 Potential Media Affected: Soil Vapor
 Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE)
 Site History: Comments: The approximately 6.77-acre Property is located in a commercial area approximately 14 miles north-northwest of Downtown San Diego. The Property includes two 3-story buildings, an adjacent three level parking structure, and surface parking. The building of interest is located at 3033 Science Park Road (TP-II), and consists of approximately 97,955 square feet. Previously, the building consisted of laboratory space, offices, shipping areas, administrative offices, IT space, meeting rooms, building maintenance equipment and common areas. The property was first developed with the current building in 1983. The building was occupied by a defense

contractor and its predecessors until the end of July 2012. The Property remained vacant until the Sub-Slab Depressurization System (SSD System) was installed and became operational. A preliminary environmental audit completed in 1990 reviewed business and agency records regarding the handling and use of hazardous substances. The PEA concluded that there was no readily available evidence to suspect that soil or groundwater was impacted beneath the site. Starting in late 2011, Ramboll Environ, formally named ENVIRON International Corporation (RAMBOLL) was retained by ARE-SD Region No. 35 LLC to complete an environmental investigation at the site to determine if there are residual chemical impacts related to historical operations and to implement any remedial measures that would be needed. The site was investigated between late 2011 through August 2012. Soil and soil vapor investigation identified elevated levels of soil vapor to depths up to 25 feet below grade. Soil sampling in these areas did not identify any soil impacts. The vapor impacts were found to be on the first floor, in the area that was originally used for shipping and receiving and the laboratory. Between August 2012 and February 2013, a site mitigation plan was developed. The plan was approved on February 19, 2013, and the system was installed between October 2014 and December 2014. The SSD System went into operation on January 7, 2015. On June 1, 2016, the Sub-Slab Depressurization System Installation and Indoor Air Sampling report was submitted providing documentation of the SSD System operation from January 7, 2016 through May 2016. Additionally, this document provided sampling results for both indoor air in the area of the SSD System and two outdoor air samples to obtain ambient background concentrations. In general all the indoor and outdoor samples had detections of the three primary contaminants associated with the release (Carbon Tetrachloride, Tetrachloroethene (PCE), and Chloroform). The concentrations of PCE and Chloroform in the indoor samples were below levels of concern. Both the indoor and the outdoor samples had Carbon Tetrachloride levels that were similar in magnitude. In comparing indoor and outdoor results, RAMBOLL concluded that the elevated levels in the indoor samples were likely due to the intake air from the ventilation system and not due to vapor intrusion. To verify this conclusion, DEH requested that a second round of sampling be completed at the same sampling locations and three additional sampling locations. Two of the new locations are indoors in an area on the first floor furthest from the impacted area and on the second floor. The third location was an outdoor sample located upwind of the building. This testing was completed in September 2016. The second round of testing documented lower concentrations than the first round, and the indoor results demonstrated that the level of Carbon Tetrachloride measured is primarily a result of ambient air that is being pulled in by the ventilation system. Based on DEHs review of the operation data of the SSD System and the indoor and outdoor air monitoring, the SSD System is operating as designed and is effective in mitigating vapor intrusion through the building floor. Please note that the SSD System needs to continue operating and be maintained and monitored as defined in the recorded Covenant of Environmental Restrictions.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
