SPH Drum Log Sheet

Site Address: 11222 Flinthote Ave, San Diego

STATUS OF DRUM(S) UPON ARRIVAL						
Date	03/16/21	03/17/21	03/18/21			
Number of drum(s) empty:						
Number of drum(s) 1/4 full:		1	1			
Number of drum(s) 1/2 full:						
Number of drum(s) 3/4 full:						
Number of drum(s) full:	2	2	2			
Total drum(s) on site:	2	3	3			
Are the drum(s) properly labeled?	YES	YES	YES			
If any drum(s) are partially or totally filled, what is the first use date:	01/23/21	09/23/21	09/23/21			

If you add any product to an empty or partially filled drum, make sure the drum has at least 20 gals. of water in it first. Just offload purgewater into the drum, or DI water.
The drum **MUST** be steel **AND** labeled with the appropriate label.

STATUS OF DRUM(S) UPON DEPARTURE						
Date	03/16/21	03/17/21	03/18/21			
Number of drums empty:						
Number of drum(s) 1/4 full:	1	1				
Number of drum(s) 1/2 full:			1			
Number of drum(s) 3/4 full:						
Number of drum(s) full:	2	2	2			
Total drum(s) on site:	3	3	3			
Are the drum(s) properly labeled?	YES	YES	YES			

LOCATION OF DRUM(S)
Describe location of drum(s): <u>North East corner of parking lot near fencing</u>

FINAL STATUS						
Number of new drum(s) left on site this event	1					
Date of inspection:	03/18/21					
Logged by BTS Field Tech:	12					
Office reviewed by:						

Please Notify Property Owners of any Drums left onsite

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

This report was revised to include QC data for Trichlorotrifluoroethane

Receipt

The samples were received on 1/21/2021 12:50 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.3° C.

GC/MS VOA

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-124261.

Method 8260B: The following analyte(s) recovered outside control limits for the LCSD associated with analytical batch 570-124261: 1,2-Dichlorobenzene, 1,2,3-Trichlorobenzene and 1,4-Dichlorobenzene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260B: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: MW-33-011821 (440-277714-4). Elevated reporting limits (RLs) are provided.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-124974.

Method 8260B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 570-124974 recovered outside control limits for the following analytes: 1,1,2,2-Tetrachloroethane, 1,2,3-Trichlorobenzene and Bromoform.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 440-277714-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: General Atomics
Project/Site: General Atomics

Job ID: 440-277714-1

Laboratory: Eurofins Calscience LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arkansas DEQ	State	88-0161	11-19-21

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

Comments

This report was revised to include QC data for Trichlorotrifluoroethane

Receipt

The samples were received on 2/17/2021 6:20 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice.

GC/MS VOA

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-131728.

Method 8260B: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: MW-33-021521 (440-279223-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: General Atomics
Project/Site: Monthly In-situ Chemical Oxidation (ISCO)

Job ID: 440-279223-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: General Atomics
Project/Site: Monthly In-situ Chemical Oxidation (ISCO)

Job ID: 440-279223-1

Laboratory: Eurofins Calscience LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arkansas DEQ	State	88-0161	11-19-21
California	Los Angeles County Sanitation Districts	10109	09-30-21

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

This report was revised to include QC data for Trichlorotrifluoroethane

Receipt

The samples were received on 3/16/2021 4:51 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice.

GC/MS VOA

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-138511.

Method 8260B: The following analyte(s) recovered outside control limits for the LCS/LCSD associated with analytical batch 570-138511: Naphthalene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260B: The following sample was diluted due to the nature of the sample matrix: SVE-12-031621 (440-280627-18). Elevated reporting limits (RLs) are provided.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-138507.

Method 8260B: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: SVE-4-031621 (440-280627-10). The reporting limits (RLs) have been adjusted proportionately.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-139029.

Method 8260B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 570-139029 recovered outside control limits for the following analytes: 1,1-Dichloroethene and Trichlorotrifluoroethane(F-113)

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with analytical batch 570-139233.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method 3510C: The samples were dark in color (dark purple) therefore, the receiving pH could not be determined due to the nature of the sample.

MW-3-031621 (440-280627-5) and SVE-4-031621 (440-280627-10)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Eurofins Calscience Irvine

Definitions/Glossary

Client: General Atomics
Project/Site: Monthly In-situ Chemical Oxidation (ISCO)

Job ID: 440-280627-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: General Atomics
Project/Site: Monthly In-situ Chemical Oxidation (ISCO)

Job ID: 440-280627-1

Laboratory: Eurofins Calscience LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arkansas DEQ	State	88-0161	11-19-21
California	Los Angeles County Sanitation Districts	10109	09-30-21
California	SCAQMD LAP	17LA0919	11-30-21
California	State	2944	09-30-21
Guam	State	20-003R	10-31-20 *
Nevada	State	CA00111	07-31-21
Oregon	NELAP	CA300001	01-30-22
USDA	US Federal Programs	P330-20-00034	02-10-23
Washington	State	C916-18	10-11-21

* Accreditation/Certification renewal pending - accreditation/certification considered valid.

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

Note: Since laboratory accreditations are subject to change Eurofins Calscience places the ownership of method analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody if the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/matrix being analyzed the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

This report was revised to correct sampling time for sample MW-17-031721 to 13:37 and include QC data for Trichlorotrifluoroethane

Receipt

The samples were received on 3/17/2021 7:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.6° C and 2.5° C.

GC/MS VOA

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-138827.

Method 8260B: The following samples were diluted due to the nature of the sample matrix: SVE-15-031721 (440-280708-2), SVE-16-031721 (440-280708-3) and MW-34-031721 (440-280708-4). Elevated reporting limits (RLs) are provided.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with analytical batch 570-139233.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: General Atomics
Project/Site: Monthly In-situ Chemical Oxidation (ISCO)

Job ID: 440-280708-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: General Atomics
Project/Site: Monthly In-situ Chemical Oxidation (ISCO)

Job ID: 440-280708-1

Laboratory: Eurofins Calscience LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arkansas DEQ	State	88-0161	11-19-21
California	Los Angeles County Sanitation Districts	10109	09-30-21
California	SCAQMD LAP	17LA0919	11-30-21

Special Instructions/Note:

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

440-280746-1**

Comments

This report was revised to include QC data for Trichlorotrifluoroethane

Receipt

The samples were received on 3/18/2021 4:20 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8° C and 1.6° C.

GC/MS VOA

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with analytical batch 570-139233.

Method 8260B: The matrix spike duplicate (MSD) associated with analytical batch 570-139539 was analyzed outside of the 12-hour tune window. The associated laboratory control sample and duplicate (LCS/LCSD) and matrix spike (MS) were analyzed within the 12-hour tune window and recovery and precision met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 440-280746-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: General Atomics
Project/Site: Monthly In-situ Chemical Oxidation (ISCO)

Job ID: 440-280746-1

Laboratory: Eurofins Calscience LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody if the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

RE: Report of Findings, Analysis of NaMnO₄
Client ID: TCE Project 91430008
PRIMA ID: GA-SV-NaMnO4-01202021

Dear Mr. Dharmapal:

PRIMA Environmental, Inc. measured sodium permanganate (NaMnO₄) in water samples from the General Atomics site located at 11222 Flintoke, San Diego, California. The results are reported herein.

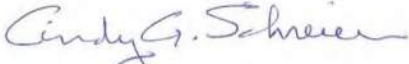

Sample Receipt. Ten (10) water samples were received in good condition on January 20, 2021.

Procedure. NaMnO₄ was analyzed via visible spectroscopy at 560 nanometers using a Hach DR 2800 spectrophotometer. Dilutions were made as needed using deionized water. No dilutions were performed on samples that were colorless in the VOA upon receipt.

Results. Results of the measurements are shown in Table 1 (attached).

If you have any questions regarding this report, please contact me at 916-939-7300 or cschreier@primaenvironmental.com. Thank you for the opportunity to be of service.

Sincerely,
PRIMA Environmental, Inc.

Cindy G. Schreier, Ph.D.
President

Data Validation Reports

Memorandum

Date: 20 April 2021
 To: Kevin Coffman
 From: Matthew Richardson
 CC: J. Caprio
 Subject: **Stage 2A Data Validation - Level II Data Deliverable – Eurofins
 Calscience Job ID 440-277714-1, Revision 1**

SITE: General Atomics

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of ten groundwater samples and one trip blank, collected 18-19 January 2021 as part of the General Atomics sampling event. The samples were sent to Eurofins Calscience, Irvine, California; the analyses were performed by Eurofins Calscience, California, both the Lincoln and Lampson campuses. The samples were analyzed for the following analytical tests:

- Volatile Organic Compounds (VOCs) by United States (US) Environmental Protection Agency (EPA) Methods 5030C/8260B
- 1,4-Dioxane by US EPA Methods 3510C/8270C using Selected Ion Monitoring (SIM)/Isotope Dilution (ID)

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and the information provided, the data are usable for supporting project objectives.

The data were reviewed based on the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, the pertinent methods referenced in the laboratory report and professional and technical judgment.

The following samples were analyzed in the data set and validated at a Stage 2A level:

Laboratory IDs	Client IDs
440-277714-1	MW-9-011821
440-277714-2	MW-17-011821
440-277714-3	P-114-011821
440-277714-4	MW-33-011821

Laboratory IDs	Client IDs
440-277714-5	P-111-011821
440-277714-6	P-112-011821
440-277714-7	TB-011821
440-277714-8	GECC-901-011921

Laboratory IDs	Client IDs
440-277714-9	P-113-011921
440-277714-10	GECC-902-011921

Laboratory IDs	Client IDs
440-277714-11	GECC-905-011921

The samples were received at the laboratories at 2.3 degrees Celsius (°C), 1.9°C and 2.5°C, within the temperature criteria of 0-6°C. No sample preservation issues were noted by the laboratories.

Incorrect error correction was observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the correction.

The second relinquishing documentation on the second page of the COC for the transfer of samples from the field to the Calscience Irvine, California laboratory did not include the time of relinquishing.

The laboratory report was revised on 19 April 2021 to include the QC data for trichlorotrifluoroethane. The revised report was identified as 440-277714-1, Revision 1.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs per US EPA methods 5030C/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogate
- ✓ Field Duplicate
- ✓ Trip Blank
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this laboratory report are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to

the total number of analytical results requested on samples submitted for this analysis, for the sample set is 100%.

1.2 Holding Time

The holding time for the VOC analysis of a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported (batches 124261 and 124974). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCS/LCS duplicate (LCSD) pairs were reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

The LCSD recoveries of 1,2,3-trichlorobenzene, 1,2-dichlorobenzene and 1,4-dichlorobenzene in batch 124261 were high and outside the laboratory specified acceptance criteria. Since 1,2,3-trichlorobenzene, 1,2-dichlorobenzene and 1,4-dichlorobenzene were not detected in the associated samples, no qualifications were applied to the data.

The RPD results for 1,1,2,2-tetrachloroethane, 1,2,3-trichlorobenzene and bromoform in batch 124974 were high and outside the laboratory specified acceptance criteria. Since 1,1,2,2-tetrachloroethane, 1,2,3-trichlorobenzene and bromoform were not detected in the associated samples, no qualifications were applied to the data.

1.6 Surrogates

The surrogate recoveries were within the laboratory specified acceptance criteria.

1.7 Field Duplicate

A field duplicate sample was not collected with the sample set.

1.8 Trip Blank

One trip blank, TB-011821, was submitted with the sample set. VOCs were not detected in the trip blank above the MDLs.

1.9 Sensitivity

The sample results were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 1,4-DIOXANE

The samples were analyzed for 1,4-dioxane per US EPA methods 3510C/8270C SIM ID.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Isotope Dilution Standard
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The 1,4-dioxane data reported in this laboratory report are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for the sample set is 100%.

2.2 Holding Time

The holding times for the 1,4-dioxane analysis of a water sample are 7 days from collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number of samples analyzed (one per batch). One method blank was reported (batch 123964). 1,4-Dioxane was not detected in the method blank above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One batch MS/MSD pair was reported. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number of samples analyzed (one per batch). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

2.6 Surrogates

The surrogate recoveries were within the laboratory specified acceptance criteria.

2.7 Isotope Dilution Standard

The isotope dilution standard recoveries were within the laboratory specified acceptance criteria.

2.8 Field Duplicate

A field duplicate sample was not collected with the sample set.

2.9 Sensitivity

The sample results were reported to the MDLs. Elevated non-detect results were not reported.

2.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

DATA VALIDATION QUALIFIER DEFINITIONS
AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to “not detected at or above the reported result”.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
- J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

LCSD - Laboratory Control Sample Duplicate

RPD - Relative percent difference

Memorandum

Date: 20 April 2021
 To: Kevin Coffman
 From: Matthew Richardson
 CC: J. Caprio
 Subject: **Stage 2A Data Validation - Level II Data Deliverable – Eurofins
 Calscience Job ID 440-279223-1, Revision 1**

SITE: General Atomics- Monthly In-situ Chemical Oxidation (ISCO)

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of ten groundwater samples and one trip blank, collected 15-16 February 2021 as part of the General Atomics sampling event. The samples were sent to Eurofins Calscience, Irvine, California; the analyses were performed by Eurofins Calscience, California, both the Lincoln and Lampson campuses. The samples were analyzed for the following analytical tests:

- Volatile Organic Compounds (VOCs) by United States (US) Environmental Protection Agency (EPA) Methods 5030C/8260B
- 1,4-Dioxane by US EPA Methods 3510C/8270C using Selected Ion Monitoring (SIM)/ Isotope Dilution (ID)

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and the information provided, the data are usable for supporting project objectives.

The data were reviewed based on the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, the pertinent methods referenced in the laboratory report and professional and technical judgment.

The following samples were analyzed in the data set and validated at a Stage 2A level:

Laboratory IDs	Client IDs
440-279223-1	TB-021521
440-279223-2	P-112-021521
440-279223-3	P-113-021521
440-279223-4	MW-33-021521

Laboratory IDs	Client IDs
440-279223-5	MW-9-021521
440-279223-6	MW-17-021521
440-279223-7	P-114-021521
440-279223-8	P-111-021621

Laboratory IDs	Client IDs
440-279223-9	GECC-905-021621
440-279223-10	GECC-902-021621

Laboratory IDs	Client IDs
440-279223-11	GECC-901-021621

The samples were received at the laboratories at 0.9 degrees Celsius (°C) and -0.3°C, both within and outside the temperature criteria of 0-6 °C. Since the samples received at -0.3°C were not frozen and based on professional and technical judgment, no qualifications were applied to the data. No other sample preservation issues were noted by the laboratories .

Incorrect error correction was observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the correction.

The laboratory report was revised on 19 April 2021 to include the QC data for trichlorotrifluoroethane. The revised report was identified as 440-279223-1 Revision 1.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs per US EPA methods 5030C/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogate
- ✓ Field Duplicate
- ✓ Trip Blank
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The VOC data reported in this laboratory report are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for the sample set is 100%.

1.2 Holding Time

The holding time for the VOC analysis of a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One method blank was reported (batch 131728). VOCs were not detected in the method blank above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS/LCS duplicate (LCSD) pair was reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.6 Surrogates

The surrogate recoveries were within the laboratory specified acceptance criteria.

1.7 Field Duplicate

A field duplicate sample was not collected with the sample set.

1.8 Trip Blank

One trip blank, TB-021521, was submitted with the sample set. VOCs were not detected in the trip blank above the MDLs.

1.9 Sensitivity

The sample results were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 1,4-DIOXANE

The samples were analyzed for 1,4-dioxane per US EPA methods 3510C/8270C SIM ID.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Isotope Dilution Standard
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The 1,4-dioxane data reported in this laboratory report are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for the sample set is 100%.

2.2 Holding Time

The holding times for the 1,4-dioxane analysis of a water sample are 7 days from collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number of samples analyzed (one per batch). One method blank was reported (batch 130694). 1,4-Dioxane was not detected in the method blank above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One batch MS/MSD pair was reported. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number of samples analyzed (one per batch). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

2.6 Surrogates

The surrogate recoveries were within the laboratory specified acceptance criteria.

2.7 Isotope Dilution Standard

The isotope dilution standard recoveries were within the laboratory specified acceptance criteria.

2.8 Field Duplicate

A field duplicate sample was not collected with the sample set.

2.9 Sensitivity

The sample results were reported to the MDLs. Elevated non-detect results were not reported.

2.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of nineteen groundwater samples and one trip blank, collected 16 March 2021 as part of the General Atomics sampling event. The samples were sent to Eurofins Calscience, Irvine, California; the analyses were performed by Eurofins Calscience, Garden Grove, California, both the Lincoln and Lampson campuses. The samples were analyzed for the following analytical tests:

- Volatile Organic Compounds (VOCs) by United States (US) Environmental Protection Agency (EPA) Methods 5030C/8260B
- 1,4-Dioxane by US EPA Methods 3510C/8270C using Selected Ion Monitoring (SIM)/ Isotope Dilution (ID)

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and the information provided, the data are usable for supporting project objectives.

The data were reviewed based on the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, the pertinent methods referenced in the laboratory report and professional and technical judgment.

The following samples were analyzed in the data set and validated at a Stage 2A level:

Laboratory IDs	Client IDs
440-280627-1	TB-031621
440-280627-2	MW-8-031621
440-280627-3	GECC-401-031621
440-280627-4	MW-1-031621

Laboratory IDs	Client IDs
440-280627-5	MW-3-031621
440-280627-6	TW-3-031621
440-280627-7	SVE-1-031621
440-280627-8	SVE-2-031621

Laboratory IDs	Client IDs
440-280627-9	SVE-3-031621
440-280627-10	SVE-4-031621
440-280627-11	SVE-5-031621
440-280627-12	SVE-6-031621
440-280627-13	SVE-7-031621
440-280627-14	SVE-8-031621

Laboratory IDs	Client IDs
440-280627-15	SVE-9-031621
440-280627-16	SVE-10-031621
440-280627-17	SVE-11-031621
440-280627-18	SVE-12-031621
440-280627-19	SVE-13-031621
440-280627-20	SVE-14-031621

The samples were received at the laboratories at 2.5 degrees Celsius (°C), 2.4°C and 1.2°C, within the temperature criteria of 0-6 °C. No sample preservation issues were noted by the laboratories.

Incorrect error correction was observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the correction.

There were two copies of the COC in the laboratory report, documenting the transfer of samples from Calscience Irvine to the Calscience Garden Grove laboratory. One copy did not have receiving documentation at the Calscience Garden Grove laboratory and the other copy had the appropriate receiving documentation.

The laboratory report was revised on 19 April 2021 to include the QC data for trichlorotrifluoroethane. The revised report was identified as 440-280627-1 Revision 1.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs per US EPA methods 5030C/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

1.1 Overall Assessment

The VOC data reported in this laboratory report are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for the sample set is 100%.

1.2 Holding Time

The holding time for the VOC analysis of a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four method blanks were reported (batches 138507, 138511, 139029 and 139233). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four LCS/LCS duplicate (LCSD) pairs were reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries of naphthalene in batch 138511 were high and outside the laboratory specified acceptance criteria. Since naphthalene was not detected in the associated samples, no qualifications were applied to the data.

The RPD results for 1,1-dichloroethene and trichlorofluoroethane in batch 139029 were high and outside the laboratory specified acceptance criteria. Since 1,1-dichloroethene and trichlorofluoroethane not detected in the associated samples, no qualifications were applied to the data.

1.6 Surrogates

The surrogate recoveries were within the laboratory specified acceptance criteria.

1.7 **Field Duplicate**

A field duplicate sample was not collected with the sample set.

1.8 **Trip Blank**

One trip blank, TB-031621, was submitted with the sample set. VOCs were not detected in the trip blank above the MDLs.

1.9 **Sensitivity**

The sample results were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

1.10 **Electronic Data Deliverable (EDD) Review**

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 **1,4-DIOXANE**

The samples were analyzed for 1,4-dioxane per US EPA methods 3510C/8270C SIM ID.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

2.1 **Overall Assessment**

The 1,4-dioxane data reported in this laboratory report are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the

number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for the sample set is 100%.

2.2 Holding Time

The holding times for the 1,4-dioxane analysis of a water sample are 7 days from collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number of samples analyzed (one per batch). One method blank was reported (batch 137106). 1,4-Dioxane was not detected in the method blank above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair, using sample GECC-401-031621, was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number of samples analyzed (one per batch). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

2.6 Surrogates

The surrogate recoveries were within the laboratory specified acceptance criteria.

2.7 Isotope Dilution Standards

The isotope dilution standard recoveries were within the laboratory specified acceptance criteria.

2.8 Field Duplicate

A field duplicate sample was not collected with the sample set.

2.9 Sensitivity

The sample results were reported to the MDLs. Elevated non-detect results were not reported.

2.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

 Calscience Job ID 440-280708-1, Revision 2**

SITE: General Atomics- Monthly In-situ Chemical Oxidation (ISCO)

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of eleven groundwater samples, one field duplicate sample and one trip blank, collected 17 March 2021 as part of the General Atomics sampling event. The samples were sent to Eurofins Calscience, Irvine, California; the analyses were performed by Eurofins Calscience, Garden Grove, California, both the Lincoln and Lampson campuses. The samples were analyzed for the following analytical tests:

- Volatile Organic Compounds (VOCs) by United States (US) Environmental Protection Agency (EPA) Methods 5030C/8260B
- 1,4-Dioxane by US EPA Methods 3510C/8270C using Selected Ion Monitoring (SIM)/ Isotope Dilution (ID)

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and the information provided, the data are usable for supporting project objectives.

The data were reviewed based on the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, the pertinent methods referenced in the laboratory report and professional and technical judgment.

The following samples were analyzed in the data set and validated at a Stage 2A level:

Laboratory IDs	Client IDs
440-280708-1	TB-031721
440-280708-2	SVE-15-031721
440-280708-3	SVE-16-031721
440-280708-4	MW-34-031721

Laboratory IDs	Client IDs
440-280708-5	MW-35-031721
440-280708-6	MW-36-031721
440-280708-7	MW-7-031721
440-280708-8	MW-9-031721

Laboratory IDs	Client IDs
440-280708-9	MW-33-031721
440-280708-10	MW-10-031721
440-280708-11	MW-10D-031721

Laboratory IDs	Client IDs
440-280708-12	MW-17-031721
440-280708-13	DUP-1-031721

The samples were received at the laboratories at 2.5 degrees Celsius (°C), 1.6°C , 1.1°C and 1.5°C, within the temperature criteria of 0-6 °C. No sample preservation issues were noted by the laboratories.

A sample collection time was not documented on the chain of custody (COC) for the field duplicate sample. The field duplicate was logged by the laboratory with the sample collection time 00:01.

The laboratory report was revised twice on 19 April 2021. The first revision was provided to correct the sample collection time for sample MW-17-031721. The second revision was provided to include the QC data for trichlorotrifluoroethane. The second revised report was identified as 440-280708-1, Revision 2.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs per US EPA methods 5030C/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

1.1 Overall Assessment

The VOC data reported in this laboratory report are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for the sample set is 100%.

1.2 Holding Time

The holding time for the VOC analysis of a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported (batches 138827 and 139233). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCS/LCS duplicate (LCSD) pairs were reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.6 Surrogates

The surrogate recoveries were within the laboratory specified acceptance criteria.

1.7 Field Duplicate

One field duplicate sample was collected with the sample set, DUP-1-031721. Acceptable precision (RPD \leq 30%) was demonstrated between the field duplicate and the original sample, MW-10D-031721.

1.8 Trip Blank

One trip blank, TB-031721, was submitted with the sample set. VOCs were not detected in the trip blank above the MDLs.

1.9 Sensitivity

The sample results were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 1,4-DIOXANE

The samples were analyzed for 1,4-dioxane per US EPA methods 3510C/8270C SIM ID.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Surrogates
- ✓ Isotope Dilution Standard
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The 1,4-dioxane data reported in this laboratory report are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for the sample set is 100%.

2.2 Holding Time

The holding times for the 1,4-dioxane analysis of a water sample are 7 days from collection to extraction and 40 days from extraction to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number of samples analyzed (one per batch). One method blank was reported (batch 137455). 1,4-Dioxane was not detected in the method blank above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair, using sample SVE-15-031721, was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number of samples analyzed (one per batch). One LCS/LCSD pair was reported. The recovery and RPD results were within the laboratory specified acceptance criteria.

2.6 Surrogates

The surrogate recoveries were within the laboratory specified acceptance criteria.

2.7 Isotope Dilution Standard

The isotope dilution standard recoveries were within the laboratory specified acceptance criteria.

2.8 Field Duplicate

One field duplicate sample was collected with the sample set, DUP-1-031721. Acceptable precision (RPD $\leq 30\%$) was demonstrated between the field duplicate and the original sample, MW-10D-031721.

2.9 Sensitivity

The sample results were reported to the MDLs. Elevated non-detect results were not reported.

2.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

DATA VALIDATION QUALIFIER DEFINITIONS
AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to “not detected at or above the reported result”.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
- J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

 CC: J. Caprio
 Subject: **Stage 2A Data Validation - Level II Data Deliverable – Eurofins
 Calscience Job ID 440-280746-1, Revision 1**

SITE: General Atomics- Monthly In-situ Chemical Oxidation (ISCO)

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of eight groundwater samples, one field duplicate sample and one trip blank, collected 18 March 2021 as part of the General Atomics sampling event. The samples were sent to Eurofins Calscience, Irvine, California; the analyses were performed by Eurofins Calscience, Garden Grove, California, both the Lincoln and Lampson campuses. The samples were analyzed for the following analytical tests:

- Volatile Organic Compounds (VOCs) by United States (US) Environmental Protection Agency (EPA) Methods 5030C/8260B
- 1,4-Dioxane by US EPA Methods 3510C/8270C using Selected Ion Monitoring (SIM)/ Isotope Dilution (ID)

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and the information provided, the data are usable for supporting project objectives.

The data were reviewed based on the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, the pertinent methods referenced in the laboratory report and professional and technical judgment.

The following samples were analyzed in the data set and validated at a Stage 2A level:

Laboratory IDs	Client IDs
440-280746-1	TB-031821
440-280746-2	MW-23-031821
440-280746-3	GECC-901-031821
440-280746-4	GECC-902-031821

Laboratory IDs	Client IDs
440-280746-5	GECC-905-031821
440-280746-6	P-111-031821
440-280746-7	P-112-031821
440-280746-8	P-113-031821

Laboratory IDs	Client IDs
440-280746-9	P-114-031821

Laboratory IDs	Client IDs
440-280746-10	DUP-2-031821

The samples were received at the laboratories at 0.8 degrees Celsius (°C), 3.5°C, 2.4°C and 1.6 °C, within the temperature criteria of 0-6°C. No sample preservation issues were noted by the laboratories.

Incorrect error corrections were observed on the chain of custody (COC), instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

A sample collection time was not documented on the COC for the field duplicate sample. The field duplicate sample was logged by the laboratory with the sample collection time 00:01.

The laboratory report was revised on 19 April 2021 to include the QC data for trichlorotrifluoroethane. The revised report was identified as 440-280746-1, Revision 1.

1.0 VOLATILE ORGANIC COMPOUNDS

The samples were analyzed for VOCs per US EPA methods 5030C/8260B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment

1.1 Overall Assessment

The VOC data reported in this laboratory report are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for the sample set is 100%.

1.2 Holding Time

The holding time for the VOC analysis of a preserved water sample is 14 days from collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two method blanks were reported (batches 139233 and 139539). VOCs were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

One batch MS/MSD pair was reported. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two LCS/LCS duplicate (LCSD) pairs were reported. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.6 Surrogates

The surrogate recoveries were within the laboratory specified acceptance criteria.

1.7 Field Duplicate

One field duplicate sample was collected with the sample set, DUP-2-031821. Acceptable precision (RPD $\leq 30\%$) was demonstrated between the field duplicate and the original sample, P-114-031821.

1.8 Trip Blank

One trip blank, TB-031821, was submitted with the sample set. VOCs were not detected in the trip blank above the MDLs.

1.9 Sensitivity

The sample results were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 1,4-DIOXANE

The samples were analyzed for 1,4-dioxane per US EPA methods 3510C/8270C SIM ID.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

November 1, 1993

Dean Charles
Maxwell Labs
8888 Balboa Ave
San Diego, CA 92123-1506

Dear Mr. Charles:

**RE: UNAUTHORIZED RELEASE H23213 (T75)
RELEASE OF OIL AT 3020 CALLAN RD, SAN DIEGO**

The site remediation information submitted to this agency by (CDM) summarizing the site characterization and mitigation activities at the above referenced location has been reviewed. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is the position of this office that **no further action is required at this time.**

This information has also been discussed with staff of the Regional Water Quality Control Board (RWQCB). Based on the information submitted and current requirements, the RWQCB concurs with the determination of this agency that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

Thank you for your efforts in resolving this matter. Please contact Steven Durham, of the Site Assessment and Mitigation Division, at (619) 338-2373, if you require additional assistance.

Sincerely,

CHUCK PRYATEL, Division Manager
Site Assessment and Mitigation Division

EVALUATION OF SITE ASSESSMENT

TYPE/CAUSE OF RELEASE: On May 15, 1991, an unauthorized release of mineral oil was reported to the HMMD. The unauthorized release was from a (one of several) vertically oriented tank (12" x 20'), which was dedicated to storing radiation source tubes. The radioactive sources were identified as Californium 252 and Cobalt 60. The source tubes were surrounded by mineral oil in the tanks for radiation shielding.

QUANTITY OF RELEASE:

80 gallons

VOLUME OF SOIL CONTAMINATED:

9 cubic yards (estimated by saturation)

CONSULTANT REPORTS ON FILE:

Camp Dresser McKee

Fate & Transport Evaluation of Mineral Oil Release (3/93)

FULL DELINEATION ACHIEVED?

Yes

OFF SITE IMPACTS?

No

BENEFICIAL USE GROUND WATER?

~~Yes~~ No *John*

GROUND WATER IMPACTED?

No

KNOWN PUBLIC HEALTH THREATS?

No

CONCURRENCE WITH RWQCB STAFF:

John Menatti *JM*

DATE:

CONCURRENCE WITH EHS HYDROGEOLOGIST:

Kevin Heaton *KH*

DATE: 11/3/93

REMEDIATION AND DISPOSAL

TYPE OF REMEDIATION USED AT SITE: None

VOLUME/CONCENTRATION OF CONTAMINATED SOIL REMAINING ONSITE:

CDM estimates (w/ SAM concurrence) that 9 cubic yards of soil remain in-situ. Mineral Oil is 100%, USP Grade (approved for human application and consumption).

ADDITIONAL COMMENTS

The RWQCB and SAM concurred that a release of Mineral Oil would not pose a health risk to life or the environment in this location. However, it was agreed that Mineral Oil may pose a threat to life if it was activated by the radiation source (Californium 252), a neutron-emitter (has enough energy to make nearby substances radioactive, hence the term "activated").

Analysis of oil remaining in the tank, by the Radiation Physicist from Maxwell Labs, indicated the oil was not activated.

A review of the Fate & Transport study indicated that the oil (even though USP Grade) had little potential to migrate to the water table in consideration of geologic conditions. Further, even if the oil were activated, the radiogenic daughters would have reached stability within two years (May 1993). The consultant concluded that there was no risk to life and health from this release.

I. SITE NAME

**Torrey Pines Science Park (the Site)
3030, 3040, 3050 Science Park Road
Torrey Pines, San Diego, CA**

II. EXECUTIVE SUMMARY

In July 2019, AECOM advanced two borings at the Site on behalf of RMR. One boring was completed at the known location of an offset wastewater pipe beneath a walkway west of building 3050 and was constructed as MW-1. The second boring SB-2 was advanced at the historic acid neutralization tanks in the parking area behind building 3040.

Soil samples collected from borings MW-1 and SB-2 soils were analyzed for volatile organic compounds (VOCs) by Environmental Protection Agency (EPA) Method 8260B, semi-volatile organic compounds (SVOCs) by EPA Method, organochloride pesticides by EPA Method 8081A, and metals including mercury by EPA Method. Groundwater sampled from monitoring well MW-1 was analyzed for VOCs by EPA Method 624.1, SVOCs by EPA Method, pesticides by EPA Method 608.3, and metals by EPA Method 200.8.

Soil analytical data collected did not exceed Environmental Screening Levels (ESLs) for Direct Exposure Human Health Risk for Construction Workers at any depth exposure recognized by the California Department of Toxic Substances Control Site Mitigation & Restoration Program - Human and Ecological Risk Office - Human Health Risk Assessment. Groundwater laboratory analytical results were compared to the applicable ESL MCL Priority values. No parameters were detected above laboratory reporting limits.

III. SCOPE OF WORK

Soil and groundwater samples were obtained from soil borings/ monitoring wells to assess subsurface conditions for potential impacts at Site. Analytical parameters for the collection of soil and groundwater samples were selected based on a review of available information regarding Site use and location of known preferential pathway.

Prior to subsurface investigation AECOM coordinated applicable County of San Diego Department of Environmental Health Land and Water Quality Division Monitoring Well Program permitting for the advancement and installation of three (3) monitoring wells. The permit is attached in **Appendix E**.

A Site Layout Map with monitoring well locations is provided as **Figure 1**.

IV. BACKGROUND INFORMATION

AECOM initially visited the Site on May 30, 2019 and met with RMR building management and RMR's plumbing contractor to complete an assessment and documentation of tenant closeout practices, review wastewater practices, and scope accessible wastewater piping with video scoping cameras. Scoping of the wastewater piping that exits the 3050 building at the parking garage level from the cage indicated that the pipe is offset from itself beneath the concrete walking path west of the 3050 building, exposing pipe contents directly to soils. This offset was considered to provide a preferential pathway of wastewater directly to surrounding soils and may represent an environmental concern in the case that chemicals in wastewater transferred from sink drains in the building have infiltrated soil or groundwater due to the piping offset. As a result of the offset pipe finding, RMR requested AECOM complete a subsurface investigation of soil and groundwater to identify possible impacts from offset piping. A historic acid neutralization system for wastewater treatment was also identified in the parking area behind building 3040, and the investigation of soils beneath the system was also requested by RMR.

V. SUBSURFACE INVESTIGATION

Date Drilled:	July 15, 2019 – July 17, 2019
Drilling Method:	Hollow-stem Auger
# of Borings/MWs:	One Boring/one Monitoring well (SB-2 and MW-1, respectively)
Boring Locations:	MW-1 based on location of pipe offset and SB-2 based on former acid neutralization tank. Locations are shown on the Site Layout (Figure 1).
Depths:	MW-1 advanced to 61 feet below ground surface (bgs), SB-2 advanced to 102.4 ft bgs.

MW-1:

Location of boring pre-cleared with hand auger to 10 ft bgs. Boring advanced to 61 ft bgs, water table located at approximately 43 ft bgs. Continuous core samples were collected from 8-25 ft bgs and every 5 ft from 25-61 ft for observation and logging. At the completion of boring, MW-1 was constructed as follows: 20 ft screen 40-60 ft, #2/12 sand 38-61 ft, bentonite chips 35-38 ft, bentonite cement/grout 0-35 ft, and concrete road box well cover at surface. Well construction and boring description are shown in the MW-1 boring log attached in **Appendix C**.

SB-2:

Location of boring pre-cleared with hand auger to 10 ft bgs. Boring advanced to 102.4 ft bgs, aquitard layer penetrated at 96 ft bgs, bringing water into the boring up to 53 ft bgs. Core samples collected 5 ft from 10-102.4 ft for observation and logging. Following sample collection, the borehole was plugged/abandoned by grouting to approximately six inches bgs, with the surface area being restored with concrete patch consistent with preexisting site conditions. Boring description is shown in the SB-2 boring log attached in **Appendix C**.

VI. SOIL CHARACTERIZATION/ANALYSIS

Three samples were collected from each boring advancement. Soil samples collected from borings MW-1 and SB-2 soils were analyzed for volatile organic compounds (VOCs) by Environmental Protection Agency (EPA) Method 8260B, semi-volatile organic compounds (SVOCs) by EPA Method, organochloride pesticides by EPA Method 8081A, and metals including mercury by EPA Method.

Soil samples were selected for laboratory analysis based on locations above and below pipe offset (MW-1) and beneath former acid neutralization tank (SB-2). MW-1 samples were collected at 12 ft bgs, 19 ft bgs, and 30 ft bgs (30 ft bgs sample submitted on hold). SB-2 samples were collected at 10 ft bgs, 20 ft bgs, and 35 ft bgs (35 ft bgs sample submitted on hold). Soil laboratory results were compared to applicable ESLs. Low level of metals was detected in both boring/wells, however all detections were well below ESLs. All other parameters were none detect.

Soil boring logs including PID headspace screening results are provided in **Appendix C**. A summary of the soil analytical results is provided in **Table 1**. Laboratory analytical reports are attached as **Appendix A**.

VII. GROUNDWATER CHARACTERIZATION/ANALYSIS

Groundwater sampled from monitoring well MW-1 was analyzed for VOCs by EPA Method 624.1, SVOCs by EPA Method, pesticides by EPA Method 608.3, and metals by EPA Method 200.8.

The groundwater sample were collected from MW-1 following well development purging by EPA recommended low flow sampling methodology. Groundwater laboratory analytical results were compared to the applicable ESL MCL Priority values. No parameters were detected above laboratory reporting limits.

Groundwater laboratory analytical reports are provided in **Appendix B** and summarized in **Table 2**.

VIII. INVESTIGATION DERIVED WASTE

All waste generated during this investigation will be transported to a licensed waste management facility for disposal by Belshire Environmental Services, Inc. Derived waste was stored in 55-gallon drums beneath parking structure until completion of work. Waste manifests will be provided when they are available to AECOM.

IX. SUMMARY OF FINDINGS

AECOM determined through observation and laboratory analysis of subsurface soils and groundwater at the Site that no constituents of concern were present at or above ESLs. No further action is recommended at this time.

X. LIMITATIONS

AECOM has prepared this Assessment for the sole use of RMR in accordance with the Agreement to Perform Scope of Work. No other warranty, expressed or implied, is made as to the professional advice included in this Assessment or any other services provided by us. This Assessment may not be relied upon by any other party without the prior and express written agreement of AECOM. Unless otherwise stated in this Assessment, the assessments made assume that the sites and facilities will continue to be used for their current purpose without significant change. The findings contained in this Assessment are based upon information provided by others and upon the assumption that all relevant information has been provided by those parties from whom it has been requested.

Where field investigations have been carried out, these have been restricted to a level of detail required to achieve the stated objectives of the services. The results of any measurements taken may vary spatially or with time and further confirmatory measurements should be made after any significant delay in using this Assessment.

NOTE:

ND - Not Detected above laboratory reporting limit

H - Sample was prepped or analyzed beyond the specified holding time by laboratory analyst delay

L - A negative instrument reading had an absolute value greater than the reporting limit

F2 - MS/MSD RPD exceeds control limits

* - Construction worker standard for any land use/any depth soil exposure limit, more conservative value of cancer risk vs. non-cancer risk used when both are presented for constituent.

NA - exposure limit not published

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Contact: Gabriel Haro

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the date this report was generated.

Certified Sanborn Results:

Certification # 680F-469B-B1BD
PO # 109553001

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

APPENDIX F

Vapor Encroachment Screening Matrix

Phase I ESA Vapor Encroachment Conditions (VEC) matrix includes a (1) Search Radius Test, (2) Chemicals of Concern Test (COC), and (3) a Critical Distance Test [1].

(1) Search Radius Test: Are there any known or suspect contaminated properties in the primary area of concern within the corresponding search radii?

Yes No If **No**, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If **Yes**, then:

(2) Chemicals of Concern Test: Are COC likely to be present within the area of concern for those known or suspect contaminated sites identified based on the Search Distance Test?

Yes No If **No**, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If **Yes**, then:

(3) Critical Distance Test: A plume test to determine whether or not COC in the contaminated plume(s) may be within the critical distance.

Yes No (3a) Is information related to the contaminated(s) plume available (i.e., isoconcentration maps, site drawings, etc.)?

(3b) If **No**, then a VEC cannot be ruled out; check **Yes** in #4 below indicating it is likely a VEC exists. If **Yes**, then:

Yes No (3c) Is the site less than 100 feet to the nearest edge of a contaminated [non-petroleum hydrocarbon] plume(s)? If **Yes**, then check **Yes** in #4 below indicating it is likely a VEC exists.

Yes No (3d) Is the site less than 30 feet to the nearest edge of a dissolved petroleum hydrocarbon plume(s)? If **Yes**, then check **Yes** in #4 below indicating it is likely a VEC exists.

If the distance from the nearest edge of a contaminated plume to the nearest existing or planned structure on the site is less than 100 feet for non-petroleum hydrocarbon COC, or less than 30 feet for dissolved petroleum hydrocarbons, then it is presumed that a VEC *currently* exists beneath the site. If the distance from the nearest edge of the contaminated plume is greater than or equal to 100 feet for non-petroleum hydrocarbons, or 30 feet for dissolved petroleum hydrocarbon chemicals of concern, then it is presumed unlikely that a VEC *currently* exists beneath the site.

(4) Is it likely that a VEC *currently* exists beneath the site?

Yes No If **No**, then the VEC screening is complete and no further investigation is recommended at this time. If **Yes**, Ninyo & Moore recommends performing additional assessment, such as a Tier 2 VEC assessment according to ASTM E 2600-15.

[1] Based on guidance presented in the ASTM E 2600-15 Standard.

APPENDIX G

Qualifications of the Environmental Professionals

Gabriel A. Haro, LRC ST

Staff Geologist

EDUCATION

B.S., Geology, 2018, University of California Davis

CERTIFICATIONS

CDPH Lead-Related Construction Sampling Technician, No. 9869

AHERA Building Inspector, No. 0522BII190562

40-Hour OSHA HAZWOPER Certification (with annual updates)

As a Staff Geologist, Gabriel provides field services for projects; provides input for technical reports; work with subs onsite (drillers, etc) during field services; and assists Project Managers and Senior Staff personnel with tasks.

EXPERIENCE

Marques Holdings, 7793 Bar du Lane Water Quality Compliance, Sacramento, California: Assistant Project Manager for a residential development project located in southern Sacramento. The project included construction monitoring to document fill and grading occurring in previously mapped sensitive habitats; preparation of the associated monitoring report; and coordination with the County of Sacramento and Regional Water Quality Control Board (RWQCB).

Little Egbert Tract (LET) Properties, LET Restoration Assessment, Solano County, California: GIS Technician for a planned wetland restoration project in Solano County. The project included revising map features and boundaries through ArcGIS Desktop under direction of the lead biologist as part of the aquatic resources delineation report and evaluation of agency jurisdiction.

Sacramento Municipal Utility District (SMUD), Nature Preserve Mitigation Bank, Herald, California: Biologist for a mitigation bank monitoring project managed by local utility provider SMUD. The project consisted of sampling vernal pools onsite to record presence and abundance of species of concern, and to measure the turbidity, water temperature, current maximum and potential depth, and estimate emergent vegetation at each location. The purpose of this contract was to measure overall bank success as outlined in the SMUD Long-term Management Plan for the site.

City of Vacaville, Routine Maintenance Agreement (RMA), Vacaville, California: Biologist for a multi-year contract with the City of Vacaville to perform surveys, monitoring, and reporting for projects included under the RMA. The project included performing a pre-construction survey along Alamo Creek at Fruitvale Road to determine the presence of nesting birds and state-protected vegetation. A technical report detailing the survey methodologies and results was submitted to the City to review and retain on record.

County of Placer, Dowd Road at Coon Creek Bridge Replacement Project, Placer County, California: Construction Monitor for a bridge replacement project along Dowd Road in Placer County. The project required monitoring and oversight of the removal of flagged live oak trees and willows prior to construction, and the installation of the Environmentally Sensitive Area (ESA) perimeter fencing. This project also included pre-construction surveys for sensitive species and required that worker environmental awareness training (WEAT) be delivered to all construction personnel working onsite.

Sacramento Municipal Utility District (SMUD), Franklin Substation and Transmission Line Project, Sacramento County, California: Construction Monitor for a high-voltage transmission lines upgrade project to support the newly constructed Franklin Substation. The purpose of the project was to verify and document compliance with all avoidance and minimization measures (AMM) as required by permits and the mitigation monitoring and reporting program. The project included pre-construction

Gabriel A. Haro

Staff Geologist

surveys for special-status species and the preparation of daily monitoring logs documenting monitoring activities and wildlife observations, including photo documentation.

Sacramento Municipal Utility District (SMUD), Solano Wind Project Phases 1, 2, and 3, Solano County, California: Biologist for a wind energy project managed by local utility provider SMUD. The project consisted of performing standardized avian bird and bat carcass searches along equally spaced transects surrounding each wind turbine generator (WTG). This project also included processing and reporting all applicable mortality and injury incidents to the lead agency and U.S. Fish and Wildlife Service (USFWS) per survey protocol.

East Bay Regional Park District (EBRPD), Seaborg Trail Culvert Replacement Project, Contra Costa County, California: Construction Monitor for the rehabilitation of the side slope along Seaborg Trail resulting from heavy storm damage in 2017. The project included monitoring of the installation of erosion control measures and performing per-construction surveys.

East Bay Regional Park District (EBRPD), Black Diamond Mine Preserve Three Ponds Restoration Project, Contra Costa County, California: Biologist for a washed out dam rehabilitation project managed by EBRPD. The project included performing pre-construction surveys to identify active burrows or nests in the project vicinity.

County of Yuba, Yuba Rices Crossing Project, Yuba County, California: Biological Monitor for a road widening project along Rices Crossing in rural Yuba County. The project included monitoring an active birds nest located within 100 feet of the construction work limits, and recording the project activities in a daily monitoring log.

San Diego Environmental Professionals

As a Principal Environmental Geologist and Manager of Environmental Sciences for Ninyo & Moore's San Diego Office, Mr. Beck, PG, CEG, CHG, EM, QSD/QSP, has extensive experience as Program Manager, Principal Environmental Geologist, Project Manager, and QA/QC Manager for large task order contracts and Capital Improvement Program Projects. Mr. Beck's project experience includes soil vapor, sediment, sludge, surface water, groundwater and soil vapor surface and subsurface site assessments; hydrologic/groundwater supply; hazardous building materials (HBM); human health and ecological risk assessments; technical studies for inclusion in California Environmental Quality Act (CEQA)/National Environmental Policy Act (NEPA) documents; remedial design; expert witness and litigation support; and remedial/ removal actions projects. Other experience includes site assessment investigations for real estate transfers; school sites; power and coal gasification plants; solar and wind generating facilities, Brownfields; pipeline; transportation and railroad rights-of-way; and regulatory compliance involving U.S. Environmental Protection Agency (EPA), California Department of Toxic Substances Control (DTSC), Regional Water Quality Control Board (RWQCB), Department of Environmental Health (DEH), Air Pollution Control District, and California Coastal Commission. Mr. Beck has participated in numerous technical work groups in preparing sections of the San Diego County DEH Site Assessment and Mitigation (SAM) Manual; served as technical advisor to the County of San Diego Department of Planning and Land Use for establishing CEQA criteria of significance for hazardous materials and water quality; and was technical co-chair for the RWQCB technical committee that prepared the current conditional waivers of waste discharge requirements for low threat discharges in the San Diego Region.

EXPERIENCE

San Diego County Regional Airport Authority (SDCRAA) On-Call Services Agreement, San Diego, California: Principal Environmental Geologist for this contract, provided technical input and services to SDCRAA regarding environmental issues pertaining to San Diego International Airport (SDIA) operations, maintenance, construction, and expansion. Acted as Principal Environmental Geologist and Contract Manager for the environmental constraints study for the final alternative sites considered as potential locations for either a new airport or the expansion of existing facilities.

SDIA CIP 104118E – NSU Storm Drain Trunk, San Diego, California: Principal Geologist and Technical Advisor for the construction of a new storm drain trunk for the north side redevelopment at the SDIA. The project included approximately 1,300 feet of 36-inch diameter gravity storm drain, 6,900 feet of 30-inch diameter force main, connection to an existing 60-inch diameter storm drain, storm drain pump station, and other associated storm drain structures. The storm drain was installed with approximately six feet of cover over the pipe in most areas with some sections deeper due to existing utilities. An approximately 570-foot long section of the new storm drain was also installed beneath Taxiway F via trenchless methods. Construction dewatering using wells was required to facilitate construction.

SDIA CIP 104066 – TDY Site/30-inch Storm Drain and Lift Station, San Diego, California: Principal Geologist and Technical Advisor for the construction of a new

Stephan A. Beck

Principal Geologist

30-inch storm drain and lift station at the SDIA. Project tasks included liaison and coordination with SDCRAA staff, Resident Engineer, and contractor; attendance at weekly construction meetings; preparation of a site-specific health and safety plan, environmental monitoring of excavating activities consisting of visual/olfactory observations and photoionization detector readings; and daily field reports with photo-documentation.

SDIA Naval Training Center (NTC) Inactive Landfill, San Diego, California: Principal-in-Charge and Technical Advisor for the NTC Inactive Landfill clean closure. The project involved identification, delineation, and characterization of buried wastes (construction, solid waste, burn waste); performance of a geotechnical investigation; evaluation of import fill suitability for cover; evaluation of remedial action alternatives; preparation and approval of the clean closure plan; preparation of cost estimates for implementation of corrective action; providing oversight, monitoring, and documentation of waste removal; preparation and submittal of the clean closure report to the SDCRAA and RWQCB; interface and negotiation with the RWQCB, California Department of Resources Recycling and Recovery, Local Enforcement Agency, and other agencies; presentation of data at various meetings and to technical advisory boards; and enrollment of the remaining burn site in RWQCB Order No. R9-2012-0003.

SDIA Airport Site Selection Program, San Diego, California: Principal Environmental Geologist for the Airport Site Selection Program (ASSP). This program was focused on evaluating three alternative airport sites within San Diego and Imperial Counties. In addition to the three alternative airport sites, evaluated alternative alignments for MagLev and utility corridors to the alternative airport sites in eastern San Diego County and Imperial County. Performed a customized evaluation of potential solid and hazardous waste impacts associated with development of each site and prepared cost estimates regarding potential environmental mitigation. Reviewed extensive in-house background data and performed research of federal, state, university and county records; researched and coordinated with federal, state, and county agencies; and compiled and incorporated information into a Geographic Information System (GIS) format.

SDIA North Side Redevelopment Projects (North Side Interior Road, SAN Park 2, FBO Taxiway, and Taxiway Bypass), Construction Oversight, San Diego, California: Contract Manager and Principal Technical Advisor for environmental consulting services for several construction projects within the North Side Redevelopment Area, which was historically part of a former General Dynamics aerospace facility. Assisted SDCRAA staff in obtaining regulatory acceptance for the reuse of non-hazardous soil within the redevelopment area utilizing existing laboratory data and familiarity with acceptable soil/material reuse criteria. Performed sampling and analysis of concrete and asphalt demolished from the site for polychlorinated biphenyls (PCBs) to receive SDCRAA and RWQCB approval for the on-site reuse as base material. Provided construction oversight to maintain the contractor's compliance with the North Side Environmental Work Plan, Soil Management Plan, and Community Health and Safety Plan (CHSP), including performance of community health and safety monitoring, soil screening, documentation, and preparation of various technical memos and project closeout reports.

Port of San Diego (POS) SDIA Former Teledyne Ryan Aeronautical (TDY) Facility Pre-Demolition Survey, San Diego, California: Principal Environmental Geologist for this pre-demolition Hazardous Building Materials (HBM) Survey within 55 buildings at the 44-acre facility in anticipation of future redevelopment. The survey included the collection and analysis of 1204 suspect asbestos-containing material samples, collection of 748 x-ray fluorescence instrument readings of painted surfaces suspected of containing lead, and documentation of the presence of items falling under the Universal Waste Rule. Using a six-member team, fieldwork for the survey and 55 individual building reports and associated tables of survey results were completed in less than two weeks. The survey data were compiled, organized, and analyzed using GIS tools and electronic maps for use in preparation of bidding documents. Abatement specification sections were also provided.

POS SDIA Teledyne Ryan Aeronautical (TDY) Facility Demolition, San Diego, California: Contract Manager and Principal Technical Advisor for the preparation and implementation of the CHSP for the demolition of the former TDY Facility. The CHSP was developed in accordance with San Diego County DEH SAM Manual guidelines and incorporated specific contaminants of concern (COCs) into the Conceptual Site Model. Based on the industrial usage of the property, proximity to the runway, and presence of hazardous building materials (HBM), perimeter action levels were established for airborne dust, airborne metals (including lead, mercury, and hexavalent chromium), volatile organic compounds, polychlorinated biphenyls (PCBs), and asbestos. Monitoring stations were established around the perimeter of the each day's work activities. Our Certified Industrial

Stephan A. Beck

Principal Geologist

Hygienist reviewed the monitoring data and the contractor was promptly notified if the action levels for COCs were exceeded. The CHSP monitoring results were discussed at the weekly progress meetings. Also provided hazardous building materials (HBM) abatement oversight, characterization of potentially contaminated soil stockpiles, concrete, and caulking, and preparation of close-out documents required for the final notice of completion.

SDIA 12kV Duct Banks Project, San Diego, California: Principal Geologist and Technical Advisor for environmental consulting services for the 12kV duct banks project, which involved the excavation of trenches for the installation of electrical conduit around the entire perimeter of SDIA. Provided soil screening for trenches excavated within burned waste associated with the former NTC Landfill, petroleum hydrocarbon impacted soil associated with a former fuel farm, and soil impacted with volatile organic compounds within the former TDY facility. Assisted the contractor with the appropriate handling and disposal of the wastes, performed community and worker health and safety monitoring, and documented the presence of burned wastes encountered on facility maps.

SDIA Terminal 2 West Solar Support Structure, San Diego, California: Principal Environmental Geologist for environmental support services for construction of a 2.2 megawatt photovoltaic solar support structure in the Terminal 2 West Parking Lot at SDIA. Services included the preparation of site-specific and community health and safety plans for the work, training of onsite project personnel, and provision of industrial hygiene support during intrusive operations. Industrial hygiene activities included real-time monitoring of volatile organic compounds, associated with historical unauthorized releases of gasoline and other fuels, using combustible gas meters and photoionization detectors.

POS Various Projects, San Diego, California: Since 1994, Mr. Beck has been Program Director, Project Manager, Technical Advisor, and QA/QC Manager on numerous Port District on-call site assessment contracts involving Phase I due diligence, Phase II investigation, National Contingency Plan, Preliminary Endangerment Assessment, Remedial Investigation, Feasibility Studies, Risk Assessment, Public Participation Plans, Remedial Action Plans, NEPA/CEQA studies, and regulatory compliance issues and public concerns. Mr. Beck's involvement on such projects, has led to the swift and successful completion of these high profile, environmentally sensitive projects. Mr. Beck continues to provide technical input, QA/QC management, and regulatory liaison and negotiation for projects at Shelter Island Boat Launch, Tenth Avenue Marine Terminal, Seaport Village, National City Marine Terminal, Chula Vista Bayfront development, and Pond 20.

POS Eighth Avenue Tidelands Dump/East Parking Lot and Vicinity Remediation Oversight, San Diego, California: Principal-in-Charge, and Technical Advisor during site assessment activities to delineate the extent of the former burn site and manufactured gas plant (MGP) waste, preparation of the Remedial Action Workplan to remove groundwater source impacts (MGP waste and soil impacts) at the former landfill/burn site in accordance with RWQCB CAO 95-21. Provided oversight of remedial excavation activities, including field/photo documentation, verification sampling and analysis, and interface with the lead regulatory agency and responsible parties. Soil excavation monitoring services included documenting the removal of approximately 51,000 tons of contaminated soil for offsite disposal and 4,000 cubic yards of clean soil for onsite reuse. Oversaw the preparation of weekly public notification messages related to community health and safety air monitoring and project progress; provided technical support to the POS and the Contractor; and created an electronic database system to track results of confirmation sample testing to facilitate the planning and efficient excavation of areas requiring over excavation.

Metropolitan Transit Development Board On-Call 5-Year Environmental Services Contract, San Diego County, California: Contract Manager and Principal Environmental Geologist for this on-call contract. Services included third-party review, regulatory liaison, site assessments, permitting, stormwater compliance, construction management services, hazardous materials management and disposal, and lead and asbestos abatement oversight. Provided critical senior technical expertise and quality review on stormwater pollution prevention protocols for the Mission Valley East Light Rail Extension project.

San Diego Unified School District As Needed Environmental Consulting Services Contract, San Diego, California: Principal-in-Charge, Technical Advisor, and QA/QC Manager for Phase I Environmental Site Assessments (ESA) at 13 proposed and existing elementary, middle, and high school sites within the jurisdiction of the San Diego Unified School District (SDUSD). The proposed sites included properties with existing commercial, industrial, and residential land uses. Phase II ESAs were also

Stephan A. Beck

Principal Geologist

conducted on nine existing SDUSD school sites and two proposed SDUSD school sites. Mr. Beck also provided technical input and report preparation assistance regarding implementation of Remedial Action Workplans at several of the sites to cleanup lead and organochlorine pesticides in soil. This work was performed under the direction of the California Department of Toxic Substances Control (DTSC).

[California Department of Resources Recycling and Recovery \(CalRecycle\) Closed, Illegal and Abandoned Disposal Site Investigation Program, Various Locations, California](#): Principal-in-Charge and Technical Advisor for the Closed, Illegal and Abandoned (CIA) Site Investigation Program. This contract includes subsurface investigations of illegal disposal sites, solid waste disposal and co-disposal sites where further site characterization is necessary for monitoring, enforcement action, or site cleanup. Investigations have included excavating and logging trenches and test pits and drilling borings to characterize subsurface materials, delineation of the extent of burned wastes or other buried wastes to evaluate recommended remedial action. The disposal site projects have all been sites where there has been an identified potential risk to human health and the environment.

[County of San Diego Burnsite and Landfill Engineering Services As-Needed Contract, Various Locations, San Diego County, California](#): Principal-in-Charge and Technical Advisor for an on-call environmental services to the County of San Diego Department of Public Works as part of its three year, \$500,000, Burn Site and Landfill Engineering Services As-Needed Contract. The general scope of work for this contract focuses on conducting investigations and remedial action at County inactive solid waste disposal sites, most of which are former burn sites. The specific engineering services required by the County include characterizing and delineating former burn sites; preparing landfill closure and post-closure maintenance plans; preparing construction plans, specifications, and cost estimates for landfill maintenance projects; implementing remedial action plans, preparing of health and safety plans; value engineering; and assistance during the bidding process for construction activities.

[City of San Diego, As-Needed Environmental Services Site Assessment and Mitigation Process Contract, San Diego, California](#): Principal-in-Charge for this five-year contract awarded to Ninyo & Moore, which includes conducting environmental site assessments at contaminated, City-owned properties throughout the County of San Diego. Scope of services include: work plan and health and safety plan preparation, field investigations (drill, sample, analytical testing), human health risk assessments, groundwater monitoring and sampling, and report preparation including corrective action plans and site conceptual models. The purpose of the contract is to assist the City of San Diego in obtaining regulatory agency closure of its properties that have been affected by unauthorized releases from underground storage tanks (USTs).

[County of San Diego Department of General Services, San Diego County, California](#): Program Manager provided environmental and geotechnical consulting services to the County of San Diego Department of General Services (DGS) under a three-year contract awarded in 2011. Consulting services were provided for a total of approximately 20 individual DGS properties. Geotechnical services included geotechnical and hydrogeologic evaluations and floor flatness testing. Most of the environmental projects involved soil, groundwater, and soil vapor investigations and remediation associated with leaking USTs. For each site, we obtained, reviewed, and compiled background information, met with DEH staff to discuss the planned investigation strategy, prepared DEH-approved site assessment work plans, and implemented work plans to delineate the extent of impacted soil, groundwater, and soil vapor. Of the more than 15 UST release cases, all but two have received regulatory closure.

[Chula Vista Bayfront Master Plan EIR, Chula Vista, California](#): Principal Environmental Geologist for a hazardous materials technical study (HMTS) for the Chula Vista Bayfront Master Plan. The project area consists of a number of parcels along the bayfront in the city of Chula Vista, California totaling approximately 550 acres under the ownership and jurisdiction of the Port of San Diego, including land acquired from B.F. Goodrich, vacant and underutilized areas, and the existing South Bay Power Plant parcel. Services included review of maps, reports and other environmental documents pertaining to the site; review regulatory agency databases for the site and for properties located within a 1,000-foot radius of the project area; and review of a HMTS report documenting findings and providing opinions and recommendations regarding possible environmental impacts to the project area.

[City of San Diego, Water Main Replacement Group 793, San Diego, California](#): Principal Environmental Geologist for environmental consulting services for the City of San Diego Water Main Replacement Group 793 project. Services included preparation of an Initial Site Assessment (ISA) report for the length of the proposed alignment to identify facilities in the vicinity

Stephan A. Beck

Principal Geologist

that had the potential to have impacted soil and/or groundwater along the alignment. Specific tasks performed during the ISA included a review of readily available maps and environmental reports pertaining to the alignment, review of federal, state, and local regulatory agency databases and select files, site reconnaissance, review of historical documents, including historical aerial photographs and city directories, and impact analysis. The ISA identified multiple facilities of potential environmental concern.

Otay Water District 36-inch Pipeline EIR, El Cajon, California: Principal Environmental Geologist for environmental consulting for the Otay Water District 36-Inch Pipeline. Services included preparation of a Hazardous Materials and Hazardous Waste Initial Site Assessment (ISA) and a Phase II Environmental Site Assessment (ESA) for the evaluation of potential hazardous materials and wastes along the proposed alignment. The scope of work for the ISA included a review of historical sources, a field reconnaissance, and a regulatory agency database search for facilities with the potential to have impacted soil or groundwater. The significance of potential hazardous materials and waste impacts were evaluated with respect to the size of the study area and the nature of the proposed improvements

City of San Diego Chollas Triangle Master Plan EIR, San Diego, California: Principal Environmental Geologist for a Hazardous Materials Technical Study (HMTS) for the Chollas Triangle project. The purpose of the HMTS is to document the presence of properties, which may have been impacted by hazardous materials or wastes, and to document, with respect to the California Environmental Quality Act (CEQA), the significance of impacts from the project area with respect to hazardous materials and wastes, and to discuss measures that can be implemented to reduce or mitigate the potential impacts. We prepared an HMTS report documenting our findings and providing opinions and recommendations regarding possible environmental impacts to the project area from potential releases of hazardous materials or wastes and potential impacts from hazardous materials or wastes from future development in the project area.

City of San Diego Interstate 5 South Multimodal Corridor Study and Environmental Impact Report (EIR), Chula Vista, California: Principal Environmental Geologist for a Hazardous Waste Initial Site Assessment (ISA) that was prepared to evaluate potential impacts to the project from hazardous materials or wastes along the corridor. Historical resources, such as aerial photographs and topographic maps, were reviewed to document the presence of facilities (e.g., gas stations, large industrial plants) or land uses (e.g., industrial, agricultural) indicative of potential environmental concerns. Environmental regulatory databases and files were reviewed for properties associated with unauthorized releases of hazardous materials or wastes to soil and/or groundwater. A comprehensive ISA report summarizing the research activities described above and providing conclusions regarding hazardous material/waste constraints and recommendations for further assessment was provided for the project.

Grantville Redevelopment Project and Study Area, Hazardous Materials Technical Study, San Diego, California: Principal Environmental Geologist for a Hazardous Materials Technical Study (HMTS) of the Grantville Redevelopment Area. The HMTS was performed as part of the Program Environmental Impact Report (EIR) that was prepared for the project area. The project area consisted of three non-contiguous areas generally located north of Interstate 8, south of Mission Gorge Road, east of Interstate 15, and west of Jackson Drive, totaling approximately 1,400 acres. Facilities of potential environmental concern identified in, within and near the project area included gasoline service stations, car washes, automobile dealerships and automobile repair facilities that had experienced unauthorized releases. The HMTS contained a table that identified the sites of potential environmental concern, the nature of the releases, contaminants released and areal extent of the contaminant plume. Mitigation measures recommended for the identified properties of potential environmental concern included performing a risk assessment where contamination has been identified or is discovered during construction activities, and at which soil is to be disturbed; and characterizing and properly disposing of contaminated soil that is excavated during future redevelopment activities.

McCabe Ranch II Specific Plan EIR, Imperial County, California: Principal Environmental Geologist for a Hazardous Materials Technical Study (HMTS) of the agricultural property designated as McCabe Ranch II. The proposed development of the site (the Specific Plan) will involve the construction of single- and multi-family residences, schools, community facilities, parks, and commercial establishments. The HMTS will be incorporated into an Environmental Impact Report (EIR) for the Specific Plan. The HMTS estimated the potential for existing environmental impacts to the site from the presence of hazardous materials/wastes on or in proximity to the site, and discussed mitigation measures that can be implemented to reduce or eliminate the potential impacts with respect to the proposed adoption of the Specific Plan. The environmental issues identified during the preparation of

Stephan A. Beck

Principal Geologist

the HMTS included the following: 1) Historic fuel-containing underground storage tanks with an associated leaking underground storage tank case at an adjacent property, and 2) the presence of suspected organochlorine pesticides as a result of current and historical agricultural uses of the site.

Harbor Drive Pedestrian Bridge, San Diego, California: Technical Advisor during environmental consulting services in support of the Harbor Drive Pedestrian Bridge project, a suspended 466-foot self-anchored suspension bridge to link the waterfront's South Embarcadero, San Diego Convention Center, and East Village's Ballpark District. The ISA report was prepared to evaluate environmental conditions of the site and vicinity based on impacts caused by historical operations at the site and vicinity. The Soil Management Plan was prepared to guide the Contractor in the management and disposal of wastes excavated during the project construction. The bid specifications included contractor submittals (health and safety plans) and requirements for the excavation, stockpiling, characterizing, loading, transportation, and disposal of wastes generated at the site during remedial action. Also prepared and implemented a Community Health and Safety Plan (CHSP) for subsurface construction activities, provided oversight for waste characterization and disposal, coordinated with the on-site contractor, provided regulatory agency interfacing, provided litigation support, and prepared a project closeout report.
