - c. “Include extensions of roads or other infrastructure not assumed in the community plan or Capital Improvements Project list ...? *Id.*

#### IV. The DEIR’s Discussion of Mitigation and Alternatives is Deficient

CEQA contains a “substantive mandate” that agencies refrain from approving a project with significant environmental effects if “there are feasible alternatives or mitigation measures” that can substantially lessen or avoid those effects. *Mountain Lion Foundation v. Fish and Game Comm.* (1997) 16 Cal.4<sup>th</sup> 105, 134; Pub. Res. Code § 21002. It “requires public agencies to deny approval of a project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects.” *Sierra Club v. Gilroy* (1990) 222 Cal.App.3d 30, 41. The DEIR is required to consider, and the City is required to adopt feasible mitigation and alternatives that can lessen or avoid the significant Project impacts. *City of Marina v. Board of Trustees of the California State Univ.* (2006) 2006 39 Cal.4<sup>th</sup> 341, 360; *see also* CEQA Guidelines § 15126.6(b).

The DEIR fails to provide sufficient degree of analysis for the planned city-wide future development and fails to adequately analyze the impacts associated with these substantial changes. Based on the analysis conducted, the DEIR found that the Project would result in significant and unavoidable impacts in 12 areas, the EIR fails to adequately discuss or consider feasible mitigation to address any of these several significant impacts. “If, as so many courts have said, the EIR is the heart of CEQA, then to continue the anatomical metaphor, mitigation is the teeth of the EIR. A gloomy forecast of environmental degradation is of little or no value without pragmatic, concrete means to minimize the impacts and restore ecological equilibrium. Thus, CEQA requires project proponents to mitigate all significant environmental impacts of their project.” *Environmental Council of Sacramento v. City of Sacramento* (2006) 142 Cal.App.4<sup>th</sup> 1018, 1039.

##### A. The DEIR’s Discussion of Mitigation is Insufficient

The EIR acknowledges significant and/or cumulative environmental impacts to “aesthetics; air quality; biological resources; cultural resources; hazards and hazardous

materials, hydrology; noise; public services; recreation; transportation; tribal cultural resources; utilities and services systems; water quality; and wildfire.” EIR at 8-1. Yet the EIR fails to adequately discuss or consider feasible mitigation to address any of these several significant impacts. *See id.* at 7-1 to 2.

For example, in discussing aesthetics impacts, the DEIR acknowledges at “this programmatic level of review without site-specific plans, impacts associated with scenic vistas would be significant.” DEIR at 4.1-13. The DEIR claims that the potential impacts would be addressed through compliance with the existing regulatory framework, “it is not possible to ensure all future impacts could be fully mitigated to less than significant” without specific plans. DEIR at 4.1-22. Yet, the DEIR fails to provide any feasible alternatives or mitigation measures at program level.

This failure is repeated for each of the acknowledged significant impacts. And in each instance, the City’s claims “of infeasibility [are not] supported by substantial evidence,” particularly since the EIR fails even to discuss or consider possible mitigation. *County of San Diego v. Grossmont-Cuyamaca Community College Dist.* (2006) 141 Cal.App.4<sup>th</sup> 86, 100 (citing Pub. Res. Code § 21081.5; CEQA Guidelines § 15091(b)).

The attached comments from SWAPE identify deficiencies in the analysis of mitigation.

B. The DEIR’s Discussion of Alternatives is Insufficient

“Under CEQA, the public agency bears the burden of demonstrating that, notwithstanding a project’s impact on the environment, the agency’s approval of the proposed project followed meaningful consideration of alternatives.” *Pesticide Action Network v. California Dept. of Pesticide Regulation* (2017) 16 Cal.App.5<sup>th</sup> 224, 247. As noted above, the EIR identifies several significant impacts. Yet it fails entirely to consider and analyze alternatives that would actually reduce or eliminate those impacts. “Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment [], the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.” CEQA Guidelines § 15126.6(b) (emphasis added).

The DEIR fails to consider feasible reduced density alternatives.

Furthermore, the Project and its objectives are defined too narrowly, thereby resulting in a narrowing of the consideration of alternatives to the Program. *City of Santee v. County of San Diego* (1989) 214 Cal.App.3d 1438, 1455.

City of San Diego  
April 29, 2024  
Page 9 of 9

V. The DEIR Should be Recirculated

The DEIR is sufficiently lacking that the only way to fix these issues is to revise it and recirculate an adequate report.

VI. Conclusion

For the foregoing reasons, Uptown United urges you to reject the Project and EIR as drafted. Thank you for your consideration of these concerns.

Sincerely,

Everett DeLano

Enc.

---

**07: Response Everett DeLano on Behalf of Livable San Diego Comment Letter**

**07-1:** The commenter refers to the attached comment letter. The City confirmed receipt of the comment letter in an email dated May 2, 2024.

**07-2:** The commenter provides introductory language regarding the content of this comment letter. This comment does not raise an issue related to the adequacy of the analysis contained within the Draft Program Environmental Impact Report (PEIR). Comment noted.

**07-3:** The commenter includes introductory language referencing California Environmental Quality Act (CEQA) Public Resources Code §§21000 – 21177 and CEQA Guidelines §15151. This comment does not raise an issue related to the adequacy of the analysis contained within the PEIR. Comment noted.

**07-4:** The comment addresses a concern regarding an adequate project description. The Blueprint SD Initiative, Hillcrest Focused Plan Amendment (FPA), and University Community Plan Update (CPU) are all planning level documents intended to implement the City's General Plan, Climate Action Plan (CAP), Housing Element, and other City policies and planning initiatives. The scope of the project, which includes all three planning initiatives, has been clearly defined as detailed in Chapter 3.5 of the Draft PEIR. The Blueprint SD Initiative proposes an updated policy and land use framework that would apply to all development Citywide and is intended to guide the development of future land use plan updates (e.g., Community Plan Updates [CPUs], Specific Plans, and Focused Plan Amendments [FPAs]) as well as future San Diego Municipal Code (SDMC) amendments which would help facilitate the implementation of the Blueprint SD Initiative. The Blueprint SD Initiative provides a land use framework defined by the Village Climate Goal Propensity Map, which identifies areas throughout the City where future land use plan updates should focus future land use changes that support higher density development to meet the City's CAP goals. The Blueprint SD Initiative and associated Village Climate Goal Propensity Map do not propose actual development, nor do they identify site-specific land use designations and zoning. Specific densities/intensities will be determined by future CPUs, FPAs, Specific Plans, or other plan amendments, which would involve community input similar to the community outreach process during the development of the University CPU and Hillcrest FPA. Future CPUs, FPAs, Specific Plans, or other plan amendments as well as future SDMC amendments that are developed consistent with the Blueprint SD Initiative policy and land use framework would be reviewed for consistency with the Final PEIR and associated Mitigation Monitoring and Reporting Program. Chapter 3.5.1.3 of the PEIR outlines how future CPUs or other plans/plan amendments and SDMC amendments would be evaluated in light of CEQA Guidelines Sections 15152, 15153, 15162, 15163, 15164, 15168, and/or 15183. For the Hillcrest FPA and the University CPU, the project includes the adoption of new zoning maps, with land use density and intensity ranges for their plan areas.

Issue 2 in Chapter 4.14, Transportation, of the PEIR summarizes the Vehicle Miles Traveled (VMT) analysis provided in Appendix J. As discussed under Chapter 4.14.5.2, the project would have a significant VMT impact at the program level due to residential, employment, and retail VMT exceeding 85 percent of the regional mean, which was determined to be significant because although the model results show that VMT per capita (residents) for the Blueprint SD Initiative, University CPU, and Hillcrest FPA, and VMT per employee (employment) for the Blueprint SD Initiative and Hillcrest FPA would fall below the City's significance thresholds, these model results

assume full implementation of the SANDAG Regional Plan transportation investments, for which the timing cannot be ensured. This is something that would be taken into consideration during future community plan updates. For the University CPU, even assuming full implementation of the SANDAG Regional Plan transportation investments, VMT per employee would be 85.3% of the 2016 base year regional mean, resulting in a significant VMT per employee impact under the University CPU due to the 0.3% above 85% of the 2016 base year regional mean. It is worth noting that the University VMT per employee would be reduced from 24.0 (126% of the 2016 base year regional mean) to 16.3 (85.3% of the 2016 base year regional mean) by 2050 with implementation of the University CPU and Regional Plan transportation network. Although slightly over the project level VMT threshold, this represents a very significant 32% reduction in VMT per employee. Additionally, with the University CPU and implementation of the Regional Plan transportation improvements, citywide VMT per capita is 13.9 (73% of regional mean) and citywide VMT per employee is 13.8 (72% of regional mean), both significantly below the 85% threshold. This is an overall significant net benefit in the City's efforts to reduce VMT and GHG emissions. Overall, due to the fact that the timing for completion of all the SANDAG Regional Plan transportation investments cannot be ensured and future project-specific review is required for consistency with the City's Transportation Study Manual (TSM), at a program level of review, residential and employment VMT impacts would be significant; however, retail VMT impacts under the Hillcrest FPA would be less than significant. VMT mitigation is included as MM-TRANS-1 – Achieve VMT Reductions. See also response to comment O11-8 under comment letter O11.

Updates to the land development code are detailed in Chapter 3.5.1.4. As specified therein, updates would focus on implementation of the City's vision as defined in the General Plan, Climate Action Plan (CAP), and other City policies, programs, plans and documents. Anticipated future land development code amendments are anticipated to include amendments to facilitate ministerial processing of residential and mixed-use development, updates to the Historical Resources Regulations, modifying parking regulations, changes to support development, and mobility improvements. This PEIR is a program-level document and, as such, the project description does not include project-level specifics but does provide a feasible development buildout. Future actions that may result from this PEIR will be reviewed for consistency with the PEIR in accordance with CEQA Guidelines Sections 15152, 15153, 15162, 15163, 15164, 15168, and/or 15183.

**O7-5:** The comment states that the PEIR fails to provide a description of increased density under the Blueprint SD Initiative. The Blueprint SD Initiative is a program level document that would be used in the future as a guide for future development projects, specifically in regard to environmental analysis. As described in Chapter 3.5.1, the proposed Blueprint SD Initiative amends the City's General Plan to better guide the long-range land use and policy framework for areas within the City boundaries that have medium to high (i.e., 7 through 14) village propensity values as identified in the Village Climate Goal Propensity Map. More specifically, future development projects implemented under the Blueprint SD Initiative would bring higher density residential development and mixed-use development near transit areas. Focusing future growth opportunities within these Climate Smart Village Areas will allow the City to address the goals in its CAP and mobility mode share goals by promoting opportunities to walk/roll, bike, and ride transit. See response to Comment O7-4 and O11-8.

**07-6:** Aesthetic impacts are adequately analyzed in Chapter 4.1 of the PEIR. Aesthetic impacts are evaluated based on the applicable criteria in CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022). The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR.

**07-7:** See response to comment O7-4 and comment O7-5. This PEIR is a program-level document and, as such, the project description does not include project-level specifics, but does provide a feasible development buildout.

**07-8:** Chapter 4.1 of the PEIR evaluates potential impacts related to aesthetics based on applicable criteria in the CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022). The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR. Comment noted.

**07-9:** Air quality impacts are adequately analyzed in Chapter 4.2 of the PEIR. Air quality impacts are evaluated based on the applicable criteria in CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022), and applicable air district standards. The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR. Comment noted.

**07-10:** See response to comment O7-4 and comment O7-5, above. This PEIR is a program-level document and, as such, the project description does not include project-level specifics but does provide a feasible development buildout.

**07-11:** As described in Chapter 3.5.1, the proposed Blueprint SD Initiative amends the City's General Plan to better guide the long-range land use and policy framework for areas within the City boundaries that have medium to high (i.e., 7 through 14) village propensity values as identified in the Village Climate Goal Propensity Map. More specifically, future development projects implemented under the Blueprint SD Initiative would bring higher density residential development and mixed-use development near transit areas. Focusing future growth opportunities within these Climate Smart Village Areas will allow the City to address the goals in its CAP and mobility mode share goals by promoting opportunities to walk/roll, bike, and ride transit.

Chapter 4.2.4 provides an analysis of potential air quality impacts resulting from the adoption of the Blueprint SD Initiative, University CPU, Hillcrest FPA, future LDC amendments, future CPUs, and future plan amendments consistent with the Village Climate Goal Propensity Map. The analysis includes, but is not limited to, two reasonably foreseeable hypothetical scenarios modeling a range of potential future projects that could be constructed within the project areas based on the development regulations and policies of the Blueprint SD Initiative, University CPU, and Hillcrest FPA; and an analysis of long-term operational emissions, which include mobile and area source emissions, based on the operation screening criteria shown in Table 4.2-7. Without project-specific development plans, the air quality analysis is an appropriate program-level analysis for the proposed project.

Future development projects and community plan updates, amendments, and specific plans would be reviewed for consistency with the Blueprint SD Initiative, Hillcrest FPA, and University CPU PEIR and Mitigation Monitoring and Reporting Program. Future projects within the scope of the PEIR would be evaluated in accordance with CEQA Guidelines Sections 15152, 15153, 15162, 15163,

15164, 15168, and/or 15183. As discussed in Chapter 3.5.1.3, Future Community Plan Updates, Specific Plans, and/or Focused Plan Amendments, of the PEIR, the Clairemont Mesa, College Area, and Mid-City Community Plan Updates (CPUs) are in process and are anticipated to be evaluated for consistency with the Village Climate Goal Propensity Map and this PEIR. The City will develop future community plan updates and/or focused plan amendments to ensure consistency with the Village Climate Goal Propensity Map and the land use and policy framework of the Blueprint SD Initiative.

**07-12:** See response to comment O7-4, above. The three model runs were conducted to provide VMT modeling for a range of densities that could occur with the adoption of the Blueprint SD Initiative. Model Run 1 is the low estimated density for the Blueprint SD Initiative's Climate Smart Village Areas, and Model Run 3 is the high estimated density for the Blueprint SD Initiative's Climate Smart Village Area. Model Run 2 incorporates the University CPU and Hillcrest FPA land uses, and the draft land uses for the Clairemont Mesa and College Area communities. Besides the community specific land use information in Model Run 2, the VMT modeling is not based on planned land use. The Blueprint SD Initiative and associated Village Climate Goal Propensity Map do not propose actual development, nor do they identify site-specific land use designations and zoning. The PEIR provides a good faith effort analysis of potential environmental impacts resulting from the adoption of the Blueprint SD Initiative, University CPU, Hillcrest FPA, future LDC amendments, future CPUs, and future plan amendments consistent with the Village Climate Goal Propensity Map.

**07-13:** Comment noted. Responses to the attached comments from SWAPE can be found under comments O7-67 to O7-72, below.

**07-14:** Transportation impacts are adequately analyzed in Chapter 4.14 of the PEIR. Transportation impacts are evaluated based on the applicable criteria in CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022). The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR. See also response to comment O11-8.

**07-15:** See response to comment O7-4 and comment O7-5, and O11-8.

**07-16:** See response to comment O7-11, above.

**07-17:** See response to comment O7-4, O7-12, and O11-8.

**07-18:** Impacts to biological resources are adequately analyzed in Chapter 4.3 of the PEIR. Impacts to biological resources are evaluated based on the applicable criteria in CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022). The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR. Comment noted.

**07-19:** See response to comment O7-4 and comment O7-5, above.

**07-20:** Impacts related to greenhouse gas emissions (GHG) are adequately analyzed in Chapter 4.7 of the PEIR. GHG impacts are evaluated based on the applicable criteria in CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022). The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR.

**07-21:** See response to comment O7-4 and comment O7-5, above.

**07-22:** See response to Comment 07-11, above.

**07-23:** See response to Comment 07-4 and 07-12, above.

**07-24:** Air quality emission impacts are discussed in Section 4.2 of the PEIR. As detailed in Chapter 4.14.4, Issue 2, SANDAG's Activity Based Model (ABM) was used to calculate the project's VMT. The proposed land uses and Regional Plan mobility network were inputs to the model to develop future travel forecasts and VMT. Attachment B of Appendix J provides details on the methodology for the modeling of this project. For the project's VMT analysis the following modelling scenarios were utilized:

- Base Year (2016) – The calibrated base year model SANDAG used for the 2021 Regional Plan 2023 Amendment.
- City of San Diego Model Run 1 (2050) – Is the low estimate density for the Blueprint SD Initiative Climate Smart Village Areas, which are areas with a village propensity value of 7 through 14, with the proposed regional mobility network from the 2021 Regional Plan 2023 Amendment.
- City of San Diego Model Run 2 (2050) – Incorporates proposed land uses from the University CPU and Hillcrest FPA with the proposed regional mobility network from the 2021 Regional Plan 2023 Amendment while maintaining the Blueprint Model Run 1 unit growth for the remaining communities except in the Clairemont Mesa and College Area communities where draft proposed CPU land uses were included (e.g. land uses that align with the Village Climate Goal Propensity map).
- City of San Diego Model Run 3 (2050) – Is the high estimate density for Blueprint SD Initiative Climate Smart Village Areas with the proposed regional mobility network from the 2021 Regional Plan 2023 Amendment.

**07-25:** Comment noted. Responses to the attached comments from SWAPE can be found under comments 07-67 to 07-72, below.

**07-26:** Land use impacts are adequately analyzed in Chapter 4.10 of the PEIR. Land use impacts are evaluated based on the applicable criteria in CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022). The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR.

**07-27:** See response to comment 07-4 and comment 07-5, above.

**07-28:** Noise impacts are adequately analyzed in Chapter 4.11 of the PEIR. Noise impacts are evaluated based on the applicable criteria in CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022). The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR.

**07-29:** See response to comment 07-4 and comment 07-5, above.

**07-30:** The PEIR does not conclude that construction and operational noise impact would be less than significant. Construction noise impacts would be significant if they exceed the noise level limits and construction time restrictions identified in San Diego Municipal Code (SDMC) 59.5.0404 of the City's Noise Abatement and Control Ordinance. As detailed under Chapter 4.11.5.1a, construction activities related to implementation of the project would potentially generate short-term noise levels in excess of 75 dB(A)  $L_{eq}$  at adjacent properties. While the City regulates noise associated with construction equipment and activities through enforcement of its Noise Abatement and Control Ordinance, it is possible that some construction activities could exceed 75 dB(A)  $L_{eq}$ . However, without site-specific development details, such as the extent of construction activities and construction equipment being utilized, it is not possible to analyze noise impacts at a programmatic level of review. Therefore, impacts associated with construction noise would remain potentially significant. Mitigation measure MM-NOI-1 would require future projects to comply with the construction noise levels limits defined by SDMC 59.5.0404. If construction noise would exceed the construction noise limits, a permit would be required and would be granted by the Noise Abatement and Control Administrator. If necessary to comply with SDMC 59.5.0404, site specific noise reduction measures may be incorporated to meet property line limitations. In addition, mitigation measure MM-NOI-2 would require future projects that include pile driving and would result in vibration levels exceeding the PPV and screening distances detailed in Table 4.11-2 to implement vibration reduction measures to minimize construction-related vibration impacts. Measures shall be based on the results of site-specific recommendations from an acoustical analysis. Measures may include, but are not limited to, limiting the use of vibration-intensive equipment in proximity to sensitive receptors, installing low soil displacement piles (e.g., H-piles) instead of high soil displacement piles (e.g., concrete piles) for pile-driving, and pre-drilling for pile-driving. Other measures may include pre- and post-construction inspections to document any damage and provide repairs in the event damage occurs. However, as concluded in Chapter 4.11.7.1(a) and 4.11.7.2, even with implementation of these mitigation measures, construction noise and vibration impacts would remain significant.

Operational noise impacts would be significant if noise levels exceed the limits specified in Section 59.5.0401 et seq. of the Noise Abatement Control Ordinance. These limits are provided in Table 4.11-4 of the DEIR. While it is not anticipated that stationary sources associated with multi-family residential land uses located within the project areas would result in noise exceeding property line limits, at a programmatic level of review it cannot be ensured that all development would be able to meet property line noise limitations. The City's Noise Ordinance property line standards would apply to all future development consistent with the Blueprint SD Initiative, University CPU, and Hillcrest FPA. Although enforcement mechanisms for the violation of noise regulations in the Noise Abatement and Control Ordinance would provide for the correction of potential noise exceedances, impacts would remain potentially significant. Mitigation measures MM-NOI-1 would require future development with stationary sources of noise to comply with SDMC 59.5.0401 et seq., which specifies the maximum one-hour average sound level limits allowed at the boundary of a property. However, as concluded in Chapter 4.11.7.1(b), even with implementation of this mitigation measure, operational noise impacts would remain significant.

**07-31:** Water quality impacts are adequately analyzed in Chapter 4.17 of the Draft PEIR, which include waters and drainages. Water quality impacts are evaluated based on the applicable criteria

in CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022). The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR.

**07-32:** See response to Comment O7-4 and Comment O7-5, above.

**07-33:** Chapter 4.12 of the Draft PEIR analyzes impacts to public services and facilities.

**07-34:** See response to Comment O7-4 and Comment O7-5, above.

**07-35:** Impacts to utilities and service systems are adequately analyzed in Chapter 4.16 of the Draft PEIR, which includes water supply impacts. Impacts to utilities are evaluated based on the applicable criteria in CEQA Guidelines Appendix G and the City's CEQA Significance Determination Thresholds (2022). The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR.

**07-36:** See response to comment O7-4 and comment O7-5, above.

**07-37:** As detailed in Chapter 4.16.5.2, water supply impacts related to implementation of the Blueprint SD Initiative would be less than significant because this planning initiative plans for anticipated growth by focusing development within Climate Smart Village Area, prioritizing higher density multi-family and mixed-use development which is more water efficient than single family land uses. At the time specific land use changes are proposed, Water Supply Assessments (WSAs) would be prepared to evaluate and document the availability of water supply over the planning horizon. Providing WSA projections based on build-out assumptions for the Blueprint SD Initiative would be speculative at this time as the land use changes have not occurred and water demand assumptions are based on more refined analysis of actual growth projections. Further, as discussed under Chapter 4.16.4, Issue 2, the water use assumptions for the Hillcrest FPA and University CPU are based on annual growth assumptions to provide a reasonable estimate of actual water demand. According to WSAs prepared for the University CPU and Hillcrest FPA, there would be adequate water supply in a normal, single-dry year, and multiple-dry year (20-year) period, to meet the estimated water demands within these communities through 2045, the water supply planning horizon. Therefore, water supply impacts related to the project would be less than significant.

**07-38:** Cumulative impacts are analyzed throughout the DEIR chapters after the impact analysis section. The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR.

**07-39:** See response to Comment O7-4 and Comment O7-5, above.

**07-40:** Chapter 3.2.3 is a summary of the Complete Communities planning initiative in the "Project Background" section of the Project Description, which briefly summarizes the four key initiatives. Complete Communities is included throughout the PEIR as an existing regulation and a cumulative condition. The City's Affordable Housing Regulations are also included throughout Chapter 4, Environmental Analysis, of the PEIR as part of the regulatory background and as a cumulative consideration.

**07-41:** The Neighbors for a Better San Diego letter can be found as comment letter O8. Programs such as Complete Communities and state mandated Accessory Dwelling Unit regulations are based on the general plan designations established within the General Plan. The environmental impacts resulting from implementation of Complete Communities Housing Solutions were analyzed in a separate EIR (SCH #2019060003). Per Public Resources Code 21080.17, CEQA includes statutory exemptions for the adoption of an ordinance by a city or county to implement specified provisions of the Planning and Land Use Law authorizing approval of granny flats and ADUs. The previous adoption of the City's ADU ordinance SDMC 141.03, which is outside of the scope of this project, was exempt from CEQA at the time it was adopted.

**07-42:** Growth inducement impacts are adequately analyzed in Chapter 6.0 of the Draft PEIR. The commenter does not raise a specific issue related to the adequacy of the analysis in the PEIR. Comment noted.

**07-43:** Chapter 6, Growth Inducement, of the PEIR includes a discussion of how CEQA and the City of San Diego define growth inducement and how the Blueprint SD Initiative, Hillcrest FPA, and University CPU are not growth inducing; rather they would direct planned growth to appropriate locations to implement existing policies, including the 2050 Regional Plan, the CAP, and the City's 6<sup>th</sup> Cycle (2021–2029) Housing Element. The Blueprint SD Initiative proposes an updated policy and land use framework that would apply to all development Citywide and is intended to guide future land use plan updates and SDMC amendments that would help facilitate the implementation of the vision in the Blueprint SD Initiative. The University CPU and Hillcrest FPA provide more specific details regarding proposed land uses and zoning throughout their respective CPU and FPA areas. Chapter 3.7, Future Actions, of the PEIR, outlines how these plans will be implemented.

**07-44:** As detailed in Chapter 4.16.6, as future development is implemented at the project-level consistent with the Blueprint SD Initiative, the University CPU, and the Hillcrest FPA, each individual project would be required to evaluate the physical impacts of development including all utility improvements, water supply, wastewater capacity, and solid waste.

Regarding utility improvements, at a project level of review, physical impacts associated with the installation of utility infrastructure would be minimized through required compliance with the City's ESL Regulations, Historical Resources Regulations, and other applicable LDC requirements, as well as any additional project-specific mitigation measures as determined by the City.

Regarding water supply, as future CPUs, Specific Plans, or other FPAs are proposed consistent with Blueprint SD Initiative and the Village Climate Goal Propensity map, these actions would be accompanied by future WSAs, as applicable pursuant to the Water Code, to document the adequacy of future water supplies to accommodate projected growth as determined on a community basis. At the project level, WSAs may also be required for larger projects that meet specified thresholds of the Water Code. Additionally, building code and City landscape regulations would apply to ensure water efficiency in new buildings and landscapes. As discussed in the WSAs prepared for the University CPU and Hillcrest FPA, there would be adequate water supply in a normal, single-dry year, and multiple-dry year (20-year) period, to meet the estimated water demands within these communities through 2045, the water supply planning horizon.

Regarding wastewater capacity, at a project level of review, physical impacts would be avoided or minimized through required compliance with the City's ESL Regulations, Historical Resources Regulations, and other applicable LDC requirements, as well as any additional project-specific mitigation measures as determined by the City.

Regarding solid waste, future development would be required to implement the City's existing and future regulations related to solid waste diversion and recycling, including Waste Management Plans, to demonstrate projects are consistent with all applicable regulations related to solid waste.

**07-45:** The City's CEQA Significance Thresholds (2022) are geared toward evaluation of project specific impacts, not program-level evaluations, so prior to preparation of the Draft PEIR, City environmental staff determined the Significance Determination Thresholds for the proposed project. All sections of Chapter 4, Environmental Analysis, include a subsection that outlines the Significance Determination Thresholds used for that issue area. The thresholds are based on Appendix G of the CEQA Guidelines as well as the City's CEQA Significance Determination Thresholds (2022). In the instances that other sources were considered, i.e., the use of the Bay Area Air Quality Management District screening criteria in the Air Quality impact analysis, the PEIR discloses it and provides the reason for consideration. Significance Determination Thresholds for the project were determined in accordance with CEQA Guidelines Section 15064.7.

**07-46:** As detailed in Chapter 4.1.5.3 of the Draft PEIR, at this programmatic level of review, and without project-specific development plans, impacts associated with visual character, quality of public views, and scenic quality would be significant. Future projects that require discretionary review would undergo a project-specific environmental review which could identify additional project features and/or mitigation measures to address potential impacts regarding visual character or quality of public views and scenic quality. Additionally, future community plan updates would incorporate and be consistent with the urban design and visual quality policies in Blueprint SD.

**07-47:** Chapter 4.2, Air Quality, includes two hypothetical project analyses (residential and mixed-use) that calculate potential particulate matter per day. While individually, both hypothetical projects would result in emissions less than the significance thresholds, if several of these types of projects were to occur simultaneously within the same project area, implementation of the development anticipated under the project could exceed the significance thresholds. Similarly, the project would support increased development densities and intensities throughout the project areas, which could result in daily construction emissions which exceed those modeled under both the hypothetical projects discussed above depending on the specific location and timing of construction since air emissions from construction are localized.

Future projects would be required to adhere to mitigation measure MM-AQ-1 which provides examples of measures that could be implemented by future development to reduce construction and operational emissions. As specific development is not proposed at this time, this list is not meant to be an exhaustive list of measures. Specific project-level information would be required in order to provide project-specific mitigation measures that are most effective and would reduce project-level emissions to the extent feasible, if emissions were found to exceed the applicable thresholds.

**07-48:** As detailed in Chapter 4.10.4, Issue 2j, of the PEIR, future development consistent with the Village Climate Goal Propensity Map, the Hillcrest FPA, and the University CPU may also occur within noise compatibility zones. Applicable noise compatibility policies would apply as implemented through the City's land use plans and zoning regulations, specifically the Airport Approach Overlay Zone, Airport Environs Overlay Zone, and Airport Land Use Compatibility Overlay Zone. Implementation of the Blueprint SD Initiative, the Hillcrest FPA, and the University CPU would be consistent with ALUCPs and no conflict with ALUCP policies or regulations would occur as future development projects within applicable areas would continue to be subject to applicable ALUCP review, and any overrides would be considered in accordance with the ALUCP and San Diego Municipal Code.

**07-49:** Chapter 4.12.4 Issue 1a of the Draft PEIR discusses potential impacts to fire protection services, Chapter 4.12.4 Issue 1b of the Draft PEIR discusses potential impacts to police protection services, Chapter 4.12.4 Issue 1c of the Draft PEIR discusses potential impacts to libraries, Chapter 4.13.4 Issue 1 of the Draft PEIR discusses potential impacts regarding the deterioration of parks and recreational facilities, and Chapter 4.13.4 Issue 2 of the Draft PEIR discusses impacts regarding the construction or expansion of recreational facilities.

**07-50:** Chapter 6.0 of the Draft PEIR, discusses growth inducement impacts. Chapter 6.0, page 6-2 of the PEIR states,

“As detailed in the City's 6<sup>th</sup> Cycle Housing Element, San Diego is projected to add nearly 154,000 jobs between 2012 and 2035 even as the population of senior residents is projected to nearly double, growing from 11 percent to 18 percent of the population. These changes will increase demand for housing across income levels. The current 6<sup>th</sup> RHNA cycle target for the City is 108,036 new units by 2029 (City of San Diego 2021). Because the RHNA targets are set to meet the forecasted housing need, and production has historically been well below this need, the project would expand opportunities to yield higher intensity housing within appropriate areas to help accommodate planned residential growth. Implementation of the Village Climate Goal Propensity map along with adoption of the University CPU and Hillcrest FPA would facilitate housing, including higher intensity housing, in appropriate locations throughout the City; however, these actions are considered growth accommodating based on the population growth estimates referenced above and in light of regional housing shortages. Therefore, implementation of the project would not be growth inducing.”

Further, as detailed in Chapter 6.0 of the Draft PEIR, the Blueprint SD Initiative, Hillcrest FPA, and University CPU are not growth inducing; rather their purpose is to direct planned growth to appropriate locations to implement existing policies, including the 2050 Regional Plan, the CAP, and the City's 6<sup>th</sup> Cycle (2021–2029) Housing Element.

**07-51:** The comment states that the DEIR's discussion of mitigation and alternatives is deficient. The comment cites caselaw and CEQA Guidelines section 15126.6(b) but does not specify how the DEIR's discussion is deficient. The PEIR includes Chapter 8, Alternatives, which analyzes four feasible alternatives, and Chapter 9, Mitigation, Monitoring and Reporting Program, which includes mitigation for impacts to air quality, biological resources, cultural resources (historic and archaeological), noise, transportation, Tribal cultural resources, and wildfire.

**07-52:** The PEIR includes a Mitigation Monitoring and Reporting Program, which can be found in Chapter 9. Discussion of the mitigation is found throughout Chapter 4, Environmental Analysis, in the sections titled "Mitigation, Monitoring and Reporting." Additionally, the DEIR analyzes the impacts of Blueprint SD, the University CPU, and Hillcrest FPA, all of which include policies which are intended to reduce environmental impacts. Unlike a specific project proposed by a project applicant, the City through its planning documents has the opportunity to proactively plan for reduced environmental impacts, which is seen throughout each of the plans at issue here.

**07-53:** See response to Comment 07-51 and 52, above.

**07-54:** See response to Comment 07-51 and 52, above.

**07-55:** See response to Comment 07-51 and 52, above.

**07-56:** Comment noted. Responses to the attached comments from SWAPE can be found under comments 07-67 to 07-72, below.

**07-57:** Chapter 8.0 of the PEIR outlines the criteria considered to determine feasible alternatives, prior to the discussion of the four alternatives: 1. No Project Alternative, 2. High Density Alternative, 3. Blueprint SD Initiative Distributed Growth Alternative, and 4: Reduced Density Alternative. The four alternatives represent a reasonable range of alternatives, and as shown in Table 8-1 and discussed in Chapter 8.0 of the PEIR, several of the proposed alternatives reduce significant impacts to a level less than the project.

**07-58:** As detailed in Chapter 8.2.1 of the Draft PEIR, the University CPU and Hillcrest FPA High Density Alternative was determined to be environmentally superior. In the Final PEIR, this alternative was renamed to High Density Alternative and the effects of this alternative throughout the City were clarified. Specifically, throughout the Climate Smart Village Areas, increases in residential and non-residential development intensities would be achieved through corresponding changes to the base zone development regulations contained in the Municipal Code such as allowing for additional height and FAR within the Climate Smart Village Areas. The High Density Alternative was identified as environmentally superior because it would potentially reduce the significance of impacts in comparison to the project for the issues of energy, GHG emissions, and transportation. In addition, the Reduced Density Alternative has also been determined to be environmentally superior because it would potentially reduce the significance of impacts in comparison to the project for the issues of aesthetics, air quality, and noise. See also responses to comments 07-51 and 07-52.

**07-59:** The reduced density alternative is analyzed under Chapter 8.4 in the PEIR. Additional detail was added to the reduced density alternative to specify how this alternative would affect growth within the Hillcrest FPA and University CPU areas. Refer to revisions included in Final PEIR Section 8.4.1. See response to comment 07-59.

**07-60:** Please see Comment O11-6 under comment letter O11 regarding project description. Please see Chapter 8 of the PEIR for description and discussion of alternatives.

The City's General Plan provides a Citywide vision and a comprehensive approach for how to develop, provide public services, and maintain and enhance qualities that define the City of San

Diego. The overarching strategy of the General Plan is based on the City of Villages strategy, which focuses growth into walkable mixed-use activity centers that are connected through a regional transit system. The Blueprint SD Initiative includes a comprehensive amendment to the General Plan to better align the City of Villages Strategy to reflect the latest goals, policies, and plans for housing, environmental protection, and climate change adaptation and sustainable growth; and is implemented in the University CPU and Hillcrest FPA. The Blueprint SD Initiative amends the General Plan to reflect an updated citywide land use framework designed around the 2050 SANDAG Regional Transportation Plan to promote reductions in per capita greenhouse gas (GHG) emissions and vehicle miles traveled (VMT). The City's CAP identifies transportation as the biggest source of emissions in the City and the Project Objectives directly support Strategy 3, specifically Measure 3.5: Climate-Focused Land Use, of the CAP by aligning housing production with planned transportation investments to achieve GHG emission reduction targets.

**07-61:** Comment noted. The comment does not identify any basis for recirculation under CEQA Guidelines section 15088.5 or raise a specific issue related to the adequacy of the analysis in the Draft PEIR. Comment noted.

**07-62:** The comment provides conclusory language regarding the content of this comment letter. This comment does not raise an issue related to the adequacy of the analysis contained within the Draft PEIR.

**07-63:** The comment refers to the attached comment letter.

**07-64:** The comment refers to the attached comment letter. The City confirmed receipt of the comment letter in an email dated May 2, 2024.

**07-65:** The comment states that SWAPE has reviewed the Draft PEIR and provides a summary of the project.

**07-66:** The comment summarizes the conclusions in the comment letter. Detailed responses are provided below.

**07-67:** The comment summarizes the conclusions of the PEIR regarding the identified significant construction and operational emissions impact at the associated mitigation measure MM-AQ-1. The comment states that the "DPEIR should incorporate mitigation measures that are required of future projects in order to collectively reduce the emissions and impacts associated with the proposed development under the General Plan." As detailed in Chapter 4.2.7.2 of the DPEIR:

"Federal, State, and local regulations would provide a framework for developing project-level air quality protection measures for future projects and implementation of mitigation measure MM-AQ-1 would reduce construction-related air quality impacts for future development anticipated under the project. "

"The regulations at the federal, State, and local levels provide a framework for developing project level air quality protection measures for future projects. The City's process for evaluating discretionary projects includes environmental review and documentation pursuant to CEQA as well

as an analysis of those projects for consistency with the goals, policies, and recommendations of the General Plan and associated Community Plan.”

As concluded in DPEIR, impacts associated with construction and operational emissions would remain significant.

See also responses to comments O7-51 and O7-52.

**O7-68:** The comment states that MM-AQ-2 is inadequate because it does not include the requirement of construction-related HRAs. MM-AQ-2 states that “heavy industrial land uses such as warehousing and distribution or other land uses that would involve substantial sources of mobile source diesel emissions shall be required to prepare a health risk assessment (HRA) in accordance with APCD HRA Guidelines and the Office of Environmental Health Hazard Assessment (OEHHA) Air Toxics “Hot Spots” Program Risk Assessment Guidelines.” It does not only apply to operational emissions. Future projects that would require the preparation of an HRA would be required to follow OEHHA HRA Guidelines which, as referred to in the comment, requires the assessment of exposure from short-term project construction activities as well as operational sources. By referring to the OEHHA Guidelines, MM-AQ-2 implies that future HRAs would include all project-level sources of emissions.

The comments states that the DPEIR fails to evaluate the potential TAC emissions generated from future projects or indicate the concentrations at which such pollutants would trigger adverse health effects. As no specific development is proposed at this time, future concentrations of TACs cannot be calculated at this program level of analysis. Chapter 4.2.3.2(b) of the DPEIR identifies the levels at which pollutants would trigger adverse health effects. Specifically, the public notification thresholds are:

- Maximum incremental cancer risks equal to or greater than 10 in one million, or
- Cancer burden equal to or greater than 1.0, or
- Total acute non-cancer health hazard index equal to or greater than 1.0, or
- Total chronic non-cancer health hazard index equal to or greater than 1.0.

See also responses to comments O7-51 and O7-52.

**O7-69:** The comment states “the DPEIR claims that future projects would be *required* to demonstrate consistency with the City’s Climate Action Plan” and provides the following quotation from the City’s CAP Consistency Checklist:

“Projects that are consistent with the CAP as determined through the use of this Checklist may rely on the CAP for the cumulative impacts analysis of GHG emissions. Projects that are not consistent with the CAP must prepare a comprehensive project-specific analysis of GHG emissions, including quantification of existing and projected GHG emissions and incorporation of the measures in this Checklist to the extent feasible.”

However, the City no longer utilizes the CAP Consistency Checklist to demonstrate consistency with the CAP. The City updated their CEQA Significance Determination Thresholds in 2022. As stated in Chapter 4.7.3.1 of the Draft PEIR:

“For plan- and policy-level environmental documents, as well as environmental documents for public infrastructure projects, the City Planning Department prepared a memorandum, Climate Action Plan Consistency for Plan- and Policy-Level Documents and Public Infrastructure Projects, dated June 17, 2022, to provide guidance on significance determination as it relates to consistency with the strategies in the CAP. The City’s guidance document requires environmental documents to address the ways in which the plan or policy is consistent with the goals and policies of the General Plan and CAP”

The analysis correctly applies the City’s CEQA thresholds of significance for GHG and concludes impacts would be less than significant based on project consistency with the CAP and key CAP and General Plan policies. Future development under the project would not conflict with implementation of the CAP, as it would be consistent with the CAP’s goal of focusing new development in areas that would allow residents, employees, and visitors to safely, conveniently, and enjoyably travel as a pedestrian, or by biking, or transit, such as in Transit Priority Areas, and areas of the City that support existing or planned transit. Therefore, the project is intended to support the City in achieving CAP goals, specifically mode share goals, by supporting and incentivizing future development within high village propensity areas to support development in areas that have a propensity for walking/rolling, bicycling and transit use, supporting citywide VMT efficiency. The project would support the City in obtaining citywide GHG emissions reduction targets under the CAP. Accordingly, impacts related to GHG emissions would be less than significant.

The comment states, “Projects are not inherently required to be consistent with the CAP and, rather, are able to conclude less-than-significant GHG impacts several different ways. Thus, the DPEIR should formally require all future projects under the General Plan to demonstrate consistency with the City’s CAP in a mitigation measure.” Cumulative GHG impacts would be significant for any project that is not consistent with the CAP. The City’s CEQA Significance Determination Thresholds provide the following process for determining project-level significance:

For project-level environmental documents, significance is determined through 1) land use consistency and 2) project compliance with the regulations set forth in SDMC Chapter 14, Article 3, Division 14. The first step in determining CAP consistency for development projects is to assess the project’s consistency with the growth projections used in the development of the CAP.

- a. Is the proposed project consistent with the existing General Plan and Community Plan land use and zoning designations?; OR
- b. If the proposed project is not consistent with the existing land use plan and zoning designations, and includes a land use plan and/or zoning designation amendment, would the proposed amendment result in an increased density within a Transit Priority Area (TPA)?; OR
- c. If the proposed project is not consistent with the existing land use plan and zoning designations, does the project include a land use plan and/or zoning designation amendment that would result in an equivalent or less GHG-intensive project when compared to the existing designations?

If a project cannot answer “yes” to one of the three options above, then the project’s cumulative GHG impact is significant and the project must prepare a comprehensive project-specific analysis of GHG emissions, including quantification of existing and projected GHG emissions. Future

development implemented under the project would be able to answer “yes” under criteria (b), at a minimum, because the project would focus development within Climate Smart Village Areas which area areas in proximity to available high-frequency transit services based on the 2050 regional transportation network, have transit access to job centers based on the 2050 regional transportation network, and have good connections between transit and destinations.

The second step in demonstrating CAP consistency is a review to ensure project consistency with the regulations set forth in SDMC Chapter 14, Article 3, Division 14 to ensure that new development is consistent with the CAP’s assumptions. Projects that are consistent with the CAP as determined through compliance with the CAP Consistency Regulations may rely on the CAP for the cumulative impacts analysis of GHG emissions per CEQA Guidelines section 15130(b)(1)(B). Projects that do not comply with the CAP Consistency Regulations set forth in SDMC Sections 143.1410 and 143.1415 must prepare a comprehensive project-specific analysis of GHG emissions, including quantification of existing and projected GHG emissions and incorporation of the measures in the CAP Consistency Regulations to the extent feasible. Implementation of the CAP Consistency Regulations would be feasible at the project level.

Projects that can answer “yes” to one of the options in step 1 and comply with the regulations in step 2 would have a less than significant impact on GHG emissions, as these projects would be determined to be consistent with the CAP. Future project-level review would be required to ensure projects would be consistent with applicable plans and policies.

**07-70:** The comment states that the less-than-significant impact determination is insufficient because “By failing to quantitatively calculate the GHG emissions associated with the General Plan, the DPEIR did not make a good-faith effort at full disclosure. While projects are able to rely on the City’s CAP to evaluate GHG impacts, the size and scale of the General Plan warrants an exhaustive analysis of the associated GHG emissions.” The commenter also provides their own GHG emission calculations. The analysis contained in the PEIR correctly applies the City’s CEQA thresholds of significance for GHG. Based on the City’s memorandum, *Climate Action Plan Consistency for Plan- and Policy-Level Documents and Public Infrastructure Projects*, dated June 17, 2022, this is determined through demonstrating consistency with the goals and policies of the General Plan and the CAP. Pursuant to CEQA Guidelines sections 15183.5(b), 15064(h)(3), and 15130(d), the City may determine that a project’s incremental contribution to a cumulative greenhouse gas (GHG) effect is not cumulatively considerable if the project complies with the requirements of a previously adopted GHG emission reduction plan. Chapter 4.7.4 Issue 2d provides a consistency analysis of the project with the six strategies of the CAP. As the project would be consistent with the CAP, it would be consistent with the CAP GHG emissions inventory and emission projections provided in the CAP, which are a more accurate disclosure of City-wide GHG emission projections than the speculative emission calculations provided in the comment letter, which does not consider the GHG emissions reductions from implementation of all six strategies of the CAP. As stated in the above-mentioned memorandum, and response to Comment O7-69 above, quantification of plan- and policy-level GHG emissions is required if the project is not consistent with the CAP. However, as concluded in the PEIR, the project would be consistent with the CAP. Therefore, no quantification is required.

The comment goes on to state that the project would not be consistent with the CAP’s goal of net zero carbon emissions by 2035. Future City actions would be needed to achieve the goals of the CAP

as outlined in the CAP and the CAP Implementation Plan. Land use is only one part of Strategy 3: Mobility & Land Use. Implementation of all six strategies of the CAP is necessary to achieve net zero carbon emissions by 2035.

**07-71:** SWAPE provides a disclaimer that states that if additional information comes available in the future they retain the right to revise or amend their report. They go on to explain that their report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties. The disclaimer is noted.

**07-72:** The City reviewed Appendix A: CalEEMod Output Files and provided a response under comment 07-70, above.

To: San Diego City Planning

Re: Blueprint SD PEIR Omits Impacts for Bonus Housing Programs

The Draft Program Environmental Impact Report (PEIR) for the Blueprint SD Initiative is deficient because it treats only zoned capacity for housing and does not also calculate the amount of housing that is allowed under various San Diego bonus programs. These programs can produce roughly ten times more housing than base zoning. Also, whereas planned zoning locates housing in dense clusters close to transit (City of Village), bonus housing programs, such as Complete Communities Housing Solutions and Bonus ADUs, provide the highest economic returns in lower density areas away from transit, thereby subverting San Diego's VMT reduction goals.

O8-2

San Diego's projected housing need (Regional Housing Needs Assessment, or RHNA) for the 2021-2029 RHNA cycle is 108,036 homes. As part of its Housing Element, San Diego has calculated the capacity to build new housing under existing zoning. The resulting capacity, as of September 2021, is 174,673. This calculation, which is now several years old, has not been updated by the City based on recent Community Plan Updates (CPUs) to Kearney Mesa and Mira Mesa, nor does it reflect the increased zoned capacity in the pending University and Uptown CPUs. Combined, these CPUs may add the capacity for 100,000 to 200,000 more homes. As a result, San Diego would have the identified zoned capacity to build two to three times as many homes as are needed to meet its RNHA allocation. This exceeds the City's stated standard to provide two times overzoning (ratio of capacity to projected need), which means that further upzoning may drive up already high land prices without an appreciable increase in land turnover and housing development.

O8-3

In addition to the zoned housing capacity, San Diego parcels are eligible for bonus development under the programs listed in Table 1. The applicable housing bonus program is determined by the underlying zoning (Commercial/Multi-Family or Single-Family) and whether the parcel is inside or outside of a Sustainable Development Area (SDA), which is based on various criteria, primarily whether the parcel is within 1 mile walking distance of a transit stop (existing or future).

**Table 1. San Diego Bonus Housing Programs**

	<b>Commercial/Multi-Family</b>	<b>Single-Family</b>
<b>Inside SDA</b>	Complete Communities Housing Solutions	Bonus ADU (unlimited)
	Density Bonus	
<b>Outside SDA</b>	Density Bonus	Bonus ADU (3 ADUs per parcel)

**Complete Communities Housing Solutions (CCHS)** – Allows for development up to a floor area ratio (FAR) limit. The FAR allowance varies in different parts of the city from 2.5 in the coastal zones to 8.0 in parts of the Uptown and University communities. In general, CCHS provides many times more housing (4 times or more) than the underlying zoning.

**Density Bonus** – Allows for 50-100% increase in density over underlying zoning. While Density Bonus could be utilized inside the SDA, the much greater density allowed by CCHS and substantially lower percentage of affordable units required makes it likely that the developer would elect to use CCHS.

**Bonus ADU** – State law allows for the addition of an Accessory Dwelling Unit (ADU) and a Junior Accessory Dwelling Unit (JADU) In addition to an existing single-family home and Junior Accessory Dwelling Unit (JADU) on any single-family zoned lot. San Diego allows 2 additional ADUs anywhere in San Diego, and an unlimited number of ADUs (up to the FAR of the parcel) inside the SDA. The Bonus ADU program has produced developments of 5 or more ADUs added to a single-family parcel.

O8-3  
cont.

Neighbors For A Better San Diego has estimated the potential (allowed) housing capacity of these programs by evaluating each parcel in San Diego. Using ArcGIS, the relevant attributes were extracted for each parcel, including zoned use, lot size (expressed in square feet or acreage), and whether or not the parcel is in the SDA. These values were used to calculate the capacity of the parcel to support additional housing units. The capacities of the individual parcels were summed up to estimate the total allowed capacity for San Diego. Parcels were also summed up by Community Planning Area for comparison with community plan update proposals. (Planned and unplanned densities for the proposed Uptown and University Community Plan Updates are compared below.)

These estimates, which include the increase of CCHS allowances in the recently enacted Housing Action Package 2.0, are summarized in Table 2.

The number of units that can be built on a parcel using CCHS and Bonus ADUs are both based on allowed floor area ratios for total development. Estimating the number of units that can be built on a parcel depends on assumptions of how large the units will be. The

CCHS calculations assumed an average unit size of 700 square feet (sf) and that 25% of the floor area of the structure would be allocated to common use (hallways, reception, etc.).

The estimate of the number of Bonus ADUs that can be built in San Diego was calculated using an average unit size of 450 sf, lot size of 9,500 sf, and existing house size of 1500 sf.

**Table 2. San Diego Allowed Housing Capacity Estimate**

<b>Zone</b>	<b>Inside/Outside SDA</b>	<b># Units</b>
<b>Commercial</b>	<b>Inside SDA (units)</b>	1,257,318
	<b>Outside SDA (units)</b>	42,075
	<b>Total Commercial Capacity (units)</b>	1,299,393
<b>Single Family</b>	<b>Inside SDA (units)</b>	713,034
	<b>Outside SDA (units)</b>	302,109
	<b>Total SF Capacity (units)</b>	1,015,143
<b>Total Estimated San Diego New Home Capacity</b>	<b>Total Housing Capacity (units)</b>	<b>2,314,536</b>
	<b>RHNA Goal (units)</b>	<b>108,036</b>
	<b>Over-Capacity (relative to RHNA)</b>	<b>21x</b>

O8-3  
cont.

As can be seen from the table, San Diego's total allowed housing capacity under all housing programs (zoned + bonus) is estimated to be 2.3 million units. Noting again that San Diego's zoned capacity (Adequate Sites) is of the order of 200,000-300,000 new units, it can be seen that bonus density programs provide up to ten times the capacity for new housing as underlying zoning. This calls into question how the city can shape communities through community plan updates when the intended (planned) development is dwarfed by random bonus development.

As it relates to the Community Plan Updates in the PEIR, Uptown and University, the estimates for these communities, without any changes in the Community Plans, is 241,000 new units for Uptown and 215,000 new units for University, which vastly exceed the zoned allowed capacities anticipated for these communities. Uptown's currently adopted plan allows for 35,600 new units, with 17,000 more units being proposed as part of the pending Hillcrest Focused Plan Amendment. The total resulting zoned capacity, 52,600 new units, is only about a fourth of what could be built using Bonus programs (mostly CCHS).

O8-4

Similarly, the University Community Planning Area has an adopted capacity of 28,000 new homes, with a proposal to add capacity for 29,000 additional units as part of the pending

University Community Plan Update proposed. Even after adoption of the plan with a capacity of 57,000 new homes, the bonus capacity would be three times the zoned capacity.

O8-4  
cont.

In addition to the lack of a complete analysis of the housing capacity of the bonus housing programs, the PEIR fails to analyze the impacts due to where these programs incentivize development. For example, Complete Communities Housing Solutions may be applied to parcels that exceed a threshold of 20 dwelling units per acre (du/acre). Because the total development is determined by the FAR allowance for the parcel and the number of affordable units is only calculated on the base density, developers seek out parcels that have the lowest underlying density, thereby minimizing the obligation to provide affordable housing. This perverse incentive confounds community planning, which typically provides the highest zoning on major commercial and transit corridors, where the added density would encourage viable walkable neighborhood commercial districts. These activity hubs would also provide destinations for transit riders and thereby increase transit adoption. However, under CCHS, the most attractive sites for projects are the intended transition zones between the high-density corridors and low-density (automobile-centric) residential areas. This increases distance to transit and de-centralizes the commercial core of the community. Increasing the distance to transit discourages transit usage for neighborhood residents, and the decentralizing of activity makes it less attractive as a transit destination. Together these conditions have a negative impact on VMT reduction efforts, and, therefore, the lack of a fulsome analysis of bonus programs in the PEIR likely overestimates the VMT reductions that will be realized by the plans, including casting doubt on the assumptions of the Village Propensity Map.

O8-5

The Bonus ADU program has an even greater negative impact on VMT reduction because it is most attractive economically on parcels that are more than one-half mile from transit stops. This is a result of San Diego's parcels being larger (and hence supporting more ADUs) as the distance from transit corridors increases. These lots are more likely to be in high fire hazard zones. Numerous studies show that transit usage drops off substantially beyond one-half mile walking distance (one-quarter mile for bus service), yet Bonus ADU developments are most often located beyond one-half mile and hence reinforce automobile use for their residents.

O8-6

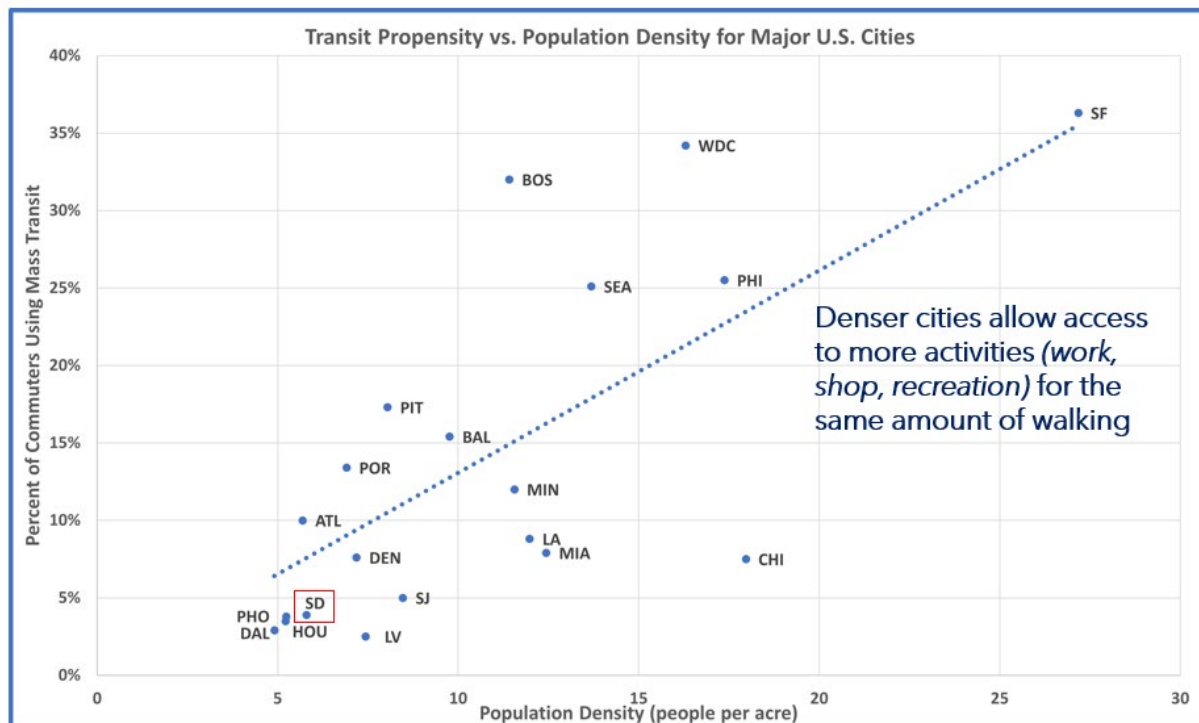

It is important to emphasize that transit usage in San Diego is suppressed by the city's average population density (see Figure 1), and that no amount of transit buildout will make it viable and efficient for the vast majority of San Diegans to utilize fixed-route transit networks (bus and rail) for commuting to work or in other daily activities. With each successive decrease in the estimate of San Diego's population growth, it is clear that San Diego should be compressing the footprint of future development so that community

O8-7

villages can achieve critical densities necessary to become viable neighborhood centers and transit destinations. This requires a horizontal form of development, not the scattered highrises produced under CCHS. This is particularly true when developments are built without parking, and without local amenities, so that a zone of exclusion is needed around the development to absorb the residents' automobiles.

**Figure 1. Population Density Determines Transit Adoption**

O8-7  
cont.

In conclusion, Neighbors For A Better San Diego recommends against acceptance of the Blueprint, University, and Uptown PEIR because the impacts of bonus development programs, resulting from the total capacity for new units and the dispersion of developments, have not been considered.

O8-8

Respectfully,

Geoffrey Hueter, Ph.D.

We have the following questions and comments regarding Blueprint SD Program Environmental Impact Report (PEIR):

1. The Village Propensity Map shows that there is only modest opportunity to locate housing, jobs, etc. along Mission Valley and the new Mid-Coast trolley lines. Shouldn't the most effective and accessible location for new development be along the trolley lines, which provide fixed, long-term transit routes? 08-9
  
2. Two areas that are targeted for the most densification appear to be mid-city and Barrio Logan. To be consistent with having new development near high quality jobs, this requires massive economic development in these traditionally low opportunity/low employment areas. What is the proposed plan for economic development to make this plan work? We can't just go back to the 1940s when everyone worked downtown. 08-10
  
3. San Diego's Climate Action Plan has legally mandated targets. What analysis is being done to prove that Blueprint SD will meet these goals, which vastly exceed the base requirements of a PEIR? 08-11
  
4. Creating walkable neighborhoods requires wide, shaded sidewalks. San Diego's sidewalks were created in an automobile era and are inadequate to meet the goals of Blueprint SD. How is this going to be rectified? What will be the funding mechanism for making this happen? 08-12
  
5. Blueprint SD has removed automobiles from the list of mobility priorities. Rather than wish automobiles away, shouldn't we be planning a transition to fewer automobiles? For example, separating parking from housing and other uses could be mitigated by adding parking structures, which would also include charging stations for those residents who don't have personal garages. Over time, when automobile use declines, parking structures could be torn down and replaced with other uses. 08-13
  
6. Recent community plan updates focus on zoned densities without consideration of relationships between building heights and street widths, widening sidewalks and adding shade trees, and creating coherent architecture within a neighborhood. Are these elements covered in the Blueprint SD plan? 08-14

7. In comparing San Diego to other U.S. cities, you need population densities in excess of 15 people per acre to achieve transit usage. (San Diego's current population density is under 6 people per acre.) The proposed densification footprint in the Blueprint SD map is too large to achieve these critical densities. Population density metrics have not been included in the mobility analysis. Without these metrics and analyses, it will not be possible to prove that a community plan update will result in increased transit usage, decreased VMT/GHG emissions, and mode shift changes, which are necessary to meet the legal mandates of the Climate Action Plan.

O8-15

8. Where are the areas where you envision densities of 290 du/acre? Given that over-zoning drives up land and construction costs and creates urban canyons along streets that are too narrow, is this level of upzoning justified from a noise and air quality standpoint?

O8-16

9. Is the PEIR considering fire hazard in light of ongoing drought conditions resulting from climate change and the reality of insurance carriers withdrawing from the CA market?

O8-17

10. Why isn't adaptive reuse part of this plan? This has worked in Los Angeles to create a vibrant, (relatively) affordable downtown with easy access to a variety of everyday activities. Not only does adaptive reuse provide naturally occurring affordable housing, but it also reduces construction waste, which should be a goal of San Diego's Climate Action Plan.

O8-18

I've also attached a PDF file with these questions.

O8-19

I look forward to your responses.

Regards,

Geoffrey Hueter, Ph.D.

**O8: Responses to Neighbors for a Better SD Comment Letter**

**O8-1:** Comment noted. No further response required.

**O8-2:** Comment noted. The commenter is correct in noting that the Draft Program Environmental Impact Report (PEIR) does not calculate the amount of housing that is available under various San Diego bonus housing programs such as the Accessory Dwelling Unit (ADU) Ordinance and the Complete Communities: Housing Solutions program.

The commenter states that the proposed Blueprint SD Initiative does not consider the potential housing that could be built through implementation of Complete Communities: Housing Solutions and the ADU Ordinance. The Complete Communities program and the City's ADU Ordinance are discussed throughout the PEIR as existing regulations and cumulative conditions; however, The Complete Communities program is not a part of the scope of the project analyzed in the Draft PEIR and the environmental impacts of the Complete Communities program were addressed in Final PEIR for Complete Communities: Housing Solutions and Mobility Choices (SCH No. 2019060003).

Per Public Resources Code 21080.17, CEQA includes statutory exemptions for the adoption of an ordinance by a city or county to implement specified provisions of the Planning and Land Use Law authorizing approval of granny flats and ADUs. The previous adoption of the City's ADU Ordinance (San Diego Municipal Code [SDMC] Section 141.0302) is outside of the scope of this project and was statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15282(h). Further, calculating the amount of housing that would occur under this program would be highly speculative as it would require knowledge of specific projects in specific locations that are not and cannot be known or identified. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR.

**O8-3:** The Complete Communities program and the City's ADU Ordinance are discussed throughout the PEIR as existing regulations and cumulative conditions; however, the City's ADU Ordinance and Complete Communities program is not a part of the scope of the project analyzed in the Draft PEIR. The environmental impacts of the Complete Communities program were addressed in Final Program EIR for Complete Communities: Housing Solutions and Mobility Choices (SCH No. 2019060003). The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR.

**O8-4:** Comment noted. See response to Comment O8-2. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O8-5:** Comment noted. The Complete Communities program and the City's ADU Ordinance are discussed throughout the PEIR as existing regulations and cumulative conditions; however, the Complete Communities program is not a part of the scope of the project analyzed in the Draft PEIR and the environmental impacts of the Complete Communities program were addressed in Final Program EIR for Complete Communities: Housing Solutions and Mobility Choices (SCH No. 2019060003). This comment appears to be a critique of the Complete Communities program, is general in nature, and does not include specific critiques of the environmental analysis in the Draft PEIR; no further response is necessary.

**08-6:** Comment noted. The City's ADU Bonus program is not a part of the scope of the project analyzed in the Draft PEIR and was statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15282(h). This comment is general in nature and does not include specific critiques of the environmental analysis in the Draft PEIR; no further response is necessary.

**08-7:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**08-8:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**08-9:** Comment noted. The comment relates to the location of new development and does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**08-10:** Comment noted. The comment relates to economic and job development and does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**08-11:** See response to Comment O2-1 under comment letter O2. The City's Climate Action Plan (CAP) has an accompanying Climate Action Implementation Plan that includes metrics for measuring success, such as number of new residential units constructed in Transit Priority Areas or Sustainable Development Areas. Future CAP Annual Reports will include updates on the City's progress toward Climate-Friendly Land Use.

**08-12:** Comment noted. The comment asks about funding mechanisms and does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**08-13:** The Blueprint SD Initiative identifies the best locations for growth and the most receptive locations that support biking, walking, and transit usage based on the Regional Travel Demand Model, to achieve the City's Climate Action Plan's (CAP's) goals. The City can meet the CAP Strategy 3 goals that support mode shift through the Blueprint SD Initiative's land use strategy and through mobility investments and programs that address travel behavior. The Blueprint SD Initiative's land use strategy is the maximum extent feasible land use scenario that – when combined with other mobility implementation strategies, which are part of the overall General Plan Refresh - can achieve the mode shift goals of the CAP. Refer also to Appendix N of the PEIR for additional information supporting how the Blueprint SD Initiative supports City mode share targets consistent with the CAP. Additionally, the Blueprint SD policies largely call for future land use plan updates to focus on increasing development capacity within the Climate Smart Village Areas as they are in or near transit priority areas (TPAs), and the proposed higher density development is considered appropriate because it would bring the City closer to meeting its CAP and General Plan goals for reducing GHG emissions and increasing mode share. Future CPUs, SPs, or plan amendments are anticipated to be developed consistent with the land use and policy frameworks in the City's General Plan and CAP and would be reviewed for consistency with the Final PEIR and Mitigation Monitoring and Reporting Program. As described in Section 4.7.4, Issue 2(a-d), the Blueprint SD Initiative, University CPU, and Hillcrest FPA would be consistent with CARB's Scoping Plan, SANDAG's Regional Plan, the GHG policies of the City of San Diego's General Plan, and the City of San Diego's CAP. By allowing for the development of high density residential and mixed-use development near existing and planned transit, the proposed land use framework would ensure the City's plans are consistent with regional

and local plans to reduce GHG emissions. See also response to comments O11-4 and O11-8 under comment letter O11.

The comment about using parking garages to assist in the transition away from vehicle use is noted. The proposed project would not preclude or eliminate the construction of parking spaces in all instances. As future development projects are proposed, appropriate parking would be provided as allowed by the zoning code restrictions for individual sites.

**O8-14:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O8-15:** See response to comment O11-8 under comment letter O11. Regarding GHG, the analysis concludes that impacts related to GHG emissions would be less than significant because the project is consistent with the CAP and is intended to implement the CAP to support a shift in mode share. The project alone is not responsible for demonstrating the targets outlined in the City's CAP. Implementation of the City's CAP is an ongoing process and future, ongoing actions will be required to achieve the targets set forth in the CAP. See also response to comment O11-9 under comment letter O11.

**O8-16:** The proposed Hillcrest FPA land use map is shown in Figure 3-8a through 3-8c of the PEIR, and the proposed land use map for the University CPU is shown in Figure 3-19 of the PEIR. The proposed housing densities and locations can be found on these two figures.

The Blueprint SD Initiative proposes an updated policy and land use framework that would apply to all development Citywide and is intended to guide future land use plan updates (e.g., Community Plan Updates [CPUs], Specific Plans, and Focused Plan Amendments [FPAs]) and future San Diego Municipal Code (SDMC) amendments which would help facilitate the implementation of the Blueprint SD Initiative. The Blueprint SD Initiative does not propose actual development, nor does it identify site-specific land use designations and zoning. Site-specific land use designations, zoning, policies, and recommendation would be brought forward during future land use plan updates.

The noise impacts of the proposed project are discussed in Chapter 4.11.4 of the PEIR, and the air quality impacts of the proposed project are discussed in Section 4.2.4 of the Draft PEIR.

**O8-17:** The commenter asks if the PEIR considers fire hazards as it pertains to drought conditions, and if insurance carriers withdrawal from the CA market was considered in the PEIR. Wildfire is discussed in Chapter 4.18 of the draft PEIR. Drought conditions are a factor used to determine CAL FIRE mapping designations, which are analyzed in Chapter 4.18.4 of the draft PEIR. CAL FIRE mapping takes into account the availability of fuel and the likelihood of an area burning based on topography, fire history, and climate. Regarding insurance carriers, this issue does not pertain to the adequacy of the Draft PEIR. No further response is required.

**O8-18:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O8-19:** Comment noted.

**O8-20:** This was a duplicate email stating the same questions above. See comments O8-9 through O8-19.

---

Please see attached the Peninsula Community Planning Boards (PCPB) comment letter in response to the draft PEIR for the General Plan Update , BluePrint SD.

O9-1

As stated in the PEIR, increased densities will result in significant unmitigated environmental impacts. Identified impacts include insufficient public services, recreational facilities, and infrastructure which will have a detrimental impact to the quality of life to San Diego's.

O9-2

Blueprint SD will reduce greenspace area while increasing impervious surface areas resulting in increased surface runoff. The PEIR identifies that BluePrint SD... "would have the potential to exceed the capacity of existing or planned stormwater drainage facilities." Due to the recent devastating flooding that affected our City, the PCPB requests that a comprehensive analysis be performed to identify the increased risk of flooding and analysis of the associated run-off with increased densities proposed under BluePrint SD.

O9-3

BluePrint SD states that "Fuel-powered vehicles are the largest source of greenhouse gas emissions and pollutants impacting our air quality. The Climate Action Plan sets a goal of net zero emissions and at least half of all trips across the City will need to shift to more sustainable, climate-friendly modes like walking/rolling, biking, or taking transit. The Mobility Plan and PEIR fail to incorporate the most recent state and federal mandates that all new passenger cars will be zero-emission vehicles by 2035. PCPB requests that the City update and revise BluePrint SD and reflect the zero-emission State and Federal vehicle regulations and the overall reduction this will have to air quality and equivalent trips traveled. .

O9-4

Please see our complete comment letter attached. The Letter was approved by the Board by a 12-0 Vote.  
Should you have any questions...please feel to reach-out.

Date: April 18, 2024

TO: BlueprintSD@sandiego.gov

Subject: 2024 General Plan Amendment Comments, BluePrint SD

Dear Mayor Gloria, Councilmembers, and Planning Department Staff:

The City of San Diego released the update to the General Plan, BluePrint SD, on March 15, 2024 along with the associated Programmatic Environmental Impact Report (PEIR) for Public Review. Community comments are due within a short 45-day review period, April 29, 2024. BluePrint SD proposes to make substantial changes to current zoning and maximum densities that increase densities throughout the City with New York style densities of up to 290 plus units per acre along with increased densities in existing single-family neighborhoods. As stated in the PEIR, increased densities will result in significant unmitigated environmental impacts. Identified impacts include insufficient public services, recreational facilities, and infrastructure which will have a detrimental impact to the quality of life to San Diegan's.

O9-6

**The Peninsula Community Planning Board (PCPB) opposes the adoption of BluePrint SD and requests that the City of San Diego extend the comment period, provide projected numbers as to how the zoning and density changes will affect the number of units built in Point Loma and their impact on parking and infrastructure compared to the existing general plan, and provide a public outreach program which reflects the proposed vast changes in land use and character of Point Loma. The vague maps in BluePrint SD do not provide this information that is necessary for adequate public input.**

Following are PCPB comments to the General Plan update and PEIR:

### General

BluePrint SD updates the General Plan Village Propensity Map which identifies new and enlarged Village Areas with increased housing density and areas that convert low-density single-family housing to multi-housing use. As stated, this map forms the base for further updates to Community Plans. The Propensity map lacks specifics, does not define increased densities and the scale provides uncertainty to the parcels (areas) proposed for change. In addition, the maps do not provide projected housing numbers under the proposed amendments and current general plan to inform the public about the resulting changes to density, parking or infrastructure the amendments would create. These proposed changes will create densities that will resemble cities such as New York, San Francisco and Los Angeles. Many San Diegan's do not wish San Diego to morph into the densities of these cities that the plan amendments could create. **Provide Village Propensity Maps with proposed density changes (units per acre) rather than using the terms low and high. These terms are subjective and are inadequate to inform the Public.**

O9-7

The Environmental Document (Section 3.5.1.3 ) states that Community Plan Updates that are consistent with the Propensity Map and the City of Village Strategy would be evaluated consistent with the Proposed Programmatic Environmental Impact Report and proposed density and not require additional environmental review. **PCPB cannot support the adoption of the Proposed Propensity Map without greater detail and community input.**

09-8

### Increased Flooding

Blueprint SD will reduce greenspace area while increasing impervious surface areas resulting in increased surface runoff. The PEIR identifies that BluePrint SD... “would have the potential to exceed the capacity of existing or planned stormwater drainage facilities.” Due to the recent devastating flooding that affected our City, the **PCPB requests that a comprehensive analysis be performed to identify the increased risk of flooding and analysis of the associated run-off with increase densities proposed under BluePrint SD.**

09-9

### Traffic Congestion and Incomplete Transportation system

BluePrint SD and the City of Villages Strategy is based on connectivity of the regional transit system, future transit investments, and implementation of SANDAG’s 2021 Regional Plan. There is a shortfall and gap of funding for the implementation of the \$170 billion, 2021 Regional Transportation Plan. Increases in density are also proposed outside the conventional one-half mile commuter walking/rolling distance from transit. Studies and state standards have demonstrated the usage of public transportation drastically drops off beyond a one-half mile walking distance. The Blueprint SD Plan wants to designate land use density to support transit goals rather than plan transit to support existing and forecasted land use and density which is backwards planning. **PCPB requests that BluePrint SD comply with recognized standards and update the General Plan to reflect the actual public transit system rather than speculating on future funding and a non-existing transit system.**

09-10

### Greenhouse Gas Emissions (GHG)

BluePrint SD states that “Fuel-powered vehicles are the largest source of greenhouse gas emissions and pollutants impacting our air quality. The Climate Action Plan sets a goal of net zero emissions and at least half of all trips across the City will need to shift to more sustainable, climate-friendly modes like walking/rolling, biking, or taking transit. **Also, the Mobility Plan and PEIR fail to incorporate the most recent state and federal mandates that all new passenger cars will be zero-emission vehicles by 2035. PCPB requests that the City update and revise both BluePrint SD and the PEIR to reflect recognized distance to transit state standards and zero-emission vehicle regulations.**

09-11

**Local Peninsula Community Opposes BluePrint SD Density Increases.** BluePrint SD proposes to update the General Plan Village Propensity Map which identifies new and enlarged Village Areas with increased housing density. This map will form the base for further updates to Community Plans. As stated in the report and shown on the map, areas shown in purple and blue have the highest densities. The Propensity map does not define the increased density and the scale provides uncertainty to the areas proposed for density increases. PCPB cannot support the adoption of the Proposed Propensity Map without greater detail and community input.

09-12

The Village Propensity Map proposes to locate a high-density village in the Fleetridge /Wooded Area of Point Loma . This area is currently zoned single family -low density. The PCPB opposes a village strategy in this area, without community input and support. This area lacks adequate transportation, has the potential to hinder and block view corridors, and lacks the infrastructure to support high density. Page LU-6 states that residential land use designations will increase to higher uses. The Village Propensity Map recommends a conversion of single-family zoning in the Roseville neighborhood and other single-family neighborhoods in the Point Loma Community. **Clearly define the areas where single family residential land use designations are proposed for greater densities and seek community input.**

## SANDAG Series 15 Population and Housing Forecast and Consistency with BluePrint SD

As the local Planning Agency SANDAG works with local jurisdictions, the State Department of Finance, demographic and economic experts, and other stakeholders to create a long-term forecast that predicts what the region will look like in terms of population and housing. SANDAG Series 15 Population forecasts a decline in population in eleven jurisdictions in the County and only a slight growth of City San Diego's population by 5 percent by 2050. The Region's population in 2050 is expected to be only 3 percent higher than in 2022. See Attached SANDAG Series 15 Regional Forecast. **The PCPB requests that BluePrint SD maintain consistency and reflect SANDAG Series 15 population and housing projections into the General Plan Update. PCPB also requests that BluePrint SD provide a numerical projection of housing units proposed in BluePrint SD and reflect consistency with SANDAG Series 15 forecast, the Region's Local Planning Agency.**

09-13

### Mobility Element

**Bikeways.** Large sections of roadways needed for Vehicle Traffic have been converted to bikeway use thereby causing increased congestion on City Roadways, and in one case just having one lane for traffic in both directions. Bikeways in urban areas are not used nearly as much as vehicles and are seldom used by Seniors when residents need to go shopping. Policy needs to be amended to specify that bikeways will not be designed that significantly and adversely affect vehicle traffic causing vehicle congestion. Also specify that any bikeway conversion leave at least two lanes for vehicle traffic (coming and going) and that roadways will not be diverted to bicycle use where there is little to no bicycle traffic.

09-14

**Parking.** The existing general plan allows developers to pay an in-lieu fee rather than provide parking for their developments. This should not be allowed. The proposed amendments also allow the city to charge a floating parking rate to limit demand. This would be another way for the city to generate more revenue and should not be allowed because it adversely affects lower income residents. Adequate parking is needed to support development to avoid traffic congestions that these policies do not promote and should be deleted as part of the general plan amendments.

09-15

The letter was approved with a vote of 12-0.

**O9: Responses to Peninsula Community Planning Board Comment Letter**

**O9-1:** The introductory comment is noted. This comment does not relate to the adequacy of the Draft Program Environmental Impact Report (PEIR). No further response is required.

**O9-2:** Sections 4.12 and 4.13 of the PEIR addresses the likelihood that development in accordance with the Blueprint SD Initiative, the Hillcrest Focused Plan Amendment (Hillcrest FPA), and the University Community Plan Update (CPU) would require new public services facilities such as schools and parks and recreational facilities to maintain acceptable levels of public service.

As discussed in the Draft PEIR, buildout of these planning initiatives could require the construction of new public services facilities to accommodate growing demand, and the construction and operation of these facilities could result in environmental impacts. The Blueprint SD Initiative, the Hillcrest FPA, and the University CPU are long-range planning documents that do not include project-specific details for specific public services facilities developments. Therefore, the potential environmental impacts associated with the construction and operation of these future facilities cannot be determined at this time. The development of future public services facilities would be subject to separate environmental review, and compliance with the regulations existing at that time could reduce potential environmental impacts associated with the construction and operation of these new facilities.

Regarding the provision of school facilities, the City and the San Diego Unified School District (SDUSD) will continue to coordinate to explore options for the provision of future school facilities as buildout of these plans occur; nevertheless, it is ultimately the responsibility of SDUSD to plan for the potential expansion of existing and/or development of new school facilities. Nevertheless, at this programmatic level of review, impacts relating to public services facilities and parks and recreational facilities are significant.

**O9-3:** As detailed in Section 4.9.4, Issue 2.b of the Draft PEIR, the Blueprint SD Initiative, University CPU and Hillcrest FPA include policies that support open space preservation, drainage management, and stormwater infrastructure improvements. These policies also support urban greening, consistent with the City's Climate Action Plan (CAP). Such design elements would help create "green streets" that incorporate vegetation, trees, soil, and engineered systems (such as permeable pavement, bioswales, etc.) to slow, filter, and cleanse stormwater runoff from impervious surfaces (e.g., concrete and asphalt). Further, the requirements for onsite site Low Impact Development (LID) BMPs, such as stormwater detention/retention BMPs set forth in the City's Stormwater Standards Manual, and required per the City's MS4 Permit, would minimize impervious areas and, as a result, simultaneously reduce project runoff and the potential transport of pollutants to the City's stormwater drainage systems. As such, implementation of the project would not result in flooding due to an increase in impervious surfaces, changes in absorption rates, drainage patterns, or the rate of surface runoff.

Further, as part of the City's Municipal Waterways Maintenance Program (MWMP), stormwater infrastructure maintenance needs are identified through an annual inspection and prioritization process that includes public input and a hydrologic and hydraulic analysis to determine the existing conveyance capacity of the City's stormwater conveyance system. The results of this inspection and prioritization process is shared annually with the Environment Committee of the City Council, as an

additional forum to receive public input, and published by the City as a tool to budget, prioritize and plan final engineering and environmental compliance, including identification of compensatory wetlands mitigation.

**O9-4:** Section 4.7.2.2c of the Draft PEIR details the City's 2022 Climate Action Plan (CAP) which includes a goal of net zero emissions by 2035. Additionally, Section 4.7.4, Issue 2, provides an analysis of the project's consistency with the six strategies of the City's CAP, which were developed to meet the City's GHG emissions goals.

The commenter also makes reference to the State's Advanced Clean Cars II Regulations approved by the California Air Resources Board in 2022 mandating that all new passenger cars, trucks, and SUVs sold in California be zero emission vehicles by 2035. It is worth noting that, although these State regulations may play a role in assisting the City with meeting its CAP goals, the State's Advanced Clean Cars II Regulations does not prohibit the use or sale of used gas-powered vehicles, only the sale of new ones. As such, it would be speculative to assume the rate of adoption of zero-emission vehicles and the associated air quality and VMT reductions.

Please note that the Mobility Plan is outside of the scope of this PEIR and was not analyzed in the project.

**O9-5:** Comment noted. Responses to the attached comment letter are provided under O9-6 through O9-16.

**O9-6:** The comment summarizes the Draft PEIR public review period, how Blueprint SD would increase densities, and issues found to be significant in the PEIR. Further, the comment states,

The Peninsula Community Planning Board (PCPB) opposes the adoption of Blueprint SD and requests that the City extend the comment period provide projected numbers as to how the zoning and density changes will affect the number of units built in Point Loma and their impact on parking and infrastructure compared to the existing general plan, and provide a public outreach program which reflects the proposed vast changes in land use and character of Point Loma. The vague maps in Blueprint SD do not provide this information that is necessary for adequate public input.

The Blueprint SD Initiative proposes an updated policy and land use framework that would apply to all development Citywide and is intended to guide future land use plan updates (e.g., Community Plan Updates [CPUs], Specific Plans, and Focused Plan Amendments [FPAs]) and future San Diego Municipal Code (SDMC) amendments which would help facilitate the implementation of the Blueprint SD Initiative. The Blueprint SD Initiative's land use framework is defined by the Village Climate Goal Propensity map, which is intended to guide future land use plan updates (e.g., Community Plan Updates (CPUs), Focused Plan Amendments (FPAs), Specific Plans, etc.) As described in Section 3.5.1.2, of the Draft PEIR, the Climate Smart Village Areas, which are areas with high village propensity values (values 7 through 14) as defined by the Village Climate Goal Propensity Map, would be the areas where future increases in development densities and intensities would be concentrated to help bring the City closer to reaching its CAP goals for reducing greenhouse gas (GHG) emissions. The Village Climate Goal Propensity Map does not propose actual development. It is not a land use map that identifies site-specific land use designations and zoning. It is anticipated

that future community plans and other applicable land use plans and policies would refine the General Plan's Citywide policies and provide site-specific land use designations, zoning, policies, and recommendations. As described in Section 3.5.1.3 of the Draft PEIR, future land use plan updates would be evaluated for consistency with the Blueprint SD Initiative, including the Village Climate Goal Propensity Map, and this PEIR. Depending on the scope of future projects, future environmental review for consistent projects may include tiered Mitigated Negative Declarations (MNDs), tiered EIRs, or other tiered environmental analysis in accordance with California Environmental Quality Act (CEQA) Guidelines Sections 15152, 15153, 15162, 15163, 15164, 15168, and/or 15183. This condition does not preclude the environmental analysis of future projects from happening. See response to comment O11-8.

Public services, recreation, and infrastructure impacts are discussed in Sections 4.12, 4.13, and 4.16 of the Draft PEIR, respectively.

Parking is not an issue required to be addressed by CEQA.

**O9-7:** See response to comment O9-6.

**O9-8:** See response to comment O9-6 and response to comment O11-11 under comment letter O11.

**O9-9:** See response to comment O9-3.

**O9-10:** An overarching goal of the Blueprint SD Initiative, University CPU, and Hillcrest FPA is to further the implementation of the City's CAP and support a mode shift from single occupancy vehicles to alternative mobility options such as walking/rolling, biking, and transit. This would directly support implementation of CAP Strategy 1. Additionally, proposed General Plan Policies CE-F.1 through CE-F.6 encourage and provide incentives for the use of alternatives to single-occupancy vehicle use, including using public transit, carpooling, vanpooling, teleworking, bicycling, and walking/rolling. The Blueprint SD Initiative identifies the best locations for growth and the most receptive locations that support biking, walking, and transit usage based on the Regional Travel Demand Model, to attain the CAP's mode share goals. The City can meet the CAP Strategy 3 goals through the Blueprint SD Initiative land use strategy and mobility investments and programs that address travel behavior. The Blueprint SD Initiative land use strategy is the maximum extent feasible land use scenario that – when combined with other mobility implementation strategies, which are part of the overall General Plan Refresh - can achieve the mode shift goals of the CAP. Refer also to Draft PEIR Appendix N for additional information supporting how the Blueprint SD Initiative supports City mode share targets consistent with the CAP.

**O9-11:** See response to comment O9-4, above.

**O9-12:** See response to comment O9-6 and O9-8.

**O9-13:** See response to comment O11-28 under comment letter O11 regarding the SANDAG Series 15 forecast.

Also, see response to comment O9-6.

**09-14:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**09-15:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**09-16:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**Subject:** Comments on Draft Program Environmental Impact Report for the Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan, and University Community Plan and Local Coastal Program Update/ SCH No. 2021070359

Dear Ms.Malone:

The San Diego Audubon Society offers these comments on the Draft EIR for the Blueprint SD Initiative. We specifically feel that the EIR misses the mark on

1. accounting for the ecosystem services provided by public-trust coastal lands
2. considering recreational ecological principles in its proposal of new trails especially within MSCP area
3. trail planning for Rose canyon
4. taking into account diverse nature of the canyons in San Diego
5. the number of “significant impact” environmental issues which is a glaring red flag that has to be addressed before any progress is made on these plans.

O10-2

## 1. ECOSYSTEM SERVICES

Blueprint SD PEIR Environmental Impact Analyses leave unmentioned coastal canyons’ considerable contribution to **Climate-Change Preparedness** and **Ecosystem Services**. Public open-space conservation lands represent a 24,000-acre contribution to the urban forest and the region’s biodiversity. They stabilize the developed mesas, sequester carbon, purify the air, infiltrate and cleanse stormwater and runoff, conserve water, reduce crime and cultivate community, and offer respite from urban heat islands. In light of Blueprint SD ambitions and likely eventualities, an analysis of impact on these ecosystem services is critically necessary. We invite you to use the San Diego Urban Ecosystem Analysis as your model<sup>1</sup>. Dynamic ecosystems, coastal canyons require maintenance and investment to remain functionally

O10-3

O10-4

858-273-7800 • 4010 Morena Blvd., Suite 100, San Diego, CA 92117 • Fax 858-273-7801 • [www.sandiegoaudubon.org](http://www.sandiegoaudubon.org)

vitalized. Not only is the municipal government responsible for public lands' maintenance and protection, the converse is true, though ignored in this PEIR. Well maintained and protected coastal canyons can protect the public and government from disasters – such as over-capacitated infrastructure, fires, floods, disease. Poorly maintained and unprotected coastal canyons – hammered by increased infill upgradient, increased use and increased precipitation –cannot.

O10-4  
cont.

Consider the tens of millions of dollars damages in and from the once richly vegetated Maple Canyon. Down through the Laurel Street stormwater infrastructure, to Solar Turbines and the airport cargo terminal, the costs and damages are growing. As a cost-benefit analysis, please weigh these costs, or those in Chollas flooding (January 2024), against whatever municipal revenues gained from Blueprint SD. Use the same watershed-wide model.

O10-5

Adding residents and businesses in proximity to public open space will greatly stress these complex ecosystems. Before Blueprint SD is implemented, **Natural Resources Management Plans** for all public open space must occur, with management and compliance funding allocated. Otherwise, fire, flood and other avoidable disasters will occur, not as emergencies, but as exceedingly costly and possibly deadly inevitabilities for which taxpayers cannot be burdened. Insurers are already bowing out, for just these reasons. Please analyze the likelihood of San Diegans' inability to insure their properties in a denser more disaster-prone urban environment with a paupered municipality, even now unable to repair streets and infrastructure, unable to maintain parks, canyons and street trees, unable to house the unhoused.

O10-6

## 2. RECREATION ECOLOGY

As a serious update to the General Plan and community plans, at such a critical juncture, the Blueprint SD strives to help the City reach its Climate Action Plan (CAP) goals and contribute to the region's mobility vision and needs. Where mobility meets biodiversity, conscientious and thorough analyses are a necessary initial step in avoiding unforeseen and unfortunate outcomes that expose San Diego to expensive liability and damages.

O10-7

**Recreation Ecology** is the scientific study of environmental impacts resulting from recreational activity in protected natural areas. This field includes research and monitoring assessments of biophysical changes, analyses to identify causal and influential factors or support carrying-capacity planning and management, and investigations of the efficacy of educational, regulatory, and site management actions designed to minimize recreation impacts on fundamental but diminishing natural resources. These ecological understandings of

O10-8

environmental impacts of outdoor recreation are critical to the management of recreation and other mobility through natural spaces.

Canyon trails were conceived not as transit corridors, but as a means of consorting with nature. Because trails throughout the city sometimes connect with sidewalks and streets, they may be co-opted into mobility ambitions. Inexplicably, “recreation ecology” has been omitted from the Blueprint SD PEIR.

Blocked stormwater infrastructure down Laurel Street, from Maple's eroding trail system. Five years ago, while San Diego Canyonlands contractors worked on this, City estimated \$20,000,000 to fix the Laurel St infrastructure. Present work IN Maple Canyon upwards from \$17,000,000, stated to Open Space Citizens' Advisory.

O10-8  
cont.

In San Diego Audubon’s considerable experience, human incursion into conservation areas – particularly humans in a hurry – can lead to widening, paving, butchered habitat, flammable invasive weeds, erosion, slope destabilization, fire and flooding. Maple Canyon supplies one worst case example. As pictured above, sediment-caused flooding blocked access to the airport's cargo terminal more than 1/2 mile away from Maple Canyon itself.

For mobility impacts in and adjacent to public lands throughout the city, please conduct Recreation Ecology environmental impact analysis in concert with resource and wildlife agencies, in order that no negative impacts occur to dedicated conservation areas. Please include a cost/benefit analysis, as well as a source of funding for Natural Resource Management Plans and long-term open-space maintenance. The City cannot afford not to do this.

O10-9

### 3. TRAIL PLANNING IN UNIVERSITY CITY’S ROSE CANYON

O10-10

The Blueprint SD’s approach to trail planning in University City’s Rose Canyon remains misguided and exceedingly problematic. Current resource management efforts within Rose Canyon and other MSCP lands are poorly funded and inadequate, putting protected habitat and species at risk. Over and over and presently evident is that new, formalized, illegal and off-trail trails, even for just hiking and biking uses, can lead to adverse impacts.

O10-10  
cont.

Please respond to the following caveats – those already communicated to the City of San Diego Planning Department in August 12, 2022 and June 30, 2023 legal correspondence from Shute, Mihaly and Weinberger, L.L.P.

### **3-1. The City Must Consider Consistency with the MSCP Before Proposing New Trails.**

In 1997, the City of San Diego finalized the MSCP Subarea Plan to meet the requirements of the California Natural Communities Conservation Planning (NCCP) Act and to allow the City to issue take permits under the state and federal Endangered Species Acts. The City’s Multi-Habitat Planning Area (MHPA) delineates core biological resource areas and corridors targeted for conservation as part of the Subarea Plan. The Subarea Plan document identifies Rose Canyon as one of these critical conservation areas. The City must abide by the MSCP protections in place for Rose Canyon and other MHPA lands as part of its legal obligations to comply with the California Natural Communities Conservation Planning Act (NCCP) and the Federal Endangered Species Act (ESA).

O10-11

#### **A. The MSCP Subarea Plan prioritizes protection of biological resources and prohibits activities that disturb those resources.**

The MSCP Subarea Plan makes clear that “[T]he overarching MSCP goal is to maintain and enhance biological diversity in the region and conserve viable populations of endangered, threatened, and key sensitive species and their habitats.” Furthermore, the Subarea Plan lists management objectives for the MHPA, which includes “[T]o protect the existing and restored biological resources from intense or disturbing activities within and adjacent to the MHPA while accommodating compatible public recreational uses.”

O10-12

#### **B. The MSCP Subarea Plan prohibits locating trails in sensitive habitat areas and requires trails to follow existing dirt roads.**

The MSCP Subarea Plan lists the following as one of the General Management Directives: “Locate trails, view overlooks, and staging areas in the least sensitive areas of the MHPA. Locate trails along the edges of urban land uses adjacent to the MHPA, or the seam between

O10-13

land uses (e.g., agriculture/habitat), and follow existing dirt roads as much as possible rather than entering habitat or wildlife movement areas. Avoid locating trails between two different habitat types (ecotones) for longer than necessary due to the typically heightened resource sensitivity in those locations.”

O10-13  
cont.

Contrary to these Directives, the draft University City Plan (UCP) proposes several new and formalized trails directly through some of the most sensitive, least fragmented habitats in the MHPA and extends trails beyond existing dirt roads. Please eliminate these anomalies.

### **3-2 Several of the Proposed Trails are Inconsistent with MSCP Subarea Plan Policies or are Otherwise Infeasible.**

Despite failing to conduct any type of analysis for consistency with the MSCP, the draft UCP charges ahead to blindly propose areas for new and formalized trails. Figure 24 of the UCP shows the “Existing Formal Trail” in Rose Canyon, which is the only approved trail in the Rose Canyon Open Space Park. Additional trails, identified as “Existing Informal Trail – to be Closed”, have been illegally created – some through sensitive habitat. Thankfully, those trails are proposed to be eliminated. Figure 24 identifies two remaining types of trail, however: “Proposed New Trail (location to be determined)” and “Existing Informal Trail, Proposed as a Formal Trail.” Most of these trails would require extensive grading and/or intrusion into sensitive habitat, and must therefore be removed from further consideration on all UCP maps.

O10-14

A Biological Resources Report was prepared in June 2020 as part of the UCP Update (“Bio Report”), but it did not examine any of the areas within the UCP in detail or evaluate the proposed trails in the discussion draft UCP. The report contains broad information regarding the regulatory environment, an incomplete compendium of sensitive species that could exist in the Plan Area, and a summary of existing conditions. Friends of Rose Canyon has deep concerns regarding the adequacy and accuracy of this Bio Report. Yet, even the high-level summary of existing conditions in the Bio Report and the most cursory assessment of topographic conditions indicates that the proposed trails will conflict with the MSCP’s conservation mandates or are otherwise infeasible.

O10-15

Many of the proposed trails would also conflict with policies in the draft UCP recognizing the need to respect hillside and canyon areas and to avoid degradation to these areas. The UCP contains policies that identify the need to preserve topography and minimize grading, which would be impossible to accomplish given the locations of several proposed trails in steep canyon areas. For example, UCP Implementation Policy 5.4A states, “Prevent development, grading, or alterations of steep slopes greater than 25 percent grade or in open space canyons.” All of the

O10-16

proposed trails discussed are in steep open space canyons, so by the UCP's own policy guidance, these trails should not be considered.

O10-16  
cont.

#### 4. EACH SAN DIEGO CANYON IS UNIQUE

Rose Canyon is one of many conservation areas in San Diego's canyon-mesa topography. In this precious collective, every canyon is distinct, as varied as the communities on the mesas above them. Their native animal and plant communities have commonalities, but each canyon has a character of its own. These differences have many factors. Their ingresses and egresses, their proximity to schools, services, streets, fire-rescue, and evacuation –all are individual. Drainages and creek systems, receiving waters for specific watersheds, drain to different locations in the ocean and bays. Functionally unique, canyons throughout the city register different temperatures on any given day, influenced by exposures, breezes, and myriad other elements.

Canyons in old San Diego above downtown were subject to settlement earlier. They were hard-hit, mined for timber, planted and invaded by palms, eucalyptus, olives, fruit trees, grasses and weeds. These neighborhoods have mature trees. Houses and businesses are tightly packed, more walkable, but now crowded with cars and less easily exited. Such characteristics influence interactions –be they those of wildlife or humans –with the canyons.

O10-17

Canyons in outer or newer San Diego suffered less deforestation, but are still under siege from anthropogenic-caused degradation. Some, like Rose Canyon, are surrounded with ample traffic circulation.

Minus compliant and sufficient municipal maintenance, these intermittent oases rely greatly on volunteerism. Different sets of “villagers” and nonprofits steward them, each with their own ardent priorities. In these ways San Diego's urban canyons defy Blueprint SD's cookie-cutter ambitions.

#### 5. TABLE ES-1: SUMMARY OF ENVIRONMENTAL IMPACTS

**The “significance” of Environmental Impact Issues 4.1 Aesthetics, 4.2 Air Quality, 4.3 Biological Resources should be enough to stop the Blueprint SD in its tracks.**

O10-18

We know, by looking out the window at construction cranes and new multistory buildings that this sentence from Environmental Impact 4.1, Issue 3 and 4 is untrue: *Compliance with City's regulations, development standards, urban design policies, and any SDRs proposed as part of the project and as part of future CPUs, Specific Plans, and FPAs would ensure that development under the project would not substantially alter the existing visual character, quality of public views, or scenic quality of the project areas.* All San Diegans know this statement to be untrue. These effects cannot be mitigated. These enumerated Impact Analyses and Conclusions are fundamentally inadequate, outrageous even, given advancing and costly climatic disasters, mounting rate of infectious disease to which contamination, pollution, and loss of biodiversity contribute. These impacts are literal death sentences. Please correct these analyses and conclusions to be factual.

O10-18  
cont.

### 5.1 Environmental Impact 4.5 Energy

Unlike the PEIR claims, construction is an exceedingly dirty, fuel-intensive, disruptive business. Worse, the building materials themselves are fuel and chemical-intensive, acquired at significant cost, particularly to struggling nations, but also struggling communities in our own country. To quote award winning architect David Chipperfield, "The construction industry contributes an enormous amount of damage to our environment. So, we have to think about how we might mitigate that, limit that, and address that." <sup>2</sup>

The construction industry's contribution to carbon emissions and land degradation has been documented extensively by the EPA as shown below

O10-19

Furthermore, according to the EPA, construction activity can "significantly change the surface of a land" due in large part to "clearing of vegetation and excavating" which is common on many construction projects. According to the agency, the result means surrounding environments can be heavily polluted, particularly surrounding water pools, which have experienced an increase in pollution as a result of various construction projects in recent years. Additionally, research by Kleiwerks says that building material, such as concrete, aluminum, and steel, are directly responsible for "large quantities of CO<sub>2</sub> emissions" due to high contents of "embodied energy content", with 9.8 million tons of CO<sub>2</sub> generated from the production of "76 million tons of finished concrete in the US." The research also says that the construction sector's current practices at reducing pollutants, or omissions, are massively ineffective and may even "generate high levels of greenhouse gas pollution." Worryingly enough, construction activities

consume “half of all the resources” extracted from nature, and account for one-sixth of global freshwater consumption, one-quarter of wood consumption, and one-quarter of global waste,” according to the research.<sup>3</sup>

According to new research by construction blog Bimhow, the construction sector contributes to 23% of air pollution, 50% of the climatic change, 40% of drinking water pollution, and 50% of landfill wastes. In separate research by the U.S. Green Building Council (USGBC), the construction industry accounts for 40% of worldwide energy usage, with estimations that by 2030 emissions from commercial buildings will grow by 1.8%.<sup>3</sup>

No amount of prospective-not-actual transit will offset the resource extraction, manufacturing, and chemicals required for this Blueprint’s realization. Please correct this analysis and conclusion to be factual.

## 5.2 Environment Impact 4.6 Geology

We already know from erosion all around us, at construction projects and downgradient from new projects, that either the San Diego Municipal Code is inadequate or unenforced, or both, as it relates to 4.6 Geology and Soils. Look at Maple Canyon! Look at Chollas in the January 2024 flood! Look downgradient from any canyon! Therefore, please correct this Impact Analysis to be factual too.

O10-19  
cont.

O10-20

### 5.3 Environmental Impact 4.11 Noise

Construction noise, along with other sources of non-transportation noise like industrial activities and urban development, can have along with various impacts on the environment:

- **Ecosystem Disturbance:** Construction noise can disrupt natural habitats and disturb wildlife. Loud noises may cause wildlife to flee the area, disrupting their normal behavior patterns such as feeding, mating, and sleeping. It can lead to habitat abandonment or even death.
- **Noise Pollution:** Excessive noise from construction sites can contribute to noise pollution in surrounding areas. Prolonged exposure to high levels of noise can have detrimental effects on human health, including stress, hearing loss, sleep disturbances, and cardiovascular issues.
- **Hazards to Wildlife Mortality and Reproduction:** Given the density of housing one can expect increased noise levels both directly because of human density and indirectly due to increased traffic in the area. The EIR as it stands does not take into consideration the impact of noise pollution on the MHPA wildlife.

Please include these substantive impacts in your analysis.

O10-21

### 5-4 Environmental Impact 4.14 Transportation

Issue 1 and Issue 4 are deemed “less than significant” impacts and the opposition to that is stated below:

Significant impacts are expected from the development in already busy urban areas like Hillcrest, University City and elsewhere in San Diego, CA, which can have significant implications for emergency access and exits, similar to concerns in places like Maui, HI. Here's how dense development could significantly impact and influence emergency access and exits in these communities:

- **Traffic Congestion:** Dense development often leads to increased traffic congestion, especially during peak hours. In the event of an emergency, such as a fire or natural disaster, heavy traffic can impede the movement of emergency vehicles and delay response times. Narrow streets and limited parking can exacerbate congestion issues.
- **Limited Road Capacity:** Older urban neighborhoods like Hillcrest and University Heights may have narrow streets and limited road capacity, which can make it challenging for emergency vehicles to navigate effectively, especially if there are parked cars blocking access lanes. Narrow roads may also hinder the evacuation of residents during emergencies.

O10-22

- **Infrastructure Limitations:** Older urban neighborhoods may have outdated infrastructure, including narrow bridges, tunnels, and roadways, which can pose challenges for emergency access and evacuation. Infrastructure improvements may be necessary to accommodate the needs of a growing population and ensure adequate emergency response capabilities.
- **Pedestrian and Bicycle Traffic:** Dense urban areas typically have higher levels of pedestrian and bicycle traffic, which can further complicate emergency access and evacuation efforts. Emergency responders must navigate through crowded sidewalks and bike lanes to reach affected areas quickly and safely.
- **Community Design and Planning:** The layout and design of urban communities can influence emergency access and exits. Mixed-use developments, high-rise buildings, and complex street networks may require careful planning to ensure efficient emergency response and evacuation routes. Accessible pathways, designated emergency vehicle lanes, and clear signage can help facilitate emergency operations. The proposed density has not taken into consideration the increase in vehicles and impact on narrow street and the ingress and egress in an emergency, such as what happened in Maui, Hawaii. At present, Hillcrest and University City are in gridlock with traffic due to the additional, dense housing.

O10-22  
cont.

Please include these substantive impacts in your analysis.

### 5-5 Environmental Impact 4.18 Wildfire

**Issue 2:** Older communities close to downtown feature “established transportation networks,” too, but these were established for far less usage, and already suffer periods of turgid traffic. Bumper-to-bumper slowdowns and periodic stoppages are everyday. Complete Communities construction compromises by allowing developers narrower ingress/egress in exchange for advantages unrelated to fire and rescue. Moreover, open-space canyons wind through these neighborhoods with many streets ending in dead ends. SDMC Section 511.8201(f)(5)(2) is not presently prohibiting development on dead-end roads as claimed in this analysis. (See DSD Project # #458558, Variance no. 1647238, which was approved on November 3, 2021, HO-7416). Therefore, this Impact Conclusion of “Less than Significant” is untrue, categorically dangerous and must be corrected. What is the present status of the implementation of the Emergency Operations Plan, SDPD Policy and Procedures, Operational Area Emergency Plan? Is that implementation funded?

O10-23

**Issue 3:** 32<sup>nd</sup> St Canyon Task Force, Golden Hill neighbors, and former members of the Citizens for Responsible Wildfire Risk Reduction have proven present municipal brush management

O10-24

practices to be in gross violation of the City's Brush Management Regulations SDMC Section 142.0412, by means that increase rather than decrease the fire-fuel load in the midterm and over time. These damages, caused partially by underfunding, already exacerbate wildfire risks and consequences to people and property, to air quality, to the MHPA's strict federal and state habitat and species-protection commitments. Please add underfunding and MHPA commitments to the wildfire analysis.

O10-24  
cont.

**Issue 4:** Existing municipal infrastructure is poorly maintained. Departments seem to have insufficient resources for repairs and maintenance, much less new improvements. Infrastructure projects in canyons invariably destabilize slopes (Maple Canyon) (32<sup>nd</sup> St Canyon) (Chollas) and accelerate weed (annual flash fuels) growth. Again the municipal commitments to the MHPA are ignored. Please interpolate MHPA into this analysis, together with a requirement for Natural Resource Management Plans for all coastal canyons held in public-trust. With specificity, how will Blueprint SD address these regular maintenance concerns that intensify fire fuel and violate SDMC Section 142.0412?

O10-25

#### **5-6 Environmental Impact - Light Pollution and Collisions due to Glass Buildings**

The EIR does not seem to include any analysis of light pollution which is a glaring omission considering the number of studies that have been done on this topic. The American Medical Association has issued warnings about the impact of light pollution on human health<sup>4</sup>. Light pollution causes bird collisions and is one of the main contributors for bird mortality. Recently the San Diego Audubon Society has launched a Lights Out, San Diego! campaign to call attention to this issue<sup>5</sup>. While adhering to the lighting code 142.0740 is necessary, it is not sufficient especially given the proximity to a sensitive habitat. We recommend that any development adjacent to natural features and park lands adopt Dark Sky standards for lighting and commit to choosing warmer colors in the range of 2000 to 3000 K for exterior lights while striving to minimize perimeter lighting. All lights should be shielded, face away from sensitive landscapes, and be on a timer or motion-sensitive. Reducing glare, spillage, or light trespass should be mandated.

O10-26

Amendments to the California Green Building Standards Code, specifically sections AR.107.1 through AR.107.3 regarding bird-friendly building design, are scheduled to be finalized in July, and as such, we strongly encourage the incorporation of these standards in any development adjacent to natural landscapes and open spaces. A newly constructed building shall comply with the bird-friendly building design elements and features in Sections A5.107.1 through A5.107.3 of the California Energy Code. These sections are critical for reducing bird mortality due to building collisions, especially given that 1 billion birds die from building collisions annually.

Fostering the protection and appreciation

of birds, other wildlife, and their habitats...

In conclusion, we believe the EIR misses the mark on many important issues from ecosystem services provided by many of the natural landscapes, to the need to balance conservation with recreation, the unique nature of the landscapes and the significant environmental impacts that this plan can create if implemented as is. A sweeping plan such as Blueprint which can set the stage for future development in our city should be more carefully considered and cannot be allowed to proceed before glaring environmental issues are addressed. Please address the questions we have raised in our letter and perform substantive analysis of the environmental impacts before proceeding any further.

010-27

Sincerely,

James Peugh  
Conservation Chair  
San Diego Audubon Society

Tershia d'Elgin  
32nd Street Canyon Task Force

**O10: Responses to San Diego Audubon Society Comment Letter**

**O10-1:** Comment noted. No further response required.

**O10-2:** Comment summarizes points to be elaborated on in the letter. No further response required.

**O10-3:** The commenter notes the City's coastal canyons' contribution to climate-change preparedness and ecosystem services. See O10-4 below for response. The Conservation Element includes new policy CE-B.7 which prioritizes climate resilience and mitigation of climate change hazard impacts on open space and environmental assets to safeguard against habitat loss, protect city services and promote human health and social equity, consistent with policies in the Safety Element and Climate Resilient SD.

**O10-4:** The commenter describes the climate and environmental benefits of maintaining open-space conservation lands. The commenter also describes potential negative effects to the canyons that may result due to increased infill, use, and precipitation. The commenter recommends using the San Diego Urban Ecosystem Analysis as a model to analyze the impact of the project on the coastal canyons. There are different factors that could potentially impact open space areas directly, indirectly, and cumulatively. Direct, indirect, and cumulative biological impacts to coastal canyons are considered in the biological resources analysis, Section 4.3.4 of the Program Environmental Impact Report (PEIR). Additionally, project consistency with the City's Multiple Species Conservation Program (MSCP) Subarea Plan (SAP) is analyzed in Section 4.10.4, Land Use, of the PEIR.

Projects in the City are required to analyze biological impacts based on the City's adopted CEQA Thresholds. Specifically, cumulative impacts are determined using the following threshold:

"The MSCP was designed to compensate for the regional loss of biological resources throughout the region. Projects that conform with the MSCP as specified by the Subarea Plan, and implementing ordinances, (i.e. July 2002 Biology Guidelines and ESL Regulations) are not expected to result in a significant cumulative impact for those biological resources adequately covered by the MSCP. These resources include the vegetation communities identified as Tier I through IV (see City's July 2002 Biology Guidelines, and the MSCP covered species list (see Appendix A of the City of San Diego's MSCP Subarea Plan))."

Implementation of MM-BIO-1 in addition to existing state and federal regulations would ensure that potential impacts to sensitive species, sensitive habitats and/or wetlands resulting from future development anticipated under the project would be mitigated to the extent feasible, consistent with all applicable federal, state, and City regulations and conservation plans. Potential impacts to sensitive species and/or designated critical habitat of listed species would be mitigated in accordance with City's ESL Regulations, Biology Guidelines, and the provisions of the MSCP SAP and VPHCP. Additionally, in the University Community planning area, future projects would be influenced by UCPU policy 2.9, Canyon Adjacent Development, which encourages building design to be minimally impactful to adjacent canyons and habitat.

While implementation of the City's regulatory framework typically is sufficient to ensure impacts are reduced to less than significant; at a program level of review and without project-specific details, it

cannot be known with certainty that it would be feasible to mitigate all significant impacts to less than significant. Therefore, after implementation of MM-BIO-1, impacts would remain significant.

Direct, indirect, and cumulative impacts to biological resources would then be analyzed at the time that specific development projects are proposed in accordance with the City's Biological Guidelines and ESL Regulations. Mitigation measures for biological impacts would then be incorporated as required conditions of approval for potential future development projects.

**O10-5:** The commenter requests a cost-benefit analysis be conducted considering the impacts to canyons due to future flooding using a watershed-wide model. This request is outside of the scope of environmental review of the project under CEQA. Per CEQA Guidelines Section 15126.2(a), "an EIR shall identify and focus on the significant effects of the proposed project on the environment." The commenter's request constitutes an analysis of the effect of the environment on the proposed project. As discussed in Chapter 4.9.4 of the PEIR, future development resulting from implementation of the proposed project could contribute to cumulative impacts related to hydrology, including downstream flooding, flood hazards from tsunami and mudflow, and erosion and sedimentation. However, all future development within the project areas would be required to comply with all NPDES permit requirements, and the City's Stormwater Standards Manual and Drainage Design Manual, including the implementation of Low Impact Development (LID) BMPs for stormwater treatment and hydromodification management. Cumulative downstream flooding impacts resulting from project implementation would be addressed through regulatory compliance, including compliance with the City's ESL Regulations and stormwater regulations contained in the SDMC. Additionally, the City's Stormwater Department actively maintains and repairs the City's existing stormwater infrastructure to ensure adequate stormwater conveyance through implementation of the Municipal Waterways Maintenance Plan (MWMP). Further, through the City's Climate Resilient SD plan the City is setting a policy framework for addressing how stormwater infrastructure can be improved (see Policy TNE-4 and related adaptation strategies from the Climate Resilient SD Plan). The City's Stormwater Department also conducts watershed and infrastructure planning in compliance with the City's Water Quality Improvements Plans (WQIPS) which includes watershed scale modeling and project prioritization for upgrading existing stormwater infrastructure and identifying new infrastructure needs. The Blueprint SD Initiative, University CPU and Hillcrest FPA also include policies that support the protection of canyons from erosion within the City, including but not limited to: increasing the use of green infrastructure, both at watershed scale and site-specific locations, in order to minimize the quantity of runoff, disruption of natural water flows, and the contamination of stormwater flows generated by development projects (General Plan Conservation Element Policy CE-E.2.j); maintaining storm drain discharge systems to prevent erosion and improve water quality by adequately controlling flow and providing filtration (University CPU Policy 5.5.H); and designing green streets to incorporate enhanced pedestrian and bicycle facilities, canopy street trees, and stormwater features that increase absorption of stormwater, urban runoff, pollutants, and carbon dioxide (Hillcrest FPA Policy UD-3.57).

**O10-6:** The commenter describes concern for increased density in proximity to open space. Please refer to comment O15-5 under comment letter O15 and comment O10-4 for more information. The commenter states that Natural Resources Management Plans for all public open space must occur. Please see comment O11-41 under comment letter O11 for further information regarding the preparation of Natural Resources Management Plans. Additionally, the commenter requests an

analysis of the likelihood of San Diegan's inability to insure their properties. Regarding the Natural Resources Management Plan comment, this comment pertains to the development of a plan which is outside of the scope of the project and doesn't raise issues regarding the adequacy of the Draft PEIR. Regarding the insurance analysis, this comment pertains to the analysis of the impact of future development associated with the project on ability of homeowners to obtain homeowners insurance. Per CEQA guidelines section 15384, "[...] economic impacts which do not contribute to or are not caused by physical impacts on the environment [do] not constitute substantial evidence[,]" and therefore do not need to be analyzed as part of the environmental analysis provided in the PEIR.

**O10-7:** The commenter states that an analysis of "where mobility meets biodiversity" is necessary to avoid liability. This analysis is outside the scope of this PEIR.

**O10-8:** The commenter states the definition of Recreation Ecology. The commenter goes on to state that the use of canyon trails for mobility (i.e. pedestrian linkages) rather than for recreational use, would lead to widening, paving, butchered habitat, invasive weeds, erosion, slope destabilization, fire and flooding. The proposed trails have been removed from the University CPU, the project description in Section 3.5.3(e) of the Draft PEIR, from Figure 3-26 of the Draft PEIR, and from the impact analysis in Section 4.3.4, Issue 4, of the Draft PEIR.

**O10-9:** The commentor requests a Recreation Ecology environmental impact analysis be conducted to determine impacts in and adjacent to public lands throughout the City. As described in response to comment O10-4, potential impacts to sensitive species and/or designated critical habitat of listed species resulting from future projects resulting from implementation of the project would be mitigated in accordance with City's ESL Regulations, Biology Guidelines, and the provisions of the MSCP SAP and VPHCP.

The commenter also requests an economic analysis regarding the maintenance of open-space areas. This is outside of the scope of this project and does not raise issues regarding the adequacy of the Draft PEIR. Please see response to comment O11-43 under comment letter O11 for more information regarding funding for the MSCP. No further response required.

**O10-10:** The proposed trails have been removed from the University CPU, the project description in Section 3.5.3(e) of the Draft PEIR, from Figure 3-26 of the Draft PEIR, and from the impact analysis in Section 4.3.4, Issue 4, of the Draft PEIR.

**O10-11:** The commenter states that the City must consider consistency with the MSCP before proposing new trails. The proposed trails have been removed from the University CPU, the project description in Section 3.5.3(e) of the Draft PEIR, from Figure 3-26 of the Draft PEIR, and from the impact analysis in Section 4.3.4, Issue 4, of the Draft PEIR. See response to comments A3-5, A3-7, A3-10, A3-18, A3-20, and A3-25 under comment letter A3 for a discussion of how the proposed project enforces the MSCP SAP.

**O10-12:** This comment cites various regulatory requirements and requirements of the City's MSCP Subarea Plan but does not raise a specific issue with the adequacy of the Draft PEIR.

**O10-13:** See response to comment O10-10.

**O10-14:** The commenter states that there was no MSCP consistency analysis for the draft UCP. The MSCP consistency analysis in the Land Use section, Chapter 4.10, of the PEIR. The comment also refers to “Proposed New Trail (location to be determined)” and “Existing Informal Trail, Proposed as a Formal Trail” as described in the UCP. See response O10-10.

**O10-15:** The commenter refers to the biological resources report prepared for the University Community Plan Update, and states that the biological resources report did not analyze in detail the proposed conceptual trails discussed in the UCP. See response to comment O10-10.

**O10-16:** See response O10-11.

**O10-17:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR.

**O10-18:** The commenter states that significant and unavoidable conclusions for aesthetics, air quality, and biological resources indicate that the project should not be approved.

The commenter continues to state that environmental impacts related to public views, visual character, and scenic quality cannot be mitigated. Chapter 4.1.4 describes numerous policies which specifically address these impacts. Refer to Chapter 4.1.4 of this PEIR for a detailed description of applicable policies pertaining to preservation of scenic views and quality. Future discretionary projects resulting from implementation of the project would be required to undergo a project-specific environmental review at the appropriate future time which would identify additional project features and/or mitigation measures to address potential impacts to scenic vistas. Additionally, compliance with the regulations in existence at the time the development is proposed would reduce potential environmental impacts related to scenic vistas and public views.

The commenter also refers to potential biological impacts. Refer to response to comment O10-4.

**O10-19:** The commentor describes the construction industry’s general environmental impacts, which is outside the scope of this Draft PEIR. They indicate that implementation of the project will not offset construction related impacts, including air quality, energy, GHG, and hazardous materials impacts. As described in Chapter 4.2.4, Issue 2 (a), of the Draft PEIR, two hypothetical scenarios for construction projects were assessed. Since individual construction projects would occur over a period of time, and because the exact timing, location, and size of future projects is not known at this time, construction-related air quality impacts are considered significant. Potential significant impacts are mitigated to the extent feasible through MM-AQ-1, and future ministerial and discretionary projects would be required to follow these measures. As described in Chapter 4.5.4, Issue 1, of the Draft PEIR construction of development facilitated by the Blueprint SD Initiative, the Hillcrest FPA, and the University CPU would not result in the use of excessive amounts of fuel or other forms of energy and impacts would be less than significant. Development pursuant to the Blueprint SD Initiative, Hillcrest FPA, and University CPU would primarily be infill development near public transit or in otherwise VMT-efficient areas, consistent with the City’s Climate Action Plan (CAP). As described in Chapter 4.7.3.1 of the Draft PEIR, the City uses a consistency analysis in lieu of quantifying GHG emissions to determine significant impacts consistent with CEQA Guidelines Section 15183.5. The City Planning Department prepared a memorandum, Climate Action Plan Consistency for Plan- and Policy-Level Documents and Public Infrastructure Projects, dated June 17,

2022, to provide guidance on significance determinations as it relates to consistency with the strategies in the CAP. The City's guidance document requires environmental documents to address the ways in which the plan or policy is consistent with the goals and policies of the General Plan and CAP. The project would support the City in obtaining citywide GHG emissions reduction targets under the CAP and impacts related to GHG emissions would be less than significant. Finally, as described in Chapter 4.8.4, Issue 1, although future development and construction activities associated with development contemplated by the project could involve the transport, use, or disposal of hazardous materials, compliance with applicable federal, state, and local regulations would ensure that regulated hazardous materials are handled and disposed of properly. The project would not create a significant hazard to the public or environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment; and impacts related to hazardous materials would be less than significant.

The commenter describes their concern regarding the incorporation of SANDAG's 2021 Regional Transportation Plan in the environmental analysis of the Draft PEIR. See response to comment O11-18 under comment letter O11.

**O10-20:** The commenter suggests that the SDMC is inadequate or unenforced as it relates to controlling erosion and flooding (geology and soils impacts) from previous projects not within the scope of the Draft PEIR. The comment does not address the adequacy of Chapter 4.6, Geology and Soils, in the Draft PEIR.

**O10-21:** The commenter notes correctly that construction noise can have noise-related impacts on the environment. These impacts are analyzed and mitigation measures are provided which address these concerns in the biology section (Chapter 4.3.4, Issue 2) and the noise section (Chapter 4.11.4) of the PEIR. Further, as described in Chapter 4.10, the City's Multiple Species Conservation Plan Subarea Plan (MSCP SAP) provides Land Use Adjacency Guidelines to avoid or reduce significant indirect impacts to the City's Multiple Habitat Planning Area (MHPA) from adjacent land uses. The MSCP establishes adjacency guidelines to be addressed on a project-by-project basis to minimize direct and indirect impacts and maintain the function of the MHPA. The Land Use Adjacency Guidelines would be incorporated as project conditions of approval, which would preclude indirect impacts to the MHPA. Note that MHPA adjacency guidelines would apply to both land within the MHPA and land as part of the Verna Pool Habitat Conservation Plan (VPHCP).

**O10-22:** The commenter describes opposition to impact conclusions for Issue 1 and Issue 4 for the transportation section (Chapter 4.14) of the Draft PEIR. For a response to the comment on traffic congestion, limited road capacity, and other flow limitations, see response to comment O13-2 under comment letter O13. Pedestrian and bicycle safety is discussed in Chapter 4.14.4, Issue 1, of the Draft PEIR. The Blueprint SD Initiative, University CPU, and Hillcrest FPA include numerous policies and proposed infrastructure improvements that would improve safety for pedestrian, bicycle, transit, and roadway facilities. For a discussion of emergency access, see response to comment O13-3 under comment letter O13.

**O10-23:** For a response to the comment on traffic congestion, limited road capacity, and other traffic flow limitations, see response to comment O13-2 under comment letter O13. The Complete Communities program is not a part of the scope of the project analyzed in the Draft PEIR and the environmental impacts of the Complete Communities program were addressed in the Final PEIR for

Complete Communities: Housing Solutions and Mobility Choices (SCH No. 201906003). For a discussion of emergency access, see response to comment O13-3 under comment letter O13.

The commenter states that a previously approved variance allowed development on a dead-end road, which would conflict with SDMC Section 511.8201(f)(5)(2). The aforementioned development project was approved on November 3, 2021, by the Hearing Officer of the City of San Diego (Resolution HO-7416). The specific SDMC section referenced above was adopted by the San Diego City Council on January 27, 2022, and was made effective February 26, 2022 (Ordinance O-21409). Therefore, the previously approved variance occurred prior to the preparation of the components of the project analyzed in this Draft PEIR and could not yet apply. Furthermore, the variance referred to was reviewed and analyzed independently of this project.

**O10-24:** The commenter states that municipal implementation of SDMC brush management regulations is inadequate due to underfunding, having an effect upon management of the MHPA in accordance with the MSCP Implementing Agreement between the City, USFWS, and CDFW. Comment noted. This comment is outside of the scope of this project and does not relate to the adequacy of the Draft PEIR. See Chapter 4.18.6 of the PEIR for the program-level mitigation framework for reducing significant impacts related to wildfire.

**O10-25:** This comment states that municipal infrastructure is poorly maintained. The infrastructure discussed in Chapter 4.18.4, Issue 4 (it references Chapter 16.4, Issue 1) refers to the infrastructure needed to prevent and control wildfires (e.g., roads, fuel breaks, emergency water sources, power lines, or other utilities). As described in the section, the physical impacts associated with the installation or maintenance of infrastructure and utilities would be significant. Future utility and infrastructure improvements would be required to comply with all applicable City standards; thus, these improvements are not likely to exacerbate fire risk. It is not likely that these infrastructure improvements would be built on MHPA land; however, they would be required to comply with the City's ESL regulations, Biology Guidelines, MSCP SAP, and VPHCP.

The comment also refers to management of the MHPA, which is outside of the scope of this project. Please see response to comment O4-27 under comment letter O4 for further information regarding the management of the MHPA

Regarding the Natural Resource Management Plan, refer to response to comment O11-41. Please see response to comment O11-43 under comment letter O11 for more information regarding funding for the MSCP

**O10-26:** The commenter states that the Draft PEIR does not contain an analysis of light pollution. See Chapter 4.1.4, Issue 5, of the Draft PEIR for an analysis of light pollution. All future development is required to comply with California Green Building Standards Code, SDMC Section 142.0730, Glare Regulations, and SDMC 142.0740, Outdoor Lighting Regulations [see Chapter 4.1.2.2 (b) of the Draft PEIR]. Additionally, see the discussion in Section 4.10.2(h) for consistency with the City's MSCP SAP and Chapter 4.10.4, Issue 2(f), of the Draft PEIR for an analysis of consistency with the City's MSCP SAP Land Use Adjacency Guidelines.

**O10-27:** The commenter states opposition to the project. Comment noted.

**Re: Comments on the City of San Diego’s Draft Blueprint SD Initiative, Hillcrest Focused Plan Amendment, and University Community Plan Update Program EIR, SCH No. 2021070359**

On behalf of the San Diego Sierra Club Chapter, we provide the following comments on the City of San Diego’s draft Program EIR (“PEIR”) for its proposed Blueprint SD Initiative (“Blueprint” or “Project”), Hillcrest Focused Plan Amendment (“FPA”), and University Community Plan Update (“CPU”). Our clients support policies that encourage transit oriented development, and a data driven approach for determining where to increase density in the City. Blueprint’s stated goal of steering away from auto-oriented development is laudable.

O11-1  
cont.

O11-2

But, the devil is in the details. And unfortunately, the PEIR lacks crucial information about how, when, and where promised future transit infrastructure will occur, and fails to require implementation of promised transit infrastructure, or provide safeguards in the event that promised transit does not emerge.

O11-3

Further, the PEIR notes that Blueprint will increase density *outside* of the Climate Smart Village Areas, including “citywide,” but fails to adequately disclose, analyze, and mitigate the impacts of increased development intensity in areas that are not located close to transit. Failure to incorporate mitigation for increased development in areas known to increase greenhouse gases (“GHG”) and Vehicles Miles Travelled (“VMT”) undermines both the City and Blueprint’s stated goals.

O11-4

Finally, the fact that the PEIR involves review only at the programmatic level does not absolve the City from incorporating feasible mitigation measures, especially for impacts to air quality, biological resources, greenhouse gas emissions, land use, biological resources and the Multiple Species Conservation Program, into the PEIR.

O11-5

**I. The PEIR Fails to Provide an Adequate Project Description**

The California Environmental Quality Act (“CEQA”) requires a clear project description of the project being approved. This project description must be stable, finite, and unambiguous, and a project description that gives “conflicting signals to decision makers and the public about the nature of the project is fundamentally inadequate and misleading.” (*Southwest Regional Council of Carpenters v. City of Los Angeles* (2022) 76 Cal.App.5th 1154, 1173–74.)

O11-6

**A. The PEIR Fails to Provide a Clear Description of the Project, Including Where Development Intensities Are Being Increased**

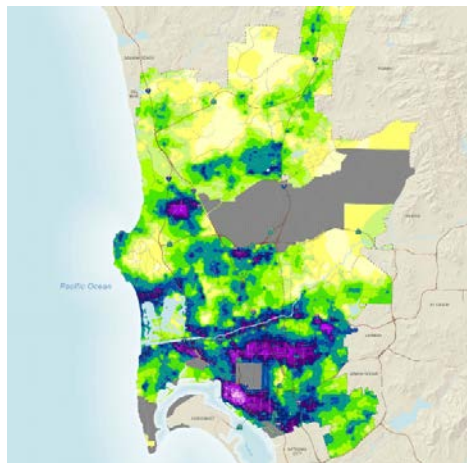

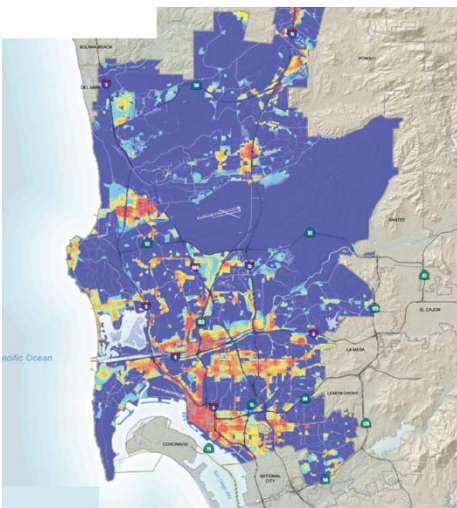

In its current state, the PEIR provides impermissible “conflicting signals” regarding the nature and boundaries of the upzoning to occur. The Project must clarify how development will be targeted in accordance with the propensity map to be compliant with CEQA. (See *Southwest Regional Council of Carpenters*, supra 76 Cal.App.5th at 1173–74.)

While the stated goals of the Blueprint General Plan Update to focus on transit-supportive development within the Climate Smart Village Areas are great, the PEIR provides little detail on what level of upzoning is to occur or where it is intended to occur. The PEIR claims that the focus is to facilitate housing in the Climate Smart Village Areas, which are clearly delineated areas with firmly established boundaries. However, the land use framework is actually “defined by the Village Climate Goal Propensity Map.” (Draft PEIR, p. S-3.) This map contains no clear delineations or categorizations of land; rather, it depicts a blurry gradient upon which to determine the general village propensity value. This map, and the blurred edges defining the boundaries of each value, results in an unclear depiction of the areas expected to see increases in development beyond the Climate Smart Village Areas. Moreover, the clear boundaries of the Climate Smart Village areas do not align with the blurred propensity values.

O11-7

In contrast, the original General Plan Village Climate Goal Propensity Map *did* contain clear boundaries to the edge of each propensity value. This change was intentional, as the PEIR states: “While the scores were calculated at the [Master-Geographic Reference Area (“MGRA”)] level, the optimization results were mapped in a heatmap format using the Inverse Weighted Distance function in ArcGIS to enhance the visualization.” (PEIR, Appendix J, p. 4.)

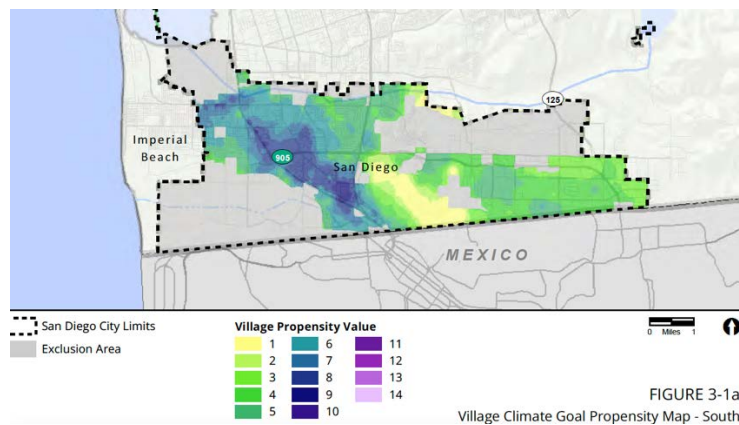

Below are images of the current Village Propensity Map (left) and the proposed new map (right):

This change resulted in an unclear depiction of the Project’s reach and boundaries, given that the Village Climate Goal Propensity Map would be incorporated into the General Plan. The PEIR admits that the Village Climate Goal Propensity Map misrepresents areas that should be excluded, including conservation lands, noting: “The heatmap generation process considers the exclusion areas meaning that the ranking score for the exclusion zones were considered as zero, but the blending of values often shades them as a low-level score.” (Appendix J, p. 4.)

At a minimum, the proposed Blueprint map should be reverted to the MGRA level map so that the scores for a given area are clearly depicted and portrayed in the same color scale so that the public and decisionmakers can understand the changes being proposed by the Project.

Further, there are variations of the proposed new “Village Propensity Map” throughout the PEIR and Project, creating further conflicting information. For example, see the following excerpt from the PEIR:

O11-7  
cont.

In comparison, see an excerpt of the same area from proposed new Figure LU-1, “Village Climate Goal Propensity,” in the Blueprint revisions to the Land Use Element (see also PEIR, Figure 3-5):

Additionally, the text of the PEIR also lends itself to confusion in interpreting the Project. There are various references to “citywide” upzoning, as well as upzoning outside of the Climate Smart Village Areas. (See, e.g., Draft PEIR, p. 3-8.) The PEIR also states, “The project would facilitate placement of non-residential and multifamily development in appropriate area of the City consistent with the Village Climate Goal Propensity Map and *primarily* within Climate Smart Village Areas, which are *primarily* areas in close proximity to existing and planned transit, pedestrian, and bicycle facilities.” (Draft PEIR, p. 4.10-65, emphasis added.) Elsewhere, the PEIR notes: “Although opportunities for new development would *likely* be focused in these Climate Smart Village Areas, future CPUs, specific plans, and focused plan amendments could also plan for development *outside* these Climate Smart Village Areas (i.e., areas with a village propensity value of 1 through 6) where considered appropriate for the surrounding area.” (PEIR, p. 3-8, emphasis added.)

O11-8

Further, the PEIR analysis indicates that areas with a propensity score of “Level 7 (blue) to 9 (dark purple) highlights areas with *medium* priority for development considering all the interacting factors,” and then “[a]t level 10 (dark purple) to level 14 (light purple), the areas with the highest receptiveness for future developments to maximize non-auto propensity are illustrated.” (PEIR, Appendix J, p. 4.) Yet, the PEIR then groups levels 7-14 for identifying Climate Smart Village Areas, despite the wide-ranging nature of these scores.

O11-9

Again, the purpose and boundaries of the Project’s density increases, and Climate Smart Village Areas, are obfuscated. The PEIR leaves it unclear the extent that upzoning is being proposed outside of the smart village areas. Upzoning areas beyond the Climate Smart Village Areas (i.e., the areas already evaluated as being beneficial if upzoned) would result in additional destructive sprawl and the obstruction of climate goals. The PEIR must provide more information about each “propensity level” and disclose how many increased units are proposed for each propensity level and the corresponding GHG impacts of each proposed increase—especially outside of the Climate Smart Village Areas.

O11-10

Further, Blueprint and the PEIR claim that the exact location of densities will be refined later during the Community Plan updates, but simultaneously state that in-depth future environmental review will not be conducted for these future actions and that the propensity map scores will be the minimum densities. (See PEIR p. p. 3-26, Blueprint Revisions LU-32 to LU-33, LU-40 [requiring future plans to be consistent with village propensity map], p. 3-14.)

O11-11

Therefore, the PEIR must provide a clearer Project description and disclose the extent of upzoning being proposed for each “village propensity score.”

O11-12

**B. The PEIR Inappropriately Claims to Analyze Future Undefined and Unspecified Actions**

Under CEQA, the Project must be studied at an appropriate level of detail. Yet, the PEIR claims that its scope includes unspecified, undefined, and unstudied future land use code changes, Community Plan Updates, and amendments. (PEIR, p. 3-26, 3-7.)

In particular, the PEIR indicates that future CPUs will not prepare EIRs:

The environmental analysis approach for prior CPUs has been to prepare a PEIR for each CPU. Through this process, the environmental analysis has found similar environmental impacts which require similar mitigation frameworks. Due to this, the City identified an opportunity to address the environmental analysis for future CPUs as part of the analysis for the Blueprint SD Initiative. Future plan amendments including CPUs, specific plans, and FPAs, as well as future projects consistent with those plans, and future amendments to the LDC consistent with the General Plan policy framework would be evaluated in the context of this PEIR.

O11-13

(PEIR, p. 3-25.)

The PEIR consistently avoids incorporating mitigation measures now on the grounds that its review is being done at the programmatic level. (See PEIR, p. 4.1-13, 4.2-28, 4.3-62.) Yet, the PEIR simultaneously claims it is “evaluating” future events that have not happened yet and will obviate the need for future EIRs. The City cannot have its cake and eat it too. Further, the City is still required to incorporate feasible mitigation at the programmatic level. (Cal. Code Regs. Tit. 14 § 15168, sub. (c)(3) [“An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into later activities in the program”].)

O11-14

The use of one programmatic, high level Citywide PEIR for all future CPUs is inappropriate and precludes meaningful mitigation. The use of this PEIR for the University Community Plan Update and Hillcrest Focused Plan Amendment underscores the problematic nature of this approach. There should be project specific mitigation measures for the proposed University CPU and Hillcrest FPA. The PEIR admits that there are many more details provided for these projects, yet did not include any specific mitigation for either of the projects, in violation of CEQA. (PEIR, p. 3-8, Table 9.1 Mitigation Monitoring and Reporting Program.)

O11-15

For example, the Biological Report for the University Community Plan update (PEIR, Appendix D) identified several mitigation and minimization measures in Section 7. Yet, these were not included as mitigation measures in the PEIR. (PEIR, p. 4.3-64.) This elucidates the problem with utilizing a Citywide PEIR for community specific plans. At a minimum, the PEIR must be re-

O11-16

circulated for public review and comment on proposed mitigation measures for the University CPU and Hillcrest FPA.

O11-16  
cont.

## **II. The PEIR Fails to Fully Analyze, Disclose, and Mitigate Impacts to Greenhouse Gas Emissions and Vehicle Miles Travelled**

Sierra Club supports infill and transit oriented development in the City of San Diego, as well as moving away from auto-dependent development. However, for development to be “transit-oriented” the “transit” needs to occur.

O11-17

### **A. The PEIR Must Analyze and Disclose the Likelihood of Transit Infrastructure, and Provide Mitigation and Safeguards to Ensure the Promised Transit Occurs**

The PEIR premises its analysis of Blueprint’s projected GHG and VMT entirely on the assumption that the 2050 regional transportation network from SANDAG’s 2021 Regional Transportation Plan, referred to throughout the PEIR as the “Regional Plan,” will be fully implemented. (p. 3-8, 3-2, 3-15 [“updated Village Climate Goal Propensity Map incorporates the 2050 regional transportation network”], App’x J, p. 4 [“using the SANDAG 2021 Regional Plan 2050 Vision transit network and stops”].) Yet, a major shortcoming in this analysis is the lack of any assured funding mechanisms in the PEIR or Blueprint, or provision of evidence that the PEIR’s assumption is reasonable and grounded in substantial evidence.

O11-18

The Regional Plan and its transit projects are subject to change every 4 years.<sup>1</sup> The SANDAG Regional Plan explains that it determines “which transit projects to advance in earlier phases, particularly by 2035, based on the availability of revenues.” (SANDAG 2021 Regional Plan, p. A-4.) Several transit projects relied on by the PEIR are not scheduled until the latest “2036 to 2050” phase, and/or lack earmarked, assured funding. This includes the light rail line through Bankers Hill, Hillcrest, North Park, South Park, and Golden Hill, and the Purple Line regional rail between Sorrento Mesa and the International Border.<sup>2</sup>

O11-19

---

<sup>1</sup> For example, SANDAG subsequently circulated an amended 2021 Regional Plan in 2023, after it failed to approve the Regional Road Use Charge (“RUC”). (Amendment to the 2021 Regional Plan, pp. 3-4.) Removal of the regional RUC reduced anticipated revenues by \$14.2 billion. (Ibid.) *Separate* from the regional RUC, the 2021 Regional Plan also assumed revenues resulting from a state-administered RUC that is only in the pilot phase. The Regional Plan further relied on a proposed citizen initiative for a sales tax measure, which will be circulated in 2024 for voter consideration. (Ibid.)

<sup>2</sup> See 2021 Regional Plan, Appendix A, pp. A-79 through A-84, A-14, (available at: <https://www.sandag.org/-/media/SANDAG/Documents/PDF/regional-plan/2021-regional-plan/final-2021-regional-plan/2021-regional-plan-appendix-a-2021-12-01.pdf>), 2025 Conceptual Regional Plan, p. 8 (available at <https://www.sandag.org/-/media/SANDAG/Documents/PDF/regional-plan/2025-regional-plan/2025-rp-draft-initial-concept-2024-1-25.pdf>.)

Further, the Regional Plan assumes that 54% of its funding--\$89 billion dollars--will come from local sources, including impact fees and general funds. (Amendment to the 2021 Regional Plan,<sup>3</sup> Attachment A: Errata to the 2021 Regional Plan, P. 5<sup>4</sup>.) The City already faces an overall infrastructure funding deficit of \$4.81 billion, the “second largest in city history.”<sup>5</sup> Blueprint’s PEIR is exactly the place to require provision and dedication of impact fees and general funds to specified transit projects as mitigation. If the City wants to rely on the Regional Plan, the PEIR must require the local contributions that are identified in the Regional Plan and phase development in alignment with the Regional Plan transit phases.

O11-20

The Regional Plan further assumes that most anticipated revenues needed for its implementation will not be realized until sometime between 2036-2050. (*Id.* at p. 6.) Yet, the PEIR only analyzes VMT and GHG outcomes in 2050, ignoring the reality that as proposed, the Project will intensify development in areas that will not even see funding for transit projects for over ten to twenty years.

O11-21

In its comments on the Blueprint PEIR Notice of Preparation, the Mira Mesa Community Planning Group requested more detailed information about transit infrastructure:

The purpose of Blueprint is to speed up Community Plan changes so that housing can be built faster. Ever since the City of Villages concept was introduced, the promise to the residents of San Diego has been that the new housing will be accompanied by “great public facilities” and “world class transit.” However, these are expensive and the risk is that the housing is built while the transit and public facilities lag far behind, or are never realized at all. The EIR should evaluate this risk and identify the associated environmental impacts.

O11-22

The EIR should identify the parks, libraries, fire stations and other public facilities needed to support the new population, *and the transit needed to provide adequate transportation to the new and existing residents.* The EIR should estimate the time required to plan the public facilities and transit, and the impact if housing is built before planning is complete and before adequate transit and public facilities are in place. The EIR should estimate the funding needed to provide the public facilities and transit and should evaluate the impact of the inadequate funding.

(PEIR, Appendix A, p. 60, emphasis added.)

<sup>3</sup> Available at: <https://www.sandag.org/-/media/SANDAG/Documents/PDF/regional-plan/2021-regional-plan/amendment-to-2021-regional-plan/amendment-2021-regional-plan.pdf>.

<sup>4</sup> Available at: <https://www.sandag.org/-/media/SANDAG/Documents/PDF/regional-plan/2021-regional-plan/amendment-to-2021-regional-plan/amendment-2021-regional-plan-errata.pdf>.

<sup>5</sup> <https://www.sandiegouniontribune.com/news/politics/story/2024-02-05/not-just-stormwater-san-diego-needs-more-than-6-billion-for-crucial-infrastructure-but-has-just-a-quarter-of-that>.

Yet, we were unable to locate any such analysis or discussion of funding in the PEIR, despite clear and repeated requests for it from several organizations and community planning groups. The PEIR must include mitigation measures that condition proposed development projects on assured funding, construction, and implementation of the promised transit projects as mitigation for Blueprint and any future tiered projects.

In fact, the PEIR admits that “at a programmatic level of analysis, it is not possible to ensure that full implementation of the Regional Plan’s transportation investments and the timing of these investments with the specific development would occur. Therefore, residential and employment VMT impacts would be considered significant.” (PEIR, p. 4.14-16 to 17.)

O11-22  
cont.

Likewise, the PEIR states, “Streetcar service will provide a 10-minute all day frequency service from Downtown San Diego to the Hillcrest neighborhood and is planned to connect to Logan Heights, Golden Hill, South Park, North Park, and University Heights, expected to be complete by 2050, *contingent upon future funding.*” (PEIR, 3-34, emphasis added.)

The PEIR further describes that the previous General Plan Village Propensity Map LU-1 was based on “existing or an identified funding source for transit service.” (PEIR, p. 4.10-34.) Blueprint removes this language from the Land Use Element (Blueprint Draft Land Use Element, p. LU-10), and we could not identify any similar language included in relation to the new LU-1 “Village Climate Goal Propensity Map.”

Blueprint seems to even weaken policies that require Community Plans to provide information on timing of transit and public facilities, via the following proposed changes:

LU-C.2. Prepare community plans to address aspects of development that are specific to the community, including: distribution and arrangement of land uses (both public and private); the local street and transit network; ~~location, prioritization, and the provision of existing and planned~~ public facilities;

O11-23

LU-F.2. Review public and private projects to ensure that they do not adversely affect the General Plan and community plans. Evaluate whether proposed projects implement specified land use, density/intensity, design guidelines, and other General Plan and community plan policies including open space preservation, community identity, mobility, and ~~the timing, phasing, and provision of~~ public facilities

The PEIR must be revised to describe how, when, and where the promised transit infrastructure will be implemented. The PEIR also must require enforceable commitments to ensure that the promised transit will occur, and safeguards in the event funding is not secured for promised

O11-24

transit improvements. Vague, unenforceable language cannot be relied upon to assure transit will be provided.

For example, the PEIR cites the following policy from the General Plan, which proposes only voluntary language on the question of funding transit in the University Area:

*Policy 3.5A: Coordinate with MTS and SANDAG to increase transit infrastructure and service enhancement opportunities within University, including those identified in the adopted Regional Plan and future updates of the Regional Plan.*

Blueprint further proposes only voluntary, vague, and unenforceable policies as it relates to provision of transit infrastructure and funding, for example:

*ME-D.15. Support a stable, multi-year transportation funding policy for passenger rail services that meets the goal of improved rail travel opportunities.*

See also policies MD-10 through MD-16. These policies must be revised to use mandatory language. Policies to “support,” “coordinate,” or “assess” are unenforceable. As another example, proposed policy ME-D.7 merely states, “Assess ways to improve the availability of transit and transit access for underserved and transit-dependent populations.” This should be revised to state “**Increase** availability of transit and transit access...”

## **B. The PEIR Must Include Feasible and Enforceable Mitigation**

The PEIR finds that VMT impacts of Blueprint will be significant, but only includes one vague, unenforceable mitigation measure that is subject to unspecified future changes:

*MM-TRANS-1 – Achieve VMT Reductions: Future development shall be required to demonstrate compliance with the City’s Mobility Choices Ordinance (SDMC Section 143.1103 et seq.) and the City’s TSM, including preparation of a VMT analysis, where applicable.*

The PEIR cannot simply provide a cursory conclusion that an impact is significant without any effort to mitigate the impact. Further, CEQA requires incorporation of all feasible mitigation measures that are “fully enforceable.” (Public Resources Code 21081.6(b)). As drafted, the single proposed Mitigation Measure does not comply with CEQA’s requirements. It must be revised to specify the required VMT reductions for proposed new development and to detail when VMT analysis will be required.

O11-24  
cont.

O11-25

In fact, Blueprint is even proposing to weaken the General Plan’s existing policy as it relates to Transportation Demand Management plans, removing the language to “require” all new development to achieve certain actions, and instead merely to “encourage” new development:

~~Require new~~ ME-G.6. Encourage large residential, mixed-use, and employment development to have site designs and on-site amenities that support alternative modes of transportation.

O11-26  
cont.

(Blueprint Proposed General Plan Revisions, p. ME-66.)

The PEIR must include enforceable timelines for transit infrastructure and tie the proposed development to the provision of transit, including through the requirement of Development Impact Fees or other funding mechanisms concurrently with development, via enforceable mitigation measures in the PEIR and mandatory policies in Blueprint.

### C. Additional Information Requested about the PEIR’s VMT Analysis

All VMT projections in the PEIR utilized a 2050 year scenario and did not include any interim projections. There should be interim projections included, especially to analyze consistency with SB 32 and CARB’s 2022 Scoping Program interim 2030 targets. Analysis is needed to evaluate how the Project impacts the State’s interim 2030 GHG targets.

O11-27

Additionally, projected population growth in the City of San Diego has dropped by 192,859 between the SANDAG Series 14 projections in 2021 and current draft of the Series 15 projections. Did the PEIR incorporate these new projections into its analysis? If not, why not?

O11-28

The PEIR’s VMT Analysis lists the variables that it utilized in its analysis to evaluate “non-auto propensity,” including “dwelling unit density, retail employment density, mixed-use density, the competitiveness of transit services for work commute travel, proximity to TPA high-quality transit stops, and household vehicle ownership,” noting that the “estimated coefficients for all the variables reflect an increasing relationship with the response variable except for vehicle ownership.” (PEIR, App’x J, p. 2.) What coefficients were assumed for each of these variables? In particular, did the modeling comply with CAPCOA’s guidance on modeling VMT reductions from increases to density?<sup>6</sup>

O11-29

Finally, why was 2016 selected as the baseline year for the VMT projections, rather than a more recent date?

O11-30

<sup>6</sup> CAPCOA Handbook available at [https://www.calemod.com/documents/handbook/full\\_handbook.pdf](https://www.calemod.com/documents/handbook/full_handbook.pdf).

#### **D. The PEIR Fails to Adequately Analyze, Disclose, and Mitigate Greenhouse Gas and VMT Impacts From Expanded Development Outside of VMT Efficient Areas**

The PEIR declines to include quantification of GHG emissions, stating that it is not required to conduct such an analysis. (PEIR, p. 4.7-15.) Yet, the Project proposes to upzone the entire City, beyond areas in Climate Smart Village Areas, resulting in increased emissions that were not included in the Climate Action Plan (“CAP”) inventory or mitigated in the CAP. Further, the City has since expanded the reach of its Complete Communities and Bonus ADU Program beyond Transit Priority Areas (“TPAs”). Therefore, the PEIR must analyze the implications of the Project, in conjunction with the expansion of these programs beyond TPAs, on the CAP’s inventory.

O11-31

The PEIR reasons that it will not create significant GHG impacts because it will locate housing in Smart Village Areas. (PEIR, p. 4.7-22.) Yet, this conflicts with the PEIR’s statements elsewhere about increasing housing outside of those areas, which *will* create significant GHG impacts. (See p. 4.7-17, 4.10-83.) In particular, the PEIR admits, “The Blueprint SD Initiative would support increases in development intensities citywide...” (p. 4.3-17, emphasis added.)

Relatedly, the PEIR provides the following as a Project objective: “Establish land uses that facilitate transit-oriented, multiple-use villages, districts, and developments within the City’s Sustainable Development Areas (SDAs).” (PEIR, pp. 3-6, 8-1.) Yet, the PEIR fails to provide substantial evidence to support its assumption that increased density Citywide, including in “Sustainable Development Areas,” areas up to one mile – and beyond ½ mile – from transit will reduce VMT, given that the State of California utilizes Transit Priority Areas, which are 1/2 miles from transit. (PRC § 21155.1.)

O11-32

Wholesale increases to development density across the City, in areas that are not close to existing or assured, forthcoming transit will only serve to increase VMT and GHG, and must be adequately analyzed and disclosed. In particular, the PEIR must identify areas outside of the Climate Smart Villages that are being upzoned in comparison to the current General Plan, and identify mitigation for that development.

Finally, the PEIR includes no mitigation measures related to GHG emissions. Yet, the prior General Plan Environmental Impact Report included mitigation measures for impacts to GHG emissions, including mitigation measures related to the preparation of the CAP. Wholesale removal of all GHG mitigation measures without any replacement measures is a step in the wrong direction. The PEIR must include implementation of the CAP and its individual measures as a mitigation measure. This is particularly important provided that the PEIR relies on the CAP to conclude that the Project will not result in significant GHG impacts (PEIR, p. 4.7-11.) Further, the CAP Consistency Checklist requires very little of individual projects. (PEIR, p. 4.7-12 [noting that Development ...shall provide only *one* of the following “amenities”: One trash

O11-33

receptacle and one recycling container; seating; lighting; wayfinding signs; *or* enhancement of bus stop or public transit waiting station”].) The City should require more than the provision of a trash can; the PEIR is the opportunity to do so.

The PEIR must include mitigation measures, including the measures promised in the CAP, as well as project-specific measures. For development proposed outside of Climate Smart Village Areas, the PEIR should specify required mitigation measures, including a requirement that Projects demonstrate net zero GHG emissions to ensure CAP consistency.

O11-33  
cont.

For example, the City of San Diego has begun to develop the Southwest Village Specific Plan, which proposes almost 6,000 homes on 472 acres of undeveloped in Otay Mesa, in an area that is not considered VMT efficient.<sup>7</sup> Mitigation should be required for projects like these.

### **III. The EIR Must Adequately Analyze, Disclose, and Mitigate Impacts to Biological Resources and Implementation of the City’s MSCP**

#### **A. The PEIR Must Incorporate Measures to Ensure Mitigation of Biological Impacts**

The PEIR’s sole mitigation measure for impacts to biological resources, MM-BIO-1, requires that future projects that could impact sensitive species or habitats comply with the City’s ESL Regulations, Biology Guidelines, and HCP Plans including the City’s MSCP Subarea Plan. (Draft PEIR, p. 9-3.) Merely complying with existing law should not in itself be a mitigation measure. The California Attorney General has warned against labeling compliance with existing regulations as a mitigation measure, asserting that “compliance with applicable regulations is required regardless of CEQA.” (Cal. Att’y Gen., Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act, at 7 (Updated Sep. 2022); *see also* Californians for Alternatives to Toxics v. Dept. of Food & Ag. (2005) 136 Cal.App.4th 1, 16–20.)

O11-34

Additionally, the PEIR states that future projects will follow the City’s ESL Regulations and Biology Guidelines and “will be required to determine the potential of occurrence of sensitive plant species in the area.” (Draft PEIR, pp. 4.3-53, 4.3-48.) The PEIR further states that development which would impact ESL would require a Site Development Permit and therefore discretionary review, but this would only be required in the event of a subsequent finding of impact to ESL. (*Id.* at 4.3-61.) Yet, the City updated its ESL regulations to remove the requirement for a Site Development Permit for projects deemed to be “infill.” (Table 143-01A, footnote 6 [only requiring a Neighborhood Development Permit.]) The PEIR must require, as a

O11-35

---

<sup>7</sup> <http://southwestvillageplan.com/#features>, [https://www.sandiego.gov/sites/default/files/pc-22-054\\_otay\\_mesa\\_community\\_plan\\_and\\_general\\_plan\\_amendment.pdf](https://www.sandiego.gov/sites/default/files/pc-22-054_otay_mesa_community_plan_and_general_plan_amendment.pdf). The SANDAG SB 743 Maps report on the closest parcels a 101.1% percent of the regional VMT Per Capita by Traffic Analysis Zone in 2050.

binding mitigation measure, that project sites be surveyed for sensitive vegetation and MSCP compliance before project approval.

O11-35  
cont.

Further, the City has shifted towards trying to process more projects as ministerial. By categorically processing permit applications for these future projects as ministerial, the City will effectively preclude any opportunity for adequate or meaningful review of the applicability of ESL regulations to these projects. The result, as we have seen frequently in our experience, will be a lack of opportunity for project-specific mitigation.

O11-36

Where projects are located near or adjacent to the MHPA, or in other areas with biological resources, discretionary review must always be required; ministerial review will only impede the ability to mitigate harm to these sensitive areas.

O11-37

The PEIR explains that the development and potential impacts of the initiative are “most likely to be concentrated within the Climate Smart Village Areas,” yet relies on “generalized vegetation data” to estimate land cover in these areas. (Draft PEIR, p. 4.3-1.) The PEIR further notes that the presence of sensitive plant species on a given site is a highly site-specific calculation that must be based on future project-level surveys. (*Id.* at 4.3-23.) This requirement for site-specific surveys for sensitive vegetation must be included as a **clear, binding mitigation measure in the PEIR**. Absent the incorporation of this measure, given the broadened scope of projects that would be considered ministerial, the ESL Regulations will not be effectively implemented and will be based on conclusions drawn from highly generalized data.

O11-38

Finally, the PEIR only analyzes biological resources within the Climate Smart Village Areas, but the Project expressly states that it could also increase development beyond these discrete areas. (Draft PEIR, p. 4.1-16.) All areas of potential impact should be studied, including those beyond the Climate Smart Village Areas, if there is the potential for increased development. Alternatively, the GPU should clarify the scope of the project and limit it to the increased development in the Climate Smart Village Areas.

O11-39

## **B. The PEIR Fails to Study the Impacts of the Addition of New Trails**

The University Community Plan prematurely adds trails through ESL and the MHPA without adequate review. (Draft PEIR, Figure 3-26.) Numerous incompatible trails have been proposed in Rose Canyon. For example, two “Proposed New Trail[s] (location to be determined)” have been suggested near Marcy Neighborhood Park. This section of Rose Canyon contains wetlands and two Tier I vegetation communities: Diegan Coastal Sage Scrub and Valley and Foothill Grasslands. These habitats are “considered sensitive and declining habitats” and “impacts to these resources may be considered significant.” Though the precise location of these proposed trails has yet to be determined, these trails are shown in these locations on the map in the PEIR, and are guaranteed to interact with sensitive communities regardless of their exact location in

O11-40

Rose Canyon. Thus, they cannot be said to be located in the “least sensitive areas of the MHPA,” as required by the City’s MSCP. (MSCP Subarea Plan, p. 52.) Other proposals for new trails or trail modifications in Rose Canyon pose similar inconsistencies with the MSCP. For example, another trail through Nobel Hill goes directly through a Vernal Pool, as well as through Diegan Coastal Sage Scrub and Valley and Foothill Grassland. Impacts to these resources must be studied under both the California Environmental Quality Act and the City’s MSCP.

O11-40  
cont

Additionally, the language in the City’s MSCP Subarea Plan indicates that the City was preparing a Natural Resources Management Plan (“NRMP”) for the management of any “urban habitats [that] are part of a natural resource park.” (MSCP Subarea Plan, p. 74.) No NRMP was ever prepared for this area, nor is there any indication that one will be prepared in the near future. The MSCP states that Rose Canyon is an urban habitat within the MHPA (*id.* at 19), yet the area seems to be unmanaged under any NRMP or other similar plan. Proposing trails in this area without the guidance of an NRMP will preclude meaningful review of the sensitive vegetation known to occur in this canyon and across the entire study area under the University Community Plan.

O11-41

Thus, these trails must be removed until adequate site-specific environmental review is conducted and MSCP compliance is ensured.

### C. The PEIR Fails to Analyze, Disclose, and Mitigate the Project’s Conflicts with the City’s Multiple Species Conservation Program

As stated above, the proposed trail systems in the University Community Plan are noncompliant with the City’s MSCP Subarea Plan because they are not located in the “least sensitive areas of the MHPA” as required. (MSCP Subarea Plan, p. 52.)

The PEIR concludes that there will not be impacts affecting the MSCP because no specific development is proposed. (Draft PEIR, p. 4.3-60.) However, given the vagueness of the project and the inclusion of plans to minimize and streamline future review, the fact that no specific development is proposed does not support the conclusion that there will be no impacts to the MSCP’s implementation. By minimizing future review and ensuring most permits are processed ministerially, the Project precludes review of the core considerations of the MSCP, including sensitive vegetation, listed species, and comprehensive habitat acreage.

O11-42

In fact, the MHPA extends into the Climate Smart Village Areas, the Hillcrest FPA area, and the University CPU area in various locations. (*Id.* at 4.10-44, Figures 4.10-10a, 4.10-10b, 4.10-10c, & 4.10-10d.) The Project will directly interact with the MHPA lands in these locations. Accordingly, it cannot be said to have no impact on the MSCP’s implementation. Even if the Project does not propose development now, it will streamline development in these protected areas. The Project must **remove upzoning** in these MHPA areas, as proper environmental review

of the impacts of said upzoning has not yet been conducted. Particularly within these areas, compliance with the MSCP’s General Planning Policies and Designs must be required for each new development. These requirements include limiting roads to those essential for circulation or emergencies, ensuring construction areas or access roads do not disturb existing habitat, prohibiting the storage of materials (including toxics, chemicals, and equipment) within the MHPA, and requiring fencing where land uses adjacent to the MHPA are incompatible with conservation goals. (MSCP Subarea Plan, pp. 43–47.)

O11-42  
cont.

Additionally, the PEIR or Blueprint GPU lacks a funding mechanism for biological resources and MSCP implementation. The MSCP requires the City to secure funding and identify how funding will be secured. (MSCP Subarea Plan, p. 101.) This may include long term and short term funding strategies and certain funding obligations both locally and regionally, as modeled after the MSCP. (*Id.*)

O11-43

The PEIR admits that the Project will result in increased strain on the City’s existing open space systems. (PEIR, p. 4.13-7.) Yet, the PEIR simply concludes:

[A]t a program level of review, it cannot be determined to what extent future parks and recreational facilities would be able to accommodate increased demand and offset the potential increased use of existing parks and recreational facilities and their associated physical deterioration that could occur with implementation of the Blueprint SD Initiative. As future development is proposed, individual private developments would be required to either pay Citywide Park DIFs or provide public parks consistent with SDMC Section 142.0640(b)(9)(A-F), as detailed in Section 4.13.2.2c.

O11-44

This analysis and conclusion fail to address the increased impacts to the City’s resource-based parks from the Project.

The PEIR should include feasible mitigation measures to require and ensure funding for the MSCP and Vernal Pool Habitat Conservation Plan, especially since these plans are not currently being fully implemented by the City due to lack of funding. For example, the City is not meeting its requirement to control invasive non-native species on preserve land and routinely points to not having funding as the reason. Additionally, mountain bikers have built many unauthorized trails in Rose and San Clemente canyons, which are in proximity to the proposed new dense zoning and will face increased strain as a result, but the City lacks the resources to enforce or restore the trails. The City is not fulfilling its management requirements of MSCP lands, in part due to lack of resources. This problem will become exacerbated under the proposed densification of the City and increased strain on resource-based parks and preserve lands, given the absence of any binding mitigation measures. This is a significant impact that must be mitigated in the PEIR.

O11-45

#### IV. The PEIR Must Incorporate Feasible Mitigation to Address Significant Air Quality Impacts

The PEIR admits that the Project will result in significant air quality impacts due to increased emissions beyond SANDAG projections, yet does not disclose the severity of this impact. (PEIR, p. 4.2-14, 4.2-29)

Further, the PEIR only includes the following mitigation measure for air emissions:

MM-AQ-1 Air Emissions: Future projects shall comply with all applicable regulations pertaining to air quality including but not limited to SDAPCD Rule 20 through 20.8, Rule 50, Rule 51, Rule 52, Rule 55, and Rule 67.1. Construction and operation of individual development projects shall not exceed criteria pollutant significance thresholds detailed in the latest City’s CEQA Significance Thresholds.

As noted earlier, the Attorney General has explicitly stated that agencies should not rely on existing air quality regulations as mitigation measures.

MM-AQ-1 further continues: *“If an individual project is found to have the potential to exceed emission thresholds due to operational emissions, the following **are example measures** that could be implemented to reduce emissions to below a level of significance...”* (4.2-31.)

O11-46

- *demonstrate net zero energy expenditure,*
- *Implementation of transportation demand management measures.*
- *Prohibit the installation of woodstoves, hearths, and fireplaces in new construction facilitated by the proposed project.*
- *Expand and facilitate completion of planned networks of active transportation infrastructure.*
- *Implement electric vehicle charging infrastructure beyond requirements set forth in the 2022 California Green Building Standards Code mandatory measures, such as Tier 2 voluntary measures set forth in the 2022 California Green Building Standards Code (or future more stringent) standards.*
- *Implement traffic demand measures, such as unbundling parking fees from rent/lease options, encouraging/developing a ride -share program for the community, and provide car/bike sharing services, that will reduce daily individual car usage and reduce project VMT*

These examples, along with the “examples” provided for construction emissions, must be included as **required** mitigation measures for future development. To list them as “examples” is

inadequate and unenforceable. The PEIR provides no information on why it is not feasible to include the listed “examples” as binding mitigation measures for all proposed development.

O11-46  
cont.

## V. Conclusion

The Sierra Club is supportive of the general policies being proposed, *if* the PEIR is revised to ensure the promised transit will occur alongside the proposed development and the appropriate mitigation is incorporated.

O11-47

Thank you for your consideration of these comments.

Sincerely,

Kathryn Pettit  
Josh Chatten-Brown  
Isabella Coye

---

**O11: Responses to the Sierra Club Comment Letter**

**O11-1:** The comment is an introduction to the attached comment letter. Comment noted.

**O11-2:** Comment noted. This comment does not raise an issue with the adequacy of the environmental analysis in the Draft Program Environmental Impact Report (PEIR).

**O11-3:** The San Diego Association of Governments (SANDAG) is responsible for planning the regional transportation network, including regional roads, regional highways, regional bicycle networks, and regional transit. As described in Section 3.2.1.1 of the Draft PEIR, SANDAG adopted a Regional Transportation Plan in 2021. It includes an updated regional transportation network that the City uses for planning purposes, to encourage the development of homes near transit, and to provide more mobility options and investment in active transportation infrastructure. As part of the Blueprint SD Initiative, the City updated the Mobility Element of its General Plan to reflect the 2021 SANDAG Regional Plan and includes an updated policy framework that encourages complete streets planning principles and concepts that will result in dynamic, vibrant corridors that support all modes of travel. As updates to SANDAG's Regional Plan and the regional transportation network occur, the village propensity values identified in the Village Climate Goal Propensity Map could be adjusted depending on an area's village characteristics and proximity to transit and could result in new Climate Smart Village Areas where opportunities for new development and active transportation investments would likely be focused. Figure 3-4 of the Draft PEIR shows the existing and proposed regional transportation network.

**O11-4:** The Blueprint SD Initiative proposes an updated policy and land use framework that would apply to all development Citywide and is intended to guide future land use plan updates (e.g., Community Plan Updates [CPUs], Specific Plans, and Focused Plan Amendments [FPAs]) and future San Diego Municipal Code (SDMC) amendments which would help facilitate the implementation of the Blueprint SD Initiative. Future development and associated impacts that follow this framework could occur Citywide including in areas outside of the Climate Smart Village Areas. It is anticipated that future CPUs, Specific Plans, and FPAs that are prepared consistent with the Blueprint SD Initiative would concentrate future land use changes that support higher density development within the Climate Smart Village Areas. As described in Section 3.5.1.2 of the Draft PEIR, opportunities for future homes and jobs are anticipated less in areas with a lower village propensity value (i.e., areas with a village propensity value of 1 through 6). Nevertheless, future CPUs, Specific Plans, and FPAs could still plan for additional density in areas with a lower village propensity when higher densities and intensities are considered appropriate for the surrounding area. Additionally, as updates to SANDAG's Regional Plan and the regional transportation network occur, the village propensity values identified in the Village Climate Goal Propensity Map could be adjusted depending on an area's village characteristics and proximity to transit and could result in new Climate Smart Village Areas where opportunities for new development would be focused. The Blueprint SD Initiative identifies the best locations for growth and the most receptive locations that support biking, walking, and transit usage based on the Regional Travel Demand Model, to achieve the City's Climate Action Plan's (CAP's) goals. The City can meet the CAP Strategy 3 goals that support mode shift through the Blueprint SD Initiative's land use strategy and through mobility investments and programs that address travel behavior. The Blueprint SD Initiative's land use strategy is the maximum extent feasible land use scenario that – when combined with other mobility

implementation strategies, which are part of the overall General Plan Refresh - can achieve the mode shift goals of the CAP. Refer also to Appendix N of the PEIR for additional information supporting how the Blueprint SD Initiative supports City mode share targets consistent with the CAP.

The Draft PEIR disclosed that the Blueprint SD Initiative's policy and land use framework would apply Citywide and potential impacts associated with the implementation of the Blueprint SD Initiative were analyzed throughout the PEIR. The Draft PEIR includes a mitigation framework which would apply to future discretionary actions within the project area and the City has a robust regulatory framework which would apply to all development throughout the City and would further minimize potential environmental impacts.

The Blueprint SD Initiative does not propose actual development, nor does it identify site-specific land use designations and zoning. Site-specific land use designations, zoning, policies, and recommendation would be brought forward during future land use plan updates. Future development projects would be required to undergo project-specific environmental review, as applicable, at the time they are proposed at which time potential environmental impacts, and the project's location regarding the Climate Smart Village Area, would be identified and addressed.

**O11-5:** The Draft PEIR includes mitigation measures that would help reduce the environmental impacts of future individual projects. As for the topics mentioned in the comment, air quality and biological resources would have significant impacts, for which mitigation measures have been provided. See MM-AQ-1, MM-AQ-2, and MM-AQ-3 in Section 4.2.6.4 of the Draft PEIR and MM-BIO-1 in Section 4.3.6 of the Draft PEIR. Additionally, the Blueprint SD Initiative, University CPU and Hillcrest FPA each include policies designed to minimize environmental impacts.

**O11-6:** The project description in Section 3.5 of the Draft PEIR clearly defines the scope of the project, which includes the Blueprint SD Initiative, Hillcrest FPA, and University CPU, and contains all elements required pursuant to CEQA. Additionally, future actions anticipated to implement each of the planning initiatives are summarized in Table 3-6 of the Draft PEIR. As a programmatic document, the project description does not provide project-level specifics but does provide feasible development buildout.

The Blueprint SD Initiative, Hillcrest FPA, and University CPU are all planning-level documents intended to implement the City's General Plan, Climate Action Plan (CAP), and Housing Element, among other City planning initiatives, policies, and programs. Furthermore, the respective project components are related because the Blueprint SD Initiative sets forth the policy and land use framework for community plans and the University CPU and the Hillcrest FPA were developed to be consistent with the land use and policy framework outlined in the Blueprint SD Initiative. For these reasons, the actions were appropriately evaluated within one PEIR. As explained in Section 3.5.1.3 of the Draft PEIR, the environmental analysis conducted for these projects found similar environmental impacts that required similar mitigation frameworks. To be more encompassing, the City identified an opportunity to address the potential environmental impacts of the University CPU and Hillcrest FPA congruently with those of the Blueprint SD Initiative since these plans were all developed consistent with the proposed General Plan refresh (Blueprint SD Initiative). To facilitate readability of the document, the analysis and existing conditions of the Blueprint SD Initiative, University CPU, and Hillcrest FPA can be found under the respective heading as appropriate.

**O11-7:** As described in Section 3.5.1.2, the Climate Smart Village Areas, which are areas with high village propensity values (values 7 through 14) as defined by the Village Climate Goal Propensity Map, would be the areas where future increases in development densities and intensities would be concentrated. The village propensity values are shown on Figures 3-1a through 3-1e of the Draft PEIR.

The Village Climate Goal Propensity Map is a land use framework intended to guide future land use plan updates (e.g. Community Plan Updates (CPUs), Focused Plan Amendments (FPAs), Specific Plans, etc.); the commenter is correct that the map does not identify specific rezoning to occur on specific parcels because the proposed action does not include such actions. The Village Climate Goal Propensity Map does not propose actual development. It is not a land use map that identifies site-specific land use designations and zoning. Instead, it is meant to indicate the areas of the City where future land use updates would focus on increasing development capacity through site-specific land use and zoning that allows for higher density and intensity development projects that would help bring the City closer to reaching its CAP goals for reducing greenhouse gas (GHG) emissions, as discussed further in Section 3.5.1.3. The Blueprint SD Initiative does not identify specific land use or zoning; rather, it is anticipated that future community plans and other applicable land use plans and policies would refine the General Plan's Citywide policies and provide site-specific land use designations, zoning, policies, and recommendations.

As noted by the commenter, the Village Climate Goal Propensity Map figures (Figures 3-1a through 3-1e) in the Draft PEIR have a legend that individually numbers the propensity levels from 1 through 14 in order to provide sufficient enough detail for the environmental analysis described throughout the Draft PEIR; and includes the Exclusion Areas, such as conserved lands, where future development would not be proposed. The Draft Blueprint SD Initiative has a legend that indicates the various propensity levels with a sliding scale in order to match the legend of the previously utilized Village Propensity Map of the General Plan.

**O11-8:** See response to comment O11-4. A future CPU, Specific Plan, or amendment to a plan may propose development outside a Climate Smart Village Area when it makes sense in the context of the plan. For example, the University CPU proposes development outside a Climate Smart Village Area in the community-oriented shopping centers along Governor Drive because these areas are the primary centers of activity for the surrounding neighborhoods; commercial and civic uses are already present in these areas – proposed residential uses would be well integrated into these existing activity centers, and new residents will have the opportunity to take a walk, ride a bike, ride transit or take a shorter drive to meet their daily needs and to get to nearby subregional employment areas. Additionally, the Blueprint SD policies largely call for future land use plan updates to focus on increasing development capacity within the Climate Smart Village Areas as they are in or near transit priority areas (TPAs), and the proposed higher density development is considered appropriate because it would bring the City closer to meeting its CAP and General Plan goals for reducing GHG emissions and increasing mode share. Future CPUs, SPs, or plan amendments are anticipated to be developed consistent with the land use and policy frameworks in the City's General Plan and CAP and would be reviewed for consistency with the Final PEIR and Mitigation Monitoring and Reporting Program. Also, see response to comment O11-11. As described in Section 3.5.1.2 of the Draft PEIR, future CPUs, Specific Plans, and FPAs could still plan for additional density in areas with a lower village propensity when higher densities and intensities are

---

considered appropriate for the surrounding area so long as the proposed land uses result in VMT levels that are below the City's CEQA Significance Determination Thresholds to implement Climate Action Plan Strategy 3. Where land use changes are proposed as part of community plan updates or amendments where the communitywide VMT exceeds the thresholds, the plan update or amendment should ensure that the VMT thresholds are not exceeded for the focused area of the land use changes. Policy LU-A.2 has been added to the Blueprint SD Initiative, along with Mitigation Measure MM-TRANS-2 to further ensure that future land use plans will be consistent with the Blueprint SD Initiative framework.

**O11-9:** Varying densities of development would be appropriate for the range of village propensity values. While all areas with village propensity values between 7 and 14 are considered to be Climate Smart Village Areas, the highest density development projects would be proposed in the areas with the highest values (values 10 and above). Areas with values between 7 and 9 would still be appropriate for higher density development that would give residents the opportunity to take alternative modes of transportation and reduce their single occupancy vehicle usage with relatively less overall VMT than lower propensity areas. As stated in response to comment O11-7, the Village Climate Goal Propensity Map does not propose actual development. It is not a land use map that identifies site-specific land use designations and zoning. Instead, it is meant to indicate the areas of the City where future land use updates would focus on increasing development capacity through site-specific land use and zoning that allows for where higher density and intensity development projects would help bring the City closer to reaching its CAP goals for reducing GHG emissions.

An overarching goal of the Blueprint SD Initiative is to further implementation of the City's CAP and support a mode shift from single occupancy vehicles to alternative mobility options such as walking/rolling, biking, and transit to reduce GHG emissions. The Blueprint SD Initiative identifies the best locations for growth and the most receptive locations that support biking, walking/rolling, and transit usage based on the Regional Travel Demand Model, to attain the CAP's mode share goals. The Blueprint SD Initiative's land use strategy is the maximum extent feasible land use scenario that – when combined with other mobility implementation strategies, which are part of the overall General Plan Refresh - can achieve the mode shift goals of the CAP. Refer Appendix N of the PEIR for additional information supporting how the Blueprint SD Initiative supports City mode share targets consistent with the CAP. See also response to comment O11-8.

**O11-10:** The Climate Smart Village Areas are depicted on Figures 3-1a through 3-1e of the PEIR. See response to comments O11-4, O11-7, O11-8, and O11-9.

**O11-11:** As described in Section 3.5.1.3 of the Draft PEIR, future CPUs, Specifics Plans, and/or FPAs would be evaluated for consistency with the General Plan policy framework including the Village Climate Goal Propensity Map and the environmental analysis for future CPUs, Specific Plans, and/or FPAs could tier off of this PEIR. Future projects that are consistent with future CPUs, Specific Plans, and/or FPAs that are consistent with the Blueprint SD Initiative and associated PEIR could tier off of the PEIR if the proposed project is consistent with the development density of the established zoning, General Plan policies, or community plan policies. Depending on the scope of future projects, future environmental review for consistent projects might include tiered Mitigated Negative Declarations (MNDs), tiered EIRs, or other tiered environmental analysis in accordance with CEQA Guidelines Sections 15152, 15153, 15162, 15163, 15164, 15168, and/or 15183. This

condition does not preclude the environmental analysis of future projects from happening. See response to comment O11-8.

**O11-12:** This comment is noted. See response to comments O11-4, O11-6, O11-7, O11-8, and O11-9.

**O11-13:** See response to comments O11-4, O11-7, O11-8, and O11-11.

**O11-14:** Mitigation measures have been provided to the extent feasible to ensure future projects are consistent with the findings of this Draft PEIR. In instances where future development projects would have unforeseeable impacts, the PEIR identifies that potential for significant impact and provides mitigation measures and/or the established City ordinances and land use regulations that must be followed by future development projects to reduce impacts. See Table 9.1 (Mitigation Monitoring and Reporting Program). See response to comment O11-8.

**O11-15:** See response to comment O11-6 and O11-8. The proposed mitigation measures in the Draft PEIR respond to the impacts associated with the Blueprint SD Initiative, the University CPU, and the Hillcrest FPA and applies to all as they are all part of the proposed project. For example, future development that has the potential to impact cultural resources located in the project area would be required to implement MM-HIST-2 to mitigate the impact. Mitigation measures shall be implemented under each individual planning-level document. Also, see response to comment O11-14.

**O11-16:** The mitigation measures provided in the Biological Resources Report for the University CPU (Appendix D of the Draft PEIR) are aligned with the City's Biology Guidelines, which are incorporated into the City's Land Development Manual (LDM) and required of all development projects that might impact environmentally sensitive lands (ESL). Mitigation measure MM-BIO-1 reinforces this compliance.

#### ***MM-BIO-1 – Impacts to Sensitive Biological Resources***

Future projects that could directly and/or indirectly impact sensitive species, sensitive habitats and/or wetlands shall comply with the City's Environmentally Sensitive Lands (ESL) Regulations, Biology Guidelines, and applicable federal, state, and local Habitat Conservation Plans including, but not limited to, the City's Multiple Species Conservation Program (MSCP) Subarea Plan and Vernal Pool Habitat Conservation Plan (VPHCP) and shall implement avoidance, minimization, and mitigation measures in accordance with the City's ESL Regulations, Biology Guidelines, and MSCP Subarea Plan and VPHCP.

The avoidance, minimization, and mitigation measures provided in Section 7 of the Biological Technical Report are identified in the City's Biology Guidelines and specific measures would be implemented on a project-by-project basis as future projects are proposed and site-specific impacts are identified.

**O11-17:** Comment noted.

**O11-18:** The Regional Plan provides the most up-to-date information regarding the development of the regional transportation system. It is the best available planning tool the City has to use when

developing land use plans that coordinate future increases in development capacity with planned transportation investments to meet the City's CAP goals. SANDAG is the region's transportation authority and is responsible for developing the regional transportation network but does not have land use authority. The City and the 18 local jurisdictions have land use decision making authority.

The Blueprint SD Initiative provides a land use and policy framework that would guide the future development of CPUs, Specific Plans, and FPA, as well as future SDMC amendments which implement the vision in the Blueprint SD Initiative. The Blueprint SD Initiative's land use strategy is the maximum extent feasible land use scenario that – when combined with other mobility implementation strategies, which are part of the overall General Plan Refresh - can achieve the mode shift goals of the CAP. Refer Appendix N of the PEIR for additional information supporting how the Blueprint SD Initiative supports City mode share targets consistent with the CAP.

The Blueprint SD Initiative does not propose actual development, and as discussed in Section 3.5.1.2 of the Draft PEIR, the village propensity values and associated Climate Smart Village Areas could be adjusted in the future as the regional transportation network changes. The Draft PEIR fully discloses that because full implementation of the Regional Plan's transportation investments might not occur, VMT impacts with the exception of retail VMT for the Hillcrest FPA would be significant (see Section 4.14.5.2 of the Draft PEIR for an analysis of VMT impacts). The purpose of CEQA documentation is to disclose the environmental impacts of proposed projects with the information available and to provide feasible mitigation measures to avoid impacts. As future buildout occurs, projects would be reviewed for consistency with the analysis in this PEIR, and additional environmental would occur as required. It is important to note that all development projects are reviewed for consistency with all regulations set forth in the City's Land Development Code and the Building Code. See response to comment O11-11 regarding future environmental analysis and response to comment O11-20 regarding funding for transportation improvements. See also response to comment O11-8.

**O11-19:** Comment noted. See response to comments O11-8, O11-18 and O11-20.

**O11-20:** Per CEQA Guidelines Section 15126.4, mitigation measures should minimize significant adverse impacts of a proposed project, and they should be "roughly proportional" to the impacts of the project (see CEQA Guidelines Section 15126.4(a)(4)(B)). In the case of the proposed project's VMT impacts, the significant impact is the increase in residential, employee, and retail VMT. The proposed mitigation measure MM-TRANS-1 would require future development projects to "demonstrate compliance with the City's Mobility Choices Ordinance (SDMC Section 143.1103 et seq.) and the City's TSM, including preparation of a VMT analysis, where applicable." In addition, future land use plans would be required to meet the City's VMT CEQA Significance Threshold (see response to comment O11-8).

Future development projects would already be paying into SANDAG's funding source for regional transit projects (per Attachment A, Errata, to the Amendment of 2021 Regional Plan). Coordinating the provision and dedication of impacts fees for SANDAG's regional planning projects is outside the scope of the proposed project and outside the scope of the City's mitigation authority. This type of requirement, which would need to be applied to all development projects regardless of whether they are within the City's jurisdiction or not, would not have a directly proportional connection with the VMT impacts of the proposed project.

**O11-21:** See response to comment O11-18. Project-specific details such as the timing, type, and location of future development projects in accordance with the proposed Blueprint SD Initiative, University CPU, and Hillcrest FPA are not known at this time. The Draft PEIR disclosed that because full implementation of the Regional Plan's transportation investments might not occur, VMT impacts with the exception of retail VMT for the Hillcrest FPA would be significant (see Section 4.14.5.2 of the Draft PEIR). Future development would be required to comply with the City's Mobility Choices Ordinance, which would help reduce potential VMT impacts. Additionally, all future discretionary projects would be required to complete a VMT analysis, as applicable, in accordance with MM-TRANS-1. In addition, future land use plans would be required to meet the City's VMT CEQA Significance Threshold (see response to comment O11-8).

**O11-22:** Regarding the need for and transit infrastructure, see response to comment O16-14 under comment letter O16. Please see response to comment O15-14 under comment letter O15.

The proposed Blueprint SD Initiative, University CPU, and Hillcrest FPA are long-range planning documents that are designed to guide future development projects. The analysis in the Draft PEIR addresses the fact that additional public services facilities and infrastructure could be required to serve projected buildout of the project. To assume the amount and source of funding needed to construct these public facilities and services, as well as regional transit projects, would be speculative and outside the scope of the project. As described in the Draft PEIR, actual needs and potential locations would be determined in the future land use plans and as development occurs.

**O11-23:** This comment is on the Blueprint SD Initiative itself and is not about the adequacy of the Draft PEIR. Comment noted.

**O11-24:** See response to comment O11-18. As stated in the response, SANDAG is the region's transportation authority and is responsible for developing the regional transportation network. The purpose of the Blueprint SD Initiative is to provide the policy and land use framework that will guide future land use updates and SDMC amendments that coordinate future increases in development capacity with planned transportation investments to meet the City's CAP goals. Also, see response to comment O11-20 regarding funding for transportation improvements.

**O11-25:** The City's Mobility Choices Regulations (SDMC Section 143.1103 et seq.) were adopted for the purpose of reducing Citywide VMT to address the environmental impacts of development related to noise, air pollution, and GHG emissions, and to promote public health and enjoyment by investing active transportation infrastructure and amenities that will result in the greatest reduction to Citywide VMT. All development within the City, with the exception of certain types of development as outlined in the regulations, is required to comply with the City's Mobility Choices Regulations which provide a standardized process for addressing potential VMT impacts across the City and provide specific measures to be implemented on a project-by-project basis depending on the project's characteristics. At a program-level of analysis without project-specific details, providing these specific requirements would be speculative. In addition, future land use plans would be required to meet the City's VMT CEQA Significance Threshold (see response to comment O11-8).

**O11-26:** The comment on the Blueprint SD Initiative policy does not concern the adequacy of the Draft PEIR. Regarding the timing and funding of future transit infrastructure, see response to comments O11-20 and O11-24.

**O11-27:** GHG impacts related to the 2022 CARB Scoping Plan are discussed in Section 4.7.4, Issue 2 (a), of the Draft PEIR. As discussed in this section, the proposed project would have a less than significant impact in relation to the 2022 CARB Scoping Plan because future development implemented under the project would require compliance with the State Building Code's energy efficiency and applicable green building standards. Additionally, future development would be reviewed at project intake to ensure the inclusion of all applicable energy efficiency and applicable green building requirements of the applicable building and energy codes. Compliance with applicable building code requirements would ensure that future projects implemented under the Blueprint SD Initiative, University CPU, and Hillcrest FPA are consistent with state plans including the 2008, 2017, and 2022 Scoping Plans.

**O11-28:** Series 14 represents the most up-to-date data that was available during the development of the Blueprint SD Initiative. The Series 15 Forecast is still in a draft state and is not an appropriate tool to use. Furthermore, the Regional Forecast relies on the land use plans prepared by the local cities when making growth assumptions. The Regional Forecast does not anticipate more housing construction beyond the total amount of homes that can be built under the currently adopted community plan and is used for mobility modeling purposes. Many other factors, including the City's current housing needs and climate goals, also informed the development of the Blueprint SD Initiative. It is important to note two things. First, SANDAG growth projections relate to population growth, which focuses on births, deaths, and net migration and does not address housing needs. Second, the proposed increase in development capacity does not directly equate to the number of new homes that will actually be constructed during the life of the General Plan and community plans as future housing construction is dependent on additional factors beyond the General Plan and community plans, such as overall economic conditions, private property owner decisions, market demand, interest rates, labor and materials supply, and availability of financing. Therefore, in order to plan for the City's housing needs, maximizing residential capacity is critical.

**O11-29:** This comment concerns and requests information regarding the VMT analysis for Blueprint SD Initiative, University CPU, and Hillcrest FPA. The VMT Analysis was conducted using the most current regional transportation model, SANDAG's ABM 2+, and is consistent with the recommendations made by the Office of Planning and Research (OPR) SB 743 Technical Advisory (December 2018). The VMT metrics used in the analysis are outputs of the ABM 2+ that are further described by SANDAG's SB 743 metadata (<https://sandag.maps.arcgis.com/sharing/rest/content/items/f85d3ffea0394f298af2462c9fbfe724/data>).

The commenter is referencing text from Appendix A: Blueprint Methodology of EIR Appendix J: VMT Analysis that details the development of the Climate Smart Village Areas heat map. The “non-auto propensity” equation attempts to describe the likelihood of choosing alternative modes of transportation versus a single-occupancy vehicle. Significant variables of the “non-auto propensity” were identified to influence mode choice in the SANDAG ABM and were developed as described in the memo. The coefficients are shown below (where dep = dependent variable; ind = independent variable; Ols\_b = ordinary least squares coefficient):

dep	ind	ols_b	ols_p	ols_r2
prop_non_auto	intercept	0.2463	0.0	0.736
	dwl_unit_dens	0.0048	0.0	
	mixed_density_retail	0.0001	0.0	
	avg_vehicles_per_hh_log	-0.1889	0.0	
	transit_comp_ratio	0.1483	0.0	
	Weighted_TPAtransit	0.0011	0.0006	

Appendix B: Blueprint SD Activity Based Model Inputs Development Memos of EIR Appendix J, detail how those Climate Smart Village Areas were converted into model run inputs for ABM 2+. As stated above the VMT metrics used for the VMT analysis were model outputs using SANDAG’s SB 743 methodology. No additional VMT reductions such as those described in CAPCOA’s guidance were applied to the model outputs. ABM 2+ is an activity-based model that synthesizes a population and simulates their daily travel behavior and is comprised of several sub-models. The ABM 2+ inherently takes into account land use densities (residential and employment), locational contexts such as access to transit, distances to attractors and other factors when simulating people daily transportation choices. For additional information on the ABM 2+ please visit: <https://www.sandag.org/data-and-research/transportation-modeling>.

Comment noted. See also response to comment O11-8

**O11-30:** The VMT analysis was completed using the latest publicly available regional transportation model from SANDAG, the ABM 2+ (Version 14.3.0), this is the same model used for the SANDAG 2021 Regional Plan Amendment completed in 2023. The current Regional Transportation Model uses a 2016 Base Year that is calibrated and validated to existing conditions in 2016 which include vehicle counts and travel behavior surveys and thus provides the most accurate VMT baseline. See response to comment O13-2 under comment letter O13.

**O11-31:** As described in Section 4.7.3.1 of the Draft PEIR, the City uses a consistency analysis in lieu of quantifying GHG emissions to determine significant impacts consistent with CEQA Guidelines Section 15183.5. The City Planning Department prepared a memorandum, Climate Action Plan Consistency for Plan- and Policy-Level Documents and Public Infrastructure Projects, dated June 17, 2022, to provide guidance on significance determinations as it relates to consistency with the strategies in the CAP. The City’s guidance document requires environmental documents to address the ways in which the plan or policy is consistent with the goals and policies of the General Plan and CAP.

See response to comments O11-4 and O11-8.

**O11-32:** The Blueprint SD Initiative proposes an updated policy and land use framework that would apply to all development Citywide and is intended to guide future land use plan updates and SDMC amendments that would help facilitate the implementation of the vision in the Blueprint SD Initiative. See responses to comment O11-4 and O11-8,

The University CPU and Hillcrest FPA provide more specific details regarding proposed land uses and zoning throughout their respective CPU and FPA areas (including proposed development within and outside of the Climate Smart Village Areas) and the potential impacts associated with buildout of these plans is analyzed throughout the PEIR. In Section 4.7.4 of the Draft PEIR, the GHG analysis found that impacts associated with the project are projected to be less than significant because the project would be in alignment with the City's CAP.

**O11-33:** Since the threshold for analyzing potential GHG impacts is consistency with the City's CAP per the City's 2022 memorandum mentioned in response to comment O11-31, and the proposed project was found not to conflict with the CAP, mitigation measures that further require consistency with the CAP are not necessary. GHG impacts were determined to be less than significant, and in accordance to CEQA Guidelines 15126.4(a)(3), mitigation is not required for "effects not found to be significant." See also response to comment O11-8.

The Southwest Village Specific Plan is not a part of this project.

**O11-34:** At the program level, the proposed biological resources mitigation measure (MM-BIO-1) would help the City reinforce compliance with their Environmentally Sensitive Lands (ESL Regulations and Biology Guidelines at a project level. CEQA Guidelines section 15126.4(a)(1)(B) allows compliance with the Biology Guidelines to be identified as mitigation if compliance results in implementation of measures that would be reasonably expected to reduce the significant impact. The City's regulations provide a standardized process for addressing development impacts across the City and they lay out a process for which impacts can be addressed at a more project-specific level. Because all development projects are subject the City's Land Development Code regulations (e.g., its ESL Regulations), many of which are put in place for the specific purpose of mitigating or reducing environmental impacts through specific performance standards, these regulations are referenced as required mitigation measures. The biological resource impact after the implementation of the mitigation measure would remain significant. This conservative approach discloses that at this point in time, the location and type of development is unknown, and there is a potential for impacts to occur.

**O11-35:** As noted by the commenter, future projects would be required to comply with the City's ESL Regulations and Biology Guidelines. As described on Table 143-01A of the ESL Regulations, affordable housing, in-fill, and/or a sustainable building projects as described in SDMC Section 143.0915 may be permitted with a Neighborhood Development Permit (NDP) instead of a Site Development Permit (SDP). However, per SDMC Section 143.0920(b) (Affordable Housing, In-Fill Projects, and Sustainable Buildings Development Regulations), Neighborhood Development Permits cannot be issued for development projects within ESL, including development that might impact steep hillsides, unless supplemental findings pursuant to SDMC Section 126.0404(a) are prepared. It

is also worth noting that both the NDP and SDP are discretionary actions subject to CEQA and public review.

Regarding compliance with MSCP, see response to comment A3-5 under comment letter A3.

**O11-36:** This comment does not raise an issue related to the adequacy of the Draft PEIR; comment noted. Furthermore, the City's ESL Regulations apply to both ministerial and discretionary development Citywide.

**O11-37:** See response to comment A3-5 under comment letter A3.

**O11-38:** The proposed mitigation measure MM-BIO-1 would reinforce the implementation of the Biology Guidelines for all ESL. As required by Section III(A)(1) of the Biology Guidelines, a biological survey report is required for all proposed development projects that are subject to ESL and/or for which the CEQA review has determined that there might be a significant impact on other biological resources considered sensitive under CEQA. As future site-specific projects are proposed that may impact ESL and sensitive species, future site-specific surveys will be required at the project level during the project review process.

**O11-39:** See response to comments O11-4, O11-8, and O11-11.

**O11-40:** The proposed trails have been removed from the University CPU, the project description in Section 3.5.3(e) of the Draft PEIR, from Figure 3-26 of the Draft PEIR, and from the impact analysis in Section 4.3.4, Issue 4, of the Draft PEIR.

**O11-41:** Comment noted. The City's General Plan Conservation Element includes new Policy CE-B.1(h), which states the following:

Prepare and update Natural Resource Management Plans (NRMPs) on all managed preserved lands and include in plans considering shifting habitat or conditions due to climate change as well as sequestration potential, as the information becomes available.

In 2023, the City initiated a geospatial analysis to provide a framework for future NRMP planning and prioritization, with the intent to provide a data and equity-driven roadmap for determining NRMP boundaries and prioritizing future NRMP preparation. Proposed NRMP boundaries were delineated based on several factors, including watershed, habitat connectivity, habitat type and MHPA designation. The preliminary prioritization is based on a geospatial analysis that included several metrics relevant to the MSCP and equity: connectivity-core size, connectivity-linkage length, species diversity of rare plants, species diversity of rare animals, socio-economic status/climate vulnerability and percent city-owned land. A full report (the NRMP Strategic Roadmap) detailing the methods, results and recommendations resulting from this analysis is currently in preparation and is expected to be included as an attachment in the 2024 MSCP Report.

Regarding the proposed trails, see response to comment O11-40.

**O11-42:** See response to comment O11-40 regarding the proposed trails. The University CPU and Hillcrest FPA does not propose upzoning within the City's MHPA areas. The Blueprint SD Initiative

provides a land use and policy framework to guide future land use updates and SDMC amendments, but does not propose actual development, nor does it identify site-specific land use designations and zoning. Future land use updates and SDMC amendments which propose upzoning in areas that are within or adjacent to the MHPA would be reviewed for consistency with the analysis in the PEIR and potential impacts to the MHPA would be addressed at that time. Furthermore, all development in the City is required to comply with the City's ESL Regulations. Should ESL impacts be identified during ministerial review of a future project, the project would be processed under a discretionary permit to ensure consistency with the City's ESL Regulations, the Biology Guidelines, and the provisions of the Multiple Species Conservation Program (MSCP) Subarea Plan (SAP) and a Vernal Pool Habitat Conservation Plan (VPHCP) to protect the on-site sensitive resources. The project's compliance with the City's MSCP SAP and VPHCP are discussed in Sections 4.10.2.2(h) and (i). See response to comments A3-5, A3-7, A3-10, A3-18, A3-20, and A3-25 under comment letter A3 for a discussion of how the proposed project complies with and

**O11-43:** Securing funding for the MSCP and VPHCP is an ongoing joint effort between local, regional, and state agencies, including the City. For example, SANDAG's transportation mitigation fund is a revenue source that the City can pursue for habitat restoration projects. Additionally, funding for the MSCP is determined annually as part of City's annual budget and is outside of the scope of this project.

**O11-44:** See response to comments O15-14 and O15-36 under comment letter O15 for a discussion park and open space impacts.

**O11-45:** The comment on funding for the MSCP and unauthorized use of trails has been noted. Please see response to O11-43.

**O11-46:** In mitigation measure MM-AQ-1, there is a requirement that "individual development projects shall not exceed criteria pollutant significance thresholds detailed in the latest City's CEQA Significance Thresholds."

The language in the remainder of MM-AQ-1 has been revised and clarified in the Final PEIR

**O11-47:** Comment noted.

Save Our Heritage Organisation  
Protecting San Diego's architectural and cultural heritage since 1969

April 29, 2024

Shannon Mulderig  
Senior Planner  
City Planning Department  
City of San Diego

RE: Hillcrest Focused Plan Amendment Draft March 2024

Dear Ms. Mulderig,

Save Our Heritage Organisation (SOHO) appreciates the opportunity to offer feedback on the March 2024 Hillcrest Focused Plan Amendment Draft, particularly regarding Chapter 5: LGBTQ+ Cultural and Chapter 11: Historic Preservation.

O12-1  
cont.

We reiterate concerns previously submitted by SOHO and the San Diego LGBTQ Historic Sites Project group, some of which do not appear to have been incorporated into the revised March 2024 Draft. Chapter 5 lacks specific language emphasizing the importance of identifying designated and potential LGBTQ+ historic sites. Although Chapter 6 addresses this, Chapter 5 should also contain such statements to establish a connection between culture and history.

O12-2

The LGBTQ+ Cultural District should prioritize preserving, maintaining, and promoting local LGBTQ+ history alongside cultural components. Designated historic LGBTQ+ sites must be preserved and incorporated into any new development, as they serve as anchors linking past, present, and future.

O12-3

Key objectives of the LGBTQ+ Cultural District should acknowledge the significance of social service agencies and community-based organizations, in addition to entertainment and commercial establishments. Recommendations include adding photos and accurately reflecting historically designated sites on maps. Community outreach should encompass Trans, API, Black, BIPOC, and Indigenous communities, ensuring their voices are heard and their history preserved.

O12-4

Interpretive elements should avoid superficial treatments and instead highlight genuine LGBTQ+ cultural and historic sites. These elements should be integrated with a strong financial-backed maintenance program to prevent deterioration.

O12-5

The walking corridor and site list should incorporate additional historically significant locations, such as:

- # 9 Albert Bell's Residence at 3780-3786 Fifth Avenue should use the official historic designated name: The Center/Gayzette/Albert Bell Building. The San Diego AIDS Project was located at 3777 Fourth Avenue (across the alley from # 9 and should be identified).

O12-6

- The AIDS epidemic in the 1980s established AIDS services at Vauclain Point at the north edge of Front Street (the former site of a SD County facility and later the SD Hospice). That area along with #16 UCSD Owen Clinic has a long history related to AIDS and Hillcrest.
- The Obelisk Bookstore at 1037 University was a landmark bookstore for the LGBTQ+ community.
- The SAGE of California Center at 3138 Fifth Avenue was an important location and drop-in center for lesbians and gay men when it opened in 1999.
- Albert Bell's final residence at 3815 Vermont Street should be located on the map.
- Contact Lambda Archives for the location of an electrolysis business on University Avenue that served the Trans community.

O12-6  
cont.

Policy recommendations include incorporating the stories of marginalized LGBTQ+ communities and explicitly stating the preservation of designated historic LGBTQ+ sites and the identification of potential sites as essential components.

O12-7

Chapter 6 should accurately reflect designated LGBTQ+ historic sites and work collaboratively with Chapter 5 to preserve and designate LGBTQ+ historic sites.

O12-8

We do not believe that development by right of historic facades with a 10' set back should be allowed without further review for contributors to the historic district. Each Historic site may have unique character defining elements and history, which may require different treatments to ensure adequate preservation of these features. This street setback should be 12' minimum.

O12-9

Setbacks for towers above 75 ft should be set back 50 feet from the Street. This is what is allowed along "J" street in the ballpark district downtown and it has maintained light and air and allowed a vibrant pedestrian orientated environment. While allowing dense towers appropriate to a modern downtown central business and residential district.

O12-10

Thank you for reviewing our feedback. Preserving Hillcrest's LGBTQ+ history is crucial for embracing its past, present, and future identity.

O12-11

Sincerely,

Bruce Coons  
Executive Director  
Save Our Heritage Organisation (SOHO)

**O12: Responses to Save Our Heritage Organization Comment Letter**

**O12-1:** Comment noted. This comment pertains to the Hillcrest Focused Plan Amendment (FPA) text and does not raise any issues regarding the adequacy of the Draft Program Environmental Impact Report (PEIR).

**Subject:** [EXTERNAL] UC PEEPS' Comments on University Community Plan Update Draft EIR

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

On behalf of UC Neighbors for Responsible Growth, a.k.a. UC PEEPS, I'm submitting our combined comments on the University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park. (See attachment with expert Traffic Analysis relative to Governor Drive.)

O13-1

O13-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

O13-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states “No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

O13-4

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community’s preferred alternative.

O13-5

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City’s general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

O13-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City’s DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

O13-7

O13-8

Sincerely,  
Bonnie Kutch, Resident of University City  
Founding Member of UC Neighbors for Responsible Growth, a.k.a. UC PEEPS, an  
Association of 500-plus University City Residents and Property Taxpayers

Bonnie Kutch | University City PEEPS | 619.299.1010

## **Review of University City Community Plan Update Draft Mobility Technical Report**

**dated March 2024 – (review conducted April 2024 by Charles Frasier(frasierf@ix.netcom.com))**

The Mobility Technical Report summarizes the physical and operational conditions of the planned mobility system outlined in the University Mobility Element. This report is one component of the University Community Plan Update, identifying the planned mobility improvements culminating with an analysis of all travel modes under the proposed plan horizon year of 2050.

The Proposed Plan is a strategy to address existing and forecast deficiencies related to the transportation system within the University community. It also strives to improve personal mobility through a balanced, multimodal transportation network, which supports the updated land use vision for University and aligns with the City's General Plan, Blueprint SD, and Climate Action Plan (CAP). The mobility system is comprised of roadway and freeway system, pedestrian and bicycle infrastructure, and public transit.

### **Analysis Methodology**

Appendix A Existing Conditions Report describes the methodology used to determine the study area and analyze the transportation system for the University community. Since the adoption of the 2008 California Complete Streets Act (AB 1358), the City of San Diego has employed multimodal analysis procedures to assess mobility needs for pedestrians, cyclists, and transit users. **Analysis of the existing pedestrian, bicycle, transit, and vehicular system can be found in Appendix A.**

Vehicle Miles Traveled – SB 743 Analysis Senate Bill 743 (SB 743) was signed into law in September 2013, modifying the existing California Environmental Quality Act (CEQA) by removing auto delay, level of service (LOS), parking and other vehicular capacity measures as metrics of transportation system impacts for mixed-use, infill or transit-oriented development projects. Vehicle miles traveled (VMT) is considered the new analysis metric used to measure transportation impacts and must be incorporated by July 1, 2020, statewide. VMT reflects the land use type, intensity, and location in relation to the capacity and roadway connectivity of the transportation network. It is also influenced by the availability and quality of multimodal facilities, and system operations. VMT is metric that measures the number of vehicle trips generated and the length or distance of those vehicle trips. For transportation analysis, VMT is generally expressed in VMT per capita for a typical weekday. VMT does not directly measure traffic operations but instead measures the efficiency of the transportation system and is expressed as a function of population or employment.

**The VMT assessment for the University Community Plan Update, circa 2050, is discussed in Appendix B – Blueprint SD, University CPU, and Hillcrest FPA Vehicle Miles Traveled (VMT) Analysis.**

Roadway segments were assigned Level of Service (LOS) ratings of A through E as shown in Appendix A Table 2-16. LOS rating E is considered to be a roadway's capacity. Average Daily Traffic (ADT) volumes exceeding LOS E are given LOS rating F. Threshold for Determination of a Significant Transportation VMT Impact are shown in Appendix B Table 3-1. **Projects with an LOS grade of F**

O13-9

exceed these thresholds and would have a significant adverse California Environmental Quality Act (CEQA) transportation impact.

## Results

**This review only addresses the results of the Roadway Segment Analyses for Governor Drive.**

Governor Drive functions as a two-way east-west, 4-lane Major Arterial with raised medians and a curb-to-curb width of approximately 68-80 feet. Governor Drive is lined with sidewalks and curbs on both sides of the street for the entire length of the street. Parallel parking is available on both sides of the street along most segments of the roadway west of Gullstrand Street. Class II bike lanes (no buffer) are partially present on both sides of the street between Genesee Avenue and Gullstrand Street. The posted speed limit is 35 mph. Access to I-805 is provided at the eastern terminus of Governor Drive. Existing conditions Average Daily Traffic (ADT) volumes for the roadway segments were provided by Accurate Video Counts Inc and measured in April and May 2015.

The University CPU plans to reduce the number of travel lanes from a 4-lane Major Arterial to a 2-lane Major Arterial on Governor Drive (West End to Greenwich Drive) to create a Complete Street consistent with City goals in the General Plan, CAP, Vision Zero, and Complete Streets Policy to encourage walking, biking, and taking transit. The plan includes continuous buffered bike lanes along Governor Drive, enhanced pedestrian and intersection treatments, and traffic calming measures, while maintaining on-street parking. Other improvements include a protected intersection at is found to be Genesee Avenue and Governor Drive. University CPU plan Average Daily Traffic (ADT) volumes for the roadway segments were determined from SANDAG's Series 14 Activity Based Model (ABM2+). An assumption of the analysis revealed by the figure in the executive summary of Appendix A is that there will be no growth of single occupancy vehicles (SOVs) from existing conditions to the University CPU plan conditions.

Table 7-4 of Appendix A shows the Existing Conditions Summary of the Roadway Segment ADT Based Analysis. From Regents Road to the I-805 SB Ramps, **Governor Drive is found to have a LOS E Capacity of 40,000 with an Average Daily Traffic (ADT) volume of 16,796 to 19,737. The v/c Ratio calculated by dividing the ADT volume by roadway segment's capacity is found to be 0.420 to 0.493 resulting in an acceptable Level of Service (LOS) rating of B.**

Table 3-11 of the Draft Mobility Technical Report shows the Roadway Segment Analysis – Proposed Plan Conditions Analysis. From Regents Road to the I-805 SB Ramps, **Governor Drive is found to have a LOS E Capacity of 20,000 with an Average Daily Traffic (ADT) volume of 22,480 to 32,140. The v/c Ratio calculated by dividing the ADT volume by roadway segment's capacity is found to be 1.124 to 1.607 resulting in an unacceptable Level of Service (LOS) rating of F.**

(The Plan v/c ratio is more than double the existing ratio due, in part, to the presence of traffic lights along the road segment.)

Because the analysis assumes that there will be no growth in SOVs from existing conditions to the University CPU plan conditions, the results of the plan analysis are applicable to the existing conditions if Governor Drive were, tomorrow, suddenly converted from a 4-lane Major Arterial to a 2-

O13-9  
cont.

lane Major Arterial with continuous buffered bike lanes, enhanced pedestrian and intersection treatments, and traffic calming measures, and a protected intersection at Genesee while maintaining on-street parking.

**The conclusion to be drawn from the Mobility Analysis is that converting Governor Drive from a 4-lane Major Arterial to a 2-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report.**

**O13-9  
cont.**

---

**O13: Response to University City Peeps Comment Letter**

**O13-1:** The proposed complete street for Governor Drive would reduce the number of vehicular travel lanes on Governor Drive from four to two in order to add continuous Class II buffered bike lanes. The proposed bicycle facility improvements on Governor Drive would implement the City's General Plan Mobility Element, Bicycle Master Plan, and Climate Action Plan (CAP) policies that support enhancements to the mobility network to accommodate non-vehicular modes. The planned improvements are intended to increase safety and calm traffic so that the roadway could be more usable for all modes, including biking, walking, and rolling. In addition, these complete street improvements will have a positive impact on mode shift, and reductions in vehicle miles traveled and greenhouse gas emissions consistent with the City's CAP goals.

Vehicle miles traveled (VMT) per capita and per employee are the numbers of miles people are traveling in vehicles as a per capita or per employee measurement; it is not a measurement of congestion or level of service of a roadway. Since the passage of Senate Bill (SB) 743 in 2013 and subsequent adoption of the Technical Advisory on evaluating Transportation Impacts in CEQA in 2018, CEQA Guidelines Section 15064.3 no longer uses traffic counts, auto delays, levels of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. Furthermore, the proposed Governor Drive design changes would support multi-modal transportation and align with the City's overarching mobility and CAP policy framework.

**O13-2:** The VMT analysis in Appendix J of the Program Environmental Impact Report (PEIR) used the Series 14 Activity Based Model (ABM2+) from the San Diego Association of Governments (SANDAG) which is the most recent model available from SANDAG and which was used for the 2021 SANDAG Regional Plan. As discussed in Chapter 4.14 of the PEIR, although citywide VMT per capita and citywide VMT per employee with the University CPU would be at 73% and 72% of the regional mean, VMT-related impacts of the University Community Plan Update (CPU) would be significant because the timing of future SANDAG Regional Plan transportation investments that could improve VMT levels cannot be ensured at this time. All future development within the University CPU area would be required to comply with the City's Mobility Choices Regulations which require investments in active transportation infrastructure and amenities that will reduce Citywide VMT, as identified in mitigation measure MM-TRANS-1. Future discretionary development projects proposed in accordance with the University CPU would also be required to undergo environmental review, which would incorporate new information from any future SANDAG Regional Plan as appropriate. Analyzing VMT, which is the metric for determining potential transportation impacts under CEQA, does not include an assessment of traffic service levels at peak hours. While the mitigation is required, the PEIR still identified VMT-related impacts to be significant. The Mobility Technical Report was prepared to inform mobility decisions for the University CPU, but is not part of the University CPU, and was not analyzed in the PEIR.

**O13-3:** As discussed in Chapter 4.18, and specifically 4.18.4, Issue 2, of the Draft PEIR, the major evacuation routes in the University CPU area are Interstates (I-) 5 and 805 and State Route (SR-) 52, which are accessible by Regents Road, Genesee Avenue, Governor Drive, Nobel Drive, Gilman Drive/La Jolla Colony Drive, and Sorrento Valley Road. The addition of Class II bike lanes to Governor Drive, as also identified in the City's Bicycle Master Plan, would involve restriping lanes; no physical

barriers would be added to these sections of Governor Drive. In the event of an emergency, vehicles would be able to access the full existing curb-to-curb width of the road. Emergency-imposed traffic routing could also redirect all traffic to drive in one direction away from a potential hazard or emergency situation. This information has been added to Chapter 4.18.4, Issue 2 and Chapter 4.14.4 Issue 4 (b) as clarification in the PEIR. Additionally, future discretionary development projects proposed in accordance with the University CPU would be required to complete environmental review to determine potential impacts related to emergency access and all future ministerial and discretionary projects would be required to demonstrate their compliance with San Diego Fire Code including requirements related to emergency access.

**O13-4:** In the letter from San Diego Unified School District (SDUSD) to the City dated September 14, 2023, SDUSD indicated a need for a school in the vicinity of La Jolla Village Drive and Genesee Avenue. The need for an elementary school at this location is identified in the Draft PEIR [Section 4.12.4(c)]. The University CPU includes policies that encourage coordination between the City and SDUSD to explore options for the provision of future school facilities, including a potential elementary school facility within the vicinity of La Jolla Village Drive and Genesee Avenue. Coordination between the City and SDUSD would continue as implementation of the community plan occurs; nevertheless, it is ultimately the responsibility of SDUSD to plan for the potential expansion of existing and/or development of new school facilities. Because this school site and other school service issues would require further environmental analysis in the future, the PEIR found this environmental impact to be significant.

**O13-5:** A description and analysis of the University Community Planning Group's Community-Preferred Alternative has been incorporated into the Reduced Density Alternative in the Final PEIR. This alternative, formerly called the Blueprint SD Initiative Reduced Density Alternative in the PEIR, has been revised to include a reduction of land use intensities for both the University CPU and Hillcrest Focused Plan Amendment (FPA) as well as for the Blueprint SD Initiative.

Under the Reduced Density Alternative, the University CPU would have the following reductions: The Urban Village areas would have a maximum of up to 145 dwelling units per acre (73 fewer dwelling units per acre than the maximum allowed under the same designation in the proposed plan). Residential capacity under this alternative would allow approximately 22,000 new homes and employment capacity would allow approximately 55,000 new jobs.

See Chapter 8.0 of the PEIR for the full discussion of the Reduced Density Alternative.

An EIR is required to describe a range of reasonable alternatives to the project which would feasibly attain most of the basic project objectives and would avoid or lessen the significant effects of the project. The High Density Alternative was included in the alternatives analysis at the request of multiple climate action, housing, bicycle, and public transportation advocacy groups. The High Density Alternative was included in the Draft PEIR because it would meet the project objectives and feasibly reduce environmental impacts related to energy, greenhouse gas emissions, and transportation.

**O13-6:** The Blueprint SD Initiative, Hillcrest FPA, and University CPU are all planning-level documents intended to implement the City's General Plan including the Housing Element and CAP, among other

City plans and policy documents. The scope of the project, which includes all three planning initiatives, is clearly defined in Section 3.5 of the PEIR.

As explained in Section 3.5.1.3 of the PEIR, the environmental analysis conducted for these projects found similar environmental impacts that required similar mitigation frameworks. Furthermore, the Blueprint SD Initiative sets forth the policy and land use framework for community plans in the City and the City identified an opportunity to address the potential environmental impacts of the University CPU and Hillcrest Focused Plan Amendment (FPA) congruently with those of the Blueprint SD Initiative since these plans were all developed consistent with the proposed General Plan refresh (Blueprint SD Initiative). Mitigation measures shall be implemented under each individual planning-level document.

**O13-7:** The PEIR provides a program-level analysis of the potential impacts that could occur with implementation of the University CPU. As a programmatic document, the project description of the PEIR does not provide project-level specifics but does provide feasible development buildout which is analyzed throughout the PEIR. The PEIR includes a discussion of environmental impacts related to aesthetics (Section 4.1), air quality (Section 4.2), biological resources (Section 4.3), greenhouse gas emissions (Section 4.7), noise (Section 4.11), public services (Section 4.12), recreation (Section 4.13), transportation (Section 4.14), and wildfires (Section 4.18). This comment is general in nature and does not include specific critiques of the environmental analysis; no further response is necessary.

**O13-8:** Comment noted. The Complete Communities program is not a part of the scope of the project analyzed in the PEIR and the environmental impacts of the Complete Communities program were addressed in Final PEIR for Complete Communities: Housing Solutions and Mobility Choices (SCH No. 2019060003). The comment does not raise an issue related to the adequacy of the analysis in the PEIR. No further response is required.

**O13-9:** The comment is in regard to the Draft Mobility Technical Report, which was prepared to inform mobility decisions for the University CPU, but is not part of the University CPU, and was not analyzed in the PEIR. The traffic analysis for the PEIR is based on the Vehicle Miles Traveled Analysis (Appendix J of the PEIR) as required by CEQA. See response to comment O13-2 for a response to VMT analysis.

Ms. Suchita Lukes  
Planner for University City Community Plan Update  
City of San Diego Planning Department  
202 C Street  
San Diego, CA 92101

Re: Comment Letter to the Draft Program Environmental Impact Report for the  
Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community  
Plan, and University Community Plan and Local Coastal Program Update

Dear Ms. Lukes:

I represent UC Neighbors for Responsible Growth, a.k.a UC PEEPs, an association of community members living in the University Community planning area. I submit this comment letter to the above-referenced draft Environmental Impact Report (“DEIR”) on their behalf.

I. The DEIR Analysis of Proposed Changes to Governor Drive Is Legally Deficient

The DEIR does not adequately inform the public of the City’s plans for Governor Drive. The current University Plan identifies Governor Drive as a four-lane major street (Current University Plan, p. 145.) It also suggests that truck routes should be limited to five streets, and Governor Drive is one of them.

The DEIR does not identify the existing condition of Governor Drive as a four-lane major street and preferred truck route. It only identifies the proposed two-lane Governor Drive in Figure 3-24, with no indication of how the preferred truck route should be addressed or whether that impact has been analyzed. The Mobility Technical Report (“MTR”), an Appendix to the Plan Update, but not the DEIR, includes an Existing Conditions Summary (as an appendix to the MTR) from 2018, which identifies the current Governor Drive as four lanes and discusses the proposal to reduce Governor Drive to a two-lane major arterial. (MTR, Appendix A Existing Conditions Report, p. 7-7, and MTR, Figure 3-3 and Table 3-11).<sup>1</sup> CEQA requires an EIR to identify existing conditions and the DEIR’s failure to identify the existing condition of Governor Drive is legally inadequate—the DEIR should be revised to remedy this error.

---

<sup>1</sup> Incidentally, the City of San Diego Traffic Manual definitions do not include anything called a two-lane major arterial. Even with cross-referencing, it is impossible for the reader to understand what the City is proposing for Governor Drive.

## Law Offices of Andrea Contreras

### II. The DEIR's Conclusion Regarding Adequate Emergency Access Is Not Supported By Substantial Evidence

CEQA requires that an EIR's conclusion be supported by substantial evidence. (CEQA Guidelines §15091(b).) The DEIR fails to support the finding of sufficient emergency access with substantial evidence.

The DEIR states “[b]ased on the existing roadway network in place combined with improvements required by the City as development occurs and required consistency with the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant. (DEIR, p. 4.14-22.)

This conclusion is unsupported by the evidence. As discussed in the prior section, the project proposes to reduce Governor Drive from four lanes to two. The conclusion of a less than significant impact to emergency access relies on the existing road network. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot legally conclude the impact will be less than significant.

In fact, the Mobility Technical Report directly contradicts this conclusion in the following manner:

Vehicular Analysis: Chapter 3.4 contains the vehicular Roadway Segment Analysis, Peak Hour Arterial Analysis and Peak Hour Intersection Analysis for Governor Drive. With full buildout of the plan, it is anticipated that decreased levels of service for both roadway segments and intersections, and increased vehicular travel times along Governor Drive will occur. (MTR, p. 81)

By stating that it is relying on the existing roadway network to find less than significant impacts related to emergency access when the plan clearly proposes reductions to the capacity of the existing roadway network, the City has failed to support its finding with substantial evidence and this section of the DEIR is legally inadequate. (*See generally, Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, (discussing the substantial evidence standard).)

The designation of the document as a program EIR with the potential for future analysis does not excuse the City from performing analysis of impacts it knows for certain. The proposed reduction of four lanes to two on Governor Drive is a specific enough proposal that the City could perform it now. “. . . [T]iering does not excuse the lead agency from adequately analyzing reasonably foreseeable significant environmental effects of the project and does not justify deferring such analysis to a later tier EIR or negative declaration.” (14 Cal. Code Regs., Div. 6,

Ch. 3 (“CEQA Guidelines”) §15152(b).). The DEIR must be revised to include specific analysis of emergency access with the reduction in capacity on Governor Drive.

4

III. The DEIR Fails to Analyze School Requirements from the San Diego School District

The DEIR states

“No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. Policies include, but are not limited to, 7.3B, which directs the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within University, as needed.”

DEIR, p. 4.12-42.

The DEIR also states that due to the uncertainty of the impacts and the unknown ability to mitigate them, the impacts associated with the construction and operation of new schools would be potentially significant.

In a memorandum submitted on September 14, 2023, the San Diego School District informed the City the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

5

Furthermore, the cost of new schools’ design and construction is forecasted at \$910 million, not including the cost of acquiring the land necessary to construct the schools. The memorandum urges the City to partner with the School District to plan for development of new school construction in advance of occupancy of new housing units.

The conflict between the DEIR suggesting the solution to more school sites will come from the district and the district looking to the plan to identify school locations is not discussed in the DEIR. The conflict suggests there are unanalyzed significant impacts. CEQA requires an analysis of all significant impacts in order to determine if there is adequate mitigation. (*Vineyard Area Citizens*, 40 Cal.4th 412.). The DEIR should be revised to include this analysis.

IV. Insufficient Alternatives Analysis

CEQA requires a reasonable range of alternatives to the project under review. (CEQA Guidelines §15126.6(a).) The range of alternatives should be feasible, achieve the basic objectives of the project, and avoid or substantially lessen one or more of the significant effects. (CEQA Guidelines §15126.6(a).)

6

## Law Offices of Andrea Contreras

The DEIR does not meet these basic requirements for a legally sufficient alternatives analysis to the proposed UC Plan. The DEIR only includes one alternative relating specifically to the UC Plan, and that alternative increases density. Furthermore, the high-density alternative states it is infeasible as the level of development in that alternative is unlikely. (DEIR, p. 8-29.) This cannot be a viable alternative if it is infeasible. Finally, as an infeasible alternative, it should not be identified as the environmentally superior alternative.

The DEIR should be revised to include the community's preferred alternative as an alternative.

V. Use of a Program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act ("CEQA")

According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decisionmakers and the public. (Ca. Pub. Res. Code §21061). The DEIR is more than 800 pages long, not including the technical appendices and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to garnish information. The DEIR should be separated into three separate EIRs for each proposed plan update.

Thank you for the opportunity to comment on the DEIR. We look forward to the City's response to our comments.

Sincerely,

Andrea Contreras

RTC-683

**O14: Responses to Law Offices of Andrea Contreras on behalf of University City Peeps**  
**Comment Letter**

**O14-1:** The comment is an introduction to the letter.

**O14-2:** The comment letter mentions that the “current University Plan identifies Governor Drive as a four-lane major street (Current University Plan, p.145). It also suggests that truck routes should be limited to five streets, and Governor Drive is one of them.” While this suggestion for Governor Drive as a truck route is included as a proposal in the current Community Plan, this does not necessarily mean that Governor Drive was designated as a truck route.

The Draft PEIR does not identify or discuss truck routes, and the City’s Transportation Department has confirmed that Governor Drive is not a designated truck route. Tables 3-6 and 3-7 have been added to Section 3.5.3.1(c) of the Final Program Environmental Impact Report (PEIR) to describe the existing and proposed roadway and bicycle network of the University Community Plan Update (CPU) area. Section 4.14 of the Draft PEIR also includes a description of the different roadway classifications in the existing roadway network. The Mobility Technical Report was prepared to inform the mobility decisions for the University CPU, but it is not an Appendix to the University CPU and the PEIR, nor was it analyzed in the PEIR. The City prepared a Vehicle Miles Traveled analysis in accordance with Senate Bill 743 and the City’s CEQA Significance Determination Thresholds. See response to comments O13-1 and O13-2 under comment letter O13 for further information regarding the analysis of road congestion. Any future proposal to reduce Governor Drive would undergo more in-depth mobility and transportation analysis.

**O14-3:** The Mobility Technical Report was prepared to inform the mobility decisions for University CPU, but it is not part of the University CPU, and was not analyzed in the Draft PEIR. Regarding the concern about emergency access, see response to comment O13-3 under comment letter O13. Regarding the concern about the decrease in level of service on Governor Drive, see the response to comment O13-1 under comment letter O13.

**O14-4:** Section 4.14.4, Issue 4 (b) and Section 4.18.4 Issue 2 of the Draft PEIR have been updated to include a description of how the proposed changes to Governor Drive could affect emergency access.

**O14-5:** See response to comment O13-4 under comment letter O13.

**O14-6:** See response to comment O13-5 under comment letter O13

**O14-7:** See response to comment O13-6 under comment letter O13.

Please accept these comments from the University Community Planning Group on the University Community Draft EIR, SCH No. 2021070359.

O15-1

Thank you,

Chris Nielsen  
UCPG Chair

**University Community Planning Group**

**Comments for the University Community Draft Environmental Impact  
Report**

**March 14, 2024, SCH No. 2021070359**

**Approved May 14, 2024, by the UCPG**

**Submitted to the City of San Diego May 15, 2022**

P 33. S4.2 (Alternative 2)

S.4.2 "Alternative 2" for the University Community is for INCREASED density and development above and beyond that recommended in the Draft Plan and is made without any specificity as to the visual impacts of that alternative, other than by virtue of comparison of square feet of commercial development and residential units. Its impact cannot be evaluated without specificity as to the development changes planned in the Alternative. With the additional development and increase in density/population put forth in Alternative 2 come additional adverse environmental impacts. The City's draft plan proposes 40,582,000sq ft of additional non-residential building in the University CPU (as opposed to Alternative 2 which proposes 46,582,000) and 30,480 new homes (as opposed to Alternative 2 which proposes 56,480). See DEIR p. S-6 and 3-50. ***The DEIR should explain how the conclusions for Alternative 2 were made without detailed analysis of that Alternative and specifically why the Community Discussion Draft's Community Scenario was not analyzed as an EIR Alternative. The DEIR should explain the criteria used to decide which Alternatives in the DEIR were analyzed.***

O15-2

The UC Draft Plan and the DEIR fail to consider the fact that approximately 11,000 new "beds" have been built to house UCSD students on campus since the plan update process began more than 5 years ago and the pending Revision to the 2018 UC San Diego Long Range Development Plan, extending through 2040, will create 5,500 additional student beds with 3 projects. ***UCSD's housing development and anticipated future development needs to be analyzed for in the DEIR for its impact on the community.***

O15-3

Additionally, the DEIR fails to consider any alternative with lesser development intensity or to set forth different developmental components which would minimize environmental impacts. Such alternative development and plan alternatives were recommended to the City by UCPG subcommittee in its proposed changes to the draft plan dated July 11, 2023, many of which the City failed to incorporate in the currently pending Draft Plan of March 2024. ***The DEIR should explain the criteria used in the selection of Alternatives to be analyzed.***

O15-4

Furthermore, the University Community is an already densely developed area in both the commercial and residential context. UCPG questions the need for the housing density set forth in the updated plan. In its grant proposal to SANDAG to undertake the plan update, the City projected the need for 10,000-30,000 new residential units. the Draft plan now envisions doubling the current population with 65,360 new residents. However, the SANDAG Series 15 forecast projected a TOTAL of 65,345 new residents in all of San Diego by 2050. Incredibly, the City's Draft Plan for UC houses the number (Per SANDAG) of **ALL new residents predicted to move to San Diego by 2050** in the University community. See SANDAG Series 15 Forecast. <https://www.sandag.org/-/media/SANDAG/Documents/PDF/data-and-research/socioeconomics/estimates-and-forecasts/sr-15-infobits-2024-04-01.pdf>

O15-5

Nowhere in the DEIR is the actual or projected need for the extent of stated development density proposed by the draft plan addressed or evaluated. In fact, With less development and less population the environmental impacts decrease.

O15-5  
cont.

P 36. S.5 (Aesthetics issue 1)

The University community has some of San Diego's largest areas of open, protected space and sensitive MHPA habitat. Its preservation and protection are both essential to the lifestyle in the community, and its draw to both residents and occupiers of commercial spaces, as well as mandated by law. The UCPG is concerned with construction of multiple story structures adjacent to canyons and open space without adequate setbacks or building transition line slopes. and open space is problematic for several reasons, only one of which is aesthetics. Such construction both blocks the scenic views/vistas of adjacent properties and cross-canyon neighbors, and it also destroys the natural beauty/views/vistas from within the open space and canyons. The significance can be mitigated in part with appropriate design measures as recommended by the UCPG: 30-foot setbacks with 45-degree transition plane angles. ***The DEIR should analyze the impacts of these two key parameters, setbacks and transition plane angles in building design on the environment of adjacent canyons and open space.***

O15-6

P 37. S.5 (Aesthetics issue 3/4)

The University community has some of San Diego's largest areas of open, protected space and sensitive MHPA habitat. Its preservation and protection is both essential to the lifestyle in the community, and its draw to both residents and occupiers of commercial spaces, as well as mandated by law. The UCPG is concerned with construction of multiple story structures adjacent to canyon and open space is problematic for several reason only one of which is aesthetics. Such construction both blocks the scenic views/vistas of adjacent properties and cross-canyon neighbors, and it also destroys the natural beauty/views/vistas from within the open space and canyons. The significance can be mitigated in part with appropriate design measures as recommended by the UCPG, see above Aesthetics issue 1.

O15-7

P 37. S.5 (Aesthetics issue 5)

The University community has some of San Diego's largest areas of open, protected space and sensitive MHPA habitat. Its preservation and protection are both essential to the lifestyle in the community, and its draw to both residents and occupiers of commercial spaces, as well as mandated by law. The UCPG is concerned with construction of multiple story structures adjacent to canyon and open space is problematic for several reason only one of which is aesthetics. Much more than an issue of aesthetics, it is an issue of survival for the habitat and endangers the continued existence of wildlife in these protected areas. Light and glare from both exterior and interior lighting from buildings adjacent to open/canyon space has a detrimentally impacts the wildlife as do windows which provide glare resulting in bird strikes. The significance can be mitigated in part with appropriate design measures as recommended by the UCPG, see above Aesthetics issue 1.

O15-8

P 38. S-4 4.3 (biological resources issue 1, 3, 4, 5)

The University community has some of San Diego's largest areas of open, protected space and sensitive MHPA habitat and its preservation and protection are both essential to the lifestyle in the community, and its draw to both residents and occupiers of commercial spaces., as well as mandated by law. The UCPG is concerned with construction of multiple story structures adjacent to canyon and open space is problematic for several reason only one of which is light and glare from both exterior and interior lighting from buildings adjacent to open/canyon space which has a detrimentally impacts the wildlife as do windows which provide glare resulting in bird strikes. Access from one area of open space to another (i.e. wildlife corridors another is also key to the survival of wildlife. The significance can be mitigated in part with appropriate design measures as recommended by the UCPG: 30-foot setbacks with 45-degree transition plane angles. ***The DEIR should analyze the impacts of these two key parameters, setbacks and transition plane angles, in building design on the biological resources (wildlife, shading) of adjacent canyons and open space.***

O15-9

P 44. S.5 - 4.7 (greenhouse gases issue 1 & 2)

The studies considered with respect to traffic data in support of the DEIR and Draft Plan are almost 10 years old and do not include conditions at high use times, nor on major thoroughfares. Without this information, complete analysis of climate effects is inadequately considered. The City's proposed Plan for UC needs to address this issue and the DEIR should explain the use of past data to project likely future impacts to its climate analysis.

O15-10

Additionally, nowhere in the UC Draft Plan is there an assessment of the likely effect of our area's rapid movement toward alternative fuel vehicles, nor the infrastructure to support residential needs for powering such vehicles with a doubling of the population in the University area. The DEIR should explain how it projects the use of alternative fueled vehicles in its climate analyses.

O15-11

***The DEIR should study the transit propensity of projected residents to determine if transit will meet its goals under the climate action plan. Further, the DEIR should study the impact of many fewer residents than projected on meeting the CAP goals.***

O15-12

P 51. S.5 – 4.12 Public Services (Issue 1)

The DEIR fails to address the total lack of additional schools in the University Community. Additional pre-school, primary and secondary schools are imperative in an area which seeks to double its residential population. Not only does the City not have land within the community on which to build additional schools but there is no infrastructure/financial plan to begin even discussing such required development. As such the lack of plans for additional schooling makes is a substantial detraction from neighborhood "livability" particularly for families residing in the area. Specific plans to mitigate this significant impact need to be developed and addressed in the DEIR.

O15-13

P 53. S.5 – 4.1 (recreation (issue 1))

The Draft Plan accounts for doubling the residential population in the University Community but lacks the ability meet that demand with adequate parks and recreational opportunities. By the City’s own calculation there is a substantial park and recreation deficit in the University community and no city property to rectify the problem. At build out, there will be a deficit of 4,100 points, the equivalent of a lack of Parks for 41,000 persons according to the Park Master Plan. Additionally, parks need to be located where people live, not in remote areas that require a car or transit ride to reach them. The DEIR also notes a need for a total of 5.7 recreational centers and 2.8 aquatic complex to meet the City standards, acknowledges that the City lacks property on which to construct such facilities or resolve the deficit. These deficits contribute to making the University Community a less “livable” section of the City. ***The DEKR should analyze the effects of a substantial park deficit, and specifically the need to analyze the specific environmental impacts to the MPHA of improper use of this land in place of missing recreational opportunities in parks.***

O15-14

P 55. S.5 – 4.14 (transportation)

The studies considered with respect to traffic data in support of the DEIR and Draft Plan are almost 10 years old and do not include conditions at high use times, nor on major thoroughfares. ***The DEIR should explain how the use of out-of-date traffic study data leads to accurate conclusions for current and future conditions.***

O15-15

P 60. S.5 – 4.18 Wildfire

Doubling the population density within the already dense University community increases wildfire risk. Permitting the construction, particularly of multi-story buildings adjacent to canyon rims and/or open spaces increases wildfire risk. The proposed City plan and the DEIR examine only issues arising after a wildfire occurs. Both fail to create realistic fire PREVENTION measures in our brush exposures including mitigation by the City, on City property, requiring hardening of exteriors of structures, and/or setback requirements and other exterior fire protective measures which should be required to mitigate some of the risk in the event of a wildfire. ***The DEIR needs to address and include specific and adequate fire protective measures.***

O15-16

P 90. 3.2.1.4

With respect to affordable housing, the draft plan anticipates the only financially feasible new housing construction will be in the higher range of "afford ability", of 81% of AMI or better. See Keyser Marston Associates Inc. March 2024 study for the City of San Diego,

O15-17

The draft plan does not study, nor address the displacement of numerous lower income households currently residing in the plan area, which housing is slated for demolition/re-development and replacement with residential units available requiring a considerably higher income. ***The UCPG Plan update subcommittee specifically requested anti-displacement***

O15-18

**measures for this group of current residents but such was not incorporated in the proposed plan nor considered in the DEIR. The DEIR should explain why this part of the housing element is omitted.**

**O15-18  
cont.**

Thus, people in the extreme low, very low- and low-income groups are essentially precluded from finding affordable homes in the University Community. It is people in those levels (individually and/or their families) who fill many of the lower paid jobs in the commercial and retail sector.... including biotech, life sciences and university jobs, who are and will be precluded from finding affordable housing in the university community.

Of the housing production needed in ALL of San Diego, according to the chart at 3.2.1.4, of the total of 63,156 new housing units needed above 81% of AMI. The city is apparently looking to place a disproportionate, almost 50% of those higher priced units (i.e. 30,480 new residential units per the draft plan) in the University community, rather than elsewhere in the City. That solution is inequitable. Not only will this elimination of lower priced housing in the UC community destroy the economic diversity of the area, but it will also have a significant NEGATIVE impact on one of the other goals of the draft plan (and which is critical to the city's infrastructure planning) .... which is to increase transit ridership and particularly use of the Blue Line Trolley. Higher income households are NOT those who typically ride public transit. More typical transit riders will be priced out of the University Community.

**O15-19**

UCPG's proposals for creating affordable housing at all levels of income within the university community; avoiding displacement of lower income households; and requiring lower income units to be provided by developers on site have not been included in the plan nor considered in the DEIR and should be.

**O15-20**

P 92. 3.3

CEQA guideline section 15124(b)(1) requires:

The description of the project shall contain the following information but should not supply extensive detail beyond that needed for evaluation and review of the environmental impact..... "(b) A statement of the objectives sought by the proposed project. A clearly written statement of objectives will help the lead agency develop a reasonable range of alternatives to evaluate in the EIR and will aid the decision makers in preparing findings or a statement of overriding considerations, if necessary. The statement of objectives should include the underlying purpose of the project and may discuss the project benefits."

**O15-21**

As further discussed, several of the objectives/goals are not adequately considered in the Draft Plan for University. Those were specifically requested in UCPG plan update's recommendations for inclusion in the plan but were not included. Therefore, they have not been considered in the DEIR although they need to be addressed.

Services and amenities, such as retail and amenities near new residential development need to be required as they are in direct competition for commercial space with biotech and life sciences development.

O15-22

There is a substantial deficit (lack of such for 41,000 persons) in parks and recreational facilities available NEAR anticipated dense residential development that is planned, and no means to create such due to the lack of City property to construct such. This needs to be remedied

O15-23

-As discussed in response to DEIR section 3.2.1.4, the Draft Plan does not provide for" housing of all types and for all income levels in a manner that affirmatively furthers fair housing." To the contrary, the Draft Plan is inequitable. Additionally, the City's specific objective of "increasing affordable housing near biotech jobs and UCSD to retain talent with the City and prevent employees and students from leaving the community due to high housing costs" also fails other than for those with high paying jobs. ***The DEIR should explain how the impact of expected housing types projected in the Draft UC Plan may affect its analyses and conclusions (CAP, Mode Share, and transit use).***

O15-24

P 136. 3.5.3

The housing contemplated by the UC Draft Plan in the University Community is that for income levels above 81% AMI. For the most part, it is not people at those incomes who are likely riders on the Blue Line or other transit. The more likely transit riders are those who will be priced out of the housing market in the University community. ***The DEIR should analyze the impact on transit projections of the household income distribution it expects in the plan area.***

O15-25

P 136. 3.5.3. (Table 3-4)

This table demonstrates the deficiencies in the proposed UC Draft Plan with respect to education and recreation which need to be remedied. Although the Draft Plan adds 30,480 residential units there is ZERO increased development area proposed for new schools or recreation. Of equal concern is the fact that the city has no land within the University Community available for such construction. Doubling the residential community without also providing for development of schools and recreation facilities is shortsighted at best. ***The DEIR should analyze the environmental impacts of adding population without identifying additional, adequate, school locations.***

O15-26

P 137. 5.3 (Table 3-5) (Residential build out)

The UC Draft Plan and the DEIR fail to consider the fact that approximately 11,000 new "beds" have been built to house UCSD students on campus since the plan update process began more than 5 years ago and the pending Revision to the 2018 UC San Diego Long Range Development Plan, extending through 2040, will create 5,500 additional student beds with 3 projects. ***UCSD's housing development and anticipated future development needs to be analyzed in both the City's Plan for UC and in the DEIR.***

O15-27

Additionally, the DEIR fails to consider any alternative with lesser development density or to set forth different developmental components which would minimize environmental impacts. Such alternative development and plan alternatives were recommended to the City by UCPG subcommittee in its proposed changes to the draft plan dated July 11, 2023, many of which the City failed to incorporate in the currently pending Draft Plan of March 2024. The DEIR should explain why the Community Alternative Plan (Community Discussion Draft of the UC Plan, April 2023), was not analyzed as one of the Alternatives in the DEIR.

O15-28

Furthermore, the University Community is an already densely developed area in both the commercial and residential context. UCPG questions the need for the housing density set forth in the updated plan. In its grant proposal to SANDAG to undertake the plan update, the City projected the need for 10,000-30,000 new residential units. The Draft plan now envisions doubling the current population with 65,360 new residents. However, the SANDAG Series 15 forecast projected a TOTAL of 65,345 new residents in all of San Diego by 2050. Incredibly, the City's Draft Plan for UC houses the number (Per SANDAG) of ALL new residents predicted to move to San Diego by 2050 in the University community. See SANDAG Series 15 Forecast. The DEIR should explain how, environmentally, the higher-density dependent Alternatives studied would perform if only a fraction of the density is achieved under the new plan.

O15-29

<https://www.sandag.org/-/media/SANDAG/Documents/PDF/data-and-research/socioeconomics/estimates-and-forecasts/sr-15-infobits-2024-04-01.pdf>

P 139. 3.5.3.1 (vision and land use framework)

O15-30

See response to 3.2.1.4 on deficits in housing plan.

P 139. 3.5.3.1

O15-31

See response to 3.2.1.4 on deficits in housing plan.

P 139. 3.5.3.1

The Draft Plan fails to require replacement or expansion of established shopping with grocery chains, or to add new shopping centers to accommodate doubling the community population, or to provide for smaller commercial service businesses in the community which cannot afford increased rents with new development (i.e. cleaners, drug stores, single practitioner medical services, nail salons, etc.). Retail spaces are left to compete for space with high end residential and with ever expanding biotech and life science developments. ***The DEIR should analyze the environmental effects of possible diminution of retail space in key locations in the plan area.***

O15-32

P 139. 3.5.3.1

See response to 3.2.1.4

O15-33

P 140. 3.5.3.1 (affordable homes requirement)

O15-34

See 3.2.1.4

O15-34  
cont.

P 141. 3.5.3.1 (Urban Design)

Newly constructed or renovated office parks need to provide publicly accessible trails, paths, and outlooks on their property, not just “access to” or “connections with” open space land.

O15-35

P 149. 3.5.3.1 (parks and recreation)

The Draft Plan accounts for doubling the residential population in the University Community but lacks the ability meet that demand with adequate parks and recreational opportunities. By the City's own calculation there is a substantial park and recreation deficit in the University community and no city property to rectify the problem. At build out, there will be a deficit of 4,100 points, the equivalent of a lack of Parks for 41,000 persons. Additionally, parks need to be located where people live, not in remote areas that require a car or transit ride to reach them. The DEIR also notes a need for a total of 5.7 recreational centers and 2.8 aquatic complex to meet the City standards, acknowledges that the City lacks property on which to construct such facilities or resolve the deficit. ***The DEIR should analyze the impacts of Parks deficits on the plan area's significant MHPA assets; when there are inadequate Park facilities, people may (over)use Open Space parks with significant passive recreation restrictions.***

O15-36

P 156. 3.5.1.3g.(Public Facilities, Services, Safety)

The DEIR fails to address the total lack of additional schools in the University Community. Additional pre-school, primary and secondary schools are imperative in an area which seeks to double its residential population. Not only does the City not have land within the community on which to build additional schools but there is no infrastructure/financial plan to begin even discussing such required development. As such the lack of plans for additional schooling makes is a substantial detraction from neighborhood "livability" particularly for families residing in the area. The UC Plan needs to provide a clear plan for financing and implementation to assure that proposed infrastructure can be paid for and implemented as a whole (not merely block by block). ***The DEIR should analyze the environmental impacts of an increasing population without identifying additional school locations, particularly on traffic due to more students without a local school.***

O15-37

Additionally, throughout the plan, and particularly with respect to issues of infrastructure, public buildings, parks, and public services there is a complete lack of any consideration of what public funding will be required or available to implement the plan. Whereas much of the existing infrastructure and public improvements in University Community were paid for by fees charged to the initial developers in University, the Draft plan now anticipates that the residential and commercial development will DOUBLE without any assurance (and in fact, plans to the contrary) that the developer fees will be used for infrastructure, public buildings and/or services within the UC community. The UC Plan should provide a clear plan for financing and implementation to assure that proposed infrastructure can be paid for and implemented as a

O15-38

whole (not merely block by block). ***The DEIR should analyze the environmental effects of development without associated infrastructure in a worst-case scenario.***

**O15-38**  
**cont.**

**O15: Responses to the University Community Planning Group Comment Letter**

**O15-1:** The comment introduces the attached comments on the Draft Program Environmental Impact Report (PEIR). Comment noted.

**O15-2:** The increase in density associated with the High Density Alternative was assessed in comparison to the project in Section 8.2.1 of the PEIR. The summary of how this alternative compares to the proposed project is discussed in Section 8.2.3. All impact conclusions of this alternative would be the same as the project; however, the less than significant impacts related to greenhouse gas (GHG) emissions and energy would be reduced slightly under this alternative. The significant impacts related to transportation would remain significant under this alternative but would be slightly reduced because of the overall reduced regional vehicle miles traveled (VMT). The significant impacts related to air quality, noise, and aesthetics would remain significant under this alternative, but would increase slightly. The level of analysis for all of the alternatives in Chapter 8 of the PEIR is an appropriate level of analysis because the objective of the alternatives section is to provide public agencies with a range of feasible alternatives, so that they may compare the potential significant impacts of the proposed project with those of the alternative projects. Pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15126.6(d), the analysis should include a comparison of the alternative's potential impacts with those of the proposed project, but the analysis does not need to include an assessment at the same level of detail as that of the proposed project.

An analysis of the University Community Planning Group's Community Preferred Alternative has been incorporated into the Reduced Density Alternative in the Final PEIR. For a discussion on how the Community Preferred Alternative has been added to the Final PEIR, see response to comment O13-5 under comment letter O13.

**O15-3:** The University of California, San Diego's (UCSD's) Long Range Development Plan (LRDP) for the La Jolla Campus is not a part of this project as the Regents of the University of California has its own land use jurisdiction over its property and thus, is not within the jurisdiction of the City. The Regents of the University of California was the "lead agency" for the 2018 LRDP and prepared a Final EIR (SCH No. 2016111019) and approved the 2018 LRDP. However, the cumulative impacts of the proposed University CPU are discussed throughout the PEIR in individual topic sections.

**O15-4:** An analysis of the University Community Planning Group's Community Preferred Alternative has been incorporated into the Reduced Density Alternative in the Final PEIR. For a discussion on how the Community Preferred Alternative has been added to the Final PEIR, see response to comment O13-5 under comment letter O13.

**O15-5:** The Regional Forecast relies on the land use plans include community plans prepared by jurisdictions when determining the capacity for total jobs and housing. The Regional Forecast does not forecast more housing construction beyond the total amount of homes that can be built under the currently adopted community plan.

Development of the University CPU was informed by a variety of factors, including but not limited to, the Blueprint SD Initiative's Village Climate Goal Propensity Map, and the City's General Plan including housing goals and Regional Housing Needs Allocation (RHNA) in the Housing Element. The

RHNA housing targets are determined by the California Department of Housing and Community Development (HCD). As described in Section 3.2.1.4 of the PEIR, the City's target for the 2021-2029 Housing Element cycle is 108,036 housing units. These housing units must be produced in a number of income categories defined by the percentage of the area median income (AMI). The City is tasked with achieving housing production by income group as follows:

- 12,380 housing units in the Extremely Low-Income category (0-30 percent of AMI)
- 15,169 housing units in the Very Low-Income category (31-50 percent of AMI)
- 17,331 housing units in the Low-Income category (51-80 percent of AMI)
- 19,319 housing units in the Moderate-Income category (81-120 percent of AMI)
- 43,837 housing units in the Above Moderate Income category ( >121 percent of AMI)

As discussed in Section 3.5.3 of the PEIR and analyzed throughout the PEIR, buildout of the University CPU would allow for an increase of approximately 29,000 dwelling units over the adopted University Community Plan and approximately 30,480 dwelling units over existing conditions. The University CPU would help the City work towards meeting existing housing demands and achieving its RHNA targets in the Housing Element, as mandated by the State, by increasing development capacity within the CPU area through policies, rezoning, and other measures in the University CPU, in order to meet the City's housing needs as addressed in the Housing Element.

It is important to note two things. First, SANDAG regional growth forecasts relate to homes needed to address a future population, which is related but different from current housing needs which is the result of under production of homes. Second, the proposed increase in development capacity does not directly equate to the number of new homes that will actually be constructed during the life of the community plan as future housing construction is dependent on additional factors beyond the CPU associated with infill development, such as overall economic conditions, private property owner decisions, market demand, interest rates, labor and materials supply, and availability of financing. Therefore, to plan for the City's housing needs, maximizing residential capacity is critical. The proposed University CPU would also help the City address its housing needs in a way that will meet citywide goals in the City's General Plan and Climate Action Plan (CAP). See Chapter 8 of the PEIR for an analysis of potential alternatives to the project.

**O15-6:** Potential aesthetic impacts are discussed in Section 4.1.4 of the Draft PEIR. As described in the analysis, the University CPU includes policies which encourage future development to consider scenic views within the community in their project design. This includes, but is not limited to, policy 2.7F, which calls on development to consider views into and from sloping areas; policy 2.9D, which encourages maximizing views from the development to open spaces by orienting the building to the open space, and by locating common amenity areas adjacent to the public open space; and policy 5.13B, which calls for preserving the scenic qualities of the surrounding coastal and canyon viewshed areas within scenic overlooks in Rose Canyon, San Clemente Canyon, Sorrento Valley, Roselle Canyon, and the canyon area between Campus Point Drive and Towne Centre Drive.

Potential impacts to public scenic vistas would additionally be minimized through required compliance with the existing regulatory framework and the University CPU's proposed Supplemental Development Regulations (SDRs) which address building transitions and setbacks (SDRs-B.1 and C.1). Additionally, aesthetic impacts of infill projects in transit priority areas (TPA) shall not be considered significant per Section 21099(d)(1) of the California Public Resources Code. However, as

discussed in the Draft PEIR, not all future projects would be within a TPA. Therefore, in those instances, potential aesthetic impacts associated with the CPU are considered to be significant.

See also response to comment A3-5 under comment letter A3 for a discussion of how the proposed project, and future development projects, would be required to comply with the development and encroachment restrictions of the City's Multiple Species Conservation Program (MSCP) Subarea Plan (SAP) and Vernal Pool Habitat Conservation Plan (VPHCP).

**O15-7:** See response to Comment O15-6. See also response to comment A3-5 under comment letter A3 for a discussion of how the proposed project, and future development projects, would be required to comply with the development and encroachment restrictions of the City's MSCP SAP and VPHCP.

**O15-8:** Light and glare impacts are discussed in Section 4.1.4, Issue 5, of the PEIR. As described in this section, future development would be required to comply with the applicable outdoor lighting regulations of the SDMC (Section 142.0740 et seq.), which would require development to minimize negative impacts from light pollution including light trespass, glare, and urban sky glow. Compliance with these regulations would preserve enjoyment of the night sky and minimize conflict caused by unnecessary illumination. New outdoor lighting fixtures would also be required to minimize light trespass in accordance with the California Green Building Standards Code, where applicable, or otherwise would be required to direct, shield, and control light to keep it from falling onto surrounding properties.

Future development associated with the project would also be required to comply with SDMC Section 142.0730 to limit the amount of reflective material on the exterior of a building that has a light reflectivity factor greater than 30 percent to a maximum of 50 percent. Additionally, per SDMC Section 142.0730(b), reflective building materials are not permitted where it is determined that their use would contribute to potential traffic hazards, diminish the quality of riparian habitat, or reduce enjoyment of public open space. Therefore, through regulatory compliance, the project would not create substantial light or glare that would adversely affect daytime or nighttime views in the area, and impacts would be less than significant.

Additionally, future development adjacent to the City's Multi-Habitat Planning Area (MHPA) would be required to conform to the City's MSCP SAP's MHPA Land Use Adjacency Guidelines and demonstrate how lighting associated with the development would not adversely affect the MHPA through shielding and other appropriate measures.

**O15-9:** See response to comment A3-5 under comment letter A3 for a discussion of how the proposed project, and future development projects, would be required to comply with the development and encroachment restrictions of the City's MSCP SAP and VPHCP. The University CPU does not propose any future increases in development capacity within its open space areas and includes policies which encourage the preservation of identified wildlife corridors in order to reduce habitat fragmentation between canyons by requiring conformance with the MSCP guidelines such as restricted development, buffers, landscaping, and barriers (policy 5.6E).

See response to comment O15-8 for a discussion of lighting impacts in the University CPU area.

**O15-10:** See response to comment O13-2 under comment letter O13.

**O15-11:** The City assesses the significance of potential GHG impacts by determining whether the project or plan conflicts with the City's Climate Action Plan (CAP). Pursuant to the City Planning Department's June 17, 2022 memorandum, Climate Action Plan Consistency for Plan- and Policy-Level Environmental Documents and Infrastructure Projects, the environmental analysis for plan- and policy-level documents (such as the Blueprint SD Initiative, University CPU and Hilcrest Focused Plan Amendment [FPA]) should address the ways in which the plan or policy is consistent with the goals and policies of the General Plan and CAP. As detailed in Section 4.7.4, Issue 2, of the PEIR, implementation of the project would be consistent with the applicable plans, policies, and regulations adopted for the purpose of reducing GHG emissions.

The City's Climate Action Plan (CAP) includes strategies for increasing the use of electric vehicles. See the discussion of these strategies in Section 4.7.4, Issue 2(d), of the PEIR. The University CPU would further achieve the strategies and goals of the CAP through the inclusion of policies which encourage the implementation or accommodation of infrastructure for electric vehicles including vehicle charging stations as part of residential, commercial, and institutional uses, and infrastructure development projects based on future demand and changes in technology (policy 3.7.a).

**O15-12:** See response to comment O15-11 for a discussion of the GHG analysis for the University CPU. The comment does not raise an issue related to the adequacy of the analysis in the PEIR. No further response is required.

**O15-13:** See response to comment O13-4 under comment letter O13.

**O15-14:** Potential impacts to recreational facilities are discussed in Section 4.13 of the PEIR. As described in Section 4.13.4, Issues 1 and 2, of the PEIR, implementation of the University CPU would require additional recreational facilities to serve the projected buildout, and impacts related to the potential increased use and associated physical deterioration of existing recreational facilities, as well as the construction of new and/or expansion of existing recreational facilities was determined to be significant at a programmatic level of analysis. As future development is proposed, individual private developments would be required to either pay citywide park Development Impact Fees or provide public parks consistent with SDMC Section 142.0640(b)(8)(A-F), as detailed in Section 4.13.2.2c. Additionally, future development within the University CPU - Community Plan Implementation Overlay Zone (CPIOZ) - Type A would be required to provide public spaces which could include recreational amenities such as a play area or a sports court with lighting (SDR-A.1) or pay a public space in-lieu fee (SDR-A.5). The University CPU also includes policies that call for the provision of parks that meet the parks standard identified in the Parks Master Plan by strategically identifying additional park and recreation opportunities as the community grows.

The environmental impact remains significant as it is unknown at this programmatic level of analysis where these future improvements would be located, the type and extent of the impacts resulting from providing these facilities, and to what extent these future facilities would be able to accommodate increases in demand for recreational facilities. Through initiatives, such as implementing the City's Parks Master Plan adopted in 2021, the City is actively seeking opportunities to sustain, connect, and expand its parks and recreational opportunities throughout the City. The University CPU also includes policies which promote the development of recreational facilities

throughout the community, such as policy 4.1C which calls for establishing an integrated public realm framework of connected sidewalks, urban pathways, trails, paseos, plazas, connections at multimodal mobility hubs, and parks like linear and pocket parks; and policy 4.1D which encourages the incorporation of publicly accessible recreation in plazas, paseos, and pocket parks within village areas, including residential, mixed-use, and employment areas on sites with visual and physical access from one or more public right-of-way frontages.

See Section 4.3 of the PEIR for a discussion of potential impacts to biological resources including the City's MHPA.

**O15-15:** See response to comment O13-2 under comment letter O13.

**O15-16:** See Section 4.18.2.3 of the Draft PEIR for a discussion of the regulations that apply to preventing wildfires through building construction, enforcement programs, brush management, etc. The Brush Management Regulations (SDMC Section 142.0412) contain information about building setbacks, including those for buildings near environmentally sensitive land uses, and the California Building Code, which is implemented in the San Diego Building Regulations (SDMC Chapter 14, Article 5, Division 1), contains restrictions on building materials in fire zones. Section 4.18.2.3 also includes a list of the General Plan policies that pertain to the prevention of wildfire, and the impact analysis under Section 4.18.4, Issue 1, of the PEIR, lists the University CPU policies that pertain to the prevention of wildfire risk.

As described in the analysis in Section 4.18.4, Issue 1, all future development that would occur under the project would be required to comply with the City's Fire Code, Building Regulations, and Brush Management Regulations aimed at ensuring the protection of people or structures from potential wildland fire hazards. While implementation of the City's regulatory framework at the project level would typically be sufficient to reduce potentially significant wildfire impacts, at a program level of review and in the absence of project-specific development plans, impacts would be significant for purposes of the CEQA analysis.

**O15-17:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O15-18:** The University CPU is a long-range land use plan which would increase the capacity for homes and jobs within the community plan area, but does not specify the location of nor how many housing units would be developed for each income level. Calculating the amount of housing that would be developed for each income level would be highly speculative as it would require knowledge of specific development projects in specific locations which are not and cannot be known or identified at this time. The University CPU includes policies which support the development of housing affordable to all income levels including, but not limited to, policy 1.2C which calls for facilitating the development of homes that are affordable to a range of household income levels, sizes, and tenure patterns, including families, employees, and students; and policy 1.2I which promotes the provision of additional affordable housing through new development within the University Community above the citywide requirement. The University CPU also includes SDR-J.1 which addresses housing equity and affordability by requiring that development within the University CPU CPIOZ – Type A area that includes a residential use shall satisfy the City's Inclusionary Affordable Housing Regulations (SDMC Chapter 14, Article 2, Division 13) through either the

provision of on-site affordable dwelling units or off-site affordable units within a Sustainable Development Area within the University CPU area or shall be required to pay the Inclusionary Affordable Housing In-Lieu Fee. Please also refer to SDMC Chapter 14, Article 3, Division 12 related to Dwelling Unit Protection Regulations which require replacement of dwelling units and protected dwelling units for residential development.

Furthermore, CEQA Guidelines Section 15064(e) states that “[e]conomic and social changes resulting from a project shall not be treated as significant effects on the environment. Economic or social changes may be used, however, to determine that a physical change shall be regarded as a significant effect on the environment. Where a physical change is caused by economic or social effects of a project, the physical change may be regarded as a significant effect in the same manner as any other physical change resulting from the project. Alternatively, economic and social effects of a physical change may be used to determine that the physical change is a significant effect on the environment. If the physical change causes adverse economic or social effects on people, those adverse effects may be used as a factor in determining whether the physical change is significant. For example, if a project would cause overcrowding of a public facility and the overcrowding causes an adverse effect on people, the overcrowding would be regarded as a significant effect.”

In the absence of substantial evidence predicated upon facts, there is no evidence that the project would result in displacement of low-income persons, resulting in physical impacts on the environment. The City has numerous plans, policies, and programs to support the development of very-low-, low-, and medium-income housing and continues to implement these plans, policies, and programs to increase housing equity and affordability throughout the City.

**O15-19:** See responses to comments O15-5 and O15-18. There is no evidence to support that all of the proposed units would be developed for households with an income level of 81 percent of AMI or higher. The City has numerous plans, policies, and programs to support the development of very-low-, low-, and medium-income housing and continues to implement these plans, policies, and programs to increase housing equity and affordability throughout the City. The comment about transit ridership is noted. The comment does not raise an issue related to the adequacy of the analysis in the PEIR.

**O15-20:** See response to comments O15-18 and O15-19. Comment noted.

**O15-21:** Comment noted. See Section 3.3 of the PEIR for a discussion of the project objectives.

**O15-22:** Comment noted. The proposed Urban Village and Community Village land uses would allow and encourage a mix of retail and residential land uses. Both Urban Villages and Urban Flex Villages would allow employment uses including scientific research uses. The Scientific Research land use designation would be used for biotechnology and life sciences development. The comment does not raise an issue related to the adequacy of the analysis in the PEIR.

**O15-23:** Comment noted. See response to comment O15-14.

**O15-24:** See response to comment O15-18. At the program level, the expected quantities of the various ranges of housing that could be provided based on the AMI rate is unknown at this time and

would be highly speculative as it would require knowledge of specific projects in specific locations which are not and cannot be known or identified. The City designations land uses as part of the community plan update process which are implemented by zoning and development regulations in the SDMC. Community plans land use designations and the associated zoning allow for housing, but do not specify the level of affordability. Community plans land use designations and the associated zoning do not exclusively identify areas for affordable housing. Likewise, the CEQA analysis looks at the land uses – residential and non-residential – to determine impacts.

The project's consistency with the City's CAP is discussed in Section 4.7.4, Issue 2, of the PEIR. As discussed in this section, the project is consistent with the City's CAP and would support the City's CAP goals, including its mode share and public transit ridership goals as it would focus future development near transit to support shifts in mode share and to encourage the use of alternative transportation modes.

**O15-25:** See response to comment O15-24

**O15-26:** Potential impacts to parks and recreational facilities are discussed in Section 4.13.4, Issues 1 and 2, and potential impacts to school facilities are discussed in Section 4.12.4, Issue 1 (c) of the Draft PEIR. See response to comment O15-14 for a discussion of park- and recreation-related impacts and response to comment O13-4 under comment letter O13 for a discussion of school-related impacts.

**O15-27:** See response to comment O15-3.

**O15-28:** An analysis of the University Community Planning Group's Community Preferred Alternative has been incorporated into the Reduced Density Alternative in the Final PEIR. See Chapter 8.0 of the PEIR for a discussion of how the various alternatives, including the Higher Density Alternative, see response to comment O13-5 under comment letter O13.

**O15-29:** See response to comment O15-5.

See Chapter 8.0 of the PEIR for a discussion of how the various alternatives, including the Higher Density Alternative and the Reduced Density Alternative, compare as it relates to the significance of potential impacts.

**O15-30:** See response to comments O15-5, O15-18, and O15-24.

**O15-31:** See response to comments O15-5, O15-18, and O15-24.

**O15-32:** The proposed University CPU would allow up to an additional approximately 16,875,000 square feet of office commercial, approximately 4,282,000 square feet of retail commercial, and approximately 1,364,000 square feet of visitor commercial space. Depending on the land use designation and zoning, these spaces could accommodate grocery stores or other community and neighborhood serving commercial businesses such as pharmacies and restaurants. As described in response to comment O15-22, the biotechnology and life science businesses would be allowed under the Scientific Research and Light Industrial land use areas. Additionally, the University CPU

contains policies to “encourage the inclusion of grocery uses as a part of commercial and mixed use development . . .” (policy 1.6B) and an SDR to maintain space for grocery uses (SDR-H.1).

Furthermore, CEQA Guidelines Section 15064(e) states that “[e]conomic and social changes resulting from a project shall not be treated as significant effects on the environment. Economic or social changes may be used, however, to determine that a physical change shall be regarded as a significant effect on the environment. Where a physical change is caused by economic or social effects of a project, the physical change may be regarded as a significant effect in the same manner as any other physical change resulting from the project. Alternatively, economic and social effects of a physical change may be used to determine that the physical change is a significant effect on the environment. If the physical change causes adverse economic or social effects on people, those adverse effects may be used as a factor in determining whether the physical change is significant. For example, if a project would cause overcrowding of a public facility and the overcrowding causes an adverse effect on people, the overcrowding would be regarded as a significant effect.”

**O15-33:** See response to comments O15-5, O15-18, and O15-24.

**O15-34:** See response to comments O15-5, O15-18, and O15-24.

**O15-35:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR.

**O15-36:** See response to comment O15-14 for a discussion of the proposed project’s potential impacts on parks and recreational facilities. Regarding the potential impacts to the MHPA, see response to comment A3-5 under comment letter A3. The areas designated as part of the City’s MHPA would be subject to the requirements of the City’s MSCP SAP and VPHCP. Additionally, as future development occurs, the City’s MSCP SAP’s MHPA Land Use Adjacency Guidelines would be addressed on a project-by-project basis to minimize direct and indirect impacts and to maintain the function of the MHPA.

**O15-37:** See response to comment O13-4 under comment letter O13 for a discussion of school-related impacts.

**O15-38:** The PEIR identifies significant impacts related to public services, recreation, and utilities and service systems. At the program level of analysis without project-specific details, the specific impacts and the extent of impacts related to the development of infrastructure cannot be assessed because the size, type, and location of these projects is not known at this time. Future public service and infrastructure projects would be required to comply with regulations in existence at the time which would reduce potential environmental impacts and would undergo project-specific environmental review, at which time environmental impacts would be identified and addressed.

See response to comment I13-3 under comment letter I13 in regard to the concern about funding future public service and infrastructure development projects.

Re: Comment on the draft PEIR for the  
Hillcrest Focused Plan Amendment to the Uptown Community Plan

**Introduction**

The Hillcrest Focused Plan Amendment (“Hillcrest/ Uptown Plan” or “Project”) is a project which is unneeded, and never should have been initiated.

As background, the Uptown community worked for seven years on the prior Community Plan Update, from 2009 to November 2016. In the end, this was a high-density, high-growth plan, containing enough allowable development capacity for 50% more housing units and population. With the city growth rate of 0.7 per year from 2010 to 2016, the 50% growth potential was enough for 70 years.

O16-2

Upon adoption of the Uptown Community Plan Update in November 2016, the City Council expressed support for a Specific Plan which would cover six blocks in the core of Hillcrest. For unknown reasons, that plan was later changed to a far-reaching project which would completely change the Land Use plan for an area 14 times as large as the original Specific Plan.

From 2020 to the present, the residents and business owners of Uptown have been burdened with another planning process, already lasting four years.

**Deficiencies of the draft Hillcrest/ Uptown Project**

The following comments are not a comprehensive list of the serious problems with the Project. Rather, these comments address some items which haven’t been clearly identified.

O16-3

**Overall problems with the Project**

1. The project was misnamed as the Hillcrest Focused Plan Amendment. The Project area includes not just the Hillcrest neighborhood, but also the Medical Complex neighborhood and part of University Heights.

O16-4

2. The Project is a group of Community Plan Amendments which revises all elements of the Community Plan. The community-wide impacts of the Project have been detailed in a recent comment letter to the city from Lu Rehling, former board member of Uptown Planners.

O16-5

3. Recent forecasts from the California Department of Finance and SANDAG predict slow growth in the state and San Diego region until 2040, then a declining population. These forecasts are not speculative. The large cohort of Baby Boomers is ageing. Later generations are smaller in number, and have lower birth rates.

O16-6

4. The United States is approaching a stable, non-growing population, before reducing in number. Public officials in the California government, San Diego region and the City of San Diego haven't become fully aware of that trend. They haven't committed to revising all relevant plans, including mobility, Climate Action Plan, water supply, and more.

O16-7

5. Between 2022 and 2050, the San Diego region is expected to add just 65,345 in population, a growth rate of only 0.17% per year. The Uptown community currently holds about 3% of the city's population.

O16-8

6. This "fair share" of the projected growth for Uptown would be about 2000 people, about 830 housing units. Even with an assumption than Uptown should absorb more than a "fair share", the addition of 53,000 housing units in allowable development capacity, above the existing 23,000 units, is excessive, and irrational.

O16-9

7. The PEIR makes claims that the Uptown Community must accept significant harmful impacts because of the overarching need for more housing units. More rational civic leaders recommend focusing on affordability, not trying futilely to get developers to build more units. There is no basis to claims in the draft PEIR that the Uptown community must accept more than a doubling of housing units and population. The proposed increase is over 50 times a "fair share" of projected City of San Diego growth.

O16-10

### **Mobility deficiencies**

1. Adverse impacts on the transportation system have not been mitigated, because the proposed transportation system is largely speculative and infeasible. Two examples are:

O16-11

a. Public testimony has stated why the proposed streetcar on University will be infeasible. The current bus system is needed because it has multiple routes. A fixed-rail transit system won't replace the many bus routes, and it's not feasible to have a dual system of buses plus streetcars on University Ave. The City has provided no substantial evidence that a streetcar will be developed, or that it would increase ridership over the current bus system.

O16-12

b. The proposed transit line from Hillcrest to Mission Valley is merely a concept, shown as a diagonal line on a map. It is vaguely described as an overhead conveyance of some type,

O16-13

perhaps a gondola or tram. This cannot be considered serious mitigation for adding capacity for 30,000 housing units to the Uptown Community Plan.

O16-13  
cont.

c. Transportation projects planned for 2040-2050 or later are not suitable as mitigation. Since the transportation plan is phased, any increases in allowable density should be phased also.

O16-14

### **Public Facilities deficiencies**

1. When the city adopted citywide Development Impact Fees (DIF), they broke the link between Community Plans and public facilities. There is now no assurance that DIFs will be spent in the community which has the development, to offset the impacts. Also, the Public Facilities Financing Plans and Impact Fee Studies have been inactivated.

O16-15

2. Levels of service and quality of life can only decline if the Uptown community gets 10 to 25 years of new development, while still waiting for transportation improvements and other public facilities.

O16-16

3. The Project needs an important policy added: Public facilities must be provided concurrent with need.

O16-17

4. The Hillcrest/ Uptown project lacks a feasible implementation plan to provide public facilities which would be needed for a doubling of population.

O16-18

### **Alternatives – the deficiencies**

The draft PEIR fails to adequately analyze alternatives. The most serious deficiency is with the Reduced Density Alternative.

1. The Reduced Density Alternative in the PEIR is a straw man, set up in such a way to easily be cut down. The conclusions were:

O16-19

a. Impacts would be reduced for air quality and noise.

b. This alternative would not meet mode share goals to the same degree as the project. This would result in increased impacts to GHG and VMT.

c. The fallacy in the above is to plan extremely high densities in the Project, then claim that anything less is insufficient.

2. a. Another weakness of the Reduced Density Alternative is that the PEIR does not sufficiently analyze the benefits. For example, the PEIR acknowledges under "Aesthetics" that "impacts associated with scenic views and viewsheds within the Climate Smart Village areas under this alternative would be reduced compared to the project". However, that benefit is not acknowledged in the Conclusion section (page 8-52).

O16-20

b. The PEIR makes no attempt to analyze the benefits to Recreation from a reduced density. Uptown is 90% deficient in parks, according to previous city reports. Yet in a community which is seriously deficient in parks, a reduced density has a clear benefit. An amount of growth could be planned which could reasonably be served by adequate parks.

O16-21

3. Residents will find parks, whether nearby or not. A lack of parks in any area leads to more travel including more vehicle miles. In the Recreation section, page 8-49, the PEIR states that "the location and need for potential future facilities cannot be determined at this time..." Yet the previous section on Aesthetics did determine that a Reduced Density would provide reduced impacts to Climate Smart Village Areas. The PEIR should similarly seek to identify areas and ways in which the Reduced Density Alternative would avoid more deficiencies in parks, and more miles driven to access parks.

O16-22

4. City planning officials and their superiors are exhibiting a serious weakness when they proposes a doubling of the Uptown population with almost no new parks. The notion is inhuman.

O16-23

5. The Conclusions section for the Reduced Density Alternative fails to weigh the many benefits from a more reasonable plan, less than the doubling of housing units and population.

O16-24

6. The High Density Alternative for Uptown is deficient, because it fails to identify the adverse impacts from adding 1000 units to a plan which already aims to double the existing housing stock. This alternative proposed to use densities as high as 290 du/acre, without meaningful analysis of the ensuing heights, traffic congestion, etc.

O16-25

### **Environmentally Superior Alternative**

The High Density Alternative for the University and Uptown communities cannot be chosen as Environmentally Superior, because the draft PEIR explains why this alternative is "infeasible". This one deficiency by itself is sufficient to cause a rejection of the draft PEIR, followed by needed revisions.

O16-26

### **Conclusion**

The draft PEIR is seriously deficient. It must be revised and recirculated.

PEIR comment Hillcrest (Uptown United).pdf

**O16: Responses to Uptown United Comment Letter**

**O16-1:** The comment is an introduction to the attached comment letter. No response required.

**O16-2:** The commenter introduces the letter and provides background information for the comments. No response required.

**O16-3:** Comment noted.

**O16-4:** The comment about the Hillcrest FPA boundaries is noted. This comment does not address the adequacy of the Program Environmental Impact Report (PEIR); no response is necessary.

**O16-5:** Comment noted. The responses to Lu Rehling's comment letter can be found under comment letter I80.

**O16-6:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O16-7:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O16-8:** This comment is noted. See response to comment O16-9.

**O16-9:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. While no further response is necessary one is provided. As discussed in Section 3.5.3 of the PEIR and analyzed throughout the PEIR, buildout of the Uptown Community Plan as a result of the Hillcrest FPA would allow for an increase of approximately 17,218 dwelling units over the adopted Uptown Community Plan and approximately 29,635 dwelling units over existing conditions. The Hillcrest FPA would help the City work toward meeting existing housing demands and achieving its Regional Housing Needs Allocation (RHNA) targets in the General Plan Housing Element, as mandated by the State, by increasing housing capacity within the Hillcrest FPA area through policies, rezoning, and other measures in the Hillcrest FPA in order to meet the City's housing needs as addressed in the Housing Element.

It is important to note two things. First, SANDAG regional growth forecasts relate to homes needed to address a future population, which is related but different from current housing needs which is the result of under production of homes. Second, the proposed increase in development capacity does not directly equate to the number of new homes that will actually be constructed during the life of the community plan as future housing construction is dependent on additional factors beyond the FPA associated with infill development, such as overall economic conditions, private property owner decisions, market demand, interest rates, labor and materials supply, and availability of financing. Therefore, to plan for the City's housing needs, maximizing residential capacity is critical. The proposed Hillcrest FPA to the Uptown Community Plan would also help the City address its housing needs in a way that will meet Citywide goals in the City's General Plan and Climate Action Plan (CAP). See Chapter 8 of the PEIR for an analysis of potential alternatives to the project.

**O16-10:** This comment does not relate to the adequacy of the analysis in the PEIR. While no further response is necessary one is provided. The RHNA for the region is determined by the California Department of Housing and Community Development (HCD). The proposed Hillcrest FPA helps the City meet its housing needs as well as its per capita greenhouse gas (GHG) emissions goals, which are part of the City's Climate Action Plan (CAP). The proposed project does not propose site-specific development but rather provides a long-range planning framework to allow growth congruently with other development programs and incentives and in alignment with the General Plan City of Villages Strategy. The Hillcrest FPA contains goals, policies, and plans that guide housing, environmental protection, climate change adaptation, and sustainable growth. Consistent with the Blueprint SD Initiative, the Hillcrest FPA helps the City focus future growth opportunities within Climate Smart Village Areas; furthermore, it allows the City to address its CAP and its mobility mode share goals by promoting opportunities to walk/roll, bike, and ride transit.

**O16-11:** The traffic impacts of the Hillcrest FPA are discussed in Section 4.14.4 of the Draft PEIR. The vehicle miles traveled (VMT) analysis determined that impacts would remain significant after implementation of mitigation measure MM-TRANS-1.

**O16-12:** Comment noted. The feasibility of various modes of transit are outside the scope of the project and are not identified as mitigation measures in the Draft PEIR. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O16-13:** The Hillcrest FPA does not propose an aerial skyway between Hillcrest and Mission Valley. Policy MO-3.13 has been added to the Uptown Community Plan, and it reads "Coordinate with SANDAG and MTS on the feasibility of an aerial skyway connecting Hillcrest and Mission Valley." There are no plans to build this until further review is conducted, and the aerial skyway is not identified as mitigation for reducing VMT impacts in the Draft PEIR.

**O16-14:** Future development projects would occur over time and not all at once. At the time individual projects are proposed, they would be required to demonstrate compliance with the City's Mobility Choices Ordinance (San Diego Municipal Code [SDMC] Section 143.1103 et seq.) and the City's Transportation Study Manual (TSM), including preparation of a VMT analysis, where applicable (mitigation measure MM-TRANS-1). Through these requirements, individual project impacts on the transportation system can be determined in light of other transportation projects that may or may not be built at those future dates. Transportation projects are not identified as mitigation for project impacts.

**O16-15:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O16-16:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O16-17:** Comment noted. The comment requests the addition of policy language to the Hillcrest FPA and does not raise an issue related to the adequacy of the analysis in the Draft PEIR. However, Chapter 7.1 of the Uptown Community Plan addresses this concern. The City has prioritized finding solutions to bridge the gap between public service needs and funding sources.

**O16-18:** Comment noted. See response to comment O16-17. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O16-19:** The Blueprint SD Initiative Reduced Density Alternative in the PEIR has been revised to include a reduction of land use intensities for both the University CPU and Hillcrest FPA as well as for the Blueprint SD Initiative. Within the Hillcrest FPA area, this alternative would allow for reduced residential development capacity, allowing a maximum of up to 218 dwelling units per acre within the Community Commercial designation and maximum of up to 109 dwelling units per acre within the Residential Very High designation. Residential capacity within the Hillcrest FPA area under this alternative would allow approximately 14,106 new homes and non-residential capacity of approximately 1,037,600 square feet.

The level of analysis for all of the alternatives in Chapter 8 of the PEIR is an appropriate level of analysis because the objective of the alternatives section is to provide public agencies with a range of feasible alternatives, so that they may compare the potential significant impacts of the proposed project with those of the alternative projects. Pursuant to CEQA Guidelines Section 15126.6(d), the analysis should include a comparison of the alternative's potential impacts with those of the proposed project, but the analysis does not need to include an assessment at the same level of detail as that of the proposed project.

Regarding the selection of the environmentally superior alternative, please see the response to Comment I11-6 under comment letter I6.

**O16-20:** As the commenter noted, aesthetics impacts would be reduced (but not avoided) under the Reduced Density Alternative. This clarification has been added to Chapter 8.4.2 of the Final PEIR.

**O16-21:** The comparison of recreation-related impacts between the Reduced Density Alternative and the proposed project is provided in Chapter 8.4.1 (m) of the Draft PEIR. Environmental impacts related to recreational facilities would occur when project demand requires the construction of new facilities, and the building of these facilities could result in impacts. As described in Chapter 8.4.1 (m), and as noted by the commenter, recreational facility deficiencies exist throughout the City. For both the proposed project and the Reduced Density Alternative, future development in accordance with the proposed project would result in the need for improved, expanded, or new facilities. At the program-level of review, the specific requirements of new facilities is not known at this time, so this impact would be significant and similar under both the proposed project and the Reduced Density Alternative.

**O16-22:** Regarding the analysis of future park and recreation facilities, see response to comment O16-21. The VMT analysis in Chapter 4.14 of the Draft PEIR accounts for population-generated vehicle trips for residents, which would account for trips that originate at home and have various destinations, including parks and recreational facilities. As described in the City of San Diego's Transportation Study Manual, "VMT does not directly measure traffic operations but instead is a measure of network use or efficiency, especially if expressed as a function of population or employment (i.e., VMT per capita). VMT per capita represents the average amount of personal, non-commercial vehicle travel made on an average weekday by each resident. The VMT for each resident is summed up for all trip purposes or reasons throughout the day."

**O16-23:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**O16-24:** Chapter 8.4.2 of the Draft PEIR, along with Table 8-1, summarizes the general conclusions for each environmental topic. Per CEQA Guidelines Section 15126.6(d), alternatives do not need to be described at the same level of detail as the proposed project, but they should have enough detail to provide a comparison of impacts between the different scenarios. The conclusion (Chapter 8.4.2) summarizes the more detailed discussions under Chapter 8.4.1 (a-r).

**O16-25:** The increase in density of the High Density Alternative is assessed in comparison to the proposed project in Chapter 8.2.1 of the PEIR. The summary of how this alternative compares to the proposed project is discussed in Chapter 8.2.3. All impact conclusions of this alternative would be the same as the project; however, the less than significant impacts related to GHG emissions, and energy would be reduced slightly under the alternative. The significant impacts related to transportation would remain significant under this alternative but would be slightly reduced. The significant impacts related to transportation would remain significant under this alternative but would be slightly reduced. The significant impacts related to air quality, noise, and aesthetics would remain significant under this alternative, but impacts would increase slightly. The level of analysis for all of the alternatives in Chapter 8.4 of the PEIR is an appropriate level of analysis because the objective of the alternatives section is to provide public agencies with a range of feasible alternatives, so that they may differentiate the significance impact levels of the proposed project with those of the alternative projects. The analysis should include a comparison of the alternative's potential impacts with those of the proposed project, but the analysis does not need to include an assessment at the same level of detail as that of the proposed project [CEQA Guidelines 15126.6(d)].

**O16-26:** See the response to Comment I11-6 under comment letter I11.

**O16-27:** Comment noted.

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

Bravo, Lou; well-said.

Thank you for voicing your opinion on at least a segment of the issues we are facing toward the densification of University City.

It is glaringly and grotesquely apparent the City wishes to eliminate as much single family homes and homeownership as possible, while inhibiting transportation and other infrastructural needs—a recipe for disaster. It is abundantly clear our civic leaders find financial advantage to cooperate with heavy hitters like Westfield Mall and the various developers, whose building permits are being fast-track to circumvent public opinion.

In the northern section of University City, we are being faced with a great many projects, either completed or slated, that are to the detriment of our community and those needing affordability. Being priced out is not an option, despite the opinions of those with a great deal of financial resources and special interests.

At this time, we have 3 "luxury" high rises that are not only out of scale to our environs as well as creating untoward light pollution, and the worst detriment—exceedingly high price points, the associated management companies are allowing their tenants to behave badly by way of impulsive noise-making vehicles and pet disruptions. The impending dwellings, of even taller height, will continue this horrid trend in addition to being financially inaccessible to a majority of area residents.

The only feasible and equitable way to continue with housing progression is to encourage current multi-unit property owners/operators to enhance their properties, instead of demolishing them in favour of massive towers that serve no one but the extreme wealth while displacing those presently living within. Moreover, mid-rise/quadplexes would be a far more pleasing concept, in a myriad of ways.

Respectfully Yours,  
Amy L Ataei, founder  
Quiet Our Streets Coalition

## **DRAFT PROGRAM ENVIRONMENTAL IMPACT REPORT SCH No. 2021070359**

BLUEPRINT SD INITIATIVE, HILLCREST FOCUSED PLAN AMENDMENT TO THE UPTOWN COMMUNITY PLAN, AND UNIVERSITY COMMUNITY PLAN AND LOCAL COASTAL PROGRAM UPDATE

Comments: Louis Rodolico April 29, 2024

### **8.1 Project Alternative** Page 8-4 PDF Page 767

The 8.1 project alternative is the same one planning has been pushing for some time. Map PDF page 780. It makes sense to have higher density along main roads like Governor Drive, but only if those roads have been completed and can serve ambulances and conflagration egress. See map of South UC's unfinished roads:

I1-5

I1-5 cont.

Note: only one of the three originally planned roads have been completed. Knowing the overwhelming majority of the community wanted the Regents Road Bridge the Lightner Administration, in service of its clients (not us) did not want to put it on the ballot, which would have been the democratic thing to do. We wonder why democracy is in trouble it is because: shareholders, lobbyists and other special interests are successful in pushing democracy to the side.

In the bridge case a major special interest was Westfield Mall Shareholders who lost their bid in the 1960's to have their mall where 52 and Marian Bear Park are currently located. This would have been a direct pipeline to wealthy La Jolla. Still burning about it, decades later, Westfield paid a half million dollars to get control of the traffic study to remove the Regents Road Bridge. [http://www.louisrodolico.com/uploads/7/5/2/2/75221087/dif\\_exhibits.pdf](http://www.louisrodolico.com/uploads/7/5/2/2/75221087/dif_exhibits.pdf)

The more cars Westfield could funnel up Genesee the higher the mall rents. Westfield Operatives conveniently left ambulance service times out of the Bridge EIR. Following that tradition this Draft EIR only mentions Ambulances once with no mention of service times. Open Space is mentioned 99 times, which is completely out of balance. Also planning continues to falsely describe undeveloped land as Open Space. In University this is a de-facto cry for an arsonist/hero to come forward for projects on undeveloped land.

The "E" in CEQA stands for both the natural and human environments but planning has consistently ignored human needs in favor of fear of special interests, like the "At Large" Crossroads Arsonists and their supporters. The City is justifiably afraid of the Crossroads Arsonists. The Friends of Rose Canyon uses the Crossroads Arsonists as a cudgel to threaten the community. This is why we need things on a private government ballot so citizens cannot be intimidated by criminals. The same can be said for the ill-informed and un-studied demand that Governor Drive be reduced to two lanes. Planning should not allow itself to be intimidated, please put it on the ballot.

Allowing democracy to play its part in our city, in the past, would have given planning a complete road system in South UC and a much better argument for the higher density as outlined in 8.1.

Respectfully Submitted

Louis Rodolico

**I1: Responses to Amy Ataei Comment Letter**

**I1-1:** The comment introduces the forwarded email. No response is necessary.

**I1-2:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report (PEIR). No further response is required.

**I1-3:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I1-4:** Regarding the concern about aesthetic impacts (e.g., light pollution and scale), see Section 4.1.4 (Issues 3, 4, and 5) of the Draft PEIR for a full discussion of this topic. Since the Draft PEIR addresses potential aesthetic impacts at a program level, individual project-level impacts of future development projects are unknown. Projects that require discretionary review would undergo a project-specific environmental review that could identify additional project features and/or mitigation measures to address potential aesthetic impacts.

For noise-related impacts, see the discussion in Section 4.11.4, Issue 1(b). The ambient noise levels in the University Community Plan Update area would remain significant after mitigation because, at the programmatic level of review, it cannot be ensured that all future development can demonstrate compliance due to a lack of project-specific development details. Future discretionary development projects would be required to complete environmental review and incorporate mitigation measure MM-NOI-1 and any additional mitigation measures if the future development project could result in a potentially significant noise impact.

**I1-5:** See response to comment I83-1 under comment letter I83.

Subject: [EXTERNAL] Hillcrest Plan Comment

\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\*

To Whom it May Concern,

I'm writing to express my displeasure with the proposed rezoning and Plan Hillcrest proposal.

The previous changes allowing buildings higher than 3 stories has already changed the character of the community and the current proposal will make that change more drastic.

I understand the need for more housing in San Diego, however I'm not in favor of Hillcrest bearing the brunt of it.

I originally bought my condo in Hillcrest because I liked the mix of homes and 2 story condos & apartments. It was a quiet walkable community and easy to get to local businesses by car. This is no longer the case. With highrises being built to house hundreds of people who both walk and drive everyday life has become unpleasant. It's a challenge to get a parking spot at the bank, grocery store, FedEx Store. Also, there is often a line of cars in front of my garage waiting to get through a stop sign down the road which prevents me from turning left out of the garage. This is caused by not enough infrastructure to support the added cars as well as pedestrians crossing the street and ambulances mucking up traffic as they come off the freeway.

In all honesty, if I'd wanted to live in a noisy community with high rise buildings, I would have bought downtown. That is not what I want and I believe it's discriminatory to choose a community and change its character without a vote of the residents. I've paid my taxes and vote in elections I'm a retired school teacher and am not in the financial position to buy another property in a different location.

I don't believe you, the decision makers, would be happy with your civic leaders if they up a decided to change the character of your neighborhood by building high rises and adding 50,000 more residents.

I propose adding more skyscrapers downtown and not in neighborhoods.

**I2: Responses to Nancy Back Comment Letter**

**I2-1:** The project, including the Hillcrest Focused Plan Amendment, would have significant program-level impacts related to the aesthetics of the project area. See Section 4.1.4 (Issues 3 and 4) of the Draft Program Environmental Impact Report (PEIR) for a full discussion of this topic. Since the Draft PEIR addresses potential aesthetic impacts at a program level, individual project-level impacts of future development projects are unknown. Projects that require discretionary review would undergo a project-specific environmental review at the appropriate future time that could identify additional project features and/or mitigation measures to address potential aesthetic impacts.

**I2-2:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I2-3:** Traffic congestion is not considered a significant impact under the California Environmental Quality Act (CEQA). Since the passage of Senate Bill 743 in 2018, CEQA Guidelines Section 15064.3 no longer uses traffic counts, auto delays, levels of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. Vehicle Miles Traveled (VMT) is the metric by which transportation impacts under CEQA are measured. Under CEQA Guidelines Section 15064.3, statewide application of the new VMT metric was required as of July 1, 2020.

**I2-4:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

## Comment Letter I3 - Linda Bauer

---

Dear Planning Commission,

I have lived in and owned property in Hillcrest for more than 20 years and have seen many changes to the area during that time. The recent changes to a once thriving neighborhood have been shameful and have entirely destroyed the character of Hillcrest. No matter where one looks and on nearly every street I have witnessed once quaint properties torn down to construct high-rise apartment buildings, many without adequate parking, and concrete boxy, bunker-like smaller units that have barely no variance between properties and are hideous to look at. Additionally, so many of these new developments are so overpriced that people cannot afford the rents! What EXACTLY are we calling affordable housing - in dollars and cents? Not once have I heard an actual range of rental prices defined of dollars and cents. You are duping the public and trying to make them digest changes that we do not want.

I3-1

As Hillcrest stands now, the overdevelopment has created increased traffic, made it impossible to find parking, narrowed major thoroughfares with bike lanes barely anyone uses, and has driven away small businesses for the increase in rents, lack of parking, and unchecked homeless problem that has made our streets unsafe. Even Starbuck's moved out of the Fifth Avenue location. One barely recognizes Hillcrest now, I hate to see what it will look like once you are finished with your poorly thought-out plans. You've made this once quaint area inconvenient, stressful, and barely livable. Residents are very unhappy, but the mayor, city council, and planning commission do not seem to care one iota about the people who live here and pay taxes on your boondoggle plans.

I3-2

And Mayor Gloria is one of the biggest culprits. His pie-in-the-sky plan to make San Diego a carless city is laughable and only serves as an attempt to try to advance his own political career. This is not Amsterdam, Mr. Mayor, San Diego is a completely different city. Does he really think that people can ride busses to work to employment in North County and spend hours commuting? Or wait in dangerous bus shelters that stink with urine and feces and have been taken over by homeless drug addicts? Or ride the unreliable train and try to manage their work schedules around the train schedule? What on earth have you all been thinking? Obviously not thinking at all. And no considerable has been given what-so-ever to our senior citizens or people

I3-3

with mobility issues.

13-3

Stop Overdeveloping Hillcrest, Mission Hills, and North Park!! You've turned these areas into an unlivable, costly nightmare. I lived in New York City for five years and know first-hand the toll it takes on living in a city environment. Residents and small businesses are very unhappy and should have a real voice, not just an exercise in collecting comments that you don't listen to. San Diego has been in the deep pockets of developers for decades. This needs to stop. Shame on all of you.

13-4

Linda Bauer  
Hillcrest

**I3: Responses to Linda Bauer Comment Letter**

**I3-1:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report (PEIR). No further response is required.

**I3-2:** The environmental impacts of the projected increase in traffic are discussed in Section 4.14, Transportation, of the Draft PEIR. Since the passage of Senate Bill (SB) 743 in 2018, California Environmental Quality Act (CEQA) Guidelines Section 15064.3 no longer uses auto delay, level of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. Vehicle Miles Traveled (VMT) is the metric by which transportation impacts under CEQA are measured. Under CEQA Guidelines Section 15064.3, statewide application of the new VMT metric was required as of July 1, 2020. With the implementation of this new threshold, parking and traffic congestion concerns are issues that are not required to be studied as a part of the environmental review process. The remainder of the comment raises economic and social issues unrelated to physical changes or the adequacy of the analysis in the Draft PEIR; no further response is necessary.

**I3-3:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I3-4:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

Below are my comments to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I4-1

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I4-2

I4-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR

I4-4

states “No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

**I4-4 cont.**

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community’s preferred alternative.

**I4-5**

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City’s general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

**I4-6**

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts : The

City’s DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

**I4-7**

**To Whom It May Concern,**

**Vista La Jolla is a small community of 56 private detached homes, each owning its own land. Established in 1978, it is part of a 'super block' that includes the Westfield University Towne Centre Shopping Mall, the Westfield UTC transit hub, the Vista La Jolla Townhomes, and the Torrey Pine Apartments.**

**During the first revision of the Community Plan update, Vista La Jolla was slated for a change from residential/commercial to residential low density. However, the current plan proposes a high or medium density designation for our community. The proposed map is in the PEIR on page 3-52 (page 138 of the PDF). The Vista La Jolla neighborhood is shown as Residential Low-4 (15-29 du/acre)**

**I5-1**

**The high-density alternative is shown in figure 8-1, page 8-17, page 780 of the PEIR PDF. The Vista La Jolla neighborhood shows as high density residential (45-75 du/acre)**

**I5-2**

**As the only enclave of single-detached family homes owning its own land in North University City, Vista La Jolla deserves equitable treatment akin to the single-family homes prevalent in South University City.**

**Despite its urban surroundings, encompassed by high-rise buildings, Westfield UTC, and a few strip malls, Vista La Jolla retains its distinctive character.**

**I5-3**

**Our unique community of 56 single-family homes, complete with its own park accessible to all, should not face reclassification under the new Community Plan to high or medium density.**

**Respectfully,**

**William H. Beck**

**President of the Vista La Jolla & Renaissance La Jolla Board of Directors**

**I5: Responses to William Beck Comment Letter**

**I5-1:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report (PEIR). No further response is required.

**I5-2:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I5-3:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

## Comment Letter I6 - Judy Becker

**From:** [Ash-Reynolds, Tara](#) on behalf of [PLN\\_PlanningCEQA](#)  
**To:** [Lombrozo, Ari](#)  
**Subject:** FW: [EXTERNAL] Final expression of resistance to Governer Drive access, egress and increased density in South UC

**From:** Judy Becker <ejdjbecker@gmail.com>  
**Sent:** Monday, April 29, 2024 7:31 PM  
**To:** PLN\_PlanningCEQA <planningceqa@sandiego.gov>  
**Subject:** [EXTERNAL] Final expression of resistance to Governer Drive access, egress and increased density in South UC

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To those who were elected to represent our community in South UC,

Please listen to us and be reasonable. We have work much of our lives to establish homes and invest in our community in south UC. It is a fine place to live and is open to all who would like to join us in utilizing our parks, schools and activities.

I6-1

Unfortunately, we have limitations on our transportation egress and access as we are limited and constrained by canyons both north and south of us with only a few access roads to provide evacuation in times of emergency, such as fire or earthquake. Furthermore, three schools are positioned and are are fully populated along Governor Drive without parking lots or drive through areas for off street drop off and pick up access for our children. In times of emergency and crisis such a need would result in complete thoroughfare utilization in times of emergency as things currently stand much less if Governor Drive lanes were reduced to one lane in each direction or density was increased to the degree being proposed.

I6-2

Our lives will be at stake along with those of our loved ones. Where are our representatives that are in office to look out for us?

I remember the panic I felt when the fire came down from Julian while I had two small children at home, entered our area and we needed to leave town. Not only was I in fear for my young children and my inability to run to safety while carrying them should our outlet be blocked, I also needed to provide for my elderly mother, my elderly neighbor and our pets. The memory still brings chills to my bones.

I6-3

Please open your hearts and take care of your constituents!

The level pf increased density you are proposing in our community without requiring units to

I6-4

provide adequate parking without efficient access to public transportation and reducing Governor Drive to a single lane in either direction creates a doomsday scenario for all of the great people who have made our homes here.

Please represent us and hear our pleas!

Sincerely, Judy Becker

**I6-4  
cont.**

**I6: Responses to Judy Becker Comment Letter**

**I6-1:** The comment is introductory in nature; no response is necessary.

**I6-2:** As discussed in the Draft Program Environmental Impact Report (PEIR), the major evacuation routes in the University Community Plan Update (CPU) area are Interstates 805 and 5 and State Route 52. These major evacuation routes are accessible by Regents Road, Genesee Avenue, Governor Drive, Nobel Drive, Gillman Drive/La Jolla Colony Drive, and Sorrento Valley Road. While the expansion of the two Class II bike lanes to Governor Drive and the reduction of the vehicle lanes from four to two reduces space for vehicular traffic, the full width of the existing right of way (including bike lanes) could be used for vehicular evacuation in an emergency as directed by emergency personnel. Emergency-imposed traffic routing could also redirect all traffic to drive in one direction away from a potential hazard or emergency situation. This information has been added to Section 4.8.4 Issue 5, Section 4.14.4 Issue 4(b), and Section 4.18.4 Issue 2 as clarification in the Draft PEIR. Additionally, future discretionary development projects proposed in accordance with the University CPU would be required to complete environmental review to determine potential impacts related to emergency access and to demonstrate their compliance with San Diego Fire Code.

**I6-3:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I6-4:** The environmental impacts of the projected increase in traffic are discussed in Section 4.14, Transportation, of the Draft PEIR. Since the passage of Senate Bill 743 in 2018, California Environmental Quality Act (CEQA) Guidelines Section 15064.3 no longer uses auto delay, level of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. Vehicle Miles Traveled (VMT) is the metric by which transportation impacts under CEQA are measured. Under CEQA Guidelines Section 15064.3, statewide application of the new VMT metric was required as of July 1, 2020. With the implementation of this new threshold, parking and traffic congestion concerns are issues that are not required to be studied as a part of the environmental review process; no further response is necessary.

hi

i just wanted to chime in to say my wife and i and our son live in uc and we are all excited by the prospect of upgrading our neighborhood. to be honest both shopping centers are very dated the shops are not massively good. bringing in more people will likely improve on this so finally we might have some good restaurants. one thing that is missing is the regents road bridge which is sorely needed for traffic abatement. i know a lot of older residents dont want change but they likely dont have to deal with traffic like the working people in the community have to. i would love to know when this will get started  
sincerely

james binley

Get [Outlook for iOS](#)

I7-1

**17: Responses to James Binley Comment Letter**

**17-1:** The commenter states reasons why they approve of the project. The Regents Road Bridge is not included as part of the University Community Plan Update. The comment does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report. No further response is required.

---

Dear Fellow San Diegan,

As a University City resident I am contacting you to express my objections regarding several areas of the City's recent Environmental Impact Report due to several key concerns, some of which were already rejected by UC residents when the 'Housing Action Plan' part of State Bill 10 failed to pass in August 2023. Here are just some key concerns:

I8-1

### Governor Drive Lane Reductions

The City acknowledged at a recent meeting in early April that while traffic "models" were done for the EIR draft plan, they were not done for the high-density alternative that is included in the EIR. Moreover, there was no new traffic count or specific study of Governor Drive regarding what the City now calls "complete streets. It has been confirmed that the City has not done a comprehensive Traffic Study since 2015 and is basing their Vehicle Miles Traveled (VMT) data on a study done in 2016. In summary, Governor Drive should not be reduced to two lanes without a current and legally valid Traffic Study with a full VMT analysis.

I8-2

I8-3

I8-4

### Emergency Ingress/Egress

Related to the Governor Drive lane reductions combined with substantially higher density allowances, such a plan ignores the reality of the impact it will have on emergency vehicles getting through in time, or worse yet if residents needed to evacuate in the event of a disaster in an area that already is in a potential wildfire zone as well as its proximity to MCAS, just to name two factors. Again, the City is under legal obligation to conduct a current and legally valid Traffic Study with a full VMT analysis along the Governor Drive corridor.

I8-5

### New High-Rise Apartments Planned for Genesee and Nobel Drive

Under the City's "Complete Communities Housing Solutions" regulations, we understand that Willmark Communities is seeking permission to build three high-rise towers comprising 1,315 "luxury" apartments, with only 1,350 onsite parking spaces, on the southwest corner of Nobel and Genesee, replacing a 108-unit two-story apartment complex. This is yet another example of the City falling short on its promise to add more affordable housing, while such a project will only increase traffic gridlock along Genesee during certain times of the day, particularly during rush hours and when the schools let out and parents are attempting to pick up or drop off their children.

I8-6

### Vons & Sprouts Centers New Height and Sharply Higher Density Allowances

The planned sharp increase in overall housing density allowances is now coupled with the EIR showing

I8-7

that the City has ignored UC community requests and is forging ahead to raise the allowable structure heights of the Vons shopping plaza on Governor Drive/Genesee to 100 feet or 10 stories with residential units added to those areas.

**18-7**

That alone will further impact all kinds of mobility along Governor Drive & onto Genesee as well as to 805 to the east, and Regents toward the west, where a similar plan is on deck for the Sprout's shopping plaza. The Sprout's shopping center is NOT an existing Transit Priority Area or TPA. Buses do not stop there frequently, and it is not close to the trolley and an existing TPA.

### **Planning Deficiencies in Parks**

Under the City's 'Master Plan', the UC area is already short on publicly accessible parks – not “greenways” or some other term that in reality is not a park, or in a land-use area that does not allow residential use. It is also our understanding that developers can now pay a one-time, in-lieu fee and not provide such amenities as a small recreational area in their residential complex plans. The City has fallen short in this key area while also allowing developers to buy their way out of providing more green spaces or publicly accessible recreation areas.

**18-8**

In summary, these initiatives ignore the need for a workable and supportive infrastructure. It fails to provide even somewhat affordable housing, disregards existing residents' input, and intentionally erodes single-family neighborhoods.

**18-9**

The most harmful high-density housing initiative the City attempted to pass was SB 10, which would have allowed as many as 14-unit buildings up to three stories high on single-family parcels and no contained parking requirements. Thanks to a successful opposition campaign, SB 10 was removed from the Housing Action Package.

**18-10**

Thank you for your time and consideration. Such initiatives call for planning that balanced growth rates with an infrastructure where families can grow and thrive. Most of all, responsible growth includes residents in decision-making.

**18-11**

Celine Bonnefous from Cambridge Terrace

---

**18: Responses to Celine Bonnefous Comment Letter**

**18-1:** The comment introduces the commenter's general concern with the Draft Program Environmental Impact Report (PEIR). The comment has been noted and no further response is required.

**18-2:** Comment noted. The commenter is correct in noting that transportation modeling was not completed for the High Density Alternative. This is an appropriate level of analysis because the objective of the alternatives chapter is to provide public agencies with a range of feasible alternatives so that they may differentiate the potential significant impacts of the proposed project with those of the alternatives and evaluate the comparative merits of the alternatives. The analysis should include a comparison of the alternative's potential impacts with those of the proposed project, but the analysis does not need to include an assessment at the same level of detail as that of the proposed project [CEQA Guidelines Section 15126.6(d)].

**18-3:** Since the passage of Senate Bill (SB) 743 in 2018, CEQA Guidelines Section 15064.3 no longer uses traffic counts, auto delays, levels of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant transportation impacts under CEQA. Vehicle Miles Traveled (VMT) is the metric by which transportation impacts under CEQA are measured. See Appendix J and Section 4.14 of the Draft PEIR for a discussion of the project's VMT impacts.

**18-4:** A VMT analysis was completed for the Draft PEIR in accordance with SB 743 and the CEQA Guidelines. The VMT analysis used the Series 14 Activity Based Model, which is the most recent model available from the San Diego Association of Governments (SANDAG) and which was used for the 2021 SANDAG Regional Plan. See Appendix J and Section 4.14 of the Draft PEIR for a discussion of the project's VMT impacts.

**18-5:** As discussed in Section 4.14.4 [Issue 4 (b)] of the Draft PEIR, the major evacuation routes in the University CPU area are Interstates (I-) 5 and 805 and State Route 52, which are accessible by Regents Road, Genesee Avenue, Governor Drive, Nobel Drive, Gilman Drive/La Jolla Colony Drive, and Sorrento Valley Road. The University Community Plan Update (CPU) proposes an expansion of the Class II bike lanes on Governor Drive and the reduction of the vehicle lanes from four to two; however, the full width of the existing right of way (including bike lanes) will be available for vehicular evacuation in an emergency as directed by emergency personnel. Emergency-imposed traffic routing could also redirect all traffic to drive in one direction away from a potential hazard or emergency situation. Section 4.14.4 [(Issue 4(b))] has been revised to clarify this. Additionally, future discretionary development projects proposed in accordance with the University CPU would be required to complete environmental review to determine potential impacts related to emergency access and all future ministerial and discretionary project would be required to demonstrate their compliance with San Diego Fire Code including requirements related to emergency access.

See response to comment 18-4 as it relates to the VMT analysis in the Draft PEIR.

**18-6:** Comment noted. The Complete Communities: Housing Solutions program is not a part of the scope of the project analyzed in the Draft PEIR and the environmental impacts of the Complete Communities program were addressed in Final PEIR for Complete Communities: Housing Solutions

and Mobility Choices (SCH No. 2019060003). Furthermore, projects that utilize the Complete Communities: Housing Solutions program are required to provide affordable housing pursuant to the San Diego Municipal Code (SDMC) Section 143.1015. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required. See response to comment I8-3 as it relates to traffic congestion and delay.

**I8-7:** See response to comments I8-3 and I8-4 as it relates to transportation impacts analyzed in the Draft PEIR.

The University CPU proposes to designate two shopping centers along Governor Drive (the Sprouts shopping center at Regents Road and Governor Drive; and the Vons Shopping Center at Genesee Avenue and Governor Drive) as Commercial Village Medium-3, which would allow commercial, office, and multi-family residential uses. The proposed zoning for these two areas, as shown on the University CPU's Zoning Map, would be Commercial – Community (CC)-3-8 and would allow up to a 100-foot building height.

The Vons shopping center is in a Transit Priority Area (TPA) but the Sprouts shopping center is not currently in a TPA. However, the Sprouts shopping center is accessible by transit as there is an existing bus route that runs along Governor Drive from Regents Road to Genesee Ave, as shown in Figure 3-22 of the Draft PEIR. Furthermore, the University CPU identifies micromobility hubs at both locations as potential transit improvements to be considered in future transit planning efforts (see Figure 23 of the University CPU). These micromobility hubs are locations within the urban landscape where various forms of lightweight transportation devices, typically human- or electric-powered devices which transport users at low speeds, are made available for public use to assist with the first-last mile of a commute, typically for short distance travel. These micromobility hubs will give the public an opportunity to increase their use of alternative modes of transportation and/or connect to the UTC Trolley Station. Additionally, increasing the residential and commercial density of these areas along with the proposed mobility improvements helps further achieve the City's Climate Action Plan and mobility mode share goals by encouraging transit-oriented development and by promoting opportunities to walk/roll, bike, and/or ride transit.

**I8-8:** Comment noted. This comment does not address the adequacy of the environmental analysis in the Draft PEIR. As discussed in Section 4.13.4 Issue 1(c), the University CPU identifies new parks and recreational facilities at Regents Road North and South, Governor Drive, Nobel Drive, Executive Drive, and adjacent to Torrey Pines City Park; includes Supplemental Development Regulations A.1 and A.3 which would require new development within the University CPU's Community Plan Implementation Overlay Zone to provide public spaces and associated amenities and a promenade along Executive Drive; and provides policies which support the provision of parks in the University CPU area. Developers would be required to pay Citywide Park Development Impact Fees, which could go towards the development and maintenance of parks and recreational facilities within the University CPU area or provide public parks consistent with SDMC Section 142.0640(b)(9)(A-F), as detailed in Section 4.13.2.2c of the Draft PEIR. Future discretionary development projects proposed in accordance with the University CPU would also be required to determine potential impacts to park and recreational facilities and demonstrate consistency with the University CPU and the City's Parks Master Plan policies which would support the provision of parks in the future. No further response is required.

**18-9:** The comment generally addresses overall concerns with the proposed University CPU. It does not address the adequacy of the environmental analysis in the Draft PEIR. No further response is necessary.

**18-10:** The comment is about a previous project that is not a part of the project evaluated in the Draft PEIR. The comment does not address the adequacy of the environmental analysis in the Draft PEIR. No further response is required.

**18-11:** Comment noted. The comment does not address the adequacy of the environmental analysis in the Draft PEIR. No further response is required.

---

To whom it may concern.

I am a second generation San Diegan and have lived in University City for 43 years. I currently live here with my wife and we are raising my 3 year old here. I am under no illusion that everyone opposing the “expansion” of UC are the first to resist development of their communities. There is no doubt an emotional aspect to any NIMBY (Not in my back yard) changes, but I want to make sure to communicate the objective negative impacts of ALL the plans that have been presented so far.

I9-1

1. We have multiple schools in the neighborhood (4) which currently create a terrible traffic environment at dropoff and pickup. Reducing ANY lanes, or adding ANY significant amount of people will not only vastly reduce the quality of life for everyone, but it will potentially cause dangerous gridlock for emergency vehicles to enter and exit during these pickup and drop-off periods.
2. Traffic in general with reduced lanes. As the East end of UC has been developed with the 55 and up community density changes over the years, traffic has drastically increased. Even with no more expansion, coupled with reduced lanes, there will be constant traffic, and the same safety issues described above will apply.
3. In 43 years I RARELY see anyone using the already existing bike lanes, and there is no need for public transportation along Governor. Why would we need more, or dedicated bike or bus lanes along Governor? UC residents typically leave UC for recreation and entertainment. Reducing car lanes in exchange for public transport makes no sense, and just reduces quality of life.
4. The only people I see at community meetings pushing for change in UC are UCSD students and people outside of UC. Students are in school for an average of 4 years. We should not impress a reduced quality of life upon the long term residents for supposed short term convenience. I am a property manager and rent to many UCSD students. They all have cars and would not be using multiple modes of public transport to get across Rose Canyon to UCSD... They will still use cars... which will exacerbate the traffic issue if there is more housing here... Reducing EVERYONES quality of life.

I9-2

I9-3

I9-4

I9-5

Finally, and fundamentally, the vast majority of residents in UC do NOT want this. It is all of your duties, as our employees, to serve your constituency. It is not your job to impress changes that reduce quality of life and increase safety issues.

Thank you for your consideration.

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

Below are my comment to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I10-1

I10-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I10-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states "No new schools are proposed as part of the University CPU; however, the

I10-4

University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district's memorandum was incorporated into the DEIR, but this statement was not.

I10-4  
cont.

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community's preferred alternative.

I10-5

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I10-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

I10-7

I10-8

Sincerely,

William and Joan Breher

**Subject:** [EXTERNAL] Comments on the Draft Program Environmental Impact Report (DPEIR)

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

I10-9

My comments are with respect to the analysis performed for the University Community Plan Update. I support all of the comments submitted by Help Save UC dated April 25, 2024. I especially want to comment on the following:

1. The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment and the University Community Plan Update into one document made the document confusing, overwhelming and not accessible to the public, thus failing CEQA's requirement to provide an informational document to inform the general public of the significant environmental effect of a project.
2. The City's failure to evaluate the full environmental impacts of the University Community Plan Update at full buildout, including the impact of the Complete Communities program, makes the document inadequate, specifically for areas such as Aesthetics, Air Quality, Biological Resources,

I10-10

I10-11

Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.

**I10-11  
cont.**

3. The City's failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.
4. The DPEIR is inadequate due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to evaluate the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project. The appropriate way to do that would have been to evaluate a lower density alternative, such as the "community-preferred alternative" (Scenario B) in the City's last draft of the Plan Update. Instead, the City evaluated a Higher Density alternative that the City admitted wasn't feasible.
5. Finally, the City's conclusion that the High Density Alternative was the environmentally superior alternative isn't supported by the evidence. Table 8-1 shows that the High Density alternative results in greater impacts on the environment. Furthermore, the City's own conclusion states, "No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project." (Section 8.2.3, underline added.)

**I10-12**

**I10-13**

**I10-14**

The City should revise the DPEIR to address these issues.

Sincerely,

William Breher and Joan Breher

3295 Welmer Place

San Diego, CA 92122

**I-9: Responses to Beau Bradford Comment Letter**

**I9-1:** The commenter introduces the general concerns. No response is necessary.

**I9-2:** The environmental impacts of the projected increase in traffic are discussed in Section 4.14, Transportation, of the Draft Program Environmental Impact Report (PEIR). Since the passage of Senate Bill 743 in 2018, California Environmental Quality Act (CEQA) Guidelines Section 15064.3 no longer uses auto delay, level of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. Vehicle Miles Traveled (VMT) is the metric by which transportation impacts under CEQA are measured. Under CEQA Guidelines Section 15064.3, statewide application of the new VMT metric was required as of July 1, 2020. With the implementation of this new threshold, parking and traffic congestion concerns are issues that are not required to be studied as a part of the environmental review process; no further response is necessary.

As discussed in Section 4.14.4 Issue 4(b) of the Draft PEIR, the major evacuation routes in the University Community Plan Update (CPU) area are Interstates 805 and 5 and State Route 52 which are accessible by Regents Road, Genesee Avenue, Governor Drive, Nobel Drive, Gilman Drive/La Jolla Colony Drive, and Sorrento Valley Road. Proposed roadway improvements would not preclude emergency vehicles from using the full width of the existing right of way (including bike lanes) in the event of an emergency. This information has been added to Section 4.8.4 Issue 5, Section 4.14.4 Issue 4(b), and Section 4.18.4 Issue 2 of the Draft PEIR as clarification. Additionally, future discretionary development projects proposed in accordance with the University CPU would be required to complete environmental review to determine potential impacts related to emergency access and to demonstrate their compliance with San Diego Fire Code.

**I9-3:** See response to comment I9-2.

**I9-4:** The proposed bicycle facility improvements on Governor Drive would implement the City's Mobility Element, Bicycle Master Plan and Climate Action Plan (CAP) policies that support enhancements to non-vehicular modes and traffic calming measures. Changes to the existing roadway design on Governor Drive are intended to calm traffic in order to make the roadway more usable for all modes, including bicycles and pedestrians. An overarching goal of the project is to further the implementation of the City's CAP and support a mode shift from single occupancy vehicles to alternative mobility options such as walking/rolling, biking, and transit. This would directly support implementation of CAP Strategy 3. Additionally, proposed General Plan policy CE-F.6 calls for encouraging and providing incentives for the use of alternatives to single-occupancy vehicle use, including using public transit, carpooling, vanpooling, teleworking, bicycling, and walking/rolling.

**I9-5:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I9-6:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**Subject:** [EXTERNAL] UC COMMENTS ON THE (DPEIR)...

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

I11-1

My comments are with respect to the analysis performed for the University Community Plan Update. I support all of the comments submitted by Help Save UC dated April 25, 2024. I especially want to comment on the following:

1. The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment and the University Community Plan Update into one document made the document confusing, overwhelming and not accessible to the public, thus failing CEQA's requirement to provide an informational document to inform the general public of the significant environmental effect of a project.
2. The City's failure to evaluate the full environmental impacts of the

I11-2

I11-3

University Community Plan Update at full buildout, including the impact of the Complete Communities program, makes the document inadequate, specifically for areas such as Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.

I11-3  
cont.

3. The City's failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.
4. The DPEIR is inadequate due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to evaluate the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project. The appropriate way to do that would have been to evaluate a lower density alternative, such as the "community-preferred alternative" (Scenario B) in the City's last draft of the Plan Update. Instead, the City evaluated a Higher Density alternative that the City admitted wasn't feasible.
5. Finally, the City's conclusion that the High Density Alternative was the environmentally superior alternative isn't supported by the evidence. Table 8-1 shows that the High Density alternative results in greater impacts on the environment. Furthermore, the City's own conclusion states, "No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project." (Section 8.2.3, underline added.)

I11-4

I11-5

I11-6

The City should revise the DPEIR to address these issues.

It would be nice to have ANY of these issues addressed regarding the UC Community Plan. However, I'm NOT holding my breath since this whole community plan is just a protocol that you are just ignoring while you maintain your

I11-7

political stance in the pockets of these developers!!!

Lisa R Brezina

[lrbdezine@gmail.com](mailto:lrbdezine@gmail.com)

| I11-7  
cont.

**I11: Responses to Lisa Brenzina Comment Letter**

**I11-1:** The comment is an introduction to the letter. No response is required.

**I11-2:** See response to comment O13-6 and O13-7 under comment letter O13.

**I11-3:** The PEIR provides a program-level analysis of the potential impacts that could occur with implementation of the University Community Plan Update (CPU). As a programmatic document, the project description of the Draft PEIR does not provide project-level specifics but does provide feasible development buildout which is analyzed throughout the Draft PEIR. The Draft PEIR includes a discussion of environmental impacts related to aesthetics (Section 4.1), air quality (Section 4.2), biological resources (Section 4.3), greenhouse gas emissions (Section 4.7), noise (Section 4.11), public services (Section 4.12), recreation (Section 4.13), transportation (Section 4.14), and wildfire (Section 4.18). The Complete Communities program is not a part of the scope of the project analyzed in the PEIR and the environmental impacts of the Complete Communities program were addressed in Final PEIR for Complete Communities: Housing Solutions and Mobility Choices (SCH No. 2019060003). This comment is general in nature and does not include specific critiques of the environmental analysis; no further response is necessary.

**I11-4:** See response to comment O13-1 and O13-2 under comment letter O13.

**I11-5:** See response to comment O13-5 under comment letter O13.

**I11-6:** The selection of an environmentally superior alternative is dictated by the ability of the alternative to reduce the environmental impacts of the project and meet the project objectives. As discussed in Section 8.5 of the PEIR, the High Density Alternative and the Reduced Density Alternative would result in the same significance conclusions as the project; however, for some issues, impacts would be incrementally increased or incrementally reduced. For the Higher Density Alternative, the significance of impacts would be reduced for the issues of energy, GHG emissions, and transportation. For the Reduced Density Alternative, the significance of impacts would be reduced for the issues of aesthetics, air quality, and noise. Therefore, the High Density Alternative and Reduced Density Alternative are considered to be the environmentally superior alternatives, based on a comparison of the alternatives' overall environmental impacts. See response to comment O15-2 under comment letter O15 for additional discussion of the High Density Alternative.

**I11-7:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**Subject:** [EXTERNAL] Citizen Comments: Draft Program Environmental Impact Report (DPEIR)

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

I12-1

My comments concern University Community Plan Update analysis. I support all the comments submitted by Help Save UC dated April 25, 2024.

I especially want to highlight the following concerns:

1. The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment, and the University Community Plan Update into one document made the document confusing, overwhelming, and not accessible to the public, thus failing CEQA's requirement to provide an informational document to inform the general public of the significant environmental effect of a project.

I12-2

2. The City's failure to evaluate the full environmental impacts of the University Community Plan Update at full buildout, including the impact of the Complete Communities program, makes the document inadequate, specifically for areas such as Aesthetics, Air Quality,

I12-3

Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.

I12-3  
cont.

3. The City's failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.

I12-4

4. The DPEIR needs to be improved due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to assess the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project. The appropriate way would have been to evaluate a lower density alternative, such as the "community-preferred alternative" (Scenario B) in the City's last draft of the Plan Update. Instead, the City evaluated a Higher Density alternative that the City admitted wasn't feasible.

I12-5

5. Finally, the evidence doesn't support the City's conclusion that the High Density Alternative was the environmentally superior alternative. Table 8-1 shows that the High Density alternative results in greater impacts on the environment. Furthermore, the City's own conclusion states, "No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project." (Section 8.2.3, underline added.)

I12-6

It is critical that the City revise the DPEIR to address these issues.

I12-7

Sincerely,

Ruth Bush

2913 Ducommun Avenue

San Diego, CA 92122

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

Dear CEQA,

There are structural flaws in the University draft environmental impact report. Below are specific items that must be addressed and changed. Please consider alternate options before the process moves forward as identified in the items listed below and summarized in the attached word document.

I13-1

**I. The City Must Reduce the Proposed Housing Density By at Least 50%** The current proposed plan will add an additional 30,480 housing units to University City's (UC) existing 26,520 units while increasing the number of residents from 64,206 to a total of 129,566, and doubling the population. This proposal is an example of very poor planning. SANDAG's current Series 15 forecasts that the entire City of San Diego will have just 65,345 more residents by the year 2050; adding that entire population increase to the UC community alone, is ridiculous. The existing UC infrastructure will not support population increase. There is no additional land to provide more housing. With more people will come more carbon emissions from traffic congestion, especially given the community's restricted traffic grid, which defeats the City's Climate Action Plan. Fewer parks, recreational centers, schools, and other public facilities will substantially lower residents' quality of life. With inadequate fire & safety coverage, the community will also suffer more crime and deaths. The City must drastically cut back its density proposal to no more than 15,000 additional housing units.

I13-2

I13-3

I13-4

I13-5

I13-6

**II. Governor Drive must Not Be Reduced to Two Lanes.** A two lane road will restrict emergency egress in the event of a wildfire and murder thousands of residents. No changes to Governor Drive are warranted without a current Traffic Analysis that also takes into consideration the proposed up-zoning at both south UC retail centers and four corners of Genesee Avenue and Governor Drive and emergency egress.

I13-7

I13-8

**III. The Proposed Up-zoning of the South UC Shopping Centers Must be Reduced.** The City proposed Sprouts and Vons shopping centers change to a zone to CC-3-8, with 0-73 dwelling units per acre is flawed. This zoning allows 100 foot-high structures with mere 10-foot setbacks from adjacent, largely single-family residential properties, and comprise as many as 572 units at the Sprouts center and 373 units at the Vons center. The proposed plan does not consider that the Sprouts center is not an existing Transit Priority Area, and likely never will be given MTS' budget shortage. The City also does not consider that Governor Drive is already a highly

I13-9

congested main arterial and cannot support additional traffic, nor does it take into account the safety of children attending the three schools and using Standley Park Recreation Center along with the two aquatic centers. The City must reduce the height limit zoning at the Sprouts center to 40 feet and the housing density to 0-29 du/ac, and lower the height limit zoning at the Vons center to 50 feet and the housing density to 0-54 du/ac in order to lower the impact on adjacent properties and minimize traffic congestion.

I13-9  
cont.

**IV. Customer Parking Must be Maintained at South UC Shopping**

**Centers.** The current quantity of commercial parking spaces at each location should be kept available, and residential projects must require at least one residential parking space per dwelling unit. The revised University CPU must contain language that ensures retail shoppers they will have enough free parking when they patronize the centers.

I13-10

**V. The City Needs to Find Sounder Solutions to Providing Additional**

**Recreation Centers.** University City's proposed population increase warrants at least 2.8 more recreation centers. However, the City has only proposed there be one new recreation center by converting the Scripps Shiley Center, which sits on city-leased land. This proposed new site is unacceptable because it is located in La Jolla along Torrey Pines Road far away from any UC residential neighborhoods.

I13-11

**VI. A Greater Number of Solutions are Needed for Larger, Usable Park**

**Space.** The City's revised University CPU proposes only two new park areas, both of which are far away from residential areas and unusable for normal recreational activities such as soccer and baseball. The plan discusses ways that will be sought to create "more places to walk, bike, play and interact with each other," but it doesn't provide sound solutions to accommodate sports nor come close to improving UC's current park deficit and relatively low ranking on the ParkScore Index.

I13-12

**VII. The City's Argument that People will Give up their Cars for other forms of transportation is Groundless.**

No studies exist to indicate that people are willing to take public transit rather than own cars, rendering the City's argument baseless. In addition to residents and UCSD students, such a study would need to take into account all the vehicle traffic that will be generated by new and existing employment centers as well as tourists. South UC's demographics are largely families with young children and pets, as well as seniors; this population cannot readily adapt to walking, biking and using public transit for their daily activities because the patrons are too young and old. There are no provisions that allow emergency evacuation in the event of a wildfire or earthquake at the very same time emergency responders are trying to access the emergency.

I13-13

I13-14

San Diego's public transportation system is inadequate and will never serve our population in the manner that public transit serves some other cities that were originally planned for it, such as New York City; besides, MTS does not have the budget to expand San Diego's transit system or make major improvements. Across the city, people are moving toward EVs instead.

I13-15

The City's attempt to suggest that public transit is a solution was to make the transit area a full mile from a Transport Priority Area rather than a half mile, when neither is likely to work for family activities, grocery shopping, and various commute patterns to work is ridiculous.

I13-16

**VII. The University CPU Must Address Wildfire Evacuations & Safety.** While the revised University CPU shows current fire and police station placement, it does not suggest any new fire or police stations for our area. The City spent \$30 million on a new fire station to accommodate a relatively small population of residents who were opposed to the Regents Road Bridge. The DEIR has no analysis of current and projected emergency response times. UC is already behind city targets to implement adequate fire and safety coverage. More than doubling our population in UC could make us one of the most vulnerable communities in San Diego. It's imperative the University CPU makes accommodations for emergency and evacuation services, and provide fire safety infrastructure and additional vehicular egress is completed before further density is increased.

I13-17

**VIII. The University CPU Must to Take into Account UC's Vulnerability to Wildfires.** Approximately 75 percent of UC falls within a Very High Fire Hazard Severity Zone. Yet, there is no discussion in either the revised University CPU nor the DEIR about how the enormous population increase proposed by the City will impact the community nor how it will be addressed. Climate change will only serve to exacerbate the dangers posed by wildfires in the years to come. The University CPU must address this reality and discuss how the City is prepared to respond to the UC community and its residents in the event of a disaster. Fire response infrastructure needs to be put in place before any future development. Reducing vehicular access on Governor Drive exponentially increases the risk of successful emergency evacuation.

I13-18

**IX. Housing Affordability Must Be a High Priority.** Much of the justification by the City for creating such enormous density in UC is to provide workforce housing for those employed in the area so they don't have to commute from other areas of the City. A goal stated in the University CPU reads, "To provide a housing inventory that contains a broad range of housing types and costs to accommodate a variety of age groups, household sizes and compositions, tenure patterns and income levels." Rather than simply stating goals and guidelines, the University CPU needs to describe what conditions it will place on housing project developers in order to ensure that a large percentage of new units will be truly affordable to low- and middle-income households.

I13-19

**X. The Plan Update Must Detail the Funding Mechanisms to Pay for Needed Infrastructure, Public Facilities and Community Enhancements.** A great deal of time and thought were put into the revised University CPU renderings and illustrations to allow viewers the ability to envision what UC might look like in the future. Without monies set aside to pay for any of it, however, the entire Plan is nothing more than a pipe dream.

I13-20

Sincerely,

Tom Cartier  
**UC Fire Safe Council, Treasurer**  
**Standley Community Recreation Group, Representative**  
**University City Parks Committee, Vice President**

## DEIR Flaws

There are structural flaws in the University draft environmental impact report (EIR). Below are specific items that must be addressed and changed. Please consider alternate options before the process moves forward as currently identified in the draft EIR.

**I. The City Must Reduce the Proposed Housing Density By at Least 50%** The current proposed plan will add an additional 30,480 housing units to University City's (UC) existing 26,520 units while increasing the number of residents from 64,206 to a total of 129,566, and doubling the population. This proposal is an example of very poor planning. SANDAG's current Series 15 forecasts that the entire City of San Diego will have just 65,345 more residents by the year 2050; adding that entire population increase the UC community alone, is ridiculous. The existing UC infrastructure will not support such a population increase. There is no additional land to provide more housing. With more people will come more carbon emissions from traffic congestion, especially given the community's restricted traffic grid, which defeats the City's Climate Action Plan. Fewer parks, recreational centers, schools, and other public facilities will substantially lower residents' quality of life. With inadequate fire & safety coverage, the community will also suffer more crime and deaths. The City must drastically cut back its density proposal to no more than 15,000 additional housing units.

**II. Governor Drive must Not Be Reduced to Two Lanes.** A two lane will restrict emergency egress in the event of a wildfire and murder thousands of residents. No changes to Governor Drive are warranted without a current Traffic Analysis that also takes into consideration the proposed up-zoning at both south UC retail centers and four corners of Genesee Avenue and Governor Drive and emergency egress.

**III. The Proposed Up-zoning of the South UC Shopping Centers Must is Reduced.** The City proposed Sprouts and Vons shopping centers change is to zone to CC-3-8, with 0-73 dwelling units per acre. This zoning allows 100 foot-high structures with mere 10-foot setbacks from adjacent, largely single-family residential properties, and comprise as many as 572 units at the Sprouts center and 373 units at the Vons center. The proposed plan does not consider that the Sprouts center is not an existing Transit Priority Area, and likely never will be given MTS' budget shortage. The City also does not consider that Governor Drive is already a highly congested main arterial and cannot support additional traffic, nor does it take into account the safety of children attending the three schools and using Standley Park Recreation Center along with the two aquatic centers. The City must reduce the height limit zoning at the Sprouts center to 40 feet and the housing density to 0-29 du/ac, and lower the height limit zoning at the Vons center to 50 feet and the housing density to 0-54 du/ac in order to lower the impact on adjacent properties and minimize traffic congestion.

**IV. Customer Parking Must be Maintained at South UC Shopping Centers.** The **current** quantity of commercial parking spaces at each location should be kept available, and residential projects must require at least one residential parking space per dwelling unit. The revised University CPU must contain language that ensures retail shoppers they will have enough free parking when they patronize the centers.

I13-21

**V. The City Needs to Find Sounder Solutions to Providing Additional Recreation**

**Centers.** University City's proposed population increase warrants at least 2.8 more recreation centers. However, the City has only proposed there be one new recreation center by converting the Scripps Shiley Center, which sits on city-leased land. This proposed new site is unacceptable because it is located in La Jolla along Torrey Pines Road far away from any UC residential neighborhoods.

**VI. A Greater Number of Solutions are Needed for Larger, Usable Park Space.**

The City's revised University CPU proposes only two new park areas, both of which are far away from residential areas and unusable for normal recreational activities such as soccer and baseball. The plan discusses ways that will be sought to create "more places to walk, bike, play and interact with each other," but it doesn't provide sound solutions to accommodate sports nor come close to improving UC's current park deficit and relatively low ranking on the Park Score Index.

**VII. The City's Argument that People will Give up their Cars for other forms of transportation is Groundless.**

No studies exist to indicate that people are willing to take public transit rather than own cars, rendering the City's argument baseless. In addition to residents and UCSD students, such a study would need to take into account all the vehicle traffic that will be generated by new and existing employment centers as well as tourists. South UC's demographics are largely families with young children and pets, as well as seniors; this population cannot readily adapt to walking, biking and using public transit for their daily activities because the patrons are too young and old. There are no provisions that allow emergency evacuation in the event of a wildfire or earthquake at the very same time emergency responders are trying to access the emergency.

San Diego's public transportation system is inadequate and will never serve our population in the manner that public transit serves some other cities that were originally planned for it, such as New York City; besides, MTS does not have the budget to expand San Diego's transit system or make major improvements. Across the city, people are moving toward EVs instead.

The City's attempt to suggest that public transit is a solution was to make the transit area a full mile from a Transport Priority Area rather than a half mile, when neither is likely to work for family activities, grocery shopping, and various commute patterns to work is ridiculous.

**VII. The University CPU Must Address Wildfire Evacuations & Safety.**

While the revised University CPU shows current fire and police station placement, it does not suggest any new fire or police stations for our area. The City spent \$30 million on a new fire station to accommodate a relatively small population of residents who were opposed to the Regents Road Bridge. The DEIR has no analysis of current and projected emergency response times. UC is already behind city targets to implement adequate fire and safety coverage. More than doubling our population in UC could make us one of the most vulnerable communities in San Diego. It's imperative the University CPU makes accommodations for emergency and evacuation services, and provide fire safety infrastructure and additional vehicular egress is completed before further density is increased.

**VIII. The University CPU Must to Take into Account UC's Vulnerability to**

**Wildfires.** Approximately 75 percent of UC falls within a Very High Fire Hazard Severity

I13-21  
cont.

Zone. Yet, there is no discussion in either the revised University CPU nor the DEIR about how the enormous population increase proposed by the City will impact the community nor how it will be addressed. Climate change will only serve to exacerbate the dangers posed by wildfires in the years to come. The University CPU must address this reality and discuss how the City is prepared to respond to the UC community and its residents in the event of a disaster. Fire response infrastructure needs to be put in place before any future development. Reducing vehicular access on Governor Drive exponentially increases the risk of successful emergency evacuation.

**IX. Housing Affordability Must Be a High Priority.** Much of the justification by the City for creating such enormous density in UC is to provide workforce housing for those employed in the area so they don't have to commute from other areas of the City. A goal stated in the University CPU reads, "To provide a housing inventory that contains a broad range of housing types and costs to accommodate a variety of age groups, household sizes and compositions, tenure patterns and income levels." Rather than simply stating goals and guidelines, the University CPU needs to describe what conditions it will place on housing project developers in order to ensure that a large percentage of new units will be truly affordable to low- and middle-income households.

**X. The Plan Update Must Detail the Funding Mechanisms to Pay for Needed Infrastructure, Public Facilities and Community Enhancements.** A great deal of time and thought were put into the revised University CPU renderings and illustrations to allow viewers the ability to envision what UC might look like in the future. Without monies set aside to pay for any of it, however, the entire Plan is nothing more than a pipe dream.

Sincerely,

Tom Cartier  
UC Fire Safe Council Treasurer  
Standley Community Recreation Group Representative

I13-21

---

**I13: Responses to Tom Cartier Comment Letter**

**I13-1:** Comment noted.

**I13-2:** The comments about the density concerns have been noted. See response to comment O11-28 under comment letter O11 and response to comment O15-5 under comment letter O15 regarding the San Diego Association of Governments Series 15 forecast and the proposed density for the University Community Plan Update (CPU).

**I13-3:** The University CPU includes policies that identify the need for funding future public service and infrastructure development projects. Plan Policy 7.1(A) iterates the City's goal "to use and seek a broad range of funding sources to finance public facilities and infrastructure, including grants and agreements with private property owners," and Plan Policy 7.3(A) highlights the City's goal to "pursue joint use opportunities, where appropriate, and subject to California Department of Education requirements and the availability of funding." Furthermore, the University CPU is a long-range planning document, and it does not include specific development projects or their details. Evaluation of and implementation of future upgrades to the City's public services and infrastructure would occur on a project-by-project basis as buildout per the project occurs. Public services impacts are discussed in Section 4.12 of the Draft Program Environmental Impact Report (PEIR), and utilities and service systems impacts are discussed in Section 4.16 of the Draft PEIR.

**I13-4:** Transportation impacts are discussed in Section 4.14, Transportation, of the Draft PEIR. Since the passage of Senate Bill (SB) 743 in 2018, California Environmental Quality Act (CEQA) Guidelines Section 15064.3 no longer uses parking, auto delay, level of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. Vehicle Miles Traveled (VMT) is the metric by which transportation impacts under CEQA are measured. Under CEQA Guidelines Section 15064.3, statewide application of the new VMT metric was required as of July 1, 2020. With the implementation of this new threshold, parking and traffic congestion concerns are issues that are not required to be studied as a part of the environmental review process; no further response is necessary. The University CPU helps achieve the City's Climate Action Plan (CAP) Strategy 3 goals that support a mode shift from single occupancy vehicles to alternative mobility options such as walking/rolling, biking, and transit through its land use strategy and through mobility investments and programs that address travel behavior.

**I13-5:** Public services impacts are discussed in Section 4.12 of the Draft PEIR and recreation impacts are discussed in Section 4.13 of the Draft PEIR. As discussed in Section 4.12.4 of the Draft PEIR, the specific locations, sizing, and capacity of future public service development projects (e.g., schools, police and fire stations, and libraries) are not known at this time. As mentioned in response to I13-3, the University CPU includes policies that identify the need for funding future public service and infrastructure development projects. Nevertheless, the Draft PEIR determined that impacts to public services would be significant as at a program level of analysis it is unknown what specific impacts, and the extent of these impacts may occur associated with the future construction and operation of such facilities. See response to comment I13-11 regarding impacts to recreational facilities.

**I13-6:** Comment noted.

**I13-7:** See response to comment O13-3 under comment letter O13. See response to comment I13-4 above for the reason why the traffic analyses for the Draft PEIR does not address traffic congestion. A Vehicle Miles Traveled Analysis was prepared for the Draft PEIR (Appendix J).

**I13-8:** See response to comments O13-1 and O13-2 under comment letter O13.

**I13-9:** See response to comment I8-7 under comment letter I8.

**I13-10:** Comment noted. Parking is not an issue required to be addressed by CEQA; see response to comment I13-4.

**I13-11:** As described in Section 4.13.4, Issue 1 and Issue 2, of the Draft PEIR, impacts related to the need for additional recreation centers is considered significant because, at the programmatic level, implementation of the University CPU would require more recreational facilities for the future population than currently identified. As future development is proposed, individual private developments would be required to either pay Citywide Park Development Impact Fees or provide public parks consistent with the San Diego Municipal Code (SDMC) Section 142.0640(b)(8)(A-F), as detailed in Section 4.13.2.2c. Without knowing where these future improvements would be located, the type and extent of the impacts resulting from providing these facilities, and to what extent these future facilities would be able to accommodate increases in demand for recreational facilities, the environmental impact remains significant. The commenter mentions a proposed recreational facility on Torrey Pines. They perhaps mean the Scripps Shiley Sports and Fitness Center on North Torrey Pines Road. The University CPU identifies this area as a potential site for a new and/or expanded facility on Figure 26 (Figure 3-25 of the Draft PEIR). While this site is not near residential development, it could feasibly serve employees in that area, which would be consistent with University CPU plan policy 1.3(B): "Encourage office development that includes strategies accommodate changes in workforce styles and needs. Promote the locating office uses within high-quality office districts where workers have access to restaurants, services, and outdoor recreation."

**I13-12:** This comment is noted. Section 4.13.7 of the Draft PEIR identifies significant impacts related to parks and recreational facilities, as mentioned in response to comment I13-11. University CPU policy 4.1F encourages the preservation, expansion, and enhancement of existing recreation centers and aquatic facilities to increase their life span, meet current and future recreational needs, or expand their uses and sustainability. As mentioned in response to I13-3, securing funding for public services, including funding for park and recreation facilities is included as Plan Policy 7.1(A).

**I13-13:** The Blueprint SD Initiative, University CPU, and Hillcrest Focused Plan Amendment (FPA) are long-range development plans that are intended to implement the City's General Plan City of Villages Strategy, CAP, and Housing Element, among other City plans and policies, and reflect the City's latest goals, policies, and plans for housing, environmental protection, climate change adaptation, and sustainable growth. The Blueprint SD Initiative's policy and land use framework is defined by the Village Climate Goal Propensity Map, which identifies the best locations for growth and the most receptive locations that support biking, walking, and transit usage based on the Regional Travel Demand Model, to achieve the City's CAP goals related to mode share. An overarching goal of the Blueprint SD Initiative is to further the implementation of the City's CAP and support a mode shift from single occupancy vehicles to alternative mobility options such as walking/rolling, biking, and transit. The University CPU was developed to be consistent with the Blueprint SD Initiative.

Focusing on building higher-density housing in urban areas, especially those near transit hubs, would give community members the opportunity to use alternative modes of transportation. The University CPU also includes policies which support the development of housing that meets the diverse needs of the community, including families and older populations [see specifically University CPU plan policies 1.2(C), 1.2(D), 1.2(E), and 1.2(F)]. The University CPU proposes a mix of land uses that would provide not only housing but amenities for families and seniors.

A Vehicle Miles Traveled Analysis was prepared for the Draft PEIR (Appendix J).

**I13-14:** See response to comment O13-3 under comment letter O13.

**I13-15:** This comment is noted. Implementation of Blueprint SD Initiative, University CPU, and Hillcrest FPA has an overarching goal to provide affordable and convenient climate-friendly mobility options, such as walking/rolling, biking, and public transit, equitably throughout the City with a focus on areas with the greatest need. See University CPU plan policies 3.1 (A–H) for a list of policies that specifically encourage this in the University CPU area. Also, see response to comment I13-13.

**I13-16:** The comment is noted. Transit priority areas (TPA) are defined, in accordance with SB 743, as “an area within one-half mile of a major transit stop that is existing or planned.” The planned stop must be “scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations.” The proposed project does not make any changes to TPA definitions.

**I13-17:** Response times for police and fire services are discussed in Section 4.12 of the Draft PEIR. See Tables 4.12-4 for the San Diego Fire Department’s performance indicators for 2021. Table 4.12-6 includes the San Diego Police Department’s (SDPD) performance indicators for 2022. As determined in Section 4.12.4 Issue 1(a) and (b), future development in accordance with the University CPU would result in an increase in building square footage and population, which would create a greater demand for police and fire emergency services. The University CPU is a long-range planning document; it does not include specific development projects or their details. Evaluation of and implementation of future upgrades to the City’s public services would occur on a project-by-project basis as buildout per the project occurs. As the location and need for potential future facilities has not been determined at this time, the nature and extent of these impacts is unknown, and impacts related to police and fire services were determined to be significant.

See response to comment O13-3 under comment letter O13 in regard to the concern about emergency egress.

**I13-18:** As shown in Table 4.18-4 of the Draft PEIR, approximately 6,836 acres of land in the University CPU area is in a very high fire hazard severity zone. Under Section 4.18.4, Issue 1, the Draft PEIR determined that impacts related to wildfires would be significant. The University CPU includes a variety of policies that aim to reduce the risk of wildfire (see University CPU plan policies 4.2(E), 5.6(A), 7.2(A and B), and 7.10(A–D)). Emergency evacuation is discussed under Impact 4.18.4, Issue 2 of the Draft PEIR. A number of transportation corridors can serve as emergency evacuation routes in the University CPU area, including Interstate (I-) 5, I-805, and State Route (SR-) 52 which are major transportation corridors that serve the area. These are accessible from Regents Road, Genesee Avenue, Governor Drive, Nobel Drive, Gilman Drive/La Jolla Colony Drive, and Sorrento

Valley Road. The Draft PEIR identified that there is a key constraint affecting the north-south connectivity of the University CPU area; Rose Canyon and the Amtrak train tracks physically separate the northern and southern portions of the community. However, both the northern and southern portions of the community have access to other transportation corridors to the north and south of the University CPU area.

The method for responding to emergencies in the University CPU is also identified in Section 4.18.4, Issue 2. The SDPD is the lead agency for evacuations within the City. During an emergency, the SDPD identifies available and appropriate evacuation routes and coordinates evacuation traffic management with the California Department of Transportation, the California Highway Patrol, the San Diego County Sheriff's Department, other supporting agencies, and jurisdictions. Modern evacuation response includes use of early warning systems and dissemination of emergency information via radio, television, social media/internet, and Reverse 911 or Alert San Diego. The Draft PEIR found 4.18.4, Issue 2, to be a less than significant impact.

Also, see response to comment O13-3 under comment letter O13.

**I13-19:** The comment is noted. The Blueprint SD Initiative, University CPU, and Hillcrest FPA are all long-range planning documents that guide development and provide a framework for land use planning. The implementation follows the regulations of the San Diego Municipal Code, including those found in SDMC Article 2, Division 13, Inclusionary Affordable Housing Regulations. The Draft PEIR states the University CPU's affordable housing requirements in Section 3.5.3.1(a). This comment does not address the adequacy of the Draft PEIR; no further response is necessary.

**I13-20:** The comment addresses a concern about the timing of future development projects and the capacity of City's infrastructure system to accommodate new development. The Blueprint SD Initiative, the Hillcrest FPA, and the University CPU are long-range planning documents, and they do not include specific development projects or their details. Evaluation of and implementation of future upgrades to the City's utilities system will occur on a project-by-project basis as buildout per the project occurs. Also, see response to comment O11-22 under comment letter O11.

**I13-21:** The attachment is a repeat of I13-2 through I13-19.

To: UC Planning Commission, Regarding San Diego University City~

Cutting our main artery, Governor Drive, down to one lane in each direction to add an unnecessary dedicated "buses only/bike lanes" in addition to proposed mass housing on Governor...

I14-1

**Have you tried to get to your child in a school emergency? I have**, running 4 blocks ON FOOT from my driveway, during a Granite Hills High School shooting, because there was zero vehicle access and zero cell service with News crews on the ground and helicopters in the air literally taking over all of the bandwidth, etc..!! Or, my adult child literally stuck in the fire that started in Carlsbad that took out Escondido..I was on the phone with her for 1.5 hours trying to guide her safely out, with the only safe route I could find being El Camino Real southbound. I could go on about what has gone wrong in all of my experiences here and Los Angeles; this city has been through it's fair share of catastrophes with all of the poor infrastructure to know better than to propose what you are proposing. Our first responders (copied here) already know all about trying to get to someone when their hands are tied, but **trying to get to your own child when your hands are tied is beyond everything and anything you've ever had to live through!** We had no warning!

I14-2

**Governor Drive is the only East/West artery** in the southern portion of University City. To use it for any other purpose other than a main artery borders on criminal intent for resident safety as you plan to increase housing exponentially! Your plan includes additional mass housing at Governor/Genesee along with additional mass housing at Governor/Regents to the tune of over 200 residential units per acre, with many residing multi-stories above the existing retail

I14-3

space in the plan. ADU approvals galore?! This means a potential of thousands of additional residents utilizing Governor Drive; I can't and won't unsee the RISK that restricting lanes will impose on a daily basis.

I14-3  
cont.

UC South has minor children in three public schools, and many daycare facilities surrounding Governor Drive to evacuate, thousands of current residents, many of whom are elderly with mobility issues, in addition to the thousands more you plan to add to our small neighborhood is of critical concern. Brush, canyons, eucalyptus trees, and Rose Canyon fault lines surround us making us susceptible to catastrophic events. We all have huge homeowners policy premiums due to the potential RISK here!

I14-4

Not only have I witnessed the entire county of San Diego burn twice (which was technically two of three times this has happened here)...., but I am originally from Northridge California (Porter Ranch, 91326, homeowner 1965-current). I have lived it all - multiple fires, earthquakes, emergency evacuations, emergency vehicle access, power outages, water outages, news reporter nightmares, water trucks, limited-zero access to our homes or any resources, our police station burned to the ground in the 1971 earthquake (I've donated an entire new cot room to the LAPD Devonshire Division recently, now that I am able to do so, due to the lifelong memory of that horrible time in our lives. I will never forget it.). Many are going to avoid driving in that well-marked "buses only" lane in an emergency, that is if we can make it onto Governor Drive in our vehicles while parents, first responders, and news vans try desperately to get in. I have spent 15 years of my career working in private and public insurance and college Risk Management because of all I have witnessed since 1971.

I14-5

I have already voiced my concerns over the entire University City plan (3/20/23 email). Our community colleges are out in the communities they serve for a reason, ACCESS. In addition, a vast majority of college classes are online/hybrid now and do not command an onsite presence or need for additional housing to accommodate incoming businesses, students, or staff. Proposed census projections are for a marked decrease in the San Diego population! UCSD should be required to research and open satellite campuses throughout San Diego so that their students can live, work and take UCSD classes in their own neighborhoods..not the other way around. Perhaps an educational **cohort with SDCCD and SDSU, to accommodate their students by combining class locations and utilizing empty buildings and classrooms already available throughout the county, SDCCD does it all day, everyday.** There is far too much waste in California coupled with threats over "demands on water and power," so you say, to continue funding and permitting more projects requiring more. We all know there are plenty of vacant, starving commercial spaces to hold classes and run businesses throughout San Diego so that commuting for all who live in this county should be a non-issue. I am not focusing on your entire UC plan in this communication; however, I will advocate for safety all day long. We are entitled to our safety. Proposed mass housing in all of UC, including Governor Drive, while narrowing Governor Drive to one lane in both directions, should clearly be deleted.

I14-6

I14-7

***Have you tried to get to your child during an emergency? Have You!?***

I14-8

Thank you,  
Lori Carver  
92122 Homeowner

cc: SD Fire, Cal Fire, CalTrans, SDPD Central, Clerk of the Board at SanDag

***(I apologize if this has been copied to mailboxes that are no longer correct as I copy those I've emailed before on this subject).  
SDPD, SDFIRE, CALFIRE, Caltrans, etc: This plan is clearly a Downtown 2.0 that council members and planners propose for 92122 with mass housing. I was unsure of who to direct content to at the municipalities, but felt it was important to realize the potential impact this will have due to the proposed over-development and overcrowding in all of 92122 and on Governor Drive (link to proposal is above, if you've not been made aware of this council plan)..This plan, especially for UC South, surrounding Governor Drive, makes no economic/feasibility/safety sense as this council attempts to cater to UCSD, add more growth without resources, and above all..create their "Downtown San Diego 2.0.' Our deadline to respond to [planuniversity@sandiego.gov](mailto:planuniversity@sandiego.gov) is 4/29/24. Please join in on the meetings. Thank you!***

**I14: Responses to Lori Carver Comment Letter**

**I14- 1:** The general concerns about the changes to Governor Drive and the proposed increase in housing along Governor Drive have been noted. See the response to comment I14-3.

**I14-2:** Comment noted. The comment does not raise an issue related to the adequacy of the environmental analysis of the Draft Program Environmental Impact Report (PEIR). No further response is required.

**I14-3:** See response to comment I8-7 under comment letter I8.

**I14-4:** See response to comment O13-3 under comment letter O13.

**I14-5:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I14-6:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I14-7:** See the response to comment I14-3.

**I14-8:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

To Whom It May Concern: Below are my comments to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

III. School Requirements from the San Diego School District Must Be Met. The DEIR states "No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district's memorandum was incorporated into the DEIR, but this statement was not.

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic

I15-1

I15-2

I15-3

I15-4

I15-5

requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community's preferred alternative. V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update. VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts : The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program. **From:** Hannah Chou <hannahjchou@gmail.com>  
**Sent:** Monday, April 29, 2024 11:14 PM  
**To:** PLN\_PlanningCEQA <planningceqa@sandiego.gov>; PLN Hillcrest Focused Amendment <planhillcrest@sandiego.gov>; Darsey, Ryan <RDarsey@sandiego.gov>; Councilmember Stephen Whitburn <StephenWhitburn@sandiego.gov>; Latchford, Jordan <JLatchford@sandiego.gov>  
**Subject:** [EXTERNAL] Hillcrest Focused Plan Amendment - Extend One-Way Bike Configuration on University Ave

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

Hello, my name is Hannah and I live in the Mission Hills neighborhood. I am emailing about the importance of revising safe, all ages and abilities bike infrastructure on West University Avenue.

I16-1

The Hillcrest Focused Plan Amendment leaves a crucial gap in the regional bikeway network on West University Avenue. With high vehicle volumes posing safety risks, especially near an elementary school, urgent action is needed. **My husband and I support the one-way configuration from First Avenue to Washington Street, creating space for a protected bikeway.** This revision ensures safe mobility for all users and closes the gap in the complete streets network.

I16-2

We personally bike around town for the majority of our chores, support local businesses, and to see friends all around San Diego's many neighborhoods. The University Ave bicycle infrastructure is often the most dangerous part of our route and we have personally been a part of or witnessed instances of conflict and confusion between car drivers and bicyclists due to the design. By investing protected bikeways all the way from First Ave to Washington, it would help connect many areas of businesses and transportation from the Washington trolley, International Row, Mission Hills businesses, and Hillcrest businesses.

I16-3

Best,  
Hannah

**I16: Responses to Hannah Chou Comment Letter**

**I16-1:** The comment introduces the commenter's general concern with the proposed bike infrastructure of the Hillcrest Focused Plan Amendment area.

**I16-2:** The comment on the gap in bike infrastructure has been noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report (PEIR). No further response is required.

**I16-3:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

## Comment Letter I17 - Lisa Clark

**From:** [Ash-Reynolds, Tara](#) on behalf of [PLN\\_PlanningCEQA](#)  
**To:** [Lombrozo, Ari](#)  
**Subject:** FW: [EXTERNAL] Comments to Revised University Community Plan Update  
**Date:** Tuesday, April 30, 2024 9:16:21 AM

**Subject:** [EXTERNAL] Comments to Revised University Community Plan Update

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

We are writing to you as residents and community activists, specifically as the founders of People for a Clean UC, to express our strong opposition to certain aspects of the proposed University City Plan Update. I17-1

First and foremost, we are deeply concerned about the proposed rezoning of the areas currently occupied by the Sprouts and Vons shopping centers to CC3-8 zoning, which allows for 0-73 dwelling units per acre. This increase in density will dramatically alter the character of our community, potentially straining local infrastructure, increasing traffic, and reducing the overall quality of life for all residents. I17-2

Additionally, we are opposed to the plans to reduce Governor Drive to one lane in each direction to accommodate new bike lanes. While we support efforts to promote alternative transportation options, this particular change is likely to cause significant traffic congestion. The impact on our ability to efficiently and safely exit and return to our community cannot be overstated, and we fear that it will only worsen with the proposed increase in local population density. I17-3

While we are opposed, we do encourage looking into other alternatives to accommodate a bike lane. The segment of Governor Dr between Stadium St and Genesee Ave spans Spreckels Elementary and Standley Middle has a 6 foot sidewalk. On the other side of the street is a sidewalk with a parking strip. Why not investigate a protected bike lane on both sides of Governor Dr? This would still allow parallel parking and 4 lanes of traffic. It might even make parents feel safer allowing their kids to bike to school instead of being dropped off. I17-4

These proposed changes threaten to transform University City from the pleasant and manageable community we know and love into an area marked by overcrowding and constant traffic issues, making it an extremely unpleasant place to live. I17-5

We urge you to reconsider these aspects of the University City Plan Update and work towards solutions that maintain the integrity and livability of our community. Thank you for taking the time to consider our concerns. I17-6

Sincerely,  
Lisa Clark

**I17: Responses to Lisa Clark Comment Letter**

**I17-1:** The comment introduces the email. No response is necessary.

**I17-2:** See response to comment I8-7 under comment letter I8 in regard to the concern about rezoning two shopping centers along Governor Drive (the Sprouts shopping center at Regents Road and Governor Drive and the Vons Shopping Center at Genesee Avenue and Governor Drive).

Aesthetic impacts are discussed in Section 4.1.4, Issues 3 and 4 of the Draft Program Environmental Impact Report (PEIR). As described in this analysis, aesthetic impacts of infill projects in transit priority areas (TPA) shall not be considered significant per Section 21099(d)(1) of the California Public Resources Code. The Sprouts shopping center is not currently in a TPA, but the Vons shopping center is in a TPA. Because not all future development in accordance with the University Community Plan Update would be in TPAs, in those instances, the Draft PEIR determined that aesthetic impacts would be significant. Future projects that require discretionary review would undergo a project-specific environmental review at the appropriate future time which could identify additional project features and/or mitigation measures to address potential site-specific project level impacts.

See response to comment I13-3 under comment letter I13 in regard to the concern about infrastructure.

Transportation impacts are discussed in Section 4.14, Transportation, of the Draft PEIR. Also, see response to comments O13-1 and O13-2 under comment letter O13. Since the passage of Senate Bill 743 in 2018, California Environmental Quality Act (CEQA) Guidelines Section 15064.3 no longer uses parking, auto delay, level of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. Vehicle Miles Traveled (VMT) is the metric by which transportation impacts under CEQA are measured. Under CEQA Guidelines Section 15064.3, statewide application of the new VMT metric was required as of July 1, 2020. With the implementation of this new threshold, parking and traffic congestion concerns are issues that are not required to be studied as a part of the environmental review process.

**I17-3:** As mentioned in the response to I17-2, traffic congestion is not used as a significance threshold under CEQA. See response to comment O13-1 under comment letter O13 regarding the proposed changes to Governor Drive. Also, see response to comment O13-3 in regard to the concern about emergency egress along Governor Drive.

**I17-4:** This suggestion is noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I17-5:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I17-6:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

## Comment Letter I18 - Jonathan Cohen

Comment on draft Program Environmental Impact Report (PEIR)

PEIR addresses multiple projects: General Plan update, University plan update, Uptown plan update for the Hillcrest area, Local Coastal Program update, zoning update, etc. (SCH No. 2021070359)

Jonathan Cohen / April 2024

Comment

Project scope

The PEIR addresses multiple projects at once. The resulting set of documents is more than 1000 pages. Please re-consider whether the draft PEIR is consistent with CEQA writing guidelines such as page limits and plain writing. (See generally Cal. Code Regs., tit. 14, §§ 15140-15150.)

I18-1

EIR type

The State CEQA Guidelines describe several different types of environmental documents that may be prepared to fulfill the requirements of CEQA. (Cal. Code Regs., tit. 14, §§ 15168 (Program EIR), 15175 (Master EIR).) The State CEQA Guidelines specifically suggest a MEIR for a general plan update. Please re-consider whether the document should be a master EIR (MEIR) or a program EIR (PEIR).

I18-2

Zoning

The project title does not mention that the project includes zoning updates. The draft PEIR does not clearly explain which areas of land would be rezoned, and the potential effects of the rezoning in each area.

I18-3

Height limit (30-feet)

In 1972, voters approved a 30-foot height limit for some areas west of the Interstate 5 freeway (Proposition D). As written, the University plan draft states that the 30-foot coastal height limit is related to coastal views. This alone may be misleading and inconsistent with prior interpretations of the City Manager and the California Coastal Commission.

I18-4

Trolley projects

Should the PEIR address plans for the expansion of the trolley system in the University area? (Purple Line trolley)

I18-5

Scenic Highway program

The draft PEIR states that the University project area is not eligible for designation as an official scenic highway. Please contact Caltrans and review the existing eligibility designations for Interstate 5.

I18-6

Architecture and art installations

Has the draft PEIR sufficiently considered the use of architecture and art installations for visual screening and aesthetic mitigation? What will the reporting/monitoring program require?

I18-7

---

**I18: Responses to Jonathan Cohen Comment Letter**

**I18-1:** See response to Comment O-13-6 under comment letter O13.

**I18-2:** As described in California Environmental Quality Act (CEQA) Guidelines Section 15168, a Program Environmental Impact Report (PEIR) is an Environmental Impact Report (EIR) which may be prepared on a series of actions that can be characterized as one large project and are related either: geographically; a logical parts in the chain of contemplated actions; in connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program; or as individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effect which can be mitigated in similar ways. The Blueprint SD Initiative, University Community Plan Update (CPU), and Hillcrest Focused Plan Amendment (FPA) includes comprehensive updates to long-range planning documents that provide a policy framework for land use decisions within the City. Thus, a PEIR is an appropriate environmental document for the proposed project. Although a Master EIR could also be prepared, Master EIRs have more restrictive requirements for subsequent projects. Specifically, a Master EIR's project description must describe specific details of future development projects that would subsequently occur (Public Resource Code Section 21157(b)). These details (e.g., size, type, and location of future development projects) are not specifically known at this time. Further, pursuant to CEQA Guidelines Section 15179(a), a certified Master EIR shall not be used for subsequent projects when the Master EIR was certified more than five years prior to the filing of an application for a subsequent project. Thus, a Master EIR would be inadequate to support the project's objective of providing a policy and land use framework for residential capacity to meet the City's Regional Housing Needs Allocation targets over the next 20 to 30 years; and would not support the project objective of streamlining the environmental review process for future planning documents to allow for expedited implementation of plans that facilitate the development of housing and infrastructure that meets the City's needs and furthers the City's Climate Action Plan goals.

**I18-3:** The proposed Hillcrest FPA zoning map is shown in Figure 3-9 of the PEIR. The proposed zoning for University CPU can be found at the following link:  
<https://www.planuniversity.org/materials>.

As described in Sections 3.6.2 and 3.6.3, the adoption of the Hillcrest FPA and University CPU would require adoption of an ordinance to rezone land within the Uptown Community Plan area consistent with the Hillcrest FPA, and adoption of an ordinance to rezone land within the University CPU area consistent with the University CPU. The potential environmental impacts associated with implementation of the Hillcrest FPA and University CPU, and their associated zoning updates, is analyzed throughout the PEIR.

The Blueprint SD Initiative proposes an updated policy and land use framework that would apply to all development citywide and is intended to guide future land use plan updates (e.g., CPUs, Specific Plans, and FPAs) and future San Diego Municipal Code amendments which would help facilitate the implementation of the Blueprint SD Initiative. The Blueprint SD Initiative does not identify specific land use or zoning; rather, it is anticipated that future community plans and other applicable land use plans and policies would refine the General Plan's citywide policies and provide site-specific land use designations, zoning, policies, and recommendations. The Draft PEIR disclosed that the Blueprint SD Initiative's policy and land use framework would apply citywide and potential impacts

associated with the implementation of the Blueprint SD Initiative were analyzed throughout the PEIR.

**I18-4:** Comment noted. This comment is on the University CPU and does not raise an issue with the adequacy of the analysis in the Draft PEIR. No further response is required.

**I18-5:** Transportation impacts are discussed in Chapter 4.14 of the PEIR. Traffic modeling for projected vehicle miles traveled relies on the proposed project land uses and San Diego Association of Governments (SANDAG's) Regional Plan network, which currently includes the Purple line. The final route and stations for the Purple line have not been determined and are currently being studied by SANDAG. Implementation of the Purple line is not a part of the project which was analyzed in the Draft PEIR, however, a reference to it has been added to Section 4.14.4, Issue 1.

**I18-6:** Section 4.1.2.1(a) of the Draft PEIR indicates that Interstate 5 (I-5) is an eligible scenic highway from the US-Mexico border to State Route 75 (SR-75) and then from SR-75 to the northern border of the City. This latter portion travels past the University CPU area. The commenter is correct that this information is not included in the analysis in Section 4.1.4, Issue 2. The Final PEIR has been revised to update this information.

**I18-7:** The use of architectural design to encourage cohesiveness in new development is implemented as supplemental design regulations (SDRs), project design features, or objective design standards. As described in Chapter 4.1.4, Issue 3, the proposed University CPU provides urban design policies and SDRs that would be applied to projects within those project areas (see the example SDRs in the appendices to the University CPU). Chapter 4.1.4, Issue 3 has been revised to include additional information regarding the SDRs. Adherence to the regulatory and policy framework in the University CPU would provide for cohesive design themes, visual elements, and development patterns on a communitywide basis as the plan areas are built out.

The University CPU also includes Policy 2.2(B) which supports the accentuation of key focal points, entrances, gateways, and corners of a development with enhanced paving, art, signs, lighting, specimen trees and accent native drought resistant plant materials; Policy 2.3(C) which supports the encouragement of buildings to be oriented around community gathering areas such as an outdoor café, community garden, park, plaza, art installation, etc.; Policy 2.12(A) which supports the use of art installations and cultural amenities as key features of buildings, common areas, and open space areas of a project; Policy 2.12(B) which supports collaborating with local artists, residents and community members during the design and construction of projects to integrate art in the development projects; Policy 2.12(C) which supports the installation of art at critical "gateway" intersections in the community to serve as an expression of community identity and pride; and Policy 2.12(D) which supports including opportunities for street art installation and murals, especially around transit stops and key intersections. Additionally, the University addresses the transition between existing and new buildings with plan Policy 2.5(C) which promotes stepping back upper levels of buildings in areas where building heights vary to transition to adjacent lower building heights; and encourage incorporating architectural elements into building design that smooth the transition between the new and existing architecture.

As discussed in Section 4.1.4, Issue 3, compliance with City's regulations, development standards, urban design policies, and any SDRs proposed would reduce potential aesthetic impacts.

Nevertheless, at a program level of review, and without project-specific development plans and potential deviations, aesthetic impacts were found to be significant. Additional project features and/or mitigation measures may be identified at the project-level to reduce potential aesthetic impacts.

---

To Whom It May Concern:

I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

I19-1

My comments are with respect to the analysis performed for the University Community Plan Update. I support all of the comments submitted by Help Save UC dated April 25, 2024. I especially want to comment on the following:

1. The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment and the University Community Plan Update into one document made the document confusing, overwhelming and not accessible to the public, thus failing CEQA's requirement to provide an informational document to inform the general public of the significant

I19-2

environmental effect of a project.

2. The City's failure to evaluate the full environmental impacts of the University Community Plan Update at full buildout, including the impact of the Complete Communities program, makes the document inadequate, specifically for areas such as Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.
3. The City's failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.
4. The DPEIR is inadequate due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to evaluate the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project. The appropriate way to do that would have been to evaluate a lower density alternative, such as the "community-preferred alternative" (Scenario B) in the City's last draft of the Plan Update. Instead, the City evaluated a Higher Density alternative that the City admitted wasn't feasible.
5. Finally, the City's conclusion that the High Density Alternative was the environmentally superior alternative isn't supported by the evidence. Table 8-1 shows that the High Density alternative results in greater impacts on the environment. Furthermore, the City's own conclusion states, "No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project." (Section 8.2.3, underline added.)

I19-2  
cont.

I19-3

I19-4

I19-5

I19-6

The City should revise the DPEIR to address these issues.

| 119-7

Thank you,  
Kendra Cole  
University City Resident

---

To Whom It May Concern:

Please see the attached with regard to the Environmental Impact Report for University City.  
Thanks for your consideration.

Carmella George Cotta-Owner  
La Jolla City Club since 1989

I20-1

To Whom It may Concern:

As a University City resident I am contacting you to express my objections regarding several areas of the City's recent Environmental Impact Report due to several key concerns, some of which were already rejected by UC residents when the 'Housing Action Plan' part of State Bill 10 failed to pass in August 2023. Here are just some key concerns:

I20-2

**Governor Drive Lane Reductions**

The City acknowledged at a recent meeting in early April that while traffic "models" were done for the EIR draft plan, they were not done for the high-density alternative that is included in the EIR. Moreover, there was no new traffic count or specific study of Governor Drive regarding what the City now calls "complete streets. It has been confirmed that the City has not done a comprehensive Traffic Study since 2015 and is basing their Vehicle Miles Traveled (VMT) data on a study done in 2016. In summary, Governor Drive should not be reduced to two lanes without a current and legally valid Traffic Study with a full VMT analysis.

I20-3

I20-4

I20-5

**Emergency Ingress/Egress**

Related to the Governor Drive lane reductions combined with substantially higher density allowances, such a plan ignores the reality of the impact it will have on emergency vehicles getting through in time, or worse yet if residents needed to evacuate in the event of a disaster in an area that already is in a potential wildfire zone as well as its proximity to MCAS, just to name two factors. Again, the City is under legal obligation to conduct a current and legally valid Traffic Study with a full VMT analysis along the Governor Drive corridor.

I20-6

**New High-Rise Apartments Planned for Genesee and Nobel Drive**

Under the City's "Complete Communities Housing Solutions" regulations, we understand that Willmark Communities is seeking permission to build three high-rise towers comprising 1,315 "luxury" apartments, with only 1,350 onsite parking spaces, on the southwest corner of Nobel and Genesee, replacing a 108-unit two-story apartment complex. This is yet another example of the City falling short on its promise to add more affordable housing, while such a project will only increase traffic gridlock along Genesee during certain times of the day, particularly during rush hours and when the schools let out and parents are attempting to pick up or drop off their children.

I20-7

**Vons & Sprouts Centers New Height and Sharply Higher Density Allowances**

The planned sharp increase in overall housing density allowances is now coupled with the EIR showing that the City has ignored UC community requests and is forging ahead to raise the allowable structure heights of the Von's shopping plaza on Governor Drive/Genesee to 100 feet or 10 stories with residential units added to those areas.

I20-8

That alone will further impact all kinds of mobility along Governor Drive & onto Genesee as well as to 805 to the east, and Regents toward the west, where a similar plan is on deck for the Sprout’s shopping plaza. The Sprout’s shopping center is NOT an existing Transit Priority Area or TPA. Buses do not stop there frequently, and it is not close to the trolley and an existing TPA.

I20-8  
cont.

### Planning Deficiencies in Parks

Under the City’s ‘Master Plan’, the UC area is already short on publicly accessible parks – not “greenways” or some other term that in reality is not a park, or in a land-use area that does not allow residential use. It is also our understanding that developers can now pay a one-time, in-lieu fee and not provide such amenities as a small recreational area in their residential complex plans. The City has fallen short in this key area while also allowing developers to buy their way out of providing more green spaces or publicly accessible recreation areas.

I20-9

In summary, these initiatives ignore the need for a workable and supportive infrastructure. It fails to provide even somewhat affordable housing, disregards existing residents’ input, and intentionally erodes single-family neighborhoods.

I20-10

The most harmful high-density housing initiative the City attempted to pass was SB 10, which would have allowed as many as 14-unit buildings up to three stories high on single-family parcels and no contained parking requirements. Thanks to a successful opposition campaign, SB 10 was removed from the Housing Action Package.

I20-11

Thank you for your time and consideration. Such initiatives call for planning that balanced growth rates with an infrastructure where families can grow and thrive. Most of all, responsible growth includes residents in decision-making.

I20-12

Carmella Cotta

La Jolla City Club

April 28, 2024

**I20: Responses to Carmella Cotta Comment Letter**

**I20-1:** The comment introduces the commenter's email attachment. The comment has been noted and no further response is required.

**I20-2:** The comment introduces the commenter's general concern with the Draft Program Environmental Impact Report (PEIR). The comment has been noted and no further response is required.

**I20-3:** See response to comment I8-2 under comment letter I8.

**I20-4:** See response to comment I8-3 under comment letter I8.

**I20-5:** See response to comment I8-4 under comment letter I8.

**I20-6:** See response to comment I8-5 under comment letter I8.

**I20-7:** See response to comment I8-6 under comment letter I8.

\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\*

To whom makes decisions-

I have been living here for over 40 years. What your plans are doing doesn't make any sense. We have limited amounts of land which is full to capacity. You want to take away roads and add more housing??? How much sense does that make- dangerous for our community just getting in and out of University City- schools- what does that do for an already crowded drop off and pickup of kids. I avoid going out after 3pm due to so many cars on Governor. Kids aren't using bikes due to safety which is the way this world is going - sad kids can't walk by themselves. Which brings another problem- parking for all these parents that spill into other neighborhoods near the schools. We are not a large community- to accommodate more people you need more roads not less. Does that make sense you are adding housing/people and take away less roads??? Why are you all ruining University City?? You should take as much time as the people here in University City to really look at the impact this will do!!! Do your job - we pay your salaries. So far you haven't answered all of our questions or given any logical answers as how this will improve University City. It only looks like it will be worse for everyone living here. Give us a pro and con document for the changes you all want to do. It's the least you can do- do any of you live here in our community??? I think the answer is "NO".

I21-1

Wake- up and come out to see what your changes will do - less roads and more people- does that make sense???  
How safe is that for us ???

Sincerely a concerned owner.

Sandra Cox  
Sent from my iPhone

**I21: Responses to Sandra Cox Comment Letter**

**I21-1:** The comment includes general concerns about the proposed University Community Plan Update project such as the proposed increase in housing and the proposed changes to the mobility network. See response to comment O15-5 under comment letter O15 as it relates to the proposed increase in housing. Transportation impacts are discussed in Section 4.14 of the Draft Program Environmental Impact Report. Also, see response to comments O13-1 and O13-2 under comment letter O13. Since the passage of Senate Bill 743 in 2018, California Environmental Quality Act (CEQA) Guidelines Section 15064.3 no longer uses parking, traffic counts, auto delays, levels of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. Vehicle Miles Traveled (VMT) is the metric by which transportation impacts under CEQA are measured. Under CEQA Guidelines Section 15064.3, statewide application of the new VMT metric was required as of July 1, 2020.

In regard to Governor Drive, the proposed roadway design changes would support multi-modal transportation and align with the City's overarching mobility and CAP policy framework. The proposed bicycle facility improvements in Governor Drive would implement the City's Mobility Element, Bicycle Master Plan and CAP policies that support enhancements to non-vehicular modes of transportation and traffic calming measures. In regard to safety concerns, see response to comment O13-3 under comment letter O13.

**Subject:** [EXTERNAL] TO STOP REDUCTION OF GOVERNOR DR LANES AND MINIMIZE BUILDING AT SPROUTS AND VONS SHOPPING CENTERS

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

Please Stop this nonsense! There are 3 schools within a half a mile, two directly off Governor. There are also ball fields, parks, tennis courts, a basketball auditorium and a recreation center and pools on Governor!! There are three freeway entrances, two shopping centers and a main road, Genesee going through Governor and when there is a evacuation we will not be able to get out. There was a jumper over the 5 a few weeks ago and most residential streets were blocked with cars trying to get around the grid lock on Genesee and Governor this went on for an hour. If there was a first responder, they weren't getting through. Our area already had first responder access issues and now you want to add more residences and cut back the main commuting streets for? Where is this logic?

I22-1

I suggest you put this money and efforts into improving upon the areas of San Diego that beg for improvement and can offer more affordable housing. Improve upon the schools, communities, roads and law enforcement in the areas that are more affordable to live. This plan is destructive and detrimental, it's not improvement!

I22-2

Thank you,

Kristina Dangelo

**I22: Response to Kristina Dangelo Comment Letter**

**I22-1:** The comments on Governor Drive have been noted. See response to comment O13-3 under comment letter O13.

**I22-2:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report. No further response is reComment Letter I23 – Don Danner (Page 1 of 5)

To Whom It May Concern:

Below are my comments to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

**I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.**

I23-1

I23-2

**II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.**

I23-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states “No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

I23-4

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community’s preferred alternative.

I23-5

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City’s general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I23-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City’s DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

I23-7

I23-8

Sincerely,  
Donald Danner  
53-year resident of University City  
5433 Dalen Avenue  
San Diego, Ca 92122

### To Whom It May Concern:

Below are my comments to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I24-1

I24-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I24-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states "No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve

I24-4

the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district's memorandum was incorporated into the DEIR, but this statement was not.

I24-4

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community's preferred alternative.

I24-5

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I24-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

I24-7

### To Whom It May Concern:

I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

I24-9

My comments are with respect to the analysis performed for the University Community Plan Update. I support all of the comments submitted by Help Save UC dated April 25, 2024. I especially want to comment on the following:

1. The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment and the University Community Plan Update into one document made the document confusing, overwhelming and not accessible to the public, thus failing CEQA's requirement to provide an informational document to inform the general public of the significant environmental effect of a project.
2. The City's failure to evaluate the full environmental impacts of the University Community Plan Update at full buildout, including the impact

I24-10

I24-11

of the Complete Communities program, makes the document inadequate, specifically for areas such as Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.

I24-11

3. The City's failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.

I24-12

4. The DPEIR is inadequate due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to evaluate the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project. The appropriate way to do that would have been to evaluate a lower density alternative, such as the "community-preferred alternative" (Scenario B) in the City's last draft of the Plan Update. Instead, the City evaluated a Higher Density alternative that the City admitted wasn't feasible.

I24-13

5. Finally, the City's conclusion that the High Density Alternative was the environmentally superior alternative isn't supported by the evidence. Table 8-1 shows that the High Density alternative results in greater impacts on the environment. Furthermore, the City's own conclusion states, "No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project." (Section 8.2.3, underline added.)

I24-14

The City should revise the DPEIR to address these issues.

I24-15

Sincerely,  
Roxieann Danner

55 year resident of University City Community  
5433 Dalen Avenue  
San Diego 92122

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

Mayor GLoria and Councilmember Lee,

I know you'll understand the position of the residents of the University City neighborhood that are in strong opposition to many of the elements of the update UC Plan, since you value the safety of our city and were called to serve to protect the residents. As a former city employee with SDFD who now serves in public safety at a nearby city, I too am called to serve and to protect.

I25-1

While it's often said the people fear change, it's not the change, per se, in the updated UC Plan that is frightening, but the combination of significant increase in housing units (which will significantly the number of vehicles) coupled with the planned reduction of Governor Drive's road width. It is a recipe for disaster. The intersections at Governor/Genesee isn't equipped to handle the uptick in traffic and cars will be backed up in traffic for long periods of time. It already takes multiple light cycles at this intersection with a notoriously long interval between green signals.

I25-2

I25-3

Planning for 100 feet building height at the Regents/Governor Drive corner is ridiculous. This intersection is **2 MILES** from the new trolley station. And almost **1 MILE** from Genesee where this is a single bus line. Anyone who says that residents of a building here will take public transit instead of driving a car is miscalculating reality. No one is going to walk 1 to 2 miles to public transit. What they will do is sit in their cars in a long line of traffic down Governor and then up Genesee. If the trolley even takes them to where they want to go. If there were an actual emergency that created a need to evacuate quickly, Governor Drive is the only exit route out for hundreds of homes in a neighborhood bound on all sides by canyons full of flammable vegetation in areas mapped as very high fire severity zones. It is possible to add some multifamily housing units into the Regents/Governor site, but the plan to zone to allow for 100 feet is unsafe, unwise, and simply irresponsible.

I25-4

I25-5

I25-6

Density could be provided at the Governor/Genesee shopping center which is far closer to some transportation. But residents here too would likely drive the mile up to the nearest trolley stop.

What is most troubling about the whole plan is the apparent "need" to build more and more housing. This is fundamentally flawed thinking because there already are hundreds of units in the planning and framing stages in Mira Mesa, at Balboa/Genesee, and Sorrento Valley. Housing is already being built. And why ruin this beautiful gem of a neighborhood with high density. It's the

I25-7

single family homes in the family-oriented community that is what makes South UC so special. Why ruin it needlessly? There are already enough allowances for increased density with the provisions to allow for ADUs, and SB 9 and SB 10. This will allow for a natural increase in density. The situation doesn't need to be forced or worsened by increasing the density in south UC.

**I25-7  
(cont.)**

I could go on and on, but these are my major points. Please protect the safety of the South UC community and require limitations to how our community is changed with the UC Plan. Thank you and feel free to reach out.

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

To whom it may concern,

It has come to my attention that there are people trying to change my little community (South University City). As a life long resident (50+years), I would hate to see my community change. Many of the people I have grown up with have returned to UC for the same reasons I did. And I believe that the proposed changes would fundamentally change this community and anger many of the residents.

I26-1

One of the changes I have heard is coming up for vote is to change Governor Drive, the main thoroughfare in UC from 2 lanes each direction to 1 lane each direction. The reasoning I have heard is to add a bike lane going each way. As one of the cyclist in the community, I think this is completely unnecessary. This would cause more harm with the disturbance to traffic flow, especially during school drop-off and pick-up windows, as well as rush hour traffic, than it would create benefit for the cyclists. I ride my bike on Governor Drive and have never had issues with cars. The central part of Governor has a very wide side walk that is often shared by cyclist with little problem. And for more experienced cyclists, I have never experienced issues with the cars. This change would not only affect the traffic for people going east/west on Governor, but it would be a great issue with the traffic turning from Governor to Genessee during all those same times (mainly the left turn towards UCHS). Adding 2 bike lanes that would get limited use, and creating traffic issues is not a win in any way.

I26-2

The second charge I have been informed about is the zoning change for the Vons & Sprout shopping centers. The proposed changes in essence create high rise apartments (400-600 at each center). This would fundamentally change our community and probably create more crime within our quiet little neighborhood. The north part of UC has always been the densely populated area, leave the south side alone. It would be one thing to add another thieves to those shopping centers, but allowing them to go to 100ft is completely wrong.

I26-3

Let's not even go into if you make both of these changes the consequences for our community would exponentially change. Adding more residents, and reducing our street capacity would be the stupidest thing you could do.

I26-4

I encourage you to leave Governor Drive alone and limit the height of the rezoning for the shopping centers to 2 stories.

Thank you,  
Traci DeMarco  
5854 Ithaca Place  
SD 92122

**Subject:** [EXTERNAL] Planned bike lane for hillcrest

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

Hello,

I'm an avid cyclist in the hillcrest area. I also have two small children that I would love to have ride to parks and beach. Unfortunately, getting from hillcrest to mission hills where you can feasibly catch the bike trail to the beach is impossible. The area from first avenue on university to richardson has no protected bike lane, and the street is tight so cars have threatened me verbally, and through using their engines and "revving" or driving very fast past me at a close distance. I'd love to commute places on bike, and encourage others to, but a lot of the bike infrastructure is wasted if it doesn't connect.

The Hillcrest Focused Plan Amendment leaves a crucial gap in the regional bikeway network on West University Avenue. With high vehicle volumes posing safety risks, especially near an elementary school, urgent action is needed. We propose extending the one-way configuration from First Avenue to Washington Street, creating space for a protected bikeway. This revision ensures safe mobility for all users and closes the gap in the complete streets network.

Let me know if you have any questions, thanks!

Kiah DeSarro

To: Galloway, Tait <[TGalloway@sandiego.gov](mailto:TGalloway@sandiego.gov)>  
Subject: [EXTERNAL] University Community Plan Update Draft EIR

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

Dear Mr. Galloway,

Below are my comments (as a 47-year resident of UC0 to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I28-1

I28-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I28-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states "No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district's memorandum was incorporated into the DEIR, but this statement was not.

I28-4

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic

I28-5

requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community's preferred alternative.

I28-5  
cont.

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I28-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally, it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

I28-7

I28-8

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

Dear Mr./Ms. ,

As a University City resident I am contacting you to express my objections regarding several areas of the City's recent Environmental Impact Report due to several key concerns, some of which were already rejected by UC residents when the 'Housing Action Plan' part of State Bill 10 failed to pass in August 2023. Here are just some key concerns:

I29-1

### **Governor Drive Lane Reductions**

The City acknowledged at a recent meeting in early April that while traffic "models" were done for the EIR draft plan, they were not done for the high-density alternative that is included in the EIR. Moreover, there was no new traffic count or specific study of Governor Drive regarding what the City now calls "complete streets. It has been confirmed that the City has not done a comprehensive Traffic Study since 2015 and is basing their Vehicle Miles Traveled (VMT) data on a study done in 2016. In summary, Governor Drive should not be reduced to two lanes without a current and legally valid Traffic Study with a full VMT analysis.

I29-2

I29-3

I29-4

### **Emergency Ingress/Egress**

Related to the Governor Drive lane reductions combined with substantially higher density allowances, such a plan ignores the reality of the impact it will have on emergency vehicles getting through in time, or worse yet if residents needed to evacuate in the event of a disaster in an area that already is in a potential wildfire zone as well as its proximity to MCAS, just to name two factors. Again, the City is under legal obligation to conduct a current and legally valid Traffic Study with a full VMT analysis along the Governor Drive corridor.

I29-5

### **New High-Rise Apartments Planned for Genesee and Nobel Drive**

Under the City's "Complete Communities Housing Solutions" regulations, we understand that Willmark Communities is seeking permission to build three high-rise towers comprising 1,315 "luxury" apartments, with only 1,350 onsite parking spaces, on the southwest corner of Nobel and Genesee, replacing a 108-unit two-story apartment complex. This is yet another example of the City falling short on its promise to add more affordable housing, while such a project will only increase traffic gridlock along Genesee during certain times of the day, particularly during rush hours and when the schools let out and parents are attempting to pick up or drop off their children.

I29-6

### **Vons & Sprouts Centers New Height and Sharply Higher Density Allowances**

The planned sharp increase in overall housing density allowances is now coupled with the EIR showing that the City has ignored UC community requests and is forging ahead to raise the allowable structure heights of the Von's shopping plaza on Governor

I29-7

Drive/Genesee to 100 feet or 10 stories with residential units added to those areas. That alone will further impact all kinds of mobility along Governor Drive & onto Genesee as well as to 805 to the east, and Regents toward the west, where a similar plan is on deck for the Sprout's shopping plaza. The Sprout's shopping center is NOT an existing Transit Priority Area or TPA. Buses do not stop there frequently, and it is not close to the trolley and an existing TPA.

I29-7  
cont.

### **Planning Deficiencies in Parks**

Under the City's 'Master Plan', the UC area is already short on publicly accessible parks – not “greenways” or some other term that in reality is not a park, or in a land-use area that does not allow residential use. It is also our understanding that developers can now pay a one-time, in-lieu fee and not provide such amenities as a small recreational area in their residential complex plans. The

I29-8

City has fallen short in this key area while also allowing developers to buy their way out of providing more green spaces or publicly accessible recreation areas.

In summary, these initiatives ignore the need for a workable and supportive infrastructure. It fails to provide even somewhat affordable housing, disregards existing residents' input, and intentionally erodes single-family neighborhoods.

I29-9

The most harmful high-density housing initiative the City attempted to pass was SB 10, which would have allowed as many as 14-unit buildings up to three stories high on single-family parcels and no contained parking requirements. Thanks to a successful opposition campaign, SB 10 was removed from the Housing Action Package.

I29-10

Thank you for your time and consideration. Such initiatives call for planning that balanced growth rates with an infrastructure where families can grow and thrive. Most of all, responsible growth includes residents in decision-making.

I29-11

Sincerely,  
Dongdong Dong  
Owner, 8168 Avenida Navidad, #21  
La Jolla City Club HOA

\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\*

Governor Drive should remain as four lanes. The arguments to make it two lanes is not based on science. Governor Drive is not in a TPA and is only served by one bus route that does not go the entire length of the street. Community feedback has been overwhelming to keep it at four lanes. The City is still relying on 9 year old traffic count data in a DRAFT existing conditions assessment, known as Appendix A in the Mobility Report. There were many public comments on the need for updated traffic count data. This needs to be done.

I30-1

The Shopping Center at Regents and Genesee (Sprouts Marketplace) is not in a TPA and should remain at current density levels. There is no justification for this strip mall to be changed to high density, just as any similar strip mall in San Diego City, that is on one minor bus route.

I30-2

The EIR incorrectly states on page S 25 that public facilities cannot be identified and placed at this time. This is incorrect since the new density is already in the Draft Plan and known areas for more population is already identified in the Draft Plan. The school district actually pinpointed a location for a new school in Appendix I2. Other facilities can be located as well and the DEIR needs to place them.

I30-3

The emergency evacuation plan is flawed as it relies on current roadway and transportation systems to provide egress. The City is proposing to change most streets to less lanes and less egress, and the new evacuation plan needs to be studied under Plan proposal conditions.

I30-4

The Community Preferred Scenario was active in July 2023 during the UCPG Subcommittee meeting. The City stripped it out of the DEIR without any notice or explanation. IT SHOULD BE IN THE DEIR as it was a scenario that the Subcommittee put forward. Redo the EIR with this alternative.

I30-5

The UCPG Subcommittee in its July 2023 minutes, highlights that the City needs to identify funding and plans for infrastructure as a result of more density. The DEIR and the latest Draft Plan do not do this. This needs to be done, specifically the 910,000,000 that the School District highlights needs to be found for a new school BEFORE new units are built.

I30-6

The Existing UC Plan states Community Goals. These were deleted from the Current Draft. They need to be included.

I30-7

Community Engagement does not have any data on number of comments, what the comments were for and one on one meetings between Nancy Graham and special interest groups. The Community Engagement piece also does not reference two Community Protests on March 11, 2023 and May 6, 2023 against the City preferred scenario, the May 16, 2023 lengthy HELP SAVE UC presentation, the April 6, 2023 Petition by UC PEEPS with specific comments on the Plan and how those comments were integrated into the latest Draft. This needs to be included and the comments need to be explained and weaved into the latest Draft.

Attached are comments on the mobility document. Answers are expected through the public process.

/R Jen Dunaway

I30-11

## Comments on Draft Mobility Technical Report

1. Appendix A is referenced numerous times in this document. Page 6 is the first time. Appendix A is the DRAFT Existing Conditions Summary Report from 2018. This document does not state it is DRAFT. How can the EIR be finalized when the existing conditions summary report is still in draft form and from 2018? This is the same document I received in a public records request 24-432 asking for the final. This document should not be completed until Appendix A receives comment and is updated to reflect UC in 2024.
2. Section 1.4.1. VMT is stated as being used for mixed use, infill or transit oriented areas, not for a single family neighborhood outside of a transit area such as UC south. It does not apply in this area of UC and different methodology should be analyzed. The VMT is questionable and by its own disclaimer, should not be utilized for hard decisions and should be for information only. See APPENDIX F 6 and F 7. Other more traditional methods such as traffic counts, Level of Service, volume and assumptions on future growth and traffic should be analyzed. More people beget more traffic. It does not decrease.
3. 2.1.1. This is a draft 2018 existing conditions summary. The copy is on the City's website and was furnished in Public Records request 24-432. This document needs to be out for community comment and finalize before this Plan proceeds further.
4. 2.1.2 What has been vetted by the community? Who in the community vetted it?
5. 2.1.2. What public input, specifically? The City recorded all Zoom meetings and received comments in various sessions and emails. Most comments received in the last two years was to have Governor alone. Provide the data on public comments specifically for Governor Drive. It will show that the community wants Governor Drive to remain 4 lanes.
6. 2.1.3 The city is not an employer of the residents of UC; this is not an equivalent comparison. What evidence suggests that the new traffic distributions will happen? What metrics were used in this analysis and statement?
7. 2.1.3. What does integrating communication strategies mean specifically for UC? What does communication with connected vehicles mean- what vehicles for example? And whose vehicles? How is it maintaining relevancy? What metrics or evidence or figures were used in this statement?
8. 2.3.2. re: bike paths. How is bicycle demand high measured? Where are the metrics and evidence to support this statement? Bicycle demand is not high on Governor Drive based on community usage and observation.
9. 2.3.2 ( class 2 specifically): How is high demand defined? How are low speed and low volume defined? Where are the metrics, analysis and evidence for each of these three measures provided? How were these routes chosen and based on what? Governor Drive should not be included based on low demand and low speed.
10. 2.4.1. Differentiation between North and South UC should be made. High levels are only in the north area. Low levels are in the South and should have a marked difference in recommendations.
11. Table 2-2 : Approximately 95% of the streets have the City recommending less travel lanes than today. This is in conflict with the direct addition of more people and housing units to the area, with no increase in roadways. Almost all of these streets will have a loss of Level of Service and increase in VMT, based on the likelihood of unit inhabitants having at least one vehicle. The VMT in Appendix F 6 and F7 are to be used for information only and are experimental in nature. In

I30-12

addition the VMT only model is only for transit areas, not for low density residential areas, some of which are in UC. The current roadways should be kept. In addition, fire and police response times need to be analyzed with data and metrics to determine current response times and future response times under 1) scenario with more population and current roadways, and 2) scenario with additional Plan population increases at 2050 and City proposal roadways.

12. 2.5.2 parking removal: Who defines attractive and competitive alternatives? How are they defined and where is the community engagement and comments? What evidence is provided that new residents will not have personal vehicles? What usage of current roadway parking is currently measured? What evidence is provided that less street parking and more residents will result in more residents selling their vehicles or not having vehicles? Existing parking should be maintained and expanded for new residents.
13. 3.5 What reference defines Complete streets? This effort is supposed to serve the needs of all users, including those in motor vehicles. This plan is a detriment and makes LOS worse for those in the latter group. This plan needs to be equitable and not make it worse for drivers of motor vehicles while encouraging those in other modes. How will the City ensure equitable access?
14. 3.5 - 3 collisions in 5 years. How is this in comparison with other similar areas? Any more recent data from the last 7 years? Look at police reports from 2017 to 2024. This Plan makes it appear that 3 in 5 years is poor without any comparison to reference data or other areas in the City. It does not appear to be poor.
15. 3.5 The Plan writer defines Governor Drive as High Stress for bicyclists. How is this defined and measured? Where are the references and comparisons with other areas to provide reference. Governor Drive is low stress based on personal experience. The writer is slanting his/her opinion in this document to suggest a reduction in lanes at Governor Drive. This should be removed.
16. 3.5 – planned “improvements”. The writer frames reducing lanes from 4 to 2 as an improvement. It does not define improve for whom, but it is to the detriment of residents trying to travel to school, work and businesses in vehicles. This plan needs to be equitable to all users. The assumptions in this section are based on what evidence and data? What is the expected result for LOS, and expected VMT with the planned increase in residents for those in vehicles? For first responders? What is the expected LOS change? How does this compare with similar streets in SD? This section is opinionated and not based on data, facts or evidence. It should be removed from the plan. The community comments during the last two years have been clear that they do not want it.
17. Appendix A is a draft conditions assessment I received in a public records request. Why is a draft document from 2018 without public comment and finalization being released in a EIR and draft final Plan?
18. Appendix B, page 13: The statement about VMT being substantially improved based on what data and evidence? This should be used as information and experimental only along with other standard measures such as LOS, traffic count data, and expected travel by new residents.
19. Appendix A of Appendix B: This explains the methodology in a series of memos from a contractor, WSP USA, on how to calculate growth areas. This is experimental. Where is the evidence and facts that prove these assumptions are valid beyond experimental? The memo states “areas of SD that are receptive to future housing and retail - what areas are 'receptive' and who is giving that impression of receptiveness? How is receptive defined and measured?

**I30-12  
cont.**

Other standard ways of measuring growth and mobility shall be considered and this should be considered information only as it cannot be validated.

20. Appendix A of Appendix B: What peer review has been done on this process? Where has this concept and methodology been done before? Why is the City relying on unproven technology? The City should rely on standard, proven, validated ways to make assumptions on growth and mobility.
21. Appendix F6 and F7; The disclaimers at the bottom of these analyses state to use this as a resource only and it is an interpretation of data. UC is not an experiment for the City to run scenarios and guess at growth. UC deserves equity and should have data, analysis and vetted metrics to use to make assumptions on growth and mobility. This should be removed.

Question on Schools.

Page S-25, impact to Schools. The DEIR states that "Implementation of the University CPU could result in the need for additional fire-rescue, police, school, and library facilities. As the location and need for potential future facilities cannot be determined at this time, "

This is a lie. Appendix I2, a memo from the San Diego Unified School District, specifically states that the UC Plan Update should have a location identified for new schools, and specifically states it should be in the vicinity of Genesee and La Jolla Village Drive.

The location and the need are determined at this time.

In addition, with the density maps provided, fire and police and library locations can be identified based on the growth areas delineated in the DEIR.

The EIR needs to show where the new facilities will go. V/R Jen Dunaway

Coby and Suchi and CEQA mailbox:

10 city staffers could not answer Mr. Weise's question last night as to why the Community Scenario was not included in the Draft EIR.

Per the minutes from the UCPG meeting, " Two alternative land use scenarios - a Staff Preferred Scenario and a Community Planning Group Subcommittee Input Scenario. The Discussion Draft does not include:

- A proposal to rezone single family residential areas for townhouses.
- The very high density "Scenario 1." "

Link to minutes here: [https://urldefense.com/v3/\\_https://bf5c854d-f91f-4d3a-bacd-48151e76d7f5.usrfiles.com/ugd/bf5c85\\_4f7352b49cd645b19da4709cc4855c22.pdf\\_!!OBed2aHXvKmHymw!xfHfn9lITvypu3uJBNIB96px4a7ttsC-Q1F0WhGjXHTXFNxZqQ-DhPGAWBmpq7ITLJsRT00qVczC89opZH5aKvMPKl2FHg\\$](https://urldefense.com/v3/_https://bf5c854d-f91f-4d3a-bacd-48151e76d7f5.usrfiles.com/ugd/bf5c85_4f7352b49cd645b19da4709cc4855c22.pdf_!!OBed2aHXvKmHymw!xfHfn9lITvypu3uJBNIB96px4a7ttsC-Q1F0WhGjXHTXFNxZqQ-DhPGAWBmpq7ITLJsRT00qVczC89opZH5aKvMPKl2FHg$)

This begs the question asked last night - why wasn't the Community's Scenario in the DEIR? Why did City Planning revive the "very high" Scenario 1 when it was discarded in July 2023?

This is not how the process is supposed to work with identifying scenarios and then performing the EIR. The ten city employees present at last night's meeting could not answer how that got into their own document.

Please advise how the City Planning staff intends to fix this problem./R Jen Dunaway

Suchi et al:

Why wasn't the community preferred scenario included in the draft EIR along with the City Planning scenario? Since these two scenarios were active and in discussion up until the latest draft, they both should have been in the EIR.

Instead the City Planning staff added a discarded scenario to the EIR; why did the City revive a discarded scenario?

The EIR needs to be re-evaluated with the community preferred scenario.

City of San Diego:

Remember this letter? This was not mentioned, included, commented on, or utilized to make any changes to the Plan. There are many community member signatures on this document. Why isn't this included under community engagement? Why are these comments not included in the Community Engagement section? /R Jen Dunaway

I30-19

March 20, 2023

TO: Mayor Todd Gloria, Planning Director Heidi Vonblum, Development Project Manager Nancy Graham, and Senior Traffic Engineer Leo Alo

FROM: UC PEEPS  
A Coalition of University City Residents and Taxpayers

Dear Mayor Gloria, Ms. Vonblum, Ms. Graham and Mr. Alo:

This letter is to provide collective comments from a large group of University City (UC) residents substantiating reasons why the City of San Diego needs to further reduce the proposed number of housing units in Land Use Scenarios A and B of the proposed University Community Plan Update.

Adding between 30,000 and 33,000 housing units, as Land Use Scenarios A and B suggest, or as many as 56,000 housing units, as pro-development groups are calling for, represents exceptionally poor planning, especially when you consider our small 7.35-square-mile footprint and the limited capacity of our existing infrastructure. Our specific objections are summarized below:

**Enormity of Housing Units Being Proposed:** We know San Diego needs more *affordable* housing, but we need a *reasonable increase* in new housing units in UC. What the City is proposing for UC is far beyond the number of new housing units that are actually needed, which SANDAG's Series 14 Forecast projects is 554 between 2025 and 2050. There is absolutely **no** call for placing more.

With an existing number of approximately 27,000 housing units, UC is a vibrant, built-out community that already has had thousands of new apartment units added, mostly to its core and east end of Governor Drive, since the last Plan Update in 1987. Hundreds of these new units have been built in just the last few years, including Palisades at UTC and Lux. All of these new apartment high-rises have been added without substantially improving our existing infrastructure, given the absence of funding and undeveloped land.

San Diego's 2021-2029 Housing Element is just 108,036, and approximately 20,000 housing units were built in 2021 and 2022, leaving just 88,000. The balance needed should be spread throughout San Diego's 52 neighborhoods, not concentrated into UC's small area.

**Inadequate Infrastructure & Law Enforcement:** The City plans to add tens of thousands of people, without regards to the existing, limited infrastructure. There **are no provisions** to add new infrastructure, including roadways, schools, parks, recreational facilities, libraries, fire &

I30-19  
cont.

safety facilities and water & sewer systems. There's no money to fund new infrastructure, and there's no undeveloped land left here to add them.

San Diego Unified School District does not appear to have the funds or land available to build additional elementary, middle or high schools for the area, especially in north UC, where schools are lacking.

Our recreation centers are already crowded, with parking lots generally full and tennis courts overbooked. There are no vacant parking areas left for the additional vehicles that would come with more residents living here. We also have a limited number of parks in UC that are already in continuous use.

Genesee Avenue and Governor Drive are already extremely congested at peak commute hours and when all of the schools let out. Added population would bring traffic to a standstill.

The San Diego Police Department, Northern Division, has stated it would be unable to provide adequate police, emergency response, and fire support for our community since it lacks both the funding and the personnel. Crime rates will surge upward if the population increases.

The City needs to rethink how it would possibly accommodate such a drastic population increase without the necessary infrastructure and law enforcement needed to accommodate it.

**Wrong Type of Housing:** The City has been calling for affordable housing for all. However, the type of housing that would be built in UC would be anything but affordable. Land is expensive here, and affordably priced housing doesn't pencil out. Instead, developers would build more luxury high-rise apartment buildings with small units that rent for \$4,000 a month and up, with projects like The Palisades at UTC and Lux as prime examples.

Research studies conducted by such firms as London Moeder Advisors reveal that San Diego already has a surplus of around 15,000 small, one- and two-bedroom rental apartments, when 100 percent of the current demand is for single-family homes where families can live and thrive.

Exacerbating the problem is that many of these new rental units would be constructed by demolishing existing, relatively affordable rental properties. The few subsidized/affordable rate units that might be built would likely to be rented very quickly and have very low turnover. Students, in particular, would be priced out of the market.

Instead of building more rentals in UC, where high land values attract the affluent and create bid-up pricing for the middle class, San Diego has an obligation to address the needs of its low-income and at-risk population by constructing both infrastructure and new housing in its historically neglected and low-income communities.

**Misconception About Public Transportation:** The transportation argument the City is making has no grounds in reality, at least in the foreseeable future and here in south UC. First, the existing transportation system throughout San Diego is sorely inadequate. To get around the city by bus or trolley is an ordeal, because the city was not originally planned for public transportation. Trying to add it after the fact has been sketchy at best. The region's two transit agencies just announced they are currently facing budget shortfalls impacting operations, which means public transportation will become even worse.

I30-19  
cont.

Second, studies show that the majority of people will continue to use their cars, as most people are moving to EVs. It's especially unrealistic to think that residents within south UC's single-family neighborhoods will use public transportation to transport their children, baby gear, loads of groceries, garden supplies, home goods and everything else aboard a bike or bus.

Third, the city justified spending such an exorbitant amount of taxpayer money to build the Mid-coast Trolley Extension by stating it would provide access to UTC for students and others living in lower-cost neighborhoods. Concentrating new housing in UC makes little sense since those living in UC are far more likely to use their vehicles to travel to other parts of the city rather than taking public transportation.

**Traffic & Safety Issues Along Governor Drive:** Placing as many as 1,000 to 1,200 combined housing units at UC Marketplace (Sprouts shopping center) and University Square (Vons shopping center), and possibly more high-rise housing at all four corners of Genesee Avenue and Governor Drive, would add enormous traffic along Governor Drive, which would make it extremely difficult for emergency vehicles to reach us in the event of an earthquake or wildfire in Rose Canyon. The only escape route is toward Genesee Avenue, which is already heavily congested. Police and ambulances would have an even harder time responding to residents' calls for help.

With three schools, a park, and two aquatic centers all located along Governor Drive, any additional traffic would compromise the safety of children, along with parents attempting to drop off and pick up their children. The City needs to perform studies of the potential impacts.

If the City goes forward with its plans to reduce Governor Drive to a single lane in each direction to accommodate a bike lane, the result would be complete traffic gridlock in the mornings, afternoons when the three schools let out, and during the evening rush hour, when motorists use Governor Drive as a shortcut to Regents Road and the I-805.

**Governor Drive Shopping Centers:** In addition to the traffic concerns, the proposed rezoning at the Vons and Sprouts shopping centers to accommodate as many as 500-600 housing units at each center would be completely out of scale and character of the surrounding neighborhood.

It is unknown how much retail these centers would retain if they were redeveloped, which is of great concern to residents who rely on the existing stores, services and restaurants. If retail stores were to be diminished, residents would need to drive to other communities to shop and eat out, which goes against the City's Climate Action Program. For many seniors who no longer drive, it would prove to be an even greater hardship.

If housing is added to these centers, zoning for the two shopping centers should remain at its current level of 29 housing units per acre at most.

**Impacts on Open Space:** Open space areas are at a premium in our community and need to be protected. Increased housing density and population would threaten the flora and fauna in Rose Canyon, which surrounds south UC on three sides.

### **Conclusion:**

While we acknowledge the need for more affordable housing in San Diego, University City is the **wrong place to add any more than 5,000 to 10,000 units** over the next 30 years. It would be

I30-19  
cont.

reckless for the City to proceed with zoning for any more when there is no infrastructure to accommodate more people.

Housing demand in San Diego is for more single-family homes, not more luxury apartment high-rises, which have already saturated the market.

The City's vision of people suddenly transitioning to public transportation is idealistic, but not realistic. Our region was not planned for public transportation, and attempts to make a transit-friendly city have failed. As proof, one only needs to look at the trolley and buses passing by that are almost completely devoid of passengers.

There is absolutely no reason for upzoning anywhere in the single-family neighborhoods of south University City. This area is built out, and any additional traffic in this area will cause traffic gridlock and pose a viable threat to the safety of the residents, particularly our children.

The City doesn't appear to be listening to UC residents -- *tax-paying, voting citizens* who have worked decades so they could purchase homes in a single-family neighborhood. Our leading realtors will attest to the fact that a large portion of the home sales in recent years in UC have been to young couples starting families. They specifically chose UC for its family-oriented environment where schools are good, parks and recreation facilities are close by, and the crime rate is relatively low. The City's plan to add enormous density here will destroy our neighborhoods and quality of life.

With new state-mandated housing, the City of San Diego has an opportunity to revitalize impoverished neighborhoods, repurpose industrial and commercial buildings, and help us live up to our reputation as "America's Finest City." It is unconscionable that the City is aiming to ruin established, well-planned, desirable neighborhoods instead.

We request that the City consider the dire consequences of going forward with its unreasonable and life-threatening Land Use Scenarios in University City and work with our community to develop a far more sensible plan. We are available to meet to discuss this further.

**Subject:** Re: University CPU Mobility Analysis

Mr. Alo;  
Thanks for showing up at the UC Community Meeting on 9 April.

I wanted to clarify a few things before next week's meeting. Per the Mobility Analysis, "Senate Bill 743 (SB 743) was signed into law in September 2013, modifying the existing California Environmental Quality Act (CEQA) by removing auto delay, level of service (LOS), parking and other vehicular capacity measures as metrics of transportation system impacts for mixed-use, infill or transit oriented development projects."

Governor Drive is not in a transit area, and the UC Plan is not a development project. It is a planning tool. The City's own slides do not say it is a project, but "provides guidance and policies".

In the Mobility Report it also states in Appendix F and G that "The maps provided by SANDAG are an interpretation of the Senate Bill 743 Technical Advisory guidelines published by the California Office of Planning and Research and are provided as a resource to the jurisdictions in the San Diego region to use as they see fit. Users of the data should exercise their professional judgment in reviewing, evaluating and analyzing VMT reduction estimate results from the tool. Each agency should consult with CEQA experts and legal counsel regarding their own CEQA practices and updates to local policies. Refer to full disclaimer and additional information relating to the use of the SB 743 VMT Map Web Application."

This data is provided as a resource and is an interpretation of data. The City should not be relying on it exclusively for making major decisions about UC.

Lastly, the Community opposition to reducing Governor Drive has been robust; you Mr. Alo and your peers have not furnished any data that accurately provides rationale to do otherwise.

/R Jen Dunaway

Greetings;

Mr. Alo, Mr. Santacroce:

This is the 40th email I have sent to Mr. Alo requesting information on the latest traffic count surveys, latest analysis of traffic projections, and impacts from Coste Verde and other developments in line with the proposed update to the UC Community Plan.

Mr. Alo: you presented yourself as the POC with email address provided at our February 2023 meeting. What was your role at the meeting? Why did you give out your email?

I received information from my public records request; it references 9 year old traffic count data. Is this the best the City can do? And the document the City sent me was from 2018 and labeled a DRAFT. Where is the Final? It has been 6 years and the City hasn't finalized the Existing Conditions Summary report?

This is the 31st email I have sent to you that goes unanswered. I am left wondering why it is ok for City employees to ignore repeated requests for information. Why?

Why bother telling us you are our point of contact for transportation when you have no intention of responding? Why?

I was a City of San Diego employee once. I got calls from random citizens. I answered those calls, even when I didn't want to. Where is your duty as a public employee?

As a reminder, in February, you provided your email as a Point of Contact for questions to the UC Plan Update Committee. There is an expectation that you provided your email as to correspond with the community. I am asking you to correspond.

In the public records request that I initiated, your name and references were present.

There were a few emails from you to Coby Tomlins and others about the task order to study transportation in the EIR. Another from Mr. Alo was about Governor Drive. The files referenced included Governor Drive striping plans, dimensions, and

machine count data from April 2023).

Can you provide please?

Can you provide please?

If you are NOT THE RIGHT PERSON, please advise and I will ask someone else. As a courtesy, you can direct me to someone who can answer the questions, and I won't email you anymore.

I am circling back to obtain information for our community plan update. On May 8th, you provided me with data from 2015, but no scenarios or data queries on proposed numbers. I have emailed you 30 times since then asking for more relevant information related to this plan update scenarios, or at the very least, someone I can talk with about that if you are not the right person. Can you please respond or refer me to someone who has the answers?

At this stage, the City should have this data. Since you have not responded, please advise who has this information so I can reach out to them. Your non-responses are not helpful.

If you are not the person to contact for this information, please let me know who is. Your nonresponse to a concerned citizen based on your public presentation in February is noted. You provided your contact information, so I am assuming you are available from the City for contact and information. Please provide the information or refer me to someone who can.

Circling back again as time is critical. As the transportation engineer assigned to work on this, I would like a response from you. Who else would I ask for this data?

The data from 2015 is old and doesn't account for UTC remodeling, Coste Verde improvement traffic impacts, Standley Pool construction, ADU construction, surrounding area density increases impacting commuter cross traffic as well as other factors.

What is the plan to obtain new traffic count data and translate that to an analysis with Scenario proposal population counts?

Time is short. What is the plan for new count data, and scenario estimates for new LOS?

This is a data driven process and based on what I have seen to date, Governor should remain as it is with limited improvements.

If you are not the right person to answer the question, please advise who is. /R

Mr. Alo:

In February, you provided your email as a Point of Contact for questions to the UC Plan Update Committee.

If you are NOT THE RIGHT PERSON, please advise and I will ask someone else. As a courtesy, you can direct me to someone who can answer the questions, and I won't email you anymore.

I am circling back to obtain information for our community plan update. On May 8th, you provided me with data from 2015, but no scenarios or data queries on proposed numbers. I have emailed you 23 times since then asking for more relevant information related to this plan update scenarios, or at the very least, someone I can talk with about that if you are not the right person. Can you please respond or refer me to someone who has the answers?

At this stage, the City should have this data. Since you have not responded, please advise who has this information so I can reach out to them. Your non-responses are not helpful.

If you are not the person to contact for this information, please let me know who is. Your nonresponse to a concerned citizen based on your public presentation in February is noted. You provided your contact information, so I am assuming you are available from the City for contact and information. Please provide the information or refer me to someone who can.

Circling back again as time is critical. As the transportation engineer assigned to work on this, I would like a response from you. Who else would I ask for this data?

The data from 2015 is old and doesn't account for UTC remodeling, Coste Verde improvement traffic impacts, Standley Pool construction, ADU construction, surrounding area density increases impacting commuter cross traffic as well as other factors.

What is the plan to obtain new traffic count data and translate that to an analysis with Scenario proposal population counts?

Time is short. What is the plan for new count data, and scenario estimates for new LOS?

This is a data driven process and based on what I have seen to date, Governor should remain as it is with limited improvements.

If you are not the right person to answer the question, please advise who is. /R

The data from 2015 is old and doesn't account for UTC remodeling, Coste Verde

improvement  
traffic impacts,  
Standley Pool  
construction,  
ADU  
construction,  
surrounding  
area density  
increases  
impacting  
commuter cross  
traffic as well as  
other factors.  
What is the plan  
to obtain new  
traffic count  
data and  
translate that to  
an analysis with  
Scenario  
proposal  
population  
counts?

Time is short.  
What is the plan  
for new count  
data, and  
scenario  
estimates for  
new LOS?

This is a data  
driven process  
and based on  
what I have  
seen to date,  
Governor  
should remain  
as it is with  
limited  
improvements.

Identify where the 1.8 recreation centers missing from the Plan will go. analyze and show any mitigation efforts associated with such in the DEIR. Identify why the one new recreation center at Torrey Pines was chosen based on new density and proposed locations of new units. Explain why a site far from any new housing units was chosen to be a recreation center. Show the analysis.

I30-22

Identify where the new elementary school(s) will be located in the Plan as identified by SDUSD in Appendix I2. The location SDUSD recommends is near La Jolla Village Drive and Genesee Avenue. Identify how the city will raise developer fees and build the school before the units are constructed per Appendix I2. Analyze and show mitigation efforts associated with this in the DEIR.

Subject: [EXTERNAL] comments on UC plan update and DEIR

\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\*

1. The EIR incorrectly states on page S 25 that public facilities cannot be identified and placed at this time. This is incorrect since the new density is already in the Draft Plan and known areas for more population is already identified in the Draft Plan. The school district actually pinpointed a location for a new school in Appendix I2. Other facilities including a new library, and 2.8 recreation centers can be located by the City as well based on the proposed density locations and the DEIR needs to place them and analysis needs to be done.

130-25

2. Governor Drive should remain as four lanes. The arguments to make it two lanes is not based on science. Governor Drive is not in a TPA and is only served by one bus route that does not go the entire length of the street. Community feedback has been overwhelming to keep it at four lanes. The City is still relying on 9 year old traffic count data in a DRAFT existing conditions assessment, known as Appendix A in the Mobility Report. There were many public comments on the need for updated traffic count data. This needs to be done.

130-26

3. The Shopping Center at Regents and Genesee (Sprouts Marketplace) is not in a TPA is two miles from the nearest Transit Center and should remain at current density levels. There is no justification for this strip mall to be changed to high density, just as any similar strip mall in San Diego City, that is on one minor bus route.

130-27

4. The emergency evacuation plan is flawed as it relies on current roadway and transportation systems to provide egress. The City is proposing to change most streets to less lanes and less egress, and the new evacuation plan needs to be studied under Plan proposal conditions.

130-28

5. The Community Preferred Scenario was active in July 2023 during the UCPG Subcommittee meeting. The City stripped it out of the DEIR without any notice or explanation. IT SHOULD BE IN THE DEIR as it was a scenario that the Subcommittee put forward. Redo the EIR with this alternative.

130-29

6. The UCPG Subcommittee in its July 2023 minutes, highlights that the City needs to identify funding and plans for infrastructure as a result of more density. The DEIR and the latest Draft Plan do not do this. This needs to be done, specifically the 910,000,000 that the School District highlights needs to be found for a new school BEFORE new units are built.

130-30

7. The Existing UC Plan states Community Goals. These were deleted from the Current Draft. Why? They need to be included. Community Engagement does not have any data on number of comments, what the comments were for and one on one meetings between Nancy Graham and special interest groups.

130-31

8. The Community Engagement piece also does not reference two Community Protests on March 11, 2023 and May 6, 2023 against the City preferred scenario, the May 16, 2023 lengthy HELP SAVE UC presentation, the April 6, 2023 Petition by UC PEEPS with specific comments on the Plan and how those comments were integrated into the latest Draft. This needs to be included and the comments need to be explained and weaved into the latest Draft.

130-32

9. The City Planner stated on 4/9/24 that police and fire had excess capacity. Provide the data to show this and show how the proposed population would be serviced by these services and what extra resources will be needed and where they will be placed. This is not shown in the plan as to where any new facilities will go near the new population increases happen and is not analyzed in terms of response times.

Planning Department:

Note since July 2023, the City Planning staff removed the Community preferred scenario from discussion. Why? This should have been included in the DEIR as an alternative. There is no rational reason why it was not included since so much effort was placed into it and the subcommittee pushed it forward in July 2023.

This needs to be included as an Alternative in the DEIR.

I30-34

All of the comments below need to be integrated into the new draft EIR and UC Plan. V/R Jen Dunaway

**Subject:** UC PEEPS' Comments on University Community Plan Update Draft EIR

I30-35

To Whom It May Concern:

On behalf of UC Neighbors for Responsible Growth, a.k.a. UC PEEPS, I'm submitting our combined comments on the University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using

I30-36

I30-37

the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park. (See attachment with expert Traffic Analysis relative to Governor Drive.)

**I30-37  
cont.**

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

**I30-38**

III. School Requirements from the San Diego School District Must Be Met. The DEIR states “No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

**I30-39**

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community’s preferred alternative.

**I30-40**

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City’s general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

**I30-41**

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City’s DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

**I30-42**

**I30-43**

Sincerely,  
Bonnie Kutch, Resident of University City  
Founding Member of UC Neighbors for Responsible Growth, a.k.a. UC PEEPS, an  
Association of 500-plus University City Residents and Property Taxpayers

## **Review of University City Community Plan Update Draft Mobility Technical Report**

**dated March 2024 – (review conducted April 2024 by Charles Frasier(frasierf@ix.netcom.com))**

The Mobility Technical Report summarizes the physical and operational conditions of the planned mobility system outlined in the University Mobility Element. This report is one component of the University Community Plan Update, identifying the planned mobility improvements culminating with an analysis of all travel modes under the proposed plan horizon year of 2050.

The Proposed Plan is a strategy to address existing and forecast deficiencies related to the transportation system within the University community. It also strives to improve personal mobility through a balanced, multimodal transportation network, which supports the updated land use vision for University and aligns with the City’s General Plan, Blueprint SD, and Climate Action Plan (CAP). The mobility system is comprised of roadway and freeway system, pedestrian and bicycle infrastructure, and public transit.

### **Analysis Methodology**

Appendix A Existing Conditions Report describes the methodology used to determine the study area and analyze the transportation system for the University community. Since the adoption of the 2008 California Complete Streets Act (AB 1358), the City of San Diego has employed multimodal analysis procedures to assess mobility needs for pedestrians, cyclists, and transit users. **Analysis of the existing pedestrian, bicycle, transit, and vehicular system can be found in Appendix A.**

Vehicle Miles Traveled – SB 743 Analysis Senate Bill 743 (SB 743) was signed into law in September 2013, modifying the existing California Environmental Quality Act (CEQA) by removing auto delay, level of service (LOS), parking and other vehicular capacity measures as metrics of transportation system impacts for mixed-use, infill or transit-oriented development projects. Vehicle miles traveled (VMT) is considered the new analysis metric used to measure transportation impacts and must be incorporated by July 1, 2020, statewide. VMT reflects the land use type, intensity, and location in relation to the capacity and roadway connectivity of the transportation network. It is also influenced by the availability and quality of multimodal facilities, and system operations. VMT is metric that measures the number of vehicle trips generated and the length or distance of those vehicle trips. For transportation analysis, VMT is generally expressed in VMT per capita for a typical weekday. VMT does not directly measure traffic operations but instead measures the efficiency of the transportation system and is expressed as a function of population or employment.

**The VMT assessment for the University Community Plan Update, circa 2050, is discussed in Appendix B – Blueprint SD, University CPU, and Hillcrest FPA Vehicle Miles Traveled (VMT) Analysis.**

Roadway segments were assigned Level of Service (LOS) ratings of A through E as shown in Appendix A Table 2-16. LOS rating E is considered to be a roadway’s capacity. Average Daily Traffic (ADT) volumes exceeding LOS E are given LOS rating F. Threshold for Determination of a Significant Transportation VMT Impact are shown in Appendix B Table 3-1. **Projects with an LOS grade of F**

I30-44

exceed these thresholds and would have a significant adverse California Environmental Quality Act (CEQA) transportation impact.

## Results

**This review only addresses the results of the Roadway Segment Analyses for Governor Drive.**

Governor Drive functions as a two-way east-west, 4-lane Major Arterial with raised medians and a curb-to-curb width of approximately 68-80 feet. Governor Drive is lined with sidewalks and curbs on both sides of the street for the entire length of the street. Parallel parking is available on both sides of the street along most segments of the roadway west of Gullstrand Street. Class II bike lanes (no buffer) are partially present on both sides of the street between Genesee Avenue and Gullstrand Street. The posted speed limit is 35 mph. Access to I-805 is provided at the eastern terminus of Governor Drive. Existing conditions Average Daily Traffic (ADT) volumes for the roadway segments were provided by Accurate Video Counts Inc and measured in April and May 2015.

The University CPU plans to reduce the number of travel lanes from a 4-lane Major Arterial to a 2-lane Major Arterial on Governor Drive (West End to Greenwich Drive) to create a Complete Street consistent with City goals in the General Plan, CAP, Vision Zero, and Complete Streets Policy to encourage walking, biking, and taking transit. The plan includes continuous buffered bike lanes along Governor Drive, enhanced pedestrian and intersection treatments, and traffic calming measures, while maintaining on-street parking. Other improvements include a protected intersection at is found to be Genesee Avenue and Governor Drive. University CPU plan Average Daily Traffic (ADT) volumes for the roadway segments were determined from SANDAG's Series 14 Activity Based Model (ABM2+). An assumption of the analysis revealed by the figure in the executive summary of Appendix A is that there will be no growth of single occupancy vehicles (SOVs) from existing conditions to the University CPU plan conditions.

Table 7-4 of Appendix A shows the Existing Conditions Summary of the Roadway Segment ADT Based Analysis. From Regents Road to the I-805 SB Ramps, **Governor Drive is found to have a LOS E Capacity of 40,000 with an Average Daily Traffic (ADT) volume of 16,796 to 19,737. The v/c Ratio calculated by dividing the ADT volume by roadway segment's capacity is found to be 0.420 to 0.493 resulting in an acceptable Level of Service (LOS) rating of B.**

Table 3-11 of the Draft Mobility Technical Report shows the Roadway Segment Analysis – Proposed Plan Conditions Analysis. From Regents Road to the I-805 SB Ramps, **Governor Drive is found to have a LOS E Capacity of 20,000 with an Average Daily Traffic (ADT) volume of 22,480 to 32,140. The v/c Ratio calculated by dividing the ADT volume by roadway segment's capacity is found to be 1.124 to 1.607 resulting in an unacceptable Level of Service (LOS) rating of F.**

(The Plan v/c ratio is more than double the existing ratio due, in part, to the presence of traffic lights along the road segment.)

Because the analysis assumes that there will be no growth in SOVs from existing conditions to the University CPU plan conditions, the results of the plan analysis are applicable to the existing conditions if Governor Drive were, tomorrow, suddenly converted from a 4-lane Major Arterial to a 2-

I30-44  
cont.

lane Major Arterial with continuous buffered bike lanes, enhanced pedestrian and intersection treatments, and traffic calming measures, and a protected intersection at Genesee while maintaining on-street parking.

**The conclusion to be drawn from the Mobility Analysis is that converting Governor Drive from a 4-lane Major Arterial to a 2-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report.**

\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\*

---

Hello:

Attached are comments related to 1) General Comments, 2) Affordability, 3) Community Engagement and 4) Schools. Appendix I-2 was especially ignored in the Draft EIR discussion. Answers are expected in the public arena. Thank you, Jen Dunaway

I30-45

**General Comments:**

1. The City states that the UC Current Plan is at capacity. How is this defined and how is that measured? Compared to the last draft, this language was not utilized. Provide measured metrics and how University compares with other communities' measure. Provide information on what is capacity and what is above capacity. I30-46
2. These documents do not meet the requirements for CEQA. Specifically, Appendix G of the CEQA guidelines is "Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives? The City has not provided data and placement of new government facilities, environmental impacts, and impacts to response times and other objectives. The City needs to do this analysis and identify facilities and placement of said facilities in order to maintain acceptable service ratios, response times and other performance objectives such as LOS for streets for mobility. I30-47
3. The change in density at Governor and Regents shopping center is unacceptable since this is NOT a transit area and is only on one minor bus link. This was discussed in community meetings and the planning group supported change in the plan to lower density at Governor and Regents shopping center. The City needs to change this density to the suggested density by the Community Groups SAVE UC and UC PEEPS. I30-48
4. The City's argument about not having to measure LOS for streets service is weak and is intended only for transit areas. The area around Governor and Regents as well as Governor and Lakewood are not transit areas and should be analyzed for road usage and lane usage based on a variety of industry standard metrics such as LOS. I30-49
5. South UC is not an area served by Transit. Southwest UC in particular is only served by one minor bus route and is not a transit area, therefore using VMT as a sole metric for Street lane removals is not appropriate. Governor Drive should stay as four lanes and LOS and other common measures should be utilized to analyze Governor and other streets in UC. I30-50
6. At no community meeting from May 2022 to December 2023 did the City staff mention that the Hillcrest EIR would be part of the UC EIR. Why was this not mentioned and kept a secret from the public? This greatly complicates the analysis and public comment period, yet Coby Tomlins refused to extend the comment period. Why and why? I30-51
7. The City mentions in the Draft that as land becomes available for purchase the City will entertain buying it for community use. This is not the intent of Appendix G of CEQA and is unacceptable planning. Sites need to be identified at the time of the project implementation (Plan Update) to ensure mitigation measures are in place for future use. Schools, Fire Stations, Recreation Centers, and Parks need to be identified in the Plan per Appendix G of CEQA. I30-52
8. Figure 3-25 in the Draft EIR should show 2.8 new recreation centers and new park space. There is only one new recreation center on the map at the northern end of the UC planning area, close to Del Mar. This is not where all the population growth is planned and does not meet the 2.8 requirement. Per Appendix G of CEQA, sites need to be identified at the time of plan implementation to ensure mitigation measures will be sufficient. The City needs to identify these sites now. The City's mention of 'buying some sites up for sale in the future' is not adequate planning and is a do-nothing approach and not acceptable per CEQA. I30-53

- 9. In 1976, homeowners in South UC voted to pay a fee to add recreation center amenities and facilities. This agreement was worked via the City of San Diego. The City should charge fees for any new units built to fund additional recreation centers based on precedent. What does the City say about this?

**I30-54**
- 10. During the Public Comment Period from May 2022 to December 2023, public comments were made and endorsed by the Planning Group to have any new development include onsite parks and public space. This needs to be codified in the updated Plan.

**I30-55**
- 11. Figure 4.12 C shows two fire stations in South UC. There are no fire stations in South UC. Fire response times need to be analyzed for today and what they would in with the Plan Implementation. Per Appendix G of CEQA, Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives? The City needs to identify this and correct the map in this document. In addition, most common scenarios for fire egress need to be discussed with the “project” of this Plan. I.e. how will the increase in population egress from South UC during a fire in either Rose or Tecolote Canyons?

**I30-56**
- 12. Page 4.12-18 discusses police coverage. The Draft EIR does not discuss what the mitigation measures are to account for the Plan growth of population and where additional police coverage will go and effect on response times. The Draft EIR only discusses the no alternative option in the sense of what the current police coverage is. This is unsatisfactory.

**I30-57**
- 13. Page 4.12-28 discusses the need for an additional public library in UC. The document does not provide a location or where the funding would come from or when it should be built. The Draft only mentions remodeling the existing libraries. This is unsatisfactory.

**I30-58**
- 14. The Current UC Community Plan states “Provide a workable circulation system which accommodates anticipated traffic without reducing the Level of Service below “D.”” This Plan discards this community goal. This is a community goal that should be included in the Plan or discussed. Why was it discarded and by whom? What is the barrier to having it included in the new Plan?

**I30-59**

**Draft Affordability Housing Report:**

1. Many public comments in meetings from May 2022 to December 2023 reflected on the current low rent older apartment complexes in North UC. The comments made were to preserve those as much as possible, and prevent gentrification and the obliteration of those units with high end, luxury high rises. This is happening current at eh corner of Cargill Drive and Nobel Drive. The Plan should have language requiring and supporting the preservation of these few low rent, older apartments in UC. It does not mention this and the draft engagement report does not include these multiple comments from the public during public input in 2023.

2. The report does not have specific recommendations to be placed in the plan. The community comments from May 2022 to December 2023 that were recorded specifically stated that inclusionary low-income housing units should be built on site along with any new development. The report does not reflect these public comments or how to support and promote this particular model.

**Draft Engagement Summary Report:**

1. Page 11: City states “Leaving the 1987 University Community Plan unchanged does not meet the City’s housing and climate goals, which are identified in the General Plan, Climate Action Plan, and other

adopted policy documents. The current plan is at capacity and therefore is in need of updating.” The City’s goals for housing should be inclusive of all 52 community areas, not simply UC and a few others. What is UC’s fair share of the SANDAG’s housing goals for the City of San Diego? The goal is much smaller for a community of UC, one of 52 community areas in the City. The current plan is not at capacity, when the City cannot explain how that is measured and defined. UC has had rapid growth since 1987 and continues to have new projects proposed and built (Nobel Drive and Cargill condos, Coste Verde Redevelopment, etc.). What capacity is the Plan at, and how is that measured? What are the capacities of the other Community Plans and how does the City determine which Plans are ‘at capacity’ and need to be updated? There are 16 other Community Plans that are older than UC; what are their capacities? This is not rationale and should be explained. The 1987 Plan has served the community well and is not ‘at capacity”. The community should absorb growth based on the fair share (1 of 52 communities) within the City.

2. The priorities listed on page one of the Community Engagement Report are all City of San Diego priorities. The 1987 Plan contains “Community Priorities”. Where are the community priorities based on the thousands of public comments received? Why did the City discard the 1987 Community Priorities and Values? These need to be placed back into this document.

3. The Community Engagement Report does not include a spreadsheet or database of all the public comments received. Where are they? How did the City staff devise these generalized statements? Based on what? If 1000 comments were received, how were they grouped together by topic and developed into community concerns? Where is the data?

4. The community engagement report makes no mention of the multiple public protests and signed petitions that were provided to the City. These were major events with major concerns noted with details, yet they are ignored by the Planning Department. These need to be included and the premise for the protests and the petitions concerns need to be evaluated.

5. Existing Community Plan goals:

D. Preservation and Enhancement of Established Neighborhoods 1. Establishment of performance standards to guide the conservation of valued existing neighborhood characteristics. 2. Encouragement of private finance mechanisms for preservation of established neighborhoods. 3. Encouragement of infill within City neighborhoods where vacant land and adequate public facilities exist.

Overall Community Goals 1. Foster a sense of community identity by use of attractive entry monuments in private developments. 2. Create a physical, social and economic environment complementary to UCSD and its environs and the entire San Diego metropolitan area. 3. Develop the University area as a self-sufficient community offering a balance of housing, employment, business, cultural, educational and recreational opportunities. 4. Create an urban node with two relatively high-density, mixed-use core areas located in the University Towne Centre and La Jolla Village Square areas. 5. Develop an equitable allocation of development intensity among properties, based on the concept of the “urban node.” 6. Provide a workable circulation system which accommodates anticipated traffic without reducing the Level of Service below “D.”

Note these are valid community goals; why are they being thrown out without comment? The last item about Level Of Service for our roads is a direct contradiction to the City’s proposal to allow all of our

I30-61  
cont.

roadways to degrade to C D and F with no consequence, with the flawed assumption that people will somehow stop using their vehicles. What studies actually suggest this will happen? What data is provided that this will actually occur? The community goals need to be integrated into the community plan and not be obliterated by the City of San Diego.

6. The UC Planning meetings specifically made recommendations that adopted those put forth by the group "Help Save UC". Why did the City not listen to the Community and threw out all of these recommendations?

7. The Community Engagement section makes no mention of the large community groups, HELP SAVE UC and UC PEEPS, which have hundreds of members who made official comments and petitions. These groups provided valuable input and recommendations. The City put forth none of these recommendations in their latest Draft. Why? Why no mention of these groups and their recommendations and suggestions?

8. Page 4.12.11 discusses fire station placement in UC. It does not provide current response times as compared to targets. The Draft EIR does not provide details on proposed response times and mitigation measures to ensure continued level of service.

9. Page 4.12.18 discusses police service. The Draft EIR does not discuss plans for mitigation to ensure continued level of service for UC. The draft only discusses what the UC area currently has. It does not provide any detail on impacts to the UC area with more population and how the Police will adjust and effects on response time.

#### **Appendix I-2, Draft EIR UC Plan Schools:**

1. Re: Appendix I-2: The School district states "Implementation of the University Community Plan Update will likely require significant expansion of existing school facilities, or construction of new facilities, at the elementary level. The district does not currently have any long-range facility plans that could possibly accommodate the estimated number of generated students. Land for new schools should be set aside in the University Community Plan Update. In particular, land for new schools is likely to be needed in the north section of the University area, in the vicinity of La Jolla Village Drive and Genesee Avenue intersection."
2. Further, the school district states "The specific question from Appendix G of the CEQA guidelines is "Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for [Schools]."
3. The City has not identified land for this and needs to in the Plan. In addition, the City has not met the requirement for Appendix G of CEQA as of yet in this Draft. This needs to be met.
4. Page 603 of the Draft EIR discusses schools in UC, but does not mention this memo from the District or where resources would be identified. The EIR is insufficient and does not discuss impacts or plans to mitigate. The City is purposely trying to ignore the School District concerns and needs in the Draft EIR. The City needs to fix the EIR to reflect mitigation measures per CEQA.

---

Greetings;

Regarding fire and emergency egress in case of emergency, the City EIR states that existing roadways can handle adequate egress in case of emergency or fire emergency with the proposed new population increase. This is wrong, since in the same document the City is proposing to reduce most street lanes from 4 to 2, hindering escape. There needs to be an analysis with the downgraded streets and increased population on emergency egress.

I30-63

Lastly, disturbingly, City Planning staff did not include the Community Preferred Scenario in the Draft EIR for study. Most EIRs have a few 'alternatives' to study and provide the 'decision maker' with choices on the way to move forward. This EIR essentially only has the "City Preferred Scenario" to study. As late as July 2023, the UCPG's subcommittee was studying both of these Scenarios and moving them both forward. Sadly, most of the comments from the community were integrated into the Community Preferred Scenario. Now the City Planning staff essentially throws that one away and uses the City Preferred Scenario as the way forward. Essentially all of the Community Comments are thrown in the trash and were for naught. We have asked why, and the best answer we got from Ms. Suchi Lukes, City Planner at the 9 April meeting was "that is a great question, we'll have to regroup on that to answer". WHY? It should be in the DEIR as an alternative.

I30-64

/R Jen Dunaway

**I30: Responses to Jennifer Dunaway Comment Letter**

**I30-1:** See response to comment O13-1 under comment letter O13.

**I30-2:** See response to comment O13-2 under comment letter O13.

**I30-3:** See response to comment I8-7 under comment letter I8.

**I30-4:** The Draft Program Environmental Impact Report (PEIR) acknowledges that the proposed project has significant impacts related to public services. As identified by the commenter, this information is found in the table summarizing the environmental impacts (Table ES-1) on page S-25. It is also discussed in Section 4.12.4 of the Draft PEIR. The specific locations, sizing, and capacity of future public service development projects (e.g., schools, police and fire stations, and libraries) are not known at this time. This level of review is acceptable for a PEIR. Section 21065.5 of the California Environmental Quality Act (CEQA) Statutes describes “tiering” as a review of “general matters and environmental effects in an environmental impact report prepared for a policy, plan, program,” followed by “narrower or site-specific environmental impact reports, which incorporate by reference the discussion in any prior environmental impact report and which concentrate on the environmental effects which (a) are capable of being mitigated, or (b) were not analyzed as significant effects on the environment in the prior environmental impact report.” If future development projects would result in potentially significant impacts not addressed in this PEIR, then a separate environmental review would be required.

See response to comment O13-4 under comment letter O13 in regard to the concern about the provision of school facilities in the University Community Plan Update (CPU) area.

**I30-5:** See response to comment O13-3 under comment letter O13.

**I30-6:** See response to comment O13-5 under comment letter O13.

**I30-7:** See response to comment I13-3 under comment letter I13.

**I30-8:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I30-9:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the PEIR. No further response is required.

**I30-10:** Figure 3-25 shows the existing and proposed recreation centers, along with existing and proposed park space. As described in Section 4.13.4, Issue 1 and Issue 2, of the PEIR, impacts related to the need for additional recreation centers is considered significant. As future development is proposed, individual private developments would be required to either pay Citywide Park Development Impact Fees or provide public parks consistent with San Diego Municipal Code Section 142.0640(b)(8)(A-F), as detailed in Section 4.13.2.2c. Without knowing where these future improvements would be located, the type and extent of the impacts resulting from providing these facilities, and to what extent these future facilities would be able to accommodate increases in demand for recreational facilities, the environmental impact remains significant.

**I30-11:** The comment indicates there is an email attachment with comments on the Draft Mobility Report, which was prepared to inform mobility decisions for the University CPU, but is not part of the University CPU, and was not analyzed in the PEIR. No further response is required.

**I30-12:** The comments are on the Draft Mobility Report which was prepared to inform mobility decisions for the University CPU, but it is not a part of the University CPU, was not analyzed in the Draft PEIR, and is not one of the reports for the Draft PEIR. The traffic analysis of the Draft PEIR relied on a Vehicle Miles Traveled Analysis (VMT), which is included as Appendix J to the PEIR. The comments on the Draft Mobility Report have been noted.

**I30-13:** See response to comment O13-4 under comment letter O13 .

**I30-14:** See response to I30-4. The comment about identifying the general locations in need of facilities based on density is noted. Planning for future facilities requires coordination between the various City departments as well as with the San Diego Unified School District. These actions are addressed in the University CPU Plan Policies 7.1(A–B), 7.2(A–B), and 7.3(A–H).

**I30-15:** See response to comment O13-5 under comment letter O13.

**I30-16:** See response to comment O13-5 under comment letter O13.

**I30-17:** See response to comment I30-10. The commenter mentions a proposed recreational facility on Torrey Pines. They perhaps mean the Scripps Shiley Sports and Fitness Center on North Torrey Pines Road. The University CPU identifies this area as a potential site for a new and/or expanded facility on Figure 26 (Figure 3-25 of the Draft PEIR). While this site is not near residential development, it could feasibly serve employees in that area, which would be consistent with University CPU plan policy 1.3(B): “Encourage office development that includes strategies accommodate changes in workforce styles and needs. Promote the locating office uses within high-quality office districts where workers have access to restaurants, services, and outdoor recreation.”

**I30-18:** See response to comment O13-4 under comment letter O13.

**I30-19:** The comment includes a letter dated March 20, 2023, that was sent to Mayor Todd Gloria, Planning Director Heidi Vonblum, Program Manager Nancy Graham, and Senior Traffic Engineer Leo Alo. The comments in the letter are on the University CPU, and the commenter is asking why these comments were not included in the Draft Engagement Summary Report. The comment has noted by the City. As it does not raise an issue related to the adequacy of the analysis in the Draft PEIR, no further response is required.

**I30-20:** The environmental impacts of the projected increase in traffic are discussed in Section 4.14, Transportation, of the PEIR. Since the passage of Senate Bill 743 in 2018, CEQA Guidelines Section 15064.3 no longer uses auto delay, level of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. This applies to any CEQA project, as defined by Section 21065 of the CEQA Statutes:

“Project” means an activity which may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment, and which is any of the following:

- a) An activity directly undertaken by any public agency.
- b) An activity undertaken by a person which is supported, in whole or in part, through contracts, grants, subsidies, loans, or other forms of assistance from one or more public agencies.
- c) An activity that involves the issuance to a person of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies.

The proposed Blueprint SD Initiative, University CPU, and Hillcrest FPA is the proposed project per CEQA since the proposed land use frameworks and policies are a collective activity taken by the City to update its General Plan and meet its Climate Action Plan goals.

VMT is the metric by which transportation impacts under CEQA are measured. Under CEQA Guidelines Section 15064.3, statewide application of the new VMT metric was required as of July 1, 2020. The traffic analysis of the PEIR relies on the Vehicle Miles Traveled Analysis, which is included as Appendix J to the PEIR. The Draft Mobility Report is not part of the University CPU and was not analyzed in the PEIR. The comment about the opposition to the proposed improvements to Governor Drive are noted.

**I30-21:** This comment is a chain of emails from the commentor to the City's traffic engineering staff dating between May, 2023, through March, 2024. The emails are requesting information regarding the traffic count data for University CPU and various projects that are not a part of this proposed project. The correspondence has been noted; since these are not comments on the adequacy of the Draft PEIR, no further comment is necessary.

**I30-22:** See response to comment I30-10 and I30-17.

**I15-23:** See response to comment O13-4 under comment letter O13.

**I30-24:** The comment is a request for presentation slides and does not have any comments on the PEIR. No response is necessary.

**I30-25:** See responses to comment I30-4 and I30-10.

**I30-26:** See responses to comment I30-1 and I30-2.

**I30-27:** See response to comment I8-7 under comment letter I8.

**I30-28:** See response to comment O13-3 under comment letter O13.

**I30-29:** See response to comment O13-5 under comment letter O13.

**I30-30:** See response to comment I13-3 under comment letter I13.

**I30-31:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I30-32:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I30-33:** See the response to comment I30-4.

**I30-34:** See response to comment O13-5 under comment letter O13.

**I30-35:** The commenter introduces their comments on the Draft PEIR and on the University CPU.

**I30-36:** See response to comment O13-1 under comment letter O13.

**I30-37:** See response to comment O13-2 under comment letter O13.

**I30-38:** See response to comment O13-3 under comment letter O13.

**I30-39:** See response to comment O13-4 under comment letter O13.

**I30-40:** See response to comment O13-5 under comment letter O13.

**I30-41:** See response to comment O13-6 under comment letter O13.

**I30-42:** See response to comment O13-7 under comment letter O13.

**I30-43:** Comment noted. The Complete Communities program is not a part of the scope of the project analyzed in the Draft PEIR and the environmental impacts of the Complete Communities program were analyzed in the Final PEIR for Complete Communities: Housing Solutions and Mobility Choices (SCH No. 2019060003). The comment does not raise an issue related to the adequacy of the analysis in the PEIR. No further response is required.

**I30-44:** This is a comment on the Mobility Technical Report, which was prepared to inform mobility decisions for the University CPU, but is not part of the University CPU, and was not analyzed in the PEIR. No comments are necessary.

**I30-45:** The commenter introduces comments on the University CPU and the PEIR.

**I30-46:** Comment noted. As this is a comment on the University CPU, and not on the adequacy of the PEIR, no additional comments are necessary.

**I30-47:** Impacts to public services and facilities is discussed in Section 4.12 of the Draft PEIR. See the response to comment I30-4.

**I30-48:** See response to comment I8-7 under comment letter I8.

**I30-49:** See response to comment I30-20.

**I30-50:** A goal of the University CPU is to expand alternative mobility options in an effort to meet CAP and General Plan policies regarding greenhouse gas emissions. While not all of South University City is within a Transit Priority Area, portions of it are. In response to the comment about VMT and Governor Drive, see the response to comment O13-1 under comment letter O13.

**I30-51:** In response to the comment about the inclusion of multiple community plan updates being analyzed under one PEIR, see the response to comment O13-6 under comment letter O13.

CEQA Guidelines Section 15105 indicate that the public review period for a Draft Environmental Impact Report (EIR) submitted to state agencies for review shall not be less than 45 days. The intention of the 45-day public review process for a Draft EIR is for the lead agency to give individuals, local agencies, and state agencies, adequate time to review and comment on the EIR, so that the Lead Agency can consider these comments and then provide responses as necessary in the Final EIR. All comments and questions posed by the commenters are noted and considered by the City of San Diego as the lead agency.

**I30-52:** See response to comment I30-4 for a discussion of how tiered EIRs analyze the environmental impacts at a program and project level. See also response to comment O11-11 under comment letter O11 as it relates to tiered environmental analysis.

**I30-53:** See the response to comment I30-10.

**I30-54:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the PEIR. No further response is required.

**I30-55:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the PEIR. No further response is required.

**I30-56:** Figure 4.12-1c of the Draft PEIR had incorrect information regarding fire station locations. This information has been corrected for the Final PEIR. The nearest station to south University City is the station at the intersection of Nobel Drive and Shoreline Drive. Response times for police and fire services are measured and analyzed in section 4.12 of the Draft PEIR. See Tables 4.12-4 for the San Diego Fire Department's performance indicators for 2021. As determined in 4.12.4 Issue 1(a), future development in accordance with the land use framework of the proposed project, including University CPU, would result in an increase in building square footage and population, which would create a greater demand for fire emergency services. As the location and need for potential future facilities cannot be determined at this time, the nature and extent of these impacts is unknown, and impacts related to police and fire services are significant. . See response to comment O13-3 under comment letter O13 in regard to the concern about emergency access.

**I30-57:** The most recent data for police response rates is listed in Table 4.12-6 of Section 4.12 of the PEIR. Under the impact analysis (Section 4.12.4, Issue 1b), police services would need to be expanded as a result of future development of the University CPU area. As this is a programmatic review, the specific details of future police stations are not known, so the impacts are considered significant.. See response to comment I30-4 for a discussion of EIR tiering.

**I30-58:** The mention of new and expanded library buildings on page 4.12-28 of the PEIR is in reference to the information about future library needs in the City's Library Master Plan. The Library Master Plan recommends the renovation and expansion of the existing 16,000-square-foot North University Community Library to 25,000 square feet and the replacement of the existing 10,000-square-foot University Community Library on the same site with a larger 25,000-square-foot library facility. As with other public service-related impacts, these program-level impacts are considered significant. . See response to comment I30-4 for a discussion of service-related impacts and tiered environmental review.

**I30-59:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I30-60:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I30-61:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I30-62:** See response to comment O13-4 under comment letter O13.

**I30-63:** See response to comment O13-3 under comment letter O13.

**I30-64:** See response to comment O13-5 under comment letter O13.

Dear planners and elected officials

Please do not reduce the lanes on Governor Drive in university City.  
We are not happy with the proposed bike lane overhaul.  
Julia Engstrom

**Subject:** [EXTERNAL] Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

Below is a summary of the shortcomings of the DPEIR. I want to add additional comments that it is clear the City is purposely not following the required legal process because it knows the results will be devastating to the City's efforts to over-build the University City/UTC area.

The DPEIR process is in place so that stakeholders, decision makers, and the community can make decisions based on full and accurate information. The City has made it clear it wants to overbuild the area at any cost, and is only going through the motions of the approval process as has been evident throughout the entire process.

I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

My comments are with respect to the analysis performed for the University Community Plan Update. I support all of the comments submitted by Help Save UC dated April 25, 2024. I especially want to comment on the following:

The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment and the University Community Plan Update into one document made the document confusing, overwhelming and not accessible to the public, thus failing CEQA's requirement to provide an informational document to inform the general public of the significant

I32-1

I32-2

environmental effect of a project.

The City's failure to evaluate the full environmental impacts of the University Community Plan Update at full buildout, including the impact of the Complete Communities program, makes the document inadequate, specifically for areas such as Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.

The City's failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.

The DPEIR is inadequate due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to evaluate the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project.

The appropriate way to do that would have been to evaluate a lower density alternative, such as the "community-preferred alternative" (Scenario B) in the City's last draft of the Plan Update. Instead, the City evaluated a Higher Density alternative that the City admitted wasn't feasible.

Finally, the City's conclusion that the High Density Alternative was the environmentally superior alternative isn't supported by the evidence. Table 8-1 shows that the High Density alternative results in greater impacts on the environment.

Furthermore, the City's own conclusion states, "No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project." (Section 8.2.3, underline added.)

The City should revise the DPEIR to address these issues.

---

Why would you redesignate open space behind a handful of multimillion dollar homes?

**I33-1**

You are creating a fire hazard where there was never one.

**I33-2**

You will be to blame when our home insurance is canceled due to Now being in a fire zone. Or worse, when they burn down!

**I33-3**

This “open space” was a maintained golf course before the backroom deals got the zoning changed.

**I33-4**

“Open Space

This designation maintains areas of undeveloped canyons and hillsides which can contain environmentally sensitive resources.”

**I33-5**

FIRE HAZARD FIRE HAZARD FIRE HAZARD

Inline image

**I33: Response to Anthony Filippone II Comment Letter**

**I33-1:** The University Community Plan Update (CPU) does not include the redesignation of open space. This comment does not raise an issue related to the adequacy of the analysis contained within the Draft Program Environmental Impact Report (PEIR).

**I33-2:** As shown in Figure 4.18-5 and detailed in Table 4.18-4 of the Draft PEIR, the majority of the University CPU area is located in a very high fire hazard severity zone. Approximately 6,836 acres of the University CPU area is located in a very high fire hazard severity zone. The proposed project would not change the existing very high fire hazard severity zone.

**I33-3:** Comment noted. This comment does not raise an issue related to the adequacy of the analysis contained within the Draft PEIR. No further response is required.

**I33-4:** Comment noted. This comment does not raise an issue related to the adequacy of the analysis contained within the Draft PEIR. No further response is required.

**I33-5:** This comment does not raise an issue related to the adequacy of the analysis contained within the Draft PEIR. Please see response to comment I33-2.

**Subject:** [EXTERNAL] University City Density Increase Plans Objection

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

Dear San Diego County Residents Representatives,

As a long-standing University City resident, I am contacting you to express my objections regarding several areas of concern from the City's recent Environmental Impact Report, some of which were already rejected by UC residents when the 'Housing Action Plan' which was part of State Bill 10 that failed to pass in August 2023. Here are just some key concerns:

I34-1

### Governor Drive Lane Reductions

The City acknowledged at a recent meeting in early April that while traffic "models" were done for the EIR draft plan, they were not done for the high-density alternative that is included in the EIR. Moreover, there was no new traffic count or specific study of Governor Drive regarding what the City now calls "complete streets. It has been confirmed that the City has not done a comprehensive Traffic Study since 2015 and is basing their Vehicle Miles Traveled (VMT) data on a study done in 2016. In summary, Governor Drive should not be reduced to two lanes without a current and legally valid Traffic Study with a full VMT analysis.

I34-2

I34-3

I34-4

### Emergency Ingress/Egress

Related to the Governor Drive lane reductions combined with substantially higher density allowances, such a plan ignores the reality of the impact it will have on emergency vehicles getting through in time, or worse yet if residents needed to evacuate in the event of a disaster in an area that already is in a potential wildfire zone as well as its proximity to MCAS, just to name two factors. Again, the City is under legal obligation to conduct a current and legally valid Traffic Study with a full VMT analysis along the Governor Drive corridor.

I34-5

### New High-Rise Apartments Planned for Genesee and Nobel Drive

Under the City's "Complete Communities Housing Solutions" regulations, we understand that Willmark Communities is seeking permission to build three high-rise towers comprising 1,315 "luxury" apartments, with only 1,350 onsite parking spaces, on the southwest corner of Nobel and Genesee, replacing a 108-unit two-story apartment complex. This is yet another example of the City falling short on its promise to add more affordable housing, while such a project

I34-6

will only increase traffic gridlock along Genesee during certain times of the day. Also, there are already several high-rise residential projects that have been built in the small radius of UTC space over the last 10-20 years. It has increased the density tremendously while taking away needed infrastructure. I used to be able to walk to the grocery store. Now, I have to get in my car and fight traffic to get to the grocery store while also dealing with a bunch of college students. We do not want or need more high rise residential in this area because UCSD wants more housing for their students. Millions were spent on a trolley system to allow people to live in different parts of the county and get to work via mass transportation or vice versa. Let's put that project to work in other areas of the county for this underutilized resource. As an alternative, other areas closer to Hwy 52 that have several older apartment and condos should be redeveloped before anything else is added or developed in UTC.

I34-6  
cont.

### **Vons & Sprouts Centers New Height and Sharply Higher Density Allowances**

The planned, sharp increase in overall housing density allowances is now coupled with the EIR showing that the City has ignored UC community requests and is forging ahead to raise the allowable structure heights of the Von's shopping plaza on Governor Drive/Genesee to 100 feet or 10 stories with residential units added to those areas. This is NOT acceptable. We, **the people**, have already voted this down!

I34-7

That alone will further impact all kinds of mobility along Governor Drive & onto Genesee as well as to 805 to the east, and Regents toward the west, where a similar plan is on deck for the Sprout's shopping plaza. The Sprout's shopping center is NOT an existing Transit Priority Area or TPA. Buses do not stop there frequently, and it is not close to the trolley and an existing TPA.

### **Planning Deficiencies in Parks**

Under the City's 'Master Plan', the UC area is already short on publicly accessible parks – not “greenways” or some other term that in reality is not a park, or in a land-use area that does not allow residential use. It is also our understanding that developers can now pay a one-time, in-lieu fee and not provide such amenities as a small recreational area in their residential complex plans.

I34-8

The City has fallen short in this key area while also allowing developers to buy their way out of providing more green spaces or publicly accessible recreation areas. This is NOT acceptable!

**In summary**, these initiatives ignore the need for a workable and supportive infrastructure. It fails to provide even somewhat affordable housing, disregards existing residents' input, and intentionally erodes single-family neighborhoods.

I34-9

The most harmful high-density housing initiative the City attempted to pass was SB 10, which would have allowed as many as 14-unit buildings up to three stories high on single-family parcels and no contained parking requirements. Thanks to a successful opposition campaign, SB 10 was removed from the Housing Action Package.

I34-10

Thank you for your time and consideration. Such initiatives call for planning that balanced growth rates with an infrastructure where families can grow and thrive. Most of all, responsible growth includes residents in decision-making.

I34-11

Marcia Fisher

---

The current University City Plan is unacceptable.

I35-1

The plan to take Governor down to two lanes (one lane each way) will increase traffic and pollution. It will also present a grave safety risk in the event the community needs to evacuate during a fire. There are better was to promote safety and transit options.

I35-2

It also allows for too much residential housing density in north and south UC.

I35-3

Please contact me if you have any questions.

I35-4

---

Hello, my name is Gail Friedt, a concerned resident who lives at First and University, and a founding member of Vibrant Uptown. I believe it is important to provide safe bike infrastructure for all ages and abilities on West University Ave.

I36-1

The Hillcrest Focused Plan Amendment leaves a crucial gap in the regional bikeway network on West University Ave. With high vehicle volumes posing safety risks, especially near Florence elementary school, urgent action is needed.

I36-2

Please extend the one-way configuration from First Avenue to Washington Street, creating space for a protected bikeway. This revision ensures safe mobility for all users and closes the cap in the complete streets network. We need safe biking for everyone in our community.

I36-3

Sincerely,

Gail Friedt

---

Hello,

I am a longtime Hillcrest resident and wish to comment on the Focused Plan Amendment. I appreciate the work going into the plan and, importantly, preserving the character of Hillcrest.

I37-1

I would like to see the City focus on affordable housing. The new apartments next to Number One Fifth Avenue range in price from \$2,450 per month for a studio to \$4,889 per month for a large two-bedroom apartment. These prices are absurd and are unaffordable for many members of the LGBTQ+ community. There are several other luxury buildings under construction and more to come. I fully support building up and building large units, but we should be focused on housing that regular people can afford. Building a luxury building with a handful of low income units does not serve our community. We need housing for regular folks.

I37-2

I would also like the City to reconsider the plans for additional bike paths. Fourth and Fifth Avenues are extremely chaotic and dangerous. It's difficult to cross the streets and you cannot see bikers coming, assuming that any of them actually use the bike lanes. I understand the City wants people to walk and bike, but that is not the reality for the majority of folks. My husband and I share a car but without trolley access Hillcrest is not realistically a place where people can live car-free.

I37-3

Finally, we need more public bathrooms that are open for our unhoused neighbors. The only public bathroom within a mile of our home is the Mission Hills/Hillcrest Public Library Branch, and it's not open 24 hours a day. This is a huge problem in our community.

I37-4

Thank you,

Jenn

Sent from my iPhone

To Whom It May Concern:

I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

I38-1

My comments are with respect to the analysis performed for the University Community Plan Update. I support all of the comments submitted by Help Save UC dated April 25, 2024. I especially want to comment on the following:

1. The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment and the University Community Plan Update into one document made the document confusing, overwhelming and not accessible to the public, thus failing CEQA's requirement to provide an informational document to inform the general public of the significant environmental effect of a project.
2. The City's failure to evaluate the full environmental impacts of the University Community Plan Update at full buildout, including the impact of the Complete Communities program,

I38-2

I38-3

makes the document inadequate, specifically for areas such as Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.

I38-3 cont.

3. The City's failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.

I38-4

4. The DPEIR is inadequate due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to evaluate the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project. The appropriate way to do that would have been to evaluate a lower density alternative, such as the "community-preferred alternative" (Scenario B) in the City's last draft of the Plan Update. Instead, the City evaluated a Higher Density alternative that the City admitted wasn't feasible.

I38-5

5. Finally, the City's conclusion that the High Density Alternative was the environmentally superior alternative isn't supported by the evidence. Table 8-1 shows that the High Density alternative results in greater impacts on the environment. Furthermore, the City's own conclusion states, "No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project." (Section 8.2.3, underline added.)

I38-6

The City should revise the DPEIR to address these issues.

I38-7

## Comments on the Hillcrest Focused Plan Amendment March 2024 draft to the Uptown Community Plan

Sharon Gehl [slgehl2000@gmail.com](mailto:slgehl2000@gmail.com)

The proposed Plan Hillcrest LGBTQ+ Cultural District would be the most effective way of supporting the *City of San Diego's Strategic Plan* objective of "Celebrating the cultural diversity and history of the LGBTQ+ community".

I39-2

The Cultural District will use effective ways of communicating ideas such as words, written and spoken, pictures and color. It would also include a walking corridor that would link cultural interpretive elements and facilitate walking tours, another effective way to communicate ideas.

Identifying and preserving historic resources and districts on the other hand has proven to not only be ineffective in communicating cultural ideas in San Diego; it has done damage to the city by preventing much needed new multifamily housing, lowering property values, and hurting the city's tax base.

Society tends to pay for the things that we find work. Most of us learned the main points of history in school, from reading a book or newspaper, or from watching things like a Ken Burns documentary. While we pay teachers, writers, and producers, all City of San Diego, San Diego County, and California state historic buildings lose money; because most people are not interested in spending money on them. Why does the new Hillcrest Plan Amendment propose designating more buildings when people aren't interested in the ones we already have? What is going on?

The key to understanding Historic Preservation is this Wikipedia entry on the subject.

[https://en.wikipedia.org/wiki/Historic\\_preservation](https://en.wikipedia.org/wiki/Historic_preservation) Wikipedia defines Historic Preservation as a "philosophical concept". The concept/theory was that turning buildings into museums would be a good way to tell history. This theory has been tested in the US for over a hundred years. It was soon evident that it was wrong, that turning buildings into museums is not an effective or popular way to tell history. If you had a restaurant that didn't have enough customers, it would go out of business; but professional preservationists asked for donations big and small, for volunteers to work for free, and taxpayer money to bail their museums out.

I39-3

The fact that historically designated buildings are not financially viable became a continuing problem. It was still difficult for professional preservationists to make money. Then about 50 years ago preservationists found that they could make money by getting laws passed that allowed them to get control of other people's property - without having to compensate the owners financially.

As the chart below from the Wikipedia entry shows, now the majority of jobs in US historic preservation are not in Museums, 9%; but in Regulatory Compliance, 70%. In other words,

managing the laws and regulations that control officially designated or proposed historic properties. The more properties the City of San Diego Historic Resources Board (HRB) designates, either by force of law or because owners want big Mills Act tax subsidies, the more money professional preservationists in San Diego make. Adding more and more proposed properties to community plans is also a way for professional preservationists to make more money.

**Areas of professional, paid practice in historic preservation in the United States<sup>[6]</sup>**

Area of practice	! Percent (out of 100%)
Regulatory compliance (federal, state, and local)	69.7%
Architecture and construction	11.2%
Historic sites/museums	8.9%
Preservation advocacy	5.7%
Downtown revitalization	4.5%

I39-3  
cont.

Appendix E of the Uptown Community Plan lists over 525 Individually and District Designated properties, 17 Potential Historic Districts with some 2678 properties, 4 potential Multi-property Districts with some 953 properties, and 44 Potential Individually Listed properties. If the city already has over 500 designed properties that lower the city’s tax base and the majority of people ignore, why do we need another 3,500 to tell history?

The problem is that the City of San Diego’s historic preservation program is not actually about telling history, supporting the city’s climate action plan, or social equity; it’s about using laws to allow professional preservationists to get control of as much property as possible. The proof is the extremely boring DRAFT Hillcrest Focused Plan Amendment LGBTQ+ Historic Context Statement. LGBTQ+ history is actually quite interesting, but that Context Statement isn’t about telling history, it’s about establishing a legal basis for getting control of property that will hold up in court if the city is sued.

To summarize, the majority of Americans do not find historical preservation a good way to learn about history, it is therefore not financially viable; which makes it difficult for professional preservationists to make money. They solved their problem by getting laws passed. Now the overwhelming majority of them make money from taxpayer subsidies and government laws that give them control of other people’s properties without paying for them, not from using buildings to tell history.

I39-4

Buildings are particularly bad at telling cultural history, even if that was actually the city's intent. Buildings are just objects that say nothing. They need verbal, written, and/or visual explanations; which are more effective and less expensive than the building itself. The solution is to take all of the proposed historic properties and districts out of the Uptown and Hillcrest Focused Plan Amendment. The proposed Cultural District can talk about culture and history more effectively and for less money than designating buildings. A Cultural District can also evolve over time to keep up with changing needs and new LGBTQ+ history.

Do what is best for the majority of people in San Diego, not what is best for a handful of preservationists. Support the City's climate action goals, it's housing needs, and social equity.

**I39-4  
cont.**

**139: Responses to Sharon Gehl Comment Letter**

**139-1:** The comment introduces the attached comment letter.

**139-2:** The comment addresses the proposed LGBTQ+ Cultural District and does not address the adequacy of the Draft Program Environmental Impact Report (PEIR). No response is required.

**139-3:** The comment addresses concerns about how the implementation of the Hillcrest Historic District would deter the construction of multifamily housing, which the commenter is in support of. As detailed in the Draft PEIR Section 4.4.4, Issue 1, the Hillcrest Historic District's Supplemental Development Regulations (SDRs) are designed to protect the significant historic character-defining features – namely the storefronts and the 1-to-3-story pedestrian scale along the streetscape – while allowing for new development within the district. The proposed SDRs provide design regulations for contributing and non-contributing resources as identified in the Hillcrest Historic District nomination and by the Historical Resources Board when designated.

This comment addresses concerns with the proposed Hillcrest Historic District and does not address the adequacy of the Draft PEIR. No additional response is required.

**139-4:** The comment raises concerns about historical preservation and has been noted. The comment does not address the adequacy of the Draft PEIR. No response is required.

---

Excellent summary and follow up questions. What is the purpose of voting for a representative if they do not choose to hear us and fight for what is right? Do any of them live in our community, walk our neighborhoods, visit our schools and recreation centers, speak with our Police and Fire crews and most of all, listen to our community residents? Our ideas are not tainted by power or money like theirs seem to be.

I40-1

Barbara

On Saturday, April 13, 2024 at 03:02:40 PM PDT, Bonnie Kutch <[bkutch@kutchco.com](mailto:bkutch@kutchco.com)> wrote:

Dear City of San Diego Officials:

During the April 9th University City Planning Group meeting I attended in person, Suchi Lukes and

I40-2

Nathen Causman gave a 40-minute Zoom presentation of the city's revised University Community Plan Update and Draft EIR. Eight other city officials participated via Zoom. Suchi and Nathen gave a summary of the documents we had already reviewed when they were made available March 14th. These documents called for considerable clarification and substantiating, which we had expected city staff would be prepared to do.

I40-2  
cont.

Following city staff's presentation, members from the live audience and Zoom participants were given time to ask questions. However, Suchi, Nathen, Leo Alo, Coby Tomlin and consultants from Kyser Marston Associates were unable to answer the majority of our questions.

On behalf of the residents of University City who took the time and care to attend this meeting and pose our well-thought-out questions, I am requesting answers to each and every question below, in writing, by a date that is certain to give the community time to properly evaluate those answers, and ask our follow-up questions to those answers.

**THIS EMAIL IS TO TO PUT YOU ON NOTICE THAT WE WANT THE APRIL 30TH DEADLINE EXTENDED BECAUSE THE CITY WAS UNPREPARED TO ADDRESS THE PUBLIC'S QUESTIONS, MAKING THE MEETING A WASTE OF THE PUBLIC'S TIME AND MONEY AND SEVERELY CUTTING INTO THE SHORT 45-DAY REVIEW PERIOD WE WERE ALLOWED.**

I40-3

#### Questions That Still Need Answers:

1. Why was the Community Scenario in the city's revised UC Plan Update not included in the Draft EIR? Why would the Planning Department revive the "very high" Scenario 1 when it was discarded in July 2023? This makes no sense, and we need this question answered.

I40-4

2. Why were the Sprouts and Vons shopping centers in south UC up-zoned to CC-3-8? Sprouts is not an existing TPA and likely never will be with MTS's budget problems; why would you consider adding as many as 572 housing units there? And how can you justify adding another 373 at Vons for a total of 945 housing units along Governor Drive, our only ingress/egress into south UC, when that artery is already heavily congested? And why would you up-zone for 100 feet high at both centers when that height would be so far out of scale with the surrounding community, depriving surrounding residents of their privacy, sunlight, safety and relative quiet?

I40-5

I40-6

3. Page S-25, Impact on Schools: The DEIR states that "Implementation of the University CPU could result in the need for additional fire/rescue, police, school, and library facilities. The location and need for potential future facilities cannot be determined at this time ... " However, if you look at Appendix 12 of your documents, we see a memo from the San Diego Unified School District written six months ago that states that the UC Plan Update should have a location identified for new schools, and it specifically states it should be in the vicinity of Genesee and La Jolla Village Drive. How do you explain this glaring oversight, and what is your solution?

I40-7

4. Funding mechanism: There is only \$44 million in the budget currently for UC improvements. The Plan Update has been presented to UC residents by the city with plenty of colorful and attractive renderings of tree-lined streets and pathways, parks and other community enhancements. Will you properly explain what the funding mechanism will be for all the needed infrastructure, recreational facilities, improvements and services in UC when DIFs are being waived or redirected to other communities?

I40-8

5. In Leo Alo's explanation of the city's "Traffic Analysis", he stated that VMT was the new standard of measuring traffic. However, the VMT data collected by the city was obtained from SANDAG's Series 14 Activity Based Model, ***which is now eight years old***. We have an expert witness who can testify that, under base year conditions, the ***University CPU exceeds the thresholds by being above 85 percent*** of the regional means for both VMT per Capita and VMT per Employee, as well as 90 percent and 126 percent of the Base Year regional means, respectively. By 2050, with the implementation of the UCPU, the VMT is projected to be 60 percent and 85.3 percent, respectively, of the Base year Regional means. **No part of the UCPU may go forward without a current, thorough Traffic Study performed at peak traffic times. This is particularly true for Governor Drive.**

I40-9

6. Nearly 100 percent of the housing demand citywide is for for-sales homes to house entire families, while rental apartments have been far overbuilt. Yet, it appears that the UCPU is being up-zoned entirely for more high-rise apartments rather than single-family or multi-family for-sale homes. Nathen's explanation that many of the apartments could be for-sale condos, but he offered no solution for families with children and pets who need multiple bedrooms and readily accessible yards or other outdoor recreational space. If the city's goal is to provide more housing for the people who work in UC and won't have to commute long distances, then are you assuming that UC's workforce is entirely young, single and childless?

I40-10

7. There was no proper answer given to the question of how Complete Communities Housing Solutions plays into the overall UCPU and how it's expected to add to the overall housing density, impact traffic, further burden existing infrastructure, and skew the number of DU/AC on the Plan Update's density map. If CCHS is not under the purview of the Planning Department, as Nathen stated, then how is this being tracked and calculated? Who's keeping score?

I40-11

8. There was not adequate explanation as to how the Plan Update will ensure there is enough retail to serve the residents of UC. If UC residents are forced to drive to Clairemont or Del Mar to do their shopping, does that not defeat the city's goal of cutting down VMT?

I40-12

9. There was no response to the point made about SANDAG's Series 15 population projection of there being a mere 65,000 additional people in all of San Diego between 2022 and 2050, which means the UCPU aims to add 40 times the housing units needed in UC alone!! How can the city justify this?

I40-13

#### **Additional Questions That Need Answers**

10. Explain where the 1.8 recreation centers missing from the UCPU will go, and what mitigation efforts have been done. Explain how the one new recreation center the city has proposed at the Shiley Eye Center at Scripps Torrey Pines could possibly serve nearby residents when there are no residences in that area.

I40-14

11. Explain how the two additional parks that the city says will be added can possibly function as neighborhood/community parks when they are nothing more than small strips of land away from residences and could not possibly accommodate a game of soccer, baseball, or other activities. The Draft EIR states that the city cannot ensure it will build any more recreational facilities, so where do you imagine people will have any outdoor recreational areas at all when it adds 65,000+ more people?

I40-15

12. The Draft UC Community Plan had "Community Goals". The city's revised Plan Update eliminates all those goals and only lists "City of San Diego Goals." Why?

I40-16

13. The Draft EIR discusses current fire station placement but does not say where new fire stations will be build to serve the added population in UC. Explain how this is being addressed.

I40-17

14. UC is already short of police coverage and we are already far behind city targets. Why have additional police force or stations not been offered? And what has the official response been from the Police Department?

I40-18

15. In the Community Engagement document, no mention is made of the petition submitted by UC PEEPS in March 2023 with close to 2,200 signatures objecting to the city's proposed plans; in fact, we received no response from city officials about that petition whatsoever. No mention is made of the three large-scale protests against the city's high-density housing plans held in UC and across the city. No mention is made of the thousands of letters submitted by community residents to city officials opposing their Plan Update. No mention was made of the extensive media coverage generated against the city's proposed Plan Update. Why was this not included in the Community Engagement document?

I40-19

I, along with many other members of the UC community, await your responses.

Sincerely,

Bonnie Kutch  
Resident & Property-Tax Paying Homeowner, University City

To Whom It May Concern: Below are my comments to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park. II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant. III. School Requirements from the San Diego School District Must Be Met. The DEIR states "No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district's memorandum was incorporated into the DEIR, but this statement was not. IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community's preferred alternative. V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching

I41-1

I41-2

I41-3

I41-4

I41-5

I41-6

amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update. VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts : The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

---

To Those It May Concerns:

The following were considered when supporting the issues below:

1. The areas combined are TWO different climates and need separate Impact Studies reflecting the unique climates I42-1
2. With the population more than doubling, stating “No new schools...” is contradictory without considering environmental impact of traffic in charter school neighborhoods to accommodate the population increase proposal. I42-2
3. DEIR should consider the near doubling of fire and police vehicles to accommodate proposed housing increase. I42-3
4. Scripts Ranch lessons learned should be used to address the community safety for emergency egress IVO of the significant doubling of population less than a 10 mile radius. I42-4

Below are my comments to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park. I42-5

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to I42-6

I42-7

ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence since the population is projected to more than double. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I42-7  
cont.

III. School Requirements from the San Diego School District Must Be Met. The DEIR states “No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

I42-8

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community’s preferred alternative.

I42-9

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City’s general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I42-10

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City’s DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

I42-11

I42-12

Sincerely,

Frederick D. Gorris  
UC resident

**I42: Response to Frederick Gorris Comment Letter**

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

**Dear Kent Lee, Mayor Todd Gloria, Nathen Causman, Suchitra Lukes & Coby Tomlins,**

As a University City resident I am contacting you to express my objections regarding several areas of the City's recent Environmental Impact Report due to several key concerns, some of which were already rejected by UC residents when the 'Housing Action Plan' part of State Bill 10 failed to pass in August 2023. Here are just some key concerns:

I43-1

### **Governor Drive Lane Reductions**

The City acknowledged at a recent meeting in early April that while traffic "models" were done for the EIR draft plan, they were not done for the high-density alternative that is included in the EIR. Moreover, there was no new traffic count or specific study of Governor Drive regarding what the City now calls "complete streets. It has been confirmed that the City has not done a comprehensive Traffic Study since 2015 and is basing their Vehicle Miles Traveled (VMT) data on a study done in 2016. In summary, Governor Drive should not be reduced to two lanes without a current and legally valid Traffic Study with a full VMT analysis.

I43-2

I43-3

I43-4

### **Emergency Ingress/Egress**

Related to the Governor Drive lane reductions combined with substantially higher density allowances, such a plan ignores the reality of the impact it will have on emergency vehicles getting through in time, or worse yet if residents needed to evacuate in the event of a disaster in an area that already is in a potential wildfire zone as well as its proximity to MCAS, just to name two factors. Again, the City is under legal obligation to conduct a current and legally valid Traffic Study with a full VMT analysis along the Governor Drive corridor.

I43-5

### **New High-Rise Apartments Planned for Genesee and Nobel Drive**

Under the City's "Complete Communities Housing Solutions" regulations, we understand that Willmark Communities is seeking permission to build three high-rise towers comprising 1,315

I43-6

“luxury” apartments, with only 1,350 onsite parking spaces, on the southwest corner of Nobel and Genesee, replacing a 108-unit two-story apartment complex. This is yet another example of the City falling short on its promise to add more affordable housing, while such a project will only increase traffic gridlock along Genesee during certain times of the day, particularly during rush hours and when the schools let out and parents are attempting to pick up or drop off their children.

I43-6  
cont.

### **Vons & Sprouts Centers New Height and Sharply Higher Density Allowances**

The planned sharp increase in overall housing density allowances is now coupled with the EIR showing that the City has ignored UC community requests and is forging ahead to raise the allowable structure heights of the Von’s shopping plaza on Governor Drive/Genesee to 100 feet or 10 stories with residential units added to those areas.

I43-7

That alone will further impact all kinds of mobility along Governor Drive & onto Genesee as well as to 805 to the east, and Regents toward the west, where a similar plan is on deck for the Sprout’s shopping plaza. The Sprout’s shopping center is NOT an existing Transit Priority Area or TPA. Buses do not stop there frequently, and it is not close to the trolley and an existing TPA.

### **Planning Deficiencies in Parks**

Under the City’s ‘Master Plan’, the UC area is already short on publicly accessible parks – not “greenways” or some other term that in reality is not a park, or in a land-use area that does not allow residential use. It is also our understanding that developers can now pay a one-time, in-lieu fee and not provide such amenities as a small recreational area in their residential complex plans. The City has fallen short in this key area while also allowing developers to buy their way out of providing more green spaces or publicly accessible recreation areas.

I43-8

In summary, these initiatives ignore the need for a workable and supportive infrastructure. It fails to provide even somewhat affordable housing, disregards existing residents’ input, and intentionally erodes single-family neighborhoods.

I43-9

The most harmful high-density housing initiative the City attempted to pass was SB 10, which would have allowed as many as 14-unit buildings up to three stories high on single-family parcels and no contained parking requirements. Thanks to a successful opposition campaign, SB 10 was removed from the Housing Action Package.

I43-10

Thank you for your time and consideration. Such initiatives call for planning that balanced growth rates with an infrastructure where families can grow and thrive. Most of all, responsible growth includes residents in decision-making.

I43-11

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Those in Decision-Making Positions:

These are my comments about the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I44-1

I44-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I44-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states “No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

I44-4

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community’s preferred alternative.

I44-5

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City’s general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I44-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City’s DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

I44-7

I44-8

Most Sincerely,

Harry Griswold, concerned resident

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

I47-1

My comments are with respect to the analysis performed for the University Community Plan Update. I support all of the comments submitted by Help Save UC dated April 25, 2024. I especially want to comment on the following:

1. The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment and the University Community Plan Update into one document made the document confusing, overwhelming and not accessible to the public, thus failing CEQA's requirement to provide an

I47-2

informational document to inform the general public of the significant environmental effect of a project.

I47-2  
cont.

2. The City’s failure to evaluate the full environmental impacts of the University Community Plan Update at full buildout, including the impact of the Complete Communities program, makes the document inadequate, specifically for areas such as Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.

I47-3

3. The City’s failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.

I47-4

4. The DPEIR is inadequate due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to evaluate the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project. The appropriate way to do that would have been to evaluate a lower density alternative, such as the “community-preferred alternative” (Scenario B) in the City’s last draft of the Plan Update. Instead, the City evaluated a Higher Density alternative that the City admitted wasn’t feasible.

I47-5

5. Finally, the City’s conclusion that the High Density Alternative was the environmentally superior alternative isn’t supported by the evidence. Table 8-1 shows that the High Density alternative results in greater impacts on the environment. Furthermore, the City’s own conclusion states, “No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project.” (Section 8.2.3, underline added.)

I47-6

The City should revise the DPEIR to address these issues.

147-7

Thank you for your consideration.

Daina Hartin

I live in Bankers Hill and regularly ride from there to IB and Mission Bay. A safe bike route is absolutely necessary in order to ride that route. Ending the safe route at Dive St. leaves a gap in the safe route that is not acceptable. The safe bike route needs to extend further West in order to provide access to the Beaches from downtown, Hillcrest, and Bankers Hill.

### To Whom It May Concern:

Below are my comment to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I50-1

I50-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I50-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR

I50-4

states “No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

I50-4 cont.

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community’s preferred alternative.

I50-5

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City’s general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I50-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City’s DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

I50-7

I50-8

Sincerely,  
Kenway & Jeanne Hoey/6141 Agee St.

**Subject:** [EXTERNAL] Comments on DPEIR for UC Community Plan Update

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

I51-1

My comments are with respect to the analysis performed for the University Community Plan Update. I support all of the comments submitted by Help Save UC dated April 25, 2024. I especially want to comment on the following:

The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment and the University Community Plan Update into one document made the document confusing, overwhelming and not accessible to the public, thus failing CEQA's requirement to provide an informational document to inform the general public of the significant environmental effect of a project.

I51-2

The City's failure to evaluate the full environmental impacts of the University Community Plan Update at full buildout, including the impact of the Complete Communities program, makes the document inadequate, specifically for areas such as Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.

I51-3

The City's failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.

I51-4

The DPEIR is inadequate due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to evaluate the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project. The appropriate way to do that would have been to evaluate a lower density alternative, such as the "community-preferred alternative" (Scenario B) in the City's last draft of the Plan Update. Instead, the City evaluated a Higher Density alternative that the City admitted wasn't feasible.

I51-5

Finally, the City’s conclusion that the High Density Alternative was the environmentally superior alternative isn’t supported by the evidence. Table 8-1 shows that the High Density alternative results in greater impacts on the environment. Furthermore, the City’s own conclusion states, “No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project.” (Section 8.2.3, underline added.)

I51-6

The City should revise the DPEIR to address these issues.

I51-7

Angie G. Jones

University City resident

To the UC planning committee and San Diego city officials:

Below are my comments to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I52-1

I52-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I52-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states "No new schools are proposed as part of the University CPU; however, the

I52-4

University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district's memorandum was incorporated into the DEIR, but this statement was not.

I52-4  
cont.

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community's preferred alternative.

I52-5

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I52-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental and Safety Impacts: The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

---

To Whom It May Concern:

Below are my comments and objections to several parts of the City of San Diego's University Community Plan Update Draft EIR (DEIR) as several of them are legally deficient:

I. Changes to Governor Drive: Converting Governor Drive from a four-lane Major Arterial to two-lanes may actually fail the legal test because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. **No changes to Governor Drive can be made without a current Traffic Analysis and VMT performed at peak hour traffic times.**

I53-1

II. Emergency Access/Ingress:

Related to the Governor Drive lane reductions combined with substantially higher density allowances, such a plan ignores the reality of the impact it will have on emergency vehicles getting through in time, or worse yet if residents needed to evacuate in the event of a disaster in an area that already is in a potential wildfire zone as well as it's proximity to MCAS Miramar, just to name two factors. **The City is under legal obligation to conduct a current and legally valid Traffic Study with a full VMT analysis along the Governor Drive corridor.** Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I53-2

III. School Requirements from the San Diego School District Must Be Met: The DEIR states "No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. **Notably, most of the school district's memorandum was incorporated into the DEIR, but this statement was not.**

I53-3

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. **The DEIR needs to be revised to include the community's preferred alternative.**

I53-4

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. **The DEIR should be separated into three separate EIRs for each proposed plan update.**

I53-5

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. **Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.**

I53-6

---

Greetings,

As long-time residents of North University City we have serious concerns about the proposed Urban Village high 3 rating for the corner of Genesee and Nobel.

We understand more housing is needed. We also know high rises are popping up all along Genesee, from Nobel to La Jolla Village Drive. Parking in our neighborhood, near Decoro, is already tight, and traffic, during rush hour, is extremely congested.

We encourage a slight density downgrade, to an Urban Village high 1 or 2 rating. This would represent reasonable and responsible growth.

Thank you,  
Brian

PS Please note that UCSD, too, will be adding a considerable number of on campus housing units through 2035.  
<https://urbanland.uli.org/uscsds-student-housing-project-to-offer-below-market-rate-rental-options#:~:text=By%202025%2C%20the%20university%20will,rates%20by%20the%20year%202035>.

**I54: Response to Brian Keliher Comment Letter**

**I54-1:** The comment about the density of the housing has been noted. The proposed mix of higher-density housing and retail for the University Community Plan Update is meant to support the City of San Diego's General Plan and Climate Action Plan goals while also meeting the State's Regional Housing Need Allocation for the City of San Diego. Focusing on building higher-density housing in urban areas, especially near transit hubs, would give community members the opportunity to take alternative modes of transportation.

In regard to traffic, it should be noted that CEQA no longer uses congestion and parking levels as thresholds for significant impacts. Since the passage of Senate Bill 743 in 2018, CEQA Guidelines Section 15064.3 no longer uses traffic counts, auto delays, levels of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts.

**I54-2:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report. No further response is required.

**Subject:** FW: Comments to University Community Plan Update Draft EIR

---

To Whom It May Concern:

Below are my comments on the City of San Diego's University Community Plan Update Draft EIR (DEIR):

In a short distance on Governor Drive, there is The Marketplace , Spreckels Elementary, Fort Field Little League baseball field, Standley Recreation Center, Swanson Memorial Pool, Standley Aquatic Center, Jim Carl Field, Standley Middle School, All Saints Lutheran Church, Chabad Center of University City, University Square, Chase Bank, University Community Library, Curie Elementary. University City High School is just off Governor.

I56-1

All these facilities attract groups and families who drive in their cars. All lanes of Governor are frequently full.

People come from all over San Diego for some of the sports events.

It is not reasonable to expect large groups of people to ride bicycles.

There aren't enough buses to replace the cars.

There are many older people in the community who depend on cars to go shopping. They couldn't ride bicycles if they wanted to.

Please keep Governor Drive as it is.

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I56-2

I56-3

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an

I56-4

analysis, the DEIR cannot conclude the impact will be less than significant.

I56-4 cont.

III. School Requirements from the San Diego School District Must Be Met. The DEIR states “No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

I56-5

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community’s preferred alternative.

I56-6

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City’s general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I56-7

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City’s DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

I56-8

I56-9

Sincerely,

Earl Kline

**Subject:** [EXTERNAL] Michael Kozma - DPEIR Comments for University Community Plan

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

My name is Michael Kozma, I am a resident of University City, and I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

I57-1

My comments are with respect to the analysis performed for the University Community Plan Update. I support all of the comments submitted by Help Save UC dated April 25, 2024. I especially want to comment on the following:

1. The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment and the University Community Plan Update into one document made the document confusing, overwhelming and not accessible to the public, thus failing CEQA's requirement to provide an informational document to inform the general public of the significant environmental effect of a project.
2. The City's failure to evaluate the full environmental impacts of the University Community Plan Update at full buildout, including the impact of the Complete Communities program, makes the document inadequate,

I57-2

I57-3

specifically for areas such as Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.

**I57-3  
cont.**

3. The City's failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.
4. The DPEIR is inadequate due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to evaluate the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project. The appropriate way to do that would have been to evaluate a lower density alternative, such as the "community-preferred alternative" (Scenario B) in the City's last draft of the Plan Update. Instead, the City evaluated an alternative that they admitted wasn't feasible.
5. Finally, the City's conclusion that the High Density Alternative was the environmentally superior alternative isn't supported by the evidence. Table 8-1 shows that the High Density alternative results in greater impacts on the environment. Furthermore, the City's own conclusion states, "No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project." (Section 8.2.3, underline added.)

**I57-4**

**I57-5**

**I57-6**

The City should conduct a DPEIR for the University Community Plan specifically, that analyzes environmental impacts assuming the full build-out of the proposed UCP, that uses a new traffic study of the region, and that is more accessible to the public for review.

**I57-7**

Thank you for your consideration, and I would like to reiterate my support for the more formal and extensive comments submitted by Help Save UC on April 25th,

**I57-8**

2024.

| 157-8 cont.

Michael Kozma.

---

Dear City of San Diego Officials:

During the April 9th University City Planning Group meeting I attended in person, Suchi Lukes and Nathen Causman gave a 40-minute Zoom presentation of the city's revised University Community Plan Update and Draft EIR. Eight other city officials participated via Zoom. Suchi and Nathen gave a summary of the documents we had already reviewed when they were made available March 14th. These documents called for considerable clarification and substantiating, which we had expected city staff would be prepared to do.

Following city staff's presentation, members from the live audience and Zoom participants were given time to ask questions. However, Suchi, Nathen, Leo Alo, Coby Tomlin and consultants from Kyser Marston Associates were unable to answer the majority of our questions. On behalf of the residents of University City who took the time and care to attend this meeting and pose our well-thought-out questions, I am requesting answers to each and every question below, in writing, by a date that is certain to give the community time to properly evaluate those answers, and ask our follow-up questions to those answers.

**THIS EMAIL IS TO TO PUT YOU ON NOTICE THAT WE WANT THE APRPIL 30TH DEADLINE EXTENDED BECAUSE THE CITY WAS UNPREPARED TO ADDRESS THE PUBLIC'S QUESTIONS, MAKING THE MEETING A WASTE OF THE PUBLIC'S TIME AND MONEY AND SEVERELY CUTTING INTO THE SHORT 45-DAY REVIEW PERIOD WE WERE ALLOWED.**

I58-1

I58-2

## Questions That Still Need Answers:

1. Why was the Community Scenario in the city's revised UC Plan Update not included in the Draft EIR? Why would the Planning Department revive the "very high" Scenario 1 when it was discarded in July 2023? This makes no sense, and we need this question answered.

I58-3

2. Why were the Sprouts and Vons shopping centers in south UC up-zoned to CC-3-8? Sprouts is not an existing TPA and likely never will be with MTS's budget problems; why would you consider adding as many as 572 housing units there? And how can you justify adding another 373 at Vons for a total of 945 housing units along Governor Drive, our only ingress/egress into south UC, when that artery is already heavily congested? And why would you up-zone for 100 feet high at both centers when that height would be so far out of scale with the surrounding community, depriving surrounding residents of their privacy, sunlight, safety and relative quiet?

I58-4

I58-5

3. Page S-25, Impact on Schools: The DEIR states that "Implementation of the University CPU could result in the need for additional fire/rescue, police, school, and library facilities. The location and need for potential future facilities cannot be determined at this time ... " However, if you look at Appendix 12 of your documents, we see a memo from the San Diego Unified School District written six months ago that states that the UC Plan Update should have a location identified for new schools, and it specifically states it should be in the vicinity of Genesee and La Jolla Village Drive. How do you explain this glaring oversight, and what is your solution?

I58-6

4. Funding mechanism: There is only \$44 million in the budget currently for UC improvements. The Plan Update has been presented to UC residents by the city with plenty of colorful and attractive renderings of tree-lined streets and pathways, parks and other community enhancements. Will you properly explain what the funding mechanism will be for all the needed infrastructure, recreational facilities, improvements and services in UC when DIFs are being waived or redirected to other communities?

I58-7

5. In Leo Alo's explanation of the city's "Traffic Analysis", he stated that VMT was the new standard of measuring traffic. However, the VMT data collected by the city was obtained from SANDAG's Series 14 Activity Based Model, **which is now eight years old**. We have an expert witness who can testify that, under base year conditions, the **University CPU exceeds the thresholds by being above 85 percent** of the regional means for both VMT per Capita and VMT per Employee, as well as 90 percent and 126 percent of the Base Year regional means, respectively. By 2050, with the implementation of the UCPU, the VMT is projected to be 60 percent and 85.3 percent, respectively, of the Base year Regional means. **No part of the UCPU may go forward without a current, thorough Traffic Study performed at peak traffic times. This is particularly true for Governor Drive.**

I58-8

6. Nearly 100 percent of the housing demand citywide is for for-sales homes to house entire families, while rental apartments have been far overbuilt. Yet, it appears that the UCPU is being up-zoned entirely for more high-rise apartments rather than single-family or multi-family for-sale

I58-9

homes. Nathen’s explanation that many of the apartments could be for-sale condos, but he offered no solution for families with children and pets who need multiple bedrooms and readily accessible yards or other outdoor recreational space. If the city’s goal is to provide more housing for the people who work in UC and won’t have to commute long distances, then are you assuming that UC’s workforce is entirely young, single and childless?

I58-9

7. There was no proper answer given to the question of how Complete Communities Housing Solutions plays into the overall UCPU and how it’s expected to add to the overall housing density, impact traffic, further burden existing infrastructure, and skew the number of DU/AC on the Plan Update’s density map. If CCHS is not under the purview of the Planning Department, as Nathen stated, then how is this being tracked and calculated? Who’s keeping score?

I58-10

8. There was not adequate explanation as to how the Plan Update will ensure there is enough retail to serve the residents of UC. If UC residents are forced to drive to Clairemont or Del Mar to do their shopping, does that not defeat the city’s goal of cutting down VMT?

I58-11

9. There was no response to the point made about SANDAG’s Series 15 population projection of there being a mere 65,000 additional people in all of San Diego between 2022 and 2050, which means the UCPU aims to add 40 times the housing units needed in UC alone!! How can the city justify this?

I58-12

#### **Additional Questions That Need Answers**

10. Explain where the 1.8 recreation centers missing from the UCPU will go, and what mitigation efforts have been done. Explain how the one new recreation center the city has proposed at the Shiley Eye Center at Scripps Torrey Pines could possibly serve nearby residents when there are no residences in that area.

I58-13

11. Explain how the two additional parks that the city says will be added can possibly function as neighborhood/community parks when they are nothing more than small strips of land away from residences and could not possibly accommodate a game of soccer, baseball, or other activities. The Draft EIR states that the city cannot ensure it will build any more recreational facilities, so where do you imagine people will have any outdoor recreational areas at all when it adds 65,000+ more people?

I58-14

12. The Draft UC Community Plan had “Community Goals”. The city’s revised Plan Update eliminates all those goals and only lists “City of San Diego Goals.” Why?

I58-15

13. The Draft EIR discusses current fire station placement but does not say where new fire stations will be build to serve the added population in UC. Explain how this is being addressed.

I58-16

14. UC is already short of police coverage and we are already far behind city targets. Why have additional police force or stations not been offered? And what has the official response been from the Police Department?

I58-17

15. In the Community Engagement document, no mention is made of the petition submitted by UC PEEPS in March 2023 with close to 2,200 signatures objecting to the city’s proposed plans; in fact, we received no response from city officials about that petition whatsoever. No mention is made of the three large-scale protests against the city’s high-density housing plans held in UC and across the city. No mention is made of the thousands of letters submitted by community residents to city officials opposing their Plan Update. No mention was made of the extensive media coverage generated against the city’s proposed Plan Update. Why was this not included in the Community Engagement document?

I, along with many other members of the UC community, await your responses.

Sincerely,

Bonnie Kutch  
Resident & Property-Tax Paying Homeowner, University City

Bonnie Kutch | University City Peeps | [www.ucpeeps.org](http://www.ucpeeps.org) |619.299.1010

**I58: Response to Bonnie Kutch Comment Letter**

**I58-1:** The comment is an introduction to the comment letter and the commenter's general concerns.

**I58-2:** This comment has been noted. The City of San Diego is taking into account all of the comments, questions, and concerns related to the proposed project by all individuals, organizations, and agencies during the 45-day public review period.

**I58-3:** See response to comment O13-5 under comment letter O13.

**I58-4:** See response to comment I8-7 under comment letter I8 in regards to the concern about rezoning two shopping centers along Regents Road (the Sprouts shopping center at Regents Road and Governor Drive and the Vons Shopping Center at Genesee Avenue and Governor Drive).

Transportation impacts are analyzed in Section 4.14 of the Draft PEIR. Since the passage of Senate Bill (SB) 743 in 2018, CEQA Guidelines Section 15064.3 no longer uses auto delay, level of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. Vehicle Miles Traveled (VMT) is the metric for determining potential transportation impacts under CEQA. Under CEQA Guidelines Section 15064.3, statewide application of the new VMT metric was required as of July 1, 2020. Per California Public Resources Code Section 21099, parking and congestion concerns are not a part of the environmental review process. Therefore, the comments about congestion are noted, but as they are not part of the environmental review process, no further response is necessary.

**I58-5:** Aesthetic impacts, including those related to the scale and bulk of future development in accordance with the University CPU, are discussed in Section 4.1.4 of the Draft PEIR. While privacy is not part of environmental review, this concern has been noted. Aesthetic impacts are considered to be significant at the program-level of review for projects that are not within a Transit Priority Area (TPA). Likewise, impacts related to public services (e.g. schools, police and fire stations, and libraries) in Section 4.12.4 of the Draft PEIR, and noise in Section 4.11.4 of the Draft PEIR were found to be significant at a program-level of review. Individual development projects requiring discretionary review would be required to assess aesthetic, public services, and noise impacts. Also, see response to comment I8-7 under comment letter I8.

**I58-6:** See response to comment O13-4 under comment letter O13.

**I58-7:** See response to comment I13-3 under comment letter I13 and response to comment O11-22 under comment letter O11 regarding the concern for funding public service and infrastructure.

Further, developers would be required to pay Citywide Park Development Impact Fees (DIFs), which could go towards the development and maintenance of parks and recreational facilities within the University CPU area, or provide public parks consistent with the San Diego Municipal Code (SDMC) Section 142.0640(b)(8)(A-F), as detailed in Section 4.13.2.2c of the Draft PEIR. Future discretionary development projects proposed in accordance with the University CPU would also be required to determine potential impacts to park and recreational facilities and demonstrate consistency with the

University CPU and the City's Parks Master Plan policies which would support provision of parks in the future.

**I58-8:** See response to comment O13-2 under comment letter O13.

**I58-9:** See response to comment O15-5 under comment letter O15. The existing single-family homes in the University CPU area would remain as they are as there are no proposed changes to the number of single-family housing units (see Table 3-5 in the Draft PEIR).

Additionally, the proposed University CPU contains policies regarding enhancements that make multi-family housing appropriate for a wide range of personal needs, including those of families with children. See specifically University CPU Plan policies 1.1(I) and 1.2(A-H).

Focusing on building higher-density housing in urban areas, especially those near transit hubs, would give community members the opportunity to use alternative modes of transportation.

**I58-10:** Comment noted. The Complete Communities program is not a part of the scope of the project analyzed in the Draft PEIR and the environmental impacts of the Complete Communities program were addressed in Final PEIR for Complete Communities: Housing Solutions and Mobility Choices (SCH No. 2019060003). The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I58-11:** The commenter is concerned that the project would not provide enough retail for the residents in University City. As described in Table 3-4 of the Draft PEIR, the proposed University CPU would allow for approximately 6,236,000 additional square feet of retail space over the existing approximately 1,721,000 square feet. The increase in retail square footage is consistent with the following project objective:

Provide options for services and amenities, such as shopping and grocery stores, public spaces, and parks and recreation facilities closer to homes so that most daily needs can be met through a short walk, bike, or transit ride.

Providing retail and other amenity services in the form of mixed-use villages is also a goal of the City's City of Villages strategy, which is implemented as part of the General Plan and which is proposed in the University CPU (see Section 4.10 of the Draft PEIR). Any future project-level discretionary development projects would be required to undergo environmental review that would require a demonstration of consistency with the City's General Plan policies regarding land use. Additionally, within the University CPU's Community Plan Implementation Overlay Zone (CPIOZ)-Type A area, development with a residential use on a property designated community village would be required to comply with Supplemental Development Regulation (SDR)-H.1 which requires the development to maintain space for commercial services and retail sales uses such as food, beverage, and /or grocery use.

Reducing VMT is an overall goal of the City's Climate Action Plan (CAP), the Blueprint SD Initiative, and both the University CPU and the Hillcrest Focused Plan Amendment (FPA). Providing opportunities for retail land uses in proximity to existing and proposed housing is one of the proposed strategies to help the City meet its greenhouse gas (GHG) goals.

**I58-12:** The commenter raises a question about the San Diego Association of Government's (SANDAG's) forecasted population growth of San Diego between 2022 and 2050. It is not clear whether the commenter means the City of San Diego or the County of San Diego. The most recent population projection from SANDAG is the Series 14 projection; the Series 15 Forecast is still in a draft state and is not an appropriate tool to use. For the City of San Diego, this model projects an increase in population of 222,124 people from 2016 to 2050 (SANDAG Forecast Reports, 2022). The projected population increase for University between 2020 and 2050 would be approximately 65,360 (population projections for the University CPU are found in Section 4.13.1.1.c). See response to comment O15-5 under comment letter O15 regarding the proposed density in the University CPU. The comment has been noted by the City. As it does not raise a specific concern about the adequacy of the environmental analysis of the Draft PEIR, no further comment is required.

**I58-13:** See response to comment I13-11 under comment letter I13.

**I58-14:** See response to comment I13-12 under comment letter I13.

**I58-15:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

**I58-16:** See response to comment I13-5 under comment letter I13.

**I58-17:** See response to comment I13-17 under comment letter I13.

**I58-18:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

Dear representatives

As a University City resident I am contacting you to express my objections regarding several areas of the City’s recent Environmental Impact Report due to several key concerns, some of which were already rejected by UC residents when the ‘Housing Action Plan’ part of State Bill 10 failed to pass in August 2023. Here are just some key concerns:

I59-1

## Governor Drive Lane Reductions

The City acknowledged at a recent meeting in early April that while traffic “models” were done for the EIR draft plan, they were not done for the high-density alternative that is included in the EIR. Moreover, there was no new traffic count or specific study of Governor Drive regarding what the City now calls “complete streets. It has been confirmed that the City has not done a comprehensive Traffic Study since 2015 and is basing their Vehicle Miles Traveled (VMT) data on a study done in 2016. In summary, Governor Drive should not be reduced to two lanes without a current and legally valid Traffic Study with a full VMT analysis.

I59-2

I59-3

I59-4

## Emergency Ingress/Egress

Related to the Governor Drive lane reductions combined with substantially higher density allowances, such a plan ignores the reality of the impact it will have on emergency vehicles getting through in time, or worse yet if residents needed to evacuate in the event of a disaster in an area that already is in a potential wildfire zone as well as its proximity to MCAS, just to name two factors. Again, the City is under legal obligation to conduct a current and legally valid Traffic Study with a full VMT analysis along the Governor Drive corridor.

I59-5

## New High-Rise Apartments Planned for Genesee and Nobel Drive

Under the City's "Complete Communities Housing Solutions" regulations, we understand that Willmark Communities is seeking permission to build three high-rise towers comprising 1,315 "luxury" apartments, with only 1,350 onsite parking spaces, on the southwest corner of Nobel and Genesee, replacing a 108-unit two-story apartment complex. This is yet another example of the City falling short on its promise to add more affordable housing, while such a project will only increase traffic gridlock along Genesee during certain times of the day, particularly during rush hours and when the schools let out and parents are attempting to pick up or drop off their children.

I59-6

### Vons & Sprouts Centers New Height and Sharply Higher Density Allowances

The planned sharp increase in overall housing density allowances is now coupled with the EIR showing that the City has ignored UC community requests and is forging ahead to raise the allowable structure heights of the Von's shopping plaza on Governor Drive/Genesee to 100 feet or 10 stories with residential units added to those areas.

I59-7

That alone will further impact all kinds of mobility along Governor Drive & onto Genesee as well as to 805 to the east, and Regents toward the west, where a similar plan is on deck for the Sprout's shopping plaza. The Sprout's shopping center is NOT an existing Transit Priority Area or TPA. Buses do not stop there frequently, and it is not close to the trolley and an existing TPA.

### Planning Deficiencies in Parks

Under the City's 'Master Plan', the UC area is already short on publicly accessible parks – not "greenways" or some other term that in reality is not a park, or in a land-use area that does not allow residential use. It is also our understanding that developers can now pay a one-time, in-lieu fee and not provide such amenities as a small recreational area in their residential complex plans. The City has fallen short in this key area while also allowing developers to buy their way out of providing more green spaces or publicly accessible recreation areas.

I59-8

In summary, these initiatives ignore the need for a workable and supportive infrastructure. It fails to provide even somewhat affordable housing, disregards existing residents' input, and intentionally erodes single-family neighborhoods.

I59-9

**The most harmful high-density housing initiative the City attempted to pass was SB 10, which would have allowed as many as 14-unit buildings up to three stories high on single-family parcels and no contained parking requirements. Thanks to a successful opposition campaign, SB 10 was removed from the Housing Action Package.**

I59-10

Thank you for your time and consideration. Such initiatives call for planning that balanced growth rates with an infrastructure where families can grow and thrive. Most of all, responsible growth includes residents in decision-making.

I59-11

---

To Whom It May Concern:

Below are my comment to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I60-1

I60-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I60-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states “No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

I60-4

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA

I60-5

requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community's preferred alternative.

I60-5 cont.

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I60-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

I60-7

I60-8

Sincerely,  
Andrea Lehman  
92122 Homeowner since 2008  
Mother of three local schoolchildren

Subject: [EXTERNAL] University City overbuilding is underwhelming

\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\* \_\_\_\_\_

Dear Joe and CEQA Planning Group,

I am hoping you will speak up for University City in regard to the misguided over planning. You know that we have U C folks who worked hard to make this community one of the best kept secrets in San Diego even though La Jolla name is all over North U.C. Check the U.T. sometime. If there is a murder or rape, it happens in University City. If it is a new opening of a high end store or hotel. It is La Jolla.

You no longer represent U.C. on the Council since our community was moved from District I to 6.  
Help us out, Joe, the way you did before the change, but I will save that for another day

Why make it into a city instead of the close knit community.? We are not selfish. We worked hard to make this a hometown in San Diego.

Mayor Gloria is not like Councilman Todd who fought against Mayor Sanders when he found closing the libraries an easy fix for the financial crisis in 2009. Councilman Todd fought hard for the libraries and he and others won. What happened?

I thought the public brought ideas to their council representatives to help communities instead of demanding whatever the mayor esntd.

Please reconsider and do the right thing for University City.

Warm regards,

Sandy Lippe

A resident of U.C. since 1975 and a retired, long time volunteer with no pension..

Sandy Lippe

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

I am opposed to the University Community Plan in general and specifically to its proposed changes to Governor Drive and the zoning changes that permit accessory dwelling units and the proposed changes to the Vons and Sprouts shopping centers.

I63-1

Sincerely,

Eric Lowenhaupt  
[ericl@san.rr.com](mailto:ericl@san.rr.com)

I have reviewed the Plan PDF and the six supporting documents provided at <https://www.planuniversity.org/> and identified a number of issues including but not limited to:

1. The plan has the flavor of a velvet glove marketing advertisement supporting a predetermined course of action, not a well-considered evaluation of possible options and their consequences. Worse, it does not appear to take the interests and concerns of current residents into account.
2. The plan does not appear to consider why people choose to live in University City (UC); rather it assumes people live near where they work.
  - a. UC is a community of mostly longtime residents, not transients. The plan contains no analysis of why people choose to live in UC or whether the proposed changes will detrimentally impact their chosen lifestyle.
  - b. There is no analysis of how many working people who live in UC work in UC. Nor is there any consideration of how many people who work in UC live elsewhere.
  - c. In the 37 years I have lived in UC, I have held seven different jobs at 11 different work locations, none of which were in UC. Likewise, my late wife, who worked full time, never worked in UC. Further, few of my neighbors work in UC.
  - d. One of the UC advantages, at least west of Genesee and alluded to in Figure 33 – Heat Exposure Index – but not explained, is the summertime cooling breezes caused by the compounding effects of the ocean and Mt. Soledad. The plan does not consider whether the proposed zoning changes will introduce an Urban Heat Island effect that neutralizes Nature’s cooling.
3. The Plan fallaciously assumes people will walk, ride bicycles, or take public transportation

I63-2

I63-3

I63-4

I63-5

I63-6

when traveling to work, shopping, or other destinations:

- a. The plan needs to consider and quantify why people drive vehicles rather than use alternatives. For example, many jobs require use of a personal vehicle.
  - b. California has already implemented bicycle lane laws. Yet there is no notable increase in the use of bicycles.
    - i. The most likely explanation is not the lack of buffering from vehicular traffic but rather the old adage that time is money. The average bicycle speed (per Google) is ~12 MPH. Non-freeway traffic is two to four times as fast.
    - ii. Most purchases made at grocery, department, and hardware stores are not easily transported on bicycles (or by walking or riding buses).
  - c. The cost of housing in UC is a major indicator that the people living in UC belong to the professional working class. As such they are generally expected to wear appropriate work attire that is not compatible with walking or bicycling to work on hot or rainy days.
  - d. The Plan levies a burdensome “time tax” on residents by attempting to impose the use of walking, riding bicycles or using public transit. There is no way that driving a personal vehicle compares timewise to walking to a bus stop, waiting for the bus, then waiting through the multiple pickup stops for other riders, waiting at transit route changes, and finally walking the remaining distance to ones work location. Time is a precious to families with much of it consumed by necessary activities of getting dressed, feeding kids, preparing lunches, work, school, etc. etc. Imposing increased travel time either by mandating use of public transit or by restricting vehicular road access will increase the general level of stress, anxiety and anger with fairly predictable results.
  - e. The plan grossly inflates vehicular transit time to justify public transit:
    - i. Page 63 of the March 2024 Draft Mobility Technical Report erroneously states “It can take anywhere from 17.7 to 25.3 minutes to travel by vehicle across the length of the corridor [Governor Drive].” On a Wednesday at 12:20 in the afternoon, I drove the entire ~2.5 mile length from 805 to Stresemann in moderate traffic in 6 minutes and 27 seconds while adhering to posted speed limits and stopping at yellow and red lights.
    - ii. Page 63 then falsely concludes “The results indicate that taking transit is a comparable option to driving a vehicle...” This morning it took my son 17 minutes to walk to the nearest bus stop on Governor. In seventeen minutes, I can generally drive anywhere in the UC planning area.
4. The Plan identifies a number of new parks but lacks evidence they will be used. Worse, it does not address maintenance costs.
  5. The Plan imposes a higher population density but does not address the inevitable increase in crime. This is especially important as walking, bicycling, or use of public transit, especially in off-hours, increases ones vulnerability to criminal activity and is thus a major deterrent to using alternate modes of transportation.
  6. The Plan states a policy of “Maintain[ing] sufficient fire-rescue and police services to meet demands of continued growth and development...” but does not attempt to extrapolate the costs of added police and fire protection required by an increased population density or more

**I63-6  
cont.**

**I63-7**

**I63-8**

**I63-9**

**I63-10**

**I63-11**

- importantly a change in population makeup.
7. The University Community Plan and Local Coastal Plan (March 2024) states on page 157 that HEPA filters can attenuate vehicular air pollution. This is false and harmful information: HEPA filters are effective against particulate matter larger than 0.3 microns, not gases such as CO<sub>2</sub>, carbon monoxide, nitrous oxides, sulfur dioxide, or VOCs. **I63-11  
cont.**
  8. The Plan contains far too many non sequitur and/or generalization fallacies such as “Governor Drive will be improved with traffic calming and buffered bike lanes so that residents can safely access key facilities in the area, including the various schools, recreation centers, and the University Community Branch Library.” There is no supporting evidence that the changes to Governor will increase utilization of these resources or improve safety of access. **I63-12**
  9. The University Community Plan Update – Draft Mobility Technical Report (March 2024) contains 84 references to Hillcrest and significant amounts of Hillcrest data. Why? Hillcrest is not in the University Planning area as identified in Figure 1-1 on page 5 of the Plan update. **I63-13**
  10. Page 8-1 (Draft Mobility Technical Report (March 2024)) discusses Intelligent Transportation Systems (ITS) and identifies four roads to have coordinated traffic signals. Why aren’t Governor, Nobel, and other roads included? Vehicular CO<sub>2</sub> emissions are a direct function of fuel efficiency which is adversely impacted by stop and go traffic as evidenced by the difference in highway and city MPG. If, as one of the Plan’s stated goals is to reduce CO<sub>2</sub>, then it seems imperative to determine the amount of CO<sub>2</sub> reduction that could be achieved by implementing ITS on all roads with multiple traffic lights before attempting to modify citizen behavior. **I63-14**
  11. The proposed changes to Governor Drive appear to include average weekday peak usage data but do not address the occasional high volumes that inevitably occur. More importantly, given that I frequently see or hear complaints about traffic on Governor on Nextdoor.com and elsewhere, it seems ridiculous to propose “traffic calming” measures that can only make traffic conditions worse by restricting traffic flow. **I63-15**
  12. The Plan frequently uses the term “traffic calming” measures but does not address whether these measures can be traffic enraging under average peak or extraordinary peak conditions. I have been stuck on Governor through multiple light changes at the Genesee intersection due to parents picking up their children at Standley Middle School. **I63-16**
  13. Further, the Plan does not discuss the impact of the Governor changes in the event of an emergency requiring an evacuation. For South University, the only evacuation routes are Genesee north and 805 if 52 is blocked by fire. What if there is a train derailment that releases toxic gas in Rose Canyon? Does the plan permit authorities to completely block traffic on one side of Governor while temporarily making the other side two-way? **I63-17**
  14. One of the problems I frequently face while driving on Governor are slowpokes doing 15 or 20 MPH in a 35 MPH zone. Currently, I can pass them. Under the Plan I will be stuck fuming. **I63-18**
  15. The water distribution capacity under the proposed plan is vaguely addressed on page 167 of the University Community Plan and Local Coastal Plan (March 2024) by the statement “Significant infrastructure is not required to serve the potential buildout of the Community Plan. However, as individual development projects are undertaken, it is anticipated that site specific studies will be required....” Given the Plan includes rezoning to provide more living space, this is an abdication of planning responsibility as the current system almost certainly has capacity limits. **I63-19**
  16. The plan identifies tree planting and the various species to be used. Who will pay for the **I63-20**

trees and who will maintain them? Also, the Jacaranda tree is an extremely messy tree whose flower “nectar” ruined the finish on one of my cars.

**I63-21  
cont.  
I63-22**

17. The Plan does not appear to have obtained any input from Sprouts or Vons on the proposed zoning changes. If either or both close, it will force people to drive further for groceries.

18. The Plan calls for tree plantings, more parks, street facing stores, plazas, etc., etc., but it does not address who will pay for the changes. Further, it does not assess whether the policy mandates will adversely affect stores already pinched financially by shoplifting and minimum wage hikes. If the stores own the publically accessible open space, it is non-revenue generating square footage.

**I63-23**

19. Parking is a major issue in UC. Many of the homes built in the 60’s and 70’s are small and lack basements and attics. Garages are used for storage, hobby activities, or are even converted into living space. Allowing multiple units on a parcel of land will only increase street parking and make driving more dangerous.

**I63-24**

**I63: Response to Eric Lowenhaupt Comment Letter**

**I63-1:** The comment is an introduction to the commenter's main concerns as described in the comment letter.

**I63-2:** Comment noted. The comment does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report (PEIR). No further response is required.

**I63-3:** This comment is about the scope of the University Community Plan Update (CPU) and does not raise an issue related to the adequacy of the Draft PEIR. No further response is required.

**I63-4:** This comment is about the scope of the University CPU and does not raise an issue related to the adequacy of the Draft PEIR. No further response is required.

**I63-5:** This comment does not raise an issue related to the adequacy of the Draft PEIR. Heat island effect—the increase in air temperature experienced in urbanized areas—is not an issue that is required to be studied under CEQA. It should be noted, however, that the University CPU includes a discussion of best practices for alleviating the effects of urban areas on air temperature, including planting street trees, promoting urban greening, and using cool pavements per Policy 7.8(A). These efforts can help reduce urban heat islands while cooling zones and resilience hubs can provide respite from the heat as proposed in Policy 7.8(B)-(D).

**I63-6:** This comment is about individual preferences for modes of transportation and does not raise an issue related to the adequacy of the Draft PEIR. A goal of the University CPU is to provide opportunities for alternative modes of transportation to be used through the planning of mobility infrastructure and the provision of more housing in proximity to employment opportunities. An overarching goal of the Blueprint SD Initiative, University CPU, and Hillcrest Focused Plan Amendment (FPA) is to further the implementation of the City's General Plan, Bicycle Master Plan, and Climate Action Plan (CAP) and support a mode shift from single occupancy vehicles to alternative mobility options such as walking/rolling, biking, and transit. The University CPU directly supports the City's General Plan policies to encourage and provide incentives for the use of alternatives to single-occupancy vehicle use, including using public transit, carpooling, vanpooling, teleworking, bicycling, and walking/rolling (Policy CE-F.6); and encourage large residential, mixed-use, and employment development to have site designs and on-site amenities that support alternative modes of transportation (Policy ME-G.6). Additionally, the University CPU would directly support implementation of the City's CAP Strategy 3 goals that support mode shift through the University CPU's land use strategy and through mobility investments and programs that address travel behavior.

**I63-7:** This comment is about the Draft Mobility Technical Report, which was a document prepared to inform mobility decisions for the University CPU, but is not a part of the University CPU and was not analyzed in the Draft PEIR. The transportation analysis in the Draft PEIR is based on the Vehicle Miles Traveled (VMT) Analysis (Appendix J) prepared for the Blueprint SD Initiative, University CPU, and Hillcrest FPA. Transportation impacts are addressed in Section 4.14 of the Draft PEIR.

**I63-8:** Comment noted.

**I63-9:** As discussed in Section 4.13 of the Draft PEIR, implementation of the University CPU could increase the demand for parks and recreational facilities and could require the construction and/or expansion of parks and recreational facilities in the University CPU area. The City's Parks Master Plan (PMP) established a new park standard, known as the Recreational Value-Based Park Standard, which establishes a point value to represent recreational opportunities within population-based parks to assess the need for upgrades and new park facilities. As future development is proposed, individual private developments would be required to either pay Citywide Park DIFs or provide public parks consistent with SDMC Section 142.0640(b)(8)(A-F), as detailed in Section 4.13.2.2c. Funding sources for ongoing maintenance of public parks are discussed in the PMP (2021) and the Citywide Park Development Impact Fee Nexus Study (2021).

**I63-10:** Crime is not a part of CEQA analysis; however, the potential impact to police service impacts is addressed in Section 4.12.4, Issue 1(b), of the Draft PEIR.

**I63-11:** The impacts on police and fire services are discussed in Section 4.12.4 in the Draft PEIR. The Draft PEIR acknowledges that the proposed project has significant impacts related to public services (e.g., fire, police, library, and school services). Because this is a program-level environmental analysis, the specific locations, sizing, and capacity of future public service development projects are not known at this time. The San Diego Police Department and the San Diego Fire Department would be consulted for future project-level development projects and their input for the need for new services would be incorporated into future project designs and/or mitigation measures, as applicable.

**I63-12:** This comment is about the scope of the University CPU and does not raise an issue related to the adequacy of the Draft PEIR. No response is necessary. Air quality impacts are discussed in Section 4.2.4 of the Draft PEIR.

**I63-13:** See response to comment O13-1 under comment letter O13.

**I63-14:** This comment is about Appendix I of the Draft Mobility Technical Report, which was a document prepared to inform mobility decisions for the Draft University CPU, but is not part of the University CPU and was not analyzed in the Draft PEIR. The traffic assessment of the Draft PEIR is based on the VMT Analysis (Appendix J) prepared for the Blueprint SD Initiative, University CPU, and Hillcrest FPA. Transportation impacts are addressed in Section 4.14 of the Draft PEIR.

**I63-15:** This comment is about the Draft Mobility Technical Report, which was a document prepared to inform mobility decisions for the Draft University CPU, but is not part of the University CPU, and was not analyzed in the Draft PEIR. The traffic assessment of the Draft PEIR is based on the VMT Analysis (Appendix J) prepared for the Blueprint SD Initiative, University CPU, and Hillcrest FPA. Transportation impacts are addressed in Section 4.14 of the Draft PEIR. In regard to the comments on air pollution, see Section 4.2.4 of the Draft PEIR.

**I63-16:** Transportation impacts are discussed in Section 4.14, Transportation, of the Draft PEIR. Since the passage of Senate Bill 743 in 2018, CEQA Guidelines Section 15064.3 no longer uses parking, auto delay, level of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. VMT is the metric by which transportation impacts under CEQA are measured. Under CEQA Guidelines Section 15064.3,

statewide application of the new VMT metric was required as of July 1, 2020. With the implementation of this new threshold, parking and traffic congestion concerns are issues that are not required to be studied as a part of the environmental review process. See response to comment O13-1 under comment letter O13 regarding the proposed changes to Governor Drive.

**I63-17:** This comment about Governor Drive has been noted. See response to comment O13-1 under comment letter O13.

**I63-18:** See response to comment O13-3 under comment letter O13.

**I63-19:** This comment is noted.

**I63-20:** As discussed in Section 4.16.4 Issue 1(c) of the Draft PEIR, the potable water distribution system is continually upgraded and repaired on an ongoing basis through the City's Capital Improvements Program. These improvements are determined based on continuous monitoring by the City's Engineering & Capital Project's Engineering Division and improvements are provided to the water system as needs are identified. As future development is implemented at the project-level, consistent with the University CPU, each individual project would be required to evaluate the physical impacts of development, including impacts associated with new or expanded water distribution facilities.

**I63-21:** This comment is about the scope of the University CPU and does not raise an issue related to the adequacy of the Draft PEIR. No response is necessary. It should be noted that tree plantings are provided and maintained by the City of San Diego's Street Tree Division.

**I63-22:** This comment is about the scope of the University CPU and does not raise an issue related to the adequacy of the Draft PEIR. The proposed land designation of these sites as Community Village Med-3 and the rezoning of the shopping center at Regents Road and Governor Drive (the Sprouts shopping center) and the one at Genesee Avenue and Governor Drive (the Vons shopping center) to (Commercial—Community) CC-3-8 would not prevent either grocery store from remaining onsite. This zoning is for mixed commercial and residential use. As described in the University CPU, the Community Village Med-3 land use designation allows for commercial, office, and multi-family residential uses, including mixed-use with office or residential space above retail space, with an emphasis on employment uses. Also, see response to comment I8-7 under comment letter I8.

**I63-23:** For trees, see response to comment I63-21. For parks, see the discussion in Section 4.13 of the Draft PEIR. This comment is about the scope of the University CPU and does not raise an issue related to the adequacy of the Draft PEIR. No further response is necessary.

**I63-24:** See response to comment I63-I6.

**Subject:** [EXTERNAL] comments to the City of San Diego's University Community Plan

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern: Below are my comments to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park. **I64-1**

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant. **I64-2**

III. School Requirements from the San Diego School District Must Be Met. The DEIR states "No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district's memorandum was incorporated into the DEIR, but this statement was not. **I64-3**

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community's preferred alternative. **I64-4**

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a **I64-5**

**I64-6**

program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update. VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts : The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

I64-6  
cont.

I64-7

I64-8

Thank you for the consideration. As a large family we are strongly affected by these unnecessary changes to our community given that we need a quick and fast access to our schools and work places.

I64-9

Below are my comment to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I65-1

I65-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I65-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states "No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed.

I65-4

In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district’s memorandum was incorporated into the DEIR, but this statement was not.

I65-4 cont.

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community’s preferred alternative.

I65-5

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City’s general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

I65-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts : The City’s DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

---

Dear Sirs/Madames,

I have been a resident of South University City for over 40 years. As a result, I have seen major change in our community. It has grown from a new residential area that our realtor called 'North County' to in essence a stand-alone city with its own shopping, residences, business, educational system (primary school to PhD), etc. If it had been maintained as a residential area only with the supporting elementary shopping areas, I can see why the NIMBYs would question the subject proposal. It hasn't stayed as a residential area and, thus, needs to grow and continue to support what it has become. The time to have stopped progress in this direction was in the early to middle 1970s before that growth started. Now, we need to evolve to become a better, more concentrated city within a city. The PEIR seems to me to be a reasonable way to get this done.

I67-1

In addition, South University City isn't an area of only individual family homes today. We already have condominiums and apartments in the Eastern portion of University City. In addition, my area of the city is filled with group homes of 5-8 (the 8 is not appropriate but is done.) students and young professionals. I can nearly throw a stone and hit 4 of those group homes from my home. While UCSD is building many new units to house students, those new units won't come close to housing all of today's needs in addition those that the UCSD student growth projections will require. I would bet that the number of group homes in South University City will continue to grow to meet the demand AND make a lot of money for the owners.

I67-2

I support the subject PEIR.

\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\* \_\_\_\_\_

Good afternoon,

I am a UCSD graduate and a longtime former resident of University City, and I would like to voice my support for the draft UC Community Plan - in particular the high density housing near the existing Blue Line.

Housing affordability is a critical issue for most younger San Diegans and those thinking of starting a family. Please retain these plans to increase housing in the area.

Regards,  
Emilee Mullen

I68-1

**I68: Response to Emilee Mullen Comment Letter**

**I68-1:** Comment noted. The comment is in general support of the proposed University Community Plan Update and does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report. No further response is required.

## Comment Letter I69 - Marion Nebiker

**From:** [Ash-Reynolds, Tara](#) on behalf of [PLN\\_PlanningCEQA](#)

---

The concept of reducing Governor Drive from four lanes to two lanes while increasing population in the area is not only unpractical, it is irresponsible. When was the last time anyone from the planning department or city council drove on Governor Drive when one of the three schools located on Governor Drive let out. And if the proposed development of the two shopping centers into high rise residence units, the traffic will only increase and residents will have to drive further for services.

I69-1

I69-2

Marion Nebiker

**I69: Response to Marion Nebiker Comment Letter**

**I69-1:** Comment noted. This comment does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report (PEIR). No further response is required.

**I69-2:** Comment noted. The rezoning of the shopping center at Regents Road and Governor Drive (the Sprouts shopping center) and the one at Genesee Avenue and Governor Drive (the Vons shopping center) to Commercial-Community (CC)-3-8 would not prevent either grocery store from remaining onsite. The CC-3-8 zone permits community-serving commercial services, retail uses, and residential uses and, as described in the University Community Plan Update, the Community Village Medium-3 land use designation allows for commercial, office, and multi-family residential uses, including mixed-use with office or residential space above retail space, with an emphasis on employment uses. This comment does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

I can't believe you are trying to make the only main road in University City, Governors Drive, a two lane road. Do you know when asked at a meeting with Planing Committee representatives what will happen when Emergency vehicles need to drive down Governors Drive the answer was, they will drive in the bike lanes. Was that meant to be a joke? Rita Newell. 2619 Angell Ave, SD 92122

Dear Representatives,

As a University City resident I am contacting you to express my objections regarding several areas of the City's recent Environmental Impact Report due to several key concerns, some of which were already rejected by UC residents when the 'Housing Action Plan' part of State Bill 10 failed to pass in August 2023. Here are just some key concerns:

I71-1

### Governor Drive Lane Reductions

The City acknowledged at a recent meeting in early April that while traffic "models" were done for the EIR draft plan, they were not done for the high-density alternative that is included in the EIR. Moreover, there was no new traffic count or specific study of Governor Drive regarding what the City now calls "complete streets. It has been confirmed that the City has not done a comprehensive Traffic Study since 2015 and is basing their Vehicle Miles Traveled (VMT) data on a study done in 2016. In summary, Governor Drive should not be reduced to two lanes without a current and legally valid Traffic Study with a full VMT analysis.

I71-2

I71-3

I71-4

### Emergency Ingress/Egress

Related to the Governor Drive lane reductions combined with substantially higher density allowances, such a plan ignores the reality of the impact it will have on emergency vehicles getting through in time, or worse yet if residents needed to evacuate in the event of a disaster in an area that already is in a potential wildfire zone as well as its proximity to MCAS, just to name two factors. Again, the City is under legal obligation to conduct a current and legally valid Traffic Study with a full VMT analysis along the Governor Drive corridor.

I71-5

### New High-Rise Apartments Planned for Genesee and Nobel Drive

I71-6

Under the City's "Complete Communities Housing Solutions" regulations, we understand that Willmark Communities is seeking permission to build three high-rise towers comprising 1,315 "luxury" apartments, with only 1,350 onsite parking spaces, on the southwest corner of Nobel and Genesee, replacing a 108-unit two-story apartment complex. This is yet another example of the City falling short on its promise to add more affordable housing, while such a project will only increase traffic gridlock along Genesee during certain times of the day, particularly during rush hours and when the schools let out and parents are attempting to pick up or drop off their children.

I71-6  
cont.

### **Vons & Sprouts Centers New Height and Sharply Higher Density Allowances**

The planned sharp increase in overall housing density allowances is now coupled with the EIR showing that the City has ignored UC community requests and is forging ahead to raise the allowable structure heights of the Von's shopping plaza on Governor Drive/Genesee to 100 feet or 10 stories with residential units added to those areas.

I71-7

That alone will further impact all kinds of mobility along Governor Drive & onto Genesee as well as to 805 to the east, and Regents toward the west, where a similar plan is on deck for the Sprout's shopping plaza. The Sprout's shopping center is NOT an existing Transit Priority Area or TPA. Buses do not stop there frequently, and it is not close to the trolley and an existing TPA.

### **Planning Deficiencies in Parks**

Under the City's 'Master Plan', the UC area is already short on publicly accessible parks – not "greenways" or some other term that in reality is not a park, or in a land-use area that does not allow residential use. It is also our understanding that developers can now pay a one-time, in-lieu fee and not provide such amenities as a small recreational area in their residential complex plans. The City has fallen short in this key area while also allowing developers to buy their way out of providing more green spaces or publicly accessible recreation areas.

I71-8

In summary, these initiatives ignore the need for a workable and supportive infrastructure. It fails to provide even somewhat affordable housing, disregards existing residents' input, and intentionally erodes single-family neighborhoods.

I71-9

The most harmful high-density housing initiative the City attempted to pass was SB 10, which would have allowed as many as 14-unit buildings up to three stories high on single-family parcels and no contained parking requirements. Thanks to a successful opposition campaign, SB 10 was removed from the Housing Action Package.

I71-10

Thank you for your time and consideration. Such initiatives call for planning that balanced growth rates with an infrastructure where families can grow and thrive. Most of all, responsible growth includes residents in decision-making.

I71-11

---

Good afternoon,

As a University City resident I am contacting you to express my objections regarding several areas of the City's recent Environmental Impact Report due to several key concerns, some of which were already rejected by UC residents when the 'Housing Action Plan' part of State Bill 10 failed to pass in August 2023. Here are just some key concerns:

I72-1

### Governor Drive Lane Reductions

The City acknowledged at a recent meeting in early April that while traffic "models" were done for the EIR draft plan, they were not done for the high-density alternative that is included in the EIR. Moreover, there was no new traffic count or specific study of Governor Drive regarding what the City now calls "complete streets. It has been confirmed that the City has not done a comprehensive Traffic Study since 2015 and is basing their Vehicle Miles Traveled (VMT) data on a study done in 2016. In summary, Governor Drive should not be reduced to two lanes without a current and legally valid Traffic Study with a full VMT analysis.

I72-2

I72-3

I72-4

### Emergency Ingress/Egress

Related to the Governor Drive lane reductions combined with substantially higher density allowances, such a plan ignores the reality of the impact it will have on emergency vehicles getting through in time, or worse yet if residents needed to evacuate in the event of a disaster in an area that already is in a potential wildfire zone as well as its proximity to MCAS, just to name two factors. Again, the City is under legal obligation to conduct a current and legally valid Traffic Study with a full VMT analysis along the Governor Drive corridor.

I72-5

### New High-Rise Apartments Planned for Genesee and Nobel Drive

Under the City's "Complete Communities Housing Solutions" regulations, we understand that Willmark Communities is seeking permission to build three high-rise towers comprising 1,315 "luxury" apartments, with only 1,350 onsite parking spaces, on the southwest corner of Nobel and Genesee, replacing a 108-unit two-story apartment complex. This is yet another example of the City falling short on its promise to add more affordable housing, while such a project will only increase traffic gridlock along Genesee during certain times of the day, particularly during rush hours and when the schools let out and parents are attempting to pick up or drop off their children.

172-6

### **Vons & Sprouts Centers New Height and Sharply Higher Density Allowances**

The planned sharp increase in overall housing density allowances is now coupled with the EIR showing that the City has ignored UC community requests and is forging ahead to raise the allowable structure heights of the Von's shopping plaza on Governor Drive/Genesee to 100 feet or 10 stories with residential units added to those areas.

172-7

That alone will further impact all kinds of mobility along Governor Drive & onto Genesee as well as to 805 to the east, and Regents toward the west, where a similar plan is on deck for the Sprout's shopping plaza. The Sprout's shopping center is NOT an existing Transit Priority Area or TPA. Buses do not stop there frequently, and it is not close to the trolley and an existing TPA.

### **Planning Deficiencies in Parks**

Under the City's 'Master Plan', the UC area is already short on publicly accessible parks – not "greenways" or some other term that in reality is not a park, or in a land-use area that does not allow residential use. It is also our understanding that developers can now pay a one-time, in-lieu fee and not provide such amenities as a small recreational area in their residential complex plans. The City has fallen short in this key area while also allowing developers to buy their way out of providing more green spaces or publicly accessible recreation areas.

172-8

In summary, these initiatives ignore the need for a workable and supportive infrastructure. It fails to provide even somewhat affordable housing, disregards existing residents' input, and intentionally erodes single-family neighborhoods.

172-9

The most harmful high-density housing initiative the City attempted to pass was SB 10, which would have allowed as many as 14-unit buildings up to three stories high on single-family parcels and no contained parking requirements. Thanks to a successful opposition campaign, SB 10 was removed from the Housing Action Package.

172-10

Thank you for your time and consideration. Such initiatives call for planning that balanced growth rates with an infrastructure where families can grow and thrive. Most of all, responsible growth includes residents in decision-making.

172-11

Best regards,

The Noncovich Family

**\*\*This email came from an external source. Be cautious about clicking on any links in this email or opening attachments.\*\***

---

To Whom It May Concern:

Below are my comment to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I73-1

I73-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I73-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states "No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area

I73-4

for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district's memorandum was incorporated into the DEIR, but this statement was not.

173-4  
cont.

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community's preferred alternative.

173-5

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

173-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

173-7

173-8

Sincerely,

John J. Perna Resident of UC since 1976  
5865 Dirac St.  
San Diego, CA 92122

**Cc:** [awiese@sdsu.edu](mailto:awiese@sdsu.edu) <[awiese@sdsu.edu](mailto:awiese@sdsu.edu)>; M Petrie <[mara12rose@hotmail.com](mailto:mara12rose@hotmail.com)>  
**Subject:** critical comments DEIR & re-zoning

This comment concerns the parcel of land called La Jolla Colony shopping center in North UC. We live across the street from the shopping center. We strongly believe that a rezoning of this commercial neighborhood (CN) shopping center to CC-38 would lead to irreparable harm and unfavorable consequences to the neighborhood, and we find the DEIR is clearly deficient in addressing concerns.

I74-1

(1) Rezoning to this level would lead to major traffic, congestion, and parking problems for everyone involved, and this is not addressed. As it is, finding street parking along Regents Road is difficult, particularly during evening hours.

I74-2

(2) The impact of noise is not even addressed in this DEIR, because the document says they do not know what they are, other than to say the noise impacts will be significant (e.g., pp.50-51, section 4.11). So this part of the EIR is clearly deficient. And once the noise impact is finally resolved, what mitigation will be provided for noise attenuation to the surrounding low density residences? Some of the residences surrounding the shopping center were built before Title 24 (e.g., RM-1-1 buildings on the east side of Regents Rd).

I74-3

So, once the city evaluates the noise impact, the city would have to do mitigation on these buildings to ameliorate the enhanced noise due to traffic, bus, and much higher density. This is not even discussed, but it obviously is required to complete the EIR. For example, would mitigation include double pane windows and HVAC systems?

**I74-3 cont.**

(3) Because most of the residences surrounding the shopping center are 2 stories with the lowest multi-family densities, the allowance of 100 foot high buildings in CC-38 is completely out of character with the surrounding residences.

**I74-4**

(4) This area of North UC is supposed to have density decreasing from Nobel south to Rose Canyon. The proposed CC-38 is clearly not compatible with that scenario.

**I74-5**

Marlene & Tom Petrie  
residents of North UC

**I74: Response to Marlene and Tom Petrie Comment Letter**

**I74-1:** This comment is an introduction to the letter. The comment is in regard to the University Community Plan Update (CPU) and does not raise an issue related to the adequacy of the analysis in the Draft Program Environmental Impact Report (PEIR). No further response is required.

**I74-2:** Transportation impacts discussed in Section 4.14, Transportation, of the Draft PEIR. Since the passage of Senate Bill (SB) 743 in 2018, CEQA Guidelines Section 15064.3 no longer uses auto delay, parking, level of service, and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. Vehicle Miles Traveled (VMT) is the metric by which transportation impacts under CEQA are measured. Under CEQA Guidelines Section 15064.3, statewide application of the new VMT metric was required as of July 1, 2020. With the implementation of this new threshold, parking and traffic congestion concerns are issues that are not required to be studied as a part of the environmental review process. Also, see response to comments O13-1 and O13-2 under comment letter O13.

**I74-3:** The noise-related impacts of the proposed project are discussed in Section 4.11.5.1 of the Draft PEIR. Ambient noise levels, such as those related to construction, the residential-commercial interface, and traffic, are considered to be significant in the PEIR because, at a program level, the assessment takes into consideration the potential environmental impacts of the buildout of the Blueprint SD Initiative, University CPU and Hillcrest Focused Plan Amendment (FPA); however, the specific size and location of future development projects in accordance with these planning frameworks is not known at this time. Construction and ambient noise are regulated by Sections 59.5.0404 and 59.5.0401 et seq. of the San Diego Municipal Code. Future projects would be required to comply with these regulations, and additional mitigation measures would be required for projects that exceed the noise levels identified in this Draft PEIR.

**I74-4:** Aesthetic impacts are discussed in Section 4.1.4, Issues 3 and 4, of the Draft PEIR. As described in the analysis, aesthetic impacts of infill projects in transit priority areas (TPA) shall not be considered significant per Section 21099(d)(1) of the California Public Resources Code. The La Jolla Colony shopping center is in a TPA.

**I74-5:** Comment noted. The comment is in regard to the University CPU and does not raise an issue related to the adequacy of the analysis in the Draft PEIR. No further response is required.

To Whom It May Concern:

I am submitting comments on the Draft Program Environmental Impact Report (DPEIR) for Blueprint SD Initiative, Hillcrest Focused Plan Amendment to the Uptown Community Plan and University Community Plan and Local Coastal Program Update - Document issued March 14, 2024.

I75-1

My comments are with respect to the analysis performed for the University Community Plan Update. I support all of the comments submitted by Help Save UC dated April 25, 2024. I especially want to comment on the following:

1. The City should prepare a DPEIR specific to the University Community Plan Update. Combining the Blueprint San Diego program, the Hillcrest Plan Amendment and the University Community Plan Update into one document made the document confusing, overwhelming and not accessible to the public, thus failing CEQA's requirement to provide an informational document to inform the general public of the significant

I75-2

environmental effect of a project.

I75-2 cont.

2. The City's failure to evaluate the full environmental impacts of the University Community Plan Update at full buildout, including the impact of the Complete Communities program, makes the document inadequate, specifically for areas such as Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire.
3. The City's failure to conduct an updated traffic study to support the reduction of Governor Drive to two lanes renders the DPEIR inadequate.
4. The DPEIR is inadequate due to its failure to evaluate appropriate alternatives. It is disingenuous for the City to evaluate the High Density Alternative (formerly known as Scenario 1) that was no longer under consideration for the University Community Plan Update. The City is supposed to evaluate alternatives that are feasible and capable of avoiding or substantially lessening any significant effects of the project. The appropriate way to do that would have been to evaluate a lower density alternative, such as the "community-preferred alternative" (Scenario B) in the City's last draft of the Plan Update. Instead, the City evaluated a Higher Density alternative that the City admitted wasn't feasible.
5. Finally, the City's conclusion that the High Density Alternative was the environmentally superior alternative isn't supported by the evidence. Table 8-1 shows that the High Density alternative results in greater impacts on the environment. Furthermore, the City's own conclusion states, "No significant impacts of the project would be completely avoided by this [High Density] alternative and on the balance, impacts would slightly increase compared to the project." (Section 8.2.3, underline added.)

I75-3

I75-4

I75-5

I75-6

The City should revise the DPEIR to address these issues.

To Whom It May Concern:

Below are my comment to the City of San Diego's University Community Plan Update Draft EIR (DEIR):

I. No Changes Should Be Made to Governor Drive. Converting Governor Drive from a four-lane Major Arterial to a two-lane Major Arterial with continuous buffered bike lanes will have a significant adverse California Environmental Quality Act (CEQA) transportation impact, according to Vehicle Miles Traveled (VMT) results of the Draft Mobility Technical Report. The Draft Mobility Technical Report is also questionable because it is based upon a computer model rather than actual measurements using the eight-year-old SANDAG 2016 Base Year forecast. No changes to Governor Drive can be made without a current Traffic Analysis performed at peak hour traffic times, i.e. when parents are dropping off and picking up their children attending all three schools and when events are held at Standley Park.

I76-1

I76-2

II. Emergency Access to South UC Must Be Maintained. The DEIR states that, based on the existing roadway network in place, combined with the improvements required by the City as development occurs and mandated by the Fire Code, impacts related to ensure emergency access within the University CPU would be less than significant; however, this conclusion is unsupported by the evidence. As discussed above, the Community CPU proposes to reduce Governor Drive from four lanes to two. The DEIR does not provide analysis of emergency access with two less lanes on Governor Drive. Without such an analysis, the DEIR cannot conclude the impact will be less than significant.

I76-3

III. School Requirements from the San Diego School District Must Be Met. The DEIR states "No new schools are proposed as part of the University CPU; however, the University CPU includes policies that support the provision of school facilities to serve the University CPU area. These policies direct the City to coordinate with SDUSD to

I76-4

explore options for the provision of pre-kindergarten to 12th grade educational facilities to serve future students within the University CPU, as needed. In a memorandum submitted on September 14, 2023, the San Diego School District informed the City that the University Community Plan Update should identify an area for a future school in the area of the intersection La Jolla Village Drive and Genesee. Notably, most of the school district's memorandum was incorporated into the DEIR, but this statement was not.

176-4 cont.

IV. The Community-Preferred Alternative Plan Must Be Included in the Land Plan Alternative Analysis. CEQA requires a reasonable range of alternatives to the project under review. The DEIR does not meet these basic requirements for a sufficient alternatives analysis to the proposed University CPU. The DEIR only includes one alternative relating specifically to the University CPU, and that alternative increases density to the extent of being unfeasible. The DEIR should be revised to include the community's preferred alternative.

176-5

V. The City Should Prepare a DEIR Specific to the University CPU. Use of a program EIR for two completely separate and distinct neighborhoods in addition to an overarching amendment to the general plan and a local coastal program update contradicts the informational requirement of the California Environmental Quality Act (CEQA). According to CEQA, the Environmental Impact Report is first and foremost an informational document for the decision-makers and the public. The DEIR is more than 800 pages long, not including the technical appendices, and purports to amend three separate policy documents: the University City EIR, the Hillcrest Focused Plan Amendment and Blueprint SD, and an amendment to the City's general plan. The very density and wide-ranging goals of the DEIR make it nearly impossible for the public to glean information. The DEIR should be separated into three separate EIRs for each proposed plan update.

176-6

VI. The DEIR Should Evaluate the Full Spectrum of Environmental Impacts: The City's DEIR fails to analyze the full range of environmental impacts of the University CPU at full buildout, making the document inadequate. The DEIR should contain a thorough analysis of Aesthetics, Air Quality, Biological Resources, Greenhouse Gas Emissions, Noise, Public Services, Recreation, Transportation, and Wildfire. Additionally it should address the additional impacts of projects built under the lenient guidelines of the Complete Communities Housing Solutions program.

176-7

176-8

Sincerely,  
Scott Preece  
University City Resident

Hi

I am the resident of UC community and would like to express full support for the comment of the "Help Save UC" group.

I77-1

The amount and quality of work City of San Diego put into the EIR and Plans, as well as quality of answers provided in meetings with City officials was extremely low. No concerns were addressed and no readiness for compromise shown, completely opposing well researched, patiently explained arguments from the South UC residents. When almost 100% residents are opposing your plans, you should stop and think about it.

I77-2
