UST Name: UNDERGROUND TANK 114873 T009
Last Update: 2012-11-02 14:17:38
Permit Number: 114873
Tank Type: SINGLE WALL
Additional Id: AT3902/BL7
Capacity Gallons: 550
UST Contents: DIESEL
Other Content Info: DIESEL
Reg Status: REMOVED
Remove Close Date: 1997-09-23 00:00:00
Year Installed: Not reported
Pipe Type: Not reported
Delivery System: Not reported
Monitor Code: 90
UST Monitor Method: NO MONITORING ALTERNATIVE SELECTED. VERIFY AND ENTER MONITORING ALTERNATIVE DURING INSPECTION.

Quarterly Update: On April 29, 1998, DTSC issued a Resources Conservation and Recovery Act (RCRA) Facility Assessment (RFA) for General Atomics. On June 30, 1999, DTSC issued a revised RFA. The revised RFA identified eight solid waste management units (SWMUs) and one area of concern (AOC) that either have released or may release hazardous waste or hazardous waste constituents into the environment. The SWMUs and AOCs include Building 25 (SWMU 1), Building 41 Filtration Unit (SWMU 2), Building 41 Mixer Unit (SWMU 3), Building 41 Drying Oven (SWMU 4), Building 41 Baler/Compactor (SWMU 5), Building 41 Mixed/Hazardous Storage (Lower) Yard (SWMU 6), the Upper Yard Storage Area (SWMU 7), Building 37N residual contamination (SWMU 8), and Building 21 TRIGA Building backyard (AOC 1). All of the SWMUs save SWMU 8 were demolished and closed under oversight from the U.S. Nuclear Regulatory Commission (NRC) in 2005. In 2002, an Interim Measure consisting of soil excavation near building 37 removed 3000 cubic yards of soil, with an estimated 86.2 kg (190 lbs.) of TCE removed. In 2006 and 2007, a RCRA Facility Investigation (RFI) generally characterized the subsurface contamination and Indoor Air intrusion. Of the remaining 2 areas of possible concern are SWMU 8 and AOC 1. AOC 1 has already been investigated and assessed, and has been approved for continued industrial use. SWMU 8 (the residual contamination at Building 37) it still undergoing Corrective Action for the following hazardous waste constituents: 1,4-Dioxane, Perchloroethylene, and Trichloroethylene. Another Interim Measure is in process for the Indoor Air issues in Building 37, to try and mitigate existing Indoor Air issues through modifications to the HVAC system. General Atomics is still in a fee-for-service agreement with the DTSC.

Comments: DTSC approved both the 2Q2016 and 2017-2018 reports with one letter. Enclosed in the letter were a variety of GSU concerns including a) that these results should not be conclusively used to determine soil vapor and indoor air conditions downgradient of this area; b) that regular indoor air sampling should be considered for the offsite office complex; c) that using a concentration of 500 micrograms per liter of trichloroethylene in groundwater as a criterion for soil vapor sampling in the offsite downgradient complex does not appear to be justified, and c) that more proactive groundwater remediation at the source area should take place to prevent further contaminant migration.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Completed Area Name: Sites With No Operable Unit
Completed Sub Area Name: ONSITE
Completed Document Type: RFI Report
Completed Date: 06/28/2018
Comments: DTSC approved this report. It identified that while soil vapor and groundwater in the northern portion of Building 37 is significantly contaminated with volatile organic compounds (VOCs), the contamination attenuates away from the northern portion of Building 37 into the southern portion. Also, while three groundwater wells were installed in the southern portion of Building 37 as part of this investigation, groundwater monitoring of these wells will occur in the future, to help clarify distribution of VOCs in groundwater.

Completed Area Name: PROJECT WIDE

Comments: The workplan revision was completed.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Monitoring Report

Completed Date: 08/13/2018

Comments: DTSC has approved the report. DTSC is raising concerns with the lack of effectiveness at preventing volatile organic compounds (VOCs) in groundwater from migrating offsite: there have been 2 significant efforts to impede these VOCs (the phytoremediation pilot study and the permeable reactive barrier pilot study), and both have largely failed. DTSC's recommendations were made to affect future reporting.

November 6, 2020.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/18/2022
Comments: This Waste Discharge Requirements Monitoring Report was prepared primarily for the San Diego Regional Water Quality Control Board, but is also transmitted to DTSC to convey how the groundwater is being remediated through the ISCO injection activities. 88,000 gallons of 5% (by volume) Sodium Permanganate was injected between July and September 2021 at the GA site. The oxidant continues to reduce concentrations of volatile organic compounds in site groundwater. This is affecting both downgradient groundwater and source-zone groundwater in positive ways. The report also recommends that groundwater remediation continues into the next quarter.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 08/29/2017
Comments: There was an email exchange that took place between Jill Slater and General Atomics that identified that they were okay with the cost estimate as written. Since the signed acknowledgement form was not sent to DTSC, this is as placeholder for approval of the cost estimate for the 17-18 fiscal year.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/26/2018
Comments: DTSC submitted the cost estimate for the General Atomics site, which estimates 201 hours of work for the project manager, with the total estimated cost of \$191,652 for DTSC oversight for the complete July 2018- June 2019 DTSC fiscal year.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Completed Area Name: Sites With No Operable Unit
Completed Sub Area Name: ONSITE
Completed Document Type: Technical Report
Completed Date: 09/25/2020
Comments: The 60-day report identified the In-Situ Chemical Oxidation wells that were drilled and the geological information acquired during drilling. DTSC accepted the document and recommended it be included in the corrective measures implementation process and documentation.

Completed Area Name: Sites With No Operable Unit
Completed Sub Area Name: ONSITE
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 03/26/2021
Comments: This report identified many of the details of the groundwater pump testing that occurred, as well as the in-situ chemical oxidation pilot study and the results of that study. This report identified that the proposed ISCO is effective in groundwater at the General Atomics site. While DTSC had comments on the report, DTSC recommends in our letter that these comments are addressed in the Corrective Measures Implementation Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 02/01/2021
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Plan
Completed Date: 12/12/2019
Comments: The Groundwater Sampling Program proposes groundwater sampling for the site and offsite wells, and recognizes that sampling rates at different wells will likely have to change over time due to in-situ chemical oxidation. DTSC approved this plan, and recommended articulating a plan for determining when sampling frequency should change for the site and offsite wells in the Corrective Measures Implementation Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 11/06/2020
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 10/30/2020
Comments: This report documented the groundwater information post Phase 1 and 2 injections of the ISCO pilot study. The groundwater data showed significant reductions in concentrations of VOCs at the site's groundwater, based on the oxidant's destruction of VOCs. The report also documents that small amounts of metals are mobilized during injection activities, but the metals concentrations appear to reduce a few months after injections are performed.

S103964279

Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/19/2018
Comments: DTSC performed both a site visit on 12/18 and had a meeting with General Atomics and their consultants on 12/19 to discuss historical corrective action activities and focused on the Government Performance and Results Act 2020 goals of US EPA to determine what needs to be done at the site to achieve these goals.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 04/30/2018
Comments: General Atomics submitted this final Waste Discharge Requirements report before the San Diego Regional Water Quality Control Board allowed them to discontinue the waste discharge reporting process. This report, as well as those previously submitted to DTSC, show that the permeable reactive barrier has had little to no effect on volatile organic compounds in groundwater migrating offsite from the General Atomics property.

Completed Area Name: Sites With No Operable Unit
Completed Sub Area Name: ONSITE
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 03/21/2019
Comments: The final Groundwater Pump Test and In-Situ Chemical Oxidation Bench Scale and Pilot Test Work Plan is implementing extracting groundwater and seeing the results on the local aquifer, and acquiring bench scale and pilot study data for oxidants that can be used to effectively destroy solvents in groundwater at the General Atomics site. Both of these pilot studies will be used to determine if these technologies can be used as components of the final remedy for the General Atomics site, such that offsite migration of contamination becomes inconsequential.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/08/2019
Comments: This report identified information about how quickly contaminants in the subsurface below Building 37 regenerate sufficiently for SVE operations to be useful and necessary.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/08/2019
Comments: This report documented the various characteristics of the SVE system given three different extraction scenarios, including measuring vacuum across the building slab in these different scenarios. The report demonstrates that expansion of the SVE system is warranted, due to the lack of effective extraction in the southern portion of Building 37.

Description: Caller states an electrical car fire in a parking lot was put out by the fire department which resulted in the substance releasing into a dry storm drain. Caller states an outside contractor responded to vacuum out the dry storm drain but there was no longer any standing free liquid to vacuum out.

 RAB: Not reported
 NPL Status: Not Listed
 Description: LOCATED IN THE TORREY PINES / LA JOLLA AREA OF THE CITY OF SAN DIEGO, CA The Technical Advisory Group at HNC subsequently performed an expanded site investigation to evaluate whether a NOFA recommendation was appropriate. It was determined that there was no readily identifiable project concerning CWM and that documentation was lacking to confirm the presence of conventional OE. Therefore, the final RAC score for this site is a 5 (NOFA).
 History: THE 1282.95 ACRES SITE WAS USED BY THE ARMY FROM 1940 TO 1946 AS AN ANTI-AIRCRAFT REPLACEMENT TRAINING CENTER.

Background Info: Camp Matthews was established in 1918 as a rifle range for the Marine Corps. Over time it expanded and by 1956 there were a total of 6 rifle ranges, one pistol range, one mortar/flame thrower/hand grenade/bazooka range, three small bore ranges, one skeet range,

and three school ranges. The mortar/flame thrower/ handgrenade/bazooka range (Range H) was located in the panhandle area of the camp. In April 1999, approximately 200 3.5 inch practice rockets were discovered during the excavation of a hillside. This location is approximately 1000 feet west of former Range H. The original INPR indicates that Range H was decontaminated prior to disposal. A mining company was used in the early 1960s to salvage lead and brass from the ranges. Most of the camp area has been extensively developed. The hillside where the rockets were discovered was professionally swept with mine detection equipment in April 1999. In February 2003, approximately 40 practice rockets were found at two construction projects on this formerly used defense site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/27/2022	Source: EPA
Date Data Arrived at EDR: 11/01/2022	Telephone: N/A
Date Made Active in Reports: 11/15/2022	Last EDR Contact: 12/01/2022

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Data Release Frequency: Quarterly

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UST CLOSURE: Proposed Closure of Underground Storage Tank (UST) Cases

UST cases that are being considered for closure by either the State Water Resources Control Board or the Executive Director have been posted for a 60-day public comment period. UST Case Closures being proposed for consideration by the State Water Resources Control Board. These are primarily UST cases that meet closure criteria under the decisional framework in State Water Board Resolution No. 92-49 and other Board orders. UST Case Closures proposed for consideration by the Executive Director pursuant to State Water Board Resolution No. 2012-0061. These are cases that meet the criteria of the Low-Threat UST Case Closure Policy. UST Case Closure Review Denials and Approved Orders.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/29/2022	Source: Drug Enforcement Administration

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

Date of Government Version: 06/24/2020	Source: Department of Health & Human Services

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

Date of Government Version: 01/03/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/31/2022	Telephone: 202-272-0167

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset, as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Northwest Map:	11993850 DEL MAR OE W, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
DEL MAR	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	1/4 - 1/2 Mile WSW	Not Reported
1G	1/4 - 1/2 Mile WSW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TERRACE ESCARPMENTS

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Good Afternoon,

HMD records found for provided address and APN have been uploaded to WeTransfer due to file size. You should receive an e-mail from that website in the next 10 to 30 minutes. If you do not, please check your Spam and Junk folders before contacting me.

There are two (2) SAM cases, LSAM-H14775-001 and LSAM-H14775-002 at the address and APN. If you would like to review those records visit the below link to download the files. All files are in the document library.

New Search Function: Scanned files for closed Site Assessment and Mitigation Program cases and Monitoring Well Program permits can be downloaded directly through the new DEH Document Library at:

<http://www.sandiegocounty.gov/content/sdc/deh/doclibrary/>

You can search by Record ID, APN, address, document category, or keyword.

Thank you,

Edwin C. Andrus

Ms. Patti Miceli
Biogen Idec, Inc.
11011 Torreyana Road
San Diego, CA 92121

Dear Ms. Miceli:

DEH ASSISTANCE PROGRAM, FILE #H14775-002
FORMER BIOGEN IDEC FACILITY
11011 TORREYANA ROAD, SAN DIEGO, CALIFORNIA

The Department of Environmental Health (DEH), Site Assessment and Mitigation Program (SAM), reviewed the environmental investigation report related to the above-referenced property, prepared by Environmental Business Solutions (EBS) on November 30, 2005, among additional information provided by Biogen Idec, Inc. The report summarizes the site investigation and activities performed at the above-referenced location. Provided that the information presented to DEH/SAM was complete, accurate, and representative of existing site conditions, **this agency concurs that the cleanup goals established for the subject site have been met.**

Please be advised that this letter does not relieve the responsible party of any liability under the California Health and Safety Code or the Porter Cologne Water Quality Control Act.

Changes in the present use of the above site as a research and development building complex may require reevaluation to determine if the change will pose a risk to public health.

Thank you for selecting the Department of Environmental Health as your lead agency to assist you with the progress of your environmental project. Please contact Kent Huth of the Site Assessment and Mitigation Program, at (619) 338-2243, if you require additional assistance.

Sincerely,

GEORGE McCANDLESS, Program Manager
Supervising Environmental Health Specialist
Site Assessment and Mitigation Program

Non-Tank - Voluntary Assistance Program

**Case Closure Summary
DEH Assistance Program**

III. SITE CHARACTERIZATION AND/OR INFORMATION (Continued)

H14775-002

MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS	MAXIMUM	REMAINING
See below.		
<p>On December 5, 2005, Voluntary Assistance Case #H14775-002 was opened through the Corrective Action Program in order to assess previous chemical releases at the Site.</p> <p>On June 7, 1999, a total of 5 gallons of Sentol solution, a 37% phosphoric acid and 63% water solution with a pH of 1, was released into the municipal storm drain at the Site. Following this, the storm drain was flushed with a constant flow of water for an hour. pH readings of the water in the storm drain inlet indicated that the solution had been diluted to a pH of approximately 5.5 prior to its release to the municipal storm drain system.</p> <p>On September 10, 1999, a total of 1.5 gallons of hydraulic oil was released to the asphalt parking lot at the Site. The release was contained without a release to any soil on-site or off-site.</p> <p>On October 31, 2002, a total of 2 gallons of Minncare, a 20% hydrogen peroxide and 4% peroxyacetic acid solution with a pH of 1.3, was spilled onto the asphalt at the Site in the are of the south delivery area. The liquid was flushed with water to a storm drain inlet, releasing it to the ground at the south storm drain outfall at the top of the canyon to the east of the Site. A total of 120 pounds of impacted soil was excavated and disposed of offsite at the Ensco facility in El Dorado, California.</p> <p>Based on the small quantities of chemicals released, the lack of impact to groundwater, the non-beneficial use of groundwater in the area, and the remediation that took place following the chemical releases, DEH concurs that no further action is required at the Site.</p>		

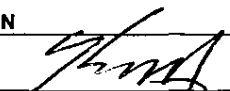

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? YES
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? YES
Does corrective action protect public health for current land use? YES Case review based on current/proposed use as: INDUSTRIAL - Research and Development Building Complex
Are there other issues DEH needs to follow up on: NA
Site Management Requirements: Any contaminated soil excavated as part of subsurface construction work must be managed in accordance with the legal requirements at that time.
Should corrective action be reviewed if land use changes? NO

Re: Spill of Hydraulic Fluid in parking lot of 11011 Torreyana Road

- On the morning of 9/10/99 a spill of a petroleum based liquid (probably hydraulic fluid) was discovered in the back parking lot at Torreyana. The spill extended from the maintenance shed to the emergency generator. Circumstantial evidence suggested that the source of the spill was the Pacific Waste Management truck that had been there earlier that morning. The maintenance personnel on-site at the time used their spill response supplies to prevent the fluid from moving towards the storm drain. Pacific was contacted and responded by sending out a clean-up crew. By about noon Pacific had removed all standing liquid. As follow-up I contacted Jack Bracston (278-6061) at Pacific to express my concerns regarding the impact of this incident to our stormwater compliance efforts. I ask him if they were planning on steam cleaning the spill area to remove all residual material. Jack's position was that steam cleaning was not worth the effort due to the low recovery rate of petroleum products from the asphalt. Had the surface been concrete it would have been different and they would have performed steam cleaning. He indicated that Pacific has had to deal with this type of situation before and that both the local Stormwater Office and the Dept. of Health Services concurred that their clean-up methods were sufficient. He agreed to send IDEC a letter to this effect for our files; this letter was received on 9/22 attached).

September 20, 1999

IDEC
Attn: Mark Thompson
3030 Callan Rd.
San Diego, Ca 92121

Per our conversation of September 7, 1999, concerning the hydrolic oil spill in your yard, the approximate amount of spill was 1.5 gallons spread over an asphalt area. This was absorbed by applying two layers of ground-up corn cob which absorbed surface oil. The corn cob was swept up and disposed of; the remainder of the spilled oil was absorbed into the asphalt. This is our standard method of cleaning oil spills and has been approved by Haz Mat...

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

AREA OF CONCERN DATASHEET

Instructions: Complete the following questions in detail for EACH release or suspected release identified in Section III FACILITY WALK-THROUGH INSPECTION - SPECIFIC AREAS or SECTION IV FACILITY WALK-THROUGH INSPECTION - OTHER AREAS and any other known or suspected releases. Do not include areas that have been or are being remediated under the oversight of an appropriate agency. If answers to questions are not known, then state "unknown".

1. Facility name: IDEC Pharmaceuticals Corporation
2. This sheet is being completed for a:
Known release X Suspected release
3. How was this release or suspected release discovered?
During the walk-through inspection? Previously known release? X
What checklist question(s) are related to this release (section/question) Checklist section III
Plant Support Utility Area
4. When did the release occur? 6/7/99
5. What was released and how much? Approximately five gallons of 37% Phosphoric acid.
(Trade name Sentol)
6. What caused the release? Material was being tranfered between containers located in
the plant support utility area.
7. Indicate the approximate area of the release (e.g. 3 feet in diameter, 5 feet X 4 feet.) Unknown
8. Was the release remediated? If YES, explain how. (Note: A datasheet need not be completed for releases remediated or being remediated under the oversight of an appropriate agency. Yes. Maintenance staff employed spill response equipment to control the spill and limit the release. The area was flushed with water.
9. Were samples collected? If yes, what were the results? Samples of water that entered the storm
drain system were collected and tested for pH. The pH was found to be 5.5.
10. List any environmental reports or studies performed on the area of concern and attach copies or summaries of the reports not submitted to the Department.

Re: Release of Sentol to the Stormwater System at 11011 Torreyana Road
cc. EH&S Files, Bert Van Loon

At 11:30 a.m. on 6/7/99 EH&S was informed that approximately 5 gallons of Sentol had been spilled unto the ground in the utility area, and that this liquid had moved into the storm drain line serving the lower level of the parking structure. Sentol is 37% phosphoric acid and 63% water.

By the time EH&S was notified several members of the maintenance department had already spent 20 minutes attempting to control the spill. Upon initial discovery those employees present had immediately carried out the actions identified as part of IDEC's best management practices for such an event; these actions included determining the source of the spill and shutting it down, notifying EH&S staff, limiting general employee access to the spill area, and closing the valve installed to prevent the release of contaminated storm water off-site into the neighboring canyon.

At the time of the spill it appeared that the material would move to the southern end of the facility, however, it did not, and moved instead to the north where it entered the main stormwater line serving Torreyana Road. Had the liquid moved south it could have been recovered from the sealed line using the pumps and drums available on hand. The control valve installed at the southern end of the facility was installed in preparation for this exact type of event. A control valve at the northern end of the property had not been installed since most industrial activities are concentrated at the other end of the building.

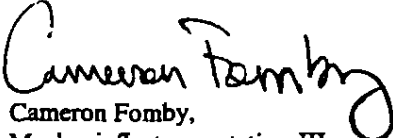

Although there was not sufficient time to prevent a release of material into the storm drain system clean-up operations began immediately on the residual surface contamination. This operation consisted of using a large quantity of clean water to flush the effected drain line; this action was intended to minimize the impact of the acid on the system. Several pH measurements were made at a sump adjacent to the point at which the drain line leaves the property. Based on readings taken at the time the pH of the slug of water released to the storm drain is estimated at 5.5.

The cause of the spill was primarily operator error. Cameron Fomby had left a transfer pump unattended for a moment and the hose fell out of the receiving container (Cameron's report is attached). No injuries occurred as a result of the release, and no adverse environmental impact is expected. No external agencies had to be contacted to assist with clean-up operations. EH&S is currently considering those actions that need to be taken to prevent a similar event from recurring, and will update the storm water pollution prevention plan accordingly. At this time I am recommending the installation of two additional control valves on the storm water lines exiting the property to the North. It should be possible to install one valve in the sump mentioned above and the other on the outfall entering the canyon adjacent to the vivarium.

On the afternoon 6/7/99 phone calls were made to the San Diego County Department of Environmental Health, Hazardous Materials Management Division, the Governor's Office of Emergency Services, and the City of San Diego Storm Water Program in order to verbally report the release. All calls were made between 2 and 3 p.m. Written notification of the incident was submitted today to these same agencies.

To Whom It May Concern,

At approximately 11:00am on Monday, June 7 1999, about 5 gallons of Sentol were accidentally spilled to the city sewer while transferring from one container to another. Large amounts of water were immediately sent to drain after it and after checking the pH at the last point of drain on the property, it was found to be 5.5pH. To avoid such problems in the future, it has been recommended that the end of the working utility yard be bermed up to contain any future spills in the area the chemicals are used.

06/10/99

Mr. Peter Neubauer
County of San Diego
Department of Environmental Health, HMMD
1225 Imperial Avenue
P.O. Box 129261
San Diego CA 92112-9261

Dear Peter,

This letter constitutes written follow-up regarding an incident during which approximately 5 gallons of a 37% phosphoric acid/63% water solution was released into a storm drain. This incident occurred at 11011 Torreyana Road, San Diego CA., 92121 at approximately 11 a.m. on 6/7/99. No injuries occurred as a result of the release, and no adverse environmental impact is expected. No external agencies had to be contacted to assist with clean-up operations.

At the time of the incident the employees involved began carrying out the procedures identified as part of IDEC's best management practices for such an event (i.e. immediate determination and shut-down of the source of the spill, notification of EH&S staff, actions taken to limit access to the spill area, and the closing of shut-off valves installed to minimize the release of contaminated storm water). Although there was not sufficient time to prevent a release to the storm drain, clean-up operations began immediately to minimize any impact to the environment. A quantity of clean water was used to flush the effected drain line. Testing for pH was carried out a sump adjacent to the point at which the drain line left the property. Based on readings taken at the time the pH of the material released to the storm drain is estimated at 5.5.

On the afternoon 6/7/99 a phone call was made to your office in accordance with the requirements for verbal notification within 24 hours following any release. In addition to notifying your agency, IDEC contacted the offices of the City of San Diego Storm Water Program, and the Governor's Office of Emergency Services. Written notification will be submitted to all agencies that received verbal notification. IDEC is currently considering those actions that need to be taken to prevent a similar event from recurring, and will update it's storm water pollution prevention plan accordingly. I anticipate that additional correspondence between IDEC and your agency may be required in order to closeout this incident. I may be contacted at (619) 458-8822, Monday through Friday, 9- 5 P.M.

Sincerely,

A handwritten signature in black ink that reads "Mark Thompson". The signature is written in a cursive style with a long horizontal stroke at the end.

FURTHER INVESTIGATION QUESTIONNAIRE IN CONNECTION WITH PHASE I ENVIRONMENTAL ASSESSMENT, FOR IDEC PHARMACEUTICALS CORPORATION, LOCATED AT 11011 TORREYANA ROAD, SAN DIEGO, CALIFORNIA, EPA ID NUMBER CAD981583479.

Dear Mr. GRAHAM:

Enclosed is the Further Investigation Questionnaire in connection with the Phase I Environmental Assessment required pursuant to the California Health and Safety Code section 25200.14.

The Department of Toxic Substances Control (DTSC) received the Phase I Environmental Assessment Checklist (Phase I Checklist) submitted for your facility. The Phase I Checklist indicates that further investigation is needed to determine the existence, nature and extent of hazardous waste contamination at or from your facility.

Please complete the enclosed Further Investigation Questionnaire and submit it to DTSC within 30 calendar days of the date of this letter to the address below:

Department of Toxic Substances Control
Hazardous Waste Management Program
State Regulatory Programs Division
5796 Corporate Avenue
Cypress, California 90630
Attention: Mr. Stephen W. Lavinger, Branch Chief

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our Web-site at www.dtsc.ca.gov.

Printed on Recycled Paper

Further Investigation Questionnaire
Page 2

The completed Further Investigation Questionnaire will facilitate DTSC to evaluate the scope of work for any necessary investigation and/or remediation at your facility. Based on the completed Further Investigation Questionnaire, DTSC may contact you to schedule a site inspection of your facility.

The submission of the Further Investigation Questionnaire does not preclude DTSC from taking any enforcement action against your facility or other necessary action to protect public health or the environment.

If you have any question regarding the Further Investigation Questionnaire, please contact Kian Soleiman at (714) 484-5396.

Sincerely,
Stephen W. Lavinger
Branch Chief
State Regulatory Programs Division
Southern California Branch

Yes No

What are they?

- Are any portions of the improvements remaining?

Yes No

If yes, please describe.

- d. Are you in possession of any title report, survey, historical photo or map for the site?

Yes No

If yes, please provide a copy of same and list below.

- e. Does any person or company, other than the owner, occupy the entire site or a portion of the site?

Yes No

If yes, please provide a detailed list (to include but not limited to name, address, and type of operation).

- f. Is there any open surface water or wetland area on, adjacent, or within one mile of the site or any indication that there is a high water table?

Yes No

If yes, where?

R. PROPERTY DESCRIPTION & ANALYSIS - continued

g. Is the site next to a storm drainage ditch or concrete lined storm water ditch? Yes No

If yes, where?

SOUTHERN BOUNDARY OF FACILITY - CANYON SIDE

h. Is there a well on the site? Yes No

(If more than one well is known to exist on the site, please answer the "If yes" questions in section g for each individual well on a separate sheet of paper. In addition, if boring logs are available, please attach them to the questionnaire.)

If yes,

1. What is the depth of the well?

2. What type of well is it:

- Drinking Water
- Irrigation
- Monitoring
- Dry Well
- Others

Please Specify:

3. Is this well the primary source of drinking water? Yes No

B. PROPERTY DESCRIPTION & ANALYSIS - continued

4. Is there a contaminant in the well that is in excess of any applicable governmental guidelines or thresholds (i.e. Maximum Contaminant Levels)? Yes No

If so, please explain the contaminant(s) with respect to the governmental guidelines.

- i. Is or has the site or any adjoining property been used for industrial purposes (i.e. plating), or as a gasoline station, auto repair shop, junkyard, dry cleaner, or landfill? Yes No

If yes, please explain.

PHARMACEUTICAL INDUSTRY

- j. Has fill of unknown origin or from a contaminated site been brought onto the site? Yes No

- k. Is there currently or has there previously been waste storage treatment or disposal units, areas, pits, ponds, or lagoons on or adjacent to the site? Yes No

If yes, please explain and list.

2. Improvements (Buildings) - This includes all buildings

- a. Describe the size (square footage) of the existing buildings.

70,700 square feet 2 story /light industrial building with an attached parking structure.

- b. How old are the buildings?

1981

PROPERTY DESCRIPTION & ANALYSIS - continued

c. Has there been any additions/renovations? Yes No

If yes, when?

1998

d. Who provides the following utilities?

Water:

CITY OF SAN DIEGO

Sanitary Sewer:

CITY OF SAN DIEGO

Storm Drainage:

CITY OF SAN DIEGO

Natural Gas:

SDG&E

Electricity:

SDG&E

Fuel:

SDG&E

d. Does the site contain an oil or gas-fired boiler or furnace? Yes No

If so, what is the fuel type?

f. Is there a floor drain on the site? Yes No

If so, where does it discharge to?

INTERNAL NEUTRALIZATION TANK → SAMPLING PORT →
SANITARY SEWER

B. PROPERTY DESCRIPTION & ANALYSIS - continued

3. Previous Studies

Do you have any knowledge of any previously prepared environmental assessment report or testing conducted on the site, whether it is for the owner or others?

Yes No

If so, who prepared such report(s), when were they prepared, and who conducted testing, if any?

1992 PREPARED BY APPLIED GEOSCIENCES, INC.

4. Map

Please provide a scaled detailed map of the site.

SEE ATTACHED

REGULATORY

1. Is or has the site been subject to any enforcement action brought by a local, state or federal agency regarding environmental violations? Yes No

If so, please explain.

2. Has there been any formal or informal citizen complaints such as complaints of respiratory distress regarding the site? Yes No

If so, please explain.

3. Is or was the site listed in any of the following environmental databases?
- a. Federal National Priorities List (NPL) Yes No
 - b. Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) Yes No
 - c. Federal Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) Facilities List Yes No
 - d. Federal RCRA Generators List (RCRIS-SQG and RCRIS-LQG) Yes No
 - e. Corrective Action Tracking System (CORRACTS) Yes No
 - f. Federal Emergency Response Notification (ERNS) List Yes No
 - g. Cal-Sites Yes No
 - h. California State Landfills or Solid Waste Facilities (SWIS) Yes No
 - i. California Hazardous Material Incident Report (CHMIRS) Yes No
 - j. Underground Storage Tank (UST) and Facility Inventory Database Sites Yes No
 - k. Leaking Underground Storage Tanks (LUSTs) Yes No
 - l. Facility Index System (FINDS) Yes No

C. REGULATORY - continued

- m. Toxic Chemical Release Inventory System (TRIS) Yes No
- n. Proposition 65 Notification (Notify 65) Yes No
- o. Other(s) _____

4. Is the site currently conducting an environmental investigation or environmental remediation activity under the oversight of any local, state, or federal agency? Yes No

If yes, please list, identify the lead agency(ies), and describe activities.

5. Does the site have a NPDES (National Pollutant Discharge Elimination System) permit issued by the California Regional Water Quality Control Board? Yes No

If yes, when was it issued?

SITE COMPLIES WITH STATE STORMWATER GENERAL PERMIT

6. Is any neighboring property engaged in the treatment, storage, transportation, transfer or disposal of hazardous waste, or chemicals? Yes No

If yes, identify name of site and address.

AURORA
TORREYANA RD.
SAN DIEGO, CA 92121

Wastewater Treatment Unit(s)

1. Does or did the site have wastewater treatment unit(s)?

Yes No

If so, please describe the unit(s) in detail and attach a diagram or drawing of the treatment process. In addition, please attach a scaled map of the site indicating the location(s) or past location(s) of the treatment unit(s)? Please indicate in detail the hazardous waste you are treating.

SITE CONTAINS WASTEWATER NEUTRALIZATION UNIT FOR
THE CONTROL OF PH.

SEE ATTACHED MAP.

D. Wastewater Treatment Unit(s) - continued

2. Is the unit(s) permitted?

Yes No

If so, what type of permit(s) do you have for the unit(s)?

*NOT APPLICABLE
- PHARMACEUTICAL EXCEPTIONS
TO TIER PERMITTING*

- | | <u>Quantity</u> |
|---|-----------------|
| a. <input type="checkbox"/> Permit by Rule (PBR) | _____ |
| b. <input type="checkbox"/> Conditionally Authorized (CA) | _____ |
| c. <input type="checkbox"/> Conditionally Exempt(CE) | _____ |

If a unit is no longer in use or has been closed, please indicate the former unit's permit type and status below.

3. What is the volume of wastewater treated per day and per year for each unit?

35,000 gallons per day

4. Is or was the wastewater treatment unit connected to the municipal sewer system with proper discharge permits from the sewage treatment agency (i.e. Sanitation Districts)?

Yes No

If no, is or was the treated effluent, sludge, or other byproducts hauled offsite?

Yes No

If no, is or was the treatment unit a closed loop system (i.e. ion exchange system)?

Yes No

If no for all questions listed above (within question 4), please explain the final disposal methods for your wastewater treatment effluent, sludge, and other byproducts?

5. Is or was cyanide treated on-site?

Yes No

If so, did or does your site/facility have authorization from DTSC to treat cyanide, such as a Cyanide Treatment Consent Order?

Yes No

Wastewater Treatment Unit(s) - continued

6. Has your site/facility ever been cited for violations and/or penalized by the local sanitation district/agency? Yes No

If so, please describe in detail and provide all information with respect to the violation and/or enforcement action.

7. Are or were clarifiers or sumps located on the site? Yes No

If so, please describe in detail where the clarifiers or sumps are or were located on the site, and please describe in detail the clarifiers or sumps history and use. In addition, please provide a scaled detailed map of the locations of the clarifiers or sumps.

E. Plating Operations

1. Does or did your site include plating operations?

Yes No

If so, please explain the different types of plating conducted at your site and provide a detailed description of your plating operations. In addition, please provide a scaled detailed map of the plating operations.

Plating Operations - continued

2. Is or was your plating operation conducted within secondary containment?

NA Yes No

3. Are you or any other company employees aware of any unauthorized release to the ground surface or subsurface with respect to the plating operations?

NA Yes No

If so, please explain in detail the unauthorized release. Please indicate the type of release (including chemical name), extent of the release, duration of release, and clean-up procedures that were used to address the release.

NA

E. Plating Operations - continued

4. How long has the plating operation been conducted at the current location?

NA

5. Has plating/metal finishing process ever been conducted anywhere else on the site besides the current location?

NA Yes No

If so, please describe the different types of plating that were conducted at this former location and provide a detailed description of the former plating operations. In addition, please provide a scaled detailed map of the former plating operations.

F. PCBs

- 1. Is there any on-site electrical transformer? Yes No
- 2. Does any of these transformers contain PCBs? Yes No

Who owns these transformers and where are they located?

- 3. Did any on-site transformer once contain PCBs, but was later replaced with coolant? Yes No
- 4. Is there any hydraulic equipment on-site? Yes No

G. STORAGE TANKS

- 1. Is there any registered or unregistered (active or inactive) Underground Storage Tank(s) ("UST") or Aboveground Storage Tank(s) ("AST") located on the site? Yes No
- If so, please fill out the following:

Location	Size (Gallons)	AST or UST	Product or Haz Waste Type	Age	Date Last Tested	Registered w/ Local Agency (Y/N)	Active or Inactive

Note: If more space is needed, please provide additional sheets with the same information as listed above.

- 2. Do you have any knowledge of any tanks and associated piping that once existed on the site, and whether such tanks were removed or abandoned? Yes No

If so, by whom, when, and type of tank(s)?

G. STORAGE TANKS - continued

3. Has any of the existing in-use tank(s) been tested to determine whether any leakage has occurred? NA Yes No

If so, when?

4. Is there any pipe or UST access way protruding from the ground, retaining walls or buildings? NA Yes No

H. HAZARDOUS MATERIALS

Note: The term Hazardous Materials includes hazardous waste, hazardous constituents, hazardous chemical, hazardous substances, and hazardous product.

1. Is any hazardous material stored on-site and/or used for any manufacturing process, automotive repair or for pest control (pesticides)? Yes No

If so, please provide the following information (please attach separate page if more space is required) or attach a copy of your Hazardous Material Inventory Plan for the site/facility.

Hazardous Materials	Quantity	Location
SEE ATTACHED INVENTORY		

2. Is there detectable sign of any of the following on the site?
- Underground Storage Tanks
 - Stained Soil
 - Vegetation Damage
 - Oily Sheens on Water
 - Discarded Batteries
 - Clarifiers/Sumps
 - PCBs
 - Oil/Gas Drums
 - Above Ground Tanks
 - Asbestos
 - Debris Pile
 - Other _____

HAZARDOUS MATERIALS - continued

3. Does or did any of the following operations take place on the site?
- | | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <u>Currently</u>
<input type="checkbox"/> |
|--|------------------------------|--|--|
| • Dry Cleaning: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Battery Storage/Sales: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Paint Storage/Sales: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Petroleum Storage/Sales: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Photo or X-Ray Finishing: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Electronic Equipment
Assembly or Manufacturing: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Solvent Storage/Sales: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Chemical Manufacturing/Sales: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Automobile Storage, Repair,
or Disposal: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Agriculture: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Medical or Dental Offices: | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| • Plating | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | <input type="checkbox"/> |

If yes, please describe:

4. Is, or has any adjoining sites been used for any of the operations listed in question 3? Yes No

If yes, please list and explain all known activities:

H. HAZARDOUS MATERIALS - continued

5. Is there any hazardous or medical waste or fluid generated or used on the site that is picked up or removed periodically by an outside service? Yes No

If so, provide name, address, & telephone number of the disposal service and the type of facility generating the waste.

PWN ENVIRONMENTAL
P) 760-727-6120
2462 C Santa Santa Fe
Vista, CA 92084

6. Please provide all available information from your records including, but not limited to, documentation in connection with any pending legal proceeding or litigation with respect to environmental liability, environmental permits and permit applications, underground and above ground tank registration and information (including removal and testing of such tanks), spill information, compliance information and programs.

NA

PART II

A. RELEASE DETAILS

1. Are you aware of any release of hazardous materials at the site? Yes No

2. Identify all past or known releases below:
2 gal MINNABE (ACID SOLUTION) SPILLED IN LOADING DOCK AREA.
2 CONTAINERS DROPPED AND BROKE OPEN.

If more than one (1) release is known, please answer the remaining questions in this section for each identified release.
(Attach responses for each known release.)

3. When did the release occur? (date/month/year) 10/31/02

4. What phase of the operation best describes the source of the release?
 Receipt of raw materials
 Chronic manufacture losses
 Incident
 Waste handling
 Treatment Units/Process
 Other

Briefly describe:
2 x 1 gal CONTAINERS DROPPED OFF THE SECONDARY CONTAINMENT CART AND BROKE OPEN.

5. What was the form of the release (check all that are applicable)?
 vapor/gas
 liquid
 solid
 sludge

6. What medium(s) of the environment was impacted (check all that are applicable)?
 soil
 air
 surface water [stormwater river/stream ocean pond/lake]
 groundwater

A. RELEASE DETAILS - continued

7. Which of the following actions have occurred (check all that are applicable)?
- No action to date
 - Emergency response
 - Evaluation by in-house personnel or contractors without agency oversight
 - Evaluation with agency oversight

Please list agencies and contractors involved in action taken:

NOTIFICATION TO DES AND SAN DIEGO COUNTY DEPT OF ENV. HEALTH

8. Was hazardous waste generated during the release or response action?
- Yes
 - No

If yes, what was the fate of the hazardous waste:

- Manifested offsite
- Treated How? _____
- Disposed without manifest or treatment
- Currently stored on site Where? _____
- Currently stored off site Where? _____

9. Was any report or document produced in connection with the release?
- Yes
 - No

If yes, please list (include title/subject, author, and date):

FOLLOW UP WRITTEN REPORT TO DES AND SD COUNTY DEPT.
AUTHOR: PETE KEXKER, IDEC LOSS CONTROL ASSOCIATE

10. Has any change been implemented to prevent or mitigate similar future releases?
- Yes
 - No

Briefly explain:

REFRESHER TRAINING ON HANDLING HAZARDOUS MATERIALS
REFRESHER TRAINING ON SPILL CLEAN UP PROCEDURES
REVIEW SECONDARY CONTAINMENT DURING TRANSPORT OF MATERIALS

RELEASE DETAILS - continued

11. Which of the following best describes the hazardous materials involved in this release?

- Toxic
- Flammable
- Reactive
- Corrosive

12. Are the chemical(s)/compound(s) proprietary?

- Yes
- No

13. Are ~~Material~~ Safety Data Sheets (MSDS) available?

- Yes
- No

14. Is the described release impacted by other contamination sources?

- Yes How? _____
- No

If yes, are any of these impacts from offsite sources?

- Yes
- No

Revised 9/08/99
Replaces 9/08/99
Printed 11/21/00

SENTOL

MSDS ID: 08343

XV. REGULATORY INFORMATION (Cont.)

Section 313 Toxic Chemicals: Phosphoric Acid - CAS #7664-38-2 at <40%.

SARA Section 311/312:

ACUTE: YES CHRONIC: NO FIRE: NO REACTIVITY: NO

SUDDEN RELEASE OF PRESSURE: NO

LISTED CARCINOGEN: NOT CARCINOGENIC

NTP: NO IARC: NO OSHA: NO

HMIS RATINGS: HEALTH: 3 FIRE: 0 REACTIVITY: 0

PERSONAL PROTECTIVE EQUIPMENT: D

NFPA RATING: HEALTH: 3 FIRE: 0 REACTIVITY: 0 SPECIAL: CORROSIVE

STATE RIGHT-TO-KNOW INFORMATION:

PHOSPHORIC ACID - CAS #7664-38-2

WATER - CAS #7732-18-5

CALIFORNIA PROPOSITION 65:

None of the ingredients are on the California proposition 65 list.

XVI. OTHER INFORMATION

Disclaimer: The information contained in this safety data sheet is based on the knowledge of this specific product and current national legislation. It applies to the product as sold, use dilutions may be less hazardous. It may not be valid for this material if used in combination with any other materials or in a process. It is the user's responsibility to evaluate the applicability of this information for his particular conditions of storage, handling, and use.

SENTOL

MSDS ID: 08343

IX. PHYSICAL AND CHEMICAL PROPERTIES (Cont.)

pH 1% SOLUTION: 2
VOLATILE BY VOLUME: 62
SOLUBILITY IN WATER: Soluble
VAPOR PRESSURE (mmHg): 17.5 at 20 C
Weight % solids: 36.3
VAPOR DENSITY: ND

X. STABILITY AND REACTIVITY

CHEMICAL STABILITY: Product stable.
INCOMPATIBILITY WITH OTHER MATERIALS: PHOSPHORUS OXIDES
HAZARDOUS DECOMPOSITION PRODUCTS: Incomplete combustion forms oxides of phosphorus.
HAZARDOUS POLYMERIZATION: None known.

XI. TOXICOLOGICAL INFORMATION

Contains Corrosive and Irritating acidic chemicals. See Section II for amounts and identity. Acute toxicology tests are listed below.
TOXICITY TEST DATA:
Phosphoric acid: Acute Oral LD50 (rat) - 1530 mg/kg (RTECS)
Acute Skin LD50 (rabbit) - 2740 mg/kg (RTECS)

XII. ECOLOGICAL INFORMATION

ECOTOXICITY DATA: Product and waste are harmful to fish and aquatic forms. Discharge process waste and overflow to a sanitary sewer or on-site treatment process.
ECOTOXICITY TEST DATA: No data available.
ENVIRONMENTAL FATE: No data available.

XIII. DISPOSAL CONSIDERATIONS

RCRA REGULATED: Concentrated product would be considered D002- corrosive if declared hazardous waste.
Contains phosphates. Adjust pH of diluted product and discharge to industrial sewer. Use product in container until empty. Triple rinse container with water and add to process. Recycle or dispose of container by product labeling or governmental regulations.

XIV. TRANSPORT INFORMATION

CORROSIVE LIQUID, ACIDIC, INORGANIC, N.O.S., (PHOSPHORIC ACID), 8, UN3264, PG III, (ERG NO. 60, IMDG PAGE 8147, EMS NO. 8-15, MFAG NO. 760), NAERG NO. 154.

XV. REGULATORY INFORMATION

U.S. Federal Regulations:
TSCA: All ingredients in this product are on TSCA inventory.
HAPS: Contains no hazardous air pollutants.
VOC CONTENT (EPA Method 24A): % VOC: 0 Lb/Gal VOC:
CERCLA/EPCRA:

MATERIAL SAFETY DATA SHEET

SENTOL

MSDS ID: 08343

IV. FIRST AID MEASURES (Cont.)

INHALATION: Remove to fresh air. If breathing difficulties continue, get medical attention.

V. FIRE FIGHTING MEASURES

FLASH POINT (degrees F): NONE FLAME EXTENSION: N/A
FLAMMABLE LIMITS IN AIR BY VOLUME: LEL: N/A UEL: N/A
UNUSUAL FIRE OR EXPLOSIVE HAZARDS: Liquid produces hydrogen on contact with steel or active metals.
EXTINGUISHING MEDIA: Water spray, CO2, foam or dry powder.
FIRE FIGHTING INSTRUCTIONS: Wear full protective gear and positive pressure breathing apparatus (SCBA) in fire area.
SPECIAL INSTRUCTIONS: Contain runoff. Prevent from entering sewer or storm drain.

VI. ACCIDENTAL RELEASE MEASURES

IF MATERIAL IS RELEASED OR SPILLED:
Contain spill. Absorb with sand or clay. Collect material and place in suitable waste container. Neutralize solids and spill area with soda ash or lime. Dispose of by environmental regulations.
The Reportable Quantity (RQ) of Phosphoric Acid, CAS #7664-38-2 is 1,364 gallons or 14,045 lbs.

VII. HANDLING AND STORAGE

HANDLING AND STORAGE PRECAUTIONS: Keep container closed. If frozen, thaw and mix to make usable. Do not pressure container to empty. Keep away from alkalis and chlorinated products.

VIII. EXPOSURE CONTROLS/PERSONAL PROTECTION

EYE/FACE PROTECTION: Face shield if contact or splash hazard exists. Eye wash in use area.
PROTECTIVE GLOVES: ACID RESISTANT
RESPIRATORY PROTECTION: Respirator protection required if PEL is exceeded. See Section II for information.
OTHER PROTECTIVE CLOTHING/EQUIPMENT: Rubber boots, chemical apron and safety shower in use area if contact or splash hazard exists.
ENGINEERING CONTROLS:
MECHANICAL VENTILATION: Normal room ventilation should be sufficient to control airborne levels.
LOCAL VENTILATION: Not usually required.

IX. PHYSICAL AND CHEMICAL PROPERTIES

APPEARANCE AND ODOR: Clear, red liquid with slight odor.

BOILING POINT (DEG F): 235 FREEZING POINT: ND
SPECIFIC GRAVITY/BULK DENSITY: 1.235 PH: 1

I. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

Product Name: SENTOL
Product Descriptor: Liquid Acid Cleaner
MANUFACTURER:
DIVERSEYLEVER
3630 E. KEMPER RD.
CINCINNATI, OH 45241

EMERGENCY PHONE NUMBERS:
MEDICAL (COLLECT): (303)592-1024
CHEMTREC: (800)424-9300
DIVERSEYLEVER (24 HRS): (800)233-1000

II. HAZARDOUS COMPONENTS

Component Name	CAS Number	%	Exposure Limits	Units
PHOSPHORIC ACID	7664-38-2	>30%	TWA 1 STEL 3	MG/M3

III. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW:

CORROSIVE-Contains strong acids. Causes severe burns to skin and eyes. May be fatal if swallowed. Do not contact eyes, skin or clothing. Wear goggles, face shield, rubber gloves and protective clothing and boots when handling product. Avoid breathing dust or spray mist. Contain spill and runoff which may cause environmental damage. Contact with iron and other metals may release hydrogen gas.

POSSIBLE ROUTES OF ENTRY: Ingestion, Skin and Inhalation.

SIGNS AND SYMPTOMS OF OVEREXPOSURE

ACUTE: EYES: Severe burns, tissue damage, or irritation with pain, swelling, blurred or impaired vision, blindness. SKIN: Severe burns, tissue destruction, blisters or rash with swelling and pain. Diluted product may cause redness or irritation. INGESTION: If swallowed, severe burns to mouth and throat may result with pain, gastric perforation and difficulty in swallowing or breathing. INHALATION: Spray or mists cause burns or irritation to nose, throat and respiratory tract with pain, choking, and difficulty in breathing.

CHRONIC: Same as Acute Effects.

MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE: Dermatitis and sensitive skin.

TARGET ORGAN(S) OF CHEMICAL HAZARD(S): Eyes, skin and respiratory tract.

IV. FIRST AID MEASURES

EYES: Immediately flush eyes with plenty of water for at least 15 minutes. Hold eyelids apart to completely flush all chemicals from entire eye surface. Get immediate medical attention.

SKIN: Flush thoroughly with plenty of water. Wash with soap and water. Remove contaminated clothes and shoes and clean before reuse. Get medical attention for any painful, red or injured skin.

INGESTION: If swallowed, rinse mouth with water. Dilute by drinking several glasses of water. DO NOT induce vomiting. If patient vomits, rerinse mouth with water. Get prompt medical attention. NOTE: Never give fluids by mouth to an unconscious person.

Reference: Release Reporting Number 99-24-34

Dear Sir,

This letter constitutes written follow-up regarding an incident during which approximately 5 gallons of a 37% phosphoric acid/63% water solution was released into a storm drain. This incident occurred at 11011 Torreyana Road, San Diego CA., 92121 at approximately 11 a.m. on 6/7/99. No injuries occurred as a result of the release, and no adverse environmental impact is expected. No external agencies had to be contacted to assist with clean-up operations.

At the time of the incident the employees involved began carrying out the procedures identified as part of IDEC's best management practices for such an event (i.e. immediate determination and shut-down of the source of the spill, notification of EH&S staff, actions taken to limit access to the spill area, and the closing of shut-off valves installed to minimize the release of contaminated storm water). Although there was not sufficient time to prevent a release to the storm drain, clean-up operations began immediately to minimize any impact to the environment. A quantity of clean water was used to flush the effected drain line. Testing for pH was carried out a sump adjacent to the point at which the drain line left the property. Based on readings taken at the time the pH of the material released to the storm drain is estimated at 5.5.

On the afternoon 6/7/99 a phone call was made to your office in accordance with the requirements for verbal notification within 24 hours following any release. In addition to notifying your agency, IDEC contacted the San Diego County Department of Environmental Health, Hazardous Materials Management Division, and the City of San Diego Storm Water Program. Written notification will be submitted to all agencies that received verbal notification. IDEC is currently considering those actions that need to be taken to prevent a similar event from recurring, and will update it's storm water pollution prevention plan accordingly. I anticipate that additional correspondence between IDEC and your agency may be required in order to closeout this incident. I may be contacted at (619) 458-8822, Monday through Friday, 9- 5 P.M.

Sincerely,

A handwritten signature in black ink, appearing to read "Mark Thompson".

Although there was not sufficient time to prevent a release to the storm drain, clean-up operations began immediately to minimize any impact to the environment. A quantity of clean water was used to flush the effected drain line. Testing for pH was carried out a sump adjacent to the point at which the drain line left the property. Based on readings taken at the time the pH of the material released to the storm drain is estimated at 5.5.

On the afternoon 6/7/99 a phone call was made to your office in accordance with the requirements for verbal notification within 24 hours following any release. In addition to notifying your agency, IDEC contacted the offices of the City of San Diego Storm Water Program, and the Governor's Office of Emergency Services. Written notification will be submitted to all agencies that received verbal notification. IDEC is currently considering those actions that need to be taken to prevent a similar event from recurring, and will update it's storm water pollution prevention plan accordingly. I anticipate that additional correspondence between IDEC and your agency may be required in order to closeout this incident. I may be contacted at (619) 458-8822, Monday through Friday, 9- 5 P.M.

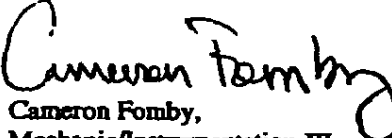

Sincerely,

Mark Thompson
Sr. Manger, Environmental Health and Safety

To Whom It May Concern,

At approximately 11:00am on Monday, June 7 1999, about 5 gallons of Sentol were accidentally spilled to the city sewer while transferring from one container to another. Large amounts of water were immediately sent to drain after it and after checking the pH at the last point of drain on the property, it was found to be 5.5pH. To avoid such problems in the future, it has been recommended that the end of the working utility yard be bermed up to contain any future spills in the area the chemicals are used.

Cameron Fomby,
Mechanic/Instrumentation III

The cause of the spill was primarily operator error. Cameron Fomby had left a transfer pump unattended for a moment and the hose fell out of the receiving container (Cameron's report is attached). No injuries occurred as a result of the release, and no adverse environmental impact is expected. No external agencies had to be contacted to assist with clean-up operations. EH&S is currently considering those actions that need to be taken to prevent a similar event from recurring, and will update the storm water pollution prevention plan accordingly. At this time I am recommending the installation of two additional control valves on the storm water lines exiting the property to the North. It should be possible to install one valve in the sump mentioned above and the other on the outfall entering the canyon adjacent to the vivarium.

On the afternoon 6/7/99 phone calls were made to the San Diego County Department of Environmental Health, Hazardous Materials Management Division, the Governor's Office of Emergency Services, and the City of San Diego Storm Water Program in order to verbally report the release. All calls were made between 2 and 3 p.m. Written notification of the incident was submitted today to these same agencies.

Date: 6/10/99
Re: Release of Sentol to the Stormwater System at 11011 Torreyana Road
cc. EH&S Files, Bert Van Loon

At 11:30 a.m. on 6/7/99 EH&S was informed that approximately 5 gallons of Sentol had been spilled unto the ground in the utility area, and that this liquid had moved into the storm drain line serving the lower level of the parking structure. Sentol is 37% phosphoric acid and 63% water.

By the time EH&S was notified several members of the maintenance department had already spent 20 minutes attempting to control the spill. Upon initial discovery those employees present had immediately carried out the actions identified as part of IDEC's best management practices for such an event; these actions included determining the source of the spill and shutting it down, notifying EH&S staff, limiting general employee access to the spill area, and closing the valve installed to prevent the release of contaminated storm water off-site into the neighboring canyon.

At the time of the spill it appeared that the material would move to the southern end of the facility, however, it did not, and moved instead to the north where it entered the main stormwater line serving Torreyana Road. Had the liquid moved south it could have been recovered from the sealed line using the pumps and drums available on hand. The control valve installed at the southern end of the facility was installed in preparation for this exact type of event. A control valve at the northern end of the property had not been installed since most industrial activities are concentrated at the other end of the building.

Although there was not sufficient time to prevent a release of material into the storm drain system clean-up operations began immediately on the residual surface contamination. This operation consisted of using a large quantity of clean water to flush the effected drain line; this action was intended to minimize the impact of the acid on the system. Several pH measurements were made at a sump adjacent to the point at which the drain line leaves the property. Based on readings taken at the time the pH of the slug of water released to the storm drain is estimated at 5.5.

Re: Spill of Hydraulic Fluid in parking lot of 11011 Torreyana Road

-
- On the morning of 9/10/99 a spill of a petroleum based liquid (probably hydraulic fluid) was discovered in the back parking lot at Torreyana. The spill extended from the maintenance shed to the emergency generator. Circumstantial evidence suggested that the source of the spill was the Pacific Waste Management truck that had been there earlier that morning. The maintenance personnel on-site at the time used their spill response supplies to prevent the fluid from moving towards the storm drain. Pacific was contacted and responded by sending out a clean-up crew. By about noon Pacific had removed all standing liquid. As follow-up I contacted Jack Bracston (278-6061) at Pacific to express my concerns regarding the impact of this incident to our stormwater compliance efforts. I ask him if they were planning on steam cleaning the spill area to remove all residual material. Jack's position was that steam cleaning was not worth the effort due to the low recovery rate of petroleum products from the asphalt. Had the surface been concrete it would have been different and they would have performed steam cleaning. He indicated that Pacific has had to deal with this type of situation before and that both the local Stormwater Office and the Dept. of Health Services concurred that their clean-up methods were sufficient. He agreed to send IDEC a letter to this effect for our files; this letter was received on 9/22 attached).

September 20, 1999

IDEC

Attn: Mark Thompson
3030 Callan Rd.
San Diego, Ca 92121

Per our conversation of September 7, 1999, concerning the hydrolic oil spill in your yard, the approximate amount of spill was 1.5 gallons spread over an asphalt area. This was absorbed by applying two layers of ground-up corn cob which absorbed surface oil. The corn cob was swept up and disposed of; the remainder of the spilled oil was absorbed into the asphalt. This is our standard method of cleaning oil spills and has been approved by Haz Mat.

Re: Request for Letter of No Further Action
For Biogen Idec, Inc.
11011 Torreyana Rd., San Diego, CA 92121

Dear Ms. Hahn:

Thanks again for your time during our site walkthrough on Friday, January 7, 2005. As promised, below you will find a summary of the three environmental releases that occurred during our occupancy of the above-referenced Biogen Idec facility site. This information is being provided to facilitate DEH's issuance of a "no further action" letter to Biogen Idec confirming that no further action is required at the site with respect to these releases so that the site may be removed from the DTSC's "Low Priority" list.

Each of these releases was previously reported to the DEH, and two of the three releases were reported to DTSC when IDEC Pharmaceuticals submitted a Tiered Permitting Phase I Environmental Assessment Checklist in October 1999. The first release occurred on June 7, 1999. At the time, approximately 5 gallons of Sentol solution were spilled onto the asphalt in a utility area. Sentol is a 37% phosphoric acid and 63% water solution. The release traveled to a storm drain and the drain was flushed with large amounts of water. Subsequent pH readings were taken of the water at the point of release from the property which confirmed that the discharge was neutral.

The second release occurred on September 9, 1999 when approximately 1.5 gallons of hydraulic oil were released from a contractor's truck in the parking lot. The material was absorbed and cleaned up by a contractor.

Finally, 2 gallons of a Mincare solution (20% hydrogen peroxide and 4% peroxyacetic acid) were released onto the site's asphalt driveway. The area was flushed with water causing the material to flow into a nearby storm drain. The storm drain discharges to soil behind the facility. Soil from storm drain release area was removed (approximately 4 30-gallon containers)

biogen idec

until the area was determined to no longer be contaminated. Confirmatory pH sampling was conducted to verify that contaminated soil was fully removed.

Based on the above information and your site walkthrough, we are requesting issuance of the "no further action" letter as soon as possible. Biogen Idec is vacating this facility and requires agency confirmation that no further action is necessary with respect to these releases as part of decommissioning the facility. Your continued assistance towards that end is much appreciated. Should you have any questions regarding these releases, please feel free to contact me at 760.231.2491. Thank you again for your assistance.

Sincerely,

Joseph Hess
EHS Manager

Dear Mr. Sionit:

providing
economic
environmental
solutions
to the business
community

Environmental Business Solutions (EBS), an SCS Engineers Company, is pleased to present this letter report (Report) of a review of previous environmental documentation for the purpose of assessing releases at the Site previously reported to the State of California Department of Toxic Substances Control (DTSC). The releases were reported to the DTSC pursuant to requirements of the Tiered Permitting program. This review of previous environmental documentation was conducted in general accordance with the guidelines set forth by the County of San Diego Department of Environmental Health (DEH) on behalf of Biogen Idec (Client), the former Site operator.

EXECUTIVE SUMMARY

EBS performed a review of environmental documentation for the purpose of assessing releases at the Site previously reported to the DTSC. EBS was retained by Biogen Idec to perform the necessary assessment activities of the three previously reported releases at the Site based on the desire for removal of the Site from DTSC's "Low Priority" list and final closure of issues related to the Conditional Authorization Permit under the Tiered Permitting program for the elementary neutralization at the Site.

The objectives of the scope of services described in this Report were to: 1) Review documentation of reported releases at the Site and assess the potential likely remaining extent of released compounds in the soil at the Site and 2) Assess the likelihood that an unacceptable health risk exists at the Site as a result of reported releases.

Based upon our review of the environmental documentation for Site, EBS concludes that: 1) The extent and concentration of compounds released into the soil and storm drains and compounds remaining after remediation activities at and near the Site have been adequately characterized; 2) Based upon the small quantities of compounds released at the Site and the remediation activities that have been performed, there is a low likelihood that compounds remaining in soil from the releases would result in significant impacts to soil or to water quality; and 3) Although a formal human health risk assessment was not performed, we are able to assess that there is a low likelihood that an unacceptable human health risk exists due to any remaining residual compounds in soil.

BACKGROUND

The Site is located at 11011 Torreyana Road, San Diego (Figure 1). The Site is comprised of one parcel (Assessor's Parcel Number [APN] 340-010-29) totaling approximately 10.24 acres. It is currently developed as a research and development building complex consisting of one main 70,000 square foot two-story building, a parking structure, and associated ancillary structures including a utilities building and an emergency generator (Figure 2). The main building structure was constructed in 1977.

Biogen Idec operated at the Site as IDEC Pharmaceuticals Corporation (IDEC). IDEC leased the Site in July 1992 and operated at the Site from June 1993 until October 2004. IDEC submitted notification to the DTSC and the County of San Diego Department of Environmental Health (DEH) in February 1993 of their intent to perform elementary neutralization of wastewater prior to discharge to the sewer system under conditional authorization of the Tiered Permitting program. IDEC operated the elementary neutralization system under conditional authorization until March of 2000 when they requested cancellation of their notification from the DEH because they became eligible for the new biotech elementary neutralization exemption under the California Health and Safety Code Section 25201.15. On April 25, 2000, Mr. Mark Thompson of IDEC met with representatives of the DEH and they agreed to cancel the Conditional Authorization permit. See Appendix A for Tiered Permitting documentation.

On May 1, 2000, IDEC submitted a Phase I Environmental Assessment Checklist (Checklist) to the DTSC in response to correspondence from the DTSC requiring the submittal of the Checklist for compliance with the Tiered Permitting program. The Checklist reported two previous small releases, at the south delivery area and the plant support utility area. It was noted that both releases did not require further investigation.

In response to a November 8, 2002 request from DTSC, on December 2, 2002 IDEC submitted a Further Investigation Questionnaire (FI Questionnaire) as a followup to the Checklist previously submitted. The FI Questionnaire included documentation on an additional small release that took place on October 31, 2002, subsequent to the submittal of the Checklist. The DTSC has placed the Site on their "Low Priority" list due to the three releases reported at the Site. See Appendix B for the Checklist and FI Questionnaire documentation.

Based on the desire for removal of the Site from DTSC's "Low Priority" list and final closure of issues related to the Conditional Authorization Permit under the Tiered Permitting program for the elementary neutralization at the Site, EBS was retained by Biogen Idec to perform the necessary assessment activities of the three previously reported releases at the Site.

Site Description Summary

Site Name:	Former Biogen Idec Facility (Currently Tanox Incorporated)
Site Owner:	TSI, L.P.
Site Address:	11011 Torreyana Road, San Diego, California
Assessors Parcel Number (APN):	340-010-29

OBJECTIVES

The objectives of the scope of services described in this Report were to:

- Review documentation of reported releases at the Site and assess the potential likely remaining extent of released compounds in the soil at the Site.
- Assess the likelihood that an unacceptable health risk exists at the Site as a result of reported releases.

SCOPE OF SERVICES

Documentation Review

EBS reviewed documentation provided by Biogen Idec regarding the three reported releases at the Site. The following is a summary of the documentation review. See Appendix C for documentation related to each of the three releases and material safety data sheets (MSDSs) for released materials.

June 7, 1999 - Sentol Release

Approximately 5 gallons of Sentol solution were spilled onto the asphalt in the plant support utility area on the south side of the main building on June 7, 1999 while transferring the liquid from one container to another. Sentol is a 37 percent phosphoric acid and 63 percent water solution used as a cleaning agent. The release flowed to a storm drain inlet on the south end of the parking structure. IDEC staff spent 20 minutes attempting to control the spill, including closing a storm drain valve on a storm water discharge pipe that discharges to the canyon at the south end of the Site. However, it was concluded that the storm drain inlet in the parking structure that was the release point discharged to the north and ultimately connected to the municipal storm drain system in Torreyana Road. The ultimate discharge location was concluded to be the municipal storm drain in Torreyana Road because no liquid was observed to be released from the north and south storm drain outlets from the Site that discharge to the canyon to the east. Therefore, the release location storm drain was flushed with large amounts of water to dilute the released Sentol that could not be recovered from the storm drain. Subsequent pH readings were taken of the water in the storm drain inlet on the Site at the north end of the parking structure, prior to the storm drain connection to the municipal storm drain system in Torreyana Road. Based upon the pH readings taken, it was estimated that the water discharge was approximately a pH of 5.5 prior to its release to the municipal storm water system. The approximate location of the release is shown on Figure 2.

Oral notifications made by telephone on the day of the release to the DEH, State Office of Emergency Services (OES), and the City of San Diego Storm Water Program. Followup written notifications were made to the same agencies.

September 10, 1999 - Hydraulic Oil Release

Approximately 1.5 gallons of a petroleum based liquid, likely hydraulic oil, was released on the morning of September 10, 1999 onto the asphalt parking lot to the south of the Site main building, in the south delivery area. The likely source of the release was a Pacific Waste Services truck that had been at the Site. Upon discovery

of the release IDEC personnel took steps using spill control materials to prevent the liquid from moving towards the storm drain in the parking lot. The liquid was absorbed using a ground corn cob absorbent and cleaned up by Pacific Waste Services. By means of these procedures, the release was contained in the asphalt delivery area. The approximate location of the release is shown on Figure 2.

October 31, 2002 - Minncare Release

Approximately 2 gallons of Minncare solution was spilled onto the asphalt parking lot to the south of the Site main building in the south delivery area on October 31, 2002. Two 1-gallon containers of Minncare had fallen off a secondary containment cart and broken open. Minncare is a 20 percent hydrogen peroxide and 4 percent peroxyacetic acid solution used as a reverse osmosis membrane disinfectant. The released liquid was flushed with water to a storm drain inlet on the east end of the parking lot. The storm drain discharges to an outfall immediately to the east of the Site mechanical building and at the top of the canyon to the east of the Site. Soil below the storm drain outfall impacted by the release was excavated and confirmatory pH sampling was conducted of soil to verify that impacted soil was adequately removed. Approximately four 30-gallon containers of soil were excavated and transported off-site as Non-RCRA waste by a licensed waste hauler. The excavated area was backfilled with clean fill soil. The approximate location of the release is shown on Figure 2.

Oral notifications made by telephone on the day of the release to the DEH and OES. Followup written notifications were made to the same agencies.

FINDINGS

Site Geology

As interpreted from a geologic map prepared by Michael P. Kennedy (1971)¹ the Site is located within the Coastal Plain Section of the Peninsular Range Geomorphic Province (California Department of Water Resources [CDWR], 1967). The surficial soils of the Site are mapped as nearshore deposits of the Pleistocene Lindavista Formation, consisting primarily of reddish-brown interbedded sandstone and conglomerate (CDMG, 1975).

¹ Geology of the Del Mar Quadrangle, in Geology of the San Diego Metropolitan Area, Map Sheet 29, CDMG Bull. 200, 1975.

Site Topography

As interpreted from a United States Geologic Survey (USGS) topographic map (Figure 1), the Site is located at an elevation of approximately 375 feet above mean sea level. Topography slopes to the east in the vicinity of the Site.

Hydrogeology

The Site is interpreted to be located in the Miramar Reservoir hydrologic area (906.10) of the Penasquitos hydrologic unit (906.00). Groundwater within this hydrologic area is listed as having existing municipal, agricultural and industrial beneficial uses. However, these beneficial use designations do not apply to the area west of the easterly boundary of the right-of-way of Interstate 5, which encompasses the subject property (RWQCB, 1994). These designations were established by the Regional Board under the terms and conditions of State Board Resolution No. 88-63, *Sources of Drinking Water Policy*, last updated in May 1998.

Based on regional topography, groundwater in the Site vicinity is estimated to flow generally toward the west-northwest toward Penasquitos Creek, which is situated to the northwest of the Site. Groundwater is interpreted to be greater than 50 feet below grade.

DISCUSSION

June 7, 1999 - Sentol Release

The 5-gallon release of Sentol on June 7, 1999 is of environmental concern only due to the low pH of the solution. The Sentol is 37 percent phosphoric acid with a pH of 1 according to the product MSDS. The release flowed to a storm drain inlet on the south end of the Site parking structure that ultimately was concluded to discharge to the municipal storm drain system in Torreyana Road. The storm drain was flushed with large amounts of water because it was not possible to recover the liquid from the storm drain. Subsequent pH readings were taken of the water in the storm drain inlet on the Site at the north end of the parking structure, prior to the storm drain discharging to the municipal storm drain system in Torreyana Road. Based upon the pH readings taken, it was estimated that the water discharge was approximately a pH of 5.5 prior to its release to the municipal storm water system. Given the relatively small volume of Sentol released, the reported large volume of water used to dilute the release, and the confirmation of the pH of the released liquid, there is a low likelihood of a significant impact to the storm drain system or soil at the ultimate discharge location to the canyon below Torreyana Road.

September 10, 1999 - Hydraulic Oil Release

The approximately 1.5-gallons of hydraulic oil released to the asphalt parking lot in the south delivery area at the Site on September 10, 1999 is of environmental concern due to the petroleum product's potential for impact to water quality. However, the release was contained to a paved asphalt area without a release to soil on-site or off-site. The liquid was absorbed using a ground corn cob absorbent and cleaned up by Pacific Waste Services. The release documentation indicates that there is a low likelihood of an impact to the environment from the release.

October 31, 2002 - Minncare Release

The approximately 2-gallon release of Minncare solution spilled on October 31, 2002 onto the asphalt at the Site in the south delivery area is of environmental concern due to the solution's low pH and oxidizer properties. Minncare is a 20 percent hydrogen peroxide and 4 percent peroxyacetic acid solution. The active ingredients in Minncare are both oxidizers with a pH of 1.3 according to the product MSDS. The released liquid was flushed with water to a storm drain inlet, resulting in a release to the ground at the south storm drain outfall at the top of the canyon to the east of the Site. The soil at the storm drain outfall impacted by the release was excavated and confirmatory pH sampling was reported to have been conducted to verify that impacted soil was adequately removed. Based upon the released material's properties as an oxidizer and an acid, the documented excavation of impacted soils, and the monitoring for pH to confirm the extent of the excavation, there is a low likelihood of a significant remaining impact to the soil at the discharge location at the canyon edge.

CONCLUSIONS

Based on the review of documents as part of this assessment and current regulatory guidelines, it is our professional opinion that:

- The extent and concentration of compounds released into the soil and storm drains and compounds remaining after remediation activities at and near the Site have been adequately characterized.
- Based upon the small quantities of compounds released at the Site and the remediation activities that have been performed, there is a low likelihood that compounds remaining in soil from the releases would result in significant impacts to soil or to water quality.

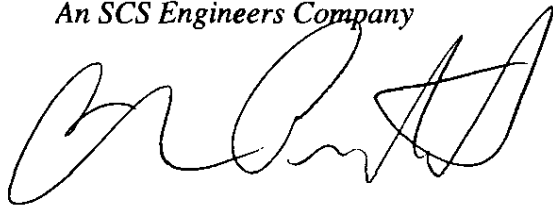

- Site remediation does not appear warranted based on the available data for the existing land use.
- Although a formal human health risk assessment was not performed, we are able to assess that there is a low likelihood that an unacceptable human health risk exists due to any remaining residual compounds in soil.

RECOMMENDATION

Based on the review of documentation performed and our conclusions, we recommend that no further action is required to assess or mitigate the three reported releases to soil and storm drains at the Site and in the vicinity and request that the DEH issue a no further action letter for the Site.

It is Biogen Idec's desire to bring closure to this matter before the end of 2005, therefore, we appreciate your timely review of this Report. Should you have any questions regarding this Report, please do not hesitate to call the undersigned at (858) 571-5500.

Respectfully,
ENVIRONMENTAL BUSINESS SOLUTIONS

REPORT USAGE AND FUTURE SITE CONDITIONS

This Report is intended for the sole usage of the Client and the parties designated by EBS. Use of this Report is subject to the provisions of the fully executed Contract between the Client and EBS. Any third party usage of this Report shall be subject to the provisions of the Contract and any unauthorized misuse of or reliance upon the Report shall be without risk or liability to EBS.

The conclusions of this Report are judged to be relevant at the time the work described in this Report was conducted. Future conditions may differ and this Report should not be relied upon to represent future Site conditions unless a qualified consultant familiar with the practice of Phase II environmental assessments in San Diego County is consulted to assess the necessity of updating this Report.

Although this Assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons which include, but are not limited to: 1) our reliance on inadequate or inaccurate information rightfully provided to us by third parties, such as public agencies and other outside sources; 2) the limited scope of this Assessment; and 3) the presence of undetected, unknown, or unreported environmental releases.

LIKELIHOOD STATEMENTS

Statements of "likelihood" have been made in this report. Likelihood statements are based on professional judgments of EBS. The term "likelihood," as used herein, pertains to the probability of a match between the prediction for an event and its actual occurrence. The likelihood statement assigns a measure for a "degree of belief" for the match between the prediction for the event and the actual occurrence of the event.

The likelihood statements in this Report are made qualitatively (expressed in words). The qualitative terms can be approximately related to quantitative percentages. The term "low likelihood" is used by EBS to approximate a percentage range of 10 to 20 percent; the term "moderate likelihood" refers to an approximate percentage range of 40 to 60 percent; and the term "high likelihood" refers to an approximate percentage range of 80 to 90 percent.

RE: IDEC Pharmaceuticals Corporation -
11011 Torreyana Road
La Jolla, Ca 92037

IDEC Pharmaceuticals Corporation will be occupying the 11011 Torreyana Road location upon completion in June 1993. We will begin neutralization of acid/alkaline (<10 %) at that time. There is no waste treatment now occurring at the current IDEC site.

All correspondence prior to June should be directed to the following address:

IDEC Pharmaceuticals
11099 N. Torrey Pines Road, Ste 160
La Jolla, CA 92037

Your cooperation is appreciated. If you have any questions, please contact me at (619) 458-0600. Thank you.

Sincerely,

M.C. Hull
M.C. Hull

ONSITE HAZARDOUS WASTE TREATMENT NOTIFICATION FORM FACILITY SPECIFIC NOTIFICATION

For Use by Hazardous Waste Generators Performing Treatment
Under Conditional Exemption and Conditional Authorization,
and by Permit By Rule Facilities

Initial
 Revised

Please refer to the attached Instructions before completing this form. You may notify for more than one permitting tier by using this notification form, DTSC 1772. You must attach a separate unit specific notification form for each unit at this location. There are different unit specific notification forms for each of the four categories and an additional notification form for transportable treatment units (TTU's). You only have to submit forms for the tier(s) that cover your unit(s). Discard or recycle the other unused forms. Number each page of your completed notification package and indicate the total number of pages at the top of each page at the 'Page ___ of ___'. Put your EPA ID Number on each page. Please provide all of the information requested; all fields must be completed except those that state 'if different' or 'if available'. Please type the information provided on this form and any attachments.

The notification will not be considered complete without payment of the appropriate fee for each tier under which you are operating. (Please note that the fee is per TIER not per UNIT. For example, if you operate 5 units but they are all Conditionally Authorized, you only owe \$1,140, NOT 5 times \$1,140. If you operate any Permit by Rule units and any units under Conditional Authorization you owe \$2,280.) Checks should be made payable to the Department of Toxic Substances Control and be stapled to the top of this form. Please write your EPA ID Number on the check. Fill in the check number in the box above.

I. NOTIFICATION CATEGORIES

Indicate the number of units you operate in each tier. This will also be the number of unit specific notification forms you must attach. Conditionally Exempt Small Quantity Treatment operations may not operate units under any other tier.

Number of units and attached unit specific notifications			Fee per Tier <small>(not per unit)</small>
A.	___	Conditionally Exempt-Small Quantity Treatment (Form DTSC 1772A)	\$ 100
B.	___	Conditionally Exempt-Specified Wastestream (Form DTSC 1772B)	\$ 100
C.	<u>1</u>	Conditionally Authorized (Form DTSC 1772C)	\$1,140
D.	___	Permit by Rule (Form DTSC 1772D)	\$1,140
	====		=====
	<u>1</u>	Total Number of Units	Total Fee Attached \$ <u>1,140</u>

III. TYPE OF COMPANY: STANDARD INDUSTRIAL CLASSIFICATION (SIC) CODE:

Use either one or two SIC codes (a four digit number) that best describe your company's products, services, or industrial activity.

Example: 7384 Photofinishing lab 3672 Printed circuit boards
 First: 2836 PHARMACEUTICAL (R&D) Second: BIOTECHNOLOGY

IV. PRIOR PERMIT STATUS: Check yes or no to each question:

- | | | |
|--------------------------|-------------------------------------|--|
| YES | NO | |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | 1. Did you file a PBR Notice of Intent to Operate (DTSC Form 8462) in 1992 for this location? |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | 2. Do you now have or have you ever held a state or federal hazardous waste facility full permit or interim status for any of these treatment units? |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | 3. Do you now have or have you ever held a state or federal full permit or interim status for any other hazardous waste activities at this location? |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | 4. Have you ever held a variance issued by the Department of Toxic Substances Control for the treatment you are now notifying for at this location? |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | 5. Has this location ever been inspected by the state or any local agency as a hazardous waste generator? |

V. PRIOR ENFORCEMENT HISTORY: Not required from generators only notifying as conditionally exempt.

- | | | |
|--------------------------|--------------------------|---|
| YES | NO | |
| <input type="checkbox"/> | <input type="checkbox"/> | Within the last three years, has this facility been the subject of any convictions, judgments, settlements, or final orders resulting from an action by any local, state, or federal environmental, hazardous waste, or public health enforcement agency? |

(For the purposes of this form, a notice of violation does not constitute an order and need not be reported unless it was not corrected and became a final order.)

- If you answered Yes, check this box and attach a listing of convictions, judgments, settlements, or orders and a copy of the cover sheet from each document. (See the Instructions for more information)

VI. ATTACHMENTS:

1. A plot plan/map detailing the location(s) of the covered unit(s) in relation to the facility boundaries.
2. A unit specific notification form for each unit to be covered at this location.

VII. **CERTIFICATIONS:** *This form must be signed by an authorized corporate officer or any other person in the company who has operational control and performs decision-making functions that govern operation of the facility (per title 22, California Code of Regulations (CCR) section 66270.11). All three copies must have original signatures.*

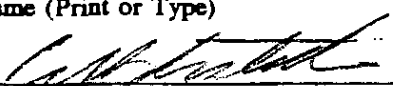

Waste Minimization I certify that I have a program in place to reduce the volume, quantity, and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment.

Tiered Permitting Certification I certify that the unit or units described in these documents meet the eligibility and operating requirements of state statutes and regulations for the indicated permitting tier, including generator and secondary containment requirements. I understand that if any of the units operate under Permit by Rule or Conditional Authorization, I will also be required to provide required financial assurances by January 1, 1994, and conduct a Phase I environmental assessment by January 1, 1995.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are substantial penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

WILLIAM RASTETTER
Name (Print or Type)

Signature

PRESIDENT, CEO

2/13/93
Date Signed

OPERATING REQUIREMENTS:

Please note that generators treating hazardous waste onsite are required to comply with a number of operating requirements which differ depending on the tier(s) under which one operates. These operating requirements are set forth in the statutes and regulations, some of which are referenced in the Tier-Specific Factsheets.

SUBMISSION PROCEDURES:

You must submit two copies of this completed notification by certified mail, return receipt requested, to:

*Department of Toxic Substances Control
Form 1772
Onsite Hazardous Waste Treatment Unit
400 P Street, 4th Floor (walk in only)
P.O. Box 806
Sacramento, CA 95812-0806.*

You must also submit one copy of the notification and attachments to the local regulatory agency in your jurisdiction as listed in the instruction materials. You must also retain a copy as part of your operating record.

All three forms must have original signatures, not photocopies.

CONDITIONALLY AUTHORIZED**UNIT SPECIFIC NOTIFICATION**

(pursuant to Health and Safety Code Section 25200.3)

UNIT NAME NEUTRALIZATION TANKUNIT ID NUMBER #1NUMBER OF TREATMENT DEVICES: 1 Tank(s) Container(s)

Each unit must be clearly identified and labeled on the plot plan attached to Form 1772. Assign your own unique number to each unit. The number can be sequential (1, 2, 3) or you may use any system you choose.

Enter the estimated monthly total volume of hazardous waste treated by this unit. This should be the maximum or highest amount treated in any month. Indicate in the narrative (Section II) if your operations have seasonal variations.

I. WASTESTREAMS AND TREATMENT PROCESSES:Estimated Monthly Total Volume Treated: pounds and/or 36,630 gallons

The following are the eligible wastestreams and treatment processes. Please check all applicable boxes:

1. Aqueous wastes hazardous solely due to inorganics constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which contain less than 1,400 ppm total of these constituents. (There is no volume limit for this wastestream.) Treatment is using:
 - a. Phase separation, including precipitation, by filtration, centrifugation, or gravity settling, including the use of demulsifiers and flocculants.
 - b. Ion exchange, including metallic replacement,
 - c. Reverse osmosis
 - d. Adsorption
 - e. pH adjustment of aqueous waste with a pH of between 2.0 and 12.5
 - f. Electrowinning of solutions, unless those solutions contain hydrochloric acid
 - g. Reduction of solutions hazardous solely due to hexavalent chromium, to trivalent chromium with sodium bisulfite, sodium metabisulfite, sodium thiosulfate, ferrous chloride, ferrous sulfate, ferrous sulfide, or sulfur dioxide. The solution contains less than 750 ppm of hexavalent chromium.

2. Aqueous wastes hazardous solely due to organic constituents listed in title 22, CCR, section 66261.24(a)(1)(B) or (2)(B) and which contain less than 750 ppm total of these constituents. (There is no volume limit for this wastestream.) Treatment is using:
 - a. Phase separation by filtration, centrifugation, or gravity settling, but excluding super critical fluid extraction.
 - b. Adsorption

3. Sludges resulting from wastewater treatment, dusts, solid metal objects, and metal workings which are hazardous solely due to the presence of constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which, for dusts only, contain less than 750 ppm total of these constituents. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
 - a. Physical processes which constitute treatment only because they change the physical properties of the waste, such as filtration, centrifugation, gravity settling, grinding, shredding, crushing, or compacting.
 - b. Drying to remove water.
 - c. Separation based on differences in physical properties, such as size, magnetism, or density.

**CONDITIONALLY AUTHORIZED
UNIT SPECIFIC NOTIFICATION**
(pursuant to Health and Safety Code Section 25200.3)

4. Alum, gypsum, lime, sulfur, or phosphate sludges. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
- a. Drying to remove water.
- b. Phase separation by filtration, centrifugation, or gravity settling.
5. Special wastes listed in title 22, CCR, section 66261.120 that meet the criteria in title 22, CCR, section 66261.122 which is hazardous solely due to the constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which contain less than 750 ppm total of these constituents. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
- a. Drying to remove water.
- b. Phase separation by filtration, centrifugation, or gravity settling.
- c. Screening to separate components based on size.
- d. Separation based on differences in physical properties, such as size, magnetism, or density.
6. Special wastes classified under title 22, CCR, section 66261.124 as special wastes, except asbestos, which is hazardous solely due to the constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which contain less than 750 ppm total of these constituents. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
- a. Drying to remove water.
- b. Phase separation by filtration, centrifugation, or gravity settling.
- c. Magnetic separation.
7. Soils contaminated with metals listed in title 22, CCR, section 66261.24 (a)(2)(A). The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
- a. Screening to separate components based on size.
- b. Magnetic separation.
8. Oil mixed with water and oil/water separation sludges. (There is no volume limit for this wastestream.) Treatment is using:
- a. Phase separation by filtration, centrifugation, or gravity settling, but excluding super critical fluid extraction, including the use of demulsifiers and flocculants. Heat can be used, but must not exceed 160 degrees Fahrenheit.
- b. Separation based on differences in physical properties, such as size, magnetism, or density.
- c. Reverse osmosis.
9. Neutralization of acidic or alkaline wastes, hazardous solely due to corrosivity or toxic only from the acid or caustic material, in elementary neutralization units. (There is no volume limit for this wastestream.)
- a. The waste contains less than 10 percent acid or base constituents by weight. There is no volume limit for this category.
- b. The waste contains 10 percent or more acid or base constituents by weight and is treated in batches that do not exceed 500 gallons at one time.
10. Recovery of silver from photofinishing. The volume limit for conditional authorization is 5,000 gallons per unit in any calendar month.
-

**CONDITIONALLY AUTHORIZED
UNIT SPECIFIC NOTIFICATION**
(pursuant to Health and Safety Code Section 25200.3)

11. Spent cleaners and conditioners which are hazardous solely due to copper or copper compounds with less than 5000 ppm copper. The volume limit for conditional authorization is 1,000 gallons of this wastestream per facility in any calendar month. (These cleaners are limited to surfactants and detergents and do not contain microetch, etchant, plating or metal stripping solutions or solutions containing oxidizers, or any cleaner based on organic solvents). (These wastestreams and processes are only conditionally authorized until January 1, 1995, unless extended by the Department.) Treatment is using:

- a. Phase separation, including precipitation, by filtration, centrifugation, or gravity settling, including the use of demulsifiers and flocculants.
- b. Ion exchange, including metallic replacement,
- c. Reverse osmosis
- d. Adsorption
- e. pH adjustment of aqueous waste with a pH of between 2.0 and 12.5
- f. Electrowinning of solutions, unless those solutions contain hydrochloric acid

II. **NARRATIVE DESCRIPTIONS:** *Provide a brief description of the specific waste treated and the treatment process used.*

- 1. SPECIFIC WASTE TYPES TREATED: SEE ATTACHMENT

- 2. TREATMENT PROCESS(ES) USED: SEE ATTACHMENT

III. **RESIDUAL MANAGEMENT:** *Check Yes or No to each question as it applies to all residuals from this treatment unit.*

- | | | |
|-------------------------------------|-------------------------------------|---|
| YES | NO | |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1. Do you discharge non-hazardous aqueous waste to a publicly owned treatment works (POTW)/sewer? |

**CONDITIONALLY AUTHORIZED
UNIT SPECIFIC NOTIFICATION**
(pursuant to Health and Safety Code)

IV. BASIS FOR NOT NEEDING A FEDERAL PERMIT:

In order to demonstrate eligibility for one of the onsite treatment tiers, facilities are required to provide the basis for determining that a hazardous waste permit is not required under the federal Resource Conservation and Recovery Act (RCRA) and the federal regulations adopted under RCRA (Title 40, Code of Federal Regulations (CFR)).

Choose the reason(s) that describe the operation of your onsite treatment units:

- 1. The hazardous waste being treated is not a hazardous waste under federal law although it is regulated as a hazardous waste under California state law.
- 2. The waste is treated in wastewater treatment units (tanks), as defined in 40 CFR Part 260.10, and discharged to a publicly owned treatment works (POTW)/sewering agency or under an NPDES permit. 40 CFR 264.1(g)(6) and 40 CFR 270.2.
- 3. The waste is treated in elementary neutralization units, as defined in 40 CFR Part 260.10, and discharged to a POTW/sewering agency or under an NPDES permit. 40 CFR 264.1(g)(6) and 40 CFR 270.2.
- 4. The waste is treated in a totally enclosed treatment facility as defined in 40 CFR Part 260.10; 40 CFR 264.1(g)(5).
- 5. The company generates no more than 100 kg (approximately 27 gallons) of hazardous waste in a calendar month and is eligible as a federal conditionally exempt small quantity generator. 40 CFR 260.10 and 40 CFR 261.5.
- 6. The waste is treated in an accumulation tank or container within 90 days for over 1000 kg/month generators and 180 or 270 days for generators of 100 to 1000 kg/month. 40 CFR 262.34, 40 CFR 270.1(c)(2)(i), and the Preamble to the March 24, 1986 Federal Register.
- 7. Recyclable materials are reclaimed to recover economically significant amounts of silver or other precious metals. 40 CFR 261.6(a)(2)(iv), 40 CFR 264.1(g)(2), and 40 CFR 266.70.
- 8. Empty container rinsing and/or treatment. 40 CFR 261.7.
- 9. Other: Specify: _____

V. TRANSPORTABLE TREATMENT UNIT: Check Yes or No. Please refer to the instructions for more information.

- | | | |
|--------------------------|-------------------------------------|--|
| YES | NO | |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | Is this unit a Transportable Treatment Unit? |

If you answered yes, you must also complete and attach Form 1772E to this page.

The Tier-Specific Factsheets contain a summary of the operating requirements for this category. Please review those requirements carefully before completing or submitting this notification package.

CAD 982410243

1. Specific waste types treated: General waste from the buffer prep and purification areas is collected into the general waste surge tank (this includes sinks, drains, tanks and clean steam condensate lines). Wastes from the fermentation tanks are first fed through a heat exchanger and raised to temperature of 80 C for a minimum of 45 seconds. The waste is then cooled and sent to the neutralization tank.

2. Treatment process(es) used: Waste neutralization is performed on a continuous overflow basis. A constant volume of approximately 100 - 150 gallons is automatically controlled at pH 6 to 8 with a maximum operating temperature of 60 C (140 F). As waste from the surge tanks (biological and general) is fed into the neutralization tank, redundant pH measurements are continuously made and concentrated acid (sulfuric or phosphoric) or 30% sodium hydroxide is pumped into the stirred neutralization tank, as necessary. Flow to the sewer will be provided on the controls and bypass valves to further protect against out-of-range waste flowing to the sewer. (estimated usage of acid = 50 - 150 gallons per month and the estimated usage for the caustic is approximately 50 - 100 gallons per month. A PLC will be used to control all aspects of the waste system including tank level controls, level alarms for the tanks and overflow pits, sumps and automated valve operation, temperature control and neutralization.

Separate containment areas for acids and caustics, designed to contain 150% of the volumes in the event of leakage will be in the mechanical areas. Waste pits for the biological and general waste tanks are each 12' X 7.5' X 12' deep, the biological pit is in the mechanical room and the general waste pit is located in the mechanical pad. Should it be necessary in the event of equipment failure, these pits could contain eight (8) tank volumes.

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

400 P Street, 4th Floor

LA JOLLA, CA 92037

For facility located at:

11011 TORREYANA ROAD
LA JOLLA, CA 92037

Authorization Date: 08/02/93

Dear Conditionally Authorized and/or Conditionally Exempt Facility:

**ACKNOWLEDGEMENT OF UNITS OPERATING UNDER CONDITIONAL AUTHORIZATION AND/OR
CONDITIONAL EXEMPTION**

The Department of Toxic Substances Control (DTSC) has received your facility specific notification (form DTSC 1772) and forms for Conditional Authorization and/or Conditional Exemption for Specified Wastestreams (form DTSC 1772B and/or 1772C). Your notifications are administratively complete, but have not been reviewed for technical adequacy. A technical review of your notifications will be conducted when an inspection is performed. At any time, you may be inspected and will be subject to penalty if violations of laws or regulations are found.

The Department acknowledges receipt of your completed notification for the treatment unit(s) listed on the last page of this letter. These units operating under Conditional Authorization or Conditional Exemption are authorized by California law without additional Department action, pursuant to Health and Safety Code sections 25200.3 and 25201.5. Your authorization to operate continues until you notify DTSC that you have stopped treating waste and have fully closed the unit(s). You will be charged annual fees calculated on a calendar year basis for each year you operate and have not notified DTSC that the units have been closed.

You must notify the DTSC 60 days before first treating hazardous wastes in any new unit. You must also notify the DTSC whenever any of the information you provided in these notifications changes. To revise information, mail a cover letter to the above address explaining the changes, attach only the pages of your notification package that have changed, and re-sign and date at the signature space on page 3 of form 1772.

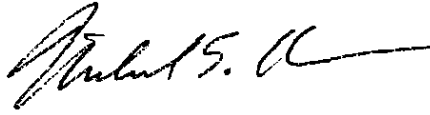

Your status to operate under Conditional Authorization and/or Conditional Exemption is contingent upon the accuracy of information submitted by you in the notifications mentioned above, and your compliance with all applicable requirements in the Health and Safety Code. Any misrepresentation or any failure to fully disclose all relevant facts shall render your authorization to operate null and void.

You are also required to properly close any treatment unit. Additional guidance on closure will be issued and distributed to all authorized onsite facilities later this year.

If you have any questions regarding this letter, or have questions on operating requirements for your facility, please contact the nearest DTSC regional office, or this office at the letterhead address or phone number.

Sincerely,

Michael S. Horner, Chief

ONSITE HAZARDOUS WASTE TREATMENT NOTIFICATION FORM

FACILITY SPECIFIC NOTIFICATION

For Use by Hazardous Waste Generators Performing Treatment
Under Conditional Exemption and Conditional Authorization,
and by Permit By Rule Facilities

Initial
 Revised

Please refer to the attached Instructions before completing this form. You may notify for more than one permitting tier by using this notification form, DTSC 1772. You must attach a separate unit specific notification form for each unit at this location. There are different unit specific notification forms for each of the four categories and an additional notification form for transportable treatment units (TTU's). You only have to submit forms for the tier(s) that cover your unit(s). Discard or recycle the other unused forms. Number each page of your completed notification package and indicate the total number of pages at the top of each page at the 'Page ___ of ___'. Put your EPA ID Number on each page. Please provide all of the information requested; all fields must be completed except those that state 'if different' or 'if available'. Please type the information provided on this form and any attachments.

The notification will not be considered complete without payment of the appropriate fee for each tier under which you are operating. (Please note that the fee is per TIER not per UNIT. For example, if you operate 5 units but they are all Conditionally Authorized, you only owe \$1,140, NOT 5 times \$1,140. If you operate any Permit by Rule units and any units under Conditional Authorization you owe \$2,280.) Checks should be made payable to the Department of Toxic Substances Control and be stapled to the top of this form. Please write your EPA ID Number on the check. Fill in the check number in the box above.

I. NOTIFICATION CATEGORIES

Indicate the number of units you operate in each tier. This will also be the number of unit specific notification forms you must attach. Conditionally Exempt Small Quantity Treatment operations may not operate units under any other tier.

Number of units and attached unit specific notifications			Fee per Tier (not per unit)
A.	___	Conditionally Exempt-Small Quantity Treatment (Form DTSC 1772A)	\$ 100
B.	___	Conditionally Exempt-Specified Wastestream (Form DTSC 1772B)	\$ 100
C.	<u>1</u>	Conditionally Authorized (Form DTSC 1772C)	\$1,140
D.	___	Permit by Rule (Form DTSC 1772D)	\$1,140

III. TYPE OF COMPANY: STANDARD INDUSTRIAL CLASSIFICATION (SIC) CODE:

Use either one or two SIC codes (a four digit number) that best describe your company's products, services, or industrial activity.

Example: 7384 Photofinishing lab 3672 Printed circuit boards

First: 2836 Pharmaceutical Second: Biotechnology

IV. PRIOR PERMIT STATUS: Check yes or no to each question:

- | YES | NO | |
|--------------------------|-------------------------------------|--|
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | 1. Did you file a PBR Notice of Intent to Operate (DTSC Form 8462) in 1992 for this location? |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | 2. Do you now have or have you ever held a state or federal hazardous waste facility full permit or interim status for any of these treatment units? |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | 3. Do you now have or have you ever held a state or federal full permit or interim status for any other hazardous waste activities at this location? |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | 4. Have you ever held a variance issued by the Department of Toxic Substances Control for the treatment you are now notifying for at this location? |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | 5. Has this location ever been inspected by the state or any local agency as a hazardous waste generator? |

V. PRIOR ENFORCEMENT HISTORY: Not required from generators only notifying as conditionally exempt.

YES NO

Within the last three years, has this facility been the subject of any convictions, judgments, settlements, or final orders resulting from an action by any local, state, or federal environmental, hazardous waste, or public health enforcement agency?

(For the purposes of this form, a notice of violation does not constitute an order and need not be reported unless it was not corrected and became a final order.)

If you answered Yes, check this box and attach a listing of convictions, judgments, settlements, or orders and a copy of the cover sheet from each document. (See the Instructions for more information)

VI. ATTACHMENTS:

1. A plot plan/map detailing the location(s) of the covered unit(s) in relation to the facility boundaries.
2. A unit specific notification form for each unit to be covered at this location.

VII. **CERTIFICATIONS:** *This form must be signed by an authorized corporate officer or any other person in the company who has operational control and performs decision-making functions that govern operation of the facility (per title 22, California Code of Regulations (CCR) section 66270.11). All three copies must have original signatures.*

Waste Minimization I certify that I have a program in place to reduce the volume, quantity, and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment.

Tiered Permitting Certification I certify that the unit or units described in these documents meet the eligibility and operating requirements of state statutes and regulations for the indicated permitting tier, including generator and secondary containment requirements. I understand that if any of the units operate under Permit by Rule or Conditional Authorization, I will also be required to provide required financial assurances by January 1, 1994, and conduct a Phase I environmental assessment by January 1, 1995.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are substantial penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

OPERATING REQUIREMENTS:

Please note that generators treating hazardous waste onsite are required to comply with a number of operating requirements which differ depending on the tier(s) under which one operates. These operating requirements are set forth in the statutes and regulations, some of which are referenced in the Tier-Specific Factsheets.

SUBMISSION PROCEDURES:

You must submit two copies of this completed notification by certified mail, return receipt requested, to:

Department of Toxic Substances Control
Form 1772
Onsite Hazardous Waste Treatment Unit
400 P Street, 4th Floor (walk in only)
P.O. Box 806
Sacramento, CA 95812-0806.

You must also submit one copy of the notification and attachments to the local regulatory agency in your jurisdiction as listed in the instruction materials. You must also retain a copy as part of your operating record.

All three forms must have original signatures, not photocopies.

CONDITIONALLY AUTHORIZED
UNIT SPECIFIC NOTIFICATION
 (pursuant to Health and Safety Code Section 25200.3)

UNIT NAME Neutralization TankUNIT ID NUMBER #1NUMBER OF TREATMENT DEVICES: 1 Tank(s) _____ Container(s)

Each unit must be clearly identified and labeled on the plot plan attached to Form 1772. Assign your own unique number to each unit. The number can be sequential (1, 2, 3) or you may use any system you choose.

Enter the estimated monthly total volume of hazardous waste treated by this unit. This should be the maximum or highest amount treated in any month. Indicate in the narrative (Section II) if your operations have seasonal variations.

I. WASTESTREAMS AND TREATMENT PROCESSES:Estimated Monthly Total Volume Treated: _____ pounds and/or 36,630 gallons

The following are the eligible wastestreams and treatment processes. Please check all applicable boxes:

1. Aqueous wastes hazardous solely due to inorganics constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which contain less than 1,400 ppm total of these constituents. (There is no volume limit for this wastestream.) Treatment is using:
 - a. Phase separation, including precipitation, by filtration, centrifugation, or gravity settling, including the use of demulsifiers and flocculants.
 - b. Ion exchange, including metallic replacement,
 - c. Reverse osmosis
 - d. Adsorption
 - e. pH adjustment of aqueous waste with a pH of between 2.0 and 12.5
 - f. Electrowinning of solutions, unless those solutions contain hydrochloric acid
 - g. Reduction of solutions hazardous solely due to hexavalent chromium, to trivalent chromium with sodium bisulfite, sodium metabisulfite, sodium thiosulfate, ferrous chloride, ferrous sulfate, ferrous sulfide, or sulfur dioxide. The solution contains less than 750 ppm of hexavalent chromium.

2. Aqueous wastes hazardous solely due to organic constituents listed in title 22, CCR, section 66261.24(a)(1)(B) or (2)(B) and which contain less than 750 ppm total of these constituents. (There is no volume limit for this wastestream.) Treatment is using:
 - a. Phase separation by filtration, centrifugation, or gravity settling, but excluding super critical fluid extraction.
 - b. Adsorption

3. Sludges resulting from wastewater treatment, dusts, solid metal objects, and metal workings which are hazardous solely due to the presence of constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which, for dusts only, contain less than 750 ppm total of these constituents. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
 - a. Physical processes which constitute treatment only because they change the physical properties of the waste, such as filtration, centrifugation, gravity settling, grinding, shredding, crushing, or compacting.
 - b. Drying to remove water.
 - c. Separation based on differences in physical properties, such as size, magnetism, or density.

**CONDITIONALLY AUTHORIZED
UNIT SPECIFIC NOTIFICATION**
(pursuant to Health and Safety Code Section 25200.3)

4. Alum, gypsum, lime, sulfur, or phosphate sludges. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
- a. Drying to remove water.
- b. Phase separation by filtration, centrifugation, or gravity settling.
5. Special wastes listed in title 22, CCR, section 66261.120 that meet the criteria in title 22, CCR, section 66261.122 which is hazardous solely due to the constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which contain less than 750 ppm total of these constituents. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
- a. Drying to remove water.
- b. Phase separation by filtration, centrifugation, or gravity settling.
- c. Screening to separate components based on size.
- d. Separation based on differences in physical properties, such as size, magnetism, or density.
6. Special wastes classified under title 22, CCR, section 66261.124 as special wastes, except asbestos, which is hazardous solely due to the constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which contain less than 750 ppm total of these constituents. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
- a. Drying to remove water.
- b. Phase separation by filtration, centrifugation, or gravity settling.
- c. Magnetic separation.
7. Soils contaminated with metals listed in title 22, CCR, section 66261.24 (a)(2)(A). The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
- a. Screening to separate components based on size.
- b. Magnetic separation.
8. Oil mixed with water and oil/water separation sludges. (There is no volume limit for this wastestream.) Treatment is using:
- a. Phase separation by filtration, centrifugation, or gravity settling, but excluding super critical fluid extraction, including the use of demulsifiers and flocculants. Heat can be used, but must not exceed 160 degrees Fahrenheit.
- b. Separation based on differences in physical properties, such as size, magnetism, or density.
- c. Reverse osmosis.
9. Neutralization of acidic or alkaline wastes, hazardous solely due to corrosivity or toxic only from the acid or caustic material, in elementary neutralization units. (There is no volume limit for this wastestream.)
- a. The waste contains less than 10 percent acid or base constituents by weight. There is no volume limit for this category.
- b. The waste contains 10 percent or more acid or base constituents by weight and is treated in batches that do not exceed 500 gallons at one time.
10. Recovery of silver from photofinishing. The volume limit for conditional authorization is 5,000 gallons per unit in any calendar month.
-

**CONDITIONALLY AUTHORIZED
UNIT SPECIFIC NOTIFICATION**
(pursuant to Health and Safety Code Section 25200.3)

11. Spent cleaners and conditioners which are hazardous solely due to copper or copper compounds with less than 5000 ppm copper. The volume limit for conditional authorization is 1,000 gallons of this wastestream per facility in any calendar month. (These cleaners are limited to surfactants and detergents and do not contain microetch, etchant, plating or metal stripping solutions or solutions containing oxidizers, or any cleaner based on organic solvents). (These wastestreams and processes are only conditionally authorized until January 1, 1995, unless extended by the Department.) Treatment is using:

- a. Phase separation, including precipitation, by filtration, centrifugation, or gravity settling, including the use of demulsifiers and flocculants.
- b. Ion exchange, including metallic replacement,
- c. Reverse osmosis
- d. Adsorption
- e. pH adjustment of aqueous waste with a pH of between 2.0 and 12.5
- f. Electrowinning of solutions, unless those solutions contain hydrochloric acid

II. **NARRATIVE DESCRIPTIONS:** *Provide a brief description of the specific waste treated and the treatment process used.*

- 1. SPECIFIC WASTE TYPES TREATED: See Attachment

- 2. TREATMENT PROCESS(ES) USED: See Attachment

III. **RESIDUAL MANAGEMENT:** *Check Yes or No to each question as it applies to all residuals from this treatment unit.*

- | YES | NO | |
|-------------------------------------|-------------------------------------|---|
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1. Do you discharge non-hazardous aqueous waste to a publicly owned treatment works (POTW)/sewer? |

**CONDITIONALLY AUTHORIZED
UNIT SPECIFIC NOTIFICATION**
(pursuant to Health and Safety Code)

IV. BASIS FOR NOT NEEDING A FEDERAL PERMIT:

In order to demonstrate eligibility for one of the onsite treatment tiers, facilities are required to provide the basis for determining that a hazardous waste permit is not required under the federal Resource Conservation and Recovery Act (RCRA) and the federal regulations adopted under RCRA (Title 40, Code of Federal Regulations (CFR)).

Choose the reason(s) that describe the operation of your onsite treatment units:

- 1. The hazardous waste being treated is not a hazardous waste under federal law although it is regulated as a hazardous waste under California state law.
- 2. The waste is treated in wastewater treatment units (tanks), as defined in 40 CFR Part 260.10, and discharged to a publicly owned treatment works (POTW)/sewering agency or under an NPDES permit. 40 CFR 264.1(g)(6) and 40 CFR 270.2.
- 3. The waste is treated in elementary neutralization units, as defined in 40 CFR Part 260.10, and discharged to a POTW/sewering agency or under an NPDES permit. 40 CFR 264.1(g)(6) and 40 CFR 270.2.
- 4. The waste is treated in a totally enclosed treatment facility as defined in 40 CFR Part 260.10; 40 CFR 264.1(g)(5).
- 5. The company generates no more than 100 kg (approximately 27 gallons) of hazardous waste in a calendar month and is eligible as a federal conditionally exempt small quantity generator. 40 CFR 260.10 and 40 CFR 261.5.
- 6. The waste is treated in an accumulation tank or container within 90 days for over 1000 kg/month generators and 180 or 270 days for generators of 100 to 1000 kg/month. 40 CFR 262.34, 40 CFR 270.1(c)(2)(i), and the Preamble to the March 24, 1986 Federal Register.
- 7. Recyclable materials are reclaimed to recover economically significant amounts of silver or other precious metals. 40 CFR 261.6(a)(2)(iv), 40 CFR 264.1(g)(2), and 40 CFR 266.70.
- 8. Empty container rinsing and/or treatment. 40 CFR 261.7.
- 9. Other: Specify: _____

V. TRANSPORTABLE TREATMENT UNIT: Check Yes or No. Please refer to the instructions for more information.

YES NO

- Is this unit a Transportable Treatment Unit?

If you answered yes, you must also complete and attach Form 1772E to this page.

The Tier-Specific Factsheets contain a summary of the operating requirements for this category. Please review those requirements carefully before completing or submitting this notification package.

1. **Specific waste types treated:** General waste from the buffer prep and purification areas is collected into the general waste surge tank (this includes sinks, drains, tanks and clean steam condensate lines). Wastes from the fermentation tanks are first fed through a heat exchanger and raised to temperature of 80 C for a minimum of 45 seconds. The waste is then cooled and sent to the neutralization tank.

2. **Treatment process(es) used:** Waste neutralization is performed on a continuous overflow basis. A constant volume of approximately 100 - 150 gallons is automatically controlled at pH 6 to 8 with a maximum operating temperature of 60 C (140 F). As waste from the surge tanks (biological and general) is fed into the neutralization tank, redundant pH measurements are continuously made and concentrated acid (sulfuric or phosphoric) or 30% sodium hydroxide is pumped into the stirred neutralization tank, as necessary. Flow to the sewer will be provided on the controls and bypass valves to further protect against out-of-range waste flowing to the sewer. (estimated usage of acid = 50 - 150 gallons per month and the estimated usage for the caustic is approximately 50 - 100 gallons per month. A PLC will be used to control all aspects of the waste system including tank level controls, level alarms for the tanks and overflow pits, sumps and automated valve operation, temperature control and neutralization.

Separate containment areas for acids and caustics, designed to contain 150% of the volumes in the event of leakage will be in the mechanical areas. Waste pits for the biological and general waste tanks are each 12' X 7.5' X 12' deep, the biological pit is in the mechanical room and the general waste pit is located in the mechanical pad. Should it be necessary in the event of equipment failure, these pits could contain eight (8) tank volumes.

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

For facility located at:

11011 TORREYANA ROAD
LA JOLLA, CA 92037

Authorization Date: 08/02/93

Dear Conditionally Authorized and/or Conditionally Exempt Facility:

ACKNOWLEDGEMENT OF UNITS OPERATING UNDER CONDITIONAL AUTHORIZATION AND/OR CONDITIONAL EXEMPTION

The Department of Toxic Substances Control (DTSC) has received your facility specific notification (form DTSC 1772) and forms for Conditional Authorization and/or Conditional Exemption for Specified Wastestreams (form DTSC 1772B and/or 1772C). Your notifications are administratively complete, but have not been reviewed for technical adequacy. A technical review of your notifications will be conducted when an inspection is performed. At any time, you may be inspected and will be subject to penalty if violations of laws or regulations are found.

The Department acknowledges receipt of your completed notification for the treatment unit(s) listed on the last page of this letter. These units operating under Conditional Authorization or Conditional Exemption are authorized by California law without additional Department action, pursuant to Health and Safety Code sections 25200.3 and 25201.5. Your authorization to operate continues until you notify DTSC that you have stopped treating waste and have fully closed the unit(s). You will be charged annual fees calculated on a calendar year basis for each year you operate and have not notified DTSC that the units have been closed.

You must notify the DTSC 60 days before first treating hazardous wastes in any new unit. You must also notify the DTSC whenever any of the information you provided in these notifications changes. To revise information, mail a cover letter to the above address explaining the changes, attach only the pages of your notification package that have changed, and re-sign and date at the signature space on page 3 of form 1772.

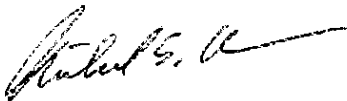

Your status to operate under Conditional Authorization and/or Conditional Exemption is contingent upon the accuracy of information submitted by you in the notifications mentioned above, and your compliance with all applicable requirements in the Health and Safety Code. Any misrepresentation or any failure to fully disclose all relevant facts shall render your authorization to operate null and void.

You are also required to properly close any treatment unit. Additional guidance on closure will be issued and distributed to all authorized onsite facilities later this year.

If you have any questions regarding this letter, or have questions on operating requirements for your facility, please contact the nearest DTSC regional office, or this office at the letterhead address or phone number.

Sincerely,

Michael S. Horner, Chief

UNDER CONDITIONAL EXEMPTION:

3/20/00

Mr. Peter Neubauer
County of San Diego
Department of Environmental Health, HMMD
1225 Imperial Avenue
P.O. Box 129261
San Diego, CA 92123 - 1119

Dear, Peter,

IDEC Pharmaceuticals is herein requesting cancellation of the Conditional Authorization permit issued to IDEC by the California Department of Toxic Substance Control for treatment of hazardous waste generated at 11011 Torreyana Road. IDEC is making this request in accordance with Section 25201.15 of the Health and Safety Code, Division 20, Chapter 6.5 (attached). In accordance with §25201.15 IDEC claims exemption from the tiered permit system; however, IDEC will continue to carryout elementary waste neutralization via its fixed treatment unit in order to comply with the Industrial Discharge permit issued by the City of San Diego, Metropolitan Industrial Waste Program. The operation of this unit shall be carried out in accordance with part (d) of §25201.15.

If you have any further questions please contact me at 858-431-8822.

Sincerely,

Mark Thompson
Sr. Manager, EH&S

§25201.15. [Definitions; biotechnology elementary neutralization activities—exemptions; operator requirements; notice requirements]

(a) For the purposes of this section, the following terms have the following meaning:

(1) "Biotechnology manufacturing or biotechnology process development activities" means activities conducted in SIC Code Subgroups 283, 2833, 2834, 2835, 2836, 8731, 8732, and 8733, including manufacturing and process development of medicinal chemicals and botanical products, pharmaceutical preparations, in vitro and in vivo diagnostic substances, and biological products, and all associated equipment and vessel cleaning and maintenance operations.

(2) "Biotechnology elementary neutralization activities" means the elementary neutralization of wastes generated by biotechnology manufacturing or biotechnology process development activities.

(3) "SIC Code" has the same meaning as defined in subdivision (t) of Section 25501.

(b) The Legislature hereby finds and declares that the biotechnology industry's elementary neutralization of hazardous wastes is a common, safe, and standard practice that typically occurs in a wastewater collection system, and which does not warrant extensive regulatory oversight.

(c) Biotechnology elementary neutralization activities are exempt from any requirement imposed pursuant to this chapter, including any regulation adopted pursuant to this chapter, that relates to generators, tanks, and tank systems, and the requirement to obtain a hazardous waste facilities permit or other grant of authorization from the department, except as otherwise provided in subdivision (d), if all of the following conditions are met:

(1) A permit is not required to conduct elementary neutralization under the federal act.

(2) The hazardous wastes are hazardous solely due to acidic or alkaline materials, and are generated by biotechnology process manufacturing or biotechnology process development activities.

(3) Either of the following applies with regard to the biotechnology elementary neutralization activity:

(A) The hazardous wastes in the elementary neutralization unit do not contain more than 10 percent by weight acid or alkaline constituents.

(B) The generator of the hazardous wastes determines that the elementary neutralization process will not raise the temperature of the hazardous wastes to within 10 degrees of the boiling point or cause the release of hazardous gaseous emissions, using either constituent-specific concentration limits or calculations. The generator shall make these calculations in accordance with the regulations adopted by the department, if the department adopts those regulations.

(4) The hazardous wastes are not diluted for the sole purpose of meeting the criteria specified in subparagraph (A) of paragraph (3) and after neutralization the wastewaters do not exhibit the characteristic of corrosivity, as defined in Section 66261.22 of Title 22 of the California Code of Regulations, or any successor regulation.

(5) The temperature of any unit 100 gallons or larger is automatically monitored, and is fitted with a high temperature alarm system, and for closed systems, the unit automatically controls the adding and mixing of corrosive and neutralizing solutions.

(d) The operator of an elementary neutralization unit exempt under this section shall comply with the following requirements:

(1) An operator of an elementary neutralization unit subject to this section shall successfully complete a program of classroom instruction or on-the-job training that includes, at a minimum, instruction for responding effectively to emergencies by familiarizing personnel with emergency procedures, emergency equipment, and emergency systems, including, where applicable, procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment, communications, or alarm systems.

(2) Within 10 days of commencing initial operation of the unit, or within any other time period that may be required by the CUPA, the operator shall notify the CUPA of the commencement of operation of the unit under the exemption made pursuant to this section. If the operator is not under the jurisdiction of a CUPA, the notice shall be sent to the officer of the agency authorized, pursuant to subdivision (f) of Section 25404.3, to implement and enforce the requirements of this chapter listed in paragraph (2) of subdivision (c) of Section 25404.

(e) Notwithstanding any other provision of law, unless required by federal law, biotechnology elementary neutralization activities satisfying the requirements of subdivisions (c) and (d) are exempt from any statute or any regulation adopted pursuant to state law requiring the elementary neutralization unit to have secondary containment for piping or ancillary equipment, including, but not limited to, a regulation adopted by the State Water Resources Control Board, the department, or any other state agency.

Ms. Sonia Low
Section Chief
Southern California Branch
State Regulatory Programs Division
5796 Corporate Avenue
Cypress, CA 90630

Via Certified Mail

Dear Ms. Low:

IDEC Pharmaceuticals has received the Summary of Violation dated April 7, 2000, and has completed the Phase 1 Checklist provided by your department. Enclosed is a copy of the Phase 1 Checklist for your records.

With regard to the Summary of Violation, I would like to point out the following information. In a telephone conversation with Mr. Nebu John on April 20, 2000 I discussed the reason why IDEC had not previously filed the Phase 1 Checklist. As I mentioned to him at that time, until his initial phone call to me earlier in the month I was under the impression that the deadline for submitting the Phase 1 Checklist had been once again extended by DTSC.

I have been tracking the department's development of the Phase 1 Checklist since 1993, at which time the filing deadline was delayed until January 1, 1995. In 1994 the reporting deadline was once again extended, this time from January 1, 1995 to January 1, 1997. It was my understanding that the filing deadline was further delayed beyond January 1, 1997. In February, 1998 I spoke with a Mr. Nabil Yacoub from your Cypress office on this matter. At that time I was involved in preparing the Certification of Financial Assurance (CFA) documentation on IDEC's treatment unit for submission to DTSC. During this conversation Mr. Yacoub indicated that it was appropriate for IDEC to delay submitting any information related to the Phase 1 Checklist because the department had not yet finalized the checklist format. Based on our conversation and Mr. Yacoub's assurances I did not submit any information related to the Phase 1 Checklist. Otherwise, I would have readily submitted the Phase 1 Checklist along with our CFA documentation.

With regard to the checklist and reminder correspondence mentioned in your April 7, 2000 letter I have no record of having received either the checklist or reminder. IDEC has complied with the conditions of the Conditional Authorization permit since its issuance in 1993, and would have filed the Phase 1 Checklist had the deadline not been extended, or if we had received your Checklist in 1996, or the 1997 reminder correspondence.

During my conversation with Mr. Yacoub in March, 1998 I mentioned that there was an effort underway in the California Senate to exempt biotechnology wastewater management operations from the tiered permit system. SB 1135 was approved and the Health and Safety Code modified based on the finding that the types of elementary waste neutralization carried by the biotech industry are common, safe, and standardized practices which do not warrant extensive regulatory oversight. In March, 2000 IDEC requested cancellation of it's Conditional Authorization permit through correspondence with the County of San Diego Department of Environmental Health, Hazardous Materials Management Division (HMMD); this request was made pursuant to Section 25201.15 of the Health and Safety Code, Division 20, Chapter 6.5. On April 25, 2000 I met with the San Diego County HMMD at which time they approved IDEC's request to cancel the permit.

In my conversation with Mr. John on April 20, he mentioned that IDEC would be receiving an enforcement notice on this matter, and that I would be given the opportunity to go before a hearing board regarding any financial assessment levied against IDEC by DTSC as a result of not filing the Phase 1 Checklist until now.

With all due respect, based on the facts and circumstances surrounding this matter, I do not believe that a violation has occurred or that an enforcement notice is necessary. I am not opposed to attending the hearing and disputing the matter, but would recommend that this matter be excused and dismissed prior to a hearing. Please let me know the next steps. If you have any questions please contact me at 858-431-8822.

Sincerely,

Mark Thompson
Sr. Manager, EH&S
IDEC Pharmaceuticals Corporation

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST**SECTION I: FACILITY INFORMATION**

Instructions: Complete the following descriptive information about your facility. This information accurately describes the location of your facility and establishes mailing and phone contacts. If facility location and mailing address are identical, you may put "same" into facility mailing address space.

Type of Permit: Permit by Rule _____ Conditional Authorization X

1. CURRENT FACILITY NAME: IDEC Pharmaceuticals Corporation

PAST NAMES (Attach additional pages if necessary):

2. EPA ID. NUMBER: CAD 981-583-479

3. NAME OF FACILITY OWNER (see definition of owner): Torrey Sorrento Incorporated

4. NAME OF FACILITY OPERATOR: IDEC Pharmaceuticals Corporation

5. NAME OF PROPERTY OWNER: Torrey Sorrento Incorporated

6. FACILITY LOCATION ADDRESS:

STREET: 11011 Torreyana Road

CITY: San Diego

COUNTY: San Diego

STATE: CA ZIP CODE: 92121

7. FACILITY MAILING ADDRESS (if different from FACILITY LOCATION ADDRESS):

STREET: 3030 Callan Road

CITY: San Diego

STATE: CA ZIP CODE: 92121

8. FACILITY TELEPHONE NUMBER: (858) 431-8500

9. FACILITY FAX NUMBER: (858) 431-8887

10. NAME OF FACILITY CONTACT PERSON: Mark Thompson

11. TITLE OF FACILITY CONTACT PERSON: Sr. Manager, Environmental Health & Safety

12. PHONE NUMBER OF FACILITY CONTACT PERSON: (858) 431-8822

13. ADDRESS OF FACILITY CONTACT PERSON:

STREET: 3030 Callan Road

CITY: San Diego

STATE: CA ZIP CODE: 92121

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

SECTION II: FACILITY HISTORY

Instructions: Complete this section regarding facility history based on reasonably available knowledge of the facility. This section will determine if past operating practices and significant historical events that occurred at the facility indicate potential areas of contamination. Current and past employees who know about the facility's past operating practices can be an asset in completing this section of the checklist. Yes answers to these questions mean that careful attention must be paid to these areas and considerations when completing the facility walk-through inspection.

	YES	NO
1. Has an environmental assessment and/or a site investigation report ever been completed for the facility? If this assessment meets the criteria for substituting for this checklist (see Instructions), use the Signature and Certification Page to record this exemption. You need not release confidential assessments. However, if these reports indicate existing or potential contamination, you must use the information relied on by the confidential report to help reach a conclusion in this assessment.		X
2. To your knowledge, have areas of the facility that contain hazardous materials ever been flooded?		X
3. To your knowledge, has the facility ever been damaged by an earthquake that could cause contamination?		X
4. To your knowledge, has the location for the facility ever been used for industrial purposes prior to its current use? If YES, then consider potential contamination from the type of industry that the location was formerly used for.	X	
5. To your knowledge, has there been any disposing of hazardous chemicals or hazardous wastes in, on, or under the property?		X
To your knowledge, has the facility ever had electrical transformers, capacitors, or hydraulic equipment including, but not limited to elevators and auto lifts, at the facility which may have released PCBs or oil to the environment? (Not including small quantities of fluorescent light ballasts and capacitors if these materials were not disposed of or dismantled at the facility)		X
If YES, was the equipment ever tested for the presence of PCBs?		
To your knowledge, has testing of any groundwater wells on the property ever revealed possible contamination?		X
Do you have in your possession, or do you know of the existence of any photographs, geophysical reports, analytical test data, and/or air sampling data that indicates the possible presence of hazardous materials and/or waste in unwarranted or unexpected areas of the facility?		X
To your knowledge, has the facility ever had liquid/sludge containment area(s), surface impoundment(s), collection pond(s), and/or lagoon(s)?		X
To your knowledge, have land-farming or bioremediation been used at the facility?		X
To your knowledge, has the facility ever burned hazardous wastes, unidentified waste materials, tires, or automotive batteries at the facility?		X
To your knowledge, have ash and/or combustion residuals been disposed of at the facility?		X

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

13.	To your knowledge, have any underground storage tank(s) been removed, abandoned, or taken out of service from the facility? Tanks removed, abandoned, or taken out of service under the oversight of a responsible agency need not be considered if the agency addressed potential contamination at the tank location.		X
4.	To your knowledge, has any contaminated soil been discovered and/or remediated at the facility without oversight by an appropriate regulatory agency?		X
15.	To your knowledge, have there been fires and/or explosions at the facility which may have caused a release of hazardous waste or materials?		X
16.	To your knowledge, has the facility ever received complaints from any employees, neighbors, or the public about the facility's practices for managing hazardous wastes, or any actual or potential releases to air, water, or soil, or other environmental issues?		X
17.	To your knowledge, have nearby residents complained to a governmental agency of any type of illnesses or unusual illnesses as having been caused or suspectedly caused by or related to activities at the facility? (Note: this item does not require questioning the facility's neighbors) If YES, indicate below the person and/or agency who recorded the complaint. _____		X
	If YES, to your knowledge, has any evidence been submitted to a physician to substantiate the claim?		
	To your knowledge, are there any areas at the facility which were formerly used for hazardous waste or hazardous materials transfer (e.g. tank loading areas, drum transfer areas)?		X
	To your knowledge, are there, or have there been lawsuits or administrative proceedings concerning an actual, alleged, or threatened release of any hazardous substance against the facility by another party? Only actions concluded by settlement or litigation need be considered.		X

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

SECTION IV: FACILITY WALK-THROUGH INSPECTION - OTHER AREAS

Instructions: This section of the checklist requires the owner and/or operator of the facility to conduct a walk-through inspection of the those portions of the facility not addressed in Section III in order to identify possible environmental problems, environmental warning signs or potential exposure to people, animals, or plants. Some of the problems that may be discovered during this inspection include abandoned storage tanks, spill areas, surface impoundments, etc. Some of the environmental warning signs include stains, discolored vegetation, and/or unnatural terrain. During the inspection, were any of the following present:

	YES	NO
Does the facility have vent pipes, fill pipes, and/or access routes that may indicate the presence of an underground storage tank?		X
Does the facility have stains and/or discolorations of the soil, flooring, drains and/or walls at the facility which may indicate a release to the environment that has not or is not being addressed under the oversight of an appropriate agency?		X
Does the facility have areas of soil at the facility that appear disturbed and which may indicate onsite disposal or land treatment of hazardous materials or remediation of releases without oversight by an appropriate agency?		X
Does the facility have areas at the facility where the terrain appears unnatural, such as unexplained mounds or depressions?		X
Does the facility have unusual smells or odors emanating from the soil, floor, drains, and/or walls at the facility?		X
6 Does the facility have dead, abnormal, or distressed-looking vegetation or conspicuous absence of vegetation at the facility that is not directly explainable by a deliberate action and/or lack of water at the site?		X
7 Where does rain and/or washwater drain to at the facility? (circle all that apply) Note: slightly contaminated storm or washwater can seriously contaminate evaporation or settling areas (with no drainage) over a period of time.		
a. Storm Drain d. Open Land b. Sewer e. Areas of pooling, settling, or evaporation c. Drainage Ditch f. Other <u>Torrey Pines State Reserve</u>		

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

**SIGNATURE AND CERTIFICATION
FOR
PERMIT-BY-RULE AND CONDITIONAL AUTHORIZATION**

Instructions: Carefully read the certification below. If you feel uncomfortable signing this certification, review the instructions and the information developed in the preparation of the checklist and correct any deficiencies you have found. Be sure that you check one of the boxes below to record your decision regarding further investigation. If you are claiming exemption from completing a Phase I Environmental Assessment, complete that section below.

Either the owner, operator, or independent professional engineer, geologist, or an environmental assessor who is registered in the State of California, shall certify to the following statement by signing on the appropriate lines below:

- Yes, further investigation is needed to determine the existence, nature, and/or extent of contamination at the facility; or
- No, further investigation is not necessary to determine the existence, nature, and/or extent of contamination at the facility.
- I am exempt from completing the checklist and/or from resulting followup work. [Please state reason for exemption below and supply documentary evidence (see instructions)]. Explanation:

"Under penalty of perjury, I certify that I have personally examined and am familiar with the information submitted in this document and all attachments, and based on my inquiry of those individuals immediately responsible for obtaining it, the information is true, accurate, and complete to the best of my knowledge. Thus informed, I certify to my best judgement that the conclusion recorded above regarding further investigation or exemption from completion of the Phase I Environmental Assessment is correct."

Owner's Signature	Name, Title, and Company Name	Date
-------------------	-------------------------------	------

Or:

<i>Connie Matsui</i>	Connie Matsui, Vice President	
Operator's Signature (If Owner is not Operator)	Name, Title, and Company Name IDEC Pharmaceuticals	Date

Or: Certification by an independent professional engineer, geologist, or environmental assessor who is registered in the State of California. Certification by a registered professional is optional for Permit-By-Rule and Conditionally Authorized Generators. Sign and affix stamp.

Signature	Name, Title, Registration Number	Date
-----------	----------------------------------	------

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

AREA OF CONCERN DATASHEET

Instructions: Complete the following questions in detail for EACH release or suspected release identified in Section III FACILITY WALK-THROUGH INSPECTION - SPECIFIC AREAS or SECTION IV FACILITY WALK-THROUGH INSPECTION - OTHER AREAS and any other known or suspected releases. Do not include areas that have been or are being remediated under the oversight of an appropriate agency. If answers to questions are not known, then state "unknown".

1. Facility name: IDEC Pharmaceuticals Corporation

2. This sheet is being completed for a:

Known release X Suspected release

3. How was this release or suspected release discovered?

During the walk-through inspection? Previously known release? X

What checklist question(s) are related to this release (section/question) Checklist section III
South Delivery Area

4. When did the release occur? 9/10/99

5. What was released and how much? Approximately 1.5 gallons of hydraulic fluid.

6. What caused the release? There was a leak in the hydraulic system of the solid waste management truck servicing IDEC's site.

7. Indicate the approximate area of the release (e.g. 3 feet in diameter, 5 feet X 4 feet) 30 ft X 30 ft

8. Was the release remediated? If YES, explain how. (Note: A datasheet need not be completed for releases remediated or being remediated under the oversight of an appropriate agency.
IDEC maintenance staff employed spill response spills to protect storm drains
Waste management vendor sent clean-up crew to take care of the spill.

9. Were samples collected? If yes, what were the results? No samples were collected.

10. List any environmental reports or studies performed on the area of concern and attach copies or summaries of the reports not submitted to the Department.

COMPLIANCE INSPECTION REPORT

BUSINESS NAME IDEC Pharmaceuticals Corp
ADDRESS 11011 Torreyana Road
CITY/ZIP San Diego CA 92121

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Office Use Only

DEC 23 1996

P; 12/23/96
CWD

Routine Inspection

Violations and Corrective Actions:

1. The 30 and 55 gallon drums in the main hazardous waste storage area are not adequately labelled. Labels have generator information, contents, and accumulation start date, but do not say "hazardous waste."
- all containers/drums storing hazardous waste are to be labelled as "Hazardous waste."
2. There were two ~ 55 gallon drums containing product for water treatment/boiler treatment systems that weren't labelled as to contents. There was a MSDS sheet with these drums. There was a third drum labelled as "caustic."
- label these drums as to contents. If it's a trade name, include main hazard constituent.

Remarks

1. A current business plan, employee training documentation, and hazardous waste manifests are on file at site
2. Recommend that disinfectant in cell media flasks be changed weekly.

PAGE 2 OF 2

BUSINESS ADDRESS: 11011 Tomeyana Road

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING

- Health Permit not obtained SDCC 68.905 V0108 W
- No EPA Identification Number 66262.12 V0105 W
- Waste Manifests/Receipts not on-site for 3 years 66262.40 V0118 W
- Manifest not properly completed 66262.23 V0120 W
- Manifest copy not sent to DTSC 66262.23 V0115 W
- TSDF signed-manifest not on-site 66262.40 V0121 W
- Biennial report not sent to DTSC 66262.41 V0122 W
- LDR Documentation not available 66268.7 V0123 W
- Exception Rpt. not filed with DTSC 66262.42 V0116 W
- Operating TSDF without authorization 25201 V0124 W

STORAGE AND HANDLING

- Waste stored longer than 90, 180, or 270 days 66262.34 V0221 W
- Failure to clean up hazwaste off of floor surface 66262.10b V0313 W
- Waste container missing/improperly labeled 66262.34 V0222 W
- Haz Materials not properly labeled 25124 V0223 W
- Waste container not kept closed 66265.173 V0202 W
- Waste container in poor condition 66265.171 V0205 W
- Waste container(s) not properly managed 66265.173 V0210 W
- Damaged container not repackaged 66265.171 V0226 W
- Container incompatible with waste 66265.172 V0207 W
- Incompatibles in the same container 66265.177 V0224 W
- Incompatibles not stored separately 66265.177 V0213 W
- Ignitable Waste less than 50 feet 66265.176 V0214 W
- Ignitable Waste not grounded 66265.31 V0215 W
- Storage area not inspected weekly 66265.174 V0216 W

DISPOSAL AND TRANSPORTATION

- Unauth. disposal of waste to 25189.5 V0313 W
- Waste determination not made 66262.11 V0319 W
- Unlawful transport of haz. waste 25163 V0315 W
- Waste transported without manifest 66262.20 V0316 W
- Extremely Haz Waste Permit not obtained 25205.7 V0317 W

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES

- Training records unavailable 66265.16 V0405 W
- Training program not adequate 66265.16 V0406 W
- Facility not designed to minimize release 66265.31 V0501 W
- Spill control equip not available 66265.32 V0508 W
- Aisle space is obstructed 66265.35 V0509 W
- Contingency plan not prepared and/or on file 66265.51, 66265.53 V0609 W

MISCELLANEOUS

- Waste oil contaminated 25250.7 V0225 W
- Used oil filters improperly managed 66266.130 V0701 W
- Damaged batteries improperly managed 66266.81 V0702 W
- Facility has failed to notify local CUPA and DTSC of onsite treatment of hazardous waste (tiered permitting) V0125 W
- Onsite treatment of waste without authorization 25201 V0125 W

III HAZARDOUS MATERIALS BUSINESS PLAN REQUIREMENTS:

RECORD KEEPING

- Health Permit not obtained SDCC 68.1105 V2001 W
- Business Plan not established/implemented 25503.5 V2002 W
- Business Plan not submitted to HMMD 25505 V2007 W
- Business Plan not amended 25505 V2003 W
- Personnel Training Records not available 19 CCR 2732 V2302 W

RELEASE REPORTING

- Failure to report a release/threatened release 25507 V2008 W

II UNDERGROUND STORAGE TANK (UST) REQUIREMENTS:

GENERAL UST REQUIREMENTS

- Health Permit not obtained 68.1005, 25284 V3002 T
- Repair/modify/close permit not obtained 68.1005 V3007 T
- UST Permit Application not submitted 25286(a) V3010 T
- Operating permit conditions violated 2712 V3011 T
- Failed to notify HMMD of changes 25284 V3012 T
- No owner/operator agreement 25284 V3005 T
- No records of financial coverage 25292.2 V3013 T
- No maint/monit/calib records available 2712(b), 2641(j) V3001 T
- Monitoring Equip. not tested annually 2630, 2641 V3003 T

MONITORING REQUIREMENTS (SINGLE WALL)

- Leak Detection Method does not meet performance standards 2643 V3014 T
- Integrity test not conducted 25292 V3015 T
- Copy of tank test not submitted to HMMD within 30 days 2643 V3016 T
- Manual tank gauging (<2000 gal) 2645 not done properly V3017 T
- Reconciliation not done properly 2646 V3018 T
- Reconciliation not approved for facility 2646 V3019 T
- Dispenser meter(s) not calib annually 2646 V3020 T
- Improper liquid measurements 2646 V3021 T
- Stick in poor condition 2646 V3022 T
- Improper monthly reconciliation 2646 V3023 T
- Failed to report excessive variation 2646 V3024 T
- Pressurized Product Piping Leak Device not tested annually 25292 V3025 T
- No written monitoring procedure 2641 V3027 T
- No written emergency response plan 2641 V3027 T
- SIR reporting incorrectly done 2646.1 V3004 T

MONITORING REQUIREMENTS (DOUBLE WALL)

- Monitoring system not functional 2632 V3026 T
- No written monitoring procedure 2632 V3027 T
- Written emergency response plan not available 2632 V3028 T
- Spill/Overfill equip. not maintained or installed 2635 V3029 T

RELEASE REPORTING

- Failure to report an unauthorized release 25295 V3009 T
- Release record log not available 2651, 2650 V3030 T
- No leak report/investigation/action 2652 V3031 T

CLOSURE

- Temporary closure req. not completed 2671 V3006 T
- Unused tank not properly closed 25298 V3032 T
- Permanent closure req. not completed 2672 V3033 T
- Failed to apply for temporary closure 25298 V3008 T

BUSINESS PLAN ELEMENTS

- Emergency Response Plan inadequate 25504 V2201 W
- Emergency Contacts not provided/current 25509 V2203 W
- Personnel Training Program inadequate 25504 V2301 W
- Inventory is incomplete 25504 V2005 W
- Site Map is not sufficient 25509 V2202 W
- Acutely Haz. Mat. not registered 25533 V2009 W

ALL VIOLATIONS MUST BE CORRECTED. PLEASE CALL (619) 338-2222 OR YOUR INSPECTOR IF YOU HAVE ANY QUESTIONS.

Business Owner or Operator: SAME

Please complete the following by entering the chemical name in the chemical name column and then place a check "✓" in the quantity column that most closely estimates the amount on hand. If measured by volume, check the appropriate gallon column(s). If measured by weight, check the appropriate pound column(s). If the chemical is a trade secret, you should check the trade secret box. For example, if you have one pint of benzene you would write benzene in the chemical name column and place a check in the "< 1 gallon" column. (PLEASE NOTE: the symbol < means less than).

Chemical Name	< 1 gallon	< 10 pounds	< 10 gallons	< 10 pounds	< 55 gallons	< 500 pounds	Trade Secret
Formaldehyde			✓				
Tiodoacetamide		✓					
Trypan Blue		✓					
Carbon Tetrachloride		✓

GENERATION AND STORAGE OF BIOHAZARDOUS WASTE:

Describe below the type and quantity of biohazardous waste generated and managed at this facility. SEE SAMPLE PLAN AND ATTACHMENT FOR DEFINITION OF TERMS USED IN THIS PLAN

MEDICAL WASTE TYPE	QUANTITY (lbs/month)	STORAGE (container type)	TREATMENT METHOD	ON-SITE	OFF-SITE	HAULER NAME*
BIOHAZARDOUS WASTE Sharp Waste Needles/syringes/Slides	100	SHARPS CONTAINERS	INCINERATION		X	DWN
Non-sharp Waste Articles containing Fluid Blood (gauze, bandages, tubing, etc.)	5	BIOHAZARD BAGS	AUTOCLAVING	X		N/A
Solids (cultures, lab waste, etc.)	2920	BIOHAZARD BAGS	AUTOCLAVING	X		N/A
Liquids (cultures, urine, etc.)	800	VACUUM FLASKS	BLEACH/SEWER	X		N/A
Trace chemotherapy waste	0	—	—	—	—	—
Contaminated animal carcasses	< 5	PLASTIC BAGS			X	D&D DISPOSAL
Other	N/A	—	—	—	—	—
MEDICAL SOLID WASTE Gloves, empty specimen containers, gauze with dry blood, treated biohazardous waste	N/A	REGULAR TRASH BAGS	N/A	N/A	N/A	LIDLAW

* If applicable, attach a copy of biohazardous waste hauler contract or Limited Quantity Hauler exemption.

Biohazardous WASTE STORAGE LOCATION: [Please check the appropriate box(es)].

Biohazardous Waste: Inside establishment in secured area Outside in posted, secure area
 Medical Solid Waste: Inside establishment Outside in Locked/secured dumpster

PERSONNEL TRAINING:

All personnel handling biohazardous waste have been trained in all aspects of this management plan. Training includes the legal definition of biohazardous waste, separation and proper storage, transportation, treatment, and disposal of biohazardous waste. Documentation for completed employee training will be kept onsite.

CERTIFICATION STATEMENT:

I certify that the above management plan is complete and accurate, and that this business will adhere to all aspects of the plan. I further understand that any violation of this plan or any applicable law or regulation may result in legal action.

Toxicity

After reviewing the management practices for the Protein A sanitizing solution IDEC decided to a sample and test for aquatic toxicity according to Title 22 Section 66261.24(a)(6). The results of this testing indicate no observable toxicity at any concentration and support classification of this substance as non-hazardous (see attached results). Had the results of this test demonstrated toxicity then the Protein A buffer would have been collected following passage through the column.

Ignitability

In reviewing the management practices for solutions containing ethanol the characteristics of both the individual solutions themselves and the process waste stream were reviewed. While IDEC's internal waste management guidelines have always prohibited the discharge of concentrated alcohol solutions to any waste lines dilute solutions were considered acceptable for discharge under certain circumstances. Title 22 Section 66261.21(1) supports the position that waste alcohol solutions may be handled and disposed of as non-hazardous waste given a certain minimum alcohol content. As discussed during your inspection there are approximately 15 different buffers used in the purification process; these buffers possess unique chemical characteristics that support the purification process. Some of these buffers contain ethanol, most do not. Concurrent formulation and use of the buffer solutions results in a large amount of waste liquid being produced during each shift; the volume of waste produced is large enough to warrant the incorporation of a waste collection tank into the design of the plant. Testing of the contents of this collection tank confirms that the characteristic of ignitability is not present in the waste stream generated by purification (see attached results). In the course of reviewing the current management practices for spent buffers IDEC contacted the Metropolitan Industrial Waste Program; Metro supports IDEC's contention that given the nature of the processes used and the characteristics of the waste produced the liquid generated in the purification area is best regulated as a process waste, and that flashpoint does not appear to be a concern (see attached correspondence). This position is based on the fact that the buffers are combined during use to yield even more dilute solutions, and that the waste collection tank is indicative of the process waste generated in purification. During your inspection you inquired as to the practicality of collecting the buffers that contain ethanol. In effect we are already doing so within the waste collection tank. A review of the buffer chemistry indicates that if drums were used to collect all the purification buffers this solution would show the same lack of ignitability associated with the contents of the collection tank. This waste would have to be disposed of as a corrosive liquid under Title 22 Section 66261.22 since several of the buffers have pH values very close to 2. Drum collection of the buffer waste and subsequent disposal as a low pH corrosive waste makes no sense, however, when you consider that the waste collection tank was installed as part of a system for providing pH adjustment for exactly this type of waste. The waste collection tank was installed to serve as a surge tank upstream of an adjustment tank where the pH of the waste is brought to

} Purification area

} Purification process

} Δ buffers

} C A incl. the surge tank?

within the range acceptable for discharge to the sewer system. The pH adjustment tank is currently operated under a Conditional Authorization permit issued by the Department of Toxic Substance Control. Since the contents of the waste collection tank do not appear to possess the characteristic of ignitability a change in the procedures to collect the waste would not reflect an improvement in management practices. In light of this the procedures currently being followed are considered to be the best management practices.

} CA

The manufacturing area is currently in a maintenance shutdown and all activities have ceased. I look forward to hearing from you regarding this matter prior to resumption of operations on or about March 1, 1998. If you have any question please contact me at my new number 619-550-8822.

Sincerely,

Mark Thompson

Industrial Waste Inspector

Fax#: 550-8752

Phone # 654-4119

Company: IDEC Pharmaceuticals Corp.**Subject:** Discharge of Buffer Used in the Manufacturing Process

Based on our discussion about the above, and the issue with the DOTSC, I spoke with both Sara Giobbi and Barbara Sharatz.

After my discussion with Barbara, I can provide the following feedback:

Among the prohibited discharges attached to any permit we issue is the prohibition against discharging hazardous materials to the sewer. We do not determine what is a hazardous waste, however. That issue must be worked out between you and the hazmat people.

In regards to the buffer and flashpoint issue, we have no problem with it as long as your discharge complies with the requirements of your permit. Specifically, flashpoint is an end of pipe issue. Meaning (technically), that we require that the flashpoint of the discharge from your facility be greater than 140 degrees Fahrenheit at the point where your sewer lateral ends and the discharge enters the City main. This does of course mean the combined wastewater flows from your facility, not just those from the manufacturing processes. Such combined flows could have an effect on any one constituent of the wastewater being discharged, including the buffer and final flashpoint.

H# File _____ For Office Use Only

Please Print or Type All Information

I. CLASSIFICATION OF WASTE

Business Name: IDEC Pharmaceuticals Corporation
 Business Address/Zip Code: 11011 Torreyana Road SD CA 92121
 Business Phone: 619-458-8822
 Business Representative's Name: Mark Thompson
 Job Title: Manager, Environmental Health and Safety

A. Waste Information:

1. Describe the Type of Waste (Example: water soluble coating oil from machines shop containing trace amounts of heavy metals):
 Spent process buffers contain alcohol and salts in dilute concentration.

2. Description of Waste:

a. Physical description of waste (Example: Dry sandblast grit and other debris):
 Clear odorless waste water

b. Present method of waste disposal:
 Wastes are routed to pH adjustment tanks followed by discharge to sanitary sewer.

c. Dates and locations of collected samples (Fill in the box below with applicable information):

TYPE OF SAMPLE COLLECTED	LOCATION	DATE COLLECTED	FIELD SAMPLE # (sample label# or ID number)
Example : Dry sandblast grit	Sandblast grit stockpile grid location: #01	September 4, 1992	#001
Industrial waste water	General waste collection tank	9/9, 9/10, 9/11, 9/14, 9/15	#1, #2, #3, #4, #5, #6
Stock Protein A buffer	Buffer prep area	1/8/98	#1

d. Description of sampling methodology (NOTE-IMPORTANT: For wastes stored in roll-off boxes; in a stockpile; in large containers; or disposed of onto the ground surface, you must attach a plot plan map detailing the exact sample locations/coordinates demonstrating where the samples were collected.):

(1) Describe the sampling technique used at site or facility: Sampling for toxicity was carried out in the buffer area where stock solutions are prepared. Sampling for ignitability was carried out at the waste collection tank that serves the purification area.

(2) Describe sample handling and preservation methods used prior to laboratory analysis: Samples were collected in separate labelled containers, properly preserved and stored, and chain of custody procedures were followed. Samples were stored in plastic containers at 37 Fahrenheit.

(3) Waste produced per unit time (Example: 500 pounds/day): The general waste collection tank receives approximately 10,000 gals. per day.

(4) Describe the process used to generate waste: Plant activities include/involve large scale fermentation and purification operations. Large amounts of clean water and buffers solutions are used daily. Buffer solutions used in the plant contain ethanol and various acid salts. Purification operations combine various buffers to yield waste water solutions that are managed as a process waste by the liquid waste handling system designed into the manufacturing area.

B. Certification by person(s) who is/are the responsible managers of the establishment.

"I certify under penalty of law that I have personally examined and am familiar with the information submitted in this notification and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I certify that the waste is non-hazardous based on testing of the waste and applying knowledge of the characteristics of the waste in light of the materials or the processes used. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

Signature: [Handwritten Signature]
Printed Name: CHRISTOPHER BURMAN
Job Title: SENIOR VICE PRESIDENT, MANUFACTURING AND PROCESS SCIENCES
Date: Feb 19, 1998

II. SAMPLING INFORMATION

A. Sampler's Name: Mark Thompson
Business Address/Zip Code: 11011 Torreyana Road
Business Phone: 619-458-8822
Contact Person: Mark Thompson
Job Title: Manager, Environmental Health and Safety

"I certify under penalty of law that I have personally conducted all sampling in accordance with the procedures specified in Section One of 'Test Methods for Evaluating Solid Waste, Physical/Chemical Methods', SW-846, 3rd Edition, U.S. Environmental Protection Agency, 1986. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment."

Signature: [Handwritten Signature]
Printed Name: Mark Thompson
Title: Manager, Environmental Health and Safety
Date: 2/19/98

SW846 Section One, Regulatory and Scientific Objectives states in part "that enough samples...be collected over a period of time to address the variability of the waste."

III. LABORATORY INFORMATION. To be completed by Lab Technician:

- A. Waste samples are to be transported with a Chain-of-Custody to a laboratory certified to perform that specific analysis by the State of California Department of Environmental Health (Pursuant to Section 67440.1 CCR).

(Attach a copy of Chain-of-Custody Form)

Laboratory: D-TEK

Address: 11494 SORRENTO VALLEY RD SUITE G

Phone #: (619) 259-5901

Contact Person: ELLEN ATIENZA

Job Title: CHEMIST / QA/QC SPECIALIST

- B. Laboratory shall have a Quality Assurance Manual which is utilized on a routine basis by the laboratory staff.

1. Cite the reference(s) for the extraction and analytical methods used on the analysis report.
2. "I certify under penalty of law that I have conducted all analysis in accordance with the analytical procedures specified in California Code of Regulations, Title 22, Division 4.5, Chapter 11. (Identification and Listing of Hazardous Waste).

(Attach Laboratory Results)

Signature: *Joquin Velasquez*

Printed Name: JOAQUIN VELASQUEZ

Job Title: LABORATORY MANAGER

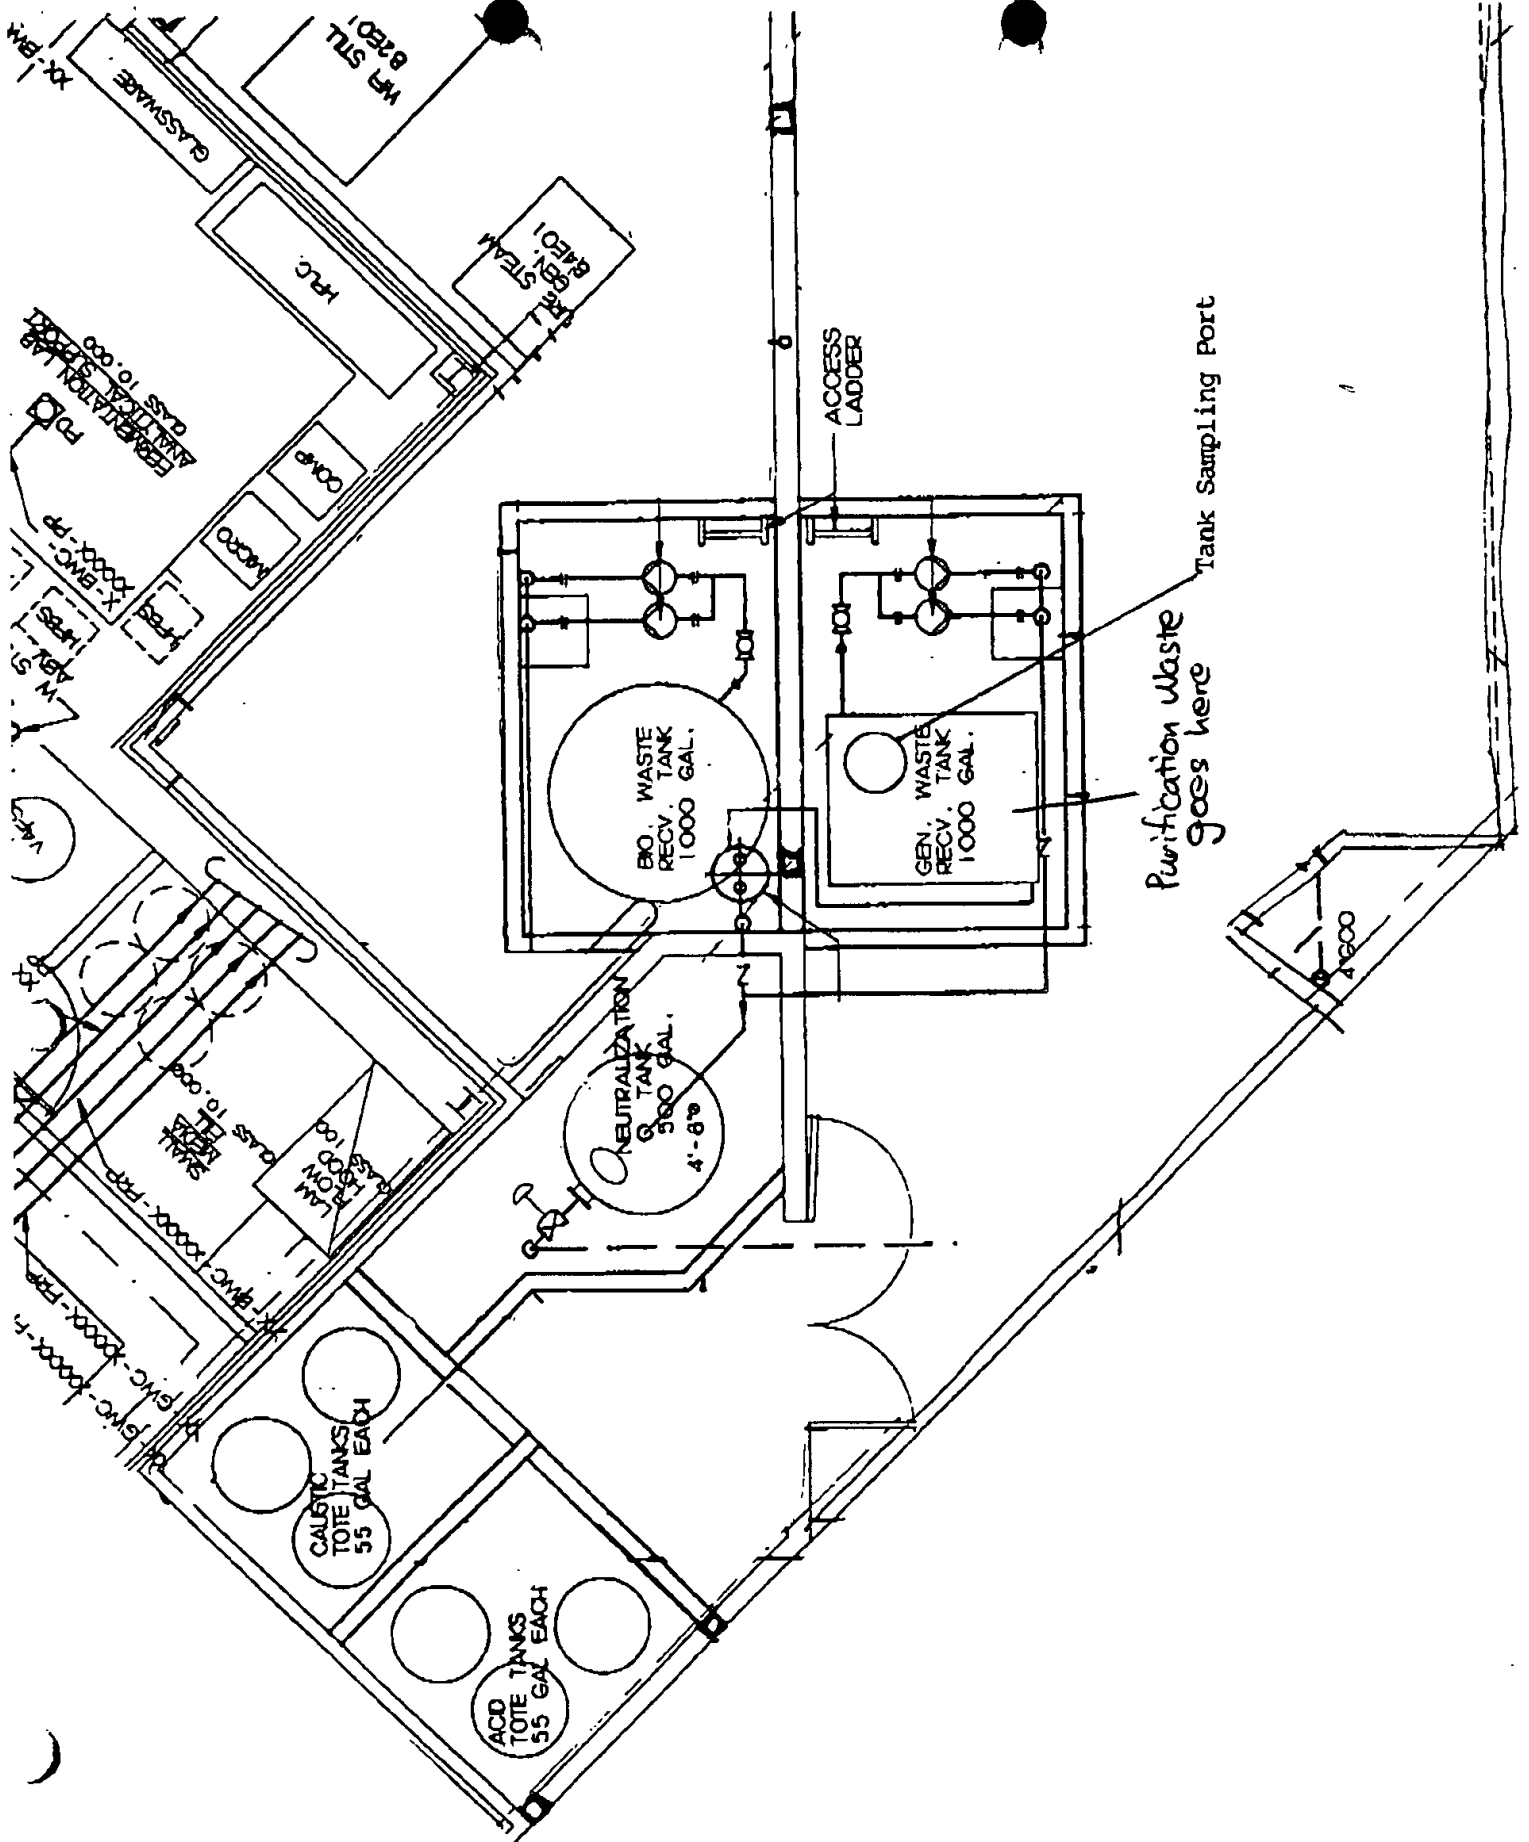

Date: Sept. 26, 1997

NOTE: You must attach a copy of the laboratory results and Chain-of-Custody document to this form.

IMPORTANT FOOTNOTES

**** Please Read ****

1. Maintain a completed copy of this document in your files available for review at all times.
2. Do NOT comingle or mix different samples into one composite sample.
3. Transport the samples directly to the laboratory as soon as possible. Maintain the samples cold (4°C or below) while in storage and during transport.
4. Enough samples should be taken of the waste to ensure that a thorough assessment of the properties of the waste is conducted by the waste producer. Sample analysis results often vary because the waste is not homogenous in nature. In many cases, more than one sample must be analyzed in order to ensure the validity of the waste determination.
5. The Hazardous Materials Management Division recommends you obtain the services of a qualified and experienced environmental consultant who can assist you in the sampling of the waste and laboratory analysis of the samples.
6. In accordance with Section 66260.200 of the California Code of Regulations, Title 22, Division 4.5, the waste generator may petition Cal-EPA, Department of Toxic Substances Control, for their concurrence with the results of the waste determination.
7. A waste generator who incorrectly determines that a hazardous waste is non-hazardous, and fails to manage the waste in a lawful manner, is in violation of the regulations and is subject to enforcement action (Section 66260.200 of the California Code of Regulations, Title 22).

Dear Mark,

On January 8, 1998 the Ogden Bioassay Laboratory received one liquid sample for bioassay analysis. The sample was identified by Idec as Sample #1 and was analyzed in accordance with State of California and USEPA methods. The definitive assay indicates no observable toxicity at any concentration tested and classification of this substance as non-hazardous.

Attached are a summary sheet of the test results, a copy of the laboratory raw data recorded during the assay, and a copy of the chain-of-custody which accompanied the sample. Please feel free to call me at (619) 458-9044 x300 should you have any questions.

Sincerely,

Marilyn J. Schwartz

BUSINESS ADDRESS: 11011 Torrey Pines Rd

VIOLATION REPORT: The items checked below refer to specific section numbers of the California Health and Safety Code Sections 25100 and 117600 et. al.; the San Diego County Code of Regulatory Ordinances Sections 68.1201 et. al.; and the California Code of Regulations, Title 22 Sections 65600 et. al. and 66262.10 et. al. All violations must be corrected. Please call (619) 338-2222 or your Inspector if you have any questions.

GENERAL REQUIREMENTS:

- [] An Environmental Health Permit as a medical waste generator has not been obtained. 68.1203, 68.1204, and 117705 V4101 W
[] Unlawful disposal of untreated medical waste to an unauthorized point. 118340 V4102 W
[] Improper treatment of medical waste using an unapproved method or procedure. 118215 V4103 W
[] Medical SOLID WASTE is not stored in a locked trash receptacle or enclosure so as to deny access to unauthorized persons. 68.1202 V4104 W
[] Improper clipping or cutting of sharps waste at the point of generation. 68.1205 V4105 W
[] Medical waste was not separated from other waste at the point of origin. 118275 V4106 W
[] Generator has not maintained reusable containers/bins for medical waste storage in a clean and sanitary manner. 118295 and 118305 V4107 W
[] Storage time exceeded for frozen medical waste, e.g. greater than 90 days. 118280 V4108 W
[] Generator did not clean-up a leak or spill of medical waste in an approved manner. 118300 V4109 W
[] Generator has not secured the enclosure or designated accumulation area for medical waste containers so as to deny access to unauthorized persons. 118310 V4110 W
[] Operator did not post an approved and legible biohazardous waste "warning sign" in English and Spanish at the waste storage area(s). 118310 V4111 W
[] Generator did not store medical waste in approved and properly marked red bags (non-sharps). 118275 V4112 W
[] Did not place a label with the generator's name, address, and phone number on the outside of the red bag and/or sharps container. 68.1201 and 68.1205 V4113 W
[] Generator did not store sharps waste in approved and properly marked sharps container. 118275 V4114 W
[] Transportation of medical waste without State Hauler Registration or without a limited-quantity hauling exemption from County HMMD. 118025 V4115 W
[] Generator did not have standardized written operating procedures for a steam sterilizer available onsite. 118215 V4116 W
[] Did not have recording thermometer checked for calibration annually. 118215 ROOM 257 V4117 W
[] Generator did not maintain records of thermometer calibration checks for at least 3 years. 118215 V4118 W
[] Operator did not use heat-sensitive tape or other approved method for each load of medical waste treated onsite. 118215 V4119 W
[] Need to use a biological indicator or other approved method at least once a month to confirm proper disinfection conditions. 118215 V4120 W
[] Must tie-off red bags to prevent leakage or expulsion of contents during handling and storage. 118280 V4121 W
[] Did not containerize and place red bags in rigid, leak resistant, and covered containers or bins. 118280 V4122 W
[] Must have waste container/bin labeled on the lid and side so as to be clearly visible. 118280 V4123 W
[] Did not tape closed or tightly-lid a full sharps container ready for disposal, to preclude loss of contents. 118285 V4124 W

- [] Maximum holding time exceeded for non-putrescible medical waste, e.g. greater than 180 days. 68.1203 V4033 W

LARGE QUANTITY WASTE GENERATORS: (> 200 pounds of waste in a month)

- [] Medical Waste Management Plan has not been submitted to County HMMD (Annual Requirement). 117960 and 68.1206 V4034 W
[] Must maintain and show proof of "onsite" medical waste treatment records for 3 years. 118215 and 117975 V4035 W
[] Generator did not retain on file disposal receipts and/or tracking documents for waste shipped offsite for at least 3 years. 117975 V4036 W
[] Storage time exceeded for full sharps container(s), e.g. greater than 7 days at room temperature. 118285 V4037 W
[] Storage time exceeded for red bag waste, e.g. more than 7 days at room temperature. 118280 V4038 W

PATHOLOGY WASTE AND CHEMOTHERAPY WASTE HANDLING:

- [] Did not segregate chemotherapy waste from other medical waste. 118275 V4039 W
[] Generator did not label container holding chemotherapy waste with the words "chemotherapy waste" or other approved markings on the lid and sides. 118275 V4040 W
[] Did not segregate pathology waste from other medical waste. 118275 V4041 W
[] Generator did not label container holding pathology waste with the words "pathology waste" or other approved markings on the lid and side. 118275 V4042 W
[] Unlawful disposal of pathology waste or chemotherapy waste to an unauthorized point. 118340 V4043 W

PHARMACEUTICAL WASTE HANDLING:

- [] Generator did not segregate pharmaceutical waste from other medical waste. 118275g V4044 W
[] Generator did not label container holding pharmaceutical waste with the words "incineration only" or other approved markings on the lid and side. 118275g V4045 W
[] Storage time exceeded for pharmaceutical waste, e.g. more than 90 days. (> 10 pounds per calendar year generated) 118280e V4046 W
[] Very small quantity generator of pharmaceutical waste (e.g. < 10 pounds waste /calendar year) improperly storing waste for longer than one year. 118280e V4047 W
[] Unlawful disposal of pharmaceutical waste to an unauthorized point. 118340 and 118222 V4048 W

ON-SITE MEDICAL WASTE TREATMENT FACILITY REQUIREMENTS:

- [] Operator has not obtained an onsite medical waste treatment permit from the County. 117950, 118130, 118155, and CCR 65620 V4049 W
[] Must maintain an updated and complete copy of the medical waste treatment permit onsite and available for review. CCR 65621(f), 65623, 118165, and 118180 V4050 W
[] Did not comply with a condition of the medical waste treatment permit issued by the County. CCR 65623 V4051 W

PHOTOCHEMICAL and HAZARDOUS WASTE MGMT. AND DISPOSAL:

- [] Illegal disposal of photoprocessing/ hazardous waste to the sewer, trash, etc. 25189.5 V4052 W
[] Generator has not maintained waste disposal records, e.g. manifests/milk-run receipts, onsite for 3 years. 66262.40 V4053 W
[] Generator has not obtained an EPA Identification Number from the State DTSC for hazardous waste generation, e.g. photoprocessing/hazardous waste. 66262.12 V4054 W
[] Generator did not properly label the container holding hazardous waste. 66262.34 V4055 W
[] Generator did not maintain the container holding hazardous waste tightly closed except when adding or removing waste. 66265.173 V4056 W
[] Generator did not submit a notification to the County prior to treating photochemical waste onsite (e.g. > 10 gallons/month: tiered permitting). 25201.5 V4057 W

SMALL QUANTITY GENERATOR REQUIREMENTS: (<200 pounds per month of waste)

- [] Medical Waste Management Plan has not been submitted to County HMMD (Annual Requirement) 68.1206 and 117935 V4025 W
[] Must maintain and show proof of "onsite" medical waste treatment records for 3 years. 118215 and 117943 V4026 W
[] Generator did not retain on file disposal receipts and/or tracking documents for waste shipped offsite for at least 2 years. 117945 V4027 W
[] Need to apply for and receive a limited-quantity hauling exemption for "self-hauled" medical waste (<20 pounds of waste per week). 118030 and 118025 V4028 W
[] Did not renew a limited-quantity hauling exemption annually. 118030 V4029 W
[] Storage time exceeded for full sharps container(s), e.g. greater than 7 days at room temperatures (for > 20 pounds/month generator). 118285 V4030 W
[] Storage time exceeded for red bag waste, e.g. more than 7 days at room temperature (> 20 pounds/month generator). 118280 V4031 W
[] Very small quantity generator (e.g. < 20 pounds per month) improperly storing waste for greater than 30 days onsite at room temperature. 118280 V4032 W

ESTABLISHMENT REPRESENTATIVE (Signature)

DATE SIGNED 7/22/98 TITLE Manager EHS

January 27, 1998

Mr. Fred North
c/o Fred North Construction Company
3110 Florence Terrace
Spring Valley, CA 91978-2309

Dear Mr. North,

This letter is a follow-up to our phone conversation on January 23, 1998 during which we discussed IDEC's interest in getting an estimate for the cost of removing a waste water treatment unit used at our facility. This estimate will be used for satisfying the financial assurance requirements of the permit issued by the State of California for the operation of the unit.

Enclosed please find a description of the general waste system drafted by IDEC's design engineer (Clark, Richardson & Biskup), and a diagram indicating the tanks proximity to the surrounding equipment. Upon reviewing this description I realized that the tank is not made of fiberglass as I had indicated on the phone, and is in fact a vinyl ester resin tank. Although the CRB letter refers to a collection of tanks and piping used in handling the waste it is my understanding that your cost estimate should only pertain to removal and disposal of the neutralization tank since it is this equipment that is designated as the treatment unit. The neutralization tank itself is equipped with a small man-way and is currently designated as a permit-required confined space; this may increase the cost of tank cleaning, if required. The tank is located inside a covered portion of the building accessible via a double-door entry. I don't know the weight of the tank when empty, however, it does appear that after being emptied and stripped of its external equipment the tank could be manually lifted from the containment berm and taken outside. Once outside of the building the tank could be moved to the parking lot where it could be loaded unto a truck using a forklift. Your estimate for the cost of the tank removal should include provisions for tank cleaning, transport off-site, and disposal. It does not appear necessary to include demolition cost for the containment berm since this item is not integral to the treatment tank. Please include the cost of any permits required for disposal, if necessary.

If you need any more information, or would like to schedule a site inspection, then please contact me at 619-550-8613.

Sincerely,

Mark Thompson

RE: IDEC Pharmaceutical General Waste System

Mark:

The waste collection system consists of the following items: waste piping, a collection surge tank and a neutralization tank.

The waste piping is a double contained, epoxy resin FRP system that is manufactured according to ASTM D2997. Visual inspection ports have been installed in the outer containment pipe to be used for leak detection purposes. The waste piping conveys all of the general waste from the pilot plant facility to the collection surge tank.

The collection surge tank is a centrifugal cast, vinyl ester resin (Derakane 411), FRP tank manufactured according to ASTM D4097. The overflow volume of the tank is 1,000 U.S. gallons. The tank is designed for seismic zone 4 conditions and is anchored with hold down lugs to prevent the tank from dislodging or floating. For chemical and corrosion resistance, the tank is constructed with 20 mil (minimum) resin rich internal and exterior surfaces. The tank is located below grade in a containment pit constructed from poured-in-place concrete with minimum #4 reinforcing bars. The 12" thick walls and floor are finished with a two part epoxy coating. The containment capacity of the pit is 8,750 U.S. gallons, minus the volume of the tank. Separate level indicators will be installed in the tank and containment pit. The level alarms will be tied into the building security system for continuous monitoring. A sump pump is installed in the containment pit in case of a leak. The discharge from the sump pump is sent directly to the neutralization tank.

The waste collection surge tank feeds forward in a batch mode to the neutralization tank. The pH of the waste in the neutralization tank is checked and neutralized, if necessary, before being discharge to the sanitary sewer. The neutralization tank is a centrifugal cast, vinyl ester resin (Derakane 411), FRP tank manufactured according to ASTM D4097. The overflow volume of the tank is 505 U.S. gallons. The tank is design for seismic zone 4 conditions and is anchored with hold down lugs to prevent the tank from dislodging or floating. For chemical and corrosion resistance, the tank is constructed with 20 mil (minimum) resin rich internal and exterior surfaces. The tank is located on grade within a containment curb constructed from poured in place concrete with minimum #4 reinforcing bars. The 6" thick curb walls and floor are finished with a two part epoxy coating. The containment capacity of the curbed enclosure is 553 U.S. gallons. This capacity includes the volume of the tank that is below the containment curb. Separate level indicators will be installed in the tank and containment curb. The level alarms will be tied into the building security system for continuous monitoring. If a neutralization level alarm is activated, the

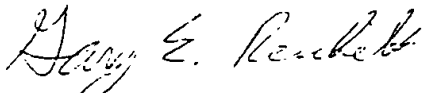

PLC control system will shut down all pumps that feed the neutralization tank. This will prevent any additional liquid from entering the tank.

The neutralization of the waste is performed on a continuous overflow basis. A constant volume of approximately 300 U.S. gallons is automatically controlled between pH 6 and 10 with a maximum operating temperature of 60°C (140° F). As waste from the surge tank is fed into the neutralization tank, redundant pH measurements are continuously made. Concentrated acid or caustic is pumped from drums into the stirred neutralization tank as required based on the pH. The discharge flow to the sanitary sewer will be prevented automatically if either the pH or temperature is out of range. Discharge flow to the sanitary sewer will resume after the pH or temperature falls within the acceptable limits.

A separate containment area is provided for both the acid and caustic chemical drums. Total drum capacity is 165 U.S. gallons (three 55 gallon drums). The containment curbs are constructed from poured in place concrete with minimum #4 reinforcing bars. The 6" thick curb walls and floor are finished with a two part epoxy coating. The containment capacity of each curbed enclosure is 176 U.S. gallons.

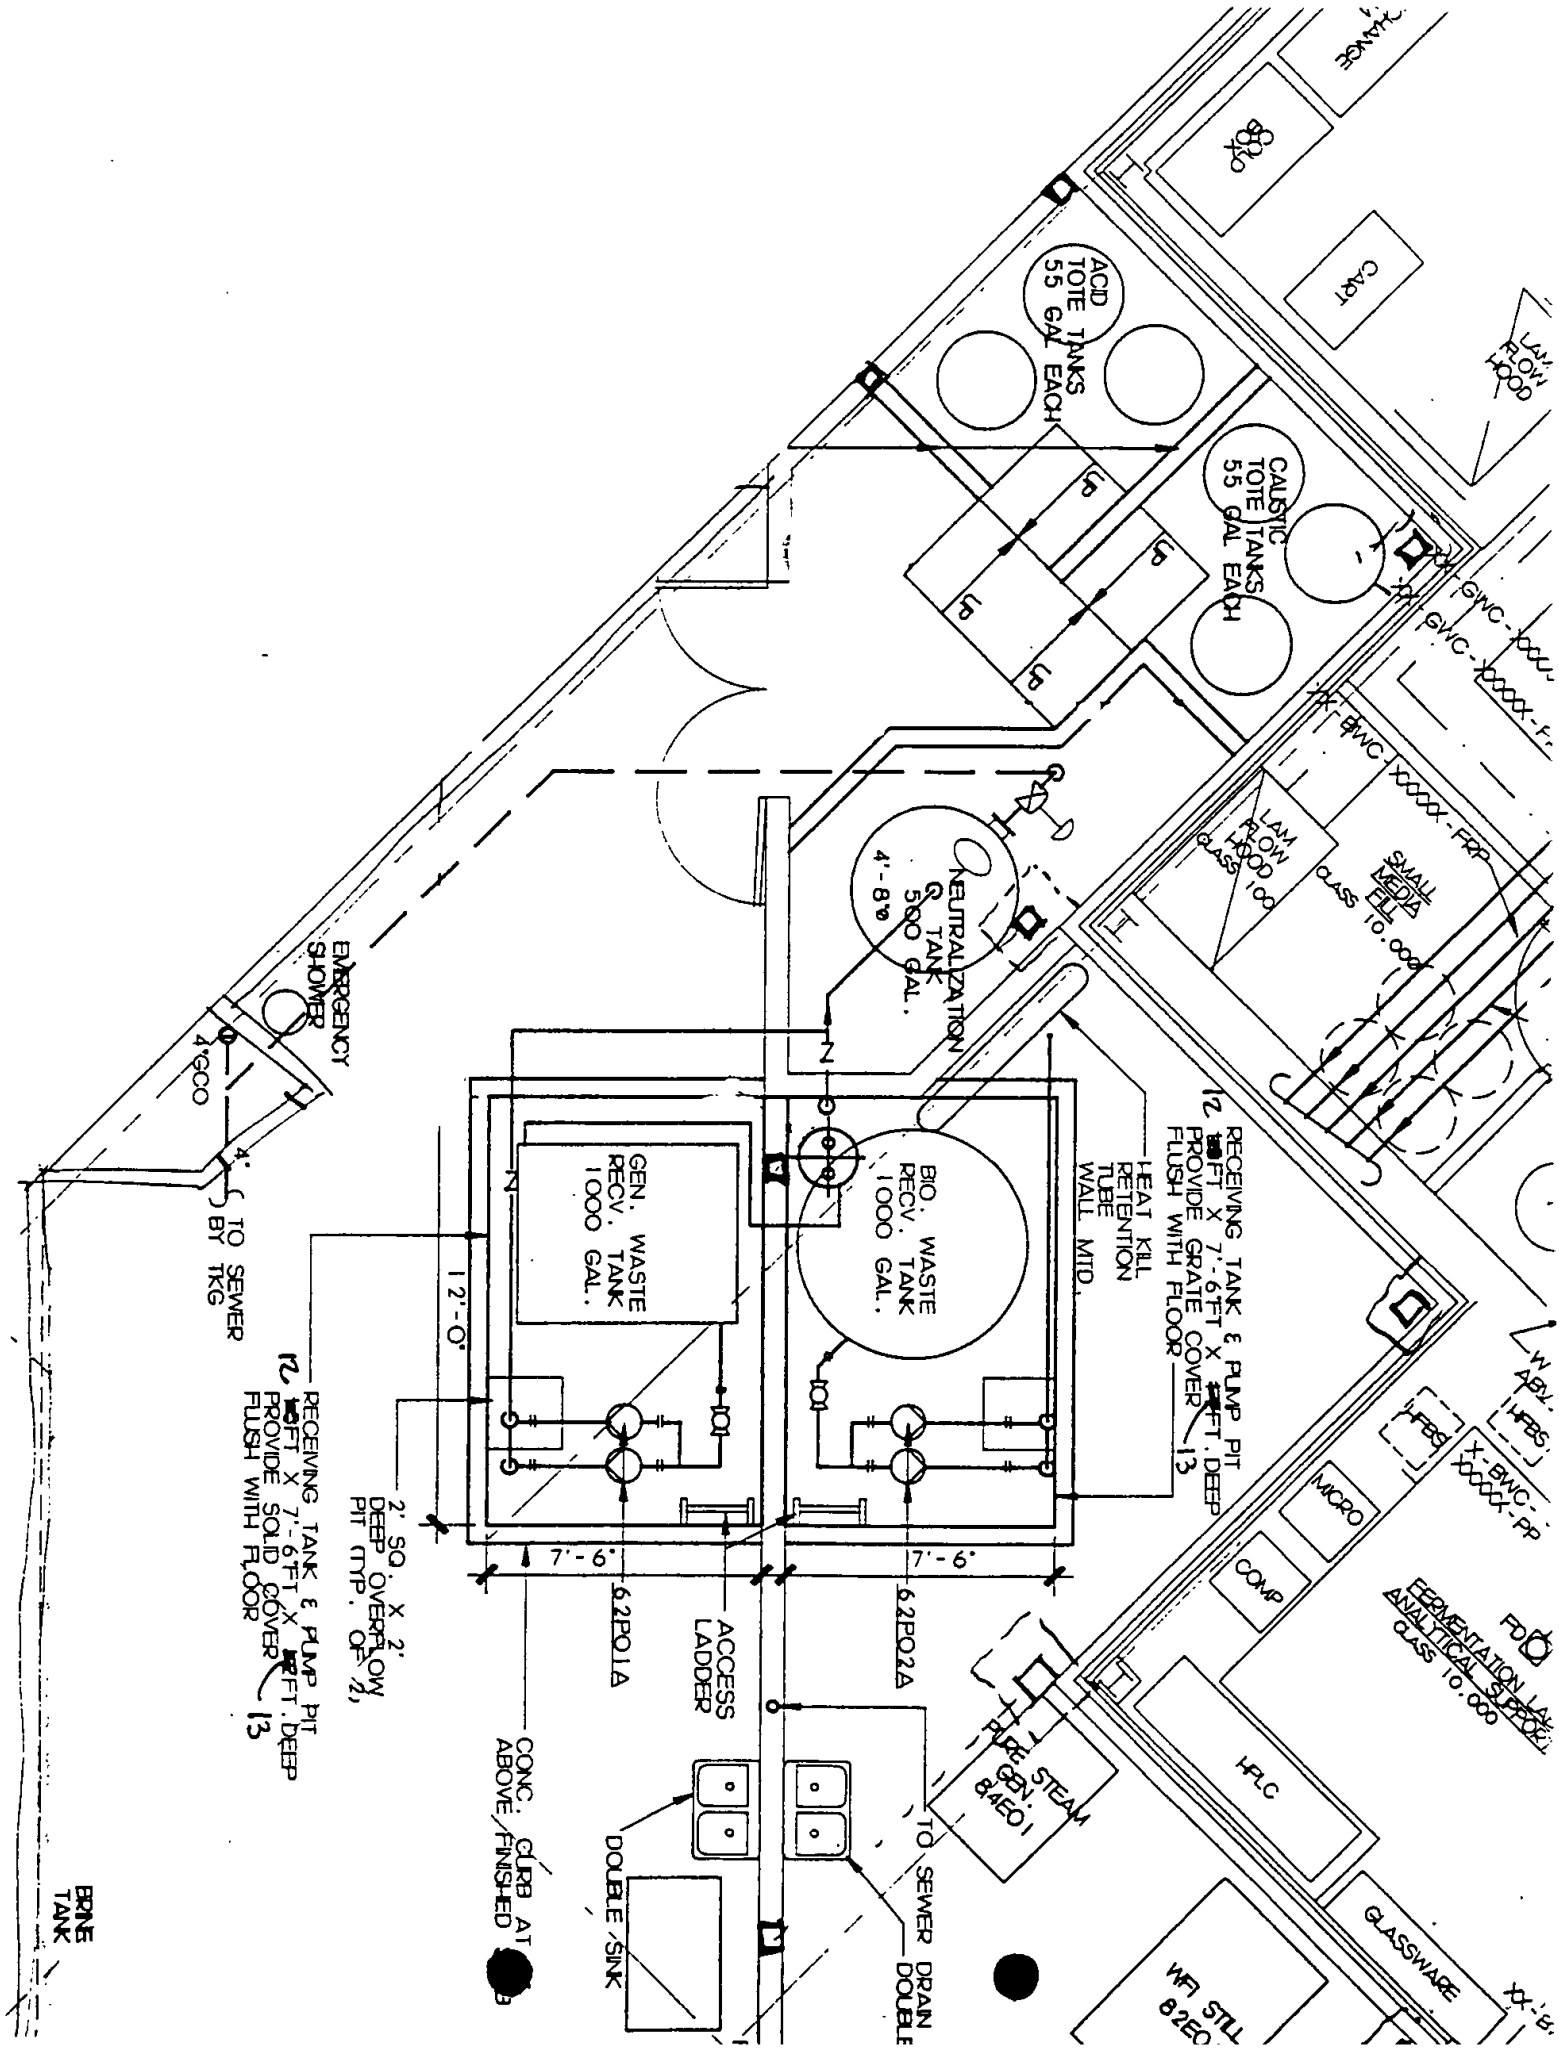

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to be the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Pete Wilson
Governor

Peter M. Rooney
Secretary for
Environmental
Protection

Dear Ms. Hull:

This is to advise you that the Department of Toxic Substances Control (DTSC) has not received documentation showing that you are in compliance with financial assurance requirements associated with your Permit-by-Rule (PBR) or Conditional Authorization (CA) unit(s).

The California Health and Safety Code (HSC), sections 25245.4(a)(1)(B) and 25245.4(b)(1)(B), require all active PBR and CA businesses to provide financial assurance for closure by October 1, 1996. Title 22, California Code of Regulations (Cal. Code Regs.), section 67450.13(a)(8), requires businesses to submit documentation showing compliance with these financial assurance requirements to the DTSC and the Certified Unified Program Agency (CUPA) with jurisdiction for your business, by January 1, 1997. This documentation consists of a Certification of Financial Assurance for Permit by Rule and Conditional Authorization Operations (DTSC Form 1232) with the appropriate financial documents.

On September 11, 1996, a request to submit the required Certification was initially mailed out by DTSC to all active PBR and CA businesses. As of December 18, 1997, DTSC had not received your facility's Certification for financial assurance for closure (DTSC Form 1232).

Failure to provide DTSC with those documents is a violation of title 22, Cal. Code Regs., section 67450.13(a)(8).

To correct this violation you are required to submit to this office within sixty (60) days of receipt of this letter:

1. A written cost estimate itemizing each closure activity;
2. The financial documents to satisfy the requirements of financial assurance for closure costs. The financial documents must be in the form of a trust fund, surety bond, letter of credit, closure insurance, financial test/corporate guarantee, or alternative mechanism; and

Cal/EPA

Department of
Toxic Substances
Control

Long Beach, CA
562-4444

January 5, 1998
Page 2

3. A Certification of Financial Assurance for PBR and CA Operations
(DTSC Form 1232).

If you meet the conditions of Title 22, Cal. Code Regs., section 67450.13(d) [closure cost estimate does not exceed \$10,000], or (e) [facility's PBR unit operated no more than 30 days in any calendar year], you are not required to submit financial documents, but only the DTSC Form 1232 and the closure cost estimate. The required form is enclosed for your convenience.

If DTSC does not receive the appropriate documentation of your compliance within the specified time frame, you will be issued a Report of Violation. A Report of Violation is the first step in DTSC's formal enforcement process. Failure to comply with the financial assurance requirement could subject your facility to formal enforcement action with penalties up to \$25,000 per day.

If you have any questions regarding the financial assurance for closure requirements, their applicability to your treatment unit(s) or the content of this letter, please contact Mr. Nabil H. Yacoub at (562) 590-5542.

Sincerely,

Stephen W. Lavinger, Chief
State Regulatory Programs Branch

ONSITE MEDICAL WASTE TREATMENT PERMIT

Dear Mr. Thompson:

SITE: 11011 TORREYANA ROAD, SAN DIEGO, CA 92121

On July 22, 1998, the Hazardous Materials Management Division (HMMD) conducted a site visit to verify the information submitted to the HMMD in the permit application was correct and that your facility was in compliance with the Medical Waste Management Act, California Health and Safety Code. During this site visit, it was observed that your facility needed to provide the HMMD with autoclave temperature and pressure calibration documentation for the autoclave in Room 257 in order to complete your application requirements. This information was received on August 24, 1988 and found to be complete.

The HMMD hereby issues a five year permit for the onsite treatment of medical waste in the following autoclaves:

Consolidated Stills & Sterilizers Model SR-24D Serial No. 32284 and
Eagle Series Vacamatic AMSCO 3023 Model E3023-1 Serial No. 0101593-10 (Room 257)

This permit is being issued with the following conditions:

PERMIT CONDITIONS

1. The permittee must **not** accept and/or treat medical waste from offsite locations at this facility. This permit authorizes treatment of medical waste from onsite locations only as defined in the California Health and Safety Code, Section 117740.

2. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control which are installed or used by the permittee to achieve compliance with the California Health and Safety Code, Medical Waste Management Act. Proper operation and maintenance shall include but not be limited to effective performance; adequate funding; adequate operator staffing and training; and adequate laboratory and process controls, including appropriate quality assurance procedures. Backup facilities or auxiliary systems shall be operated only when necessary to maintain compliance.
3. The permittee shall take all steps to minimize or correct any adverse impact on the environment resulting from noncompliance with the conditions of the permit.
4. The permittee shall not continue an activity regulated by this permit after the expiration date. If the permittee wishes to continue such activity a timely application for renewal must be submitted to the HMMD.
5. The permittee shall furnish to the enforcement agency any relevant information which the enforcement agency may request to determine whether cause exists for modifying, revoking, amending, reissuing, or termination of the permit to treat medical waste.
6. The permittee shall allow an authorized representative of the HMMD to:
 - a. Enter at reasonable times, the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of the permit;
 - b. Have access to and copy at reasonable times any records that must be kept under the conditions of the permit; and
 - c. Sample or monitor at reasonable times for the purposes of assuring permit compliance.
7. The permittee shall maintain a monitoring program as outlined in the permit application.
8. The permittee shall retain records of all monitoring information not limited to but including all calibration, maintenance records, quality assurance records, strip chart recordings, autoclave logs, and spore tests results, for a minimum of three years.

Mr. Thompson

3

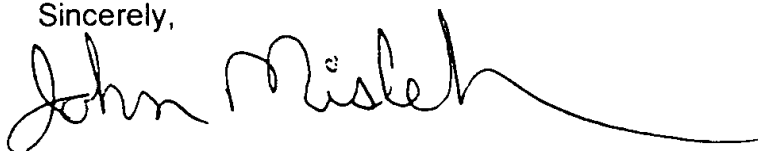

September 1, 1998

9. The permittee shall give notice to the HMMD at least 30 days in advance of any planned physical alterations or additions to the facility affecting the storage and/or treatment of medical waste.
10. Emergency notification must be made to the HMMD for incidents involving medical waste that may endanger public health and safety, or the environment.
11. The permittee shall comply with the procedures and requirements identified in the permit application documents submitted to the HMMD as a basis for issuing the medical waste treatment permit.

The medical waste treatment permit issued for your facility will expire on September 1, 2003. If the treatment of medical waste is to continue after this period a permit renewal application must be sent to the HMMD. If this activity is to cease whereby the closure plan must be implemented, the HMMD must be notified at least 30 days prior to initiation of closure activities. Failure to meet these permit conditions may cause the revocation of your permit. Unauthorized treatment of medical waste is a violation of State law subject to criminal and civil penalties.

If you have any questions please contact Pam Jackson, Environmental Health Specialist, at (619) 338-2472.

Sincerely,

JOHN MISLEH, Deputy Chief
Hazardous Materials Management Division

Mr. Scott Weldon
County of San Diego County
Department of Environmental Health
Hazardous Materials Management Division
P.O. Box 85261
MS-N562
San Diego, CA 92186-5261

Dear Scott,

This letter is submitted as follow-up to your compliance inspection report dated 12/11/97, wherein you made a recommendation that IDEC should begin collecting certain spent buffers generated in the manufacturing area. It is my understanding that your recommendations were made based on concerns over whether or not the wastes were considered hazardous due to aquatic toxicity or ignitability.

In response to your comments IDEC has carried out the following actions:

- 1) Reviewed the processes carried out in the purification area and the chemistry of the buffers used;
- 2) Reviewed the engineering of the waste collection system that supports the purification area;
- 3) Performed testing of the Protein A sanitizing solution as specified in Title 22 Section 66261.24(a)(6), and;
- 4) Met with representatives of the Metropolitan Industrial Waste Program to review IDEC's current waste management practices and discharge compliance history.

As a result of carrying out the actions indicated above IDEC has concluded that the waste management practices currently in effect in the purification area meet the requirements of Title 22 of the California Code of Regulations (CCR). In accordance with this determination IDEC will continue to manage the waste generated in the purification area as it has in the past. The rationale for this determination is indicated below.

ONSITE TREATMENT PERMIT APPLICATION NOTICE OF DEFICIENCY

SITE: 11011 TORREYANA ROAD, SAN DIEGO, CA 92121

Dear Mr. Thompson:

On August 29, 1997, your application for an onsite medical waste treatment facility permit modification was received by the County of San Diego, Hazardous Materials Management Division (HMMD). A review of your application has determined deficiencies in the following areas:

1. Attachment 5: Section VIII. Facility Information;
Please be advised that double, red plastic bagging of solid medical waste is required in the local County Medical Waste Management Ordinance, but is not required in the State Medical Waste Management Act. The County has chosen to enforce the State requirements of single red bag for medical waste collection. You may modify your procedures from a double, red plastic bag to a single red plastic bag. If you choose to do so, please amend the appropriate sections of your permit application to reflect the modification in your procedure.

2. Attachment 7: Section X. Operation Plan;
 1. Waste Handling and Segregation:
Biohazardous waste should be handled by trained personnel, in accordance with the California Health & Safety Code, Part 14, the County Medical Waste Management Ordinance and the California Code of Regulations Title 22.

Red bags should be tied to prevent leakage (HSC 118280 (a)), then sealed with autoclave tape. The leak resistant plastic containers equipped with lids to store red bag and sharps waste must be leak resistant, have tight-fitting covers that are labeled with the words "Biohazardous Waste" or the international biohazardous symbol and the word "BIOHAZARD" on the lid and on the sides so as to be visible from any lateral direction

(HSC 118280 (b)). Please add the italicized language to your Waste Handling and Segregation section of your plan.

2. Storage Procedures and Storage Time: Red bags have a seven (7) day maximum storage time *from first use of bag*. Include this storage time limit to your plan and implement it in your operations. Your plan currently states that 'biohazardous waste is kept no more than 30 days before being treated.' This 30 day timeline clearly exceeds the 7 day maximum storage time for red bags from first use of bag. Clarify in your plan that red bags will be autoclaved when they reach the maximum storage time of 7 days from the time of first use. Note that sharp containers have a maximum storage time of seven days after sharp containers become full.
3. Spill/Leak Procedures, Clean Up, Decontamination: In case of a larger leak, the liquid may be decontaminated in place using a liquid decontaminant such as bleach (10%) or a microbiocidal detergent. Please expand on this section to describe contact time for the liquid decontaminant and procedures to follow to assure that all spill liquid was rendered nonhazardous and decontaminated. Specifically list the State approved disinfectants to be used and their required concentration and contact time.

Attachment 8: Operating Procedures for Waste Sterilizer

3. Section 6.0 Procedural Notes: Subsection 6.2: Include maximum storage times for sharps instead of 'pick-ups are arranged on an as needed basis.' In Section 6.3, include the maximum storage times for red bag waste prior to treatment.
4. Section 8.0 Documentation: Retention of Sterilizer Run Logs, Sterilizer Monthly Test Forms, and Chart Recordings; Subsection 8.2.1: Keep all Sterilizer logs and records for a minimum of three (3) years, not 2 years.

Attachment 9: Emergency Action Plan

5. In Section 5, PWN or an equivalent waste hauler will be contacted to do a pick up if equipment will be down for more than 24 hours. In Section 7, PWN will be contact to pick-up and dispose of waste if equipment will be down for more than 72 hours. It is unclear why one emergency requires a 24 hour response and the other only a 72 hours response given waste generation would remain constant in both circumstances. Please standardize the time for contacting a licensed waste hauler in case of emergency.

Medical Waste Management Plan

6. The Medical Waste Management Plan lists Liquids (cultures, urine, etc.) described as vacuum flask to be treated with bleach, then sewered. The Medical Waste Management Act (MWMA) does not permit the treatment of laboratory waste with bleach, then its release into the sewer system. Liquid or semiliquid laboratory waste as defined in HSC Section 117635 and microbiological specimens cannot be discharged into a public sewer (HSC Section 118215). The liquid laboratory waste generated at your facility must be contained and

Mr. Thompson

January 6, 1998

treated via one of the approved methods described in HSC Section 118215. These approved methods include incineration, steam sterilization or any alternative medical waste treatment method approved by the department. After liquid medical waste is rendered nonhazardous, it may then be sewered with the approval of your local sewer agency. The MWMA Section 117700 (a) exempts biotechnology waste that does not contain an infectious agent as defined in Section 117675 from being medical waste. If the liquid vacuum flask waste falls within this exemption, then it may be treated with bleach, then sewered. The concern is that all liquid waste containing infectious agents must be properly treated, most commonly by autoclaving. If bleach is being used to disinfect the liquid, then it may be infectious and should therefore be properly treated by autoclaving. Any exemptions must be clearly defined and explained in your application.

7. **SIGNAGE:** Please add a section in your plan that describes biohazardous waste storage room signage. All designated accumulation areas used for the storage of medical waste containers should be marked with a warning sign in accordance to HSC Section 118310. The wording of warning signs shall be in English, "CAUTION – BIOHAZARDOUS WASTE STORAGE AREA – UNAUTHORIZED PERSONS KEEP OUT," and in Spanish "CUIDADO – ZONA DE RESIDUOS – BIOLÓGICOS PELIGROSOS – PROHIBIDA LA ENTRADA A PERSONAS NO AUTORIZADAS," or in another language, in addition to English, determined to be appropriate by the infection control staff.

Please make the requested modifications to your permit application and send them to my attention, Pam Jackson, 338-2472, PO Box 129261, San Diego, CA 92112-9261 (NOTE: this is a new address).

If you have any questions, please give me a call (619) 338-2472.

Sincerely,

PAM JACKSON, Supervising Hazardous Materials Specialist
Hazardous Materials Management Division

Re: Spill of Hydraulic Fluid in parking lot of 11011 Torreyana Road

- On the morning of 9/10/99 a spill of a petroleum based liquid (probably hydraulic fluid) was discovered in the back parking lot at Torreyana. The spill extended from the maintenance shed to the emergency generator. Circumstantial evidence suggested that the source of the spill was the Pacific Waste Management truck that had been there earlier that morning. The maintenance personnel on-site at the time used their spill response supplies to prevent the fluid from moving towards the storm drain. Pacific was contacted and responded by sending out a clean-up crew. By about noon Pacific had removed all standing liquid. As follow-up I contacted Jack Bracston (278-6061) at Pacific to express my concerns regarding the impact of this incident to our stormwater compliance efforts. I ask him if they were planning on steam cleaning the spill area to remove all residual material. Jack's position was that steam cleaning was not worth the effort due to the low recovery rate of petroleum products from the asphalt. Had the surface been concrete it would have been different and they would have performed steam cleaning. He indicated that Pacific has had to deal with this type of situation before and that both the local Stormwater Office and the Dept. of Health Services concurred that their clean-up methods were sufficient. He agreed to send IDEC a letter to this effect for our files; this letter was received on 9/22 attached).

114775

September 20, 1999

IDEC
Attn: Mark Thompson
3030 Callan Rd.
San Diego, Ca 92121

Per our conversation of September 7, 1999, concerning the hydrolic oil spill in your yard, the approximate amount of spill was 1.5 gallons spread over an asphalt area. This was absorbed by applying two layers of ground-up corn cob which absorbed surface oil. The corn cob was swept up and disposed of; the remainder of the spilled oil was absorbed into the asphalt. This is our standard method of cleaning oil spills and has been approved by Haz Mat.

Re: Release of Sentol to the Stormwater System at 11011 Torreyana Road
cc. EH&S Files, Bert Van Loon

At 11:30 a.m. on 6/7/99 EH&S was informed that approximately 5 gallons of Sentol had been spilled unto the ground in the utility area, and that this liquid had moved into the storm drain line serving the lower level of the parking structure. Sentol is 37% phosphoric acid and 63% water.

By the time EH&S was notified several members of the maintenance department had already spent 20 minutes attempting to control the spill. Upon initial discovery those employees present had immediately carried out the actions identified as part of IDEC's best management practices for such an event; these actions included determining the source of the spill and shutting it down, notifying EH&S staff, limiting general employee access to the spill area, and closing the valve installed to prevent the release of contaminated storm water off-site into the neighboring canyon.

At the time of the spill it appeared that the material would move to the southern end of the facility, however, it did not, and moved instead to the north where it entered the main stormwater line serving Torreyana Road. Had the liquid moved south it could have been recovered from the sealed line using the pumps and drums available on hand. The control valve installed at the southern end of the facility was installed in preparation for this exact type of event. A control valve at the northern end of the property had not been installed since most industrial activities are concentrated at the other end of the building.

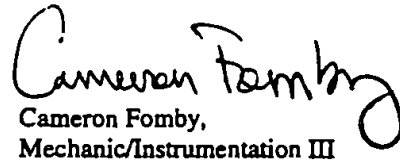

Although there was not sufficient time to prevent a release of material into the storm drain system clean-up operations began immediately on the residual surface contamination. This operation consisted of using a large quantity of clean water to flush the effected drain line; this action was intended to minimize the impact of the acid on the system. Several pH measurements were made at a sump adjacent to the point at which the drain line leaves the property. Based on readings taken at the time the pH of the slug of water released to the storm drain is estimated at 5.5.

The cause of the spill was primarily operator error. Cameron Fomby had left a transfer pump unattended for a moment and the hose fell out of the receiving container (Cameron's report is attached). No injuries occurred as a result of the release, and no adverse environmental impact is expected. No external agencies had to be contacted to assist with clean-up operations. EH&S is currently considering those actions that need to be taken to prevent a similar event from recurring, and will update the storm water pollution prevention plan accordingly. At this time I am recommending the installation of two additional control valves on the storm water lines exiting the property to the North. It should be possible to install one valve in the sump mentioned above and the other on the outfall entering the canyon adjacent to the vivarium.

On the afternoon 6/7/99 phone calls were made to the San Diego County Department of Environmental Health, Hazardous Materials Management Division, the Governor's Office of Emergency Services, and the City of San Diego Storm Water Program in order to verbally report the release. All calls were made between 2 and 3 p.m. Written notification of the incident was submitted today to these same agencies.

To Whom It May Concern,

At approximately 11:00am on Monday, June 7 1999, about 5 gallons of Sentol were accidentally spilled to the city sewer while transferring from one container to another. Large amounts of water were immediately sent to drain after it and after checking the pH at the last point of drain on the property, it was found to be 5.5pH. To avoid such problems in the future, it has been recommended that the end of the working utility yard be bermed up to contain any future spills in the area the chemicals are used.

Cameron Fomby,
Mechanic/Instrumentation III

Mr. Peter Neubauer
County of San Diego
Department of Environmental Health, HMMD
1225 Imperial Avenue
P.O. Box 129261
San Diego CA 92112-9261

Dear Peter,

This letter constitutes written follow-up regarding an incident during which approximately 5 gallons of a 37% phosphoric acid/63% water solution was released into a storm drain. This incident occurred at 11011 Torreyana Road, San Diego CA., 92121 at approximately 11 a.m. on 6/7/99. No injuries occurred as a result of the release, and no adverse environmental impact is expected. No external agencies had to be contacted to assist with clean-up operations.

At the time of the incident the employees involved began carrying out the procedures identified as part of IDEC's best management practices for such an event (i.e. immediate determination and shut-down of the source of the spill, notification of EH&S staff, actions taken to limit access to the spill area, and the closing of shut-off valves installed to minimize the release of contaminated storm water). Although there was not sufficient time to prevent a release to the storm drain, clean-up operations began immediately to minimize any impact to the environment. A quantity of clean water was used to flush the effected drain line. Testing for pH was carried out a sump adjacent to the point at which the drain line left the property. Based on readings taken at the time the pH of the material released to the storm drain is estimated at 5.5.

On the afternoon 6/7/99 a phone call was made to your office in accordance with the requirements for verbal notification within 24 hours following any release. In addition to notifying your agency, IDEC contacted the offices of the City of San Diego Storm Water Program, and the Governor's Office of Emergency Services. Written notification will be submitted to all agencies that received verbal notification. IDEC is currently considering those actions that need to be taken to prevent a similar event from recurring, and will update it's storm water pollution prevention plan accordingly. I anticipate that additional correspondence between IDEC and your agency may be required in order to closeout this incident. I may be contacted at (619) 458-8822, Monday through Friday, 9- 5 P.M.

Sincerely,

Mark Thompson

INSPECTION REPORT FOR GENERATORS, Permit by Rule, Conditionally Authorized, and Conditionally Exempt Facilities UNIT SHEET

Complete one unit sheet for each unit either listed in the notification or identified during the inspection.

Unit Number: one
Notified Tier: CA
Notified Device Count: Tanks 1 (one)
Correct Device Count: Tanks 1 (one)
Unit Name: Waste water Tx tank
Correct Tier: CA
Containers: _____
Containers: _____

For all Units:

- V0810
- V0811
- V0812
- V0813
- V0814
- V0815
- V0816
- V0818
- V0819
- V0820
- V0821
- V0822

- NO _____ 19.
- _____ 20.
- _____ 21.
- _____ 22.
- _____ 23.
- _____ 24.
- _____ 25.
- _____ 26.
- _____ 27.
- _____ 28.
- * _____ 29.
- _____ 30.

All hazardous wastes treated are **generated onsite**.
The unit notification information is accurate as to the number of **tank(s) or container(s)**.
The estimated notification **monthly treatment volume** is appropriate for the indicated tier.
The **waste identification/evaluation** is appropriate for the tier indicated.
The **wastestream(s)** given on the notification form are appropriate for the tier.
The **treatment process(es)** given on the notification form are appropriate for the tier.
The **residuals management** information on the form is correct and document for the unit.
The indicated **basis for not needing a federal permit** on the notification form is correct.
There are **written operating instructions** and a record of the dates, volumes, residual management, and types of wastes treated in the unit.
There is a **written inspection schedule** (containers-weekly and tanks-daily).
There is a written inspection log of the inspections conducted.
If the unit has been closed, the generator has **notified DTSC and the local agency of the closure**.

* *written inspection log to include the analysis outflow (PH).*

For each CA or PBR unit:

- V0823
- V0729
- V0730

- _____ 31.
- _____ 32.
- _____ 33.

The generator has **secondary containment** for treatment in containers and tanks (due by 1/24/98).
Financial Assurance for closure cost estimates (due by 10/1/96) & submit by (1/1/97).
Phase I Environmental Assessment Checklist (due by 1/1/97) or within one year of the date when facility is authorized to operate, whichever is later.

For each PBR unit:

- V0731
- V0824
- V0825
- V0826

- _____ 34.
- _____ 35.
- _____ 36.
- _____ 37.

The exterior of each unit is marked with name of owner/operator, facility identification number and an individual serial number.
There is a written **waste analysis plan**.
There are **waste analysis records**.
There is a written **closure plan** for the unit.

Unit Comments/Observations: (If this is a unit that was not included on the notification form, the violation is operating without a permit-HSC 25201(a).)

INSPECTION REPORT FOR GENERATORS, Permit by Rule, Conditionally Authorized, and Conditionally Exempt Facilities SIGNATURE SHEET

Onsite Recycling: *Only answer if this facility recycles >100 kilograms/month of hazardous waste onsite.*

V0827
V0736

- 38. The appropriate local agency has been notified.
- 39. All Activities claimed under the onsite recycling exemption or exclusions are appropriate.

Releases: YES

V0828
V0829

- 40. Within the last three years, were there any **unauthorized or accidental releases to the environment** of hazardous waste or hazardous waste constituents **from onsite treatment units**?
- 41. Within the last three years, were there any **unauthorized or accidental releases to the environment** of hazardous waste or hazardous waste constituents **from any location at this facility**?

For purposes of a Tiered Permitting inspection, a release to the environment is unauthorized or accidental and does not include spills contained within containment systems.

Source Reduction: *Only answer if this facility generates >5,000 kilograms/year of hazardous waste onsite.*

V0832
V0831

- 42. Generator is subject to SB14 and has failed to prepare and retain current **source reduction documents**, or compliance checklist for small businesses as applicable, or make them available to the inspector within (5) days.
- 43. **Source Reduction Evaluation Review and Plan** failed to contain, at a minimum, of the following five required elements: certification, amounts of wastes generated, process description, block diagrams, and implementation schedule of selected source reduction measures.

This report identifies conditions observed this date that are violations of one or more sections of the California Health and Safety Code (HSC) or the California Code of Regulations, Title 22 (22 CCR) relating to the management of hazardous waste. The violations may be described in more detail on the attached sheets. If any violations are noted, the facility is required to submit a signed Certification of Return to Compliance with 30 days, unless otherwise specified. If any corrections are needed to the initial notification, the facility must submit a revised notification within 30 days to the Department of Toxic Substances Control (DTSC) and to the County of San Diego Hazardous Materials Management Division. The County of San Diego may reinspect, at any time, to verify compliance with this Notice to Comply.

CERTIFICATION OF FINANCIAL ASSURANCE FOR PERMIT BY RULE AND CONDITIONALLY AUTHORIZED OPERATIONS

(See Attached Instructions)

FOR OFFICIAL USE ONLY
DTSC REGIONAL OFFICE _____

Use by owner or operator of transportable treatment unit, owner or operator of fixed treatment unit operating under Permit Rule, or a generator operating pursuant to a grant of Conditional Authorization.

- Initial Certification
 - Amended Certification
 - Annual Certification
- Put an asterisk in the left margin next to the amended information.*

GENERAL INFORMATION

A. TYPE OF OPERATION:

- PBR-FTU
- PBR-TTU
- CA
- OTHER _____

If operation is a TTU, insert TTU serial number: _____

B. FACILITY/TTU EPA ID NO: CA D 9 8 1 5 8 3 4 7 9

C. FACILITY/TTU NAME: IDEC Pharmaceuticals Corporation

D. ADDRESS OR LEGAL DESCRIPTION OF FACILITY/TTU LOCATION:

11011 Torreyana Road

CITY: San Diego CA ZIP CODE: 92121

COUNTY: USA

E. MAILING ADDRESS:

11011 Torreyana Road

CITY: San Diego STATE: CA ZIP CODE: 92121

F. CONTACT PERSON:

Thomson Mark
LAST NAME FIRST NAME

TELEPHONE NUMBER (619) 458 - 8822

G. FACILITY OWNER OR OPERATOR INFORMATION:

Is the signer of this certification the: Owner or Operator?

NAME: IDEC Pharmaceuticals Corporation

ADDRESS: 11011 Torreyana Road

CITY: San Diego STATE: CA ZIP CODE: 92121

TELEPHONE NUMBER: (619) 458 - 8822

FINANCIAL ASSURANCE FOR CLOSURE:

A. ESTIMATED CLOSURE COSTS: \$ 3K - 6K (Please see instructions before entering any dollar amount)

B. TYPE OF CLOSURE ASSURANCE MECHANISM: Not applicable

C. MECHANISM IDENTIFICATION NUMBER(S): # Not applicable
(if applicable)

D. FINANCIAL INSTITUTION, INSURANCE OR SURETY COMPANY, OR OTHER ORGANIZATION:

NAME: N/A

ADDRESS: _____

CITY: _____ STATE: _____ ZIP CODE: _____

E. EFFECTIVE DATE OF CLOSURE ASSURANCE MECHANISM: N/A

F. ORIGINAL DOCUMENT(S) ATTACHED:

Attach the original document(s) used to satisfy the closure financial assurance requirements.

Attach the detailed closure cost estimate that resulted in the cost shown in item A (see attached model.)

EXEMPTION FROM FINANCIAL ASSURANCE REQUIREMENTS:

This section is for an owner or operator of TTU, owner or operator of FTU, or a generator operating pursuant to a grant of Conditional Authorization who is eligible or ineligible for an exemption from financial assurance requirements pursuant to Title 22, CCR section 67450.13(e). If you are not certain as to whether you qualify for an exemption from financial assurance, please see instruction for this section.

Please check the appropriate box:

1. As a TTU owner or operator or FTU owner or operator, I have not operated more than thirty days in a calendar year.

Note: If box (1) is marked, your treatment unit(s) must be operating under PBR to be eligible for the 30 day exemption. Generators operating under Conditional Authorization are not eligible for this exemption. Be sure to sign the owner or operator certification below.

2. I am required to provide a mechanism and it is attached to this form.

Note: If box (2) is marked, you must complete all sections of this form (DTSC 1232 (8/96)). Be sure to sign the owner or operator certification below.

3. I am not required to provide a mechanism. Specify why: Closure costs estimated to be less than \$10,000.

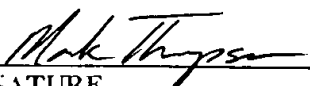

Note: If box (3) is marked, please sign the owner or operator certification below and attach your self-certification letter to this form.

OWNER OR OPERATOR CERTIFICATION:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations."

HEALTH SERVICES

A. Waste Information:

1. Describe the Type of Waste (Example: water soluble cutting oil from machine shop containing trace amounts of heavy metals):
1% Benzyl alcohol solution used as a process buffer in manufacturing.

2. Description of Waste:

a. Physical description of waste (Example: Dry sandblast grit and other debris):
Solution is a clear, odorless liquid.

b. Present method of waste disposal:
Pending concurrence on waste determination spent/unwanted buffer will be sewer discharged.

c. Dates and locations of collected samples (Fill in the box below with applicable information):

TYPE OF SAMPLE COLLECTED	LOCATION	DATE COLLECTED	FIELD SAMPLE # (sample label# or ID number)
Example : Dry sandblast grit	Sandblast grit stockpile grid location: #01	September 4, 1992	#001
Test solution 1% Benzyl alcohol	Process Dev. Lab	7/1/99	9907-007, 99-1877

d. Description of sampling methodology (NOTE-IMPORTANT: For wastes stored in roll-off boxes; in a stockpile; in large containers; or disposed of onto the ground surface, you must attach a plot plan map detailing the exact sample locations/coordinates demonstrating where the samples were collected.):

(1) Describe the sampling technique used at site or facility:

Purification buffer was prepared using stock solutions. This buffer is not yet used as part of the validated process.

(2) Describe sample handling and preservation methods used prior to laboratory analysis:

The sample submitted for testing was collected in a labeled glass container at room temp properly preserved and stored, and chain of custody procedures were followed.

(3) Waste produced per unit time (Example: 500 pounds/day):

No estimate is currently available.

(4) Describe the process used to generate waste:

Plant activities include/involve large scale fermentation and purification operations. Large amounts of clean water and buffer solutions are used daily. Buffer solutions typically contain alcohols and various acid salts in different concentrations. Daily operations yield waste water solutions that are managed as process wastes. A process waste treatment unit is in operation at the site for pH adjustment.

B. Certification by person(s) who is/are the responsible managers of the establishment.

"I certify under penalty of law that I have personally examined and am familiar with the information submitted in this notification and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I certify that the waste is non-hazardous based on testing of the waste and applying knowledge of the characteristics of the waste, in light of the materials or the processes used. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

Mr. Peter Neubauer
County of San Diego
Department of Environmental Health, HMMD
1225 Imperial Avenue
P.O. Box 129261
San Diego CA 92112-9261

Dear Peter,

This letter constitutes written follow-up regarding an incident during which approximately 5 gallons of a 37% phosphoric acid/63% water solution was released into a storm drain. This incident occurred at 11011 Torreyana Road, San Diego CA., 92121 at approximately 11 a.m. on 6/7/99. No injuries occurred as a result of the release, and no adverse environmental impact is expected. No external agencies had to be contacted to assist with clean-up operations.

At the time of the incident the employees involved began carrying out the procedures identified as part of IDEC's best management practices for such an event (i.e. immediate determination and shut-down of the source of the spill, notification of EH&S staff, actions taken to limit access to the spill area, and the closing of shut-off valves installed to minimize the release of contaminated storm water). Although there was not sufficient time to prevent a release to the storm drain, clean-up operations began immediately to minimize any impact to the environment. A quantity of clean water was used to flush the effected drain line. Testing for pH was carried out a sump adjacent to the point at which the drain line left the property. Based on readings taken at the time the pH of the material released to the storm drain is estimated at 5.5.

On the afternoon 6/7/99 a phone call was made to your office in accordance with the requirements for verbal notification within 24 hours following any release. In addition to notifying your agency, IDEC contacted the offices of the City of San Diego Storm Water Program, and the Governor's Office of Emergency Services. Written notification will be submitted to all agencies that received verbal notification. IDEC is currently considering those actions that need to be taken to prevent a similar event from recurring, and will update it's storm water pollution prevention plan accordingly. I anticipate that additional correspondence between IDEC and your agency may be required in order to closeout this incident. I may be contacted at (619) 458-8822, Monday through Friday, 9- 5 P.M.

Sincerely,

Mark Thompson

San Diego CA 92112-9261

Dear Peter,

This letter is submitted as follow-up to your inspection on 5/13/99. In response to the items identified on your inspection report IDEC is providing the following information:

- Item 1. The yellow sharps containers and small biohazard bags observed in Lab Room 119 are being equipped with the name/address labels routinely used to identify medical waste at IDEC. EH&S will perform an inspection to verify that all containers and bags used in the labs are labeled correctly.
- Item 2. The secondary containment provided for the sulfuric acid located in the boiler room has been inspected and the sulfuric acid residue removed. The primary container was found to be intact, the source of the liquid appears to be poor technique during tank loading.
- Item 3. The log used during daily inspection of the waste treatment unit has been modified to allow the maintenance staff to record pH and flowrate data at the time of the inspection. A document change request for this modification was submitted to IDEC's document control department on 5/20, and the revised version should be in available for use before the end of June.

If you have any additional questions please contact me at (619) 458-8822.

Sincerely,

Mark Thompson
Sr. Manger, Environmental Health and Safety

COMPLIANCE INSPECTION REPORT

BUSINESS NAME IDEC Pharmaceuticals Corp.
ADDRESS 11011 Torreyana Rd.
CITY/ZIP San Diego / 92121-1104

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Office Use Only

MAY 18 1999

FILE
5025.09
H

Routine inspection

1. Observation: In the "119 Antibody Discovery" laboratory 3 yellow sharps containers are not labeled with generator information. Small bench top red biohazardous waste bags (in the wire frames) not labeled with generator information while in use.

Corrective action: Label biohazardous waste with the generator's name, address, and telephone number while in use.

2. Observation: The secondary containment for the sulfuric acid above ground tank has liquid accumulated at the bottom. This container is stored in the boiler room.

Corrective action: Pump out liquid and keep secondary containment clean and dry.

3. Be advised, employee refresher training is required annually. The ~~base~~ research and development division was last trained January 1998.

MEDICAL WASTE GENERATOR REQUIREMENTS

BUSINESS ADDRESS: 11011 Torreyana Rd. San Diego 9 ZIP: 92121
VIOLATION REPORT: The items checked below refer to specific section numbers of the California Health and Safety Code Sections 25100 and 117600 et. al.; the San Diego County Code of Regulatory Ordinances Sections 68.1201 et. al.; and the California Code of Regulations, Title 22 Sections 65600 et. al. and 66262.10 et. al. All violations must be corrected. Please call (619) 338-2222 or your Inspector if you have any questions.

GENERAL REQUIREMENTS:

- [] An Environmental Health Permit as a medical waste generator has not been obtained. 68.1203, 68.1204, and 117705 V4101 W
[] Unlawful disposal of untreated medical waste to an unauthorized point. 118340 V4102 W
[] Improper treatment of medical waste using an unapproved method or procedure. 118215 V4103 W
[] Medical SOLID WASTE is not stored in a locked trash receptacle or enclosure so as to deny access to unauthorized persons. 68.1202 V4104 W
[] Improper clipping or cutting of sharps waste at the point of generation. 68.1205 V4105 W
[] Medical waste was not separated from other waste at the point of origin. 118275 V4106 W
[] Generator has not maintained reusable containers/bins for medical waste storage in a clean and sanitary manner. 118295 and 118305 V4107 W
[] Storage time exceeded for frozen medical waste, e.g. greater than 90 days. 118280 V4108 W
[] Generator did not clean-up a leak or spill of medical waste in an approved manner. 118300 V4109 W
[] Generator has not secured the enclosure or designated accumulation area for medical waste containers so as to deny access to unauthorized persons. 118310 V4110 W
[] Operator did not post an approved and legible biohazardous waste "warning sign" in English and Spanish at the waste storage area(s). 118310 V4111 W
[] Generator did not store medical waste in approved and properly marked red bags (non-sharps). 118275 V4112 W
[] Did not place a label with the generator's name, address, and phone number on the outside of the red bag and/or sharps container. 68.1201 and 68.1205 V4113 W
[] Generator did not store sharps waste in approved and properly marked sharps container. 118275 V4114 W
[] Transportation of medical waste without State Hauler Registration or without a limited-quantity hauling exemption from County HMMD. 118025 V4115 W
[] Generator did not have standardized written operating procedures for a steam sterilizer available onsite. 118215 V4116 W
[] Did not have recording thermometer checked for calibration annually. 118215 V4117 W
[] Generator did not maintain records of thermometer calibration checks for at least 3 years. 118215 V4118 W
[] Operator did not use heat-sensitive tape or other approved method for each load of medical waste treated onsite. 118215 V4119 W
[] Need to use a biological indicator or other approved method at least once a month to confirm proper disinfection conditions. 118215 V4120 W
[] Must tie-off red bags to prevent leakage or expulsion of contents during handling and storage. 118280 V4121 W
[] Did not containerize and place red bags in rigid, leak resistant, and covered containers or bins. 118280 V4122 W
[] Must have waste container/bin labeled on the lid and side so as to be clearly visible. 118280 V4123 W
[] Did not tape closed or tightly-lid a full sharps container ready for disposal, to preclude loss of contents. 118285 V4124 W

- [] Maximum holding time exceeded for non-putrescible medical waste, e.g. greater than 180 days. 68.1203 V4033 W

LARGE QUANTITY WASTE GENERATORS:

- (> 200 pounds of waste in a month)
[] Medical Waste Management Plan has not been submitted to County HMMD (Annual Requirement) . 117960 and 68.1206 V4034 W
[] Must maintain and show proof of "onsite" medical waste treatment records for 3 years. 118215 and 117975 V4035 W
[] Generator did not retain on file disposal receipts and/or tracking documents for waste shipped offsite for at least 3 years. 117975 V4036 W
[] Storage time exceeded for full sharps container(s), e.g. greater than 7 days at room temperature. 118285 V4037 W
[] Storage time exceeded for red bag waste, e.g. more than 7 days at room temperature. 118280 V4038 W

PATHOLOGY WASTE AND CHEMOTHERAPY WASTE HANDLING:

- [] Did not segregate chemotherapy waste from other medical waste. 118275 V4039 W
[] Generator did not label container holding chemotherapy waste with the words "chemotherapy waste" or other approved markings on the lid and sides. 118275 V4040 W
[] Did not segregate pathology waste from other medical waste. 118275 V4041 W
[] Generator did not label container holding pathology waste with the words "pathology waste" or other approved markings on the lid and side. 118275 V4042 W
[] Unlawful disposal of pathology waste or chemotherapy waste to an unauthorized point. 118340 V4043 W

PHARMACEUTICAL WASTE HANDLING:

- [] Generator did not segregate pharmaceutical waste from other medical waste. 118275g V4044 W
[] Generator did not label container holding pharmaceutical waste with the words "incineration only" or other approved markings on the lid and side. 118275g V4045 W
[] Storage time exceeded for pharmaceutical waste, e.g. more than 90 days. (> 10 pounds per calendar year generated) 118280e V4046 W
[] Very small quantity generator of pharmaceutical waste (e.g. < 10 pounds waste /calendar year) improperly storing waste for longer than one year. 118280e V4047 W
[] Unlawful disposal of pharmaceutical waste to an unauthorized point. 118340 and 118222 V4048 W

ON-SITE MEDICAL WASTE TREATMENT FACILITY REQUIREMENTS:

- [] Operator has not obtained an onsite medical waste treatment permit from the County. 117950, 118130, 118155, and CCR 65620 V4049 W
[] Must maintain an updated and complete copy of the medical waste treatment permit onsite and available for review. CCR 65621(f), 65623, 118165, and 118180 V4050 W
[] Did not comply with a condition of the medical waste treatment permit issued by the County. CCR 65623 V4051 W

PHOTOCHEMICAL and HAZARDOUS WASTE MGMT. AND DISPOSAL:

- [] Illegal disposal of photoprocessing/ hazardous waste to the sewer, trash, etc. 25189.5 V4052 W
[] Generator has not maintained waste disposal records, e.g. manifests/milk-run receipts, onsite for 3 years. 66262.40 V4053 W
[] Generator has not obtained an EPA Identification Number from the State DTSC for hazardous waste generation, e.g. photoprocessing/hazardous waste. 66262.12 V4054 W
[] Generator did not properly label the container holding hazardous waste. 66262.34 V4055 W
[] Generator did not maintain the container holding hazardous waste tightly closed except when adding or removing waste. 66265.173 V4056 W
[] Generator did not submit a notification to the County prior to treating photochemical waste onsite (e.g. > 10 gallons/month: tiered permitting). 25201.5 V4057 W

SMALL QUANTITY GENERATOR REQUIREMENTS: (<200 pounds per month of waste)

- [] Medical Waste Management Plan has not been submitted to County HMMD (Annual Requirement) 68.1206 and 117935 V4025 W
[] Must maintain and show proof of "onsite" medical waste treatment records for 3 years. 118215 and 117943 V4026 W
[] Generator did not retain on file disposal receipts and/or tracking documents for waste shipped offsite for at least 2 years. 117945 V4027 W
[] Need to apply for and receive a limited-quantity hauling exemption for "self-hauled" medical waste (<20 pounds of waste per week). 118030 and 118025 V4028 W
[] Did not renew a limited-quantity hauling exemption annually. 118030 V4029 W
[] Storage time exceeded for full sharps container(s), e.g. greater than 7 days at room temperatures (for >20 pounds/month generator). 118285 V4030 W
[] Storage time exceeded for red bag waste, e.g. more than 7 days at room temperature (>20 pounds/month generator). 118280 V4031 W
[] Very small quantity generator (e.g. <20 pounds per month) improperly storing waste for greater than 30 days onsite at room temperature. 118280 V4032 W

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

EST. NUMBER H 14775DATE 5/13/99PAGE 3 OF 3BUSINESS ADDRESS: 11011 Torreyana Rd. San Diego 92121

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING

- Health Permit not obtained SDCC 68.905 **V0108 W** _____
- No EPA Identification Number 66262.12 **V0105 W** _____
- Waste Manifests/Receipts not on-site for 3 years 66262.40 **V0118 W** _____
- Manifest not properly completed 66262.23 **V0120 W** _____
- Manifest copy not sent to DTSC 66262.23 **V0115 W** _____
- TSDf signed-manifest not on-site 66262.40 **V0121 W** _____
- Biennial report not sent to DTSC 66262.41 **V0122 W** _____
- LDR Documentation not available 66268.7 **V0123 W** _____
- Exception Rpt. not filed with DTSC 66262.42 **V0116 W** _____
- Operating TSDf without authorization 25201 **V0124 W** _____

STORAGE AND HANDLING

- Waste stored longer than 90, 180, or 270 days 66262.34 **V0221 W** _____
- Failure to clean up hazwaste off of floor surface 66262.10b **V0313 W** _____
- Waste container missing/improperly labeled 66262.34 **V0313 W** _____
- Haz. Materials not properly labeled 25124 **V0222 W** _____
- Waste container not kept closed 66265.173 **V0223 W** _____
- Waste container in poor condition 66265.171 **V0202 W** _____
- Waste container(s) not properly managed 66265.173 **V0205 W** _____
- Damaged container not repackaged 66265.171 **V0210 W** _____
- Container incompatible with waste 66265.172 **V0226 W** _____
- Incompatibles in the same container 66265.177 **V0207 W** _____
- Incompatibles not stored separately 66265.177 **V0224 W** _____
- Ignitable Waste less than 50 feet 66265.176 **V0213 W** _____
- Ignitable Waste not grounded 66265.31 **V0214 W** _____
- Storage area not inspected weekly 66265.174 **V0215 W** _____
- Storage area not inspected weekly 66265.174 **V0216 W** _____

DISPOSAL AND TRANSPORTATION

- Unauth. disposal of waste to _____ 25189.5 **V0313 W** _____
- Waste determination not made 66262.11 **V0319 W** _____
- Unlawful transport of haz. waste 25163 **V0315 W** _____
- Waste transported without manifest 66262.20 **V0316 W** _____
- Extremely Haz. Waste Permit not obtained 25205.7 **V0317 W** _____

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES

- Training records unavailable 66265.16 **V0405 W** _____
- Training program not adequate 66265.16 **V0406 W** _____
- Facility not designed to minimize release 66265.31 **V0501 W** _____
- Spill control equip not available 66265.32 **V0508 W** _____
- Aisle space is obstructed 66265.35 **V0509 W** _____
- Contingency plan not prepared and/or on file 66265.51, 66265.53 **V0609 W** _____

MISCELLANEOUS

- Waste oil contaminated 25250.7 **V0225 W** _____
- Used oil filters improperly managed 66266.130 **V0701 W** _____
- Damaged batteries improperly managed 66266.81 **V0702 W** _____
- Facility has failed to notify local CUPA and DTSC of onsite treatment of hazardous waste (tiered permitting) **V0125 W** _____
- Onsite treatment of waste without authorization 25201 **V0125 W** _____

III HAZARDOUS MATERIALS BUSINESS PLAN REQUIREMENTS:

RECORD KEEPING

- Health Permit not obtained SDCC 68.1105 **V2001 W** _____
- Business Plan not established/implemented 25503.5 **V2002 W** _____
- Business Plan not submitted to HMMD 25505 **V2007 W** _____
- Business Plan not amended 25505 **V2003 W** _____
- Personnel Training Records not available 19 CCR 2732 **V2302 W** _____

RELEASE REPORTING

- Failure to report a release/threatened release 25507 **V2008 W** _____

II UNDERGROUND STORAGE TANK (UST) REQUIREMENTS:

GENERAL UST REQUIREMENTS

- Health Permit not obtained 68.1005, 25284 **V3002 T** _____
- Repair/modify/close permit not obtained 68.1005 **V3007 T** _____
- UST Permit Application not submitted 25286(a) **V3010 T** _____
- Operating permit conditions violated 2712 **V3011 T** _____
- Failed to notify HMMD of changes 25284 **V3012 T** _____
- No owner/operator agreement 25284 **V3005 T** _____
- No records of financial coverage 25292.2 **V3013 T** _____
- No maint/monit/calib records available 2712(b), 2641(j) **V3001 T** _____
- Monitoring Equip. not tested annually 2630, 2641 **V3003 T** _____

MONITORING REQUIREMENTS (SINGLE WALL)

- Leak Detection Method does not meet performance standards 2643 **V3014 T** _____
- Integrity test not conducted 25292 **V3015 T** _____
- Copy of tank test not submitted to HMMD within 30 days 2643 **V3016 T** _____
- Manual tank gauging (<2000 gal) 2645 not done properly **V3017 T** _____
- Reconciliation not done properly 2646 **V3018 T** _____
- Reconciliation not approved for facility 2646 **V3019 T** _____
- Dispenser meter(s) not calib annually 2646 **V3020 T** _____
- Improper liquid measurements 2646 **V3021 T** _____
- Stick in poor condition 2646 **V3022 T** _____
- Improper monthly reconciliation 2646 **V3023 T** _____
- Failed to report excessive variation 2646 **V3024 T** _____
- Pressurized Product Piping Leak Device not tested annually 25292 **V3025 T** _____
- No written monitoring procedure 2641 **V3027 T** _____
- No written emergency response plan 2641 **V3027 T** _____
- SIR reporting incorrectly done 2646.1 **V3004 T** _____

MONITORING REQUIREMENTS (DOUBLE WALL)

- Monitoring system not functional 2632 **V3026 T** _____
- No written monitoring procedure 2632 **V3027 T** _____
- Written emergency response plan not available 2632 **V3028 T** _____
- Spill/Overfill equip. not maintained or installed 2635 **V3029 T** _____

RELEASE REPORTING

- Failure to report an unauthorized release 25295 **V3009 T** _____
- Release record log not available 2651, 2650 **V3030 T** _____
- No leak report/investigation/action 2652 **V3031 T** _____

CLOSURE

- Temporary closure req. not completed 2671 **V3006 T** _____
- Unused tank not properly closed 25298 **V3032 T** _____
- Permanent closure req. not completed 2672 **V3033 T** _____
- Failed to apply for temporary closure 25298 **V3008 T** _____

BUSINESS PLAN ELEMENTS

- Emergency Response Plan inadequate 25504 **V2201 W** _____
- Emergency Contacts not provided/current 25509 **V2203 W** _____
- Personnel Training Program inadequate 25504 **V2301 W** _____
- Inventory is incomplete 25504 **V2005 W** _____
- Site Map is not sufficient 25509 **V2202 W** _____
- Acutely Haz. Mat. not registered 25533 **V2009 W** _____

ALL VIOLATIONS MUST BE CORRECTED. PLEASE CALL (619) 338-2222 OR YOUR INSPECTOR IF YOU HAVE ANY QUESTIONS.

Mark Thompson

INSPECTION REPORT FOR GENERATORS Permit by Rule, Conditionally Authorized, and Conditionally Exempt Facilities

FACILITY NAME: IDEC Pharmaceuticals Corp.
 PHYSICAL ADDRESS: 11011 Torreyana Road
 FACILITY CONTACT-NAME: Mark Thompson PHONE: 550-8500
 SIC CODES(S): _____
 *GENERATOR: CESQG _____ SQG _____ LQG _____
 NOTIFIED UNIT COUNT: PBR _____ CA CESW _____ CESQT _____ CEL _____ TOTAL _____
 CORRECT UNIT COUNT: PBR _____ CA CESW _____ CESQT _____ CEL _____ TOTAL _____

This checklist and inspection report identifies violations of State law regarding onsite treaters of hazardous waste, operating under an onsite permitting tier. This inspection verifies compliance with information provided on form 1772. It also covers generator requirements, although a separate checklist may be used for those requirements. A checkmark indicates a violation of the law, which is explained in more detail on the attached inspection sheets. The governing laws are the Health and Safety Code (HSC) and Title 22 of the California Code of Regulations (22 CCR).

GENERATOR STANDARDS:

NO

- V0609
- V0405

- _____ 1. **Contingency plan** has been prepared (adequately minimizes releases, has alarm/communication system; lists emergency equipment, name and phone numbers of emergency coordinators).
- _____ 2. **Written training documents** and records prepared for employees handling hazardous waste.
- _____ 3. **Meet container management standards** (storage time limits, closed, labeled, compatibility, inspected weekly, in good condition, with ignitables/reactives 50 feet from property line).
- _____ 4. **Meet tank management standards** (either secondary containment or integrity assessments, plus storage time limits, labeled, compatibility, inspected daily, in good condition, with ignitables/reactives 50 feet from property line).
- _____ 5. **Hazardous waste determination** (hazardous by testing the waste or applying knowledge of characteristics).
- _____ 6. **EPA identification number** (generator has an EPA identification number).**
- _____ 7. **Aisle space** is maintained to allow for the unobstructed movement of personnel, fire protection equipment, spill control equipment, and the decontamination equipment in an emergency.
- _____ 8. **Accumulation of hazardous waste** is appropriate for the time allowed. (LQG <90 days; SQG 180 or 270 days or less if the waste for transportation >200 miles, and waste on site <6000 kg at any time; CESQG, 90 days clock starts when 100 kg of hazardous waste or 1 kg of acutely hazardous waste is accumulated).
- _____ 9. **Manifest standards** (copies of manifest on site for at least 3 years, within 30 days of each shipment submit to the Department a legible copy of each manifest used, generator and waste sections completed, transported hazardous waste without/incomplete manifest).
- _____ 10. **Inspection standards** for hazardous waste accumulation area (container-weekly and tanks-daily).

Please Print or Type All Information

I. CLASSIFICATION OF WASTE

Business Name: IDEC Pharmaceuticals Corporation
Business Address/Zip Code: 11011 Torreyana Road SD CA 92121
Business Phone: (619) 458-8822
Business Representative's Name: Mark Thompson
Job Title: Sr. Manager Environmental Health & Safety

ENVIRONMENTAL
HEALTH SERVICES

A. Waste Information:

1. Describe the Type of Waste (Example: water soluble cutting oil from machine shop containing trace amounts of heavy metals):
6 Molar Guanadine Hydrochloride solution is used as a process buffer in manufacturing.

2. Description of Waste:

a. Physical description of waste (Example: Dry sandblast grit and other debris):
Solution is a clear, odorless liquid.

b. Present method of waste disposal:

Pending concurrence on waste determination spent/unwanted buffer will be sewer discharged.

c. Dates and locations of collected samples (Fill in the box below with applicable information):

TYPE OF SAMPLE COLLECTED	LOCATION	DATE COLLECTED	FIELD SAMPLE # (sample label# or ID number)
Example : Dry sandblast grit	Sandblast grit stockpile grid location: #01	September 4, 1992	#001
6 Molar Guanadine HCL	Process Dev. Lab	7/1/99	9907-008 99-1876

d. Description of sampling methodology (NOTE-IMPORTANT: For wastes stored in roll-off boxes; in a stockpile; in large containers; or disposed of onto the ground surface, you must attach a plot plan map detailing the exact sample locations/coordinates demonstrating where the samples were collected.):

(1) Describe the sampling technique used at site or facility:

Purification buffer was prepared using stock solutions. This buffer is not yet used as part of the validated process.

(2) Describe sample handling and preservation methods used prior to laboratory analysis:

The sample submitted for testing was collected in a labeled glass container at room temperature, properly preserved and stored, and chain of custody procedures were followed.

(3) Waste produced per unit time (Example: 500 pounds/day):

No estimate is currently available.

(4) Describe the process used to generate waste:

Plant activities include/involve large scale fermentation and purification operations. Large amounts of clean water and buffer solutions are used daily. Buffer solutions typically contain alcohols and various acid salts in different concentrations. Daily operations yield waste water solutions that are managed as process wastes. A process waste treatment unit is in operation at the site for pH adjustment.

B. Certification by person(s) who is/are the responsible managers of the establishment.

"I certify under penalty of law that I have personally examined and am familiar with the information submitted in this notification and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I certify that the waste is non-hazardous based on testing of the waste and applying knowledge of the characteristics of the waste in light of the materials or the processes used. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

Signature: Chris Burman

Printed Name: Chris Burman

Job Title: Sr. Vice President, Manufacturing and Process Sciences

Date: 8.20.99

II. SAMPLING INFORMATION

A. Sampler's Name: Mark Thompson

Business Address/Zip Code: 11011 Torreyana Road SD CA 92121

Business Phone: (619) 458-8822

Contact Person: Mark Thompson

Job Title: Sr. Manager, Environmental Health and Safety

"I certify under penalty of law that I have personally conducted all sampling in accordance with the procedures specified in Section One of 'Test Methods for Evaluating Solid Waste, Physical/Chemical Methods', SW-846, 3rd Edition, U.S. Environmental Protection Agency, 1986. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment."

Signature: _____

Printed Name: Mark Thompson

Title: Sr. Manager, Environmental Health & Safety

Date: 8/20/99

SW846 Section One, Regulatory and Scientific Objectives states in part "that enough samples...be collected over a period of time to address the variability of the waste."

III. **LABORATORY INFORMATION** To be completed by Lab Technician:

A. Waste samples are to be transported with a Chain-of-Custody to a laboratory certified to perform that specific analysis by the State of California Department of Environmental Health (Pursuant to Section 67440.1 CCR).

(Attach a copy of Chain-of-Custody Form)

Laboratory: OPEN ENVIRONMENTAL
Address: 5550 MOREHOUSE DRIVE, SAN DIEGO, CA 92121
Phone #: 658-458-9044
Contact Person: MARILYN SCHWARTZ
Job Title: LABORATORY MANAGER

B. Laboratory shall have a Quality Assurance Manual which is utilized on a routine basis by the laboratory staff.

1. Cite the reference(s) for the extraction and analytical methods used on the analysis report.
2. I certify under penalty of law that I have conducted all analysis in accordance with the analytical procedures specified in California Code of Regulations, Title 22, Division 4.5, Chapter 11. (Identification and Listing of Hazardous Waste).

(Attach Laboratory Results)

Signature: 
Printed Name: MARILYN SCHWARTZ
Job Title: LAB MANAGER
Date: 20 AUGUST 1999

NOTE: You must attach a copy of the laboratory results and Chain-of-Custody document to this form.

IMPORTANT FOOTNOTES
** Please Read **

1. Maintain a completed copy of this document in your files available for review at all times.
2. Do **NOT** commingle or mix different samples into one composite sample.
3. Transport the samples directly to the laboratory as soon as possible. Maintain the samples cold (4°C or below) while in storage and during transport.
4. Enough samples should be taken of the waste to ensure that a thorough assessment of the properties of the waste is conducted by the waste producer. Sample analysis results often vary because the waste is not homogenous in nature. In many cases, more than one sample must be analyzed in order to ensure the validity of the waste determination.
5. The Hazardous Materials Management Division recommends you obtain the services of a qualified and experienced environmental consultant who can assist you in the sampling of the waste and laboratory analysis of the samples.
6. In accordance with Section 66260.200 of the California Code of Regulations, Title 22, Division 4.5, the waste generator may petition Cal-EPA, Department of Toxic Substances Control, for their concurrence with the results of the waste determination.
7. A waste generator who incorrectly determines that a hazardous waste is non-hazardous, and fails to manage the waste in a lawful manner, is in violation of the regulations and is subject to enforcement action (Section 66260.200 of the California Code of Regulations, Title 22).

III. LABORATORY INFORMATION To be completed by Lab Technician:

A. Waste samples are to be transported with a Chain-of-Custody to a laboratory certified to perform that specific analysis by the State of California Department of Environmental Health (Pursuant to Section 67440.1 CCR).

(Attach a copy of Chain-of-Custody Form)

Mark Thompson
IDEC Pharmaceuticals
3030 Callan Road
San Diego, CA 92121

Dear Mark,

On July 1, 1999, the Ogden Bioassay Laboratory received two liquid samples for definitive hazardous waste characterization. The samples were identified by IDEC Pharmaceuticals as "One percent Benzyl Alcohol" and "6M Guanadine HCl."

The samples were analyzed in accordance with State of California Fish and Game and USEPA methods. Definitive assays were conducted and the LC₅₀ for both samples was determined to be >750 mg/L. Samples exhibiting LC₅₀ values above 500 mg/L are **not** classified by the State of California as hazardous for disposal under Title 22.

Attached are summary sheets of the test results, copies of the laboratory raw data recorded during the assays, and a copy of the chain-of-custody which accompanied the samples. Please feel free to me at (619) 458-9044 ext. 300 should you have any questions.

Sincerely,

Marilyn J. Schwartz

QUALITY CONTROL TERMINOLOGY

- **LCS** - Laboratory Control Sample. Reported as % Recovery of an Independent Standard carried through all sample preparation procedures to verify method performance. Acceptable range is 80 % -120 % recovery.
- **Spike**- Environmental sample is matrix spiked with method compounds and % recovery of concentration spiked into sample is calculated. Reported as
- **% Recovery**. Acceptable range for "Normal Matrix Sample" is 75 % - 125% recovery.
- **% Recovery** = (Spike Sample Result - Sample Result) *100/Spike Concentration.
- **RPD (Relative % Difference)** = (Spiked Sample - Spike Duplicate) * 100 / Average Result.

Please Print or Type All Information

I. CLASSIFICATION OF WASTE

Business Name: IDEC Pharmaceuticals Corporation
Business Address/Zip Code: 11011 Torreyana Road SD CA 92121
Business Phone: (619) 458-8822
Business Representative's Name: Mark Thompson
Job Title: Sr. Manager Environmental Health & Safety

ENVIRONMENTAL
HEALTH SERVICES

A. Waste Information:

1. Describe the Type of Waste (Example: water soluble cutting oil from machine shop containing trace amounts of heavy metals):
200 ppm Peracetic Acid solution is used as a process buffer in manufacturing.

2. Description of Waste:

a. Physical description of waste (Example: Dry sandblast grit and other debris):
Solution is a clear liquid with a slight odor of vinegar.

b. Present method of waste disposal:
Pending concurrence on waste determination spent/unwanted buffer will be sewer discharged.

c. Dates and locations of collected samples (Fill in the box below with applicable information):

TYPE OF SAMPLE COLLECTED	LOCATION	DATE COLLECTED	FIELD SAMPLE # (sample label# or ID number)
Example : Dry sandblast grit	Sandblast grit stockpile grid location: #01	September 4, 1992	#001
200 ppm Peracetic acid	Process Dev. Lab	8/19/99	9908-110 99-2292

d. Description of sampling methodology (NOTE-IMPORTANT: For wastes stored in roll-off boxes; in a stockpile; in large containers; or disposed of onto the ground surface, you must attach a plot plan map detailing the exact sample locations/coordinates demonstrating where the samples were collected.):

(1) Describe the sampling technique used at site or facility:

Purification buffer was prepared using stock solutions. This buffer is not yet used as part of the validated process.

(2) Describe sample handling and preservation methods used prior to laboratory analysis:

The sample submitted for testing was collected in a labeled glass container at room temp properly preserved and stored, and chain of custody procedures were followed.

(3) Waste produced per unit time (Example: 500 pounds/day):

No estimate is currently available.

(4) Describe the process used to generate waste:

Plant activities include/involve large scale fermentation and purification operations. Large amounts of clean water and buffer solutions are used daily. Buffer solutions typically contain alcohols and various acid salts in different concentrations. Daily operations yield waste water solutions that are managed as process wastes. A process waste treatment unit is in operation at the site for pH adjustment.

B. Certification by person(s) who is/are the responsible managers of the establishment.

"I certify under penalty of law that I have personally examined and am familiar with the information submitted in this notification and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I certify that the waste is non-hazardous based on testing of the waste and applying knowledge of the characteristics of the waste in light of the materials or the processes used. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

Signature: Chris Burman

Printed Name: Chris Burman

Job Title: Sr. Vice President, Manufacturing and Process Sciences

Date: 8-20-99

II. SAMPLING INFORMATION

A. Sampler's Name: Mark Thompson

Business Address/Zip Code: 11011 Torreyana Road SD CA 92121

Business Phone: (619) 458-8822

Contact Person: Mark Thompson

Job Title: Sr. Manager, Environmental Health and Safety

"I certify under penalty of law that I have personally conducted all sampling in accordance with the procedures specified in Section One of 'Test Methods for Evaluating Solid Waste, Physical/Chemical Methods', SW-846, 3rd Edition, U.S. Environmental Protection Agency, 1986. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment."

Signature: _____

Printed Name: Mark Thompson

Title: Sr. Manager, Environmental Health & Safety

Date: 8/20/99

SW846 Section One, Regulatory and Scientific Objectives states in part "that enough samples...be collected over a period of time to address the variability of the waste."

III. **LABORATORY INFORMATION** To be completed by Lab Technician:

A. Waste samples are to be transported with a Chain-of-Custody to a laboratory certified to perform that specific analysis by the State of California Department of Environmental Health (Pursuant to Section 67440,1 CCR).

(Attach a copy of Chain-of-Custody Form)

Laboratory: OCEAN ENVIRONMENTAL
Address: 5550 WAREHOUSE DRIVE, SAN DIEGO, CA 92121
Phone #: 658-458-9044
Contact Person: MARILYN SCHWARTZ
Job Title: LABORATORY MANAGER

B. Laboratory shall have a Quality Assurance Manual which is utilized on a routine basis by the laboratory staff.

1. Cite the reference(s) for the extraction and analytical methods used on the analysis report.
2. I certify under penalty of law that I have conducted all analysis in accordance with the analytical procedures specified in California Code of Regulations, Title 22, Division 4.5, Chapter 11. (Identification and Listing of Hazardous Waste).

(Attach Laboratory Results)

Signature: 
Printed Name: MARILYN SCHWARTZ
Job Title: LAB MANAGER
Date: 20 AUGUST 1999

NOTE: You must attach a copy of the laboratory results and Chain-of-Custody document to this form.

IMPORTANT FOOTNOTES
** Please Read **

1. Maintain a completed copy of this document in your files available for review at all times.
2. Do **NOT** commingle or mix different samples into one composite sample.
3. Transport the samples directly to the laboratory as soon as possible. Maintain the samples cold (4°C or below) while in storage and during transport.
4. Enough samples should be taken of the waste to ensure that a thorough assessment of the properties of the waste is conducted by the waste producer. Sample analysis results often vary because the waste is not homogenous in nature. In many cases, more than one sample must be analyzed in order to ensure the validity of the waste determination.
5. The Hazardous Materials Management Division recommends you obtain the services of a qualified and experienced environmental consultant who can assist you in the sampling of the waste and laboratory analysis of the samples.
6. In accordance with Section 66260.200 of the California Code of Regulations, Title 22, Division 4.5, the waste generator may petition Cal-EPA, Department of Toxic Substances Control, for their concurrence with the results of the waste determination.
7. A waste generator who incorrectly determines that a hazardous waste is non-hazardous, and fails to manage the waste in a lawful manner, is in violation of the regulations and is subject to enforcement action (Section 66260.200 of the California Code of Regulations, Title 22).

III. **LABORATORY INFORMATION** To be completed by Lab Technician:

Ogden I.D. Test No. 9908-110

Mr. Mark Thompson
IDEC Pharmaceuticals
11011 Torreyana Road
San Diego, CA 92121

Dear Mark,

On August 19, 1999, the Ogden Bioassay Laboratory received one liquid sample for bioassay analysis. The sample was analyzed in accordance with State of California and USEPA methods. The symbol for greater than indicates that the LC₅₀ was higher than the highest concentration tested (750 mg/L). Samples exhibiting an LC₅₀ value greater than 500 mg/L are not classified as hazardous for disposal under California Code of Regulations Title 22.

Attached are a summary sheet of the test results, a copy of the laboratory raw data recorded during the assay, and a copy of the chain-of-custody which accompanied the sample. Please feel free to me at (619) 458-9044 ext. 300 should you have any questions.

Sincerely,

Marilyn J. Schwartz
Manager, Ogden Bioassay Labs

Dear Mark:

WASTE DETERMINATION FOR PROCESS BUFFERS

This letter is in reply to your correspondence of September 20, 1999, to the Hazardous Materials Division (HMD) regarding the waste determination conducted on the three new buffers being considered for use by IDEC Pharmaceuticals. Your letter stated the buffers consist of 1% benyl alcohol, peracetic acid, and 6 molar guanadine HCL. The waste determination consisted of flashpoint and toxicity testing for all three buffers...

The HMD appreciates the opportunity to review your planned use of the buffers. Based on the waste determination results, your plan is considered to satisfy regulatory requirements for waste management. If the buffer compositions or processes change, a new waste determination will be required. Additionally, since the waste buffer solutions are discharged to the sanitary sewer, the HMD recommends you contact the City of San Diego, Metropolitan Wastewater Division for discharge approval.

If you have any further questions, please do not hesitate to contact me at (858) 694-3234.

Sincerely,

PETER NEUBAUER, Environmental Health Specialist II
Hazardous Materials Division

RE: Waste Determination/Classification for Process Buffers

Dear Peter,

Enclosed please find the paperwork on three new buffers being considered for use in IDEC's manufacturing purification operation. These buffers are identified as 200 ppm Peracetic Acid, 6 Molar Guanadine HCL, and 1% Benzyl Alcohol. As per your agency's procedures IDEC is asking for a Waste Determination/Classification on these substances.

IDEC has carried out flashpoint and toxicity testing on these buffers in accordance with CAC Title 22 and the results are attached. According to the test results these buffers would not constitute hazardous waste when no longer fit for use or re-use and therefore could be discharged to the sewer as industrial wastewater. Two of these buffers are completely new to the purification process, and one (the benzyl alcohol) is a partial replacement for several of the ethanol buffers currently approved for use in the plant. IDEC is currently in a transition phase between manufacturing campaigns, and is gearing up for the production of clinical trial materials starting in October. If you have any additional questions please contact me at (858) 431-8822.

Sincerely,

Mark Thompson
Sr. Manger, Environmental Health and Safety

III. LABORATORY INFORMATION To be completed by Lab Technician:

A. Waste samples are to be transported with a Chain-of-Custody to a laboratory certified to perform that specific analysis by the State of California Department of Environmental Health (Pursuant to Section 67440.1 CCR).

(Attach a copy of Chain-of-Custody Form)

Laboratory: OPEN ENVIRONMENTAL
Address: 5550 MOREHOUSE DRIVE, SAN DIEGO, CA 92121
Phone #: 658-458-9044
Contact Person: MARILYN SCHMIDT
Job Title: LABORATORY MANAGER

B. Laboratory shall have a Quality Assurance Manual which is utilized on a routine basis by the laboratory staff.

1. Cite the reference(s) for the extraction and analytical methods used on the analysis report.
2. I certify under penalty of law that I have conducted all analysis in accordance with the analytical procedures specified in California Code of Regulations, Title 22, Division 4.5, Chapter 11. (Identification and Listing of Hazardous Waste).

(Attach Laboratory Results)

Signature: 
Printed Name: MARILYN SCHMIDT
Job Title: LAB MANAGER
Date: 20 AUGUST 1999

NOTE: You must attach a copy of the laboratory results and Chain-of-Custody document to this form.

IMPORTANT FOOTNOTES
** Please Read **

1. Maintain a completed copy of this document in your files available for review at all times.
2. Do **NOT** commingle or mix different samples into one composite sample.
3. Transport the samples directly to the laboratory as soon as possible. Maintain the samples cold (4°C or below) while in storage and during transport.
4. Enough samples should be taken of the waste to ensure that a thorough assessment of the properties of the waste is conducted by the waste producer. Sample analysis results often vary because the waste is not homogenous in nature. In many cases, more than one sample must be analyzed in order to ensure the validity of the waste determination.
5. The Hazardous Materials Management Division recommends you obtain the services of a qualified and experienced environmental consultant who can assist you in the sampling of the waste and laboratory analysis of the samples.
6. In accordance with Section 66260.200 of the California Code of Regulations, Title 22, Division 4.5, the waste generator may petition Cal-EPA, Department of Toxic Substances Control, for their concurrence with the results of the waste determination.
7. A waste generator who incorrectly determines that a hazardous waste is non-hazardous, and fails to manage the waste in a lawful manner, is in violation of the regulations and is subject to enforcement action (Section 66260.200 of the California Code of Regulations, Title 22).

Dear Mark,

On July 1, 1999, the Ogden Bioassay Laboratory received two liquid samples for definitive hazardous waste characterization. The samples were identified by IDEC Pharmaceuticals as "One percent Benzyl Alcohol" and "6M Guanadine HCl."

The samples were analyzed in accordance with State of California Fish and Game and USEPA methods. Definitive assays were conducted and the LC₅₀ for both samples was determined to be >750 mg/L. Samples exhibiting LC₅₀ values above 500 mg/L are **not** classified by the State of California as hazardous for disposal under Title 22.

Attached are summary sheets of the test results, copies of the laboratory raw data recorded during the assays, and a copy of the chain-of-custody which accompanied the samples. Please feel free to me at (619) 458-9044 ext. 300 should you have any questions.

Sincerely,

Marilyn J. Schwartz

November 14, 2000

Attention: Clarissa Hart

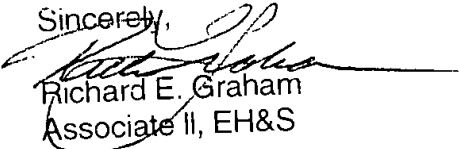

Subject: Cancellation of Permit for Medical Waste On-Site Treatment.

On behalf of IDEC Pharmaceuticals, I am sending you this letter, per our conversation during the second week of November 2000, to confirm the cancellation of our Medical Waste On-Site Treatment Permit for the Torreyana Facility. IDEC has discontinued the practice of Medical Waste On-Site Treatment and is now shipping all untreated waste via our Waste Hauler, PWN. We will maintain service and use records of our Autoclave for infrequent Medical Waste treatment. However, any waste that is treated on site will be treated again by PWN for proper disposal.

Attached you will find a copy of the aforementioned Medical Waste On-Site Treatment Permit.

If for any reason there are problems and/or questions relating to the cancellation of this permit, please call me at (858) 431-8950.

Sincerely,

Richard E. Graham

IN THE MATTER OF: STIPULATION AND ORDER; IDEC PHARMACEUTICALS CORPORATION, DOCKET NO. SRPD 99/00 SNS- 4050

Dear Mr. Thompson:

Enclosed please find a copy of the signed Stipulation and Order (Order) concerning Idec Pharmaceuticals Corporation, located at 11011 Torreyana Road, La Jolla, California 92121.

As indicated in section 7 of the Order, Idec Pharmaceuticals Corporation has paid the Department of Toxic Substances Control (DTSC) the administrative costs in the amount of \$6,000. 00, on June 23, 2000. Please note that the Order became effective on July 11, 2000, the date it was signed by DTSC.

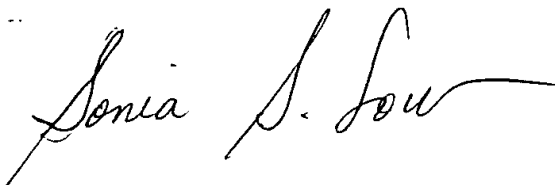

This document indicates your full compliance to the terms and conditions of the Order. Thank you very much for your prompt cooperation in the matter.

Mr. Mark Thompson
July 11, 2000

10
11 INTRODUCTION

12 The State Department of Toxic Substances Control
13 (Department) and Idec Pharmaceuticals corporation enter into this
14 Stipulation and Order (Order) and agree as follows:

15 1. A dispute exists regarding the draft Enforcement
16 Order (Docket No SRPD 99/00 SNS-4050) issued by the Department on
17 May 11, 2000.

18 2. The parties wish to avoid the expense of further
19 litigation and to ensure prompt action to achieve the Schedule
20 for Compliance below.

21 3. Jurisdiction exists pursuant to Health and Safety
22 Code (HSC) section 25187.

23 4. Respondent waives any right to a hearing in this
24 matter.

25 5.1. Based on the available facility information, the
26

1 Respondent's Tiered Permitting Phase I Environmental Checklist
2 (Checklist) concludes that their facility requires no further
3 investigation at this time.

4 5.2. This Order shall constitute full settlement of
5 the violations alleged in the draft Enforcement Order, but does
6 not limit the Department from taking appropriate enforcement
7 action concerning other violations.

8
9 SCHEDULE FOR COMPLIANCE

10
11 6. Respondent did comply with the following:

12 6.1. Respondent submitted to the Department a completed
13 Checklist (DTSC Form # 1151) as specified in HSC section 25200.14
14 (b), on May 2, 2000.

15 6.2. Submittals: All submittals from Respondent
16 pursuant to this Order shall be sent to:

17 Sonia S. Low, Section Chief
18 Southern California Branch
19 State Regulatory Programs Division
20 Department of Toxic Substances Control
5796 Corporate Avenue
Cypress, California 90630-4700

21 6.3. Communications: All approvals and decisions of
22 the Department made regarding such submittals and notifications
23 shall be communicated to Respondent in writing by Ms. Sonia S.
24 Low, Section Chief, Department of Toxic Substances Control, or
25 her designee. No informal advice, guidance, suggestions, or
26 comments by the Department regarding reports, plans,

1 specifications, schedules, or any other writings by Respondent
2 shall be construed to relieve Respondent of its obligation to
3 obtain such formal approvals as may be required.

4 6.4. Department Review and Approval: If the
5 Department determines that any report, plan, schedule, or other
6 document submitted for approval pursuant to this Order fails to
7 comply with the Order or fails to protect public health or safety
8 or the environment, the Department may:

9 a. Modify the document as deemed necessary and approve
10 the document as modified; or

11 b. Return the document to Respondent with recommended
12 changes and a date by which Respondent must submit to the
13 Department a revised document incorporating the recommended
14 changes.

15 6.5. Compliance with Applicable Laws: Respondent
16 shall carry out this Order in compliance with all local, State,
17 and federal requirements, including but not limited to
18 requirements to obtain permits and to assure worker safety.

19 6.6. Endangerment during Implementation: In the event
20 that the Department determines that any circumstances or activity
21 (whether or not pursued in compliance with this Order) are
22 creating an imminent or substantial endangerment to the health or
23 welfare of people on the site or in the surrounding area or to
24 the environment, the Department may order Respondent to stop
25 further implementation for such period of time as needed to abate
26 the endangerment. Any deadline in this Order directly affected
27

1 by a Stop Work Order under this section shall be extended for the
2 term of such Stop Work Order.

3 6.7. Liability: Nothing in this Order shall
4 constitute or be construed as a satisfaction or release from
5 liability for any conditions or claims arising as a result of
6 past, current, or future operations of Respondent, except as
7 provided in this Order. Notwithstanding compliance with the
8 terms of this Order, Respondent may be required to take further
9 actions as are necessary to protect public health or welfare or
10 the environment.

11 6.8. Government Liabilities: The State of California
12 shall not be liable for injuries or damages to persons or
13 property resulting from acts or omissions by Respondent or
14 related parties specified in paragraph 6.14 in carrying out
15 activities pursuant to this Order, nor shall the State of
16 California be held as a party to any contract entered into by
17 Respondent or its agents in carrying out activities pursuant to
18 this Order.

19 6.9. Additional Enforcement Actions: By agreeing to
20 this Order, the Department does not waive the right to take
21 further enforcement actions, except to the extent provided in
22 this Order.

23 6.10. Incorporation of Plans and Reports: All plans,
24 schedules, and reports that require Department approval and are
25 submitted by Respondent pursuant to this Order are incorporated
26 in this Order upon approval by the Department.
27

1 \$6,000.00, of which \$3,000.00 is a penalty and \$3,000.00 is
2 reimbursement of the Department's administrative costs. Payment
3 shall be made by September 30, 2000. Respondent's check shall be
4 made payable to Department of Toxic Substances Control, and shall
5 identify the Respondent and Docket Number, as shown in the
6 heading of this case. Respondent shall deliver the penalty
7 payment to:

8 Department of Toxic Substances Control
9 Accounting Office
10 400 P Street, 4th Floor
11 P. O. Box 806
12 Sacramento, California 95812-0806

13 A photocopy of the check shall be sent to:

14 Sonia S. Low, Section Chief
15 Southern California Branch
16 State Regulatory Programs Division
17 Department of Toxic Substances Control
18 5796 Corporate Avenue
19 Cypress, California 90630-4700

20 If Respondent fails to make payment as provided above, Respondent
21 agrees to pay interest at the rate established pursuant to
22 HSC section 25360.1 and to pay all costs incurred by the
23 Department in pursuing collection including attorney's fees.

24 EFFECTIVE DATE

25 8. The effective date of this Order is the date it is
26 signed by the Department.

Dear Clarissa,

I have completed the requested updates per your inspections on 2-12-01 (Torreyana Facility) and 2-14-01 (Callan Warehouse, and Science Park Facility). I will be double checking the labs for non-compliance and correcting any problems that appear. You will find a copy of the Health Permit that was missing from the Callan Facility and the original will be posted at Callan. If there is any needed information missing or you have any concerns/questions, do not hesitate to contact me at (858) 431-8950.

Sincerely,

Rick Graham

SUMMARY OF VIOLATION

Dear Mr. Thompson:

The Department of Toxic Substances Control (DTSC) is issuing this Summary of Violation (SOV) to Idec Pharmaceuticals Corporation located at 11011 Torreyana Road, La Jolla, California 92037, for the following violation:

Violation

Idec Pharmaceuticals Corporation violated Health and Safety Code, section 25200.14(b), in that on January 1, 1997, Idec Pharmaceuticals Corporation failed to submit a Phase I Environmental Assessment (Phase I Checklist, DTSC Form 1151 - 9/95) to DTSC.

The Phase I Checklist was due to DTSC no later than January 1, 1997 for active or closed facilities under Permit By Rule (PBR) or Conditional Authorization (CA). The Phase I Checklist was mailed to these facilities on June 6, 1996 and June 12, 1996, respectively. A reminder letter was mailed on March 7, 1997 to those facilities that had not submitted a Phase I Checklist to DTSC.

Mr. Mark Thompson
April 7, 2000
Page 2

Schedule of Compliance

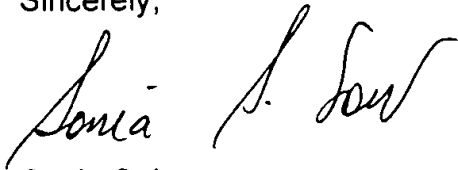

A completed Phase I Checklist must be submitted within thirty (30) calendar days from receipt of this letter to:

Sonia S. Low
Section Chief
Southern California Branch
State Regulatory Programs Division
5796 Corporate Avenue
Cypress, California 90630

Enclosed is a Phase I Checklist (DTSC 1151 - 06/99) for your use. The issuance of this SOV does not preclude DTSC from taking administrative, civil, or criminal action as a result of the violation.

If the Phase I Checklist has been submitted to DTSC or if you have any questions regarding this letter, please contact Mr. Nebu John at (714) 484-5475.

Sincerely,

Sonia S. Low
Section Chief
Southern California Branch
State Regulatory Programs Division

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

- Routine Inspection -

Office Use Only

Violations and Corrective Actions:

MAY 03 2001

1) Hazardous waste used oil has not been cleaned up from the secondary containment floor of the storage area.

- Corrective Action: Clean up all hazardous waste used oil from the floor of the secondary containment storage area. Keep this area clean and dry. Clean up all spills of hazardous wastes as soon as possible.

2) Containers holding hazardous waste, used oil and other hazardous waste chemicals are not kept closed.

- Corrective Action: All containers holding hazardous wastes must be kept closed at all times unless adding or removing wastes.

3) Sharps containers are not labeled with generator information.

- Corrective Action: All sharps containers and red bags holding biohazardous waste must be labeled with generator labels.

Remarks:

1) Submit an updated Hazardous Materials Business Plan, Medical Waste Management, and Annual Cancerogen Report within 10 days to my attention.

2) Hazardous waste manifests ~~and~~ onsite.

3) Employee safety training records are located at Science Park road.

4) Health permit onsite, expires 11/30/01.

BUSINESS ADDRESS: 11011 Torreyana Rd San Diego 92121

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING

- Health Permit not obtained SDCC 68.905
- No EPA Identification Number 66262.12
- Waste Manifests/Receipts not on-site for 3 years 66262.40
- Manifest not properly completed 66262.23
- Manifest copy not sent to DTSC 66262.23
- TSDf signed-manifest not on-site 66262.40
- Biennial report not sent to DTSC 66262.41
- LDR Documentation not available 66268.7
- Exception Rpt. not filed with DTSC 66262.42
- Operating TSDf without authorization 25201

STORAGE AND HANDLING

- Waste stored longer than 90, 180, or 270 days 66262.34
- Failure to clean up hazwaste off of floor surface 66262.10b
- Waste container missing/improperly labeled 66262.34
- Haz Materials not properly labeled 25124
- Waste container not kept closed 66265.173
- Waste container in poor condition 66265.171
- Waste container(s) not properly managed 66265.173
- Damaged container not repackaged 66265.171
- Container incompatible with waste 66265.172
- Incompatibles in the same container 66265.177
- Incompatibles not stored separately 66265.177
- Ignitable Waste less than 50 feet 66265.176
- Ignitable Waste not grounded 66265.31
- Storage area not inspected weekly 66265.174

DISPOSAL AND TRANSPORTATION

- Unauth. disposal of waste to _____ 25189.5
- Waste determination not made 66262.11
- Unlawful transport of haz. waste 25163
- Waste transported without manifest 66262.20
- Extremely Haz. Waste Permit not obtained 25205.7

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES

- Training records unavailable 66265.16
- Training program not adequate 66265.16
- Facility not designed to minimize release 66265.31
- Spill control equip not available 66265.32
- Aisle space is obstructed 66265.35
- Contingency plan not prepared and/or on file 66265.51, 66265.53

MISCELLANEOUS

- Waste oil contaminated 25250.7
- Used oil filters improperly managed 66266.130
- Damaged batteries improperly managed 66266.81
- Facility has failed to notify local CUPA and DTSC of onsite treatment of hazardous waste (tiered permitting)
- Onsite treatment of waste without authorization 25201

III HAZARDOUS MATERIALS BUSINESS PLAN REQUIREMENTS:

RECORD KEEPING

- Health Permit not obtained SDCC 68.1105
- Business Plan not established/implemented 25503.5
- Business Plan not submitted to HMMD 25505
- Business Plan not amended 25505
- Personnel Training Records not available 19 CCR 2732

RELEASE REPORTING

- Failure to report a release/threatened release 25507

II UNDERGROUND STORAGE TANK (UST) REQUIREMENTS:

GENERAL UST REQUIREMENTS

- Health Permit not obtained 68.1005, 25284
- Repair/modify/close permit not obtained 68.1005
- UST Permit Application not submitted 25286(a)
- Operating permit conditions violated 2712
- Failed to notify HMMD of changes 25284
- No owner/operator agreement 25284
- No records of financial coverage 25292.2
- No maint/monit/calib records available 2712(b), 2641(j)
- Monitoring Equip. not tested annually 2630, 2641

MONITORING REQUIREMENTS (SINGLE WALL)

- Leak Detection Method does not meet performance standards 2643
- Integrity test not conducted 25292
- Copy of tank test not submitted to HMMD within 30 days 2643
- Manual tank gauging (<2000 gal) 2645 not done properly
- Reconciliation not done properly 2646
- Reconciliation not approved for facility 2646
- Dispenser meter(s) not calib annually 2646
- Improper liquid measurements 2646
- Stick in poor condition 2646
- Improper monthly reconciliation 2646
- Failed to report excessive variation 2646
- Pressurized Product Piping Leak Device not tested annually 25292
- No written monitoring procedure 2641
- No written emergency response plan 2641
- SIR reporting incorrectly done 2646.1

MONITORING REQUIREMENTS (DOUBLE WALL)

- Monitoring system not functional 2632
- No written monitoring procedure 2632
- Written emergency response plan not available 2632
- Spill/Overfill equip. not maintained or installed 2635

RELEASE REPORTING

- Failure to report an unauthorized release 25295
- Release record log not available 2651, 2650
- No leak report/investigation/action 2652

CLOSURE

- Temporary closure req. not completed 2671
- Unused tank not properly closed 25298
- Permanent closure req. not completed 2672
- Failed to apply for temporary closure 25298

BUSINESS PLAN ELEMENTS

- Emergency Response Plan inadequate 25504
- Emergency Contacts not provided/current 25509
- Personnel Training Program inadequate 25504
- Inventory is incomplete 25504
- Site Map is not sufficient 25509
- Acutely Haz. Mat. not registered 25533

ALL VIOLATIONS MUST BE CORRECTED. PLEASE CALL (619) 338-2222 OR YOUR INSPECTOR IF YOU HAVE ANY QUESTIONS.

MEDICAL WASTE GENERATOR REQUIREMENTS

DATE 2/12/01

PAGE 3 OF 3

BUSINESS ADDRESS: 11011 Torreyana Rd San Diego ZIP: 92121

VIOLATION REPORT: The items checked below refer to specific section numbers of the California Health and Safety Code Sections 25100 and 117600 et. al.; the San Diego County Code of Regulatory Ordinances Sections 68.1201 et. al.; and the California Code of Regulations, Title 22 Sections 65600 et. al. and 66262.10 et. al. All violations must be corrected. Please call (619) 338-2222 or your Inspector if you have any questions.

GENERAL REQUIREMENTS:

- [] An Environmental Health Permit as a medical waste generator has not been obtained. 68.1203, 68.1204, and 117705 V4101 W
[] Unlawful disposal of untreated medical waste to an unauthorized point. 118340 V4102 W
[] Improper treatment of medical waste using an unapproved method or procedure. 118215 V4103 W
[] Medical SOLID WASTE is not stored in a locked trash receptacle or enclosure so as to deny access to unauthorized persons. 68.1202 V4104 W
[] Improper clipping or cutting of sharps waste at the point of generation. 68.1205 V4105 W
[] Medical waste was not separated from other waste at the point of origin. 118275 V4106 W
[] Generator has not maintained reusable containers/bins for medical waste storage in a clean and sanitary manner. 118295 and 118305 V4107 W
[] Storage time exceeded for frozen medical waste, e.g. greater than 90 days. 118280 V4108 W
[] Generator did not clean-up a leak or spill of medical waste in an approved manner. 118300 V4109 W
[] Generator has not secured the enclosure or designated accumulation area for medical waste containers so as to deny access to unauthorized persons. 118310 V4110 W
[] Operator did not post an approved and legible biohazardous waste "warning sign" in English and Spanish at the waste storage area(s). 118310 V4111 W
[] Generator did not store medical waste in approved and properly marked red bags (non-sharps). 118275 V4112 W
[] Did not place a label with the generator's name, address, and phone number on the outside of the red bag and/or sharps container. 68.1201 and 68.1205 V4113 W
[] Generator did not store sharps waste in approved and properly marked sharps container. 118275 V4114 W
[] Transportation of medical waste without State Hauler Registration or without a limited-quantity hauling exemption from County HMMD. 118025 V4115 W
[] Generator did not have standardized written operating procedures for a steam sterilizer available onsite. 118215 V4116 W
[] Did not have recording thermometer checked for calibration annually. 118215 V4117 W
[] Generator did not maintain records of thermometer calibration checks for at least 3 years. 118215 V4118 W
[] Operator did not use heat-sensitive tape or other approved method for each load of medical waste treated onsite. 118215 V4119 W
[] Need to use a biological indicator or other approved method at least once a month to confirm proper disinfection conditions. 118215 V4120 W
[] Must tie-off red bags to prevent leakage or expulsion of contents during handling and storage. 118280 V4121 W
[] Did not containerize and place red bags in rigid, leak resistant, and covered containers or bins. 118280 V4122 W
[] Must have waste container/bin labeled on the lid and side so as to be clearly visible. 118280 V4123 W
[] Did not tape closed or tightly-lid a full sharps container ready for disposal, to preclude loss of contents. 118285 V4124 W

SMALL QUANTITY GENERATOR REQUIREMENTS: (<200 pounds per month of waste)

- [] Medical Waste Management Plan has not been submitted to County HMMD (Annual Requirement) 68.1206 and 117935 V4025 W
[] Must maintain and show proof of "onsite" medical waste treatment records for 3 years. 118215 and 117943 V4026 W
[] Generator did not retain on file disposal receipts and/or tracking documents for waste shipped offsite for at least 2 years. 117945 V4027 W
[] Need to apply for and receive a limited-quantity hauling exemption for "self-hauled" medical waste (<20 pounds of waste per week). 118030 and 118025 V4028 W
[] Did not renew a limited-quantity hauling exemption annually. 118030 V4029 W
[] Storage time exceeded for full sharps container(s), e.g. greater than 7 days at room temperatures (for >20 pounds/month generator). 118285 V4030 W
[] Storage time exceeded for red bag waste, e.g. more than 7 days at room temperature (>20 pounds/month generator). 118280 V4031 W
[] Very small quantity generator (e.g. <20 pounds per month) improperly storing waste for greater than 30 days onsite at room temperature. 118280 V4032 W

- [] Maximum holding time exceeded for non-putrescible medical waste, e.g. greater than 180 days. 68.1203 V4033 W

LARGE QUANTITY WASTE GENERATORS: (>200 pounds of waste in a month)

- [] Medical Waste Management Plan has not been submitted to County HMMD (Annual Requirement) . 117960 and 68.1206 V4034 W
[] Must maintain and show proof of "onsite" medical waste treatment records for 3 years. 118215 and 117975 V4035 W
[] Generator did not retain on file disposal receipts and/or tracking documents for waste shipped offsite for at least 3 years. 117975 V4036 W
[] Storage time exceeded for full sharps container(s), e.g. greater than 7 days at room temperature. 118285 V4037 W
[] Storage time exceeded for red bag waste, e.g. more than 7 days at room temperature. 118280 V4038 W

PATHOLOGY WASTE AND CHEMOTHERAPY WASTE HANDLING:

- [] Did not segregate chemotherapy waste from other medical waste. 118275 V4039 W
[] Generator did not label container holding chemotherapy waste with the words "chemotherapy waste" or other approved markings on the lid and sides. 118275 V4040 W
[] Did not segregate pathology waste from other medical waste. 118275 V4041 W
[] Generator did not label container holding pathology waste with the words "pathology waste" or other approved markings on the lid and side. 118275 V4042 W
[] Unlawful disposal of pathology waste or chemotherapy waste to an unauthorized point. 118340 V4043 W

PHARMACEUTICAL WASTE HANDLING:

- [] Generator did not segregate pharmaceutical waste from other medical waste. 118275g V4044 W
[] Generator did not label container holding pharmaceutical waste with the words "incineration only" or other approved markings on the lid and side. 118275g V4045 W
[] Storage time exceeded for pharmaceutical waste, e.g. more than 90 days. (>10 pounds per calendar year generated) 118280e V4046 W
[] Very small quantity generator of pharmaceutical waste (e.g. <10 pounds waste /calendar year) improperly storing waste for longer than one year. 118280e V4047 W
[] Unlawful disposal of pharmaceutical waste to an unauthorized point. 118340 and 118222 V4048 W

ON-SITE MEDICAL WASTE TREATMENT FACILITY REQUIREMENTS:

- [] Operator has not obtained an onsite medical waste treatment permit from the County. 117950, 118130, 118155, and CCR 65620 V4049 W
[] Must maintain an updated and complete copy of the medical waste treatment permit onsite and available for review. CCR 65621(f), 65623, 118165, and 118180 V4050 W
[] Did not comply with a condition of the medical waste treatment permit issued by the County. CCR 65623 V4051 W

PHOTOCHEMICAL and HAZARDOUS WASTE MGMT. AND DISPOSAL:

- [] Illegal disposal of photoprocessing/ hazardous waste to the sewer, trash, etc. 25189.5 V4052 W
[] Generator has not maintained waste disposal records, e.g. manifests/milk-run receipts, onsite for 3 years. 66262.40 V4053 W
[] Generator has not obtained an EPA Identification Number from the State DTSC for hazardous waste generation, e.g. photoprocessing/hazardous waste. 66262.12 V4054 W
[] Generator did not properly label the container holding hazardous waste. 66262.34 V4055 W
[] Generator did not maintain the container holding hazardous waste tightly closed except when adding or removing waste. 66265.173 V4056 W
[] Generator did not submit a notification to the County prior to treating photochemical waste onsite (e.g. >10 gallons/month: tiered permitting). 25201.5 V4057 W

GENERATION AND STORAGE OF BIOHAZARDOUS WASTE:

Describe below the type and quantity of biohazardous waste generated and managed at this facility. SEE SAMPLE PLAN AND ATTACHMENT FOR DEFINITION OF TERMS USED IN THIS PLAN

MEDICAL WASTE TYPE	QUANTITY (lbs/month)	STORAGE (container type)	TREATMENT METHOD	ON-SITE	OFF-SITE	HAULER NAME*
BIOHAZARDOUS WASTE Sharp Waste Needles/syringes/slides	68	SHARPS CONTAINERS	AUTOClave → COMPACTION → LANDFILL	-	X	PWN ENVIRON.
Non-sharp Waste Articles containing Fluid Blood (gauze, bandages, tubing, etc.)	0	-	-	-	-	-
Solids (cultures, lab waste, etc.)	672	BIOHAZARD BAGS	AUTOClave → COMPACTION → LANDFILL	-	X	PWN-ENVIRON
Liquids (urine, etc.)	10	VACUUM FLASKS	10% BLEACH → SEWER	X	-	-
Trace chemotherapy waste	0	-	-	-	-	-
Contaminated animal carcasses	25	PLASTIC BAGS FREEZER	INCINERATION	-	X	D+D DISPOSAL
Other	-	-	-	-	-	-
MEDICAL SOLID WASTE Gloves, empty specimen containers, gauze with dry blood, treated biohazardous waste	N/A	BIOHAZARD BAGS N/A	N/A	N/A	N/A	PWN Re 2-14-01 ENVIRON. N/A

* If applicable, attach a copy of biohazardous waste hauler contract or Limited Quantity Hauler exemption.

Biohazardous WASTE STORAGE LOCATION: [Please check the appropriate box(es)].

Biohazardous Waste: Inside establishment in secured area Outside in posted, secure area
 Medical Solid Waste: Inside establishment Outside in Locked/secured dumpster AREA.
 N/A Re 2-14-01

PERSONNEL TRAINING:

All personnel handling biohazardous waste have been trained in all aspects of this management plan. Training includes the legal definition of biohazardous waste, separation and proper storage, transportation, treatment, and disposal of biohazardous waste. Documentation for completed employee training will be kept onsite.

CERTIFICATION STATEMENT:

I certify that the above management plan is complete and accurate, and that this business will adhere to all aspects of the plan. I further understand that any violation of this plan or any applicable law or regulation may result in legal action.

Date Test Ended: 12-Mar-02
Matrix: Liquid

California T-22 Hazardous Materials Screening Test

MEC Testing Protocol: BIO004

Polisini & Miller, 1988

Test Organism: *Pimephales promelas*

Test Concentration (ppm)	Number of Test Organisms at Start of Test	Number of Test Organisms at End of Test	Percent Mortality
0	20	20	0%
250	20	20	0%
750	20	20	0%

Acute Toxicity Statement: Sample #5: 30% Ethanol / 0.5 N HoAc produced 0 percent mortality at the 250 ppm concentration and 0 percent mortality at the 750 ppm concentration. Given this percent mortality, this sample is not considered a hazardous waste.

Protocol Deviations: The hardness (60 mg/L CaCO₃) of the water used for dilutions was above the protocol range (40-48 mg/L CaCO₃). As the hardness was not far out of range, and the conductivity was within normal limits, this deviation is not expected to have affected the results.

Appendix
Pertinent Test Data

TEST: California T-22 Hazardous Materials Screening Test, MEC Testing Protocol: BIO004, Polisini & Miller, 1988

DILUTION WATER: Reconstituted Soft Water

Dissolved Oxygen	99 % Saturation
Temperature	18.6°C
pH	7.9
Hardness	60 mg/L CaCO ₃
Alkalinity	46 mg/L CaCO ₃

TEST ORGANISM: Juvenile Fathead Minnow, *Pimephales promelas*, purchased from Thomas Fish Co; 7 days acclimation at 20°C; fed "Tetra Min"; 0.33465 g average weight; 29.6 mm average length.

TEST CHAMBER: 22-L aquaria, 2 replicate samples at 250 and 750 ppm, and 2 replicate controls, brought to a final volume of 10000 mL, for a >14 cm depth.

EXPERIMENTAL DESIGN:

1. A sample was collected at 1300 hours on February 27, 2002. The sample was picked up by an MEC courier on February 28, 2002 at 0830 and delivered to the laboratory at 1005 hours the same day.
2. The test substance was shaken mechanically for 6 hours prior to test initiation and rinsed into the test chamber with dilution water for final concentrations of 250 and 750 ppm.
3. Ten test organisms were placed in each aquarium. The ratio of grams of fish to liters of bioassay test solution was 0.33 g/L.
4. Test chambers were randomized and held at 20 ± 2 °C for 96 hours with a photoperiod of 16 hours light: 8 hours darkness.

MORTALITY CRITERIA: Lack of respiratory movement and lack of reaction to gentle prodding

ACCEPTABILITY CRITERIA: ≥ 90% survival in controls.

REFERENCE TOXICITY: Toxicant: CuSO₄, Lot No. 1110-01, Received 7/13/01, Opened 7/13/01, Expires 4/20/03.

Subject: Need for Training Space for Manufacturing

Manufacturing needs a reserved training space for two types of training in the next two years for training for NICO and NIMO.

1. A 3-1/2 day *Manufacturing New Hire Orientation*. Bi-monthly in 2002 and monthly in 2003 and 2004. The group size will range from 5-12. The Manufacturing Orientation will begin on Monday afternoons (after the company HR orientation that new hires attend) and complete on Thursday afternoons. The first one is the week of March 25 (scheduled for SP 1502). Subsequent sessions will be approximately the first week of June, August, October and December.

2. We will also need a small classroom for about an hour a day, 2-3 days/week for Core Skills Training sessions starting in fall of 2002 and through 2004. The Core Skills training will be hands on in CSM (after NICO moves to Oceanside) but involve some short classroom presentations and require a space to take tests and review documentation. Space in Torreyana close to Production would be best to minimize lost time moving between the classroom and CSM. The group size will range from 4-6.

We had thought that the training room in Trade Services would be available to use starting in April. Please discuss with the new residents of Trade Services whether reserving the room from Monday afternoon through Thursdays for the Manufacturing New Hire Orientation would work for them. And keep in mind the need for the end of the year for a space for Core Skills Training.

Thanks,
Mary

Pertinent Test Data

TEST: California T-22 Hazardous Materials Screening Test, MEC Testing Protocol:
BIO004, Polisini & Miller, 1988

DILUTION WATER: Reconstituted Soft Water

Dissolved Oxygen	99 % Saturation
Temperature	18.6°C
pH	7.9
Hardness	60 mg/L CaCO ₃
Alkalinity	46 mg/L CaCO ₃

TEST ORGANISM: Juvenile Fathead Minnow, *Pimephales promelas*, purchased from
Thomas Fish Co; 7 days acclimation at 20°C; fed "Tetra Min";
0.33465 g average weight; 29.6 mm average length.

TEST CHAMBER: 22-L aquaria, 2 replicate samples at 250 and 750 ppm, and 2 replicate
controls, brought to a final volume of 10000 mL, for a >14 cm depth.

EXPERIMENTAL DESIGN:

1. A sample was collected at 1300 hours on February 27, 2002. The sample was picked up by an MEC courier on February 28, 2002 at 0830 and delivered to the laboratory at 1005 hours the same day.
2. The test substance was shaken mechanically for 6 hours prior to test initiation and rinsed into the test chamber with dilution water for final concentrations of 250 and 750 ppm.
3. Ten test organisms were placed in each aquarium. The ratio of grams of fish to liters of bioassay test solution was 0.33 g/L.
4. Test chambers were randomized and held at 20 ± 2 °C for 96 hours with a photoperiod of 16 hours light: 8 hours darkness.

MORTALITY CRITERIA: Lack of respiratory movement and lack of reaction to gentle prodding

ACCEPTABILITY CRITERIA: ≥ 90% survival in controls.

REFERENCE TOXICITY: Toxicant: CuSO₄, Lot No. 1110-01, Received 7/13/01, Opened 7/13/01,
(Control Chart Included) Expires 4/20/03.
96 Hour LC50: 253.36 ppb
Laboratory Mean: 198.84 ppb
Test Date: 03/13/2002 Within 95 % Confidence Limits

Date Test Ended: 12-Mar-02
Matrix: Liquid

California T-22 Hazardous Materials Screening Test
MEC Testing Protocol: BIO004
Polisini & Miller, 1988

Test Organism: *Pimephales promelas*

Test Concentration (ppm)	Number of Test Organisms at Start of Test	Number of Test Organisms at End of Test	Percent Mortality
0	20	20	0%
250	20	20	0%
750	20	20	0%

Acute Toxicity Statement: Sample #4: 1% Phosphoric Acid produced 0 percent mortality at the 250 ppm concentration and 0 percent mortality at the 750 ppm concentration. Given this percent mortality, this sample is not considered a hazardous waste.

Protocol Deviations: The hardness (60 mg/L CaCO₃) of the water used for dilutions was above the protocol range (40-48 mg/L CaCO₃). As the hardness was not far out of range, and the conductivity was within normal limits, this deviation is not expected to have affected the results.

COMPLAINT INFORMATION

INCIDENT ONSET DATE: INCIDENT TIME:

BUSINESS NAME: **IDEC PHARMACEUTICALS** CENSUS TRACT: DEH ESTAB#: **H14775**
 ADDRESS: **11011 TORREYANA RD** STE: X-STREET: **CALLAN RD**
San Diego (Sorrento) ZIP: **92121** THOM BROS PAGE: **1208** COORD: **A5**

This greyed area contains Reporting Party information that is blocked from public viewing for CONFIDENTIALITY purposes, per County Policy A-2.

SUBSTANCE: **SPILL NOTIFICATION**
 NATURE OF COMPLAINT: **EXTRACT OF EMAIL - 10/31/02 - HAD A SMALL SPILL OF APPROXIMATELY 2 GALLONS OF HAZARDOUS MATERIAL, COMPRISED OF 20% HYDROGEN PEROXIDE AND 4% PEROXYACETIC ACID. THE PLASTIC BOTTLES WERE BEING TRANSPORTED ON A DOLLY WHEN 2 BOTTLES FELL OFF AND BROKE OPEN. THE EMPLOYEES THEN TURNED ON THE EMERGENCY SHOWER IN AN ATTEMPT TO WASH THE SPILL MATERIAL INTO THE STORM DRAIN. THE WASTE WENT INTO THE STORM DRAIN AND OUT THE OUTFALL PIPE INTO THE CANYON AND CONTAMINATED A SMALL AREA OF SOIL.**

DEH RESPONSE INFORMATION

DIVISION: **ICP** APPROVED BY: APPROVED DATE: ASSIGNED TO: **CHARTTEH**

 H06 **B**

REFER ONLY?: CONTACT: AGENCY: PHONE:
 ACTION TAKEN: **10/31/02 - THE CONTAMINATED SOIL AND ANY OTHER CONTAMINATED ITEMS WERE COLLECTED AND WILL BE DISPOSED OF AS HAZARDOUS WASTE. THE COUNTY HMD WAS NOTIFIED OF THIS RELEASE, AS WAS OES. THE EMPLOYEES WERE INSTRUCTED NOT TO OVERLOAD THE DOLLY DURING TRANSPORT OF HAZARD MATERIALS. THE COMPANY WILL CONDUCT SUPPLEMENTARY EMERGENCY RESPONSE PROCEDURES AND NOTIFICATION PROCEDURES TRAINING SESSIONS. THEY WILL SUBMIT A WRITTEN REPORT TO US OF THE INCIDENT WITHIN 15 DAYS.**

Inspected 7/09/02 off file

BUSINESS NAME IDEC Pharmaceuticals Corp
 ADDRESS 11011 Torreyana Rd
 CITY/ZIP San Diego 92121 JUL 11 1 11 02

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (HSC) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

- | | | | | | |
|-------------------------------------|--------------------------|--|-------------------------------------|--------------------------|-------------------------------------|
| Y | N/A | | Y | N/A | |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | Unified Facility Permit current and available | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Permit Expires on: <u>11/30/02.</u> |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | Hazardous Materials Business Plan available | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Contingency Plan available |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | Employee Training is adequate | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Employee Training records available |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | Waste disposal records available for review | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Waste containers kept closed |
| <input type="checkbox"/> | <input type="checkbox"/> | Emergency contacts current <input checked="" type="checkbox"/> Updated today | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Waste containers kept labeled |
| <input type="checkbox"/> | <input type="checkbox"/> | Chemical inventory current <input checked="" type="checkbox"/> Updated today | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Waste containers in good condition |

Remarks:

- 1) Properly label the 1-liter bottle of acid wash waste in the hazardous chemical storage shed. Determine the contents, close, and properly label the beaker in the shed.
- 2) Be aware of the 90-day storage time limit for your hazardous waste used oil and oily debris wastes.
- 3) Please add the company phone numbers to your hazardous waste labels.
- 4) I suggest reviewing the use of Roadyne as a disinfectant. As an iodine based product it could possibly be a hazardous waste.
- 5) Separate the incompatible acids. Separate your oxygen and acetylene compressed gas cylinders.
- 6) Do not store anything other than biohazardous waste in red bags.
- 7) I recommend writing 'non-hazardous' on non-hazardous waste bottles.
- 8) Ensure the area/floor under your acid tank for wastewater treatment is kept clean and dry.
- 9) Please contact me with an accurate compressed/liquid gas inventory by Monday May 20.

This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

MEC Analytical Systems, Inc.
Analytical Report

Client: IDEC Pharmaceuticals Date Received: 28-Feb-02
Project: Hazard Analysis Date Test Started: 08-Mar-02
Client Sample ID: #1: 4 M Urea / 50 mM Sodium Phosphate Date Test Ended: 12-Mar-02
MEC Sample ID: C020228.0104 Matrix: Liquid

California T-22 Hazardous Materials Screening Test
MEC Testing Protocol: BIO004
Polisini & Miller, 1988

Test Organism: *Pimephales promelas*

Test Concentration (ppm)	Number of Test Organisms at Start of Test	Number of Test Organisms at End of Test	Percent Mortality
0	20	20	0%
250	20	20	0%
750	20	20	0%

Acute Toxicity Statement: Sample #1: 4 M Urea / 50 mM Sodium Phosphate produced 0 percent mortality at the 250 ppm concentration and 0 percent mortality at the 750 ppm concentration. Given this percent mortality, this sample is not considered a hazardous waste.

Protocol Deviations: The hardness (60 mg/L CaCO₃) of the water used for dilutions was above the protocol range (40-48 mg/L CaCO₃). As the hardness was not far out of range, and the conductivity was within normal limits, this deviation is not expected to have affected the results.

Pertinent Test Data

TEST: California T-22 Hazardous Materials Screening Test, MEC Testing Protocol:
BIO004, Polisini & Miller, 1988

DILUTION WATER: Reconstituted Soft Water

Dissolved Oxygen	99 % Saturation
Temperature	18.6°C
pH	7.9
Hardness	60 mg/L CaCO ₃
Alkalinity	46 mg/L CaCO ₃

TEST ORGANISM: Juvenile Fathead Minnow, *Pimephales promelas*, purchased from
Thomas Fish Co; 7 days acclimation at 20°C; fed "Tetra Min";
0.33465 g average weight; 29.6 mm average length.

TEST CHAMBER: 22-L aquaria, 2 replicate samples at 250 and 750 ppm, and 2 replicate
controls, brought to a final volume of 10000 mL, for a >14 cm depth.

EXPERIMENTAL DESIGN:

1. A sample was collected at 1300 hours on February 27, 2002. The sample was picked up by an MEC courier on February 28, 2002 at 0830 and delivered to the laboratory at 1005 hours the same day.
2. The test substance was shaken mechanically for 6 hours prior to test initiation and rinsed into the test chamber with dilution water for final concentrations of 250 and 750 ppm.
3. Ten test organisms were placed in each aquarium. The ratio of grams of fish to liters of bioassay test solution was 0.33 g/L.
4. Test chambers were randomized and held at 20 ± 2 °C for 96 hours with a photoperiod of 16 hours light: 8 hours darkness.

MORTALITY CRITERIA: Lack of respiratory movement and lack of reaction to gentle prodding

ACCEPTABILITY CRITERIA: ≥ 90% survival in controls.

REFERENCE TOXICITY: Toxicant: CuSO₄, Lot No. 1110-01, Received 7/13/01, Opened 7/13/01,
(Control Chart Included) Expires 4/20/03.
96 Hour LC50: 253.36 ppb
Laboratory Mean: 198.84 ppb
Test Date: 03/13/2002 Within 95 % Confidence Limits

Re: Hazard Analysis

Dear Ms. Vidal:

Enclosed please find the final reports for the hazard analyses performed on the test substances received 2/28/02. Results are summarized in the table below.

Sample	ID Number	pH	Ignitability °F	96-Hour Fish Bioassay Toxicity LC ₅₀
4M Urea / 50mM Sodium Phosphate	C020228.01	6.7	>212	>750 ppm
100mM Glycine / 50mM Tris	C020228.02	8.0	>212	>750 ppm
1M Glycine / 150mM NaCl	C020228.03	8.9	>212	>750 ppm
1% Phosphoric Acid	C020228.04	1.7	>212	>750 ppm
30% Ethanol / 0.5 N HoAc	C020228.05	2.6	92	>750 ppm
0.5M NaCl / 10mM EDTA / 50mM Tris	C020228.06	7.7	>212	>750 ppm
20% Ethanol	C020228.07	5.7	100	>750 ppm
4M Urea / 50mM Tris	C020228.08	7.3	>212	>750 ppm
100mM Glycine / 200mM HoAc	C020228.09	3.3	>212	>750 ppm
20% Ethanol / 200mM NaAc	C020228.10	7.7	94	>750 ppm

Project Name/No.: IDEC Pharmaceuticals
Hazard Analysis
Laboratory Log No.: 0458-02
Date Received: 02/28/02
Sample Matrix: Ten wastewater samples
PO No.: IDEC Pharmaceuticals Hazard Analysis

Please find the following enclosures for the referenced project identified:

- 1) Analytical Report
- 2) QA/QC Report
- 3) Chain of Custody Form

.....**Certified Analysis**.....

Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. Date of extraction, date of analysis, detection limits and dilution factor are reported for each compound analyzed.

Data for each analytical method was evaluated by assessing the following QA/QC functions, as applicable to the methodology:

- Quality Control Standard
- Surrogate Percent Recovery
- Laboratory Control Sample (LCS) percent recoveries for all analyses
- Matrix Spike Recovery/Matrix Spike Duplicate Recovery (MSR & MSDR) and/or
- Relative Percent Difference (RPD from MSR & MSDR)

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hard copy data report has been authorized by the following signature.

Janis Columbo
Vice President/Laboratory Director

 Date Test Ended: 18-Mar-02
 Matrix: Liquid

California T-22 Hazardous Materials Screening Test
 MEC Testing Protocol: BIO004
 Polisini & Miller, 1988

Test Organism: *Pimephales promelas*

Test Concentration (ppm)	Number of Test Organisms at Start of Test	Number of Test Organisms at End of Test	Percent Mortality
0	20	20	0%
250	20	20	0%
750	20	20	0%

Acute Toxicity Statement: Sample #10: 20% Ethanol / 200 mM NaAc produced 0 percent mortality at the 250 ppm concentration and 0 percent mortality at the 750 ppm concentration. Given this percent mortality, this sample is not considered a hazardous waste.

Protocol Deviations: The hardness (56 mg/L CaCO₃) of the water used for dilutions was above the protocol range (40-48 mg/L CaCO₃). As the hardness was not far out of range, and the conductivity was within normal limits, this deviation is not expected to have affected the results.

Appendix
Pertinent Test Data

TEST: California T-22 Hazardous Materials Screening Test, MEC Testing Protocol: BIO004, Polisini & Miller, 1988

DILUTION WATER: Reconstituted Soft Water

Dissolved Oxygen	99 % Saturation
Temperature	19.0°C
pH	7.4
Hardness	56 mg/L CaCO ₃
Alkalinity	46 mg/L CaCO ₃

TEST ORGANISM: Juvenile Fathead Minnow, *Pimephales promelas*, purchased from Thomas Fish Co; 7 days acclimation at 20°C; fed "Tetra Min"; 0.29562 g average weight; 29 mm average length.

TEST CHAMBER: 22-L aquaria, 2 replicate samples at 250 and 750 ppm, and 2 replicate controls, brought to a final volume of 10000 mL, for a >14 cm depth.

EXPERIMENTAL DESIGN:

1. A sample was collected at 1300 hours on February 27, 2002. The sample was picked up by an MEC courier on February 28, 2002 at 0830 and delivered to the laboratory at 1005 hours the same day.
2. The test substance was shaken mechanically for 6 hours prior to test initiation and rinsed into the test chamber with dilution water for final concentrations of 250 and 750 ppm.
3. Ten test organisms were placed in each aquarium. The ratio of grams of fish to liters of bioassay test solution was 0.30 g/L.
4. Test chambers were randomized and held at 20 ± 2 °C for 96 hours with a photoperiod of 16 hours light: 8 hours darkness.

MORTALITY CRITERIA: Lack of respiratory movement and lack of reaction to gentle prodding

ACCEPTABILITY CRITERIA: ≥ 90% survival in controls.

REFERENCE TOXICITY: Toxicant: CuSO₄, Lot No. 1110-01, Received 7/13/01, Opened 7/13/01, Expires 4/20/03.
(Control Chart Included)

Analytical Report

Client: IDEC Pharmaceuticals
 Project: Hazard Analysis
 Client Sample ID: #8: 4 M Urea / 50 mM Tris
 MEC Sample ID: C020228.0804

Date Received: 28-Feb-02
 Date Test Started: 14-Mar-02
 Date Test Ended: 18-Mar-02
 Matrix: Liquid

California T-22 Hazardous Materials Screening Test
 MEC Testing Protocol: BIO004
 Polisini & Miller, 1988

Test Organism: *Pimephales promelas*

Test Concentration (ppm)	Number of Test Organisms at Start of Test	Number of Test Organisms at End of Test	Percent Mortality
0	20	20	0%
250	20	20	0%
750	20	20	0%

Acute Toxicity Statement: Sample #8: 4M Urea / 50 mM Tris produced 0 percent mortality at the 250 ppm concentration and 0 percent mortality at the 750 ppm concentration. Given this percent mortality, this sample is not considered a hazardous waste.

Protocol Deviations: The hardness (56 mg/L CaCO₃) of the water used for dilutions was above the protocol range (40-48 mg/L CaCO₃). As the hardness was not far out of range, and the conductivity was within normal limits, this deviation is not expected to have affected the results.

Appendix
Pertinent Test Data

TEST: California T-22 Hazardous Materials Screening Test, MEC Testing Protocol:
BIO004, Polisini & Miller, 1988

DILUTION WATER: Reconstituted Soft Water

Dissolved Oxygen	99 % Saturation
Temperature	19.0°C
pH	7.4
Hardness	56 mg/L CaCO ₃
Alkalinity	46 mg/L CaCO ₃

TEST ORGANISM: Juvenile Fathead Minnow, *Pimephales promelas*, purchased from
Thomas Fish Co; 7 days acclimation at 20°C; fed "Tetra Min";
0.29562 g average weight; 29 mm average length.

TEST CHAMBER: 22-L aquaria, 2 replicate samples at 250 and 750 ppm, and 2 replicate
controls, brought to a final volume of 10000 mL, for a >14 cm depth.

EXPERIMENTAL DESIGN:

1. A sample was collected at 1300 hours on February 27, 2002. The sample was picked up by an MEC courier on February 28, 2002 at 0830 and delivered to the laboratory at 1005 hours the same day.
2. The test substance was shaken mechanically for 6 hours prior to test initiation and rinsed into the test chamber with dilution water for final concentrations of 250 and 750 ppm.
3. Ten test organisms were placed in each aquarium. The ratio of grams of fish to liters of bioassay test solution was 0.30 g/L.
4. Test chambers were randomized and held at 20 ± 2 °C for 96 hours with a photoperiod of 16 hours light: 8 hours darkness.

MORTALITY CRITERIA: Lack of respiratory movement and lack of reaction to gentle prodding

ACCEPTABILITY CRITERIA: ≥ 90% survival in controls.

REFERENCE TOXICITY: Toxicant: CuSO₄, Lot No. 1110-01, Received 7/13/01, Opened 7/13/01,
(Control Chart Included) Expires 4/20/03.
96 Hour LC50: 253.36 ppb

Temperature	18.6°C
pH	7.9
Hardness	60 mg/L CaCO ₃
Alkalinity	46 mg/L CaCO ₃

TEST ORGANISM: Juvenile Fathead Minnow, *Pimephales promelas*, purchased from
Thomas Fish Co; 7 days acclimation at 20°C; fed "Tetra Min";
0.33465 g average weight; 29.6 mm average length.

TEST CHAMBER: 22-L aquaria, 2 replicate samples at 250 and 750 ppm, and 2 replicate controls,
brought to a final volume of 10000 mL, for a >14 cm depth.

EXPERIMENTAL DESIGN: 1. A sample was collected at 1300 hours on February 27, 2002. The sample
was picked up by an MEC courier on February 28, 2002 at 0830 and delivered
to the laboratory at 1005 hours the same day.
2. The test substance was shaken mechanically for 6 hours prior to test
initiation and rinsed into the test chamber with dilution water for final
concentrations of 250 and 750 ppm.
3. Ten test organisms were placed in each aquarium. The ratio of grams of fish
to liters of bioassay test solution was 0.33 g/L.
4. Test chambers were randomized and held at 20 ± 2 °C for 96 hours with a
photoperiod of 16 hours light: 8 hours darkness.

MORTALITY CRITERIA: Lack of respiratory movement and lack of reaction to gentle prodding

ACCEPTABILITY CRITERIA: ≥ 90% survival in controls.

REFERENCE TOXICITY: Toxicant: CuSO₄, Lot No. 1110-01, Received 7/13/01, Opened 7/13/01, Expires
(Control Chart Included) 4/20/03.
96 Hour LC50: 253.36 ppb
Laboratory Mean: 198.84 ppb
Test Date: 03/13/2002 Within 95 % Confidence Limits

Attention: Clarissa Hart

Subject: Hazardous Waste Characterization

This correspondence is being submitted as follow-up to your site inspection on January 24, 2002. During your visit, you expressed interest in how IDEC is handling the process waste liquids generated in the manufacturing areas at Torreyana. You specifically requested additional information on the process buffers used during production.

The information contained within this packet includes:

- Comprehensive listing of all buffer materials used and produced for recent, current, and proposed campaigns.
- List of buffers selected for hazard analysis and sample test results.

Summary of findings:

- 47 buffers were reviewed
- 10 buffers were selected for lab analysis
- Of the 10 selected for analysis, 4 possessed characteristics with potential to meet the hazardous waste definition for corrosivity and ignitability. (1 buffer has a pH less than 2 and 3 buffers have flash point less than 140 degrees). None of the buffers tested possessed the characteristics of toxicity.

The Torreyana facility was built with a wastewater management system that serves the production areas. This system was designed according to industry standards for pharmaceutical manufacturing facilities. The system supports two main process areas: the fermentation area and buffer preparation/purification area. Liquid waste from the fermentation area is collected in a below grade tank described as a "Bio-Waste Tank". Liquid waste from the buffer preparation/purification area is collected in a second below grade tank described as a "General Waste Tank". Both tanks feed a third tank (Neutralization Tank), where pH neutralization takes place, if necessary. The contents of the biowaste tank are passed through a heat exchanger, then cooled before transfer to the pH adjustment tank.

Previous testing has been conducted on the substances and wastes associated with the manufacturing process. The general waste tank and the biowaste tank contents have been profiled on several occasions in the past. Historically, the samples taken from the general waste tank and the biowaste tank demonstrate that the wastes collected in these tanks are non-hazardous in terms of ignitability and toxicity. Periodically, pH adjustment is required, which is carried out by the system automatically. This adjustment is carried out to comply with the conditions of our current Metropolitan Industrial Wastewater Permit (Number 02-0504).

In light of the testing conducted on the buffers currently being used, IDEC will begin collecting the three buffers that meet the definition of hazardous waste due to ignitability. These buffers will be disposed of as hazardous waste according to applicable Federal, State, and Local regulations. All other buffers are considered suitable for discharge as non-hazardous industrial wastewater.

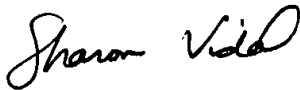

At this time, IDEC is requesting DEH concurrence with the following:

- Based on the Biotechnology Exemption for Tiered Permitting (25201.15) IDEC Pharmaceuticals Corporation does not require a permit for pH adjustment of its wastewater.
- IDEC is not required to document the volume of low or high pH waste sent through the manufacturing wastewater neutralization system.

IDEC is approaching a production shutdown that will last approximately thirty days. Manufacturing operations are expected to resume on or around the middle of June 2002. By the time production resumes, we expect to have our new buffer handling procedures in place. We look forward to continuing to work with the Department of Environmental Health as a partner in compliance.

Please do not hesitate to contact me at 858-431-8221 with any questions. Thank you for your assistance in this matter.

Sincerely,

Sharon Vidal, CHMM

**HAZARDOUS WASTE DETERMINATION RESULTS FOR BUFFER SOLUTIONS, UNIFIED
PROGRAM FACILITIES PERMIT #H14775**

Dear Ms. Vidal,

This letter is in response to the analytical results submitted by you to the Hazardous Materials Division (HMD) on (Date). The laboratory analysis was conducted on the process buffer solutions that are used during production in the manufacturing area at the Torreyana facility.

The sample results indicate that three of the buffer solutions exhibit the characteristic of ignitability and one for the characteristic of corrosivity. You stated that IDEC Pharmaceuticals intends to accumulate the three ignitable buffers and manage them as hazardous waste. The buffer solution that exhibits the characteristic for corrosivity will be treated in the on-site wastewater treatment system prior to discharging into the sanitary sewer.

Based on the description of the wastewater treatment system that you submitted, the pH adjustment of the corrosive buffer solution would be exempt from the Tiered Permitting requirements (California Health and Safety Code, Division 20, Section 25201.15) for the treatment of hazardous waste. IDEC Pharmaceuticals must demonstrate compliance with all of the conditions listed in this section to maintain this exemption. The HMD suggests that you review the conditions of your Industrial Wastewater Discharge Permit to ensure that this process is in compliance with the pretreatment standards as stated in the permit.

If you have any further questions, please feel free to contact me at (858) 495-5872.

Sincerely,

Clarissa Hart, Environmental Health Specialist II
Hazardous Materials Division

Routine Inspection

AUG 22 2003

Notice to Complete Violations and Corrective Action:

1) Based upon a review of 2001 Hazardous waste manifests, a Biennial Report was supposed to be submitted by March 1, 2002.
 -Corrective Action: A Biennial Report is required for any facility that generates more than 2200 lbs of RCRA Hazardous waste in any calendar month. The report is required to be submitted March 1 of each even numbered year for the preceeding odd numbered year. Ensure you follow this requirement.

Remarks:

- 1) Within 30 days, update and submit an updated annual Carcinogen list and a medical Waste Management Act.
- 2) Label the Caustic water treatment tank with what chemical it actually is.
- 3) SPCC is required and is onsite.
- 4) Determine if any waste entering the treatment tank system is hazardous. If it is, you have a hazardous waste tank system and need to meet all the waste tank system requirements. Please let me know.

This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

Re: Wastewater treatment system and onsite treatment permit paperwork for IDEC Pharmaceuticals, 11011 Torreyana Rd. San Diego, CA 92121, Unified Program Facility Permit #114775

Dear Ms. Suryavanshi,

I have enclosed copies of the Department of Environmental Health's records regarding the wastewater treatment system and the permit for onsite treatment of hazardous waste for IDEC Pharmaceuticals, 11011 Torreyana Rd. San Diego, CA 92121, Unified Program Facility Permit #114775. These records encompass the time from system installation in 1993 to the request for and granting of an exemption from the permitting requirements for onsite wastewater treatment by the Department of Environmental Health in 2000.

If you have any further questions, please feel free to contact me at (858) 495-5872.

Sincerely,

Clarissa Hart, Environmental Health Specialist II

Re: Request for Letter of No Further Action
For Biogen Idec, Inc.
11011 Torreyana Rd., San Diego, CA 92121

Dear Ms. Hahn:

Thanks again for your time during our site walkthrough on Friday, January 7, 2005. As promised, below you will find a summary of the three environmental releases that occurred during our occupancy of the above-referenced Biogen Idec facility site. This information is being provided to facilitate DEH's issuance of a "no further action" letter to Biogen Idec confirming that no further action is required at the site with respect to these releases so that the site may be removed from the DTSC's "Low Priority" list.

Each of these releases was previously reported to the DEH, and two of the three releases were reported to DTSC when IDEC Pharmaceuticals submitted a Tiered Permitting Phase I Environmental Assessment Checklist in October 1999. The first release occurred on June 7, 1999. At the time, approximately 5 gallons of Sentol solution were spilled onto the asphalt in a utility area. Sentol is a 37% phosphoric acid and 63% water solution. The release traveled to a storm drain and the drain was flushed with large amounts of water. Subsequent pH readings were taken of the water at the point of release from the property which confirmed that the discharge was neutral.

The second release occurred on September 9, 1999 when approximately 1.5 gallons of hydraulic oil were released from a contractor's truck in the parking lot. The material was absorbed and cleaned up by a contractor.

Finally, 2 gallons of a Mincare solution (20% hydrogen peroxide and 4% peroxyacetic acid) were released onto the site's asphalt driveway. The area was flushed with water causing the material to flow into a nearby storm drain. The storm drain discharges to soil behind the facility. Soil from storm drain release area was removed (approximately 4 30-gallon containers)

biogen idec

until the area was determined to no longer be contaminated. Confirmatory pH sampling was conducted to verify that contaminated soil was fully removed.

Based on the above information and your site walkthrough, we are requesting issuance of the "no further action" letter as soon as possible. Biogen Idec is vacating this facility and requires agency confirmation that no further action is necessary with respect to these releases as part of decommissioning the facility. Your continued assistance towards that end is much appreciated. Should you have any questions regarding these releases, please feel free to contact me at 760.231.2491. Thank you again for your assistance.

Sincerely,

Joseph Hess
EHS Manager

Authorization Date: 08/02/93

Dear Conditionally Authorized and/or Conditionally Exempt Facility:

ACKNOWLEDGEMENT OF UNITS OPERATING UNDER CONDITIONAL AUTHORIZATION AND/OR CONDITIONAL EXEMPTION

The Department of Toxic Substances Control (DTSC) has received your facility specific notification (form DTSC 1772) and forms for Conditional Authorization and/or Conditional Exemption for Specified Wastestreams (form DTSC 1772B and/or 1772C). Your notifications are administratively complete, but have not been reviewed for technical adequacy. A technical review of your notifications will be conducted when an inspection is performed. At any time, you may be inspected and will be subject to penalty if violations of laws or regulations are found.

The Department acknowledges receipt of your completed notification for the treatment unit(s) listed on the last page of this letter. These units operating under Conditional Authorization or Conditional Exemption are authorized by California law without additional Department action, pursuant to Health and Safety Code sections 25200.3 and 25201.5. Your authorization to operate continues until you notify DTSC that you have stopped treating waste and have fully closed the unit(s). You will be charged annual fees calculated on a calendar year basis for each year you operate and have not notified DTSC that the units have been closed.

You must notify the DTSC 60 days before first treating hazardous wastes in any new unit. You must also notify the DTSC whenever any of the information you provided in these notifications changes. To revise information, mail a cover letter to the above address explaining the changes, attach only the pages of your notification package that have changed, and re-sign and date at the signature space on page 3 of form 1772.

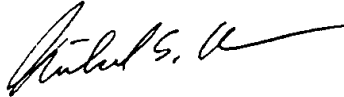

Your status to operate under Conditional Authorization and/or Conditional Exemption is contingent upon the accuracy of information submitted by you in the notifications mentioned above, and your compliance with all applicable requirements in the Health and Safety Code. Any misrepresentation or any failure to fully disclose all relevant facts shall render your authorization to operate null and void.

You are also required to properly close any treatment unit. Additional guidance on closure will be issued and distributed to all authorized onsite facilities later this year.

If you have any questions regarding this letter, or have questions on operating requirements for your facility, please contact the nearest DTSC regional office, or this office at the letterhead address or phone number.

Sincerely,

Michael S. Horner, Chief

You will be charged annual fees calculated on a calendar year basis for each year you operate and have not notified DTSC that the units have been closed.

You must notify the DTSC 60 days before first treating hazardous wastes in any new unit. You must also notify the DTSC whenever any of the information you provided in these notifications changes. To revise information, mail a cover letter to the above address explaining the changes, attach only the pages of your notification package that have changed, and re-sign and date at the signature space on page 3 of form 1772.

Your status to operate under Conditional Authorization and/or Conditional Exemption is contingent upon the accuracy of information submitted by you in the notifications mentioned above, and your compliance with all applicable requirements in the Health and Safety Code. Any misrepresentation or any failure to fully disclose all relevant facts shall render your authorization to operate null and void.

You are also required to properly close any treatment unit. Additional guidance on closure will be issued and distributed to all authorized onsite facilities later this year.

If you have any questions regarding this letter, or have questions on operating requirements for your facility, please contact the nearest DTSC regional office, or this office at the letterhead address or phone number.

Sincerely,

Michael S. Horner, Chief
Onsite Hazardous Waste Treatment Unit

For facility located at:

11011 TORREYANA ROAD
LA JOLLA, CA 92037

Authorization Date: 08/02/93

Dear Conditionally Authorized and/or Conditionally Exempt Facility:

**ACKNOWLEDGEMENT OF UNITS OPERATING UNDER CONDITIONAL AUTHORIZATION AND/OR
CONDITIONAL EXEMPTION**

The Department of Toxic Substances Control (DTSC) has received your facility specific notification (form DTSC 1772) and forms for Conditional Authorization and/or Conditional Exemption for Specified Wastestreams (form DTSC 1772B and/or 1772C). Your notifications are administratively complete, but have not been reviewed for technical adequacy. A technical review of your notifications will be conducted when an inspection is performed. At any time, you may be inspected and will be subject to penalty if violations of laws or regulations are found.

The Department acknowledges receipt of your completed notification for the treatment unit(s) listed on the last page of this letter. These units operating under Conditional Authorization or Conditional Exemption are authorized by California law without additional Department action, pursuant to Health and Safety Code sections 25200.3 and 25201.5. Your authorization to operate continues until you notify DTSC that you have stopped treating waste and have fully closed the unit(s). You will be charged annual fees calculated on a calendar year basis for each year you operate and have not notified DTSC that the units have been closed.

You must notify the DTSC 60 days before first treating hazardous wastes in any new unit. You must also notify the DTSC whenever any of the information you provided in these notifications changes. To revise information, mail a cover letter to the above address explaining the changes, attach only the pages of your notification package that have changed, and re-sign and date at the signature space on page 3 of form 1772.

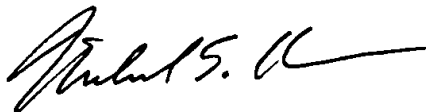

Your status to operate under Conditional Authorization and/or Conditional Exemption is contingent upon the accuracy of information submitted by you in the notifications mentioned above, and your compliance with all applicable requirements in the Health and Safety Code. Any misrepresentation or any failure to fully disclose all relevant facts shall render your authorization to operate null and void.

You are also required to properly close any treatment unit. Additional guidance on closure will be issued and distributed to all authorized onsite facilities later this year.

If you have any questions regarding this letter, or have questions on operating requirements for your facility, please contact the nearest DTSC regional office, or this office at the letterhead address or phone number.

Sincerely,

Michael S. Horner, Chief

Dear Mike:

Enclosed please find an updated version of IDEC's Waste Treatment Notification Form. The original form had been submitted utilizing an EPA identification number that is no longer in effect. All other information on the form is correct. Please update your files with the current information.

If you have any questions, please contact me at 619-550-8670.

Sincerely,

A handwritten signature in cursive script that reads "Mark Thompson".

ONSITE HAZARDOUS WASTE TREATMENT NOTIFICATION FORM

FACILITY SPECIFIC NOTIFICATION

For Use by Hazardous Waste Generators Performing Treatment Initial
Under Conditional Exemption and Conditional Authorization, Revised
and by Permit By Rule Facilities

Please refer to the attached Instructions before completing this form. You may notify for more than one permitting tier by using this notification form, DTSC 1772. You must attach a separate unit specific notification form for each unit at this location. There are different unit specific notification forms for each of the four categories and an additional notification form for transportable treatment units (TTU's). You only have to submit forms for the tier(s) that cover your unit(s). Discard or recycle the other unused forms. Number each page of your completed notification package and indicate the total number of pages at the top of each page at the 'Page ___ of ___'. Put your EPA ID Number on each page. Please provide all of the information requested; all fields must be completed except those that state 'if different' or 'if available'. Please type the information provided on this form and any attachments.

The notification will not be considered complete without payment of the appropriate fee for each tier under which you are operating. (Please note that the fee is per TIER not per UNIT. For example, if you operate 5 units but they are all Conditionally Authorized, you only owe \$1,140, NOT 5 times \$1,140. If you operate any Permit by Rule units and any units under Conditional Authorization you owe \$2,280.) Checks should be made payable to the Department of Toxic Substances Control and be stapled to the top of this form. Please write your EPA ID Number on the check. Fill in the check number in the box above.

I. NOTIFICATION CATEGORIES

Indicate the number of units you operate in each tier. This will also be the number of unit specific notification forms you must attach. Conditionally Exempt Small Quantity Treatment operations may not operate units under any other tier.

Number of units and attached unit specific notifications			Fee per Tier (not per unit)
A.	___	Conditionally Exempt-Small Quantity Treatment (Form DTSC 1772A)	\$ 100
B.	___	Conditionally Exempt-Specified Wastestream (Form DTSC 1772B)	\$ 100
C.	<u>1</u>	Conditionally Authorized (Form DTSC 1772C)	\$1,140
D.	___	Permit by Rule (Form DTSC 1772D)	\$1,140
	====		=====
	___	Total Number of Units	Total Fee Attached \$ _____

III. TYPE OF COMPANY: STANDARD INDUSTRIAL CLASSIFICATION (SIC) CODE:

Use either one or two SIC codes (a four digit number) that best describe your company's products, services, or industrial activity.

Example:

7384 Photofinishing lab

3672 Printed circuit boards

First: 2836 Pharmaceutical

Second: Biotechnology

IV. PRIOR PERMIT STATUS: Check yes or no to each question:

YES NO

- 1. Did you file a PBR Notice of Intent to Operate (DTSC Form 8462) in 1992 for this location?
- 2. Do you now have or have you ever held a state or federal hazardous waste facility full permit or interim status for any of these treatment units?
- 3. Do you now have or have you ever held a state or federal full permit or interim status for any other hazardous waste activities at this location?
- 4. Have you ever held a variance issued by the Department of Toxic Substances Control for the treatment you are now notifying for at this location?
- 5. Has this location ever been inspected by the state or any local agency as a hazardous waste generator?

V. PRIOR ENFORCEMENT HISTORY: Not required from generators only notifying as conditionally exempt.

YES NO

- Within the last three years, has this facility been the subject of any convictions, judgments, settlements, or final orders resulting from an action by any local, state, or federal environmental, hazardous waste, or public health enforcement agency?

(For the purposes of this form, a notice of violation does not constitute an order and need not be reported unless it was not corrected and became a final order.)

- If you answered Yes, check this box and attach a listing of convictions, judgments, settlements, or orders and a copy of the cover sheet from each document. (See the Instructions for more information)

VI. ATTACHMENTS:

1. A plot plan/map detailing the location(s) of the covered unit(s) in relation to the facility boundaries.
2. A unit specific notification form for each unit to be covered at this location.

VII. CERTIFICATIONS: *This form must be signed by an authorized corporate officer or any other person in the company who has operational control and performs decision-making functions that govern operation of the facility (per title 22, California Code of Regulations (CCR) section 66270.11). All three copies must have original signatures.*

Waste Minimization I certify that I have a program in place to reduce the volume, quantity, and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment.

Tiered Permitting Certification I certify that the unit or units described in these documents meet the eligibility and operating requirements of state statutes and regulations for the indicated permitting tier, including generator and secondary containment requirements. I understand that if any of the units operate under Permit by Rule or Conditional Authorization, I will also be required to provide required financial assurances by January 1, 1994, and conduct a Phase I environmental assessment by January 1, 1995.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are substantial penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

OPERATING REQUIREMENTS:

Please note that generators treating hazardous waste onsite are required to comply with a number of operating requirements which differ depending on the tier(s) under which one operates. These operating requirements are set forth in the statutes and regulations, some of which are referenced in the Tier-Specific Factsheets.

SUBMISSION PROCEDURES:

You must submit two copies of this completed notification by certified mail, return receipt requested, to:

Department of Toxic Substances Control
Form 1772
Onsite Hazardous Waste Treatment Unit
400 P Street, 4th Floor (walk in only)
P.O. Box 806
Sacramento, CA 95812-0806.

You must also submit one copy of the notification and attachments to the local regulatory agency in your jurisdiction as listed in the instruction materials. You must also retain a copy as part of your operating record.

All three forms must have original signatures, not photocopies.

CONDITIONALLY AUTHORIZED

UNIT SPECIFIC NOTIFICATION
(pursuant to Health and Safety Code Section 25200.3)

UNIT NAME Neutralization Tank

UNIT ID NUMBER #1

NUMBER OF TREATMENT DEVICES: 1 Tank(s) Container(s)

Each unit must be clearly identified and labeled on the plot plan attached to Form 1772. Assign your own unique number to each unit. The number can be sequential (1, 2, 3) or you may use any system you choose.

Enter the estimated monthly total volume of hazardous waste treated by this unit. This should be the maximum or highest amount treated in any month. Indicate in the narrative (Section II) if your operations have seasonal variations.

I. WASTESTREAMS AND TREATMENT PROCESSES:

Estimated Monthly Total Volume Treated: pounds and/or 36,630 gallons

The following are the eligible wastestreams and treatment processes. Please check all applicable boxes:

1. Aqueous wastes hazardous solely due to inorganics constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which contain less than 1,400 ppm total of these constituents. (There is no volume limit for this wastestream.) Treatment is using:

- a. Phase separation, including precipitation, by filtration, centrifugation, or gravity settling, including the use of demulsifiers and flocculants.
- b. Ion exchange, including metallic replacement,
- c. Reverse osmosis
- d. Adsorption
- e. pH adjustment of aqueous waste with a pH of between 2.0 and 12.5
- f. Electrowinning of solutions, unless those solutions contain hydrochloric acid
- g. Reduction of solutions hazardous solely due to hexavalent chromium, to trivalent chromium with sodium bisulfite, sodium metabisulfite, sodium thiosulfate, ferrous chloride, ferrous sulfate, ferrous sulfide, or sulfur dioxide. The solution contains less than 750 ppm of hexavalent chromium.

2. Aqueous wastes hazardous solely due to organic constituents listed in title 22, CCR, section 66261.24(a)(1)(B) or (2)(B) and which contain less than 750 ppm total of these constituents. (There is no volume limit for this wastestream.) Treatment is using:

- a. Phase separation by filtration, centrifugation, or gravity settling, but excluding super critical fluid extraction.
- b. Adsorption

3. Sludges resulting from wastewater treatment, dusts, solid metal objects, and metal workings which are hazardous solely due to the presence of constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which, for dusts only, contain less than 750 ppm total of these constituents. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:

- a. Physical processes which constitute treatment only because they change the physical properties of the waste, such as filtration, centrifugation, gravity settling, grinding, shredding, crushing, or compacting.
- b. Drying to remove water.
- c. Separation based on differences in physical properties, such as size, magnetism, or density.

CONDITIONALLY AUTHORIZED UNIT SPECIFIC NOTIFICATION (pursuant to Health and Safety Code Section 25200.3)

- 4. Alum, gypsum, lime, sulfur, or phosphate sludges. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
a. Drying to remove water.
b. Phase separation by filtration, centrifugation, or gravity settling.
5. Special wastes listed in title 22, CCR, section 66261.120 that meet the criteria in title 22, CCR, section 66261.122 which is hazardous solely due to the constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which contain less than 750 ppm total of these constituents. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
a. Drying to remove water.
b. Phase separation by filtration, centrifugation, or gravity settling.
c. Screening to separate components based on size.
d. Separation based on differences in physical properties, such as size, magnetism, or density.
6. Special wastes classified under title 22, CCR, section 66261.124 as special wastes, except asbestos, which is hazardous solely due to the constituents, except asbestos, listed in title 22, CCR, section 66261.24(a)(1)(B) or (a)(2)(A) and which contain less than 750 ppm total of these constituents. The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
a. Drying to remove water.
b. Phase separation by filtration, centrifugation, or gravity settling.
c. Magnetic separation.
7. Soils contaminated with metals listed in title 22, CCR, section 66261.24 (a)(2)(A). The monthly volume treated in this unit does not exceed 5,000 gallons or 45,000 pounds. Treatment is using:
a. Screening to separate components based on size.
b. Magnetic separation.
8. Oil mixed with water and oil/water separation sludges. (There is no volume limit for this wastestream.) Treatment is using:
a. Phase separation by filtration, centrifugation, or gravity settling, but excluding super critical fluid extraction, including the use of demulsifiers and flocculants. Heat can be used, but must not exceed 160 degrees Fahrenheit.
b. Separation based on differences in physical properties, such as size, magnetism, or density.
c. Reverse osmosis.
9. Neutralization of acidic or alkaline wastes, hazardous solely due to corrosivity or toxic only from the acid or caustic material, in elementary neutralization units. (There is no volume limit for this wastestream.)
a. The waste contains less than 10 percent acid or base constituents by weight. There is no volume limit for this category.
b. The waste contains 10 percent or more acid or base constituents by weight and is treated in batches that do not exceed 500 gallons at one time.
10. Recovery of silver from photofinishing. The volume limit for conditional authorization is 5,000 gallons per unit in any calendar month.

**CONDITIONALLY AUTHORIZED
UNIT SPECIFIC NOTIFICATION**
(pursuant to Health and Safety Code Section 25200.3)

11. Spent cleaners and conditioners which are hazardous solely due to copper or copper compounds with less than 5000 ppm copper. The volume limit for conditional authorization is 1,000 gallons of this wastestream per facility in any calendar month. (These cleaners are limited to surfactants and detergents and do not contain microetch, etchant, plating or metal stripping solutions or solutions containing oxidizers, or any cleaner based on organic solvents). (These wastestreams and processes are only conditionally authorized until January 1, 1995, unless extended by the Department.) Treatment is using:

- a. Phase separation, including precipitation, by filtration, centrifugation, or gravity settling, including the use of demulsifiers and flocculants.
- b. Ion exchange, including metallic replacement,
- c. Reverse osmosis
- d. Adsorption
- e. pH adjustment of aqueous waste with a pH of between 2.0 and 12.5
- f. Electrowinning of solutions, unless those solutions contain hydrochloric acid

UNIT SPECIFIC NOTIFICATION
(pursuant to Health and Safety Code)**

IV. BASIS FOR NOT NEEDING A FEDERAL PERMIT:

In order to demonstrate eligibility for one of the onsite treatment tiers, facilities are required to provide the basis for determining that a hazardous waste permit is not required under the federal Resource Conservation and Recovery Act (RCRA) and the federal regulations adopted under RCRA (Title 40, Code of Federal Regulations (CFR)).

Choose the reason(s) that describe the operation of your onsite treatment units:

- 1. The hazardous waste being treated is not a hazardous waste under federal law although it is regulated as a hazardous waste under California state law.
- 2. The waste is treated in wastewater treatment units (tanks), as defined in 40 CFR Part 260.10, and discharged to a publicly owned treatment works (POTW)/sewering agency or under an NPDES permit. 40 CFR 264.1(g)(6) and 40 CFR 270.2.
- 3. The waste is treated in elementary neutralization units, as defined in 40 CFR Part 260.10, and discharged to a POTW/sewering agency or under an NPDES permit. 40 CFR 264.1(g)(6) and 40 CFR 270.2.
- 4. The waste is treated in a totally enclosed treatment facility as defined in 40 CFR Part 260.10; 40 CFR 264.1(g)(5).
- 5. The company generates no more than 100 kg (approximately 27 gallons) of hazardous waste in a calendar month and is eligible as a federal conditionally exempt small quantity generator. 40 CFR 260.10 and 40 CFR 261.5.
- 6. The waste is treated in an accumulation tank or container within 90 days for over 1000 kg/month generators and 180 or 270 days for generators of 100 to 1000 kg/month. 40 CFR 262.34, 40 CFR 270.1(c)(2)(i), and the Preamble to the March 24, 1986 Federal Register.
- 7. Recyclable materials are reclaimed to recover economically significant amounts of silver or other precious metals. 40 CFR 261.6(a)(2)(iv), 40 CFR 264.1(g)(2), and 40 CFR 266.70.
- 8. Empty container rinsing and/or treatment. 40 CFR 261.7.
- 9. Other: Specify: _____

V. TRANSPORTABLE TREATMENT UNIT: Check Yes or No. Please refer to the instructions for more information.

YES NO

Is this unit a Transportable Treatment Unit?

If you answered yes, you must also complete and attach Form 1772E to this page.

The Tier-Specific Factsheets contain a summary of the operating requirements for this category. Please review those requirements carefully before completing or submitting this notification package.

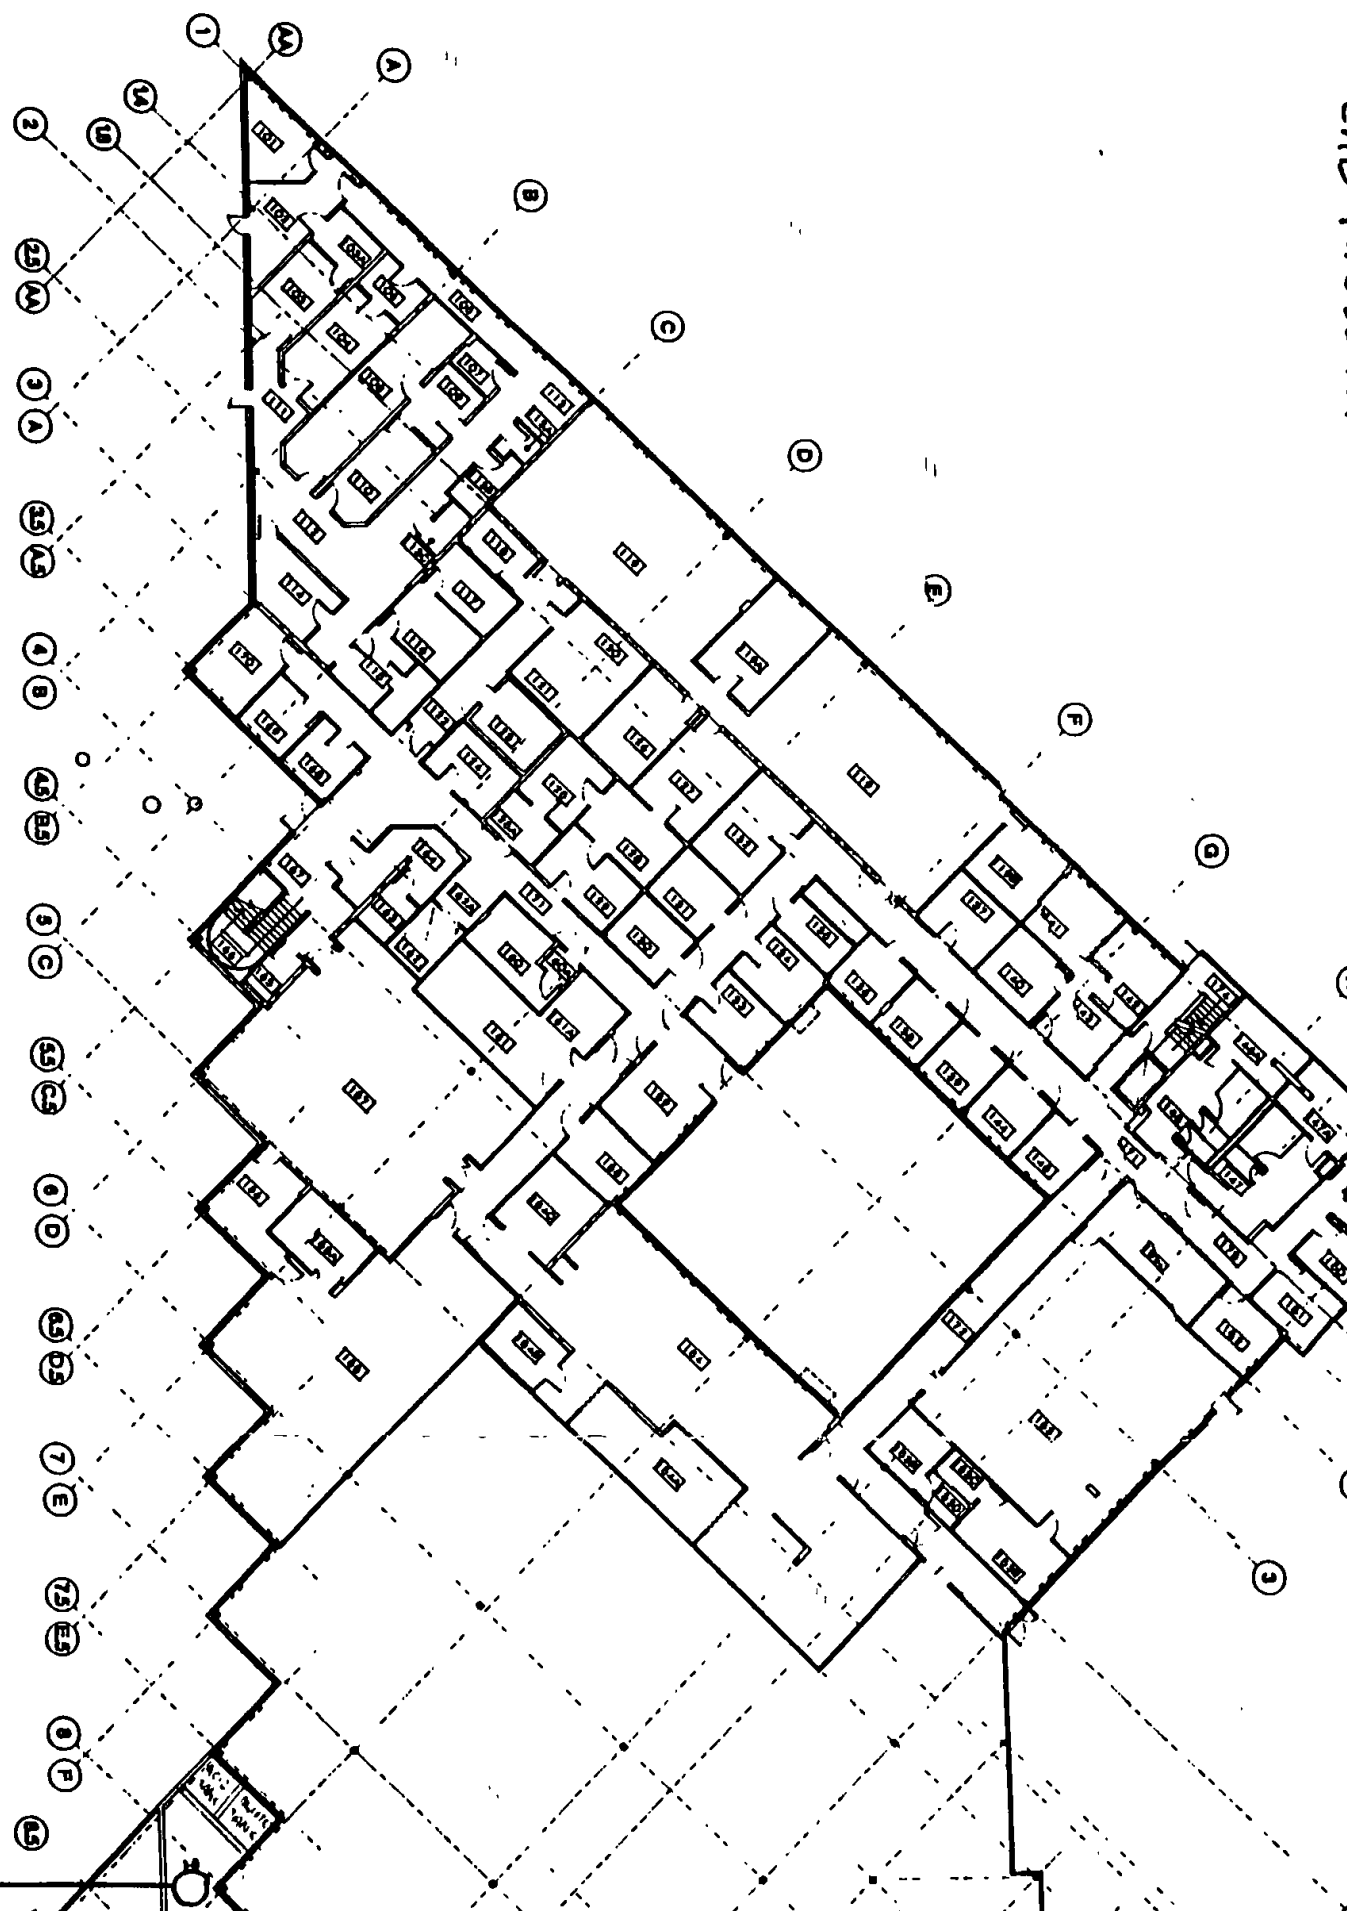

CAD 982410243

1. **Specific waste types treated:** General waste from the buffer prep and purification areas is collected into the general waste surge tank (this includes sinks, drains, tanks and clean steam condensate lines). Wastes from the fermentation tanks are first fed through a heat exchanger and raised to temperature of 80 C for a minimum of 45 seconds. The waste is then cooled and sent to the neutralization tank.

2. **Treatment process(es) used:** Waste neutralization is performed on a continuous overflow basis. A constant volume of approximately 100 - 150 gallons is automatically controlled at pH 6 to 8 with a maximum operating temperature of 60 C (140 F). As waste from the surge tanks (biological and general) is fed into the neutralization tank, redundant pH measurements are continuously made and concentrated acid (sulfuric or phosphoric) or 30% sodium hydroxide is pumped into the stirred neutralization tank, as necessary. Flow to the sewer will be provided on the controls and bypass valves to further protect against out-of-range waste flowing to the sewer. (estimated usage of acid = 50 - 150 gallons per month and the estimated usage for the caustic is approximately 50 - 100 gallons per month. A PLC will be used to control all aspects of the waste system including tank level controls, level alarms for the tanks and overflow pits, sumps and automated valve operation, temperature-control and neutralization.

Separate containment areas for acids and caustics, designed to contain 150% of the volumes in the event of leakage will be in the mechanical areas. Waste pits for the biological and general waste tanks are each 12' X 7.5' X 12' deep, the biological pit is in the mechanical room and the general waste pit is located in the mechanical pad. Should it be necessary in the event of equipment failure, these pits could contain eight (8) tank volumes.

MODIFICATIONS TO APPLICATION

ON-SITE MEDICAL WASTE TREATMENT FACILITY PERMIT

SUBMITTED TO:

SAN DIEGO COUNTY
DEPT. OF ENVIRONMENTAL HEALTH
HAZARDOUS MATERIALS MANAGEMENT DIVISION

BY:

IDEC PHARMACEUTICALS
11011 TORREYANA ROAD
SAN DIEGO, CA 92121

AUGUST, 1997

I. GENERAL

A. Type of Permit Requested

Place an "X" on the appropriate line below to indicate the type of permit being applied for:

1. Type of Treatment

a. Steam Sterilization

b. Incineration

c. Other State DHS approved method (please specify):

B. Facility Status

Place an "X" on the appropriate line to indicate whether this application is for a new or existing facility.

1. New Facility

2. Existing Facility

If an existing facility, please indicate the purpose of this application. Place an "X" on the appropriate line below to indicate whether this is a renewal application, a facility modification, transfer of ownership, revised application, or a initial request for permit.

a. Initial Request for Permit

b. Modification

c. Transfer of Ownership

d. Permit Revision

e. Permit Renewal

C. Application Information (Note: Provide the information requested below on a separate page attached to the completed application.)

1. Estimated Weight and Volume *See attachment 1.*

A summary of the weight or volume of medical waste handled or expected to be handled during the permit period. For renewals, the amount handled during the previous permit period.

2. Special Occurrences

A listing of any special occurrences such as fires, injury, property damage, accident or other unusual occurrences, or incidents involving medical waste which have occurred at the facility during the previous three years.

3. Compliance History

A description of your compliance history relative to local, state, or federal regulation regarding the handling, storage, or treatment of medical waste during the previous three years. Include information from other facilities under your control for the same period.

II. FACILITY INFORMATION

A. Facility Name IDEC PHARMACEUTICALS

B. Facility Contact Person(s)

1. Name (last, first, middle initial) and Job Title:

THOMPSON, MARK L., MANAGER II, ENVIRONMENTAL, HEALTH, & SAFETY

2. Telephone Number (area code and number):

(619) 550-8613

C. Facility Mailing Address

1. Street, Route Number, or P.O. Box Number

11011 TORREYANA ROAD

2. City or Town, State, and Zip Code:

SAN DIEGO, CA 92121

D. Facility Location (if different from above)

1. Street, Route Number or other specific site location, or address:

(SAME AS ABOVE)

2. City or Town, State and Zip Code:

3. Telephone Number (area code and number):

()

E. Ownership status HELD PUBLICLY ~~BY~~ COMPANY

(Federal, state, local government, or other public or private entity.)

III. OPERATOR INFORMATION

A. Name IDEC PHARMACEUTICALS

B. Owner or Operator ..IDEC PHARMACEUTICALS

Is the name listed in III. (A.) above also the owner?

1. Yes

2. No

If no, please complete the following additional information.

a. Telephone Number (area code and number):

() _____

b. Street or P.O. Box Number:

c. City or Town, State, and Zip Code:

IV. FACILITY OWNER

A. If the facility owner is also the facility operator as listed in III. above, disregard the B. portion of this section.

B. If the facility owner is not the facility operator as listed in III. above, complete the following items.

1. Name of legal owner of facility:

2. Telephone Number (area code and number):

() _____

3. Street or P.O. Box Number:

4. City, State, and Zip Code:

V. ENVIRONMENTAL CLEARANCES

A. Pursuant to Section 65610, Chapter 21, California Code of Regulations, provide all necessary information relating to environmental clearances/permits as required.

See attachment 2.

1. A copy of the environmental impact report (EIR) or negative declaration prepared by the lead agency or evidence that a lead agency is preparing or will prepare environmental documentation, if applicable.
 2. Other information (please specify):
-

VI. MAP

See attachment 3.

Attach to this application a map extending for one mile beyond the property boundary identifying access roads and the type of development surrounding the facility (e.g. residential, commercial, recreational, schools, etc.)

VII. PRIMARY ACTIVITIES OF THE FACILITY

See attachment 4.

Provide a description of the nature and activities of the business which requires a permit.

VIII. FACILITY INFORMATION

See attachment 5.

A. Provide the following facility information.

1. Average monthly quantity of medical waste to be stored and/or treated on property.
2. The rated capacity per operational cycle, the time per cycle, the number of operating hours per day, and days per week of operation.
3. Type and description of medical waste being treated. What measures are employed to prevent unauthorized waste (i.e. chemical waste, chemotherapy waste, etc.) from being treated at the facility?

B. Total capacity of primary waste storage area in use.

IX. FACILITY PLAN

See attachment 6.

Provide a site map of the facility with a description of the ingress, egress, medical waste storage area(s), treatment facility location, security measures, and other areas which will be used as a part of the ongoing operation.

X. OPERATION PLAN

Append a copy of the facility Medical Waste Operation Plan and Procedures with this application.

See attachment 7. + 8.

XI. EMERGENCY ACTION PLAN

Append a copy of your Emergency Action Plan with this application.

See attachment 9.

XII. TRAINING PLAN

Append a copy of your employee Training Plan for medical waste management with this application.

See attachment 10.

XIII. CLOSURE PLAN

Append a copy of your Closure Plan and a written estimate of the cost of closing the medical waste storage and treatment areas.

See attachment 11.

XIV. MONITORING SCHEDULE

Append a copy of the Monitoring Schedule, the schedule for installation of monitoring equipment and a copy of the Operating Procedures for maintenance and testing of the monitoring equipment.

N/A.

ONSITE TREATMENT PERMIT APPLICATION NOTICE OF DEFICIENCY

SITE: 11011 TORREYANA ROAD, SAN DIEGO, CA 92121

Dear Mr. Thompson:

On August 29, 1997, your application for an onsite medical waste treatment facility permit modification was received by the County of San Diego, Hazardous Materials Management Division (HMMD). A review of your application has determined deficiencies in the following areas:

1. Attachment 5: Section VIII. Facility Information;

Please be advised that double, red plastic bagging of solid medical waste is required in the local County Medical Waste Management Ordinance, but is not required in the State Medical Waste Management Act. The County has chosen to enforce the State requirements of single red bag for medical waste collection. You may modify your procedures from a double, red plastic bag to a single red plastic bag. If you choose to do so, please amend the appropriate sections of your permit application to reflect the modification in your procedure.

2. Attachment 7: Section X. Operation Plan;

1. Waste Handling and Segregation:

Biohazardous waste should be handled by trained personnel, in accordance with the California Health & Safety Code, Part 14, the County Medical Waste Management Ordinance and the California Code of Regulations Title 22.

Red bags should be tied to prevent leakage (HSC 118280 (a)), then sealed with autoclave tape. The leak resistant plastic containers equipped with lids to store red bag and sharps waste must be leak resistant, have tight-fitting covers that are labeled with the words "Biohazardous Waste" or the international biohazardous symbol and the word "BIOHAZARD" on the lid and on the sides so as to be visible from any lateral direction

P. Jackson
cut/RRR
P4 37-435-849

(HSC 118280 (b)). Please add the italicized language to your Waste Handling and Segregation section of your plan.

32. Storage Procedures and Storage Time: Red bags have a seven (7) day maximum storage time *from first use of bag*. Include this storage time limit to your plan and implement it in your operations. Your plan currently states that 'biohazardous waste is kept no more than 30 days before being treated.' This 30 day timeline clearly exceeds the 7 day maximum storage time for red bags from first use of bag. Clarify in your plan that red bags will be autoclaved when they reach the maximum storage time of 7 days from the time of first use. Note that sharp containers have a maximum storage time of seven days after sharp containers become full.
43. Spill/Leak Procedures, Clean Up, Decontamination: In case of a larger leak, the liquid may be decontaminated in place using a liquid decontaminant such as bleach (10%) or a microbicide detergent. Please expand on this section to describe contact time for the liquid decontaminant and procedures to follow to assure that all spill liquid was rendered nonhazardous and decontaminated. Specifically list the State approved disinfectants to be used and their required concentration and contact time.

Attachment 8: Operating Procedures for Waste Sterilizer

3. Section 6.0 Procedural Notes: Subsection 6.2: Include maximum storage times for sharps instead of 'pick-ups are arranged on an as needed basis.' In Section 6.3, include the maximum storage times for red bag waste prior to treatment.
4. Section 8.0 Documentation: Retention of Sterilizer Run Logs, Sterilizer Monthly Test Forms, and Chart Recordings; Subsection 8.2.1: Keep all Sterilizer logs and records for a minimum of three (3) years, not 2 years.

Attachment 9: Emergency Action Plan

5. In Section 5, PWN or an equivalent waste hauler will be contacted to do a pick up if equipment will be down for more than 24 hours. In Section 7, PWN will be contact to pick-up and dispose of waste if equipment will be down for more than 72 hours. It is unclear why one emergency requires a 24 hour response and the other only a 72 hours response given waste generation would remain constant in both circumstances. Please standardize the time for contacting a licensed waste hauler in case of emergency.

Medical Waste Management Plan

6. The Medical Waste Management Plan lists Liquids (cultures, urine, etc.) described as vacuum flask to be treated with bleach, then sewered. The Medical Waste Management Act (MWMA) does not permit the treatment of laboratory waste with bleach, then its release into the sewer system. Liquid or semiliquid laboratory waste as defined in HSC Section 117635 and microbiological specimens cannot be discharged into a public sewer (HSC Section 118215). The liquid laboratory waste generated at your facility must be contained and

Mr. Thompson

January 6, 1998

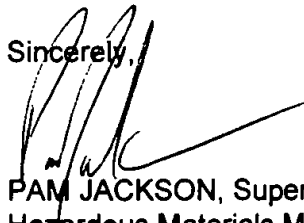

treated via one of the approved methods described in HSC Section 118215. These approved methods include incineration, steam sterilization or any alternative medical waste treatment method approved by the department. After liquid medical waste is rendered nonhazardous, it may then be sewered with the approval of your local sewer agency. The MWMA Section 117700 (a) exempts biotechnology waste that does not contain an infectious agent as defined in Section 117675 from being medical waste. If the liquid vacuum flask waste falls within this exemption, then it may be treated with bleach, then sewered. The concern is that all liquid waste containing infectious agents must be properly treated, most commonly by autoclaving. If bleach is being used to disinfect the liquid, then it may be infectious and should therefore be properly treated by autoclaving. Any exemptions must be clearly defined and explained in your application.

7. **SIGNAGE:** Please add a section in your plan that describes biohazardous waste storage room signage. All designated accumulation areas used for the storage of medical waste containers should be marked with a warning sign in accordance to HSC Section 118310. The wording of warning signs shall be in English, "CAUTION – BIOHAZARDOUS WASTE STORAGE AREA – UNAUTHORIZED PERSONS KEEP OUT," and in Spanish "CUIDADO – ZONA DE RESIDUOS – BIOLÓGICOS PELIGROSOS – PROHIBIDA LA ENTRADA A PERSONAS NO AUTORIZADAS," or in another language, in addition to English, determined to be appropriate by the infection control staff.

Please make the requested modifications to your permit application and send them to my attention, Pam Jackson, 338-2472, PO Box 129261, San Diego, CA 92112-9261 (NOTE: this is a new address).

If you have any questions, please give me a call (619) 338-2472.

Sincerely,

PAM JACKSON, Supervising Hazardous Materials Specialist
Hazardous Materials Management Division

HEALTH SERVICES

8/21/98

Pam Jackson
San Diego County, Department of Environmental Health
Hazardous Materials Management Division
P.O. Box 12961
San Diego, CA 92112-9261

Dear Pam,

This letter is submitted as follow-up to your inspection on July 22. In response to the corrective actions noted in your report IDEC is providing the following information:

- 1) The autoclave located in room 257 has been re-added to IDEC's internal calibration schedule, and calibration will be performed on an annual basis from now on. Paperwork indicating that the temperature and pressure indicators are routinely being inspected every two months by an external vendor have been tracked down, and the two most recent reports are attached. These documents support our position that the unit continues to function as intended with respect to proper waste treatment.
- 2) The capacity for the autoclave located in room 257 has been set at 30 lbs., which is roughly equivalent to two autoclave bags full of waste. The autoclave SOP has been revised to reflect this value.
- 3) The handling instructions for animal carcass waste have been expanded (an updated version is attached).

If you have any additional questions please contact me at 619-458-8822.

Sincerely,

Mark Thompson
Manager, EH&S

IDEC PHARMACEUTICALS CORPORATION
PREVENTIVE MAINTENANCE PROTOCOL

UNIT DESCRIPTION: Autoclave, 20x20 Amsco Eagle 3000-Stage 3, VAC

UNIT SERIAL NUMBER: 010259303

LOCATION: Microbiology Lab

INSPECTION FREQUENCY: Bimonthly

DATE OF INSPECTION: 7/30/98

PROCEDURES:

1. Inspect both door operations for correct radial arm hand-wheel, and pivot and hinge movement. Clean and lubricate or repair as required.

PASS () FAIL COMMENTS: OK

2. Inspect door gaskets for damage and serviceability. Clean or replace as required.

PASS () FAIL COMMENTS: OK

3. Confirm door safety diaphragm operation. Repair or replace as required. Confirm door safety switch operation.

PASS () FAIL COMMENTS: OK

4. Inspect all incoming utility strainers and jacket trap strainer. Clean or replace as required.

PASS () FAIL COMMENTS: OK

5. Inspect Jacket and Chamber traps and any auxiliary traps. Rebuild, clean, or replace as required.

PASS () FAIL COMMENTS: OK

6. Inspect and confirm correct operation of all solenoid valves both mechanically and electrically. Rebuild or replace as required.

PASS () FAIL COMMENTS: OK

7. Confirm correct operation of all manual control valve operations and confirm leak free.

PASS () FAIL COMMENTS: OK

8. Inspect printer assembly and paper take-up motor for correct operation including proper print density. Repair or adjust as required.

PASS () FAIL COMMENTS: OK

9. Inspect jacket safety valve for proper operation and leakage. Replace as required.

PASS () FAIL COMMENTS: *OK*

10. Confirm correct operation of the pressure regulator valve. Confirm valve stops for high and low set points. Adjust, rebuild or replace as required.

PASS () FAIL COMMENTS: *OK*

11. Inspect fresh air inlet filter. Replace if soiled or damaged.

PASS () FAIL COMMENTS: *OK*

12. Confirm proper operation of cycle select touch pads and switch operations including display. Repair or replace as required.

PASS () FAIL COMMENTS: *OK*

13. Verify correct temperature/pressure calibration.

TEMPERATURE: MEASURED: 121.3 Deg C DISPLAYED: 121.0 Deg C

PRESSURE: MEASURED: 18 PSIG DISPLAYED: 17 PSIG

COMMENTS: 10 minute Sterilize with a 5 minute Dry cycle at 132 Deg C

14. Perform final test cycle and confirm unit free of leaks. Perform Bowie-Dick air removal test. Perform leak test and confirm within specifications. If unit fails test repair or adjust as required to meet specifications. Confirm chamber strainer clear.

PASS () FAIL COMMENTS: *OK*

15. Additional Comments:

Autoclave is operating properly.

OPERATIONS PLAN

Waste Collection And Handling

Animal Carcass Waste

1. Animal carcasses that are not suspected of being infected with a disease communicable to humans, or known to have been contaminated with a viable micro-organism, are not considered medical waste. This waste is handled as a regulated solid waste, and red biohazard bags are not to be used. Animal carcasses are to be placed into zip-lock bags and placed into a dedicated freezer for cold storage prior to disposal. Animal carcasses are stored on-site for pick-up and disposal by D &D Disposal Services, or an equivalent waste hauler. Refrigerated carcasses must be picked up in 7 days, frozen carcasses in 90 days.
2. If animal carcasses are generated that have been exposed to infectious agents then lab employees are instructed to notify the biowaste coordinator so that special waste pick-up arrangements can be made with IDEC's waste broker. This waste is handled as medical waste, and red biohazard bags are to be used. Animal carcasses are stored on-site for pick-up and disposal by PWN Environmental, or an equivalent waste hauler. Refrigerated carcasses must be picked up in 7 days.

Ref. IDEC's Medical Waste Treatment Facility Permit and Waste Management Plan

Dear Pam,

This letter is submitted in response to your letter dated January 6, 1998 regarding IDEC's medical waste treatment permit. Listed below are the deficiencies noted in your letter and the actions taken by IDEC in response. Our medical waste management plan has been modified to reflect these changes, and I have attached a copy of the revised plan for your review.

Item 1. Attachment 5: Section VIII. Facility Information.

1. Facility Information

Subject: DEH indicates that IDEC has the option to discontinue double bagging solid medical waste.

Action: IDEC will continue its current practice of double bagging solid medical waste.

Item 2. Attachment 7: Section X. Operation Plan.

1. Waste Handling and Segregation.

Subject: DEH indicates that IDEC needs to expand the description of the labeling used containers of solid waste medical.

Action: IDEC has modified it's medical waste management plan as specified.

2. Storage Procedures and Storage Time.

Subject: DEH indicates that IDEC needs to clarify the holding time for solid medical waste prior to treatment.

Action: IDEC has modified it's medical waste plan to include instructions for treating medical waste within 7 days of the first use of the bag.

3. Spill/Leak Procedures, Clean Up, Decontamination.

Subject: DEH indicates that IDEC needs to expand the description of spill response procedures to include information on recommended disinfectants and contact time.

Action: IDEC has modified its medical waste management plan to identify the disinfectants used during spill clean-up and specify the contact time required as per HSC Section 118295.

Items 3 and 4. Attachment 8: Operating Procedures for the Waste Sterilizer

1. Section 6.0, Subsection 6.2.

Subject: DEH indicates that IDEC needs to clarify the instructions on holding-time for solid medical waste and sharps waste.

Action: IDEC has modified its treatment SOP to include a maximum hold time for sharps prior to pick-up (7 days after full), a maximum hold time for medical solid waste prior to treatment (7 days from start of bag), a maximum hold time for liquid medical waste prior to treatment (7 days from start of collection), and a maximum hold time for pharmaceutical waste prior to pick-up (90 days). To facilitate compliance on sharps management IDEC's waste broker has been instructed to make weekly pick-ups of the sharps containers held in the waste storage area. The frequency of collection and the regular treatment of solid waste generated in the laboratory areas currently satisfies the requirements of DEH for maximum hold-time.

2. Section 8.0, Subsection 8.2.1.

Subject: DEH indicates that IDEC needs to change the instructions on retention time for logs and records maintained as part of the waste treatment operation.

Action: IDEC has modified its treatment SOP to include a three year minimum retention period rather than two years.

Item 5. Attachment 9: Emergency Action Plan

1. Failure of Equipment Due to Mechanical Problem or Loss of Power.

Subject: DEH indicates that IDEC needs to standardize the time for calling a licensed waste hauler following failure of equipment due to mechanical problem or loss of power.

Action: IDEC has modified it's medical waste management plan to standardize the time allowed for calling a licensed waste hauler following failure of equipment.

Items 6 and 7. Medical Waste Management Plan

1. Use of Bleach in Treating Waste Liquids.

Subject: DEH indicates that IDEC is to use those treatment methods specified in HSC Section 118215 when treating liquid waste that meets the definition of medical waste.

Action: IDEC will comply with HSC Section 118215 when treating infectious waste. The medical waste management plan and exposure control plan have been modified to provide instruction on liquid waste management, specifying autoclaving at the required treatment method.

2. Signage

Subject: DEH indicates that IDEC is to modify the medical waste management plan by specifying the wording of the signage used to identify the waste accumulation area.

Action: IDEC will modify it's medical waste management plan to indicate the wording of the signage currently used to identify the waste accumulation/storage area. The signs currently in-place on the door leading to the storage room bear the following phrase in both English and Spanish: "Warning, BioHazard, Authorized Personnel Only".

If you have any further question please contact me at (619) 458-8822.

Sincerely,

Mark Thompson

GENERAL INFORMATION

Description Of The Waste Generated

Research and Development

The R&D laboratories at IDEC generate a variety of solid and liquid waste that meets of the definition of medical waste. Solid medical waste consists primarily of disposable items such as culture dishes, bench paper, gloves and other plastic or paper items used in the laboratories. Liquid medical waste may consist of bacterial, viral, or fungal culture specimens, or other liquids known to contain infectious agents. Sharps waste consists of hypodermic needles, glass microscope slides, discarded micro-tome blades, and other disposable glass items used in the laboratories. Medical waste in the form of solid, liquid, and sharps waste is managed as a regulated waste in accordance with the Medical Waste Management Act.

In addition to generating solid and liquid medical waste the R&D laboratories generate a variety of waste solutions designated as liquid biological waste. While this liquid consists primarily of spent culture media and is not known to contain infectious agents, it is labeled as a potentially infectious material in accordance with the Bloodborne pathogens standard. Biological waste is commonly found in the vacuum flasks located underneath the biological safety cabinets. This waste is managed as a special form of laboratory waste in accordance with IDEC's Exposure Control Plan.

Commercial Operations

The commercial operations division generates pharmaceutical waste on an irregular basis. Since waste pharmaceuticals are currently classified as medical wastes by the State of California this waste is collected and disposed of as a regulated waste in accordance with the Medical Waste Management Act. Used Cunno filters generated in the manufacturing facility contain cells used as part of the production process; these filters do not meet the definition of medical waste and are therefore exempt from having to be managed as a medical waste (HSC Section 117700). Used Cunnos are currently autoclaved prior to disposal as regular solid waste, in accordance with the regulations of the U.S. FDA.

Vivarium

The vivarium generates a small amount of animal carcass waste each month. Since this waste does not contain any infectious agent it is not managed as a medical waste (HSC Section 117635). Carcass waste is disposed of using a licensed waste hauler in accordance with State solid waste regulations. Laboratory personnel are instructed to contact a member of the EH&S Department if they anticipate using infectious agents in the vivarium so that special medical waste management arrangements can be made.

GENERAL INFORMATION

Waste Segregation And Security Systems

1. Medical waste in the form of solid, liquid, and sharps waste is segregated from regular solid waste using distinctive labels and containers.
2. Waste removed from the laboratory areas is taken to a waste treatment/storage area located outside the main building. Access to the waste treatment/storage area is restricted to authorized personnel by means of a locked gate. The gate leading into the waste treatment/storage area bear the following phrase in both English and Spanish: "Authorized Personnel Only".
3. Inside the gated area is the building the contains the autoclave. Outside of normal working hours the doors leading to the autoclave are locked shut. The signs currently in-place on the door leading to the autoclave bear the following phrase in both English and Spanish: "Warning, BioHazard, Authorized Personnel Only" and a copy of the biohazard symbol.
4. Maintenance personnel are present on-site after normal working-hours and on the weekend. These employees have received bloodborne pathogens training and are familiar with the layout of the autoclave area; maintenance personnel serve as emergency response personnel for this area should the need arise.
5. Safety Department personnel are not present on-site after normal working hours or on weekends, but can be reached via pagers if the need arises.
6. The building housing the waste treatment autoclave is equipped with an automatic sprinkler system. A facility wide alarm monitoring system is connected to this sprinkler system and monitors it 24 hours a day.

GENERAL INFORMATION

Measures Employed To Prevent Unauthorized Waste From Being Treated

1. Medical waste is collected from the laboratory areas by a trained member of the EH&S department, in accordance with the procedures set forth in this plan. After being taken to the waste storage area all medical waste (both solid and liquid) is treated using a steam autoclave; only authorized personnel are allowed to operate the autoclave.
2. Medical waste in the form of solid, liquid, and sharps waste is collected using distinctive labels and containers; hazardous and radioactive waste is packaged and handled in a separate manner, and laboratory personnel are trained to recognize the difference between each type. Written waste handling procedures are made available to all laboratory personnel. Laboratory personnel are instructed to contact a member of the EH&S Department if they are unsure as to the classification of a particular type of waste prior to attempting disposal.
3. Janitorial support staff do not handle biohazardous waste as part of their duties, and have been instructed to avoid biohazard waste containers when working in the laboratory areas.

OPERATIONS PLAN

Waste Collection And Handling

Solid Medical Waste

1. Solid medical waste is collected in the labs using RED autoclavable plastic bags displaying the universal biohazard symbol (Baxter catalog No. A9511-13 or equivalent). These bags are available from the biowaste coordinator. Each bag is pre-printed with IDEC's name, phone number and mailing address. Biohazard waste bags are to be used in sets of two (an inner bag and an outer bag) as additional protection during waste handling. If pre-printed bags are not available, company address labels may be added to the bags individually provided that labels are attached both bags.
2. When in-use the red biohazard bags are held in leak resistant plastic containers equipped with tight-fitting lids (Baxter Scientific Products catalog No. A9520-13 or equivalent). These containers are available from the biowaste coordinator.
3. Both the containers and their lids are labeled with the phrase "Biohazardous Waste" or the international biohazard symbol and the word " Biohazard". Container labeling is attached in such a manner that these warnings are visible from any direction.
4. Removal of solid waste from the laboratories is the responsibility of the biowaste coordinator. Waste pick-up is made each week on a continuous basis.
5. When the red bags are full a heat resistant rubber band is placed around the neck of the bag to keep the waste secure. The bag is then removed from the container and placed on the biowaste cart. A set of replacement bags are then put into the container.
6. The closed bags are transported to the waste accumulation/storage where they will be autoclaved following the SOP for the Autoclave Decontamination of Medical Waste. Prior to autoclaving, solid waste is kept in rigid, leakproof containers equipped with lids.
7. Following autoclaving, all red bags are placed into a lockable dumpster located adjacent to the storage area.

OPERATIONS PLAN

Waste Collection And Handling

Liquid Medical Waste

1. Liquid medical waste is collected in the labs using disposable containers equipped with strong lids that are suitable for autoclaving.
2. Liquid waste containers are equipped with labels bearing the phrase "Biohazardous Waste" or the international biohazard symbol and the word "Biohazard". Each container is also equipped with a label bearing IDEC's name, phone number, mailing address, and a piece of autoclave tape.
3. When using a vacuum system for liquid medical waste collection an in-line filter shall be placed between the flask and the vacuum line to prevent the accidental aspiration of materials into the vacuum system. Replacement filters are available from the Health and Safety Department.
4. Removal of liquid waste from the laboratories is the responsibility of the biowaste coordinator and the user. When liquid medical waste containers are ready for disposal the user is to contact the biowaste coordinator. The biowaste coordinator shall retrieve the waste and transport it to the waste treatment/storage area. During transport the liquid waste containers are to be placed into closed secondary containment in such a manner to provide containment if the primary vessel fails.
5. Liquid waste transported to the waste accumulation/storage area will be autoclaved following the SOP for the Autoclave Decontamination of Medical Waste. Prior to autoclaving, liquid waste is kept in rigid, leakproof containers equipped with lids.
6. Following autoclaving, liquid waste is disposed of via discharge to the sanitary sewer; laboratory sinks may be used for this purpose. After they are emptied the containers are to be allowed to dry and then discarded as solid medical waste.

OPERATIONS PLAN

Waste Collection And Handling

Sharps Waste

1. Sharps items are collected separately from solid medical waste using rigid, leak proof, puncture proof, permanently sealable containers displaying the universal biohazard symbol (Devon "Sharps-A-Gator," catalog No. 4802 or Sherwood Medical "Monoject," catalog No. 8881-676814 or equivalent). These containers are available from the biowaste coordinator.
2. Each sharps container is to be labeled with IDEC's name, phone number and address. Sharps containers shall have their lids attached before use and shall be used once and discarded.
3. Removal of sharps waste from the laboratories is the responsibility of the biowaste coordinator. When the sharps containers are full the tops are sealed using the sealing device built into the container. Sharps containers are considered full when their contents exceed 50 % of their total internal volume.
4. Sharps containers transported to the waste accumulation/storage are held for pick-up by PWN Environmental, or an equivalent waste hauler. Prior to pick-up sharps containers are to be kept in rigid, leakproof containers equipped with lids.

3/4

OPERATIONS PLAN

Waste Collection And Handling

Pipettes

1. Contaminated pipettes are collected in cylindrical jars equipped with two appropriately sized red biohazard bags (as described above) and a lid. These jars are leak proof, rigid plastic jars displaying universal biohazard symbol (Nalgene catalog No. 52420050, Baxter catalog No. J3020-6 or equivalent). These containers are available from the biowaste coordinator. Note: Glass Pasteur pipettes are considered sharps due to their tendency to break, and should not be disposed of via the pipette jars; Pasteur pipettes are to be disposed of via the sharps containers.
2. Warning signs and labels used on the pipette jars are equivalent to those attached to the larger containers.
3. Removal of the pipette waste from the laboratories is the responsibility of the biowaste coordinator. Waste pick-up is made each week on a continuous basis.
4. When the bags lining the pipette jars are full a heat resistant rubber band is placed around the neck of the bag to keep the waste secure. The bags are then removed from the container and placed on the biowaste cart. A set of replacement bags are then put into the container.
5. Pipette bags transported to the waste accumulation/storage area will be autoclaved following the SOP for the Autoclave Decontamination of Medical Waste. Prior to autoclaving, pipette bags are kept in rigid, leakproof containers equipped with lids.
6. Following autoclaving, all red bags are placed into a lockable dumpster located adjacent to the storage area.

OPERATIONS PLAN

Waste Collection And Handling

Waste Pharmaceuticals

1. The disposition of waste pharmaceutical product is controlled by IDEC's Materials Review Board.
2. Waste pharmaceuticals are collected in labeled containers and held for pick-up by PWN, or an equivalent waste hauler, in accordance with the Quality SOP(s) created for this purpose and in accordance with the SOP for the Preparation and Shipment of Pharmaceutical Waste.
3. Disposal records for waste pharmaceuticals are maintained on file with the Health and Safety Department and with the Quality Department.

OPERATIONS PLAN

Waste Collection And Handling

Liquid Biological Waste

1. Liquid biological waste is defined as a waste liquid generated in the laboratory that contains biological materials but does not contain agents that are infectious to humans or animals. This waste classification includes human blood and spent culture media from non-infectious cell lines.
2. Liquid biological waste is collected in the laboratories using closed containers. This waste may be collected using vacuum flasks located on the bench tops or underneath the Biological Safety Cabinets. When using a vacuum system for liquid medical waste collection an in-line filter shall be placed between the flask and the vacuum line to prevent the accidental aspiration of materials into the vacuum system. Replacement filters are available from the Health and Safety Department.
3. Liquid waste containers are equipped with labels bearing the phrase "Biohazardous Waste" or the international biohazard symbol and the word "Biohazard".
4. Each container used to collect liquid biological waste is to be equipped with secondary containment in the form of a plastic tub or similar device.
5. Bleach shall be added to these containers in order to maintain a minimum concentration of 10% by volume at all times. If media containing phenol red is being collected the presence of a pink color is a sign that you do not have enough bleach.
6. Lab personnel are expected to empty the biowaste vacuum flasks servicing their bench areas (or Biological Safety Cabinets) at least monthly. The sinks serving the research and development laboratories may be used for this purpose.

OPERATIONS PLAN

Waste Collection And Handling

Animal Carcass Waste

1. Animal carcasses that are not suspected of being infected with a disease communicable to humans, or known to have been contaminated with a viable micro-organism are not considered medical waste. This waste is handled as a regulated solid waste, and red biohazard bags are not used. Animal carcasses are to be placed into zip-lock bags and placed into a dedicated freezer for cold storage prior to disposal. Animal carcasses are stored on-site for pick-up and disposal by D &D Disposal Services, or an equivalent waste hauler.
2. If animal carcasses are generated that have been exposed to infectious agents then lab employees are instructed to notify the biowaste coordinator so that special waste pick-up arrangements can be made with IDEC's waste broker.

OPERATIONS PLAN

Storage Procedures And Storage Time

1. Medical waste is removed from the laboratories on a regular basis by the biowaste coordinator and transported to the waste treatment/storage area.
2. Waste brought to the waste treatment/storage area will be held until it is autoclaved or picked-up by PWN (or an equivalent waste hauler).
3. The storage time for medical waste is as follows:
 - a. The maximum hold-time for solid waste prior to treatment is 7 days from start of collection (i.e. from start of bag).
 - b. The maximum hold time for sharps waste prior to pick-up is 7 days from the point at which they are removed from the laboratory.
 - c. The maximum hold time for liquid medical waste is 7 days from start of collection.
 - d. The maximum hold time for pharmaceutical waste is 90 days.

OPERATIONS PLAN

Run Capacity And Operational Schedule For The Autoclave

1. The rated capacity of the steam autoclave per operational cycle has been set at 100 pounds of solid waste or 5 gallons of liquid waste.
2. The autoclave is run on an as-needed basis depending on the amount of waste present and the operators daily schedule. The unit is generally operated Monday through Friday between 8 a.m. and 5 p.m., but can be run outside of these times (i.e. weekends) if necessary.

OPERATIONS PLAN

Operating Procedures For The Steam Autoclave

Written instructions for the use of the waste autoclave are available in the form of a Standard Operating Procedure for the Autoclave Decontamination of Medical Waste.

OPERATIONS PLAN

Schedule Of Inspection And Calibration Of Equipment

Maintenance and testing of the medical waste autoclave is covered under for SOP for the Autoclave Decontamination of Medical Waste. This SOP includes provisions for operational inspection of the unit, monthly spore testing, verification of accuracy, maintenance, and records retention.

EMERGENCY ACTION PLAN

Exposure Incidents

1. High-risk exposure incidents usually involve liquids other potentially infectious materials introduced through intact skin or splashed onto mucous membranes or broken or abraded skin of the employee.
2. If liquids are involved and your face or eyes have been exposed go to a safety shower or eye wash station immediately and rinse the exposed areas. If liquids are involved and your clothing or skin is overtly contaminated then clean go to the nearest washroom and begin decontamination. If the exposure involves large portions of your body then showering with germicidal soap is recommended. Contaminated clothing should be bagged and held for decontamination.
3. Any employee sustaining a high-risk exposure is to notify his/her supervisor immediately after decontamination.
4. After notification of the supervisor a BioSafety Incident Report form is to be completed and submitted to a member of the Human Resources Department or the BSO. The standard Accident Report form may be initially used to report an exposure incident, with the BioSafety Incident Report form completed as soon as possible. Accident report forms are available from the BSO or the Human Resources department.
5. Following an exposure incident each employee receives a confidential medical evaluation and follow-up. The medical evaluation should include documentation of the route(s) of exposure and the circumstances under which the exposure occurred. The medical evaluation should also include identification and documentation of the source individual, unless IDEC can establish that identification is not possible or prohibited by state or local law. The source individual is defined as any person, living or dead, whose blood or other potentially infectious materials may be a source of occupational hazard to the employee. In the absence of a source individual the report would identify the potentially infectious agent involved.
6. When the source of exposure is human blood, the source individual's blood is tested as soon as possible and after consent is obtained to determine HBV and HIV infectivity. If consent is not obtained, documentation that legally required consent cannot be obtained is needed. When the source individual's consent is not required by law, the source individual's blood, if available, is tested and the results documented.
7. When the source individual is already known to be infected with HBV or HIV, testing for the source individual's known HBV or HIV status is not repeated.

EMERGENCY ACTION PLAN

Exposure Incidents (continued)

8. Results of the source individual's testing are made available to the exposed employee, and the employee is informed of applicable laws and regulations concerning disclosure of the identity and infectious status of the source individual.
9. After consent is obtained a sample of the exposed employee's blood will be collected for testing. If the employee consents to baseline blood collection but does not give consent at that time for HIV serologic testing, the sample is preserved for at least 90 days. If within 90 days of the exposure incident, the employee elects to have the baseline sample tested, the testing is done as soon as feasible.
10. Any antibody or antigen testing, counseling, illness reporting, and/or safe and effective post-exposure prophylaxis is conducted according to standard recommendations for medical practice by the evaluating physician. In the case of an exposure incident IDEC provides the evaluating physician with a copy of section 5193 of Title 8 California Code of Regulations (Bloodborne Pathogens) and a description of the affected employee's duties as they relate to the employee's occupational exposure.

EMERGENCY ACTION PLAN

Liquid Spill Clean-Up

1. Inform any employees present in the immediate area as to what has happened and contact the BSO (or alternate). If exposure has occurred, immediately begin personal decontamination.
2. Request assistance from co-workers in dealing with the spill.
3. Before starting clean-up put on protective equipment in the form of a lab coat or apron, disposable latex or rubber gloves, and eye protection. Respiratory protection may also be warranted if aerosols are known or suspected.
4. Locate cleaning supplies if they are not already available.
5. Cover the liquid with absorbent paper towels. Using a 10 % bleach solution (500 ppm available chlorine) wet the paper towels such that the entire area of the spill is covered. Add disinfectant slowly to the outer margin of spill and allow it to flow inward.
6. Allow the disinfectant to act for 20 minutes, then add additional towels to absorb all standing liquids.
7. Using a dust pan and broom, or forceps, transfer all contaminated materials into an autoclave bag held in an autoclavable tub or pan. Secure the bag by sealing it with a rubber band and autoclave it according to the SOP for the Autoclave Decontamination of Medical Waste. If sharps items were generated during the spill they are to be into a new sharps container for disposal.
8. Any tools used during clean-up are to be disposed of as medical waste unless they can be autoclaved and re-used.
9. In accordance with the instructions printed on the container use Vespore or Vesphene II to clean the spill area. Allow the cleaning agent to remain in contact with the spill area for 20 minutes. Soak up residual liquids with paper towels and place them into an autoclave bag held in an autoclavable tub or pan. Secure the bag by sealing it with a rubber band and autoclave it according to the SOP for the Autoclave Decontamination of Medical Waste.
10. Remove and discard protective clothing.
11. Inform the BSO (or alternate) that clean-up is complete.
12. Obtain and fill out a BioSafety Incident Report Form. Forward the completed form to the BSO within 24 hours.

EMERGENCY ACTION PLAN

Solid Spill Clean-Up

1. Inform any employees present in the immediate area as to what has happened.
2. Locate and put on protective equipment in the form of a lab coat or apron, disposable latex or rubber gloves, and eye protection.
3. Locate cleaning supplies if they are not already available.
4. Using a dust pan and broom, or forceps, transfer all contaminated materials into an autoclave bag. Secure the bag by sealing it with a rubber band and autoclave it according to the SOP for the Autoclave Decontamination of Medical Waste. If sharps items were generated during the spill they are to be placed into a new sharps container for disposal.
5. Any tools used during clean-up are to be disposed of as medical waste unless they can be autoclaved and re-used.
6. In accordance with the instructions printed on the container use Vespore or Vesphene II to clean the spill area. Allow the cleaning agent to remain in contact with the spill area for 20 minutes. Soak up residual liquids with paper towels and place them into an autoclave bag held in an autoclavable tub or pan. Secure the bag by sealing it with a rubber band and autoclave it according to the SOP for the Autoclave Decontamination of Medical Waste.
7. Remove and discard protective clothing.
8. Obtain and fill out a BioSafety Incident Report Form. Forward the completed form to the BSO within 24 hours.

EMERGENCY ACTION PLAN

Fire Emergencies

1. If an employee discovers a fire in the autoclave area, the employee should determine if the fire can be contained by use of a portable fire extinguisher.
2. If they are not sure, or are unable to contain the fire, they should go to the closest pull station and activate the alarm.
3. Partially destroyed waste items are assumed to be contaminated and are to be treated according to the SOP for the Autoclave Decontamination of Medical Waste.

EMERGENCY ACTION PLAN

Earthquake

1. Following an earthquake the BSO will assist in determining if the autoclave is safe to use.
2. If the autoclave will be out of service as a result of the earthquake, and waste needs to be autoclaved, PWN, or an equivalent waste hauler, will be called in to pick up and dispose of the waste. The services of PWN, or an equivalent waste hauler, will be utilized until the problem has been resolved.

EMERGENCY ACTION PLAN

Equipment Failure Prior To A Run

1. In the case of equipment failure prior to a run the operator is to notify the BSO.
2. Following notification of the BSO the operator is to attempt re-start the unit. If the autoclave fails to function the operator is to contact Maintenance to determine the cause of the failure.
3. Any waste loaded into the autoclave at the time of the loss of power is to be removed and held for disposal as medical waste. Prior to pickup the waste will be stored in rigid leakproof containers equipped with lids and the identified with the universal biohazard symbol.
4. If the autoclave will be down for less than 24 hours then waste processing will commence when the equipment is operational. If the equipment will be down for more than 24 hours then PWN, or an equivalent waste hauler will be contacted to pick up and dispose of the waste on hand at the time. The services of PWN, or an equivalent waste hauler, will be utilized until the problem has been resolved.

EMERGENCY ACTION PLAN

Equipment Failure During A Run

1. In the case of equipment failure during a run the operator is to attempt re-start the cycle and run the load again.
2. If the autoclave fails to complete a cycle again the operator is to notify the BSO.
3. If the cycle was interrupted but the chamber is still pressurized then the operator may attempt to resolve the problem by using the manual exhaust controls. No attempt to open the autoclave door should be made until the chamber pressure gauge indicates zero. If the chart recorder indicates that the load was exposed to 121 for 60 minutes then the waste is considered non-infectious and can be thrown out according to the SOP for the Autoclave Decontamination of Medical Waste.
4. If the cycle cannot be completed manually then the operator is to notify the Maintenance Department. The operator is to inform Maintenance as to what has happened and the type of load present. Utilizing personal protective equipment in the form of gloves, aprons, disposable booties, body coverings, and respiratory protection an attempt is to be made to open the door to the unit and inspect for any problems. Waste recovered from the autoclave following an incomplete run will be stored on-site for treatment or pick-up by a licensed waste hauler.
5. If the problem cannot be resolved, then IDEC's contract maintenance/service vendor will be called.
6. If the autoclave will be down for less than 24 hours processing will commence when the equipment is operational. If the equipment will be down for more than 24 hours then PWN (or an equivalent waste hauler) will be contacted to pick up and dispose of the waste on hand at the time. The services of PWN, or an equivalent waste hauler, will be utilized until the problem has been resolved.
7. Prior to pickup the waste will be stored in rigid leakproof containers equipped with lids and the identified with the universal biohazard symbol.

EMERGENCY ACTION PLAN

Waste Inadvertently Sent To Disposal Site Without Treatment

1. If waste is inadvertently sent to the disposal site prior to treatment then the licensed hauler will be contacted.
2. The BSO, or alternate, is to go to the disposal site and identify the waste, if possible.
3. PWN, or an equivalent licensed waste hauler, will be contacted to pick up the waste at the landfill and transport it for disposal.

EMERGENCY ACTION PLAN

Power Outages

1. In the case of equipment failure due to power outage the operator is to notify the BSO.
2. Following notification of the BSO the operator is to contact Maintenance to determine the reason behind the loss of power. If the loss of power is limited to the autoclave then the operator is to have Maintenance inspect the unit.
3. Power interruptions may be unexpected or the result of a planned, temporary shut-down. If power will be down for less than 24 hours then waste treatment will commence when the power has been restored.
4. If the equipment will be down for more than 24 hours then PWN (or an equivalent licensed waste hauler) will be contacted to pick-up and dispose of the waste on-hand at the time. The services of PWN (or an equivalent licensed waste hauler) will be utilized until the situation has been resolved.

TRAINING PLAN

1. The employees authorized to operate the autoclave are given instruction regarding medical waste collection practices and the contents of the medical waste management plan.
2. This instruction covers the use of appropriate personal protective equipment (PPE) during routine operation of the equipment and emergency situations. (A training syllabus is attached.)
3. Operation of the autoclave itself will be explained in detail using the Standard Operating Procedure. The supervisor will ensure that the operator has read and fully understands the SOP prior to using the equipment.
4. Employees using the autoclave are fully trained in safety practices employed during routine operation of the equipment and emergency situations.
5. Annual refresher training on the operation of the autoclave and the contents of the Medical Waste Management Plan are provided those members of the EH&S Department responsible for biowaste management.

CLOSURE PLAN

1. If the facility were to discontinue usage of the autoclave, medical waste would be disposed of by a licensed medical waste management contractor.
2. If the facility were to close, IDEC will contract PWN (or equivalent licensed waste hauler) to assist in the decontamination of the autoclave area and remove any waste that has not been autoclaved. The anticipated cost for shutdown and removal of the treatment unit is expected to be less than \$5000.

E. EFFECTIVE DATE OF CLOSURE ASSURANCE MECHANISM: N/A

F. ORIGINAL DOCUMENT(S) ATTACHED:

- Attach the original document(s) used to satisfy the closure financial assurance requirements.
- Attach the detailed closure cost estimate that resulted in the cost shown in item A (see attached model.)

EXEMPTION FROM FINANCIAL ASSURANCE REQUIREMENTS:

This section is for an owner or operator of TTU, owner or operator of FTU, or a generator operating pursuant to a grant of Conditional Authorization who is eligible or ineligible for an exemption from financial assurance requirements pursuant to Title 22, CCR section 67450.13(e). If you are not certain as to whether you qualify for an exemption from financial assurance, please see instruction for this section.

Please check the appropriate box:

1. As a TTU owner or operator or FTU owner or operator, I have not operated more than thirty days in a calendar year.

Note: If box (1) is marked, your treatment unit(s) must be operating under PBR to be eligible for the 30 day exemption. Generators operating under Conditional Authorization are not eligible for this exemption. Be sure to sign the owner or operator certification below.

2. I am required to provide a mechanism and it is attached to this form.

Note: If box (2) is marked, you must complete all sections of this form (DTSC 1232 (8/96)). Be sure to sign the owner or operator certification below.

3. I am not required to provide a mechanism. Specify why: Closure costs estimated to be less than \$10,000.

Note: If box (3) is marked, please sign the owner or operator certification below and attach your self-certification letter to this form.

OWNER OR OPERATOR CERTIFICATION:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations."

IDEC Pharmaceutical

PROJECT: IDEC PHARMACEUTICAL

Dear Mr. Thompson;

Thank you for the opportunity to provide a bid for the above project.

Our bid includes the following work:

Triple rinse, remove, transport and dispose of one 500 gallon above ground storage tank.

TOTAL BID AMOUNT **\$2,000.00**

Notes:

- 1) If underground utilities or hazards interfere in the proposed excavation areas or are damaged during excavation, the cost of removal, repair or relocation of same shall be borne by the owner.

Exclusions:

- 1) Permits, bonds and fees.
- 2) Excavation, transportation and/or disposal of contaminated material.

If you have any questions or require any additional information, please contact our office at (760) 631-0342.

Sincerely,

Tom Perrault

SUBJECT: COST ESTIMATE FOR NEUTRALIZATION TANK REMOVAL

Mr. Thompson,

We are pleased to present our cost estimate for the services you requested in your letter dated January 27, 1998 to remove one 500 gallon aboveground tank used for waste neutralization. This cost estimate is in accordance with your letter and the following scope of services.

SCOPE OF SERVICES

Empty contents and clean 500 gallon neutralization tank.
(Contents and rinsate are assumed to be directly discharged to sewer with no off-site disposal.)
Disconnect associated components and alarms connected to the tank and leave on site for client disposition.
Disconnect associated piping from tank prior to removal.
Remove and dispose 500 gallon FRP tank off-site.
Install new piping to connect influent to effluent line in place of removed tank.

COST ESTIMATE FIXED PRICE: \$ 5,600.00

This estimate is for the services requested and discussed herein. Anything not specifically discussed is excluded. To my knowledge, no construction related Permits are required. However, your Industrial Waste Water Discharge Permit may need to be amended to reflect the tank removal from the process. This would be IDEC's responsibility.

Please contact me if further information is needed. Thank you for this opportunity to be of service, we look forward to assisting you with this project.

Sincerely,

Fred North

Department of
 Toxic Substances
 Control

245 West Broadway,
 Suite 350
 Long Beach, CA
 90802-4444

Dear Ms. Hull:

This is to advise you that the Department of Toxic Substances Control (DTSC) has not received documentation showing that you are in compliance with financial assurance requirements associated with your Permit-by-Rule (PBR) or Conditional Authorization (CA) unit(s).

The California Health and Safety Code (HSC), sections 25245.4(a)(1)(B) and 25245.4(b)(1)(B), require all active PBR and CA businesses to provide financial assurance for closure by October 1, 1996. Title 22, California Code of Regulations (Cal. Code Regs.), section 67450.13(a)(8), requires businesses to submit documentation showing compliance with these financial assurance requirements to the DTSC and the Certified Unified Program Agency (CUPA) with jurisdiction for your business, by January 1, 1997. This documentation consists of a Certification of Financial Assurance for Permit by Rule and Conditional Authorization Operations (DTSC Form 1232) with the appropriate financial documents.

On September 11, 1996, a request to submit the required Certification was initially mailed out by DTSC to all active PBR and CA businesses. As of December 18, 1997, DTSC had not received your facility's Certification for financial assurance for closure (DTSC Form 1232).

Failure to provide DTSC with those documents is a violation of title 22, Cal. Code Regs., section 67450.13(a)(8).

To correct this violation you are required to submit to this office within sixty (60) days of receipt of this letter:

1. A written cost estimate itemizing each closure activity;
2. The financial documents to satisfy the requirements of financial assurance for closure costs. The financial documents must be in the form of a trust fund, surety bond, letter of credit, closure insurance, financial test/corporate guarantee, or alternative mechanism; and

January 5, 1998
Page 2

3. A Certification of Financial Assurance for PBR and CA Operations
(DTSC Form 1232).

If you meet the conditions of Title 22, Cal. Code Regs., section 67450.13(d) [closure cost estimate does not exceed \$10,000], or (e) [facility's PBR unit operated no more than 30 days in any calendar year], you are not required to submit financial documents, but only the DTSC Form 1232 and the closure cost estimate. The required form is enclosed for your convenience.

If DTSC does not receive the appropriate documentation of your compliance within the specified time frame, you will be issued a Report of Violation. A Report of Violation is the first step in DTSC's formal enforcement process. Failure to comply with the financial assurance requirement could subject your facility to formal enforcement action with penalties up to \$25,000 per day.

If you have any questions regarding the financial assurance for closure requirements, their applicability to your treatment unit(s) or the content of this letter, please contact Mr. Nabil H. Yacoub at (562) 590-5542.

Sincerely,

for

Stephen W. Lavinger, Chief
State Regulatory Programs Branch
Southern California Region

SERVICE MANUAL

*ARS ENTERPRISES GENERAL PURPOSE STEAM
STERILIZER, DOUBLE DOOR MODEL 812132*

Prepared for:

*SCRIPPS CLINIC & RESEARCH FACILITY
10666 N. TORREY PINES RD.
LA JOLLA, CALIFORNIA*

S/N 0496

ROUTINE OPERATING INSTRUCTIONS

ARS GENERAL PURPOSE STEAM STERILIZER

-
- THE ARS STEAM STERILIZER IS DESIGNED TO PREFORM ALL PHASES OF STEAM STERILIZATION USING SATURATED STEAM IN THE TEMPERATURE RANGE FROM 230 F TO 270 F.
-

TO OPERATE:

1. PUSH THE SELECTOR SWITCH LOCATED ON THE CONTROL PANEL TO EITHER "LIQUIDS" OR "DRY GOODS WITH OR WITHOUT DRY TIME."

THE ORANGE "ON" INDICATOR BULB WILL LIGHT UP.
2. REPLACE RECORDING CHART EACH MORNING WITH BRISTOL DYNAMASTER OBTAINABLE FROM ARS ENTERPRISES, PART #11133.
3. SET DESIRED STERILIZING TEMPERATURE. TO SET THIS TEMPERATURE, OPEN THE DOOR ON THE TEMPERATURE INDICATING RECORDER, CHANGE THE POSITION OF THE POINTER AT THE TOP OF THE RECORDER.
4. SET "STERILIZING TIMER" TO DESIRED STERILIZING TIME.
5. IF DRYING TIME IS TO BE USED, SET "DRY TIMER" TO DESIRED TIME. (DRY TIMER DOES NOT FUNCTION ON LIQUIDS CYCLE.)
6. LOAD STERILIZER, MAKING SURE ITEMS DO NOT TOUCH VESSEL WALLS, OR DOOR.
7. CLOSE THE DOORS AND LOCK BY ROTATING THE CENTER HUB. CLOSE THE DOORS SNUG, BUT NOT OVER TIGHTENED. THE DOOR SWITCH WILL ENGAGE, PUSH THE START BUTTON.
8. THE STERILIZING CYCLE WILL PROGRESS AS FOLLOWS:
 - A. STEAM WILL ENTER THE CHAMBER, RAISING THE TEMPERATURE AND INCREASING THE PRESSURE UNTIL THE PRE-SET TEMPERATURE IS OBTAINED. (THE GREEN POINTER WILL REACH THE ORANGE POINTER).

WHEN THE PRE-SET TEMPERATURE IS OBTAINED, THE ORANGE "STERILIZING" LIGHT WILL COME ON AS WELL AS THE RED LIGHT ON THE "STERILIZING TIMER:. THESE LIGHTS WILL STAY ON UNTIL THE TIMER REACHES ZERO.

IF THE CHAMBER TEMPERATURE DROPS BELOW THE SET TEMPERATURE, THE TIMER WILL AUTOMATICALLY RETURN TO THE ORIGINAL TIME SETTING. THE TIMER WILL REACH ZERO ONLY AFTER CONTINUOUS EXPOSURE AT OR ABOVE THE PRE-SET TEMPERATURE.

- B. WHEN THE STERILIZING TIME PERIOD EXPIRES, THE ORANGE "COOLING" LIGHT WILL COME ON, AND THE CHAMBER WILL VENT RAPIDLY. FOR A "LIQUIDS" CYCLE, THE CHAMBER IS VENTED SLOWLY TO PREVENT BOILING OF THE LIQUIDS. IF DRY GOODS WITH DRY TIME IS SELECTED, THE UNIT WILL DRAW AN AIR FLOW UNTIL DRY TIMER REACHES ZERO. IF DRY GOODS WITHOUT DRY TIME IS SELECTED, THE UNIT WILL AUTOMATICALLY DRAW AN AIR FLOW FOR TWO (2) MINUTES. WHEN THE CHAMBER PRESSURE REACHES ZERO, THE ORANGE "CYCLE COMPLETE" LIGHT WILL COME ON AND THE BUZZER WILL SOUND INDICATING THE CYCLE IS COMPLETE.
- C. WHEN THE DOOR IS OPENED THE "COMPLETE" LIGHT WILL GO OUT.

TIME AND TEMPERATURE CHART

TEMPERATURE		PRESSURE	MINIMUM EXPOSURE TIME VARIOUS LOADS			
C.	F.	PSIG	INSTRUMENTS	COTTON	RUBBER	SOLUTIONS
121	250	15	30 MIN	30 MIN	30 MIN	*30 MIN
** 132	270	27	3 MIN	*	*	*

CAUTION MUST BE FOLLOWED WHEN OPENING AND UNLOADING THE CHAMBER, WHEN PROCESSING LIQUIDS. THE CONTENTS WILL BE HOT AND CLOSE TO BOILING.

* NOT RECOMMENDED

** FOR HIGH SPEED UNITS ONLY

MAINTENANCE INSTRUCTIONS

1. WIPE OFF THE DOOR GASKET AND HEAD RING EACH DAY.
2. CLEAN THE DRAIN SCREEN, LOCATED UNDER THE BOTTOM TRAY, OR IN THE CHAMBER DRAIN, ONCE A WEEK.
3. INSPECT THE UNIT FOR LEAKS ONCE A WEEK AND REPAIR AS SOON AS POSSIBLE.
4. HAVE THE COMPLETE STERILIZER SERVICED AND CALIBRATED EVERY 180 DAYS BY A TRAINED STERILIZER MECHANIC.
5. REPLACE RECORDING CHART EACH DAY

MAINTENANCE

Doors and chamber

Valves and traps

Control panel

(Maintenance should only be performed by trained personnel familiar with autoclave maintenance).

1. Doors

- A. The door should be lubricated every 90 days with a high temperature lubricate. STP or lubriplate works well. Lubricate the threads on the center shaft.*
- B. Inspect the hub of the door for any water. If the door lock bellows leaks, water will leak through the center shaft and out of the hub. If this occurs, repair as soon as possible.*
- C. Inspect the door gasket and replace as needed.*
- D. Check the door locks to make sure the doors will not open under pressure. With not more than 5# psi in the chamber the doors should not open.*

2. Chamber

- A. The chamber requires no maintenance, only cleaning. The chamber is made of 316L stainless steel. Clean as needed with a scotch pad and water.*

3. Valves

- A. The safety valves should be checked every 90 days and the chamber & jacket safety valves should be replaced once a year with the exact same valve specs.*
- B. The traps should be inspected every 90 days and replaced as needed.*
- C. The control valves should be inspected every 90 days and replaced or rebuilt as needed.*
- D. The filters should be inspected and replaced as needed. The sterilizable air in filter requires replacing every 50 hours of exposure. The hour meter on the rear of the control panel is for this filter.*

4. Control panel

- A. The control panel should be kept clean and dry.*
- B. Replace the light bulbs as needed.*

5. General

- A. Repair all leaks as soon as possible.*

A WORD FROM **AMSCO...**

Your Medallion Series sterilizer has been tailored by AMSCO for you, the user.

"Human-Engineered" operating controls... greater functional flexibility... dependable performance capabilities... design for easy maintenance, are but a few advanced features of this equipment available to you for simplicity of operation and improved productivity.

These precision-engineered features... combined with outstanding craftsmanship, symbolize over 75 years of progress in our continuing and dedicated purpose... to provide better equipment and techniques for sterilization.

You, the owner, will want to enjoy the most benefits from this equipment which has been designed to give many years of faithful, economical service. The information in this Manual can be of assistance to you and your maintenance engineering staff in making this an assured reality.

Routine "preventive maintenance" inspections, adjustments and replacement of worn parts will prevent untimely equipment malfunctions which often cause inconvenient or costly interruptions of production schedules.

AMSCO maintains a nationwide service organization staffed with factory-trained, well-equipped technicians who can provide expert "preventive maintenance" as well as corrective maintenance services for you, promptly and efficiently. Ask your AMSCO representative for full details about our Preventive Maintenance Agreement (PMA) program.

Thank you for choosing this fine AMSCO product... you may be confident of our continued interest in your satisfaction with it.

BEFORE INSTALLING THIS EQUIPMENT

SET-IN-PLACE INSTRUCTIONS AND INSTALLATION DRAWINGS Complete instructions for uncrating this equipment and setting it in place, as well as a drawing showing all of the utility service and space requirements, have been previously furnished. If you cannot find these ... write, wire or telephone our factory giving the serial, unit and model numbers of the equipment ... replacement copies will be sent to you promptly.

CLEARANCE The clearance space shown on the drawing is necessary for easy installation, good operation and maintenance of the equipment.

UTILITY SERVICE LINES Shutoff valves should be installed in steam and water supply lines at a point near the equipment ... so that the equipment can be serviced without shutting off the building supply.

Also, disconnect switches should be installed in electric supply lines near the sterilizer.

If the equipment is installed next to other equipment, shutoff valves and disconnect switches should be so placed that service can be shut off to one piece of equipment at a time.

IMPORTANT

INFORM YOUR BUILDING ENGINEER THAT

- The building steam supply line must be well-drained so as to provide condensate-free (dry) steam to the sterilizer.
- The steam return system must permit gravity flow of steam and condensate from sterilizer into an **ADEQUATELY VENTED** receptacle.

IF YOUR STERILIZER DOES NOT HAVE A CONDENSER

- Riser from sterilizer exhaust fitting to header or building vent stack **MUST NOT** be less than 45° to the horizontal.

INSTALLATION

IF YOUR MODEL HAS STAINLESS-STEEL PANELS - LEAVE ON THE PROTECTIVE PAPER

1. Remove wrapped contents from chamber. Carefully unwrap packaged parts.
2. Roll sterilizer into its permanent mounting location.
3. Lower floor flanges to position sterilizer at height specified on the installation print.
4. Level sterilizer (horizontally) by adjusting floor flanges; use a spirit level.
NOTE: The sterilizer has a sloping chamber which will allow condensate to flow rapidly into the drain line.
5. Place funnel in the building waste line outlet (stubbing).
6. Connect exhaust opening to the building exhaust system or vent stack. (This connection is not required if your sterilizer is equipped with a Condenser.)
7. Connect the Condenser, if furnished, to the building cold water supply line ... 20-50 psig at the sterilizer.
8. Blow out the building steam supply line to remove chips, scale, etc.

9. Connect
50-80

10. Connect

solution) to

TIVE

tion

(This

e

9. Connect sterilizer steam supply fitting to the building steam supply line ... 50-80 psig.
10. Connect sterilizer steam return fitting to the building steam return line.
11. Connect building electric supply line to the junction box. The electrical requirements ... shown on the cover of the box ... are 120 volt, 60 cycle. Some units for export are wired for 50-cycle electric service - see tag on junction box.
12. If your sterilizer is a ...
 - CABINET-ENCLOSED MODEL: Install the front and side panels.
 - MODEL FOR RECESSING: Lower front kickplate to the floor and tighten the retaining screws.

REMOVE ALL PROTECTIVE PAPER FROM STAINLESS-STEEL CABINET PANELS-Clean panels with suitable solvent (such as Stoddard solution) to remove any adhesive.

STERILIZER	SINGLE DOOR	DOUBLE DOOR
24 x 36 x 36"	3700	
24 x 36 x 48"	4200	4600
24 x 36 x 60"	4800	5200

BEFORE OPERATING THIS EQUIPMENT

at the beginning of the day ...

FIRST. Install a new paper chart on the INDICATOR-RECORDER ... see instructions on page 25.

The "READY" light will come on.

SECOND. Turn OPERATING VALVE WHEEL to OFF. Always turn valve wheel to the right.

FOURTH. Open STEAM SUPPLY valve - this will allow steam from the supply line to enter sterilizer jacket. The JACKET PRESSURE GAUGE should show a pressure of 18 or 30 psig, depending upon the setting of the HI-LO valve.

FIFTH. If your sterilizer has a Condenser, be sure that CONDENSER WATER valve is closed.

THIRD. Press POWER SWITCH; FUSE-INDICATING LIGHT will glow, meaning that electric power is flowing through the control unit.

Steam pressure should be maintained in the jacket throughout the day. Then it will not be necessary to "heat" the jacket before each processing cycle.

at the end of the day ... shut off the POWER SWITCH and STEAM SUPPLY valve. Leave the sterilizer door slightly open when the equipment is not in use ... this will extend the life of the gasket.

DOOR OPERATING INSTRUCTIONS

MANUALLY OPERATED DOOR

To open - turn **DOOR WHEEL** to left as far as it will go.

Should the door not unlock, turn **DOOR WHEEL** slightly clockwise, press the center **BLUE BUTTON**, and then turn the **DOOR WHEEL** counterclockwise to open.

To close: - (1) Turn **DOOR WHEEL** to extreme left to bring the ends of the **HOLDING ARMS** inward so they will not strike the door frame when door is closed. (2) Close **DOOR**. (3) Turn **DOOR WHEEL** to right as far as it will go (by hand) without applying undue pressure.

IN THE EVENT OF ELECTRIC POWER FAILURE ... SHIFT FROM POWER TO MANUAL OPERATION. Pull SHIFT HANDLE to the LEFT. If DOOR WHEEL does not engage, turn it slowly while maintaining a slight pressure to the left on the SHIFT HANDLE.

POWER-OPERATED DOOR

Pressing the **LOCK** button will close and lock the door pressure-tight.

Pressing the **CLOSE** button will close ... but not lock the door.

Pressing the **OPEN** button will unlock and fully open the door.

Pressing the **UNLOCK** button will unlock the door and position it slightly ajar.

TO RETURN TO POWER OPERATION FROM MANUAL WHEN SERVICE IS RESTORED ... With the door closed, press the LOCK button. You will hear the locking motor start. Then position the SHIFT HANDLE to the RIGHT ... this will cause the door HOLDING ARMS to engage.

STERILIZING WRAPPED AND UNWRAPPED GOODS

AUTOMATIC OPERATION

Before starting cycle . . . BE SURE TO FOLLOW INSTRUCTIONS ON PAGES 6 AND 7

1. SET

Turn HI-LO valve to LO for 250 F (121 C) Sterilizing cycle; HI for 270 F (132 C) cycle - see table on page 9.

Set YELLOW-POINTER on INDICATOR-RECORDER to the desired temperature - see table on page 9.

Set EXPOSURE TIMER for desired exposure period - see table on page 9.

2. LOAD

LOAD STERILIZER WITH GOODS

Close door . . . see door operating instructions on page 7.

3. START

Press the WRAPPED button if load consists of goods such as Surgical Packs . . . Dressings . . . Linens . . . etc.

use → Press the UNWRAPPED button if load consists of articles such as Utensils . . . Glassware . . . etc.

If you press the wrong selector button - don't worry - just press and release the RESET button and then make the correct selection.

WHAT HAPPENS?

The READY light will go out and the HEAT light will come on and steam will be admitted to the chamber. When chamber temperature reaches the set point, the STERILIZE light will come on. The COLORED INDICATORS will then light up in sequence until the cycle is completed.

Finally, the STERILE light will come on and a buzzer will sound, indicating that the cycle is finished. The buzzer will continue for approximately 2 minutes or until you open the door.

This will complete the automatic cycle and you may then remove the goods from the chamber.

NOTE: The Cyclomatic-M® Control is manually operable to select, extend, or bypass any phase of a processing cycle ... follow instructions on pages 10 and 11.

IMPORTANT

If electric service fails WHILE A CYCLE IS IN PROGRESS, turn OPERATING VALVE WHEEL and POWER SWITCH to OFF and initiate a new (manual) cycle ... follow instructions on pages 10 and 11.

STERILIZING WRAPPED AND UNWRAPPED GOODS

MANUAL OPERATION

Before starting cycle . . . BE SURE TO FOLLOW INSTRUCTIONS ON PAGES 6 AND 7

The Cyclomatic-M® may be manually operated to select, extend, or bypass any processing cycle phase as may be required for special techniques ordered by your supervisor.

1. Turn OPERATING VALVE WHEEL to OFF. Press MANUAL button.

2. Turn HI-LO valve to LO for 250 F (121 C) sterilizing cycle . . . HI for 270 F (132 C) cycle - see table on page 11.

3. Load sterilizer with goods . . . see door operating instructions on page 7.

If your sterilizer has a Condenser, open CONDENSER WATER valve.

UNDER UNIT

4. Turn OPERATING VALVE WHEEL to STER.

Wait until INDICATOR-RECORDER shows the temperature you selected for the cycle . . . 250 or 270 F (121 or 132 C).

THEN

Time the desired sterilizing exposure period by a clock or other timing device - see table on page 11.

5. At the periodic wheel

FAST EX load consists of wrapped goods

DRY - if goods consists of wrapped goods.

After drying when CHAMBER PRESSURE reads ZERO

This compartment goods may be removed from chamber.

Sutures, silk, cotton or nylon, wrapped in paper or muslin	30	15

5. At the end of the timed exposure period, turn OPERATING VALVE WHEEL to ...

FAST EXHAUST - if load consists of un-wrapped goods. ➔ Leave valve wheel in this position until the **CHAMBER PRESSURE GAUGE** reads **ZERO**.

DRY - if load consists of wrapped goods. ➔ Leave valve wheel in this position for about 15 minutes.

After drying or when **CHAMBER PRESSURE GAUGE** reads **ZERO** ... ➔ Turn OPERATING VALVE WHEEL to **OFF**.

This completes the manual cycle and the goods may now be removed from the chamber.

6. If your sterilizer has a Condenser ... close CONDENSER WATER valve to conserve water.

STERILIZING LIQUIDS

AUTOMATIC OPERATION

Before starting cycle . . . BE SURE TO FOLLOW INSTRUCTIONS ON PAGES 6 AND 7

1. SET

Set YELLOW POINTER on INDICATOR-RECORDER at 250 F (121 C).

Turn HI-LO valve to LO.

Set EXPOSURE TIMER for desired exposure period - see table on page 13.

2. LOAD

LOAD STERILIZER WITH GOODS

Close door . . . see door operating instructions on page 7.

3. START

Press LIQUIDS button to start the cycle.

If you press the wrong selector button - don't worry - just press and release the RESET button and then make the correct selection.

WHAT HAPPENS?

The READY light will go out and the HEAT light will come on and steam will be admitted to the chamber. The COLOR-ORED INDICATORS will then light up in sequence until the cycle is completed.

If electric service fails **WHILE A CYCLE IS IN PROGRESS**, turn **OPERATING VALVE WHEEL** and **POWER SWITCH** to OFF and initiate a new (manual) cycle ... follow instructions on pages 14 and 15.

STERILIZING LIQUIDS

MANUAL OPERATION

Before starting cycle . . . BE SURE TO FOLLOW INSTRUCTIONS ON PAGES 6 AND 7

The Cyclomatic-M® may be manually operated to select, extend, or bypass any processing cycle phase as may be required for special techniques ordered by your supervisor.

1. Turn OPERATING VALVE WHEEL to OFF. Press MANUAL button.

If your sterilizer has a Condenser, open CONDENSER WATER valve.

2. Turn HI-LO valve to LO.

3. Load sterilizer with goods . . . see door operating instructions on page 7.

4. Turn OPERATING VALVE WHEEL to STER.

Wait until INDICATOR-RECORDER shows . . . 250 F (121 C).

THEN

5. Time the exposure period by a clock or other timing device - see table on page 15.

2000	40

- Open DOOR only about 1/2 inch ... and wait 5 minutes before removing load.

WARNING: Sudden full opening of door following a sterilization cycle could cause liquids to boil over or bottles to burst.

- If your sterilizer has a Condenser ... close CONDENSER WATER valve to conserve water.

PLEASE - repairs and adjustments, other than those described in this Manual, should be attempted ONLY by experienced mechanics fully acquainted with this equipment. Use of inexperienced, unqualified persons to work on the equipment or the installation of unauthorized component parts could invalidate the warranty or result in important, costly damage!

NO
du

DAILY

NOTE: Allow the sterilizer and loading equipment to cool to room temperature before performing the following:

REMOVE the chamber drain strainer. Clean out lint and sediment. (FLUSH DRAIN AS NECESSARY - SEE PAGE 17.)

WASH inside of the sterilizing chamber and the loading equipment. Use a mild detergent solution such as Calgonite® (Calgon Corp.).

CAUTION - never use abrasive cleaning compounds, wire brush or steel wool.

RINSE inside of sterilizing chamber with tap water.

DRY inside of sterilizing chamber with lint-free cloth.

REPLACE the strainer.

Wash with mild detergent solution such as Calgonite.

MAINTENANCE

AS NECESSARY

NOTE - If the drain line becomes clogged or spillage has occurred during a liquids processing cycle, proceed as follows:

REMOVE the chamber drain strainer.

RINSE drain with hot solution of tri-sodium phosphate (2 tablespoons of tri-sodium phosphate to one quart of water).

FLUSH drain with one quart of hot tap water. If the water backs up into the chamber, close the door (refer to instructions on page 7). Then turn OPERATING VALVE WHEEL to STER. When the chamber pressure gauge indicates 10 psig, advance the OPERATING VALVE WHEEL to FAST EXHAUST. When the chamber pressure gauge indicates zero, turn OPERATING VALVE WHEEL to OFF and open the door.

REPLACE chamber drain strainer.

CYCLOMATIC-M CONTROL

Watch the sterilizer while it goes through each phase of a complete automatic cycle to be sure that all lights are working. If any of the lights are out, refer to page 23.

preventive . . . MAINTENANCE

(CONTINUED)

MONTHLY

Place a few drops of heavy machine oil (SAE 20 or 30 motor oil will do) on hinge pin. Work oil into hinge by opening and closing the door several times.

QUARTERLY

Expose and grease the door post bearing as follows . . .

- Unscrew the BLUE BUTTON (1) in the center of the DOOR HANDWHEEL (4).
- Remove the three SOCKET HEAD SCREWS (2).
- Remove the COVER PLATE (3).
- Remove the DOOR HANDWHEEL (4).
- Remove the four SOCKET HEAD SCREWS (5).
- Remove the CLUTCH LOCK CAP (6) — and SHIMS (7) [if power door].
- Inject "Jet-Lube AP-1W" (Mfr.: Jet-Lube Inc., Burbank, California) or other high-temperature white grease of equal quality into the cavity between the nuts and screw shaft.
- Reassemble in reverse order of above.

GUIDE TO MINOR MAINTENANCE

The piping schematic and table on pages 20 and 21 show certain items of minor maintenance commonly required from time to time on equipment of this type. Opposite each item you will find the probable cause and how to correct it.

Pages 22 through 30 describe (or contain instructions on how to replace) certain minor parts that may become worn or unserviceable through normal use of the equipment.

If something happens to the equipment that is not covered in the table, please call your local AMSCO representative. He will arrange promptly to have your equipment placed in proper working order by a factory-trained repairman.

Never permit inexperienced, unqualified persons to attempt such repairs.

NOTE: A wiring schematic was furnished with this sterilizer. Should yours be missing, write us for a replacement copy. Be sure to include in your request the model, unit and serial numbers of the equipment.

PIPING SCHEMATIC

- A Hi-Lo Valve
- B Steam Supply Valve
- C Return Trap
- D Strainer (Steam Supply To Jacket)
- F Chamber Drain Strainer
- G Chamber Drain Trap
- H Condenser Water Valve
- I Cold Water Strainer
- J Condenser Flow Regulator
- K Safety Valve
- L Jacket (Lower Part)
- N Cyclomatic-M® Reference
- O Vacuum Drier

Illustrations of parts and ordering information will be found on pages 22 through 30.

description

1. Steam pressure in jacket does not rise to that desired
2. Chamber temperature won't rise to setting on Indicator-Recorder
3. When correctly set, the Hi-Lo valve yields too much or too little steam pressure in the jacket
4. Cyclomatic-M® "Ready" light does not come on
5. Excessive steam in the area of the sterilizer while it is in operation
6. Steam pressure in the chamber will not rise during the "sterilize" phase of the cycle
7. Steam enters the chamber when sterilizer door is open
8. Pools of water on the floor of the chamber after sterilization cycle is completed
9. Goods are wet following "fabrics" cycle; or there is excessive steam in the chamber upon opening the sterilizer door
10. Loads consisting of liquids are exhausted too quickly ... causing the bottles or flasks in the load to "boil over" and bottle stoppers to "blow"
11. Steam escapes through Safety valve
12. Steam leaks around the sterilizer door during the "sterilize" phase of the cycle

PILOT LAMP REPLACEMENT. The main control panel is hinged along the bottom edge and held by a screw in the center of the top edge. To replace a burned-out pilot lamp, remove the screw and pull the panel forward until it is held by the support chain. Remove pilot lamp shield by pushing in on shield, turning left 1/8 turn, and pulling straight out. Pilot lamp is now accessible and may be unscrewed from socket.

FUSE REPLACEMENT. A pilot lamp in the fuse-holder cap will glow when the power switch is turned on. Failure of this lamp to glow indicates a burned-out fuse.

To replace, push in on fuse holder and turn 1/4 turn to the LEFT to release. Fuse is mounted in socket of fuse-holder cap and can be removed by pulling out. Use care when replacing fuse holder - do not force when inserting.

REPEATED FUSE BURNOUTS INDICATE
A SHORT CIRCUIT OR OVERLOAD, AND
THE TROUBLE SHOULD BE LOCATED
AND CORRECTED BY A FULLY TRAINED
SERVICEMAN.

INDICATOR-RECORDER

NOTE: Access to the internal components, including plastic ink bottle (or bottles), is gained in the following manner: unscrew the chart hub, lift the pen-retention spring and remove the chart. Loosen the knurled screw which is at the lower right corner of the chart backup plate. Pull the bottom of the plate outward to open. The following steps are applicable to each inking system if your indicator-recorder is a multiple-pen model.

step C

CLEANING

The inking system should be cleaned periodically. This should be done as follows:

1. Fill the ink bottle with warm tap water.
2. Replace the cap and tighten firmly.
3. Place the index finger over the vent hole in the cap and pull the bottom of the plate outward to open.

4. Be sure to clear the tubing while the pen is in operation. Release the pressure on the bottle as the ink flows from the pen tip.

step D

CHANGING

1. Unscrew the pen-retention spring from the pen lifter and screw it into the chart hub.
2. With the pen lifter in place, remove the chart and place it over the pen.
3. Turn the pen-retention spring to the proper position.
4. Replace the chart and secure it with the pen-retention spring.

recording

°F
°C

step A

PLACING THE INSTRUMENT IN OPERATION FOR THE FIRST TIME

1. Remove cap (with capillary tubing attached) and fill bottle with ink to the line on bottle.
2. Replace cap and tighten firmly.
3. Place finger over vent hole in cap.
4. Squeeze bottle between thumb and middle finger until ink flows through tubing and a few drops flow freely from tip of pen.

REMOVE FINGER FROM VENT HOLE BEFORE RELAXING PRESSURE ON BOTTLE. (DO NOT RELEASE SUDDENLY as the ink could be drawn back from pen tip.)

The pen is now ready for operation.

step B

FILLING THE BOTTLE WITH INK

1. Before removing cap from ink bottle, squeeze the bottle between the thumb and middle finger while the vent hole in the cap is open, then close the vent hole with the index finger and release pressure on bottle. The ink in the tubing will then be drawn into the bottle. This will prevent dripping when the cap assembly is removed and will also prevent air bubbles from forming when ink is forced into the tubing.

2. Repeat Step A.

ink supply (2)

(red)

P-89491-91

repair parts . . recording instrument

step C

CLEANING THE INKING SYSTEM

The inking system should be cleaned periodically with warm water. This may be done as follows:

1. Fill the empty plastic ink bottle with warm tap water.
2. Replace cap and tighten firmly.
3. Place index finger over vent hole in cap and squeeze the bottle between thumb and middle finger to force the water through capillary and pen. (Place blotter under pen to absorb the water forced out.)
4. Be sure, after cleaning the capillary, to clear it of water by squeezing the bottle while the vent hole is open and then closing the vent hole and releasing the pressure on the bottle. This will draw any residue in the capillary into the bottle.

step D

CHANGING THE CHART

1. Unscrew hub cap. The cap retains a spring-loaded wire bracket which acts as a pen lifter; hold the bracket while unscrewing the cap.
2. With the hub cap and pen away from the chart, remove chart and slip a new one over the chart hub.
3. Turn chart by hand until pen rests on proper time arc.
4. Replace and tighten hub cap.

repair parts...sterilizer

how to install door gasket

1. Remove old gasket and gasket bars by removing the retaining screws.

NOTE: Gasket should be carefully examined over its entire length for variations in compression. If variations in gasket compression indicate an appreciable difference in different areas, the door is probably not properly shimmed; it should be rehung and shimmed. Contact an authorized AMSCO serviceman.
2. Clean door surface, end frame surface and gasket surface with solvent. (Such as Stoddard solution). Make certain that surfaces are free of foreign matter.
3. Run a 1/4"-28 tap through the gasket bar holes in door to clean threads.
4. Replace gasket bars. Leave bars loose enough to allow gasket to be inserted.
5. Insert gasket under gasket bars ... tightening gasket bar retaining screws just enough to hold the gasket. Don't compress the gasket to any great extent in any one area.
6. Tighten gasket bars alternately to almost snug.
7. If gasket appears firmly seated under gasket bars and is flat on the door, snug the gasket bar retaining screws.
8. After gasket has been installed, spray the sealing surfaces of the end ring with Fluorocarbon Spray (AMSCO Part No. P-752870-091; available from your local AMSCO representative) to prevent gasket from sticking.
9. If your sterilizer has a . . .
 - Power Door - Press "LOCK" button to close and tighten door.
 - Manual Door - Close and tighten door only sufficient to obtain a snug fit. Un-necessary tightening will only result in excessive gasket compression and reduced gasket life.

OPERATING INSTRUCTIONS

The information in this section will provide optimum equipment performance if followed carefully. It will not, however, compensate for failure to observe and understand the parameters of the sterilizing equipment process. Refer to Section 3 for proper Sterilization Techniques.

4.1 Before Operating The Equipment

1. Be sure that chamber drain strainer is clean and in place and that chamber interior is clean (para. 5.1).
2. Open the upper access door.
 - a. If sterilizer has manual control, make sure it is turned to OFF.
 - b. Turn STEAM and WATER valves to ON. Steam is admitted to jacket and will begin to warm chamber.
3. Open the door on the secondary control panel, and position the POWER and CONTROL switches to ON. The primary control panel lights up.
4. Install a new paper chart on the Indicator-Recorder-Controller at the beginning of each day.
5. Review paragraph 4.5, "Control Monitoring and Communication Systems," in order to identify the cause of any abnormal condition during a sterilization cycle.
6. If a double-door unit, review paragraph 4.6 to become familiar with the controls on the non-operating end.
7. If sterilizer is equipped with power door(s), review paragraph 4.8, "Power Door Manual Operation."
8. Wait until jacket pressure has stabilized before starting a cycle.

4.2 Automatic Operation: Gravity Cycle

1. Follow instructions in paragraph 4.1, "Before Operating The Equipment."

2. Refer to Table 4.1 and select the desired sterilizing temperature. Open the upper access door and turn HI-LO valve to HI for the 270° F (132° C) sterilizing cycle, or to LO for the 250° F (121° C) sterilizing cycle.

NOTE: For cycle temperature below 250° F (121° C), refer to paragraph 4.7.

3. Open the door on the secondary control panel.

a. Be sure POWER and CONTROL switches are ON. Primary control panel should be lit.

b. Dial the correct exposure period (Table 4.1) STERILIZE TIME thumbwheel switches.

JTE: For items not listed in Table 4.1, time required will depend upon material and wrapping (if applicable). If there is any question, contact manufacturer of the material for the recommended procedure.

c. Dial the desired drying period on DRY TIME thumbwheel switches. For wrapped goods, 15 minutes is recommended. For unwrapped goods, drying time is not required, however, a minimum of 02 minutes will eliminate excess steam vapors prior to opening chamber door.

NOTE: Set times are displayed on the primary control panel. Once the cycle is started, these times are locked in and cannot be changed.

4. Set the yellow pointer on the indicator-recorder-controller to 270° F (132° C) or to 250° F (121° C).

5. Open chamber door and load sterilizer.

a. Power Door (if double-door unit, opposite door must be locked) — press UNLOCK/OPEN button ... once to unlock the door, a second time to open it.

Primary Control Panel

TABLE 4.1 MINIMUM STERILIZATION EXPOSURE PERIOD — WRAPPED AND UNWRAPPED GOODS GRAVITY CYCLE ONLY

ITEMS	RECORDER SETTING	
	250° F (121° C) MINUTES	270° F (132° C) MINUTES
Dressings, wrapped in paper or muslin	30	15
Glassware, empty, inverted	15	3
Instruments, metal only, any number (unwrapped)	15	3
Instruments, metal, combined with suture, tubing or other porous materials (unwrapped)	20	10
Instruments, wrapped in double thickness muslin	30	10
Linen packs (maximal size: 12"x12"x20"; maximal weight 12 pounds)	30	—
Rubber gloves, wrapped in muslin or paper	20	10
Treatment trays, wrapped in muslin or paper	30	10
Utensils, unwrapped	15	3
Utensils, wrapped in muslin or paper	20	10

Power Door Controls.

Cycle Reset.

b. Manual Door — turn handwheel counterclockwise. Should the door not at first unlock, turn door wheel slightly clockwise, press the center black button, then again turn door wheel counterclockwise and open. Turn handwheel to extreme left to bring ends of holding arms inward so that they will not strike door frame when door is opened or closed.

6. Close and lock the door . . . panel light DOOR UNLOCKED (also OPPOSITE DOOR UNLOCKED if applicable) must go off. Once chamber is pressurized, an integral pressure-actuated lock will prevent door from being opened.

a. Power Door — press LOCK button.

b. Manual Door — turn handwheel to the right as far as it will go using normal hand pressure.

NOTE: Pressing the STOP button during power door operation will immediately stop the door. Refer to paragraph 4.8 if it becomes necessary to shift from power to manual operation.

7. Touch GRAVITY cycle selector. Light comes on to full brightness. Status light CONDITION comes on.

NOTE: If you push the wrong cycle selector, simply press and release the RESET pushbutton on the secondary panel. Earlier selected cycle light will go out. Touch selector for correct cycle. Cycle light will come on; status light CONDITION will come on and new cycle will begin.

8. After condition phase is complete, STERILIZE light comes on and stays on for the duration of the STERILIZE phase. STERILIZE TIME digital readout begins to count down when sterilizing temperature is reached.

9. When sterilize timer times out, EXHAUST light comes on. Chamber exhausts to atmospheric pressure. If a drying period was selected, DRY TIME digital readout begins to count down. If zero DRY TIME was selected, cycle proceeds to next step.

10. When exhaust phase is completed, panel light COMPLETE comes on and buzzer sounds. Open chamber door (see step 5), load may be removed from the sterilizer.

11. When chamber door is opened, controls will automatically reset and DOOR UNLOCKED light will come on.

35. @ Sq. In = 24 sq. in.

4.3 Automatic Operation: Liquids Cycle

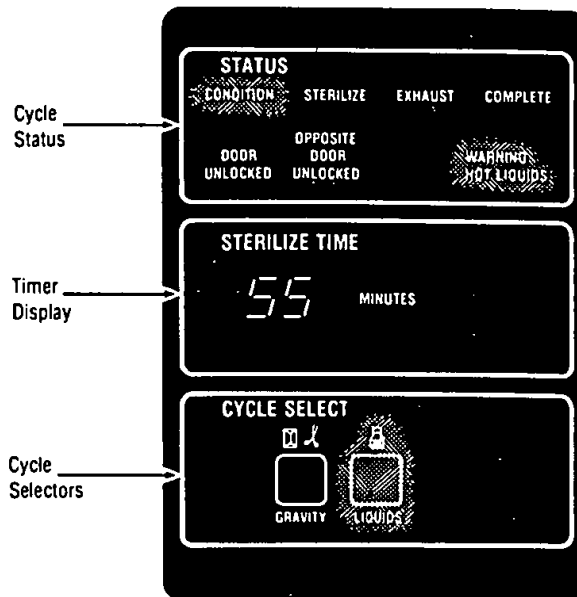

WARNING: TO PREVENT THE POSSIBILITY OF PERSONAL INJURY FROM BURSTING BOTTLES AND HOT FLUID, USE ONLY BORO-SILICATE (PYREX) FLASKS WITH VENTED CLOSURES FOR STERILIZING LIQUIDS.

• SEE PARAGRAPHS 3.2.1 AND 3.2.2 FOR FURTHER INFORMATION.

1. Follow instructions in paragraph 4.1, "Before Operating The Equipment."
2. Open the upper access door and turn HI-LO valve to LO.

NOTE: For cycle temperatures below 250° F (121° C), refer to paragraph 4.7.

3. Open the door on the secondary control panel.
 - a. Be sure POWER and CONTROL switches are ON. Primary control panel should be lit.
 - b. Set STERILIZE timer thumbwheels to appropriate time ... see Table 4.2. (Note: For a laboratory process, the time required will depend upon the specific preparation and volume ... larger volumes normally require longer processing times.)

Primary Control Panel.

NOTE: Set time will be displayed on the primary control panel; however, during a LIQUIDS cycle, controller automatically disregards any DRY time setting and blanks out that portion of the display. Once the cycle is started, the STERILIZE time will be locked in and cannot be changed.

4. Set the yellow pointer on the indicator-recorder-controller to 250° F (121° C).
5. Open chamber door and load sterilizer.

TABLE 4.2 MINIMUM RECOMMENDED EXPOSURE TIMES FOR FULL LOAD OF SQUARE-PAK® FLASKED SOLUTIONS

1500 ML	50
2000 ML	55

Indicator-Recorder-Controller.

a. Power Door (if double-door unit, opposite door must be locked) — press UNLOCK/OPEN button . . . once to unlock the door, a second time to open it.

b. Manual Door — turn handwheel counterclockwise. Should the door not at first unlock, turn door wheel slightly clockwise, press the center black button, then again turn door wheel counterclockwise and open. Turn handwheel to extreme left to bring ends of holding arms inward so that they will not strike door frame when door is opened or closed.

6. Close and lock the door . . . panel light DOOR UNLOCKED (also OPPOSITE DOOR UNLOCKED if applicable) must go off. Once chamber is pressurized, an integral pressure-actuated lock will prevent door from being opened.

a. Power Door — press LOCK button.

b. Manual Door — turn handwheel to the right as far as it will go using normal hand pressure.

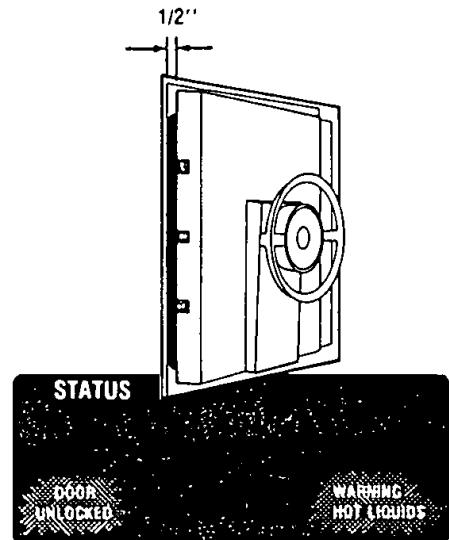

NOTE: Pressing the STOP button during power door operation will immediately stop the door. Refer to paragraph 4.8 if it becomes necessary to shift from power to manual operation.

7. Touch LIQUIDS cycle selector. Light comes on to full brightness. Status light CONDITION comes on; also WARNING HOT LIQUIDS light comes on.

NOTE: If you push the wrong cycle selector, simply press and release the RESET pushbutton on the secondary panel. Earlier selected cycle light will go out. Touch selector for correct cycle. Cycle light will come on; status light CONDITION will come on and new cycle will begin.

8. After condition phase is completed, STERILIZE panel light comes on and stays on for the duration of the sterilize phase. STERILIZE TIME digital readout begins to count down when sterilizing temperature is reached.

9. When sterilize timer times out, EXHAUST light comes on and chamber exhausts slowly.

Crack Door Following Liquids Cycle.

10. When exhaust phase is completed, COMPLETE light comes on and buzzer begins to sound.

WARNING: SUDDEN FULL OPENING OF THE DOOR FOLLOWING A STERILIZATION CYCLE COULD CAUSE LIQUIDS TO BOIL OVER OR BOTTLES TO BURST. TO PREVENT POSSIBLE PERSONAL INJURY, PROCEED AS FOLLOWS.

11. Crack the door open (see step 5) about 1/2'' and leave it cracked for at least 10 minutes. (If a power door, press the UNLOCK/OPEN button only once. This will unlock, but not open the door.)

12. Unlocking the door will stop buzzer and cause DOOR UNLOCKED light to come on. WARNING HOT LIQUIDS light will remain on, but will begin to flash . . . continuing for 10 minutes. At the end of 10 minutes, buzzer will again sound and WARNING HOT LIQUIDS light will stay on, but will stop flashing.

13. Open chamber door, load may now be removed from sterilizer. Press RESET button on secondary control panel to reset control and turn WARNING HOT LIQUIDS light off.

4.4 Manual Operation: Gravity (Wrapped or Unwrapped Goods) or Liquids Cycle

NOTE: Manual control is an optional feature on this sterilizer. The following procedure can be performed only if this sterilizer is so equipped.

1. Follow steps 1, 2 and 8 in paragraph 4.1, "Before Operating The Equipment." If there is electricity to the sterilizer, positioning POWER switch on secondary control panel at ON will energize the Recorder. The CONTROL switch, however, must be positioned at OFF when using manual operation.

2. Open the upper access door.

3. Determine desired processing temperature (270° F [132° C] or 250° F [121° C] for Gravity cycle; 250° F [121° C] for Liquids cycle). See Table 4.1 or 4.2. As a reminder, the yellow pointer on the indicator-recorder-controller may be positioned to this temperature.

NOTE: For wrapped or unwrapped goods not listed in Table 4.1, time required will depend upon material and wrapping (if applicable). If there is any question, contact manufacturer of the material for the recommended procedure. For laboratory processing of liquids, the time required will depend upon the specific preparation and volume ... larger volumes normally require longer processing times.

4. Set HI-LO valve as follows:

a. For 250° F (121° C) operation — refer to paragraph 4.7 for instructions on loosening front stop on pressure regulator; then turn valve counterclockwise until jacket pressure gauge reads between 15 and 18 psig (1.056 and 1.267 kg/cm²).

NOTE: If normal "LO" setting is used for manual operation, chamber temperature will be approximately 258° F (126° C).

b. for 270° F (132° C) operation — set HI-LO valve so that jacket pressure gauge reads between 28 and 30 psig (1.971 and 2.112 kg/cm²).

WARNING: WHEN OPERATING A LIQUIDS CYCLE YOU MUST OBSERVE THE PRECAUTIONS LISTED IN PARAGRAPH 3.2. FAILURE TO FOLLOW THESE PRECAUTIONS COULD RESULT IN PERSONAL INJURY OR PROPERTY DAMAGE.

5. Open chamber door and load sterilizer.

a. Power Door — if power is available use normal procedure, otherwise follow instructions in paragraph 4.8, then proceed to step b ("Manual Door").

b. Manual Door — turn handwheel counterclockwise. Should the door not at first unlock, turn door wheel slightly clockwise, press the center black button, then again turn door wheel counterclockwise and open. Turn handwheel to extreme left to bring ends of holding arms inward so that they will not strike door frame when door is opened or closed.

6. Close and lock the door ... panel light DOOR UNLOCKED (also OPPOSITE DOOR UNLOCKED if applicable) must go off. Once chamber is pressurized, an integral pressure-actuated lock will prevent door from being opened.

a. Power Door — if power is available use normal procedure, otherwise proceed to step b ("Manual Door").

b. Manual Door — turn handwheel to the right as far as it will go using normal hand pressure.

7. Turn the Manual Operation selector to Condition and wait for sixty seconds. Proceed to step 8.

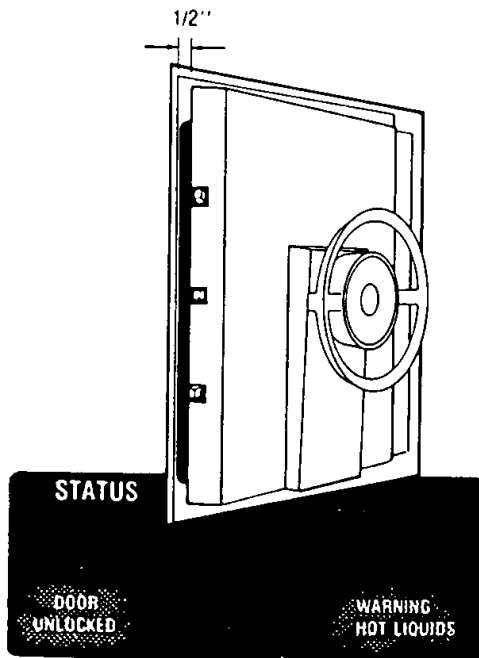

8. After Condition phase, turn selector to Sterilize. When chamber temperature reaches desired temperature, begin timing. After correct sterilization period, proceed to next step.

WARNING: SUDDEN FULL OPENING OF THE DOOR FOLLOWING A LIQUIDS STERILIZATION CYCLE COULD CAUSE LIQUIDS TO BOIL OVER OR BOTTLES TO BURST. TO PREVENT POSSIBLE PERSONAL INJURY, PROCEED AS FOLLOWS.

9. a. If a Liquids cycle, turn selector to Slow Exhaust and keep it in this position until chamber pressure is atmospheric (0 psig). Then turn selector to Off position, omitting the Dry phase. Crack the door open about 1/2" and wait for at least 10 minutes.

b. If a Gravity cycle, turn the selector to the Fast Exhaust position until chamber pressure is between 4 and 6 psig (0.28 and 0.42 kg/cm²). Then turn selector to the Dry position, if a drying period for wrapped goods is desired, and then to Off.

10. Load may be removed from the sterilizer.

Crack Door Following Liquids Cycle.

4.5 Control Monitoring and Communication Systems

To ensure the validity of the sterilizing process, the automatic control continually monitors the cycle. Should one of the following conditions occur, you will be notified as indicated.

No. 1 — Condition Phase Too Long.

CONDITION NO. 1: Sterilizer did not complete conditioning phase in preset time.

INDICATION: CONDITION light on primary control panel flashes and buzzer sounds intermittently.

OPERATOR SHOULD:

1. Touch cycle selector to stop buzzer (sterilizer will continue to operate).

2. Refer to Section 6 "Troubleshooting" to see if problem can be determined and corrected without interrupting cycle (e.g., HI-LO valve is incorrectly set).

3. If problem cannot be corrected so that conditioning phase can be completed (i.e., chamber reaches set sterilizing temperature), press cycle RESET button on secondary control panel to abort cycle. Do not proceed further until chamber is at atmospheric pressure.

4. When chamber is at atmospheric pressure:

a. If a Liquids cycle was in progress, crack door open 1/2" and wait for at least 10 minutes.

b. Correct problem.

c. Reprocess load.

No. 2 — Sterilizing Temperature Drops.

CONDITION NO. 2: Temperature drops 2° F below set point.

INDICATION: STERILIZE light on primary control panel flashes and STERILIZE timer display resets.

OPERATOR SHOULD:

1. Let cycle continue to completion if sterilizing temperature is reestablished.
2. If condition happens repeatedly, refer to Section 6 "Troubleshooting" to see if problem can be determined and corrected without interrupting cycle.
3. If problem cannot be corrected so that sterilizing phase can be completed, press cycle RESET button on secondary control panel to abort cycle. Do not proceed further until chamber is at atmospheric pressure.
4. When chamber is at atmospheric pressure:
 - a. If a **Liquids** cycle was in progress, crack door open 1/2" and wait for at least 10 minutes.
 - b. Correct problem.
 - c. Reprocess load.

No. 3 — Chamber Door Switch Not Made

CONDITION NO. 3: Cycle started, but chamber door not sufficiently tightened to keep door lock switch actuated.

INDICATION: DOOR UNLOCKED light(s) on primary control panel comes on and buzzer sounds intermittently.

OPERATOR SHOULD:

1. Press cycle RESET button on secondary control panel. Do not proceed further until chamber is at atmospheric pressure.
2. When chamber is at atmospheric pressure:
 - a. If a **Liquids** cycle was in progress, crack door open 1/2" and wait for at least 10 minutes.
 - b. Check door and door switch operation.
 - c. Reprocess load.

No. 4 — Loss of Electricity

CONDITION NO. 4: Loss of electricity.

INDICATION: Primary control panel goes dark.

OPERATOR SHOULD:

1. Wait until power is restored to sterilizer; then position CONTROL switch (on secondary control panel) to ON. Buzzer will sound intermittently.
2. Press cycle RESET button, but do not proceed until chamber is at atmospheric pressure.
3. When chamber is at atmospheric pressure:
 - a. If a Liquids cycle was in progress, crack door open about 1/2" and wait for at least 10 minutes, then reprocess load.
 - b. Other cycles, load may be reprocessed right away.

4.6 Controls and Signals For Double-Door Sterilizers

The following controls will be found on the non-operating end of the sterilizer:

1. Cycle selectors: **GRAVITY** and **LIQUIDS**. If you wish to repeat the previous gravity or liquids cycle, and all preparatory actions (para. 4.1) have been made, you may do this from the non-operating end by touching the appropriate selector.
2. Status lights: These indicate the cycle phase which is currently in progress: **CONDITION**, **STERILIZE**, **EXHAUST**, **COMPLETE**, **DOOR UNLOCKED**, **OPPOSITE DOOR UNLOCKED**, **WARNING HOT LIQUIDS**.
3. Warning lights: **DOOR UNLOCKED**, **OPPOSITE DOOR UNLOCKED**, **WARNING HOT LIQUIDS**.
4. Power door controls (if applicable): **CLOSE**, **LOCK**, **UNLOCK/OPEN**, **STOP**.

Non-operating End Primary Control Panel.

7 Sterilization Requirements At Temperatures Below 250° F (121° C)

The HI-LO valve (steam pressure regulator) on this sterilizer was factory set for 250° and 270° F (121° and 132° C) sterilization cycles. If your sterilization procedures routinely require temperature control below 250° F (121° C) ... i.e., Laboratory processes, the LO setting will have to be changed. Have your AMSCO Service Representative or an equally qualified technician from your maintenance staff make the change as follows.

1. If a freestanding sterilizer, remove a cabinet side panel for access to the HI-LO valve; if a recessed model, proceed to the area behind the recessing wall.

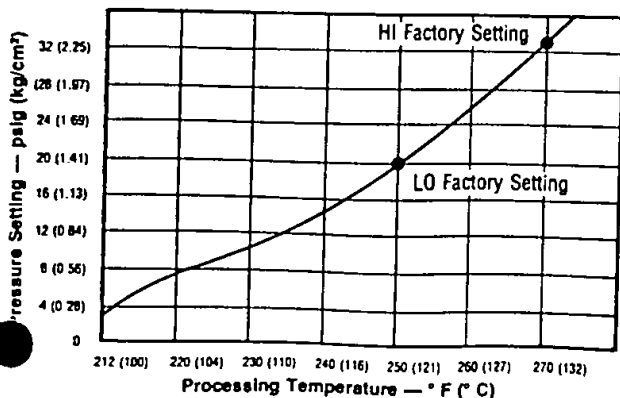

2. Remove adjusting screw cover.

3. Loosen setscrew on front locknut; turn locknut until it is against the rear locknut.

4. Follow instructions in paragraph 4.1, "Before Operating The Equipment."

5. Using the following chart, adjust the HI-LO valve until jacket pressure as indicated on the jacket pressure gauge corresponds with the desired processing temperature.

6. Follow cycle instructions starting with step 3 of paragraph 4.2 if a Gravity cycle; paragraph 4.3 if a Liquids cycle, except set the yellow pointer on the indicator-recorder-controller for the desired processing temperature.

Pressure Regulator Settings.

Adjusting Pressure Regulator.

NOTE: At lower settings the indicator-recorder-controller will maintain chamber temperature at a slightly higher than set temperature ... if necessary, wait until cycle reaches the sterilize phase and readjust the yellow pointer until the recorder chart indicates the exact temperature.

7. Steps 4, 5 and 6 will have to be repeated for each new temperature. If temperature will not be changed, turn locknut on HI-LO valve until it is against the stop on the bottom plate, then tighten the setscrew.

8. Replace the adjusting screw cover and if applicable, the cabinet side panel.

NOTE: The jacket pressure/processing temperature relationships provided in this chart are guidelines for optimum performance of this Eagle Series sterilizer. They do not represent actual pressure/temperature ratios.

4.8 Power Door Manual Operation

1. Pull shift handle to the left. If handwheel does not engage, turn it slowly while maintaining a slight pressure to the left on shift handle.

2. To return the power operation from manual, position shift handle to the right.

CAUTION: Be sure shift handle is in either the extreme right (POWER) or left (MANUAL) position at all times. Placing handle in an intermediate position could damage drive system.

Power Door Shift Handle.

5

ROUTINE MAINTENANCE

WARNING: REPAIRS AND ADJUSTMENTS, OTHER THAN THOSE DESCRIBED IN THESE INSTRUCTIONS, SHOULD BE ATTEMPTED ONLY BY EXPERIENCED PERSONS FULLY ACQUAINTED WITH THIS EQUIPMENT. USE OF INEXPERIENCED, UNQUALIFIED PERSONS TO WORK ON THE EQUIPMENT OR THE INSTALLATION OF UNAUTHORIZED PARTS COULD CAUSE PERSONAL INJURY OR RESULT IN COSTLY DAMAGE!

IMPORTANT: Paragraph 5.4, step 3 calls for periodic checking of safety valve operation in accordance with the National Board Inspection Code. However, a periodic boiler inspection by a qualified inspector to check the integrity of the pressure vessel is also advisable. Be sure to check state and local requirements for such inspections.

The following procedures should be performed at regular intervals, as indicated. This frequency is the minimum and should be increased if usage of the sterilizer demands. Should a problem occur, refer to Section 6, "Troubleshooting."

WARNING: ALLOW STERILIZER AND LOADING EQUIPMENT TO COOL TO ROOM TEMPERATURE BEFORE PERFORMING THE FOLLOWING:

5.1 Daily

1. Clean chamber and loading equipment as follows:

a. Wash inside of sterilizing chamber and loading equipment with a mild detergent solution such as Calgonite® (Calgon Corp.).

CAUTION: Never use a wire brush or steel wool on door and chamber assembly.

b. Rinse with tap water; dry with lint-free cloth.

c. Remove chamber drain strainer. Clean out lint and sediment; reverse flush under running water.

d. Place strainer back in chamber drain.

e. Flush drain weekly — see below. Also flush drain whenever line becomes clogged or spillage occurs during a liquids processing cycle.

NOTE: To keep your sterilizer and loading equipment looking like new, AMSCO recommends an occasional application of **Pry Cream** to the non-painted surfaces. **Pry Cream** is available from your AMSCO representative.

Cleaning Chamber Drain Strainer.

5.2 Weekly

1. Flush chamber drain as follows:

- a. Remove chamber drain strainer.
- b. Rinse drain with hot solution of trisodium phosphate (two tablespoons to one quart of water).

or

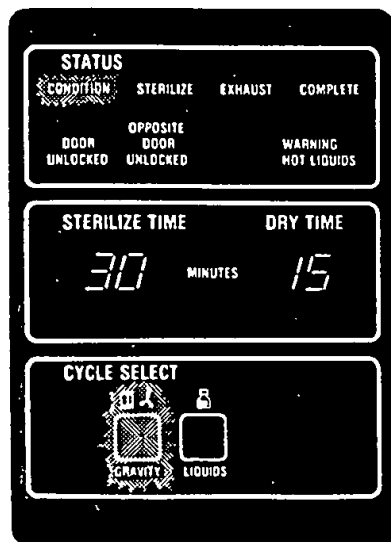

If trisodium phosphate is objectionable, use a solution of 1/2 cup of AMSCO Sonic Detergent* and one quart of hot water.

- c. Wait five minutes.
 - d. Then flush drain with one quart of hot water.
 - e. Place strainer back in chamber drain.
- ### 2. Check control and status signals as follows:

a. With empty chamber, set the thumbwheel switches for one minute. Watch the control panel as the sterilizer operates through each phase. Refer to page 30 if any lights are out.

b. Observe gauges and indicator-recorder-controller for proper functioning.

*Available from your local AMSCO representative.

Primary Control Panel

Lubricating Chamber Door.

5.3 Monthly

1. Place a few drops of heavy machine oil (SAE 20 or 30 motor oil will do) on chamber door hinge pins (top and bottom). Work oil into hinge by opening and closing the door several times.

5.4 Quarterly

1. Expose and grease door post bearing as follows:

- a. Unscrew the black button in the center of the chamber door wheel.
- b. Remove the three socket head screws.
- c. Remove coverplate.
- d. Remove door handwheel.
- e. Remove four socket head screws.
- f. Remove clutch lock cap and shims (if power door).
- g. Inject a high-temperature grease such as Neptune 7* (Mfgr: Ore-Lube Corp., College Point, N.Y. 11356) or one of equal quality into cavity between nuts and screw shaft.

h. Reassemble in reverse order.

2. Inspect door gasket. If it is brittle or has cracks, replace it. (See page 28 for instructions.)

*Also available from your local AMSCO representative ... ask for part P-385220-091.

3. Check chamber safety valve as follows:

- a. Be sure sterilizer is cool.
- b. Inspect safety valve for accumulations of rust, scale or other foreign substances which would prevent free operation of the valve. The opening of any discharge piping must be clear and free from restrictions.
- c. Operate try lever (or pull ring) several times. The lever should move freely and return to its closed position after each operation.
- d. Follow operating instructions on page 7, and allow chamber to reach operating pressure.

WARNING: BE CAREFUL OF STEAM ESCAPING FROM SAFETY VALVE. TO PREVENT BURNS, WEAR GLOVES OR USE AN EXTENSION DEVICE IF IT BECOMES NECESSARY TO OPERATE THE TRY LEVER.

e. Check safety valve for steam leakage. If valve is leaking, operate the try lever several times to see if the leakage will stop. **Avoid letting moisture get under insulation on chamber as it will cause rusting of the outer jacket.**

f. If leakage continues, discontinue operation of sterilizer until a qualified technician replaces the leaky safety valve.

Chamber Safety Valve.

BASIC STEAM and ELECTRICAL POWER SCHEMATIC FOR TSRI AUTOCLAVES

Detailed information regarding the steam or electrical plant can be obtained by contacting

November 7, 2000

Ms. Sylvia Mosse, R.E.H.S.
Department of Environmental Health
County of San Diego
Hazardous Materials Division
P.O. Box 129261
San Diego, CA 92112-9261

Dear Ms. Mosse:

Enclosed is the required information to revise the Medical Waste Treatment Permit issued to The Scripps Research Institute (TSRI), Site 10550 North Torrey Pines Road, Establishment No.H14290, Expiration Date, March 2002. I have also enclosed a copy of the original letter addressed to Mr. Deweese.

Due to the large number of changes contained in the enclosed permit application packet, I have attempted to facilitate the review process by listing the significant revisions below. If you should have any questions regarding the permit application, please do not hesitate to contact me.

- (a) Removal of the following autoclaves (serial numbers): 0125186-023, 0110192-04, 0496121693, and 039962689.
- (b) Addition of the following autoclaves (serial numbers): 0495, 0496121691, 0103399-7, 011499114, and 011519109 (Autoclaves A1, A2, A6, A7 and A8 of Permit Section VIII. See Attachment 5, Table I).

Autoclaves A7 (011499114) and A8 (011519109) are currently permitted at The Scripps Research Institute's CVN facility, 3545 John Hopkins Court, San Diego, CA 92121, Establishment No. H33602.

The CVN facility is within 400 yards from the property boundary of the existing TSRI facility (H14290). As the CVN facility meets the definition of adjacent property as defined in Title 22, Section 65600 of the California Code of Regulations, these autoclaves are being transferred to the TSRI facility permit. The CVN facility Medical Waste Treatment Permit will be terminated.

- (c) Inclusion of all requested permit information that pertains to the added autoclaves.
- (d) Addition of all information required on page 8 of the permit application (Medical Waste Treatment Equipment Specifications) for all permitted autoclaves.

NOV 13 1 09 PM '00

January 12, 2000

Mr. Dale Deweese
Department of Environmental Health
County of San Diego
Hazardous Materials Division
1255 Imperial Avenue
P.O. Box 129261
San Diego, CA 92112-9261

Dear Mr. Deweese:

Enclosed is the required information to revise the Medical Waste Treatment Permit issued to The Scripps Research Institute (TSRI), Site 10550 North Torrey Pines Road, Establishment No.H14290, Expiration Date, March 2002.

Due to the large number of changes contained in the enclosed permit application packet, I have attempted to facilitate the review process by listing the significant revisions below. If you should have any questions regarding the permit application, please do not hesitate to contact me.

- (a) Removal of the following autoclaves (serial numbers): 0125186-023, 0110192-04, 0496121693, and 039962689.
- (b) Addition of the following autoclaves (serial numbers): 0495, 0496121691, 0103399-7, 011499114, and 011519109 (Autoclaves A1, A2, A6, A7 and A8 of Permit Section VIII. See Attachment 5, Table 1).

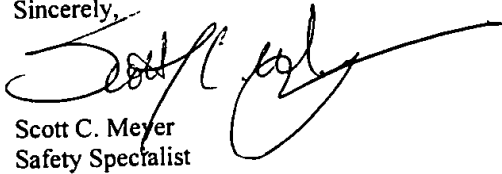

Autoclaves A7 (011499114) and A8 (011519109) are currently permitted at The Scripps Research Institute's CVN facility, 3545 John Hopkins Court, San Diego, CA 92121, Establishment No. H33602.
R APP
- (c) The CVN facility is within 400 yards from the property boundary of the existing TSRI facility (H14290). As the CVN facility meets the definition of adjacent property as defined in Title 22, Section 65600 of the California Code of Regulations, these autoclaves are being transferred to the TSRI facility permit. The CVN facility Medical Waste Treatment Permit will be terminated.
- (d) Inclusion of all requested permit information that pertains to the added autoclaves.
- (e) Addition of all information required on page 8 of the permit application (Medical Waste Treatment Equipment Specifications) for all permitted autoclaves.
- (f) Expanded Emergency Action Plan, Permit Section XI. See Attachment 9.
- (g) Revised Training Plan, Permit Section XII. See Attachment 10.

Mr. Dale Deweese
Page Two
January 12, 2000

(g) Revised Closure Plan, Permit Section XIII. See Attachment 11.

(h) If the transfer of the autoclaves referenced in (b) above is completed, please cancel the CVN Medical Waste Treatment Permit (H33602).

Sincerely,

A handwritten signature in black ink, appearing to read "Scott C. Meyer", with a long, sweeping horizontal stroke extending to the right.

Scott C. Meyer
Safety Specialist

Enclosure: Permit Application Packet

**APPLICATION FOR ON-SITE MEDICAL WASTE
TREATMENT PERMIT**

**COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH
HAZARDOUS MATERIALS MANAGEMENT DIVISION
P. O. BOX 85261
SAN DIEGO, CA 92186-5261
(619) 338-2222**

Instructions

If you generate 200 pounds or more of medical waste in any calendar month, and treat the waste, then you must complete this application and obtain a permit prior to conducting treatment.

Enclosed are the instructions and application forms for a Medical Waste Treatment Permit as required by the Medical Waste Management Act of 1990 (MWMA) for the storage and onsite treatment of medical waste in California (Health and Safety Code, Section 117600 et.al.).

State law specifies that an application for a treatment facility must be submitted and approved to operate a medical waste treatment unit. Failure to obtain a medical waste treatment permit is a violation and subject to a penalty of up to \$25,000 per day and/or jail.

The application requires both general and site-specific information. If you have any questions regarding the information required, you may contact the County of San Diego, Hazardous Materials Management Division (HMMD).

Included in this package is a copy of the applicable regulations, Chapter 21, Sections 65600 through 65628 (non-consecutive) of Title 22, California Code of Regulations, relating to minimum Standards For Permitting Medical Waste Facilities.

Upon completion of the permit application, please attach any supporting data or additional information which may substantiate your answers. Submit the permit application to:

**COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH
HAZARDOUS MATERIALS MANAGEMENT DIVISION
ATTN: MEDICAL WASTE COORDINATOR
P. O. BOX 85261
SAN DIEGO, CA 92186-5261
(619) 338-2222**

This application will be reviewed and processed by staff from the Hazardous Materials Management Division. A permit processing fee will be charged to the applicant and is payable to the COUNTY OF SAN DIEGO. The fee will be calculated on a hourly basis and will depend on the amount of time it takes to review and process the application. The review fee is \$80.00 per hour.

An initial application review fee of \$160.00 must be submitted with this application at the time of submittal. Additional hours accrued while processing the permit will be charged to the applicant and payable when the final permit is issued.

OFFICIAL USE ONLY

MEDICAL WASTE TREATMENT PERMIT APPLICATION

NAME OF FACILITY: The Scripps Research Institute

APPLICANT NAME: Stuart D. Rosenberg, Director, Environmental Health and Safety

(Must be an individual's/individuals' name(s) in addition to the corporation name.)

APPLICANT ADDRESS: 10550 North Torrey Pines Road

La Jolla, CA 92037

TELEPHONE NUMBER: (858) 784-8240

DATE APPLICATION RECEIVED BY DEPARTMENT: _____
(Department use only)

I. GENERAL

A. Type of Permit Requested

Place an "X" on the appropriate line below to indicate the type of permit being applied for:

1. Type of Treatment

- a. Steam Sterilization
- b. Incineration
- c. Other State DHS approved method (please specify):

B. Facility Status

Place an "X" on the appropriate line to indicate whether this application is for a new or existing facility.

- 1. New Facility
- 2. Existing Facility

If an existing facility, please indicate the purpose of this application. Place an "X" on the appropriate line below to indicate whether this is a renewal application, a facility modification, transfer of ownership, revised application, or a initial request for permit.

- a. Initial Request for Permit
- b. Modification
- c. Transfer of Ownership
- d. Permit Revision
- e. Permit Renewal

EE ATTACHMENT 1 **C. Application Information (Note: Provide the information requested below on a separate page attached to the completed application.)**

1. Estimated Weight and Volume

A summary of the weight or volume of medical waste handled or expected to be handled during the permit period. For renewals, the amount handled during the previous permit period.

2. Special Occurrences

A listing of any special occurrences such as fires, injury, property damage, accident or other unusual occurrences, or incidents involving medical waste which have occurred at the facility during the previous three years.

3. Compliance History

A description of your compliance history relative to local, state, or federal regulation regarding the handling, storage, or treatment of medical waste during the previous three years. Include information from other facilities under your control for the same period.

II. FACILITY INFORMATION

A. Facility Name The Scripps Research Institute

B. Facility Contact Person(s)

1. Name (last, first, middle initial) and Job Title:

Rosenberg, Stuart D., Director, Environmental Health and Safety

2. Telephone Number (area code and number):

(858) 784-8240

C. Facility Mailing Address

1. Street, Route Number, or P.O. Box Number

10550 North Torrey Pines Road

2. City or Town, State, and Zip Code:

La Jolla, California 92037

SEE ATTACHMENT 14 D. Facility Location (if different from above)

1. Street, Route Number or other specific site location, or address:

2. City or Town, State and Zip Code:

3. Telephone Number (area code and number):

()

E. Ownership status Private Entity

(Federal, state, local government, or other public or private entity.)

479

III. OPERATOR INFORMATION

A. Name The Scripps Research Institute

B. Owner or Operator The Scripps Research Institute

Is the name listed in III. (A.) above also the owner?

1. Yes

2. No

If no, please complete the following additional information.

a. Telephone Number (area code and number):

() _____

b. Street or P.O. Box Number:

c. City or Town, State, and Zip Code:

IV. FACILITY OWNER

A. If the facility owner is also the facility operator as listed in III. above, disregard the B. portion of this section.

B. If the facility owner is not the facility operator as listed in III. above, complete the following items.

1. Name of legal owner of facility:

2. Telephone Number (area code and number):

() _____

3. Street or P.O. Box Number:

4. City, State, and Zip Code:

V. ENVIRONMENTAL CLEARANCES SEE ATTACHMENT 2

A. Pursuant to Section 65610, Chapter 21, California Code of Regulations, provide all necessary information relating to environmental clearances/permits as required.

1. A copy of the environmental impact report (EIR) or negative declaration prepared by the lead agency or evidence that a lead agency is preparing or will prepare environmental documentation, if applicable.
 2. Other information (please specify):
-

VI. MAP SEE ATTACHMENT 3

Attach to this application a map extending for one mile beyond the property boundary identifying access roads and the type of development surrounding the facility (e.g. residential, commercial, recreational, schools, etc.)

VII. PRIMARY ACTIVITIES OF THE FACILITY SEE ATTACHMENT 4

Provide a description of the nature and activities of the business which requires a permit.

VIII. FACILITY INFORMATION SEE ATTACHMENT 5

A. Provide the following facility information.

1. Average monthly quantity of medical waste to be stored and/or treated on property.
2. The rated capacity per operational cycle, the time per cycle, the number of operating hours per day, and days per week of operation.
3. Type and description of medical waste being treated. What measures are employed to prevent unauthorized waste (i.e. chemical waste, chemotherapy waste, etc.) from being treated at the facility? SEE ATTACHMENT 6

B. Total capacity of primary waste storage area in use. SEE ATTACHMENT 5

IX. FACILITY PLAN SEE ATTACHMENT 7

Provide a site map of the facility with a description of the ingress, egress, medical waste storage area(s), treatment facility location, security measures, and other areas which will be used as a part of the ongoing operation.

X. OPERATION PLAN SEE ATTACHMENT 8

Append a copy of the facility Medical Waste Operation Plan and Procedures with this application.

XI. EMERGENCY ACTION PLAN SEE ATTACHMENT 9

Append a copy of your Emergency Action Plan with this application.

XII. TRAINING PLAN SEE ATTACHMENT 10

Append a copy of your employee Training Plan for medical waste management with this application.

XIII. CLOSURE PLAN SEE ATTACHMENT 11

Append a copy of your Closure Plan and a written estimate of the cost of closing the medical waste storage and treatment areas.

XIV. MONITORING SCHEDULE SEE ATTACHMENT 12

Append a copy of the Monitoring Schedule, the schedule for installation of monitoring equipment and a copy of the Operating Procedures for maintenance and testing of the monitoring equipment.

GO TO PAGE 8.

Medical Waste Treatment Equipment Specifications: SEE ATTACHMENT THIRTEEN

Each medical waste treatment unit must be described below. The following information shall be completed and submitted along with the application. Submit a separate sheet for each medical waste treatment unit.

Must complete the following information: (please print or type information)

1. Date of equipment installation: _____
2. Manufacturer's Name: _____
3. Model Number: _____
4. Serial Number: _____
5. Describe the method of treatment for the equipment (e.g. autoclaving; chemical disinfection; thermal treatment; microwaves; etc.):

6. Give the exact location and/or room number where the treatment unit will be operated:

7. What is the rated capacity of the treatment unit? _____ pounds/hour of waste treated.
8. Give the date when the treatment equipment was last serviced by a "manufacturer-authorized" technician:
Date: _____
9. The permittee must photocopy and submit to the HMMD the manufacture's operating instructions and recommended maintenance schedule for the waste treatment equipment. Also, submit a photocopy of the manufacturer's diagrams or schematics of the equipment.

ATTACHMENT 1

Application Information (I.C.)

I. C. Application Information

1. It is anticipated that during the five-year period beginning March 1997 ending March 2002, approximately 89 tons of medical waste will be handled (treated on-site) by The Scripps Research Institute.
2. During the last three years, there have been two (2) instances where individuals have received lacerations while handling medical waste. In both instances, proper procedure was not followed with respect to the handling of medical waste. Corrective actions were taken to ensure that correct procedures would be followed when handling medical waste.
3. During the last three years, there have been no Federal or State compliance issues relative to the handling, storage, or treatment of medical waste. The following discrepancies in the management of medical waste have been identified by the County:
 - Generator labels missing from sharps containers and red bags;
 - Sharps container not labeled "biohazardous sharps waste: or with the international biohazardous symbol;
 - Daily operations records not filled out or kept for three years;
 - Items missing from the on-site treatment application;
 - A bag of medical waste was on the floor with no secondary containment;
 - Red bag waste not containerized in rigid, leak-resistant containers;
 - Clear bags in use for the collection of medical waste;
 - Secondary containers for biohazardous waste bags were not labeled with "biohazardous" or the international biohazardous symbol.
 - Overfilled sharps containers;
 - Red biohazard bags used for activities other than biohazardous waste disposal;

Corrective actions were taken to ensure that correct procedures would be followed when handling medical waste.
3. During the last three years, there have been no Federal or State compliance issues relative to the handling, storage, or treatment of medical waste.

The County of San Diego, Department of Environmental Health, Hazardous Materials Division is the Enforcement Agency as defined by Section 117650 responsible for administering Part 14 of the Medical Waste Management Act.

The following discrepancies in the management of medical waste have been identified by the County:

- Generator labels missing from sharps containers and red bags;
- Sharps container not labeled "biohazardous sharps waste: or with the international biohazardous symbol;
- Daily operations records not filled out or kept for three years;

- Red biohazard bags used for activities other than biohazardous waste disposal;

ATTACHMENT 2

Environmental Clearances (V)

V. Environmental Clearance

In accordance with the Internal Memorandum dated, February 23, 1993, written by John Winn, the use of onsite autoclaves for the treatment of medical waste is in most instances ministerial. The text of Mr. Winn's memorandum is detailed below.

“As a result of consultation with the Governor's Office of Permit Assistance, we have concluded that issuance of permits for the onsite treatment of medical waste is in most instances a ministerial decision under the California Environmental Quality Act (CEQA). Permitting of onsite autoclaves for use in treating medical waste will still be done in accordance with the Permitting Regulations in Chapter 21 of Title 22 of the California Code of Regulations. A notation should be made in the facility's permit file stating that issuance of such a permit is ministerial under CEQA. We will also continue to use the permit application form we have been using for issuance of onsite medical waste treatment facility permits. As you know, as of January 1, 1993, the Medical Waste Management Act no longer requires disclosure statements from applicants for onsite medical waste treatment facility permits prior to issuance of permits.”

Map (VI)

ATTACHMENT 4

Primary Activities of the Facility (VII)

VII. PRIMARY ACTIVITIES OF THE FACILITY

Activities conducted at The Scripps Research Institute include biomedical research and the operation of several vivariums. All activities result in the generation of medical waste. At present, a portion of the medical waste is treated on-site via steam sterilization (autoclaved) and the remainder is removed and appropriately disposed of by a commercial vendor (BFI). Steam sterilization is conducted in one of 8 autoclaves listed in section VIII (Attachment 5, Table 1).

ATTACHMENT 6

Facility Information (VIII A3)

VIII.A.3 FACILITY INFORMATION

Medical waste generated at The Scripps Research Institute includes but is not limited to:

Specimen Cultures	Cultures and Stocks of Infectious agents
Culture Dishes, etc.	Live and Attenuated Vaccines
Fluid Blood	Regulated Body Fluids
Sharps	Animal/Human Surgical Specimens
Microbiological Laboratory Specimens	Animal Carcasses, Bedding, etc.

- Individuals involved in the generation of medical waste are trained in the identification and management of this waste stream. Written policies and procedures which outline the identification, storage, management, and treatment of medical waste are in place and reviewed on a periodic basis.
- In order to prevent the treatment of unauthorized waste, employees receive training in the identification and management of hazardous and radioactive material. Written policies and procedures are in place which govern these waste streams.
- Institution policies governing biohazardous, hazardous, and radioactive material can be found in the Safety Management Plan. Individual departments develop specific policies concerning handling and management of biohazardous, hazardous, and radioactive material. These policies must meet the minimum standards as set forth in the Institute's Safety Management Plan.
- All facilities belonging to The Scripps Research Institute undergo quarterly internal inspections conducted by the Department of Environmental Health and Safety. Activities related to the handling of biohazardous, hazardous, and radioactive material are reviewed.

ATTACHMENT 7

Facility Plan (IX)

IX. FACILITY PLAN

Included in this attachment are the following:

- A facility map which shows general locations of treatment areas (autoclaves) and storage areas.
- Detailed floor plans that show treatment area locations, ingress/egress from treatment areas, and storage area locations.
- Facility operating procedures, manufacturer operating procedures, maintenance schedules, and schematics for the facility autoclaves.

Autoclaves and storage areas are identified by number in Attachment 5, Table 1 and can be located on the maps provided with this attachment.

All medical waste generated by the Institute is not treated on-site. Storage areas outside of the vivarium facilities are used for storage of medical waste that will be transferred to an authorized medical waste broker. These areas are not used to store waste that is awaiting on-site treatment. However, in an emergency (inability to treat waste on-site), these areas can be used to store waste until on-site treatment is resumed or the waste can be transferred to an authorized medical waste broker.

Emergency

Waste within the vivarium facilities is treated on a daily basis. Storage areas within the vivariums are used to store waste only until the next treatment cycle.

Security

All autoclaves are located within facility work spaces. Access to the buildings (work spaces) is controlled by The Scripps Research Institute's Security Department.

Storage areas are located both within the facility buildings and outside of the buildings. Storage locations are locked at all times.

STANDARD OPERATING PROCEDURES

THE SCRIPPS RESEARCH INSTITUTE
DIVISION OF ANIMAL RESOURCES

TITLE: AUTOCLAVE QUALITY ASSURANCE

CODE#: TECH13

EFFECTIVE DATE: MAY 1, 1994

APPROVAL:

ELIZABETH W. FORD, DVM, MPVM
Director

PURPOSE: TO ASSURE RESPONSIBLE TREATMENT OF POTENTIALLY INFECTIOUS MATERIAL.

DESCRIPTION:

- 1.0 Persons Responsible
 - Manager
 - Animal Health Technician
 - Senior Animal Technician
 - Containment Technician
 - Non-Human Primate Technician
- 2.0 Frequency
 - daily, monthly, quarterly
- 3.0 Documentation
 - autoclave charts
 - autoclave tape
 - autoclave test vial notification sheets
 - Omega measurement print-outs
 - autoclave log
- 4.0 Materials Required
 - biohazard bags
 - autoclave bags
 - autoclave charts
 - autoclave tape
 - autoclave test vials
 - Omega measuring device
- 5.0 Procedure-Daily, Non-Infectious
 - 5.1 Each day there is material to be autoclaved a new chart (if applicable or verification that the recording roll is functional) is placed on the machine. The old chart (or roll

if full) is given to the Senior Animal Technician who keeps these on file for a three year period.

5.2 A piece of autoclave tape is affixed to every bag of feed or bedding to be autoclaved.

5.3 Autoclave settings are as follows:

Temperature; 250 degrees

Feed; 30 minute sterilize (20 minute ARS slider), 20 dry

Bedding; 30 minute sterilize, 30 minute dry

Bottles; 30 minute sterilize, 0 dry

Cages; 20 minute sterilize, 30 minute dry

5.4 While in operation, sterilizer is checked for proper operation. This should include verifying proper temperature is reached in a normal time frame by checking the recording chart/roll, time settings are correct, proper cycle has been selected, and exhaust cycle is functioning adequately.

5.5 If operator suspects any problem with sterilizer, the Senior Animal Technician or Manager is notified immediately.

6.0 Procedure-Daily, Infectious Waste and Contaminated Equipment

6.1 Each autoclave used for decontamination of potentially infectious waste must have an autoclave log (see attachment) sheet attached to the sterilizer or sterilizer cart. This sheet is filled out for each load run through the sterilizer.

6.2 Each day there is waste or contaminated equipment to be autoclaved a new chart is placed on the sterilizer (or the roll is verified to be functioning properly). Used charts are filed for a minimum of three years in each respective areas office.

6.3 All waste should be placed in a red biohazard bag and then placed in a clean autoclave bags to ensure no leakage occurs during autoclaving. These bags should not be closed tightly. Bags must be only loosely closed, or allowed to remain open so that adequate steam penetration can occur.

6.4 Cages containing contaminated bedding should not be stacked on top of each other but criss-crossed to allow for ample steam penetration. Contaminated bedding in cages should not be dumped from the cage until after autoclaving.

6.5 A strip of autoclave tape should be affixed to a random piece of material in every load to be autoclaved.

6.6 Each load should be verified by the Animal Technician to have completely gone through a proper cycle prior to it being unloaded.

6.7 Autoclave settings are as follows:

Temperature; 250 degrees minimum

Waste (animal, paper); 45 minute sterilize, 10 minute dry

Soiled equipment; 45 minute sterilize, 10 minute dry

Laundry; 45 minute sterilize, 10 minute dry

Animal carcasses; 90 minute sterilize, 10 minute dry

6.8 If operator suspects a problem the Manager should be notified immediately, the autoclave turned off, and the Senior Animal Technician of the affected area instructed not to empty this sterilizer until further notice.

7.0 Procedure-Monthly

7.1 Monthly, the Manager will distribute autoclave test vials to each area having sterilizers. There will be one test vial distributed for each sterilizer.

7.2 As soon as possible after receiving the autoclave test vials, the Senior Animal Technician will place the vial in a challenging spot within the sterilizer load. The sterilizer ~~will be operated at~~ the normal time and temperature. It is noted on the autoclave chart that this load contained the test vial.

7.3 Once test vials are run, they are refrigerated and returned to the Manager as soon as possible, who forwards them to Environmental Health and Safety. Safety incubates these vials and results are mailed to the Manager who keeps these written results on file for at least 3 years.

7.4 If there are any positive results from the test vial incubation the Manager will notify the Senior Animal Technician in the affected area and the autoclave put out of operation until service is performed on the unit.

8.0 Procedure-Quarterly

8.1 Once every quarter each sterilizer is monitored for temperature versus time using the Omega temperature monitoring device. This is performed by the Animal Health Technician assigned to laboratory duties.

8.2 The wire lead is placed in a challenging position of the load to be autoclaved and the sterilizer started. The product temperature and elapsed time since start is noted on paper. Other items to be noted is the sterilizer, the contents of the load, and the placement of the wire lead.

8.3 Results are forwarded to the Manager for interpretation and filing.

9.0 Procedure-Annually

9.1 ~~Each year the~~ Manager will arrange with the appropriate autoclave service personnel to have each sterilizer calibrated for temperature settings.

~~9.2~~ The Manager will keep on file for three years the temperature calibration documentation.

STANDARD OPERATING PROCEDURES

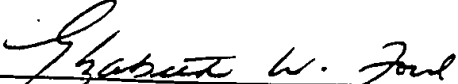

RESEARCH INSTITUTE OF SCRIPPS CLINIC
DIVISION OF ANIMAL RESOURCES

TITLE: BIOCONTAINMENT FACILITY WASTE DISPOSAL

CODE#:CONS

EFFECTIVE DATE: JANUARY 1, 1991

APPROVAL:

ELIZABETH W. FORD, DVM, MPVM

PURPOSE: PROPERLY REMOVE WASTE FROM THE ANIMAL FACILITY IN A WAY THAT PROTECTS PERSONNEL, ENVIRONMENT, AND OTHER ANIMALS.

DESCRIPTION:

- 1.0 Persons Responsible
 - Containment Coordinator
 - Animal Technicians

- 2.0 Frequency
 - Daily as necessary

- 3.0 Documentation
 - Animal Carcass disposal company monthly reports
 - Autoclave charts (dated)
 - Autoclave test vials

- 4.0 Materials Required
 - Wet waste bags
 - Zip lock bags
 - Freezer
 - Trash liners
 - Autoclave bags
 - Wide mouth hard plastic sharp containers
 - Radioactive waste containers supplied by Safety

- 5.0 Procedures-Trash and soiled bedding
 - 5.1 Soiled cages are placed in the soiled corridor. Animal care personnel will not scrape or handle the bedding prior to being autoclaved. It is imperative that all soiled caging be autoclaved as soon as possible to minimize the contamination in the soiled corridor.

 - 5.2 If cage racks are used the waste is carefully placed in wet waste bags being careful not to create aerosols.

Wet waste bags should not be filled more than can be easily handled. The bags should be closed by folding down the top edges.

5.3 All waste and soiled cages are loaded into the autoclave allowing for adequate steam penetration and air circulation. The rodent cages are stacked in herring bone patterns.

5.4 Any spillage in the soiled corridor must be immediately cleaned up.

5.5 Proper lifting techniques should be utilized at all times.

5.6 All trash in the soiled corridor is placed in the autoclave bags and autoclaved.

6.0 Procedure-Carcass disposal

6.1 All deceased animals should be bagged in zip lock bags and placed in the refrigerators in the soiled corridor.

6.2 Carcasses will be autoclaved when the refrigerator is full or on a weekly basis. ✓

6.3 After autoclaving the carcasses are handled as noninfectious waste. Once every two weeks a commercial disposal company picks up the carcasses. The company calls one half hour ahead of time at which point the frozen carcasses are placed in the red sanitized barrel provided by the company. The barrels are moved to the pickup point (outside immunology) and someone from the experimental rodent colony is designated to wait for pickup and receive the invoice.

6.4 The company leaves freshly sanitized barrels to replace the ones taken. These barrels are distributed to each of the facilities.

6.5 The invoice is returned to the central office.

6.6 Monthly reports as to the weight, pick up and disposition of the carcass are sent to the central office.

7.0 Procedure-Radioactive animal carcasses

7.1 Radioactive animals are not stored in the facilities. An animal carcass that contains radioisotopes will be autoclaved prior to handling by the Safety department. The Containment Coordinator will notify the Senior Animal Technician that the animal carcass is being autoclaved and should be picked up by Safety.

7.2 Safety will survey the autoclave to assure that it has

not been contaminated with radioactive materials.

7.3 It is the Principal Investigators responsibility to assure that the carcass is appropriately labeled with the investigators name, phone extension, amount and type of radioisotope, and date.

7.4 If there are any problems please address them with the Manager, Containment Coordinator or the Radiation Safety Officer.

7.5 Radioactive bedding is handled in the same manner as the animal carcasses.

7.6 Radioactive equipment after autoclaving is taken directly to the soiled wash room where it is dipped in a solution of detergent (TIDE), rinsed with copious amounts of water and sent through the tunnel washer.

7.7 If there is concern at any time that there may have been a contamination, the Manager or Radiation Safety Officer should be notified.

8.0 Procedures-Autoclave Times

8.1 All materials are autoclaved at 250 degrees for 45 minutes. The cages are positioned in herring bone (criss cross) fashion. Autoclave bags are not completely closed to allow for adequate sterilization without rupturing. Autoclave bags are used to contain the plastic bags the carcasses and trash are in.

8.2 Autoclave charts are a record of adequate sterilization. Each needs to be changed when filled and dated on the back of the chart. These should be kept with the containment records.

8.3 Test vials are supplied by Safety on a monthly basis. Test vials are inserted in a challenging position within the load to be autoclaved. Personnel working on the soiled side of the washroom are alerted so that they can retrieve vials. The vials are returned to the Senior Animal Technician who returns them to the Manager. The results are kept on file with the Manager.

8.4 After autoclaving the trash and carcasses are disposed of as noninfectious waste. The cages are handled as noninfectious soiled equipment.

cc: Autoclave Test Vial Reports

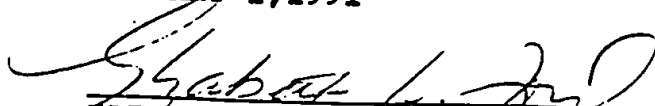

STANDARD OPERATING PROCEDURES
THE SCRIPPS RESEARCH INSTITUTE
DIVISION OF ANIMAL RESOURCES

TITLE: DEPARTMENTAL WASTE DISPOSAL

CODE#: ADM9

EFFECTIVE DATE: JANUARY 1, 1991

APPROVAL:

ELIZABETH W. FORD, DVM, MPVM
Director

PURPOSE: TO ASSURE RESPONSIBLE DISPOSAL OF WASTE MATERIALS IN COMPLIANCE WITH ALL REGULATIONS

DESCRIPTION:

- 1.0 Persons Responsible
 - Manager
 - Senior Animal Technician
 - Director
- 2.0 Frequency
 - Daily, Weekly, biweekly, as needed
- 3.0 Documentation
 - BFI monthly print outs
- 4.0 Materials Required
 - Radioactive Tape
 - BFI waste boxes
 - Unprinted Autoclave Bags
 - Wet Waste Bags
 - Autoclave Tape
- 5.0 Procedure-Radioactive Waste
 - 5.1 Radioactive carcasses are brought to the attention of the Senior Animal Technician or Manager who notifies Safety for pickup. The animal facilities do not have the capability of storing radioactive waste.
 - 5.2 After pick up and clearance by Safety the Manager is notified by the Senior Animal Technician.
 - 5.3 If the radioactive materials are in the way, they may carefully be moved but the original site should be covered

with durable plastic backed paper to prevent tracking radioactivity throughout the facilities.

5.4 In the event that the material is not properly labeled with the Principal Investigator, date, isotope, amount it should not be handled but should be left for Safety. Information, regarding possible ownership that can be followed up by Safety, is desirable.

6.0 Procedure-Carcass Disposal

6.1 Every other Wednesday, the Central Office is notified by BFI of pick up time 30 minutes prior to arrival.

6.2 The Central Office notifies the Senior Animal Technicians in each area of the pick up time. The BFI boxes are plastic lined and loaded ensuring the total weight of each box is less than 50 lbs. The filled box is closed and securely taped.

6.3 After pickup outside the Experimental Rodent Colony, the Senior Animal Technician signs the pick up slip and forwards it to the Central Office.

6.4 The company barcodes the waste and handles it as medical waste.

6.5 Monthly reports regarding the disposition of the waste are sent to the Manager and kept on file.

7.0 Procedure-Waste Management, Non-Infectious

7.1 All nonhazardous refuse (feed, bedding, paper products from the animal rooms and the office areas) is placed in large air-tight dumpsters located in front of the Vivarium, the Experimental Rodent Colony, Blake Building, and Nonhuman Primate Facility. The Non-Human Primate dumpster is kept locked at all times.

7.2 The waste is picked up twice a week by San Diego Waste Management on Tuesday and Friday and taken to the Mira Mar landfill.

8.0 Procedure-Infectious Waste, Bio-containment

8.1 All waste generated in the bio-containment areas is considered infectious. Before leaving this area all waste is decontaminated. This is performed by placing the waste in autoclave bags and autoclaving for a minimum of 45 minutes at 250 degrees. Soiled equipment and bedding is also autoclaved in this fashion prior to leaving the containment facility. Once decontaminated this waste is handled as in Procedure 7.0.

8.2 All animal carcasses in the containment areas are considered infectious and will be autoclaved as in Procedure 8.1 with the exception that carcasses are autoclaved for a

minimum of 90 minutes. Once decontaminated the carcasses are handled as in Procedure 6.0.

9.0 Procedure-Infectious Waste, Primate Quarantine

9.1-Until animals in quarantine are released by the California Dept. of Health Veterinary Public Health Unit, all waste generated is considered infectious. Prior to leaving the quarantine area the waste is placed in plastic trash liners, placed in autoclave bags, and autoclaved at 250 degrees for a minimum of 30 minutes.

9.2-Once waste has been decontaminated, it is removed from the autoclave and immediately taken to and deposited in the locking dumpster directly outside the facility.

9.3-Autoclaved sharps containers are placed in the locked BFI bin to await pickup by that company.

9.4-Any animal that dies while in quarantine will be treated according to SOP SV1, Procedures 6.8 and 12.0.

**Manufacturer Operating Procedures,
Maintenance Schedules, and Schematics**

Putrescible biohazardous waste must be treated within seven days of the first item being placed in the bag.

Nonputrescible biohazardous waste must be treated within six months of the first item being placed in the bag.

Waste that is not biohazardous must not be placed into biohazardous waste bags.

2. Biohazardous Waste Bags

Biohazard bags are disposable, plastic bags which are impervious to moisture and have sufficient strength to preclude ripping, tearing, or bursting under normal conditions. The following requirements apply:

- The bags shall be red in color, i.e., orange bags are not permitted. The outer bag may be colorless as long as the inner bag is red and both bags meet the stated strength criteria.
- Conspicuously labeled with the international biohazard symbol and the word "Biohazard."
- Generator's name, address, and phone number displayed on the biohazard bag.

3. Sharps.

All sharps (with the exception of radioactive sharps) must be collected in biohazardous sharps containers. Sharps containers are required to be red, leakproof, rigid, puncture-resistant containers with a tight or tamper-resistant lid and labeled with the following: generator name, address, and phone number. Each container must be identified with the universal biohazard symbol along with the words "Biohazard."

Sharps containers shall be managed as biohazardous waste. Contact Environmental Services for removal and replacement of sharps containers.

Sharps contaminated with radioactive materials/extremely hazardous waste shall not be placed in biohazardous sharps containers. Contact Environmental Health and Safety for the appropriate sharps containers.

4. Liquids

Liquid wastes shall be kept separate from solid wastes.

Liquid waste shall not be stored for extended periods prior to treatment.

Use appropriate techniques (steam or chemical sterilization) to treat waste fluids known or suspected to be pathogenic. It should be noted that some chemical sterilants (i.e. gluteraldehyde, formaldehyde) meet the definition of hazardous waste. These items must be collected and not disposed of in the sink drains. Contact Environmental Health and Safety for pick-up.

5. Filling and Securing Biohazardous Waste Containers.

When placing items into the biohazardous waste bags or containers, do not fill to capacity. This will prevent bursting as the temperature within the autoclave increases causing expansion of air and liquid within the bags and containers. Overfilling of sharps containers may result in laceration and puncture injuries to personnel.

When full, loosely seal the biohazardous waste bag with tape or place the supplied cap onto the waste container. Loosely sealing the bag or container will allow steam to reach the center of the receptacle and ensure adequate sterilization.

Attach heat sensitive autoclave indicating tape to the bags or containers.

Biohazard bags must be tied and have autoclave indicating tape attached before being transported.

The bags should be tied to prevent leakage or expulsion of solid or liquid wastes during storage, handling, or transport.

III. Handling of Biohazardous Waste

1. General

Employees who generate, handle, and process infectious biological waste have the potential for direct exposure to infectious biological agents. Exposure can occur through direct inoculation when an employee is cut by a piece of contaminated glass. Protection against accidentally acquired illness associated with handling infectious and potentially infectious materials is achieved through appropriate waste handling methods and training.

2. Responsibility for the Safe Handling of Infectious Materials.

The primary responsibility for the safe handling and disposal of infectious biological waste resides with the generator of that waste. This responsibility extends to the ultimate point of disposal even when there are other parties involved in the handling of waste.

3. Personal Protection

The handling of biological waste requires the use of protective clothing and equipment.

IV. Risks of Biohazardous Exposure

All employees who handle biohazardous waste will:

- Understand the content of the CAL/OSHA Bloodborne Pathogen Standard;
- Receive an explanation of the epidemiology and symptoms of bloodborne pathogens;
- Receive an explanation of the modes of transmission of bloodborne pathogens;
- Understand the contents of the Bloodborne Pathogen Exposure Control Plan;
- Understand how to recognize tasks and activities that may involve exposure to blood and other potentially infectious materials;
- Understand the use and limitations of practices that will prevent or reduce exposure including appropriate engineering controls, work practices, and personal protective equipment;
- Understand waste disposal practices;
- Understand appropriate actions to take and persons to contact in an emergency;
- Understand the procedure to follow if an exposure incident occurs, including the method of reporting the incident and the medical follow-up and counseling that will be made available;
- Receive an explanation of signs and labels and/or color coding required by the standard.

V. Autoclaving of Biohazardous Waste

1. Basic Principle of Operation.

To achieve adequate sterilization, a minimum temperature of 250°F must be achieved and held for a minimum of 30 minutes. Because of its excellent heat transfer characteristics, steam is used in the autoclave process instead of air. The “wet heat” associated with steam greatly reduces the sterilization time. For example, autoclaving at 250°F for 12 minutes in a steam autoclave would require overnight operation of a “hot air” sterilization process to achieve the same results.

At the start of the autoclave cycle, steam is admitted to the top of the autoclave and air in the autoclave is forced out vents in the bottom (gravity displacement). This process continues through out the cycle to ensure that a “blanket” of steam surrounds the load.

Air pockets within the autoclave chamber and tightly sealed bags and containers result in inefficient sterilization.

2. General Autoclave Procedure.

See autoclave specific information for the autoclave in use.

If not already affixed, heat sensitive autoclave indicating tape must be attached to the bags or containers.

Fill out all entries on autoclave log with the exception of the run time, temperature, and pressure information.

Position items within the autoclave to allow steam to reach all surfaces of the bags or containers.

Defects in glassware may cause glass containers to break during the autoclave process. These items should be placed into secondary containers within the autoclave to prevent spills. If possible, bags and sharps containers should also be placed in secondary containment to catch any liquids that may leak from them. Caution should be used when selecting secondary containers as some plastics will not withstand autoclave temperatures.

Start the autoclave cycle. The minimum autoclave cycle time and temperature is 250°F for 30 minutes. In general, this is sufficient time/temperature to sterilize most loads.

Large loads or certain autoclaves may require longer sterilization times to ensure adequate sterilization. See the posted instructions for the specific autoclave.

When the autoclave cycle is complete, verify from the autoclave cycle printout that adequate temperature has been attained for the required time. Complete run time, temperature, and pressure entry on the autoclave log sheet.

VI. Autoclave Safety Tips

PPE: Approved safety glasses, gloves (latex, nitrile), a lab coat, and closed-toed shoes are required to be worn when placing items into or removing items from the autoclave. Additional equipment to assist the operator may be used at the operator's discretion to assist in the loading and unloading of items from the autoclave.

Liquids:

Use LIQUIDS cycle only (no dry time). No other cycle is safe for processing liquids.

Use only vented closures to allow for the escape of expanding gases.

Use only containers that can withstand the autoclave process.

Avoid sudden full opening of door at end of cycle. Open autoclave door no more than one inch and wait 10 minutes before unloading autoclave.

Do not allow bottles to be jolted. This can result in hot-bottle explosions. Do not move bottles if boiling or bubbling is present.

Allow bottles to cool to the touch before removing them from the autoclave.

Insulated gloves must be worn when removing glass/liquid containers from the autoclave. Containers should be placed in a secondary container and transported on a cart if possible. This will help to prevent spills.

Steam burns: Allow time for the steam to be evacuated and for the load to cool before opening the autoclave door.

Ergonomics: Do not fill bags to the point that they become difficult to lift (too heavy). When lifting bags and containers, face the load and lift with your legs. Ask for assistance if the load is too heavy.

VII. Control Measures

Autoclave Tape:

Autoclave tape must be placed on each bag or container to be autoclaved. The tape functions as a visual indicator that the item has passed through a steam sterilization process, but does not indicate that the item has been correctly autoclaved.

Autoclave Cycle Printout:

Following the autoclave process, the autoclave cycle printout must be checked to verify that the autoclave has reached and maintained the proper temperature for the appropriate time. This information must be entered into the Autoclave Log located near the unit.

Autoclave cycle printout tape must be kept for a period of at least three years.

Monthly Spore Test (Appendix A):

Place biological indicator in the most challenging area of the autoclave load.

Following sterilization, send the indicator to EH&S as soon as possible.

Notification will be made for any positive results. Autoclave must be removed from service until a negative test result is attained.

Two separate spore tests must be conducted to verify a negative test result prior to sterilization of waste following any change or modification to either the autoclave unit or operating cycle that may effect the units ability to adequately sterilize waste.

Autoclave Log (Appendix B):

Autoclave use date, run time/temperature/pressure, load description, load pattern, water content, annual maintenance check, operator initials, and laboratory number must be entered onto the log for each use.

Autoclave logs must be kept for a period of at least three years.

Maintenance:

Maintenance records are kept by the Engineering Department for a minimum of three years. These records must include;

- Bimonthly maintenance
- Annual thermometer calibration
- Any other maintenance items associated with the autoclave.

All autoclave malfunctions must be reported to your supervisor and Engineering Services immediately.

APPENDIX A

AUTOCLAVE SPORE TEST PROCEDURE

1. Insert the test vial into the autoclave and run with a standard load, time, and cycle. The vial should be placed in the most challenging area of the autoclave ,i.e., the bottom shelf near the door.
2. All loads of "red bag" (biohazardous) waste must be sterilized for a minimum of thirty (30) minutes at 250° Fahrenheit (gravity) or 270° Fahrenheit (prevacuum) steam cycles.
3. After the sterilization cycle is complete, remove the test vial from the autoclave and complete the information at the bottom of this sheet.
4. In order to obtain accurate results, it is necessary that the spore test vial be incubated within 7 days of the test. Therefore, the spore test vial along with this sheet must be promptly returned to the Department of Environmental Health and Safety. This can be accomplished as follows:
Contacting the EH&S Office (4-8240) to arrange for pickup.
Returning the items by interdepartmental mail to the EH&S Office (Mail Code: BCC078) or
Delivering the items to the EH&S Office (BCC B278).
5. If at any time during the incubation period a positive (bacteria present) readout is observed, Environmental Health and Safety will immediately notify the contact person. Arrangements will be made to retest the autoclave. The autoclave must not be used for the sterilization of biohazardous/medical waste until a negative test result is obtained.
6. Two separate spore tests must be conducted to verify a negative readout prior to sterilization of waste following any change or modification to either the autoclave unit or the operating cycle that may effect its ability to adequately sterilize the waste.
7. Note any comments on the back of this form.

OPERATING PROCEDURE

TITLE: SHARPS HANDLING PROCEDURE PROCEDURE: III

DATE: AUGUST 11, 1998

OBJECTIVE: To provide a safe and secure method of handling sharps containers in preparation for disposal. All used sharps are placed in disposable sharp containers at the place of use.

DEFINITIONS: Sharps: Includes any objects or devices having acute rigid corners, edges, or protuberances capable of cutting or piercing, and includes, but is not limited to hypodermic needles, blades, and slides.

Sharp Containers: Leak proof, rigid, puncture-resistant containers which when sealed cannot be reopened without great difficulty. These containers must be labeled either "Biohazardous" or "Infectious Waste". The container must be labeled so that the producer's name, address, and phone number are visible for inspection. Needles and syringes shall not be clipped prior to disposal. All sharps containers must be managed as Biohazardous waste.

PERSONAL PROTECTIVE EQUIPMENT: Leather Gloves. Precautionary apparel

REFERENCES: Biosafety Manual IV.D.1,2,3,4
Biosafety in Microbiological and Biomedical Labs, HHS Publication # 93-8395
Cal/OSHA Bloodborne Pathogens Standard (8CCR 5193)
Medical Waste Management Act (HSC 117600et,seq.)

PROCEDURE:

- I. COLLECTION:
 - A. EVS is responsible for the collection, transportation, and storing of sharps containers.
 - B. All sharp containers have lids that are permanently secured before transporting to the Biohazardous Waste area.
 - C. All sharp disposal boxes will be transported by covered Biohazardous cart to the Biohazardous Waste Area where they are stored in covered barrels until picked up by a permitted Biohazardous Waste hauler.
 - D. Biohazardous Waste Storage Cages are located on the first floor BCC and outside the CVN building. A Biohazardous Storage Shed is located adjacent to the Immunology building. Only authorized personnel have access to the storage areas. The Biohazardous Waste Storage areas are kept locked at all times when not in use.

TSRI ENVIRONMENTAL SERVICES
OPERATING PROCEDURE
SHARPS HANDLING PROCEDURE
PAGE 2 OF 2

II. DISPOSAL:

- A. All sharp containers are picked up on a regularly scheduled basis by a permitted Biohazardous Waste hauler for disposal.
- B. Sharps are placed in barrels, separate from other Biohazardous waste.
- C. All sharp containers are considered Biohazardous. Proper handwashing procedures must be used after handling of Biohazardous Waste.

III. TRAINING/COMPETENCY:

- A. All EVS staff is oriented to Biohazardous Waste handling procedures during the department orientation and the TSRI orientation.
- B. EVS staff receives annual training in Biohazardous Waste handling.
- C. EVS staff is instructed to report to Lead or EVS Manager when mishandling of sharps containers is discovered.

Manager, Environmental Services

THE SCRIPPS RESEARCH INSTITUTE
ENVIRONMENTAL SERVICES
OPERATING PROCEDURES

TITLE: BIOHAZARDOUS SOLID WASTE HANDLING PROCEDURE PROCEDURE: III.3

DATE: AUGUST 24, 1998

DEFINITIONS: Medical Waste: Waste that is generated a) in the diagnosis, treatment, immunization, or autopsy of human beings; b) in research pertaining to humans; c) in the preparation of human or animal remains for internment or cremation (incineration); or d) in the production or testing of biologicals and meets one or more of the following:

1. Cultures and stocks
2. Pathological wastes
3. Human blood, body fluids, and tissues
4. Animal wastes
5. Sharps

Solid Wastes: Solid wastes include: petri dishes, culture tubes, culture flasks, plastic serological pipettes, and pipette tips meeting the definition for biohazardous waste.

Biohazard Bags: Biohazard bags are disposable, red plastic bags which are impervious to moisture and have sufficient strength to preclude ripping, tearing, or bursting under normal conditions.

PERSONAL PROTECTIVE EQUIPMENT: Leather gloves. Precautionary apparel.

REFERENCES: Biosafety Manual IV A,B,C,D
Biosafety in Microbiological and Biomedical Labs, HHS publication #93-8395
Cal/OSHA Bloodborne Pathogens Standard (8CCR 5193)
Medical Waste Management Act (HSC 117600 et, seq.)

PROCEDURE:

- I. COLLECTION/TRANSPORTATION/STORAGE
 - A. EVS is responsible for the collection, transportation, and storing of the red plastic biohazard bags.
 - B. Double-lined biohazard bags labeled with the following: name of institution, address, and phone number are used by laboratory personnel for disposal of solid waste.
 - C. Laboratory personnel (generators) place biohazard bags inside supported, reusable containers with lids. Containers must be labeled with "Biohazardous Waste" or the international symbol for "Biohazard". Biohazard bags must be tied and autoclave tape used before being transported.

TSRI ENVIRONMENTAL SERVICES
OPERATING PROCEDURE
BIOHAZARDOUS SOLID WASTE HANDLING PROCEDURE
PAGE 2 OF 2

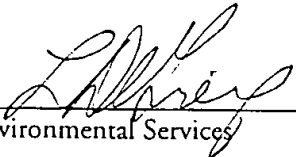

- D. All double-lined red biohazard bags will be transported by supported, reusable containers with lids to the biohazardous waste area where they are stored in covered barrels until picked up by a permitted biohazardous waste hauler. Environmental Services staff will wear PPE when transporting and storing sharps.
- E. Biohazardous Waste Storage Cages are located on the first floor BCC and outside the CVN building. A biohazardous storage shed is located adjacent to the IMM building. Only authorized personnel have access to the storage areas. The biohazardous waste storage areas are kept locked at all times when not in use.

II. DISPOSAL

- A. All red biohazard bags are picked up on a regularly scheduled basis by a permitted biohazardous waste hauler for disposal.
- B. Red biohazard bags are placed in barrels, separate from other biohazardous waste.
- C. All red biohazard bags are considered Biohazardous. Proper hand washing procedures must be used after handling of biohazardous waste.

III. TRAINING/COMPETENCY

- A. All EVS staff is oriented to Biohazardous Waste handling procedures during the department orientation and the TSRI orientation.
- B. EVS staff receives annual training in Biohazardous Waste handling.
- C. EVS staff is instructed to report to Lead or EVS Manager when mishandling of biohazardous waste is discovered.

OPERATING PROCEDURE

TITLE: BIOHAZARDOUS WASTE RECORDKEEPING/REPORTING

PROCEDURE: III.4

DATE: AUGUST 24, 1998

DEFINITION: Recordkeeping: Internal housekeeping practices and controls needed to meet the goals of the environmental legal program (i.e. maintaining employee training records and tracking of pick up by hazardous waste haulers).

REPORTING:

- A. Periodic reports of routine operations
 - 1. Employee injury records
 - a. monthly report to V.P. Facilities
 - 2. Hazardous Waste Generator Records
 - a. poundage by location
 - b. cost by location
 - c. monthly report to V.P. Facilities
- B. Incident Response Report
 - 1. Spills
 - a. reported on occurrence to:
EH&S
V.P. Facilities
- C. Medical Waste Management Plan
(Dept. of health Services, County of San Diego)
 - 1. Update annually
 - 2. Update when change in generator and/or storage area.

RECORDKEEPING:

- A. Standard Container Inventory Invoices
 - 1. provided by licensed hauler
 - a. transported off TSRI Campus
- B. Daily activity Supporting Statements
 - 1. net weight biohazardous waste generated
 - 2. net weight pathological incineration waste generated

Manager, Environmental Services

Date

ATTACHMENT 11

Closure Plan (XIII)

XIII. CLOSURE PLAN

- All treatment units (autoclaves) will be operated empty for a minimum of 90 minutes at a temperature of 250°F.
- The outer surfaces of the autoclaves will be cleaned with an EPA registered disinfectant.
- All biohazardous storage containers will be disinfected with an EPA registered disinfectant and then transferred to an authorized biohazardous waste broker for disposal.
- Biohazardous waste storage areas and areas in which waste was treated will be cleaned with an EPA registered disinfectant.

CLOSURE COST ESTIMATE

AUTOCLAVES-INSIDE	\$120.00
AUTOCLAVES-OUTER SURFACES	\$480.00
STORAGE CONTAINERS	\$1800.00
OFF-SITE DISPOSAL OF CONTAINERS	\$3000.00
FACILITY DISINFECTION	\$1800.00
TOTAL CLOSURE COST	\$7200.00

ATTACHMENT 12

Monitoring Schedule (XIV)

XIV. AUTOCLAVE MONITORING SCHEDULE

SPORE TESTS:

All autoclaves will be tested at least monthly. The Department of Environmental Health and Safety (EH&S) will administer the monthly spore (*Bacillus Stearothermophilus*) test program in accordance with the attached procedure. If an autoclave fails a spore test, EH&S will immediately notify the contact person. Arrangements will be made to re-test the autoclave. Biohazardous waste will not be autoclaved until it has been determined that the autoclave is again functioning properly.

AUTOCLAVE INDICATOR TAPE:

Autoclave Indicator Tape will be placed on each bag of biohazardous waste to be autoclaved. Prior to disposal, the tape will be checked to verify that adequate temperature has been obtained.

PREVENTIVE MAINTENANCE:

All autoclaves undergo bimonthly maintenance. See attached Preventive Maintenance Protocol.

Department Name: Environmental Health and Safety	Issue Date: August 26, 1998	Revision Date:
Title: Permitted Autoclaves	P.P. Number: I-10	Page 1 of 7

Purpose: The purpose of this document is to establish a procedure by which county-permitted autoclaves (autoclaves in which biohazardous/medical waste may be treated) are tested and monitored for regulatory compliance.

Scope: This document applies to all TSRI Environmental Health and Safety personnel who are responsible for ensuring that county-permitted autoclaves are maintained in accordance with current regulations.

I. Responsibilities

A. It is the responsibility of the **Department of Environmental Health and Safety** to ensure the following:

1. All autoclaves used to sterilize biohazardous/medical waste are permitted by the San Diego County Department of Environmental Health, Hazardous Materials Management Division.
2. An up-to-date list of all permitted autoclaves is maintained and these autoclaves are tested (spore test) for proper operation on a monthly basis.
3. The contact person for each autoclave is provided with a written copy of the spore test results.
4. Written records of autoclave spore test results are maintained for a period of not less than three (3) years.
5. Training is provided to users of permitted autoclaves in accordance with the TSRI Medical Waste Management Program. Training is to include but is not limited to waste handling, proper labeling, waste segregation, waste storage, record keeping, emergency procedures, and safe operation of the autoclave.
6. The records of all permitted autoclaves are periodically inspected to ensure regulatory compliance.

B. It is the responsibility of the **Department of Engineering Services** to ensure that all maintenance records for permitted autoclaves are maintained for a period of not less than three (3) years. These records will include documentation of the annual thermometer calibration.

- C. It is the responsibility of the **contact person** for each permitted autoclave to ensure the following:
1. All autoclave users accurately maintain the Autoclave Use Log (Appendix B).
 2. The completed log sheets and autoclave tapes are maintained in a neat and orderly fashion.
 3. The monthly autoclave spore test is conducted and accurate records of test dates and results are maintained.
 4. The Department of Environmental Health and Safety is immediately notified if maintenance is performed on the autoclave which may affect the ability of the unit to adequately sterilize biohazardous/medical waste.
- D. It is the responsibility of the **user** of each permitted autoclave to ensure the following:
1. Biohazardous medical waste is handled in accordance with the TSRI Medical Waste Management Program.
 2. All malfunctions with the autoclave are immediately reported to the contact person.

II. Test Procedure

A. Vial Preparation and Delivery

1. Obtain biological indicators of the variety Bacillus Stearothermophilus.
2. Using an indelible ink marker, label each biological indicator with the autoclave designation number and current month (i.e., "1" for January, "2" for February, etc.).
3. Place the indicator(s) into a coin envelope labeled with the designation numbers. Seal the envelope with tape.
4. Mail the indicators, a copy of the Autoclave Spore Test Procedure, (Appendix A) and the results of the previous month's test to the contact person.

III. Vial Processing (Incubation and Reading)

- A. The spore test vials must be incubated for a period of 48 hours and the final results read at the end of this period. Longer incubation times may result in erroneous results. Consequently, all incubations must be started no later in the week than Wednesday to ensure that the incubation is complete by Friday.
- B. Verify that the spore test vial has been autoclaved by observing that the chemical indicator located on the vial label has changed color from rose to brown.
- C. Place a positive growth control vial of the same lot and manufacturing date as the test biological indicators used in the autoclave test.
- D. Load the test vials into the incubator. If additional test vials are loaded into the incubator at a later time, a positive growth control vial must also be added with each subsequent group.
- E. Periodically check the indicators for any color change. Appearance of a yellow color (positive readout) indicates bacterial growth. If at any time during the incubation period a positive readout is obtained, the contact person must be notified immediately and instructed not to use the autoclave until a negative readout is obtained. Arrangements must be made to retest the autoclave as soon as possible.
- F. Vials must be read within 2-3 days of the completion of the 48-hour incubation period to prevent erroneous readings.
- G. If maintenance is performed which may effect the ability of the unit to adequately sterilize biohazardous/medical waste or if there is a change in the autoclave sterilization procedure, two separate tests must be conducted to verify a negative readout.

IV. Notification and Record Keeping

- A. Following incubation of the spore tests, record the results in the Autoclave Summary Sheet file (h:\users\common\autoclav\autolst.xls).
- B. Print two copies of the Autoclave Summary Sheet for each of the autoclave locations. Initial each sheet for the current month's test results. One copy is to be maintained by the Department of Environmental Health and Safety. The other copy is to be sent to the contact person with the following month's spore test.

C. The Department of Environmental Health and Safety shall maintain test results for a period of 3 years.

V. Consultation Program

Review of all records pertaining to permitted autoclaves will be conducted as part of the Consultation Program. This review shall include but is not limited to a review of the following:

1. The current list of permitted autoclaves
2. Autoclave Use Logs
3. Training records
4. Spore test results
5. Autoclave maintenance records

APPENDIX A

AUTOClave SPORE TEST PROCEDURE

1. Insert the test vial into the autoclave and run with a standard load, time, and cycle. The vial should be placed in the most challenging area of the autoclave ,i.e., the bottom shelf near the door.
2. All loads of "red bag" (biohazardous) waste must be sterilized for a minimum of thirty (30) minutes at 250° Fahrenheit (gravity) or 270° Fahrenheit (prevacuum) steam cycles.
3. After the sterilization cycle is complete, remove the test vial from the autoclave and complete the information at the bottom of this sheet.
4. In order to obtain accurate results, it is necessary that the spore test vial be incubated within 7 days of the test. Therefore, the spore test vial along with this sheet must be promptly returned to the Department of Environmental Health and Safety. This can be accomplished as follows:
Contacting the EH&S Office (4-8240) to arrange for pickup.
Returning the items by interdepartmental mail to the EH&S Office (Mail Code: BCC078) or
Delivering the items to the EH&S Office (BCC B278).
5. If at any time during the incubation period a positive (bacteria present) readout is observed, Environmental Health and Safety will immediately notify the contact person. Arrangements will be made to retest the autoclave. The autoclave must not be used for the sterilization of biohazardous/medical waste until a negative test result is obtained.
6. Two separate spore tests must be conducted to verify a negative readout prior to sterilization of waste following any change or modification to either the autoclave unit or the operating cycle that may effect its ability to adequately sterilize the waste.
7. Note any comments on the back of this form.

Operating Procedure

JACKET FLOODED SWITCH

Eagle 3000 Series Sterilizers

(1-18-93)

P-387342-993 Rev. 1

A WORD FROM AMSCO

This manual contains important information on proper use of this sterilizer. All operators and department heads are urged to carefully review and become familiar with the warnings, cautions and instructions contained herein. This sterilizer is specifically designed to process goods using only the cycles as specified in this manual. If there is any doubt about a specific material or product, contact the manufacturer of the product for the recommended sterilization technique.

Service Information

A thorough preventive maintenance program is essential to safe and proper operation of this sterilizer. You are encouraged to contact AMSCO concerning our Preventive Maintenance Agreement. Under terms of this agreement, preventive maintenance, adjustments, and replacement of worn parts are done on a scheduled basis to assure equipment performance at peak capability and to help avoid untimely or costly interruptions. AMSCO maintains a nationwide staff of well-equipped, factory-trained technicians to provide this service, as well as expert repair services. Contact your AMSCO representative for details.

AMSCO carries a complete line of accessories for this unit to simplify, organize and assure sterility of the sterilization process. Instrument trays, Vantage and DEXTEX wraps and biological/chemical monitoring systems are all available to fulfill your facility's processing needs. An AMSCO representative will gladly review these with you.

Advisory

A summary of the safety precautions to be observed when operating this equipment can be found in Section 1 of this manual and behind the upper access panel of the unit. Do not operate the sterilizer until you have become familiar with this information.

This sterilizer is not designed to process flammable liquids nor liquids in containers that are not designed for sterilization. Any alteration of the sterilizer which affects its operation will void the warranty and could violate state and local regulations and jeopardize insurance coverage.

Service and Maintenance Procedure

Eagle 3000 Series Prevacuum Sterilizer

(11-22-93)

P-387343-361 Rev. 1

A WORD FROM AMSCO

This manual contains important information on proper maintenance of this sterilizer. All operators and department heads are urged to carefully review and become familiar with the warnings, cautions and instructions contained herein. This sterilizer is specifically designed to process goods using only the cycles as specified in the Operating Procedure manual. If there is any doubt about a specific material or product, contact the manufacturer of the product for the recommended sterilization technique.

Service Information

A thorough preventive maintenance program is essential to safe and proper operation of this sterilizer. You are encouraged to contact AMSCO concerning our Preventive Maintenance Agreement. Under terms of this agreement, preventive maintenance, adjustments, and replacement of worn parts are done on a scheduled basis to assure equipment performance at peak capability and to help avoid untimely or costly interruptions. AMSCO maintains a nationwide staff of well-equipped, factory-trained technicians to provide this service, as well as expert repair services. Contact your AMSCO representative for details.

This manual contains maintenance schedules and procedures which should be followed for satisfactory sterilizer performance.

Advisory

A summary of the safety precautions to be observed when servicing this equipment can be found in Section 1 of this manual and behind the upper access panel of the unit. Do not operate or service the sterilizer until you have become familiar with this information.

This sterilizer is not designed to process flammable liquids nor liquids in containers that are not designed for sterilization. Any alteration of the sterilizer which affects its operation will void the warranty and could violate state and local regulations and jeopardize insurance coverage.

Eagle 3000 Series Sterilizers

SUMMARY OF WARNING AND CAUTIONS

1

The following is a summary of safety precautions to be observed when operating or servicing this unit. WARNINGS indicate the potential for danger to personnel, and CAUTIONS indicate the potential for damage to equipment. The precautions are repeated (in whole or part) where applicable throughout the manual. Carefully read all safety precautions before proceeding to use or service the unit.

WARNING!

-  **SLIPPING HAZARD:** To avoid slippery floor conditions, immediately wipe up any spillage or condensation in sterilizer loading area.
-  **BURN HAZARD:** Sterilizer and rack/shelves will be HOT after cycle is run. Always wear protective gloves and apron (also face shield if processing liquids) when loading or unloading the sterilizer.
-  **BURN HAZARD:** Make sure chamber door is closed and locked before activating a manual cycle.
-  **BURN HAZARD:** When operating a manual cycle, with the power off, the flood control system is not operational. During this time a steam supply malfunction can cause the chamber to fill with scalding water. If machine is operated manually:
 - Unlock the door slowly.
 - Retighten door if water leaks past the door gasket and call for service immediately.
 - Do not attempt to operate this sterilizer until repairs have been completed by a skilled, trained technician.
-  **BURN HAZARD:** A steam supply malfunction, identified by an audible (warble tone) and visual alarm, can cause the sterilizer chamber to fill with scalding water.
 - Do not open the door.
 - Call for service immediately.
-  **BURN HAZARD:** Allow sterilizer, and accessories to cool to room temperature before performing any cleaning or maintenance procedures.
-  **BURN AND SHOCK HAZARD:** Repairs and adjustments must be performed only by authorized persons fully acquainted with this equipment. Maintenance done by inexperienced, unqualified persons or installation of unauthorized parts could cause personal injury or result in costly damage.
-  **BURN HAZARD:** Proper testing of the safety valve requires it to be operated under pressure. Exhaust from the safety valve is hot and can cause burns. Proper safety attire (gloves, eye protection, insulated overall) is necessary. Testing is to be performed by qualified service personnel only.
-  **BURN HAZARD:** Prior to equipment repair, the following investigative steps must be followed and any water that is present in the jacket must be eliminated.
-  **BURN HAZARD:** Do not attempt to open the sterilizer door.
-  **BURN HAZARD:** Do not service sterilizer steam trap or strainer until pressure in jacket has reached 0 psig and the sterilizer has reached room temperature. Piping may contain hot water so protective clothing and hand protection must be worn.

CAUTION!

-  Never use a wire brush, abrasives or steel wool on door and chamber assembly.
-  After installation, it is mandatory to brace piping so that it will not move vertically.
-  Make sure water and steam shut-off valves are closed and pressure is relieved from lines before cleaning strainers.
-  Allow thermostatic traps to cool to room temperature before removing cover. Since there is nothing to limit expansion, the diaphragm may rupture or fatigue if trap is opened while hot.
-  When replacing steam generator sight glass, do not overtorque the gland nut or damage to glass will occur.
-  Only a qualified service technician thoroughly familiar with sterilizer operation should perform these steps.

An Equipment Drawing showing all utility and space requirements was supplied with the sterilizer. Clearance space shown on the drawing is necessary for ease of installation and to assure proper operation and maintenance of equipment. If any documents are missing or misplaced, contact AMSCO giving the Serial, Equipment and Model numbers. Replacement copies will be sent to you promptly.

Installation Checklist

After installing this unit, complete the following checklist to assure that your installation is complete and correct. Or, if you desire, contact your AMSCO representative for a technician to be scheduled to test your installation and demonstrate proper equipment operation.

- Shut-off valves, for maintenance purposes, installed in steam and water lines at a point near the equipment.
- Disconnect switch (with OFF position lockout only) installed in electric supply line near the sterilizer.

NOTE: If the equipment is installed next to other equipment, shutoff valves and disconnect switches should be placed so that service can be shut off to any one unit.

- Service clearance is as shown on the Equipment Drawing.
- If a recessed machine, panel trim fits tightly against curtain-wall opening.
- Building steam line (direct steam units) provides condensate-free steam between 97 and 100% saturated vapor and that pressure is as specified (dynamic) on the Equipment Drawing.
- Building cold water line supplies water to sterilizer at the maximum pressure specified on the Equipment Drawing.
- Electrical supply for sterilizer controls is as specified on the Equipment Drawing.
- If applicable, electric supply for optional three phase motor for vacuum pump and/or recirculating pump, as specified on the Equipment Drawing. Circuit protection by others, not supplied as part of equipment.

Sterilizer parameters can be altered through the Change Values mode or the Service Mode.

Service Mode

Only qualified service technicians should access the service mode. To enter the service mode, pull down swing panel located inside the control column. Turn the column power switch OFF. Set dip switch 4 on the primary control board (P/N 146655-819) to ON. In order to default to the factory set values, hold the CHANGE VALUES and SAVE VALUES touch pad at the same time while the control power switch is turned ON.

NOTE: Control must be in service mode to default (burn-in) to the factory settings.

```
* CONTROL OFF      9:11:50A
                   7/09/91
* CONTROL ON       9:13:31A
                   7/09/91

* MADE IN U.S.A.  *
*****
* NOT READY      9:13:35A
DOOR UNLOCKED
-----
* CHANGE VALUE   9:14:20A
```

Printout Example

NOTE: Sterilizer is factory-set to operate using degrees Celsius. If Fahrenheit operation is desired or required, see the Change Values section on changing the temperature units.

Change Values Mode

The change values procedure is used to alter the operating "parameters" of the sterilizer. Change values can be used to adjust the sterilizer's cycle values through a wide range of adjustment, and allow control over the operating style of the sterilizer. Most of the change values options, except the ability to correct the time and date and set up the auto utilities control function can be secured (or "locked out") using a supervisor's access code.

Changing values in the Service Mode is similar to changing values in the Ready Mode. However, more values can be changed in the Service Mode, including temperature units, steam flush parameters (separate steam feed units only), and cycle names.

Making Changes

NOTE: The following procedures cover the adjustment of cycles, cycle values and operating (or control) values as they are displayed during the change values procedure by the sterilizer.

All changes are made to displayed settings using a cursor. The cursor is a blinking digit or word on the display. Move the cursor right or left by pressing the arrow touch pad for the appropriate direction (to move left, press the touch pad pointing left, to move right press the touch pad pointing right). If the cursor is on a cycle name (such as GRAVITY), the cycle type can be changed by pressing the up or down direction arrows touch pads.

Press CHANGE VALUES to move the cursor on the display to the first value to be changed. On displays with more than one line of value information, the cursor can be moved from the last number on one line to the first number on the next using the right arrow touch pad.

NOTE: It is often not possible to back up to a previous option or setting.

To change the digit or setting displayed, press the up or down direction touch pads. Usually pressing the up touch pad increases the value of a blinking digit by one, pressing the down arrow direction pad decreases the displayed value by one. The up and down direction pads are also used to change NO to YES (or YES to NO). The procedures given below will provide more details for these kinds of changes.

- Any step in Change Values can be left unchanged (i.e., skipped over) by pressing the CHANGE VALUES touch pad.
- Pressing SAVE VALUES at any time causes the sterilizer to leave the Change Values procedure and save any changes made to the point where SAVE VALUES has been pressed.
- A printout of all cycle and control values is provided upon leaving the change values procedure. Press RESET if you wish to cancel the printout.
- Pressing RESET alone causes the sterilizer to leave Change Values without saving any changes that have been made. Printer records time and date RESET was pressed.

Figure 3-2. Values Touch Pads

Table 3-1. Change Values

GENERAL	
Time and Date	The time and date displayed by the sterilizer can be adjusted when necessary.
CYCLE AND CYCLE VALUES	
Cycles and Cycle Values	<p>The cycles normally displayed and ready for use by the sterilizer can be changed. The values (Sterilize Time and Temperature, and Dry time) for each cycle can be adjusted.</p> <p><i>NOTE: Cycles can be secured against change by unauthorized personnel using the Access Code function (see below).</i></p>
OPERATING VALUES	
Auto Utility Control	This setting permits the operator to program the sterilizer to automatically shut off its steam and water at the end of the work day, to conserve utilities. The number of work days in a week, shut down and power up times can be programmed.
Automatic Duplicate Print	Sterilizer can be set to automatically furnish a duplicate printout of each cycle at the end of the cycle. First line will always read "DUPLICATE PRINT..." and complete printout of cycle data will be furnished.
Date Format	The sterilizer can be programmed to change the way the date is displayed and printed. The normal setting is to display Month/Day/Year (M/D/Y); but this can be changed to Year/Month/Day (Y/M/D), or Day/Month/Year (D/M/Y).
Time Units	This setting allows the control to display times using either standard AM/PM format or 24 hour format.
Access Code	An access code can be programmed into the control, limiting access to locked out cycles and most operating settings. Once the access code has been set, the full number of available cycles can be locked-out, making them unavailable for change by an operator without entering the Access Code first. Time and Date and Auto Utilities Control settings can be adjusted even if the Access Code is being used.
Complete Tone	Normally, a pulsing alarm tone sounds at the completion of a cycle. The sterilizer can be set so that the alarm tone does not sound when cycle is complete.
After Undertemperature	This setting is used to program the sterilizer to respond in the event of an undertemperature alarm. The Restart option resets sterilize phase time to its full length, restarting the phase, once the alarm has been cleared. When the Resume option is selected, the sterilizer continues the sterilization phase, running for the amount of time remaining when the alarm occurred.
Fo Value (Service mode only)	If a load prove is selected, the sterilizer can be set to calculate Fo values based on the load probe during the charge and sterilize phases.
Temperature Units (Service mode only)	The temperature units can be changed between Fahrenheit and Celsius. The display, printout and temperature will reflect the new temperature units.
P3 Setpoint (Units without Optimal Solution Cooling ONLY)	This setting determines the pressure when the Fast Exhaust valve opens during the Exhaust phase of a Liquid cycle or when the Vent phase begins.

Change Values

The sterilizer is open to a wide range of adjustments. This range of adjustments allows the operator, for example, to set cycle phases in hours/minutes/seconds.

After entering the Service mode, the display will show:

```

      STATUS
-----
1=MFG          3=TESTS
2=VALUES       4=CALIB

```

Press cycle 2 touchpad to change values. The display will show:

```

      STATUS
-----
CYCLE CNT=00000000
RUN TIME=00000.0

```

These values can be changed (see section on making changes). The "CYCLE CNT" refers to the total number of cycles run. The "RUN TIME" refers to the total run time in hours.

Press the CHANGE VALUES touchpad to advance. The printer will print the stored values from above.

```

CYCLE CNT = 0000000
RUN TIME = 00000.0hrs

```

The display will show:

```

      STATUS
-----
STERILIZER=VAC

```

This value can be changed to any 7 alphanumeric characters including space and underscore. This parameter will be printed at the start of all cycles. Press the CHANGE VALUES touchpad. The printer will print:

```

      STATUS
-----
INTERLOCK TYPE? 01

```

See the Interlock Procedure (if door interlocks are equipped on unit). Press the CHANGE VALUES touchpad. The display will show:

```

      STATUS
-----
INTERLOCK CODE? 0000

```

See the Interlock Procedure (if door interlocks are equipped on unit).

Changing Time and Date

NOTE: Adjusting the Time and Date is not protected under the Access Code.

1. Press and release the CHANGE VALUES touch pad, the time and date are displayed.

This display shows the time and date the sterilizer is using for all display and printout messages. This display should be verified periodically (see Preventive Maintenance Guide in Section 6).

If the display requires adjustment, follow the steps given below:

2. Move cursor (the blinking display position) to the digit you wish to change by pressing right or left direction touch pads.
3. Increase or decrease the value (of blinking digit) by pressing the up or down direction pads.
4. Repeat steps 2 and 3 until correct time and date is set.
5. Press SAVE VALUES touch pad to record the new time and date and to advance control to ready mode. Printout of cycle values and new time and date will also be furnished. Press CHANGE VALUES touch pad if more changes are desired.

The display will show:

**This blinking position can be 1, 2, 3, 4 (controls with four cycles) or CONTROL.*

When changing values, cycles and cycle values do not have to be changed following a set sequence. Instead, using the up/down direction values keys allows the operator to "scroll" through cycles and values. Select by pressing the CHANGE VALUES touch pad when the desired cycle number, or CONTROL, is on the display.

Pressing the PRINT VALUES button will print the values for that cycle only.

Display numbers correspond to the cycle numbers displayed on the sterilizer's main menu. The full number of available cycles can be locked out under the Access Code.

CONTROL values are the operational settings of the sterilizer (e.g., Auto Utility Control, etc.). All control values, with the exception of Auto Utility Control, are automatically secured against unauthorized or accidental change when the Access Code is been enabled.

NOTE: See the Operating Procedures for a description of changing cycle values.

****NOTE: This sterilizer is factory defaulted to operate using Celsius temperature units. If operation using Fahrenheit units is required, see the proceeding section on changing the units from Celsius to Fahrenheit.***

The following terms or abbreviations are used in CHANGE VALUES:

S = Sterilize time, in hours/minutes/seconds. This is the length of the sterilize phase of the cycle.

TMP = Sterilize temperature, in degrees (either Fahrenheit, or Celsius). This is the temperature at which the sterilize phase timer begins*.

D = This is the length, in minutes, of the drying phase of the cycle. Drying uses continuous evacuation to remove moisture from the chamber and any wrapped packs.

DRY VAC = This setting is used to determine the vacuum level to start the dry timer.

PULSES = This is the number of vacuum pulses the sterilizer pulls before entering the sterilize phase of the cycle. This applies only to prevac cycles.

P1 = This value is the peak pressure point between vacuum pulses during the conditioning phase of prevac cycles.

V1 = This value is the minimum depth of the vacuum pulses during the conditioning phase of prevac cycles. If unit has water ejector (refer to S7 on piping identification drawing for component identification), evacuation will occur for one minute and then end when the vacuum level reaches the V1 point.

P1 HOLD = This is the amount of time, in minutes and seconds, the control will hold at the P1 pressure value.

V1 HOLD = This is the amount of time, in minutes and seconds, the control will hold vacuum at the end of a vacuum pulse.

FT* = Steam flush temperature, in degrees (either Fahrenheit or Celsius). This is the temperature which the unit must obtain, at the steam flush pressure, to verify that most of the air is out of the chamber.

FP* = Steam flush pressure, in psig or bar pressure, This is the pressure which the unit will control to reach the steam flush temperature.

PURGE = This setting is used to determine the length of the purge phase of the cycle. Purging removes air from the chamber.

OVERDRIVE = This value is for controlling the sterilize temperature during the sterilize phase of the cycle. Typically it is offset a few degrees above the desired sterilize temperature. The control temperature during the sterilize phase is the sterilize temperature (TMP) plus the overdrive setting.

OVERTEMP = This is the value used by the sterilizer to determine at what temperature above the **set control** temperature the unit signals an overtemperature alarm.

UNDERTEMP = This is the value used by the sterilizer to determine at what temperature below the **set sterilize** temperature the unit signals an undertemperature alarm.

PRINT INTERVAL = This value controls the interval between status printouts. The value can be set anywhere between 0 and 100 minutes (when set to 00, the sterilizer makes a status print once every 100 minutes).

** Available only on units with separate steam feed piping.*

Change Values - Prevac Cycle

STATUS	
1.PREVAC	S=00:04:00
TMP=132 C	D=00:05:00

NOTE: Refer to the Operating Procedure for a complete listing of default values.

Range of adjustment for PREVAC cycle:

S=	0:00:00 - 99:99:99 hours:minutes:seconds
TMP=	0 - 140° Celsius (0 - 285° Fahrenheit)
D=	00:00:00 - 99:99:99 hours:minutes:seconds
DRY VAC=	0 - 99.9 (0 - 9.99 bar vacuum)
PULSES=	0 - 9
P1=	0 - 35 (0 - 9.99 bar pressure)
V1=	0 - 99.9 (0 - 9.9 bar vacuum)
P1 HOLD=	00:00 - 99:99 minutes:seconds
V1 HOLD=	00:00 - 99:99 minutes:seconds
PURGE=	00:00 - 99:99 minutes:seconds
FT*=	0 - 999° C or F
FP*=	0 - 99 psig (0-9.99 bar pressure)
OVERDRIVE=	0.0 - 9.9° (Celsius or Fahrenheit)
OVERTEMP=	00.0 - 99.9° (Celsius or Fahrenheit)
UNDERTEMP=	0.0 - 9.9° (Celsius or Fahrenheit)
PRINT INT=	0 - 100 minutes (00 =100 minutes)

* Steam flush parameters, FT and FP, are changeable in the service mode only and are only available on units with separate steam feed piping. The parameters are defaulted as follows:

FT= 108°C

FP= 6psig

Change Values - Liquid Cycle

STATUS	
4.LIQUID	S=00:45:00
TMP=121 C	

NOTE: Refer to the Operating Procedure for a complete listing of default values.

Range of adjustment for LIQUID cycle:

S=	00:00:00 - 99:99:99 hours:minutes:seconds
TMP=	0 - 140° Celsius (0 - 285 degrees Fahrenheit)
PURGE=	00:00 - 99:99 minutes:seconds
FT*=	0 - 999° C or F
FP*=	0 - 99 psig (0-9.99 bar pressure)
OVERDRIVE=	0.0 - 9.9° (Celsius or Fahrenheit)
OVERTEMP=	00.0 - 99.9° (Celsius or Fahrenheit)
UNDERTEMP=	0.0 - 9.9° (Celsius or Fahrenheit)
PRINT INT=	0 - 100 minutes (00 = 100 minutes)

* Steam flush parameters, FT and FP, are changeable in the service mode only and are only available on units with separate steam feed piping. The parameters are defaulted as follows:

FT= 108°C

FP= 6psig

Change Cycle Name

After pressing the CHANGE VALUES touch pad when the desired cycle number is on the display, that cycle's values can be changed. As an example, the following display will be shown:

STATUS	
1.PREVAC	S=00:10:00
.TEMP=132 C	D=00:05:00

The cycle name GRAVITY will be blinking. By pressing the up or down value touchpad, the cycle name will change to LIQUID and then back to GRAVITY.

Press the right cursor touch pad to change the cycle name. The first letter of the cycle name will be blinking. Press the up or down value touch pad to change the value from A to Z, blank space, underscore, or 0 to 9. Press the right cursor touch pad to change the next letter or press the left cursor touch pad to change the previous letter. The cycle can have a total of 7 characters. If the 7th character is blinking, pressing the right cursor touch pad will proceed to the first character. If the first character is blinking, pressing the left cursor touch pad will proceed to the last character.

NOTE: If the PREVAC cycle name is changed, the customized named cycle will have a PREVAC skeleton. The same is true if a LIQUID cycle is changed.

The cycles can be custom named for easy identification. As an example, the cycles can be named as follows:

STATUS	
1=CYLINDR	3=H_GOODS
2=FEED	4=MEDIA

CUSTOM NAME	CYCLE SKELETON
CYLINDR	PREVAC
FEED	PREVAC
H_GOODS	GRAVITY
MEDIA	LIQUID

Press the CHANGE VALUES touch pad to exit the change cycle name mode and proceed to changing the sterilize time, temperature and dry time. Press the CHANGE VALUES touch pad again to proceed to the next screen, or press the SAVE VALUES touch pad to save the values and exit.

NOTE: If you have changed any cycle values, and then later change the cycle type, any changes made to the cycle values will be lost. Additionally, once the cursor (blinking position) is moved off the cycle type (name), the cursor cannot be moved back onto the cycle name without exiting and re-entering the Change Values mode.

Changing Operating Values

These procedures can be used to change the way the sterilizer operates in a general way. If the Access Code has been enabled, only Automatic Utility Control, is open to the operator without the Access Code. These values are displayed in sequence.

**OFF is blinking.*

If you have access to Change Values (i.e., you know the Access Code, or the Access Code has not been enabled), but Auto Utility Control is not selected, follow this arrow.

1. Auto Utility

- a. This option allows the operator to program the sterilizer to automatically shut off and restart the sterilizer's steam and water supplies. The number of work days in a week, shut down and power up times can also be programmed. Sterilizer is shipped from the factory with Auto Utilities Control turned OFF.

- 1) The option defaults to the OFF setting, it can be changed to ON by pressing either the up or down direction pads.
- 2) Press SAVE VALUES to save changes to this point, or CHANGE VALUES to advance control.
- 3) If the Auto Utilities option is left OFF (and the remaining settings have not been secured by the Access Code), the control advances to the Cycle Print Format option (see below).
- 4) If, however, Auto Utilities is turned ON, the display changes to the following after pressing CHANGE VALUES:

**Seven is blinking.*

- b. The cursor (blinking digit) appears at the last number in the first line when the display comes onto the screen. These two settings can be used to set the range of days the sterilizer automatically shuts down and restarts utilities.

- 1) If necessary, increase or decrease the blinking display number to another number by pressing the up or down arrows touch pads.
- 2) Move to the second line by pressing the right arrow touch pad. The second line is used to enter the day of the work week the sterilizer is being programmed for Auto Utilities Control.

- 3) Once this display is changed satisfactorily, press CHANGE VALUES to advance to next display.

Example: The sterilizer is to be used five days a week (Monday through Friday); the Utility control is being set up on Tuesday. To program this, press the down arrow touch pad twice, the 7 at the end of the first line on the display is changed to a 5. Press CHANGE VALUES to move cursor to the next line of the display. Tuesday is the second day of the work week, press the down arrow touch pad five times to change the 7 at the end of the second line to a 2. The sterilizer is now programmed to operate Monday through Friday, and will shutdown utilities consumption automatically Saturday through Sunday.

- c. This display is used to set the time of day utilities are automatically shutdown and restarted. These values control Restart and Shutdown times each day the sterilizer is scheduled to be used in step 1, above. The values shown are the defaults and can be changed using the up and down, right and left direction pads. Once this display has been changed satisfactorily, proceed to steps 1) or 2), below. When these values are set to the same times, utilities will not automatically turn off.
 - 1) Press SAVE VALUES to save changes to this point and exit, or
 - 2) Press CHANGE VALUES to advance to the next display.

NOTE: Display while unit is in shutdown is shown above. Pressing cycle selector 1, 2, 3 or 4 touch pads restarts sterilizer before normal restart time.

**OFF is blinking.*

2. The sterilizer can be programmed to automatically provide a duplicate print at the completion of each cycle. The factory default is no duplicate print.
 - a. Press the up or down direction pad to change the OFF to a ON. ON indicates a duplicate print will be provided after every cycle.
 - b. Press SAVE VALUES to save changes to this point and exit, or
 - c. Press CHANGE VALUES to advance to next option.

**AM/PM is blinking.*

3. This option is used to select the display format for time. The factory default for this option is a standard time display (AM/PM), but this can be changed to a 24 hour time display (24hrs).
 - a. Press the up or down direction pad to change AM/PM to 24 hrs.
 - b. Press SAVE VALUES to save changes and exit, or
 - c. Press CHANGE VALUES to advance to Temperature Units.

4. This option is only present if the load prove is present. This option will either enable or disable the Fo control. The factory default for this option is Fo value control OFF, but this can be changed to Fo (optional item) value control ON.
 - a. Press the up or down direction pad to change OFF to ON. ON indicates that the cycles will have the Fo control option enabled.
 - b. Press SAVE VALUES to save changes and exit, or
 - c. CHANGE VALUES to advance to the temperature units.

**CELSIUS is blinking.*

5. This option is used to select the display, printer and control temperature units. The factory default for this option is Celsius, but this can be changed to Fahrenheit. Calibration is not required to change temperature units. If temperature units are changed, all temperature default values are reloaded for the temperature units selected. On some units, all changeable parameters are set to their defaults when temperature units are changed.
 - a. Pressing the up or down direction touch pads toggles the display from Celsius to Fahrenheit and back to Celsius. Once desired setting is on the display,
 - b. Press SAVE VALUES to save changes to this point and exit,
 - c. Press CHANGE VALUES to advance to Access Code option.

**M is blinking.*

6. This option can be used to change the way the sterilizer displays and prints the date. The normal setting is to display Month/Day/Year (M/D/Y); but this can be changed to either Year/Month/Day (Y/M/D) or Day/Month/Year (D/M/Y).
 - a. Pressing the up or down direction touch pads cycles the display through these selections. Once desired setting is on the display,
 - b. Press SAVE VALUES to save changes to this point and exit,
 - c. Press CHANGE VALUES to advance to Time Units.

**OFF is blinking.*

7. The access code enables the supervisor to secure the sterilizer against unauthorized accidental entry into the Change Values procedure. The factory default is for no access code.
 - a. If an access code is required, press the up or down direction pads to change display to ON.
 - b. Press either SAVE VALUES or CHANGE VALUES touch pad. If the status of the access code was not changed, control advances to Complete Tone option. If Access Code option was changed from OFF to ON, display changes to ask for entry of access code.

**First 0 is blinking.*

8. Cursor (blinking digit) appears at first digit of access code.
 - a. Use the right left arrow touch pads to move the cursor (blinking digit) to the right or the left. Once the cursor is positioned, use the up/down direction pads to increase or decrease a blinking digit. All four digits can be changed at this display. Once this display has been changed as desired, advance to steps "b" or "c", below.
 - b. By pressing SAVE VALUES the Access Code (even if unchanged) will be saved by the memory; any other changes are also saved and control exits to main cycle selection menu.
 - c. Press CHANGE VALUES To "lock-out" cycles.

**0 is blinking.*

9. The default value for this display is 0. Up to the full number of available cycles can be locked-out (protected from unauthorized or accidental change).
 - a. Change the value by pressing the up direction pad a number of times equal to the number of cycles you wish to lock-out. (For example, if one cycle is locked out, cycle #1 is locked out, if two cycles are locked out, cycles #1 and #2 are locked out, etc.). Press the up arrow touch pad to increase, or press the down direction pad to decrease the number of locked out cycles.
 - b. Trying to enter a value greater than the full number of available cycles causes the display to respond with the following message:

- c. Once this display has been changed as desired, press SAVE VALUES to save changes to this point and exit, or
 - d. Press CHANGE VALUES to advance to Complete Tone option.

**ON is blinking.*

10. When this option is set to ON, the sterilizer sounds a pulsing tone when a cycle completes. The default setting for this option is ON.
 - a. Press the up or down direction pads if you wish to change ON to OFF.
 - b. Press SAVE VALUES to save changes made to this point and exit, or
 - c. Press CHANGE VALUES to advance to the After Undertemperature Restart option.

**RESTART is blinking.*

11. This option is used to control the sterilizer during undertemperature situations occurring during the sterilize phase of a cycle. The RESTART setting causes the sterilizer to begin the sterilize phase over if the unit enters an undertemperature state. RESTART is the default setting. RESUME causes the sterilizer to start the phase timer from the point where the unit enters an undertemperature state.
- Change RESTART to RESUME, if desired, by pressing the up or down direction touch pads.
 - Press SAVE VALUES to save changes to this point and exit, or
 - Press CHANGE VALUES to advance control to first Too Long in Step display or P3 setpoint (units without Optimal solution Cooling ONLY).

12. This setpoint exists and shows only for units without Optimal Solution Cooling. This point determines when the Fast Exhaust valve opens during the Exhaust phase of a Liquid Cycle or when the Vent phase begins. This point may not be set greater than 4.0 psig (2.76 bar pressure).
- This value is entered using the CHANGE VALUES touch pads, the same as for other values in this procedure.
 - Press SAVE VALUES to store this value in the control memory, and return to the main cycle selection menu.
 - Once this value has been set as desired, press CHANGE VALUES to advance to the next Too Long in Step display.

13. The screen for Too Long in Step alarms appears on the display. These alarm settings are defined as follows:

TLIC = Too Long in Charge. This value determines how long the sterilizer will attempt to reach the sterilize temperature set point during charge before the control sounds an alarm. This value can be set anywhere from 0 to 99 minutes.

TLIV = Too Long in Evacuation. This value determines how long the sterilizer will attempt to reach the vacuum set point before the control sounds an alarm. This value can be set anywhere from 0 to 99 minutes.

TLIE = Too Long in Exhaust. This value determines how long the sterilizer will attempt to reach the atmosphere set point (following sterilization) before the control sounds an alarm. This value can be set anywhere from 0 to 99 minutes.

- a) These values are entered using the CHANGE VALUES touch pads, the same as for other values in this procedure.
- b) Press SAVE VALUES to store all values in the control memory, and return to the main cycle selection menu.
- c) Once all values have been set as desired, press CHANGE VALUES to advance to the next Too Long in Slow Exhaust display.

This display defaults to the same value for both small and medium sterilizers.

- c. TLIS = Too Long in Slow Exhaust. This value determines how long the sterilizer will attempt to exhaust the chamber to atmospheric pressure following the sterilize phase of a liquids cycle, before the control sounds an alarm. This value can be set anywhere from 00:00 to 99:59 (hours:minutes).
 - 1) This value is entered using the CHANGE VALUES touch pads, the same as for other values in this procedure. Once complete:
 - 2) Press SAVE VALUES or CHANGE VALUES to store all values in the control memory, and return to the MODIFY CYCLE display.
14. Upon leaving the Change Values procedure, the sterilizer provides a complete printout of all cycle values and operating settings. To cancel printout, press the RESET touch pad once printout begins.

This concludes the Change Values procedure.

Hardware Dip Switches/Jumpers

Control Board #1

Control Board #1 may be at the top or bottom of the control column. It can be identified as the board with a plug located in J10.

Introduction

The calibration of the temperature probes and the pressure sensor should only be performed by qualified service technicians.

The following procedure should be followed to calibrate the unit.

Before beginning, the following items should be obtained/performed.

- Chamber RTD
- Chamber pressure transducer
- Test Equipment: Calibrated Compound Test Gauge - 30 inHg and 100 psig.
- Regulated oil bath at low temperature (preferably room temperature) and high temperature [preferably 132°C (270°F) to 135°C (275°F)].
- Put control in the service mode, see page 3-1.

1. Press the RESET button. The following display will be shown:

1. Press Cycle 4 touch pad to enter the calibration mode.

2. Press Cycle 1 touch pad to enter temperature calibration.
3. The following display will be shown for 3 seconds:

4. After 3 seconds, the following display will be shown:

Temperature Calibration

CELSIUS and FAHRENHEIT temperature units can be changed by pressing the up or down touch pad. If the calibration is made in F (fahrenheit), the control will display and print all temperature data in F. If the calibration is made in C (celsius), the control will display and print all temperature data in C.

The following tabulation lists several comparisons of F and C.

72°F	≅	22.2°C
75°F	=	23.9°C
100°F	=	37.8°C
150°F	=	65.6°C
200°F	=	93.3°C
250°F	=	121.1°C
270°F	=	132.2°C

IMPORTANT: If temperature units have been changed since calibration of the temperature probes was last done, calibration of all temperature probes is required. If any calibration of temperature probes is to be done, the following printout will show at this point if all probes must be recalibrated.

TEMPERATURE UNITS
CHANGED. ALL PROBES
MUST BE RECALIBRATED

Once the correct temperature units are shown, press the CHANGE VALUES touch pad. If temperature units have been changed all temperature setpoints are set to their default values. On some units, all changeable parameters are set to their defaults when temperature units are changed.

If there is no reference or load probe (optional item), proceed to step #6. The following display will be shown if a reference or load probe is deleted:

STATUS
CALIBRATE
PROBES TOGETHER

All of the temperature RTDs can be calibrated together, or they can be calibrated in pairs or singularly as shown by the chart below:

(Option	No Reference	With Reference	Load Probe
Ref. Probe	--	Chamber/Ref. Probe	Load Probe
Load Probe	Chamber Probe	Chamber/Ref. Probe	Load Probe

Press the up or down cursor touchpads to change which probes are to be calibrated.

After the correct message is shown, showing which probes are to be calibrated, press the CHANGE VALUES touchpad.

5. The display will show:

Remove the probes that were selected and place it (them) in the low temperature oil bath and press the CHANGE VALUES touch pad.

6. The display will show:

The "CT=XXX C" represents the chamber drain temperature. "CT=XXX C" will continue to show until the RTD temperature changes no more than 0.3°C (0.6°F) in 30 seconds. If other optional probes are being calibrated with the chamber drain temperature, "CT=XXX C" will change to "RT=XXX C" (representing reference temperature) and/or "LT=XXX C" (representing load temperature).

7. After the probe(s) have finished stabilizing, the display will show:

Read the temperature on the calibrated temperature indicator and correct the displayed temperature using the appropriate cursor touch pads. Press the CHANGE VALUES touch pad when finished.

8. The display will show:

Remove the probes that were selected and place it (them) in the high temperature oil bath and press the CHANGE VALUES touch pad.

9. The display will show:

The "CT=XXX C" represents the chamber drain temperature. "CT=XXX C" will continue to show until the RTD temperature changes no more than 0.3°C or 0.6°F in 30 seconds. If other optional probes are being calibrated with the chamber drain temperature, "CT=XXX C" or change to "RT=XXX C" (representing reference temperature) and/or "LT=XXX C" (representing load temperature).

10. After the probe(s) have finished stabilizing, the display will show:

Read the temperature on the calibrated temperature indicator and correct the displayed temperature using the appropriate cursor touch pads. Press the CHANGE VALUES touch pad when finished.

11. After the probes are calibrated, one of the following display will be shown:

The printer will print:

```
NAME    TEMP
-----
CALIBRATED ON:    DATE
                  TIME:    TIME

HEX VALUE:

CHAMBER RTD:
XXXXXXXXXXXXXXXXXXXX

LOAD RTD:                (OPTIONAL)
XXXXXXXXXXXXXXXXXXXX

REFERENCE RTD:           (OPTIONAL)
XXXXXXXXXXXXXXXXXXXX
```

NOTE: "name" refers to one of the following: CHAMBER, CHAMBER/REF, LOAD, PROBES.

Hex values are printed for each RTD that is equipped on the unit. This value represents the calibration setting of the RTD. See Hex Calibration Section for a description of the hex values.

Pressure Calibration

1. Press the RESET button. The following display will be shown:

```
----- STATUS -----
1=MFG                3=TESTS
2=VALUES             4=CALIB
```

2. Press Cycle 1 touch pad.

```
----- STATUS -----
1=SETUP              3=ADJUST
2=CALIB              4=CHART
```

NOTE: Before performing the pressure calibration, it is advisable to run a Vacuum Leak Test Cycle to assure the integrity of vessel and piping.

3. When the display shows:

```
----- STATUS -----
1=SETUP              3=ADJUST
2=CALIB              4=CHART
```

press Cycle number 3 touch pad to enter the ADJUST mode.

4. The ADJUST mode is used to test the following:
 - a. door lock test
 - b. door unlock test
 - c. vacuum leak test
5. The display will show the following for 3 seconds.

STATUS	
STERILIZER CHECK AND ADJUSTMENTS	

6. The display will show the following for 2 seconds.

STATUS	
DOOR PRESS	CT=XXX C
LOCK	P=XXPSIG

7. The display will now show:

STATUS	
1=START	CT=XXX C
4=ADVANCE	P=XXPSIG

NOTE: Number 1-start is used to test DOOR LOCK and DOOR UNLOCK. This test mode is used in the factory as part of the sterilizer and factory test procedures.

8. Press Cycle 4 touch pad. The following displays will be shown:

STATUS	
PERFORM LEAK TEST?	
1=YES	2=NO

Press cycle 1 touch pad.

STATUS	
PLEASE CHECK STEAM	

wait 3 seconds.

STATUS	
READY TO TEST	
1=YES	RESET=CANCEL

Press Cycle 1 touch pad.

Refer to Section 5, for a detailed explanation of the Vacuum Leak Test. The Leak Test cycle is preprogrammed with the following cycle parameters.

Only if vacuum pump not equipped.

- Purge - 1 minute
- Two prevacuum pulses
- Change to 132°C (270°F)
- Evacuate - (10 minutes)
- Stabilize - 2 minutes
- Leak Test - 10 minutes

NOTE: At the end of the 10 minute leak test, the printer will print the actual leak rate. (Reading should not be greater than 1 mm/min.)

- Air Break - 2 inHg
- Complete

After the cycle is complete and the door is open, the display will show:

9. Press Cycle 2 touch pad. The following will be displayed:

Press Cycle 2 touch pad. The following will be displayed:

10. After 3 seconds the display will show:

11. PSIG and BAR pressure units can be changed by pressing the up or down touch pad. If the calibration is made in PSIG (psig/inHg), the control will display and print all pressure/vacuum data in psig/inHg. If the calibration is made in BAR (bar pressure/bar vacuum), the control will display and print all pressure data in bar pressure/bar vacuum.
12. The following tabulation lists several comparisons of psig and bar pressure/bar vacuum.

26 psig	=	1.790 bar pressure
20 psig	=	1.379 bar pressure
6 psig	=	0.413 bar pressure
2 psig	=	0.140 bar pressure
0 psig	=	0 bar
2 inHg	=	0.068 bar vacuum
10 inHg	=	0.340 bar vacuum
20 inHg	=	0.670 bar vacuum

Once the correct pressure units are shown, press the CHANGE VALUES touch pad. If pressure units are changed, all pressure setpoints are set to their defaults.

13. If the pressure unit chosen is psig and the sterilizer has separate steam feed piping (jacket steam does not feed the chamber) the following display will be shown:

This value represents the atmospheric pressure in pounds per square inch (psia) and provides accuracy for the control in determining steam-table pressures used for the steam-table deviation alarm. Using the value and cursor touchpads, enter in the local absolute atmospheric pressure. Then press the CHANGE VALUES touchpad to continue.

If the absolute atmospheric pressure cannot be determined at the sterilizer location, contact the nearest airport for the atmospheric pressure, generally given in inches of mercury (inHg.). To calculate the pressure in psia, take the inHg value and divide it by 2.036.

Pressure must be calibrated after entering this point.

NOTE: The atmospheric pressure value feature has not been made available on all sterilizers.

14. The sterilizer door needs to be open to set the atmospheric pressure point at 0 psig (0 bar). The display will show:

15. Open the door. The display will show:

STATUS
STANDBY... POINT
BEING CALCULATED.

16. Ten seconds later, the display will show:

STATUS
CLOSE THE DOOR(S)

17. Close the sterilizer doors. The display will show:

STATUS
PRESS CVPB TO
PURGE/PRESSURIZE.

18. Press the CHANGE VALUES touch pad, steam flows through the chamber for one minute. The display will show:

STATUS
PURGE CT=XXX C
1:00 P=XXPSIG

the printer will print:

PURGE

TIME OF DAY TIME
CHAMBER PRESS PRESS P
CHAMBER TEMP TEMP C

19. After the one minute purge, the chamber will charge with steam. The display will show:

STATUS
CHARGE CT=XXX C
 P=XXPSIG

the printer will print:

CHARGE

TIME OF DAY TIME
CHAMBER PRESS PRESS P
CHAMBER TEMP TEMP C

Set the pressure regulator (this may be a chamber pressure regulator or a Hi-Lo valve), if one exists, to maintain chamber pressure at desired calibration pressure point (30-32 psig recommended). The chamber will be charged with steam to the limit of the steam supply to the chamber.

20. When the chamber pressure changes no more than 0.25 psig for 10 seconds, the display will show:

STATUS	
HI SET PT= XX.X	
PRESS CVPB TO SET.	

21. Wait for the chamber pressure to stabilize further. Once the chamber pressure changes no more than 0.3 psig during a one minute period, read the pressure on the calibrated pressure gauge and immediately enter it into the display. Press the CHANGE VALUES touch pad.

NOTE: If the pressure does not rise 5 psig in one minute, the printer will print:

PRESSURE SENSOR FAILED
NO STEAM

NOTE: The pressure transducer will not be calibrated. The control will exhaust and exit the pressure calibration routine. Troubleshoot the pressure transducer and redo the pressure calibration.

22. The control will fast exhaust to 3 psig (0.2 bar). The display will show:

STATUS	
FAST	CT=XXX C
EXHAUST	P=XXPSIG

the printer will print:

FAST EXHAUST

TIME OF DAY TIME
CHAMBER PRESS PRESS P
CHAMBER TEMP TEMP C

23. When the pressure is equal to, or less than, 3 psig (0.2 bar), the dry phase will begin. A vacuum will be pulled in the chamber to 10 inHg (0.34 bar).

STATUS	
VACUUM	CT=XXX C
DRY	P=XXPSIG

the printer will print:

```
VACUUM DRY
-----
TIME OF DAY      TIME
CHAMBER PRESS    PRESS P
CHAMBER TEMP     TEMP  C
```

24. After 10 inHg (0.34 bar) has been reached, the cycle will enter the dry phase. Evacuation in the chamber will continue. The dry phase time will start at 30 seconds and count down to zero.

```
-----STATUS-----
DRY                CT=XXX C
0:30              P=XXPSIG
```

the printer will print:

```
DRY
-----
TIME OF DAY      TIME
CHAMBER PRESS    PRESS P
CHAMBER TEMP     TEMP  C
```

25. Upon reaching zero, the cycle will enter the air break phase. Filtered air will enter the chamber to relieve the vacuum in the chamber.

```
-----STATUS-----
AIR BREAK         CT=XXX C
                  P=XXPSIG
```

the printer will print:

```
AIR BREAK
-----
TIME OF DAYTIME
CHAMBER PRESS    PRESS P
CHAMBER TEMP     TEMP  C
```

26. Ten seconds after the vacuum level reaches 2 inHg (0.068 bar), the cycle will be completed. The following will be displayed and printed.

```
-----STATUS-----
* PRESSURE *
* IS CALIBRATED *
```

PRESSURE CALIBRATED

CALIBRATED ON: DATE
 TIME: TIME

HEX VALUE:
006902C861DB01000

27. The display will show:

STATUS	
1=TEMP	3=HEX
2=PRESS	4=VERIFY

Hex Calibration

1. Hex calibration may be used to reset calibration settings to the settings made at the last calibration, in case calibration settings have changed due to a RAM chip failure or replacement or installation of a different or revised EPROM. This is accomplished by entering in the hex values that are printed at the completion of calibration. Hex Calibration may not be sufficient if an RTD, transducer, or control board is replaced, since these items affect the calibration settings. It is recommended that actual calibration be done in these cases. To enter the hexadecimal calibration mode, press cycle 3 touchpad when the above screen is shown.

2. The display will show:

STATUS
WARNING CALIBRATION WILL BE CHANGED!

3. After 3 seconds, the display will show:

STATUS
1=PRINT HEX VALUES 2=ENTER HEX VALUES

4. Press Cycle 1 touch pad to obtain a listing of all hex values for each individual probe or transducer. The display will show:

STATUS
HEX VALUE PRINTOUT

The following printout will occur:

HEX VALUE PRINTOUT

CHAMBER PRESSURE:

XXXXXXXXXXXXXXXXXXXX

CHAMBER RTD:

XXXXXXXXXXXXXXXXXXXX

LOAD RTD:

(OPTIONAL)

XXXXXXXXXXXXXXXXXXXX

REFERENCE RTD:

(OPTIONAL)

XXXXXXXXXXXXXXXXXXXX

5. The display will show:

6. Press Cycle 3 touch pad to enter the hexadecimal calibration mode.

7. The display will show:

8. After 3 seconds, the display will show:

9. Press Cycle 2 touch pad to re-enter the hexadecimal values.

10. The display will show:

11. Press CHANGE VALUES touch pad to re-enter the hex values for the chamber drain RTD.

12. The display will show:

STATUS
CHAMBER RTD: 026903CEC0AF00FC02

The values can be changed by using the up, down, right and left cursor touch pads. The values can be changed from 0-9 and from A-F. Press Change Values touch pad after all the values have been set.

13. The display will show:

STATUS
RE-ENTER HEX VALUE.

14. The display will show:

STATUS
CHAMBER RTD: 026903CEC0AF00FC02

Re-enter the hex value to verify that the previous value was entered correctly. Press CHANGE VALUES touch pad after the values have been set.

15. The printer will print:

CHAMBER RTD HEX VALUE
TYPED IN:
026903CEC0AF00FC02

16. The next screen will allow the next temperature RTD's hex value to be changed, or if there are no more present, the pressure transducer's hex value can now be changed. Re-enter those hex values in the same manner as described above for the chamber drain RTD or by-pass those values to show the following display:

STATUS	
1=TEMP	3=HEX
2=PRESS	4=VERIFY

Verify Calibration

1. Press Cycle 4 touch pad to verify the temperature calibration. The display will show:

```
-----STATUS-----  
PLACE THE PROBES IN HOT  
OIL.      PRESS CVPB
```

2. Press the CHANGE VALUES touch pad when the probes are in the hot oil.
3. The display will show:

```
-----STATUS-----  
STABILIZING ...  
CT=XXX C
```

4. After all RTDs change no more than 0.3° C in 30 seconds, the printer will print:

```
*****  
VERIFY CALIBRATION  
  
TIME:      TIME  
DATE:      DATE  
  
CHAMBER TEMP      = XXX.X C  
REFERENCE TEMP    = XXX.X C  
LOAD TEMP         = XXX.X C  
  
* VERIFY THESE  
* TEMPERATURES WITH THE  
* CALIBRATED REFERENCE.  
  
*OPERATOR _____  
  
*****
```

5. The display will show:

```
-----STATUS-----  
1=TEMP      3=HEX  
2=PRESS     4=VERIFY
```

⚠ WARNING - BURN HAZARD: Allow sterilizer, generator (if applicable) and accessories to cool to room temperature before performing any cleaning or maintenance procedures.

⚠ WARNING - BURN AND SHOCK HAZARD: Repairs and adjustments must be performed only by authorized persons fully acquainted with this equipment. Maintenance done by inexperienced, unqualified persons or the installation of unauthorized parts could cause personal injury or result in costly damage.

This section describes how to access a test in the service mode of the control which allows each output to be manipulated and allows the state of each input to be viewed on the display.

1. Enter service mode by performing the following:
 - a. Turn off the main power supply.
 - b. Remove the front cover on the control.
 - c. Pull down the swing panel and locate a set of dip switches (SW1) on the control board #1. (P/N-146655-819).
 - d. Set dip switch 4 to the ON position.
 - e. Push swing panel back into place and turn on the main power switch and the control power switch.
2. The display will show:

Press Cycle 3 touch pad. The display will show:

Press Cycle 1 touch pad. The display will show for 5 seconds:

The display will then appear similar to the following:

Some commonly used valves are shown below. See Electrical or Piping schematic for a complete list of valves used on the unit.

DISPLAY		VALVE
S1	=	Filtered Air
S2	=	Chamber Steam (come up)
S3	=	Fast Exhaust
S4	=	Exhaust Cooling
S7	=	Water Ejector
S9	=	Steam To Jacket
S13	=	Constant Bleed
S14	=	Chamber Steam (timing)
S16	=	Water Supply

The valve number of each valve equipped on the unit is shown on the display beside a letter "S". Use the CURSOR touch pads to scroll the blinking "S" and use the VALUE touch pads to change the "s" to a "S", which turns on the corresponding valve, or change the "S" to a "s", which turns off the corresponding valve.

If S2 is actuated, it will deenergize when the door(s) is/are open and the following display will show for 5 seconds:

When the display shows (example):

Press Cycle 1 touch pad to show the temperatures and pressure. An example display showing chamber temperature and pressure is shown below.

Press Cycle 1 touch pad again to return to the valve actuation display.
Press Cycle 3 touch pad to show the limit switch state display.

Display will show (example):

"0" = Indicates switch contacts closed

"-" = Indicates switch contacts open/not used

Top row numbers/letters correspond to the limit switches as shown on machine electrical schematics.

Some commonly used switches are shown below:

DISPLAY		LIMIT SWITCH
0	=	Front Door Switch
1	=	Rear Door Switch
2	=	Water Sensor
3	=	Wire Jumper or Chamber Pressure switch

To return to the normal valve test, press cycle touch pad #3 again.

3. Exit service mode by performing the following:
 - a. Turn off main power supply.
 - b. Pull down swing panel and set dip switch 4 back to the OFF position.
 - c. Push swing panel back into place and turn on main power supply.

ROUTINE MAINTENANCE

6

⚠ WARNING: BURN AND SHOCK HAZARD - Be sure to switch power switch to OFF and wait until chamber cools to room temperature before starting any maintenance procedures.

Maintenance procedures described in these sections should be performed regularly at the indicated intervals. The indicated frequencies are minimums and should be increased if sterilizer usage warrants. If a problem occurs, refer to Section 6, Operator Troubleshooting. A sample maintenance record is included in this Section which should be used as a guide for the frequency of maintenance. Local conditions (water quality, usage, etc.) may require more frequent maintenance than indicated. Such a record will prove useful in ensuring proper maintenance.

Preventive Maintenance Guide

The following guide should be followed to properly maintain the sterilizer. These procedures should be carried out only by qualified service technicians.

SERVICE REQUIRED: (Bimonthly inspection)		1	2	3	4	5	6
1.0	PREPARATION FOR PREVENTIVE MAINTENANCE						
1.1	Discuss equipment operation with department personnel.	x	x	x	x	x	x
1.2	Inspect printouts for signs of trouble.	x	x	x	x	x	x
1.3	Install test equipment.	x	x	x	x	x	x
1.4	When necessary, shut off all building services and drain all lines.	x	x	x	x	x	x
2.0	DOOR ASSEMBLY (EACH DOOR ON A DOUBLE DOOR UNIT)						
2.1	Inspect door for ease of operation.	x	x	x	x	x	x
2.2	Inspect condition of door seal for wear- replace as necessary.	x	x	x	x	x	x
2.3	Inspect door alignment with end ring.	x	x	x	x	x	x
2.4	Lubricate hinge and hinge pins	x	x	x	x	x	x
2.5	Inspect for loose screws and tighten.	x	x	x	x	x	x
2.6	Door lock diaphragm - replace						x
2.7	Grease door post and bearings			x			
3.0	EACH HAND VALVE						
3.1	Inspect valve for smooth operation and proper valve seating.	x	x	x	x	x	x
3.2	Inspect valve for leaks.	x	x	x	x	x	x
3.3	Run MANUAL cycle to test operation of multiport valve (if equipped)	x					
4.0	EACH WATER, JACKET AND STEAM STRAINER						
4.1	Inspect strainers for debris, clean as necessary.	x	x	x	x	x	x
5.0	EACH STEAM TRAP (If equipped)						
5.1	Inspect steam trap for proper operation.	x	x	x	x	x	x
5.2	Rebuild steam trap.			x			

* Contact your local AMSCO representative for this service.

6-1

SERVICE REQUIRED: (Bimonthly inspection)		1	2	3	4	5	6
6.0	EACH GAUGE						
6.1	Inspect each gauge for accuracy (against test gauge).	x	x	x	x	x	x
6.2	Inspect each gauge for leaks.	x	x	x	x	x	x
7.0	EACH VALVE						
7.1	Make internal inspection of each valve.	x			x		
7.2	Replace check valve if necessary (run a leak test).	x			x		
7.3	Inspect each solenoid valve for proper operation (run a cycle).	x	x	x	x	x	x

12.3	Run machine through each cycle verify operation, displays and printouts.	x	x	x	x	x	x
12.4	Remove all test equipment installed for inspection.	x	x	x	x	x	x
12.5	Install any panel or cover removed during inspection.	x	x	x	x	x	x
12.6	Inspect areas to ensure removal of all materials used during inspection.	x	x	x	x	x	x

Recommended Daily Maintenance

*NOTE: To keep your sterilizer and loading equipment looking like new, AMSCO recommends and occasional application of **Pry Cream*** to the painted surfaces.*

NOTE: Flush drain whenever line becomes clogged or spillage occurs during a liquid processing cycle.

Recommended Weekly Maintenance

** Contact your local AMSCO representative.*

1. Clean chamber as follows:
 - a. Wash inside of chamber and loading equipment with a mild detergent solution such as AMSCO's Liqui-Jet* or Sonic* detergent. (Chamber must be at room temperature - OFF all night - before washing.)
 - b. Rinse with tap water; dry with a lint free cloth.
 - c. Remove chamber drain strainer. Clean out lint and sediment: reverse flush under running water.
 - d. Place strainer back in chamber drain.

1. Flush chamber drain as follows:
 - a. Turn OFF steam supply valve. Wait until Jacket Pressure is zero. Wait until chamber has cooled to room temperature.
 - b. Remove chamber drain strainer.
 - c. Rinse drain with a solution of 1/2 cup of AMSCO Sonic Detergent* or Liqui-Jet* and one quart of hot water.
 - d. Wait five minutes.
 - e. Flush drain with hot water.
 - f. Place strainer back in drain.
 - g. Turn steam supply valve back on.

2. Check control and status signals as follows:
 - a. Select and start a short cycle.
 - b. Observe gauges, display and printed tape for proper functioning. (On double-door units, also observe non-operating end control panel.)

Recommended Quarterly Maintenance

Float switch assembly (option)

Mounted on the side of the jacket of the sterilizer is a float switch assembly. This device is used for monitoring the presence of water in the jacket. On a quarterly basis, minimum, the float switch is to be removed from its housing and inspected for freedom of movement. Disassembly may be needed to clean the unit. Use a Scotchbrite® pad to clean off any scale. Make sure the float is installed in the correct position. There is a "NC" and a "NO" stamped on the float. The "NC" is to be installed up. If the letters are not readable, an ohmmeter can be used to confirm operation. With the float in the down position, there must be continuity between the wires coming out of the switch.

Door

1. Inspect door seal. If it is brittle or has cracks, replace it (see "Service Procedures," in this section for the procedure).
2. Lubricate bearings and door post—it is recommend that AMSCO service personnel perform this procedure.
3. Replace door lock diaphragm.
4. Lubricate door hinge pins.

Service Procedure

Strainer — Steam and Water Inlet

These should be opened for cleaning at least twice a year. Accumulation of sediment and rust will reduce pressure and flow. In extreme conditions, complete blockage may occur.

Disassembly

1. Remove hex plug and gasket. Pull out strainer screen from body.
2. Scrape and polish all rust and residue from strainer screen and body. Use a wire brush or steel wool. Be sure that all perforations are clear, by poking open with a wire. Replace screen if damaged, rusted or corroded.

Reassembly

1. Insert screen into strainer body. Take care that no dirt or other particles remain in strainer body.
2. Replace and tighten hex plug. Use a new gasket if necessary.
3. Make certain that all pipe connections are tight after assembly.

Steam Trap (if equipped)

Disassembly

1. Using a hex socket-wrench, unscrew and remove the cap and attached diaphragm assembly.
2. Remove seat from body using a hex socket wrench.
3. Wipe out bowl taking care that loose material does not enter the piping.

⚠ CAUTION: Allow thermostatic traps to cool to room temperature before removing cover. Since there is nothing to limit expansion, the diaphragm may rupture or fatigue if trap is opened while hot.

Reassembly.

1. Screw new seat in firmly. (Use hex socket wrench.)

NOTE: Seat and diaphragm are a lapped pair.

2. Install new diaphragm.
3. Replace cap and attached diaphragm assembly, using a new gasket.
4. Check for leaks.

WARNING-BURN HAZARD: Proper testing of the safety valve requires it to be operated under pressure. Exhaust from the safety valve is hot and can cause burns. Proper safety attire (gloves, eye protection, insulated overall) are necessary. Testing is to be performed by qualified service personnel only.

Valves

1. Check Valves - Repair of check valves is limited to cleaning of valve seats when foreign matter causes improper operation. When a valve becomes defective, the entire valve must be replaced.
2. Solenoid Valves - Solenoid valve repair kits include complete instructions for revuiling the valve. Refer to the parts list for the correct repair kit part number.
3. Steam Control Valve - The Hi-Lo valve is used for setting the correct supplied steam pressure for high temperature (270° F) cycles and low temperature (250° F) cycles. Incorrect adjustment of this valve can lead to improper sterilizer operation and therefore adjustment and rebuilding of this component should be referred to a qualified service technician.
4. Safety Valve - The safety valve is to be tested periodically. To prevent damage to the safety valve, the valve must have at least 75% of its rated pressure when the try lever is actuated. The valve is to be held open for 1 to 2 seconds and then allowed to snap shut. Actuation at less than 75% of rated pressure can allow debris to contaminate the seat and will cause the valve to leak.

Vacuum Breaker

Disassembly

1. Unscrew and remove bonnet assembly.
2. Remove friction ring and air valve seat.
3. Remove assembled ballast and float.
4. Separate ballast and float.
5. Clean all rust and sediment from valve. Clean out drain holes in the float and ballast, and inspect for breaks or leaks. Replace parts as required. If the friction ring and air valve seat are not in perfect condition, they should be replaced.

Reassembly

1. Assemble ballast and float.
2. Slide float/ballast assembly into valve body, making sure that the

assembly moves freely in valve body.

3. Insert air valve seat and friction ring.
4. Screw on bonnet assembly.
5. Test for leaks.

Thermal Printer Replacement

Two different printer types exist, either thermal or impact. Refer to "Change Paper Roll" section to determine printer type.

To replace printer P755716-005 follow these steps:

1. Turn power off at main power switch (located behind upper access panel on 16x16 and 20x20 units, behind lower access panel on 24x36 units.)
2. Remove 2 socket head screws and lower control panel.
3. Remove any paper left in printer. Remove paper by pulling up.
4. Locate printer board assembly. Remove 3 nuts and disconnect two cables as noted. Remove printer board assembly from column.
5. Remove three screws and disconnect cable as shown. Remove printer from printer board.
6. Remove the 2 small nuts and bolts and remove printer P755716-005 from backing plate.
7. Install new printer P755716-005 by reversing above steps.
8. Refer to "Change Paper Roll" section in this manual.

Heat Exchanger Zinc Plug (24 X 36 units only)

A Zinc plug is installed in the end of the heat exchanger. The purpose of the zinc plug is to act as a sacrificial material to prolong the life of the heat exchanger. On a periodic basis the zinc plug should be replaced.

To replace, first locate the zinc plug. It is installed in the end cap of the heat exchanger towards the non operating end of the sterilizer. It looks like a regular pipe plug. Water from the heat exchanger (approx. 1-2 gallons may come out when removing.) Remove the plug and replace it with a new plug P-764321-001.

Figure 6-1. Heat Exchanger Zinc Plug

Change Paper Roll

See Figure 6-2, 6-3, 6-4, 6-5, 6-6, 6-7, 6-8, 6-9, and 6-10.

1. Open control door.
 - a. Grasp and pull remaining paper through printer. Pull paper *up*. If paper is pulled down damage to printer will occur.
 - b. Remove take-up spindle from its drive mechanism by pulling to the left. (Figure 6-2)
 - c. Remove paper roll from take-up spindle and return empty take-up spool to spindle.
2. At this point, identify the type of printer. Two types of printers are currently being used: thermal or impact. See figure 6-3 to identify printer type.
3. Lower the platen and remove the lower paper spindle by pulling it straight forward. (Figure 6-4).
 - a. Place new paper roll onto the lower spindle with the paper feeding downward from the back of the paper roll. (Figure 6-5)

For impact printers only

- b. Slide tab of paper into top of printer as far as possible. Then turn control power switch on. Paper automatically advances through printer and exits front of printer. (Figure 6-6 or 7)
 - c. Replace lower spindle (with new paper roll) back into position by pressing from the front until it snaps into place.
4. Pull four or five inches of paper out from the roll and tear the corners to make a point.
 - a. Slide tab of paper from the back (with platen still in down position) until it exits from the front of the printer.
 - b. Grasp tab of paper, pull *up* not down 10 to 12 inches of paper, and feed this paper through the opening in the platen. (Figure 6-8)
5. Raise platen backup into position and lift out the take-up spindle. (Figure 6-9)
6. Insert the tab of the new paper roll into the slot of the take-up spindle and rotate the spindle in the direction shown to secure the paper in the slot. (Figure 6-9)
7. Press take-up spindle back onto the drive mechanism and rotate to verify paper is secure to the take-up spindle. (Figure 6-10)
8. Close Control Door.

Changing Ink Cartridge

NOTE: For Impact printers only

1. Open control door. Tear paper just above platen opening as shown in Figure 6-1 and remove from top spindle.
2. Lower the platen. Press ink cartridge on the right side as shown in Figure 6-11. Slide used cartridge off end of paper.
3. Insert paper between ribbon and plastic housing of the new ink cartridge. Install new ink cartridge, snapping it into position.
4. Attach paper to top spindle as described in Section Change Paper Roll.

Figure 6-11. Change Ink Cartridge

Storing Thermal Paper

Thermal paper is subject to fading with time, humidity and exposure to light.

It is the manufacturer's recommendation that thermal paper be stored in a dark place with an average ambient temperature of less than 25°C (77°F) and a relative humidity less than 65%. Under these conditions, the paper remains readable for at least five years. It is recommended that if the printed data is to be retained for periods of time longer than five years (6-25 years), an additional photocopy should be made for record retention. In any case, a duplicate set of record should be maintained in the files of the engineering or maintenance departments.

Thermal paper begins to develop color at about 70°C (158°F), however, under humid conditions, it might begin to develop at an accelerated rate. If stored for 24 hours at 60°C (140°F), the paper show some signs of development. It also show signs of development if stored for 24 hours at 45°C (113°F) and a relative humidity of 90%.

Do not store thermal paper next to other chemically treated papers—such as pressure sensitive paper or other type of recording round charts—as this may cause fading in print. If thermal paper is to be stored in the same area, always ensure it and other chemically treated papers are kept in separate envelopes.

Thermal paper discolors when exposed to direct sunlight.

Install Chamber Door Gasket

Figure 6-12. REPLACE SMALL STERILIZER DOOR GASKET

Small Sterilizer

1. Remove old gasket and clean groove. The groove must be completely free of debris.
2. Clean replacement gasket with a damp cloth and mark gasket at four equidistant points to represent corners.
3. Press gasket into the groove at the four corners, a short section at a time without stretching it while doing so.
 - Should gasket appear too long ...DO NOT CUT IT... start over again, compressing short sections into groove, until entire length is inserted.
 - NEVER USE SHARP TOOLS TO PUSH GASKET INTO GROOVE.
4. Spray the sealing surface of the door frame with Fluorocarbon Spray (P-752870-091; available from your local AMSCO representative) to prevent gasket from sticking.

Medium Sterilizer (refer to Figure 6-13)

1. Remove gasket bars and old gasket from door.
2. Clean door surface and gasket surface with AMSCO Pry Cleaner. Make certain that surfaces are free of foreign matter and excess cleaner.
3. Clean replacement gasket with a damp cloth and clean threads of the gasket bar screw holes.
4. Replace gasket bars; leave bars loose enough to allow gasket to be inserted.
5. Insert new gasket under gasket bars and tighten gasket bar retaining screws just enough to hold the gasket in place.
 - Do not compress gasket to any great extent in any one area.
6. Tighten gasket bars alternately until almost snug.
7. When gasket appears firmly seated under gasket bars and is flat on the door, tighten gasket bar retaining screws until snug. (Always ensure that screw heads are below surface of gasket bar.)
8. Spray the sealing surface of the door frame with Fluorocarbon Spray (P-752870-091; available from your local AMSCO representative) to prevent gasket from sticking.

Figure 6-13. Replace Medium Sterilizer Door Gasket

⚠ WARNING - BURN HAZARD: Allow sterilizer, generator (if applicable) and accessories to cool to room temperature before performing any cleaning or maintenance procedures.

⚠ WARNING - BURN AND SHOCK HAZARD: Repairs and adjustments must be performed only by authorized persons fully acquainted with this equipment. Maintenance done by inexperienced, unqualified persons or the installation of unauthorized parts could cause personal injury or result in costly damage.

This section describes the types of sterilizer malfunctions likely to occur, and indicates probable causes. Use the following Troubleshooting Chart to identify problem and probable cause.

If you are unable to correct the problem with the use of this Troubleshooting Chart, or if a problem occurs not described on chart, please call your AMSCO representative. They will arrange to have your equipment promptly put into working order by a factory-trained representative. Never permit unqualified persons to perform service on the sterilizer.

Section Descriptions

Section 1 – Problems where the sterilizer has *no* alarm or printout.

Section 2 – Problems where alarm and printout occurs.

OPERATOR TROUBLESHOOTING CHART

PROBLEM	POSSIBLE CAUSE AND/OR CORRECTION
SECTION 1 No alarm or printout	
1. No power, display is blank.	<ol style="list-style-type: none"> 1. Check facility power source - turn ON. 2. Sterilizer Main Power switch OFF - turn ON. 3. Fuse in line filter (located in power input box) failed - replace. 4. Fuse in power supply failed - replace. 5. Power supply failed - replace. 6. Control board failed - replace.
2. Unable to select cycle.	<ol style="list-style-type: none"> 1. Chamber door(s) open - close and lock door(s). 2. Printer still printing - wait until printout completes. 3. Door switch faulty - replace. 4. Touch pad faulty - replace. 5. Incorrect dip switch settings on interface PC board. 6. Interface board failed - replace.

PROBLEM	POSSIBLE CAUSE AND/OR CORRECTION
3. Steam leaks around door during sterilize phase.	<ol style="list-style-type: none"> 1. Door not fully closed - close. 2. Door gasket worn or defective - replace.
4. Wrapped goods are wet after completion of cycle.	<ol style="list-style-type: none"> 1. Dry time too short for load type - increase setting. 2. Improper loading/packing techniques used - refer to AMSCO Technique Manual, MK-2085, supplied with sterilizer. 3. Improper utilities supplied to unit (steam pressure and quality, water pressure and volume) - correct. 4. Faulty jacket trap - replace. 5. Faulty vacuum system on sterilizer - repair. 6. Faulty air inlet popping component (check valve or solenoid valve) - repair. 7. Vacuum leak in sterilizer - repair.
5. Water in chamber.	<ol style="list-style-type: none"> 1. Drain line strainer plugged - clean. 2. Faulty chamber trap - replace. 3. Sterilizer not level - relevel (refer to installation notes). 4. Faulty vacuum system on sterilizer - repair.
6. Steam generator does not produce steam (units equipped with steam generator only).	<ol style="list-style-type: none"> 1. No water supply to generator - turn on supply. 2. 3 phase power off - turn ON. 3. Fuse failure in generator - replace. 4. Faulty water supply solenoid or generator - repair. 5. Faulty water level control system - repair.
7. Unable to open door at end of cycle.	<ol style="list-style-type: none"> 1. Faulty air inlet check valve - replace.
8. Printing defect appears consistently in the same column.	<ol style="list-style-type: none"> 1. Printing errors of this type may be caused by debris trapped on the print head - with no paper in the printer, insert a one inch wide strip of bond type paper or equivalent with a good "tooth" under the print head. Move the paper using both linear and circular motions. Doing this should dislodge any debris on the print head.
9. Display shows: COMMUNICATION TO HOST HAS BEEN LOST.	<ol style="list-style-type: none"> 1. Control board failed - replace. 2. Power supply failed - replace. 3. Eprom failed - replace. 4. RAM failed - replace. 5. Loose harness connector between boards.

PROBLEM	POSSIBLE CAUSE AND/OR CORRECTION*
<p>10. Display shows time: XX:XX:80 Time shown on Display and Print out does not change. Seconds are shown as ":80"</p>	<p>1. Time function was turned off at factory to preserve RAM battery. Enter Change Values procedure (Section 4 in the Operating Procedure manual), and follow Change Time and Date instructions to set correct time. Once time is set, clock begins functioning.</p>

SECTION 2
Alarm and printout

**NOTE: All alarms below (except for "INVALID VALUE SET") will sound an audible alarm. This alarm can be silenced by pressing 1, 2, 3, or 4 Cycle Selector touch pad. "ALARMS" can be cleared by pressing the Reset touch pad. "ALARMS" accompanied by "COMPONENT FAILURE" printout can be cleared only by turning OFF/ON the Control Power switch. If the "COMPONENT FAILURE" still exists after turning the Control Power switch OFF/ON, the sterilizer must be repaired prior to placing it back in operation.*

<p>11. Printer prints: * ALARM TOO LONG IN EVACUATION (Prevac cycle only)</p>	<ol style="list-style-type: none"> 1. Leak around door - tighten. 2. Water supply valve not open - open valve. 3. Insufficient water pressure - correct (proper range: 30-50 psig) dynamic. 4. Chamber drain line strainer plugged - clean. 5. Chamber overloaded - reduce load size. 6. Faulty door gasket - replace. 7. Faulty check valve CK1, CK5 or CK2 (24x36 unit only) - replace. 8. Faulty water solenoid valve S4, S7 - repair. 9. Faulty water ejector - replace. 10. Faulty heat exchanger (24x36 unit only) - replace.
<p>12. Printer prints: * ALARM TOO LONG IN CHARGE</p>	<ol style="list-style-type: none"> 1. Steam supply hand valve not open - open valve. 2. Steam supply less than 50 psig (3.52 kg/sq. cm) dynamic - check supply pressure and increase if necessary. (Proper steam supply range: 50 to 80 psig.) 3. Steam control valve (HI-LO valve) faulty - repair. 4. Faulty chamber steam trap - repair. 5. Faulty steam control valve - repair. 6. Faulty steam-to-chamber solenoid valve - repair. 7. Faulty steam-to-jacket solenoid valve - repair. 8. Control requires recalibration - recalibration must be performed by qualified service technician.

PROBLEM	POSSIBLE CAUSE AND/OR CORRECTION*
<p>13. Printer prints:</p> <p>* ALARM TOO LONG IN STERILIZE</p> <p>status...</p> <p>Display alternates between: COMPONENT FAILURE</p> <p>and</p> <p>* ALARM</p>	<p>This alarm occurs if the sterilize phase has lasted longer than sterilize set time plus 15 minutes. (This can occur if continued Undertemp or Overtemp alarms occur.)</p> <ol style="list-style-type: none"> 1. Constant bleed not set correctly - readjust. 2. Drain clogged - clean. 3. See problems 14,15 and 16.
<p>14. Printer prints:</p> <p>* UNDERTEMP</p> <p>and Display shows:</p> <p>STERILIZE UNDERTEMP</p> <p><i>Note: Printer will print the minimum temperature reached during the sterilize phase.</i></p>	<ol style="list-style-type: none"> 1. Loss of steam pressure - correct (50 to 80 psig is to be supplied). 2. Water supplied to steam generator is less than 60°C (140°F). This can cause a momentary drop in generator steam pressure when cold make up water is fed into the unit. (Note - applies to generator equipped units only.) 3. Insufficient jacket pressure (18 to 20 psig needed for 121°C [250°F] cycle, 28 to 32 for 132°C [270°F] cycle). 4. Faulty chamber steam trap - replace. 5. Faulty steam-to-chamber S2 valve - replace.
<p>15. Printer prints:</p> <p>* OVERTEMP</p> <p>and Display shows:</p> <p>STERILIZE OVERTEMP</p> <p><i>Note: Printer will print the maximum temperature reached during the sterilize phase.</i></p>	<ol style="list-style-type: none"> 1. Jacket pressure too high - correct. 2. Faulty steam-to-chamber solenoid valve - repair. 3. Failure in control - repair must be performed by qualified service technician.
<p>16. Printer prints:</p> <p>* STEAM TABLE DEVIATION</p> <p>status.....(present pressure & temperature in chamber)</p> <p>COMPONENT FAILURE</p> <p>and</p> <p>* ALARM</p>	<p>This alarm occurs if the pressure and temperature do not match the steam table.</p> <ol style="list-style-type: none"> 1. Constant bleed not set correctly - readjust. 2. Loose connection to temperature probe - repair or replace. 3. Either the chamber drain or chamber reference probe (optional) has failed - replace. 4. Control requires calibration - calibration must be performed by a qualified service technician. 5. Absolute atmospheric pressure value has not been entered or is not accurate - enter in the actual absolute atmospheric pressure. (see pressure calibration. 6. Absolute atmospheric pressure value is not available and actual atmospheric pressure differs significantly from 14.7 psia - contact AMSCO service.

PROBLEM	POSSIBLE CAUSE AND/OR CORRECTION*
17. Printer prints: * ALARM TOO LONG IN FAST EXHAUST	<ol style="list-style-type: none"> 1. Clogged drain line strainer - clean. 2. Faulty chamber exhaust solenoid valve - repair. 3. Faulty steam-to-chamber solenoid valve - repair.
18. Printer prints: * ALARM TOO LONG IN AIR BREAK	<ol style="list-style-type: none"> 1. Plugged filter - replace filter element. 2. Faulty air inlet check valve - replace. 3. Faulty filtered air solenoid - repair. 4. Faulty steam-to-chamber solenoid valve - repair. 5. Control requires recalibration - recalibration must be performed by a qualified service technician.
19. Printer prints: * ALARM TOO LONG IN SLOW EXHAUST (Liquid cycle only)	<ol style="list-style-type: none"> 1. Incorrect setting of slow exhaust needle valve - reset. 2. Slow exhaust needle valve clogged - clean. 3. Control requires recalibration - recalibration must be performed by qualified service technician.
20. Printer prints: * ALARM TOO LONG IN VENT	<ol style="list-style-type: none"> 1. Chamber drain line strainer clogged - clean. 2. Faulty steam-to-chamber solenoid valve - repair.
21. Printer prints: VACUUM SYSTEM FAILURE status. . .	<p>This will occur if there is a leak in the chamber, or the vacuum system has failed.</p> <ol style="list-style-type: none"> 1. Leak around door - tighten. 2. Chamber drain line strainer plugged - clean. 3. Faulty door gasket - replace. 4. Insufficient water pressure - correct (30-50 psig required). 5. Faulty check valve - replace. 6. Faulty water solenoid valve - repair.
22. Printer prints: * DOOR OPEN * ABORT * ALARM PRESSURE IN CHAMBER WITH DOOR UNLOCKED	<ol style="list-style-type: none"> 1. Door switch has opened during a cycle - check switch adjustment or replace switch. 2. Control requires recalibration - recalibration must be performed by qualified service technician. 3. Failure in control - repair must be performed by qualified service technician.

PROBLEM	POSSIBLE CAUSE AND/OR CORRECTION*
<p>23. Display shows: INVALID VALUE SET SEE OPERATORS MANUAL <i>Note: The printer does not print any information during this situation.</i></p>	<ol style="list-style-type: none"> 1. An invalid setting has been selected during the Change Values procedure, refer to the Change Values Procedure section in the Operating Procedure manual for valid settings.
<p>24. Printer prints: *ALARM FAILURE READING TEMP Display alternates between: COMPONENT FAILURE and *ALARM</p>	<ol style="list-style-type: none"> 1. Loose connection to temperature probe - repair or replace. 2. Temperature probe has failed - replace. 3. Control requires calibration - calibration must be performed by a qualified service technician.
<p>25. Printer prints: * ALARM FAILURE READING PRESSURE Display alternates between: COMPONENT FAILURE and *ALARM</p>	<p>If this alarm occurs during Slow Exhaust phase, Chamber exhausting either to fast or too slow:</p> <ol style="list-style-type: none"> 1. Chamber trap stuck open - replace. 2. Loose connection to pressure transducer - repair or replace. 3. Pressure transducer has failed - replace. 4. Control requires calibration - calibration must be performed by a qualified service technician.
<p>26. Printer prints: * ALARM FAILURE READING TEMP/PRES Display alternates between: COMPONENT FAILURE and * ALARM</p>	<p>This alarm will occur if the control senses low pressure going into the sterilize phase. This alarm will also occur if there is pressure with a very low temperature.</p> <ol style="list-style-type: none"> 1. Temperature probe has failed - replace. 2. Pressure transducer has failed - replace. 3. Control requires calibration - calibration must be performed by a qualified service technician.
<p>27. Printer prints: *ALARM FAILURE READING LOAD Display alternates between: COMPONENT FAILURE and *ALARM (Sterilizer with Load probe ONLY)</p>	<ol style="list-style-type: none"> 1. Loose connection to temperature probe - repair or replace. 2. Temperature probe has failed - replace. 3. Control requires calibration - calibration must be performed by a qualified service technician.

PROBLEM	POSSIBLE CAUSE AND/OR CORRECTION*
28. Printer prints: *ALARM CHAMB/REF DEVIATION	This alarm occurs if the chamber and reference probes are 5° C (9° F) apart: 1. Loose connection to temperature probe - repair or replace. 2. Either the chamber drain or chamber reference probe has failed - replace. 3. Control requires calibration - calibration must be performed by a qualified service technician.
29. Printer prints: * WARNING PRESSURE IN CHAMBER	1. Cycle aborted with pressure in chamber - allow chamber to exhaust. 2. Steam-to-chamber valve failed - repair. 3. Control requires calibration - calibration must be performed by a qualified service technician.
30. Printer prints: * ALARM PRESSURE IN CHAMBER WITH DOOR UNLOCKED	This alarm will occur if the control senses pressure in the chamber, the sterilizer is not in cycle and door is unlocked. 1. Pressure transducer has failed - replace. 2. Steam-to-chamber valve failed - repair. 3. Control requires calibration - calibration must be performed by a qualified service technician.
31. Printer prints: *ALARM JACKET FLOODED Display alternates between: COMPONENT FAILURE and * ALARM	1. Water is present in the sterilizer jacket. This can occur due to the following: a. jacket trap failed closed. b. jacket strainer clogged. c. boiler/steam generator failure causing water to be fed to sterilizer through the steam piping. 2. A loose connection between the sterilizer control column and the jacket water sensor JWS. There are two wires connected to the JWS, in the event the plug is disconnected from the JWS, the alarm will occur. A loose plug connector at the back of the control column will also cause the same situation. 3. Faulty jacket water sensor JWS. 4. Faulty sterilizer control board. WARNING - BURN HAZARD: Prior to equipment repair, the following investigative steps must be followed and any water that is present in the jacket must be eliminated. <u>CLEARING ALARMS</u> WARNING - BURN HAZARD: Do not attempt to open the sterilizer door. CAUTION: Only a qualified service technician thoroughly familiar with sterilizer operation should perform these steps. 1. Press the Reset touch pad on the sterilizer control.

PROBLEM	POSSIBLE CAUSE AND/OR CORRECTION*
<p>32. Printer prints: *ALARM CHAMBER FLOODED Display alternates between: COMPONENT FAILURE and * ALARM (Pure steam sterilizer ONLY)</p>	<p>2. If the alarm clears, then the alarm may have been caused by a temporary flood condition due to a boiler/generator start up. Steam traps between the boiler/generator should be inspected and repaired where necessary. The sterilizer jacket strainer and trap should be inspected, cleaned and repaired where necessary.</p> <p>WARNING - BURN HAZARD: Do not service sterilizer steam trap or strainer until pressure in jacket has reached 0 psig and the sterilizer has reached room temperature. Piping may contain hot water so protective clothing and hand protection must be worn.</p> <p>3. If the alarm does not clear, the control is indicating there is water still present in the jacket. First inspect boiler/steam generator for signs of a failed water level control system (water in sight glass exceeding normal limit).</p> <p>If facility boiler - Contact facility maintenance department and inform them of need to service the boiler.</p> <p>If AMSCO supplied electric steam generator - turn generator electrical power off and close water supply valve to generator.</p> <p>In either case repair of boiler/generator must be done before sterilizer can be put back in operation.</p> <p>If the boiler/generator does not show signs of overfilling, then the alarm condition may have been caused by traps in the steam piping failing closed, or the jacket trap/strainer in the sterilizer failing closed. The sterilizer jacket strainer and trap should be inspected, cleaned and repaired where necessary.</p> <p>WARNING - BURN HAZARD: Do not service sterilizer steam trap or strainer until pressure in jacket has reached 0 psig and the sterilizer has reached room temperature. Piping may contain hot water so protective clothing and hand protection must be worn.</p> <p>4. If the jacket is clear of water and pressing the Reset touch pad still does not clear the alarm, then the fault may be:</p> <ol style="list-style-type: none"> loose wire or plug at the JWS jacket water sensor - repair as required. faulty JWS jacket water sensor - replace. faulty sterilizer control board - replace. <p>1. Water is present in the sterilizer chamber. This can occur due to the following:</p> <ol style="list-style-type: none"> chamber trap failed closed. chamber strainer clogged. boiler/steam generator failure causing water to be fed to sterilizer through the steam piping. <p>2. A loose connection between the sterilizer control column and the chamber water sensor (CWS). There are two wires connected to the CWS, in the event the plug is disconnected from the CWS, the alarm will occur. A loose plug connector at the back of the control column will also cause the same situation.</p>

PROBLEM	POSSIBLE CAUSE AND/OR CORRECTION*
	<p>3. Faulty jacket water sensor CWS.</p> <p>4. Faulty sterilizer control board.</p> <p>WARNING - BURN HAZARD: PRIOR TO EQUIPMENT REPAIR, THE FOLLOWING INVESTIGATIVE STEPS MUST BE FOLLOWED AND ANY WATER THAT IS PRESENT IN THE JACKET MUST BE ELIMINATED.</p> <p><u>CLEARING ALARMS</u></p> <p>WARNING - BURN HAZARD: Do not attempt to open the sterilizer door.</p> <p>CAUTION: Only a qualified service technician thoroughly familiar with sterilizer operation should perform these steps.</p> <p>1. Press the RESET touch pad on the sterilizer control.</p> <p>2. If the alarm clears, then the alarm may have been caused by a temporary flood condition due to a boiler/generator start up. Steam traps between the boiler/generator should be inspected and repaired where necessary. The sterilizer chamber strainer and trap should be inspected, cleaned and repaired where necessary.</p> <p>WARNING - BURN HAZARD: Do not service sterilizer steam trap or strainer until pressure in chamber has reached 0 psig and the sterilizer has reached room temperature. Piping may contain hot water so protective clothing and hand protection must be worn.</p> <p>3. If the alarm does not clear, the control is indicating there is water still present in the chamber. First inspect boiler/steam generator for signs of a failed water level control system (water in sight glass exceeding normal limit).</p> <p>If facility boiler - Contact facility maintenance department and inform them of need to service the boiler.</p> <p>If AMSCO supplied electric steam generator - turn generator electrical power off and close water supply valve to generator.</p> <p>In either case repair of boiler/generator must be done before sterilizer can be put back in operation.</p> <p>If the boiler/generator does not show signs of overfilling, then the alarm condition may have been caused by traps in the steam piping failing closed, or the jacket trap/strainer in the sterilizer failing closed. The sterilizer jacket strainer and trap should be inspected, cleaned and repaired where necessary.</p> <p>WARNING - BURN HAZARD: Do not service sterilizer steam trap or strainer until pressure in jacket has reached 0 psig and the sterilizer has reached room temperature. Piping may contain hot water so protective clothing and hand protection must be worn.</p>

PROBLEM	POSSIBLE CAUSE AND/OR CORRECTION*
	<p>4. If the chamber is clear of water and pressing the RESET touch pad still does not clear the alarm, then the fault may be:</p> <ol style="list-style-type: none"> a. loose wire or plug at the JWS jacket water sensor - repair as required. b. faulty JWS jacket water sensor - replace. c. faulty sterilizer control board - replace.
<p>33. Printer prints: * ABORT * WARNING PRESSURE IN CHAMBER Display alternates between SLOW EXHAUST and WARNING HOT LIQUIDS IN CHAMBER</p>	<p>This print will occur if the Reset touch pad is pressed when the sterilizer is in a Liquid cycle. This is a normal abort sequence and operator should refer to the Operating Procedure manual for handling of a hot liquids load.</p>
<p>34. Printer prints: INSUFFICIENT VAC. LEVEL TO PERFORM LEAK TEST</p>	<p>This alarm would occur only if a fault were present during a vacuum leak test, the vacuum fails to reach 20 inHg.</p> <ol style="list-style-type: none"> 1. Leak around door - tighten. 2. Chamber drain line strainer plugged - clean. 3. Faulty door gasket - replace. 4. Insufficient water pressure - correct (30-50 psig required). 5. Faulty check valve - replace. 6. Faulty water solenoid valve - repair.
<p>35. Printer prints: ** LOW BATTERY ** PLEASE REPLACE</p> <p>or</p> <p>LOSS OF MEMORY PLEASE REPROGRAM (8K RAM only)</p>	<p>These alarms will occur if the battery is bad or has been erased.</p> <ol style="list-style-type: none"> 1. Replace battery (8K ram). 2. Control requires calibration - calibration must be performed by a qualified service technician.

Control Parts List
AMSCO Scientific
Eagle 3000 Series
Sterilizer

(1-30-95)

P-387345-273 Rev.0

A WORD FROM AMSCO

This manual contains important information on spare parts. All operators and department heads are urged to carefully review and become familiar with the warnings, cautions and instructions contained in associated Operating Procedure and the Service and Maintenance Procedure. This sterilizer is specifically designed to process goods using only the cycles as specified in these manuals. If there is any doubt about a specific material or product, contact the manufacturer of the product for the recommended sterilization technique.

Service Information

A thorough preventive maintenance program is essential to safe and proper operation of this sterilizer. You are encouraged to contact AMSCO concerning our Preventive Maintenance Agreement. Under terms of this agreement, preventive maintenance, adjustments, and replacement of worn parts are done on a scheduled basis to assure equipment performance at peak capability and to help avoid untimely or costly interruptions. AMSCO maintains a nationwide staff of well-equipped, factory-trained technicians to provide this service, as well as expert repair services. Contact your AMSCO representative for details.

AMSCO carries a complete line of accessories for this unit to simplify, organize and assure sterility of the sterilization process. Instrument trays, Vantage and DEXTEX wraps and biological/chemical monitoring systems are all available to fulfill your facility's processing needs. An AMSCO representative will gladly review these with you.

Advisory

A summary of the safety precautions to be observed when operating this equipment can be found in the Operating Procedure and the Service and Maintenance Procedure. Do not operate the sterilizer until you have become familiar with this information.

This sterilizer is not designed to process flammable liquids nor liquids in containers that are not designed for sterilization. Any alteration of the sterilizer which affects its operation will void the warranty and could violate state and local regulations and jeopardize insurance coverage.

Control Parts List

The listing in this section is for replaceable parts that would be necessary to do maintenance on the Stage 3 Control.

DESCRIPTION	PART NUMBERS
Control Type	
Control: Standard Vertical Column	
Power Supply	P-136810-006 (2 board control)
Power Supply	P-93910-541 (single board control)
PC (Printed Circuit) Board, Control	P-146655-356 (w/2K RAM)
EPROM*	P-93913-XXX Rev. X
RAM (2K)	P-150828-625
Triac	P-129360-770
PC (Printed Circuit) Board, Control	P-146655-819 (w/8K RAM**)
RAM (8K)	P-129362-145
PC (Printed Circuit) Board Connector	P-146655-357
Fuse 3 amp	P-764317-778
Touch Pad Panel	P-136806-685
Motor, Paper Take-up	P-93909-399
Fuse, Line Filter (5 amp)	P-764317-463
Line Filter	P-93910-584
If Thermal Printer Equipped:	
Printer Assembly	P-93910-531
Printer only	P-755716-005
Paper (5 rolls)	P-129359-008
Control Interface Board	P-146655-598
If Impact Printer Equipped:	
Printer Head	P-338517-173
Printer Ink Cartridge	P-150828-440
Paper (single ply, 3 rolls)	P-764324-057
(double ply, 3 rolls)	P-150828-420
Printer Interface Board	P-338517-164
Control Interface Board	P-366065-409
If PID Valve(s) or Thermocouples equipped:	
PID/Thermocouple Board	P-146655-766

*NOTE: When ordering P-93913-XXX, Rev. X EPROMs refer to the part number on the label in the control column. If one control board is present, order one EPROM. If two control boards are present, order two EPROMs (part numbers may be different so check both EPROMs on the control boards).

**NOTE: The 8K RAM will fill all the pins in the socket (28 pins), The 2K RAM has only 24 pins.

DESCRIPTION

PART NUMBERS

Control: 3000SL & 3000SLH

PC (Printed Circuit) Board	P-1456655-819 (w/8K RAM**)
RAM (8K)	P-129362-145
Triac	P-129360-770
EPROM*	P-93913-XXX Rev. X
Line Filter (3000SL)	P-93910-584
Power Supply (3000SL)	P-136810-006
Line Filter (3000SLH)	P-93821-001
Power Supply (3000SLH)	P-93910-541
Override Control Board (3000SL CNLY)	P-146655-964
Fuse	P-93911-505
Triac	P-129360-770
Connector Board	P-356255-442
Fuse (3 amp)	P-764317-778

Impact Printer:

Printer Assembly	P-93911-459
Printer Head	P-93911-502
Printer Board	P-93911-561
Printer Interface Board	P-146657-025
Printer Ink Cartridge	P-150828-440
Paper (single ply, 3 rolls)	P-764324-057
(double ply, 3 rolls)	P-150828-420

*NOTE: When ordering P-93913-XXX, Rev. X EPROMs refer to the part number on the label in the control column. If one control board is present, order one EPROM. If two control boards are present, order two EPROMs (part numbers may be different so check both EPROMs on the control boards).

**NOTE: The 8K RAM will fill all the pins in the socket (28 pins), The 2K RAM has only 24 pins.

be disclosed to others without **STERIS Corporation** written permission.*

Operating Procedure

Eagle 3000 Series Prevacuum Sterilizers

(4-16-93)

P-387342-976 Rev. 1

A WORD FROM AMSCO

This manual contains important information on proper use of this sterilizer. All operators and department heads are urged to carefully review and become familiar with the warnings, cautions and instructions contained herein. This sterilizer is specifically designed to process goods using only the cycles as specified in this manual. If there is any doubt about a specific material or product, contact the manufacturer of the product for the recommended sterilization technique.

Service Information

A thorough preventive maintenance program is essential to safe and proper operation of this sterilizer. You are encouraged to contact AMSCO concerning our Preventive Maintenance Agreement. Under terms of this agreement, preventive maintenance, adjustments, and replacement of worn parts are done on a scheduled basis to assure equipment performance at peak capability and to help avoid untimely or costly interruptions. AMSCO maintains a nationwide staff of well-equipped, factory-trained technicians to provide this service, as well as expert repair services. Contact your AMSCO representative for details.

AMSCO carries a complete line of accessories for this unit to simplify, organize and assure sterility of the sterilization process. Instrument trays, Vantage and DEXTEX wraps and biological/chemical monitoring systems are all available to fulfill your facility's processing needs. An AMSCO representative will gladly review these with you.

Advisory

A summary of the safety precautions to be observed when operating this equipment can be found in Section 1 of this manual and behind the upper access panel of the unit. Do not operate the sterilizer until you have become familiar with this information.

This sterilizer is not designed to process flammable liquids nor liquids in containers that are not designed for sterilization. Any alteration of the sterilizer which affects its operation will void the warranty and could violate state and local regulations and jeopardize insurance coverage.

SUMMARY OF WARNING AND CAUTIONS

1

The following is a summary of safety precautions to be observed when operating or servicing this unit. WARNINGS indicate the potential for danger to personnel, and CAUTIONS indicate the potential for damage to equipment. The precautions are repeated (in whole or part) where applicable throughout the manual. Carefully read all safety precautions before proceeding to use or service the unit.

WARNING!

- ⚠ EXPLOSION HAZARD:** This sterilizer is not designed to process flammable liquids.
- ⚠ BURN HAZARD:** When sterilizing liquids, to prevent personal injury or property damage resulting from bursting bottles and hot fluid, you must observe the following procedures:
 - Use LIQUID cycle only. No other cycle is safe for processing liquids.
 - Use only vented closures — do not use screw caps or rubber stoppers with crimped seal.
 - Use only Type I borosilicate glass bottles — do not use ordinary glass bottles or any container not designed for sterilization.
 - Avoid sudden full opening of door at end of cycle. Open sterilizer door no more than one inch and wait at least 10 minutes before unloading sterilizer.
 - Do not allow hot bottles to be jolted. This can cause hot-bottle explosions! Do not move bottles if any boiling or bubbling is present.
 - Allow bottles to cool to touch before attempting to move them from sterilizer shelf or tray(s) to the storage area.
- ⚠ SLIPPING HAZARD:** To avoid slippery floor conditions, immediately wipe up any spillage or condensation in sterilizer loading or unloading area(s).
- ⚠ BURN HAZARD:** Sterilizer and rack/shelves will be HOT after cycle is run. Always wear protective gloves and apron (also face shield if processing liquids) when loading or unloading the sterilizer.
- ⚠ BURN HAZARD:** Make sure chamber door is closed and locked before activating a manual cycle.
- ⚠ BURN HAZARD:** When operating a manual cycle with power off, the flood control system is not operational. During this time, a steam supply malfunction can cause the chamber to fill with scalding water. If the machine is operated manually:
 - Unlock the door slowly.
 - Retighten door if water leaks past the door gasket and call for service immediately.
 - Do not attempt to operate this sterilizer until repairs have been completed by a skilled, trained technician.
- ⚠ BURN HAZARD:** A steam supply malfunction, identified by an audible (warble tone) and visual alarm, can cause the sterilizer chamber to fill with scalding water.
 - Do not open the door.
 - Call for service immediately.

⚠ BURN HAZARD: Allow sterilizer, generator (if applicable) and accessories to cool to room temperature before performing any cleaning or maintenance procedures.

⚠ BURN AND SHOCK HAZARD: Repairs and adjustments must be performed only by authorized persons fully acquainted with this equipment. Maintenance done by inexperienced, unqualified persons or installation of unauthorized parts could cause personal injury or result in costly damage.

CAUTION!

⚠ Never use a wire brush, abrasives or steel wool on door and chamber assembly.

⚠ After installation, it is mandatory to brace piping at the drain funnel so that it will not move vertically.

COMPONENT IDENTIFICATION/FUNCTION

2

Become familiar with all control locations and functions before operating the sterilizer (see Figure 2-1).

- **Main Power Switch** - located behind the upper access door. This switch should be left on at all times.
- **Control Power Switch** - located behind the printer door. This switch enables control operation and the integral steam generator, if applicable.
- **Water Supply Valve** - located behind the upper access door, provides cold water supply to sterilizer; must be open for sterilizer operation.
- **Steam Supply Valve** - located behind the upper access door, provides steam supply to sterilizer; must be open for sterilizer operation.

Figure 2-1. Control Locations

Printer

Refer to Figure 2-1. Printer records all cycle data on 2-1/4 inch wide single ply thermal paper. See Service and Maintenance Procedure for paper changing procedure.

- **Printer Function Switch** (located behind printer door) controls two printer functions:
 - **Print** - Press top of printer switch to obtain a complete duplicate printout of the last previously run cycle (when unit is not in cycle) or to obtain a printout of current cycle phase and conditions (when unit is in cycle).
 - **Print Values** - Press bottom of printer switch to obtain a printout of all currently set cycles and cycle values (when unit is not in cycle). When the unit is in cycle, the specific cycle values will be printed.

Operating End Control Panel

The operating end control panel is used to start cycles, set cycles and cycle values, and obtain status printouts..

- Cycles and cycle values can be **set** using the Values touch pads accessible when sliding door is in raised position.
- Cycles can be started or reset using the touch pads accessible when sliding door is in lowered position.
- Cycle status and control messages are shown on a 2 line x 20 character display.

When sterilizer is not in cycle and not in the READY mode, the display indicates a brief status of the sterilizer:

- DOOR UNLOCKED or
- Non-Operating End DOOR UNLOCKED, or
- BOTH DOORS UNLOCKED, or

shows the door(s) is locked and some **abnormal out-of-cycle condition** exists such as:

- PRESSURE IN CHAMBER

When not in cycle, door(s) is locked and the sterilizer is in the READY mode, the display alternately shows available cycle selections — (example)

STATUS	
1 = PREVAC	3 = GRAVITY
2 = PREVAC	4 = LIQUID

and the current time and chamber status.

STATUS	
TIME:	CT=(temp)
(time of day)	P=(pressure)

When cycle is in progress, display shows cycle status and information. In the event of an abnormal condition, the display and printer will alert the operator. See Section 8 for a full list of alarm conditions.

Cycle Selector Touch Pads

Four touch pads, numbered 1 through 4, are located below the display window. These touch pads are used to select the cycle to be run. The type of cycle that can be selected by the touch pad is shown on the display, next to the number of the pad. For example, 1=PREVAC (on the display) means that by pressing the #1 touch pad, a PREVACUUM cycle can be selected.

Pressing a Cycle Selector touch pad once selects the cycle and displays the sterilize time, sterilize temperature and dry time (if applicable) programmed for the selected cycle. Pressing the same touch pad twice, within five seconds, starts the selected cycle.

Reset Function

The Reset touch pad is used to abort a cycle and put the control into a known condition. See Figures 2-1 and 2-2 for location of this touch pad.

If you press the wrong Cycle Selector touch pad when starting a cycle, proceed as follows:

1. Press RESET touch pad to abort cycle. Display will show "— ABORT—" and the printer will record time RESET was pressed and will print "ABORT— (time of day)".
2. Wait until display shows "TIME: time of day".
3. Press appropriate touch pad for correct cycle. Printer will record cycle selected and unit will proceed through correct cycle.

Values Touch Pads

These touch pads are accessed by raising the sliding door located beneath the display window and Cycle Selector touch pads. The Values touch pads are used for changing cycle values and the control settings of the sterilizer. For more details on using these touch pads, see Section 4, Change Values Procedure.

Figure 2-2. Non-operating End Control Panel

Non-Operating End Control Panel (Double-Door Sterilizers)

The non-operating end control panel features four Cycle Selector touch pads and a RESET touch pad (see Figure 2-2). Cycles can be started or reset using these touch pads. Non-operating end display window concurrently shows the same message as shown in display window on the operating end of the sterilizer.

NOTE: Cycle values cannot be changed from the non-operating end control panel.

Manual Door Operation

A handwheel operates locking and unlocking of the manual door. Door can be swung open or closed from the unlocked position:

- To open door from locked position - rotate handwheel counterclockwise as far as it will go using normal hand pressure and swing door open by hand. Turning handwheel to extreme left brings the ends of the holding arms inward so that they will not strike door frame when door is opened or closed.
- To close and lock door from open position - swing door closed by hand and rotate handwheel clockwise as far as it will go using normal hand pressure.

NOTE: If the door does not unlock at first, turn handwheel slightly clockwise, press the center black button, then again turn handwheel counterclockwise and open door.

⚠ WARNING - EXPLOSION HAZARD: This sterilizer is not designed to process flammable liquids.

⚠ WARNING - BURN HAZARD: When sterilizing liquids, to prevent personal injury or property damage resulting from bursting bottles and hot fluid, you must observe the following procedures:

- Use LIQUID cycle only. No other cycle is safe for processing liquids.
- Use only vented closures - do not use screw caps or rubber stoppers with crimped seal.
- Use only Type I borosilicate glass bottles - do not use ordinary glass bottles or any container not designed for sterilization.
- Avoid sudden full opening of door at end of cycle. Open sterilizer door no more than one inch and wait at least 10 minutes before unloading sterilizer.
- Do not allow hot bottles to be jolted. This can cause hot-bottle explosions! Do not move bottles if any boiling or bubbling is present.
- Allow bottles to cool to touch before attempting to move them from sterilizer cart to the storage area.

The information in this section is intended as a general guide to steam sterilization techniques. For a more detailed description of this subject, refer to AMSCO Techniques Manual (MK-2085) shipped to you with the sterilizer. (Contact AMSCO for another copy if you cannot locate your copy of this manual.)

General

Preparatory to sterilization, all materials and articles must be thoroughly cleaned. After sterilization, most goods should be stored for no longer than thirty days, depending on wrapping materials. For sterilization of articles or materials not covered in this section, contact the manufacturer of the article for the recommended procedure. Cycle times and temperatures not covered in this manual should always be validated for efficacy before processing loads.*

**For in-depth training, AMSCO offers a wide range of education/training programs designed to meet the educational needs of Scientific Industries. Contact AMSCO for details.*

Sterilizing Liquids: Use LIQUID Cycle Only

⚠ WARNING - EXPLOSION HAZARD: This sterilizer is not designed to process flammable liquids.

⚠ WARNING - BURN HAZARD: When sterilizing liquids, to prevent personal injury or property damage resulting from bursting bottles and hot fluid, you must observe the following procedures:

- Use LIQUID cycle only. No other cycle is safe for processing liquids.
- Use only vented closures - do not use screw caps or rubber stoppers with crimped seal.
- Use only Type I borosilicate glass bottles - do not use ordinary glass bottles or any container not designed for sterilization.
- Avoid sudden full opening of door at end of cycle. Open sterilizer door no more than one inch and wait at least 10 minutes before unloading sterilizer.
- Do not allow hot bottles to be jolted. This can cause hot-bottle explosions! Do not move bottles if any boiling or bubbling is present.
- Allow bottles to cool to touch before attempting to move them from sterilizer cart to the storage area.

IMPORTANT: Please read the following paragraphs before sterilizing any liquids in your sterilizer.

Your AMSCO sterilizer is designed to process liquids only when borosilicate containers with vented closures are used.

Borosilicate glass is required because it is a superior glass capable of resisting thermal shock. If glass not as thermally resistant is used, a greater potential for bursting exists.

Vented closures are required because, by design, they release internal pressure build-up by automatically venting the containers, whereas pressure in unvented containers remains until the contents have cooled. Examples of vented closures are shown in Figure 3-1.

Sterilizing liquids in any other type of container or with the use of non-vented closures requires a sterilizer specifically designed for that purpose.

When loading, place small bottles in a separate basket to minimize sliding. Always use side rails on the loading cart to prevent containers or baskets from falling off.

Figure 3-1. Vented Closures

Table 3-1. Minimum Recommended Exposure Times for Full Load of Autopour® Flasked Solutions

ASPF Size	Time (Minutes)	Temperature
75 ML	25	121°C (250°F)
250 ML	30	121°C (250°F)
500 ML	40	121°C (250°F)
1000 ML	45	121°C (250°F)
1500 ML	50	121°C (250°F)
2000 ML	55	121°C (250°F)

Table 3-2. Minimum Sterilization Exposure Period – Wrapped and Unwrapped Goods: Gravity Cycle Only

Items	Sterilize Time 121°C (250°F)	Sterilize Time 132°C (270°F)	Dry Time Minutes
Dressings, wrapped in muslin or equivalent	30	15	30*
Glassware, empty, inverted	15	3	0**
Instruments, metal combined with suture, tubing or other porous materials (unwrapped)	20	10	0**
Instruments, wrapped in double thickness muslin or equivalent	30	15	30*
Linen packs (maximal size: 12x12x20", maximum weight 12 pounds)	30	25	30*
Treatment trays wrapped in muslin or equivalent	30	15	30*
Utensils, unwrapped	15	3	0**
Utensils, wrapped in muslin or equivalent	30	15	30*

*Dry time can vary for wrapped goods depending on pack density, instrument tray weight, pack preparation technique including type of wrapping material used, and sterilizer loading procedures (refer to AMSCO Techniques Manual).

**Dry time is not required for unwrapped goods, however, a dry time of one or two minutes will help reduce excess steam vapor when opening chamber door at end of cycle.

Table 3-3. Steam Sterilization Cycles - Prevacuum Cycles Only

Temperature	Exposure Time (Minutes) (recommended minimum)	Dry Time (recommended minimum)
132-134°C (270-274°F)	4 minutes	20 minutes

Control Measures For Verifying Sterilization Process

Biological Monitors

The best way to ascertain the sterility of an article or to verify the sterilization process is to use a biological monitor.

A live spore test utilizing *B. stearotherophilus* is the most reliable form of biological monitoring. AMSCO recommends that Proof Dual-Pack® or products such as AMSCO's Proof Plus® and Spordex® be used daily to test the sterilizer. These products utilize controlled populations of a controlled resistance so that survival time and kill time can be demonstrated. Steam sterilizers should be tested at least weekly, preferably daily, to minimize the impact of a possible recall. Insert the Proof Plus or Spordex in a test pack and place pack at the bottom front of the rack. Proof Dual-Pack, Proof Plus and Spordex are available from your local AMSCO representative.

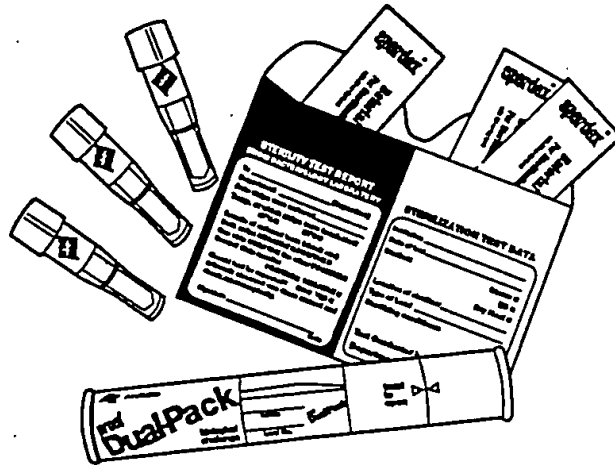

Figure 3-2. Biological Monitors

Testing For Prevacuum Efficiency

The first prevacuum cycle of each day should be used to test the adequacy of air removal from the chamber during the prevacuum phase, so that when steam is subsequently admitted, its penetration of the load may be virtually instantaneous. It is not a test for adequate exposure to heat in terms of time-at-temperature.

Tests such as the Bowie-Dick or the AMSCO DART® (Daily Air Removal Test)* are designed to expose the pattern or document the removal of residual air from a sample challenge load.

In the case of the Bowie-Dick, following exposure in a prevacuum sterilizing cycle, the pack is opened, the tape examined and conclusions are drawn as to the pattern of residual air, if any, that remained in the pack during the sterilizing cycle.

*Available from your AMSCO representative.

AMSCO recommends a Daily Air Removal Test (DART) or a test package. AAMI Standard test package consist of 24 towels approximately 36x36" (457x838 mm) folded three times to give six layers of fabric, forming an approximate size of 8-1/2x11" (914x914 mm) Towel material is a coarse, absorbent, durable cotton (OR towel). Stack towels, placing a single Chemdi Daily Record Sheet* between the twelfth and thirteenth towel. Wrap towels in two double thickness 36x36" (914x914 mm) muslin wrappers and secure with tape. Place the DART or pack positioned on its back, on the lower rack near the chamber drain. Acceptable results are achieved if all of the indicator bars on the DART or the Daily Record Sheet show a complete color change. If desired, record and file with daily printed record.

NOTE: With the DART (Daily Air Removal Test) product, a simple color change from yellow to black of the six (6) indicator bars verifies that air has been removed from the challenge load area of the DART product.

Chemical Controls

1. **Sterilizer Tape** - used for securing wrapper/package ... serves only as an index of exposure to the sterilant system.
2. **Chemical Indicator** - such as AMSCO's Chemdi Steam Indicator Strips*. Placed in center of pack/package... indicates physical conditions of temperature, time, moisture have been reached in that portion of the pack/package.

*Available from your AMSCO representative.

**Table 3-4. Selected Supply Products
For Use With Eagle 3000-S Series Sterilizers**

Description	Package Size	Reorder No.
Proof Dual Pack Biological Indicators	Case of 40*	NA125
Proof Plus Biological Indicators	Box of 100*	NA052
Dart Daily Air Removal Test	Box of 50*	NB113
Chemdi Steam Indicators	Box of 250*	NB001
Steam Autoclave Tape, 3/4"	Case of 48 Rolls*	NB202
Eaglepac Self Seal Pouch, 5-1/4" x 10"	Case of 1000*	NE403
Blue Seal II Peel Pouch, 4" Roll Tubing	Case of 10 Rolls*	NZ307
Solution Flask, 1000 ml	Case of 10*	NC608
Disposable Flask Closures	Bag of 100	NC003

*Other package and/or product sizes available.

The following values are defaulted when changing cycle skeletons.

Prevacuum Cycle

STER TEMP (sterilize temperature)	=	132°C or 270°F
STER TIME (sterilize time)	=	04:00
DRY TIME (dry time)	=	05:00
DRY VAC (dry vacuum point)	=	10.0 inHg or 0.34 bar vacuum
PULSES (number of vacuum pulses)	=	4
P1 (pulse pressure point)	=	26.0 psig or 1.79 bar pressure
V1 (pulse vacuum point)	=	10.0 inHg or 0.34 bar vacuum
P1 HOLD (time pressure held at P1)	=	0:00
V1 HOLD (time vacuum held at V1)	=	0:00
PURGE (purge)	=	1:00
OVERDRIVE (overdrive)	=	1.5°C or 3.0°F
OVERTEMP (over temperature)	=	6.0°C or 12.0°F
UNDERTEMP (under temperature)	=	1.0°C or 2.0°F
PRINT INT (print interval)	=	2 minutes

Gravity Cycle

STER TEMP (sterilize temperature)	=	132°C or 250°F
STER TIME (sterilize time)	=	15:00
DRY TIME (dry time)	=	30:00
DRY VAC (dry vacuum point)	=	10.0 inHg or 0.34 bar vacuum
PURGE (purge)	=	1:00
OVERDRIVE (overdrive)	=	1.5°C or 3.0°F
OVERTEMP (over temperature)	=	6.0°C or 12.0°F
UNDERTEMP (under temperature)	=	1.0°C or 2.0°F
PRINT INT (print interval)	=	2 minutes

Liquid Cycle

STER TEMP (sterilize temperature)	= 121°C or 250°F
STER TIME (sterilize time)	= 45:00
PURGE (purge)	= 1:00
OVERDRIVE (overdrive)	= 1.5°C or 3.0°F
OVERTEMP (over temperature)	= 6.0°C or 12.0°F
UNDERTEMP (under temperature)	= 1.0°C or 2.0°F
PRINT INT (print interval)	= 2 minutes

Introduction

Eagle 3000 Series sterilizers have factory set cycles, cycle values and control values programmed into the control. If necessary, preset values can be changed to suit the operating environment in which the sterilizer has been placed.

The Change Values procedure is used to adjust the preset values and allow control over the operating style of the sterilizer. Most of the selections in the Change Values procedure, except the ability to correct the time and date and set up the auto utility control function, can be secured (or "locked out") using a supervisor's access code.

Making Changes

NOTE: The following procedures cover the adjustment of cycles, cycle values and control values as they are displayed during the Change Values procedure by the sterilizer.

All changes are made to displayed settings using a cursor. The cursor is a blinking digit or word on the display. Move the cursor right or left by pressing the arrow touch pad for the appropriate direction (to move left, press the touch pad pointing left, to move right press the touch pad pointing right).

Press CHANGE VALUES touch pad to move the cursor on the display to the first value to be changed. On displays with more than one line of value information, the cursor can be moved from the last number on one line to the first number on the next using the right arrow touch pad.

NOTE: It is often not possible to back up to a previous option or setting.

To change the digit or setting displayed, press the up or down arrow touch pad. Usually pressing the up arrow touch pad increases the value of a blinking digit by one, pressing the down arrow touch pad decreases the displayed value by one. If the cursor is on a cycle name (such as GRAVITY), the cycle type can be changed by pressing the up or down arrow touch pad. The up and down arrow touch pads are also used to change NO to YES (or YES to NO).

The procedures given below will provide more details for these kinds of changes.

- Any step in the Change Values procedure can be left unchanged (i.e., skipped over) by pressing the CHANGE VALUES touch pad.
- Pressing SAVE VALUES touch pad at any time causes the sterilizer to leave the Change Values procedure and save any changes made to the point where SAVE VALUES was pressed.
- A printout of all cycle and control values is provided upon leaving the Change Values procedure. Press RESET touch pad if you wish to cancel the printout.
- Pressing RESET touch pad alone causes the sterilizer to leave Change Values procedure without saving any changes that have been made. Printer records time and date RESET was pressed.

Figure 5-1. Control Locations

Accessing Change Values Procedure

If the sterilizer is off, follow the steps listed below to access the Change Values procedure.

1. Open the printer door and position the Control Power Switch to POWER (see Figure 5-1).
2. The following message appears on the display each time the sterilizer is turned on:

Press Cycle Selector #1 touch pad to run the leak test cycle, or press #2 touch pad to bypass the leak test cycle.

NOTE: At least one leak test should be run on a sterilizer each week. Refer to Section 5, Sterilizer Operation, for a detailed description of a Leak Test cycle.

Once the leak test has been bypassed or run, the following display appears:

Press Cycle Selector #1 touch pad to run the DART test, or #2 touch pad to bypass the test.

NOTE: At least one DART test should be run each day the sterilizer is used for processing cycles. Refer to Section 5, Sterilizer Operation, for a detailed description of a DART Test cycle.

- Once the DART test has been run or bypassed, raise the sliding door on the control panel and press the CHANGE VALUES touch pad when cycle menu is shown on the display .

```

* CONTROL OFF 9:11:50A
              7/09/93
* CONTROL ON  9:13:31A
              7/09/93
*****
*      EAGLE 3000      *
* VACAMATIC STERILIZER *
*   MADE IN U.S.A.   *
*****
* NOT READY 9:13:35A
DOOR UNLOCKED
-----
* CHANGE VALUE 9:14:20A
  
```

If the sterilizer is on, simply raise the sliding door on the control panel and press the CHANGE VALUES touch pad when cycle menu is shown on the display .

The printer records the time and date that the Change Values procedure is accessed (see Figure 5-2), and the display for adjusting time and date appears in the sterilizer's display window.

Refer to Table 4-1 and Figure 5-4 for the selections available and their order of appearance in the Change Values procedure.

Figure 5-2. Printout Example

Figure 5-2. Values Touch Pads

Table 5-1. Change Values Selections

GENERAL	
Time and Date	The time and date displayed by the sterilizer can be adjusted when necessary.
CYCLE AND CYCLE VALUES	
Cycles and Cycle Values	<p>The cycles normally displayed and ready for use by the sterilizer can be changed. The values (Sterilize Time and Temperature, and Dry time) for each cycle can be adjusted.</p> <p><i>NOTE: Cycles can be secured against change by unauthorized personnel using the Access Code function (see below).</i></p>
CONTROL VALUES	
Auto Utility Control	This setting permits the operator to program the sterilizer to automatically shut off its steam and water at the end of the work day, to conserve utilities. The number of work days in a week, shut down and power up times can be programmed.
Automatic Duplicate Print	Sterilizer can be set to automatically furnish a duplicate printout of each cycle at the end of the cycle. First line will always read "DUPLICATE PRINT..." and complete printout of cycle data will be furnished.
Time Units	This setting allows the control to display times using either standard AM/PM format or 24 hour format.
Date Format	The sterilizer can be programmed to change the way the date is displayed and printed. The normal setting is to display Month/Day/Year (M/D/Y); but this can be changed to Year/Month/Day (Y/M/D), or Day/Month/Year (D/M/Y).
Access Code	An access code can be programmed into the control, limiting access to locked out cycles and most control settings. Once the access code has been set, the full number of available cycles can be locked-out, making them unavailable for change by an operator without entering the Access Code first. Time and Date and Auto Utility Control settings can be adjusted even if the Access Code is being used.
Complete Tone	Normally, a pulsing alarm tone sounds at the completion of a cycle. The sterilizer can be set so that the alarm tone does not sound when cycle is complete.
After Undertemperature	This setting is used to program the sterilizer to respond in the event of an undertemperature alarm. The Restart option resets sterilize phase time to its full length and restarts the phase, once the alarm has been cleared. When the Resume option is selected, the sterilizer continues the sterilization phase, running for the amount of time remaining when the alarm occurred.
P3 Setpoint <i>(units without Optimal Solution Cooling ONLY)</i>	This setting determines the pressure when the Fast Exhaust valve opens during the exhaust phase of Liquid cycles or when the Vent phase begins.

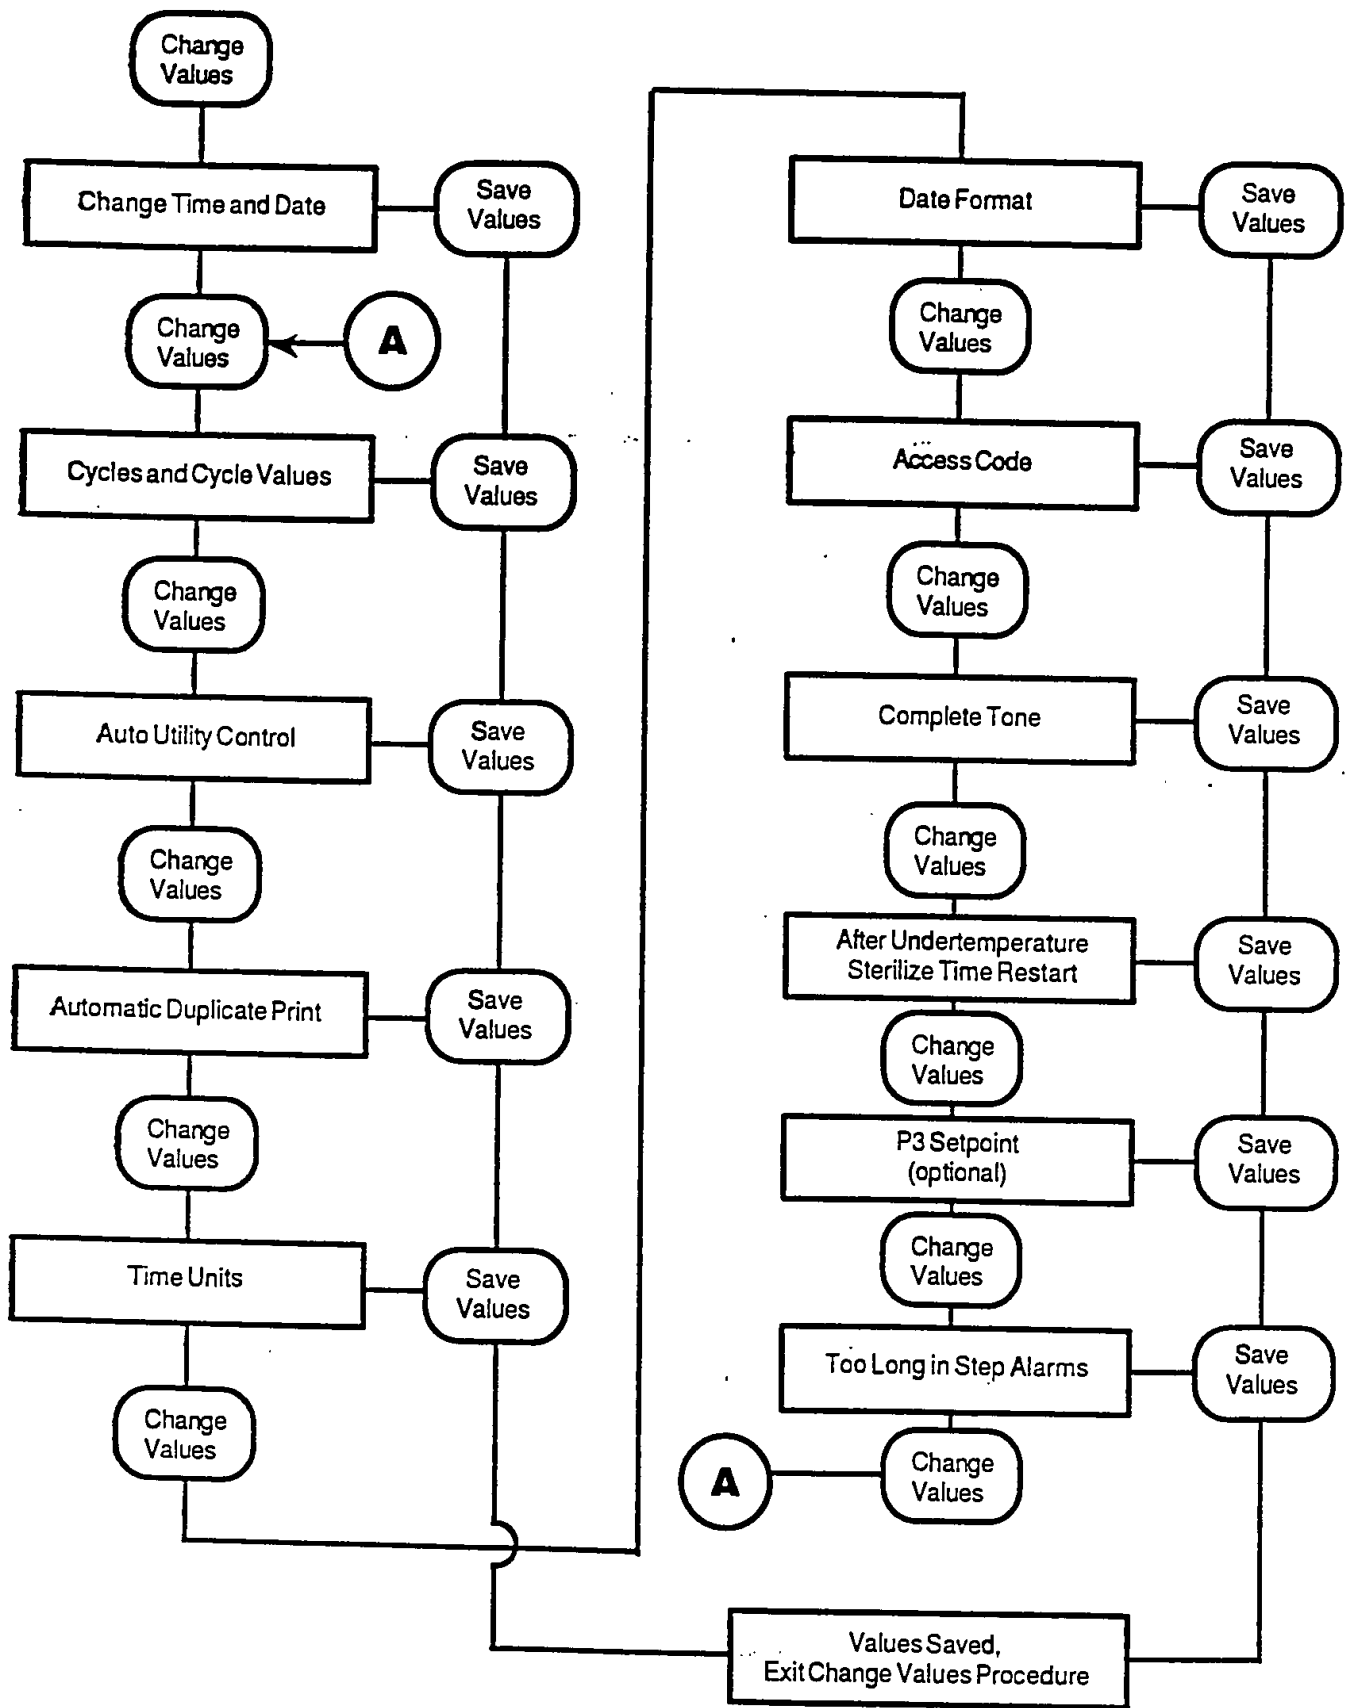

Figure 5-4. Change Values Flowchart

Changing Time and Date

Changing time and date is the first selection to appear in the display once the Change Values procedure is accessed.

STATUS
DATE: M*M/DD/YY
TIME: HH:MM:SS

**M is blinking.*

This display shows the time and date the sterilizer is using for all display and printout messages. This display should be verified periodically (see Preventive Maintenance Guide in Service and Maintenance Procedure manual).

NOTE: Adjusting the Time and Date cannot be locked out using the Access Code.

If the display requires adjustment, follow the steps given below:

1. Move cursor (blinking display position) to the digit you wish to change by pressing right or left arrow touch pad.
2. Increase or decrease the value (of blinking digit) by pressing the up or down arrow touch pad.
3. Repeat steps 1 and 2 until correct time and date is set.
4. Press CHANGE VALUES touch pad if more changes are desired, or . . .
5. Press SAVE VALUES touch pad to record the new time and date and to exit the Change Values procedure. Printout of cycle values and new time and date will also be furnished.

Changing Cycles and Cycle Values

1. If the Access Code is enabled for the sterilizer, one or more of the cycles can be "locked-out" and will not be available for change without knowing the Access Code. If the Access Code is enabled, the following display appears after Changing Time and Date:

STATUS
DO YOU KNOW ACCESS CODE? NO*

**NO is blinking.*

If you know the access code, press the up arrow touch pad to change "NO" to "YES". Press CHANGE VALUES while "YES" is blinking to advance control to the following display message.

STATUS
ENTER ACCESS CODE CODE IS 0000*

**First 0 is blinking.*

Enter the access code using the right/left and up/down arrow touch pads as described under Making Changes in this section. Once the correct code is entered, press CHANGE VALUES touch pad to advance to Modify Cycle selection.

If the Access Code is not known, press CHANGE VALUES touch pad while "NO" is blinking to automatically advance control to the first cycle which is not locked-out. If all cycles are locked out, control advances to Auto Utility Control function.

2. If Access Code is not enabled, the following display appears after Changing Time and Date:

**1 is blinking.*

3. To change values of each cycle, press CHANGE VALUES touch pad when desired cycle number, or CONTROL, is shown on the display. Use the up or down arrow touch pad to select the corresponding number, or Control, for the desired cycle. For example: pressing the CHANGE VALUES touch pad when display shows 3 will allow operator to change the values for Cycle 3; pressing CHANGE VALUES touch pad when display shows CONTROL will allow operator to change the control values.

NOTE: See separate procedure (4, 6, 9, or 12 cycles) for a complete listing of all default values.

1. Press the CHANGE VALUES touch pad when the prevacuum cycle number is shown on the display.

**1 is blinking.*

2. The sterilize time, sterilize temperature and dry time can be changed for each gravity cycle selected. The 'S=' represents the sterilize time in hours/minutes/seconds. Sterilize time is the length of the sterilize phase of the cycle. The 'TMP=' represents the sterilize temperature in degrees (either Celsius or Fahrenheit). Sterilize temperature is the temperature at which the sterilize phase timer begins. The 'D=' represents the dry time in hours/minutes/seconds. Dry time is the length of the drying phase of the cycle.

**PREVAC is blinking.*

//////
**Changing
 Prevacuum Cycle
 Values (values are
 typical only)**
 //////

NOTE: Sterilizer is factory set to operate using Celsius temperature units. If operation using Fahrenheit units is desired or required, adjustment must be performed by a qualified service technician.

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
3. The dry vacuum point can be changed for each Prevacuum cycle selected. Dry vacuum point is the vacuum level at which the dry timer begins. The 'DRY VAC=' represents the vacuum point in inHg or bars..

**1 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
4. The number of prevacuum pulses can be changed for each prevacuum cycle selected. The 'PULSES=' represents the number of vacuum pulses the sterilizer pulls during the conditioning phase of the Prevacuum cycle.

**0 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
- b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
- c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
- d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.

5. The pulse pressure point can be changed for each prevacuum cycle selected. Pulse pressure point is the peak pressure point that each pulse charges to before exhausting during the conditioning phase of the prevacuum cycle. The 'P1=' represents the pulse pressure point in psig or bars.

**2 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
6. The pulse vacuum point can be changed for each prevacuum cycle selected. Pulse vacuum point is the minimum vacuum point that each pulse evacuates to before charging during the conditioning phase of the prevacuum cycle. If unit has water ejector, evacuation will occur for one minute and then will end when the V1 point is reached. The 'V1=' represents the pulse vacuum point in inHg or bars.

**1 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
7. The pressure point hold time can be set for each prevacuum cycle selected. Pressure point hold time is the amount of time the control holds each pulse at the pulse pressure point. The 'P1 HOLD=' represents the hold time in minutes and seconds.

**First 0 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
8. The vacuum point hold time can be set for each prevacuum cycle selected. Vacuum point hold time is the amount of time the control holds the vacuum level at the end of each vacuum pulse. The 'V1 HOLD=' represents the hold time in minutes and seconds.

**First 0 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
9. The purge time can be changed for each prevacuum cycle selected. Purge time is the length of the purge phase of the cycle. The 'PURGE=' represents the purge time in minutes/seconds.

**First 0 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
- b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.

- c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
10. The overdrive temperature value can be changed for each prevacuum cycle selected. The overdrive value is used in determining the control temperature value for the sterilize phase (control temperature = sterilize temperature + overdrive value). The 'OVERDRIVE=' represents the overdrive value in Celsius or Fahrenheit.

**1 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
11. The overtemp temperature value can be changed for each prevacuum cycle selected. The overtemp value plus the control temperature value will determine when the overtemp alarm occurs. The 'OVERTEMP=' represents the overtemp value in Celsius or Fahrenheit.

**First 0 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
12. The undertemp temperature value can be changed for each prevacuum cycle selected. The undertemp value minus the sterilize temperature value will determine when the undertemp alarm occurs. The 'UNDERTEMP=' represents the undertemp value in Celsius or Fahrenheit.

**1 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
13. The print interval value can be changed for each prevacuum cycle selected. The print interval value determines the time interval between status printouts during the sterilize phase. The 'PRINT INTERVAL=' represents the print interval in minutes.

**0 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
- b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
- c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to return to the MODIFY CYCLE display, or . . .
- d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.

**Changing Gravity
Cycle Values
(values are
typical only)**

NOTE: See separate procedure (4, 6, 9 or 12 cycles) for a complete listing of all default values.

1. Press CHANGE VALUES touch pad when the gravity cycle number is shown on the display.

**3 is blinking.*

2. The sterilize time, sterilize temperature and dry time can be changed for each gravity cycle selected. The 'S=' represents the sterilize time in hours/minutes/seconds. Sterilize time is the length of the sterilize phase of the cycle. The 'TMP=' represents the sterilize temperature in degrees (either Celsius or Fahrenheit). Sterilize temperature is the temperature at which the sterilize phase timer begins. The 'D=' represents the dry time in hours/minutes/seconds. Dry time is the length of the drying phase of the cycle.

NOTE: Sterilizer is factory set to operate using Celsius temperature units. If operation using Fahrenheit units is desired or required, adjustment must be performed by a qualified service technician.

STATUS	
3. GRAVITY*	S=00:15:00
TMP=132C	D=00:30:00

**GRAVITY is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
3. The purge time can be changed for each gravity cycle selected. Purge time is the length of the purge phase of the cycle. The 'PURGE=' represents the purge time in minutes/seconds.

 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
5. The overtemp temperature value can be changed for each liquid cycle selected. The overtemp value plus the control temperature value will determine when the overtemp alarm occurs. The 'OVERTEMP=' represents the overtemp value in Celsius or Fahrenheit.

**First 0 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
6. The undertemp temperature value can be changed for each liquid cycle selected. The undertemp value minus the sterilize temperature value will determine when the undertemp alarm occurs. The 'UNDERTEMP=' represents the undertemp value in Celsius or Fahrenheit.

**1 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
 - b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
 - c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to advance to the next display, or . . .
 - d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.
7. The print interval value can be changed for each liquid cycle selected. The print interval value determines the time interval between status printouts during the sterilize phase. The 'PRINT INTERVAL=' represents the print intervals in minutes.

**0 is blinking.*

- a. Move cursor (blinking display position) to the value you wish to change by pressing right or left arrow touch pad.
- b. Increase or decrease the value (of blinking position) by pressing the up or down arrow touch pad.
- c. Once display is changed satisfactorily, press the CHANGE VALUES touch pad to return to the MODIFY CYCLE display, or . . .
- d. Press the SAVE VALUES touch pad to save all changed values and exit Change Values procedure.

Changing Control Values

Control values are the operational settings of the sterilizer (e.g., Date Format, etc.). All control values, with the exception of Auto Utility Control, are automatically secured against unauthorized or accidental change when the Access Code feature is enabled.

1. Press CHANGE VALUE touch pad when CONTROL is shown on the display,

**CONTROL is blinking.*

2. This selection allows the operator to program the sterilizer to automatically shut off and restart the sterilizer's steam and water supplies. The number of work days in a week, shut down and power up times can also be programmed. Sterilizer is shipped from the factory with Auto Utility Control turned OFF.

*OFF is blinking.

- a. The setting can be changed to ON by pressing either the up or down arrow touch pad.
- b. Press SAVE VALUES touch pad to save changes to this point, or CHANGE VALUES touch pad to advance to the next display.

If the Auto Utility selection is left OFF and the remaining settings have not been secured by the Access Code, the control advances to the Auto Duplicate Print selection (see step 3).

If the Auto Utility is turned ON, the display advances to the following after pressing CHANGE VALUES.

- c. These two settings can be used to set the range of days the sterilizer automatically shuts down and restarts utilities.

*Seven is blinking.

For Example: The sterilizer is to be used five days a week (Monday through Friday); the Utility control is being set up on Tuesday. To program this, press the down arrow touch pad twice, the 7 at the end of the first line on the display is changed to a 5. Press Change Values to move cursor to the next line of the display. Tuesday is the second day of the work week, press the down arrow touch pad five times to change the 7 at the end of the second line to a 2. The sterilizer is now programmed to operate Monday through Friday, and will shutdown utilities consumption automatically Saturday through Sunday.

- 1) If necessary, increase or decrease the blinking display number by pressing the up or down arrow touch pad.
- 2) Move to the second line by pressing the right arrow touch pad. The second line is used to enter the day of the work week the sterilizer is being programmed for Auto Utility Control.
- 3) Once this display is changed satisfactorily, press CHANGE VALUES to advance to next display.
- d. This display is used to set the time of day utilities are automatically shutdown and restarted. These values control the Restart and Shutdown times each day the sterilizer is scheduled to be used. If these values are set to the same times, utilities will remain on continuously.

If you have access to Change Values (i.e., you know the Access Code, or the Access Code has not been enabled), but Auto Utility Control is not selected, follow this arrow.

From previous page.

STATUS
RESTART = 07:00* AM
SHUTDOWN = 07:00 AM

**First 0 is blinking.*

- 1) Move cursor (blinking display position) to the digit you wish to change by pressing right or left arrow touch pad.
- 2) Increase or decrease the value (of blinking digit) by pressing up or down arrow touch pad as necessary.
- 3) Once this display is changed satisfactorily, press CHANGE VALUES to advance to Auto Duplicate Print, or . . .
- 4) Press SAVE VALUES to save changes to this point and exit Change Value procedure.

NOTE: The following display is shown while utilities are shutdown. Pressing any of the Cycle Selector touch pads restarts the sterilizer utilities before normal restart time.

STATUS
UTILITIES SHUTDOWN
RESTART AT (TIME)

3. The sterilizer can be programmed to automatically provide a duplicate print at the completion of each cycle. The factory default is no duplicate print.

STATUS
AUTO DUPLICATE PRINT
OFF*

**OFF is blinking.*

- a. Press the up or down arrow touch pad to change the OFF to a ON. ON indicates a duplicate print will be provided after every cycle.
 - b. Press CHANGE VALUES to advance to Time Units, or . . .
 - c. Press SAVE VALUES to save changes to this point and exit Change Values procedure.
4. This selection is used to change the display format for time. The factory default is a standard time display (AM/PM), but this can be changed to a 24 hour time display (24hrs).

**AM/PM is blinking.*

- a. Press the up or down arrow touch pad to change AM/PM to 24 hrs.
 - b. Press CHANGE VALUES to advance to Date Format, or . . .
 - c. Press SAVE VALUES to save changes and exit Change Values procedure.
5. This selection can be used to change the way the sterilizer displays and prints the date. The factory default is to display Month/Day/Year (M/D/Y); but this can be changed to either Year/Month/Day (Y/M/D) or Day/Month/Year (D/M/Y).

**M/D/Y is blinking.*

- a. Press the up or down arrow touch pad to cycle the display through the available settings.
 - b. Once desired setting is on the display, press CHANGE VALUES to advance to Access Code, or . . .
 - c. Press SAVE VALUES to save changes to this point and exit Change Values procedure.
6. The access code enables the supervisor to secure the sterilizer against unauthorized or accidental entry into the Change Values procedure. The factory default is for no access code.

**OFF is blinking.*

- a. If an access code is required, press the up or down arrow touch pad to change display to ON.
- b. Press either SAVE VALUES or CHANGE VALUES touch pad. If the status of the access code was not changed, control advances to Complete Tone. If Access Code option was changed from OFF to ON, display changes to ask for entry of access code.
- c. The access code can be set as any four-digit number from 0000 to 9999.

**First 0 is blinking.*

- 1) Move cursor (blinking display position) to the digit you wish to change by pressing right or left arrow touch pad.
 - 2) Increase or decrease the value (of blinking digit) by pressing up or down arrow touch pad.
 - 3) Once this display is changed satisfactorily, press CHANGE VALUES to "lock-out" cycles, or. . .
 - 4) Press SAVE VALUES to save the Access Code (even if unchanged) in the memory, save any other changes made to this point and exit Change Values procedure.
- d. The default value for this display is 0. Up to the full number of available cycles can be locked-out (protected from unauthorized or accidental change).

**0 is blinking.*

- 1) Change the value (or blinking digit) by pressing the up or down arrow touch pad until the number of cycles you wish to lock-out is displayed. For example, if one cycle is locked out, Cycle #1 is locked out, if two cycles are locked out, Cycles #1 and #2 are locked out.
- 2) Trying to enter a value greater than the full number of available cycles causes the display to respond with the following message:

- 3) Once this display has been changed as desired, press CHANGE VALUES to advance to Complete Tone, or. . .
 - 4) Press SAVE VALUES to save changes to this point and exit Change Values procedure.
7. When this selection is set to ON, the sterilizer sounds a pulsing tone when a cycle completes. The factory default setting is ON.

**ON is blinking.*

- a. Press the up or down arrow touch pad to change ON to OFF.
 - b. Press CHANGE VALUES to advance to the After Undertemperature Restart, or, . .
 - c. Press SAVE VALUES to save changes made to this point and exit Change Values procedure.
8. This selection is used to control the sterilizer if undertemperature situations occur during the sterilize phase of a cycle. The RESTART setting causes the sterilizer to begin the sterilize phase over if the unit enters an undertemperature state. RESUME causes the sterilizer to restart the phase timer from the point where the unit entered an undertemperature state. The factory default setting is RESTART.

**RESTART is blinking.*

- a. Change RESTART to RESUME, if desired, by pressing the up or down arrow touch pad.
- b. Press CHANGE VALUES to advance control to first Too Long in Step display, or P3 setpoint (units with out Optimal Solution Cooling ONLY)
- c. Press SAVE VALUES to save changes to this point and exit Change Values procedure.

9. This set point exists and shows only for units without Optimal solution Cooling. This point determines when the Fast Exhaust valve opens during the exhaust phase of a Liquid Cycle or when the Vent phase begins.
- a. This value is entered using the CHANGE VALUES touchpads, the same as for values in this procedure.
 - b. Press SAVE VALUES to store this value in the control memory, and return to the main cycle selection menu.
 - c. Once all values have been set as desired, press CHANGE VALUES to advance to the Too Long in Step display

10. The first screen for Too Long in Step alarms appears on the display. These alarm settings are defined as follows:

**3 is blinking.*

TLIC = Too Long in Charge. This value determines how long the sterilizer will attempt to reach the sterilize temperature set point, during charge phase, before the control sounds an alarm. This value can be set anywhere from 0 to 99 minutes.

TLIV = Too Long in Evacuation. This value determines how long the sterilizer will attempt to reach the vacuum set point before the control sounds an alarm. This value can be set anywhere from 0 to 99 minutes.

TLIE = Too Long in Exhaust. This value determines how long the sterilizer will attempt to reach the atmosphere set point, following sterilize phase, before the control sounds an alarm. This value can be set anywhere from 0 to 99 minutes.

- a. Move cursor (blinking display position) to the digit you wish to change by pressing right or left arrow touch pad.
- b. Increase or decrease the value (of blinking digit) by pressing up or down arrow touch pad.
- c. Once all values have been set as desired, press CHANGE VALUES to advance to the next Too Long in Step alarm display.
- d. This display defaults to the same value for both small and medium sterilizers. The alarm setting is defined as follows:

**First 0 is blinking.*

TLIS = Too Long in Slow Exhaust. This value determines how long the sterilizer will attempt to exhaust the chamber to atmospheric pressure, following the sterilize phase of a Liquid cycle, before the control sounds an alarm. This value can be set anywhere from 00:00 to 99:59 (hours:minutes).

- e. Move cursor (blinking display position) to the digit you wish to change by pressing right or left arrow touch pad.
 - f. Increase or decrease the value (of blinking digit) by pressing up or down arrow touch pad.
 - g. Press CHANGE VALUES to store all changed values in the control memory and return to the MODIFY CYCLE display, or . . .
 - h. Press SAVE VALUES to save all changed values in the control memory and exit the Change Values procedure.
10. Upon exiting the Change Values procedure, the sterilizer provides a complete printout of all cycle values and control settings. To cancel printout, press the RESET touch pad once printout begins.

Operate sterilizer by referring to the appropriate cycle description in this section for the cycle to be run. Refer to Section 4, Change Values Procedure, if it is necessary to change cycles, cycle values or control values.

NOTE: To view current cycle values, press and hold the corresponding Cycle Selector touch pad (1, 2, 3 or 4) for the cycle (sterilizer power must be on).

Figure 5-1. Control Locations

Before Operating the Sterilizer

⚠ WARNING - BURN HAZARD: Sterilizer and rack/shelves will be HOT after cycle is run. Always wear protective gloves and apron (also face shield if processing liquids) when loading or unloading the sterilizer.

⚠ WARNING - SLIPPING HAZARD: To avoid slippery floor conditions, immediately wipe up any spillage or condensation in sterilizer loading or unloading area(s).

1. Check that chamber drain strainer is clean and in place and that chamber interior is clean. See Service and Maintenance Procedure if cleaning is necessary.
2. Open the upper access door.
 - a. Check that manual control is turned to OFF.
 - b. Turn Steam and Water valves to ON.

NOTE: If sterilizer is equipped with an integral electric steam generator, Consult Operating Procedure Manual for Generator.

- c. Set HI-LO valve according to the sterilize temperature of the cycle to be run. For example: set valve to LO if running a Liquid cycle.

NOTE: For jacket steam feed units ONLY. Refer to Jacket Steam Feed/Manual Control Procedure.

- d. Turn on Main Power Switch (behind lower access door if medium unit).
- e. Open the printer door and position the Control Power switch to POWER.

Steam enters jacket and begins to warm chamber.

The printer records the time and date that the power is turned ON.

3. The display shows the following sequence of messages whenever the Control Power switch is turned on:

STATUS	
PERFORM LEAK TEST?	
1=YES	2=NO

Press the appropriate Cycle Selector touch pad to run or bypass the test.

NOTE: Leak Test should be performed on the sterilizer at least once each week. For additional details, see the Leak Test procedure and cycle description later in this section.

Once this test has been bypassed or run, the display changes to the following:

STATUS	
PERFORM DART TEST?	
(BOWIE-DICK) 1=Y 2=N	

Press the appropriate Cycle Selector touch pad to run or bypass the test.

NOTE: DART (Bowie-Dick) Test should be run each day the sterilizer is used. For additional details, see the DART Test procedures and cycle description later in this section.

Once this test has been bypassed or run, the display changes to the following:

STATUS	
TIME	CT = (temp)
(time of day)	P = (pressure)

alternating with -

STATUS	
1=PREVAC	3=GRAVITY
2=PREVAC	4=LIQUID

4. Open chamber door. (Refer to Manual Door Operation in Section 2.) Display alternately shows - (example)

STATUS	
DOOR	CT=(temp)
UNLOCKED	P=0 psig

and

STATUS	
1=PREVAC	3=GRAVITY
2=PREVAC	4=LIQUID

Printer records -

NOT READY (time of day)
DOOR UNLOCKED

5. Load the chamber.
6. Close and lock chamber door. (Refer to Manual Door Operation in Section 2.)

NOTE: Once chamber is pressurized, an integral pressure-actuated lock will prevent door from being opened under pressure.

Display shows available cycle selections for five seconds - (example)

STATUS	
1=PREVAC	3=GRAVITY
2=PREVAC	4=LIQUID

and then alternates with

STATUS	
TIME	CT=(temp)
(time of day)	P=(pressure)

7. Refer to the procedure on Steam Pressure Regulation before starting a cycle.
8. If other temperature probes are present, refer to the procedures related to these probes before starting a cycle.
9. The sterilizer is now ready to run a cycle.

Automatic Operation: LEAK TEST Cycle

Refer to Before Operating the Sterilizer to prepare the unit for running this cycle.

A vacuum leak test cycle may be run as the first cycle only after positioning Control Power switch to POWER. If any cycle has been run after switching control power on, the leak test cycle cannot be started until power is switched OFF and then ON again.

⚠ WARNING - BURN HAZARD: Sterilizer and rack/shelves will be HOT after cycle is run. Always wear protective gloves and apron (also face shield if processing liquids) when loading or unloading the sterilizer.

In this cycle, the sterilizer automatically checks for vacuum leaks in the piping and door seal. If the sterilizer leak rate is not acceptable, the sterilizer should be inspected by a qualified service technician. Leak test cycle can also be used to confirm that the sterilizer piping is intact after performing repairs.

NOTE: The measured leak rate (mm Hg per minute) is calculated by the control over a timed 10 minute period, and is included in the cycle printout.

NOTE: This test is not a substitute for a Bowie-Dick test.

⚠ WARNING - SLIPPING HAZARD: To avoid slippery floor conditions, immediately wipe up any spillage or condensation in sterilizer loading or unloading area(s).

1. Once the following display is shown, press Cycle Selector #1 touch pad to select the leak test.

STATUS	
PERFORM LEAK TEST?	
1=YES	2=NO

2. The display below will be shown for 5 seconds. Check that the steam supply to the sterilizer is turned on.

STATUS	
PLEASE CHECK STEAM.	

3. Press the Cycle Selector #1 touch pad to begin the leak test.

STATUS	
READY TO TEST?	
1=YES	RESET=CANCEL

```

```

(stabilize display)

NOTE: If the sterilizer has a vacuum pump, steps 5, 6, 7, and 8 will be skipped. The cycle will immediately start evacuation of chamber.

5. Steam flows through chamber for one minute.

6. After the purge phase, a vacuum is pulled in the chamber for one minute and then down to 10 inHg (0.34 bar). For units with a vacuum pump, there is no one minute wait.

7. The pulse charge phase begins and the chamber is charged to 26 psig (0.34 bar). One more pulse is then completed (repeat step 6)

8. After two prevacuum pulses, the chamber charges with steam to 132°C (270°F).

9. Once temperature is reached, the evacuation phase begins. The chamber exhausts and a vacuum is pulled in the chamber for 10 minutes.

10. After the 10 minute timer expires, the chamber stabilizes for 2 minutes. This phase ensures a constant vacuum level after the vacuum system has been turned off.

TOTAL CYCLE = time

PERFORM DART TEST?
(BOWIE-DICK) 1=Y 2=N

(dart test display)

- During the leak test phase, chamber remains idle for 10 minutes. On completion of phase, control calculates the leak rate based on the initial and final pressure readings taken during the 10 minute period.

The printer records the leak rate.

- After the leak test phase, cycle enters the air break phase. Filtered air enters the chamber to relieve the vacuum in the chamber.

- Two seconds after chamber pressure reaches 2 inHg (0.068 bar), the cycle is complete. The complete tone sounds and the total cycle time is printed.

- Once the cycle is complete, unlock and open chamber door. The control will be ready to run the Dart Warm-up cycle.

NOTE: Sequential records of tests should be kept to detect if any major changes in leak rates are occurring. Maintenance can then be scheduled to correct any loose fittings, bad gaskets, etc.

Refer to Before Operating the Sterilizer to prepare the unit for running this cycle.

A DART Warm-up cycle may be run as the first or second cycle only after positioning Control Power switch to POWER. A Leak Test or a Warm-up cycle should be completed prior to performing a DART (Bowie-Dick) test.

NOTE: Bypass the PERFORM LEAK TEST? prompt when it appears in the display window, unless a leak test cycle is required at this time. (If required, refer to the Leak Test Cycle description.)

- Once the leak test has been bypassed or run, the message below appears on the display. Press Cycle Selector #1 touch pad.

READY TO TEST?
1=YES RESET=CANCEL

(dart test display)

16. Once the cycle is complete, the DART test cycle can be run. Press the Cycle Selector #1 touch pad to begin DART test, or press Reset to bypass the DART test.

Refer to Before Operating the Sterilizer to prepare the unit for running this cycle.

A DART (BOWIE-DICK) test cycle may be run as the first or second cycle only after positioning Control Power switch to POWER. Chamber must be at operating temperature when DART (BOWIE-DICK) test is performed. A Leak Test or a Warm-up cycle should be completed prior to performing DART (Bowie-Dick) test.

Tests such as the DART or BOWIE-DICK are designed to document the removal of residual air from a sample challenge load and should be run before sterilizer use every day.

NOTE: Bypass the PERFORM LEAK TEST? prompt when it appears in the display window, unless a leak test cycle is required at this time. (If required, refer to the Leak Test Cycle description.)

Automatic Operation: DART Cycle

⚠ WARNING - BURN HAZARD: Sterilizer and rack/shelves will be HOT after cycle is run. Always wear protective gloves and apron (also face shield if processing liquids) when loading or unloading the sterilizer.

3. Steam flows through chamber for selected time interval.
4. After the purge phase, a vacuum is pulled in the chamber for one minute and then down to the V1 vacuum parameter. **For units with a vacuum pump, there is no one minute wait.**
5. If the VAC (V1) HOLD parameter is greater than 0, the cycle holds at the current vacuum level for that amount of time.
6. The pulse charges to the P1 pressure parameter.
7. If the PRES (P1) HOLD parameter is greater than 0, the cycle holds at the P1 pressure point for that amount of time.
8. After the last prevacuum pulse, the chamber charges with steam.
9. During the charge phase, when pressure is greater than or equal to the steam flush pressure point, FP, (default 6 psig or 0.41 bar), the steam flush phase will begin and will continue until the chamber temperature reaches the steam flush temperature point, FT, (default 108° C or 226° F). The steam flush phase will flush most of the remaining air out of the chamber. **
10. After the steam flush phase, the cycle will charge with steam to the sterilize temperature. **
11. The sterilize phase begins when chamber temperature is equal to or greater than the sterilize temperature. The steam-to-chamber valve is regulated to maintain the chamber at the sterilize control temperature.
12. When the sterilize time is expired, the fast exhaust phase begins. The pressure in the chamber decreases to 3 psig (0.2 bar).
13. When the pressure is equal to or less than 3 psig (0.2 bar), the vacuum dry phase begins. A vacuum is pulled in the chamber to the dry vacuum point.
14. After the dry vacuum point is reached, the cycle enters the dry phase. Evacuation of the chamber continues for the selected time interval.
15. When dry phase is complete, the cycle enters the air break phase. Filtered air enters the chamber to relieve the vacuum in the chamber.
16. Ten seconds after the vacuum level reaches 2 inHg (0.068 bar), the cycle is complete.

2. The cycle name and cycle values are printed at the beginning of the cycle.

- a. Cycle Skeleton: GRAVITY.
- b. Cycle Number: 1, 2, 3 or 4. (1a, 2a, 3a, ...)

- ← sterilize temperature
- ← sterilize temperature plus overdrive
- ← sterilize time
- ← dry time

← c. Phase name and the current time, pressure and temperature are printed.

← d. The phase names on the left show the sequence of the cycle. Refer to the following explanation for a complete description of each phase.

DISPLAY WINDOW MESSAGE SEQUENCE FOR GRAVITY CYCLES

```

PURGE      CT=XXX C
X:XX      P=XXpsig

```

(purge phase display)

```

CHARGE     CT=XXX C
           P=XXpsig

```

(charge phase display)

```

STEAM     CT=XXX C
FLUSH     P=XXpsig

```

(steam flush display)

```

CHARGE     CT=XXX C
           P=XXpsig

```

(charge phase display)

```

STERILIZE CT=XXX C
time left P=XXpsig

```

(sterilize phase display)

```

FAST      CT=XXX C
EXHAUST   P=XXpsig

```

(fast exhaust display)

3. Steam flows through chamber for selected time interval.

4. After the purge phase, the chamber charges with steam.

5. During the charge phase, when pressure is greater than or equal to the steam flush pressure point, FP, (default 6 psig or 0.41 bar), the steam flush phase will begin and will continue until the chamber temperature reaches the steam flush temperature point, FT, (default 108° C or 226° F). The steam flush phase will flush most of the remaining air out of the chamber. *

6. After the steam flush phase, the cycle will charge with steam to the sterilize temperature. *

7. The sterilize phase begins when chamber temperature is equal to or greater than the sterilize temperature. The steam-to-chamber valve is regulated to maintain the chamber at the sterilize control temperature.

8. When the sterilize time is expired, the fast exhaust phase begins. The pressure in the chamber decreases to 3 psig (0.2 bar).

* Sterilizers with separate steam feeds only

VACUUM DRY	CT=XXX C P=XXpsig
---------------	----------------------

(vacuum dry display)

DRY time left	CT=XXX C P=XXpsig
------------------	----------------------

(dry phase display)

AIR BREAK	CT=XXX C P=XXpsig
-----------	----------------------

(air break display)

COMPLETE time	CT=XXX C P=XXpsig
------------------	----------------------

(complete display)

9. When the pressure is equal to or less than 3 psig (0.2 bar), the vacuum dry phase begins. A vacuum is pulled in the chamber to the vacuum dry point.

10. After the dry vacuum point is reached, the cycle enters the dry phase. Evacuation of the chamber continues for the selected time interval.

11. When dry phase is complete, the cycle enters the air break phase. Filtered air enters the chamber to relieve the vacuum in the chamber.

NOTE: If there is pressure in the chamber at the end of the dry phase, air break phase will be replaced with a vent phase. During vent phase, remaining pressure is vented from the chamber.

12. Ten seconds after the vacuum level reaches 2 inHg (0.068 bar), the cycle is complete.

(operating end door open)

N.O.E. DOOR UNLOCKED	CT=XXX C P=XXpsig
-------------------------	----------------------

(non-operating end door open)

13. Once the cycle is complete, unlock and open chamber door. The control will automatically reset to current cycle values.

14. After the doors are unlocked and the appropriate safety precautions have been taken, remove the load from the chamber.

Automatic Operation: LIQUID Cycle

Refer to Before Operating the Sterilizer to prepare the unit for running this cycle.

1. Press and release the corresponding Cycle Selector touch pad (1, 2, 3 or 4) for LIQUID cycle. Press and release the touch pad a second time within five seconds to begin cycle.

⚠ WARNING - EXPLOSION HAZARD: This sterilizer is not designed to process flammable liquids.

⚠ WARNING - BURN HAZARD: When sterilizing liquids, to prevent personal injury or property damage resulting from bursting bottles and hot fluid, you must observe the following procedures:

- Use LIQUID cycle only. No other cycle is safe for processing liquids.
- Use only vented closures – do not use screw caps or rubber stoppers with crimped seal.
- Use only Type I borosilicate glass bottles – do not use ordinary glass bottles or any container not designed for sterilization.

⚠ WARNING - BURN HAZARD: Sterilizer and rack/shelves will be HOT after cycle is run. Always wear protective gloves and apron (also face shield if processing liquids) when loading or unloading the sterilizer.

⚠ WARNING - SLIPPING HAZARD: To avoid slippery floor conditions, immediately wipe up any spillage or condensation in sterilizer loading or unloading area(s).

STATUS	
1=PREVAC	3=GRAVITY
2=PREVAC	4=LIQUID

NOTE: A complete cycle printout of all values can be obtained any time during cycle by pressing PRINT VALUES on the printer function switch. To obtain a cycle printout out of cycle, press the corresponding Cycle Selector touch pad (1, 2, 3 or 4) and press PRINT VALUES within five seconds.

The ALARM tone sounds, for 3 seconds and the cycle summary and end-of-cycle messages are printed.

←see warning labels

! WARNING - BURN HAZARD: When sterilizing liquids, to prevent personal injury or property damage resulting from bursting bottles and hot fluid, you must observe the following procedures:

- Avoid sudden full opening of door at end of cycle. Open sterilizer door no more than one inch and wait at least 10 minutes before unloading sterilizer.
- Do not allow hot bottles to be jolted. This can cause hot-bottle explosions! Do not move bottles if any boiling or bubbling is present.
- Allow bottles to cool to touch before attempting to move them from sterilizer cart to the storage area.

UNLOAD IN 10:00	CT=XXX C P=XXpsig
--------------------	----------------------

(cool down period)

- alternates with -

WARNING HOT LIQUIDS	CT=XXX C P=XXpsig
------------------------	----------------------

(warning display)

DOOR UNLOCKED	CT=XXX C P=XXpsig

(operating end door open)

N.O.E. DOOR UNLOCKED	CT=XXX C P=XXpsig
-------------------------	----------------------

(non-operating end door open)

11. Once the cycle is complete, unlock and **open chamber door one inch**. Allow load to cool for 10 minutes.

12. After 10 minutes, the complete tone sounds, if selected. Fully open door and remove load from chamber. The control will automatically reset to current cycle values.

13. Close door immediately after unloading. This will activate steam to the jacket and warm up the sterilizer for the next cycle to be run. Steam to the jacket can also be activated by pressing the RESET touchpad.

Rear of Control Column
Figure 7-1. RS232 Port Location

An RS232 Interface Port is provided, and is located at the rear of the control column near the middle (see Figure 7-1).

NOTE: A RS232 interface cable is required. The cable is wired as follows (see Table 7-1 for proper settings):

Back of Control Column Pins	Data Acquisition System Pins
2	2
3	3
7	7

1. The data will only be sent out the RS232 during cycle.
2. The status data during cycle will be sent out continuously.
3. Each line will contain the following:
 - a. Start byte (02 HEX, which is a smiling face in ascii).
 - b. Data in ascii of the status line.
 - c. Checksum in ascii.

The checksum is calculated as follows:

All of the hex values in the status line from the start byte to the stop byte, excluding the 0D hex for carriage return and the checksum itself, are added together. As an example, if the value of the checksum is 3B5, the checksum is displayed with only the two right most digits (B5 hex). So, the value of the checksum in ascii is displayed as (=).

- d. Carriage return (0D hex).
- e. Stop byte (03 hex, which is a heart in ascii).

4. Parts of the status line.

Start Byte	Status Line	Checksum	Carriage Return	Stop Byte
---------------	-------------	----------	--------------------	--------------

5. The following status lines will be printed:

	XX:XX:XX	← time of day
	XX.X P	← pressure
	XXX.X C	← chamber drain temperature
optional	XXX.X C	← chamber drain temperature
optional	XXX.X C	← load temperature
optional	XXX.X	← Fo value

See the Service and Maintenance Procedure for explanation on how to correct or prevent the alarms.

1. **TOO LONG IN CHARGE (TLIC)** - This alarm occurs during the charging phase of the cycle. If the total time during the charge phase is greater than the TLIC parameter, an alarm will sound. The following will be printed:

```
*ALARM
TOO LONG IN CHARGE
-----
STATUS...
```

2. **TOO LONG IN STERILIZE** - This alarm occurs during the sterilize phase of the cycle when the total sterilize time exceeds the set sterilize time by 15 minutes (this can occur if continued overtemp or undertemp alarms occur). If the alarm occurs, an alarm will sound, the following will be printed:

```
*ALARM
TOO LONG IN STERILIZE
-----
STATUS...
```

and the display will show:

STATUS	
COMPONENT	CT = XXX C
FAILURE	P = XXpsig

- alternating with -

STATUS	
*ALARM	CT = XXX C
	P = XXpsig

3. **TOO LONG IN EXHAUST (TLIE)** - This alarm occurs during the fast exhaust phase of the Prevacuum or Gravity cycle whenever the sterilizer takes longer than the TLIE parameter to exhaust (to 1 psig, 0.07 bar) during vacuum pulses and to 3 psig [0.2 bar] during fast exhaust phase). If the alarm occurs, an alarm will sound and the following will be printed:

```
*ALARM
TOO LONG IN FAST EXHAUST
-----
STATUS...
```

or

```
*ALARM
TOO LONG IN EXHAUST
-----
STATUS...
```

4. **TOO LONG IN SLOW EXHAUST (TLIS)** - This alarm occurs during the slow exhaust phase of the Liquid cycle whenever the sterilizer takes longer than the TLIS parameter to slow exhaust. If the alarm occurs, an alarm will sound and the following will be printed:

```
*ALARM
TOO LONG IN SLOW EXHAUST
-----
STATUS...
```

5. **EXHAUST RATE FAILURE** - This alarm occurs only during the slow exhaust phase of the Liquid cycle whenever the pressure does not drop after S3 is turned on (S3 turns on if rate cannot be met by S13 valve) or if pressure drops too rapidly. If an alarm occurs, the cycle will abort, an alarm will sound, the following will be printed:

```
* ALARM
FAILURE READING PRESSURE
-----
STATUS...
```

and the display will show:

STATUS	
COMPONENT	CT = XXX C
FAILURE	P = XXpsig

- alternating with -

STATUS	
*ALARM	CT = XXX C
	P = XXpsig

6. **TOO LONG IN EVACUATION (TLIV)** - This alarm occurs during the dry vacuum phase or during the prevac vacuum pulses of the Prevacuum cycle whenever the sterilizer takes longer than the TLIV parameter to reach the DRY VACUUM point or the V1 parameter. If the alarm occurs, an alarm will sound and the following will be printed:

```
*ALARM
TOO LONG IN EVACUATION
-----
STATUS...
```

7. **TOO LONG IN AIR BREAK** - This alarm occurs during the air break phase of the cycle whenever the sterilizer takes more than 5 minutes to air break to 2 inHg (0.068 bar). If the alarm occurs, an alarm will sound and the following will be printed:

```
*ALARM
TOO LONG IN AIR BREAK
-----
STATUS...
```

8. **UNDER TEMPERATURE ALARM** - This alarm will occur during the sterilize phase of the cycle whenever the chamber drain temperature falls below the set sterilize temperature. If the alarm occurs, an alarm will sound, the following will be printed:

*UNDERTEMP

STATUS...

and the display will show:

STATUS	
STERILIZE	CT=XXX C
UNDERTEMP	P=XXpsig

After the chamber drain temperature rises above the set sterilize temperature the alarm will silence and the following will be printed:

TEMP MIN = XXX.X C

STERILIZE

STATUS...

9. **OVER TEMPERATURE ALARM** - This alarm occurs in the sterilize phase of the cycle when chamber drain temperature rises above the control temperature by the OVERTEMP parameter. If the alarm occurs, an alarm will sound, the following will be printed:

*OVERTEMP

STATUS...

and the display will show:

STATUS	
STERILIZE	CT=XXX C
OVERTEMP	P=XXpsig

The sterilize phase will resume with the same amount of time on the display when the overtemp occurred. The following will be printed:

TEMP MAX = XXX.X C

STERILIZE

STATUS...

10. **DOOR UNLOCKED (IN CYCLE)** - This alarm occurs any time a door switch opens while in cycle. The cycle will automatically abort and the printer will record the following information.

*DOOR OPEN TIME

*ABORT TIME

and if there is pressure in the chamber...

*ALARM
PRESSURE IN CHAMBER
WITH DOOR UNLOCKED

STATUS...

The following message will be displayed for several seconds.

STATUS
* ABORT *

and if there is pressure in the chamber...

STATUS
PRESSURE CT=XXX C
IN CHAMBER P=XXpsig

11. **PRESSURE IN CHAMBER** - This alarm will occur out of cycle and when the pressure is above 2 psig (0.14 bar). If the alarm occurs, pressure is exhausted and the printer will print the following:

* WARNING TIME
PRESSURE IN CHAMBER

STATUS...

and the display will show:

STATUS
PRESSURE CT=XXX C
IN CHAMBER P=XXpsig

If the door is open when the pressure is above 2 psig (0.14 bar), the printer will print:

```
* WARNING   TIME  
PRESSURE IN CHAMBER  
WITH DOOR UNLOCKED
```

STATUS...

and the display will show:

STATUS	
PRESSURE	CT=XXX C
IN CHAMBER	P=XXpsig

12. **VACUUM SYSTEM FAILURE** - This alarm occurs during the dry phase of a cycle if the vacuum level should decrease by more than 2 inHg (0.067 bar). If the alarm occurs, the printer will print the following:

```
VACUUM SYSTEM FAILURE
```

STATUS...

13. **STEAM TABLE DEVIATION** - This alarm occurs after 1 minute in the sterilize phase of a cycle if the pressure does not match the steam table pressure within 5 psig. If an alarm occurs, an alarm will sound, the following will be printed:

```
STEAM TABLE DEVIATION
```

STATUS...

and the display will show:

STATUS	
COMPONENT	CT = XXX C
FAILURE	P = XXpsig

- alternating with -

STATUS	
*ALARM	CT = XXX C
	P = XXpsig

NOTE: This alarm will not be active if pressure units are in bars.

14. **FAILURE READING TEMPERATURE** - This alarm occurs any time the chamber drain temperature reading is greater than 142.5°C or less than 0°C. If an alarm occurs, an alarm will sound, the following will be printed:

```
* ALARM
FAILURE READING TEMP
-----
STATUS...
```

and the display will show:

STATUS	
COMPONENT	CT = XXX C
FAILURE	P = XXpsig

- alternating with -

STATUS	
*ALARM	CT = XXX C
	P = XXpsig

15. **FAILURE READING PRESSURE** - This alarm occurs any time the pressure reading is greater than 40 psig. If an alarm occurs, an alarm will sound, the following will be printed:

```
* ALARM
FAILURE READING PRESSURE
-----
STATUS...
```

and the display will show:

STATUS	
COMPONENT	CT = XXX C
FAILURE	P = XXpsig

- alternating with -

STATUS	
*ALARM	CT = XXX C
	P = XXpsig

16. **FAILURE READING TEMP/PRES** - This alarm occurs any time the chamber drain temperature and the chamber pressure do not correlate. For example: chamber drain temperature less than 18°C and pressure greater than 15 psig. If an alarm occurs, an alarm will sound, the following will be printed:

```
* ALARM
FAILURE READING TEMP/PRES
-----
STATUS. . .
```

and the display will show:

STATUS	
COMPONENT	CT = XXX C
FAILURE	P = XXpsig

- alternating with -

STATUS	
*ALARM	CT = XXX C
	P = XXpsig

17. **ABORT IN LIQUID CYCLE** - This alarm will occur if the RESET touch pad is pressed during the Liquid cycle after the purge phase. If the alarm occurs, an alarm will sound and the following will be printed:

```
* ABORT TIME
-----
* WARNING
PRESSURE IN CHAMBER
-----
STATUS. . .
```

and then the following will be displayed for several seconds:

STATUS	
* ABORT *	

and then the display will alternately show:

STATUS	
SLOW	CT=XXX C
EXHAUST	P = XXpsig

- and -

STATUS	
WARNING	CT = XXX C
HOT LIQUIDS	P = XXpsig

The sterilizer will slow exhaust, then the buzzer will sound and the following will print:

```
+++++  
+          WARNING          +  
+        HOT LIQUIDS        +  
+   OPEN DOOR 1in. (3cm)   +  
+   AND UNLOAD IN 10 min.  +  
+++++
```

The display will alternately show:

STATUS	
WARNING	CT=XXX C
HOT LIQUIDS	P=XXpsig

- and -

STATUS	
OPEN DOOR	CT = XXX C
1" WAIT 10M	P = XXpsig

Pressing the RESET touch pad at this point will only repeat the above message. In order to exit to the READY mode, open the door 1 inch ONLY (see warning messages) and then press RESET. The display will show:

STATUS	
WARNING HOT LIQUIDS!	
PLEASE READ PRINTOUT	

and the following will print:

```
* ABORT ATTEMPTED  
WARNING HOT LIQUIDS!  
ABORT MAY BE DANGEROUS  
CONTINUE COOLING BY  
PRESSING #1  
TO ABORT PRESS RESET
```

Pressing the RESET touch pad will exit to the READY mode. Pressing cycle selector #1 touch pad will continue the warning messages.

SUMMARY OF WARNINGS AND CAUTIONS

1

Refer to the Warnings and Cautions in the Operating Procedure that are to be observed when operating or servicing this unit. WARNINGS indicate the potential for danger to personnel, and CAUTIONS indicate the potential for damage to equipment. The precautions are repeated (in whole or part) where applicable throughout the manual. Carefully read all safety precautions before proceeding to use or service the unit.

JACKET FLOODED SWITCH

2

Displays and Printouts

The sterilizer is equipped with a jacket flooded switch to detect if the jacket has flooded. If an alarm occurs, the alarm will sound and the printer will print:

```
* ALARM  
JACKET FLOODED
```

```
-----  
STATUS...
```

The display will show:

STATUS	
COMPONENT	CT=XXX C
FAILURE	P=XXPSIG

and

STATUS	
*ALARM	CT=XXX C
	P=XXPSIG

The cycle will abort. See the service and maintenance procedure Manual for further information.

Operating Procedure
Jacket Steam Feed/Manual Control
Eagle 3000 Series Sterilizers

(11-13-92)

P-387342-988 Rev. 0

A WORD FROM AMSCO

This manual contains important information on proper use of this sterilizer. All operators and department heads are urged to carefully review and become familiar with the warnings, cautions and instructions contained herein. This sterilizer is specifically designed to process goods using only the cycles as specified in this manual. If there is any doubt about a specific material or product, contact the manufacturer of the product for the recommended sterilization technique.

Service Information

A thorough preventive maintenance program is essential to safe and proper operation of this sterilizer. You are encouraged to contact AMSCO concerning our Preventive Maintenance Agreement. Under terms of this agreement, preventive maintenance, adjustments, and replacement of worn parts are done on a scheduled basis to assure equipment performance at peak capability and to help avoid untimely or costly interruptions. AMSCO maintains a nationwide staff of well-equipped, factory-trained technicians to provide this service, as well as expert repair services. Contact your AMSCO representative for details.

AMSCO carries a complete line of accessories for this unit to simplify, organize and assure sterility of the sterilization process. Instrument trays, Vantage and DEXTEx wraps and biological/chemical monitoring systems are all available to fulfill your facility's processing needs. An AMSCO representative will gladly review these with you.

Advisory

A summary of the safety precautions to be observed when operating this equipment can be found in Section 1 of this manual and behind the upper access panel of the unit. Do not operate the sterilizer until you have become familiar with this information.

This sterilizer is not designed to process flammable liquids nor liquids in containers that are not designed for sterilization. Any alteration of the sterilizer which affects its operation will void the warranty and could violate state and local regulations and jeopardize insurance coverage.

TABLE OF CONTENTS

Section	Paragraph	Page
1. SUMMARY OF WARNINGS AND CAUTIONS		1-1
2. JACKET STEAM FEED/MANUAL CONTROL		2-1
Hi-Lo Valve		2-1
Manual Operation Gravity or Liquid Cycle ONLY		2-3

SUMMARY OF WARNINGS AND CAUTIONS

1

Refer to the Warnings and Cautions in the Operating Procedure that are to be observed when operating or servicing this unit. WARNINGS indicate the potential for danger to personnel, and CAUTIONS indicate the potential for damage to equipment. The precautions are repeated (in whole or part) where applicable throughout the manual. Carefully read all safety precautions before proceeding to use or service the unit.

Hi-Lo Valve

WARNING-Only qualified AMSCO service technicians should make adjustments described herein.

The sterilizer is equipped with one steam supply feeding the jacket. The chamber receives steam directly from the jacket.

Adjustment of the HI-LO valve (steam control valve) for sterilization at temperatures other than 250° and 270° F.

The HI-LO valve (steam control valve) on the sterilizer was set to operate 250° F and 270° F cycles. If sterilization procedures require processing at temperatures other than factory set temperatures, it will be necessary to reset the HI-LO valve.

Cycles above 270° F are limited by the pressure rating of the sterilizer. Pressure in the jacket should be set no higher than 3 to 4 psig below the pressure rating. All steam sterilizers are rated at 40 psig, therefore the jacket should run at no higher than 36-37 psig. Therefore cycles above 275° F are not feasible.

Adjustment of the HI-LO valve will require the use of a calibrated pressure gauge installed on the sterilizer jacket and should be performed by a qualified service technician. Adjust as follows:

Refer to figures on the next pages.

1. Locate the HI-LO valve (mounted directly behind the upper access panel).
2. Loosen the setscrew on the front locknut if cycles at less than 250° F are to be run. Loosen the setscrew on the rear locknut if cycles above 270° F are to be run.
3. Observe jacket pressure on the calibrated compound gauge. Adjust clockwise to increase pressure. Rotate counterclockwise to decrease pressure. When desired pressure is set, turn locknut against the stop. Tighten setscrew.

Note that operation at 250° and 270° F will require readjustment of the HI-LO valve.

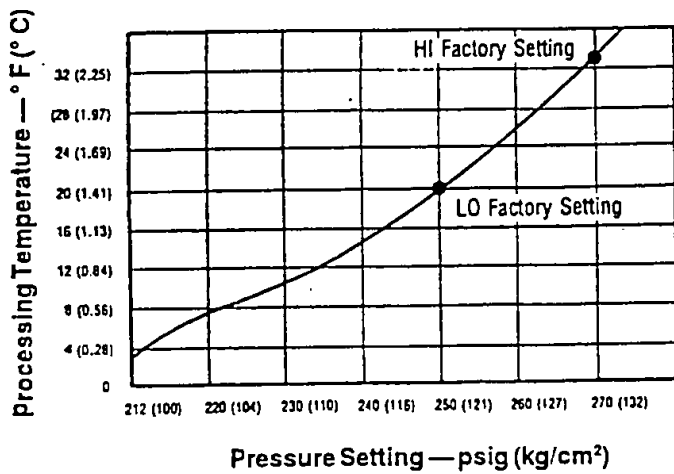

Figure 1. Adjusting Pressure Regulator

**Manual Operation:
GRAVITY or
LIQUIDS Cycle
Only**

The operator should only run a manual cycle if the control column has malfunctioned. Only Liquid and Gravity cycles can be run using the manual control. Any cycles using the Vacuum capabilities of the sterilizer are not possible. If steam is not available or if the optional electric steam generator is not functioning, a manual cycle cannot be run.

NOTE: *The sterilizer control must be OFF in order to run a manual cycle*

1. Check that chamber drain strainer is clean and in place and that chamber interior is clean. (See Service and Maintenance Procedures, if cleaning is necessary.)
2. Open printer door and verify sterilizer POWER switch is OFF.
3. Open upper access door and check that manual control is turned to ON.
4. Turn STEAM and WATER valves to ON.
 - Steam enters jacket and begins to warm chamber.
5. Select desired processing temperature.
6. Set HI-LO valve to 121° C (250° F) for LIQUIDS cycle or to 121° C (250° F) or 132° C (270° F) for GRAVITY cycle.
7. Wait until jacket pressure has stabilized before starting a cycle.
8. Unlock and open chamber door. (See Manual Door Operation)
9. Load the chamber.
10. Close and lock chamber door. (See Manual Door Operation)
11. Turn Manual Operation selector to CONDITION and wait sixty seconds, then proceed to next step.
12. Turn selector to STERILIZE and wait until chamber reaches desired pressure.
13. Time the desired sterilization period and when completed, proceed to step 14.a. if a LIQUIDS cycle, 14.b. if a GRAVITY Cycle (Wrapped Goods), or 14.c. if a GRAVITY Cycle (Unwrapped Goods).
14. Cycles:
 - a. LIQUIDS Cycle:
 - 1) Turn selector to SLOW EXHAUST and keep it in this position until chamber pressure is atmospheric (0 psig).
 - 2) Turn selector to OFF position (omit Dry phase).
 - 3) Open door one inch and wait at least 10 minutes until bubbling and boiling of solutions has ceased.

 **WARNING- BURN HAZARD.** With power off and running a manual cycle, the flood sensing system is not operating.

c. GRAVITY Cycle (Unwrapped Goods)

- 1) Turn selector to FAST EXHAUST and keep it in this position until chamber pressure is atmospheric (0 psig).
 - 2) Turn selector to OFF position (omit DRY phase*).
15. Open door (see Manual Door Operation) and unload chamber.

A WORD FROM AMSCO

This manual contains important information on proper use of this sterilizer. All operators and department heads are urged to carefully review and become familiar with the warnings, cautions and instructions contained herein. This sterilizer is specifically designed to process goods using only the cycles as specified in this manual. If there is any doubt about a specific material or product, contact the manufacturer of the product for the recommended sterilization technique.

Service Information

A thorough preventive maintenance program is essential to safe and proper operation of this sterilizer. You are encouraged to contact AMSCO concerning our Preventive Maintenance Agreement. Under terms of this agreement, preventive maintenance, adjustments, and replacement of worn parts are done on a scheduled basis to assure equipment performance at peak capability and to help avoid untimely or costly interruptions. AMSCO maintains a nationwide staff of well-equipped, factory-trained technicians to provide this service, as well as expert repair services. Contact your AMSCO representative for details.

AMSCO carries a complete line of accessories for this unit to simplify, organize and assure sterility of the sterilization process. Instrument trays, Vantage and DEXTEX wraps and biological/chemical monitoring systems are all available to fulfill your facility's processing needs. An AMSCO representative will gladly review these with you.

Advisory

A summary of the safety precautions to be observed when operating this equipment can be found in Section 1 of this manual and behind the upper access panel of the unit. Do not operate the sterilizer until you have become familiar with this information.

This sterilizer is not designed to process flammable liquids nor liquids in containers that are not designed for sterilization. Any alteration of the sterilizer which affects its operation will void the warranty and could violate state and local regulations and jeopardize insurance coverage.

SUMMARY OF WARNINGS AND CAUTIONS

1

Refer to the Warnings and Cautions in the Operating Procedure that are to be observed when operating or servicing this unit. WARNINGS indicate the potential for danger to personnel, and CAUTIONS indicate the potential for damage to equipment. The precautions are repeated (in whole or part) where applicable throughout the manual. Carefully read all safety precautions before proceeding to use or service the unit.

The machine is equipped with interlock doors that are designed to prevent cross-contamination through the chamber. See section 3 for Power Radial arm Interlocks.

Interlock Type #1 (Both Doors Unlock at End of Cycle)

1. Enter the SERVICE mode change values procedure (dip switch 4 on control board #1 "ON") and set the interlock type to 01 and set an access code, which must be entered by the operator in order to bypass the door interlocks. By setting the interlock type to 01, the operating-end door is designated as the dirty door and the non-operating end door as the clean door. After these two items are set, turn the control OFF and return dip switch 4 to "OFF"...
2. When powering up the control, the following will be displayed:

If 2 is selected, the control will continue normally. If 1 is selected, the control will ask the operator for an access code. If the correct access code is entered (a four digit number, see step 1 above), and the CHANGE VALUES button is pressed, both interlocks are deactivated, unlocking both doors. Both doors may be open at the same time at this point. "Press #1 TO CANCEL" will then be displayed. Press 1 to exit and to continue with normal operation.

3. Both doors will unlock at the end of any cycle.
4. If the clean door (non-operating end) is opened, the dirty door (operating end) will lock.
5. The clean door can be opened and closed several times. Each time this happens, the dirty door locks and is again unlocked when the clean door is closed.
6. If the dirty door is opened, the clean door locks. If the dirty door is closed, clean door does NOT unlock. The only way to unlock the clean door is to run a complete cycle.
7. When the cycle is aborted, the control unlocks the dirty door – the clean door will NOT unlock again until a complete cycle is run.

////////////////////////////////////
Interlock Type #2
(Only "CLEAN"
Door Unlocks at
End of Cycle)
////////////////////////////////////

1. Enter the SERVICE mode (dip switch 4 on control board #1 "ON") and set the interlock type to 02 and set an access code, which must be entered by the operator in order to bypass the door interlocks. By setting the interlock type to 02, the operating-end door is designated as the dirty door and the non-operating end door as the clean door. After these two items are set, turn the control column power switch OFF and return dip switch 4 to "OFF".
2. See interlock type #1, step 2, for instructions to bypass the door interlocks.
3. Only the clean door (non-operating end door) unlocks at the end of any cycle.
4. If the clean door (non-operating end) is opened, the dirty door (operating end) remains locked.
5. The clean door can be opened and closed several times. Each time this happens, the dirty door locks and is again unlocked when the clean door is closed.
6. If the dirty door is opened, the clean door locks. If the dirty door is closed, clean door does NOT unlock. The only way to unlock the clean door is to run a complete cycle.
7. When the cycle is aborted, the control unlocks the dirty door – the clean door will NOT unlock again until a complete cycle is run.

Note: Interlock types 3 and 4 operate the same as types 1 and 2, respectively except for the designation of the doors. The operating end door is dirty for types 1 and 2, clean for types 3 and 4. The non-operating door is clean for types 1 and 2, dirty for types 3 and 4.

////////////////////////////////////
Interlock Type #3
(Both Doors Unlock
at End of Cycle)
////////////////////////////////////

1. Enter the SERVICE mode (dip switch 4 on control board #1 "ON") and set the interlock type to 03 and set an access code, which must be entered by the operator in order to bypass the door interlocks. By setting the interlock type to 03, the operating-end door is designated as the clean door and the non-operating end door as the dirty door. After these two items are set, turn the control column power switch OFF and return dip switch 4 to "OFF".
2. See interlock type #1, step 2, for instructions to bypass the door interlocks.
3. Both doors will unlock at the end of any cycle.
4. If the clean door (operating end) is opened, the dirty door (non-operating end) remains locked.
5. The clean door can be opened and closed several times. Each time this happens, the dirty door locks and is again unlocked when the clean door is closed.
6. If the dirty door is opened, the clean door locks. If the dirty door is closed, clean door does NOT unlock. The only way to unlock the clean door is to run a complete cycle.
7. When the cycle is aborted, the control unlocks the dirty door – the clean door will NOT unlock again until a complete cycle is run.

**Interlock Type #4
(Only "CLEAN"
Door Unlocks at
End of Cycle)**

1. Enter the SERVICE mode (dip switch 4 on control board #1 "ON") and set the interlock type to 04 and set an access code, which must be entered by the operator in order to bypass the door interlocks. By setting the interlock type to 04, the operating-end door is designated as the clean door and the non-operating end door as the dirty door. After these two items are set, turn the control column power switch OFF and return dip switch 4 to "OFF".
2. See interlock type #1, step 2, for instructions to bypass the door interlocks.
3. Only the clean door (operating end door) unlocks at the end of any cycle.
4. If the clean door (operating end) is opened, the dirty door (non-operating end) remains locked.
5. The clean door can be opened and closed several times. Each time this happens, the dirty door locks and is again unlocked when the clean door is closed.
6. If the dirty door is opened, the clean door locks. If the dirty door is closed, clean door does NOT unlock. The only way to unlock the clean door is to run a complete cycle.
7. When a cycle is aborted, the control unlocks the dirty door – the clean door will NOT unlock again until a complete cycle is run.

INTERLOCK DOORS - POWER RADIAL ARM

3

The machine is equipped with interlock doors that are designed to prevent cross-contamination through the chamber. Different interlock types are selectable by dip switch settings on control board #2. Turn power OFF prior to making any dip switch settings, set dip switch and turn power ON.

Single Door Sterilizer

1. Set dip switch #1 to the ON position and all others OFF, for units equipped with one door only.

No Door Interlock

1. To bypass door interlocking and allow both doors to be opened at the same time, set dip switch #2 to the ON position and all others OFF.

Interlock Type #1 One Door Allowed Open at a Time

1. To prevent both doors from being opened at the same time but without regard to which door is at the "clean" or "dirty" side, set dip switch #3 to the ON position and all others OFF.

Interlock Type #2 (Non-Operating End Designated "CLEAN" Door)

1. To prevent the non-operating door from being opened until a complete cycle is run, set dip switch #4 to the ON position and all others to the OFF position. Interlock will operate as outlined in steps below.
2. Both doors will unlock at the end of any cycle.
3. If the clean door (non-operating end) is opened, the dirty door (operating end) remains locked.
4. The clean door can be opened and closed several times. Each time this happens, the dirty door locks and is again unlocked when the clean door is closed.
5. If the dirty door is opened, the clean door locks. If the dirty door is closed, clean door does NOT unlock. The only way to unlock the clean door is to run a complete cycle.
6. When the cycle is aborted, the control unlocks the dirty door – the clean door will NOT unlock again until a complete cycle is run.

**Interlock Type #2
(Operating End
Door Designated
"CLEAN" Door)**

1. To prevent the operating end door from being opened until a complete cycle is run, set dip switch #5 to the ON position and all others to the OFF position. Interlock will operate as outlined in steps below.
2. Both doors will unlock at the end of any cycle.
3. If the clean door (operating end) is opened, the dirty door (non-operating end) remains locked.
4. The clean door can be opened and closed several times. Each time this happens, the dirty door locks and is again unlocked when the clean door is closed.
5. If the dirty door is opened, the clean door locks. If the dirty door is closed, clean door does NOT unlock. The only way to unlock the clean door is to run a complete cycle.
6. When the cycle is aborted, the control unlocks the dirty door – the clean door will NOT unlock again until a complete cycle is run.

Operating Procedure

FOUR CYCLES - PREVACUUM STERILIZER

Eagle 3000 Series Sterilizers

(4-16-93)

P-387342-978 Rev. 1

A WORD FROM AMSCO

This manual contains important information on proper use of this sterilizer. All operators and department heads are urged to carefully review and become familiar with the warnings, cautions and instructions contained herein. This sterilizer is specifically designed to process goods using only the cycles as specified in this manual. If there is any doubt about a specific material or product, contact the manufacturer of the product for the recommended sterilization technique.

Service Information

A thorough preventive maintenance program is essential to safe and proper operation of this sterilizer. You are encouraged to contact AMSCO concerning our Preventive Maintenance Agreement. Under terms of this agreement, preventive maintenance, adjustments, and replacement of worn parts are done on a scheduled basis to assure equipment performance at peak capability and to help avoid untimely or costly interruptions. AMSCO maintains a nationwide staff of well-equipped, factory-trained technicians to provide this service, as well as expert repair services. Contact your AMSCO representative for details.

AMSCO carries a complete line of accessories for this unit to simplify, organize and assure sterility of the sterilization process. Instrument trays, Vantage and DEXTEX wraps and biological/chemical monitoring systems are all available to fulfill your facility's processing needs. An AMSCO representative will gladly review these with you.

Advisory

A summary of the safety precautions to be observed when operating this equipment can be found in Section 1 of this manual and behind the upper access panel of the unit. Do not operate the sterilizer until you have become familiar with this information.

This sterilizer is not designed to process flammable liquids nor liquids in containers that are not designed for sterilization. Any alteration of the sterilizer which affects its operation will void the warranty and could violate state and local regulations and jeopardize insurance coverage.

SUMMARY OF WARNINGS AND CAUTIONS

1

Refer to the Warnings and Cautions in the Operating Procedure that are to be observed when operating or servicing this unit. WARNINGS indicate the potential for danger to personnel, and CAUTIONS indicate the potential for damage to equipment. The precautions are repeated (in whole or part) where applicable throughout the manual. Carefully read all safety precautions before proceeding to use or service the unit.

FOUR CYCLE - PREVACUUM

2

The following values are defaulted upon a manufacturers burn-in. See Service and Maintenance Procedure Manual for explanation of setting up the default values.

PREVAC CYCLE Cycle 1

STER TEMP (sterilize temperature)	=	132° C or 270° F
STER TIME (sterilize time)	=	04:00
DRY TIME (dry time)	=	05:00
DRY VAC (dry vacuum point)	=	10.0 inHg or 0.34 bar vacuum
PULSES (number of vacuum pulses)	=	4
P1 (pulse pressure point)	=	26.0 psig or 1.79 bar pressure
V1 (pulse vacuum point)	=	10.0 inHg or .34 bar vacuum
P1 HOLD (time pressure held at P1)	=	0:00
V1 HOLD (time vacuum held at V1)	=	0:00
PURGE (purge)	=	1:00
FT* (flush temperature)	=	108° C or 226° F
FP* (flush pressure)	=	6 psig or 0.413 bar pressure
OVERDRIVE (overdrive)	=	1.5° C or 3.0° F
OVERTEMP (over temperature)	=	6.0° C or 12.0° F
UNDERTEMP (under temperature)	=	1.0° C or 2.0° F
PRINT INT (print interval)	=	2 minutes

* Available only on separate steam feed units (units with independent steam to chamber and jacket).

Prevac Cycle Cycle 2

STER TEMP (sterilize temperature)	=	132° C or 270° F
STER TIME (sterilize time)	=	04:00
DRY TIME (dry time)	=	20:00
DRY VAC (dry vacuum point)	=	10.0 inHg or 0.34 bar vacuum
PULSES (number of vacuum pulses)	=	4
P1 (pulse pressure point)	=	26.0 psig or 1.79 bar pressure
V1 (pulse vacuum point)	=	10.0 inHg or .34 bar vacuum
P1 HOLD (time pressure held at P1)	=	0:00
V1 HOLD (time vacuum held at V1)	=	0:00
PURGE (purge)	=	1:00
FT* (flush temperature)	=	108° C or 226° F
FP* (flush pressure)	=	6 psig or .413 bar pressure
OVERDRIVE (overdrive)	=	1.5° C or 3.0° F
OVERTEMP (over temperature)	=	6.0° C or 12.0° F
UNDERTEMP (under temperature)	=	1.0° C or 2.0° F
PRINT INT (print interval)	=	2 minutes

** Available only on separate steam feed units (units with independent steam to chamber and jacket).*

Gravity Cycle Cycle 3

STER TEMP (sterilize temperature)	= 132° C or 250° F
STER TIME (sterilize time)	= 15:00
DRY TIME (dry time)	= 30:00
DRY VAC (dry vacuum point)	= 10.0 inHg or .34 bar vacuum
PURGE (purge)	= 1:00
FT* (flush temperature)	= 108° C or 226° F
FP* (flush pressure)	= 6 psig or 0.413 bar pressure
OVERDRIVE (overdrive)	= 1.5° C or 3.0° F
OVERTEMP (over temperature)	= 6.0° C or 12.0° F
UNDERTEMP (under temperature)	= 1.0° C or 2.0° F
PRINT INT (print interval)	= 2 minutes

** Available only on separate steam feed units (units with independent steam to chamber and jacket).*

Liquid Cycle Cycle 4

STER TEMP (sterilize temperature)	=	121° C or 250° F
STER TIME (sterilize time)	=	45:00
PURGE (purge)	=	1:00
FT* (flush temperature)	=	108° C or 226° F
FP* (flush pressure)	=	6 psig or .413 bar pressure
OVERDRIVE (overdrive)	=	1.5° C or 3.0° F
OVERTEMP (over temperature)	=	6.0° C or 12.0° F
UNDERTEMP (under temperature)	=	1.0° C or 2.0° F
PRINT INT (print interval)	=	2 minutes

CONTROL

TLIC (too long in charge)	=	30 minutes
TLIV (too long in exhaust)	=	30 minutes
TLIV (too long in evacuation)	=	30 minutes
TLIS (too long in slow exhaust)	=	1 hour
P3** (slow exhaust to vent)	=	3.0 psig or 0.206 bar pressure

The cycle values can be changed in the ready mode by pressing the change values pushbutton. If the access code option is enabled, 1, 2, 3 or 4 cycles can be locked out. The following display will allow cycles 1, 2, 3 or 4 to be chosen along with CONTROL parameters.

Pressing the CHANGE VALUES will change cycle 1. Pressing the up or down pushbuttons will change 1 to 2 or 1 to CONTROL. Pressing the CHANGE VALUES pushbutton when the display shows 3 will change cycle 3, etc. Changing the number to the word CONTROL will change the control values.

The following display will be shown in the ready mode, allowing any of the four cycles to be run by pressing the number, representing the cycle twice.

* Available only on separate steam feed units (units with independent steam to chamber and jacket).

** Available only on units without Optimal Solution Cooling.

Operating Procedure
OPTIMAL SOLUTION COOLING
Eagle 3000-S Series Sterilizers

(4-16-93)

P-387342-987 Rev. 1

A WORD FROM AMSCO

This manual contains important information on proper use of this sterilizer. If there is any doubt about a specific material or product, contact the manufacturer of the product for the recommended sterilization technique.

Service Information

A thorough preventive maintenance program is essential to safe and proper operation of this sterilizer. You are encouraged to contact AMSCO concerning our Preventive Maintenance Agreement. Under terms of this agreement, preventive maintenance, adjustments, and replacement of worn parts are done on a scheduled basis to assure equipment performance at peak capability and to help avoid untimely or costly interruptions. AMSCO maintains a nationwide staff of well-equipped, factory-trained technicians to provide this service, as well as expert repair services. Contact your AMSCO representative for details.

AMSCO carries a complete line of accessories for this unit to simplify, organize and assure sterility of the sterilization process. Instrument trays, Vantage and DEXTEX wraps and biological/chemical monitoring systems are all available to fulfill your facility's processing needs. An AMSCO representative will gladly review these with you.

Advisory

A summary of the safety precautions to be observed when operating this equipment can be found in Section 1 of this manual and behind the upper access panel of the unit. Do not operate the sterilizer until you have become familiar with this information.

This sterilizer is not designed to process flammable liquids nor liquids in containers that are not designed for sterilization. Any alteration of the sterilizer which affects its operation will void the warranty and could violate state and local regulations and jeopardize insurance coverage.

TABLE OF CONTENTS

Section	Paragraph	Page
1.	<i>SUMMARY OF WARNINGS AND CAUTIONS</i>	1-1
2.	<i>OPTIMAL SOLUTION COOLING</i>	2-1
	Features of Cycle	2-1

SUMMARY OF WARNINGS AND CAUTIONS

1

Refer to the Warnings and Cautions in the Operating Procedure that are to be observed when operating or servicing this unit. WARNINGS indicate the potential for danger to personnel, and CAUTIONS indicate the potential for damage to equipment. The precautions are repeated (in whole or part) where applicable throughout the manual. Carefully read all safety precautions before proceeding to use or service the unit.

Features of Cycle

⚠ WARNING - EXPLOSION HAZARD: This sterilizer is not designed to process flammable liquids.

⚠ WARNING - BURN HAZARD: When sterilizing liquids, to prevent personal injury or property damage resulting from bursting bottles and hot fluid, you must observe the following procedures:

- Use LIQUID cycle only. No other cycle is safe for processing liquids.
- Use only vented closures – do not use screw caps or rubber stoppers with crimped seal.
- Use only Type I borosilicate glass bottles – do not use ordinary glass bottles or any container not designed for sterilization.
- Avoid sudden full opening of door at end of cycle. Open sterilizer door no more than one inch and wait at least 10 minutes before unloading sterilizer.
- Do not allow hot bottles to be jolted. This can cause hot-bottle explosions! Do not move bottles if any boiling or bubbling is present.
- Allow bottles to cool to touch before attempting to move them from sterilizer cart to the storage area.

The sterilizer is equipped with the Optimal Solution Cooling feature during the slow exhaust phase of the LIQUID cycle. This feature allows the pressure in the chamber, during slow exhaust, to be exhausted as fast as possible without causing the vented closure bottles to have a significant loss of liquid.

The exhaust valves are controlled to maintain exhaust rates as follows:

MAINTAINED EXHAUST RATE	CHAMBER PRESSURE
1.6 psig/min	Greater than 4.2 psig (0.29 bar)
.6 psig/min	Less than 4.2 psig (0.29 bar) and greater than 0.5 psig (0.034 bar)

Note: The exhaust rate control ends when the pressure reaches 0.5 psig (0.034 bar) or when 5 minutes pass after pressure reaches 1 psig (0.07 bar).

Alarm for Optimal Solution Cooling

EXHAUST RATE FAILURE - This alarm occurs only during the slow exhaust phase of the Liquid cycle whenever the pressure does not drop after S3 is turned on (S3 turns on if rate cannot be met by S13 valve). If an alarm occurs, the cycle will abort, an alarm will sound, the following will be printed:

```
* ALARM
FAILURE READING PRESSURE
-----
STATUS...
```

and the display will show:

```
STATUS
COMPONENT      CT = XXX C
FAILURE P = XXpsig
```

- alternating with -

```
STATUS
*ALARM CT = XXX C
P = XXpsig
```

Mr. Peter Neubauer
County of San Diego
Department of Environmental Health, HMMD
1225 Imperial Avenue
P.O. Box 129261
San Diego, CA 92123 - 1119

Dear, Peter,

IDEC Pharmaceuticals is herein requesting cancellation of the Conditional Authorization permit issued to IDEC by the California Department of Toxic Substance Control for treatment of hazardous waste generated at 11011 Torreyana Road. IDEC is making this request in accordance with Section 25201.15 of the Health and Safety Code, Division 20, Chapter 6.5 (attached). In accordance with §25201.15 IDEC claims exemption from the tiered permit system; however, IDEC will continue to carryout elementary waste neutralization via its fixed treatment unit in order to comply with the Industrial Discharge permit issued by the City of San Diego, Metropolitan Industrial Waste Program. The operation of this unit shall be carried out in accordance with part (d) of §25201.15.

If you have any further questions please contact me at 858-431-8822.

Sincerely,

Mark Thompson
Sr. Manager, EH&S

To File PN H114775

§25201.15. [Definitions; biotechnology elementary neutralization activities—exemptions; operator requirements; notice requirements]

(a) For the purposes of this section, the following terms have the following meaning:

(1) "Biotechnology manufacturing or biotechnology process development activities" means activities conducted in SIC Code Subgroups 283, 2833, 2834, 2835, 2836, 8731, 8732, and 8733, including manufacturing and process development of medicinal chemicals and botanical products, pharmaceutical preparations, in vitro and in vivo diagnostic substances, and biological products, and all associated equipment and vessel cleaning and maintenance operations.

(2) "Biotechnology elementary neutralization activities" means the elementary neutralization of wastes generated by biotechnology manufacturing or biotechnology process development activities.

(3) "SIC Code" has the same meaning as defined in subdivision (t) of Section 25501.

(b) The Legislature hereby finds and declares that the biotechnology industry's elementary neutralization of hazardous wastes is a common, safe, and standard practice that typically occurs in a wastewater collection system, and which does not warrant extensive regulatory oversight.

(c) Biotechnology elementary neutralization activities are exempt from any requirement imposed pursuant to this chapter, including any regulation adopted pursuant to this chapter, that relates to generators, tanks, and tank systems, and the requirement to obtain a hazardous waste facilities permit or other grant of authorization from the department, except as otherwise provided in subdivision (d), if all of the following conditions are met:

(1) A permit is not required to conduct elementary neutralization under the federal act.

(2) The hazardous wastes are hazardous solely due to acidic or alkaline materials, and are generated by biotechnology process manufacturing or biotechnology process development activities.

(3) Either of the following applies with regard to the biotechnology elementary neutralization activity:

(A) The hazardous wastes in the elementary neutralization unit do not contain more than 10 percent by weight acid or alkaline constituents.

To File
PN 114775

- (B) The generator of the hazardous wastes determines that the elementary neutralization process will not raise the temperature of the hazardous wastes to within 10 degrees of the boiling point or cause the release of hazardous gaseous emissions, using either constituent-specific concentration limits or calculations. The generator shall make these calculations in accordance with the regulations adopted by the department, if the department adopts those regulations.
- (4) The hazardous wastes are not diluted for the sole purpose of meeting the criteria specified in subparagraph (A) of paragraph (3) and after neutralization the wastewaters do not exhibit the characteristic of corrosivity, as defined in Section 66261.22 of Title 22 of the California Code of Regulations, or any successor regulation.
- (5) The temperature of any unit 100 gallons or larger is automatically monitored, and is fitted with a high temperature alarm system, and for closed systems, the unit automatically controls the adding and mixing of corrosive and neutralizing solutions.
- (d) The operator of an elementary neutralization unit exempt under this section shall comply with the following requirements:
- (1) An operator of an elementary neutralization unit subject to this section shall successfully complete a program of classroom instruction or on-the-job training that includes, at a minimum, instruction for responding effectively to emergencies by familiarizing personnel with emergency procedures, emergency equipment, and emergency systems, including, where applicable, procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment, communications, or alarm systems.
- (2) Within 10 days of commencing initial operation of the unit, or within any other time period that may be required by the CUPA, the operator shall notify the CUPA of the commencement of operation of the unit under the exemption made pursuant to this section. If the operator is not under the jurisdiction of a CUPA, the notice shall be sent to the officer of the agency authorized, pursuant to subdivision (f) of Section 25404.3, to implement and enforce the requirements of this chapter listed in paragraph (2) of subdivision (c) of Section 25404.
- (e) Notwithstanding any other provision of law, unless required by federal law, biotechnology elementary neutralization activities satisfying the requirements of subdivisions (c) and (d) are exempt from any statute or any regulation adopted pursuant to state law requiring the elementary neutralization unit to have secondary containment for piping or ancillary equipment, including, but not limited to, a regulation adopted by the State Water Resources Control Board, the department, or any other state agency.

Cypress, CA 90630

Dear Ms. Low:

IDEC Pharmaceuticals has received the Summary of Violation dated April 7, 2000, and has completed the Phase 1 Checklist provided by your department. Enclosed is a copy of the Phase 1 Checklist for your records.

With regard to the Summary of Violation, I would like to point out the following information. In a telephone conversation with Mr. Nebu John on April 20, 2000 I discussed the reason why IDEC had not previously filed the Phase 1 Checklist. As I mentioned to him at that time, until his initial phone call to me earlier in the month I was under the impression that the deadline for submitting the Phase 1 Checklist had been once again extended by DTSC.

I have been tracking the department's development of the Phase 1 Checklist since 1993, at which time the filing deadline was delayed until January 1, 1995. In 1994 the reporting deadline was once again extended, this time from January 1, 1995 to January 1, 1997. It was my understanding that the filing deadline was further delayed beyond January 1, 1997. In February, 1998 I spoke with a Mr. Nabil Yacoub from your Cypress office on this matter. At that time I was involved in preparing the Certification of Financial Assurance (CFA) documentation on IDEC's treatment unit for submission to DTSC. During this conversation Mr. Yacoub indicated that it was appropriate for IDEC to delay submitting any information related to the Phase 1 Checklist because the department had not yet finalized the checklist format. Based on our conversation and Mr. Yacoub's assurances I did not submit any information related to the Phase 1 Checklist. Otherwise, I would have readily submitted the Phase 1 Checklist along with our CFA documentation.

With regard to the checklist and reminder correspondence mentioned in your April 7, 2000 letter I have no record of having received either the checklist or reminder. IDEC has complied with the conditions of the Conditional Authorization permit since its issuance in 1993, and would have filed the Phase 1 Checklist had the deadline not been extended, or if we had received your Checklist in 1996, or the 1997 reminder correspondence.

During my conversation with Mr. Yacoub in March, 1998 I mentioned that there was an effort underway in the California Senate to exempt biotechnology wastewater management operations from the tiered permit system. SB 1135 was approved and the Health and Safety Code modified based on the finding that the types of elementary waste neutralization carried by the biotech industry are common, safe, and standardized practices which do not warrant extensive regulatory oversight. In March, 2000 IDEC requested cancellation of its Conditional Authorization permit through correspondence with the County of San Diego Department of Environmental Health, Hazardous Materials Management Division (HMMD); this request was made pursuant to Section 25201.15 of the Health and Safety Code, Division 20, Chapter 6.5. On April 25, 2000 I met with the San Diego County HMMD at which time they approved IDEC's request to cancel the permit.

In my conversation with Mr. John on April 20, he mentioned that IDEC would be receiving an enforcement notice on this matter, and that I would be given the opportunity to go before a hearing board regarding any financial assessment levied against IDEC by DTSC as a result of not filing the Phase 1 Checklist until now.

With all due respect, based on the facts and circumstances surrounding this matter, I do not believe that a violation has occurred or that an enforcement notice is necessary. I am not opposed to attending the hearing and disputing the matter, but would recommend that this matter be excused and dismissed prior to a hearing. Please let me know the next steps. If you have any questions please contact me at 858-431-8822.

Sincerely,

Mark Thompson

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST**SECTION I: FACILITY INFORMATION**

Instructions: Complete the following descriptive information about your facility. This information accurately describes the location of your facility and establishes mailing and phone contacts. If facility location and mailing address are identical, you may put "same" into facility mailing address spaces.

Type of Permit: Permit by Rule _____ Conditional Authorization X

1. CURRENT FACILITY NAME: IDEC Pharmaceuticals Corporation

PAST NAMES (Attach additional pages if necessary):

2. EPA I.D. NUMBER: CAD 981-583-479

3. NAME OF FACILITY OWNER (see definition of owner): Torrey Sorrento Incorporated

4. NAME OF FACILITY OPERATOR: IDEC Pharmaceuticals Corporation

5. NAME OF PROPERTY OWNER: Torrey Sorrento Incorporated

6. FACILITY LOCATION ADDRESS:

STREET: 11011 Torreyana Road

CITY: San Diego

COUNTY: San Diego

STATE: CA ZIP CODE: 92121

7. FACILITY MAILING ADDRESS (if different from FACILITY LOCATION ADDRESS):

STREET: 3030 Callan Road

CITY: San Diego

STATE: CA ZIP CODE: 92121

8. FACILITY TELEPHONE NUMBER: (858) 431-8500

9. FACILITY FAX NUMBER: (858) 431-8887

10. NAME OF FACILITY CONTACT PERSON: Mark Thompson

11. TITLE OF FACILITY CONTACT PERSON: Sr. Manager, Environmental Health & Safety

12. PHONE NUMBER OF FACILITY CONTACT PERSON: (858) 431-8822

13. ADDRESS OF FACILITY CONTACT PERSON:

STREET: 3030 Callan Road

CITY: San Diego

STATE: CA ZIP CODE: 92121

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

SECTION II: FACILITY HISTORY

Instructions: Complete this section regarding facility history based on reasonably available knowledge of the facility. This section will determine if past operating practices and significant historical events that occurred at the facility indicate potential areas of contamination. Current and past employees who know about the facility's past operating practices can be an asset in completing this section of the checklist. Yes answers to these questions mean that careful attention must be paid to these areas and considerations when completing the facility walk-through inspection.

		YES	NO
1.	Has an environmental assessment and/or a site investigation report ever been completed for the facility? If this assessment meets the criteria for substituting for this checklist (see Instructions), use the Signature and Certification Page to record this exemption. You need not release confidential assessments. However, if these reports indicate existing or potential contamination, you must use the information relied on by the confidential report to help reach a conclusion in this assessment.	-	X
2.	To your knowledge, have areas of the facility that contain hazardous materials ever been flooded?		X
3.	To your knowledge, has the facility ever been damaged by an earthquake that could cause contamination?		X
4.	To your knowledge, has the location for the facility ever been used for industrial purposes prior to its current use? If YES, then consider potential contamination from the type of industry that the location was formerly used for.	X	
5.	To your knowledge, has there been any disposing of hazardous chemicals or hazardous wastes in, on, or under the property?		X
6.	To your knowledge, has the facility ever had electrical transformers, capacitors, or hydraulic equipment including, but not limited to elevators and auto lifts, at the facility which may have released PCBs or oil to the environment? (Not including small quantities of fluorescent light ballasts and capacitors if these materials were not disposed of or dismantled at the facility) If YES, was the equipment ever tested for the presence of PCBs?		X
7.	To your knowledge, has testing of any groundwater wells on the property ever revealed possible contamination?		X
8.	Do you have in your possession, or do you know of the existence of any photographs, geophysical reports, analytical test data, and/or air sampling data that indicates the possible presence of hazardous materials and/or waste in unwarranted or unexpected areas of the facility?		X
9.	To your knowledge, has the facility ever had liquid/sludge containment area(s), surface impoundment(s), collection pond(s), and/or lagoon(s)?		X
10.	To your knowledge, have land-farming or bioremediation been used at the facility?		X
11.	To your knowledge, has the facility ever burned hazardous wastes, unidentified waste materials, tires, or automotive batteries at the facility?		X
12.	To your knowledge, have ash and/or combustion residuals been disposed of at the facility?		X

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

13.	To your knowledge, have any underground storage tank(s) been removed, abandoned, or taken out of service from the facility? Tanks removed, abandoned, or taken out of service under the oversight of a responsible agency need not be considered if the agency addressed potential contamination at the tank location.		X
14.	To your knowledge, has any contaminated soil been discovered and/or remediated at the facility without oversight by an appropriate regulatory agency?		X
15.	To your knowledge, have there been fires and/or explosions at the facility which may have caused a release of hazardous waste or materials?		X
16.	To your knowledge, has the facility ever received complaints from any employees, neighbors, or the public about the facility's practices for managing hazardous wastes, or any actual or potential releases to air, water, or soil, or other environmental issues?		X
17.	To your knowledge, have nearby residents complained to a governmental agency of any type of illnesses or unusual illnesses as having been caused or suspectedly caused by or related to activities at the facility? (Note: this item does not require questioning the facility's neighbors) If YES, indicate below the person and/or agency who recorded the complaint. _____		X
	If YES, to your knowledge, has any evidence been submitted to a physician to substantiate the claim?		
18.	To your knowledge, are there any areas at the facility which were formerly used for hazardous waste or hazardous materials transfer (e.g. tank loading areas, drum transfer areas)?		X
19.	To your knowledge, are there, or have there been lawsuits or administrative proceedings concerning an actual, alleged, or threatened release of any hazardous substance against the facility by another party? Only actions concluded by settlement or litigation need be considered.		X

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

SECTION III: FACILITY WALK-THROUGH INSPECTION - SPECIFIC AREAS

Instructions: List each area of the facility where hazardous materials are present. The listing area is divided into functional divisions for convenience. Individual units may be grouped on the chart, but must be individually inspected. Carefully examine each of these areas during the walk-through inspection to determine the presence of releases or possible releases and record the results in the appropriate column, date and initial the entry. Complete a Release Information Data Sheet for each actual and possible release found. Using your best judgement, decide if any actual or suspected releases found require further investigation and record the results on the Release Information Data Sheet and in the appropriate column on this chart. If you need additional space, photocopy this sheet.

HAZARDOUS MATERIAL AREA	INSPECTED (Yes or No)	ACTUAL OR SUSPECTED RELEASE (Yes or No)	REQUIRES FURTHER INVESTIGATION (Yes or No)
LOADING/UNLOADING AREAS			
North loading dock	yes	no	no
South loading dock	yes	no	no
South delivery area	yes	yes	no
HAZARDOUS MATERIALS USE AREAS			
Central plant	yes	no	no
Emergency generator containment	yes	no	no
Plant support equipment chase	yes	no	no
Plant support utility area	yes	yes	no
Cooling tower area	yes	no	no
HAZARDOUS WASTE GENERATION AREAS			
Plant support equipment chase	yes	no	no
Plant support utility area	yes	no	no
Cooling tower area	no	no	no
HAZARDOUS WASTE TREATMENT/STORAGE AREAS			
Hazardous waste storage area	yes	no	no

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

SECTION IV: FACILITY WALK-THROUGH INSPECTION - OTHER AREAS

Instructions: This section of the checklist requires the owner and/or operator of the facility to conduct a walk-through inspection of the those portions of the facility not addressed in Section III in order to identify possible environmental problems, environmental warning signs or potential exposure to people, animals, or plants. Some of the problems that may be discovered during this inspection include abandoned storage tanks, spill areas, surface impoundments, etc. Some of the environmental warning signs include stains, discolored vegetation, and/or unnatural terrain. During the inspection, were any of the following present:

		YES	NO
1.	Does the facility have vent pipes, fill pipes, and/or access routes that may indicate the presence of an underground storage tank?		X
2.	Does the facility have stains and/or discolorations of the soil, flooring, drains and/or walls at the facility which may indicate a release to the environment that has not or is not being addressed under the oversight of an appropriate agency?		X
3.	Does the facility have areas of soil at the facility that appear disturbed and which may indicate onsite disposal or land treatment of hazardous materials or remediation of releases without oversight by an appropriate agency?		X
4.	Does the facility have areas at the facility where the terrain appears unnatural, such as unexplained mounds or depressions?		X
5.	Does the facility have unusual smells or odors emanating from the soil, floor, drains, and/or walls at the facility?		X
6.	Does the facility have dead, abnormal, or distressed-looking vegetation or conspicuous absence of vegetation at the facility that is not directly explainable by a deliberate action and/or lack of water at the site?		X
7.	Where does rain and/or washwater drain to at the facility? (circle all that apply) Note: slightly contaminated storm or washwater can seriously contaminate evaporation or settling areas (with no drainage) over a period of time.		
	<ul style="list-style-type: none"> a. Storm Drain b. Sewer c. Drainage Ditch d. Open Land e. Areas of pooling, settling, or evaporation f. Other <u>Torrey Pines State Reserve</u> 		

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

**SIGNATURE AND CERTIFICATION
FOR
PERMIT-BY-RULE AND CONDITIONAL AUTHORIZATION**

Instructions: Carefully read the certification below. If you feel uncomfortable signing this certification, review the instructions and the information developed in the preparation of the checklist and correct any deficiencies you have found. Be sure that you check one of the boxes below to record your decision regarding further investigation. If you are claiming exemption from completing a Phase I Environmental Assessment, complete that section below.

Either the owner, operator, or independent professional engineer, geologist, or an environmental assessor who is registered in the State of California, shall certify to the following statement by signing on the appropriate lines below:

Yes, further investigation is needed to determine the existence, nature, and/or extent of contamination at the facility, or

No, further investigation is not necessary to determine the existence, nature, and/or extent of contamination at the facility.

I am exempt from completing the checklist and/or from resulting followup work. [Please state reason for exemption below and supply documentary evidence (see instructions)]. Explanation:

“Under penalty of perjury, I certify that I have personally examined and am familiar with the information submitted in this document and all attachments, and based on my inquiry of those individuals immediately responsible for obtaining it, the information is true, accurate, and complete to the best of my knowledge. Thus informed, I certify to my best judgement that the conclusion recorded above regarding further investigation or exemption from completion of the Phase I Environmental Assessment is correct.”

Owner's Signature	Name, Title, and Company Name	Date
-------------------	-------------------------------	------

Or:

<i>Connie Matsui</i>	Connie Matsui, Vice President	
Operator's Signature (If Owner is not Operator)	Name, Title, and Company Name IDEC Pharmaceuticals	Date

Or: Certification by an independent professional engineer, geologist, or environmental assessor who is registered in the State of California. Certification by a registered professional is optional for Permit-By-Rule and Conditionally Authorized Generators. Sign and affix stamp.

Signature	Name, Title, Registration Number	Date
-----------	----------------------------------	------

TIERED PERMITTING PHASE I ENVIRONMENTAL ASSESSMENT CHECKLIST

AREA OF CONCERN DATASHEET

Instructions: Complete the following questions in detail for EACH release or suspected release identified in Section III FACILITY WALK-THROUGH INSPECTION - SPECIFIC AREAS or SECTION IV FACILITY WALK-THROUGH INSPECTION - OTHER AREAS and any other known or suspected releases. Do not include areas that have been or are being remediated under the oversight of an appropriate agency. If answers to questions are not known, then state "unknown".

1. Facility name: IDEC Pharmaceuticals Corporation

2. This sheet is being completed for a:

Known release X Suspected release _____

3. How was this release or suspected release discovered?

During the walk-through inspection? _____ Previously known release? X

What checklist question(s) are related to this release (section/question) Checklist section III
Plant Support Utility Area

4. When did the release occur? 6/7/99

5. What was released and how much? Approximately five gallons of 37% Phosphoric acid.
(Trade name Sentol)

6. What caused the release? Material was being tranfered between containers located in the plant support utility area.

7. Indicate the approximate area of the release (e.g. 3 feet in diameter, 5 feet X 4 feet.) Unknown

8. Was the release remediated? If YES, explain how. (Note: A datasheet need not be completed for releases remediated or being remediated under the oversight of an appropriate agency. Yes. Maintenance staff employed spill response equipment to control the spill and limit the release. The area was flushed with water.

9. Were samples collected? If yes, what were the results? Samples of water that entered the storm drain system were collected and tested for pH. The pH was found to be 5.5.

10. List any environmental reports or studies performed on the area of concern and attach copies or summaries of the reports not submitted to the Department.

EPA ID No. CAD 981 583 479

IN THE MATTER OF: ENFORCEMENT ORDER; IDEC PHARMACEUTICALS CORPORATION. DOCKET NO. SRPD 99/00 SNS-4050.

Dear Mr. Thompson:

Enclosed please find a draft Enforcement Order (Order) for your review and comment. This Order is being issued to Idex Pharmaceuticals Corporation located at 11011 Torreyana Road, La Jolla, California 92121, because a completed Phase I Environmental Assessment (Checklist) was not received by the Department of Toxic Substances Control (DTSC) as required by California Health and Safety Code, section 25200.14(b). The Checklist, was due to DTSC by January 1, 1997. The Checklist was originally mailed out to all active Permit By Rule (PBR) and Conditionally Authorized (CA) facilities on June 6, 1996 and to all closed PBR and CA facilities on June 12, 1996. A reminder letter was mailed out on March 7, 1997, to those facilities that had not submitted the Checklist to DTSC.

An informal conference for you to discuss and attempt to resolve this matter with DTSC has been scheduled for May 22, 2000. Please contact Mr. Nebu John at (714) 484-5475 at least three (3) working days in advance to confirm this appointment, or the appointment will be canceled. DTSC will then issue this Order as it is written. Whether or not you choose to attend the informal conference, you will have a right to a hearing once the Order has been issued.

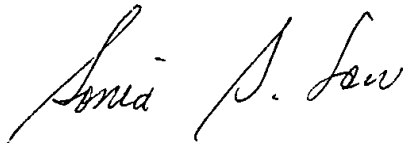

Please contact Mr. Nebu John at (714) 484-5475, if you have any questions regarding

SUMMARY OF VIOLATION

Dear Mr. Thompson:

The Department of Toxic Substances Control (DTSC) is issuing this Summary of Violation (SOV) to Idec Pharmaceuticals Corporation located at 11011 Torreyana Road, La Jolla, California 92037, for the following violation:

Violation

Idec Pharmaceuticals Corporation violated Health and Safety Code, section 25200.14(b), in that on January 1, 1997, Idec Pharmaceuticals Corporation failed to submit a Phase I Environmental Assessment (Phase I Checklist, DTSC Form 1151 - 9/95) to DTSC.

The Phase I Checklist was due to DTSC no later than January 1, 1997 for active or closed facilities under Permit By Rule (PBR) or Conditional Authorization (CA). The Phase I Checklist was mailed to these facilities on June 6, 1996 and June 12, 1996, respectively. A reminder letter was mailed on March 7, 1997 to those facilities that had not submitted a Phase I Checklist to DTSC.

Mr. Mark Thompson
April 7, 2000
Page 2

Schedule of Compliance

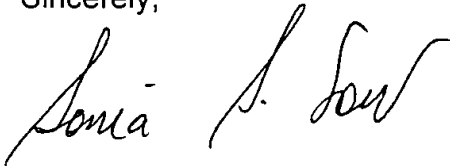

A completed Phase I Checklist must be submitted within thirty (30) calendar days from receipt of this letter to:

Sonia S. Low
Section Chief
Southern California Branch
State Regulatory Programs Division
5796 Corporate Avenue
Cypress, California 90630

Enclosed is a Phase I Checklist (DTSC 1151 - 06/99) for your use. The issuance of this SOV does not preclude DTSC from taking administrative, civil, or criminal action as a result of the violation.

If the Phase I Checklist has been submitted to DTSC or if you have any questions regarding this letter, please contact Mr. Nebu John at (714) 484-5475.

Sincerely,

Sonia S. Low

ONSITE MEDICAL WASTE TREATMENT PERMIT

SCOTT C. MEYER
SENIOR SAFETY CONSULTANT
THE SCRIPPS RESEARCH INSTITUTE.
10550 N TORREY PINES RD
LA JOLLA, CA 92037

SITE: THE SCRIPPS RESEARCH INSTITUTE, 10466 N TORREY PINES RD, SAN DIEGO, H14290
THE SCRIPPS RESEARCH INSTITUTE, 3545 JOHN HOPKINS COURT, SANDIEGO, H33602

Dear Mr. Meyer:

On July 25, 2001 your "amended" application for a **revision** of the onsite medical waste treatment permit was received by the County of San Diego Hazardous Materials Division (HMD). The attached permit supercedes existing Onsite Medical Waste Treatment Permits for H14290 and H33602. Upon receipt of this letter please return the original permits to the HMD.

The HMD hereby issues a five-year permit for the onsite treatment of medical waste in the following autoclave(s):

#	Make,	Model	Serial #	Location
A1	ARS,	812132	0495 (0497121691)	BBC Vivarium (Containment) BCCB212
A2	ARS	812182	0496121691 (50944STS)	Immunology Vivarium (Containment) R119
A3	Amsco Medallion	M65CDS	0131878012	Immunology Vivarium Hallway
A4	AMSCO 2041	R78S-4	0123186-010	MB Vivarium (Containment)
A5	AMSCO 2041	R78GA-4	010168902	MB Vivarium Washroom
A6	AMSCO	3000 Series	0103399-07	MEM Vivarium L35A
A7	AMSCO	3043-1	011499117	CVN Vivarium (Containment) CVN133
A8	AMSCO	3043-1	011519109	CVN Vivarium Washroom

PERMIT CONDITIONS

1. The permittee must **not** accept and/or treat medical waste from offsite locations at this facility. This permit authorizes treatment of medical waste from onsite locations only as defined in the California Health and Safety Code, Section 117740.
2. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control which are installed or used by the permittee to achieve compliance with the California Health and Safety Code, Medical Waste Management Act. Proper operation and maintenance shall

"Environmental and public health through leadership, partnership and science"

include but not be limited to: effective performance, adequate funding, adequate operator staffing, training and adequate laboratory process controls, including appropriate quality assurance procedures. Backup facilities or auxiliary systems shall be operated only when necessary to maintain compliance.

3. The permittee shall take all steps to minimize or correct any adverse impact on the environment resulting from noncompliance with the conditions of the permit.
4. The permittee shall not continue an activity regulated by this permit after the expiration date. If the permittee wishes to continue such activity a timely application for renewal must be submitted to the HMD.
5. The permittee shall furnish to the enforcement agency any relevant information which the enforcement agency may request to determine whether cause exists for modifying, revoking, amending, reissuing, or termination of the permit to treat medical waste.
6. The permittee shall allow an authorized representative of the HMD to:
 - a. Enter the permittee's premises at reasonable times, where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of the permit;
 - b. Have access to and copy at reasonable times any records that must be kept under the conditions of the permit; and
 - c. Sample, photograph, or monitor at reasonable times for the purposes of assuring permit compliance.
7. The permittee shall maintain a monitoring program as outlined in the permit application.
8. The permittee shall retain records of all monitoring information not limited to but including all calibration, maintenance records, quality assurance records, strip chart recordings, autoclave logs, and spore tests results, for a minimum of three years.
9. The permittee shall give notice to the HMD at least 30 days in advance of any planned physical alterations or additions to the facility affecting the storage and/or treatment of medical waste.
10. Emergency notification must be made to the HMD for incidents involving medical waste that may endanger public health and safety, or the environment.
11. The permittee shall comply with the procedures and requirements identified in the permit application documents submitted to the HMD as a basis for issuing the medical waste treatment permit.

Scott Meyer

3

September 19, 2001

This onsite medical waste treatment permit will **expire on September 19, 2006**. If the treatment of medical waste is to continue after this period, a permit renewal application must be sent to the HMD 90 days **before** the permit expires.

If this activity is to cease whereby the Closure Plan must be implemented, the HMD must be notified at least 30 days prior to initiation of closure activities. Unauthorized treatment of medical waste is a violation of State law subject to criminal and civil penalties. Failure to meet the permit conditions listed above may cause the revocation or suspension of your permit.

Maintain a copy of this letter and enclosed certificate onsite at or near the treatment unit and available for review during regulatory inspections. If you have any questions, please contact me at 858-495-5213.

Sincerely,

Brad Long, Environmental Health Specialist
Hazardous Materials Division

ON-SITE MEDICAL WASTE TREATMENT PERMIT INVOICE

Dear Mr Meyer:

Section 65.107(h) of the San Diego Code of Regulatory Ordinances establishes the requirement to recover costs incurred for the review of the permit application and the issuance of an On-Site Medical Waste Treatment Permit.

The attached invoice is for the time spent by County of San Diego, Hazardous Materials Division (HMD) staff to review and process the medical waste treatment permit application for this site. Payment must be made before an On-Site Medical Waste Treatment Permit will be issued.

If you have any questions concerning this invoice, please call (619) 338-2438.

Make checks payable to: DEPARTMENT OF ENVIRONMENTAL HEALTH. Please return one copy of the attached invoice along with your payment.

Please send payment to: COUNTY OF SAN DIEGO
Department of Environmental Health

Medical Waste Management Plan Checklist Discrepancy Resolution

1. Biohazardous Waste Hauler Contract

- ✓ The Scripps Research Institute utilizes Stericycle, 7737 Formula Place, San Diego, CA 92121 as our biohazardous waste hauler. As requested, a copy of the contract has been enclosed.

2. Procedures for the processing, storage, transport, and treatment of pathological wastes, trace contaminated tissues, and chemotherapeutic containers and mixed waste.

✓ Recognizable Human Anatomical Remains.

At the present time, The Scripps Research Institute does not handle this type of waste. If this type of waste is to be generated in the future, the Medical Waste Management Plan will be revised.

✓ Mixed Waste.

Mixed waste, as defined in Section 117730 of the Medical Waste Management Act, will be treated at the highest level as specified in the Act (i.e. medical waste and hazardous waste will be treated as hazardous waste; medical waste and radioactive waste will be treated as radioactive waste; medical waste, hazardous waste, and radioactive waste will be treated as radioactive waste). This type of waste is collected in containers marked with the appropriate hazard warning labels. Laboratory and Environmental Health and Safety staff members are instructed to maintain these wastes separate from "non-mixed" wastes and to handle these wastes as stated above.

✓ Pathological and Chemotherapeutic Wastes.

At the present time, The Scripps Research Institute does not handle this type of waste. If this type of waste is to be generated in the future, the Medical Waste Management Plan will be revised.

3. Containment and Storage

- ✓ At the present time, The Scripps Research Institute does not handle pathological or chemotherapeutic wastes.

Mixed wastes are handled as stated in #2 above.

4. Limited Quantity Hauling Exemption

- ✓ No medical waste is transported to this facility from any off-site location for the purpose of consolidation and/or treatment.

5. Common Storage Facilities

- ✓ There are currently no common storage facilities utilized by The Scripps Research Institute for the storage of medical waste collected from small quantity generators.

6. Discharge to Public Sewer System

- ✓ Liquid biohazardous waste material is inactivated with a 10% bleach solution (20 minute contact time) prior to sink disposal. This type of waste includes, but is not limited to, cultures and stocks that may contain a variety of tissue cell lines.

7. Additional Remarks

Supporting Documentation verifying 3545 John Hopkins Court facility is within 400 yards of the 10466 North Torrey Pines boundary.

Enclosed is a scaled map verifying that the property at 3545 John Hopkins Court is within 400 yards of the Main Campus (H#14290) as stated in the On-Site Medical Waste Treatment Permit revision request. The Lot 1 property line is 346 feet from the 3545 John Hopkins Court property line. Lot 1 is contiguous to the Main Campus facility via the Nelson Tunnel. The tunnel runs underneath North Torrey Pines Road. Please reference the enclosed maps. The area of interest can be found in the southeast corner of the site map.

Language to Clarify Responsibility for Administering Part 14 of the Medical Waste Management Act.

The requested language has been added to Attachment 1, #3 (enclosed).

Review of Attached maps:

*3545 John Hopkins Court is within 1600 ft
of 10466 N. Torrey Pines, ~ 1100 ft.*

TERMS AND CONDITIONS

1. Biomedical Waste Services (a) Staricycle, Inc. ("SRCL") shall collect, transport, treat and dispose of all Biomedical Waste generated by Customer during the term of this Agreement. "Biomedical Waste" means sharps, hypodermic needles, syringes, microbial cultures, tissue cultures, animal tissues or organs, animal carcasses, animal bedding, laboratory containers and slides that meet the definition of regulated medical waste under 29 CFR 1910.1030 or 49 CFR 173.134 and infectious substances arising from those agents

by chemotherapeutic, cytotoxic, or antineoplastic drug or agents, provided that such items, including vials and syringes, shall be "empty" as defined in applicable federal, state, county or municipal laws, regulations and guidelines. Biomedical Waste does not include, and SRCL may decline to handle, collect, treat or dispose of, any other waste or other material not falling within the definition of Biomedical Waste ("Non-Conforming Waste"), including but not limited to (a) fetal remains and human torsos, (b) radioactive, reactive, corrosive, ignitable or toxic wastes and any and all other hazardous wastes and substances as defined in any applicable federal, state, county or municipal laws, regulations and guidelines, and (c) pharmaceutical materials (except to the extent that SRCL gives prior written approval and the pharmaceuticals are packaged according to instructions provided), and (d) improperly classified and/or improperly packaged Biomedical Waste.

(b) Customer is solely responsible for properly segregating, packaging and labeling Biomedical Waste. Customer agrees that all containers SRCL supplies to Customer shall be collected and disposed of only by SRCL or its designated representatives. The storage of Biomedical Waste shall be confined to an area on Customer's premises to which only personnel authorized by Customer or SRCL shall have access. Customer shall not place the following items inside red bag medical waste containers: (1) pharmaceutical waste; (2) RCRA characteristic chemotherapy waste which has an alcohol base that makes the mixture ignitable, such as Vepesid; (3) Chlorambucil, Cyclophosphamide, Daunomycin, Melphalan, Mitomycin C, Streptozotocin, and Uraclil Mustard (which are listed RCRA Hazardous Wastes and must be managed as such). Customer shall only place sharps in designated sharps containers. SRCL may at its discretion refuse to collect containers that are improperly packaged or labeled, or that are wet or leaking, and in any event Customer shall be liable for all injuries, losses and damages that result from such containers. Title to Biomedical Waste collected from Customer shall transfer and vest in SRCL at the time it is loaded into SRCL's truck. Customer shall have title to Biomedical Waste at all prior times. Customer shall hold title to any Non-Conforming Waste at all times.

2. Term and Pricing The term ("Term") of this Agreement shall be sixty (60) months from the date of execution of this Agreement.

(a) This Agreement shall automatically renew for successive terms of one year each ("Extension Terms") unless either party has notified the other party in writing during the sixty (60) day period prior to any such renewal date of its desire to terminate this Agreement. All Extension Terms shall be subject to the same terms and conditions as this original Agreement.

(b) SRCL may adjust the contract price to account for operational changes it implements to comply with changes in law, to cover increases in the cost of fuel, insurance, or residue disposal, or to otherwise address cost escalation. SRCL may charge Customer a fee to cover its administrative costs in the event that Customer changes its service requirements during the Term or Extension Term.

(c) If Customer breaches this Agreement by terminating SRCL's collections prior to the expiration of its Term or any Extension Term, or in any other way violates this agreement in such a way that SRCL's continued performance is rendered impossible or commercially impracticable, then, in addition to any rights and remedies SRCL may have at law or in equity, SRCL shall be entitled to collect from Customer an amount in liquidated damages equal to 50% of Customer's average charge on a monthly basis based on the 12 months' billings prior to the cessation of collections (or based on any lesser period if the contract began less than twelve months earlier) times the number of months, including prorated partial months, remaining until the expiration date of the Term or Extension Term. Customer hereby acknowledges that SRCL's damages resulting from the premature termination of collections are impossible of estimation, and include lost profits, inefficiencies resulting from route changes and reduced treatment plant throughput, increased administrative overhead, unrecoverable sunk training/instruction costs, and other elements of injury, and acknowledges further that the foregoing charge is reasonable and is not a penalty.

(d) SRCL shall have the right to terminate this Agreement at any time by giving Customer at least sixty (60) days notice in the event that it is unable to continue performing its obligations under this Agreement due to the suspension, revocation, cancellation or termination of any permit or required to perform this Agreement or in the event that a change in any law, regulation or ordinance makes it impractical or uneconomical, in SRCL's sole discretion, to continue performing this Agreement.

3. Billing SRCL shall provide Customer with monthly, quarterly or annual invoices that are due upon receipt. Customer agrees to pay a late charge on any amounts owed to SRCL that are more than 30 days old, at a rate equal to the lesser of 1 1/2% per month or the maximum rate permitted by law. Customer shall bear any costs that SRCL may incur in collecting overdue amounts from Customer, including, but not limited to, reasonable attorneys' fees and court costs. Should any amounts due pursuant to this Agreement remain unpaid for more than 30 days from the date of the debt's first invoice, SRCL shall have the option, without notice to Customer, to suspend service under this Agreement until the overdue amounts (plus late charges and collection fees) are paid. In the event that SRCL suspends services under this Agreement for any reason, including the expiration or termination of this Agreement or Customer's breach (see 2(c), above), SRCL may remove all containers belonging to it from Customer's premises. Any non-compliant containers will be billed an additional container charge at the current container rate. Non-compliant containers include containers that are overweight under applicable laws or regulations or containers holding Non-Conforming Waste.

4. Surecharge SRCL may also impose a surcharge in the event that SRCL attempts to pick up waste at a Customer location (on either a scheduled pick-up or in response to a Customer request) and, through no fault of SRCL, either (a) there is no Biomedical Waste for SRCL to pick up, (b) waste is not ready for pick-up or (c) the Customer location is closed.

5. Liability for Equipment Customer shall have the care, custody and control of containers and other equipment placed at Customer's premises which is owned by SRCL and accepts responsibility and liability for the equipment and its contents except when it is being physically handled by employees of SRCL. Customer agrees to defend, indemnify and hold harmless SRCL from and against any and all claims for loss or damage to property, or personal injury or death, resulting from or arising in any manner out of Customer's use, operation or possession of any containers and other equipment furnished under this Agreement. Any damage to such property and equipment, other than normal wear and tear, will be charged to the Customer, and payable to SRCL as additional service cost.

6. Indemnification SRCL shall indemnify and hold Customer harmless from any liabilities arising from the gross negligence or willful misconduct of SRCL in the performance of its obligations under this Agreement. Customer shall indemnify and hold harmless SRCL from any liabilities arising from the gross negligence or willful misconduct of Customer, which shall include, but not be limited to, failure to properly store, package, label, or segregate Biomedical Waste and any liabilities relating to Non-Conforming Waste, whether or not collected, transported or treated by SRCL. Each party agrees to pay the reasonable attorneys' fees and costs incurred by the other in bringing a successful indemnification claim under this Paragraph. Customer agrees to pay SRCL's reasonable attorney's fees incurred for any successful defense by SRCL of a suit for indemnification brought against SRCL by Customer.

7. Compliance with Laws SRCL hereby agrees to carry General Liability, Automobile Liability, and Workmen's Compensation Insurance as required by applicable state law, and to otherwise comply with all federal and state laws, rules and regulations applicable thereto and relating to its performance hereunder. As of the date of this Agreement, SRCL has obtained all necessary permits, licenses, zoning and other federal, state or local authorizations required to perform the services under this Agreement and will furnish copies of these to Customer upon request. Customer hereby agrees to comply with all federal and state laws, rules and regulations applicable to its handling of Biomedical Waste and its performance under this Agreement, including, without limitation, all applicable record keeping, documentation and manifesting requirements. SRCL and Customer shall keep and retain adequate books and records and other documentation including personnel records, correspondence, instructions, plans, receipts, vouchers, copies of manifests and tracking records and any other records or reports or memoranda consistent with and for the periods required by applicable regulatory requirements and guidelines pertaining to storage or handling of Biomedical Waste and the services to be performed under this Agreement.

8. Exclusivity Customer agrees to use no other Biomedical Waste disposal service or method during the Term of this Agreement and any Extension Terms.

9. Excuse of Performance SRCL shall not be responsible if its performance of this Agreement is interrupted or delayed by contingencies beyond its control, including, without limitation, acts of God, war, blockades, riots, explosion, strikes, lockouts or other labor or industrial disturbances, fires, accidents to equipment, injunctions or compliance with laws, regulations, guidelines or orders of any governmental body or instrumentality thereof (whether now existing or hereafter created).

10. Independent Contractor SRCL's relationship with Customer pursuant hereto is that of an independent contractor, and nothing in this Agreement shall be construed to designate SRCL as an employee, agent or partner of or a joint venture with Customer.

11. Amendment and Waiver Changes in the types, size and amount of equipment and the frequency of service may be mutually agreed to orally or in writing by the parties, without affecting the validity of this Agreement. Consent to oral changes shall be evidenced by the practices and actions of the parties. All other amendments to this Agreement (other than as provided in 2(b)) shall be effected only by a written instrument executed by the parties. No waiver shall be effective unless submitted in writing by the party granting such waiver. No waiver of any provision of this Agreement shall be deemed a waiver of any other provision of this Agreement and no waiver of any breach or duty under this Agreement shall be deemed a waiver of any other breach or later instances of the same duty.

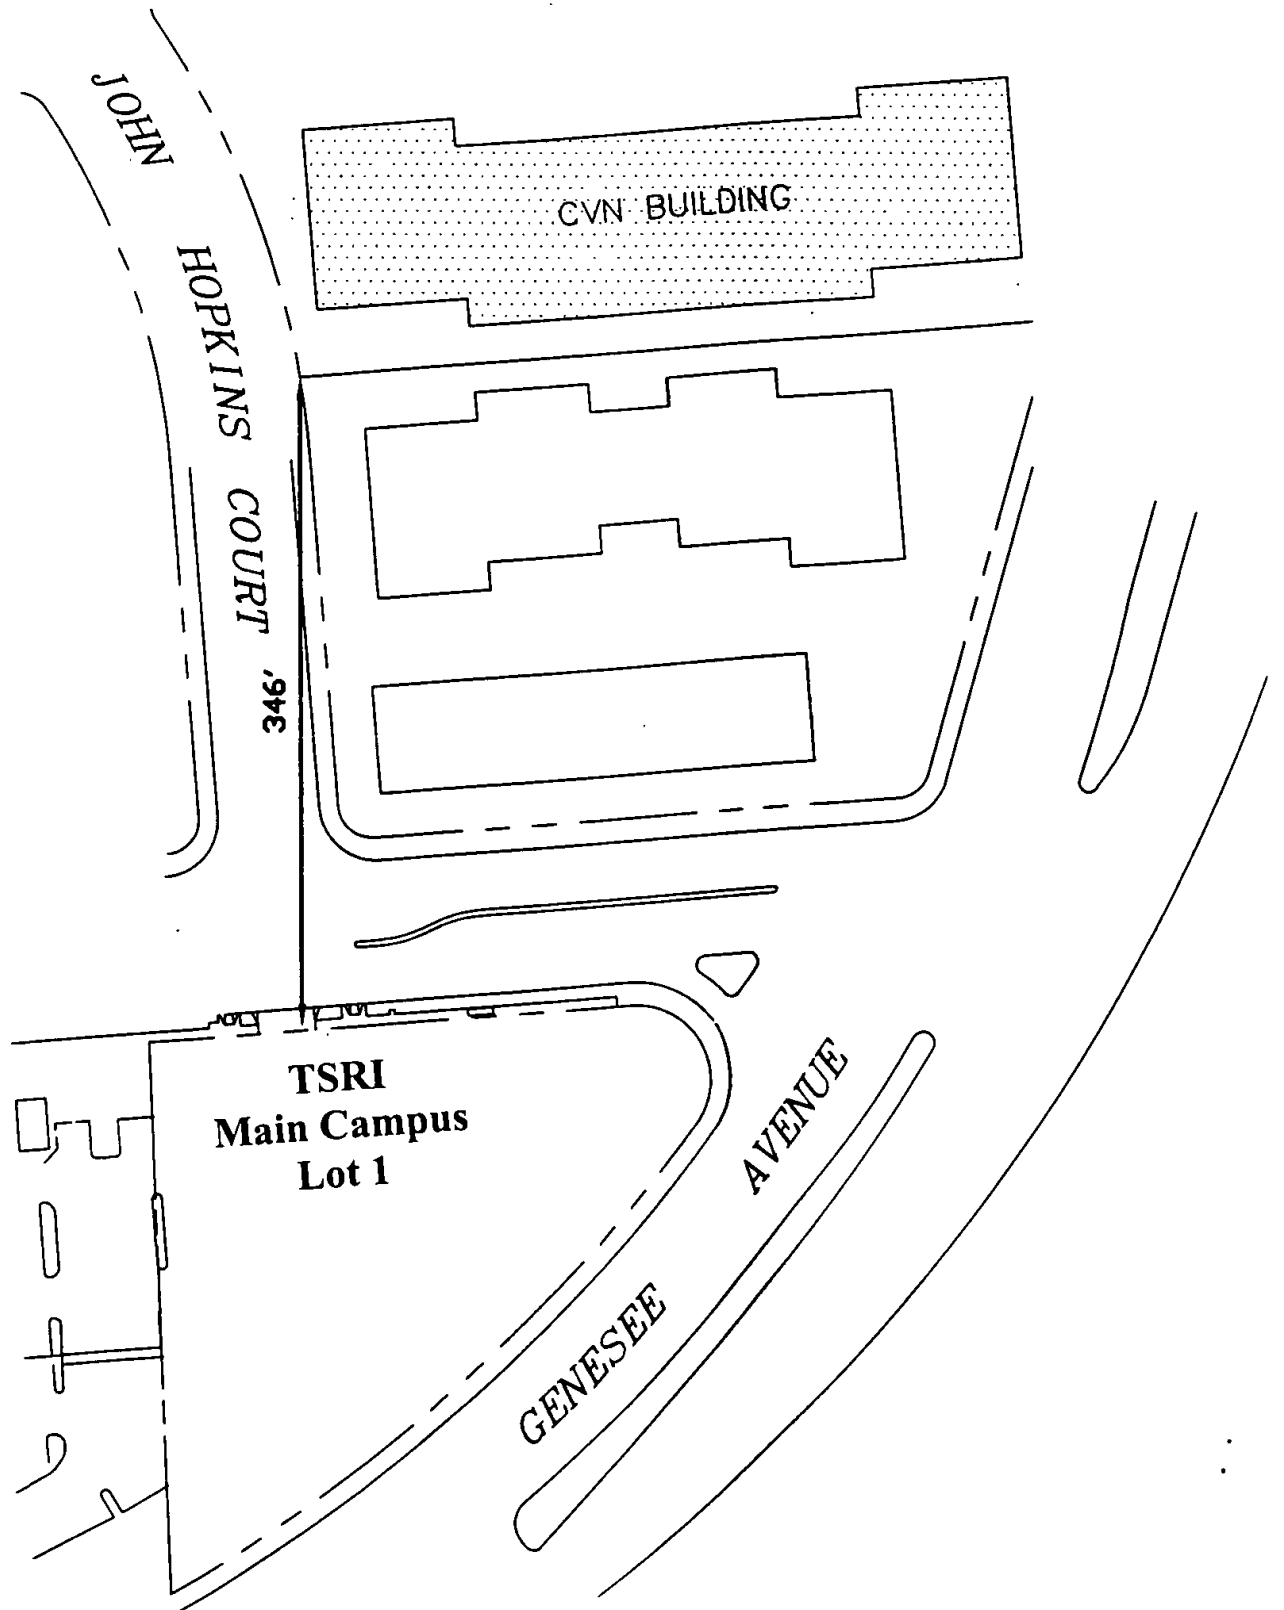

12. Savings Clause In case any one or more of the provisions contained in this Agreement shall, for any reason, be held to be invalid, illegal or unenforceable in any respect, such invalidity, illegality or unenforceability shall not effect any other provisions of this Agreement; this Agreement shall be construed as if such invalid, illegal or unenforceable provision had never been contained herein, unless such finding shall impair the rights or increase the obligations of SRCL hereunder, in which event, at SRCL's option, this Agreement may be terminated.

13. Entire Agreement This Agreement (including any attachments, exhibits and amendments made in accordance with Paragraph 11) constitutes the entire understanding and agreement of the parties and cancels and supercedes all prior negotiations, representations, understandings or agreements, whether written or oral, with respect to the subject matter of this Agreement.

14. Governing Law This Agreement shall be governed by and construed in accordance with the laws of the State of Illinois without regard to the conflicts of laws rules of any jurisdiction.

15. Notices All required notices, or those which the parties may desire to give under this Agreement shall be in writing and sent to the parties' addresses set forth on the reverse side of this Agreement.

16. Counterparts This Agreement may be executed in one or more counterparts, each of which shall be deemed an original but all of which when taken together shall constitute one and the same instrument. A copy or facsimile of this Agreement shall be as effective as an original.

ONSITE MEDICAL WASTE TREATMENT PERMIT APPLICATION NOTICE OF DEFICIENCY

July 3, 2001

SCOTT MEYER
Environmental Health and Safety
THE SCRIPPS RESEARCH INST.
10550 N TORREY PINES RD
LA JOLLA, CA 92037-1027

SITE: THE SCRIPPS RESEARCH INST., 10466 N. TORREY PINES RD. LA JOLLA, 92037-1027

Dear Mr. Meyer:

The application for a revised onsite medical waste treatment facility permit dated 11/07/2000 has been received by the County of San Diego, Hazardous Materials Division (HMD). An initial review of the application and attached documentation as been completed by this office. It has been determined that the supporting documentation is incomplete or deficient. Attached is an explanation of the areas and issues that require revision. [See attachment, address only the items marked with a "✓"]

We are unable to complete the processing of the permit application until you have resolved the deficiencies and issues noted. Please submit the additional information requested to my attention within **30 days** of receipt of this Notice to comply with the California Medical Waste Management Act

If you have any questions, please contact me at 858-694-2750

Sincerely,

Brad Long, Environmental Health Specialist III
Hazardous Materials Division

Medical Waste Management Plan Checklist

Facility Name: THE SCRIPPS RESEARCH INST. HMD File # H14290
Site Address: 10466 N TORREY PINES RD, LA JOLLA, 92037-1027

This facility has been identified as: (check one if applicable)

[] This generator of medical waste is a new facility or did not have a medical waste management plan (MWMP) on file with the Department. Below are the items to be incorporated in the MWMP. Utilize this checklist with the Medical Waste Management Act (MWMA) in revising the MWMP for this facility. If you do not have a copy of the MWMA, contact the Department and one will be provided.

[x] A review of this facility's medical waste management plan (MWMP) revealed that it did not adequately address the items checked below. The items checked below are the areas of the MWMP, which need to be revised. Utilize this checklist with the MWMA, contact the Department and one will be provided.

The items checked shall be incorporated into your facility's medical waste management plan.

[] Provide the name of the contact person at the facility for matters regarding medical waste. Section 117960 (a) of the MWMA.

[] Provide the name, phone number, and address of the facility. Section 117960(b) of the MWMA.

[] Indicate the type of facility. Section 117960 (c) of the MWMA.

[] Indicate the types and estimated average monthly quantity, of medical waste generated, Section 117960 (d) of the MWMA. See Sections 117635 and 117755 of the MWMA for types of medical waste.

[] Indicate the on-site medical waste treatment method utilized if applicable. Section 117960 (e) of the MWMA.

[x] The name and business address of the registered hazardous waste hauler utilized to have untreated medical waste removed for treatment, if applicable. Sections 117960 (f) (g) of the MWMA.

Observation- In addition the onsite treatment of Medical Waste, untreated medical waste is picked-up using a registered hazardous waste hauler. Also, the emergency action plan indicates in the event of onsite treatment disruption medical waste will be transferred to BFI or other licensed medical waste hauler.

Corrective Action- Provide a copy of the biohazardous waste hauler contract. (Note outdated reference to BFI).

- ___ The name and business address of the offsite treatment facility to which the medical waste is being hauled, if applicable. Section 117960 (h).
- ___ Provide an emergency action plan. Indicate in the emergency action plan the actions to be taken in the event of a disruption of service as a result of a natural disaster or equipment failure. Section 117960 (i) of the MWMA.
- ___ Provide a statement certifying that the information provided is complete and correct. Section 117960 (j) of the MWMA.
- ___ Indicate in the medical waste management plan that tracking documents and treatment records will be maintained for 3 years. Section 117957 of the MWMA.

Procedures for the processing, storage, transport, and treatment of pathological wastes (recognizable human anatomical remains), trace contaminated tissues, and chemotherapeutic containers, and mixed waste.

- ok √ Indicate in the medical waste management plan how recognizable human anatomical remains are to be handled or treated to assure compliance with Section 118220 of the MWMA. Describe the procedures to be utilized in their handling. If there are no medical wastes produced which contain or are comprised of recognizable anatomical remains, indicate this fact in the medical waste management plan, and it will not be necessary to provide procedures for the handling of these wastes.

Corrective Action- Address how recognizable human anatomical remains are to be handled, if none are handled than provide a statement to this effect.

- ok √ Indicate in the medical waste management plan how mixed waste as specified in Section 117730 of the MWMA are to be handled. State the procedures to be utilized to assure proper handling. If there is no mixed waste produced by this facility containing hazardous or radiological materials, indicate this fact in the medical waste management plan, and it will not be necessary to provide procedures for the handling of these wastes.

Corrective Action- Address how mixed waste are to be handled, if none are handled than provide a statement to this effect.

- ok √ Indicate in the medical waste management plan how pathological and chemotherapeutic wastes are handled and treated. The medical waste management plan must contain the definition of "empty," as specified in Section 117635 of the MWMA to assure that pathological and chemotherapeutic wastes are properly handled. Describe the procedures

to be employed to assure proper handling. If these wastes are not generated or handled by this facility, indicate this fact in the medical waste management plan, and it will not be necessary to provide procedures for the handling of these wastes.

Corrective Action- Address how pathological and chemotherapeutic wastes are to be handled, if none are handled than provide a statement to this effect.

Containment and Storage

- ___ Indicate in the medical waste management plan that medical waste will be contained separately from other waste at the point of generation. Section 118275 (a) of the MWMA.
- ___ Indicate in the medical waste management plan that the medical waste shall be placed in a red biohazard bag. Sections 118275 (b) and 117630 of the MWMA.
- ___ Indicate in the medical waste management plan that sharps waste must be contained in a sharps container. Sections 118275 (c), 117750, and 117755 of the MWMA.

✓
OK Section 118275 (d) of the MWMA: See section regarding handling procedures for pathological, trace chemotherapeutic, and mixed waste.

Observation- Procedures for pathological, trace chemotherapeutic, and mixed waste are not provided.

Corrective Action- If pathological, trace chemotherapeutic, and/or mixed waste(s) are to be generated provide procedures as required in Section 118275 (d).

- ___ Indicate in the medical waste management plan that red biohazard bags are to be tied. Section 118280 (a) of the MWMA.
- ___ Indicate in the medical waste management plan that red biohazard bags are to be placed for storage, handling, and transport in rigid containers with tight-fitting lids labeled with the words "Biohazardous Waste," or the word "Biohazard," and the international biohazard symbol on the lids and side so as to be visible from any lateral direction. Sections 118280 (b) and 117645 of the MWMA.
- ___ Indicate in the medical waste management plan the maximum storage time of medical waste above 32 degrees Fahrenheit (7 days). If stored at or below 32 F, state this fact in the plan and describe the storage temperature monitoring schedule (maximum storage time at or below 32 F is 90 days). Section 118280 (d) (1&2) of the MWMA.

- ___ Provide in the medical waste management plan the procedures to containerize sharps waste. Section 118285 (a-d) of the MWMA.
- ___ Provide in the medical waste management plan the protocol for the routine washing and decontamination of reusable rigid medical waste containers. (see Section 118295 (a)(b) for approved methods, disinfectants, and use).
- ___ Provide in the medical waste management plan the techniques performed and disinfectants to be utilized in the cleanup of medical waste spills. Provide the type(s) of disinfectant, concentration, and contact time used for the decontamination of spills. See Section 118295 (b) for approved disinfectants and use. Section 118300. Indicate in the medical waste management plan that the accumulation area utilized by the facility to store containers of medical waste for accumulation must be secured so as to prevent or deny access by unauthorized persons and posted with warning signs, on or adjacent to, the exterior of the entry doors, on entry doors, gates, or lids. These warning signs must be in both English and Spanish as follows: **CAUTION--BIOHAZARDOUS WASTE STORAGE AREA-- UNAUTHORIZED PERSONS KEEP OUT**, and in Spanish: **CUIDADO--ZONA DE RESIDUOS BIOLÓGICOS PELIGROSOS-- PROHIBIDA LA ENTRADA A PERSONAS NO AUTORIZADAS**. Section 118310 of the MWMA. State in your plan, that the signage stated above is provided and the medical center locations where the signage is required.

Limited Quantity Hauling Exemption

- OK Indicate in the medical waste management plan if offsite medical waste is transported to this facility for consolidation and/or treatment. If so, indicate the sources and the protocols in place for accepting the waste. Section 118030 of the MWMA.

Observation - Protocols for accepting medical waste for consolidation and/or treatment are not provided.

Corrective Action – Provide protocols for accepting medical waste for consolidation and/or treatment. If medical waste is not going to be accepted for consolidation and/or treatment provide a statement to this effect.

Common Storage Facilities

- ___ Provide a medical waste management plan, addressing all issues above, and indicate in the plan the nature of the medical waste generated by the individual generators.

- OK Provide a list of small quantity generators of medical waste using the facility for the storage of their medical waste. Indicate in this list the name of each generator, suite number, telephone number, and contact person.

Observation- The above issue is not addressed.

Corrective Action- If common storage of medical waste is to be aloud for small quantity generators provide a list as indicated. If a common storage practices are not going to be conducted provide a statement to this effect.

Treatment

Discharge to Public Sewer System

√ Provide in the medical waste management plan the medical waste to be treated by means of discharge to the public sewer system. Describe in detail methods to be utilized and the types of medical waste to be treated in this manner. Section 118215 (b) of the MWMA.
ok

Observation- Liquid bio-hazardous waste is routinely generated, treated, and discharged to the public sewer system. The above information is not provided.

Corrective Action- Provide in the medical waste management plan the medical waste to be treated by means of discharge to the public sewer system. Describe in detail methods to be utilized and the types of medical waste to be treated in this manner. Section 118215 (b) of the MWMA.

Facilities, which do not treat medical waste on-site, are NOT responsible for the information below.

Steam Sterilization

___ Provide in the medical waste management plan standard written operating procedures for biological indicators, or for other indicators of adequate sterilization approved by the Department, for each steam sterilizer, including time, temperature, pressure, type of waste, type of container, closure on container, pattern of loading, water content, and maximum load quantity. Section 118215 (c) (1) of the MWMA.

___ Provide in the medical waste management plan procedures established for checking recording or indicating thermometers during each complete cycle to ensure the attainment of 121EC (250EF) for at least one-half hour, depending on the quantity and density of the load, in order to achieve sterilization of the entire load. Sections 118165 (c) (2) of the MWMA.

___ Indicate in the medical waste management plan that for each treatment cycle the amount and types of medical waste treated shall be recorded and maintained as part of the treatment records. Section 118155 (f) of the MWMA.

___ Indicate in the medical waste management plan that thermometers shall be checked for calibration annually and that records of the calibration checks shall be maintained as part of the facility's files and records for a

period of three years, or for the period specified in the regulations.

Section 118215 (c) (3) of the MWMA.

- Indicate in the medical waste management plan that heat-sensitive tape, or another method acceptable to the enforcement agency, shall be used on each biohazard bag or sharps container that is processed on-site to indicate attainment of adequate sterilization conditions. Section 118215 (c) (3) of the MWMA.
- State the course of action to be taken in the event that the heat-sensitive tape has not changed color and/or the thermometer indicates that proper sterilization has not taken place. Section 118215 (c) (1) of the MWMA.
- Indicate in the medical waste management plan that biological indicator *Bacillus Stcarothermophilus*, or other indicator of adequate sterilization, as approved by the department, shall be placed at the center of a load processed under standard operating conditions at least monthly to confirm the attainment of adequate sterilization conditions. Section 118215 (c) (4) of the MWMA.
- State in the medical waste management plan that all records pertaining to on-site treatment shall be maintained for a period of not less than three years. Sections 117957, 118165 (b), and 118215 (c) (5) of the MWMA.

Incineration

- Provide a copy of the air pollution permit issued by the local enforcement agency to operate the medical waste indicator. Section 118155 (f) of the MWMA.
- Indicate in the medical waste management plan the medical waste treatment standards and quality control audit procedures, such as throughput and types of waste logs, inspection checklist, maintenance records, incinerator operating procedures, and inspection of ash, and maximum amount of throughput to achieve minimum treatment standards. Sections 118155 and 118215 (a) of the MWMA.
- Indicate in the medical waste management plan that for each treatment cycle the amount and types of medical waste treated shall be recorded and maintained as part of the treatment records. Section 118155 (f) of the MWMA.
- State in the medical waste management plan that all records pertaining to on-site treatment shall be maintained for a period of not less than three years. Sections 117957 and 118165 of the MWMA.

Large quantity generators treating medical waste on-site (Title 22, ch. 21)

- Include in the medical waste management plan a map showing all areas up to one mile beyond the property boundaries. Identify access roads and the type of development surrounding the facility (e.g., residential, commercial, recreational, schools, etc.).

- Include in the medical waste management plan a closure plan, including a written estimate of the cost of closing the facility.
- Include in the medical waste management plan the CEQA clearance or Notice of Exemption obtained from the lead agency at the time of permit approval.

Additional Remarks

Observation- The revised permit application indicates the CVN facility located at 3545 John Hopkins Court San Diego, CA 92121 is within 400 yards of the 10466 N. Torrey Pines boundary, qualifying as an "Adjacent Property". Documentation supporting this qualification is not provided.

Corrective Action- Provide supporting documentation (Scaled Maps, Surveyor records, etc.) verifying the 3545 John Hopkins Court is within 400 yards of the 10466 N. Torrey Pines boundary.

Observation- Attachment 1, #3, indicates there has been no Federal or State compliance issues relative medical wastes, however a list of discrepancies have been identified by the County.

OK

Corrective Action- Add language to clarify that the County of San Diego, Department of Environmental Health, Hazardous Materials Division is the Enforcement Agency as defined by Sec 117650 responsible for administrating Part 14 of the Medical Waste Management Act.

COMPLIANCE INSPECTION REPORT

BUSINESS NAME Stratogene Cloning Systems

ADDRESS 11011 N. Torrey Pines Rd

CITY/ZIP La Jolla CA 92037

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Processed 7/9/96 MSC

Office Use Only

Violation: JUN 04 1996

1) One container of hazardous waste, (silane waste in brown glass bottle dated 9/2/93) under hood #7 in lab A is stored for over one year.

- To Comply: Date all hazardous waste containers with initial accumulation date and dispose of waste within one year (for satellite accumulation) or within 90 days of accumulating 100 kilograms facility wide (non-satellite accumulation)

Remarks:

- Hazardous materials business plan was verified by Allison Fowler. Keep a copy available on site with location known to designated emergency coordinators. Document annual employee training outlined in business plan (including topics).
- Several hazardous waste containers were completely labeled (were missing dates and/or contents) during this inspection. Completely label hazardous waste containers when first used.
- Keep both generator and TSDf copies of manifests on site for review. If you cannot obtain the TSDf copy, file an exception report with California EPA. Keep manifest and/or receipts for at least three years.

SUPPLEMENTAL INSPECTION REPORT

Office Use Only

BUSINESS ADDRESS: 11011 N. Torrey Pines Rd La Jolla ZIP CODE: 92037

- Two sharps containers (Bellvue synthesis area) and one biohazard can (labeled as "hazardous waste") were properly labeled during the inspection. Label sharps containers with name, address, & phone number when first used. Separate hazardous waste from biohazardous waste; label appropriately.
- Contact California EPA regarding EPA # for this site. Two EPA #s have been used in the last year (CAL913475948 + CAL981975261). Use correct, current number on future hazardous waste manifests.
- Strongly advise you keep a log book to show transfer of waste oil. (include date, quantity, where hauled, & name of hauler).
