On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6. This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

CONSENT TO CONDUCT INSPECTION GRANTED BY: Monica Sullivan

TITLE: VP of IP and Contracts

INTRODUCTION:

Today an initial Certified Unified Program Agency (CUPA) inspection was completed at BioAtla to verify compliance with hazardous materials and medical waste regulations. At the time of inspection this facility is a small quantity medical waste generator and stores on-site reportable amounts of hazardous materials.

This facility is a biotech specializing in research for cancer therapeutics. This facility began operations at this location in 2012.

Facility notified the Hazardous Materials Division (HMD) of business activities by submitting information in the California Environmental Reporting System (CERS). CERS ID: 10705507

Also present during inspection: Haizhen Liu, Lab Manager

Observed during facility walk-through of laboratory areas:

- Red Bag waste
- Sharps waste
- Bleached & Sewered Liquid Bio-hazardous waste
- CO2 compressed gas - 6 x 50 pounds

Employee training documents on-site and reviewed.

Medical waste disposal documents on-site and reviewed.

Medical waste management plan on-site, at this time per disposal documents reviewed this facility is generating less than 200 pounds a month of medical waste.

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

INSPECTION DATE: <u>01/24/2017</u>	PAGE <u>2</u> OF <u>5</u>
RECORD ID #: <u>DEH2016-HUPFP-002990</u>	

INSPECTION REMARKS:

REMARK:

Within 30 days ensure that your CERS inventory is updated to include the new inventory on-site (CO2 & sharps waste). Per Monica Sullivan these inventory items are part of a new project/machine that has been installed in the lab space.

Ensure that sharps waste containers are properly labeled with a generator label.

Be advised that you are required to re-submit/re-certify your California Environmental Reporting System (CERS) Hazardous Materials Business Plan (HMBP) at least once every twelve months or within 30 days of a change occurring.

- 3030005 Failed to make a proper waste determination. 22 CCR 66262.11, 66262.40(c)
- 3050001 Failed to use a California registered hazardous waste transporter to transport hazardous waste. HSC 25163(a); 22 CCR 66263.41
- 3050002 Failed to properly dispose of hazardous waste at an authorized facility. HSC 25189.5(a); 25189(c),(d); 25189.2(c)
- 3130002 Impermissible dilution of hazardous waste. 22 CCR 66268.3(a)
- HMD 0305 Disposed of used oil illegally. HSC 25250.5(a); 25189.5(a); 25189(c),(d); 25189.2(c)
- HMD 0306 Disposed of hazardous waste latex paint improperly. HSC 25217.1

Hazardous Waste Requirements for SOGs and LOGs STORAGE AND HANDLING

- | | |
|---|-----------------------|
| # | VIOLATION DESCRIPTION |
|---|-----------------------|
- 3030001 Failed to meet requirements, when handling, and storing spent lead acid batteries. 22 CCR 66266.81(a)(1)
 - 3030003 Failed to properly manage 'damaged' spent lead acid batteries. 22 CCR 66266.81(b)
 - 3030004 Failed to properly manage, store, label, and/or recycle used oil filters and/or used fuel filters. HSC 25250.22; 22 CCR 66266.130
 - 3050004 Failed to properly manage contaminated used oil as a hazardous waste. HSC 25250.7(a), (c)
 - HMD 0222 Failed to properly label Excluded Recyclable Materials (ERM). HSC 25143.9(a).
 - HMD 0216 Failed to label hazardous material container within 10 days after the container was discovered to be mislabeled or inadequately labeled. HSC 25124(b)(3)(A); 22 CCR 66262.34(f)
 - HMD 0217 Failed to repack damaged/deteriorated hazardous material container within 96 hours. HSC 25124(b)(3)(B); 22 CCR 66262.34(f)
 - HMD 0219 Failed to properly segregate used oil &/or fuel drained from filters. HSC 25250.22(b)(4); 22 CCR 66266.130(c)(6)
 - HMD 0221 Failed to comply with hazardous waste satellite container regulation. 22 CCR 66262.34(e)
 - HMD 0223 Failed to properly empty container, failed to manage non-empty container, or inner liner removed from a container. 22 CCR 66261.7(b), (d) and/or (r); 66262.34(f)
 - HMD 0224 Failed to mark date on empty container larger than 5 gallons and/or manage it within one year. 22 CCR 66261.7(e),(f)

Universal Waste Handler Requirements

- 3010004 Failed to obtain an EPA ID number from DTSC or US EPA prior to storing 5,000 kg or more of universal waste. 22 CCR 66273.32(a),(b)
- 3020002 Failed to maintain universal waste handler training records for 3 years. 22 CCR 66273.36(c),(d)
- 3020003 Failed to properly train handlers of universal waste in universal waste management and response procedures. 22 CCR 66273.36(a),(b)
- 3030008 Failed to properly label or mark a universal waste (non-Conditionally Exempt Small Quantity Universal Waste Generator). 22 CCR 66273.34
- 3030011 Failed to properly dispose of universal waste within one year. 22 CCR 66273.35(a) and/or (b)
- 3030046 Failed to keep records of offsite universal waste (UW) shipment(s) available for inspection for 3 years. HSC 25185(a); 22 CCR 66273.39(c), (d)(2)
- 3030051 Failed to meet the accumulation standards for universal waste aerosol containers and waste handling. HSC 25201.16(f)
- 3040004 Failed to manage universal waste in a manner to prevent release(s) to the environment. 22 CCR 66273.33; 66273.33.5
- 3050003 Disposal of universal waste (UW) to an unauthorized point. HSC 25189.5(a), 25189(c),(d); 25189.2(c); 22 CCR 66273.31(a)

COMPLIANCE INSPECTION REPORT

INSPECTION DATE: 01/24/2017 PAGE 5 OF 5
 RECORD ID #: DEH2016-HUPFP-002990

Medical Waste Generators

Each violation checked below is for the section(s) of the California health and Safety Code (HSC), California Code of Regulation (CCR), or the San Diego County Code (SDCC) indicated in italics. All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form (HM-926) to document your return to compliance. Please call (858) 505-6880 or your Specialist if you have any questions. UPF = Unified Program Facility; MW = Medical Waste; USPS = United States Postal Service; DOT = Department of Transportation

STORAGE AND LABELING

- | # | HMD | VIOLATION DESCRIPTION |
|--------------------------|------|---|
| <input type="checkbox"/> | 4201 | UPF Permit not obtained. HSC 117705; SDCC 68.905, 68.1202 |
| <input type="checkbox"/> | 4202 | Medical waste (MW) not separated from other waste at the point of origin. HSC 118275 |
| <input type="checkbox"/> | 4203 | Enclosure or designated accumulation area for MW containers not secured. HSC 118307, 118310 |
| <input type="checkbox"/> | 4204 | MW designated accumulation area not posted with an approved, legible biohazardous waste "warning sign" in English & Spanish which can be read from 25 ft. HSC 118310 |
| <input type="checkbox"/> | 4205 | Medical SOLID WASTE not secured to deny access to unauthorized persons. SDCC 68.1211 |
| <input type="checkbox"/> | 4206 | Spill of MW not properly cleaned up. HSC 118300 |
| <input type="checkbox"/> | 4207 | Sharps not stored in approved and properly marked sharps container. HSC 118285(a) & (d) |
| <input type="checkbox"/> | 4208 | Full sharps container not taped closed or tightly-lidded to preclude loss of contents. HSC 118285(b) |
| <input type="checkbox"/> | 4209 | Primary containers accumulating MW not labeled with generator's name, address, and phone number. SDCC 68.1205 |
| <input type="checkbox"/> | 4210 | Medical waste not stored in approved and properly marked biohazard bags. HSC 118275(a) |
| <input type="checkbox"/> | 4211 | Biohazard bags not tied off to prevent leakage/expulsion of contents during handling and storage. HSC 118280(a) |
| <input type="checkbox"/> | 4212 | Biohazard bags not containerized in rigid, leak resistant, and covered containers or bins when placed for storage, handling, or transport. HSC 118280(b) |
| <input type="checkbox"/> | 4213 | Waste container/bin not labeled with the words "Biohazardous Waste" or with the international biohazard symbol and the word "BIOHAZARD" on the lid and sides. HSC 118280(c) |
| <input type="checkbox"/> | 4214 | Reusable containers/bins for MW storage not kept clean and sanitary. HSC 118295, 118305 |
| <input type="checkbox"/> | 4215 | Frozen (0°C/32°F) biohazardous waste stored >90 days. HSC 118280(e)(2) |
| <input type="checkbox"/> | 4306 | Full sharps container stored >30 days at >0°C. HSC 118285(c) |
| <input type="checkbox"/> | 4307 | Biohazard bag waste stored >7 days at >0°C (for generators of >20lbs/month). HSC 118280(e)(1)(A) |
| <input type="checkbox"/> | 4308 | Biohazard bag waste stored >30 days at >0°C (for generators of <20lbs/month). HSC 118280(e)(1)(B) |
| <input type="checkbox"/> | 4219 | MW interim storage area not marked with warning sign or biohazard symbol legible from 5 ft. HSC 118307, 118310 |
| <input type="checkbox"/> | 4220 | MW interim storage area not properly secured. HSC 118307 |

TREATMENT AND DISPOSAL

- | | | |
|--------------------------|------|--|
| <input type="checkbox"/> | 4251 | MW treated by unapproved method/procedure. HSC 118215 |
| <input type="checkbox"/> | 4252 | Standardized written operating procedures for steam sterilization not available. HSC 118215(a)(2)(A) |
| <input type="checkbox"/> | 4253 | Recording thermometer not calibrated annually. HSC 118215(a)(2)(B) |
| <input type="checkbox"/> | 4254 | No records of annual thermometer calibration checks onsite for at least the past 2 years. HSC 118215(a)(2)(B) |
| <input type="checkbox"/> | 4255 | Heat-sensitive tape/other approved method not used for each load treated onsite. HSC 118215(a)(2)(C) |
| <input type="checkbox"/> | 4256 | Monthly biological indicator or other approved method not used to confirm proper disinfection. HSC 118215(a)(2)(D) |
| <input type="checkbox"/> | 4257 | Onsite steam sterilization did not reach 121°C/250°F for 30 minutes. HSC 118215(a)(2)(B) |
| <input type="checkbox"/> | 4258 | Treatment records/logs of dates, time, and temperature not available for 2 years. HSC 118215(a)(2)(E) |
| <input type="checkbox"/> | 4259 | Disposal of untreated MW to an unauthorized point. HSC 118340 |

TRANSPORTATION REQUIREMENTS

- | # | HMD | VIOLATION DESCRIPTION |
|--------------------------|------|---|
| <input type="checkbox"/> | 4260 | Transportation of MW without State Hauler Registration, USPS or requirements of the DOT "Materials of Trade Exceptions." HSC 118025 |
| <input type="checkbox"/> | 4311 | Medical waste tracking documents/logs not in vehicle transporting medical waste. HSC 118040 |

SMALL QUANTITY GENERATORS ONLY

(<200 pounds of medical waste generated per month)

- | | | |
|--------------------------|------|---|
| <input type="checkbox"/> | 4301 | Medical Waste Management Plan (MWMP) not submitted to HMD (initial/updates), if onsite treatment. HSC 117935 |
| <input type="checkbox"/> | 4302 | Did not maintain and show proof of "onsite" medical waste treatment records for 3 years. HSC 117943 |
| <input type="checkbox"/> | 4303 | Did not retain on file disposal receipts, tracking/shipping documents for medical waste shipped offsite for 3 years. HSC 117945 |
| <input type="checkbox"/> | 4309 | MWMP or equivalent information not onsite (only for SQG doing onsite treatment or comply with pharmaceutical waste hauling exemption). HSC 117935, 118032 |

LARGE QUANTITY GENERATORS ONLY

(≥ 200 pounds of medical waste generated per month)

- | | | |
|--------------------------|------|--|
| <input type="checkbox"/> | 4351 | MWMP not submitted to HMD (initial/updates). HSC 117960, 117970 |
| <input type="checkbox"/> | 4352 | Records of medical waste treatment not available for 2 years. HSC 117975, 118215(a)(2)(E) |
| <input type="checkbox"/> | 4353 | Did not make available disposal receipts, tracking/shipping documents for at least 2 years for medical waste shipped offsite. HSC 117975 |

CHEMOTHERAPY, PATHOLOGY, PHARMACEUTICAL HAZARDOUS & UNIVERSAL WASTES

- | | | |
|--------------------------|---------|--|
| <input type="checkbox"/> | 4401 | Trace Chemo waste not segregated from other MW. HSC 118275(a)(4) |
| <input type="checkbox"/> | 4402 | Trace Chemo waste container not labeled "Chemotherapy Waste" or "CHEMO" on the lid and the sides. HSC 118275(a)(4) |
| <input type="checkbox"/> | 4403 | Illegal disposal of chemo waste. HSC 118340 |
| <input type="checkbox"/> | 4411 | Pathology waste not segregated from other MW. HSC 118275(a)(5) |
| <input type="checkbox"/> | 4412 | Pathology waste container not labeled "Pathology Waste" or "PATH" on the lid and the sides. HSC 118275(a)(5) |
| <input type="checkbox"/> | 4413 | Illegal disposal of pathology waste. HSC 118340 |
| <input type="checkbox"/> | 4421 | Pharm waste not segregated from other MW. HSC 118275(a)(6) |
| <input type="checkbox"/> | 4422 | Pharm waste not labeled "Incineration Only or HIGH HEAT" on the lid and the sides. HSC 118275(a)(6) |
| <input type="checkbox"/> | 4423 | Pharm waste stored >90 days when container full, or stored longer than one year (maximum allowable time). HSC 118280(f) |
| <input type="checkbox"/> | 4432 | Illegal disposal of pharm waste. HSC 118340, 118222(b) |
| <input type="checkbox"/> | 4441 | Disposal of photo/hazwaste to an unauthorized point. HSC 25189.5 |
| <input type="checkbox"/> | 3030046 | Failed to keep records of offsite universal waste shipment(s) available for inspection for 3 years. HSC 25185(a)(4); 22 CCR 66273.39(c),(d)(2) |
| <input type="checkbox"/> | 3050003 | Disposed of universal waste to an unauthorized point. HSC 25189.5(a); 25189(c),(d); 25189.2(c); 22 CCR 66273.31(a) |

LOG MW ONSITE TREATMENT FACILITY

(≥ 200 pounds of medical waste generated per month)

- | | | |
|--------------------------|------|--|
| <input type="checkbox"/> | 4501 | Onsite MW treatment permit not obtained/renewed. HSC 117950, 118130, 65620, 65623 |

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6. This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

Medical Waste Management Plan

Facility Information	
Business Name Revelation Biosciences Inc	Permit or Registration #
Type of Business R&D	Date 04/05/2021
Street Address 11011 Torreyana Rd, Suite 102	City/ZIP 92121
Person Responsible for implementing the Medical Waste Management Plan (MWMP)	
Name Jackson Stephens	
Title Scientist	Phone 619-944-9443
Types of Medical Wastes (MW) Generated	
Please check the box for all types of medical waste that will be generated by your facility. Also estimate the number of pounds (lbs.) that will be generated each month. Definitions are in Chapter 2 of the Medical Waste Management Act in the California Health and Safety Code (HSC) §117625-117780.	
<input type="checkbox"/> Sharps waste - a device used in a healthcare setting that has acute rigid corners, edges, or protuberances capable of cutting or piercing. (e.g., needles, syringes, blades, scalpels, root canal files, Pasteur pipettes, or broken glass) Estimated monthly amount _____ lbs	<input checked="" type="checkbox"/> Biohazardous waste – regulated medical waste, clinical waste, or biomedical waste from the medical treatment of a human or from an animal that is suspected to be infected with a pathogen that is infectious to humans. Biohazardous waste also includes: Highly Communicable waste - waste contaminated with excretion, exudates or secretions from humans or animals who are isolated due to highly communicable diseases. Laboratory waste – infectious specimens or microbiological cultures, stocks of infectious agents, live and attenuated vaccines, biologicals, and culture media. Fluid Blood or Blood Products – recognizable fluid human blood or blood products, containers, equipment containing human blood or blood from animals Estimated monthly amount <u>100</u> lbs
<input type="checkbox"/> Non RCRA Pharmaceutical waste - a prescription or over-the-counter human or veterinary drug that is not RCRA hazardous waste nor radiological waste. Estimated monthly amount _____ lbs	<input checked="" type="checkbox"/> Liquid/Semi-liquid biohazardous waste - treated onsite by chemical disinfection and discharged to sewer.* Estimated monthly amount <u>530</u> lbs
<input type="checkbox"/> Trace Chemotherapeutic waste - waste that is contaminated through contact or contained, chemotherapeutic agents. (e.g. gloves, disposable gowns, towels, and empty IV bags with attached tubing) Estimated monthly amount _____ lbs	<input type="checkbox"/> Other (specify): Estimated monthly amount _____ lbs
<input type="checkbox"/> Pathology waste – human body parts or animal tissues suspected to be infectious to humans or have been fixed in formaldehyde or other fixative Estimated monthly amount _____ lbs	
<input type="checkbox"/> Trauma Scene waste – waste that has been removed, is to be removed, or is in the process of being removed, from a trauma scene by a trauma scene waste management practitioner. Estimated monthly amount _____ lbs	
Estimate of <u>TOTAL</u> monthly medical waste generated: <u>130</u> lbs	

*Per HSC §118215(c), for liquid or semi-liquid biohazardous laboratory waste (§117690(b)(1)(B)), the treatment method must be recognized by the NIH, the CDC, or the American Biological Safety Association. If the chemical disinfection of the medical waste causes the waste to become a hazardous waste, the waste shall be managed in accordance with the requirements of HSC Chapter 6.5 (commencing with §25100) of Division 20.

Registered Medical Waste Hauler or Common Carrier

In accordance with HSC, a generator of medical waste shall maintain on file in its office all the following:

- (1) An information document stating how the generator contains, stores, treats, and disposes of any medical waste generated through any act or process of the generator. This document satisfies this requirement.
- (2) Tracking documents or electronically archived tracking documents maintained by the facility and medical waste hauler of all untreated medical waste shipped offsite for treatment. **LQGs must maintain these records for no less than two years** HSC § 117975; **SQGs must maintain these records for no less than three years** HSC § 117943.

Documentation shall be made available to the enforcement agency onsite.

Primary Medical Waste Transporter Veolia	CA Registration # 3400
Street Address 9530 Candida St,	City/ZIP San Diego, CA 92126
Contact Person CUSTOMER SERVICE	Phone # (858) 244-0486

How frequently will the waste be disposed? (e.g. weekly, monthly, quarterly): Weekly

Will employees be transporting waste to a central facility for disposal? * Yes No

Will the facility be treating any medical waste prior to disposal to municipal trash? * Yes No

If Yes, what method of treatment will be used?

Is there a plan to properly characterize and dispose of pharmaceutical waste in accordance with DEA, RCRA, Radiological Control Law if applicable? * Yes No

*Additional regulations may apply, contact [HMD Duty Desk](#) for more information.

Decontamination Procedure

In accordance with HSC§118295 and 118300, the following decontamination procedure is to be followed in the event of a biohazardous spill or contamination, to include but not limited to the reuse of rigid containers for medical waste. Approved methods of decontamination include, but are not limited to, agitation to remove visible soil combined with one of the following procedures:

Check the appropriate box indicating which method of disinfection you will use:

- Exposure to hot water 180°F for ≥ 15 seconds
- Rinse/Immersion in hypochlorite solution for ≥ 3 minutes
(500 ppm available chlorine)
- Rinse/Immersion in phenolic solution for ≥ 3 minutes
(500 ppm active agent)
- Rinse/Immersion in Iodoform solution for ≥ 3 minutes
(100 ppm available iodine)
- Rinse/Immersion in Quaternary ammonium solution for ≥ 3 minutes
(400 ppm available active agent)

Acknowledgement

I have read and understood, as a medical waste generator, I am required to comply with the applicable requirements in the Medical Waste Management Act found in the California Health and Safety Code, Sections 117600-118360. Yes

Self-Certification Statement

I declare under penalty of law that to the best of my knowledge and belief, the statements made herein are correct and true. I hereby consent to all necessary inspections made pursuant to the California Medical Waste Management Act and incidental to the issuance of my permit or registration and the operation of this business.

Attachments: PRA_12-09-22_G. Haro_11011 Torreyana Road, San Diego, CA 92121 (APN 340-010-2900).zip

Hello Gabriel,

The San Diego County Air Pollution Control District (“District”) has received your California Public Records Act request dated December 9, 2022 for Notices to Comply (NTC), Notices of Violation (NOV), Permits to Operate (PTO), and Site Inspection Reports from 1950-01-01 to 2022-12-09 for the address, 11011 Torreyana Road, San Diego, CA 92121 (APN: 340-010-2900). We have attached copies of the documents responsive to your request to this email, including site histories for your reference.

If you have any questions, then please do not hesitate to contact Public Records at (858) 586-2600.

Regards,

Atifa Said | Administrative Analyst | Public Records
San Diego County | Air Pollution Control District
10124 Old Grove Road, San Diego, CA 92131

PERMIT TO OPERATE
EXPIRES: April 30, 2014

This permit is not valid until required fees have been paid.

The above is hereby granted a Permit To Operate the article, machine, equipment or contrivance described below. This permit is not transferable to a new owner nor is it valid for operation of the equipment at another location except as specified. This Permit To Operate or copy must be posted on or within 25 feet of the equipment, or readily available on the operating premises.

EQUIPMENT DESCRIPTION

Emergency standby engine: Detroit Diesel/MTU diesel engine, Model 12V2000 G84 R123-8A36 (S/N: 5352005377) , rated at 1120 BHP, Model Year 2007, EPA Tier 2 certified of Engine Family Number 7MDDL31.8XRR, driving a 750 KW generator. Equipped with turbocharger and aftercooler.

Every person who owns or operates this equipment is required to comply with the conditions listed below and all applicable requirements and District rules, including but not limited to Rules 10, 20, 40, 50, 51.

Fee Schedules: 1 [34H] California Certified Emergency Standby Engine

BEC: APCD2011-CON-000296

FAILURE TO OPERATE IN COMPLIANCE IS A MISDEMEANOR SUBJECT TO CIVIL AND CRIMINAL PENALTIES

1. The engine shall be operated exclusively during emergencies as defined in Rule 69.4.1 or Rule 12 or 17CCR93115 as applicable, or for maintenance and testing.
2. This engine shall not be enrolled in a Demand Response Program (DRP) at any time. (17CCR 93115)
3. Engine operation for maintenance and testing purposes shall not exceed 50 hours per calendar year. (17 CCR 93115)
4. This engine shall only use CARB diesel fuel. (RULE 69.4.1, 17 CCR 93115)
5. Visible emissions including crank case smoke shall comply with Air Pollution Control District Rule 50. (Rule 50)
6. The equipment described above shall not cause or contribute to a public nuisance. (Rule 51)
7. This engine shall not operate for non-emergency use during the following periods, as applicable:
 - (a) whenever there is any school sponsored activity, if engine is located on school grounds or
 - (b) between 7:30am and 3:30pm on days when school is in session, if the engine is located within 500 feet of, but not on, school grounds.
 This condition shall not apply to an engine located at or near any school grounds that also serve as the students' place of residence. (17 CCR 93115)
8. Engine operation in response to notification of an impending rotating outage, shall be subject to all the following restrictions:

Sectors: 3, G

Site ID: APCD2012-SITE-01190

App ID: APCD2012-APP-002382

PERMIT TO OPERATE

EXPIRES: April 30, 2014

- (a) the utility distribution company has ordered rotating outages in the control area where the engine is located.
- (b) the engine is operated no more than 30 minutes prior to the time when the utility distribution company officially forecasts a rotating outage in the cited control area, and
- (c) the engine operation is terminated immediately after the utility distribution company advises that a rotating outage is no longer in effect.
- This condition shall not apply to engines operating pursuant to the rolling blackout reduction program as defined in 17 CCR 93115 and operating in accordance with 17 CCR 93115 (e)(2)(f). (17CCR93115)
9. A non-resettable engine hour meter shall be installed on this engine, maintained in good working order, and used for recording engine operation hours. If a meter is replaced, the Air Pollution Control District's Compliance Division shall be notified in writing within 10 calendar days. The written notification shall include the following information:
- (a) old meter's hour reading
- (b) replacement meter's manufacturer name, model and serial number if available and current hour reading on replacement meter
- (c) copy of receipt of new meter or of installation work order. A copy of the meter replacement notification shall be maintained onsite and made available to the Air Pollution Control District upon request.
(Rule 69.4.1, 17 CCR 93115)
10. The owner or operator of this engine shall conduct periodic maintenance of the engine and add-on control equipment, if any, as recommended by the engine and control equipment manufacturers or as specified by the engine servicing company's maintenance procedures. The periodic maintenance shall be conducted at least once each calendar year. (Rule 69.4.1)
11. The owner or operator of the engine shall maintain the following records on site for at least the same period of time as the engine to which the records apply is located at the site:
- (a) documentation shall be maintained identifying the fuel as CARB diesel.
- (b) manual of recommended maintenance provided by the manufacturer, or maintenance procedures specified by the engine servicing company; and
- (c) records of annual engine maintenance including date the maintenance was performed.
These records shall be made available to the Air Pollution Control District upon request.
(Rule 69.4.1)(17 CCR 93115)
12. The owner or operator of this engine shall maintain a monthly operating log containing, at a minimum, the following:
- (a) dates and times of engine operation; whether the operation was for maintenance and testing purposes or emergency use; and the nature of the emergency, if known;
- (b) hours of operation for all uses other than those specified above and identification of the nature of that use.
(Rule 69.4.1, 17 CCR 93115)
13. All operational and maintenance logs and fuel use and type and purchase records required by this permit shall be kept for a minimum of 36 months from their date of creation unless otherwise indicated by the conditions of this permit. The records shall be maintained onsite for a minimum of 24 months from their date of creation. Records for the last 24 months of operations shall be made available to the Air Pollution Control District upon request. Records for operation for the last 25 to 36 months shall be made available to the Air Pollution Control District within 5 working days of request. (69.4.1, 17 CCR 93115)
14. Access, facilities, utilities and any necessary safety equipment for source testing and inspection shall be

EQUIPMENT ADDRESS: 11011 TORREYANA, SAN DIEGO CA 92121

This is to inform you that your Permit to Operate No(s) APCD2008-PTO-961744 for your non-operational equipment was retired pursuant to San Diego County Air Pollution Control District 10(h) on December 1, 2012. This action was undertaken because you failed to renew the permit within the required six (6) months from the date of expiration.

If you wish to reinstate your permit, it must be done within six (6) months of the retirement date. To reinstate the permit, contact Permit Processing at (858) 586-2600.

Please be advised that any operation of the equipment after the retirement date described in the aforementioned Permit to Operate is a misdemeanor, which may be subject to substantial fines or penalties. If the equipment is observed in use by the District, appropriate legal action will be undertaken.

A new Permit to Operate may be applied for by submitting an application and the necessary fee to the Air Pollution Control District.

6. This engine shall not operate for non-emergency use during the following periods, as applicable:
 - (a) Whenever there is any school sponsored activity, if engine is located on school grounds or
 - (b) Between 7:30am and 3:30pm on days when school is in session, if the engine is located within 500 feet of, but not on, school grounds.This condition shall not apply to an engine located at or near any school grounds that also serve as the students' place of residence. (17 CCR 93115)

7. Engine operation in response to notification of an impending rotating outage, shall be subject to all the following restrictions:
 - (a) The utility distribution company has ordered rotating outages in the control area where the engine is located.
 - (b) The engine is operated no more than 30 minutes prior to the time when the utility distribution company officially forecasts a rotating outage in the cited control area, and
 - (c) The engine operation is terminated immediately after the utility distribution company advises that a rotating outage is no longer in effect.This condition shall not apply to engines operating pursuant to the rolling blackout reduction program as defined in 17 CCR 93115 and operating in accordance with 17 CCR 93115 (e)(2)(f). (17CCR93115)

8. A non-resettable engine hour meter shall be installed on this engine, maintained in good working order, and used for recording engine operation hours. If a meter is replaced, the Air Pollution Control District's Compliance Division shall be notified in writing within 10 calendar days. The written notification shall include the following information:
 - (a) Old meter's hour reading
 - (b) Replacement meter's manufacturer name, model and serial number if available and current hour reading on replacement meter
 - (c) Copy of receipt of new meter or of installation work order. A copy of the meter replacement notification shall be maintained onsite and made available to the Air Pollution Control District upon request.(Rule 69.4.1, 17 CCR 93115)

9. The owner or operator of this engine shall conduct periodic maintenance of the engine and add-on control equipment, if any, as recommended by the engine and control equipment manufacturers or as specified by the engine servicing company's maintenance procedures. The periodic maintenance shall be conducted at least once each calendar year. (Rule 69.4.1)

PERMIT TO OPERATE

10. The owner or operator of the engine shall maintain the following records on site for at least the same period of time as the engine to which the records apply is located at the site:
 - (a) Documentation shall be maintained identifying the fuel as CARB diesel.
 - (b) Manual of recommended maintenance provided by the manufacturer, or maintenance procedures specified by the engine servicing company; and
 - (c) Records of annual engine maintenance including date the maintenance was performed.These records shall be made available to the Air Pollution Control District upon request.
(Rule 69.4.1)(17 CCR 93115)
11. The owner or operator of this engine shall maintain a monthly operating log containing, at a minimum, the following:
 - (a) Dates and times of engine operation; whether the operation was for maintenance and testing purposes or emergency use; and the nature of the emergency, if known;
 - (b) Hours of operation for all uses other than those specified above and identification of the nature of that use.(Rule 69.4.1, 17 CCR 93115)
12. All operational and maintenance logs and fuel use and type and purchase records required by this permit shall be kept for a minimum of 36 months from their date of creation unless otherwise indicated by the conditions of this permit. The records shall be maintained onsite for a minimum of 24 months from their date of creation. Records for the last 24 months of operations shall be made available to the Air Pollution Control District upon request. Records for operation for the last 25 to 36 months shall be made available to the Air Pollution Control District within 5 working days of request. (69.4.1, 17 CCR 93115)
13. Access, facilities, utilities and any necessary safety equipment for source testing and inspection shall be provided upon request of the Air Pollution Control District.
14. This Air Pollution Control District Permit does not relieve the holder from obtaining permits or authorizations required by other governmental agencies.
15. The permittee shall, upon determination of applicability and written notification by the District, comply with all applicable requirements of the Air Toxics "Hot Spots" Information and Assessment Act (California Health and Safety Code Section 44300 et seq.)

EVERY PERSON WHO OWNS OR OPERATES THIS EQUIPMENT IS REQUIRED TO COMPLY WITH THE CONDITIONS LISTED BELOW AND ALL APPLICABLE REQUIREMENTS AND DISTRICT RULES, INCLUDING BUT NOT LIMITED TO RULES 2, 10, 40, 50, 51, 67.17, 69.2, 62, 53.

FAILURE TO OPERATE IN COMPLIANCE IS A MISDEMEANOR SUBJECT TO CIVIL AND CRIMINAL PENALTIES.

1. THE BOILER SHALL BE OPERATED ON NATURAL GAS ONLY. NO OTHER FUEL SHALL BE USED WITHOUT PRIOR WRITTEN AUTHORIZATION FROM THE DISTRICT.
2. A NON-RESETTABLE TOTALIZING FUEL METER SHALL BE INSTALLED IN THE FUEL LINE TO MEASURE THE VOLUMETRIC FLOW RATE OF FUEL TO THIS EQUIPMENT. THIS METER SHALL BE PROPERLY CALIBRATED, MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES. A RECORD OF THE CALIBRATION SHALL BE MAINTAINED ON SITE, UNLESS CALIBRATED BY THE GAS UTILITY, AND MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST.
3. THE FUEL METER TO THIS EQUIPMENT SHALL EITHER BE SELF-CORRECTING TO STANDARD PRESSURE (14.7 PSIA) OR THE PERMITTEE SHALL DETERMINE THE NORMAL OPERATING PRESSURE OF THE FUEL LINE AT THE INLET OF THE METER. A RECORD OF THE FUEL LINE PRESSURE SHALL BE POSTED AT THE FUEL METER OR SHALL BE MAINTAINED WITH THE EQUIPMENT AND MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST.
4. NATURAL GAS USAGE SHALL NOT EXCEED 220,000 THERMS PER CALENDAR YEAR. THIS IS AN AMOUNT EQUAL TO 21,568,627 CUBIC FEET OF NATURAL GAS PER

6. THIS EQUIPMENT SHALL BE SOURCE TESTED FOR COMPLIANCE AT LEAST ONCE PER PERMIT YEAR BEFORE THE PERMIT RENEWAL DATE, UNLESS OTHERWISE SPECIFIED IN WRITING BY THE DISTRICT. TESTING SHALL BE CONDUCTED IN ACCORDANCE WITH DISTRICT TEST METHOD 100 AND IN ACCORDANCE WITH SOURCE TEST REQUIREMENTS SPECIFIED IN DISTRICT RULE 69.2 (G) AND 69.3.1 (G).
7. IF COMPLIANCE WITH THE NOX AND CO EMISSION STANDARDS CANNOT BE DEMONSTRATED TO THE SATISFACTION OF THE DISTRICT, THE PERMITTEE SHALL TAKE CORRECTIVE ACTION TO MEET THESE LIMITS. ANY PROPOSED CORRECTIVE ACTION THAT WOULD RESULT IN A MODIFICATION TO THE EQUIPMENT SHALL REQUIRE AN APPLICATION AND A DISTRICT AUTHORITY TO CONSTRUCT FOR SUCH MODIFICATION. IN THE EVENT THE COMPLIANCE TEST RESULTS DO NOT DEMONSTRATE TO THE DISTRICT'S SATISFACTION THAT THE FACILITY CAN BE EXPECTED TO MAINTAIN CONTINUAL COMPLIANCE, THE APPLICATION FOR THE PERMIT TO OPERATE WILL BE SUBJECT TO DENIAL.
8. ACCESS, FACILITIES, UTILITIES AND ANY NECESSARY SAFETY EQUIPMENT FOR SOURCE TESTING AND INSPECTION SHALL BE PROVIDED UPON REQUEST OF THE AIR POLLUTION CONTROL DISTRICT.
9. THIS AIR POLLUTION CONTROL DISTRICT PERMIT DOES NOT RELIEVE THE HOLDER FROM OBTAINING PERMITS OR AUTHORIZATIONS REQUIRED BY OTHER GOVERNMENTAL AGENCIES.
10. THE PERMITTEE SHALL, UPON DETERMINATION OF APPLICABILITY AND WRITTEN NOTIFICATION BY THE DISTRICT, COMPLY WITH ALL APPLICABLE REQUIREMENTS OF THE AIR TOXICS 'HOT SPOTS' INFORMATION AND ASSESSMENT ACT (CALIFORNIA HEALTH AND SAFETY CODE SECTION 44300 ET. SEQ.)

 this boiler is limited to 220,000 lbs/hr, natural gas amount for cond #4 found to qualify for R 69.2 (10/10/91) compliance option (10/20/93) (11/11/99 cond #1)
 220,000 lbs/hr applies to 10,000,000 Btu/hr (10/10/91) (11/11/99 cond #1)
 current flow meter reading: 72369000, on 3-3-98 (last inspection) 28140000 for not 11W consumption of 14,229,000 ccf since last inspec.
 records show that 21,059,000 (280 Kwh) has been consumed between 11/15/98; 11/16/99 (1st year of permit)
 records show that 21,076,000 (280 MWh) has been consumed between 9/27/98; 9/27-99 (1st year of R 69.2 applicability)
 records show that 21,076,000 (280 MWh) has been consumed between 11/99; 12/31/99 (1st calendar year of operation)
 records show that 21,076,000 (280 MWh) has been consumed between 1/1/00; 1/1/00 (1st calendar year of operation)

calendar year info being sent by site will submit NW when info is received

NOTICE OF VIOLATION

Date(s) of Violation 9-27-98 through 5-3-00 Date of Report 5-3-00
 Name Idec Inc. Phone (656) 550-8500
 Address 11011 Torreyana Rd. City San Diego 92121
 Violation Location same City _____ (Zip Code)

Specifically, the following violation(s) of the San Diego Air Pollution Control District rules and/or laws of the State of California has occurred: (abbreviations: H&S=Cal. Health & Safety Code; CCR=Cal. Code of Regulations; R=Rule)

Section	Description of Violation
Rule 21 for condition # 4 of the Permit to Operate	for exceeding the 220,000 therm per year limit for natural gas consumption for the Parker boiler, serial number H2645, 63 MBTU
Rule ⁶¹² 612 for condition # 5 of the Permit to Operate	failure to tune the boiler at least once per year in accordance with the tuning procedure outlined in District Rule 612 (section J)

Pursuant to California Health and Safety Code section 42400 et seq., any person who violates any Order, Rule, or Regulation of the State Board or of an Air Pollution Control District is guilty of a MISDEMEANOR. Each day a violation occurs constitutes a separate offense.

YOU MUST ADVISE THE DISTRICT IN WRITING, WITHIN TEN DAYS, OF THE ACTION TAKEN TO CORRECT THE ALLEGED VIOLATION(S) OR THE REASON(S) YOU BELIEVE THE VIOLATION(S) DID NOT OCCUR. PLEASE MAIL YOUR RESPONSE TO THE AIR POLLUTION CONTROL DISTRICT, ATTENTION: COMPLIANCE DIVISION, 9150 CHESAPEAKE DRIVE, SAN DIEGO, CALIFORNIA 92123-1096.

Inspector Wesley Burton Date 5-3-00 Time 16:45

SIGNING THIS NOTICE ACKNOWLEDGES RECEIPT OF THIS NOTICE, IT IS NOT AN ADMISSION OF GUILT.

RE: Permit to Operate Number 961744

May 3, 2007

Mr. Haury,

Enclosed are the following forms requested to expedite a review and modify the conditions (remove the source test requirement) on our Boiler Permit to Operate:

- APCD 116(Rev. 04/07) – Permit /Registration Application
- Supplemental Application Information – Fee Schedule I31

Please contact me on Nextel if you need any additional information.

Thank You,

Judi Gaither

**NOTICE OF INTENT TO MODIFY
PERMIT TO OPERATE CONDITIONS**

The District is modifying the conditions of Permit to Operate No.(s) 961744. The modifications to your permit conditions reflect current District requirements and Compliance procedures.

The new operating conditions appear on the attached Permit to Operate. Please review each condition carefully. You are required to operate in accordance with these new conditions.

Within 30 days after receipt of this letter, you may petition the Hearing Board for a hearing on any revised condition in accordance with Rule 25.

If you have any questions regarding the modified conditions, please contact Dan Speer at (858) 650-4607.

PERMIT / REGISTRATION APPLICATION

FILING THIS APPLICATION DOES NOT GRANT PERMISSION TO CONSTRUCT OR TO OPERATE EQUIPMENT

IMPORTANT REMINDERS: Read instructions on the reverse side of this form prior to completing this application. Please ensure that all of the following are included before you submit the application:

- Appropriate Permit Fee
- Completed Supplemental Form(s)
- Signature on Application

REASON FOR SUBMITTAL OF APPLICATION: (check the appropriate item and enter Application (AP) or Permit to Operate (PO) number if required)

- 1. New Installation
- 2. Existing Unpermitted Equipment or Rule 11 Change
- 3. Modification of Existing Permitted Equipment
- 4. Amendment to Existing Authority to Construct or AP
- 5. Change of Equipment Location
- 6. Change of Equipment Ownership
- 7. Change of Permit Conditions
- 8. Change Permit to Operate Status to Inactive
- 9. Banking Emissions
- 10. Registration of Portable Equipment
- 11. Other (Specify) _____
- 12. List affected AP/PO#(s): 961744 9716831

APPLICANT INFORMATION

- 13. Name of Business (DBA) TANOX WEST INC.

**NATURAL GAS FIRED BOILER LESS THAN 50 MM BTU PER HR AND WITH
AN ANNUAL HEAT INPUT LESS THAN 220,000 THERMS PER YEAR OR
LESS THAN 10 PERCENT ANNUAL CAPACITY FACTOR**

Please type or print the information requested below.

Update

Company Name: Tanox West, Inc

Equipment Address: 11011 Torreyana Rd.

New Replacement Other boilers at facility? Yes No

School within 1000 feet?* Yes No Parcel No. _____

A. EQUIPMENT DESCRIPTION

Manufacturer/Model/ S/N: Parker Industrial, 150HP, S/N 42645

Heat Input Capacity: 6.3 MM Btu/hr (limit is 5 to 50 MM Btu/hr)

Fuel Meter: Make/Model/Serial No. American Meter Co., GT-3, 275psi, 10,000 cfm, S/N 997717

Is meter corrected to standard conditions? Yes No

If No, it will be necessary to know the fuel line pressure immediately upstream of the meter in order to evaluate fuel usage

NO IA ✓ DIMAYOT

Provide the equipment manufacturer's specifications.

B. PROCESS DESCRIPTION: (Briefly describe the intended use of the boiler indicating hours per year use.)

To heat utilities and plant steam

C. OPERATING SCHEDULE

Maximum: 24 hrs/day; 7 days/wk; 52 wks/yr

D. FUEL INFORMATION:

Type of fuel: (Natural Gas, LPG etc.) Natural Gas

Annual Fuel Usage: 17,815,000 Cubic Feet (limit is 21,568,627 cu. ft /yr)

Maximum Annual Hours of Operation: 8,760 hrs/yr

Does this engine use diesel fuel as a backup?* Yes No

Name of Preparer: Judi Gaither Phone No.: (858) 864-6576

Title: Senior Facilities Coordinator Date: 01 May 07

*Please note that boilers located within 1000 feet of a school or which can be fired on diesel fuel, even as a backup fuel, are ineligible for the Streamlined permitting program.

① This is an update to an existing boiler PO#96174 permit. Please revise requirements of permit accordingly. Based on usage we may no longer need the source testing. JB DIMAYOT

RECEIVED

AIR POLLUTION
CONTROL DISTRICT

APPLICABLE RULES

Rule 50: Visible emissions

This Rule prohibits any person from discharging from any sources of emissions for a period of more than three minutes any air contaminant which is darker in shade than that designated as Number 1 on the Ringlemann Chart, or of such opacity as to obscure an observer's view to a degree greater than does smoke of a shade designated as number 1 on the Ringlemann chart.

Visible emission from this equipment operation is expected to be in compliance with rule.

Rule 51: Nuisance

This Rule prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other materials which causes injury, nuisance or annoyance to the public or which causes damage to business or property.

No nuisance complaints are expected from this equipment operation.

Rule 53 Specific Air Contaminants

This Rule prohibits any person from discharging from any sources of emissions combustion particulate matter in excess of 0.1 gr/dscf standardized to 12% CO₂.

PM levels for this boiler are negligible since CO level –in direct relationship with PM in natural gas combustion- is in the 9 ppm level. PM estimated to be less than 0.01 lb/day, therefore expected to be in compliance with this rule.

Rule 69.2: Industrial and Commercial Boilers

This Rule gives options to comply with Section (d) Emission Standards.

(d)(2) gives the possibility of an annual tuning of the boiler in lieu of source testing if the boiler does not have an annual heat input of 220,000 therms or more.

The applicant is selecting this option. To verify compliance it is required that the natural gas meter in operation will either display the cumulative standard cubic feet or display cumulative cubic feet with gas line pressure and to know the line pressure is approximately constant. New conditions proposed address this issue for 2nd alternative (non-standard cubic feet). Condition # 23861 addresses the tune-up obligation.

(e)(3) Requires the operator to monitor fuel heat value.

Condition #20599 requires the operator to use only natural gas.

(e)(6) Requires the operator to maintain documentation verifying the required annual tune-ups including the date.

Condition # 27421 addresses specifically the availability of tune-up documentation.

**ENGINEERING EVALUATION

Date Evaluation Completed: **May 24, 2007**
Date Evaluation Modified:

Senior Engineer Signature: 
Date Reviewed: 7/24/07

1.0 BACKGROUND

- 1.1 **Type of Application** – The Plant is already permitted with PO 961744. Application is to modify current permit to waive source testing and limit the boiler to 220K therms annually.
- 1.2 **Permit History** – The application was submitted in May 08, 2007 and the inspection of the facility was made on May 22, 2007.
- 1.3 **Facility Description** – Facility was first called IDEC Inc., and has now changed to Tanox West, a Houston based pharmaceutical research company. Facility does basically new drug research and testing.
- 1.4 **Other Background Information** – No board actions, no nuisance complaints, no legal issues, no Title V.

2.0 PROCESS DESCRIPTION

- 2.1 **Equipment** – Equipment already permitted is:
One (1) Parker Industrial Boiler: 150 HP, 6,300,000 BTU/hr, serial number 42645. Has a low NOx premix burner.
- 2.2 **Process** – Boiler produces steam to be used in plant heating devices, sterilizing and for utilities heating.

- 2.3 **Emissions Controls** – Boiler is fitted with a Lo-NOx premix burner said to be guaranteed to a maximum of 20 ppmv at 3% O2. Source testing (five data points) has shown NOx between 16 and 21 ppm at 3% O2.
- 2.4 **Attachments** – No process schematics.

3.0 EMISSIONS

- 3.1 **Emission Estimate Summary** – The emissions for this boiler will not vary but only be limited to 220K therms. Summary follows:

Pollutant	Daily emissions (lb/day)	Annual emission (tpy)
NOx	1.1328	0.207
CO	0.3612	0.066
THC	Negligible	Negligible
PM	Negligible	Negligible
Sox	0.02	0.0037

- 3.2 **Emission Estimate Assumptions** – The operating schedule of this facility is 24x7. We have used the annual estimate of therms to be used by the applicant and calculated an hourly average.
- 3.3 **Emissions Calculations** – Attached.
- 3.4 **Emission Calculation References** – Boiler annual output and real source test results on this boiler.

4.0 APPLICABLE RULES

- 4.1 **Prohibitory Rules** – Rules are: 50, 51, 53, 69.2. Are explained in detail in attachment but the boiler with premix burner has such good combustion that CO levels are of the 9.4 ppm order and therefore PM is negligible (< 0.01 lb/day) affecting positively all such rules.
- 4.2 **NSR** – BACT is not enforced since PM < 10 lb/day. In practice though, the emission with a NOx average level of 18.0 ppm is BACT from an economic standpoint. *(Not a new source)*.
- 4.3 **TNSR** – Not applicable as there is no toxics increase involved.
- 4.4 **AB 3205** – Not applicable as there is no toxics increase involved.
- 4.5 **ATCM REQUIREMENTS** - Not applicable.
- 4.6 **ATTACHMENTS** – Attached are Permit to Operate Approval Request (that includes the Rule Analysis), Emissions Calculations.

triggered criteria pollutants (NOx, VOC, PM, SOx)

6.0 RECOMMENDED CONDITIONS

6.1 Condition List -

Recommended the use of BEC 12686 modified with conditions that are associated with 220K limit and its determination. The proposed conditions are: 20599, 26847, 23861, 27421, New1, New2.

The new proposed conditions are:

New1: Natural gas usage shall not exceed 220,000 therms per calendar year.

This is an amount equivalent to 21,000,000 cubic feet measured at actual average gas pressure.

New2: Natural gas pressure near the meter shall be recorded and kept between the range of 10.5" and 12.5" water gage at least 90% of the time the boiler is in operation.

7.0 INSPECTION REPORT

An inspection report is attached.

*Note -
Until we get the computerized system
to modify BEC's, the facility will have
permit based on BEC ~~12686~~
12548*

REQUEST FOR NEW OR MODIFIED BASIC EQUIPMENT CODE (BEC)

BEC DESCRIPTION (equipment description as it will appear in VAX)		EXISTING AND/OR "NEW" CONDITION NOS. (list in order to appear on P/O, e.g. 11031, 11032, NEW1).	
BOILER, LIMITED TO 220,000 THERMS.		20599, 268847, 23861, 27421, NEW1, NEW2	
COND. NO.	NEW/CHANGED CONDITION LANGUAGE. LIST IN ORDER TO APPEAR ON P/O		
NEW1	NATURAL GAS USAGE SHALL NOT EXCEED 220,000 THERMS PER CALENDAR YEAR. THIS IS AN AMOUNT EQUIVALENT TO 21,000,000 CUBIC FEET MEASURED AT ACTUAL AVERAGE GAS PRESSURE.		
NEW2	NATURAL GAS PRESSURE NEAR THE METER SHALL BE RECORDED AND KEPT BETWEEN THE RANGE OF 10.5" TO 12.5" WATER GAGE AT LEAST 90% OF THE TIME THE BOILER IS OPERATING.		

NOTES: This set of conditions derives mostly from BEC 12686. We have added specific limits to the natural gas flow totalizer and keeping record of the pressure of the gas line.

+

Site Inspection Report

Site Name: Tanox West Inc. Application No. 985363.

Day: May 24, 2007

Time : Left APCD at about 9:20 am. Was at site at about 10:05 am. Left site at about 10:55 am. Back in APCD at about 11:25 am.

Observations:

Facility is a bio-pharmaceutical research site. Boiler produces plant steam, also used to heat utilities.

Steam produced is medium pressure. I have observed that it shuts down the main burner at about 122 # in the main line and it does reignite it at about 80 #, so the steam main line pressure is floating.

Boiler nameplate characteristics are:

Parker Boiler, serial no. 42645, 150 HP capacity, 6,300,000 BTU/hr, 150 psi, 1,993 sq-ft area. Local name is SB #2, 83E01.

The natural gas meter is a GT-3 American Meter 275 # and 10,000 cf/hr maximum. The meter cumulative reading at May 22, 10:15 am. was of **206056** uncorrected thousands of cubic feet of natural gas.

The main burner is a premix burner managing loads through a modulating motor that drives a fuel valve. The pressure at the premix burner was observed to be about 6.5" water gage at very low load or idling and I was informed it goes down to 4" water gage at high loads probably due to the curve of the centrifugal blower.

The gas meter is not corrected for pressure. It has a pressure transmitter after the meter but before the gas control valves (instead of before the meter which should be the correct installation) probably due to lack of space to install it. The meter characteristic is Honeywell DR 4500, 0-15" water gage, serial no. 983248376089. This meter is connected to the line but it was not fitted with a circular chart. The meter was reading 11.7" water gage. I asked the operator to show me previous charts, he pulled out two red ink charts and they showed about 11.5" water gage as an average pressure. The charts should be kept there and by this inspection I am assuming the average gas pressure at the meter is 11.5" water gage. Since the instrument is not correcting for that pressure, the total permitted annual gas usage should be:

$21,600,000/1.0283 = 21,005,543$ which is rounded to 21,000,000 cubic feet per year. By this criteria, maximum reading by May 22, 2008 should be: **227056**.

According to personnel on site - Mr. Bob Fischer - boiler operates 24 x 7 to keep the steam line pressurized but the actual steam generation is quite small and was estimated at 17,815,000 (which is really 18,319,000); now $18,319,000/8760 = 2,091$ scf/hr average gas hourly usage (20% of max instrument reading).

REQUEST FOR NEW OR MODIFIED BASIC EQUIPMENT CODE (BEC)

COMPANY NAME: TANOX WEST INC.		DATE: 05/24/07	BEC NO.
APPL. / PO NO: 9845363 PO: 961744		FEE SCHEDULE: 13a	NEW BEC. (derives from 12686 to include conditions related to measurement of natural gas to boiler)
<i>Jorge, Please submit BEC requests via e-mail.</i>			
ENGINEER: JFT	SR. ENGR: _____	SR. INSP: _____	PRM PROC: _____
DATE: 05/24/07	DATE: _____	DATE: _____	DATE: _____
BEC DESCRIPTION (equipment description as it will appear in VAX)		EXISTING AND/OR "NEW" CONDITION NOS. (list in order to appear on P/O, e.g. 11031, 11032, NEW1).	
BOILER, LIMITED TO 220,000 THERMS.		<i>fuel meter</i> 20599, 268847, 23861, 27421, NEW1, NEW2 <i>timing records</i>	
COND. NO.	NEW/CHANGED CONDITION LANGUAGE. LIST IN ORDER TO APPEAR ON P/O		
NEW1	NATURAL GAS USAGE SHALL NOT EXCEED 220,000 THERMS PER CALENDAR YEAR. THIS IS AN AMOUNT EQUIVALENT TO 21,000,000 CUBIC FEET MEASURED AT ACTUAL AVERAGE GAS PRESSURE.		
NEW2	NATURAL GAS PRESSURE NEAR THE METER SHALL BE RECORDED AND KEPT BETWEEN THE RANGE OF 10.5" TO 12.5" WATER GAGE AT LEAST 90% OF THE TIME THE BOILER IS OPERATING.		

NOTES: This set of conditions derives mostly from BEC 12686. We have added specific limits to the natural gas flow totalizer and keeping record of the pressure of the gas line.

John: This file for BEC approval. May 27, 07
After that, I will prepare PO.

Two

Jorge J

*Jorge,
 We have not required facilities to record periodic gas line pressure and it does not appear to be causing any compliance issues. If you would like to update condition 26849 to reflect current heat content of natural gas as we discussed, I am ok with that. Otherwise BEC 12548 appears to be a good fit. Thanks, John*

Subject: RE: Tanox Re: Permit 961744

Hi Suzanne,

I know you primarily handle the source testing – however, wondering who I should talk to about taking "Saya Godwin's" name off our account and replacing with my name. She has not been with the company for over a year and I thought I'd requested the change, but just got our permits and they have her name on them. Can you point me in the right direction?

Thanks
Judi

Cc: Blackburn, Suzanne; Haury, Evariste
Subject: RE: Tanox Re: Permit 961744

Hi Judi,

Sorry I didn't get back to you sooner but yes, the District will allow you to postpone your source testing requirement while the new application is processed. Once the application is processed and the source testing requirement is removed, you will no longer be required to conduct annual source testing. Instead annual tune ups of the boiler will be required.

Please retain this e-mail for your records. If you have any questions please give me a call.

Gary

Subject: RE: Tanox Re: Permit 961744

Hi Gary,
I spoke with Evariste today to advise that I have filled out APCD 116 and I31 to modify our Existing Permit 961744 in order to avoid the annual source test. Our permit expires at the end of this month. We have not yet completed a source test for permit May 07 – May 08. Will you be providing us permission to delay the source test until Evariste can review?

Evariste,
I will send the forms today. Please let me know if you would like me to send you the scanned copies of originals now.

Thank You,
Judi Gaither

To: 'Gary.Hartnett@sdcountry.ca.gov'
Cc: Marissa Arayata; Bob Fischer
Subject: Tanox Re: Permit 961744

Hi Gary,

As per our discussion I am writing to request permission to forgo the source test due May 2006. Additionally, I am completing the Permit/Registration Application Form APCD 116 and the Supplemental Application information 131 to modify the Modify the Existing Permitted Equipment (Boiler) for future annual permit. Our maintenance department has confirmed the past years fuel usage was 17,815,000 cu. ft or approximately 184,000 therms. If the conditions of the permit are modified to require a tune up vs. a source test, we understand that we will be required to keep fuel records and provide those records as required.

The last annual tune up/PM was completed Nov 22, 2006.

Please let me know if you need any further information to allow us to forgo the source test.

Thanks for your help today,

Judi Gaither

RE: Biogen Idec, 11011 Torreyana Rd., San Diego, CA
Permit Numbers 961744, 976831

Dear APCD Representative:

This letter serves to notify the San Diego County APCD that Tanox, Inc. will be accepting equipment and assets located at the above referenced facility from Biogen Idec as of January 10, 2005 in accordance with a lease agreement signed December 9, 2004. This equipment includes one boiler (permit number 961744) and one emergency generator (permit number 976831) currently permitted with the District. Enclosed you will find the application requesting that ownership be changed from Biogen Idec to Tanox, Inc. We understand an inspector will like to visit the facility to verify the site status. Please contact Mr. Joe Hess at 760.231.2491 to schedule such a visit. Thank you.

Sincerely,

Jeffrey Organ

Revised May 10, 2000

Mr. Wes Karch
IDEC PHARMACEUTICALS CORP.
11011 Torreyana Road
San Diego, CA 92121

SUBJECT REFERENCE: LOW NO_x CONVERSION - 150 H.P. PARKER BOILER - S.N. 42645

Dear Wes:

Thank you for your inquiry and interest in our Metal Fiber Burner System, as it relates to LOW NO_x conversion of your boiler referenced above.

We recommend the use of this burner system to:

1. Meet the LOW NO_x Requirements, as set forth by San Diego Air Pollution Control District.
2. Reduce energy consumption.
3. Provide a durable, improved burner system to the presently installed cast iron burners.

Gas Company Funding maybe available to you under the terms of their Incentive Programs for retrofitting combustion equipment with higher efficiencies. We believe this new burner system will generate at least a 5% fuel savings.

Per our discussion, we are pleased to quote on the LOW NO_x Burner Systems for your 150 H.P. Parker Boiler. Conversion of the present Boiler to LOW NO_x, generating less than 30 PPM NO_x at O₂ corrected at 3% and with CO levels below 400 PPM in compliance with SDAPCD Rule 69.2, will consist of the following elements.

DESCRIPTION

Parker Boiler Co. will provide and install a Premix Burner Bed of Metal Fiber Burners. These burners will be connected through pipe to a Premix Distribution Manifold mounted exterior to the boiler. The Premix Blower Mixer will mount on the manifold and provide a gas/air mixture to the Premix Burner System.

The present Flame Safeguard System will be modified as required for smooth and regular light offs. The gas train will be relocated as is convenient for the retrofit. An Auto Potentiometer Switch will be added to the boiler control panel.

Parker Boiler Co. will provide a motor starter for the 3 H.P., 3 Phase Premix Burner Blower provided and will provide the wiring from the motor starter mounted on the boiler to the blower motor and necessary interlocking wiring. Parker Boiler Co. will modify the present wiring to incorporate the premix system. All miscellaneous pipe, field material for support stands, etc., will be provided and installed by Parker Boiler Co. Down time on the boiler will be approximately four (4) working days.

IDEC PHARMACEUTICAL CORP.

Attention: Mr. Wes Karch

Revised May 10, 2000

Page 2

Included in the retrofit will be complete installation of all above materials, startup of system, adjustment to LOW NOx, assistance with Forms as required by the San Diego Air Pollution Control District and assistance with Source Test as will be required on this boiler.

IDEC would need to apply for a Permit from SDAPCD.

Parker Boiler Co.'s price for providing Material and Labor for the proposed conversion: **\$32,920.00.**

TERMS: \$8,230.00 deposit required with order: Balance due 30 days from date of invoice
(Subject to approval by our Credit Department).

SALES TAX: Included in above pricing.

DELIVERY: Approximately 45 to 60 days, subject to burner availability.

PRICES: Guaranteed firm for order if placed prior to December 31,2000.

EXCLUSIONS: Please note that the preceding quotation does not include the following items:

1. Electrical Service.
2. 3 H.P. fused disconnect mounted adjacent to the boiler.
3. AQMD Permitting Fees required for retrofit or cost associated with Source Testing.
4. Any NOx adjustments on boiler after initial firing and certification.
5. Work during other than regular working hours (8:00 AM to 4:30 PM, Monday through Friday).

Please note that our pricing is installed and does include initial startup of the equipment, instruction of Operating Personnel and assistance with Source Test.

Thank you for contacting us regarding this conversion.

Yours truly,

PARKER BOILER CO.

Robert J. Johnson
Sales Representative

PREMIX METAL FIBER LOW NO_x BURNER SYSTEM

DESCRIPTION

The premix fan assisted combustion system consists of a burner bed of multiple Metal Fiber Burners. These burners are linked to a single fan through a manifold and gas air premix piping. The Premix Burners provide uniform heat distribution over all boiler tubes. The system provides a high degree of NO_x level repeatability once system is adjusted. No filters are required.

The burners are capable of generating Low NO_x without generating significant CO emissions. NO_x emissions are guaranteed less than 20 PPM at 3% O₂ with CO emissions guaranteed less than 100 PPM at 3% O₂.

The burners consist of a sintered Metal Fiber Hot Face made from an Iron Chromium Alloy with a bonding Yttrium Element. The Metal Fiber is backed by a layer of 430 Stainless Steel and an additional perforated plate. The Metal Fiber Burners provide a high degree of resistance to mechanical and thermal shock, fast cool down and corrosion resistance. Maximum pressure drop through burner at normal firing rates is 1.2" W.C.

The system utilizes a blower mixer, which distributes a ratio controlled gas/air mixture to individual Metal Fiber Low NO_x Burners. Blower construction is non-sparking with totally enclosed motor. The burner bed is placed under the standard Parker tube bundle and contained in a non-pressurized combustion chamber. The gas/air ratio is controlled by the blower/mixer, which accepts a modulating motor. Adjustment of the fuel air ratio is accomplished by a characterizable fuel valve as part of the blower mixer.

EFFICIENCY

South Coast Air Quality Management District Testing has confirmed 83-85% thermal efficiency on Parker High Pressure Steam Boilers. Higher efficiencies are realized because of excellent gas/air ratio control, clean complete combustion and the radiant effect. Most boiler efficiencies can be improved at least 5% with the Premix Metal Fiber Burner System.

GUARANTEE

This Burner System when installed or adjusted by Parker Boiler or an Approved Service Organization, is guaranteed to produce less than 20 PPM NO_x emissions and less than 100 PPM CO emissions at 3% corrected O₂. These Low NO_x levels are achieved by the Metal Fiber Burner and a Premix gas/air distribution manifold assembly.

Parker or Approved Service Organization will adjust and certify these Low NO_x and CO levels.

REPEATABILITY

It has been our experience with field installations that the Low NO_x and CO levels can be repeated, with ease.

MAINTENANCE

We would recommend that the burner system be checked and tuned up by competent personnel on a yearly basis. The burners can be blown off with air if the surface becomes dirty. After approximately 5 years, if required, the burners can be removed, washed and reinstalled.

PREMIUM METAL FIBER BURNER

Parker Low NOx Metal Fiber Burner

ADVANTAGES
The Parker System consists of a burner bed of Heavy Duty Metal Fiber Burners (MFB). Through a gas/air premix manifold, the burners are linked to a fully modulating blower mixer which offers precise control of combustion through the full range of modulation.

Even Heat Distribution
Unlike Conventional Power Burner Technology, the burner bed provides a uniform heat distribution on all boiler tubes for improved heat transfer and boiler efficiency. Uniform heat over the entire heating surface of high, low and modulating firing rates provides longer tube life by eliminating concentrated firing on limited tube surface.

Low Maintenance, Simple Adjustment
The simplicity of the System with no FGR fan or valve, allows normal boiler operators to adjust and service the System. Allen screws provide simple precise adjustments through a characterizable fuel valve. Filters are not normally required.

Parker Low NOx MFB Firing in a Parker 150 HP Steam Boiler

Pictured above is a view through one of the large inspection doors of our 150L model. You can see the Low NOx Metal fiber burners firing under our sectional tubes providing even heat distribution to the entire heating surface.

not only the ultimate in quality and safety but also a complete ready to install packaged unit, including trim with boiler controls, electrically wired, ready to connect to the utilities. Every boiler is thoroughly factory fired tested.

Safety

Our ASME tube bundle is extremely flexible and offers a long life with a 20 year warranty against thermal shock. No Parker Boiler has ever been known to experience an internal explosion.

Low-Cost Operation

The staggered tubing design provides a multi-baffled heating surface to increase efficiency.

Fast Heat-Up

The boiler requires less than ten minutes to heat up to 100 PSI from a cold start which saves a considerable amount of time and fuel.

Large Heating Surface

A large amount of heating surface provides increased efficiency & minimizes chances of scaling. Compare ours to the competition.

Durability

The heart of our Low NOx system is our metal fiber burner. It, as well as the entire boiler assembly, is constructed to withstand the harsh environment sometimes associated with boilers.

Internal Accessibility

Full length cabinet doors can be easily removed in a matter of minutes, making the internal boiler, drum, tubes, and burners readily accessible. Easy-to-remove gasketed inspection plugs are provided at both ends of every tube. Boiler inspections can be accomplished quickly and at low costs.

Ease of Inspection and Repair

Any boiler may eventually require rebuilding depending on care and operating conditions. The Parker is designed

be easily replaced doors within time. Rebuild require or weld on most designer rolled tube Low Extreme NOx & C are attain our Penn System. below 21 3% O₂ are easily assured in numerous. 9 PPM u available models tions.

Heavy Duty

The heart of our Low NOx system is our metal fiber burner. It, as well as the entire boiler assembly, is constructed to withstand the harsh environment sometimes associated with boilers.

LOW NO_x PREMIX TECHNOLOGY

Industrial Packaged Bent Water Tube Steam Boilers

with Heavy Duty Metal Fiber Burners

Gas Fired 70-150 HP - Models 70L-150L

ADVANTAGES

The purchase of a Parker Boiler assures not only the ultimate in quality and safety but also a complete ready to install packaged unit, including trim with boiler controls, electrically wired, ready to connect to the utilities. Every boiler is thoroughly factory fired tested.

Safety

Our ASME tube bundle is extremely flexible and offers a long life with a 20 year warranty against thermal shock. No Parker Boiler has ever been known to experience an internal explosion.

Low-Cost Operation

The staggered tubing design provides a multi-baffled heating surface to increase efficiency.

Fast Heat-Up

The boiler requires less than ten minutes to heat up to 100 PSI from a cold start which saves a considerable amount of time and fuel.

Large Heating Surface

A large amount of heating surface provides increased efficiency & minimizes chances of scaling. Compare ours to the competition.

Durability

The heart of our Low NO_x system is our metal fiber burner. It, as well as the entire boiler assembly, is constructed to withstand the harsh environment sometimes associated with boilers.

Internal Accessibility and Inspection

Full length cabinet doors can be easily removed in a matter of minutes, making the internal boiler, drum, tubes, and burners readily accessible. Easy-to-remove gasketed inspection plugs are provided at both ends of every tube. Boiler inspections can be accomplished quickly and at low costs.

Ease of Inspection and Repair

Any boiler may eventually require retubing depending on care and operating conditions. The Parker is designed

with sectional tubes attached by unions so that sections can be easily and inexpensively replaced through the cabinet doors with minimum downtime. Retubing does not require special tools, skills or welding as is necessary on most boilers designed with rolled tubes.

Low Emission

Extremely LOW NO_x & CO levels are attained by our Premix Burner System. NO_x levels below 20 PPM at 3% O₂ and CO levels below 100 PPM are easily obtained, assured & repeated in numerous applications. Optional 9 PPM units are available on certain models and applications.

Heavy Duty Tubes

Parker tubes are 1.5/16" O.D. Grade SA-53 steel heavy .133" thickness which is almost double that of standard gauge boiler tubing. Each tube is double-welded to assure a rugged connection.

Dry Steam

Our large horizontal steam drum provides ample steam release area to assure dry steam delivery. No steam separators are required.

Codes

All Boilers are built in accordance with the ASME Power & Heating Boiler Codes, Sections I & IV. Boilers above 15 PSI are furnished with the "S" Stamp and Trim. Boilers for 15 PSI are normally furnished with the "H" Stamp and Trim. All Boilers are

Parker 115 HP
Steam Boiler
with Low NO_x
Burner System

inspected and registered with the National Board of Boiler and Pressure Vessel Inspectors.

All individual gas and electrical controls are AGA Certified or UL Listed.

All Low NO_x natural gas fired models are ETL Listed as "Industrial and Commercial Gas Fired Packaged Boilers" and certified to UL795. All units are provided with trim and controls to meet ASME CSD-1 standards for "Controls & Safety Devices for

Automatically Fired Boilers". In addition, all units also meet the standards of the International Conference of Building Officials, the International Association of Mechanical & Plumbing Officials and the Uniform Mechanical Code.

After examination of your Application No. 975049 for an Air Pollution Control District (District) Authority to Construct, the District has decided that:

Authority to Construct is granted pursuant to Rule 20 of the Air Pollution Control District Rules and Regulations for a:

Steam Boiler: Parker Industrial, 150 hp, 6.3 MMBtu/hr, natural gas fired, S/N 42645; with a low-NOx burner, Parker Industrial, Model Premix Metal Fiber.

This Authority to Construct is granted with the following conditions:

- 22557 1. Operation of this equipment shall be conducted in accordance with all data and specifications submitted with the application under which this permit is issued unless otherwise noted below.
- ? 20997 2. This equipment shall be properly maintained and kept in good operating condition at all times.
3. The applicant shall provide access, facilities, utilities and any necessary safety equipment for source testing and inspection upon request of the Air Pollution Control District.
- 22925 4. This equipment shall be fired on natural gas only.
- 21662 5. The concentration of oxides of nitrogen (NOx) emissions, measured as nitrogen dioxide, shall not exceed 30 parts per million by volume (ppmv), measured on a dry basis and corrected to 3% oxygen.
- 21663 6. The concentration of carbon monoxide (CO) emissions shall not exceed 400 parts per million by volume (ppmv), measured on a dry basis and corrected to 3% oxygen.
7. Within 30 days upon completion of the installation of the low-NOx burner, an initial compliance test shall be conducted on this equipment by an ARB-approved source tester, at the applicant's expense, to determine the flue gas emissions of total NOx and CO. A source test protocol shall be submitted to the District for written approval at least 30 days prior to source testing. The source test protocol shall comply with the requirements of the San Diego Air Pollution Control District Test Method 100, or equivalent, as approved by the U.S. Environmental Protection Agency.

22596

8. The equipment shall be source tested on an annual basis to ensure continued compliance with District emission standards prior to permit renewal. The measurement of emissions shall be conducted by the District in accordance with District Test Method 100 and in accordance with the source test requirements specified in District Rule 69.2.

23338

9. In the event the compliance test results do not demonstrate to the District's satisfaction that the facility can be expected to maintain continual compliance, the application for the Permit to Operate will be subject to a denial.
10. All records required by this permit shall be kept for a minimum of three years and made available to District personnel upon request.

This Authority to Construct authorizes temporary operation of the above specified equipment. This temporary Permit to Operate shall take effect upon written notification to the District that construction has been completed in accordance with this Authority to Construct. This temporary Permit to Operate will remain in effect, unless withdrawn or modified by the District, until the equipment is inspected by the District and a revised temporary permit (Startup Authorization) is issued or a Permit to Operate is granted or denied.

Upon completion of construction in accordance with this Authority to construct and prior to commencing operation, the applicant must complete and mail, deliver, or fax the enclosed Construction Completion Notice to the District. After mailing, delivering, or faxing the notice, the applicant may commence operation of the equipment. Operation must be in compliance with all of the conditions of this Authority to Construct and applicable District rules.

This Authority to Construct shall be posted on or within 25 feet of the above described equipment, or maintained readily available at all times on the operating premises.

This Air Pollution Control District Authority to Construct does not relieve the holder from obtaining permits to authorizations which may be required by other governmental agencies.

Within 30 days after receipt of this Authority to Construct, the applicant may petition the Hearing Board for a hearing on any conditions imposed herein in accordance with Rule 25.

This Authority to Construct is not transferable and will expire one year from the date of this letter, unless an extension is requested in writing.

If you have any questions regarding this action, please contact the undersigned at (858) 650-4608.

X. Equipment Description (equipment listing)

Steam Boiler: Parker Industrial, 150 bhp, 6.3 MMBtu/hr, natural gas fired, S/N 42645; with a low-NOx burner, Parker Industrial, Model Premix Metal Fiber.

XI. Process Description (Identify and quantify materials used)

This boiler was previously permitted with conditions limiting the fuel input to less than 220,000 therms per year to satisfy District Rule 69.2. Subsequently, the facility exceeded the limit and will now install low-NOx burners guaranteed to meet the NOx emission limit of 30 ppm @ 3% O2 specified in Rule 69.2.

EVALUATION COVER SHEET

V. Recommendations

Authority to Construct

Senior Engineer Approval: Date: 11/30/00

This boiler was previously limited to a fuel input of < 220,000 therms per year. The site was unable to comply with this so they are installing low-NOx burners to comply with Rule 69.2. The low-NOx burner system does not utilize flue gas recirculations. It uses a premix fan assisted combustion system consisting of a burner bed of multiple metal fiber burners. The burners are guaranteed to less than 20 ppm NOx @ 3% O2 and less than 100 ppm CO @ 3% O2. An initial source test and subsequent annual source test will show initial and continued compliance with the limits of Rule 69.2.

Although installing the low-NOx burners will result in lower hourly and daily potential to emit for NOx and CO, the increase in usage will result in an increase in annual emissions (see calculations). However, the increase in emissions does not trigger any NSR thresholds.

This equipment is expected to comply with all Rules and Regulations of the San Diego APCD. Therefore, it is recommended that a conditional Authority to Construct be issued.

BOILER, 6.3 MMBTU/HR, NATURAL GAS

Cond Num: 22557

OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

Cond Num: 20997

THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES IN ACCORDANCE WITH MANUFACTURER'S INSTRUCTIONS. THESE INSTRUCTIONS SHALL BE KEPT ONSITE.

Cond Num: 22925

THE BOILER SHALL BE OPERATED ON NATURAL GAS ONLY. NO OTHER FUEL SHALL BE USED WITHOUT PRIOR WRITTEN AUTHORIZATION FROM THE DISTRICT.

Cond Num: 21662

EMISSIONS OF OXIDES OF NITROGEN, CALCULATED AS NITROGEN DIOXIDE AT 3% OXYGEN ON A DRY BASIS, SHALL NOT EXCEED 30 PARTS PER MILLION BY VOLUME WHEN OPERATED ON A GASEOUS FUEL.

Cond Num: 21663

EMISSIONS OF CARBON MONOXIDE SHALL NOT EXCEED 400 PARTS PER MILLION BY VOLUME, CALCULATED AT 3% OXYGEN ON A DRY BASIS.

Cond Num: 22596

THIS EQUIPMENT SHALL BE SOURCE TESTED FOR COMPLIANCE AT LEAST ONCE PER PERMIT YEAR BEFORE THE PERMIT RENEWAL DATE, UNLESS OTHERWISE SPECIFIED IN WRITING BY THE DISTRICT. TESTING SHALL BE CONDUCTED IN ACCORDANCE WITH DISTRICT TEST METHOD 100 AND IN ACCORDANCE WITH SOURCE TEST REQUIREMENTS SPECIFIED IN DISTRICT RULE 69.2 (G) AND 69.3.1 (G).

Cond Num: 23338

IF COMPLIANCE WITH THE NOX AND CO EMISSION STANDARDS CANNOT BE DEMONSTRATED TO THE SATISFACTION OF THE DISTRICT, THE PERMITTEE SHALL TAKE CORRECTIVE ACTION TO MEET THESE LIMITS. ANY PROPOSED CORRECTIVE ACTION THAT WOULD RESULT IN A MODIFICATION TO THE EQUIPMENT SHALL REQUIRE AN APPLICATION AND A DISTRICT AUTHORITY TO CONSTRUCT FOR SUCH MODIFICATION. IN THE EVENT THE COMPLIANCE TEST RESULTS DO NOT DEMONSTRATE TO THE DISTRICT'S SATISFACTION THAT THE FACILITY CAN BE EXPECTED TO MAINTAIN

GRM, 26-July-00, V 3.5

APPENDIX

Calculation of Gas Concentrations (Method 100).

1) Concentrations for O₂ & CO (and CO₂ when required) are calculated using equation 1.

$$C_{gas} = (C_{avg} - C_o) * \frac{C_{ma}}{(C_m - C_o)} \quad 1$$

Where:

C_{gas} = Effluent gas concentration, ppm, dry basis.

C_{avg} = Average gas concentration, ppm, dry basis,

indicated by the analyzer

C_{ma} = Actual certified concentration, ppm, of the mid- or high-range calibration gas used for the system calibration checks.

C_m = Average of the initial and final system calibration responses, ppm, for the mid- or high-range calibration gas.

C_o = Average of the initial and final system calibration responses, ppm, for the zero calibration gas.

2) NO₂, NO, & NO_x gas concentrations, corrected for instrument drift, calibration error and system bias for NO & NO₂ are calculated using equations 2,3 & 4 respectively.

$$NO_2_{gas} = [(NO_{xavg} - NO_{xod}) - (NO_{avg} - NO_o)] * \frac{(NO_{ma})}{(NO_{md} - NO_{od})} * \frac{(NO_{2md} - NO_{2od})}{(NO_{2m} - NO_{2od})} \quad 2$$

$$NO_{gas} = (NO_{avg} - NO_o) * \frac{(NO_{ma})}{(NO_{md} - NO_{od})} * \frac{(NO_{md} - NO_{od})}{(NO_m - NO_o)} \quad 3$$

$$NO_{xgas} = NO_{gas} + NO_2_{gas} \quad 4$$

Where:

NO_{xgas} = the total NO_x concentration, ppm, dry basis, in the stack effluent.

NO_{2gas} = the NO₂ concentration, ppm, dry basis, in the stack effluent

NO_{gas} = the NO concentration, ppm, dry basis, in the stack effluent.

NO_{xavg} = the average NO_x concentration, ppm, dry basis, indicated by the analyzer.

NO_{avg} = the average NO concentration, ppm, dry basis, indicated by the analyzer.

NO_{ma} = the actual certified concentration, ppm, of the mid- or high-range NO calibration gas.

NO_{2md} = the average of the initial and final analyzer responses, ppm, for the NO₂ calibration gas when introduced directly to the analyzer.

NO_{md} = the average of the initial and final analyzer responses, ppm, for the NO calibration gas when introduced directly to the analyzer.

NO_{od} = the average of the initial and final zero calibration responses, ppm, when NO zero calibration gas is sampled directly to the analyzer.

NO_{2m} = the average of the initial and final system calibration responses, ppm, for the NO₂ calibration gas.

NO_m = the average of the initial and final system calibration responses, ppm, for the NO calibration gas.

NO_o = the average of the initial and final system calibration responses, ppm, for the NO zero calibration.

NO_{xod} = the average of the initial and final zero calibration responses, ppm, when the NO_x zero calibration gas is sampled directly to the analyzer.

3) Specific gaseous emission limits corrected to 3% or 15% O₂ are calculated using equations 5a & 5b

$$C_{gas @ 3\% O_2} = C_{gas} * \frac{(20.95 - 3\% O_2)}{(20.95 - C_{gas} O_2\%)} \quad 5a$$

$$C_{gas @ 15\% O_2} = C_{gas} * \frac{(20.95 - 15\% O_2)}{(20.95 - C_{gas} O_2\%)} \quad 5b$$

Where:

C_{gas @ 3% or 15%} = the stack gas effluent for either NO_x or CO corrected to 3% or 15% O₂.

C_{gas} = the stack gas effluent for either NO_x or CO determined using equation 1.

C_{gas O₂%} = the stack effluent gas concentration of O₂, %

NOTE: The Teco 42C NO_x analyzer used during this test is capable of measuring NO and total NO_x simultaneously. NO₂ calibration gas values are measured via the NO_x channel, thus NO₂ zero is the same as NO_x zero.

SOURCE TEST ENGINEERING REPORT

SITE : IDEC Pharmaceuticals Corporation
(Boiler)
PO# : 961744 (APP#: 975049)
DATE : 15-May-01
APCD PERSONNEL : G.R.Mortimore

EQUIPMENT: Steam boiler, Parker Industrial, 150 hp, 6.3 MMBtu/hr, natural gas fired, s/n 42645: with a low-NOx burner, Parker Industrial, model Premix Metal Fibre.

OPERATING PARAMETERS

	RUN #1	RUN #2	RUN #3	AVERAGE
FIRING RATE*	100	100	100	100
FUEL FLOW (acf?)**	5623	5623	5540	5595
FUEL FLOW (scf)***	6262	6262	6262	6262

* Firing rate is indicated by a pointer on a quadrant with 15 divisions. During testing a steam blow-off valve was opened which resulted in the boiler running at full fire with the pointer indicating 15 on the quadrant.

** This number is derived from timing fuel flow using the meter in the gas delivery line. This appears to be actual cubic feet. The line gas pressure is not known, therefore standard cubic feet flow cannot be determined.

*** This number is calculated from the firing rate and the Btu content of natural gas (1006 Btu/scf)

9/20/00

Mr. Arthur Carbonell

San Diego, CA 92123

Ref. Application # 975049

Dear M. Carbonell,

As per our telephone conversation on 9/20/00, I am submitting the information on the emission monitoring/control equipment we intend to install our boiler. The lead-time on this equipment is approximately eight to ten weeks, and IDEC anticipates having the vendor install the equipment during the routine maintenance shutdown currently scheduled for January 2001.

I hope this information allows you to move forward with the permitting process, and look forward to receiving a permit to construct. If you need any additional information then please contact me at 858-431-8822.

Sincerely,

Mark Thompson
Sr. Manager, EH&S

NOTICE OF RECEIPT OF APPLICATION

Your application for the following equipment/operation was received by the San Diego Air Pollution Control District on 18-May-2000. It was assigned Application No.975049.

MAL PO# 961744 INSTALLING EMISSION MONITORING/CONTROL EQUIPMENT FOR THE

The District will conduct an initial review of the application to determine if sufficient information has been provided to complete the review. You will be contacted within 30 days if additional information is required. If you have any questions concerning this application, please contact the following engineer: ARTHUR CARBONELL at (858) 694-3606.

Please note that this is not a Permit to Operate. Installation and/or operation of this equipment without written authorization is subject to fines.

cc: ARTHUR CARBONELL

Air Pollution Control District
Compliance Division
9150 Chesapeake Drive
San Diego, CA 92123

Dear Sirs:

IDEc Pharmaceuticals has received the Notice of Violation dated April 3, 2000, provided by your department (ref. enclosed copy). IDEc understands that the equipment in question (Parker boiler, serial # 112645) no longer qualifies for the 220,000 therm/year exemption provided under Rule 69.2 (d)(2) and is now subject to emission standards.

Enclosed please find an application and fee for modification of existing permitted equipment. IDEc intends on installing emission monitoring/control equipment for the Park boiler. I have not yet determined the nature of the monitoring/control equipment required, and am currently investigating this matter with the boiler vendor. I hope to submit the model numbers, specifications, and anticipated installation date for this monitoring/control equipment to APCD within 30 days. If you have any questions please contact me at 858-431-8822.

Sincerely,

Mark Thompson
Sr. Manager, EH&S

PERMIT / REGISTRATION APPLICATION

FILING THIS APPLICATION DOES NOT GRANT PERMISSION TO CONSTRUCT OR TO OPERATE EQUIPMENT

IMPORTANT REMINDERS: Read instructions on the reverse side of this form prior to completing this application. Please ensure that all of the following are included before you submit the application:

Appropriate Permit Fee _____ Completed Supplemental Form(s) _____ Signature on Application _____

REASON FOR SUBMITTAL OF APPLICATION: (check the appropriate item and enter Application (AP) or Permit to Operate (PO) number if required)

- 1. New Installation
- 2. Existing Unpermitted Equipment or Rule 11 Change
- 3. Modification of Existing Permitted Equipment
- 4. Amendment to Existing Authority to Construct or AP
- 5. Change of Equipment Location
- 6. Change of Equipment Ownership
- 7. Change of Permit Conditions
- 8. Change Permit to Operate Status to Inactive
- 9. Banking Emissions
- 10. Registration of Portable Equipment
- 11. Other (Specify) _____

12. List affected AP/PO#(s): _____

APPLICANT INFORMATION

13. Name of Business (DBA) IDEC Pharmaceuticals Corporation

14. Nature of Business Bio-pharmaceutical company

15. Does this organization own or operate any other APCD permitted equipment at this or any other adjacent locations in San Diego County? yes no

If yes, list assigned location ID's from your PO's 920494

16. Type of Ownership Corporation Partnership Individual Owner Government Agency Other _____

17. Name of Legal Owner (if different from DBA) _____

18. Contact Person/Permit Holder (Complete Items B, C and D only if different from Item A)

A. Equipment Owner

B. Authority to Construct

19. Name IDEC PHARMACEUTICALS CORP

20. Mailing Address 11011 TORREYANA ROAD

21. City SAN DIEGO

APPLICATION INSTRUCTIONS

GENERAL

1. The owner or designated agent must complete and sign this multi-copy form and file it with one copy of all attachments, required supplementary forms, drawings and the appropriate fee.
2. The appropriate fee (payable to "County of San Diego APCD") shall be forwarded with this Permit/Registration Application. Application processing will not begin until the full required fee has been received. Excess fees will be refunded upon completion of the application process. If you do not know the appropriate fee or need to discuss the information required, please contact the District at (619) 694-3307 and ask for the Engineering Division.

REASON FOR SUBMITTAL OF APPLICATION

1. New Installation - check if you are installing equipment that does not currently have a District Permit to Operate.
2. Existing Unpermitted Equipment or Rule 11 Change - check if applying for installed existing equipment that is currently unpermitted or equipment that is now subject to District Rules due to Rule 11 changes.
3. Modification of Existing Permitted Equipment - check if you are making a change to equipment with a current District Permit to Operate. (List affected PO #(s) on line 12)
4. Amendment to Existing Authority to Construct or Permit/Registration Application - check this line if you are amending a previously submitted application form or if amending a current Authority to Construct. (List affected Application #(s) on line 12)
5. Change of Equipment Location - check if you are moving non-portable equipment with a current District Permit to Operate. (List affected PO #(s) on line 12)
6. Change of Equipment Ownership - check if you are now the owner of equipment with a current District Permit to Operate under a different owner. (List affected PO #(s) on line 12)
7. Change of Permit Conditions - check if equipment with a current Permit to Operate requires changes to the existing operating conditions. (List affected PO #(s) on line 12)
8. Change Permit to Operate Status to Inactive - check if you wish to maintain your current Permit to Operate but are not going to operate the equipment. (List affected PO #(s) on line 12)
9. Banking Emissions - check if you are retiring equipment with a current District Permit to Operate and wish to bank the emissions for future credits. (List affected PO #(s) on line 12)
10. Registration of Portable Equipment - check this line if you are applying for registration of portable equipment.
11. Other - check for any action not covered by #(s) 1 thru 10.
12. List affected AP/PO#(s) - if you checked #'s 3 or 5-9, list current Permit to Operate Number(s) affected or if you checked #4, list existing Application number whether or not an Authority to Construct has been issued.

APPLICANT INFORMATION

13 thru 17 are self-explanatory.

18 thru 28 are self-explanatory, complete Items B, C, and D only if different from Item A.

EQUIPMENT/PROCESS INFORMATION

Check Stationary (e.g. gasoline service site, dry cleaning facility, etc.) or Portable (abrasive blast pot, roofing kettle, etc.) depending upon the type of equipment for which you are filing an application. Also check Yes if the equipment is portable and will operate more than 180 consecutive days at a single site. Otherwise, check No.

29 thru 37 are self-explanatory.

STARTUP AUTHORIZATION

7/24/98

(BEC)

Date of Issuance

IDEC PHARMACEUTICALS CORP.

11011 TORREYANA ROAD, SAN DIEGO, CA 92121

(NAME AND ADDRESS OF OPERATOR OR OWNER)

may operate an STEAM BOILER: PARKER INDUSTRIAL, NATURAL GAS FIRED, 150 BHP, 6.3 MMBTU/HR,
S/N 42645.

(DESCRIPTION OF FACILITY OR EQUIPMENT)

located at 11011 TORREYANA ROAD, SAN DIEGO, CA 92121

(ADDRESS)

until 10/27/98 pursuant to Rule 21 of the Rules and Regulations of the Air Pollution
Control District, subject to the following conditions:

A copy of this authorization shall be posted on or near the equipment for which operation is authorized.

The undersigned APCD representative shall be notified as soon as the equipment is fully operational.

1. THE INSTALLATION AND OPERATION OF THE BOILER AND ANY EMISSION CONTROLS SHALL BE LIMITED TO THE EQUIPMENT DESCRIBED ABOVE AND OPERATIONS SHALL BE IN ACCORDANCE WITH ALL THE CONDITIONS STATED HEREIN.
2. THE APPLICANT SHALL PROVIDE ACCESS, FACILITIES, UTILITIES, AND ANY NECESSARY SAFETY EQUIPMENT FOR SOURCE TESTING AND INSPECTION UPON REQUEST OF THE AIR POLLUTION CONTROL DISTRICT.
3. THIS BOILER SHALL BE OPERATED ON NATURAL GAS ONLY. NO OTHER FUEL SHALL BE USED WITHOUT PRIOR WRITTEN AUTHORIZATION FROM THE DISTRICT.
4. THIS BOILER SHALL BE EQUIPPED WITH A NON-RESETTABLE TOTALIZING FUEL METER INSTALLED IN THE FUEL LINE TO MEASURE THE VOLUMETRIC FLOW RATE OF FUEL TO THE BOILER. THIS METER SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.
5. NATURAL GAS CONSUMPTION SHALL NOT EXCEED 220,000 THERMS PER CALENDAR YEAR (AMOUNT EQUAL TO 16,094,356 CUBIC FEET PER CALENDAR YEAR, BASED ON A HEATING VALUE OF 1020 BTU/SCF AND A GAUGE PRESSURE OF 5 PSI).
6. THE BOILER SHALL BE TUNED AT LEAST ONCE PER YEAR IN ACCORDANCE WITH THE TUNING PROCEDURE OUTLINED IN DISTRICT RULE 69.2 (SECTION J). THE PERMITTEE SHALL BE RESPONSIBLE FOR ALL BOILER TUNING AND COST INCURRED.
7. ALL RECORDS REQUIRED BY THIS PERMIT, INCLUDING MONTHLY FUEL USAGES AND TUNE-UP DOCUMENTATION, SHALL BE MAINTAINED ON-SITE FOR A MINIMUM OF THREE YEARS AND MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST.
8. THIS STARTUP AUTHORIZATION SHALL EXPIRE ON THE DATE SPECIFIED ABOVE OR TEN DAYS FOLLOWING WRITTEN NOTICE FROM THE DISTRICT THAT THE EQUIPMENT IS NOT IN COMPLIANCE WITH AN APPLICABLE RULE, RECEIPT OF A PERMIT TO OPERATE, OR NOTICE OF DENIAL OF A PERMIT TO OPERATE; WHICHEVER IS SOONER.

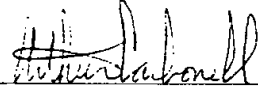

Operation is authorized only for the purpose of:

Shaking down, testing and evaluating the equipment named above.

Allowing operation until an APCD Permit to Operate has been issued.

THIS IS NOT AN AUTHORIZATION TO EXCEED ANY APPLICABLE EMISSION STANDARD. THIS AUTHORIZATION IS SUBJECT TO CANCELLATION IF ANY EMISSION STANDARD OR CONDITION IS VIOLATED. IF THERE ARE ANY QUESTIONS ABOUT THIS AUTHORIZATION, PLEASE CONTACT THE UNDERSIGNED AT (619) 694 - 3606 .

VI. AB3205 Compliance (Bldg. Permits/Public Notice)

A. Does this equipment/process have the potential to emit a hazardous compound as identified either by the ARB list of hazardous compounds or by the District?

Yes: _____ No: X

B. If yes, is the proposed project an increase in hazardous compound emissions?

Yes: _____ No: _____

C. If yes, is source located within 1000 feet of a school?

Yes: _____ No: _____

Basis: Applicant Certification: _____ District Map: _____ Other: _____

D. If yes, does the school have less than twelve students or is it a private school located in a private home?

Yes: _____ No: _____

VII. Rule 51 TAC Reveiw Policy

A. Is this equipment/process of a type which will require a health risk assessment pursuant to the Engineering policy regarding Rule 51 Compliance Review (ref. Attachment 1, Part A)?

Yes: _____ No: X

B. Will operation of this equipment result in an increase in emissions of any of the toxic air contaminants listed in Attachment 2 of the policy?

Yes: _____ No: _____

C. If yes to either A or B, has this application been reviewed by the Air Toxic/Special Projects Section?

Yes: _____ No: _____

D. Have the results of a health risk assessment and recommendations of the Air Toxic staff been considered?

Yes: _____ No: _____

E. Have the results and recommendations been discussed with the Senior Eng'r.?

Yes: _____ No: _____

*Explain:

VIII. Permit Conditions/Enforceability/Source Testing

A. Is this permit being granted with newly created permit conditions, modified conditions or a new combination of conditions?

Yes: X No: _____

B. If yes, will the permit conditions require new or additional Enforcement practices for this source or source type?

Yes: _____ No: X

C. If yes to A and B, have the permit conditions been reviewed with Enforcement (Chief or Inspector III)?

Yes: _____ No: _____

D. Is regular source testing of this equipment/process necessary to ensure on-going compliance?

Yes: _____ No: _____

E. If yes, has a written recommendation been provided to Enforcement on the type and frequency of renewal testing?

Yes: _____ No: _____

IX. AB2588 (Toxic Hot Spots)

A. Is this source (per Rule 20.1) subject to AB2588?

Yes: _____ No: X

B. If yes, is the source complying with those requirements?

Yes: _____ No: _____

C. If a new or modified source that emits greater than 10 TPY of NOx, SOx, PM10 or THC, have conditions requiring AB2588 compliance been imposed?

Yes: _____ No: _____

X. Conclusions and Recommendations

a. Authority to Construct:

Date: _____

Engineer's Signature

b. Permit to Operate:

Date: 8/5/98

To comply with Rule 69.2, this facility has opted to keep the fuel usage for the boiler to less than 220,000 therms per year and to tune up each boiler on an annual basis in accordance with the rule. According to Lisa Stovall of Idec, the pressure in the line at which the gas meter reads the volumetric flow rate of the fuel input is 5 psi. Since the 220,000 therms/yr fuel limit was established for standard conditions, the final allowable fuel input had to be corrected for the gauge pressure. Therefore, the final allowable fuel input is 16.09 MMft³/yr (see attached calculations).

This equipment is expected to comply with all rules and regulations of the San Diego APCD, therefore it is recommended that a final Permit to Operate be issued with the conditions of BEC No. 11214.

Arthur S. Bonnell
Engineer's Signature

ANALYSIS OF APPLICABLE RULES

RULE 50: VISIBLE EMISSIONS:-

This rule limits air contaminant emission into the atmosphere of shade greater than Ringlemann Number 1, to a maximum aggregate of three minutes in any consecutive sixty minute time period.

This modification will not cause an increase in visible emissions. Therefore, continued compliance with this rule is expected.

RULE 51: NO NUISANCE:-

This rule prohibits discharge of air contaminants that cause or have a tendency to cause injury, nuisance, annoyance to people and/or the public or damage to business or property.

No nuisance complaints have been received for this equipment and this modification will not cause an increase in odors or toxic emissions. Therefore, continued compliance with this rule is expected.

RULE 53(c)(2): COMBUSTION PARTICULATES:-

This rule prohibits the discharge of particulate matter from any single combustion source in excess of 0.1 grains per dry standard cubic foot of gas which is standardized to 12% CO₂ by volume.

Calculations performed for the Authority to Construct evaluation show PM = 0.006 grains/dscf. Therefore, compliance with this rule is expected.

RULE 69.2 - BOILERS:-

This rule requires all boilers, steam generators, and process heaters with a heat input rating greater than or equal to 5 MMBtu/hr to either meet NO_x emissions limits of 30 ppm for natural gas, 40 ppm for diesel or to limit their annual fuel input to less than 220,000 therms and perform annual tune ups.

The applicant will limit the annual heat input for each boiler to less than 220,000 therms per year. The applicant will also install a non-resettable totalizing fuel meter in each fuel line which will measure the volumetric flow rate to each boiler. Additionally, each boiler will be tuned annually in accordance with the procedure outlined in section (j) of this rule.

RULE 20.1 - NEW SOURCE REVIEW:-

This rule required the applicant to implement BACT, conduct an AQIA, or provide offsets if certain thresholds are exceeded. The BACT threshold is 10 lbs/day of any criteria pollutant for each permit unit. The AQIA threshold values for each permit unit are as follows: NO_x and SO_x are 25 lbs/hr, 250 lbs/day; CO is 100 lbs/hr, 550 lbs/day; PM is 100 lbs/day. The threshold value for offsets is 15 tons/yr of NO_x or VOC for each facility.

This modification will result in a net decrease in the potential to emit for this equipment. Therefore, the modification to this equipment is exempt from NSR requirements.

CONDITIONS EXPLANATION:

All conditions are standard for this type of equipment.

EVALUATION COVER SHEET

Yes: _____ No: X

B. If yes, is the source complying with those requirements?

Yes: _____ No: _____

C. If a new or modified source that emits greater than 10 TPY of NOx, SOx, PM10 or THC, have conditions requiring AB2588 compliance been imposed?

Yes: _____ No: _____

Appl. No. 961744

X. Conclusions and Recommendations

a. Authority to Construct:

Date: 7/8/97

THIS IS BOILER IS BEING PERMITTED AT THIS FACILITY TO COMPLY WITH RULE 69.2. PREVIOUSLY, THIS BOILER WAS EXEMPT PER RULE 11(d)(4)(iv) BECAUSE IT IS LESS THAN 20.0 MM BTU/HR AND IS FIRED EXCLUSIVELY ON NATURAL GAS. THEREFORE NEW SOURCE REVIEW DOES NOT APPLY.

COMPLIANCE CONDITIONS FOR RULE 69.2 NECESSITATES THE NEED FOR A PERMIT.

THE APPLICANT HAS REQUESTED THE COMPLIANCE ALTERNATIVE FOR RULE 69.2 STANDARDS WITH THE TUNING PROCEDURE AND AN ENERGY CAP OF 220,000 THERMS/YEAR (\approx 20.95 MM CFT NG/YR).

IT IS RECOMMENDED THAT AN A/C BE ISSUED WITH THE CONDITIONS OF THE ATTACHED LETTER. BY FOLLOWING THE CONDITIONS OF THE A/C, COMPLIANCE WITH APPLICABLE RULES IS EXPECTED.

Engineer's Signature

b. Permit to Operate:

Date: _____

THE NATURAL GAS FIRED BOILER WAS OBSERVED IN OPERATION ON / / TO BE IN COMPLIANCE WITH ALL APPLICABLE RULES AND REGULATIONS AT THIS TIME.

BASED ON THE ENGINEERING EVALUATION, THERE IS REASONABLE EXPECTATION OF CONTINUOUS COMPLIANCE WITH ALL APPLICABLE DISTRICT RULES AND REGULATIONS. IT IS THEREFORE RECOMMENDED THAT A P.O. BE ISSUED WITH THE ATTACHED CONDITIONS OF BEC NO.

Engineer's Signature

ANALYSIS OF APPLICABLE RULES

RULE 50: VISIBLE EMISSIONS:-

This rule limits air contaminant emission into the atmosphere of shade greater than Ringlemann Number 1, to a maximum aggregate of three minutes in any consecutive sixty minute time period.

Based on District experience, no visible emissions expected from the combustion of Natural Gas in boilers. This boiler was reported to have been installed and operating for several years and no violations with this rule have been recorded.

RULE 51: NO NUISANCE:-

This rule prohibits discharge of air contaminants that cause or have a tendency to cause injury, nuisance, annoyance to people and/or the public or damage to business or property.

This boiler is reported to have been installed and in operation for several years. No complaints from its operation have been received and no potential for significant nuisance, injury or endangerment of people or the public nor damage to business or property is expected from the continued operation of this equipment.

RULE 53(c)(2): PM LIMITS:-

This rule limits the PM emissions from gaseous fuel combustion to less than or equal to 0.1 grains/dscf @ 12% CO₂.

From the emission calculation for the boiler, the emissions are less than the threshold limit.

RULE 62(b)(1): SULFUR IN FUEL:-

This rule limits the sulfur content of gaseous fuel used in stationary fuel burning equipment to ≤ 10 grains of sulfur per 100 DSCF of fuel.

The utility (SDG&E), by its contractual arrangements with its supplier, provides the County with 0.05 grains H₂S/100 dscf NC or less. Therefore, this source is assumed to be in compliance with this rule.

RULE 69.2 (d)(2): ALTERNATIVE TO NO_x & CO STD:

This part of the rule requires that (i) exhaust stack O₂ concentration $\leq 3.0\%$ by vol. or, (ii) the O₂ trim system maintain exhaust stack O₂ $\leq 3.0 \pm 0.15\%$ by vol. or, (iii) annual tuning in accordance with sect. (j) or manufacturer's procedure per APCO's approval or, (iv) comply with the NO_x & CO stds of 30 ppm(v) and 400 ppm(v) @ 3% O₂.

The applicant has requested the annual tuning procedure as the compliance alternative. Since this choice is only available to a boiler with an annual heat input below 220,000 therms, the fuel consumption rate is limited to 21.5 MM cft of NG/yr.

ANALYSIS OF APPLICABLE RULES (contd...)

NEW SOURCE REVIEW - post May '94

RULE 20.2: STATIONARY NON-MAJOR EMISSION SOURCE

This is the only boiler presently being permitted at this facility. It is 10 MM btu/hr and fired exclusively on natural gas and was previously exempt from permitting per Rule 11(d)(4)(iv). Due to Rule 11 change to accomodate Rule 69.2 compliance, a permit is now required.

However, due to previous qualification for a Rule 11 exemption, NSR is not applicable.

UNIQUE CONDITIONS:

- 1) Standard conditions limiting fuel consumption to ≤ 21.5 MM cft NG/yr (per PO condits developed by A Stengel).
- 2) Record keeping of annual fuel consumed to maintain qualification for tuning option in Rule 69.2.
- 3) Perform annual tuning I.A.W. procedute in Rule 69.2 sect (j)
- 4) Maintain records for at least 3 years at the site.

SOx	0.134 lb/MMcft NG	0.134 lb/MMcft NG	[adjusted to 0.05 grains H2S/100 dscf NG]

$$S \text{ with } \frac{10.0 \text{ gr (H2S)}}{100 \text{ DSCF}} \times \frac{32 \text{ grain (S)}}{34 \text{ grain (H2S)}} \times \frac{1 \text{ lbs}}{7000 \text{ grain}} \times \frac{385.4 \text{ cft}}{34.0 \text{ lbs}} \times 10^6 = 152.4 \text{ ppmw sulfur (S) in fuel @ 68°F}$$

$$SOx \text{ } 152.4 \text{ ppm(w) S in fuel} \times 308.8 \text{ lbs NG/hr} \times \frac{64 \text{ lb SOx}}{32 \text{ lb S}} = 0.094 \text{ lbs SOx/hr}$$

CALCULATED NORMAL EMISSIONS: **0.05** grains sulfur as H2S/100 dscf Natural Gas; the SDG&E gas analysis value.

	lbs/MMcft NG	x	6863 dscf NG/hr	+ 10 ⁶	=	lbs/hr	x	24 hrs/day	=	lbs/day	x	8760 hrs/yr	+ 2000 lbs/ton	=	tons/yr
NOx	100.00					0.69				16.560					3.022
CO	21.00					0.14				3.360					0.613
NMHC	2.78					0.02				0.480					0.088
PM10	7.40					0.05				1.200					0.219
SOx	0.094					0.000				0.000					0.000

CALCULATED NSR EMISSIONS: with **0.05** grains sulfur as H2S/100 dscf Natural Gas up to the Rule 62 limit of 10 grains.

NOT APPLICABLE

	lb/hr	x	24 hrs/day	=	lbs/day	x	130 days/yr	+ 2000 lbs/ton	=	tons/yr
NOx	0.690				16.56					1.076
CO	0.140				3.36					0.218
NMHC	0.020				0.48					0.031
PM10	0.050				1.20					0.078
SOx	0.000				0.00					0.000

CALCULATED RULE 53 DISCHARGE: with normal emissions the particulate discharge concentration @ 12% CO2 is:
 7000 grains/lb x **0.05** lb PM/hr + **308.8** lb NG/hr + 199 dscf exhaust/lb fuel = **0.006** grains PM/dscf exhaust.

THERM USAGE: **70.0** therms/hr x **24** hrs/day = **1,680** therms/day x **130** days/yr = **218.4** M therms/yr.

FUEL USAGE: **6.86** M dscf NG/hr x **24** hrs/day = **165** M dscf NG/day x **130** days/yr = **21.40** MM dscf NG/yr

COMMENTS:

- 1 THERM = 100,000 BTU/HR.
- THE ANNUAL FUEL CONSUMPTION RATE & OPERATING TIME IS A RESULT OF STAYING BELOW THE 220,000 THERMS/YR HEAT INPUT RATE FOR RULE 69.2 ALTERNATIVE COMPLIANCE.
- DUE TO RULE 11 CHANGE (NG FIRED & < 20 MMBTU/HR) THIS BOILER NOW REQUIRES A PERMIT. HOWEVER, IT IS NOT SUBJECT TO NSR.

Calculation Constants: District standard conditions are 68°F and 14.7 psia; Natural Gas density is 0.045 lb/dscf and air density is 0.0752 lb/dscf; total heat of combustion (HHV) is 22,667 btu/lb and 1020 btu/dscf; live exhaust is 234 dscf/lb fuel @ 3% O2 and 199 dscf/lb fuel @ 12% CO2.

Air Pollution Control District

R. J. Sommerville Director

August 6, 1997

GORDON MEACHAM
IDEC PHARMACEUTICALS CORP
11011 TORREYANA RD
SAN DIEGO CA 92121

Dear Mr. Meacham:

After examination of your Application No. 961744 for Air Pollution Control District Authority to Construct/Permits to Operate a natural gas fired boiler located at 11011 Torreyana Road, San Diego, California, the District has decided on the following action:

Authority to Construct is granted pursuant to Rule 20 of the Air Pollution Control District Rules and Regulations for the equipment consisting of:

Water-tube boiler: One (1) Thermo Pak Boiler, Model GW-D 10000, 10 MM BTU/hr, natural gas fired, water-tube boiler.

This Authority to Construct is granted with the following conditions:

1. The installation and operation of the boiler and any emission controls shall be limited to the equipment described above and operations shall be in accordance with all the conditions stated herein.
2. Permittee shall provide access, facilities, utilities, and any necessary safety equipment for source testing and inspection upon request of the Air Pollution Control District.
3. This boiler shall be tuned at least once per year in accordance with the tuning procedure outlined in District Rule 69.2(j). The permittee shall be responsible for all boiler tuning and costs incurred.
4. This boiler shall be operated on natural gas only. No other fuel shall be used without prior written authorization from the District.

5. The natural gas consumption rate of the boiler shall not exceed 21.5 million cubic feet per calendar year. This rate is equivalent to 220,000 therms.
6. The fuel for this boiler shall flow through a permanently installed, non-resettable, totalizing gas meter to measure the fuel consumed by the boiler. The gas meter shall measure and display the cubic feet of fuel consumed and shall either (i) be self correcting to standard conditions, (ii) display meter gas pressure and temperature data, or (iii) be a standard gas meter installed by the serving utility specifically for this boiler or the entire facility. In cases where other equipment are also connected to the gas meter, the fuel rates displayed by the meter will assumed to have been consumed by this boiler.
7. The natural gas meter readings and where appropriate, the temperature and gas pressure shall be recorded in a log at least monthly. The cubic feet of gas consumed in the month shall be calculated and also recorded in the log. The most recent three years of log entries shall be maintained onsite and be readily available for District review upon request.
8. Upon completion of installation, a field inspection by the District shall be scheduled.

This Air Pollution Control District Authority to Construct does not relieve the holder from obtaining permits or authorizations which may be required by other governmental agencies.

This is not a Permit to Operate. Please notify the Air Pollution Control District as soon as the equipment is installed in accordance with this Authority to Construct so it may be evaluated for a Permit to Operate. Operation of this equipment without written authorization to do so will be a violation of Rule 10(b) and will be subject to civil and criminal penalties.

This Authority to Construct authorizes temporary operation of the above specified equipment. This temporary Permit to Operate shall take effect upon written notification to the District that construction has been completed in accordance with this Authority to Construct. This temporary Permit to Operate will remain in effect, unless withdrawn or modified by the District, until the equipment is inspected by the District and a revised temporary permit (Startup Authorization) is issued or a Permit to Operate is granted or denied.

August 6, 1997

-3-

Upon completion of construction in accordance with this Authority to Construct and prior to commencing operation, the applicant must complete and mail, deliver personally or via facsimile the enclosed Construction Completion Notice to the District. After submitting the Notice, the applicant may commence operation of the equipment. Operation must be in compliance with all of the conditions of this Authority to Construct and applicable District rules.

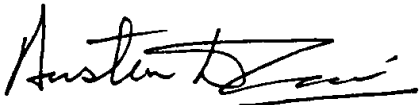

This Authority to Construct shall be posted on or within 25 feet of the above described equipment, or maintained readily available at all times on the operating premises.

Within ten days after receipt of this Authority to Construct, the applicant may petition the Hearing Board for a hearing on any conditions imposed herein in accordance with Rule 25.

This Authority to Construct will expire one year from the date of this letter.

If you have any questions regarding this action, please contact the undersigned at (619) 694-3317.

Sincerely,

AUSTEN D'LIMA
Air Pollution Control Engineer

APPLICATION STATUS

The application for an Authority to Construct and Permit to Operate for a 150 HP boiler, was received at the District on April 15, 1997. It has been assigned Application No. 961744.

As of May 14, 1997, this application is considered complete. Evaluation for permitting this equipment will proceed. Please note that during the permitting process, you may be contacted for clarification and amplification of information to proceed further with the application evaluation.

Please be advised that installation and operation of this equipment without written authorization is a misdemeanor subject to fines or penalties up to \$1,000 a day. This is not a Permit to Operate or an Authority to Construct. If you have any questions, please contact the undersigned at (619) 694-3317.

CONTACT MEMORANDUM

Date 5/12/98 Time _____ Project A/N 961744
Subject PHONE CALL FROM LISA STOVALL
Contact _____ Telephone 550-8742
Organization IDEC PHARMACEUTICALS

Discussion _____
MS. STOVALL CALLED TO INFORM ME THAT THE GAS METER READS
A VOLUMETRIC FLOW RATE AND THE PRESSURE IN THE LINE IS 5 PSI
(DROPPING TO 7 PSI AT THE BOILER).

I TOLD MS. STOVALL THAT I WOULD TRY TO HAVE HER S/A BY THE
END OF THE MONTH.

Conclusions/Follow on work to be done ADJUST MAX. FUEL RATE : $V_{base} = \left(\frac{P_{flow}}{14.7} \right) \left(\frac{T_{base}}{T_{flow}} \right) V_{flow}$

$\Rightarrow V_{flow} = \left(\frac{14.7}{14.7+5} \right) V_{base}$
where V_{base} is derived from 220,000 $\frac{therms}{yr}$

Staff Representative (Signature) AC

TELECON MEMO

Date: 8-27-97 Time: _____ Project: 6.3MM BTU/hr Steam Boiler

Subject: Correction factor for the gas meter.

Contact: Lisa Stovall Telephone No.: 550-8651

Re: Permit for steam boiler

Dear Sir or Madam:

Enclose you will find the required application and fee associated with a request for a Permit to operate a gas fired boiler. Due to changes in Rule 11, this boiler now falls within the scope of Rule 69.2(d)(2).

In operating this unit, IDEC intends to comply with section (d)(2)(iii) regarding the performance of annual tune-ups on the unit.

Should you have any questions, you can reach me at 619/550-8742 or Mark Thompson at 619/550-8613.

Thank you for your time.

Sincerely,

A handwritten signature in cursive script that reads "Lisa Stovall".

DATE : 11-Apr-06

APCD PERSONNEL : Ian K. Morris

EQUIPMENT : Parker Industrial steam boiler, 150 hp, 6.3 MMBtu/hr,
S/N 42645 natural gas fired, with a low NOx burner.
Parker Industrial model, Premix Metal Fiber

OPERATING PARAMETERS

	RUN 1	RUN 2	RUN 3	AVERAGE
FIRING RATE (%)*	93	93	93	93
STEAM PRESSURE (psi)	85 - 90	95 - 100	80 - 90	80 - 100
FUEL FLOW (scfh)**	5778	5778	5778	5778
FUEL FLOW (acfh)***	5897	5654	5631	5727

* Firing rate is indicated by a pointer bar on a quadrant with 15 divisions. During emissions testing a blow-off valve was opened and the boiler run with the pointer bar manually set at 14 on the quadrant.

** Calculated from 80 % Btu/hr input: [$0.8 \times 6.3 \text{ MM Btu/hr} / 1014 \text{ (btu/scf)}$]

*** The boiler has a dedicated fuel meter but the numerical increments are set at 1,000 cu.ft and so during a 15 minute test there is no numerical change on the meter display. An uncorrected roots meter on the gas delivery line provides gas usage in actual cu. ft. but the gas line pressure is not known therefore correction to standard conditions is not possible.

PERMIT TO OPERATE

(17 CCR 93115) (ATCM REPORTABLE)

- 6. ENGINE OPERATION IN RESPONSE TO NOTIFICATION OF AN IMPENDING ROTATING OUTAGE, SHALL BE SUBJECT TO ALL THE FOLLOWING RESTRICTIONS:
 - (A) THE UTILITY DISTRIBUTION COMPANY HAS ORDERED ROTATING OUTAGES IN THE CONTROL AREA WHERE THE ENGINE IS LOCATED.
 - (B) THE ENGINE IS OPERATED NO MORE THAN 30 MINUTES PRIOR TO THE TIME WHEN THE UTILITY DISTRIBUTION COMPANY OFFICIALLY FORECASTS A ROTATING OUTAGE IN THE CITED CONTROL AREA, AND
 - (C) THE ENGINE OPERATION IS TERMINATED IMMEDIATELY AFTER THE UTILITY DISTRIBUTION COMPANY ADVISES THAT A ROTATING OUTAGE IS NO LONGER IN EFFECT.

THIS CONDITION SHALL NOT APPLY TO ENGINES OPERATING PURSUANT TO THE ROLLING BLACKOUT REDUCTION PROGRAM AS DEFINED IN 17 CCR 93115 AND OPERATING IN ACCORDANCE WITH 17 CCR 93115 (E) (2) (F). (17CCR93115) (ATCM REPORTABLE)

- 7. A NON-RESETTABLE ENGINE HOUR METER SHALL BE INSTALLED ON THIS ENGINE, MAINTAINED IN GOOD WORKING ORDER, AND USED FOR RECORDING ENGINE OPERATION HOURS. IF A METER IS REPLACED, THE AIR POLLUTION CONTROL DISTRICT'S COMPLIANCE DIVISION SHALL BE NOTIFIED IN WRITING WITHIN 10 CALENDAR DAYS. THE WRITTEN NOTIFICATION SHALL INCLUDE THE FOLLOWING INFORMATION:
 - (A) OLD METER'S HOUR READING
 - (B) REPLACEMENT METER'S MANUFACTURER NAME, MODEL AND SERIAL NUMBER IF AVAILABLE AND CURRENT HOUR READING ON REPLACEMENT METER
 - (C) COPY OF RECEIPT OF NEW METER OR OF INSTALLATION WORK ORDER.

A COPY OF THE METER REPLACEMENT NOTIFICATION SHALL BE MAINTAINED ONSITE AND MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT UPON REQUEST.
(RULE 69.4.1, 17 CCR 93115)

- 8. THE OWNER OR OPERATOR THIS ENGINE SHALL CONDUCT PERIODIC MAINTENANCE OF THE ENGINE AND ADD-ON CONTROL EQUIPMENT, IF ANY, AS RECOMMENDED BY THE ENGINE AND CONTROL EQUIPMENT MANUFACTURERS OR AS SPECIFIED BY THE ENGINE SERVICING COMPANY'S MAINTENANCE PROCEDURES. THE PERIODIC MAINTENANCE SHALL BE CONDUCTED AT LEAST ONCE EACH CALENDAR YEAR. (RULE 69.4.1)

- 9. THE OWNER OR OPERATOR OF THE ENGINE SHALL MAINTAIN THE FOLLOWING RECORDS ON SITE FOR AT LEAST THE SAME PERIOD OF TIME AS THE ENGINE TO WHICH THE RECORDS APPLY IS LOCATED AT THE SITE:
 - (A) DOCUMENTATION SHALL BE MAINTAINED IDENTIFYING THE FUEL AS CARB DIESEL.
 - (B) MANUAL OF RECOMMENDED MAINTENANCE PROVIDED BY THE MANUFACTURER, OR MAINTENANCE PROCEDURES SPECIFIED BY THE ENGINE SERVICING COMPANY; AND
 - (C) RECORDS OF ANNUAL ENGINE MAINTENANCE INCLUDING DATE THE MAINTENANCE WAS PERFORMED.

THESE RECORDS SHALL BE MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT UPON REQUEST. (RULE 69.4.1) (17 CCR 93115)

10. THE OWNER OR OPERATOR OF THIS ENGINE SHALL MAINTAIN A MONTHLY OPERATING LOG CONTAINING, AT A MINIMUM, THE FOLLOWING:
 - (A) DATES AND TIMES OF ENGINE OPERATION WHETHER THE OPERATION WAS MAINTENANCE AND TESTING PURPOSES OR EMERGENCY USE; AND THE NATURE OF THE EMERGENCY, IF KNOWN;
 - (B) HOURS OF OPERATION FOR ALL USES OTHER THAN THOSE SPECIFIED ABOVE AND IDENTIFICATION OF THE NATURE OF THAT USE.(RULE 69.4.1, CCR 93115)
11. THE OWNER OR OPERATOR SHALL DOCUMENT FUEL USE THROUGH THE RETENTION OF FUEL PURCHASE RECORDS THAT ACCOUNT FOR ALL FUEL USED IN THE ENGINE AND ALL FUEL PURCHASED FOR USE IN THE ENGINE, AND, AT A MINIMUM, CONTAIN THE FOLLOWING INFORMATION:
 - (A) AMOUNT OF FUEL PURCHASED
 - (B) DATE WHEN THE FUEL WAS PURCHASED
 - (C) SIGNATURE OF OWNER OR OPERATOR OR REPRESENTATIVE OF OWNER OR OPERATOR WHO RECEIVED THE FUEL.
 - (D) SIGNATURE OF FUEL PROVIDER INDICATING FUEL WAS DELIVERED; AND
 - (E) AMOUNT OF FUEL ADDED TO THE ENGINE TANK.(17 CCR 93115)
12. ALL OPERATIONAL AND MAINTENANCE LOGS AND FUEL USE AND TYPE AND PURCHASE RECORDS REQUIRED BY THIS PERMIT SHALL BE KEPT FOR A MINIMUM OF 36 MONTHS FROM THEIR DATE OF CREATION UNLESS OTHERWISE INDICATED BY THE CONDITIONS OF THIS PERMIT. THE RECORDS SHALL BE MAINTAINED ONSITE FOR A MINIMUM OF 24 MONTHS FROM THEIR DATE OF CREATION. RECORDS FOR THE LAST 24 MONTHS OF OPERATIONS SHALL BE MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT UPON REQUEST. RECORDS FOR OPERATION FOR THE LAST 25 TO 36 MONTHS SHALL BE MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT WITHIN 5 WORKING DAYS OF REQUEST. (69.4.1, 17 CCR 93115)
13. THE PERMITTEE SHALL NOTIFY THE AIR POLLUTION CONTROL DISTRICT COMPLIANCE DIVISION IMMEDIATELY UPON DETECTION OF ANY VIOLATION OF A CONDITION IDENTIFIED AS "ATCM REPORTABLE". SUCH VIOLATIONS SHALL BE SUBJECT TO AIR POLLUTION CONTROL DISTRICT COMPLIANCE ACTION.

PERMIT TO OPERATE

(17 CCR 93115) (ATCM REPORTABLE)

6. ENGINE OPERATION IN RESPONSE TO NOTIFICATION OF AN IMPENDING ROTATING OUTAGE, SHALL BE SUBJECT TO ALL THE FOLLOWING RESTRICTIONS:
- (A) THE UTILITY DISTRIBUTION COMPANY HAS ORDERED ROTATING OUTAGES IN THE CONTROL AREA WHERE THE ENGINE IS LOCATED.
 - (B) THE ENGINE IS OPERATED NO MORE THAN 30 MINUTES PRIOR TO THE TIME WHEN THE UTILITY DISTRIBUTION COMPANY OFFICIALLY FORECASTS A ROTATING OUTAGE IN THE CITED CONTROL AREA, AND
 - (C) THE ENGINE OPERATION IS TERMINATED IMMEDIATELY AFTER THE UTILITY DISTRIBUTION COMPANY ADVISES THAT A ROTATING OUTAGE IS NO LONGER IN EFFECT.

THIS CONDITION SHALL NOT APPLY TO ENGINES OPERATING PURSUANT TO THE ROLLING BLACKOUT REDUCTION PROGRAM AS DEFINED IN 17 CCR 93115 AND OPERATING IN ACCORDANCE WITH 17 CCR 93115 (E) (2) (F). (17CCR93115) ~~(ATCM REPORTABLE)~~

7. A NON-RESETTING ENGINE HOUR METER SHALL BE INSTALLED ON THIS ENGINE, MAINTAINED IN GOOD WORKING ORDER, AND USED FOR RECORDING ENGINE OPERATION HOURS. IF A METER IS REPLACED, THE AIR POLLUTION CONTROL DISTRICT'S COMPLIANCE DIVISION SHALL BE NOTIFIED IN WRITING WITHIN 10 CALENDAR DAYS. THE WRITTEN NOTIFICATION SHALL INCLUDE THE FOLLOWING INFORMATION:
- (A) OLD METER'S HOUR READING
 - (B) REPLACEMENT METER'S MANUFACTURER NAME, MODEL AND SERIAL NUMBER IF AVAILABLE AND CURRENT HOUR READING ON REPLACEMENT METER
 - (C) COPY OF RECEIPT OF NEW METER OR OF INSTALLATION WORK ORDER.
- A COPY OF THE METER REPLACEMENT NOTIFICATION SHALL BE MAINTAINED ONSITE AND MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT UPON REQUEST.
(RULE 69.4.1, 17 CCR 93115)

8. THE OWNER OR OPERATOR OF THIS ENGINE SHALL CONDUCT PERIODIC MAINTENANCE OF THE ENGINE AND ADD-ON CONTROL EQUIPMENT, IF ANY, AS RECOMMENDED BY THE ENGINE AND CONTROL EQUIPMENT MANUFACTURERS OR AS SPECIFIED BY THE ENGINE SERVICING COMPANY'S MAINTENANCE PROCEDURES. THE PERIODIC MAINTENANCE SHALL BE CONDUCTED AT LEAST ONCE EACH CALENDAR YEAR. (RULE 69.4.1)

9. THE OWNER OR OPERATOR OF THE ENGINE SHALL MAINTAIN THE FOLLOWING RECORDS ON SITE FOR AT LEAST THE SAME PERIOD OF TIME AS THE ENGINE TO WHICH THE RECORDS APPLY IS LOCATED AT THE SITE:
- (A) DOCUMENTATION SHALL BE MAINTAINED IDENTIFYING THE FUEL AS CARB DIESEL.
 - (B) MANUAL OF RECOMMENDED MAINTENANCE PROVIDED BY THE MANUFACTURER, OR MAINTENANCE PROCEDURES SPECIFIED BY THE ENGINE SERVICING COMPANY; AND
 - (C) RECORDS OF ANNUAL ENGINE MAINTENANCE INCLUDING DATE THE MAINTENANCE WAS PERFORMED.

PERMIT TO OPERATE

THESE RECORDS SHALL BE MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT UPON REQUEST. (RULE 69.4.1) (17 CCR 93115)

10. THE OWNER OR OPERATOR OF THIS ENGINE SHALL MAINTAIN A MONTHLY OPERATING LOG CONTAINING, AT A MINIMUM, THE FOLLOWING:
 - (A) DATES AND TIMES OF ENGINE OPERATION WHETHER THE OPERATION WAS MAINTENANCE AND TESTING PURPOSES OR EMERGENCY USE; AND THE NATURE OF THE EMERGENCY, IF KNOWN;
 - (B) HOURS OF OPERATION FOR ALL USES OTHER THAN THOSE SPECIFIED ABOVE AND IDENTIFICATION OF THE NATURE OF THAT USE.(RULE 69.4.1, 17 CCR 93115)
11. THE OWNER OR OPERATOR SHALL DOCUMENT FUEL USE THROUGH THE RETENTION OF FUEL PURCHASE RECORDS THAT ACCOUNT FOR ALL FUEL USED IN THE ENGINE AND ALL FUEL PURCHASED FOR USE IN THE ENGINE, AND, AT A MINIMUM, CONTAIN THE FOLLOWING INFORMATION:
 - (A) AMOUNT OF FUEL PURCHASED
 - (B) DATE WHEN THE FUEL WAS PURCHASED
 - (C) SIGNATURE OF OWNER OR OPERATOR OR REPRESENTATIVE OF OWNER OR OPERATOR WHO RECEIVED THE FUEL.
 - (D) SIGNATURE OF FUEL PROVIDER INDICATING FUEL WAS DELIVERED; AND
 - (E) AMOUNT OF FUEL ADDED TO THE ENGINE TANK.(17 CCR 93115)
12. ALL OPERATIONAL AND MAINTENANCE LOGS AND FUEL USE AND TYPE AND PURCHASE RECORDS REQUIRED BY THIS PERMIT SHALL BE KEPT FOR A MINIMUM OF 36 MONTHS FROM THEIR DATE OF CREATION UNLESS OTHERWISE INDICATED BY THE CONDITIONS OF THIS PERMIT. THE RECORDS SHALL BE MAINTAINED ONSITE FOR A MINIMUM OF 24 MONTHS FROM THEIR DATE OF CREATION. RECORDS FOR THE LAST 24 MONTHS OF OPERATIONS SHALL BE MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT UPON REQUEST. RECORDS FOR OPERATION FOR THE LAST 25 TO 36 MONTHS SHALL BE MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT WITHIN 5 WORKING DAYS OF REQUEST. (69.4.1, 17 CCR 93115)
13. THE PERMITTEE SHALL NOTIFY THE AIR POLLUTION CONTROL DISTRICT COMPLIANCE DIVISION IMMEDIATELY UPON DETECTION OF ANY VIOLATION OF A CONDITION IDENTIFIED AS "ATCM REPORTABLE". SUCH VIOLATIONS SHALL BE SUBJECT TO AIR POLLUTION CONTROL DISTRICT COMPLIANCE ACTION.
(17 CCR 93115)
14. ACCESS, FACILITIES, UTILITIES AND ANY NECESSARY SAFETY EQUIPMENT FOR SOURCE TESTING AND INSPECTION SHALL BE PROVIDED UPON REQUEST OF THE AIR POLLUTION CONTROL DISTRICT
15. THIS AIR POLLUTION CONTROL DISTRICT PERMIT DOES NOT RELIEVE THE HOLDER

THIS CONDITION SHALL NOT APPLY TO ENGINES OPERATING PURSUANT TO THE ROLLING BLACKOUT REDUCTION PROGRAM AS DEFINED IN 17 CCR 93115 AND OPERATING IN ACCORDANCE WITH 17 CCR 93115 (E) (2) (F). (17CCR93115) (ATCM REPORTABLE)

8. A NON-RESETTABLE ENGINE HOUR METER SHALL BE INSTALLED ON THIS ENGINE, MAINTAINED IN GOOD WORKING ORDER, AND USED FOR RECORDING ENGINE OPERATION HOURS. IF A METER IS REPLACED, THE AIR POLLUTION CONTROL DISTRICT'S COMPLIANCE DIVISION SHALL BE NOTIFIED IN WRITING WITHIN 10 CALENDAR DAYS. THE WRITTEN NOTIFICATION SHALL INCLUDE THE FOLLOWING INFORMATION:

(A) OLD METER'S HOUR READING

(B) REPLACEMENT METER'S MANUFACTURER NAME, MODEL AND SERIAL NUMBER IF AVAILABLE AND CURRENT HOUR READING ON REPLACEMENT METER

(C) COPY OF RECEIPT OF NEW METER OR OF INSTALLATION WORK ORDER.

A COPY OF THE METER REPLACEMENT NOTIFICATION SHALL BE MAINTAINED ONSITE AND MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT UPON REQUEST.

(RULE 69.4.1, 17 CCR 93115)

9. THE OWNER OR OPERATOR THIS ENGINE SHALL CONDUCT PERIODIC MAINTENANCE OF THE ENGINE AND ADD-ON CONTROL EQUIPMENT, IF ANY, AS RECOMMENDED BY THE ENGINE AND CONTROL EQUIPMENT MANUFACTURERS OR AS SPECIFIED BY THE ENGINE SERVICING COMPANY'S MAINTENANCE PROCEDURES. THE PERIODIC MAINTENANCE SHALL BE CONDUCTED AT LEAST ONCE EACH CALENDAR YEAR. (RULE 69.4.1)

10. THE OWNER OR OPERATOR OF THE ENGINE SHALL MAINTAIN THE FOLLOWING RECORDS

CONTROL NO.
267994

COUNTY OF SAN DIEGO, AIR POLLUTION CONTROL DISTRICT
9150 CHESAPEAKE DRIVE, SAN DIEGO, CA 92123-1096
(858) 650-4700 FAX (858) 650-4659

PERMIT TO OPERATE

ON SITE FOR AT LEAST THE SAME PERIOD OF TIME AS THE ENGINE TO WHICH THE RECORDS APPLY IS LOCATED AT THE SITE:

- (A) DOCUMENTATION SHALL BE MAINTAINED IDENTIFYING THE FUEL AS CARB DIESEL.
- (B) MANUAL OF RECOMMENDED MAINTENANCE PROVIDED BY THE MANUFACTURER, OR MAINTENANCE PROCEDURES SPECIFIED BY THE ENGINE SERVICING COMPANY; AND
- (C) RECORDS OF ANNUAL ENGINE MAINTENANCE INCLUDING DATE THE MAINTENANCE WAS PERFORMED.

THESE RECORDS SHALL BE MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT UPON REQUEST. (RULE 69.4.1) (17 CCR 93115)

- 11. THE OWNER OR OPERATOR OF THIS ENGINE SHALL MAINTAIN A MONTHLY OPERATING LOG CONTAINING, AT A MINIMUM, THE FOLLOWING:
 - (A) DATES AND TIMES OF ENGINE OPERATION WHETHER THE OPERATION WAS MAINTENANCE AND TESTING PURPOSES OR EMERGENCY USE; AND THE NATURE OF THE EMERGENCY, IF KNOWN;
 - (B) HOURS OF OPERATION FOR ALL USES OTHER THAN THOSE SPECIFIED ABOVE AND IDENTIFICATION OF THE NATURE OF THAT USE.(RULE 69.4.1, CCR 93115)

- 12. THE OWNER OR OPERATOR SHALL DOCUMENT FUEL USE THROUGH THE RETENTION OF FUEL PURCHASE RECORDS THAT ACCOUNT FOR ALL FUEL USED IN THE ENGINE AND ALL FUEL PURCHASED FOR USE IN THE ENGINE, AND, AT A MINIMUM, CONTAIN THE FOLLOWING INFORMATION:
 - (A) AMOUNT OF FUEL PURCHASED
 - (B) DATE WHEN THE FUEL WAS PURCHASED
 - (C) SIGNATURE OF OWNER OR OPERATOR OR REPRESENTATIVE OF OWNER OR OPERATOR WHO RECEIVED THE FUEL.
 - (D) SIGNATURE OF FUEL PROVIDER INDICATING FUEL WAS DELIVERED; AND
 - (E) AMOUNT OF FUEL ADDED TO THE ENGINE TANK.(17 CCR 93115)

- 13. ALL OPERATIONAL AND MAINTENANCE LOGS AND FUEL USE AND TYPE AND PURCHASE RECORDS REQUIRED BY THIS PERMIT SHALL BE KEPT FOR A MINIMUM OF 36 MONTHS FROM THEIR DATE OF CREATION UNLESS OTHERWISE INDICATED BY THE CONDITIONS OF THIS PERMIT. THE RECORDS SHALL BE MAINTAINED ONSITE FOR A MINIMUM OF 24 MONTHS FROM THEIR DATE OF CREATION. RECORDS FOR THE LAST 24 MONTHS OF OPERATIONS SHALL BE MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT UPON REQUEST. RECORDS FOR OPERATION FOR THE LAST 25 TO 36 MONTHS SHALL BE MADE AVAILABLE TO THE AIR POLLUTION CONTROL DISTRICT WITHIN 5 WORKING DAYS OF REQUEST. (69.4.1, 17 CCR 93115)

- 14. THE PERMITTEE SHALL NOTIFY THE AIR POLLUTION CONTROL DISTRICT COMPLIANCE

Fee Schedules: 49A01

EVERY PERSON WHO OWNS OR OPERATES THIS EQUIPMENT IS REQUIRED TO COMPLY WITH THE CONDITIONS LISTED BELOW AND ALL APPLICABLE REQUIREMENTS AND DISTRICT RULES, INCLUDING BUT NOT LIMITED TO RULES 2, 10, 40, 50, 51, 67.17, 1200, 69.4.1.

FAILURE TO OPERATE IN COMPLIANCE IS A MISDEMEANOR SUBJECT TO CIVIL AND CRIMINAL PENALTIES.

1. THIS EQUIPMENT SHALL NOT BE OPERATED AT ANY TIME EXCEPT WHERE LIMITED USE OF THIS EQUIPMENT IS ALLOWED WITHOUT A PERMIT TO OPERATE UNDER A RULE 11 EXEMPTION. THIS LIMITED USAGE SHALL BE SUBJECT TO ALL OTHER APPLICABLE PROHIBITORY RULES. ALL RECORDS AND DATA NECESSARY TO SUBSTANTIATE THIS RULE 11 EXEMPTION SHALL BE MAINTAINED ON SITE FOR A MINIMUM OF THREE CALENDAR YEARS AND MADE AVAILABLE TO THE DISTRICT UPON REQUEST.
2. IF THE PREVIOUSLY APPLICABLE PERMIT TO OPERATE (PRIOR TO INACTIVATION) REQUIRED SOURCE TESTING, THE EQUIPMENT SHALL BE SOURCE TESTED WITHIN 60 CALENDAR DAYS OF PERMIT REACTIVATION. THIS SOURCE TESTING IS REQUIRED TO DEMONSTRATE COMPLIANCE WITH EMISSION STANDARDS CONTAINED IN THE PREVIOUSLY APPLICABLE PERMIT TO OPERATE, IT IS THE RESPONSIBILITY OF THE PERMITTEE TO SCHEDULE THE SOURCE TEST WITH THE DISTRICT. THE SOURCE TEST SHALL BE PERFORMED OR WITNESSED BY THE DISTRICT.
3. THE PERMITTEE SHALL SUBMIT AN APPLICATION AND OBTAIN WRITTEN APPROVAL

Emergency standby engine: Detroit Diesel/MTU diesel engine, Model 12V2000 G84 R123-8A36 (S/N: 5352005377) , rated at 1120 BHP, Model Year 2007, EPA Tier 2 certified of Engine Family Number 7MDDL31.8XRR, driving a 750 KW generator. Equipped with turbocharger and aftercooler.

Equipment Type
[34H] California Certified Emergency Standby Engine

Reason for Inspection:

Authority to Operate (Rule 10) Review:

- Equipment (including controls) manufacturer, model & serial number matches permit/certificate/application? Yes No
- Permit/certificate current and posted/readily available? Yes No

<u>Expiration Status</u> Active	<u>Expiration Date</u> 4/30/2021
------------------------------------	-------------------------------------
- Ownership verified? Yes No
Equipment Owner
- Engine running during inspection? Yes No
 If yes, is visible emissions standard met? [Rule 50] UTV Yes No

FUEL & HOUR METER

- Fuel(s): CARB diesel Natural gas Propane Gasoline Biodiesel Other _____
 If CARB diesel, is documentation maintained identifying fuels as such? [17 CCR § 93115.10(f)(1)(H)1.] Yes No
- Engine equipped with a properly working hour meter? [17 CCR § 93115.10(d)(1) / R12(d)(3) / R69.4.1(e)(3)] Yes No
- Facility changed out the hour meter since the last inspection? Yes No
 If yes, did the Facility notify Compliance Division of the change? UTV Yes No

RECORDS REVIEW & OPERATING HOURS

- Records of engine operation properly maintained? Yes No

Engine Hours Reading Date	10/01/2020	02/27/2019	01/01/2018
FIRST reading of year	44.2	35	28
LAST reading of year	48.8	44.2	35
Total usage (LAST-FIRST)	4.6	9.2	7
Emergency Use	1.8	0	0
Other usage (e.g. valid breakdowns)	0	0	0
Testing & Maintenance (T&M)	2.8	9.2	7
T&M limit in permit	50	50	50
Hour reading on inspection date	48.8		

NEAR/ON SCHOOL PROVISIONS (for diesel engines not equipped with DPF)

14. Exhaust stack located within 500 feet of a school or on school grounds (not boarding schools)?¹ N/A Yes No
15. If yes, is engine operated for non-emergency purposes: [17 CCR § 93115.6(a)(1) / (b)(2) / (c)(2)(A)]
- A. Before 7:30 AM and after 3:30 PM, if school in session (engines within 500 feet of school) UTV Yes No
- B. Outside of school-sponsored activities (engines on school grounds) UTV Yes No

MAINTENANCE

16. Periodic maintenance performed on engine/DPF at least once per calendar year? [R69.4.1(f)] N/A Yes No
17. Records of periodic maintenance/owner's manual maintained on site readily available? [R69.4.1(g)(1)(iv)] N/A Yes No
18. Did facility comply with NESHAP ZZZZ maintenance requirements? If so, how? N/A Yes No

Every 500 operating hours or annually, whichever is first:

A. Oil & filter (3 ways to comply):

- Oil & filter changed
- Oil tested² and passed
- Oil tested² and failed, but oil changed within 2 business days (of receiving results or operating)
- Did not comply

B. Hoses & Belts inspected, replaced if needed: Yes No

Every 1000 operating hours or annually, whichever is first:

C. Air Cleaner inspected, replaced if needed: Yes No

D. Spark plugs inspected, replaced if needed (non-diesel only): N/A Yes No

ENFORCEMENT DOCUMENTS & NOTES

19. Site advised of permit/certificate conditions & applicable rules including maintenance, logs, etc? Yes No
20. Facility in compliance with all permit conditions not addressed above? Yes No
21. Permit/certificate conditions reviewed (current/enforceable)? Yes No
- If changes needed, permit condition change request submitted? N/A Yes No
22. Any enforcement documents issued? None CAR NTC NOV

Notes

Facilities Manager, Bob Fischer, was out of town on date of inspection. Robert Chavez, EHS Consultant at Bioduro, and additional Bioduro staff assisted and granted me access to the equipment.

The engine operating log kept with the generator contained entries for period: 09/24/19-10/1/20. I called Mr. Fischer and requested records for dates prior to 09/24/19. He stated he kept those records in his office and told me he could send them to me when he returned from vacation (a week from the inspection date). I asked if anyone else could access them. He said no.

Based on the last inspection report, T&M limit was not surpassed.

An NTC was issued for violation of Rule 69.4.1 (g)(2)(i) / Rule 21 Condition 12 (a) - failing to maintain an operating log containing dates, elapsed times, and nature of use, of every instance of engine operation. Specifically, no records of engine operation were

Notes

Annual PM conducted by Global Power Group 5/16/2021

GIS mapping complete

Facility has 2 logs at engine, one from 9/24/2019 - 9/9/2021 and another log beginning from 2013 through 12/15/2021. Both were provided for review. Last year 2019, facility received NTC for no records of engine use prior to 9/24/2019. New facility contact, Les Winchester, was aware of previous NTC (only 9/24/2021 log book was available at the time, see 2020 inspection checklist) and older logbook was since found. Overlap of both logs match up and all hours are now accounted for. Mr. Winchester advised facility will continue to log hours on current log book to reduce confusion but will keep other logbook (9/24/2019) as a record.

NOTICE TO COMPLY

Date(s) of Violation 10/01/20

Name Alliance Diversified Holdings LLC Phone 619-977-7225

Mailing Address PO BOX 928769 City San Diego 92192

Violation Location 11011 Torreyana Rd. City San Diego 92121

Specifically, the following violation(s) of the California Health and Safety Code, California Code of Regulations and/or San Diego Air Pollution Control District Rules and Regulations require corrective action:

Section(s)/Rule(s)	Description of Violation(s) and Corrective Action Required
<u>Rule 69.4.1(g) (2)(i) / Rule 21 12(a)</u>	<u>Failure to maintain an operating log containing dates, elapsed times, and nature of use, of every instance of engine operation. Specifically, no records of engine operation were available for dates prior to 09/24/19.</u>
<u>Correct by:</u>	<u>Maintaining said records onsite and readily available for a minimum of 36 months from their date of creation</u>

Compliance is required by 10/15/20 (due date). You must sign and return this form within five days of achieving compliance.

Inspector Melanie Sanchez Date 10/01/20

Served To Bob Fischer Title Facilities Manager

Signature _____ Date _____

I CERTIFY, BY SIGNING MY NAME BELOW, I HAVE TAKEN THE REQUIRED CORRECTIVE ACTION TO ACHIEVE COMPLIANCE WITH THE CITED SECTION(S) AND/OR RULE(S):

Signature Bob Fischer Date 10/8/2020

Reinspection may occur at any time to verify that the violation(s) have been corrected. Failure to comply by the due date and/or any false statement of compliance may result in civil or criminal penalties. (See reverse side for more information.)

10/10/01
00779

WHAT A "NOTICE TO COMPLY" MEANS

You have just received a Notice to Comply from the San Diego County Air Pollution Control District, a government agency responsible for air pollution control in San Diego County. A Notice to Comply is the District's claim that a violation of the District's rules and/or state laws applying to air pollution has occurred.

10/10/01
00779

WHAT TO DO IF YOU RECEIVE A NOTICE TO COMPLY

If you receive a Notice to Comply, take immediate action to correct the violation as soon as possible and compliance must be achieved no later than the due date.

YOU MUST SIGN AND RETURN THE NOTICE TO COMPLY (GOLDENROD COPY) TO THE DISTRICT WITHIN FIVE DAYS OF ACHIEVING COMPLIANCE.

IF YOU DISAGREE WITH THE NOTICE TO COMPLY, THEN SEND IN A WRITTEN RESPONSE BY THE DUE DATE STATING THE REASON(S) WHY THE ALLEGED VIOLATION(S) DID NOT OCCUR.

If you need additional time to correct the violation, the due date may be extended for good cause up to a maximum 30 days from the issue date. You may request a time extension by calling (858) 586-2650.

HOW THE NOTICE TO COMPLY WILL BE RESOLVED

The District will review your signed Notice to Comply, and/or any other information submitted to the District to determine if you are in compliance.

THE DISTRICT MAY REINSPECT YOUR FACILITY AT ANY TIME TO ENSURE COMPLIANCE AND/OR TO VERIFY THAT THE VIOLATION(S) CITED IN THE NOTICE TO COMPLY HAVE BEEN CORRECTED.

Please be advised that compliance with District rules and/or state pollution laws is your responsibility and any failure to comply may result in civil or criminal prosecution.

FAILURE TO COMPLY

FAILURE TO COMPLY BY THE DUE DATE AND/OR ANY FALSE STATEMENT OF COMPLIANCE MAY RESULT IN CIVIL OR CRIMINAL PENALTIES. The maximum civil penalties established by the California Health and Safety Code range between \$1,000 and 50,000 per day of violation, depending on the nature of the violation. The maximum criminal penalties established by the California Health and Safety Code is a misdemeanor and fines range between \$1,000 and \$50,000 per day of violation and/or one (1) year in jail, depending on the nature of the violation.

CORRESPONDENCE

RETURN THE SIGNED NOTICE TO COMPLY (GOLDENROD COPY) AND/OR ALL OTHER CORRESPONDENCE TO THE AIR POLLUTION CONTROL DISTRICT, 10124 OLD GROVE ROAD, SAN DIEGO, CALIFORNIA 92131

YOU MAY CALL (858) 586-2650 TO CHECK THE STATUS OF THE NOTICE TO COMPLY.

Dear Gabriel,

The San Diego Regional Water Quality Control Board has found documents responsive to your Public Records Act request. The search was of the following databases: the Board's Electronic Content Management (ECM) filing system, California Integrated Water Quality System (CIWQS), Stormwater Multiple Application and Report Tracking System (SMARTS), and GeoTracker. The below is what was responsive to your Public Records Act request:

SMARTS Records

I have attached the SMARTS instructions which will tell you step by step how to access the records. Please use the following link to access the site, and the following facility address when searching for the records:

<https://smarts.waterboards.ca.gov>

Facility Site/Street: "11011 Torreyana"

Email Communication Documents

I have uploaded the requested electronic files onto our FTP site for you to download and view. Your folder is named "11011 Torreyana - EN". Due to size limitations, **this folder will be automatically deleted within two weeks (on 12/29/2022) unless you request more time to access it.**

Please use the following link, user ID, and password to access our FTP site:

<https://ftp.waterboards.ca.gov>

User ID: RB9Public

Password: rqfa51

Please let me know if you have any questions!

Thank you,

-Liz

STATE WATER RESOURCES CONTROL BOARD

ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES
1993-1994

RECEIVED

JUN 28 1994

SAN DIEGO REGIONAL WATER
QUALITY CONTROL BOARD

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company that the information provided in this report is true and complete (see Section C.9 of the General Permit). Retain a copy of the completed Annual Report for your records.

Many of the Annual Report questions, when answered "NO", require an explanation. Please provide explanations on a separate sheet as an attachment. As necessary, include a discussion of what actions have or will be taken to bring the facility into compliance along with a time schedule for implementation of planned actions. If convenient, you may provide a single sketch or site plan that combines the sketch or site plan requirements under items 6, 7, 8, and 9(c) on pages 3 and 4.

If any information contained in Items A, B, and C below is incorrect, please cross out or highlight the incorrect information (do not white out or erase) and provide the correct information next to or above the incorrect information.

If you have any questions, please contact your Regional Board Storm Water Program Contact. The address of your Regional Board (where the Annual Report must be filed) along with the name and telephone number of the contact person is indicated below.

STATE WATER RESOURCES CONTROL BOARD

ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES
1993-1994

SPECIFIC INFORMATION

1. Have you prepared a Storm Water Pollution Prevention Plan (SWPPP) as required in Section A of the Permit?

Yes No If No, attach explanation.

2. Have you implemented all elements of your SWPPP?

Yes No If No, attach explanation.

3. a. Have all non-storm water discharges (see page 10 for examples) been permitted or eliminated (Section A.6)?

Yes No

If No, describe the non-storm water discharges that have not been permitted or eliminated.

- b. Have you reported all non-storm water discharges described above to the appropriate Regional Board office?

Yes No If No, attach report (see page 10 for instructions). See Attachment One
If Yes, attach a copy of the first page of the previously submitted report.

- c. Does your SWPPP include Best Management Practices (BMPs) that address existing non-storm water discharges described above?

Yes No

If No, revise your SWPPP and attach a brief description of the revisions.

4. Have you developed a monitoring program as required in Section B of the Permit?

Yes No If No, attach explanation.

5. Have you implemented all the elements of your monitoring plan?

Yes No If No, attach explanation.

6. Did you conduct an annual site inspection (Section B.5a)?

Yes No If No, attach explanation.

If Yes, attach a sketch or site plan of the facility showing areas inspected and provide the following for each area inspected: (you may use FORM 1 to report findings)

- Date and time of inspection.
- Name and title of inspector.
- Summary of inspection findings. Evaluate if BMPs, as identified in the SWPPP, are in place and if additional BMPs are needed. Discuss corrective actions that are necessary..

State of California
STATE WATER RESOURCES CONTROL BOARD

ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES
1993-1994

SPECIFIC INFORMATION (CONTINUED)

10. Provide a summary of your sampling results. You may use FORM 4 to report findings. The summary should include the date and time of sample, constituents tested, who did the testing, the testing results, test method used, and test detection limit. Copies of the analytical results from the laboratory may also be provided, but are not required. For facilities subject to Federal Storm Water Effluent Limitation Guidelines, separately report the Federal Guidelines and the corresponding monitoring results.
11. Attach an evaluation of the over-all effectiveness of the facility's SWPPP in reducing pollutants in storm water discharge. Consider the results of sampling and visual observation in this evaluation. Discuss specific areas or elements of the SWPPP that are not effective or need improvement. Provide a brief description of alternatives or proposed revisions to the SWPPP. See Attachment One
12. Attach an evaluation of your monitoring program in detecting pollutants in storm water discharge. Discuss areas of the monitoring program that are not effective or need improvement. Provide a brief description of proposed revisions to the monitoring program. See Attachment One
13. Do you certify that, based on your annual site inspection, your facility is in compliance with the requirements of the General Industrial Activities Storm Water Permit?

Yes No If No, attach explanation.

CERTIFICATION

I am duly authorized to sign reports required by the GENERAL INDUSTRIAL ACTIVITIES STORM WATER PERMIT (see Provisions C. 9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITY
1993-1994

SUPPLEMENTAL QUESTIONNAIRE (OPTIONAL)

We have received over 8000 NOIs for coverage under the STATEWIDE INDUSTRIAL GENERAL PERMIT. We have tried to make the program understandable and provide a workable means of implementing a complex set of new regulations. You may wish to spend a few minutes answering the following questions to tell us how we are doing.

You may send this form with your annual report. If you wish to submit it anonymously, please submit it separately.

1. Do you understand the GENERAL PERMIT and what it requires you to do?

Yes No

2. Do you consider the GENERAL PERMIT an efficient and workable means to comply with the Clean Water Act and the Storm Water Permitting Regulations?

Yes No

3. Have you had any contact (inspections, informational workshops, telephone inquiries) with staff of the Regional Water Boards or your local storm water management agency?

Yes No

If Yes, please indicate the type of contact made, and the date (if available) it was made. You may also wish to discuss the context in which the contact was made and if you were satisfied with the help or guidance received in response to your inquiry.

Phone contact made with local lead agency regarding limits in 40 CFR 439.15.

Specifically - lack of numbers in the table included in this section.

4. Did you (or your accounting office) understand the last ANNUAL FEE INVOICE ?

Yes No DID NOT RECEIVE INVOICE

5. Please use the space provided below (or an attachment) to suggest ways that we can improve and/or streamline our management of this program, or explain your responses made to the preceding questions.

None at this time.

Attachment One

Facility WDID NO: 9 37S010764

OWNER/OPER: IDEC PHARMACEUTICALS

ADDRESS: 11011 TORREYANA ROAD SAN DIEGO CA 92121

Item 3. Non-Storm Water Discharges

A non-storm water discharge has been identified at the IDEC facility, but has not been reported to the Regional Board office.

The discharge in question occurs during cleaning of a metal grating that is normally attached to the air intake of the cooling tower that serves the facility. This grating has to be periodically removed from the intake and rinsed free of mineral deposits that build-up on the exterior surface. The rinsate generated during the grate washing had been released to the storm water system until the practice was identified as a discharge associated with industrial activity that might be prohibited under CFR 40. The practice has now been suspended.

A sample of the rinsate from the grating was taken and analyzed. Under the current regulations it is unclear as to whether or not the release of this rinsate is prohibited, however, the discharge is currently targeted for elimination. The cooling tower service yard is equipped with a drain line leading to the industrial waste (sewer) system which will be enlarged to facilitate washing of the grating. The analytical results on the rinsate in question are on file as part of IDEC's Storm Water Pollution Prevention Plan.

Item 8. Dry Season Visual Observations

Dry season visual observations (for the period May to October 1993) were not made as IDEC did not receive confirmation of its registration as a general permittee until December 1993. Dry season observations will be made starting May of 1994, and will be included in the report submitted by July 1, 1995.

Attachment One
(continued)

Item 9. Storm Water Samples

It was not always possible to collect storm water samples within the first 30 minutes of discharge due to the intermittent nature of the rainfall in the San Diego area. Samples were collected as soon as discharge was observed to be occurring.

Item 11. Evaluation of Over-All Effectiveness of SWPPP.

Overall, the SWPPP that IDEC has created should be effective in reducing or eliminating pollutants in storm water discharge. The process of creating the plan forces each site to consider which sources of pollutants are present, and which sources present the greatest threat of contamination of storm water. Once this information is available, it is relatively straight forward to devise methods or procedures to limit storm water contamination. Currently there are no anticipated revisions to IDEC's SWPPP with regard to the overall plan.

Item 12. Evaluation of Monitoring Program.

Monitoring for pollutants has been easy as IDEC utilizes the services of an independent analytical laboratory as part of its monitoring program. IDEC identifies which pollutant to test for, and the lab selects the appropriate test method. Currently there are no anticipated revisions to IDEC's SWPPP with regard to the monitoring program.

ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 1994 through June 30, 1995

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

If any information contained in Items A, B, and C below is incorrect, please cross out or highlight the incorrect information (do not white out or erase) and provide the correct information next to or above the incorrect information.

If you have any questions, please contact your Regional Board Storm Water Program Contact. The address of your Regional Board (where the Annual Report must be filed) along with the name and telephone number of the contact person is indicated below.

SPECIFIC INFORMATION

STORM WATER POLLUTION PREVENTION PLAN

1. Have you developed (and updated) a Storm Water Pollution Prevention Plan (SWPPP), as required in Section A of the General Permit?

Yes No If No, attach an explanation and time schedule for SWPPP development.

2. Have you implemented all elements of your SWPPP?

Yes No If No, attach an explanation and time schedule for SWPPP implementation.

NON-STORM WATER DISCHARGES

3. Section A.6 of the General Permit requires that non-storm water discharges be eliminated or permitted.

- a. Does your facility have any non-storm water discharges (see page 7 for examples)?

No Go to Question 4.

Yes Please list: _____

- b. Have any of the non-storm water discharges been permitted by a State or local agency?

No Yes If yes, on a separate sheet, identify the non-storm water discharge, agency that permitted the non-storm water discharge, and the permit number.

- c. Attach a description for each non-storm water discharges listed in 3.a that has not been permitted. At a minimum, this description should answer the following:

- o What is the source of the non-storm water discharge?
- o What are the characteristics of the non-storm water discharge (odor, color, frequency, flow rate, potential pollutants, etc.)?
- o What areas of your facility does the non-storm water discharge contact?
- o Has the non-storm water discharge been previously reported to the Regional Board?
- o Why hasn't the non-storm water discharge been eliminated?
- o When is the non-storm water discharge scheduled to be eliminated?

- d. Does your SWPPP include Best Management Practices (BMPs) that address the non-storm water discharges described in 3.c?

Yes No If No, revise your SWPPP and attach a brief description of the revisions.

STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

MONITORING AND REPORTING PLAN

4. Section B.5.a of the General Permit requires you to conduct an annual site inspection. Did you conduct an annual site inspection?

Yes If Yes, use FORM 1 (page 9) to report findings or provide the following for each area inspected:

See Form 1 and Attachment 1.

- Date and time of inspection.
- Name and title of inspector.
- Summary of inspection findings. Evaluate if all sources of storm water pollutants have been identified in the SWPPP; if the BMPs identified in the SWPPP to address these sources of pollutants are in place and effective; and whether additional BMPs are needed. Discuss corrective actions that are necessary.

No If No, attach an explanation.

5. Section B.5.b of the General Permit requires you to conduct visual observations of all discharge locations at least twice during the dry season (May through September). How many dry season observations did you conduct?

None, attach an explanation why no dry season visual observations were conducted.

See attachment 2, Item 5.

One, attach an explanation why only one dry season visual observation was conducted.

Two

More than two

For each dry season visual observation conducted, use FORM 2 (page 10) to report observations or provide the following for each discharge location:

- Date and time of observation.
- Name and title of inspector.
- Observations of non-storm water discharge or indications of prior non-storm water discharge. Describe the discharge characteristics, i.e. odor, color, etc., and possible source of discharge, and corrective action taken. If no action has been taken, discuss what and when actions will be taken to eliminate the non-storm water discharge. Report all non-storm water discharges in Item 3 above.

6. Section B.5.c of the General Permit requires you to conduct visual observations of all discharge locations for at least one storm per month during the wet season (October through April). How many months during the wet season did you conduct visual observations? 7. If you did not conduct visual observations in each month of the wet season, attach an explanation.

For each wet season visual observation, use FORM 3 (page 11) to report observations or provide the following information for each discharge location:

- Date and time of observation.
- Name and title of inspector.
- Storm water discharge characteristics observed. For example, was the discharge discolored, very turbid; did it have an odor, evidence of floating or suspended material; did it have a sheen; or any other unusual characteristics? If any were observed, discuss the corrective actions taken or to be taken.

SAMPLING AND ANALYSIS

7. a. Is your facility part of a Group Monitoring Plan? (Only facilities that have received prior approval are part of a group monitoring plan.)

Yes No

If No, go to Question 8.

If Yes, answer the following questions:

- b. What is the Group Monitoring Plan's name? _____

- c. Is your facility designated to collect storm water samples?

Yes No

If Yes, go to Question 9.

If No, go to Question 10.

8. a. Is your facility exempt from sample collection (Section B.9 of the General Permit)? (Only facilities that have received prior Self-certification approval are exempt from sampling. Facilities participating in a Group Monitoring Plan cannot be self-certified)

Yes No

If No, go to Question 9.

- b. If Yes, which of the following apply (check one):

Submitted Self Certification to Regional Board.

Date Submitted: _____

Received certification of local agency.

Received exemption by the Regional Board.

Attach, as appropriate, the first page of either the submitted self certification, the local agency certification letter, or the Regional Board exemption letter.

9. Section B.5.d of the General Permit requires that storm water samples from at least two storms be collected and analyzed.

- a. How many storms did you sample? 5

If you did not sample any storms, or only sampled one storm, attach an explanation.

- b. How many storm water discharge points are located at your facility? 3

Did you sample from every discharge point?

Yes No

If you did not sample from every discharge point, attach an explanation why you did not or attach a justification as to why certain discharge points are substantially identical.

See attachment 2.

State of California
STATE WATER RESOURCES CONTROL BOARD

1994-1995
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

SAMPLING AND ANALYSIS (cont'd)

c. For each storm sampled, provide the following information:

	Number of Samples Taken	Number of Samples Analyzed and Reported	Constituents Tested and Reported
First Storm	1	1	pH, TSS, TOC, Conductivity, Grease & Oil
Second Storm	1	1	Same
Additional Storms	1	1	Same

If all samples from the first and/or second storms were not analyzed, provide an explanation.

d. Provide a summary of your sampling and analysis results. You may use Form 4 (page 12) to report your findings. The summary should include the date and time of sample, constituents tested, who did the testing, the testing results, test method used, and test detection limit. Copies of the analytical results from the laboratory should also be attached. Include a completed Form 4, or equivalent, for each sample analyzed.

For facilities subject to Federal Storm Water Effluent Limitation Guidelines, separately report the Federal Guidelines and the corresponding monitoring results.

If past years analytical results are available, on a separate sheet, compare and evaluate the analytical results from the 1994-95 testing period with the analytical results from past years (are the pollutant concentrations increasing or decreasing and why; if a reason is known?).

See attachment 3.

e. For each storm sampled, provide the following information:

	Was sample taken during the first 30 minutes?	Were there 3 days of dry weather before the storm?
First Storm	Yes	Yes
Second Storm	Yes	Yes
Additional Storms	Yes	Yes

If you responded no to either of the above questions for the first or second storm, attach an explanation.

STORM WATER POLLUTION PREVENTION PLAN EVALUATION

10. Based upon the comparison and analysis of analytical data, visual observations, etc. from the time you submitted your Notice of Intent to comply with the General Permit; is your Storm Water Pollution Prevention Plan effective in reducing pollutants in your facility's storm water discharge? Discuss specific areas or elements of the SWPPP that are not effective or need improvement. Provide a brief description of alternatives or proposed revisions to the SWPPP.
See attachment 4.
11. Provide a written evaluation of your monitoring program in detecting pollutants in storm water discharge. Discuss areas of the monitoring program that are not effective or need improvement. Provide a brief description of proposed revisions to the monitoring program.
See attachment 4.
12. The General Industrial Activities Storm Water Permit requires that:
- o a Storm Water Pollution Prevention Plan be developed and implemented (Questions 1 and 2)
 - o non-storm water discharges be eliminated, reported to the Regional Board, or permitted (Question 3)
 - o an annual site inspection be conducted to determine the effectiveness of BMPs in reducing and/or eliminating sources of storm water pollution (Question 4)
 - o two dry weather visual observations be conducted (Question 5)
 - o wet weather visual observations be made once each month during the wet season (Question 6)
 - o unless specifically exempted, samples be collected and analyzed from at least two storms (Question 9)

If you have not completed all of the above requirements, please make sure you have attached an explanation for each requirement you have not completed.

Do you certify, based on your annual site inspection that, your facility is in compliance with the requirements of the General Industrial Activities Storm Water Permit?

Yes No

13. Attach an updated site map showing the areas of industrial activity; the areas where visual inspections were done; all storm water discharge locations; and all storm water sampling locations.

CERTIFICATION

I am duly authorized to sign reports required by the GENERAL INDUSTRIAL ACTIVITIES STORM WATER PERMIT (see Provisions C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Attachment One

Annual SWPPP Inspection

Facility WDID No: 9 37S010764
Owner/Operator: IDEC Pharmaceuticals
Address: 11011 Torreyana Rd., San Diego, CA 92121

Date of Inspection:
4/27/95

Name(s) of Personnel Conducting Inspection:
Marty King

Observations:

As is listed on the *Annual Site Inspection Form*, areas where pollutants may come in contact with storm water - the loading docks, sites with exposed materials and the hazardous waste storage area - were inspected to ensure that the BMP's listed in the SWPPP are in place. The BMP's reviewed include: the use of signs to identify chemical storage areas, use of concrete berms to provide secondary containment, use of portable secondary containment, a training program on the contents of the SWPPP, development of guidelines and other written information regarding disposal practices for hazardous materials/wastes, effective spill response training, spill response supplies and inspection program.

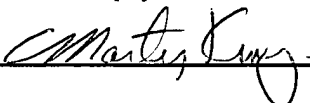

Deficiencies:

None observed.

Corrective Action Taken:

None taken.

FORM 4 - SAMPLING RESULTS

DISCHARGE POINT: Outfall #2

DATE AND TIME OF SAMPLE: April 18, 1995 10:00 am TIME DISCHARGE STARTED: 10:00 am

CONSTITUENT TESTED	TESTED BY: LAB/SELF ⁽¹⁾	RESULTS ⁽²⁾⁽³⁾	TEST METHOD USED ⁽⁴⁾	DETECTION LIMIT
pH	Lab	6.9 (pH UNITS)	STD 4500-B	1pH unit
TOTAL SUSPENDED SOLIDS	Lab	21.0 mg/l	STD 2540-D	1.0 mg/L
SPECIFIC CONDUCTANCE	Lab	77.6 umho/cm	EPA 120.1	1.0 umho/cm
OIL & GREASE	Lab	<1.0 mg/l	STD 5520-B	1.0 mg/L
TOTAL ORGANIC CARBON	Lab	16.5 mg/l	EPA 415.2	0.1 mg/L
ADDITIONAL POLLUTANTS:	N/A			
FLOW ⁽⁵⁾	N/A		gallons	
SIZE OF STORM (IF AVAILABLE)	Unknown		inches	

- (1) If testing was done by a certified laboratory, indicate "lab"; otherwise, indicate "self".
- (2) If analytical results indicate a value less than the detection limit (or non detect), show the value as less than the numerical value of the detection limit.
- (3) If you did not analyze for a particular constituent, do not report "0". Instead leave the appropriate box blank.
- (4) Indicate the test method used to determine result. In cases where analysis was conducted in the field, using portable analyzers (portable pH meters, portable EC meters, etc.), indicate with an "A"
- (5) Dischargers subject to the Santa Clara County General Permit are required to provide estimates or calculations of the volume of storm water discharged from each point. Describe, on a separate sheet, how the flow measurement was calculated.

Attachment Two

State Water Resources Control Board 1994-1995 Annual Report

Facility WDID No: 9 37S010764

Owner/Operator: IDEC Pharmaceuticals

Address: 11011 Torreyana Rd., San Diego, CA 92121

Item 5. Visual Observations

No dry weather inspections were done from May to September as there has been no rain and we have no non-storm water events.

Item 9b. Discharge Point Sampling

Storm water discharges from outfall #1, #2 and #3 are considered substantially identical so it is not required that three samples be collected during each storm event.

Attachment Three

Comparison of 1993-94 and 1994-95 Storm Water Analytical Results

Facility WDID No: 9 37S010764

Owner/Operator: IDEC Pharmaceuticals

Address: 11011 Torreyana Rd., San Diego, CA 92121

Item 9d.

1993-94

Constituent Tested	Dec. 1993	Feb. 1994	April 1994
pH (pH units)	8.04	7.71	8.84
Total Suspended Solids (mg/L)	3.0	1.00	183
Sp. Conductance (umho/cm)	1070	92.00	362
Oil and Grease (mg/L)	< 1.0	1.30	1.9
Total Organic Carbon (mg/L)	3.58	5.28	12.4

1994-95

Constituent Tested	Nov. 1994	Jan.. 1995	Feb. 1995	Mar. 1995	April 1995
pH (pH units)	6.5	7.4	7.3	7.6	6.9
Total Suspended Solids (mg/L)	224	53	9.0	12.0	21.0
Sp. Conductance (umho/cm)	2030	171	203	204	77.6
Oil and Grease (mg/L)	5.4	4.0	2.2	3.1	<1
Total Organic Carbon (mg/L)	432	24.2	23.7	9.5	16.5

Compare Past Results

Since IDEC Pharmaceuticals has been in this location since 1993, only the 93-94 results to the 94-95 results can be compared. The pollutant concentrations seem somewhat consistent over the last two years. There are no activities that would account for any fluctuation in the results.

Attachment Four

State Water Resources Control Board 1994-1995 Annual Report

Facility WDID No: 9 37S010764

Owner/Operator: IDEC Pharmaceuticals

Address: 11011 Torreyana Rd., San Diego, CA 92121

Item 10. Effectiveness of SWPPP

Based upon the comparison and analysis of analytical data and visual observations, from the time we submitted our Notice of Intent to comply with the General Permit, our Storm Water Pollution Prevention Plan continues to be effective in reducing pollutants in the storm water discharge. In the past, the metal grating that is normally attached to the air intake of the cooling tower that serves the facility was periodically removed from the intake and rinsed free of mineral deposits that build up on the exterior surface. The runoff drained through outfall #2. This procedure has since then been discontinued at this drain and the runoff no longer is disposed of through the storm water outfalls.

Item 11. Evaluation

Overall, IDEC's SWPPP is effective in reducing pollutants in storm water discharge. Training sessions and inspections have created a heightened awareness to pollutants. The program is reviewed annually. To date, no changes are necessary in the plan.

JUN 24 1996
SAN DIEGO REGIONAL WATER
QUALITY CONTROL BOARD

Reporting Period July 1, 1995 through June 30, 1996

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. Retain a copy of the completed Annual Report for your records.

If any information contained in Items A, B, and C below is incorrect, please cross out or highlight the incorrect information (do not white out or erase) and provide the correct information next to or above the incorrect information.

If you have any questions, please contact your Regional Board Storm Water Program Contact. The address of your Regional Board (where the Annual Report must be filed) along with the name and telephone number of the contact person is indicated below.

SPECIFIC INFORMATION

STORM WATER POLLUTION PREVENTION PLAN

1. Have you developed (and updated) a Storm Water Pollution Prevention Plan (SWPPP), as required in Section A of the General Permit?
 Yes No If No, attach an explanation and time schedule for SWPPP development.
2. Have you implemented all elements of your SWPPP?
 Yes No If No, attach an explanation and time schedule for SWPPP implementation.

NON-STORM WATER DISCHARGES

3. Section A.6 of the General Permit requires that non-storm water discharges be eliminated or permitted.

- a. Does your facility have any non-storm water discharges (see page 7 for examples)?

No Go to Question 4.

Yes Please list: _____

- b. Have any of the non-storm water discharges been permitted by a State or local agency?

No Yes If yes, on a separate sheet, identify the non-storm water discharge, agency that permitted the non-storm water discharge, and the permit number.

- c. Attach a description for each non-storm water discharges listed in 3.a that has not been permitted. At a minimum, this description should answer the following:

- o What is the source of the non-storm water discharge?
- o What are the characteristics of the non-storm water discharge (odor, color, frequency, flow rate, potential pollutants, etc.)?
- o What areas of your facility does the non-storm water discharge contact?
- o Has the non-storm water discharge been previously reported to the Regional Board?
- o Why hasn't the non-storm water discharge been eliminated?
- o When is the non-storm water discharge scheduled to be eliminated?

- d. Does your SWPPP include Best Management Practices (BMPs) that address the non-storm water discharges described in 3.c?

Yes No If No, revise your SWPPP and attach a brief description of the revisions.

ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

MONITORING AND REPORTING PLAN

4. Section B.5.a of the General Permit requires you to conduct an annual site inspection. Did you conduct an annual site inspection?

Yes If Yes, use FORM 1 (page 9) to report findings or provide the following for each area inspected:
See form 1 and Attachment 1.

- Date and time of inspection.
- Name and title of inspector.
- Summary of inspection findings. Evaluate if all sources of storm water pollutants have been identified in the SWPPP; if the BMPs identified in the SWPPP to address these sources of pollutants are in place and effective; and whether additional BMPs are needed. Discuss corrective actions that are necessary.

No If No, attach an explanation.

5. Section B.5.b of the General Permit requires you to conduct visual observations of all discharge locations at least twice during the dry season (May through September). How many dry season observations did you conduct?

None, attach an explanation why no dry season visual observations were conducted.

See Attachment 2, Item 5.

One, attach an explanation why only one dry season visual observation was conducted.

Two

More than two

See attachment 2, Item 5.

For each dry season visual observation conducted, use FORM 2 (page 10) to report observations or provide the following for each discharge location:

- Date and time of observation.
- Name and title of inspector.
- Observations of non-storm water discharge or indications of prior non-storm water discharge. Describe the discharge characteristics, i.e. odor, color, etc., and possible source of discharge, and corrective action taken. If no action has been taken, discuss what and when actions will be taken to eliminate the non-storm water discharge. Report all non-storm water discharges in Item 3 above.

6. Section B.5.c of the General Permit requires you to conduct visual observations of all discharge locations for at least one storm per month during the wet season (October through April). How many months during the wet season did you conduct visual observations? 7. If you did not conduct visual observations in each month of the wet season, attach an explanation.

For each wet season visual observation, use FORM 3 (page 11) to report observations or provide the following information for each discharge location:

- Date and time of observation.
- Name and title of inspector.
- Storm water discharge characteristics observed. For example, was the discharge discolored, very turbid; did it have an odor, evidence of floating or suspended material; did it have a sheen; or any other unusual characteristics? If any were observed, discuss the corrective actions taken or to be taken.

SAMPLING AND ANALYSIS

7. a. Is your facility part of a Group Monitoring Plan? (Only facilities that have received prior approval are part of a group monitoring plan.)

Yes No

If No, go to Question 8.

If Yes, answer the following questions:

- b. What is the Group Monitoring Plan's name? _____

- c. Is your facility designated to collect storm water samples?

Yes No

If Yes, go to Question 9.

If No, go to Question 10.

8. a. Is your facility exempt from sample collection (Section B.9 of the General Permit)? (Only facilities that have received prior Self-certification approval are exempt from sampling. Facilities participating in a Group Monitoring Plan cannot be self-certified)

Yes No

If No, go to Question 9.

- b. If Yes, which of the following apply (check one):

Submitted Self Certification to Regional Board.

Date Submitted: _____

Received certification of local agency.

Received exemption by the Regional Board.

Attach, as appropriate, the first page of either the submitted self certification, the local agency certification letter, or the Regional Board exemption letter.

9. Section B.5.d of the General Permit requires that storm water samples from at least two storms be collected and analyzed.

- a. How many storms did you sample? 3

If you did not sample any storms, or only sampled one storm, attach an explanation.

- b. How many storm water discharge points are located at your facility? 3

Did you sample from every discharge point?

Yes No

If you did not sample from every discharge point, attach an explanation why you did not or attach a justification as to why certain discharge points are substantially identical.

See Attachment 2, Item 2.

State of California
STATE WATER RESOURCES CONTROL BOARD

1995-1996
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

SAMPLING AND ANALYSIS (cont'd)

c. For each storm sampled, provide the following information:

	Number of Samples Taken	Number of Samples Analyzed and Reported	Constituents Tested and Reported
First Storm	1	1	pH, TSS, TOC, Conductivity, Grease & Oil.
Second Storm	1	1	Same
Additional Storms	1	1	Same

If all samples from the first and/or second storms were not analyzed, provide an explanation.

d. Provide a summary of your sampling and analysis results. You may use Form 4 (page 12) to report your findings. The summary should include the date and time of sample, constituents tested, who did the testing, the testing results, test method used, and test detection limit. Copies of the analytical results from the laboratory should also be attached. Include a completed Form 4, or equivalent, for each sample analyzed.

For facilities subject to Federal Storm Water Effluent Limitation Guidelines, separately report the Federal Guidelines and the corresponding monitoring results.

If past years analytical results are available, on a separate sheet, compare and evaluate the analytical results from the 1994-95 testing period with the analytical results from past years (are the pollutant concentrations increasing or decreasing and why; if a reason is known?).

See Attachment 3.

e. For each storm sampled, provide the following information:

	Was sample taken during the first 30 minutes?	Were there 3 days of dry weather before the storm?
First Storm	Yes	Yes
Second Storm	Yes	Yes
Additional Storms	Yes	Yes

If you responded no to either of the above questions for the first or second storm, attach an explanation.

STORM WATER POLLUTION PREVENTION PLAN EVALUATION

10. Based upon the comparison and analysis of analytical data, visual observations, etc. from the time you submitted your Notice of Intent to comply with the General Permit; is your Storm Water Pollution Prevention Plan effective in reducing pollutants in your facility's storm water discharge? Discuss specific areas or elements of the SWPPP that are not effective or need improvement. Provide a brief description of alternatives or proposed revisions to the SWPPP.
See Attachment 4.
11. Provide a written evaluation of your monitoring program in detecting pollutants in storm water discharge. Discuss areas of the monitoring program that are not effective or need improvement. Provide a brief description of proposed revisions to the monitoring program.
See Attachment 4.
12. The General Industrial Activities Storm Water Permit requires that:
- o a Storm Water Pollution Prevention Plan be developed and implemented (Questions 1 and 2)
 - o non-storm water discharges be eliminated, reported to the Regional Board, or permitted (Question 3)
 - o an annual site inspection be conducted to determine the effectiveness of BMPs in reducing and/or eliminating sources of storm water pollution (Question 4)
 - o two dry weather visual observations be conducted (Question 5)
 - o wet weather visual observations be made once each month during the wet season (Question 6)
 - o unless specifically exempted, samples be collected and analyzed from at least two storms (Question 9)

If you have not completed all of the above requirements, please make sure you have attached an explanation for each requirement you have not completed.

Do you certify, based on your annual site inspection that, your facility is in compliance with the requirements of the General Industrial Activities Storm Water Permit?

Yes No

13. Attach an updated site map showing the areas of industrial activity; the areas where visual inspections were done; all storm water discharge locations; and all storm water sampling locations.

CERTIFICATION

I am duly authorized to sign reports required by the GENERAL INDUSTRIAL ACTIVITIES STORM WATER PERMIT (see Provisions C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Printed Name: Mark Thompson
Signature: Mark Thompson Date: 6/17/96
Title: Environmental Health and Safety Manager

State of California
STATE WATER RESOURCES CONTROL BOARD

1995-1996
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

NON-STORM WATER DISCHARGES

The list below contains examples of some common non-storm water discharges:

Boiler blow-down	Construction rinse down	Car washing
Floor washing	Non-contact cooling water	Tank drains
Boiler drains	Cooling tower back wash	Filter drains
Pavement washing	Evaporative cooling water	Window and building washing
Vehicle washing	Vehicle steam cleaning	Hydrostatic pressure vessel testing
Dust control water	Truck & trailer washing	Aggregate pile cooling water
Ground water infiltration	Landscape/lawn irrigation	Fire auxiliary (building sprinklers)
Foundation drainage	Air compressor condensate	Water line cleaning
Collected rainwater	Air conditioning condensate	Fire fighting (emergency only)
Well test pumping	Refrigeration unit condensate	Ground water discharges
Fire hydrant testing	Well water discharges	

The General Permit requires reporting of all unpermitted non-storm water discharges (discharges) to the appropriate Regional Board. You should report these discharges as an attachment to the Annual Report (see item 3.c). Regional Board staff may review your report and make modifications as appropriate. When preparing your schedule for the elimination of each discharge, please remember that the General Permit requires the discharge to be eliminated within three years of your NOI submittal date.

The General Permit was not intended to prohibit discharges that are not associated with industrial activity if the conditions provided by the General Permit Fact Sheet are met. Examples of discharges that may meet these conditions are landscape/lawn irrigation, air conditioning condensate, and fire hydrant testing. If the discharge meets the Fact Sheet conditions, the report should also explain briefly why the discharge meets the Fact Sheet conditions. A permitting strategy for such discharges is being developed by the Regional Boards. Regional Board staff will review your report and notify you of any permitting requirements or discharge prohibitions as they are developed.

STATE WATER RESOURCES CONTROL BOARD

1995-1996
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

DESCRIPTION OF CONSTITUENTS TO BE MONITORED

The General Industrial Permit requires you to analyze storm water samples for at least four constituents. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity. There are no numeric limitations for the constituents you test for.

The four constituents which the Permit requires to be tested are considered *indicators*. In other words they are nonspecific tests that will provide enough information to indicate whether or not pollutants are present in your storm water discharge. The following briefly explains what these parameters mean:

pH is numeric measure of the hydrogen-ion concentration. The neutral, or acceptable range can be defined as 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar and a alkaline or basic substance is liquid antacid. Pure rain fall tends to have a pH of less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC above zero. A high SC could affect the usability of waters for drinking and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office.

ANNUAL REPORT
 FOR
 STORM WATER DISCHARGES ASSOCIATED
 WITH INDUSTRIAL ACTIVITIES

FORM 3 - RECORD OF WET SEASON VISUAL OBSERVATIONS

Wet season observations are required to be done during the first hour of discharge for at least one storm per month between October 1 and April 30.

Month: October Approximate time storm water discharge began: _____

DISCHARGE LOCATION	DATE/TIME	DISCHARGE OBSERVATIONS (CIRCLE ALL THAT APPLY)			DESCRIBE DISCHARGE	DESCRIBE SOURCE OF DISCHARGE
		Floating Materials?	Suspended materials?	Odors?		
#2, 3	Oct. 30 8am	Discolorations?	Oil/grease sheen?	Cloudiness?	Clear	Rainwater surface runoff
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		

Comments/Corrective Actions Taken for above: _____

DISCHARGE LOCATION	DATE/TIME	DISCHARGE OBSERVATIONS (CIRCLE ALL THAT APPLY)			DESCRIBE DISCHARGE	DESCRIBE SOURCE OF DISCHARGE

FORM 4 - SAMPLING RESULTS

DISCHARGE POINT: #2

DATE AND TIME OF SAMPLE: February 1, 1996 7:30am TIME DISCHARGE STARTED: n/a

CONSTITUENT TESTED	TESTED BY: LAB/SELF ⁽¹⁾	RESULTS ⁽²⁾⁽³⁾	TEST METHOD USED ⁽⁴⁾	DETECTION LIMIT
pH	Lab	7.39 (pH UNITS)	EPA 150.1	1 pH Unit
TOTAL SUSPENDED SOLIDS	Lab	10 mg/L mg/l	EPA 160	1 mg/L
SPECIFIC CONDUCTANCE	Lab	96 uMHO umho/cm	SM 2510B	1 uMHO
OIL & GREASE	Lab	ND mg/L mg/l	SM 5520B	1 mg/L
TOTAL ORGANIC CARBON	Lab	6.9 mg/L mg/l	EPA 415.1	1 mg/L
ADDITIONAL POLLUTANTS:	N/A			
FLOW ⁽⁵⁾	Unknown			gallons
SIZE OF STORM (IF AVAILABLE)	N/A			inches

- (1) If testing was done by a certified laboratory, indicate "lab"; otherwise, indicate "self".
- (2) If analytical results indicate a value less than the detection limit (or non detect), show the value as less than the numerical value of the detection limit.
- (3) If you did not analyze for a particular constituent, do not report "0". Instead leave the appropriate box blank.
- (4) Indicate the test method used to determine result. In cases where analysis was conducted in the field, using portable analyzers (portable pH meters, portable EC meters, etc.), indicate with an "A"
- (5) Dischargers subject to the Santa Clara County General Permit are required to provide estimates or calculations of the volume of storm water discharged from each point. Describe, on a separate sheet, how the flow measurement was calculated.

Attachment One

Annual SWPPP Inspection

Facility WDID No: 9 37S010764
Owner/Operator: IDEC Pharmaceuticals
Address: 11011 Torreyana Rd., San Diego, CA 92121

Date of Inspection:
4/08/96

Name(s) of Personnel Conducting Inspection:
Marty King

Observations:

As is listed on the Annual Site Inspection Form, areas where pollutants may come in contact with storm water - the loading docks, sites with exposed materials and the hazardous waste storage area - were inspected to ensure that the BMP's listed in the SWPPP are in place. The BMP's reviewed include: the use of signs to identify chemical storage areas, use of concrete berms to provide secondary containment, use of portable secondary containment, a training program on the contents of the SWPPP, development of guidelines and other written information regarding disposal practices for hazardous materials/wastes, effective spill response training, spill response supplies and inspection program.

Deficiencies:

None observed.

Corrective Action Taken:

None taken.

Signature(s):

Attachment Two

State Water Resources Control Board 1995-1996 Annual Report

Facility WDID No: 9 37S010764

Owner/Operator: IDEC Pharmaceuticals

Address: 11011 Torreyana Rd., San Diego, CA 92121

Item 5. Visual Observations

Dry weather inspections were done from May to September to observe the area around the drains although we have had no rain. Complying with the conditions of our permit, IDEC has no non-stormwater discharge events.

Item 9b. Discharge Point Sampling

Storm water discharges from outfall #1, #2 and #3 are considered substantially identical so it is not required that three samples be collected during each storm event.

Attachment Three

Comparison of 1993-94, 94-95, 95-96 Storm Water Analytical Results

Facility WDID No: 9 37S010764

Owner/Operator: IDEC Pharmaceuticals

Address: 11011 Torreyana Rd., San Diego, CA 92121

Item 9d.

1995-96

Constituent Tested	Feb. 1 1996	Feb. 12 1996	Feb. 21 1996	Mar. 1996
pH (pH units)	7.39	6.44	7.17	6.49
Total Suspended Solids (mg/L)	10	300	184	5.3
Sp. Conductance (uMHO/cm)	96	630	131	110
Oil and Grease (mg/L)	None detected	14	18	23.8
Total Organic Carbon (mg/L)	6.9	81.1	10.8	6.5

Compare Past Results

IDEC Pharmaceuticals has been in this location since 1993. The pollutant concentrations seem somewhat consistent over the past years. There are no activities that would account for any fluctuation in the results.

The 93-94 and 94-95 results were analyzed by Quality Assurance Laboratories. The company is no longer operating in San Diego. We are currently sending our samples to Environmental Engineering Laboratories located in San Diego. EEL is subcontracting Truesdail Laboratories, Inc. of Tustin, California to analyze the TOC samples.

Item 10. Effectiveness of SWPPP

Based upon the comparison and analysis of analytical data and visual observations, from the time we submitted our Notice of Intent to comply with the General Permit, our Storm Water Pollution Prevention Plan continues to be effective in reducing pollutants in the storm water discharge.

Item 11. Evaluation

Overall, IDEC's SWPPP is effective in reducing pollutants in storm water discharge. Training sessions and inspections have created a heightened awareness of pollutants. The program is reviewed annually. To date, no changes are necessary in the plan.

STORM WATER ANNUAL REPORT

2

Reporting Period July 1, 1996 through June 30, 1997

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by June 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. Retain a copy of the completed Annual Report for your records.

Please circle or highlight any incorrect information contained in items A, B, and C below and write in the correct information.

If you have any questions, please contact your Regional Board Storm Water Program Contact. The address of the Regional Board (where the Annual Report must be filed) along with the name and telephone number of the contact is indicated below.

ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

MONITORING AND REPORTING PLAN

4. Section B.5.a of the General Permit requires you to conduct an annual site inspection. Did you conduct an annual site inspection?

Yes If Yes, use FORM 1 (page 9) to report findings or provide the following for each area inspected:

- Date and time of inspection.
- Name and title of inspector.
- Summary of inspection findings. Evaluate if all sources of storm water pollutants have been identified in the SWPPP; if the BMPs identified in the SWPPP to address these sources of pollutants are in place and effective; and whether additional BMPs are needed. Discuss corrective actions that are necessary.

See Form 1 and Attachment 1.

No If No, attach an explanation.

5. Section B.5.b of the General Permit requires you to conduct visual observations of all discharge locations at least twice during the dry season (May through September). How many dry season observations did you conduct?

None, attach an explanation why no dry season visual observations were conducted.

One, attach an explanation why only one dry season visual observation was conducted.

Two

More than two

See attachment 2, Item 5.
For each dry season visual observation conducted, use FORM 2 (page 10) to report observations or provide the following for each discharge location:

- Date and time of observation.
- Name and title of inspector.
- Observations of non-storm water discharge or indications of prior non-storm water discharge. Describe the discharge characteristics, i.e. odor, color, etc., and possible source of discharge, and corrective action taken. If no action has been taken, discuss what and when actions will be taken to eliminate the non-storm water discharge. Report all non-storm water discharges in Item 3 above.

6. Section B.5.c of the General Permit requires you to conduct visual observations of all discharge locations for at least one storm per month during the wet season (October through April). How many months during the wet season did you conduct visual observations? 7. If you did not conduct visual observations in each month of the wet season, attach an explanation.

For each wet season visual observation, use FORM 3 (page 11) to report observations or provide the following information for each discharge location:

- Date and time of observation.
- Name and title of inspector.
- Storm water discharge characteristics observed. For example, was the discharge discolored, very turbid; did it have an odor, evidence of floating or suspended material; did it have a sheen; or any other unusual characteristics? If any were observed, discuss the corrective actions taken or to be taken.

State of California
STATE WATER RESOURCES CONTROL BOARD

1996-1997
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

SAMPLING AND ANALYSIS (cont'd)

c. For each storm sampled, provide the following information:

	Number of Samples Taken	Number of Samples Analyzed and Reported	Constituents Tested and Reported
First Storm	1	1	pH, TSS, TOC, Conductivity, Grease & Oil
Second Storm	1	1	Same
Additional Storms	1	1	Same

If all samples from the first and/or second storms were not analyzed, provide an explanation.

d. Provide a summary of your sampling and analysis results. You may use Form 4 (page 12) to report your findings. The summary should include the date and time of sample, constituents tested, who did the testing, the testing results, test method used, and test detection limit. Copies of the analytical results from the laboratory should also be attached. Include a completed Form 4, or equivalent, for each sample analyzed.

For facilities subject to Federal Storm Water Effluent Limitation Guidelines, separately report the Federal Guidelines and the corresponding monitoring results.

If past years analytical results are available, on a separate sheet, compare and evaluate the analytical results from the 1996-97 testing period with the analytical results from past years (are the pollutant concentrations increasing or decreasing and why; if a reason is known?).

e. See Attachment 3.
For each storm sampled, provide the following information:

	Was sample taken during the first 30 minutes?	Were there 3 days of dry weather before the storm?
First Storm	Yes	Yes
Second Storm	Yes	Yes
Additional Storms	Yes	Yes

If you responded no to either of the above questions for the first or second storm, attach an explanation.

State of California
STATE WATER RESOURCES CONTROL BOARD

1996-1997
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

NON-STORM WATER DISCHARGES

The list below contains examples of some common non-storm water discharges:

Boiler blow-down	Construction rinse down	Car washing
Floor washing	Non-contact cooling water	Tank drains
Boiler drains	Cooling tower back wash	Filter drains
Pavement washing	Evaporative cooling water	Window and building washing
Vehicle washing	Vehicle steam cleaning	Hydrostatic pressure vessel testing
Dust control water	Truck & trailer washing	Aggregate pile cooling water
Ground water infiltration	Landscape/lawn irrigation	Fire auxiliary (building sprinklers)
Foundation drainage	Air compressor condensate	Water line cleaning
Collected rainwater	Air conditioning condensate	Fire fighting (emergency only)
Well test pumping	Refrigeration unit condensate	Ground water discharges
Fire hydrant testing	Well water discharges	

The General Permit requires reporting of all unpermitted non-storm water discharges (discharges) to the appropriate Regional Board. You should report these discharges as an attachment to the Annual Report (see item 3.c). Regional Board staff may review your report and make modifications as appropriate. When preparing your schedule for the elimination of each discharge, please remember that the General Permit requires the discharge to be eliminated within three years of your NOI submittal date.

The General Permit was not intended to prohibit discharges that are not associated with industrial activity if the conditions provided by the General Permit Fact Sheet are met. Examples of discharges that may meet these conditions are landscape/lawn irrigation, air conditioning condensate, and fire hydrant testing. If the discharge meets the Fact Sheet conditions, the report should also explain briefly why the discharge meets the Fact Sheet conditions. A permitting strategy for such discharges is being developed by the Regional Boards. Regional Board staff will review your report and notify you of any permitting requirements or discharge prohibitions as they are developed.

FLOW ⁽⁵⁾	unknown	gallons		
SIZE OF STORM (IF AVAILABLE)	N/A	inches		

- (1) If testing was done by a certified laboratory, indicate "lab"; otherwise, indicate "self".
 (2) If analytical results indicate a value less than the detection limit (or non detect), show the value as less than the numerical value of the detection limit.
 (3) If you did not analyze for a particular constituent, do not report "0". Instead leave the appropriate box blank.
 (4) Indicate the test method used to determine result. In cases where analysis was conducted in the field, using portable analyzers (portable pH meters, portable EC meters, etc.), indicate with an "A"
 (5) Dischargers subject to the Santa Clara County General Permit are required to provide estimates or calculations of the volume of storm water discharged from each point. Describe, on a separate sheet, how the flow measurement was calculated.

Attachment One

Annual SWPPP Inspection

Facility WDID No: 9 37S010764
Owner/Operator: IDEC Pharmaceuticals
Address: 11011 Torreyana Rd., San Diego, CA 92121

Date of Inspection:

5-15-97

Name(s) of Personnel Conducting Inspection:

Marty King

Observations:

As is listed on the Annual Site Inspection Form, areas where pollutants may come in contact with storm water - the loading docks, sites with exposed materials and the hazardous waste storage area - were inspected to ensure that the BMP's listed in the SWPPP are in place. The BMP's reviewed include: the use of signs to identify chemical storage areas, use of concrete berms to provide secondary containment, use of portable secondary containment, a training program on the contents of the SWPPP, development of guidelines and other written information regarding disposal practices for hazardous materials/wastes, effective spill response training, spill response supplies and inspection program.

Deficiencies:

None observed.

Corrective Action Taken:

None taken.

Signature(s):

Marty King

Attachment Two

State Water Resources Control Board 1996-1997 Annual Report

Facility WDID No: 9 37S010764

Owner/Operator: IDEC Pharmaceuticals

Address: 11011 Torreyana Rd., San Diego, CA 92121

Item 5. Visual Observations

Dry weather inspections were done from May to September to observe the area around the drains although we have had no rain. Complying with the conditions of our permit, IDEC has no non-stormwater discharge events.

Item 9b. Discharge Point Sampling

Storm water discharges from outfall #1, #2 and #3 are considered substantially identical so it is not required that three samples be collected during each storm event.

Attachment Three

Item 9d.

Compare Past Results

IDEC Pharmaceuticals has been in this location since 1993. The pollutant concentrations seem somewhat consistent over the past years. There are no activities that would account for any fluctuation in the results.

The 93-94 and 94-95 results were analyzed by Quality Assurance Laboratories. The company is no longer operating in San Diego. The 1995-96 samples were analyzed by Environmental Engineering Laboratories located in San Diego. EEL is subcontracting Truesdail Laboratories, Inc. of Tustin, California to analyze the TOC samples. The 1996-1997 samples are being analyzed by D-Tech of San Diego.

Item 10. Effectiveness of SWPPP

Based upon the comparison and analysis of analytical data and visual observations, from the time we submitted our Notice of Intent to comply with the General Permit, our Storm Water Pollution Prevention Plan continues to be effective in reducing pollutants in the storm water discharge.

Item 11. Evaluation

Overall, IDEC's SWPPP is effective in reducing pollutants in storm water discharge. Training sessions and inspections have created a heightened awareness of pollutants. The program is reviewed annually. The plan will be amended per the May 1, 1997 reissued Industrial Activities Storm Water General Permit.

ANNUAL REPORT

FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

logged

Reporting Period July 1, 1997 through June 30, 1998

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

If any information contained in Items A, B, and C below is incorrect, please cross out or highlight the incorrect information (do not white out or erase) and provide the correct information next to or above the incorrect information.

If you have any questions, please contact your Regional Board Storm Water Program Contact. The address of your Regional Board (where the Annual Report must be filed) along with the name and telephone number of the contact person is indicated below.

ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from two storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2 NO Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from two storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan Group Name: _____

ii. Submitted No Exposure Certification (NEC) Date Submitted: ___/___/___
Re-evaluation Date: ___/___/___

Does facility continue to satisfy NEC conditions? YES NO

iii. Submitted Sampling Reduction Certification (SRC) Date Submitted: ___/___/___
Re-evaluation Date: ___/___/___

Does facility continue to satisfy SRC conditions? YES NO

iv. Received Regional Board Certification Certification Date: ___/___/___

v. Received Local Agency Certification Certification Date: ___/___/___

3. If you checked boxes i or iii above, were you scheduled to sample one storm event during the reporting year?

YES Go to Section E NO Go to Section F

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 2 If less than 2, attach explanation (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES NO Attach explanation

3. How many storm water discharge locations are at your facility? 3

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? YES NO, attach explanation
- If "YES", attach documentation supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated 5/1/98
6. Were all samples collected during the first hour of discharge? YES NO, attach explanation
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, attach explanation
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, attach explanation
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Is your facility required to analyze additional parameters listed in Table D of the General Permit? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ The parameter has not been detected in significant quantities from the last two consecutive sampling events. **Attach explanation**
- _____ The parameter is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges:**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July-September: YES NO N/A October-December: YES NO N/A

January-March: YES NO N/A April-June: YES NO N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each authorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July-September YES NO October-December: YES NO

January-March YES NO April-June: YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

YES NO **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information:

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. Attach an explanation for any "NO" answers.

	YES	NO		YES	NO
October	<input checked="" type="checkbox"/>	<input type="checkbox"/>	February	<input checked="" type="checkbox"/>	<input type="checkbox"/>
November	<input checked="" type="checkbox"/>	<input type="checkbox"/>	March	<input checked="" type="checkbox"/>	<input type="checkbox"/>
December	<input checked="" type="checkbox"/>	<input type="checkbox"/>	April	<input checked="" type="checkbox"/>	<input type="checkbox"/>
January	<input checked="" type="checkbox"/>	<input type="checkbox"/>	May	<input checked="" type="checkbox"/>	<input type="checkbox"/>

2. Report monthly wet season visual observations using **Form 4** or provide the following information.

- date, time, and location of observation
- name and title of observer
- characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
- any new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. Attach an explanation for any "NO" answers.

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
 The following areas should be inspected:
- areas where spills and leaks have occurred during the last year.
 - outdoor wash and rinse areas.
 - process/manufacturing areas.
 - loading, unloading, and transfer areas.
 - waste storage/disposal areas.
 - dust/particulate generating areas.
 - erosion areas.
 - building repair, remodeling, and construction
 - material storage areas
 - vehicle/equipment storage areas
 - truck parking and access areas
 - rooftop equipment areas
 - vehicle fueling/maintenance areas
 - non-storm water discharge generating areas
2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: YES NO

- facility boundaries
- outline of all storm water drainage areas
- areas impacted by run-on
- storm water discharges locations
- storm water collection and conveyance system
- structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit?

YES NO

If you answered "NO" attach an explanation to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)
- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA
- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA
- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office.

ANNUAL REPORT

1997-98

SIDE B

FORM 1-SAMPLING & ANALYSIS RESULTS
SECOND STORM EVENT

- If analytical results are less than the detection limit (or non detectable), show the value as less than the numerical value of the detection limit (example: <.05)
- When analysis is done using portable analysis (such as portable pH meters, SC meters, etc.), indicate "P" in the appropriate test method used box.
- If you did not analyze for a required parameter, do not report "0". Instead, leave the appropriate box blank

FORM 4-MONTHLY VISUAL OBSERVATIONS OF
STORM WATER DISCHARGES

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.
- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- Make additional copies of this form as necessary.

**IDEC Pharmaceuticals
1997-1998 Annual Report for
Storm Water Discharges Associated with Industrial Activities**

Attachments:

B (General Information)

Mark Thompson's office telephone number has been changed. The new number is (619) 458-8822.

C (General Information)

Please change Mark Thompson's telephone number in this section to the new telephone number.

E 5 (Sampling and Analysis Results)

IDEC has three discharge points. As we have no authorized nor unauthorized industrial discharges to the storm drain and only runoff from the parking areas is being discharged to the storm drain, it is reasonable to conclude that all discharge points - #1, 2, and 3 - are identical. Also, between 1993 and 1994, sampling was alternated between outfall 2 and 3 and the results were found to be similar as was noted in the 1993-94 report. These results are attached.

E 6 (Sampling and Analysis Results)

It is not always possible to collect storm samples during the first hour of discharge as sampling is dependent on work schedules. A storm may begin at any time of the day or night and not necessarily during normal business hours.

E 10 c (Sampling and Analysis Results)

When sending samples of the second storm event to D-Tech for testing, I accidentally omitted the conductivity test. From 1993 (IDEC's beginning at 11011 Torreyana Rd.), until the present, conductivity has always been within the normal limits.

Form 5 -ANNUAL EVALUATION

Additional BMP's and their date(s) of implementation:

In 1997 a shut-off valve has been added to outfall #2 which drains storm water into the canyon located at the southeast corner of the building. An accidental spill would be controlled by turning the valve handle to the "close" position. Our SWPPP has been revised instructing members of Health & Safety and Maintenance to supervise the pick-up and delivery of hazardous waste or materials.

1998-1999
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 1998 through June 30, 1999

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

If any information contained in Items A, B, and C below is incorrect, please cross out or highlight the incorrect information (do not white out or erase) and provide the correct information next to or above the incorrect information.

If you have any questions, please contact your Regional Board Storm Water Program Contact. The address of the Regional Board (where the Annual Report must be filed) along with the name and telephone number of the contact is indicated below.

1998-99
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2

NO Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan **Group Name:** _____

ii. Submitted No Exposure Certification (NEC) **Date Submitted:** ____/____/____
Re-evaluation Date: ____/____/____

Does facility continue to satisfy NEC conditions? **YES** **NO**

iii. Submitted Sampling Reduction Certification (SRC) **Date Submitted:** ____/____/____
Re-evaluation Date: ____/____/____

Does facility continue to satisfy SRC conditions? **YES** **NO**

iv. Received Regional Board Certification **Certification Date:** ____/____/____

v. Received Local Agency Certification **Certification Date:** ____/____/____

3. If you checked boxes i or iii above, were you scheduled to sample one storm event during the reporting year?

YES Go to Section E

NO Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 2 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES

NO **Attach explanation**

3. How many storm water discharge locations are at your facility? 3

4. For each storm event sampled, did you collect and analyze a sample from each of the facilities' storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? YES NO, attach explanation
- If "YES", attach documentation supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated / /
6. Were all samples collected during the first hour of discharge? YES NO, attach explanation
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, attach explanation
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, attach explanation
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Is your facility required to analyze additional parameters listed in Table D of the General Permit? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons: *N/A*

~~_____ The parameter has not been detected in significant quantities from the last two consecutive sampling events. Attach explanation~~

_____ The parameter is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. Attach explanation

_____ Other. Attach explanation

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using Form 1 or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. Authorized Non-Storm Water Discharges

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. Attach an explanation for any "NO" answers. Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September YES NO N/A October-December YES NO N/A
January-March YES NO N/A April-June YES NO N/A

c. Use Form 2 to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. any new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. Unauthorized Non-Storm Water Discharges

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. Attach an explanation for any "NO" answers.

July -September YES NO October-December YES NO
January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

YES NO Attach explanation

d. Use Form 3 to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. any corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

- 1) Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. Attach an explanation for any "NO" answers.

	YES	NO		YES	NO
October	<input type="checkbox"/>	<input checked="" type="checkbox"/>	February	<input checked="" type="checkbox"/>	<input type="checkbox"/>
November	<input type="checkbox"/>	<input checked="" type="checkbox"/>	March	<input checked="" type="checkbox"/>	<input type="checkbox"/>
December	<input type="checkbox"/>	<input checked="" type="checkbox"/>	April	<input type="checkbox"/>	<input checked="" type="checkbox"/>
January	<input checked="" type="checkbox"/>	<input type="checkbox"/>	May	<input type="checkbox"/>	<input checked="" type="checkbox"/>

2. Report monthly wet season visual observations using Form 4 or provide the following information.
- date, time, and location of observation
 - name and title of observer
 - characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
 - any new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. Attach an explanation for any "NO" answers.

- 1.) Have you inspected all potential pollutant sources and industrial activities areas? YES NO
The following areas should be inspected:

- areas where spills and leaks have occurred during the last year.
- outdoor wash and rinse areas.
- process/manufacturing areas.
- loading, unloading, and transfer areas.
- waste storage/disposal areas.
- dust/particulate generating areas.
- erosion areas.
- building repair, remodeling, and construction
- material storage areas
- vehicle/equipment storage areas
- truck parking and access areas
- rooftop equipment areas
- vehicle fueling/maintenance areas
- non-storm water discharge generating areas

- 2.) Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO

- 3.) Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: YES NO

- facility boundaries
- outline of all storm water drainage areas
- areas impacted by run-on
- storm water discharges locations
- storm water collection and conveyance system
- structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use Form 5 to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? YES NO

If you answered "NO" attach an explanation to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)

- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA

- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA

- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

IDEC PHARMACEUTICALS CORPORATION
Annual Storm Water Report for 1998-1999

Explanations to "NO" Answers in Annual Report Questionnaire.

E1.

Attached you will find similar results from earlier sampling comparing outfall #2 and #3. Outfall #1 is located on Torreyana Rd. and is not accessible for sampling.

E5.

See attached documentation.

E9.

Any collected water inside a berm would be equivalent to storm water runoff that is typically sampled and analyzed. In the future, any rainwater collected inside a berm will be sampled along with the outfall sample.

F2b and Form 3 Attachment to Annual Report (Unauthorized Non-Storm Water Discharge)

At approximately 11:00am on Monday, June 7, 1999, approximately 5 gallons of Sentol (acid) were accidentally spilled to the city sewer while transferring from one container to another. Copious amounts of water were immediately sent to the drain after it. The pH was checked at the last point of drainage on the property and was found to be 5.5. To avoid such problems in the future, the end of the working utility yard shall be bermed up to contain any future spills in the area.

G1.

Rain occurred on the months of January, February and March. Observations were performed during the first hour of the events. A "no" answer implies that no storm event occurred in those months.

ANNUAL REPORT

1998-1999

SIDE A

**FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED
NON-STORM WATER DISCHARGES (NSWDs)**

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

1998-1999
ANNUAL REPORT
FORM 4 (Continued)-MONTHLY VISUAL OBSERVATIONS OF
STORM WATER DISCHARGES

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.
- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- Make additional copies of this form as necessary.

QUALITY CONTROL TERMINOLOGY

- **LCS** - Laboratory Control Sample. Reported as % Recovery of an Independent Standard carried through all sample preparation procedures to verify method performance. Acceptable range is 80 % -120 % recovery.
- **Spike**- Environmental sample is matrix spiked with method compounds and % recovery of concentration spiked into sample is calculated. Reported as
- **% Recovery**. Acceptable range for "Normal Matrix Sample" is 75 % - 125% recovery.
- **% Recovery** = (Spike Sample Result - Sample Result) *100/Spike Concentration.
- **RPD (Relative % Difference)** = (Spiked Sample - Spike Duplicate) * 100 / Average Result.

D-TEK POLICIES

Fee Schedule Criteria / Discounts: Fees are established from our fixed list prices, with the exception of non-routine analyses requiring supplemental research, method development, extensive QA/QC reporting data, not-routine detection limits, or additional materials. Fixed prices are applied to routine analyses and reporting formats. The prices for non-routine analyses are assessed on a "time and materials" basis. Expedited turnaround times for sample analyses may be arranged with advanced notice. Surcharges are applied to the prices of analyses requiring expedited turnaround times.

Discounts are extended for projects involving large numbers of samples, or on a contractual arrangement. Please call our office for price quotations.

Turnaround Time: Standard turnaround time is five (5) working days for verbal results, with a written report following within three (3) working days. Expedited turnaround times may be arranged with advanced notice and are subject to a surcharge. Samples received after 5:00 PM on regular working days are considered as being received at 8:00 AM on the next working day and turnaround time begins at that point.

Surcharges: Standard turnaround time (TAT) is five (5) working days. On expedited turnaround times the following surcharge factors apply: Four (4) day TAT (X) 1.2, Three (3) day TAT (X) 1.4, Two (2) day "Rush" TAT (X) 1.6, One (1) day "Urgent" TAT (X) 1.8 and Less than Four Hours (<4 hr.) "Flash" TAT (X) 2.5.

Holding Times: Holding times are carefully monitored at D-TEK since this is a vital part of Quality Control procedures. D-TEK will make every effort to perform analyses within the applicable holding times established by the Environmental Protection Agency (EPA) or equivalent methodology. However, samples and sample integrity are ultimately the responsibility of the client. We reserve the right to apply a surcharge to prices if the sample holding time dictates sample processing within a specified time that would otherwise not be performed within our standard turnaround time.

Payment: Payment for pre-approved accounts is net 30 days from the date of invoice. On all analyses that are done on other than pre-approved accounts, payment must accompany the sample at the time of the sample delivery unless credit is approved by D-TEK. Cash, checks, money order or Visa / MasterCard are acceptable forms of payment. D-TEK has a forty dollar (\$40) minimum laboratory/data generation fee per visit. Without pre-approved credit, no analyses will begin until payment is received in full.

Sample Archiving: After thirty (30) calendar days, samples will be disposed of or returned to customer. D-TEK will not be held responsible for reanalysis of samples after this time. Samples stored after 30 calendar days are subject to an archiving fee of \$2.50 per sample per month or a \$60.00 minimum per month charge (whichever charge is greater). Samples received with instructions to only "hold" or "store" are subject to an archiving fee commencing on the date of receipt. However, if analytical work is performed within the thirty (30) days, the archiving fee is suspended until another thirty (30) days have passed.

Hazardous Samples: Hazardous samples will be returned to the client. D-TEK reserves the right to withhold the Analytical Report until the samples have been retrieved. Samples that D-TEK deems as "hazardous" or difficult to dispose of are subject to a disposal fee per sample.

Reporting Results: Analyses are reported in wet weight values. Dry weight values may be obtained when percent total solids is performed at an additional cost.

Overtime Services: Time-and-a-half charges will apply for hours worked 5:00 PM to 12:00 AM Monday through Friday and 8:00 AM through 5:00 PM on Saturday and 8:00 AM to 5:00 PM on Sunday. Triple time will be charged for hours from 12:00 AM to 8:00 AM on Saturday and 5:00 PM to 12:00 AM on Sunday.

Sample Collection: D-TEK does not accept any liability with regard to the collection, preservation technique, or transportation method of samples by clients.

Date Sample Received:	2/4/99
Date Analyzed:	February 4, 9, 10 and 16, 1999
Analyzed By:	EA and JV
Sample Type:	Liquid
Project Name:	Storm Water #2
Log Number:	99-0285

The sample(s) were analyzed with EPA methodology or equivalent methods as specified on the attached "Analyses Results" report. The symbol for "less than" indicates a value below the reportable detection limit.

The results of these analyses and the quality control data are enclosed.

QUALITY CONTROL TERMINOLOGY

- **LCS** - Laboratory Control Sample. Reported as % Recovery of an Independent Standard carried through all sample preparation procedures to verify method performance. Acceptable range is 80 % -120 % recovery.
- **Spike**- Environmental sample is matrix spiked with method compounds and % recovery of concentration spiked into sample is calculated. Reported as
- **% Recovery**. Acceptable range for "Normal Matrix Sample" is 75 % - 125% recovery.
- **% Recovery** = (Spike Sample Result - Sample Result) *100/Spike Concentration.
- **RPD (Relative % Difference)** = (Spiked Sample - Spike Duplicate) * 100 / Average Result.

SAN DIEGO REGIONAL
WATER QUALITY
CONTROL BOARD
Dev J 12.8.00
2000 JUL 19 A 11:39

Reporting Period July 1, 1999 through June 30, 2000

An Annual Report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

If any information contained in Items A, B, C, and D below is incorrect, please cross out or highlight the incorrect information (do not white out or erase) and provide the correct information next to or above the incorrect information so that we can update our records. Please remember that a Notice of Termination and new Notice of Intent is required whenever your facility is relocated or changes ownership.

If you have any questions, please contact your Regional Board Storm Water Program Contact. The address of the Regional Board (where the Annual Report must be filed) along with the name, telephone number, and e-mail address of the contact is indicated below. Additional copies of the Annual Report may be obtained from our web site at www.swrcb.ca.gov.

1999-2000
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from two storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2

NO Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from two storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan Group Name: _____

ii. Submitted No Exposure Certification (NEC) Date Submitted: ___/___/___

Re-evaluation Date: ___/___/___

Does facility continue to satisfy NEC conditions? YES NO

iii. Submitted Sampling Reduction Certification (SRC) Date Submitted: ___/___/___

Re-evaluation Date: ___/___/___

Does facility continue to satisfy SRC conditions? YES NO

iv. Received Regional Board Certification Certification Date: ___/___/___

v. Received Local Agency Certification Certification Date: ___/___/___

3. If you checked boxes i or iii above, were you scheduled to sample one storm event during the reporting year?

YES Go to Section E

NO Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 1

If less than 2, attach explanation (if you checked item D.2.i or iii. above, only attach explanation if you answer "0")

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES

NO Attach explanation

3. How many storm water discharge locations are at your facility? 3

4. For each storm event sampled, did you collect and analyze a sample from each of the facilities' storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? YES NO, attach explanation
- If "YES", attach documentation supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated / /
6. Were all samples collected during the first hour of discharge? YES NO, attach explanation
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, attach explanation
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, attach explanation
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using Form 1 or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. Attach an explanation for any "NO" answers. Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September YES NO N/A October-December YES NO N/A

January-March YES NO N/A April-June YES NO N/A

c. Use Form 2 to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. any new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. Attach an explanation for any "NO" answers.

July -September YES NO October-December YES NO

January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

YES NO Attach explanation

d. Use Form 3 to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. any corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. Attach an explanation for any "NO" answers. Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	<input type="checkbox"/>	<input checked="" type="checkbox"/>	February	<input type="checkbox"/>	<input checked="" type="checkbox"/>
November	<input type="checkbox"/>	<input checked="" type="checkbox"/>	March	<input checked="" type="checkbox"/>	<input type="checkbox"/>
December	<input type="checkbox"/>	<input checked="" type="checkbox"/>	April	<input type="checkbox"/>	<input checked="" type="checkbox"/>
January	<input type="checkbox"/>	<input checked="" type="checkbox"/>	May	<input type="checkbox"/>	<input checked="" type="checkbox"/>

2. Report monthly wet season visual observations using Form 4 or provide the following information.
 - a. date, time, and location of observation
 - b. name and title of observer
 - c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
 - d. any new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1- June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. Attach an explanation for any "NO" answers.

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
 The following areas should be inspected:
 - areas where spills and leaks have occurred during the last year.
 - outdoor wash and rinse areas.
 - process/manufacturing areas.
 - loading, unloading, and transfer areas.
 - waste storage/disposal areas.
 - dust/particulate generating areas.
 - erosion areas.
 - building repair, remodeling, and construction
 - material storage areas
 - vehicle/equipment storage areas
 - truck parking and access areas
 - rooftop equipment areas
 - vehicle fueling/maintenance areas
 - non-storm water discharge generating areas
2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO
3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: YES NO
 - facility boundaries
 - outline of all storm water drainage areas
 - areas impacted by run-on
 - storm water discharges locations
 - storm water collection and conveyance system
 - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- quarterly unauthorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- Sampling and Analysis records
- records of spills/leaks and associated clean-up/response activities
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- assessment of potential pollutant sources
- list of significant materials
- identification and description of the BMPs to be implemented for each potential pollutant source
- description of potential pollutant sources

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- preventative maintenance
- spill response
- material handling and storage practices
- employee training
- waste handling/storage
- erosion control
- structural BMPs
- quality assurance

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- schedule for implementing SWPPP revisions
- the date(s) of the evaluation
- any incidents of non-compliance and the corrective actions taken.
- necessary SWPPP revisions

Use Form 5 to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? YES NO

If you answered "NO" attach an explanation to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)
- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA
- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA
- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

 Title: Sr. Manager, EMS

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.swrcb.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

1999-2000
ANNUAL REPORT

SIDE A

FORM 1-SAMPLING & ANALYSIS RESULTS
FIRST STORM EVENT

- If analytical results are less than the detection limit (or non detectable), show the value as less than the numerical value of the detection limit (example: < .05)
- If you did not analyze for a required parameter, do not report "0". Instead, leave the appropriate box blank
- When analysis is done using portable analysis (such as portable pH meters, SC meters, etc.), indicate "PA" in the appropriate test method used box.
- Make additional copies of this form as necessary.

FORM 1-SAMPLING & ANALYSIS RESULTS

SECOND STORM EVENT

- If analytical results are less than the detection limit (or non detectable), show the value as less than the numerical value of the detection limit (example: <.05)
- When analysis is done using portable analysis (such as portable pH meters, SC meters, etc.), indicate "PA" in the appropriate test method used box.
- If you did not analyze for a required parameter, do not report "0". Instead, leave the appropriate box blank

**FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED
NON-STORM WATER DISCHARGES (NSWDs)**

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

IDEC PHARMACEUTICALS CORPORATION
Annual Storm Water Report for 1999-2000

Explanations to "NO" Answers in Annual Report Questionnaire.

E1. Only one storm event met the criteria for sampling. Runoff was only excessive enough to sample one storm event that occurred on March 8, 2000.

E9. Samples from temporary contained/stored discharges are not applicable to our facility.

G1. Storm water discharges occurred at each discharge location during the March storm event. Only one storm that occurred during normal business hours created significant runoff.

QUALITY CONTROL TERMINOLOGY

- LCS - Laboratory Control Sample. Reported as % Recovery of an Independent Standard carried through all sample preparation procedures to verify method performance. Acceptable range is 80 % -120 % recovery.
- Spike- Environmental sample is matrix spiked with method compounds and % recovery of concentration spiked into sample is calculated. Reported as
- % Recovery. Acceptable range for "Normal Matrix Sample" is 75 % - 125% recovery.
- % Recovery = (Spike Sample Result - Sample Result) *100/Spike Concentration.
- RPD (Relative % Difference) = (Spiked Sample - Spike Duplicate) * 100 / Average Result.

2000-2001 ANNUAL REPORT
FOR STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Δ⁵

logged

Reporting Period July 1, 2000 through June 30, 2001

An Annual Report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

If any information contained in Items A, B, and C below is incorrect, please cross out or highlight the incorrect information (do not white out or erase) and provide the correct information next to or above the incorrect information so that we can update our records. Please remember that a Notice of Termination and new Notice of Intent is required whenever your facility is relocated or changes ownership.

If you have any questions, please contact your Regional Board Storm Water Program Contact. The address of the Regional Board (where the Annual Report must be submitted) along with the name, telephone number, and e-mail address of the contact is indicated below. Additional copies of the Annual Report may be obtained from our web site at www.swrcb.ca.gov.

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from two storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2

NO Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from two storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan Group Name: _____

ii. Submitted No Exposure Certification (NEC) Date Submitted: ____/____/____

Re-evaluation Date: ____/____/____

Does facility continue to satisfy NEC conditions? YES NO

iii. Submitted Sampling Reduction Certification (SRC) Date Submitted: ____/____/____

Re-evaluation Date: ____/____/____

Does facility continue to satisfy SRC conditions? YES NO

iv. Received Regional Board Certification Certification Date: ____/____/____

v. Received Local Agency Certification Certification Date: ____/____/____

3. If you checked boxes i or iii above, were you scheduled to sample one storm event during the reporting year?

YES Go to Section E

NO Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 3 If less than 2, attach explanation (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES

NO, attach explanation (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? 3

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? YES NO, attach explanation
- If "YES", attach documentation supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated / /
6. Were all samples collected during the first hour of discharge? YES NO, attach explanation
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, attach explanation
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, attach explanation
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using Form 1 or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September YES NO N/A October-December YES NO N/A

January-March YES NO N/A April-June YES NO N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. any new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September YES NO October-December YES NO

January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

YES NO Attach explanation

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. any corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. Attach an explanation for any "NO" answers. Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge:

October	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>	February	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
November	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>	March	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
December	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>	April	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
January	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>	May	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>

2. Report monthly wet season visual observations using Form 4 or provide the following information.

- date, time, and location of observation
- name and title of observer
- characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
- any new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. Attach an explanation for any "NO" answers.

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
The following areas should be inspected:

- areas where spills and leaks have occurred during the last year.
- outdoor wash and rinse areas.
- process/manufacturing areas.
- loading, unloading, and transfer areas.
- waste storage/disposal areas.
- dust/particulate generating areas.
- erosion areas.
- building repair, remodeling, and construction
- material storage areas
- vehicle/equipment storage areas
- truck parking and access areas
- rooftop equipment areas
- vehicle fueling/maintenance areas
- non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: YES NO

- facility boundaries
- outline of all storm water drainage areas
- areas impacted by run-on
- storm water discharges locations
- storm water collection and conveyance system
- structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- quarterly unauthorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- Sampling and Analysis records
- records of spills/leaks and associated clean-up/response activities
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- assessment of potential pollutant sources
- list of significant materials
- identification and description of the BMPs to be implemented for each potential pollutant source
- description of potential pollutant sources

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- preventative maintenance
- spill response
- material handling and storage practices
- employee training
- waste handling/storage
- erosion control
- structural BMPs
- quality assurance

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- schedule for implementing SWPPP revisions
- the date(s) of the evaluation
- any incidents of non-compliance and the corrective actions taken
- necessary SWPPP revisions

Use Form 5 to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit?

- YES NO

If you answered "NO" attach an explanation to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)
- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA
- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA
- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse effects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.swrcb.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

NON-STORM WATER DISCHARGES (NSWDs)**

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10 e of the General Permit.
- Make additional copies of this form as necessary.

FORM 4-MONTHLY VISUAL OBSERVATIONS OF
STORM WATER DISCHARGES

SEE ATTACHED

SIDE A

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.

- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- Make additional copies of this form as necessary.
- Until a monthly visual observation is made, record any eligible storm events that do not result in a storm water discharge and note the date, time, name, and title of who observed there was no storm water discharge.

**2000-2001
ANNUAL REPORT
FORM 4 (Continued)-MONTHLY VISUAL OBSERVATIONS OF
STORM WATER DISCHARGES**

SIDE A

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.

- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- Make additional copies of this form as necessary.
- Until a monthly visual observation is made, record any eligible storm events that do not result in a storm water discharge and note the date, time, name, and title of who observed there was no storm water discharge.

Observation Date: February <u>2/10</u> 2000 2001 Observers Name: <u>Richard Spurr</u> Title: <u>Assoc. STORM WATER POLLUTION PREVENTION PLAN

Dry Season: June 1-Sept 30
 Wet Season: Oct 1-May 31

Reporting Period	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
Monthly Storm Event Observation (Note if sampled)	June (dry) 19th 9:15am Dry, odorless, no grease/oil, no debris Foliage will be cut back.	September (dry) 18th 9:00am South out-fall is wet, odorless, but some debris. North out-fall is wet, strong odor of Lysol, turbid, debris (Sampled). Remediated!	December (wet) 18th 9:00am South out-fall is dry, odorless, no debris. North out-fall is wet, no odor, no debris.	March (wet) 19th 9:00am South out-fall is dry, odorless, some small debris (cleaned). North out-fall is wet, strong odor of Lysol, turbid, debris (Sampled). Remediated
	July (dry) 17th 8:30am Dry, odorless, no grease/oil, no debris Foliage is cut back.	October (wet) 16th 9:15am Rainy days Sample taken 10-6-00 10-18-00. Wet, odorless, no grease/oil, some debris (cleaned)	January (wet) 15th 8:15am South out-fall is dry, odorless, no debris. North out-fall is wet, no odor, no debris.	April (wet) 16th 8:45am South out-fall is dry, odorless, no debris. Pampus grass has been removed. North out-fall is wet, no odor, no debris.
	August (dry) 14th 10:00am Moist (landscape), odorless, no grease/oil, no debris.	November (wet) 20th 10:30am South out-fall is wet, odorless, but some debris. North out-fall is wet, strong odor of Lysol, turbid, debris. Remediated!	February (wet) 20th 10:15am South out-fall is wet, odorless, no debris. North out-fall is wet, no odor, no debris.	May (wet) 21st 10:15am South out-fall is moist, odorless, no debris. North out-fall is wet, no odor, no debris.
	Date/Comments	Date/Results	Date/Results	Date/Results

Quarterly Non-storm observation (Authorized or unauthorized)	August	November	February	May
	All OK. No non-storm water events.	Sept 18 th and Nov 20 th – Industrial Cleaning water (Mop water) was poured down a storm port outside the building. Remediation followed immediately and the cleaning contractors where notified and trained not to do this. Also, “No Dumping” (Spanish/English) was stenciled on the drains.	All OK. No non-storm water events	All OK. No non-storm water events.

NOTES:

Storm water discharge visual observations-Monthly

- Visually observe storm water discharges from one storm event per month (if applicable) during the wet season (October 1-May 30).
- These visual observations shall occur during the first hour of discharge and at all discharge locations.
- Visual observations shall document the presence of any floating and suspended material, oil and grease, discoloration, turbidity, odor, and source of any pollutants.
- Records shall be maintained of the (1) observation dates, (2) locations observed, (3) observations, and (4) response taken to reduce or prevent pollutants in storm water discharges.

Non-storm water discharge visual observations-Quarterly

- Visually observe all drainage areas for the presence of authorized and unauthorized non-storm water discharges and their sources.
- Visual observations shall document the presence of any discoloration, stains, odors, floating materials, etc., as well as the source of the discharge noting if discharge is authorized or unauthorized.
- Records shall be maintained of the (1) visual observation dates, (2) locations observed, (3) observations, and (4) response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges.

San Diego, CA 92121

WDID: 9 37S010764

Dear Mr. Graham:

SUBJECT: SEPTEMBER 27, 2001 COMPLIANCE INSPECTION

On September 27, 2001, a compliance inspection of your facility was conducted by Tetra Tech, a United States Environmental Protection Agency contractor representing the San Diego Regional Water Quality Control Board. The purpose of the inspection was to evaluate your compliance with the Industrial Activities Storm Water General Permit (General Permit), Order No. 97-03-DWQ. Enclosed is a copy of Tetra Tech's inspection report and evaluation of your Storm Water Pollution Prevention Plan (SWPPP) and Monitoring Program (MP) to assess the effectiveness of your Best Management Practices (BMPs) to comply with the General Permit requirements.

Please review the inspection report carefully. The report includes a summary of the inspector's findings and may identify areas of potential non-compliance and other areas of concern. You should take appropriate actions to address the issues described in the report. These actions may include modifying the existing BMPs or implementing new BMPs that reduce or eliminate the discharge of pollutants. Your facility SWPPP and MP may need to be revised to include the new or modified BMPs and to reflect any other changes. Please submit a summary of any corrective actions already taken, or actions you plan to take, with your Annual Report, which is due to this office by July 1, 2002.

If you have any questions regarding this letter, please contact Gloria Fulton at (858) 467-2971.

Respectfully,

JOHN R. PHILLIPS
Senior WRC Engineer

CB 4/15/02

WDID: 010764
Status Code: Active

Receiving Water Name:
Pacific Ocean

Facility Name: IDEC Pharmaceuticals
Facility Address: 11011 Torreyana Rd.
San Diego, CA 92121

Facility Size: 1.6 Acre(s)
Impervious Area: 90%
Primary SIC Code(s):

Facility Contact: Richard Graham
Facility Phone: 858 431 8822

283X - Drugs

Date of Inspection: 9/27/01
Inspector(s): Oxsalida (Tt)
Type of Inspection: B Type Inspection

General Results:

IDEC Pharmaceuticals was inspected on 9/27/01 to determine compliance with NPDES General Permit No. CAS000001. IDEC Pharmaceuticals is categorized under SIC code 283X - Drugs. The inspector met with Richard Graham to tour the facility and review relevant storm water paperwork.

The facility produces Ritoxin, which is used to treat Non-Hodgkins Lymphoma, a form of leukemia. The company's Torreyana facility is used for production, as well as Quality Control (QC) for Ritoxin. Mr. Graham could not elaborate on specific production facilities and equipment, and preferred not to show the inspector much of the inside of the facility. The facility tour was restricted mostly to outdoor portion of the facilities. Outdoor industrial facilities include loading and unloading docks, enclosed storage sheds for raw and waste materials, a wastewater treatment system, a storage area for chemicals used in wastewater treatment, and a miscellaneous hazardous waste storage area. The wastewater treatment system is contained within a pit with a leak-detection device which is sufficient to hold the wastewater capacity of the system. The treatment chemicals are kept in sealed drums, and are stored within a bermed, ramped, and covered area. The miscellaneous hazardous waste storage area is fenced and locked, with sloping pavement and a sump to contain any spills. The storage area contains expired product and raw materials, stored in bottles within cardboard boxes.

The facility has three identified storm water outfalls. The first discharge point is located at the northeast corner of the property, and receives storm water runoff from the lower level of the parking structure, as well as some landscaping. The second discharge point is located at the southeast corner of the property, and receives storm water runoff from the loading and unloading area, the wastewater treatment area, the treatment chemical area, and the hazardous waste storage area. The third discharge point is located at the northwest corner of the property, and receives storm water runoff from the upper level of the parking structure and the front driveway. Based on the lack of industrial activities for discharge points 1 and 3, the facility only collects storm water samples from discharge point 2. The facility currently does visually inspect all three discharge points.

The facility's SWPPP, monitoring plan, and most recent analytical storm water data were reviewed. The SWPPP contained deficiencies, as discussed below. BMPs listed in the SWPPP were fully implemented. The monitoring plan contained deficiencies, also noted below. One specific conductance value was above the RWQCB benchmark value, and one pH value was not within the RWQCB benchmark range. Specific values are listed below.

Identified Areas of Potential Noncompliance:

**San Diego Regional Water Quality Control Board
General Industrial Activities Storm Water Permit (CAS000001 - General Permit)
Storm Water Compliance Facility Inspection Report**

The SWPPP does not identify a pollution prevention team (CAS000001 Attachment A.3.).

The SWPPP site map was incomplete in the following areas (CAS000001 Attachment A.4.):

A site map was not included in the SWPPP, and none could be found for review

The SWPPP does not contain a complete list of significant materials handled at the site (CAS000001 Attachment A.5.):

The SWPPP contains an adequate description of potential pollutant sources, but no specific material information is included.

The facility did not have sampling records for the following required activities:

The facility did not sample from representative storm water discharge locations (CAS000001 Attachment B.7.):

Discharge point 3 has recently been added to the SWPPP and the monitoring plan, and was not visually inspected or sampled prior to the first quarter (June-August) of 2001. Therefore, visual observation and sampling data is not included in the 2000-2001 Annual Report.

Other issues of noncompliance observed during the site inspection:

In addition to the lack of monitoring and visual inspection data for discharge point 3, the Monitoring Plan did not contain a description of sampling locations, sampling methods, and analytical methods as required by sections B.7, B.10, and B.10.b, respectively, of the permit.

Other Areas of Concern

Storm water discharges exceed RWQCB benchmark values for the following parameters:

Southeast discharge point (No. 2) - 01/11/01
pH - 6.19 su (6.19 su)

Southeast discharge point (No. 2) - 10/06/00
Specific conductance - 480 umhos/cm (200 umhos/cm)

RWQCB benchmark values are provided parenthetically.

The facility is implementing the following model storm water BMPs:

The containment for the wastewater treatment system is excellent. The system is enclosed within a concrete pit with walls approximately 6 feet high. The corrosive water holding tank is equipped with a leak-detection device. All storm water is visually inspected for contamination before release.

IDEC Pharmaceuticals Corporation is pleased to submit the 2001 - 2002 Annual Report for Storm Water Discharges Associated with Industrial Activities for the facility located at 11011 Torreyana Road.

The following attachments are included in the submittal:

- 2001 - 2002 Annual Report
- Laboratory test results
- Visual observation results from monthly inspections
- Supporting documentation for reduction in sampling locations (Section E.5)
- Summary of corrective action from 9/27/01 compliance inspection
- Updated Storm Water Pollution Prevention Program written plan

Please do not hesitate to contact me at 858-431-8221 with any questions. Thank you for your assistance in this matter.

Sincerely,

Sharon Vidal

STATE WATER RESOURCES CONTROL BOARD
2001-2002
ANNUAL REPORT

Reporting Period July 1, 2001 through June 30, 2002

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

If any information contained in Items A, B, C, and D below differs from the information provided in your Notice of Intent (NOI), circle or highlight the information that differs from your NOI so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility is relocated or changes ownership.

If you have any questions, please contact your Regional Board Storm Water Program Contact. The address of the Regional Board (where the Annual Report must be filed) along with the name, telephone number and e-mail address of the contact is indicated on page 8 of this Annual Report. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Location:

Facility WDID No: 9 37 S 010 764

2001-2002
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2

NO Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan **Group Name:** _____

ii. Submitted **No Exposure Certification (NEC)** **Date Submitted:** _____

Re-evaluation Date: _____

Does facility continue to satisfy NEC conditions? **YES** **NO**

iii. Submitted **Sampling Reduction Certification (SRC)** **Date Submitted:** _____

Re-evaluation Date: _____

Does facility continue to satisfy SRC conditions? **YES** **NO**

iv. Received Regional Board Certification **Certification Date:** _____

v. Received Local Agency Certification **Certification Date:** _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

YES Go to Section E

NO Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 4 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES

NO, attach explanation (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? 3

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? YES, go to Item E.6 NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? YES NO, attach explanation

If "YES", attach documentation supporting your determination that two or more drainage areas are substantially identical.

Date facility's drainage areas were last evaluated 4-24-2002

6. Were all samples collected during the first hour of discharge? YES NO, attach explanation

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, attach explanation

8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, attach explanation

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

a. Does Table D contain any additional parameters related to your facility's SIC code(s)? YES NO, Go to Item E.11

b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO

c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

_____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

_____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

_____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler.
- Parameters tested.
- Name of analytical testing laboratory.
- Discharge location identification.
- Testing results.
- Test methods used.
- Test detection limits.
- Date of testing.
- Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September YES NO N/A October-December YES NO N/A
January-March YES NO N/A April-June YES NO N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September YES NO October-December YES NO
January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

YES NO **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	<input checked="" type="checkbox"/>	<input type="checkbox"/>	February	<input checked="" type="checkbox"/>	<input type="checkbox"/>
November	<input checked="" type="checkbox"/>	<input type="checkbox"/>	March	<input checked="" type="checkbox"/>	<input type="checkbox"/>
December	<input checked="" type="checkbox"/>	<input type="checkbox"/>	April	<input checked="" type="checkbox"/>	<input type="checkbox"/>
January	<input checked="" type="checkbox"/>	<input type="checkbox"/>	May	<input checked="" type="checkbox"/>	<input type="checkbox"/>

2. Report monthly wet season visual observations using **Form 4** or provide the following information.
 - a. date, time, and location of observation
 - b. name and title of observer
 - c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
 - d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
The following areas should be inspected:

<ul style="list-style-type: none"> • areas where spills and leaks have occurred during the last year. • outdoor wash and rinse areas. • process/manufacturing areas. • loading, unloading, and transfer areas. • waste storage/disposal areas. • dust/particulate generating areas. • erosion areas. 	<ul style="list-style-type: none"> • building repair, remodeling, and construction • material storage areas • vehicle/equipment storage areas • truck parking and access areas • rooftop equipment areas • vehicle fueling/maintenance areas • non-storm water discharge generating areas
---	--
2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO
3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: YES NO

<ul style="list-style-type: none"> • facility boundaries • outline of all storm water drainage areas • areas impacted by run-on 	<ul style="list-style-type: none"> • storm water discharges locations • storm water collection and conveyance system • structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.
--	--

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit?

- YES NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)
- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA
- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA
- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

2001-2002
ANNUAL REPORT

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.swrcb.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

FORM 4 (Continued)-MONTHLY VISUAL OBSERVATIONS OF
STORM WATER DISCHARGES

* SEE ATTACHED
VISUAL OBSERVATIONS
DESCRIPTIONS

SIDE A

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.
- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- Make additional copies of this form as necessary.
- Until a monthly visual observation is made, record any eligible storm events that do not result in a storm water discharge and note the date, time, name, and title of who observed there was no storm water discharge.

QUALITY CONTROL DATA REPORT

Attention: Rick Graham
IDEC Pharmaceuticals Corp.

Report Date: 02/07/02

Log Number: 02-321

- * **LCS** - Laboratory Control Sample. The LCS is a blank spiked with a known amount of method analyte(s) obtained from independent standards and is carried through all sample preparation and analytical procedures. Recoveries are calculated in order to evaluate method accuracy.
- * **Spike** - The spike is an actual sample spiked with a known amount of method analyte(s) and is carried through all sample preparation and analytical procedures. Recoveries are calculated in order to evaluate potential matrix interferences.
- * **RPD** = Rel % Difference = $((\text{Result 1} - \text{Result 2}) / \text{Average Result}) \times 100\%$
The RPD provides a measure of method precision by comparing analytical results of 2 duplicate samples.
- * **% Recovery** = $((\text{Spike Sample Result} - \text{Sample Result}) / \text{Spike Conc}) \times 100\%$
The result of the unspiked sample is treated as zero if it is less than established reporting limits.

Annual Report 2001 – 2002 (Section E.5)

This correspondence is being submitted as documentation to support Section E.5 of the 2001 – 2002 Annual Report. This document is submitted to support determination that drainage areas 1 and 3 are substantially identical to outfall number 2. Based on the lack of industrial activities for discharge points 1 and 3, IDEC only collects storm water samples from discharge point 2. IDEC conducts a visual inspection of all three drainage points.

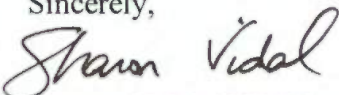

IDEC Pharmaceuticals Corporation has three discharge points. Outfall number one is located in the northwest corner of the property and receives storm water runoff from the lower level of the parking structure as well as some landscaping. The second discharge location is located in the southeast corner of the property, and receives storm water runoff from the loading and unloading area, the wastewater treatment area, the treatment chemical area, and the hazardous waste storage area. The third discharge point is located in the northeast corner of the property, and receives storm water runoff from the level of the parking structure and the front driveway.

IDEC provided initial documentation related to the identical drainage points in the 1998 Annual Report. IDEC reported that “we have no authorized nor unauthorized industrial discharges to the storm drain and only runoff from the parking areas is being discharged to the storm drain, it is reasonable to conclude that all discharge points - #1, #2, and #3 – are identical.” IDEC further reported that in 1993 and 1994 sampling was conducted at each outfall and similar results were reported.

Follow up testing was conducted at outfall number 3 on April 24, 2002 with similar results to testing conducted at outfall 2. Follow up sampling will be conducted at outfall 1 during the next wet season to compare results with outfall number 2 and 3. Results from the follow up testing are included in our submittal with the 2001 – 2002 Annual Report.

Please do not hesitate to contact me at 858-431-8221 with any questions. Thank you for your assistance in this matter.

Sincerely,

Sharon Vidal, CHMM
Sr. Associate I, EH&S

 Summary of Corrective Action from 9/27/01 Compliance Inspection

On September 27, 2001, Tetra Tech, a US EPA contractor representing the San Diego Regional Water Quality Control Board, conducted a compliance inspection of our facility.

The following areas were identified as potential noncompliance:

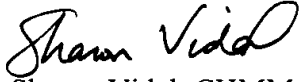

- The SWPPP does not identify a pollution prevention team (A.3)
- The SWPPP site map was not included in the written plan (A.4)
- The SWPPP did not contain a complete list of specific material / significant materials handled at the site. (A.5)
- The facility did not have sampling records for the following required activities: The facility did not sample from representative storm water discharge locations (B.7)
- The monitoring plan did not contain a description of sampling locations, sampling methods, and analytical methods as required by sections B.7, B.10, and B.10b, respectively, of the permit.

The following corrective actions have been taken to ensure compliance with the General Permit requirements:

- The SWPPP has been updated to include listing of pollution prevention team members, responsibilities, and current participants. *See attached written plan.*
- The SWPPP site map has been included in the written plan. *See attached written plan.*
- The SWPPP has been updated to include a complete list of specific and significant materials handled at the site. *See attached written plan.*
- IDEC currently has three discharge locations for the Torreyana facility. Outfall 1 and 3 have demonstrated identical results as outfall 2. IDEC currently tests only outfall 2 to obtain a representative sample of storm water discharge. IDEC re-tested outfall 3 in April 2002 and plans to re-test outfall 1 during the next wet season to update documentation and validate identical discharge representation.
- The monitoring plan has been updated to include a description of sampling locations, sampling methods, and analytical methods. *See attached written plan.*

Please do not hesitate to contact me at 858-431-8221 with any questions. Thank you for your assistance in this matter.

Sincerely,

INTRODUCTION

Regulatory Overview

The Federal Clean Water Act (CWA) authorizes the EPA to regulate discharges to surface waters of the United States. These regulations cover discharges of storm water from industrial facilities to surface waters. As identified by Standard Industrial Code (SIC), certain industries are required to have a permit for managing industrial storm water runoff. Storm water runoff includes rain runoff, snowmelt runoff, and surface water runoff and drainage. This permit provides for identification and regulation of industries that use materials, or generate waste on site, which could be released to the environment via the storm drain system.

In 1992 the State of California issued a statewide general permit, regulating storm water discharges for those sites with significant industrial activity. This permit is issued by the California State Water Resources Control Board and regulates industrial sites, which have the potential for the generation of contaminated run-off during a rainstorm. Contaminated run-off is produced when rainwater flows over chemical substances stored outside of enclosures or otherwise encounters contaminated soil.

It is the responsibility of each industrial site to determine whether or not their storm water discharges are covered under the General Permit. Sites without the potential for creating contaminated run-off have no obligations under the General Permit. Sites that do have the potential for creating contaminated run-off must implement management practices that eliminate or minimize the chance that they are contributing to the contamination of the environment. The general permit falls within the hierarchy of permits issued under the jurisdiction of the National Pollutant Discharge Elimination System (NPDES).

Inherent in implementation of a site-specific plan is the identification of industrial or commercial wastewater discharges (termed non-storm discharges) that flow directly into municipal storm water conveyance systems or surface waters of the U.S. Non-storm water discharges covered under the permit are not allowed, and must be permitted separately (under a site-specific license) or eliminated. Non-storm water discharges that do not fall within the scope of the General Permit are allowed since they are not expected to significantly impact the environment.

Based on the SIC number of 2836, IDEC has been issued a general storm water permit for the Torreyana facility. The NPDES general permit was submitted because there is a potential for release of hazardous materials into the environment due to storm water runoff from IDEC's site.

Purpose

This Storm Water Pollution Prevention Plan has been prepared consistent with the requirements for storm water pollution prevention plans set forth in the NPDES regulations. This Storm Water Pollution Prevention Plan (SWPPP) describes IDEC's storm water management program and indicates procedures implemented to eliminate or reduce pollution of storm water runoff at the Torreyana facility.

Objectives

The SWPPP has two major objectives:

1. To identify and evaluate sources of pollutants associated with industrial activities that may affect the quality of storm water discharges and authorized non-storm water discharges from the facility
2. To identify and implement site-specific best management practices (BMPs) to reduce or prevent pollutants associated with industrial activities in storm water discharges and authorized non-storm water discharges.

SWPPP Contents

- Pollution Prevention Team
- Review of other requirements and existing facility plans
- Site map
- List of significant materials
- Description of potential pollutant sources
- Assessment of potential pollutant sources
- Best Management Practices
- Annual comprehensive site compliance evaluation
- Monitoring program description

The intent of the SWPPP is to prevent the discharge of chemical contaminants into the municipal storm water system. The discharge of contaminants can occur under two types of conditions, normal and emergency.

Under normal conditions, discharges are avoided when one identifies and eliminates the processes and operations that would release contaminants to the storm water sewer system. The primary tool for achieving the elimination of these discharges is the education of employees regarding the processes and/or operations that have been prohibited and/or the areas to monitor. Under emergency conditions, discharges are avoided when you employ the correct spill response procedures. The primary tool for achieving the elimination of these discharges is the education of employees regarding proper spill response.

POLLUTION PREVENTION TEAM

In compliance with the conditions of the "General Permit for Storm Water Discharge Associated with Industrial Activity", IDEC has implemented a pollution prevention team. The team includes members of the Maintenance Department, members of the Manufacturing Department, and the Environmental Health and Safety Department.

The duties and responsibilities of the Team are described below.

Maintenance Personnel

Members of the Maintenance Department are responsible for correctly following the Best Management Practices (BMPs) identified for their group. The BMPs identified for the Maintenance Department include: carrying out routine visual inspections for integrity of the containers, drums, etc. used to store maintenance chemicals and promptly removing any leaking containers if observed; periodically verifying that spill response materials are available in their areas; monitoring their own operations to ensure that wastewater generated during industrial operations is routed to the sanitary sewer rather than the storm drains; routinely maintaining outdoor areas where potential pollutants are used or stored to minimize the likelihood that these agents will contaminate storm water run-off; and following all waste disposal guidelines.

Manufacturing Personnel:

Members of the Manufacturing Department are responsible for correctly following the Best Management Practices (BMPs) identified for their group. The BMPs identified for the Manufacturing Department include: carrying out routine visual inspections for integrity of the containers, drums, etc. used to store raw materials and promptly removing leaking containers if observed; periodically verifying that spill response materials are available in their work areas; monitoring their own operations to ensure that outdoor areas, where potential pollutants are used or stored, are managed to minimize the likelihood that these agents will contaminate storm water run-off; and following all waste disposal guidelines.

Environmental Health and Safety Personnel

Members of the EH&S Department are responsible for coordinating the SWPPP for IDEC by: conducting observations of storm water discharge and carrying out effluent sampling; maintaining an inventory of potential sources of pollutants; arranging training and drills for company staff as needed; maintaining all documentation related to the SWPPP; assisting with spill response actions; conducting weekly inspections of the hazardous waste area and an annual site inspection; creating (and following) waste disposal guidelines addressing the management of liquid waste (both hazardous and otherwise); and completing and filing the annual storm water report with the lead regulatory agency.

POLLUTION PREVENTION TEAM cont..

Pollution Prevention Current Team Members:

Sharon Vidal	EH&S
Rick Graham	EH&S
Mark Thompson	EH&S
Marty King	EH&S
Pete Krucker	EH&S
Javier Jimenez	EH&S
Tom	Protech Hazmat Technician
Darko Radovanovic	Maintenance
Matt Pino	Manufacturing
Carl Bullen	Manufacturing
Tony Alvarez	Warehouse Materials Management

RELATED COMPLIANCE PROGRAMS

IDEC Pharmaceuticals Corporation has several related compliance programs that overlap the goals and requirements of the Storm Water Pollution Prevention Plan. The following programs and written plans can be referenced for additional details of program components:

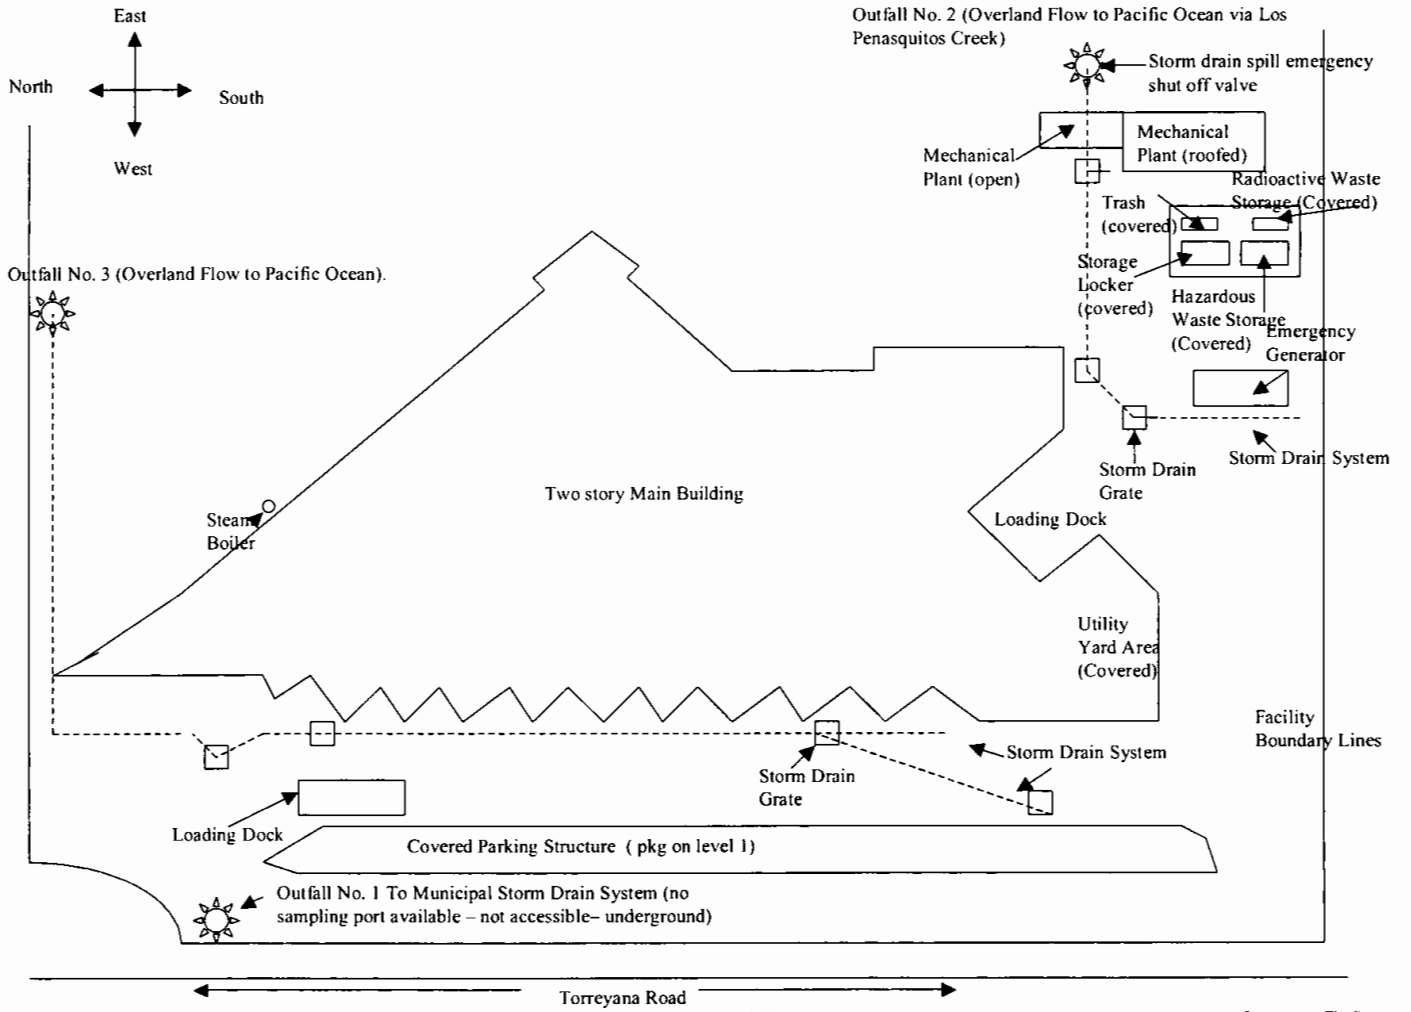

- Emergency Response Plan
- Exposure Control Plan
- Chemical Hygiene Plan
- Injury and Illness Prevention Plan
- Medical Waste Management Plan
- Toxic Organic Management Plan
- Air quality permits

The above listed plans are maintained by the Environmental, Health, and Safety Department and are available for review upon request.

SITE MAP

A copy of the site map is maintained by the Environmental, Health, and Safety Department and is available for review upon request. The following information is included on the site map (see attached):

- Facility boundaries
- Outline of all storm water drainage areas in the facility boundaries
- Direction and flow of each drainage area
- Nearby water bodies
- Municipal storm drain inlets where the facility's storm water discharges and authorized non storm water discharges may be received
- Location of the storm water collection and conveyance system, associated points of discharge, and direction of flow (including structural control measures such as catch basins)
- Outline of all impervious areas of the facility, including paved areas, buildings, covered storage areas, or other roofed structures
- Locations where materials are directly exposed to precipitation
- Areas of industrial activity including storage areas, shipping and receiving areas, equipment storage/maintenance areas, material handling and processing areas, and other areas of potential pollutant sources.

LIST OF SIGNIFICANT MATERIALS

Chemical Inventory

A chemical inventory has been developed to identify potential pollutants that might be found in storm and non-storm discharges. The goal of the SWPPP is to minimize the potential for pollution being introduced into the environment. The identification of potential pollutants is also required under the sampling provisions of the Permit.

Description of Potential Pollutant Sources

i. Industrial Processes

IDEC Pharmaceuticals Corporation is a leader in the development of targeted immunotherapies for cancer and autoimmune diseases. IDEC drug substances are recombinant protein products. The steps that constitute drug substance manufacturing include: cell culture production and harvesting, recovery and purification, and formulation. A number of laboratories contain support services for the manufacturing area including QA/QC, buffer preparation, etc.

A number of environmental controls are employed during each of these steps that constitute drug substance manufacturing. The primary controls exercised pertain to waste water control, air emissions, hazardous waste management, and solid waste management. *(see individual written programs maintained by the EH&S department as mentioned above for additional details)*

ii. Material Handling and Storage Areas

All hazardous materials are stored within the confines of the buildings. The buildings are modular in nature, and have been designed with hazardous materials in mind.

The inventory of hazardous materials primarily includes flammables and corrosives. A small amount of other types of chemicals may also be present. Flammable liquid and corrosive cabinets are used within the building to provide primary containment.

Hazardous materials stored in the Southeast corner of the building present some potential for contamination of storm water run-off. Contamination would only be present following a catastrophic event such as a fire. Under normal conditions, the potential for contamination is extremely limited.

In addition to the hazardous materials located at the Southeast corner of the building, there is an emergency diesel generator onsite. It is hard wired to support the building during power outages. This generator contains 1600 gallons of diesel and is surrounded by a berm. The potential for contamination of storm water from the generator fuel tank is low.

A review has been made of each operation or piece of equipment that constitutes a potential source of pollutants during storm and non-storm discharges.

At IDEC the following operations or materials constitute a potential source of pollution:

- Process substances (buffers).
- Controlled materials and waste in-storage.
- The manufacturing waste management system (neutralization system).
- Manufacturing waste water treatment chemicals (in-use and in-storage).
- Cooling tower, boiler, and chiller chemicals (in-use and in-storage).
- Bypass or blow down of various pieces of equipment located around the exterior of the building.
- Emergency generator fuel
- Trash receptacles
- Oil, grease, fuel from delivery equipment
- Cleaning and mop bucket materials

Prohibited Discharges

Water generated in the operations listed below should not be released into storm water conveyance systems or directly into the environment. Instead, they should be discharged via the sewer system:

- Hydrostatic Pressure testing of vessels.
- Boiler blow-down.
- Equipment washing.
- Fire Sprinkler/Hydrant testing.
- Cooling tower backwash, and filter cleaning.

The following types of industrial water should not be released into storm water conveyance lines or directly into the environment. Instead, they should be discharged via the sewer system:

- Non-contact cooling water.
- Evaporative cooling water
- Air compressor/air conditioning condensate.
- Unwanted/spent process buffers (even when they are primarily aqueous)

In most cases, rainwater collected in berms or other types of secondary containment can be discharged into storm water conveyance lines or directly into the environment provided that periodic sampling and observation demonstrate that the water is not contaminated.

iii. Dust and Particulate Generating Activities

There are no current activities that would generate dust or particulates.

iv. Significant Spills and Leaks

There have been no significant spills or leaks of a reportable quantity.

BEST MANAGEMENT PRACTICES

As part of IDEC's materials management program a number of Best Management Practices (BMPs) are used to reduce the potential for contamination of storm water discharges.

Non-Structural BMPs

Non-structural BMPs consist of processes, prohibitions, procedures, and schedules of activities that prevent pollutants associated with industrial activity from contacting with storm water with discharges.

Good Housekeeping

- Practical procedures to maintain a clean and orderly facility.
- Routine inspection for leaks or conditions that could lead to discharges.
Improving operation and maintenance of machinery and processes
- Implementation of careful storage practices
- Maintain an up to date chemical inventory
- Container labeling
- Scheduled routine clean up operations
- Train employees on good housekeeping techniques
- Use of signs identifying chemical storage areas.
- Removing trash from overflowing receptacles

Preventative Maintenance

- Regular inspection of storm water management devices
- Regular maintenance of structural storm water controls
- Regular maintenance of facility equipment and systems

Spill Response

- Establishment and implementation of appropriate spill clean up procedures
- Identification of potential spill sites and the drainage points.
- Provisions and maintenance for the staging of spill-response supplies.
- Spill clean up kits available in each manufacturing supply area, maintenance area, and hazardous material storage area.
- Good preventative maintenance (housekeeping).
- Timely management of leaking containers.
- Effective management of pollution prevention equipment once a spill has occurred, including the use of shut-off valves and other control devices.
- Effective use of personal protective equipment (PPE).

Material Handling and Storage

- Established procedures to identify potential for spills and leaks and to minimize exposure of materials to storm water discharge.
- Substitute non-hazardous substances where possible.

Employee Training

- Development of an employee training program regarding the contents of the SWPPP (including good housekeeping, material handling procedures, actions necessary to implement BMPs.)
- Development of an employee training program on spill prevention and spill response.

Waste Handling/Recycling

- Development of guidelines and other written information regarding disposal practices for unwanted hazardous materials and wastes.

Record keeping and Internal Reporting

- Procedures established to retain records for visual observations, records of inspection, maintenance activities, etc.

Erosion Control and Site Stabilization

- Utilize natural settings (grasses, shrubs, etc.) where existing and utilize landscape for areas surrounding the parking garage.
- Established procedure to monitor facility grounds for potential future erosion and continue to prevent runoff activities.

Inspections

- Development of an effective inspection program
- Inspections of each storm drain discharge area conducted on a monthly basis.
- Monitor equipment, machinery, storage tanks, trash on a regular basis

Quality Assurance

- Review of storm water pollution program on an annual basis to ensure all elements of the written plan and monitoring program are adequately conducted.

Structural BMPs

Structural BMPs consist of structural devices that reduce or prevent pollutants in storm water discharges.

- All flammable liquid and corrosive materials are stored within flammable and corrosive cabinets
- Flammable liquid and corrosive cabinets are used within the building to provide primary containment
- Use of concrete berms surrounding the buildings to provide tertiary containment for hazardous materials
- Portable secondary containment for hazardous materials
- The building is equipped with sumps that provide secondary containment of 1000 gallons
- Several drain lines service the area enclosed by the berm. These drain lines are equipped with removable polypropylene plugs to prevent runoff from entering the outfall lines
- Emergency shutoff valve at storm water discharge location to prevent release of spill material to environment
- Concrete berm surrounding emergency generator
- Grounding connectors to dissipate static electricity
- Seismic restraints
- A fire rated venting system
- An automatic dry chemical fire suppression system with 3000 cubic feet of dump capacity dry chemical
- A secondary fire suppression system consisting of a deluge water sprinkler system pre-plumbed to the exterior of the building.
- An alarm system consisting of an exterior audible alarm, with a link to the centralized security system

MONITORING PROGRAM

The objectives of the monitoring program are to:

1. Ensure that storm water discharges are in compliance with the discharge prohibitions, effluent limitations, and receiving water limitations specified in the General Permit.
2. Ensure practices at the facility to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges are evaluated and revised to meet changing conditions.
3. Aid in the implementation and revision of the SWPPP
4. Measure the effectiveness of BMPs.

A monitoring program has been implemented in accordance with the conditions of the General Permit. This program combines an annual review, direct monitoring and periodic observations as follows:

Annual Compliance Evaluation

The facility operator will conduct one comprehensive site compliance evaluation in each reporting period (July 1 - June 30). The SWPPP shall be revised, as appropriate, and the revisions implemented within 90 days of the evaluation. Evaluations will include the following:

- Review of all visual observation records, inspection records, and sampling / analysis results
- Visual inspection of all potential pollutant sources for evidence or the potential for, pollutants entering the drainage system.
- Review and evaluate all BMPs to determine if they are adequate, properly implemented, or whether additional BMPs are needed. A visual inspection of equipment needed to implement the SWPPP such as spill response equipment will be included.
- Evaluation report to be submitted as part of the annual report and retained for at least 5 years that includes:
 - identification of personnel performing the evaluation
 - date of the evaluation
 - SWPPP revisions
 - Schedule for implementing the revisions
 - Any incidents of non compliance and the corrective actions
 - Certification that the facility is in compliance with the General Permit

Sampling Requirements

Discharge Locations:

- IDEC Pharmaceuticals Corporation has three discharge points.
- Outfall number one is located in the northwest corner of the property and receives storm water runoff from the lower level of the parking structure as well as some landscaping.
- The second discharge location is located in the southeast corner of the property, and receives storm water runoff from the loading and unloading area, the wastewater treatment area, the treatment chemical area, and the hazardous waste storage area. This is identified on the storm water map as outfall number 2.
- The third discharge point is located in the northeast corner of the property, and receives storm water runoff from the upper level of the parking structure and the front driveway.

Sampling Locations:

- Outfall Number 2
- Based on the lack of industrial activities for discharge points 1 and 3, IDEC only collects storm water samples from discharge outfall 2.

Visual Observations:

- Outfall 1, 2, 3

Sampling Methods:

- IDEC will collect storm water samples during the first discharge from the first storm event of the wet season or one other storm event in the wet season.
- If IDEC Facility does not collect samples from the first storm event of the wet season, IDEC will still collect samples from two other storm events of the wet season and shall explain in the Annual Report why the first storm event was not sampled.
- Sample collection is only required of storm water discharges that occur during scheduled facility operating hours and that are preceded by at least (3) three working days without storm water discharge.

Sample Analysis:

The samples shall be analyzed for:

- Total suspended solids (TSS)
- PH
- Specific conductance
- total organic carbon (TOC).
- Oil and grease (O&G)

Analytical Methods:

pH	EPA 150.1
TSS	EPA 160.2
SC	EPA 120.1
O&G	EPA 1664
TOC	EPA 415.2

Monitoring and Reporting Requirements

Wet Season (Oct 1 - May 31).

a. Observations

Storm Water Discharge

- Visually observe storm water discharges from one storm event per month during the wet season (October 1-May 31).
- These visual observations shall occur during the first hour of discharge and at all discharge locations.
- Visual observations shall document the presence of any floating and suspended material, oil and grease, discoloration, turbidity, odor, and source of any pollutants.
- Records shall be maintained of observation dates, locations observed, observations, and response taken to reduce or prevent pollutants in storm water discharges.

Non-Storm Water Discharge

- Visually observe all drainage areas for the presence of authorized and unauthorized non-storm water discharges and their sources.
- Visual observations shall document the presence of any discoloration, stains, odors, floating materials, etc., as well as the source of the discharge.
- Records shall be maintained of the visual observation dates, locations observed, observations, and response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges.
- The visual observations required above are done quarterly for the presence of unauthorized non-storm water discharges and authorized non-storm water discharges.
- Quarterly observations shall be conducted in each of the following periods: January-March, April-June, July-September, and October-December. Observations shall be conducted within 6 - 18 weeks of each other.

b. *Sampling*

Storm Water Discharge

- Sampling storm events that produce discharge is required during the wet season (October 1 through May 31) from the first storm event of the wet season and at least one other storm event in the wet season.
- Sampling should be done in the first hour of the storm.
- Test for total suspended solids (TSS), total organic solids (TOC), pH, grease and oil, and conductivity.
- Storm water discharges from outfall #1 discharges to the Municipal Storm Drain and there is no accessible sampling port.
- Outfall #2, and 3 are considered substantially identical so it is not required that three samples be collected during each storm event. (See correspondence to State Water Resources Control Board in attachment section of the annual report 1997-1998 subsection E5)
- Periodic re-testing of outfall # 3 will be conducted to confirm it is not a unique representation of discharge from the site.
- A sample shall be obtained from outfall # 2, located behind the mechanical plant.

Non-Storm Water Discharge

- Sample as needed to evaluate whether the discharge is allowed, needs to be permitted, or should be eliminated.
- Sampling is usually carried out as part of the initial implementation of the SWPPP. Sampling is not required as an ongoing process.

Dry Season (June 1 - September 30).

a. *Observations*

Storm Water Discharge

- Only one observation is required per quarter during the dry season.
- Quarterly observations shall be conducted in each of the following periods: January-March, April-June, July-September, and October-December. Observations shall be conducted within 6 - 18 weeks of each other.

Non-Storm Water Discharge

- Visually observe all drainage areas for the presence of authorized and unauthorized non-storm water discharges and their sources, quarterly.
- Visual observations shall document the presence of any discoloration, stains, odors, floating materials, etc., as well as the source of the discharge.
- Records shall be maintained of the visual observation dates, locations observed, observations, and response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges.
- The visual observations required above are done quarterly for the presence of unauthorized non-storm water discharges and authorized non-storm water discharges.
- Quarterly observations shall be conducted in each of the following periods: January-March, April-June, July-September, and October-December. Observations shall be conducted within 6 - 18 weeks of each other.

b. *Sampling*

Storm Water Discharge

- There are no requirements for dry season sampling.

Non-Storm Water Discharge

- There are no requirements for dry season sampling though discharge may be sampled as needed to evaluate whether the discharge is allowed, needs to be permitted, or should be eliminated.

2002 - 2003 Annual Report

IDEC Pharmaceuticals Corporation is pleased to submit the 2002 - 2003 Annual Report for Storm Water Discharges Associated with Industrial Activities for the facility located at 11011 Torreyana Road.

The following attachments are included in the submittal:

- 2002 - 2003 Annual Report
- Supporting documentation for Section E.4
- Supporting documentation for Section E.6
- Analytical test results

Please do not hesitate to contact me at 858-431-8221 with any questions. Thank you for your assistance in this matter.

Sincerely,

Sharon Vidal, CHMM
Sr. Associate I, EH&S

STATE WATER RESOURCES CONTROL BOARD

2002-2003
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2002 through June 30, 2003

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

If any information contained in Items A, B, C, and D below differs from the information provided in your Notice of Intent (NOI), circle or highlight the information that differs from your NOI so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility is relocated or changes ownership.

If you have any questions, please contact your Regional Board Storm Water Program Contact. The address of the Regional Board (where the Annual Report must be filed) along with the name, telephone number and e-mail address of the contact is indicated on page 8 of this Annual Report. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Location:

Facility WDID No: 9 37 S010764

Facility Name: IDEC Pharmaceuticals Corporation

Address: 11011 Torreyana Road

City: San Diego

State: CA Zip: 92121 Phone: 858-431-8800

B. Facility Operator Information:

Operator Name: IDEC Pharmaceuticals Corporation

Contact Person: Sharon Vidal

Mailing Address: 3030 Callan Road

Title: Sr. Associate I, EH&S

City: San Diego

State: CA Zip: 92121 Phone: 858-431-8221

C. Facility Information: (Complete if different from facility mailing address in Item A above)

Street Address: Same as above

2002-2003
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2 **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan **Group Name:** _____

ii. Submitted **No Exposure Certification (NEC)** Date Submitted: ____ / ____ / ____

Re-evaluation Date: ____ / ____ / ____

Does facility continue to satisfy NEC conditions? YES NO

iii. Submitted **Sampling Reduction Certification (SRC)** Date Submitted: ____ / ____ / ____

Re-evaluation Date: ____ / ____ / ____

Does facility continue to satisfy SRC conditions? YES NO

iv. Received Regional Board Certification Certification Date: ____ / ____ / ____

v. Received Local Agency Certification Certification Date: ____ / ____ / ____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

YES Go to Section E **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 2

If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES **NO** **attach explanation** (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? 3

2002-2003
ANNUAL REPORT

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's' storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? YES NO, **attach explanation**
If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.
Date facility's drainage areas were last evaluated 04/01 /2003
6. Were all samples collected during the first hour of discharge? YES NO, **attach explanation**
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, **attach explanation**
8. Were there any discharges of storm water that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, **attach explanation**
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler
 - Parameters tested
 - Name of analytical testing laboratory
 - Discharge location identification
 - Testing results
 - Test methods used
 - Test detection limits
 - Date of testing
 - Copies of the laboratory analytical results

2002-2003
ANNUAL REPORT

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July-September YES NO N/A October-December YES NO N/A

January-March YES NO N/A April-June YES NO N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information:

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July-September YES NO October-December YES NO

January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to Item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

YES NO **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information:

- i. name of each unauthorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each unauthorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

2002-2003
ANNUAL REPORT

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	<input checked="" type="checkbox"/>	<input type="checkbox"/>	February	<input checked="" type="checkbox"/>	<input type="checkbox"/>
November	<input checked="" type="checkbox"/>	<input type="checkbox"/>	March	<input checked="" type="checkbox"/>	<input type="checkbox"/>
December	<input checked="" type="checkbox"/>	<input type="checkbox"/>	April	<input checked="" type="checkbox"/>	<input type="checkbox"/>
January	<input checked="" type="checkbox"/>	<input type="checkbox"/>	May	<input checked="" type="checkbox"/>	<input type="checkbox"/>

2. Report monthly wet season visual observations using **Form 4** or provide the following information:

- a. date, time, and location of observation
- b. name and title of observer
- c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed
- d. **any new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges.** Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1- June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
The following areas should be inspected:

- | | |
|--|--|
| <ul style="list-style-type: none"> • areas where spills and leaks have occurred during the last year • outdoor wash and rinse areas • process/manufacturing areas • loading, unloading, and transfer areas • waste storage/disposal areas • dust/particulate generating areas • erosion areas | <ul style="list-style-type: none"> • building repair, remodeling, and construction • material storage areas • vehicle/equipment storage areas • truck parking and access areas • rooftop equipment areas • vehicle fueling/maintenance areas • non-storm water discharge generating areas |
|--|--|

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO

3. Have you inspected the entire facility to verify that the SWPPP's site map is up-to-date? The following site map items should be verified: YES NO

- | | |
|--|--|
| <ul style="list-style-type: none"> • facility boundaries • outline of all storm water drainage areas • areas impacted by run-on • storm water discharges locations | <ul style="list-style-type: none"> • storm water collection and conveyance system • structural control measures such as catch basins, berms, containment areas, oil/water separators, etc. |
|--|--|

2002-2003
ANNUAL REPORT

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? YES NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

2002-2003
ANNUAL REPORT

ATTACHMENT SUMMARY

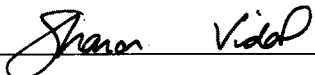

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)
2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA
3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA
4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

2002-2003
ANNUAL REPORT

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.swrcb.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

ANNUAL REPORT
FORM 4 (Continued)-MONTHLY VISUAL OBSERVATIONS OF
STORM WATER DISCHARGES

SIDE A

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.

- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- Make additional copies of this form as necessary.
- Until a monthly visual observation is made, record any eligible storm events that do not result in a storm water discharge and note the date, time, name, and title of who observed there was no storm water discharge.

April 22, 2003

California Regional Water Quality Control Board
San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123-4340

Attention: Gloria Fulton
Sanitary Engineering Associate

Subject: Sampling Outfall Applicability Revision
Facility WDID # 9 37S-101-764

This letter provides notification to the Regional Board of a change in sampling protocol for storm water management at the 11011 Torreyana facility. The facility has three outfall locations on the property as referenced on the attached map.

In the 1997 –1998 Annual Report, IDEC notified the Regional Board that there were no authorized or unauthorized industrial discharges associated with discharge points #1 and #3. Idec notified the Board that the only runoff for these outfalls result from the parking areas. IDEC further stated that it was reasonable to conclude that all discharge points #1,2, 3 were identical. IDEC notified the Board that sampling indicated similar results at each location to support the information provided.

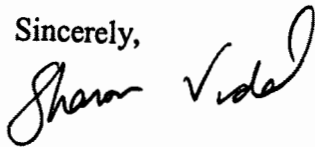

IDEC conducted sampling in 2002 and 2003 to validate sampling information from 1998 and found similar results. Sampling results indicated similar ranges in the data received from analytical testing.

In addition, IDEC received confirmation during a verbal phone conversation with Regional Board representative Gloria Fulton on March 6, 2003 that parking lot runoff is exempt from sampling requirements.

Based on the above information, IDEC has revised the sampling protocols in the Storm Water Pollution Prevention Plan for this facility. IDEC will continue to sample at Outfall #2 for future rain events. IDEC will continue to conduct visual observations at each outfall.

Please do not hesitate to contact me at 858-431-8221 with any questions. Thank you for your assistance in this matter.

Sincerely,

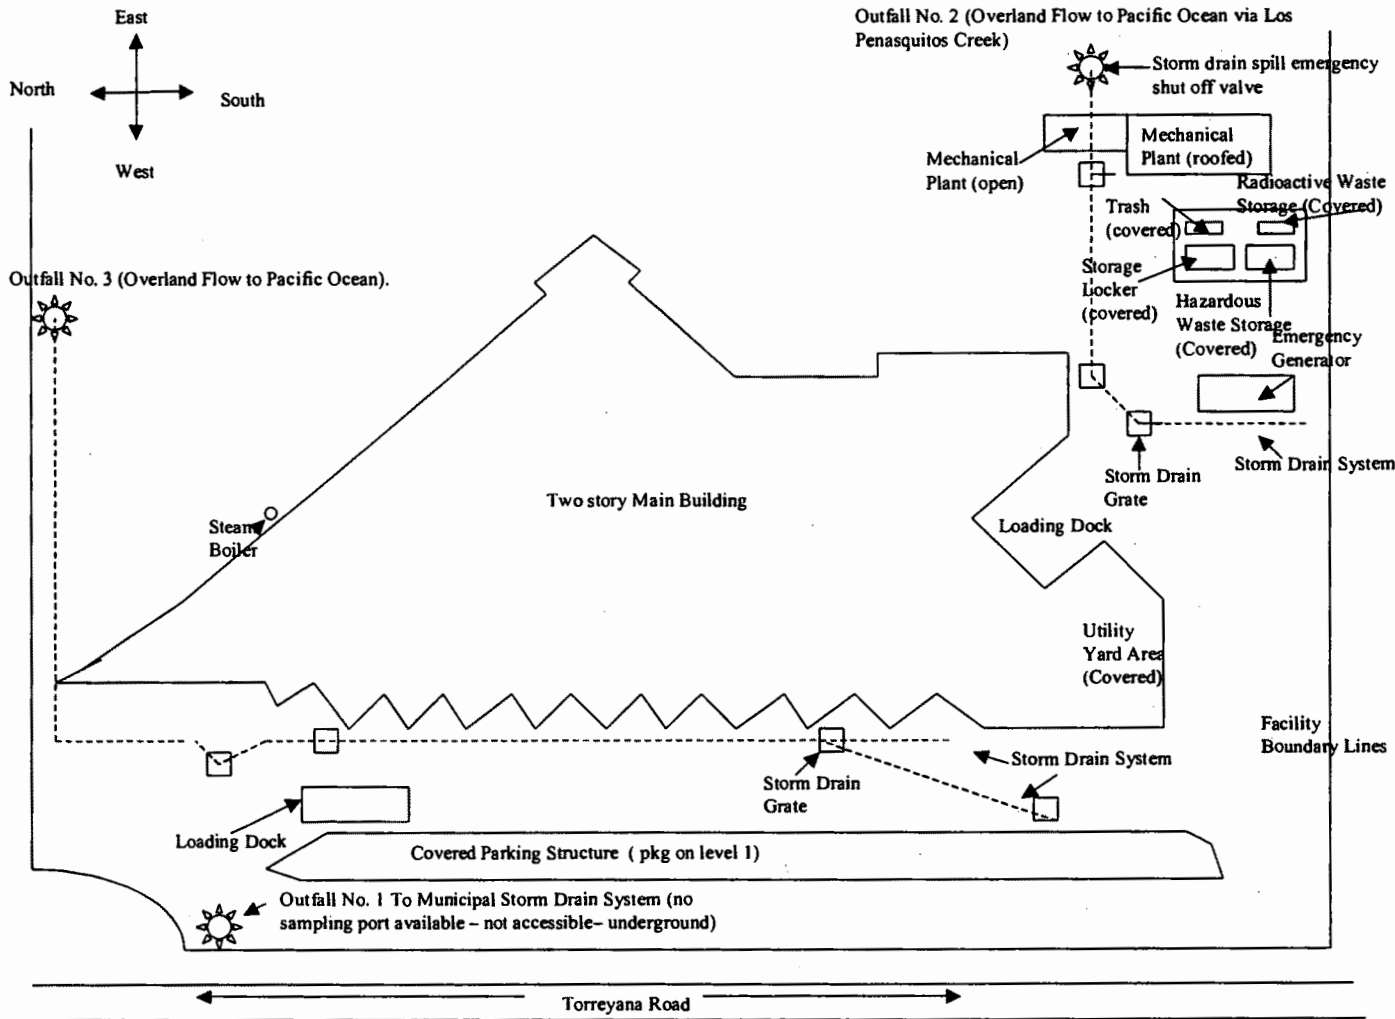

Sharon Vidal

cc: Joe Hess, IDEC Pharmaceuticals Corporation

QUALITY CONTROL DATA REPORT

Report Date: 11/25/02

Log Numbers: 02-5732 through 02-5737

- * **LCS** - Laboratory Control Sample. The LCS is a blank spiked with a known amount of method analyte(s) obtained from independent standards and is carried through all sample preparation and analytical procedures. Recoveries are calculated in order to evaluate method accuracy.
- * **Spike** - The spike is an actual sample spiked with a known amount of method analyte(s) and is carried through all sample preparation and analytical procedures. Recoveries are calculated in order to evaluate potential matrix interferences.
- * **RPD** = Rel % Difference = $((\text{Result 1} - \text{Result 2}) / \text{Average Result}) \times 100\%$
The RPD provides a measure of method precision by comparing analytical results of 2 duplicate samples.
- * **% Recovery** = $((\text{Spike Sample Result} - \text{Sample Result}) / \text{Spike Conc}) \times 100\%$
The result of the unspiked sample is treated as zero if it is less than established reporting limits.

QUALITY CONTROL DATA REPORT

Report Date: 01/16/03

Log Numbers: 02-6537 through 02-6541

- * **LCS** - Laboratory Control Sample. The LCS is a blank spiked with a known amount of method analyte(s) obtained from independent standards and is carried through all sample preparation and analytical procedures. Recoveries are calculated in order to evaluate method accuracy.
- * **Spike** - The spike is an actual sample spiked with a known amount of method analyte(s) and is carried through all sample preparation and analytical procedures. Recoveries are calculated in order to evaluate potential matrix interferences.
- * **RPD** = Rel % Difference = $((\text{Result 1} - \text{Result 2}) / \text{Average Result}) \times 100\%$
The RPD provides a measure of method precision by comparing analytical results of 2 duplicate samples.
- * **% Recovery** = $((\text{Spike Sample Result} - \text{Sample Result}) / \text{Spike Conc}) \times 100\%$
The result of the unspiked sample is treated as zero if it is less than established reporting limits.

State of California
STATE WATER RESOURCES CONTROL BOARD

SAN DIEGO REGIONAL
WATER QUALITY
CONTROL BOARD

2003-2004
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

2004 JUL -1 P 1:41

RP 7-2-04

Reporting Period July 1, 2003 through June 30, 2004

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at <http://www.swrcb.ca.gov/stormwtr/contact.html>. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information: Facility Business Name: Biogen Idec Inc. Facility WDID No: 9371010764
Physical Address: 11011 Torreyana Road Contact Person: Gary A. Merrill
City: San Diego e-mail: gary.merrill@biogenidec.com
Standard Industrial Classification (SIC) Code(s): 2836 CA Zip: 92121 Phone: 760-231-2427
Drugs

B. Facility Operator Information: Operator Name: Biogen Idec Inc. Contact Person: Joseph Hess
Mailing Address: One Antibody Way e-mail: Joseph.Hess@biogenidec.com
City: Oceanside State: CA Zip: 92056 Phone: 760-231-2491

C. Facility Billing Information: Operator Name: Biogen Idec Inc. Contact Person: Gary A. Merrill

ANNUAL REPORT**SPECIFIC INFORMATION****MONITORING AND REPORTING PROGRAM****D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS**

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2

NO Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

- i. Participating in an Approved Group Monitoring Plan

Group Name: _____

- ii. Submitted No Exposure Certification (NEC)

Date Submitted: ____/____/____

Re-evaluation Date: ____/____/____

Does facility continue to satisfy NEC conditions?

YES

NO

- iii. Submitted Sampling Reduction Certification (SRC)

Date Submitted: ____/____/____

Re-evaluation Date: ____/____/____

Does facility continue to satisfy SRC conditions?

YES

NO

- iv. Received Regional Board Certification

Certification Date: ____/____/____

- v. Received Local Agency Certification

Certification Date: ____/____/____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

YES Go to Section E

NO

Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 2

If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES

NO

attach explanation (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? 2

2003-2004
ANNUAL REPORT

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's' storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? YES NO, attach explanation
If "YES", attach documentation supporting your determination that two or more drainage areas are substantially identical.
Date facility's drainage areas were last evaluated ___ / ___ / ___
6. Were all samples collected during the first hour of discharge? YES NO, attach explanation
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, attach explanation
8. Were there any discharges of storm water that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, attach explanation
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using Form 1 or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler
 - Parameters tested
 - Name of analytical testing laboratory
 - Discharge location identification
 - Testing results
 - Test methods used

2003-2004
ANNUAL REPORT

F. QUARTERLY VISUAL OBSERVATIONS

1. Authorized Non-Storm Water Discharges

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. Attach an explanation for any "NO" answers. Indicate "N/A" for quarters without any authorized non-storm water discharges.

July-September YES NO N/A October-December YES NO N/A

January-March YES NO N/A April-June YES NO N/A

c. Use Form 2 to report quarterly visual observations of authorized non-storm water discharges or provide the following information:

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. any new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. Unauthorized Non-Storm Water Discharges

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. Attach an explanation for any "NO" answers.

July-September YES NO October-December YES NO

January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to Item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

YES NO Attach explanation

d. Use Form 3 to report quarterly unauthorized non-storm water discharge visual observations or provide the following information:

- i. name of each unauthorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each unauthorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. any corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

2003-2004
ANNUAL REPORT

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	<input checked="" type="checkbox"/>	<input type="checkbox"/>	February	<input checked="" type="checkbox"/>	<input type="checkbox"/>
November	<input checked="" type="checkbox"/>	<input type="checkbox"/>	March	<input checked="" type="checkbox"/>	<input type="checkbox"/>
December	<input checked="" type="checkbox"/>	<input type="checkbox"/>	April	<input checked="" type="checkbox"/>	<input type="checkbox"/>
January	<input checked="" type="checkbox"/>	<input type="checkbox"/>	May	<input checked="" type="checkbox"/>	<input type="checkbox"/>

2. Report monthly wet season visual observations using **Form 4** or provide the following information:

- a. date, time, and location of observation
- b. name and title of observer
- c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed
- d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1- June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
The following areas should be inspected:

- | | |
|--|--|
| <ul style="list-style-type: none"> • areas where spills and leaks have occurred during the last year • outdoor wash and rinse areas • process/manufacturing areas • loading, unloading, and transfer areas • waste storage/disposal areas • dust/particulate generating areas • erosion areas | <ul style="list-style-type: none"> • building repair, remodeling, and construction • material storage areas • vehicle/equipment storage areas • truck parking and access areas • rooftop equipment areas • vehicle fueling/maintenance areas • non-storm water discharge generating areas |
|--|--|

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO

3. Have you inspected the entire facility to verify that the SWPPP's site map is up-to-date? The following site map items should be verified: YES NO

- | | |
|--|--|
| <ul style="list-style-type: none"> • facility boundaries • outline of all storm water drainage areas • areas impacted by run-on • storm water discharges locations | <ul style="list-style-type: none"> • storm water collection and conveyance system • structural control measures such as catch basins, berms, containment areas, oil/water separators, etc. |
|--|--|

2003-2004
ANNUAL REPORT

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

- Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? YES NO

If you answered "NO" attach an explanation to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ANNUAL REPORT

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)
- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA
- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA
- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

2003-2004
ANNUAL REPORT

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.swrcb.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

See Storm Water Contacts at

<http://www.swrcb.ca.gov/stormwtr/contact.html>

FORM 1-SAMPLING & ANALYSIS RESULTS

FIRST STORM EVENT

- If analytical results are less than the detection limit (or non detectable), show the value as less than the numerical value of the detection limit (example: <.05)
- When analysis is done using portable analysis (such as portable pH meters, SC meters, etc.), indicate "PA" in the appropriate test method used box. Make additional copies of this form as necessary.
- If you did not analyze for a required parameter, do not report "0". Instead, leave the appropriate box blank

QUALITY CONTROL DATA REPORT

Report Date: 03/24/04

Log Numbers: 04-850 through 04-851

- * **LCS** - Laboratory Control Sample. The LCS is a blank spiked with a known amount of method analyte(s) obtained from independent standards and is carried through all sample preparation and analytical procedures. Recoveries are calculated in order to evaluate method accuracy.
- * **Spike** - The spike is an actual sample spiked with a known amount of method analyte(s) and is carried through all sample preparation and analytical procedures. Recoveries are calculated in order to evaluate potential matrix interferences.
- * **RPD** = Rel % Difference = $((\text{Result 1} - \text{Result 2}) / \text{Average Result}) \times 100\%$
The RPD provides a measure of method precision by comparing analytical results of 2 duplicate samples.
- * **% Recovery** = $((\text{Spike Sample Result} - \text{Sample Result}) / \text{Spike Conc}) \times 100\%$
The result of the unspiked sample is treated as zero if it is less than established reporting limits.

STATE WATER RESOURCES CONTROL BOARD

2004-2005
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

terminated

Reporting Period July 1, 2004 through June 30, 2005

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at <http://www.waterboards.ca.gov/stormwtr/contact.html>. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility Business Name: Biogen Idec Inc.
Physical Address: 11011 Torreyana Rd.
City: San Diego
Standard Industrial Classification (SIC) Code(s): 2836

Facility WDID No: 937I010764
Contact Person: Gary Merrill
e-mail: gary.merrill@biogenidec.com
CA Zip: 92161 Phone: 760.231.2427

B. Facility Operator Information:

Operator Name: Biogen Idec Inc.
Mailing Address: One Antibody Way
City: Oceanside

Contact Person: Joe Hess

2004-2005
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2

NO Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan Group Name: _____

ii. Submitted No Exposure Certification (NEC) Date Submitted: _____

Re-evaluation Date: _____

Does facility continue to satisfy NEC conditions? YES NO

iii. Submitted Sampling Reduction Certification (SRC) Date Submitted: _____

Re-evaluation Date: _____

Does facility continue to satisfy SRC conditions? YES NO

iv. Received Regional Board Certification Certification Date: _____

v. Received Local Agency Certification Certification Date: _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

YES Go to Section E

NO Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 0 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES

NO, **attach explanation** (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? 2

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? YES NO, **attach explanation**
- If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated _____
6. Were all samples collected during the first hour of discharge? YES NO, **attach explanation**
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, **attach explanation**
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, **attach explanation**
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September YES NO N/A October-December YES NO N/A
 January-March YES NO N/A April-June YES NO N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. any new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September YES NO October-December YES NO
 January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

YES NO **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. any corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

2. Report monthly wet season visual observations using **Form 4** or provide the following information.

- date, time, and location of observation
- name and title of observer
- characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
- any new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1- June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
The following areas should be inspected:

- areas where spills and leaks have occurred during the last year.
- outdoor wash and rinse areas.
- process/manufacturing areas.
- loading, unloading, and transfer areas.
- waste storage/disposal areas.
- dust/particulate generating areas.
- erosion areas.
- building repair, remodeling, and construction
- material storage areas
- vehicle/equipment storage areas
- truck parking and access areas
- rooftop equipment areas
- vehicle fueling/maintenance areas
- non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: YES NO

- facility boundaries
- outline of all storm water drainage areas
- areas impacted by run-on
- storm water discharges locations
- storm water collection and conveyance system
- structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit?

YES NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)

- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA

- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA

- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

2004-2005
ANNUAL REPORT

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.waterboards.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

See Storm Water Contacts at

<http://www.waterboards.ca.gov/stormwtr/contact.html>

FORM 1-SAMPLING & ANALYSIS RESULTS

FIRST STORM EVENT

- If analytical results are less than the detection limit (or non detectable), show the value as less than the numerical value of the detection limit (example: <.05)
- If you did not analyze for a required parameter, do not report "0". Instead, leave the appropriate box blank

- When analysis is done using portable analysis (such as portable pH meters, SC meters, etc.), indicate "PA" in the appropriate test method used box.
- Make additional copies of this form as necessary.

**FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED
NON-STORM WATER DISCHARGES (NSWDs)**

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

ANNUAL REPORT
FORM 4-MONTHLY VISUAL OBSERVATIONS OF
STORM WATER DISCHARGES**

SIDE A

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.

- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- Make additional copies of this form as necessary.
- Until a monthly visual observation is made, record any eligible storm events that do not result in a storm water discharge and note the date, time, name, and title of who observed there was no storm water discharge.

Not Applicable.

Annual Report 2004 – 2005
Storm Water Discharges Associated with Industrial Activity

Biogen Idec Inc.

Explanation Sheet Attachment

E.1. This annual report is being completed for the time frame corresponding to July 1, 2004 to December 17, 2004 and is an attachment to a Notice of Termination. No storm events were sampled because the only storm events that occurred and produced a discharge between July 1, 2004 and December 17, 2004 occurred outside of normal facility operating hours.

E.2. See E.1 above.

E.5. See E.1 above.

E.6. See E.1 above.

E.7. See E.1 above.

F.2.a. This annual report only covers the time period of July 1, 2004 to December 17, 2004. This timeframe corresponds only to the first and second quarters of annual unauthorized stormwater discharge observations. Therefore, observations were not made during the last two quarters.

G.1. See the explanation for F.2.a above. This timeframe only includes October 1 through the December 17, 2004 of the wet season.

NOT Terminated
5/25/05

Dear RWCQB Representative:

Enclosed please find a Notice of Termination and Annual Report for the abovementioned site. The Biogen Idec, Inc. business at this location has been sold and the new tenant will occupy the facility beginning January 10, 2005. Please feel free to contact me at 760.231.2491 should you have any questions. Thank you.

Sincerely,

Joseph R. Hess
EHS Manager

NOTICE OF INTENT
For Existing Facility Operators

482

TO COMPLY WITH THE TERMS OF THE
GENERAL PERMIT TO DISCHARGE STORM WATER
ASSOCIATED WITH INDUSTRIAL ACTIVITY (WQ ORDER No. 97-03-DWQ)

This Notice of Intent (NOI) is being sent to all facility operators that were enrolled under the prior Industrial Storm Water General Permit that has now expired. A new General Permit has been adopted to replace the expired one. To enroll under the new General Permit, review this NOI (and make any necessary corrections), sign the CERTIFICATION on the reverse side, and return this original NOI within 45 days of receipt to: STORM WATER NOI PROCESSING UNIT, STATE WATER RESOURCES CONTROL BOARD, PO BOX 1977, SACRAMENTO, CA 95812-1977

**DEVELOPING A SITE MAP
(Section 2.2.1)**

Worksheet #2

Completed by: Mark Thompson

Title: Environmental Health & Safety Officer

Date: 11/1/93

Instructions: Draw a map of your site including a footprint of all buildings, structures, paved areas, and parking lots. The information below describes additional elements required by EPA's General Permit (see example maps in Figures 2.3 and 2.4).

EPA's General Permit requires that you indicate the following features on your site map:

- All outfalls and storm water discharges
- Drainage areas of each storm water outfall
- Structural storm water pollution control measures, such as:
 - Flow diversion structures
 - Retention/detention ponds
 - Vegetative swales
 - Sediment traps
- Name of receiving waters (or if through a Municipal Separate Storm Sewer System)
- Locations of exposed significant materials (see Section 2.2.2)
- Locations of past spills and leaks (see Section 2.2.3)
- Locations of high-risk, waste-generating areas and activities common on industrial sites such as:
 - Fueling stations
 - Vehicle/equipment washing and maintenance areas
 - Area for unloading/loading materials
 - Above-ground tanks for liquid storage
 - Industrial waste management areas (landfills, waste piles, treatment plants, disposal areas)
 - Outside storage areas for raw materials, by-products, and finished products
 - Outside manufacturing areas
 - Other areas of concern (specify: _____)

DESCRIPTION OF EXPOSED SIGNIFICANT MATERIAL
(Section 2.2.2)

Worksheet #3A
 Completed by: Mark Thompson
 Title: Environmental Health & Safety Officer
 Date: 11/1/93

Instructions: Based on your material inventory, describe the significant materials that were exposed to storm water during the past three years and/or are currently exposed. For the definition of "significant materials" see Appendix B of the manual.

Description of Exposed Significant Material	Period of Exposure	Quantity Exposed (units)	Location (as indicated on the site map)	Method of Storage or Disposal (e.g., pile, drum, tank)	Description of Material Management Practice (e.g., pile covered, drum sealed)
CORROSIVE WASTES LITER	N/A	0	FIRST PLANT - S/SIDE IN MECHANICAL AREA	CLOSED TANK - MONITORED	MATERIAL IS IN CLOSED, MONITORED TANK, LOCATION IN PIT WHICH WILL HOLD CONTENTS IF LEAK
TREATMENT CHEMICALS SULFURIC ACID FOR HYDROLYSIS	N/A	0	MECHANICAL SHOP	DRUMS	LOCATION IS ZIMED AND RAMPED TO PREVENT TRENDS, DRUMS ARE SEALED
MISC. HAZARDOUS WASTES	N/A	0	S/E GRINDER LOT	DRUMS, GLASS CONTAINER IN H3/H13 occup. Bldg.	MATS WILL BE TO CONTAINED IN BLDG. SUMP WILL CONTAIN ANY POTENTIAL TRENDS (See Attachment)

NOTE: NEW FACILITY

NOTE: NEW FACILITY AND PREVIOUS HISTORICAL

LIST OF SIGNIFICANT SPILLS AND LEAKS
(Section 2.2.3)

Worksheet #4

Completed by: Mark Thompson

Title: Environmental Health & Safety Officer

Date: 11/1/93

Directions: Record below all significant spills and significant leaks of toxic or hazardous pollutants that have occurred at the facility in the three years prior to the effective date of the permit.

Definitions: Significant spills include, but are not limited to, releases of oil or hazardous substances in excess of reportable quantities.

1st Year Prior		Location (as indicated on site map)	Description			Response Procedure		Preventive Measures Taken
Date (month/day/year)	Spill		Leak	Type of Material	Quantity	Source, if Known	Reason	
			Type of Material	Quantity	Source, if Known	Reason	Amount of Material Recovered	
NEW FACILITY/NO OPERATING HISTORY								
2nd Year Prior								
3rd Year Prior		Location (as indicated on site map)	Description			Response Procedure		Preventive Measures Taken
Date (month/day/year)	Spill		Leak	Type of Material	Quantity	Source, if Known	Reason	
			Type of Material	Quantity	Source, if Known	Reason	Amount of Material Recovered	

**NON-STORM WATER DISCHARGE
ASSESSMENT AND CERTIFICATION**
(Section 2.2.4)

Worksheet #5
Completed by: Mark Thompson
Title: Environmental Health & Safety Officer
Date: 11/1/93

Date of Test or Evaluation	Outfall Directly Observed During the Test (Identify as indicated on the site map)	Method Used to Test or Evaluate Discharge	Describe Results from Test for the Presence of Non-Storm Water Discharge	Identify Potential Significant Sources	Name of Person Who Conducted the Test or Evaluation
11/1/93	OUTFALL #1	VISUAL INSPECTION	NO DISCHARGE OBSERVED	NONE	MARK THOMPSON
11/1/93	OUTFALL #2	VISUAL INSPECTION	NO DISCHARGE OBSERVED	HAZARDOUS MATS STORAGE AREA	MARK THOMPSON
11/1/93	OUTFALL #3	VISUAL INSPECTION	NO DISCHARGE OBSERVED	NONE	MARK THOMPSON

CERTIFICATION

I, _____ (responsible corporate official), certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

A. Name & Official Title (Type or print)
Chris Burman, Vice President, Manufacturing Sciences

B. Area Code and Telephone No.
619-550-9690

C. Signature
Chris Burman

D. Date Signed
11.2.93

**NON-STORM WATER DISCHARGE ASSESSMENT AND
FAILURE TO CERTIFY NOTIFICATION
(Section 2.2.4)**

Worksheet #6
 Completed by: Mark Thompson
 Title: Environmental Health & Safety Officer
 Date: 11/1/93

Directions: If you cannot feasibly test or evaluate an outfall due to one of the following reasons, fill in the table below with the appropriate information and sign this form to certify the accuracy of the included information.

List all outfalls not tested or evaluated, describe any potential sources of non-storm water pollution from listed outfalls, and state the reason(s) why certification is not possible. Use the key from your site map to identify each outfall.

Important Notice: A copy of this notification must be signed and submitted to the Director within 180 days of the effective date of this permit.

Identify Outfall Not Tested/Evaluated	Description of Why Certification Is Infeasible	Description of Potential Sources of Non-Storm Water Pollution
NONE		

CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations, and that such notification has been made to the Director within 180 days of _____ (date permit was issued), the effective date of this permit.

A. Name & Official Title (type or print) Chris Burman Vice President, Manufacturing Sciences
 B. Area Code and Telephone No. 619-550-8640
 C. Signature Chris Burman
 D. Date Signed 11.2.93

POLLUTANT SOURCE IDENTIFICATION
(Section 2.2.6)

Worksheet #7
Completed by: Mark Thompson
Title: Environmental Health & Safety
Date: 11/1/93

Instructions: List all identified storm water pollutant sources and describe existing management practices that address those sources. In the third column, list BMP options that can be incorporated into the plan to address remaining sources of pollutants.

Storm Water Pollutant Sources	Existing Management Practices	Description of New BMP Options
1. HAZARDOUS MATERIALS/WASTE STORAGE	<ul style="list-style-type: none"> • SIGNS IDENTIFYING AREA/MATERIALS • BERNED/DIKED CONTAINMENT INSPECTED FOR LEAKS • ILE OF SECONDARY CONTAINMENT 	<ul style="list-style-type: none"> • TRAINING OF EMPLOYEES - ROUTINE INSPECTIONS • PLACEMENT OF ADDITIONAL SPILL RESPONSE EQUIP.
2. PILOT PLANT: CORROSIIVE WASTE WRITER	<ul style="list-style-type: none"> • PERIODIC INSPECTIONS OF SYSTEM 	<ul style="list-style-type: none"> • PROVIDE SPILL EQUIP. INCLUDING BOOMS AND SKRBS.

9.		
10.		

BMP IDENTIFICATION
(Section 2.3.1)

Worksheet #7a
 Completed by: Mark Thompson
 Title: Environmental Health & Safety Officer
 Date: 11/1/93

Instructions: Describe the Best Management Practices that you have selected to include in your plan. For each of the baseline BMPs, describe actions that will be incorporated into facility operations. Also describe any additional BMPs facility-specific (Chapter 3) and site-specific BMPs (Chapter 4) that you have selected. Attach additional sheets if necessary.

BMPs	Brief Description of Activities
Good Housekeeping	<ul style="list-style-type: none"> • ROUTINE CLEAN UP AND MAINTENANCE OF ALL OUTDOOR AREAS
Preventive Maintenance	<ul style="list-style-type: none"> • VISUAL INSPECTIONS OF POTENTIAL SOURCES • REPLACE OR REPAIR IDENTIFIED DISCREPANCIES • RE-EXAMINE LAND MAINTENANCE SECURITY TO HAZYMAT AREA.
Inspections	SEE ABOVE : INSPECTIONS ARE PERFORMED ACCORDING TO RCRA, SPCC AND OTHER REQUIREMENTS
Spill Prevention Response	DESIGNATE , TRAIN RESPONSIBLE PARTIES PROVIDE ADDITIONAL RESPONSE EQUIPMENT
Sediment and Erosion Control	UTILIZE NATURAL SETTINGS (GRASSES, SHRUBS, ETC) WHERE EXISTING. LANDSCAPE TREES ARE
Management of Runoff	USE OF HERMS, LANDFILL
Additional BMPs (Activity-specific and Site-specific)	SUBSTITUTE NON-HAZARDOUS SUBSTANCES WHERE POSSIBLE.

IMPLEMENTATION
(Section 2.4.11)

Worksheet #8
 Completed by: Mark Thompson
 Title: Environmental Health & Safety Office
 Date: 11/1/93

Instructions: Develop a schedule for implementing each BMP. Provide a brief description of each BMP, the steps necessary to implement the BMP (i.e., any construction or design), the schedule for completing those steps (list dates) and the person(s) responsible for implementation.

BMPs	Description of Action(s) Required for Implementation	Scheduled Completion Date(s) for Req'd. Action	Person Responsible for Action	Notes
Good Housekeeping	1. DEVELOP TRAINING PROGRAM	02-94	MARK THOMPSON	
	2. CONDUCT TRAINING - INCLUDE REFRESHER TRNG	03-94	"	
	3.			
Preventive Maintenance	1. USE OF SECONDARY CONTAINMENT	10-93	"	THIS IS NEW CONSTRUCTION CONTAINMENT W/RS DESIGNED W/ID PLANS
	2.			
	3.			
Inspections	1. DEVELOP INSPECTION PLAN	11-93	MARK THOMPSON/ G. MERCHANT	
	2.			
	3.			
Spill Prevention and Response	1. IMPLEMENT PLAN DEFINED IN BUSINESS PLAN	8-93	Mark Thompson

	3.			
Sediment and Erosion Control	1. N/A			
	2.			
	3.			
Management of Runoff	1. MONITOR	12/93	G. MERCHANT	OR DESIGNER
	2.			
	3.			
Additional BMPs (Actively-specific and site-specific)	1. PROVIDE SPILL CLEAN-UP MATERIALS ON SITE	11/93	Mark Thompson	
	2.			
	3.			

EMPLOYEE TRAINING
(Section 2.4.2)

Worksheet #9
 Completed by: Mark Thompson
 Title: Environmental Health & Safety Engineer
 Date: 11/1/93

Instructions: Describe the employee training program for your facility below. The program should, at a minimum, address spill prevention and response, good housekeeping, and material management practices. Provide a schedule for the training program and list the employees who attend training sessions.

Training Topics	Brief Description of Training Program/Materials (e.g., film, newsletter course)	Schedule for Training (list dates)	Attendees
Spill Prevention and Response	ANNUAL TRAINING WITH "HAND OUTS" AND DRILLS AS NEEDED	PERIODIC	PLANT EMPLOYEES FACILITIES
Good Housekeeping	HAND OUTS - PRUDENT PRACTICES FOR GOOD HOUSEKEEPING, RES. RET'G. ANNUALLY	PERIODIC	FACILITIES PLANT EMPLOYEES LAB WORKERS
Material Management Practices	HAND OUTS - HAZARD AVOIDING TECHNIQUES (VIDEO - SPILLS HAPPEN?) ANNUALLY AND AS NEEDED	ANNUALLY - PERIODIC	FACILITIES PLANT EMPLOYEES LAB WORKERS
Other Topics	HIPP LINKURY ILLNES PREVENTION PLAN 1	AT LEAST ANNUALLY	ALL EMPLOYEES
	GENERAL SAFETY COMMITTEE MEETINGS	MONTHLY	MEMBERS FROM EACH "LAB" AND ADMIN. AREA. OPEN TO ALL EMPLOYEES

DAILY TANK INSPECTION LOG

Tanks that are used to treat or store hazardous wastes must be inspected daily for: overfilling controls, monitoring equipment, leaks from fixtures and seams or corrosion/erosion of the tank materials, and the surrounding area to detect obvious signs of leakage.

Inspection Date: _____ Time: _____

Inspector Name: _____

	Yes	No
High level waste feed cut-off working?	_____	_____
Tank exterior free of signs of corrosion/leakage?	_____	_____
Inlet piping/valves/connections free of signs of corrosion/leakage?	_____	_____
Outlet piping/valves/connections free of signs of corrosion/leakage?	_____	_____
Secondary containment free of cracks/leakage?	_____	_____
Secondary containment free of accumulated liquids?	_____	_____
_____	_____	_____
_____	_____	_____

Explain all "No" answers:

Date/Nature of Repairs:

Maintain record for three years.

rev 3/93

**Hazardous Waste Management Facility
Weekly Inspection Report**

IDEC Pharmaceuticals

Pursuant to 22 CCR § 66264.14 *et seq.* the facility shall be inspected weekly for the following items. If any discrepancies are noted, corrections shall be made immediately or as soon as possible.

_____ **Security**

- Fence is secured and in good repair
- Buildings are locked
- Sign posted stating : Dangerous Hazardous Waste Area - Unauthorized Personnel
Keep Out
- Emergency notification device is free of impedence and functioning

_____ **Unauthorized Discharges**

- Drums, containers and secondary containment devices show no sign of leakage, spillage, deterioration or erosion
- Spill clean up equipment is present and stocked ready for use

_____ **Training**

- Personnel training records are maintained (in Safety Office).

_____ **Equipment**

- Fire suppression devices and alarms are checked
- Emergency shower and eye are checked (at least monthly)
- Portable fire extinguishers are present and visually inspected for charge
- Bonding cords and grounding rods are present
- Equipment is free of impediments

• _____

• _____

_____ **Miscellaneous**

- Materials/wastes are properly labeled and dated
- Materials are segregated and stored according to hazard classification and reactivity.
 - Wastes are stored separately from chemicals
- Contingency Plan is on-site

• _____

• _____

VISUAL INSPECTION

DATE: _____

During the heavy rain fall, I performed a visual inspection of the hazardous waste management facility, the Pilot Plant outdoor mechanical area and the IDEC Pharmaceuticals site drainage system. Since this is a new site there is no historical data available. However during my inspection I observed the following items:

I was satisfied that the drainage systems worked adequately and were discharging water into the designed basins. Debris, residue or any chemical discharged was not observed entering the system. I am satisfied that all drainage systems are working and that the Storm Water Discharge Program is being appropriately administered.

2006 JUL 28 A 8: 55

To Whom It May Concern:

Please note I have documented reasons below as required in report. Enclosed is the completed Annual Report, our SWPPP as a reference, and the site map. Additionally, we have made some corrections to the General Information.

- E3 We only discharge and sample from #2 discharge locations – other areas are not accessible. Please see Site Map.
- E4 Answer is NO because we only discharge and sample from one discharge location out of 3 due to accessibility.
- G. Monthly Wet Season Visual Observations: Nov 05, Dec 05, and Jan 06, April 06 we did not discharge contained storm water. We only discharge from temporarily stored sump as needed and it was not necessary these months.
- G1. Discharge in October 2005 and March of 2006 – ph taken, acceptable range and discharged. October release didn't meet the criteria for 1st storm testing and was not submitted to an independent lab. It didn't meet the criteria of during business hours, within 1 hour of flow, and dry for a period of 3 days before. (i.e. rained on Monday during business hours, however, also rained on Sunday)

Sample taken 02/28/06 – Attached results from Analytical Lab.

Sample taken 05/22/06 – Attached results from Analytical Lab

- H4. We had an evaluation in Sept of 2005 with the development of the SWPPP and circumstances have not changed. We have reviewed the major elements of SWPPP. We understand we have 8-16 months to do another evaluation. We had planned on another evaluation after 1 year in Aug. 2006.

If there are any questions, please call me at 858-864-6576 Nextel.

Thank you,

Subject: Storm Water Pollution Prevention Plan (SWPPP)
 11011 Torreyana Road, San Diego, California

Dear Judi:

Haley & Aldrich, Inc. (Haley & Aldrich) is pleased to present this updated Storm Water Pollution Prevention Plan (SWPPP) for your San Diego facility located at 11011 Torreyana Road.

We appreciate the opportunity to be of service to Tanox West, Inc. If you have any questions regarding this document please feel free to contact me at 619-285-7134.

Sincerely yours,
HALEY & ALDRICH, INC.

1. INTRODUCTION

1.1 Facility Activities

Tanox West, Inc. located at 11011 Torreyana Road in San Diego, California engages in clinical manufacturing and process research and development for the production of monoclonal antibodies.

1.2 Regulatory Overview

The Federal Clean Water Act (CWA) authorizes the EPA to regulate discharges to surface waters of the United States (U.S.). These regulations cover discharges of storm water from industrial facilities to surface waters. As identified by Standard Industrial Classification (SIC) Code, certain industries are required to have a permit for managing industrial storm water runoff. Storm water runoff includes rain runoff, snowmelt runoff, and surface water runoff and drainage. This permit provides for identification and regulation of industries that use materials, or generate waste on site, which could be released to the environment via the storm drain system.

In 1992 the State of California issued a statewide general permit, regulating storm water discharges for those sites with significant industrial activity. This permit is issued by the California State Water Resources Control Board and regulates industrial sites, which have the potential for the generation of contaminated run-off during a rainstorm. Contaminated run-off is produced when rainwater flows over chemical substances stored outside of enclosures or otherwise encounters contaminated surfaces.

It is the responsibility of each industrial site to determine whether or not their storm water discharges are covered under the General Permit. Sites without the potential for creating contaminated run-off have no obligations under the General Permit. Sites that do have the potential for creating contaminated run-off must implement management practices that eliminate or minimize the chance that they are contributing to the contamination of the environment. The general permit falls within the hierarchy of permits issued under the jurisdiction of the National Pollutant Discharge Elimination System (NPDES).

Inherent in implementation of a site-specific plan is the identification of industrial or commercial wastewater discharges (termed non-storm discharges) that flow directly into municipal storm water conveyance systems or surface waters of the U.S. Non-storm water discharges covered under the permit are not allowed, and must be permitted separately (under a site-specific license) or eliminated. Non-storm water discharges that do not fall within the scope of the General Permit are allowed since they are not expected to significantly impact the environment.

Based on the SIC Code of 2834, Tanox West is regulated under the General Permit. The NPDES General Permit applies because there is a potential for hazardous materials to come into contact with storm water at the site.

1.3 Purpose

This Storm Water Pollution Prevention Plan (SWPPP) has been prepared to address the requirements for storm water pollution prevention plans set forth in the NPDES General Permit No. CAS000001. This SWPPP describes Tanox West's storm water management

program and indicates procedures implemented to eliminate or reduce pollution of storm water runoff at the Torreyana facility.

1.4 Objectives

The SWPPP has two major objectives:

1. To identify and evaluate sources of pollutants associated with industrial activities that may affect the quality of storm water discharges and authorized non-storm water discharges from the facility.
2. To identify and implement site-specific best management practices (BMPs) to reduce or prevent pollutants associated with industrial activities in storm water discharges and authorized non-storm water discharges.

1.5 General Requirements

The SWPPP shall be retained on site and made available upon request of a representative of the Regional Water Board and/or local storm water management agency (local agency) which receives the storm water discharges.

The SWPPP shall be revised, as appropriate, and implemented prior to changes in industrial activities which (i) may significantly increase the quantities of pollutants in storm water discharge, (ii) cause a new area of industrial activity at the facility to be exposed to storm water, or (iii) begin an industrial activity which would introduce a new pollutant source at the facility.

1.6 SWPPP Contents

- Pollution Prevention Team
- Review of Related Compliance Programs
- Site map
- List of significant materials
- Description of potential pollutant sources
- Assessment of potential pollutant sources
- Best Management Practices
- Monitoring program description (including Annual comprehensive site compliance evaluation)

The intent of the SWPPP is to prevent the discharge of chemical contaminants into the municipal storm water system. The discharge of contaminants can occur under two types of conditions, normal and emergency.

Under normal conditions, discharges are avoided when one identifies and eliminates the processes and operations that would release contaminants to the storm water sewer system. The primary tool for achieving the elimination of these discharges is the education of employees regarding the processes and/or operations that have been prohibited and/or the areas to monitor. Under emergency conditions, discharges are avoided when you employ the correct spill response procedures. The primary tool for achieving the elimination of these discharges is the education of employees regarding proper spill response.

2. POLLUTION PREVENTION TEAM

In compliance with the conditions of the "General Permit for Storm Water Discharge Associated with Industrial Activity," Tanox West has implemented a pollution prevention team. The team includes members of the Facilities Department, R&D Sections, and the Environmental Health and Safety Department. The team meets monthly to address environmental and safety related issues at the facility.

The duties and responsibilities of the key departments represented are described below.

2.1 Facilities Personnel

Members of the Facilities Department are responsible for correctly following the Best Management Practices (BMPs) identified for their group. The BMPs identified for the Facilities Department include:

- carrying out routine visual inspections for integrity of the containers, drums, and other areas used to store maintenance chemicals and promptly removing any leaking containers if observed;
- periodically verifying that spill response materials are available in their areas;
- monitoring their own operations to ensure that wastewater generated during industrial operations is routed to the sanitary sewer rather than the storm drains;
- routinely maintaining outdoor areas where potential pollutants are used or stored to minimize the likelihood that these agents will contaminate storm water run-off; and
- following all waste disposal guidelines.

2.2 R&D and Manufacturing Personnel

Members of the R&D and Manufacturing sections are responsible for correctly following the Best Management Practices (BMPs) identified for their group. The BMPs identified for the R&D personnel include:

- carrying out routine visual inspections for integrity of the containers, drums, etc. used to store raw materials and promptly removing leaking containers if observed;
- periodically verifying that spill response materials are available in their work areas;
- monitoring their own operations to ensure that outdoor areas, where potential pollutants are used or stored, are managed to minimize the likelihood that these agents will contaminate storm water run-off; and
- following all waste disposal guidelines.

2.3 Environmental Health and Safety Personnel

Members of the EH&S Department are responsible for coordinating the SWPPP for Tanox West by:

- conducting observations of storm water discharge and carrying out effluent sampling;
- maintaining an inventory of potential sources of pollutants;
- arranging training for company staff as needed (see Appendix B); maintaining all documentation related to the SWPPP;
- assisting with spill response actions; conducting weekly inspections of the hazardous waste area and periodic site inspections;
- creating (and following) waste disposal guidelines addressing the management of liquid waste (both hazardous and otherwise); and

- completing and filing the annual storm water report with the lead regulatory agency.

Pollution Prevention Current Team Members:

Name	Department/Section
Jake Jacanin MURISSA Atayata	Facilities Manager, EH&S Site Contact
Judi Gaither	Facility Services Coordinator, EH&S Contacts
Mike Metcalf	EH&S Coordinator (Houston)
Bob Fisher	Senior Maintenance Coordinator

3. RELATED COMPLIANCE PROGRAMS

Tanox West has several related compliance programs that overlap the goals and requirements of the SWPPP. The following programs and written plans can be referenced for additional details of program components:

- Emergency Response Plan
- Injury and Illness Prevention Plan
- Medical Waste Management Plan
- Toxic Organic Management Plan
- Air quality permits
- Spill Prevention Countermeasures and Control (SPCC) Plan

The above listed plans are maintained by the Environmental, Health, and Safety Department and are available for review upon request.

4. SITE MAP

A copy of the site map is maintained by the Environmental, Health, and Safety Department. The following information is included on the site map (see attached):

- Facility boundaries
- Outline of all storm water drainage areas in the facility boundaries
- Direction of flow of each drainage area
- Nearby water bodies
- Municipal storm drain inlets where the facility's storm water discharges and authorized non storm water discharges may be received
- Location of the storm water collection and conveyance system, associated points of discharge, and direction of flow (including structural control measures such as catch basins)
- Outline of all impervious areas of the facility, including paved areas, buildings, covered storage areas, or other roofed structures
- Locations where materials are directly exposed to precipitation
- Areas of industrial activity including storage areas, shipping and receiving areas, equipment storage/maintenance areas, material handling and processing areas, and other areas of potential pollutant sources.

5. LIST OF SIGNIFICANT MATERIALS

5.1 Chemical Inventory

A chemical inventory has been developed to identify potential pollutants that might be found in storm and non-storm discharges (Table I). The goal of the SWPPP is to minimize the potential for pollution being introduced into the environment. The identification of potential pollutants is also required under the sampling provisions of the Permit.

6. DESCRIPTION AND ASSESSMENT OF POTENTIAL POLLUTANT SOURCES

6.1 Industrial Processes

Tanox is engaged in the research and development of therapeutic monoclonal antibodies designed to address significant unmet medical needs in the areas of asthma, allergy, inflammation and other diseases affecting the human immune system. In the late 1980s, Tanox scientists discovered a novel approach for the treatment of allergic disease by reducing the levels of immunoglobulin E (IgE) in the blood. IgE is one of a class of antibodies that is responsible for causing allergic reactions. In June 2003, an anti-IgE therapy, Xolair® (Omalizumab) for Subcutaneous Use, received approval from the U.S. Food and Drug Administration for the treatment of adults and adolescents (12 years of age and above) with moderate-to-severe persistent asthma who have a positive skin test or in vitro reactivity to a perennial aeroallergen and whose symptoms are inadequately controlled with inhaled corticosteroids.

A number of environmental controls are employed during research and development activities. The primary controls exercised pertain to waste water control, air emissions, hazardous waste management, and solid waste management.

6.2 Material Handling and Storage Areas

All hazardous materials and hazardous wastes are stored within the confines of the buildings. The buildings are modular in nature, and have been designed with hazardous materials and hazardous wastes in mind.

The inventory of hazardous materials primarily includes flammables and corrosives. A small amount of other types of chemicals may also be present. Flammable liquid and corrosive cabinets are used within the building to provide primary containment.

Hazardous materials stored in the southeast corner of the building present some potential for contamination of storm water run-off. Contamination would only be present following a catastrophic event such as a fire. Under normal conditions, the potential for contamination is extremely limited.

In addition to the hazardous materials located at the southeast corner of the building, an emergency diesel generator equipped with an integral "belly" tank is also present onsite. The tank is approximately 2,000 gallons in capacity and is equipped with secondary containment. The generator is hard wired to support the building during power outages. The potential for contamination of storm water from the generator fuel tank is low.

Hazardous wastes are stored in covered bins or roll-up buildings in the southeast corner of the property and present some potential for contamination of storm water run-off. Contamination would only be present following a catastrophic event such as a fire. Under normal conditions, the potential for contamination is extremely limited.

A review has been made of each operation or piece of equipment that constitutes a potential source of pollutants during storm and non-storm discharges.

The following operations or materials constitute a potential source of pollution:

- Process substances (buffers)

- Contained hazardous materials and waste in-storage
- The manufacturing waste management system (neutralization system)
- Manufacturing waste water treatment chemicals (in-use and in-storage)
- Cooling tower, boiler, and chiller chemicals (in-use and in-storage)
- Emergency generator fuel
- Trash receptacles
- Oil, grease, fuel from delivery equipment
- Cleaning and mop bucket materials

6.3 Prohibited Discharges

Water generated in the operations listed below should not be released into storm water conveyance systems or directly into the environment. Instead, they should be discharged via the sewer system:

- Hydrostatic Pressure testing of vessels
- Boiler blow-down
- Equipment washing
- Cooling tower backwash, and filter cleaning
- Non-contact cooling water
- Evaporative cooling water
- Unwanted/spent process buffers (even when they are primarily aqueous)

In most cases, rainwater collected in berms or other types of secondary containment can be discharged into storm water conveyance lines or directly into the environment provided that periodic sampling and observation demonstrate that the water is not contaminated.

6.4 Dust and Particulate Generating Activities

There are no current activities that would generate dust or particulates.

6.5 Significant Spills and Leaks

There have been no significant spills or leaks of a reportable quantity.

6.6 Authorized Non-Storm Water Discharges

Under Special Conditions of the General Permit, Non-Storm Water discharges are permitted provided they satisfy the following conditions:

- Conditions established with the Regional Water Board
- Requirements established by local agencies
- BMPs are specifically included in the SWPPP to prevent or minimize impact
- Non-storm water discharges do not contain pollutants
- Non-storm water discharge locations must be included in the quarterly visual monitoring program
- Non-storm water discharge must be included and reported on the annual report

The following types of discharge are authorized as Non-Storm Water Discharge:

- Irrigation drainage
- Fire suppression sprinkler testing and release

- Potable water sources, including potable water related to the operation, maintenance, or testing of potable water systems
- Drinking fountain water
- Atmospheric condensates including refrigeration, air conditioning, and compressor condensate
- Landscape watering
- Springs
- Ground water
- Foundation or footing drainage
- Sea water infiltration where the sea waters are discharged back into the sea water source

Irrigation drainage comes from the landscape area around the perimeter of the property. Irrigation drainage will be daily. Landscape has been designed to minimize run-off and prevent erosion.

Fire suppression sprinkler testing and release drainage occurs on a quarterly basis for equipment maintenance testing. Drainage has been designed to minimize run-off on paved areas. Drainage is monitored to ensure pollution prevention.

See Best Management Practices (BMP) section for a list of BMPs to prevent impact to the storm water system.

6.7 Soil Erosion

Landscaping has been designed to minimize run-off and soil erosion at the site.

7. BEST MANAGEMENT PRACTICES

As part of Tanox West's materials management program a number of Best Management Practices (BMPs) are used to reduce the potential for contamination of storm water discharges.

7.1 Non-Structural BMPs

Non-structural BMPs consist of processes, prohibitions, procedures, and schedules of activities that prevent pollutants associated with industrial activity from contacting with storm water with discharges.

Good Housekeeping

- Practical procedures to maintain a clean and orderly facility
- Routine inspection for leaks or conditions that could lead to discharges.
- Improving operation and maintenance of machinery and processes
- Implementation of careful storage practices
- Maintain an up to date chemical inventory
- Container labeling
- Scheduled routine clean up operations
- Train employees on good housekeeping techniques
- Use of signs identifying chemical storage areas
- Removing trash from overflowing receptacles

Preventative Maintenance

- Regular inspection of storm water management devices
- Regular maintenance of structural storm water controls
- Regular maintenance of facility equipment and systems

Spill Response

- Establishment and implementation of appropriate spill clean up procedures
- Identification of potential spill sites and the drainage points
- Provisions and maintenance for the staging of spill-response supplies
- Spill clean up kits available in each manufacturing supply area, maintenance area, and hazardous material storage area
- Good preventative maintenance (housekeeping)
- Timely management of leaking containers
- Effective management of pollution prevention equipment once a spill has occurred, including the use of shut-off valves and other control devices
- Effective use of personal protective equipment (PPE)

Material Handling and Storage

- Established procedures to identify potential for spills and leaks and to minimize exposure of materials to storm water discharge
- Substitute non-hazardous substances where possible

Employee Training

- Development of an employee training program regarding the contents of the SWPPP (including good housekeeping, material handling procedures, actions necessary to implement BMPs)
- Development of an employee training program on spill prevention and spill response

Waste Handling/Recycling

- Development of guidelines and other written information regarding disposal practices for unwanted hazardous materials and wastes

Record keeping and Internal Reporting

- Procedures established to retain records for visual observations, records of inspection, maintenance activities, etc.

Erosion Control and Site Stabilization

- Utilize natural settings (grasses, shrubs, and the like) where existing and utilize landscape for areas surrounding the parking garage
- Established procedure to monitor facility grounds for potential future erosion and continue to prevent runoff activities

Inspections

- Development of an effective inspection program
- Inspections of each storm drain discharge area conducted on a monthly basis
- Monitor equipment, machinery, storage tanks, trash on a regular basis

Quality Assurance

- Review of storm water pollution program on an annual basis to ensure all elements of the written plan and monitoring program are adequately conducted

7.2 Structural BMPs

Structural BMPs consist of structural devices that reduce or prevent pollutants in storm water discharges

- All flammable liquid and corrosive materials are stored within flammable and corrosive cabinets
- Flammable liquid and corrosive cabinets are used within the building to provide primary containment

- Use of concrete berms surrounding the buildings to provide tertiary containment for hazardous materials
- Portable secondary containment for hazardous materials
- The building is equipped with sumps in the loading area that provide secondary containment of 1000 gallons
- Several drain lines service the area enclosed by the berm. These drain lines are equipped with removable polypropylene plugs to prevent runoff from entering the outfall lines
- Emergency shutoff valve at storm water discharge location to prevent release of spill material to environment from the sumps
- Concrete berm surrounding emergency generator provides 100 percent secondary containment and freeboard for a 100-year 24-hour storm
- Grounding connectors to dissipate static electricity
- Seismic restraints
- A fire rated venting system
- An automatic dry chemical fire suppression system with 3000 cubic feet of dump capacity dry chemical
- A secondary fire suppression system consisting of a deluge water sprinkler system pre-plumbed to the exterior of the building
- An alarm system consisting of an exterior audible alarm, with a link to the centralized security system

8. MONITORING PROGRAM

The objectives of the monitoring program are to:

1. Ensure that storm water discharges are in compliance with the discharge prohibitions, effluent limitations, and receiving water limitations specified in the General Permit
2. Ensure practices at the facility to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges are evaluated and revised to meet changing conditions
3. Aid in the implementation and revision of the SWPPP
4. Measure the effectiveness of BMPs

A monitoring program has been implemented in accordance with the conditions of the General Permit. This program combines an annual review, direct monitoring and periodic observations as described in the following paragraphs.

8.1 Annual Compliance Evaluation and Report

The facility operator will conduct one comprehensive site compliance evaluation in each reporting period (July 1 – June 30). The SWPPP shall be revised, as appropriate, and the revisions implemented within 90 days of the evaluation. Evaluations will include the following:

- Review of all visual observation records, inspection records, and sampling and analysis results
- Visual inspection of all potential pollutant sources for evidence of or the potential for, pollutants entering the drainage system
- Review and evaluate all BMPs to determine if they are adequate, properly implemented, or whether additional BMPs are needed. A visual inspection of equipment needed to implement the SWPPP such as spill response equipment will be included
- Evaluation report to be submitted as part of the annual report on July 1st of each year and retained for at least 5 years that includes:
 - Identification of personnel performing the evaluation
 - Date of the evaluation
 - SWPPP revisions
 - Schedule for implementing the revisions
 - Any incidents of non compliance and the corrective actions
 - Certification that the facility is in compliance with the General Permit
 - Must be signed and certified in accordance with Section C, Numbers 9 and 10 of the General Permit

All reports, certifications, or other information required by the General Permit or requested by the Regional Water Board, State Water Board, U.S. EPA, or local storm water management agency shall be signed by a person described above or by a duly authorized representative. A person is a duly authorized representative only if:

1. The authorization is made in writing by a person described above and retained as part of the SWPPP.
2. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of manager, operator, superintendent, or position of equivalent responsibility or an individual or position having overall responsibility for named position.
3. If an authorization is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization must be attached to the SWPPP prior to submittal of any reports, certifications, or information signed by the authorized representative.

Any person signing documents under provision 9 of the General Permit shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

If the revisions to the plan are instigated by the Regional Water Control Board or a local agency then, within 14 days of the implemented revisions, the facility operator shall provide written certification to the Regional Board or local agency that the revisions have been implemented.

8.2 Sampling Requirements

Discharge Locations:

- Tanox West has three discharge points.
- Outfall number one (designated as Outfall No. 1 on the site map) is located in the northwest corner of the property and receives storm water runoff from the lower level of the parking structure as well as some landscaping.
- The second discharge location is located in the southeast corner of the property, and receives storm water runoff from the loading and unloading area, the wastewater treatment area, the treatment chemical area, and the hazardous waste storage area. This is identified on the site map as Outfall No. 2.
- The third discharge point is located in the northeast corner of the property, and receives storm water runoff from the upper level of the parking structure and the front driveway. It is designated as Outfall No. 3 on the site map.

Sampling Locations:

- Outfall No. 2
- Based on the lack of industrial activities for discharge points 1, and 3, Tanox West only collects storm water samples from Outfall No. 2. Outfalls No. 1 and No. 3 receive drainage from the parking lot area only.

Visual Observations:

- Outfalls 1, 2 and 3

Observation Frequency, Sampling Method and Frequency:

- Tanox West will collect storm water samples during the first hour of discharge from the first storm event of the wet season, and at least one other storm event in the wet season.
- If Tanox West does not collect samples from the first storm event of the wet season, Tanox West will still collect samples from two other storm events of the wet season and shall explain in the Annual Report why the first storm event was not sampled.
- Sample collection is only required of storm water discharges that occur during scheduled facility operating hours and that are preceded by at least (3) three working days without storm water discharge.

Sample Analysis:

The samples shall be analyzed for:

- Total suspended solids (TSS)
- pH
- Specific conductance
- total organic carbon (TOC) (or Oil and grease (O&G))

Analytical Methods:

pH	EPA 150.1
TSS	EPA 160.2
SC	EPA 120.1
O&G	EPA 1664
TOC	EPA 415.2

Additional analytical parameters are not required for SIC code 2834. As listed in Table D of the General Permit, Sector C Chemical and Allied Product Manufacturing, there are no additional sampling requirements.

8.3 Monitoring and Reporting Requirements

8.3.1 Wet Season (Oct 1 - May 31).

8.3.1.1 Observations

Storm Water Discharge

- Visually observe storm water discharges from one storm event per month during the wet season (October 1-May 31).
- These visual observations shall occur during the first hour of discharge and at all discharge locations.

- Visual observations shall document the presence of any floating and suspended material, oil and grease, discoloration, turbidity, odor, and source of any pollutants.
- Records shall be maintained of observation dates, locations observed, observations, and response taken to reduce or prevent pollutants in storm water discharges.

Non-Storm Water Discharge

- Visually observe all drainage areas for the presence of authorized and unauthorized non-storm water discharges and their sources.
- Visual observations shall document the presence of any discoloration, stains, odors, floating materials, etc., as well as the source of the discharge.
- Records shall be maintained of the visual observation dates, locations observed, observations, and response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges.
- The visual observations required above are done quarterly for the presence of unauthorized non-storm water discharges and authorized non-storm water discharges.
- Quarterly observations shall be conducted in each of the following periods: January-March, April-June, July-September, and October-December. Observations shall be conducted within 6 - 18 weeks of each other.

8.3.1.2 Sampling

Storm Water Discharge

- Sampling storm events that produce discharge is required during the wet season (October 1 through May 31) from the first storm event of the wet season and at least one other storm event in the wet season.
- Sampling should be done in the first hour of the storm¹.
- Analyze for total suspended solids (TSS), total organic carbon (TOC) (or oil and grease (O&G)), pH, and conductivity.
- Storm water discharges from outfall #1 discharges to the Municipal Storm Drain and there is no accessible sampling port.
- Outfalls No. 2, and No. 3 are considered substantially identical so it is not required that three samples be collected during each storm event. (See correspondence to State Water Resources Control Board in attachment section of the annual report 1997-1998 subsection E5)
- Periodic re-sampling of Outfall No. 3 will be conducted to confirm it is not a unique representation of discharge from the site.
- A sample shall be obtained from Outfall No. 2, located behind the mechanical plant.

¹ Only if the first hour of the storm occurs during facility operating hours and if no storm water discharge has been generated in the previous 3 working days

Non-Storm Water Discharge

- Sample and analyze as needed to evaluate whether the discharge is allowed, needs to be permitted, or should be eliminated.
- Sampling is usually carried out as part of the initial implementation of the SWPPP. Sampling is not required as an ongoing process.

All sampling and sample preservation shall be in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" (American Public Health Association). All monitoring instruments and equipment (including a facility operator's own field instruments for measuring pH and Electro Conductivity) shall be calibrated and maintained in accordance with manufacturers' specifications to ensure accurate measurements. All laboratory analyses must be conducted according to procedures of 40 CFR Part 136, unless other procedures have been specified in this General Permit or by the Regional Water Board. All metals shall be reported as total metals. With the exception of analysis conducted by facility operators, all laboratory analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health Services. Facility operators may conduct their own sample analyses if the facility operator has sufficient capability (qualified employees, laboratory equipment, etc.) to adequately perform the procedures.

Note: Table II of 40 CFR 136.3 stipulates that pH analysis must be conducted within 15 minutes of sample collection.

8.3.2 Dry Season (June 1 - September 30).

8.3.2.1 Observations

Storm Water Discharge

- Only one observation is required per quarter during the dry season.
- Quarterly observations shall be conducted in each of the following periods: January-March, April-June, July-September, and October-December. Observations shall be conducted within 6 - 18 weeks of each other.

Non-Storm Water Discharge

- Visually observe all drainage areas for the presence of authorized and unauthorized non-storm water discharges and their sources, quarterly.
- Visual observations shall document the presence of any discoloration, stains, odors, floating materials, etc., as well as the source of the discharge.
- Records shall be maintained of the visual observation dates, locations observed, observations, and response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges.
- The visual observations required above are done quarterly for the presence of unauthorized non-storm water discharges and authorized non-storm water discharges.

- Quarterly observations shall be conducted in each of the following periods: January-March, April-June, July-September, and October-December. Observations shall be conducted within 6 - 18 weeks of each other.

8.3.2.2 Sampling

Storm Water Discharge

- There are no requirements for dry season sampling.
- Tanox samples storm water generated during the dry season and collected in the Outfall 2 catch basin for pH. If the pH is between 6 and 9 the water is released to the canyon. If the pH is less than 6 or greater than 9 the water is pumped to the waste water treatment (WWT) system for treatment.

Non-Storm Water Discharge

- There are no requirements for dry season sampling though discharge may be sampled and analyzed as needed to evaluate whether the discharge is allowed, needs to be permitted, or should be eliminated.

All sampling and sample preservation shall be in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" (American Public Health Association). All monitoring instruments and equipment (including a facility operator's own field instruments for measuring pH and Electro Conductivity) shall be calibrated and maintained in accordance with manufacturers' specifications to ensure accurate measurements. All laboratory analyses must be conducted according to procedures under 40 CFR Part 136, unless other procedures have been specified in this General Permit or by the Regional Water Board. All metals shall be reported as total metals. With the exception of analysis conducted by facility operators, all laboratory analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health Services. Facility operators may conduct their own sample analyses if the facility operator has sufficient capability (qualified employees, laboratory equipment, etc.) to adequately perform the procedures.

Note: Table II of 40 CFR 136.3 stipulates that pH analysis must be conducted within 15 minutes of sample collection.

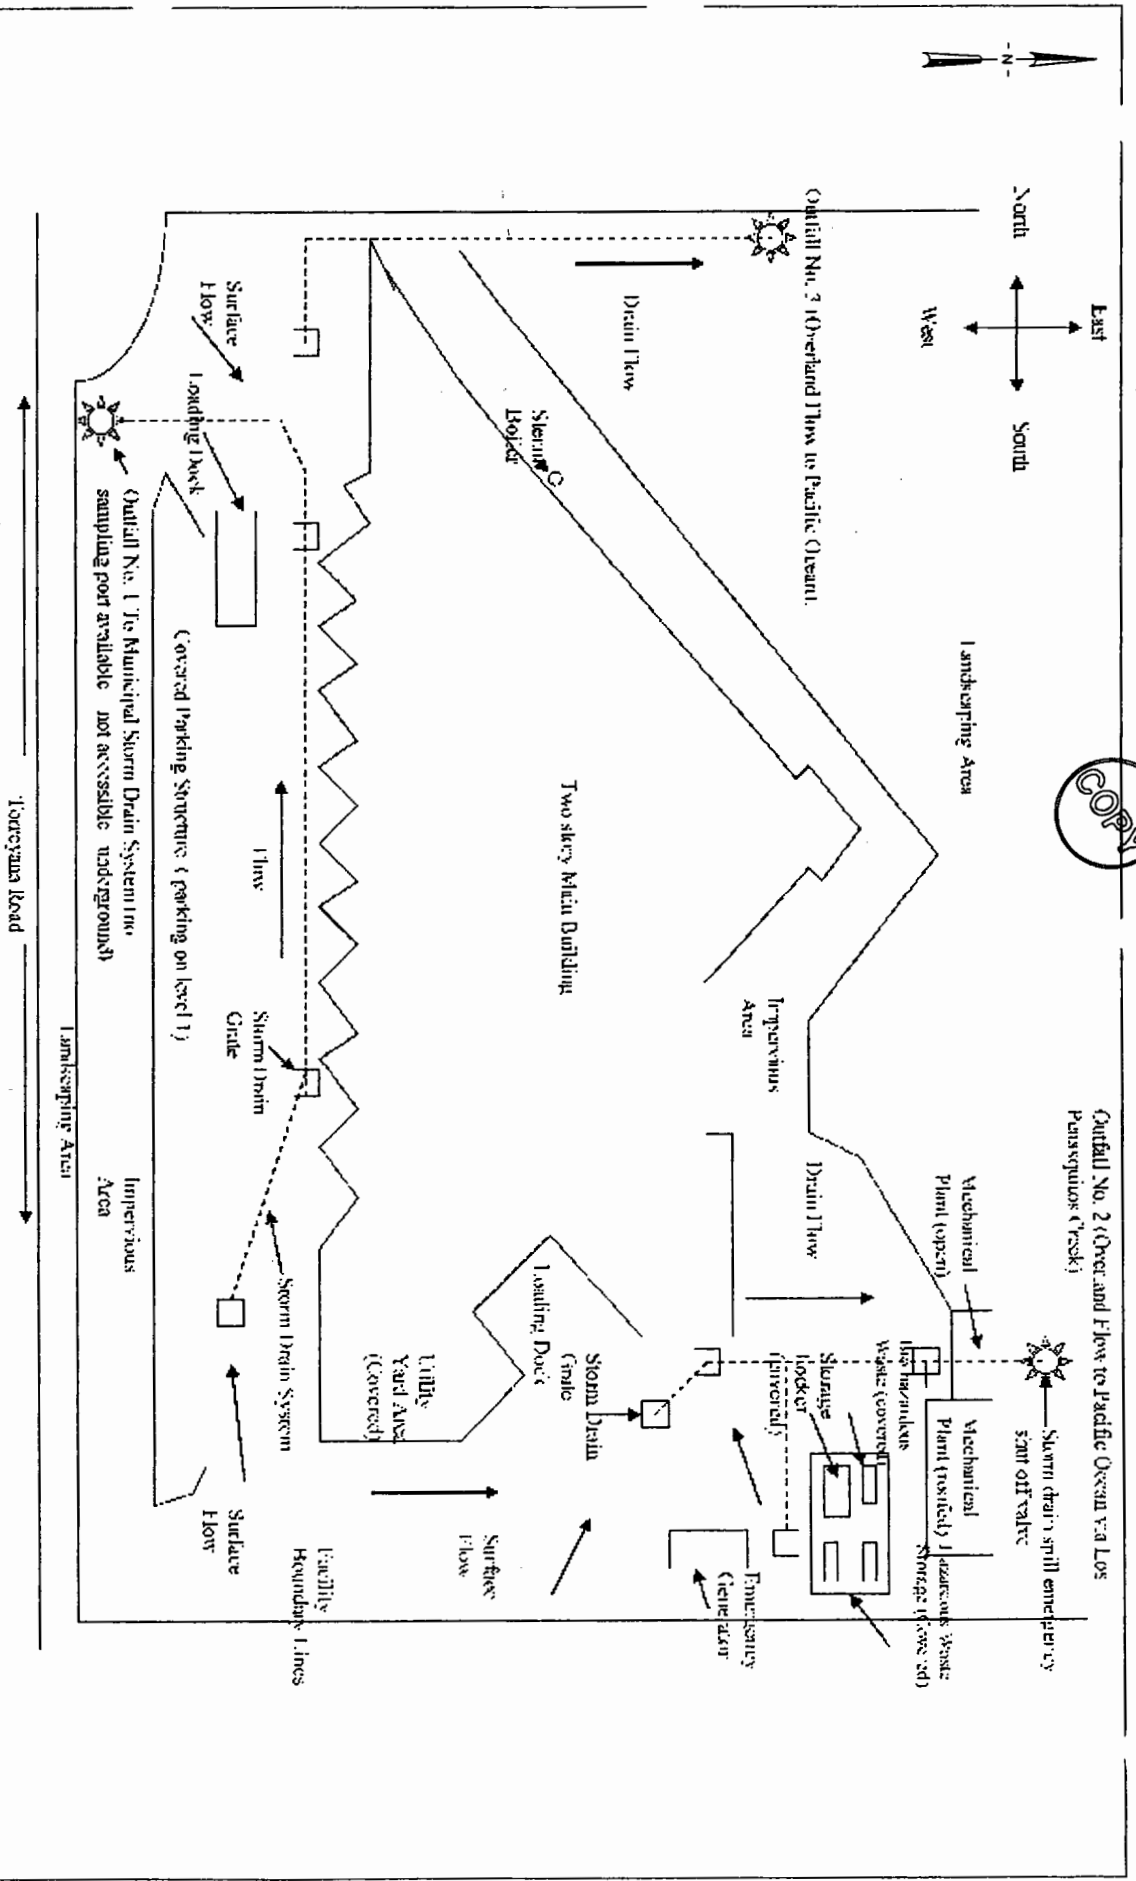

8.4 Recordkeeping

Records of all storm water monitoring information and copies of all reports (including the Annual Reports) required by the General Permit shall be retained for a period of at least five years. These records shall include:

- a. The date, place, and time of site inspections, sampling, visual observations, and/or measurements;
- b. The individual(s) who performed the site inspections, sampling, visual observations, and/or measurements;
- c. Flow measurements or estimates (if required by Section B.6 of the General Permit);
- d. The date and approximate time of analyses;

- e. The individual(s) who performed the analyses;
- f. Analytical results, method detection limits, and the analytical techniques or methods used;
- g. Quality assurance/quality control records and results;
- h. Non-storm water discharge inspections and visual observations and storm water discharge visual observation records (see Sections B.3 and 4 of the General Permit);
- i. Visual observation and sample collection exception records (see Section B.5.a, 7.d, 8, and 12.b.ii of the General Permit);
- j. All calibration and maintenance records of on-site instruments used;
- k. All Sampling and Analysis Exemption and Reduction certifications and supporting documentation (see Section B.12 of the General Permit); and
- l. The records of any corrective actions and follow-up activities that resulted from the visual observations.

Attention: Storm Water Compliance Unit
Subject: Annual Storm Water Report 2004-2005

Ladies and Gentlemen:

This letter serves as our first annual storm water report for the period of 30 June 2004 through 1 July 2005. Tanox West, Inc. (Tanox) took possession of its facility at 11011 Torreyana Road in San Diego on 10 January 2005. Full operations at the facility began in mid-April.

Tanox has prepared a storm water pollution prevention plan (SWPPP), which is located onsite. The SWPPP was finalized after a site evaluation. The results of the evaluation are as follows:

1. Identification of personnel performing the evaluation: Brooks W. Pauly (Haley & Aldrich, Inc.)
2. Date of the evaluation: 5 May 2005
3. SWPPP revisions: the chemical inventory was updated to reflect current conditions
4. Schedule for implementing the revisions: completed 20 June 2005
5. Any incidents of non compliance and the corrective actions: None
6. Certification that the facility is in compliance with the General Permit: see below
7. Must be signed and certified in accordance with Section C, Numbers 9 and 10 of the General Permit: see below

The facility is in compliance with the conditions of the General Permit as specified in the SWPPP.

File: 10-019266-02 my

Storm Water Discharge Observations

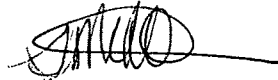

Storm water discharge from the catch basin sump was observed and released to the storm drain system (Outfall #2) on 11 January, 22 January, 15 February and 29 March. The water was clear with some sediment and leaves observed in it. No observations were made during April, May and June due to lack of rainfall.

Non-Storm Water Discharge Observations

The operations of the facility were documented on 23 March 2005 and 24 June 2005. No non-storm water discharges were observed.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely yours,
TANOX WEST, INC.

SECTION VI. RECEIVING WATER INFORMATION

Your facility's storm water discharges flow: (check one) Directly OR Indirectly to waters of the United States.

Name of receiving water: Pacific Ocean _____
(river, lake, stream, ocean, etc.)

SECTION VII. IMPLEMENTATION OF PERMIT REQUIREMENTS

A. STORM WATER POLLUTION PREVENTION PLAN (SWPPP) (check one)
 A SWPPP has been prepared for this facility and is available for review.
 A SWPPP will be prepared and ready for review by (enter date): ____/____/____.

B. MONITORING PROGRAM (check one)
 A Monitoring Program has been prepared for this facility and is available for review.
 A Monitoring Program will be prepared and ready for review by (enter date): ____/____/____.

C. PERMIT COMPLIANCE RESPONSIBILITY
 Has a person been assigned responsibility for:

1. Inspecting the facility throughout the year to identify any potential pollution problems?	<input checked="" type="checkbox"/> YES	<input type="checkbox"/> NO
2. Collecting storm water samples and having them analyzed?	<input checked="" type="checkbox"/> YES	<input type="checkbox"/> NO
3. Preparing and submitting an annual report by July 1 of each year?	<input checked="" type="checkbox"/> YES	<input type="checkbox"/> NO
4. Eliminating discharges other than storm water (such as equipment or vehicle wash-water) into the storm drain?	<input checked="" type="checkbox"/> YES	<input type="checkbox"/> NO

For State Use only. _____

SECTION VIII. SITE MAP

I HAVE ENCLOSED A SITE MAP YES A new NOI submitted without a site map will be rejected.

SECTION IX. CERTIFICATION

"I certify under penalty of law that this document and all attachments were prepared under my direction and supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. In addition, I certify that the provisions of the permit, including the development and implementation of a Storm Water Pollution Prevention Plan and a Monitoring Program Plan, will be complied with."

Reporting Period July 1, 2005 through June 30, 2006

An Annual Report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers, and e-mail addresses of the Regional Board contacts, as well as the Regional Board Offices addresses are indicated below.

ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2 **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan **Group Name:** _____

ii. Submitted **No Exposure Certification (NEC)** **Date Submitted:** _____

Re-evaluation Date: _____

Does facility continue to satisfy NEC conditions? **YES** **NO**

iii. Submitted **Sampling & Analysis Reduction Certification (SARC)** **Date Submitted:** _____

Re-evaluation Date: _____

Does facility continue to satisfy SARC conditions? **YES** **NO**

iv. Received Regional Board Certification **Certification Date:** _____

v. Received Local Agency Certification **Certification Date:** _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

YES Go to Section E **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 2 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES **NO, attach explanation** (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? 3

(we only test discharge from #2 other location are not Accessible)

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? YES NO, **attach explanation**
- If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated _____
6. Were all samples collected during the first hour of discharge? YES NO, **attach explanation**
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, **attach explanation**
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, **attach explanation**
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September YES NO N/A October-December YES NO N/A
January-March YES NO N/A April-June YES NO N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September YES NO October-December YES NO
January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated?

YES NO **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	<input checked="" type="checkbox"/>	<input type="checkbox"/>	February	<input checked="" type="checkbox"/>	<input type="checkbox"/>
November	<input type="checkbox"/>	<input checked="" type="checkbox"/>	March	<input checked="" type="checkbox"/>	<input type="checkbox"/>
December	<input type="checkbox"/>	<input checked="" type="checkbox"/>	April	<input type="checkbox"/>	<input checked="" type="checkbox"/>
January	<input type="checkbox"/>	<input checked="" type="checkbox"/>	May	<input checked="" type="checkbox"/>	<input type="checkbox"/>

2. Report monthly wet season visual observations using **Form 4** or provide the following information.
 - a. date, time, and location of observation
 - b. name and title of observer
 - c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
 - d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
The following areas should be inspected:

- areas where spills and leaks have occurred during the last year.
- outdoor wash and rinse areas.
- process/manufacturing areas.
- loading, unloading, and transfer areas.
- waste storage/disposal areas.
- dust/particulate generating areas.
- erosion areas.
- building repair, remodeling, and construction
- material storage areas
- vehicle/equipment storage areas
- truck parking and access areas
- rooftop equipment areas
- vehicle fueling/maintenance areas
- non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: YES NO

- facility boundaries
- outline of all storm water drainage areas
- areas impacted by run-on
- storm water discharges locations
- storm water collection and conveyance system
- structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? YES NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)

- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA

- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA

- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

B. FACILITY/SITE INFORMATION

Principal activity: _____

Assigned JURMP Classification: High Ind Medium Ind Low Ind High Comm Unassigned
 Is this facility listed on the current year's inspection list? Yes No
 Assigned NAICS code(s) _____ and/or SIC Code(s) _____
 Does NAICS Code best represent principal activity: Yes No SIC? Yes No
 Recommended change of NAICS Code(s)? _____ Of SIC? _____
 New JURMP Classification? _____

Does facility have a current business certificate? Yes No # _____ Exp. _____
 Is facility subject to CA Statewide General Industrial Permit? Mandatory Conditional No
 If yes, does facility have a Notice of Non-Applicability (NONA/NEC)? Yes No
 If no, has facility filed a Notice of Intent (NOI) to obtain coverage? Yes No WDID: 9 3710 10764
 Has facility filed a Notice Of Termination (NOT) for the WDID# listed above? Yes No Approval date: _____
 Does facility maintain SWPPP or BMP Plan? Yes No month/yr
 Does facility have a storm water monitoring program? Yes No
Existing Status: High Ind Med Ind Low Ind High Comm Moved/Out of Business Dup Low Comm
 Municipal Out of Jurisdiction
Existing NAICS code(s) _____ and **SIC Code(s)** _____

C. INITIAL OBSERVATIONS

Nearest receiving water body: _____ Hydrologic Area (9XX.X): _____
 Approximate distance to receiving water body: < 200 ft. 200 - 1000 ft. > 1000 ft.
 Sensitivity of receiving waters: Sensitive (ESA, 303(d), or other) Non-sensitive
 Discharge points along perimeter: _____
 Discharge observed: Yes No
 If yes, describe: _____
 Approximate area covered by industrial or commercial activities: _____ square feet

100010764.02

BMPs	N/A	Yes	No	Comments
Is vehicle washing performed in a contained area where runoff does not enter the MS4?				
D.5 Non Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?				
If not, have the appropriate authorities been notified?				
D.6 Other				
Are there any other potential storm water pollution issues or concerns? If yes, explain below.				
Are all applicable activity-specific BMPs from Appendix C of the JURMP being implemented?				
Were any educational materials distributed?				NOI NONA/NEC 3Cs
D.7 BMP Summary				
<ul style="list-style-type: none"> - Biogen Idec Pharmaceuticals Corp. no longer operates at this address. - Instead, Tanox West, Inc. is currently operating at this location. Tanox West, Inc. has already been inspected. - Biogen Idec Pharmaceuticals Corp. moved to a location at 5200 Research Place, San Diego, CA 92122. Biogen Idec was inspected last year at this location. 				
<p>Note: Both Biogen Idec @ 5200 Research Place and Tanox West at 11011 Torreyman Rd have submitted NOIs</p> <p style="text-align: right;"><i>J.P. An</i></p>

*The SWPPP review portion of the inspection focuses mainly on proposed BMPs and monitoring practices. It is not intended to be a comprehensive assessment of compliance with all SWPPP-related requirements of the General Industrial Permit.

G. VIOLATIONS*

- No violations have been noted at this time
 - No violations have been noted, but recommend taking corrective action described in Section F.
 - Violation of the City's storm water ordinance:
 - Illegal discharge(s) of pollutants to the storm drain system or to receiving waters
- Description _____
- Illegal connection(s) to the storm drain system
- Location _____
- Littering
 - Failure to properly implement required BMPs
 - Failure to comply with the storm water monitoring requirements for high priority industrial facilities
- Non-compliance with the State Industrial Storm Water General Permit.
 - In the future, under a new Industrial Permit, which has not yet been adopted, this facility may be able to qualify for exemption from Permit coverage based on no outdoor exposure.
 - Other Violation noted _____

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE*:

- Implement the recommended corrective actions listed in Section F.
- File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) to obtain coverage under the Industrial Permit—see Attachment 3 of the Industrial Permit (www.waterboards.ca.gov/stormwtr/industrial.html).
 - For "Conditional" facilities only: if you implement all the recommended BMPs and eliminate outdoor exposure, contact the City to request a re-inspection. If it is determined that you qualify, NONA/NEC paperwork will be provided for you to complete, and you will not have to file an NOI.
- Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.
- Develop and implement a storm water monitoring program—see section B of the Industrial Permit for guidelines.
- Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC).

Additional notes and/or actions required:

H. RECOMMENDED CITY ACTIONS*

Is a follow-up inspection recommended for this business?

Yes

No

ASSESSMENT

Level of knowledge regarding stormwater issues:

1 2 3 4 5

Level of cleanliness, BMP implementation, orderliness of site:

1 2 3 4 5

*Violations, corrective actions, and recommended City actions listed at the time of inspection are subject to change based on later review by office staff.

**General Business Facility
Storm Water Pollution Prevention Inspection Checklist
Order No. 2001-01 CAS0108758**

SAN DIEGO REGIONAL WATER
QUALITY CONTROL BOARD

Dear Sara,

Enclosed you will find the Stormwater report for 1994-95 for IDEC. Please do not hesitate to call me at 550-8671 if you have any questions. Thank you.

Sincerely,

A handwritten signature in cursive script that reads "Marty King".

Marty King
Environmental Health and Safety Supervisor

Attachment

Hazardous materials stored in the South-East corner of the building present some potential for contamination of storm water run-off. Contamination would only be present following a catastrophic event such as a fire. Under normal conditions, the potential for contamination is extremely limited. All hazardous materials are stored within the confines of the buildings, and the dispensing of chemicals in this area is prohibited.

The inventory of hazardous materials primarily includes flammables and corrosives. A small amount of other types of chemicals may also be present. Flammable liquid and corrosives cabinets are used within each building to provide primary containment. The buildings themselves are equipped with sumps that provide secondary containment (1000 gal. per building). Tertiary containment is provided by a cement berm that surrounds the buildings (11 inches in height). Several drain lines service the area enclosed by the berm. These drain lines are equipped with removable polypropylene plugs to prevent runoff from entering the outfall lines.

The buildings themselves are modular in nature, and have been designed with hazardous materials in mind. Diagrams of the buildings are attached.

The buildings include the following equipment and features:

- * Grounding connectors to dissipate static electricity.
- * Seismic restraints.
- * A fire rated venting system.
- * A floor sump with a capacity of 1000 gallons .
- * An automatic dry chemical fire suppression system with 3000 cubic feet of dump capacity dry chemical.
- * A secondary fire suppression system consisting of a deluge water sprinkler system pre-plumbed to the exterior of the building.
- * An alarm system consisting of an exterior audible alarm, with a link to the centralized security system.

In addition to the hazardous materials located at the southeast corner of the building there is an emergency diesel generator. This generator contains 500 gallons of diesel fuel and test run each week. This generator is surrounded by a berm (23.5' by 14.5' by 9" inches"). The potential for contamination of storm water from the generator is extremely low.

Re: 2006-2007 Annual Report

To Whom It May Concern:

Enclosed are our 2006-2007 Annual Report and other supporting documentation related to the Annual Report.

General Information Section:

Please see Corrections.

Section E.11:

Attached are the two analytical reports required. Additionally, a spreadsheet we used to document when and how we discharged and sampled water is attached showing 4 discharges. We began using this spreadsheet for Wet Season 2006. Visual observations are always made prior to release of storm water and when we are not sampling for analytical testing, we do test for acceptable pH.

Monthly inspections are completed during regular maintenance rounds. These regular monthly inspections are not documented. We did not allow anything but storm water to go into the drains. We did not release any non-stormwater discharges.

Item G.1. Explanation for "No":

October, December, January, and May there were no eligible storm events and due to the minimal amount of rain, we did not require any storm water releases. The storm water remained in a sump until which time it was necessary to release.

Also attached is a **Copy of the City of San Diego Storm Water Compliance Inspection** for Industrial Facilities completed on 27Feb07.

If there are any questions, please contact Judi Gaither at 858-373-3601.

Best Regards,

Judi Gaither

SAN DIEGO REGIONAL
WATER QUALITY
CONTROL BOARD

STATE OF CALIFORNIA
STATE WATER RESOURCES CONTROL BOARD
2006-2007 ANNUAL REPORT
FOR STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2006 through June 30, 2007

An Annual Report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers, and e-mail addresses of the Regional Board contacts, as well as the Regional Board Offices addresses are indicated below.

REGIONAL BOARD INFORMATION:

2006-2007
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2

NO Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan **Group Name:** _____

ii. Submitted **No Exposure Certification (NEC)** **Date Submitted:** _____
Re-evaluation Date: _____

Does facility continue to satisfy NEC conditions? **YES** **NO**

iii. Submitted **Sampling Reduction Certification (SRC)** **Date Submitted:** _____
Re-evaluation Date: _____

Does facility continue to satisfy SRC conditions? **YES** **NO**

iv. Received Regional Board Certification **Certification Date:** _____

v. Received Local Agency Certification **Cetification Date:** _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

YES Go to Section E

NO Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 2 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES

NO, attach explanation (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? 1

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? *N/A* YES NO, **attach explanation**
- If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated _____
6. Were all samples collected during the first hour of discharge? YES NO, **attach explanation**
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, **attach explanation**
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, **attach explanation**
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September YES NO N/A October-December YES NO N/A
January-March YES NO N/A April-June YES NO N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September YES NO October-December YES NO
January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

*N/A
6-15-00*

YES NO **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

2. Report monthly wet season visual observations using **Form 4** or provide the following information.

- date, time, and location of observation
- name and title of observer
- characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
- any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
The following areas should be inspected:

- areas where spills and leaks have occurred during the last year.
- outdoor wash and rinse areas.
- process/manufacturing areas.
- loading, unloading, and transfer areas.
- waste storage/disposal areas.
- dust/particulate generating areas.
- erosion areas.
- building repair, remodeling, and construction
- material storage areas
- vehicle/equipment storage areas
- truck parking and access areas
- rooftop equipment areas
- vehicle fueling/maintenance areas
- non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: YES NO

- facility boundaries
- outline of all storm water drainage areas
- areas impacted by run-on
- storm water discharges locations
- storm water collection and conveyance system
- structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? YES NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)

- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA

- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA

- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

2006-2007
ANNUAL REPORT

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.swrcb.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

CITY OF SAN DIEGO

STORM WATER COMPLIANCE INSPECTION FOR INDUSTRIAL FACILITIES

Inspected by D-MAX Engineering, Inc.

COPY X-1
18 MAY 07

Inspector Name: Peter Smith Date: 2/27/07 Time: 1:00 AM (PM)

Type of Inspection: Full Insp. Could not Contact Low Commercial Moved, Vacant Refused

Routine Follow-up Moved, Replaced by _____ Follow-up (i.e. not full)

Complaint Investigation Out of Jurisdiction Duplicate of: _____ Reclassified

A. CONTACT INFORMATION

Business Name: Original Tanox West, Inc.

Tanox, Inc.

Street Address: 11011 Torreyana Rd. San Diego, CA 92121

Responsible Person(s): Saya Goodwin

Judi Gaither
Facility Services Coordinator

Title: Manager of Purchasing & materials

Business Telephone #: (858) 373-3000 ext. _____

Direct Phone: (858) 373-3661
Cell: (858) 864-6576
jgaither@tanox.com
www.tanox.com

11011 Torreyana Road
San Diego, CA 92121-1104
Fax: (858) 373-3601

Business Fax #: _____

Home Based? Yes No

Facility personnel present: Judi Gaither - Facility Services Coordinator

B. FACILITY/SITE INFORMATION

Principal activity: Manufacturing of Pharmaceutical products

Assigned JURMP Classification: High Ind Medium Ind Low Ind High Comm Unassigned

Is this facility listed on the current year's inspection list? Yes No

Assigned NAICS code(s) 32541 and/or SIC Code(s) 2834

Does NAICS Code best represent principal activity: Yes No SIC? Yes No

Recommended change of NAICS Code(s)? _____ Of SIC? _____

New JURMP Classification? _____

Does facility have a current business certificate? Yes No # B2005001487 Exp. 1/31/08

Is facility subject to CA Statewide General Industrial Permit? Mandatory Conditional No

If yes, does facility have a Notice of Non-Applicability (NONA/NEC)? Yes No

If no, has facility filed a Notice of Intent (NOI) to obtain coverage? Yes No WDID: 9 3710 19266

Has facility filed a Notice Of Termination (NOT) for the WDID# listed above? Yes No Approval date: _____

Does facility maintain SWPPP or BMP Plan? Yes No month/yr

Does facility have a storm water monitoring program? Yes No

Existing Status: High Ind Med Ind Low Ind High Comm Moved/Out of Business Dup Low Comm
 Municipal Out of Jurisdiction

Existing NAICS code(s) 32541 and SIC Code(s) 2834

C. INITIAL OBSERVATIONS

Nearest receiving water body: Los Penasquitos Creek Hydrologic Area (9XX.X): 900.1

Approximate distance to receiving water body: < 200 ft. 200 - 1000 ft. > 1000 ft.

Sensitivity of receiving waters: Sensitive (ESA, 303(d), or other) Non-sensitive

Discharge points along perimeter: Several storm drains around the facility.

Discharge observed: Yes No

If yes, describe: Storm water runoff

Approximate area covered by industrial or commercial activities: 70,000 square feet

Approximate % impervious surface of this area 90 %
 Exposed areas of intensive outdoor activity: Storage area, parking

D. BMP ASSESSMENT

BMPs	N/A	Yes	No	Comments
D.1 General				
Is the site free of litter and debris?		X		
Are discharge locations free of sediment and debris?		X		
Are parking lots, sidewalks and streets free of sediment and debris?			X	- pollen dust throughout bottom parking lot
Is pressure washing of parking lots or sidewalks conducted at the facility?			X	
If yes, is wash water captured?	X			
Are roof downspouts directly away from areas of potential pollutants?		X		
D.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)		X		
Are irrigation systems programmed to minimize over-watering and runoff?		X		
Are stockpiles of soil or landscape waste equipped to prevent runoff transport?	X			
D.3 Materials and Wastes				
Are adequate trash containers provided?		X		
Are adequate recycling containers provided?		X		
Is the trash/recycling area enclosed?		X		- lids closed
Is the trash/recycling area free of litter and debris, liquids, powders, particulates, etc?		X		
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?		X		
Are outdoor material storage areas adequately covered?		X		
Do outdoor material storage areas have adequate secondary containment?		X		
Are outdoor storage containers properly labeled?		X		
Is there an accessible, functional spill response kit?		X		
Are storage tanks equipped with secondary containment?		X		
Is secondary containment free of spills and rainwater?			X	- some rainwater from recent storm
Are loading and unloading areas free of spills and debris?		X		
D.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?		X		
Are heavy equipment and vehicles stored in garages or under canopies?		X		- forklift
Are vehicle maintenance activities conducted within contained areas (garage, canopy, work shop)?	X			
Are vehicle-fueling areas covered and are storm drain inlets in/around the fueling area protected from spills and leaks?	X			

BMPs	N/A	Yes	No	Comments
Is vehicle washing performed in a contained area where runoff does not enter the MS4?	<input checked="" type="checkbox"/>			

D.5 Non Storm Water Management

Is the site free of evidence of illicit connections and illegal discharges?		<input checked="" type="checkbox"/>		
If not, have the appropriate authorities been notified?	<input checked="" type="checkbox"/>			

D.6 Other

Are there any other potential storm water pollution issues or concerns? If yes, explain below.			<input checked="" type="checkbox"/>	
Are all applicable activity-specific BMPs from Appendix C of the JURMP being implemented?		<input checked="" type="checkbox"/>		
Were any educational materials distributed?			<input checked="" type="checkbox"/>	NOI NONA/NEC 3Cs

D.7 BMP Summary

- Tanox West, Inc. is a facility that manufactures pharmaceutical products.
- All manufacturing, testing and laboratory activities are conducted within the facility.
- The facility maintains some outdoor storage. All material or equipment are stored with overhead cover, and have minimal contact with rain.
- All hazardous materials/chemicals are stored under cover and are equipped with secondary containment.
- The facilities storm water drainage is plumbed so that storm water is contained on site and can be released from a valve. This is also the location of storm water sampling. Sampling results indicate effective BMPs. pH is tested before storm water release.
- Some pollen debris was noted throughout one of the parking lots.

E. SWPPP/BMP PLAN AND/OR STORM WATER MONITORING PLAN

SWPPP Component	Does facility maintain a SWPPP/BMP Plan: <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Unknown <input type="checkbox"/> N/A				Comments

Storm Water BMPs.....	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No			

*The SWPPP review portion of the inspection focuses mainly on proposed BMPs and monitoring practices. It is not intended to be a comprehensive assessment of compliance with all SWPPP-related requirements of the General Industrial Permit.

E.2 STORM WATER MONITORING PROGRAM

- Does this facility have a storm water monitoring program? Yes No N/A
- Was appropriate monitoring conducted during the most recent wet season? Yes No
- If not, does the facility have documentation of no qualifying rain events? Yes No
- If not, is the facility in a GMP and not scheduled for most recent year? Yes No
- Do monitoring results show that existing BMPs are effective in removing pollutants? Yes No None Available
- If not, were potential sources of the identified pollutants observed during the inspection? Yes No
- If yes, list the potential sources and their associated pollutants: _____

Exceedances Noted (list dates, locations, constituent(s) and numeric value(s)):

5/22/06 All below benchmarks, 2/28/06 All below benchmarks

As for 2006-2007 season, one set of sampling results back
Specific Conductance = 375 mg/L

F. RECOMMENDED CORRECTIVE ACTION (BMP-RELATED)*

Is BMP-related corrective action needed? Yes No

If BMP-related corrective action is required, see below. For other corrective action, please see Section G.

Please refer to <http://www.sandiego.gov/thinkblue/programs/industrial.shtml> for more information on BMP implementation options.

~~- Attempt to clean up pollen debris from the parking lot.
If sweeping is not effective, power washing may be
conducted as long as all wash water is collected and prevented
from entering the storm water system.~~

Based on inspection findings, it appears likely that significant levels of _____ would be present in storm water discharges from this site. Take action to reduce the levels of _____ to the maximum extent practicable. Treatment control BMPs are likely necessary. More information about BMP options can be found at the website listed in Section F of the inspection form.

*Recommended corrective actions listed at the time of inspection are subject to change based on later review by office staff.

Owner/operator has been notified of recommended corrective actions both verbally and by: Hand Mail Fax

G. VIOLATIONS*

- No violations have been noted at this time
- No violations have been noted, but recommend taking corrective action described in Section F.
- Violation of the City's storm water ordinance:
 - Illegal discharge(s) of pollutants to the storm drain system or to receiving waters
- Description _____
- Illegal connection(s) to the storm drain system
- Location _____
- Littering
- Failure to properly implement required BMPs
- Failure to comply with the storm water monitoring requirements for high priority industrial facilities
- Non-compliance with the State Industrial Storm Water General Permit.
 - In the future, under a new Industrial Permit, which has not yet been adopted, this facility may be able to qualify for exemption from Permit coverage based on no outdoor exposure.
- Other Violation noted _____

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE*:

- Implement the recommended corrective actions listed in Section F.
- File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) to obtain coverage under the Industrial Permit—see Attachment 3 of the Industrial Permit (www.waterboards.ca.gov/stormwtr/industrial.html).
- For "Conditional" facilities only: if you implement all the recommended BMPs and eliminate outdoor exposure, contact the City to request a re-inspection. If it is determined that you qualify, NONA/NEC paperwork will be provided for you to complete, and you will not have to file an NOI.
- Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.
- Develop and implement a storm water monitoring program—see section B of the Industrial Permit for guidelines.
- Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC).

Additional notes and/or actions required:

H. RECOMMENDED CITY ACTIONS*

Is a follow-up inspection recommended for this business? Yes No

ASSESSMENT

Level of knowledge regarding stormwater issues: 1 2 3 4 5

Level of cleanliness, BMP implementation, orderliness of site: 1 2 3 4 5

*Violations, corrective actions, and recommended City actions listed at the time of inspection are subject to change based on later review by office staff.

D. POLLUTANT DISCHARGE POTENTIAL ASSESSMENT, PEÑASQUITOS WATERSHED¹

Site Name: Tanox, Inc.

Pollutant	RW 303(d) (Y/N)	WS COC (Y/N)	PDP	Sources Needing More BMPs							Recommended BMPs (check if applicable)			
				Trash Area	Material Storage	Prkng Lot	Load/Unload	Land-scape	Veh/Equip Maint	Exposed Work Area	Emp. Training	House-keeping	Minor Struct.	Major Struct.
Sediments		X	2											
Nutrients			2											
Aluminum			2											
Iron			2											
Heavy Metals		Cu	2											

Check if evidence indicates specific metals may have significant PDPs: Copper Cadmium Lead Zinc Mercury

Organic Compounds			2											
-------------------	--	--	---	--	--	--	--	--	--	--	--	--	--	--

Check if evidence indicates there may be historical soil contamination associated with any of the following: PCBs PAHs Chlordane DDT

Trash & Debris			3			X							X	
Oxygen Demanding			2											
Oil & Grease			2											
Bacteria & Viruses		X	2											
Pesticides		Diaz, Chlor	1											

Check if evidence indicates the following are used on site: Diazinon Chlorpyrifos Malathion

Acid/Base (pH effects)			2											
Others ² (list):														

"RW 303(d)" = Receiving water impairments, as listed in the most recent 303(d) list

"WS COC" = High priority watershed constituents of concern (COC), as listed in the most recent WURMP Annual Report

"PDP" = pollutant discharge potential.

"Emp. Training" = employee training activities focused on storm water pollution prevention

"Housekeeping" = standard good housekeeping BMPs, such as sweeping, regular trash pickup, etc.

"Minor Struct." = minor structural BMPs that do not require building permits, such as covering with tarps or building berms

"Major Struct." = major structural BMPs that require a building permit or are especially expensive, such as detention basins, oil/water separators, grease interceptors, overhead coverage for storage areas, etc.

Criteria

- 0 - no appreciable quantity observed on site
- 1 - very small potential for pollutant discharge; monitoring results* are well below the EPA benchmark
- 2 - Small potential for pollutant discharge; monitoring results* are close to the EPA benchmark but still below it
- 3 - Moderate potential for pollutant discharge; monitoring results* are at or slightly above the EPA benchmark
- 4 - Large potential for pollutant discharge; monitoring results* above the EPA benchmark but are within an order of magnitude
- 5 - Severe potential for pollutant discharge; monitoring results* exceed the EPA benchmark by an order of magnitude or more

Notes

1. Los Peñasquitos Lagoon is 303(d) listed for sedimentation/siltation, but currently none of the creeks tributary to it are 303(d) listed. It is not too likely a site will discharge directly to Peñasquitos Lagoon.
2. TDS is a COC in this watershed. If you see sources of TDS, note them in the "other" row.

* if available

Tony.

25 JUN 07

Enclosed is a copy of our annual report. I had mistakenly sent the report to Sacramento until you clarified for me last week. I can now see that it should go to "LOCAL" division. I apologize for the delay.

Thank you
Jude Sauter

Re: 2006-2007 Annual Report

To Whom It May Concern:

Enclosed are our 2006-2007 Annual Report and other supporting documentation related to the Annual Report.

General Information Section:

Please see Corrections.

Section E.11:

Attached are the two analytical reports required. Also attached is a spreadsheet we use internally to document when and how we discharge and sample water. We began using this spreadsheet for Wet Season 2006. Visual observations are always made prior to release of storm water and a pH test is completed prior to releasing.

Monthly inspections are completed during regular maintenance rounds. These regular monthly inspections are not documented. We did not allow anything but storm water to go into the drains. We did not release any non-stormwater discharges.

Item G.1. Explanation for "No":

October, December, January, and May there were no eligible storm events and due to the minimal amount of rain, we did not require any storm water releases. The storm water remained in a sump until which time it was necessary to release.

Also attached is a **Copy of the City of San Diego Storm Water Compliance Inspection** for Industrial Facilities completed on 27Feb07.

If there are any questions, please contact Judi Gaither at 858-373-3601.

Best Regards,

Judi Gaither
Senior Facilities Coordinator

SAN DIEGO REGIONAL
WATER QUALITY
CONTROL BOARD

STATE OF CALIFORNIA
STATE WATER RESOURCES CONTROL BOARD
2006-2007 ANNUAL REPORT
FOR STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2006 through June 30, 2007

An Annual Report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. Retain a copy of the completed Annual Report for your records.

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers, and e-mail addresses of the Regional Board contacts, as well as the Regional Board Offices addresses are indicated below.

SAME AS ABOVE

2006-2007
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from two storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2 NO Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from two storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan Group Name: _____

ii. Submitted No Exposure Certification (NEC) Date Submitted: _____
Re-evaluation Date: _____

Does facility continue to satisfy NEC conditions? YES NO

iii. Submitted Sampling Reduction Certification (SRC) Date Submitted: _____
Re-evaluation Date: _____

Does facility continue to satisfy SRC conditions? YES NO

iv. Received Regional Board Certification Certification Date: _____

v. Received Local Agency Certification Certification Date: _____

3. If you checked boxes i or iii above, were you scheduled to sample one storm event during the reporting year?

YES Go to Section E NO Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 2 If less than 2, attach explanation (If you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES NO, attach explanation (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? 1

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? **N/A.** YES NO, attach explanation
- If "YES", attach documentation supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated _____
6. Were all samples collected during the first hour of discharge? YES NO, attach explanation
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, attach explanation
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or ii. above) YES NO, attach explanation
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using Form 1 or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. Authorized Non-Storm Water Discharges

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. Attach an explanation for any "NO" answers. Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September YES NO N/A October-December YES NO N/A

January-March YES NO N/A April-June YES NO N/A

c. Use Form 2 to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. any new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. Unauthorized Non-Storm Water Discharges

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. Attach an explanation for any "NO" answers.

July -September YES NO October-December YES NO

January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

*N/A
6-15-00*

YES NO Attach explanation

d. Use Form 3 to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. any corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. Attach an explanation for any "NO" answers. Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	<input type="checkbox"/>	<input checked="" type="checkbox"/>	February	<input checked="" type="checkbox"/>	<input type="checkbox"/>
November	<input checked="" type="checkbox"/>	<input type="checkbox"/>	March	<input checked="" type="checkbox"/>	<input type="checkbox"/>
December	<input type="checkbox"/>	<input checked="" type="checkbox"/>	April	<input checked="" type="checkbox"/>	<input type="checkbox"/>
January	<input type="checkbox"/>	<input checked="" type="checkbox"/>	May	<input type="checkbox"/>	<input checked="" type="checkbox"/>

2. Report monthly wet season visual observations using Form 4 or provide the following information.
- date, time, and location of observation
 - name and title of observer
 - characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
 - any new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1- June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. Attach an explanation for any "NO" answers.

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
The following areas should be inspected:
- areas where spills and leaks have occurred during the last year.
 - outdoor wash and rinse areas.
 - process/manufacturing areas.
 - loading, unloading, and transfer areas.
 - waste storage/disposal areas.
 - dust/particulate generating areas.
 - erosion areas.
 - building repair, remodeling, and construction
 - material storage areas
 - vehicle/equipment storage areas
 - truck parking and access areas
 - rooftop equipment areas
 - vehicle fueling/maintenance areas
 - non-storm water discharge generating areas
2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO
3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: YES NO
- facility boundaries
 - outline of all storm water drainage areas
 - areas impacted by run-on
 - storm water discharges locations
 - storm water collection and conveyance system
 - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use Form 5 to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? YES NO

If you answered "NO" attach an explanation to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)

- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA

- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA

- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

2006-2007
ANNUAL REPORT

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and an alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse effects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.swrcb.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

San Diego, CA 92121-1104
Fax: (858) 373-3601

B. FACILITY/SITE INFORMATION

Principal activity: Manufacturing of Pharmaceutical products

Assigned JURMP Classification: High Ind Medium Ind Low Ind High Comm Unassigned
 Is this facility listed on the current year's inspection list? Yes No
 Assigned NAICS code(s) 2854 and/or SIC Code(s) 2834
 Does NAICS Code best represent principal activity: Yes No SIC? Yes No
 Recommended change of NAICS Code(s)? _____ Of SIC? _____
 New JURMP Classification? _____

Does facility have a current business certificate? Yes No # B2005001487 Exp. 1/31/08
 Is facility subject to CA Statewide General Industrial Permit? Mandatory Conditional No
 If yes, does facility have a Notice of Non-Applicability (NONA/NEC)? Yes No
 If no, has facility filed a Notice of Intent (NOI) to obtain coverage? Yes No WDID: 9 371019266
 Has facility filed a Notice Of Termination (NOT) for the WDID# listed above? Yes No Approval date: _____
 Does facility maintain SWPPP or BMP Plan? Yes No
 Does facility have a storm water monitoring program? Yes No
 Existing Status: High Ind Med Ind Low Ind High Comm Moved/Out of Business Dup Low Comm
 Municipal Out of Jurisdiction
 Existing NAICS code(s) 2854 and SIC Code(s) 2834

C. INITIAL OBSERVATIONS

Nearest receiving water body: Los Penasquitos Creek Hydrologic Area (9XX.X): 907.1
 Approximate distance to receiving water body: < 200 ft. 200 - 1000 ft. > 1000 ft.
 Sensitivity of receiving waters: Sensitive (ESA, 303(d), or other) Non-sensitive
 Discharge points along perimeter: Several storm drains around the facility.
 Discharge observed: Yes No
 If yes, describe: Storm water runoff
 Approximate area covered by industrial or commercial activities: 70,000 square feet

Approximate % impervious surface of this area 90 %
 Exposed areas of intensive outdoor activity: Storage area, Parking

D. BMP ASSESSMENT

BMPs	N/A	Yes	No	Comments
D.1 General				
Is the site free of litter and debris?		X		
Are discharge locations free of sediment and debris?		X		
Are parking lots, sidewalks and streets free of sediment and debris?			X	- pollen dust throughout bottom parking lot
Is pressure washing of parking lots or sidewalks conducted at the facility?			X	
If yes, is wash water captured?	X			
Are roof downspouts directly away from areas of potential pollutants?		X		
D.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)		X		
Are irrigation systems programmed to minimize over-watering and runoff?		X		
Are stockpiles of soil or landscape waste equipped to prevent runoff transport?	X			
D.3 Materials and Wastes				
Are adequate trash containers provided?		X		
Are adequate recycling containers provided?		X		
Is the trash/recycling area enclosed?		X		- lids closed
Is the trash/recycling area free of litter and debris, liquids, powders, particulates, etc?		X		
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?		X		
Are outdoor material storage areas adequately covered?		X		
Do outdoor material storage areas have adequate secondary containment?		X		
Are outdoor storage containers properly labeled?		X		
Is there an accessible, functional spill response kit?		X		
Are storage tanks equipped with secondary containment?		X		
Is secondary containment free of spills and rainwater?			X	- some rainwater from recent storm
Are loading and unloading areas free of spills and debris?		X		
D.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?		X		
Are heavy equipment and vehicles stored in garages or under canopies?		X		- forklift
Are vehicle maintenance activities conducted within contained areas (garage, canopy, work shop)?	X			
Are vehicle-fueling areas covered and are storm drain inlets in/around the fueling area protected from spills and leaks?	X			

BMPs	N/A	Yes	No	Comments
Is vehicle washing performed in a contained area where runoff does not enter the MS4?	X			

D.5 Non Storm Water Management

Is the site free of evidence of illicit connections and illegal discharges?		X		
If not, have the appropriate authorities been notified?	X			

D.6 Other

Are there any other potential storm water pollution issues or concerns? If yes, explain below.			X	
Are all applicable activity-specific BMPs from Appendix C of the JURMP being implemented?		X		
Were any educational materials distributed?			X	NOI NON/NEC 3Cs

D.7 BMP Summary

- Tanox West, Inc is a facility that manufactures pharmaceutical products.
- All manufacturing, testing and laboratory activities are conducted within the facility.
- The facility maintains some outdoor storage. All material or equipment are stored with overhead cover, and have minimal contact with rain.
- All hazardous materials/chemicals are stored under cover and are equipped with secondary containment.
- The facilities storm water drainage is plumbed so that storm water is contained on site and can be released from a valve. This is also the location of storm water sampling. Sampling results indicate effective BMPs. pH is tested before storm water release.
- Some pollen debris was noted throughout one of the parking lots

*The SWPPP review portion of the inspection focuses mainly on proposed BMPs and monitoring practices. It is not intended to be a comprehensive assessment of compliance with all SWPPP-related requirements of the General Industrial Permit.

E.2 STORM WATER MONITORING PROGRAM

- Does this facility have a storm water monitoring program? Yes No N/A
- Was appropriate monitoring conducted during the most recent wet season? Yes No
- If not, does the facility have documentation of no qualifying rain events? Yes No
- If not, is the facility in a GMP and not scheduled for most recent year? Yes No
- Do monitoring results show that existing BMPs are effective in removing pollutants? Yes No None Available
- If not, were potential sources of the identified pollutants observed during the inspection? Yes No
- If yes, list the potential sources and their associated pollutants: _____

Exceedances Noted (list dates, locations, constituent(s) and numeric value(s)):

5/22/06 All below benchmarks, 2/28/06 All below benchmarks

As for 2006-2007 season, one set of sampling results back
Specific Conductance = 375 mg/L

F. RECOMMENDED CORRECTIVE ACTION (BMP-RELATED)*

Is BMP-related corrective action needed? Yes No

If BMP-related corrective action is required, see below. For other corrective action, please see Section G.

Please refer to <http://www.sandiego.gov/thinkblue/programs/industrial.shtml> for more information on BMP implementation options.

~~Attempt to clean up pollen debris from the parking lot.~~
~~If sweeping is not effective, power washing may be~~
~~conducted as long as all wash water is collected and prevented~~
~~from entering the storm water system.~~

Based on inspection findings, it appears likely that significant levels of _____ would be present in storm water discharges from this site. Take action to reduce the levels of _____ to the maximum extent practicable. Treatment control BMPs are likely necessary. More information about BMP options can be found at the website listed in Section F of the inspection form.

*Recommended corrective actions listed at the time of inspection are subject to change based on later review by office staff.

Owner/operator has been notified of recommended corrective actions both verbally and by: Hand Mail Fax

G. VIOLATIONS*

- No violations have been noted at this time
- No violations have been noted, but recommend taking corrective action described in Section F.
- Violation of the City's storm water ordinance:
 - Illegal discharge(s) of pollutants to the storm drain system or to receiving waters
- Description _____
 - Illegal connection(s) to the storm drain system
- Location _____
 - Littering
 - Failure to properly implement required BMPs
 - Failure to comply with the storm water monitoring requirements for high priority industrial facilities
- Non-compliance with the State Industrial Storm Water General Permit
 - In the future, under a new Industrial Permit, which has not yet been adopted, this facility may be able to qualify for exemption from Permit coverage based on no outdoor exposure.
- Other Violation noted _____

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE*:

- Implement the recommended corrective actions listed in Section F.
- File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) to obtain coverage under the Industrial Permit—see Attachment 3 of the Industrial Permit (www.waterboards.ca.gov/stormwtr/Industrial.html).
- For "Conditional" facilities only: if you implement all the recommended BMPs and eliminate outdoor exposure, contact the City to request a re-inspection. If it is determined that you qualify, NONA/NEC paperwork will be provided for you to complete, and you will not have to file an NOI.
- Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.
- Develop and implement a storm water monitoring program—see section B of the Industrial Permit for guidelines.
- Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC).

Additional notes and/or actions required:

H. RECOMMENDED CITY ACTIONS*

Is a follow-up inspection recommended for this business? Yes No

ASSESSMENT

Level of knowledge regarding stormwater issues: 1 2 3 4 5
Level of cleanliness, BMP implementation, orderliness of site: 1 2 3 4 5

*Violations, corrective actions, and recommended City actions listed at the time of inspection are subject to change based on later review by office staff.

D. POLLUTANT DISCHARGE POTENTIAL ASSESSMENT, PEÑASQUITOS WATERSHED¹

Site Name: Tanox, Inc.

Pollutant	RW 303(d) (Y/N)	WS COC (Y/N)	PDP	Sources Needing More BMPs							Recommended BMPs (check if applicable)			
				Trash Area	Material Storage	Prkng Lot	Load/Unload	Land-scape	Veh/Equip Maint	Exposed Work Area	Emp. Training	House-keeping	Minor Struct.	Major Struct.
Sediments		X	2											
Nutrients			2											
Aluminum			2											
Iron			2											
Heavy Metals		Cu	2											
Check if evidence indicates specific metals may have significant PDPs: <input type="checkbox"/> Copper <input type="checkbox"/> Cadmium <input type="checkbox"/> Lead <input type="checkbox"/> Zinc <input type="checkbox"/> Mercury														
Organic Compounds			2											
Check if evidence indicates there may be historical soil contamination associated with any of the following: <input type="checkbox"/> PCBs <input type="checkbox"/> PAHs <input type="checkbox"/> Chlordane <input type="checkbox"/> DDT														
Trash & Debris			3			X							X	
Oxygen Demanding			2											
Oil & Grease			2											
Bacteria & Viruses		X	2											
Pesticides		Diaz, Chlor	1											
Check if evidence indicates the following are used on site: <input type="checkbox"/> Diazinon <input type="checkbox"/> Chlorpyrifos <input type="checkbox"/> Malathion														
Acid/Base (pH effects)			2											
Others ² (list):														

"RW 303(d)" = Receiving water impairments, as listed in the most recent 303(d) list
 "WS COC" = High priority watershed constituents of concern (COC), as listed in the most recent WURMP Annual Report
 "PDP" = pollutant discharge potential
 "Emp. Training" = employee training activities focused on storm water pollution prevention
 "Housekeeping" = standard good housekeeping BMPs, such as sweeping, regular trash pickup, etc.
 "Minor Struct." = minor structural BMPs that do not require building permits, such as covering with tarps or building berms
 "Major Struct." = major structural BMPs that require a building permit or are especially expensive, such as detention basins, oil/water separators, grease interceptors, overhead coverage for storage areas, etc.

Criteria

- 0 - no appreciable quantity observed on site
- 1 - very small potential for pollutant discharge; monitoring results* are well below the EPA benchmark
- 2 - Small potential for pollutant discharge; monitoring results* are close to the EPA benchmark but still below it
- 3 - Moderate potential for pollutant discharge; monitoring results* are at or slightly above the EPA benchmark
- 4 - Large potential for pollutant discharge; monitoring results* above the EPA benchmark but are within an order of magnitude
- 5 - Severe potential for pollutant discharge; monitoring results* exceed the EPA benchmark by an order of magnitude or more

Notes

1. Los Peñasquitos Lagoon is 303(d) listed for sedimentation/siltation, but currently none of the creeks tributary to it are 303(d) listed. It is not too likely a site will discharge directly to Peñasquitos Lagoon.
 2. TDS is a COC in this watershed. If you see sources of TDS, note them in the "other" row.

**Subject: Notice of Violation: NPDES No. CAS000001: Order No. 97-03-DWQ:
Discharger Name: WDID 9 371019266: Failure to Submit 2007-2008
Industrial Storm Water Annual Report**

**Facility: Tanox West Inc
11011 Torreyana Rd
San Diego, CA 92121**

YOU ARE HEREBY NOTIFIED THAT:

You are in violation of the statewide General Industrial Storm Water Permit Order, No. 97-03-DWQ (Order) for failure to submit the 2007-2008 Annual Report. The Annual Report was due to the California Regional Water Quality Control Board, San Diego Region (Regional Board) by July 1, 2008 as required by Section B.14 of the Order.

Pursuant to California Water Code (CWC) Sections 13399.33 and 13385, your noncompliance for failure to submit the Annual Report subjects you to possible enforcement action by the Regional Board. Civil liability could range from a minimum of \$1,000 and up to \$10,000 a day for each day of violation, or up to \$25,000 a day if the liability is assessed by a court. You may also be subject to criminal prosecution under Section 13387 of the CWC. The number of days of violation would be counted from July 1, 2008, up to the date the 2007-2008 Annual Report is received. To minimize the potential liability assessed, please submit the Annual Report immediately.

2008-2009
ANNUAL REPORT

2009 JAN 22 P 1:17

FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2008 through June 30, 2009

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. Retain a copy of the completed Annual Report for your records.

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at <http://www.swrcb.ca.gov/stormwtr/contact.html>. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

2008-2009
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

YES Go to Item D.2 **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i. Participating in an Approved Group Monitoring Plan **Group Name:** _____

ii. Submitted **No Exposure Certification (NEC)** **Date Submitted:** _____

Re-evaluation Date: _____

Does facility continue to satisfy NEC conditions? **YES** **NO**

iii. Submitted **Sampling Reduction Certification (SRC)** **Date Submitted:** _____

Re-evaluation Date: _____

Does facility continue to satisfy SRC conditions? **YES** **NO**

iv. Received Regional Board Certification **Certification Date:** _____

v. Received Local Agency Certification **Certification Date:** _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

YES Go to Section E **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? _____ If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

YES **NO, attach explanation** (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? 0

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? YES, go to Item E.6 NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? YES NO, attach explanation
- If "YES", attach documentation supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated 11/14/08
6. Were all samples collected during the first hour of discharge? YES NO, attach explanation
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? YES NO, attach explanation
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) YES NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) YES NO, attach explanation
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? YES NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? YES NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using Form 1 or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September YES NO N/A October-December YES NO N/A
January-March YES NO N/A April-June YES NO N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. **any new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.**

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September YES NO October-December YES NO
January-March YES NO April-June YES NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

YES NO **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. **any corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.**

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

January	<input type="checkbox"/>	<input checked="" type="checkbox"/>	May	<input type="checkbox"/>	<input checked="" type="checkbox"/>

2. Report monthly wet season visual observations using **Form 4** or provide the following information.
- date, time, and location of observation
 - name and title of observer
 - characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
 - any new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1- June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? YES NO
The following areas should be inspected:
- areas where spills and leaks have occurred during the last year.
 - outdoor wash and rinse areas.
 - process/manufacturing areas.
 - loading, unloading, and transfer areas.
 - waste storage/disposal areas.
 - dust/particulate generating areas.
 - erosion areas.
 - building repair, remodeling, and construction
 - material storage areas
 - vehicle/equipment storage areas
 - truck parking and access areas
 - rooftop equipment areas
 - vehicle fueling/maintenance areas
 - non-storm water discharge generating areas
2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? YES NO
3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: YES NO
- facility boundaries
 - outline of all storm water drainage areas
 - areas impacted by run-on
 - storm water discharges locations
 - storm water collection and conveyance system
 - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? YES NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- quarterly unauthorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- Sampling and Analysis records
- records of spills/leaks and associated clean-up/response activities
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? YES NO

The following SWPPP items should be reviewed:

- pollution prevention team
- assessment of potential pollutant sources
- list of significant materials
- identification and description of the BMPs to be implemented for each potential pollutant source
- description of potential pollutant sources

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? YES NO

The following BMP categories should be reviewed:

- good housekeeping practices
- preventative maintenance
- spill response
- material handling and storage practices
- employee training
- waste handling/storage
- erosion control
- structural BMPs
- quality assurance

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? YES NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- schedule for implementing SWPPP revisions
- the date(s) of the evaluation
- any incidents of non-compliance and the corrective actions taken.
- necessary SWPPP revisions

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

- Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? YES NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? YES (Mandatory)

- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? YES NO NA

- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? YES NO NA

- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? YES NO NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

Attachment to Storm Water 2008 – 2009 Annual Report

E2., E5-7.

Storm water samples were not collected because the site has been vacant of employees and there have been no production activities since Genentech took over the facility lease from Tanox West on June 10, 2007.

F2.

Production activities ceased when Genentech took over the facility lease from Tanox West on June 10, 2007. Quarterly visual observations have not been conducted since then, with the exception of during the month of November to prepare for this annual report submittal.

G1.

Production activities ceased when Genentech took over the facility lease from Tanox West on June 10, 2007. As such, monthly wet season visual observations have not been conducted since then.

**COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH
LAND AND WATER QUALITY DIVISION
MONITORING WELL PROGRAM
GEOTECHNICAL BORING CONSTRUCTION PERMIT**

SITE NAME: VERTEX PHARMACEUTICALS

SITE ADDRESS: 11010 TORREYANA RD., SAN DIEGO, CA 92121

PERMIT FOR: **2 GEOTECHNICAL BORINGS**

PERMIT APPROVAL DATE: AUGUST 8, 2012

PERMIT EXPIRES ON: DECEMBER 6, 2012

RESPONSIBLE PARTY: MCFARLANE ARCHITECTS INCORPORATED

PERMIT CONDITIONS:

1. All borings must be sealed from the bottom of the boring to the ground surface with an approved sealing material as specified in California Well Standards Bulletin 74-90, Part III, Section 19.D. **Drill cuttings are not an acceptable fill material.**
2. All borings must be properly destroyed within 24 hours of drilling.
3. Placement of any sealing material at a depth greater than 30 feet must be done using the tremie method.
4. This work is not connected to any known unauthorized release of hazardous substances. Any contamination found in the course of drilling and sampling must be reported to DEH. All water and soil resulting from the activities covered by this permit must be managed, stored and disposed of as specified in the SAM Manual in Section 5, II, E-4. (http://www.sdcounty.ca.gov/deh/lwq/sam/manual_guidelines.html) In addition, drill cuttings must be properly handled and disposed in compliance with the Stormwater Best Management Practices of the local jurisdiction.
5. Within 60 days of completing work, submit a well/boring construction report, including all well and/or boring logs and laboratory data to the Well Permit Desk. This report must include all items required by the SAM Manual, Section 5, Pages 6 & 7.
6. **This office must be given 48-hour notice of any drilling activity on this site and advanced notification of drilling cancellation. Please contact the Well Permit Desk at (858) 505-6688.**

	TOTAL COST OF PERMIT		<u>\$249.00</u>

10. Are you proposing a variation in drilling and destruction of soil borings from the methods and/or procedures specified in the current SAM manual? If yes, specify these variations and include a destruction diagram.
Yes No NA
11. What procedures will be used to ensure that the drilling equipment will introduce no contamination?
Immediately following drilling and sampling, the borings will be backfilled with boring spoils. Drill fluids will not be used.
12. What methods will be used to clean sampling equipment? A wire brush.
13. What cleaning method will be used to clean casing and screen prior to installation? Screens or casing will not be used during the drilling operation.
14. A Property Owner Consent (POC) agreement is required for all applications, except for onsite, open LOP/SAM site assessment cases, Caltrans properties and military properties.

PROPERTY OWNER CONSENT

Proposed locations for subsurface work:

Property Address:

Assessor's Parcel Number (APN):

11010 Torreyana Road
San Diego, CA 92121

340-010-37-00

I, Geocon Incorporated owner of the property/properties listed above, give my permission to Geocon Incorporated (consulting company) contractor) to conduct the following work at the locations stated above.

Install _____ monitoring wells Destroy _____ monitoring wells Drill 2 soil borings

I understand that John Hooks (registered professional) of Geocon Incorporated (consulting company) and an authorized signer for Pacific Drilling Company (drilling company) have submitted a signed application to the Department of Environmental Health in which they have agreed to complete the above-stated work according to the requirements of the current SAM Manual, all ordinances and laws of the County of San Diego and the State of California pertaining to well/boring construction and destruction. I have arranged with the Responsible Party, the person who causes to have monitoring wells/borings installed or existing wells destroyed on this property, to ensure proper closure of the monitoring wells/borings.

WELL PERMIT NO. LMON108664
SAN DIEGO, CALIFORNIA

To Whom It May Concern:

In accordance with your request, we have prepared this letter presenting information regarding exploratory borings performed at the subject project related to DEH Permit No. LMON108664 dated August 8, 2012.

The geologic conditions encountered consist of undocumented fill underlain by Very Old Paralic Deposits. The site location is presented on the Vicinity Map (Figure 1). The approximate boring locations and parcel map are shown on Figures 2 and 3, respectively. The borings were drilled by Pacific Drilling Co. The borings were extended to depths ranging between 16 feet to 38.5 feet. Logs of the borings are attached as Figures A-1 through A-2. The borings were backfilled the full depth with bentonite slurry. The approximate volume of bentonite slurry used as backfill is shown on each boring log.

Please contact the undersigned if you have any questions.

Very truly yours,

GEOCON INCORPORATED

A handwritten signature in green ink, appearing to read 'John Hoops'.

2. If potable water is not currently used for irrigation, there are no supplementary
submittal requirements.

PART 2 -- PRODUCTS (Not Used)

PART 3 -- EXECUTION

3.1 SEPARATION VERIFICATION PROCEDURE

A. The CONTRACTOR shall perform a separation verification procedure as follows:

1. Perform all construction and modifications as required in the Contract Documents.
Make connections between the existing irrigation system and the new recycled water
system only after authorized by the CONSTRUCTION MANAGER.
CITY OF SAN DIEGO WATER DEPARTMENT CONNECTIONS TO RECYCLED WATER SYSTEM
PROJECT NO. _____
PROJECT NAME: RECYCLED WATER IRRIGATION RETROFIT AT 11010 TORREYANA ROAD.
DATE: FEBRUARY 5, 2016

2. Shut off all domestic water service valves and close all valves between the recycled water
connection point and the irrigation system.

3. Open all existing irrigation valves to be served with recycled water and allow residual water to drain
from the system.

4. Open the source valve serving the domestic water system. Ensure that all valves to the irrigation
system remain closed.

5. After no less than two hours, determine whether water is flowing through the irrigation system. No
water should be flowing through the irrigation system as all valves to the irrigation system are closed. If
flow occurs, the irrigation system is still connected to the potable water system at some location.
Visually inspect for flow at all sprinkler heads, quick couplers, and any other irrigation service intended
for recycled water use. Replace all hose bibbs connected to the irrigation system with a quick-coupler
connection, and post a recycled water warning sign at the quick-coupler location. If a cross-connection
is found at a drinking water fountain, a new potable line shall be
installed to supply the fountain or the fountain shall be abandoned as directed by the
CONSTRUCTION MANAGER. Replacement of hose bibbs found but not indicated on the Drawings,
including corresponding sign installation and drinking fountain
modifications due to cross-connections, shall be paid for as extra work.

ASSISTANT DIRECTOR

October 15, 2020

Laila Nasrawi, P.E.
Recycled Water Program
Public Utilities Department
525 B Street, Suite 300 MS 906
San Diego, CA 92101

11010 Torreyana Rd - DEH Control Number: DEH2020-LRWS-001262

Dear Ms. Nasrawi,

The reclaimed water irrigation plans for the above project have been received and reviewed by the County of San Diego Department of Environmental Health (DEH). The purpose of the review by DEH is to determine compliance with good public health engineering practices, applicable rules and regulations as applied to the use of recycled water for irrigation purposes. The following corrections/comments must be incorporated into the irrigation plans prior to approval being granted by DEH:

1. Include the DEH control number in the upper right hand corner of the title sheet: DEH2020-LRWS-001262.
2. Provide an updated date and expiration date on the architect stamp on the title sheet.
3. On DEH recycled water note #19, replace "Otay Water District" with "San Diego".
4. Show an additional Do Not Drink sign next to the driveway entrance.
5. Show fire laterals and hydrants.
6. Label existing irrigation areas as potable. The site is not currently connected to recycled water.
7. A site inspection was completed on October 15th with City of San Diego Water.
8. This original correction letter should be included with notes on how corrections were accomplished when re-submitting plans for approval.

Please note that review and approval of the plans by DEH covers the irrigation portion of the plans only and does not include any other parts of the plans. Please call me at (858) 880-4371 if you have any questions.

Sincerely,

Jenna Poitras, REHS

DEPARTMENT OF ENVIRONMENTAL HEALTH RECYCLED WATER STANDARD PLAN NOTES

1. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE SAN DIEGO WATER DISTRICT'S RULES AND REGULATIONS.
2. DRINKING WATER FOUNTAINS AND DESIGNATED OUTDOOR EATING AREAS SHALL BE PROTECTED AGAINST CONTACT WITH RECYCLED WATER SPRAY, MIST, OR RUNOFF.
3. BEST MANAGEMENT PRACTICES SHALL BE USED TO ELIMINATE OR CONTROL TO THE BEST EXTENT POSSIBLE PONDING, RUN-OFF, OVER-SPRAY AND MISTING.
4. HOSE BIBS ARE STRICTLY PROHIBITED.
5. CROSS-CONNECTIONS BETWEEN RECYCLED WATER LINES AND POTABLE WATER LINES ARE STRICTLY PROHIBITED.
6. NO SUBSTITUTIONS OF PIPE MATERIALS WILL BE ALLOWED WITHOUT PRIOR APPROVAL OF THE SAN DIEGO WATER DISTRICT.
7. ALL MAINLINE PIPES SHALL HAVE WARNING TAPE PER SAN DIEGO WATER DISTRICT'S RULES AND REGULATIONS.
8. HOURS FOR IRRIGATION WITH RECYCLED WATER ARE FROM 9:00 P.M. TO 6:00 A.M. THE HOURS FOR IRRIGATION WITH DISINFECTED TERTIARY RECYCLED WATER MAY BE MODIFIED BY THE LOCAL AUTHORITY. IRRIGATION DURING PUBLIC USE PERIODS WITH DISINFECTED TERTIARY RECYCLED WATER SHALL BE UNDER THE SUPERVISION OF THE DESIGNATED USER SUPERVISOR. IRRIGATION WITH WATER OF A LESSER QUALITY THAN DISINFECTED TERTIARY RECYCLED WATER SHALL BE BETWEEN THE HOURS OF 9:00 P.M. AND 6:00 A.M.
9. BURIAL OF ALL WIRING AND PIPING SHALL MEET SAN DIEGO WATER DISTRICT'S RULES AND REGULATIONS.

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

CONSENT TO CONDUCT INSPECTION GRANTED BY: Homero Carrillo TITLE: Senior Facilities Manager

INTRODUCTION:

On 06/01/2022, I conducted a Certified Unified Program Agency (CUPA) routine inspection of Foundation Medicine, Inc. to verify compliance with Hazardous Materials Business Plan (HMBP), Hazardous Waste, Medical Waste, and Aboveground Petroleum Storage Act (APSA) requirements. The inspection was conducted with facility representative, Homero Carrillo, Senior Facilities Manager. Consent to conduct the inspection was granted by Homero Carrillo.

This business conducts Research and Development. Per Homero Carrillo, the business will conduct processes for diagnostic kits for cancer in the future.

This facility is subject to Hazardous Materials Business Plan (HMBP) requirements for storing hazardous materials/hazardous waste in reportable quantities (55 gallons, 500 pounds, 200 cubic feet), hazardous waste, medical waste, and APSA requirements.

At the time of inspection, based on records reviewed and statements made by Homero Carrillo, the facility appears to be a small quantity generator of hazardous waste and a small quantity generator of medical waste.

VIOLATION # 1

1010006 Failed to update HMBP in CERS within 30 days of a substantial change to any portion of the HMBP, including inventory changes or facility information. HSC 25508.1(a-f); 19 CCR 2654(d); SDCC 68.904(c)(6)

Classification: Minor

Observations:

I observed 5 x 55 gallon drums of contaminated solid lab debris waste on-site. 1 x 55 gallon drum of the contaminated lab debris waste was in one of the laboratories, the other 4 x gallon drums were in the consolidated waste area. Per Homero Carrillo and based on the hazardous waste manifests, this facility regularly generates and has at least 5 x 55 gallon drums of solid lab debris waste on-site.

Within 30 days of any significant increase in any hazardous material/hazardous waste (more than 100% increase), submit the up-to-date information in the inventory element in CERS.

Corrective Action Due By: 07/01/2022

This violation must be corrected online by logging into the California Environmental Reporting System (CERS) and editing/

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

INSPECTION DATE: 06/01/2022 PAGE 2 OF 12
RECORD ID #: DEH2002-HUPFP-111672

submitting an up-to date hazardous materials inventory section.

If guidance is needed with your inventory in CERS, visit our CERS Information webpage or call our CERS help line at (858) 505-6990 for one-on-one guidance.

Within 30 days, provide documentation of corrective action to me via e-mail at cameron.williams@sdcounty.ca.gov. You may use the corrective action form located at the end of this report.

VIOLATION # 2

4020001 Failed to train oil-handling personnel on: operation/maintenance of equipment to prevent discharges; discharge procedure protocols; applicable laws, rules, and regulations; general facility operations; and the contents of the SPCC Plan. (40 CFR 112.7(f)(1).) HSC 25270.4.5(a)

Classification: Class II

Observations:

Failure to provide training or documentation of the training regarding: the operation and maintenance of equipment to prevent discharges; discharge procedure protocols; applicable pollution control laws, rules, and regulations; general facility operations; and the contents of the SPCC Plan.

Corrective Action Due By:07/01/2022

Within 30 days implement a training plan with the above required elements and provide documentation of the training of applicable personnel.

Within 30 days, provide documentation of corrective action to me via e-mail at cameron.williams@sdcounty.ca.gov. You may use the corrective action form located at the end of this report.

VIOLATION # 3

HMD5104 Failed to submit, and keep up to date, the APSA program element in CERS. SDCC 68.904; 27 CCR 15188(a),(b), (c),&(f)

Classification: Minor

Observations:

The information in the Aboveground Petroleum Storage Act (APSA) element in CERS is not consistent with the APSA information in the Spill Prevention Control and Countermeasure (SPCC) Plan. The date of the 5-year review of the SPCC Plan in CERS is reported as 07/08/2021, the provided SPCC plan was written in August 2021. The total aboveground capacity storage of petroleum reported in CERS is 1788gallon and the total capacity reported on the SPCC Plan, and verified during the inspection, is 2149 gallons.

Corrective Action Due By:07/01/2022

Correct and re-submit the APSA element in CERS and keep the APSA information up-to-date and accurate.

Within 30 days, provide documentation of corrective action to me via e-mail at cameron.williams@sdcounty.ca.gov. You may use the corrective action form located at the end of this report.

INSPECTION REMARKS:

Action Items:

The initial invoice will be generated after the inspection and mailed to the billing address listed in CERS. Please pay the Unified Program Facility Permit (UPFP) fees within 10 days of receiving the invoice.

The Tier 1 Spill Prevention, Control and Countermeasure (SPCC) Plan was signed and certified by Management during the inspection by Homero Carrillo, Senior Facilities Manager.

Per Homero Carrillo, the primary emergency contact, Serena Hill, has not worked at the facility for 2 weeks. Please update the

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

INSPECTION DATE: 06/01/2022 PAGE 3 OF 12
RECORD ID #: DEH2002-HUPFP-111672

emergency contact in the California Environmental Reporting System (CERS) within 30 days of a change.

HMBP:

The facility's HMBP, including the Facility Information, Hazardous Materials Inventory, and Emergency Response/Training Plans, was last certified in CERS on 07/26/2021. Ensure HMBP certifications are submitted in CERS annually and include the Facility Information, Hazardous Materials Inventory, and Emergency Response/Training Plans.

Per Homero Carrillo, HMBP employee training records includes initial and annual training on evacuation, emergency response, and chemical safety/HAZCOM. Records of the trainings were available for the last year, this facility has been at this location for about 1 year.

Hazardous Waste:

Per DTSC's Hazardous Waste Tracking System, the facility's EPA ID, CAL000464299, is active.

Hazardous waste manifests, including TSDf signed copies and land disposal restriction notifications, for the last year were available and reviewed.

The contingency plan was available and reviewed.

Per Homero Carrillo, this facility has not had any universal waste disposals yet. Ensure universal waste is properly disposed of within one year of the accumulation start date.

APSA:

Per CERS, this facility's Spill Prevention Control and Countermeasure (SPCC) Plan is dated 07/08/2021. A draft of the SPCC plan from August 2021 signed by Homero Carrillo during the inspection was available and reviewed. Ensure the SPCC plan is reviewed at least every 5 years and technical amendments are made within six months of the change.

The total aboveground storage petroleum capacity subject to APSA reported in CERS is 1788 gallons. The total aboveground storage petroleum capacity specified in the SPCC Plan and observed on-site was 2149 gallon. Ensure the accurate capacity is reported in CERS.

There are three emergency generator aboveground storage tanks storing diesel fuel: Generator 500 has an 894 gallon capacity double-walled diesel fuel AST for an emergency generator system; Generator 350 has a 700 gallon capacity double-walled diesel fuel AST for an emergency generator system; and Generator 200 has a 555 gallon capacity double-walled diesel fuel AST for an emergency generator system.

Facility appears to have appropriate containment and/or diversionary structures or equipment.

The third party Global Power conducts and documents monthly inspections of generator diesel fuel aboveground storage tanks. Monthly inspection records are retained and were available and reviewed for the past year. The SPCC Plan states the facility does monthly inspections; the monthly inspection checklist was printed from the SPCC Plan and an inspection was conducted during the inspection by Homero Carrillo.

I did not observe any petroleum spills/leaks in secondary containment.

Medical Waste:

This facility is currently a small quantity generator of medical waste, generating less than 200 pounds of medical waste per month.

Per Homero Carrillo, this facility does not treat any waste and does not need a Medical Waste Management Plan (MWMP). In

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

the future if the facility is a large quantity generator of medical waste or treats medical waste then a MWMP will be needed.

Medical waste tracking documents for the last year were available and reviewed. Medical wastes are picked up by Veolia Environmental Services monthly.

The designated medical waste accumulation area was properly secured and marked appropriately in 2 languages and with a Biohazard symbol.

The facility generates the following medical wastes: sharps waste, biohazardous liquid waste, and red bag waste.

I observed biohazardous red bags labeled with the generator's name, address and phone number. Other medical waste containers were properly labeled with the facility's name, address, and phone number.

The final report was provided to Homero Carrillo after the inspection. The report was not signed due to current Public Health Orders and COVID-19 restrictions.

HAZARDOUS WASTE TANK SYSTEMS FOR SQGS ONLY

#	<u>VIOLATION DESCRIPTION</u>
---	------------------------------

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

INSPECTION DATE: 06/01/2022 PAGE 6 OF 12
 RECORD ID #: DEH2002-HUPFP-111672

Hazardous Materials and Hazardous Waste (continued)

- 3030024 Failed to operate uncovered tank to ensure at least 2 ft. of freeboard to prevent overtopping, unless the tank is equipped with a containment structure, a drainage control system, or a diversion structure with a capacity that equals or exceeds the volume of the top 2 ft. of the tank. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(b)(c)
- 3030025 Failed to provide an overflow protection device on continuously fed hazardous waste tank(s). 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(b)(4)
- 3030027 Failed to conduct daily tank inspection of discharge control system, monitoring equipment and waste level. 22 CCR 66262.34(d)(2); 40 CFR 265.201(c)(1-3), 262.34(d)(3)
- 3030028 Failed to conduct weekly hazardous waste tank inspection(s) to detect signs of leakage and ensure that the construction materials, fixtures and surrounding areas of the tank are in good condition. 22 CCR 66262.34(d)(2); 40 CFR 265.201(c)(4 & 5), 262.34(d)(3)
- 3050007 Failed to properly remove all waste upon closure, decontaminate, and document the closure of a hazardous waste tank system. 22 CCR 67383.3; 40 CFR 262.34(d)(3), 265.201(f)
- HMD1612 Hazardous waste improperly stored in a tank system causing leaks, corrosion, or failure. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(b)
- HMD1614 Failed to pre-notify the CUPA in writing prior to closing a hazardous waste tank system. 22 CCR 67383.3(a)(1)
- HMD1615 Failed to properly accumulate ignitable or reactive waste in a tank system. 22 CCR 66262.34(d)(2); 40 CFR 262.34(d)(3), 265.201(g)

 RECORD ID #: DEH2002-HUPFP-111672

Aboveground Petroleum Storage Act (APSA) Program

Each violation checked below is for the section(s) of the California Health and Safety Code (HSC), California Code of Regulations (CCR), or San Diego County Code ("SDCC") indicated in *italics*. Incorporated provisions of Title 40 of the Code of Federal Regulations (CFR) are noted for reference. All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use a DEH Corrective Action Form (HM-926) or other correspondence to document your return to compliance. Please call (858) 505-6880 or your Specialist if you have any questions.

GENERAL APSA FACILITY REQUIREMENT

(CHAPTER 6.67 OF DIVISION 20 OF THE HSC & SDCC)

#	VIOLATION DESCRIPTION
<input type="checkbox"/> 4010001	Failed to prepare a Spill Prevention, Control, and Countermeasures (SPCC) Plan. HSC 25270.4.5(a), 40 CFR 112.3, 112.6
<input type="checkbox"/> 4030038	Failed to implement the SPCC Plan. HSC 25270.4.5(a), 40 CFR 112.3, 112.6
<input type="checkbox"/> 4010032	Failed to submit a tank facility statement or update/certify Business Plan annually. HSC 25270.6(a)(1) or (a)(2)
<input type="checkbox"/> 4010033	Failed to pay the APSA program fee or obtain Unified Program Facility Permit. HSC 25270.6(b), SDCC 68.904; 68.905; 68.907.1
<input type="checkbox"/> 4040001	Failed to immediately, upon discovery, report a one-barrel (42 gallons) or greater release of petroleum to Cal OES and the CUPA. HSC 25270.8
<input type="checkbox"/> 4010037	Failed to meet conditions of APSA exemption for oil-filled electrical equipment including containment and visual inspection. HSC 25270.2(a)(4), 25270.4.5(a)
<input type="checkbox"/> 4030043	Failed to have secondary containment and leak detection if piping connected to tank in an underground area (TIUGA) cannot be directly viewed on all sides. (Refer to HSC 6.67 for direct viewing; DOES NOT apply to: 1. Piping connected to a tank that contains new oil/used oil for lubricant or coolant in a motor engine or transmission, or oil-filled operational/manufacturing equipment. 2. Piping connected to a tank used solely in connection with a fire pump or emergency system, legally required by standby system, or optional standby system. 3. Piping connected to a petroleum hazardous waste tank that complies with hazardous waste tank standards (22 CCR Ch. 15, Art. 10) and facility has been issued a unified program facility permit pursuant to HSC 25404.2 for generation, treatment, accumulation, or storage of hazardous waste.) (24CCR Title 9 Section 5703.6.2.2.) HSC 25270.4.5(a), HSC 25270.2(o)(1)(C)(iv)
<input type="checkbox"/> 4030044	Failure of an owner/operator of an excluded tank in an underground area (TIUGA) with less than 55-gallon capacity to have secondary containment, conduct monthly inspections, and/or maintain a log of inspections. HSC 6.67 25270.2(a)(8)
3 <input checked="" type="checkbox"/> HMD5104	Failed to submit, and keep up to date, the APSA program element in CERS. SDCC 68.904; 27 CCR 15188(a),(b),(c),&(f)

REQUIREMENTS BASED ON 40 CFR 112.1-112.6

#	VIOLATION DESCRIPTION
<input type="checkbox"/> 4010035	Failed to prepare an appropriate SPCC Plan within 6 months when the facility no longer meets the qualified facility criteria. 40 CFR 112.6(a)(2), 112.6(b)(2)(ii); HSC 6.67 25270.4.5(a)
<input type="checkbox"/> 4010047	(Qualified Facility only- Tier I or II) Failed to have management, or a Professional Engineer if applicable, certify the SPCC Plan and comply with the certification requirements. (40 CFR 112.6(a)(1), 112.6(b).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010048	(Qualified Facility only- Tier I) Failed to certify the SPCC Plan according to 40 CFR 112.6(a)(1) if a technical change has been made to the facility design, construction, operation, or maintenance. (40 CFR 112.6(a)(2).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010052	(Qualified Facility only- Tier II) Failed to have technical amendment(s) certified by management, or a Professional Engineer if applicable. (40 CFR 112.6(b)(2), 112.6(b)(2)(i).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010054	(Qualified Facility only- Tier I) Failed to include in the SPCC Plan a prediction of direction and total quantity of oil potentially discharged from the facility as a result of each type of major equipment failure. (40 CFR 112.6(a)(3)(i).) HSC 25270.4.5(a)
<input type="checkbox"/> 4030041	(Qualified Facility only- Tier I) Failed to provide bulk storage containers/tanks with adequate sized secondary containment to contain the capacity of the largest container plus freeboard for precipitation; failed to position/locate mobile or portable containers to prevent a discharge. (40 CFR 112.6(a)(3)(ii).) HSC 25270.4.5(a)
<input type="checkbox"/> 4030042	(Qualified Facility only- Tier I) Failed to provide systems or follow procedures to prevent overfills as described in the SPCC Plan; failed to routinely test overflow equipment to ensure proper operation. (40 CFR 112.6(a)(3)(iii).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010003	Failed to have a Professional Engineer certify and review the SPCC Plan. (40 CFR 112.3(d).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010008	Failed to maintain a complete copy of the SPCC Plan at the facility if the facility is normally attended at least four hours per day, or at the nearest field office if the facility is not so attended. (40 CFR 112.3(e)(1).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010010	Failed to make SPCC Plan technical amendment(s) within six months when the facility has had a change in design, construction, operation, or maintenance which affects the facility's discharge potential; failed to implement within six months following preparation of the amendment. (40 CFR 112.5(a), 112.5(b).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010009	Failed to perform and properly document a five-year review of the SPCC Plan. (40 CFR 112.5(b).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010039	Failed to have technical amendments certified by a licensed Professional Engineer. (40 CFR 112.5(c).) HSC 25270.4.5(a)

GENERAL SPCC REQUIREMENTS

BASED UPON 40 CFR 112.7

#	VIOLATION DESCRIPTION
<input type="checkbox"/> 4010012	Failed to prepare a written SPCC Plan in accordance with good engineering practices and any applicable more stringent State rules, regulations, and guidelines; failed to prepare a SPCC Plan that follows the sequence of rule or provides a cross-reference; failed to prepare a SPCC Plan that addresses additional procedures/methods/equipment not fully operational; failed to obtain facility management approval for implementation of the SPCC Plan. (40 CFR 112.7 and 112.7(a)(1).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010014	Failed to include alternative environmental protection to SPCC requirements within SPCC Plan. (40 CFR 112.7(a)(2).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010015	Failed to include in the SPCC Plan an adequate facility diagram, or no facility diagram included. The facility diagram is not required for a Tier I Qualified Facility. (40 CFR 112.7(a)(3).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010016	Failed to adequately describe in the SPCC Plan the physical layout of facility, types of oil and storage capacities, tanks, containers, equipment, mobile refuelers, portable containers, transfer operations, and other required information. (40 CFR 112.7(a)(3), 112.7(a)(3)(i-vi).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010017	Plan does not contain procedures for reporting a discharge, and/or a contact list and phone numbers for the facility response coordinator, National Response Center, cleanup contractors with an agreement for response, and all appropriate Federal, State, and local agencies. (40 CFR 112.7(a)(4).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010018	Discharge response procedures are not adequately organized to be readily accessible in an emergency. (40 CFR 112.7(a)(5).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010019	Failed to include in the SPCC Plan a prediction of the direction, rate of flow, and total quantity of oil that could be discharged for each type of major equipment failure where experience indicates a reasonable potential for equipment failure. (40 CFR 112.7(b).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010020	(General Containment) Failed to provide, or include in the SPCC Plan, the appropriate containment, diversionary structures, or equipment to prevent a discharge that will not escape containment before cleanup occurs, including typical failure mode and most likely quantity of discharge. (40 CFR 112.7(c).) HSC 25270.4.5(a)
<input type="checkbox"/> 4010004	Failed to clearly explain why appropriate containment/diversionary structures are not practicable and/or SPCC Plan claiming impracticability is not certified by a licensed Professional Engineer. (40 CFR 112.7(d).) HSC 25270.4.5(a)

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

INSPECTION DATE: 06/01/2022 PAGE 9 OF 12
 RECORD ID #: DEH2002-HUPFP-111672

APSA Program (continued)

- 4010005 Failed to prepare an Oil Spill Contingency Plan following the provisions of 40 CFR Part 109 for impracticability claim. (40 CFR 112.7(d)(1).) HSC 25270.4.5(a)
- 4010006 Failed to provide a written commitment of manpower, equipment, materials when claiming impracticability. (40 CFR 112.7(d)(2).) HSC 25270.4.5(a)
- 4010021 Failed to have record of inspections and integrity tests signed by the appropriate supervisor or inspector, keep written procedures and records of inspections and integrity tests for at least three years, and/or keep comparison records for bulk storage containers subject to 40 CFR 112.8(c)(6). (40 CFR 112.7(e), 112.8(c)(6).) HSC 25270.4.5(a)
- 4020002 Failure to conduct spill prevention briefing for oil-handling personnel at least once a year to assure adequate understanding of the SPCC Plan, including: 1. Known discharges or failures, 2. Malfunctioning components, 3. Any recently developed precautionary measures. 40 CFR 112.7(f)(3); HSC 6.67 25270.4.5(a)
- 2 4020001 Failed to train oil-handling personnel on: operation/maintenance of equipment to prevent discharges; discharge procedure protocols; applicable laws, rules, and regulations; general facility operations; and the contents of the SPCC Plan. (40 CFR 112.7(f)(1).) HSC 25270.4.5(a)
- 4010022 Failed to designate person accountable for discharge prevention who reports to facility management. (40 CFR 112.7(f)(2).) HSC 25270.4.5(a)
- 4010023 Failure to include in the SPCC Plan an adequate description of employee training. 40 CFR 112.7(f)(1), 40 CR 112.7(f)(3), HSC 6.67 25270.4.5(a)
- 4030001 Failed to address security and access control of the oil handling, processing, and storage areas to both prevent acts of vandalism and assist in discovery of discharges. (40 CFR 112.7(g).) HSC 25270.4.5(a)
- 4030002 (For loading/unloading racks) Failure of the secondary containment, and/or rack drainage to flow to a catchment basin, treatment system, or quick drainage system, and hold at least the maximum capacity of the largest single compartment of any tank car or tank truck. (40 CFR 112.7(h)(1).) HSC 25270.4.5(a)
- 4030003 (For loading/unloading racks) Failed to provide an interlocked warning light or physical barriers, warning signs, wheel chocks, or vehicle brake interlock system in the area adjacent to the loading/unloading rack to prevent vehicles from departing before complete disconnection of transfer lines. (40 CFR 112.7(h)(2).) HSC 25270.4.5(a)
- 4030016 Failed to evaluate field-constructed storage tank for brittle fracture or other catastrophe and take appropriate action. (40 CFR 112.7(i).) HSC 25270.4.5(a)
- 4010013 Failure to discuss in the SPCC Plan conformance with SPCC requirements and other effective discharge prevention and containment procedures or any more stringent State rules, regulations and guidelines. (HSC 6.67 25270.4.5(a); 40 CFR 112.7(a)(1), 112.7(j))
- 4030034 (For oil-filled operational equipment) Failed to provide general secondary containment or fulfill alternative requirements to general secondary containment. (40 CFR 112.7(k).) HSC 25270.4.5(a)

SPCC REQUIREMENTS BASED UPON 40 CFR 112.8 & 112.20

REFER TO APSA (HSC CHAPTER 6.67) FOR DEFINITION OF "STORAGE TANK"

- | # | VIOLATION DESCRIPTION |
|----------------------------------|---|
| <input type="checkbox"/> 4010027 | Failed to restrain drainage from diked storage areas by valve(s) or manually activated pump/ejector to prevent discharge. (40 CFR 112.8(b)(1).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030005 | Failed to use valves of manual, open-and-closed design, for drainage of diked areas. (40 CFR 112.8(b)(2).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030008 | Facility drainage system from undiked areas not designed/equipped to retain oil or return oil to facility and/or failed to ensure catchment basin is not in an area subject to flooding. (40 CFR 112.8(b)(3), 112.8(b)(4).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030009 | Failed to provide at least two lift pumps and permanently install at least one pump where drainage waters are treated in more than one treatment unit and such treatment is continuous, and pump transfer is needed. (40 CFR 112.8(b)(5).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030012 | Storage tanks not compatible with materials stored or conditions of storage. (40 CFR 112.8(c)(1).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030010 | (Sized Containment) Secondary containment not sized to contain the entire capacity of the largest single storage tank plus freeboard for precipitation. (40 CFR 112.8(c)(2).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030013 | Failure to ensure diked areas are sufficiently impervious to contain discharged oil. (40 CFR 112.8(c)(2).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030006 | Failed to ensure all of the following before allowing drainage of uncontaminated rainwater from diked area: keep bypass valve normally sealed closed, inspect the retained rainwater, and open then reseal bypass valves under responsible supervision. (40 CFR 112.8(c)(3).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4010026 | Failed to maintain adequate records (or NPDES permit records) of drainage from diked areas. (40 CFR 112.8(c)(3)(iv).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030017 | Failed to provide corrosion protection for partially buried storage tanks. (40 CFR 112.8(c)(5).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030015 | Failed to test or inspect each aboveground tank or container for integrity on a regular schedule and after material repairs. (40 CFR 112.7(e), 112.8(c)(6).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030014 | Failed to ensure tanks are inspected and tested by an appropriately qualified person in accordance with industry standards. (40 CFR 112.7(e), 112.8(c)(6).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4010028 | Failed to include in the SPCC Plan procedures to test or inspect each aboveground container for integrity in accordance with industry standards on a regular schedule, after material repairs are made, by qualified personnel; failed to include the frequency and type of testing and inspections based on container size, configuration, and design. (40 CFR 112.8(c)(6).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030018 | Failure of steam return/exhaust of internal heating coils, which discharge into an open water course, to be monitored, passed through a settling tank, skimmer, or other separation system. (40 CFR 112.8(c)(7).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030019 | Failed to engineer or update each container/tank installation in accordance with good engineering practice to avoid discharges and/or failed to provide at least one of the following overflow prevention devices: audible/visual high liquid level alarm, high liquid level pump cutoff devices, audible or code signal communications between tank gauge and pumping station, or fast response system for determining liquid levels, such as computers, telepulse or direct vision gauges. (40 CFR 112.8(c)(8)(i-iv).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030022 | Failed to regularly test liquid level sensing devices to ensure proper operation. (40 CFR 112.8(c)(8)(v).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030023 | Failed to observe effluent treatment facilities frequently enough to detect any potential for discharges as described in 40 CFR 112.1(b). (40 CFR 112.8(c)(9).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030021 | Failed to promptly correct visible discharges and/or remove any accumulations of oil in diked areas. (40 CFR 112.8(c)(10).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030020 | (For mobile or portable storage tanks EXCEPT mobile refuelers) Failed to position or locate mobile or portable storage container, and/or failure to provide secondary containment with sufficient capacity to contain the largest single mobile or portable container/compartment and sufficient freeboard for precipitation. (40 CFR 112.8(c)(11).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030025 | Failed to inspect buried piping when exposed for any reason; failed to do additional examination or take corrective action if corrosion damage is identified. (40 CFR 112.8(d)(1).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030027 | Failed to provide corrosion protection for buried piping. (40 CFR 112.8(d)(1).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030028 | Failed to cap/blank-flange piping connection at transfer point and mark its origin if not in service. (40 CFR 112.8(d)(2).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030029 | Failed to design pipe supports to minimize abrasion/corrosion and to allow for expansion/contraction. (40 CFR 112.8(d)(3).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030026 | Failed to regularly inspect aboveground valves, piping, and appurtenances. (40 CFR 112.8(d)(4).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030030 | Failed to conduct integrity and leak test on buried piping at installation, modification, construction, relocation or replacement. (40 CFR 112.8(d)(4).) HSC 25270.4.5(a) |
| <input type="checkbox"/> 4030031 | Failed to adequately warn vehicles entering facility to protect piping and other transfer operations. (40 CFR 112.8(d)(5).) HSC 25270.4.5(a) |

Medical Waste Generators

Each violation checked below is for the section(s) of the California health and Safety Code (HSC), California Code of Regulation (CCR), or the San Diego County Code (SDCC) indicated in italics. All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form (HM-926) to document your return to compliance. Please call (858) 505-6880 or your Specialist if you have any questions. UPF = Unified Program Facility; MW = Medical Waste; USPS = United States Postal Service; DOT = Department of Transportation

MEDICAL WASTE GENERATORS

STORAGE, LABELING, AND DISPOSAL

#	VIOLATION DESCRIPTION
<input type="checkbox"/> HMD4200	Failed to obtain or maintain a Small Quantity Medical Waste Registration or a Unified Program Facility Permit. HSC 117705; SDCC 68.904, 68.905, 68.906, 68.907.1, 68.1201
<input type="checkbox"/> HMD4201	Failed to submit or report in CERS chemical inventory information for hazardous waste and/or medical waste, and keep up to date. SDCC 68.904(a)(2)
<input type="checkbox"/> HMD4202	Medical waste (MW) not separated from other waste at the point of origin. HSC 118275
<input type="checkbox"/> HMD4203	Enclosure or designated accumulation area for MW containers not secured. HSC 118307, 118310
<input type="checkbox"/> HMD4204	MW designated accumulation area not posted with an approved, legible biohazardous waste "warning sign" in English & Spanish or in another language, in addition to English which can be read from a distance of at least 25 feet. HSC 118310
<input type="checkbox"/> HMD4205	MW interim storage area not marked with warning signs or international biohazard symbol legible from a distance of 5 feet. HSC 118307, 118310
<input type="checkbox"/> HMD4206	MW interim storage area not properly secured. HSC 118307
<input type="checkbox"/> HMD4207	Sharps not stored in approved container or labeled with the words "sharps waste" or with the international biohazard symbol and the word "BIOHAZARD". HSC 118285(a) & (d)
<input type="checkbox"/> HMD4208	Sharps containers, including those used to containerize trace chemotherapeutic wastes, lined with a plastic bag or inner liner. HSC 117750
<input type="checkbox"/> HMD4209	Full sharps container not taped closed or tightly-lidded to preclude loss of contents. HSC 118285(b)
<input type="checkbox"/> HMD4210	Primary containers accumulating MW not labeled with an electronic tracking system label or a label with generator's name, address and phone number. SDCC 68.1205
<input type="checkbox"/> HMD4211	Medical waste not stored in approved and properly marked biohazard bags. HSC 118275(a)
<input type="checkbox"/> HMD4212	Biohazard bags not tied off to prevent leakage or expulsion of contents during storage and handling. HSC 118280(a)
<input type="checkbox"/> HMD4213	Biohazardous bags not containerized in rigid, leak resistant, and covered containers or bins when placed for storage, handling, or transport. HSC 118280(c)
<input type="checkbox"/> HMD4214	Biohazard bag not ASTM D1709 certified. HSC 117630(b)
<input type="checkbox"/> HMD4215	Biohazard bag(s) are not red, except when yellow to further segregate trace chemo waste or white for pathology waste. HSC 117630(b)
<input type="checkbox"/> HMD4216	Biohazard bags not placed in a USDOT-approved container lined with a biohazard bag that is ASTM D1709 and ASTM D1922 certified. HSC 117630(b)
<input type="checkbox"/> HMD4217	Waste container or bin not labeled with the words "Biohazardous Waste" or with the international biohazard symbol and the word "BIOHAZARD" on the lid and sides. HSC 118280(c)
<input type="checkbox"/> HMD4218	Reusable containers or bins for MW storage not thoroughly washed and decontaminated and maintained in a clean and sanitary manner. HSC 118295, 118305
<input type="checkbox"/> HMD4219	MW interim storage area not marked with warning signs or international biohazard symbol legible from a distance of 5 feet. HSC 118307, 118310
<input type="checkbox"/> HMD4220	MW interim storage area not properly secured. HSC 118307
<input type="checkbox"/> HMD4221	Full sharps container stored more than 30 days at >0°C. HSC 11828(c)
<input type="checkbox"/> HMD4222	Biohazard bag waste stored more than 7 days at >0°C (for generators of 20 or more pounds a month). HSC 118280(e)(1)(A)
<input type="checkbox"/> HMD4223	Biohazard bag waste stored >30 days at below 0°C (for generators of <20lbs/month). HSC 118280(e)(1)(B)
<input type="checkbox"/> HMD4224	Materials of Trade Exemption: transportation logs not maintained for 2 years at the receiving facility HSC 117946(3), 117976(3)
<input type="checkbox"/> HMD4225	Materials of Trade Exemption: transportation logs do not contain the name of the person transporting the medical waste, the number of containers of medical waste transported, the date the medical waste was transported. HSC 117946(3)(a-c), 117976(3)(a-c)
<input type="checkbox"/> HMD4226	Disposal of untreated MW to an unauthorized point. HSC 118340

SMALL QUANTITY GENERATORS ONLY

(<200 POUNDS OF MEDICAL WASTE GENERATED PER MONTH)

#	VIOLATION DESCRIPTION
<input type="checkbox"/> HMD4301	Medical Waste Management Plan (MWMP) not submitted to HMD within 30 days of generating medical waste or making updates to the MWMP. HSC 117935, SDCC 68.1202(c)(2)(B)
<input type="checkbox"/> HMD4302	Did not maintain and show proof of "onsite" medical waste treatment records for 3 years. HSC 117943
<input type="checkbox"/> HMD4303	Did not maintain on file disposal receipts, tracking or shipping documents for medical waste shipped offsite for at least 3 years. HSC 117945
<input type="checkbox"/> HMD4309	MWMP or equivalent information not onsite. HSC 117935, 118032

LARGE QUANTITY GENERATORS ONLY

(>= 200 POUNDS OF MEDICAL WASTE GENERATED PER MONTH)

#	VIOLATION DESCRIPTION
<input type="checkbox"/> HMD4351	Medical Waste Management Plan (MWMP) not submitted to HMD within 30 days of generating medical or making updates to the MWMP. HSC 117960, 117970
<input type="checkbox"/> HMD4352	Records of medical waste treatment not available for 2 years. HSC 117975, 118215(a)(2)(E)
<input type="checkbox"/> HMD4353	Did not make available disposal receipts, tracking or shipping documents for at least 2 years for medical waste shipped offsite. HSC 117975

MW ONSITE TREATMENT FACILITY

#	VIOLATION DESCRIPTION
<input type="checkbox"/> HMD4500	Treated medical waste generated offsite without a permit from the California Department of Public Health (CDPH). HSC 118130
<input type="checkbox"/> HMD4501	Onsite MW treatment permit not obtained or renewed. HSC 117950, 117925, 118130; 65623
<input type="checkbox"/> HMD4502	Current copy of the MW treatment permit not available. HSC 118165, 118180; CCR 65621(f), 65623

COUNTY OF SAN DIEGO

INSPECTION DATE: 06/01/2022 PAGE 12 OF 12
 RECORD ID #: DEH2002-HUPFP-111672

Medical Waste Generators (continued)

- HMD4503 Condition(s) of the MW treatment permit violated. CCR 65623
- HMD4504 Operators who treat medical waste not trained in proper equipment use, proper protective equipment to wear and if necessary, proper cleanup of spills. HSC 117967(a), 117938(b)
- HMD4505 Initial and/or annual training for operators that treat medical waste not provided. HSC 117967(b), 117938(b)(2)
- HMD4506 Initial and/or annual training documentation for operators that treat medical waste not available for two years. HSC 117967(c), 117938(b)(3)
- HMD4507 MW treated by unapproved method/procedure. HSC 118215
- HMD4508 Standard written operating procedures for steam sterilization not established. HSC 118215(a)(2)(A)
- HMD4509 Recording thermometer not calibrated annually. HSC 118215(a)(2)(B)
- HMD4510 No records of annual thermometer calibration checks onsite for at least the past 2 years. HSC 118215(a)(2)(B)
- HMD4511 Heat-sensitive tape or other approved method not used for each load treated onsite. HSC 118215(a)(2)(c)
- HMD4512 Monthly biological indicator or other approved indicator not used to confirm proper sterilization. HSC 118215(a)(2)(D)
- HMD4513 Onsite steam sterilization did not reach 121° C (250° F) for at least 30 minutes. HSC 118215(a)(2)(B)
- HMD4514 Treatment records or logs of dates, time, and temperature not maintained for at least 2 years. HSC 118215(a)(2)(e)
- HMD4515 Treated sharps waste is not destroyed or public access to the treated sharps waste not prevented. HSD118225(c)
- HMD4516 Emergency Action Plan not established or provided to HMD. HSC 118235
- HMD4517 Treatment Closure Plan not established or provided to HMD. HSC 117935(j), HSC 117960(j)

CHEMOTHERAPY, PATHOLOGY, PHARMACEUTICAL, HAZARDOUS, AND UNIVERSAL WASTES

- # VIOLATION DESCRIPTION
- HMD4401 Trace chemotherapy waste not segregated from other MW. HSC 118275(a)(4)

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

CONSENT TO CONDUCT INSPECTION GRANTED BY: Charles Xing TITLE: Scientist

INTRODUCTION:

ROUTINE INSPECTION

The Hazardous Materials Division (HMD) of the Department of Environmental Health serves as the Certified Unified Program Agency (CUPA) for the County of San Diego. As the local CUPA, the Hazardous Materials Division implements the Unified Program, which includes programs pertaining to Hazardous Materials Business Plan, Hazardous Waste, Aboveground Petroleum Storage, and Underground Storage Tanks. In San Diego County, the Hazardous Materials Division also enforces the Medical Waste Management Act.

On 5/21/2021, I conducted a routine inspection of BioAtla, LLC to verify compliance with Hazardous Materials Business Plan (HMBP) requirements, Hazardous Waste (HW) generator requirements and Medical Waste Management Act requirements. This facility develops novel monoclonal antibody and cell based therapeutics. Today's inspection was conducted with facility representatives, Charles Xing, Scientist. Also present for the inspection was Olivia Villalvazo, Environmental Health Specialist for HMD.

Charles Xing granted Olivia Villalvazo and I consent to conduct the on-site inspection.

According to the most recent information submitted to the Hazardous Materials Division (HMD) through CERS (on 8/20/2018), this facility is subject to the following CUPA programs:

- Hazardous Materials Business Plan (HMBP) requirements due to the storage of reportable amounts of hazardous materials on-site (approximately 5681cu.ft of Carbon Dioxide gas and 120gal of Liquid Nitrogen)
- Medical Waste (MW) regulations as a small quantity generator of MW (LQGMW: < 200lbs of MW per month).
- Hazardous Waste (HW) regulations as a small quantity generator (SQG) of HW (SQG: <1,000Kgs of HW per month); EPA ID Number: CAL000436269 (Active).

For Reference:

Last inspection performed by Anastasiya Irkhin, Environmental Health Specialist, on 5/4/2018.

Facility CERS ID Number: 10758046

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

INSPECTION DATE: 05/21/2021 PAGE 2 OF 10
RECORD ID #: DEH2018-HUPFP-004327

VIOLATION # 1

1010008 HMBP not certified as complete and accurate in CERS by the required due date. HSC 25508.2, 19 CCR 2654(b)

Classification: Class II

Observations:

This facility is subject to hazardous materials business plan (HMBP) requirements due to the storage of reportable amounts of hazardous materials (approximately 6993cu.ft of Carbon Dioxide gas, 120gal of Liquid Nitrogen, and 300gal of Diesel Fuel). Facilities subject to HMBP requirements must complete an annual certification of their HMBP plan through CERS. The most recent HMBP certification through CERS before today's inspection was dated 8/20/2018. The facility submitted the Facility Information and Hazardous Materials Inventory elements on 11/14/2019 but this submittal was incomplete as the Emergency Response and Training Plans element was not submitted. There was a comment by the regulator that stated to submit all elements for be considered annual certification.

Corrective Action Due By:06/20/2021

Immediately re-certify your HMBP in CERS by submitting the Facility Information, Hazardous Materials Inventory, and the Emergency Response and Training Plans elements. **Within 30 days** provide documentation of corrective action via email to Aisha.Daniel@sdcounty.ca.gov. You may use the Corrective Action form at the end of this report.

HMBP's must be re-certified annually.

VIOLATION # 2

1010004 Chemical inventory incomplete or not submitted in CERS. HSC 25505(a)(1); 25507(a); 25508.1(a-b); 19 CCR 2654 (a) or (d)

Classification: Class II

Observations:

This facility is subject to hazardous materials business plan (HMBP) requirements due to the storage of reportable amounts of hazardous materials at or above 55gal for a liquid, 500lbs for a solid, or 200 cubic feet for a compressed gas. During the inspection, I observed a 300 gallon emergency diesel generator. Per Charles Xing, BioAlta is responsible for maintenance of the generator as well as record keeping of documents related to the generator. Charles Xing confirmed that the diesel generator has been on-site since they began operating at this facility in 2018. Based on previous submittals, including the the last Hazardous Materials Inventory submitted on 11/14/2019, diesel fuel has not been reported as part of the facility's hazardous materials inventory.

Corrective Action Due By:06/20/2021

Immediately update your HM inventory in CERS. **Within 30 days** provide documentation of corrective action via email to Aisha.Daniel@sdcounty.ca.gov. You may use the Corrective Action form at the end of this report. If guidance is needed with your inventory in CERS, visit our CERS Information webpage or call our CERS help line at (858) 505-6990 for one-on-one guidance.

VIOLATION # 3

3030007 Failed to properly label/date hazardous waste container &/or tank. 22 CCR 66262.34(f)

Classification: Class II

Observations:

I observed one (1) 20gal trash container labeled as "ADC Solid Waste". Per Charles Xing, the ADC solid waste is the trace chemotherapeutic solid and when it is full, the bag goes into the hazardous waste bin labeled Hazardous Waste Solid - Cytotoxic. The "ADC Solid Waste" container was missing the following: the composition and physical state of the wastes, the hazardous properties of the wastes (toxic, ignitable, reactive, corrosive), and the name and address of the generator.

Corrective Action Due By:06/20/2021

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

INSPECTION DATE: 05/21/2021 PAGE 3 OF 10
RECORD ID #: DEH2018-HUPFP-004327

Immediately properly label all containers storing hazardous waste. During the inspection, I provided Charles Xing with a hazardous waste label. **Within 30 days** provide documentation of corrective action via email at Aisha.Daniel@sdcounty.ca.gov. You may use the Corrective Action form at the end of this report.

Containers storing hazardous waste must be labeled with the words "Hazardous Waste", composition and physical state of the wastes, the hazardous properties of the wastes (toxic, ignitable, reactive, corrosive), and the name and address of the generator.

VIOLATION # 4

1010005 Site map not submitted in CERS or not sufficient. HSC 25505(a)(2); 25508.1(f); 19 CCR 2652(a)(3)

Classification: Minor

Observations:

This facility is subject to HMBP requirements for storing hazardous materials in reportable quantities (approximately 6993cu.ft of Carbon Dioxide gas, 120gal of Liquid Nitrogen, and 300gal of Diesel Fuel). A requirement for facilities subject to HMBP is having a site map that contains north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, emergency response equipment, and additional map requirements the governing body of the unified program agency finds necessary. I observed the site map missing the diesel emergency generator.

Corrective Action Due By:06/20/2021

Update your site map to include the 300gal diesel emergency generator. **Within 30 days** provide documentation of corrective action via email at Aisha.Daniel@sdcounty.ca.gov. You may use the Corrective Action form at the end of this report.

A sample map, instructions, and symbols legend can be found at [https://www.sandiegocounty.gov/content/dam/sdc/deh/hmd/pdf/hmbp/HM-952%20\(04-2019\).pdf](https://www.sandiegocounty.gov/content/dam/sdc/deh/hmd/pdf/hmbp/HM-952%20(04-2019).pdf)

INSPECTION REMARKS:

Minor Violations Corrected During Inspection:

- 1) I observed at least four (4) red biohazardous bags not labeled properly labeled with a generator's label. Per Charles Xing, the facility adds the generator labels to the red bags when they remove it from the container to their waste accumulation area. During the inspection, Charles Xing added the generator labels to the red biohazardous bags.
- 2) I observed the Hazardous Waste Solid- Cytotoxic waste bin label missing the accumulation start date. Charles Xing added the accumulation start date to the hazardous waste label.

Hazardous Materials (hazmat):

- Facility's HMBP had last been submitted on 08/20/18 (refer to violation #1)
- Employee Training records were reviewed
- I observed a flammable cabinet in the storage area.
- Hazmat inventory was reviewed:
 - I observed two (2) 20gal hazardous waste containers for the Hazardous Waste Solid - Cytotoxic. The chemical inventory current reports one (1) container for the Hazardous Waste Solid - Cytotoxic. Update your chemical inventory to include the second container.
 - I observed sixteen (16) 437 cubic feet carbon dioxide cylinders throughout the lab area. Please ensure the maximum daily amount correlates with the inventory stored on-site.

Hazardous Waste (hazwaste):

- EPA ID Number: CAL000436269 (Active)
- Hazwaste manifest records were reviewed; Per Charles Xing, no hazwaste has been picked up in 2021. Based on observed hazwaste manifest records, last pick up was 1/6/2020.

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

INSPECTION DATE: 05/21/2021 PAGE 4 OF 10
RECORD ID #: DEH2018-HUPFP-004327

- Attain to HW generation requirements (labeling, accumulation times, disposal, records, employee training, etc.)

This facility has satellite accumulation of hazardous waste in their lab area. For satellite accumulation of hazardous waste, please keep in mind:

1. Waste must be accumulated in containers (not tanks) at or near or at the initial point of generation, and is under the control of the operator.
2. Waste must not be on-site for more than 1 yr from initial date of accumulation.
3. Initial date of accumulation must be clearly marked and visible on each container.
4. Within 3 days of reaching the quantity limits, the generator must mark the container with the date that limit was reached, and comply with the other applicable regulations for HW.

Medical Waste:

- Medical waste tracking documents and disposal records were observed. Per Charles Xing, Veolia picks up medical waste every week.
- Proper signage observed posted outside of designated medical waste accumulation areas.
- Based on recent (2020 - 2021) medical waste disposal records, this facility generates less than 200lbs of medical waste per month, however, based on medical waste disposal records from 2019, the facility generated more than 200lbs of medical waste per month. Per Charles Xing, the facility has not generated a lot of medical waste due to the pandemic. Please ensure to update your Medical Waste Management Plan when your facility starts operating at normal capacity and the medical waste generated increases above 200lbs per month.

ADDITIONAL REMARKS:

During the inspection, the content of this report was reviewed with Charles Xing and this inspection report was not signed due to current Public Health Orders and COVID-19 restrictions.

Local information and updates about COVID-19 are available online at: <https://www.sandiegocounty.gov/coronavirus.html>

To receive text messages with COVID-19 information and updates, send "COSD COVID-19" to the number 468-311 on your mobile phone.

Medical Waste Generators

Each violation checked below is for the section(s) of the California health and Safety Code (HSC), California Code of Regulation (CCR), or the San Diego County Code (SDCC) indicated in italics. All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form (HM-926) to document your return to compliance. Please call (858) 505-6880 or your Specialist if you have any questions. UPF = Unified Program Facility; MW = Medical Waste; USPS = United States Postal Service; DOT = Department of Transportation

MEDICAL WASTE GENERATORS

STORAGE AND LABELING

#	VIOLATION DESCRIPTION
<input type="checkbox"/> HMD4201	UPF Permit not obtained. HSC 117705, SDCC 68.904; 68.905; 68.906; 68.907.1; 68.1202
<input type="checkbox"/> HMD4216	Failed to submit or report in CERS chemical inventory information for hazardous waste and/or medical waste, and keep up to date. SDCC 68.904(a)(2)
<input type="checkbox"/> HMD4202	Medical waste (MW) not separated from other waste at the point of origin. HSC 118275
<input type="checkbox"/> HMD4203	Enclosure or designated accumulation area for MW containers not secured. HSC 118307, 118310
<input type="checkbox"/> HMD4204	MW designated accumulation area not posted with an approved, legible biohazardous waste "warning sign" in English & Spanish or in another language, in addition to English which can be read from a distance of at least 25 feet. HSC 118310
<input type="checkbox"/> HMD4205	Medical SOLID WASTE not secured to deny access to unauthorized persons. SDCC 68.1211
<input type="checkbox"/> HMD4206	Leak or spill of MW not properly decontaminated. HSC 118300
<input type="checkbox"/> HMD4207	Sharps not stored in approved container or labeled with the words "sharps waste" or with the international biohazard symbol and the word "BIOHAZARD". HSC 118285(a) & (d)
<input type="checkbox"/> HMD4208	Full sharps container not taped closed or tightly-lidded to preclude loss of contents. HSC 118285(b)
<input type="checkbox"/> HMD4209	Primary containers accumulating MW not labeled with an electronic tracking system label or a label with generator's name, address and phone number. SDCC 68.1205
<input type="checkbox"/> HMD4210	Medical waste not stored in approved and properly marked biohazard bags. HSC 118275(a)
<input type="checkbox"/> HMD4211	Biohazard bags not tied off to prevent leakage or expulsion of contents during storage and handling. HSC 118280(a)
<input type="checkbox"/> HMD4212	Biohazardous bags not containerized in rigid, leak resistant, and covered containers or bins when placed for storage, handling, or transport. HSC 118280(c)
<input type="checkbox"/> HMD4213	Waste container or bin not labeled with the words "Biohazardous Waste" or with the international biohazard symbol and the word "BIOHAZARD" on the lid and sides. HSC 118280(c)
<input type="checkbox"/> HMD4214	Reusable containers or bins for MW storage not thoroughly washed and decontaminated and maintained in a clean and sanitary manner. HSC 118295, 118305
<input type="checkbox"/> HMD4215	Frozen (0°C/32°F) biohazardous waste stored for more than 90 days. HSC 118280(e)(2)
<input type="checkbox"/> HMD4306	Full sharps container stored more than 30 days at >0°C. HSC 118285(c)
<input type="checkbox"/> HMD4307	Biohazard bag waste stored more than 7 days at >0°C (for generators of 20 or more pounds a month). HSC 118280(e)(1)(A)
<input type="checkbox"/> HMD4308	Biohazard bag waste stored >30 days at >0°C (for generators of <20lbs/month). HSC 118280(e)(1)(B)
<input type="checkbox"/> HMD4219	MW interim storage area not marked with warning signs or international biohazard symbol legible from a distance of 5 feet. HSC 118307, 118310
<input type="checkbox"/> HMD4220	MW interim storage area not properly secured. HSC 118307

TREATMENT AND DISPOSAL

#	VIOLATION DESCRIPTION
<input type="checkbox"/> HMD4251	MW treated by unapproved method/procedure. HSC 118215
<input type="checkbox"/> HMD4252	Standard written operating procedures for steam sterilization not established. HSC 118215(a)(2)(A)
<input type="checkbox"/> HMD4253	Recording thermometer not calibrated annually. HSC 118215(a)(2)(B)
<input type="checkbox"/> HMD4254	No records of annual thermometer calibration checks onsite for at least the past 2 years. HSC 118215(a)(2)(B)
<input type="checkbox"/> HMD4255	Heat-sensitive tape or other approved method not used for each load treated onsite. HSC 118215(a)(2)(C)
<input type="checkbox"/> HMD4256	Monthly biological indicator or other approved indicator not used to confirm proper sterilization. HSC 118215(a)(2)(D)
<input type="checkbox"/> HMD4257	Onsite steam sterilization did not reach 121° C (250° F) for at least 30 minutes. HSC 118215(a)(2)(B)
<input type="checkbox"/> HMD4258	Treatment records or logs of dates, time, and temperature not maintained for at least 2 years. HSC 118215(a)(2)(E)
<input type="checkbox"/> HMD4259	Disposal of untreated MW to an unauthorized point. HSC 118340

TRANSPORTATION REQUIREMENTS

#	VIOLATION DESCRIPTION
<input type="checkbox"/> HMD4260	Transportation of MW without State Hauler Registration, USPS or requirements of the DOT "Materials of Trade Exceptions." HSC 118025
<input type="checkbox"/> HMD4311	Medical waste tracking documents or logs not in vehicle transporting medical waste. HSC 118040(a)
<input type="checkbox"/> HMD4313	Medical waste tracking documents or logs not complete. HSC 118040(b)

SMALL QUANTITY GENERATORS ONLY

(<200 POUNDS OF MEDICAL WASTE GENERATED PER MONTH)

#	VIOLATION DESCRIPTION
<input type="checkbox"/> HMD4301	Medical Waste Management Plan (MWMP) not submitted to HMD (initial/updates), if onsite treatment. HSC 117935
<input type="checkbox"/> HMD4302	Did not maintain and show proof of "onsite" medical waste treatment records for 3 years. HSC 117943
<input type="checkbox"/> HMD4303	Did not maintain on file disposal receipts, tracking or shipping documents for medical waste shipped offsite for at least 3 years. HSC 117945
<input type="checkbox"/> HMD4309	MWMP or equivalent information not onsite (only for SQG doing onsite treatment or comply with pharmaceutical waste hauling exemption). HSC 117935, 118032
<input type="checkbox"/> HMD4310	Did not meet the requirements of the pharmaceutical waste hauling exemption. HSC 118032

Subject: Groundwater Sampling and Analysis Performed July 8, 1998 at General Atomics (GA), Building 37 - EPA Identification No. CAD 066 638 957

Dear Mr. Felix:

Enclosed please find a copy of the October 15, 1998 Tetra Tech EM₄ Inc. report documenting groundwater sampling completed in July 1998 near General Atomics' (GA's) Building 37. As you will see in the report, chemical concentrations have remained fairly stable since the February 1995 sampling event.

It is anticipated that a work plan for additional investigation near the source area at Building 37 will be prepared within four-six weeks. When that work plan is available, a copy will be sent to you.

We sincerely appreciate the help you have given us in the past. If you have any questions or comments on our planned activities, we would again appreciate your input. You may call me at (619) 455-2823.

Very truly yours,

A handwritten signature in blue ink that reads "Keith E. Asmussen".

**Subject: Groundwater Sampling and Analysis, Building 37, General Atomics
San Diego, California**

Dear Ms. Slater:

Tetra Tech EM Inc. (Tetra Tech) has prepared this report presenting groundwater monitoring data obtained during groundwater sampling activities conducted at General Atomics Building 37, located on Flintkote Street, San Diego, California (Figure 1, Attachment A). At the request of General Atomics, Tetra Tech collected groundwater samples from five monitoring wells (MW-102, MW-401, MW-902, MW-905, and MW-901) on July 8, 1998 (Figure 2). Groundwater samples were sent for laboratory analysis; this report summarizes the groundwater sampling activities performed and the laboratory analytical results.

BACKGROUND

In September of 1994, Geocon Environmental (Geocon) installed seven monitoring wells and performed subsequent groundwater sampling at the site. The groundwater analytical data collected by Geocon indicated the presence of volatile organic compounds (VOCs) in five of the seven monitoring wells. Barrett Consulting Group (Barrett) was later contracted by General Atomics to conduct confirmation sampling of the seven monitoring wells. On February 15 and 16, 1995 Barrett collected groundwater samples from the seven monitoring wells; analytical results indicated the presence of VOCs in five of the seven monitoring wells. Concentrations of trichloroethane (TCE) ranged from 44,000 micrograms per liter ($\mu\text{g/l}$) in monitoring well MW-102 to 33 $\mu\text{g/l}$ in MW-905. Table 1 in Attachment B summarizes the historical results for all VOCs previously detected in groundwater samples collected from the site.

FIELD ACTIVITY

Field activities were conducted on July 8, 1998. Five groundwater monitoring wells were purged using a stainless steel submersible pump, disposable hand bailers, and a peristaltic pump. Once on site, a pre-sampling meeting was held and covered health and safety issues, a review of sampling protocol, decontamination procedures, and the order in which the wells were to be sampled; the well with the lowest historical contaminant concentrations was sampled first and the well with the highest historical contaminant concentration was sampled last. Based on the analytical results of groundwater samples collected by Barrett in February of 1995, the following monitoring well sampling order was proposed: MW-901, MW-902, MW905, MW-401, and MW102. Upon completion of the pre-sampling meeting, well covers were removed from each well and a H-Nu Systems Inc. Photoionization detector (PID) was used to monitor for organic vapors at the well head and breathing zone. No measurable concentrations of

organic vapors were detected above the background concentration of 1 part per million (ppm) in four of the five monitoring wells. An initial measured concentration of 2 ppm was detected at the well head of MW-902; by the time the well was sampled no detectable concentrations of organic vapors were detected at this monitoring well. Following organic vapor monitoring, depth-to-groundwater and well depth measurements were collected from each well and the volume of water within each well casing was calculated. A summary of depth-to-groundwater, total measured well depth, and well volumes is presented in Table 2 of Attachment B. The following is a description of purging and sampling activities at each well.

Purging

Tetra Tech set-up on MW-901 at approximately 0900 to begin purging three well casing volumes (approximately 18 gallons) of groundwater from the well into a Department-of-Transportation (DOT) rated 55-gallon drum. General Atomics supplied a DOT rated 55-gallon drum at each well location. One well casing volume was calculated at approximately 6 gallons (see Table 2 in Attachment A). The well was purged with a stainless steel submersible pump from a dedicated discharge line; purging procedures were in general conformance with Tetra Tech's standard operating procedures (SOPs) for groundwater sampling, and the County of San Diego Site Assessment and Mitigation (SA/M) Manual. Prior to purging, the submersible pump and associated electrical line was thoroughly decontaminated in a three-step decontamination procedure. The procedure included washing with Alconox detergent and deionized water, rinsing with tap water, and a final rinse with deionized water. The well was then pumped at 0.5 gallons per minute (gpm). The water level within the well was periodically drawn down below the pump intake requiring the pump to be shut down to allow the well to recharge. At 0.5 gpm and allowing the well to periodically recharge, purging 18 gallons of groundwater required approximately 2 hours. During purging, Tetra Tech used a Horiba U-10 Water Quality meter to monitor the following parameters: dissolved oxygen, pH, temperature, specific conductance, turbidity, and salinity. Throughout purging, the groundwater did not appear turbid or contain organic debris. Water quality parameters stabilized within 10 percent during the removal of 18 gallons of groundwater. Table 3 in Attachment B summarizes groundwater quality parameters. Groundwater sampling data sheets are included in Attachment C.

At 0940 Tetra Tech began purging three well casing volumes (approximately 13 gallons) of groundwater from MW-902 using a disposable hand bailer. One well casing volume was calculated at approximately 4.2 gallons. During purging, plant roots were recovered from the well. In addition, throughout the purging processes the groundwater remained highly turbid; turbidity as measured by the water quality meter increased from beginning to end of purging with final measurements over the detectable range of the meter. All other water quality parameters were stabilized within 10 percent during the removal of 13 gallons of groundwater. Purging 13 gallons with the disposable hand bailer required approximately 2 hours. Table 3 in Attachment B summarizes groundwater quality parameters. Groundwater sampling data sheets are included in Attachment C.

At 1135 Tetra Tech began purging three well casing volumes (approximately 13.5 gallons) of groundwater from MW-905. Tetra Tech calculated one well casing volume to be approximately 4.5 gallons. Groundwater was purged at a rate of approximately 0.08 gpm using a peristaltic surface pump with dedicated downhole and discharge lines. With a purging rate of approximately 0.08 gpm, the time required to purge 13 gallons was approximately 2 hours 45 minutes. Water levels within MW-905 were not drawn down sufficiently enough at any point during purging to require the pump to be shut down in

order to allow the well to recharge. Water quality parameters were monitored during purging process. The groundwater initially appeared clear and remained visually clear throughout purging, with no organic debris encountered in the monitoring well. In addition, measured water quality parameter stabilized within 10 percent during the removal of 13 gallons of groundwater. Table 3 in Attachment B summarizes groundwater quality parameters. Groundwater sampling data sheets are included in Attachment C.

At 1220 Tetra Tech began purging three well casing volumes (approximately 21 gallons) of groundwater from MW-401. One well casing volume was calculated at approximately 7 gallons. The well was purged with a stainless steel submersible pump with a dedicated discharge line. Prior to purging the pump was thoroughly decontaminated using the same decontamination procedures described above. The purging rate was approximately 0.25 gpm. Within 20 minutes the water level within the well was drawn down below the pump intake and the pump was shut down to allow the well to recharge. Due to the slow recharge of the well, only 9 gallons of groundwater was removed from the well by 1405. Water quality parameters were monitored during purging process. The groundwater initially appeared slightly turbid, with turbidity increasing after the water level was drawn down below the pump intake. No organic debris were observed during the purging process. Table 3 in Attachment B summarizes groundwater quality parameters. Groundwater sampling data sheets are included in Attachment C. It should be noted that the specific conductance units are not in micromhos per centimeter ($\mu\text{mhos/cm}$), as noted on the forms, but in millimhos/cm. Specific conductance is presented in $\mu\text{mhos/cm}$ in Table 3.

The decision to purge only 9 gallons was made after the County of San Diego Department of Environmental Health inspector for this project, Dave Felix, was contacted by the Tetra Tech project manager, Rod Reeve. Mr. Reeve contacted the county to get concurrence on purging only one well casing volume. Mr. Felix stated that one well casing volume was sufficient for purging as long as the well recharged 80 percent of its initial volume before sampling.

At 1308 Tetra Tech began purging three well volumes (approximately 27 gallons) of groundwater from MW-102 using a disposable plastic bailer. One well casing volume was calculated at 8.8 gallons. During purging, groundwater appeared clear with no organic debris recovered with the bailer. Having received concurrence from Dave Felix concerning purging less than three volumes, purging of the well was terminated at 1410 after the removal of approximately 14 gallons (approximately 1.5 volumes). Water quality parameters were stabilized within 10 percent during removal of 14 gallons. Table 3 in Attachment B summarizes groundwater quality parameters. Groundwater sampling data sheets are included in Attachment C.

Sampling

Following purging of the five monitoring wells, each well was returned to in the order it was purged and sampled with a disposable plastic bailer. Prior to sampling, groundwater elevations were measured to assess if the wells had recharge to at least 80 percent of their original elevation (see Table 2 in Attachment A for depth to groundwater data). All pre-sampling elevations were within 10 percent of their original elevations.

Samples were collected in appropriate containers, labeled and delivered chilled to Calscience Environmental Laboratories, Inc. and Environmental Engineering under proper chain-of-custody documentation. Samples sent to Calscience Environmental Laboratories were analyzed for volatile

organic compounds (VOCs) using Environmental Protection Agency (EPA) Method 8021B, total nitrogen using EPA Method 351.3, and general minerals using EPA Method 300.0. Included in the general minerals analysis were the following analyses and associated methods: surfactants, EPA Method 425.1; specific conductance, EPA Method 120.1; hardness concentration, EPA Method 130.2; pH, EPA Method 150.1; total alkalinity, bicarbonate concentration, and carbonate concentration using Standard Method (SM) 2320B; total dissolved solids (TDS), EPA Method 160.1; and copper, zinc, calcium, iron, magnesium, manganese, potassium, and sodium using EPA Method 6010A. Samples sent to Environmental Engineering were analyzed for total fecal coliform SM 9221E. General minerals and fecal coliform analysis was conducted to assess the potential for a sewer leak into the groundwater. A copy of the analytical results and chain-of-custody documentation are included in Attachment D to this report.

The groundwater levels obtained on July 8, 1998, within MW-901, MW-905, and MW-401 were used to assess the site groundwater gradient direction and magnitude. Using a triangulation between these three monitoring wells, a resultant gradient was calculated to be approximately 0.0024 feet per foot (ft/ft) in a north-northeast direction (Figure 3). In addition, groundwater elevation data for this sampling event depicts a localized high in the vicinity of MW-102. This groundwater high point was also observed by Geocon during their December 1, 1994, groundwater monitoring event.

Groundwater analytical results from MW-102 indicate the highest concentrations of VOCs detected in the five monitoring wells sampled at the site. Analytical results indicated concentrations of the following compounds at or above the laboratory reporting limits: trichlorofluoromethane (TCFM [50 µg/l]); 1,1-dichloroethene (1,1-DCE [90 µg/l]); methylene chloride (MeCL [55 µg/l]); 1,1-dichloroethane (1,1-DCA [5 µg/l]); *c*-1,1-dichloroethene (*c*-1,2-DCE [1 µg/l]); chloroform (ClFM [80 µg/l]); carbon tetrachloride (1 µg/l); trichloroethene (TCE [59,000 µg/l]); tetrachloroethene (PCE [310 µg/l]); and toluene (1.7 µg/l).

Groundwater analytical results for MW-401 indicate VOC concentrations of TCFM (21 µg/l), 1,1-DCE (19 µg/l), 1,1-DCA (8 µg/l), TCE (210 µg/l), PCE (59 µg/l), and toluene (0.8 µg/l). MW-902 and MW-905 indicated VOC concentrations of TCFM (1 and 5 µg/l), 1,1-DCE (6 and 10 µg/l), TCE (60 and 52 µg/l), and PCE (18 and 31 µg/l), respectively. TCE at 5 µg/l was the only VOC detected from MW-901 above the laboratory reporting limit. Total fecal coliform was not detected above the laboratory reporting limits or method detection limits in any of the samples. Table 1 in Attachment B summarizes the analytical results for VOCs. Table 4 summarizes the additional analyzed parameters mentioned above.

Quality Assurance/Quality Control Samples

Quality assurance/quality control (QA/QC) samples were collected and analyzed to evaluate the quality and accuracy of field sampling and laboratory methods. Field QA/QC samples included an equipment blank, field blank, and trip blank. Laboratory QA/QC samples included a method blank, a matrix spike/matrix spike duplicate (MS/MSD), and laboratory control sample (LCS). Neither the field blank, equipment blank, or trip blank indicated concentrations of VOCs above the laboratory reporting limits. The LCS had recoveries within the laboratory accepted QC limits of a known spiked compound. The MS/MSD sample had recoveries of known spiked compounds between 88 and 113 percent with relative percent differences of 9 to 12 percent. The high recoveries of the LCS and the MS/MSD indicate that laboratory methods and matrix interference is not likely to have biased the data high or low.

CONCLUSIONS

Based on the results of groundwater monitoring and sampling conducted by Tetra Tech on July 8, 1998, groundwater gradient and direction of flow, along with analytical results appear to generally support the findings of previous groundwater sampling events at the site. Groundwater gradient is approximately 0.0024 ft/ft in the north-northeast direction, towards Soledad Valley.

Total dissolved solids data indicate that monitoring wells MW-101 and MW-901 contained saline water and the remaining wells contained brackish water. This is based on the assumption that TDS concentrations for brackish water range from 1,000 to 10,000 milligrams per liter (mg/l), and TDS concentrations for saline water range from 10,000 to 100,000 mg/l (Freeze and Cherry 1979). *NO 101!*

TCE was detected in all five monitoring wells with the highest concentration in MW-102 (59,000 µg/l). This concentration represents the highest detected concentration in MW-102 to date. The concentration of TCE detected in monitoring well MW-401 is substantially higher than concentrations detected previously (a previous concentration range of 41 to 78 µg/l to the current reported concentration of 210 µg/l). Concentrations of TCE in monitoring wells MW-902, and MW-905 are within the range of detected concentrations from previous investigations; concentrations of TCE in MW-901 have increased from less than 1 µg/l to 5 µg/l.

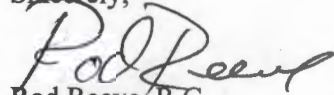

In addition, analytical results indicate that nitrogen dissolved in the groundwater at the site is predominantly in the form of nitrate (NO₃⁻). Nitrate concentrations range from 3.3 mg/l to 65.8 mg/l with the highest concentration reported in MW-901. Nitrate is the main form in which nitrogen occurs in groundwater; the other forms are nitrite (NO₂⁻), ammonium (NH₄⁺), ammonia (NH₃), nitrogen (N₂), nitrous oxide (N₂O), and organic nitrogen. Nitrite was not detected in any of the sampled wells above laboratory method detection limits. Although nitrate in groundwater is typically caused from man-made sources (agricultural activities, sewage [Freeze and Cherry 1979]), the absence of fecal coliform in the groundwater (results below the laboratory method detection limit of 2 MPN [most probable number]), and MBAS results below the laboratory detection limits of 0.1 mg/l suggest that the nitrate concentrations are not the result of a nearby discharge of sewage from a sanitary sewer line.

Other parameters such as, specific conductance, total dissolved solids, hardness, total alkalinity, bicarbonate, chloride, sulfate, sodium, magnesium, and manganese are respectively higher in monitoring well MW-901 than they are in the other wells sampled during this sampling event. In addition, the groundwater elevation in MW-901 is approximately 0.5 feet higher than the groundwater elevations in MW-902, and MW-905 (these three monitoring wells are located along the eastern boundary of the site). The discrepancies between MW-901 and other monitoring wells, especially MW-902 and MW-905, may be associated with geologic conditions such as faults and other natural groundwater barriers. At neutral pH values, the detected concentrations of the metals most likely reflect the presence of soil particles in the samples (the soil samples were not filtered prior to digestion and analysis). Geochemical discrepancies may also be impacted by the different purging procedures used during the sampling event (submersible pump, disposable bailers, and surface pump) in MW-901, MW-902, and MW-905, respectively.

organic compounds (VOCs) using Environmental Protection Agency (EPA) Method 8021B, total nitrogen using EPA Method 351.3, and general minerals using EPA Method 300.0. Included in the general minerals analysis were the following analyses and associated methods: surfactants, EPA Method 425.1; specific conductance, EPA Method 120.1; hardness concentration, EPA Method 130.2; pH, EPA Method 150.1; total alkalinity, bicarbonate concentration, and carbonate concentration using Standard Method (SM) 2320B; total dissolved solids (TDS), EPA Method 160.1; and copper, zinc, calcium, iron, magnesium, manganese, potassium, and sodium using EPA Method 6010A. Samples sent to Environmental Engineering were analyzed for total fecal coliform SM 9221E. General minerals and fecal coliform analysis was conducted to assess the potential for a sewer leak into the groundwater. A copy of the analytical results and chain-of-custody documentation are included in Attachment D to this report.

The groundwater levels obtained on July 8, 1998, within MW-901, MW-905, and MW-401 were used to assess the site groundwater gradient direction and magnitude. Using a triangulation between these three monitoring wells, a resultant gradient was calculated to be approximately 0.0024 feet per foot (ft/ft) in a north-northeast direction (Figure 3). In addition, groundwater elevation data for this sampling event depicts a localized high in the vicinity of MW-102. This groundwater high point was also observed by Geocon during their December 1, 1994, groundwater monitoring event.

Groundwater analytical results from MW-102 indicate the highest concentrations of VOCs detected in the five monitoring wells sampled at the site. Analytical results indicated concentrations of the following compounds at or above the laboratory reporting limits: trichlorofluoromethane (TCFM [50 µg/l]); 1,1-dichloroethene (1,1-DCE [90 µg/l]); methylene chloride (MeCL [55 µg/l]); 1,1-dichloroethane (1,1-DCA [5 µg/l]); c-1,1-dichloroethene (c-1,2-DCE [1 µg/l]); chloroform (ClFM [80 µg/l]); carbon tetrachloride (1 µg/l); trichloroethene (TCE [59,000 µg/l]); tetrachloroethene (PCE [310 µg/l]); and toluene (1.7 µg/l).

Groundwater analytical results for MW-401 indicate VOC concentrations of TCFM (21 µg/l), 1,1-DCE (19 µg/l), 1,1-DCA (8 µg/l), TCE (210 µg/l), PCE (59 µg/l), and toluene (0.8 µg/l). MW-902 and MW-905 indicated VOC concentrations of TCFM (1 and 5 µg/l), 1,1-DCE (6 and 10 µg/l), TCE (60 and 52 µg/l), and PCE (18 and 31 µg/l), respectively. TCE at 5 µg/l was the only VOC detected from MW-901 above the laboratory reporting limit. Total fecal coliform was not detected above the laboratory reporting limits or method detection limits in any of the samples. Table 1 in Attachment B summarizes the analytical results for VOCs. Table 4 summarizes the additional analyzed parameters mentioned above.

Quality Assurance/Quality Control Samples

Quality assurance/quality control (QA/QC) samples were collected and analyzed to evaluate the quality and accuracy of field sampling and laboratory methods. Field QA/QC samples included an equipment blank, field blank, and trip blank. Laboratory QA/QC samples included a method blank, a matrix spike/matrix spike duplicate (MS/MSD), and laboratory control sample (LCS). Neither the field blank, equipment blank, or trip blank indicated concentrations of VOCs above the laboratory reporting limits. The LCS had recoveries within the laboratory accepted QC limits of a known spiked compound. The MS/MSD sample had recoveries of known spiked compounds between 88 and 113 percent with relative percent differences of 9 to 12 percent. The high recoveries of the LCS and the MS/MSD indicate that laboratory methods and matrix interference is not likely to have biased the data high or low.

**Subject: Work Plan for Installation of Groundwater Monitoring Wells and Pilot Scale Sparge Remediation System
General Atomics, Building 37
11222 Flintkote Avenue, San Diego, California 92121**

Dear Ms. Slater:

Tetra Tech EM Inc. (Tetra Tech) has prepared this work plan to install, operate, and evaluate a pilot-scale groundwater sparge remediation system at the General Atomics Building 37 Site, located at 11222 Flintkote Avenue, San Diego, California (Figure 1, Attachment A). As part of the operation and evaluation of the groundwater sparge remediation system, Tetra Tech will install three sparge locations down gradient of the former vault (Figure 2); each sparge location will consist of two sparge points at different depth intervals. In addition, Tetra Tech will install two additional groundwater monitoring wells at the site and conduct a baseline groundwater sampling event. Groundwater samples will be obtained from the five monitoring wells currently at the site and the two newly installed monitoring wells. Approximately one month after startup of the remediation system, Tetra Tech will perform the first of six monthly groundwater sampling events using the four existing monitoring wells situated around the proposed sparge system (GECC-102, MW-01, MW-02, and MW-03) in an effort to evaluate the effectiveness of the remedial activities.

BACKGROUND

In September of 1994, Geocon Environmental Consultants Inc, (Geocon) installed seven monitoring wells and performed groundwater sampling at the site. The groundwater analytical data collected by Geocon indicated the presence of volatile organic compounds (VOCs) in five of the seven monitoring wells. Barrett Consulting Group (Barrett) was later contracted by General Atomics to conduct confirmation sampling of the seven monitoring wells. On February 15 and 16, 1995, Barrett collected groundwater samples from the seven monitoring wells; analytical results indicated the presence of VOCs in five of the seven monitoring wells. Concentrations of trichloroethane (TCE) ranged from 44,000 micrograms per liter ($\mu\text{g/l}$) in monitoring well GECC-102 to 33 $\mu\text{g/l}$ in GECC-905. On July 8, 1998, Tetra Tech collected groundwater samples from five monitoring wells (GECC-102, GECC-401, GECC-901, GECC-902, and MW-905). The analytical results and groundwater gradient and direction of flow generally supported the finding of previous groundwater sampling events. The July 1998 water level soundings associated with the sampling event indicated a localized "mounding" of groundwater in the vicinity of monitoring well GECC-102. This groundwater mound has been documented in previous

sampling events as well and may be due to the pressure of a semiconfining layer noted in the borings B-1, B-2, and B-3.

Cross sections (Figures 3 through 8) showing the historical soil and groundwater data as well as inferred subsurface conditions are attached. The cross-sections are based on a compilation of data from previously performed field work and cross-sections prepared by others. The soil samples obtained by Tetra Tech from Boring B-2, later converted to MW-02, indicated contaminant levels slightly higher than those noted during the work done by Geocon in 1994. Although the difference in contaminant concentrations are relatively minor, the differences may be a reflection of 4 years additional time for migration to occur. The differences may also be a result of subsurface conditions being heterogeneous.

There appear to be some minor discrepancies in horizontal and vertical scale between previous plots and current site conditions. An example is the appearance of local low areas where SB-11 and SB-20 are located on the soil analytical result cross sections (Figures 3 and 4). These discrepancies may be the result of grading changes which have occurred after the preparation of the Geocon report. After completing the installation of the monitoring wells MW-01, MW-02, and MW-03, in November 1998, Tetra Tech surveyed them relative to the existing wells on site. Upon completion of this proposed next phase of work, a California licensed surveyor will be retained to survey all monitoring wells and appropriate topographical features in an effort to alleviate these potential discrepancies. Revised cross-sections and maps will be submitted with the final report.

Additionally, there appears to be an approximate 10 to 17 foot discrepancy between the level at which Geocon and Tetra Tech have logged the top of the Scripps Formation. Preparation of the cross sections discussed above have not used boring GECC-102 in projection of the inferred contact between slope wash/alluvium and the Scripps Formation. During the proposed drilling operations, Tetra Tech will attempt to resolve this discrepancy as discussed in the Soil Sampling section below.

OBJECTIVE AND RATIONALE

The objective of installing a pilot-scale sparge system and additional monitoring wells at the site is to evaluate the effectiveness of the sparge points to remediate or reduce concentrations of TCE impacted groundwater, and to further delineate the vertical and horizontal extent of TCE impacts. The rationale for installing the sparge system immediately down gradient of the former vault is because TCE concentrations in groundwater are highest in this area as can be seen on Figures 6, 7, 8 and 9.

The objective of baseline groundwater sampling event is to provide data on the current groundwater quality across the site and provide a basis from which to evaluate the effectiveness of the pilot scale sparge system. The evaluation will be based on data obtained from the six monthly sampling events compared to the baseline sampling results.

A pilot scale evaluation of the KVA C-Sparger (C-Sparge), will be performed in the immediate vicinity of the previously located vaulted tank which had contained chlorinated products. The C-Sparge system pumps an air/ozone mixture through the Spargepoint® into the subsurface. The entrainment of ozone in the influent stream increases the efficiency of oxidation of the chlorinated compounds. The C-Sparge system will be monitored over a period of six months. The monitoring will be accomplished through monthly groundwater sampling. The groundwater sampling will utilize low flow sampling techniques in currently existing monitoring wells in the vicinity of the sparge locations.

SCOPE OF WORK

The scope of work to be performed is presented below.

Monitoring Well Installation

Drilling and Logging

Five soil borings will be advanced at the site using a truck-mounted hollow stem auger drill rig, in accordance with procedures and methods outlined in the Site Assessment and Mitigation (SA/M) Manual, prepared by the County of San Diego Department of Environmental Health (DEH). The boring locations are shown on Figure 2. Boring permit applications will be submitted to the DEH. It is understood that General Atomics personnel will provide underground clearance prior to the actual drilling operations. Two borings will be advanced with 10-inch diameter hollow stem augers and completed as 4-inch monitoring wells. The remaining three borings will be advanced with 10-inch diameter hollow-stem augers and completed as sparge locations. The borings to be completed as monitoring wells will be advanced crossgradient and downgradient of the sparge locations. The crossgradient boring will be advanced to approximately 60 feet below ground surface (bgs), and the down-gradient boring will be advanced to approximately 30 feet bgs. The sparge locations will be installed in the vicinity of the former vaulted tank location, near monitoring wells MW-01, MW-02, MW-03, and GECC-102. One boring will be advanced slightly down gradient of the former vault location, the other two borings will be advanced approximately 15 feet down gradient of the first boring location, forming a triangle. Each of the three sparge boring will extend approximately 70 feet bgs.

Field personnel will log and classify soil according to the Unified Soil Classification System and Tetra Tech's standard operating procedures (SOPs) for logging and classifying soil. SOPs were previously submitted to General Atomics.

Soil Sampling

During drilling operations, the first boring to be utilized as a sparge location will be continuously cored within the soil interval from approximately 20 to 45 feet bgs. This will be done in an attempt to determine the location of the inferred contact between fill material/alluvium and the top of the Scripps Formation. Additional sampling will not be performed in the three sparge location borings

Soil samples will be collected at approximately each 5-foot interval bgs in the two borings which will be utilized as monitoring wells (B-4 and B-5). These samples will be used to further delineate the horizontal and vertical extent of VOC contamination at the site. Three soil samples will be analyzed for VOCs from each of the monitoring well borings. Soil samples will be screened in the field for organic vapors using a photoionization detector (PID) with a 10.6 electron volt lamp. It is currently anticipated that one sample will be collected from the approximate top of the Scripps Formation based on previous data obtained at the site as can be seen on Figures 6 and 7, in monitoring wells MW-02 and MW-03 which indicated a semiconfining layer at the top of the Scripps Formation. One soil sample will be obtained from near the bottom of each boring due to the potential aquatard at the base of the Scripps Formation/top of Ardath Shale. Additionally, one location in each monitoring well boring will be analyzed for VOCs based on the highest concentration of organic vapors detected with the PID.

Soil samples will be collected using a California modified split-spoon sampler. The hollow stem auger will be advanced into the soil until the top of the desired sampling interval is reached. The split-spoon sampler will then be attached to the bottom end of a drive rod, and the sampler will be driven into the formation 12 to 18 inches. The number of blows required to drive the sampler 6 inches will be counted and logged. Blow counts will provide an indication of the in-place density of the soil being sampled. Following sample acquisition, the sampler will be brought to the surface, removed from the drive rod and split open. The soil sample will then be logged and if appropriate, placed in laboratory prepared jars, and placed on ice until transport to a laboratory can be arranged.

Monitoring Well Construction

why?

Two groundwater monitoring wells will be installed at the site; one near the northeast corner of the site (downgradient) and one near the former southwest corner of Building 39 (crossgradient). Based on the existing knowledge of the site hydrogeology, the following monitoring well construction is anticipated; however, field observations may alter the final design. These two borings will be converted into 4-inch diameter monitoring wells using schedule 40 polyvinyl chloride (PVC) casing. The two monitoring wells will be constructed with a 2.5-foot sump on the bottom of each well and 10 feet of slotted screen. The decision to utilize ten feet of screen is based on the relatively low yield of the saturated zone at this site. The sumps will be installed to assess the potential presence of dense non-aqueous phase liquids (DNAPL). However, DNAPL has not been encountered at the site and is not anticipated. The downgradient well will be completed to approximately 30 feet bgs with a 10-foot slotted screen interval above the sump. This construction scenario assumes the semiconfining layer will not be encountered in this area. This assumption is based on review of previous work done by Geocon in the northeast portion of the site (GECC-905), where the magnitude of difference between "at time of drilling" water level, -vs- static water level was not observed, as opposed to the observation noted by Tetra Tech in the vicinity of GECC-102, MW-01, MW-02, and MW-03. Only fill materials/alluvium was logged previously as can be seen in Figures 5 and 8. If semiconfining conditions are encountered, the construction of this well may be altered. The cross-gradient well will be installed to approximately 60 feet bgs with a 10-foot slotted screen interval above the sump. The screen interval in both wells will consist of 0.010 inch slotted screen. A Lone Star 2/12 to 2/16 filter pack will be constructed around the screen interval. The filter pack will extend from the bottom of the boring to 3 feet above the top of the screen. A 3-foot-thick bentonite seal will be constructed above the top of each filter pack. A bentonite/cement grout will be placed on top of the bentonite seal to approximately 2 feet bgs. A flush-mounted traffic box will be installed around the top of the well casing, slightly elevated above grade to prevent inflow of surface water runoff into the well. Each monitoring well will be developed at the time of installation by block surging and purging to produce a pumping effect within the saturated screen section.

Installation of Remediation System

Sparge Location Construction

Three sparge locations will be constructed at the site and will be located approximately 15 feet apart, forming a triangle situated slightly downgradient of the former vault location (Figures 9 and 10). The positioning of the sparge locations is based on the proximity to the original source. This is also the area which contains the highest concentrations of VOCs in groundwater and soil as can be seen on Figures 3 through 9. Each sparge location will consist of two sparge points. One sparge point will be situated 5 to 7 feet below the confining layer, which was identified during the last round of monitoring well

installation (approximately 47-52 feet bgs). The second sparge point will be situated near the contact of the Scripps Formation and the underlying Ardath Shale (approximately 65-70 feet bgs). The basis for the selection of the lower sparge point location is based on the higher permeability of these soils relative to the upper zones resulting in an increased zone of influence. The upper sparge point is located beneath the inferred semiconfining layer in an effort to extend the zone of influence by allowing the ozonated air stream to disperse laterally along the bottom of the semiconfining layer. Tetra Tech also proposes to install two 3/4-inch diameter micro-wells within each sparge location. The micro wells will be screened at a depth approximately five feet above each sparge point. This will allow sampling at the time of startup, as well as after shutdown of the system in an effort to evaluate the system impact at the point of origination of the ozone sparging.

Each sparge point is 30 inches long. Once positioned at the desired depth within a boring, a Lone Star #30 filter pack will be constructed around the sparge point, approximately 2 feet above the top and one foot beneath the bottom of the point. Bentonite grout will separate the filter packs around the lower and upper sparge points, and a bentonite seal will be constructed above the top of the upper sparge point to the surface.

Attached to each sparge point will be a 3/4-inch PVC air line with viton o-rings. Air lines will extend from the sparge points to the ground surface. The lines will then be plumbed to a single control panel. The lines will be placed beneath the asphalt surface in trenches from each sparge location to the control panel. The control panel operates on a 110 volt electrical source.

Alternative configurations of future sparge locations may be considered based upon evaluation of data acquired during the six month pilot test. Key factors involved in the evaluation will include, ability of the system to reduce contaminant concentrations, zone of influence of the system within the low permeability soils, and projected costs involved with continued operation of the system as compared to alternative options.

Surveying

Following installation of the monitoring wells and sparge points, a licensed surveyor will determine the top of casing (TOC) elevation of the newly installed monitoring wells and the ground surface elevation of each sparge location. In addition, the TOC elevation will be resurveyed on all of the existing monitoring wells and appropriate topographical features to provide better control for groundwater measurements at the site. The survey will provide horizontal and vertical coordinates for each survey point. The horizontal control will be accurate to 0.10 feet and tied to the North American Datum of 1983 (NAD'83). The vertical control will be tied to mean sea level (MSL) and accurate to 0.01 feet.

Groundwater Sampling

A minimum of 48 hours after the monitoring wells have been installed and developed, a baseline groundwater monitoring event will be conducted on all the monitoring wells at the site. Following the baseline sampling event, 6 monthly sampling events will be conducted. Monitoring wells to be sampled during the monthly sampling events will include MW-01, MW-02, MW-03, and GECC-102 only.

The monitoring wells will be sampled using low flow purging and sampling techniques. Water quality parameters will be monitored every 5 minutes for at least 30 minutes. Samples will not be collected until such time as the parameters vary between the last three readings by 10 percent or less. At that point a

sample will be obtained. Groundwater sampling procedures will be in accordance with Tetra Tech's SOPs which have previously been submitted to General Atomics. If recharge will not maintain a minimum of 0.5 liter/minute rate, the well may be purged to dryness and sampled upon recovery to a minimum 80 percent of the original static water level.

Groundwater samples will be collected in 40 milliliter volatile organic analysis (VOA) containers preserved with hydrochloric acid. Sample containers will be provided by the analytical laboratory. Groundwater samples for metals will be field filtered using a 0.45 micron filter. Upon collection, the samples will be labeled and stored in a cooler on ice prior to being delivered under chain-of-custody documentation to the analytical laboratory.

ANALYTICAL METHODS

Soil samples collected for chemical analyses will be submitted to Calscience Environmental Laboratories, Inc. (Calscience), a State of California certified analytical laboratory, and analyzed for VOCs by Environmental Protection Agency (EPA) Method 8260. Soil results from EPA Method 8260 will be reported in micrograms per kilogram ($\mu\text{g}/\text{kg}$). In addition, up to four samples may be analyzed for metals using EPA Method 6020. This test method uses induction coupled plasma and mass spectrometry methods. This test method will report concentrations of metals to 1 part per billion (ppb).

Groundwater samples collected for chemical analyses will also be submitted to Calscience and analyzed for VOCs by EPA Method 8260 and metals with EPA Method 6020. Groundwater results from EPA Method 8260 will be reported in $\mu\text{g}/\text{L}$ and soil samples will be reported in $\mu\text{g}/\text{kg}$.

In addition to the primary groundwater samples, the following quality control (QC) samples will be collected:

- Field Blank - A field blank will be collected during groundwater sampling to assess the potential for site ambient conditions to contaminate the samples. The field blank will consist of distilled water collected in a preserved VOA during the sampling event. The field blank will be shipped to the laboratory along with the other samples and analyzed using the same procedures.
- Equipment Blank - An equipment blank will be collected to assess if samples are being contaminated because of inadequate decontamination procedures. The equipment blank will be collected by pouring distilled water over the sampling equipment and collecting the water in a preserved VOA. The equipment blank will be shipped to the laboratory along with the other samples and analyzed using the same procedures.

INVESTIGATION DERIVED WASTE

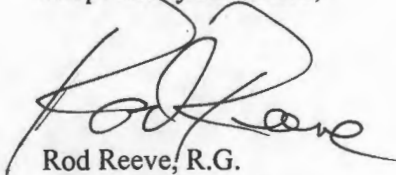

Soil cuttings, decontamination fluid, and well development water generated by the investigation will be containerized in Department of Transportation rated 55-gallon drums. The drums will be labeled and stored onsite pending proper analysis and disposal by General Atomics.

REPORT

A description of the field activities and the analytical results will be provided in a final report approximately one month after Tetra Tech receives the results from the analytical laboratory from the final round of groundwater sampling. Additionally, Tetra Tech will submit the boring and monitoring well information, as required by the San Diego County Department of Environmental Health SAM guidelines.

If you should have any questions regarding this work plan, please contact me at (619) 718-9676.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Rod Reeve". The signature is fluid and cursive, with a large initial "R" and "R".

The attached June 1999 Revised RCRA Facility Assessment narrows the focus of the originally prepared April 1998 RFA by incorporating additional data and comments submitted by General Atomics. We certify, to the best of our knowledge, that we have reviewed the Revised RFA for General Atomics. We further certify that: (1) the RFA conforms with the RCRA Corrective Action Manual, (2) the RFA is technically sound, and (3) the RFA is administratively complete.

Subject: Groundwater Contamination at Build 37, General Atomics in San Diego,
Solid Waste Management Unit # 9, CAD 076 180 843.

On May 1, 1998 the Department of Toxic Substances Control (DTSC) sent General Atomics (GA) a copy of a RCRA Facility Assessment (RFA) and a Consent Agreement for corrective action concerns at the facility operations at 11222 Flintkote Street and 3550 General Atomics Court in San Diego. The RFA was prepared for the facility's historic and interim status operation as of July 1955 and March 1989, respectively. Difficulties in properly characterizing the nature and extent of contamination have necessitated revising the original Consent Agreement to better focus corrective action activities.

SOLID WASTE MANAGEMENT UNITS

The April 1988 RFA identified nine Solid Waste Management Units (SWMU) and five Areas of Concern (AOC). Seven of the identified SWMUs were operating hazardous waste management units. The AOC included buildings and units subject to decontamination and decommissioning activities overseen or reviewed by the California Department of Health Services, the Nuclear Regulatory Commission or the U.S. Department of Energy (DOE). In July and August 1998 GA responded to DTSC with additional information and comments on the RFA. These submittals included documentation for the UST closures.

The D&D activities for Building 39 anticipate no further remediation and DHS approval. During the D&D of Building 37, however, soil contamination due to an underground vault and solvent storage tank was discovered. Despite excavation and removal actions trichloroethene concentrations above the 5 ppb MCL level have been recorded. In September 1994 seven monitor wells were installed. Five of these wells detected TCE above 33 ug/l, with one well

measuring as high as 44,000 ug/l (well MW-102). In November 1998 GA submitted a groundwater sampling report and a workplan for the installation of three additional monitoring wells, prepared by Tetra Tech EM Inc., dated October 15, 1998 and November 18, 1998, respectively. The July 8, 1998 sampling of MW-102 recorded the highest concentration of TCE to date at 59,000 ug/l. Tetra Tech EM Inc. recommends the additional wells to be used to evaluate the applicability of the groundwater remediation system. At least two of the wells would be used for air sparging.

The installation of the three additional wells will result in additional soil samples (minimum of three samples per boring) and VOC measurements. The characterization of the lithography should also better elucidate whether more than one water bearing zone is present beneath the site. Additionally, the preparation of a Corrective Action Plan has been suggested, as well as the further characterization of the vertical and horizontal extent of contamination.

CORRECTIVE ACTION REQUIREMENTS

The Hazardous and Solid Waste Amendments (HSWA) of 1984 require that corrective action activities be conducted at both permitted and interim status facilities. DTSC has adopted and incorporated these requirements pursuant to Section 25150 and 25159.5 of the Health and Safety Code. The releases of hazardous waste, or their hazardous constituents must be addressed by DTSC pursuant to Section 3005(u) of HSWA. It is the policy of DTSC to issue Corrective Action Orders (CAO), or Consent Agreements to assure the oversight and completion of corrective action activities. These activities include facility assessments, facility investigations and remedial actions as outlined in the June 1994 Corrective Action Orientation Manual.

During the preparation of the RFA it was noted that GA has been proactive in the *environmental assessment of its property and operations*. The ongoing efforts to remediate the historic TCE release requires additional attention. For this reason it is recommended that a focused Consent Agreement be negotiated to allow for the most flexible approach toward additional investigation and remediation. A copy of the proposed Agreement is attached. The Consent Agreement is intended to assure that any additional work adequately meets current DTSC and US EPA standards.

EXECUTIVE SUMMARY

In 1984 the United States Congress amended the Resource Conservation and Recovery Act (RCRA) by passing the Hazardous and Solid Waste Amendments (HSWA). These amendments provided authority to the United States Environmental Protection Agency (U.S.EPA) to require comprehensive corrective action on Solid Waste Management Units (SWMUs) and other Areas of Concern (AOCs) at facilities applying for a RCRA permit and those with RCRA Interim Status. The intent of this authority is to address previously unregulated releases of hazardous constituents to air, soil, surface water, groundwater and the generation of subsurface gas. To achieve this objective, a RCRA Facility Assessment (RFA) was performed to identify and evaluate the SWMUs and AOCs at the General Atomics (GA) site.

The purpose of this RFA is to determine whether a release of hazardous waste or hazardous constituents has occurred from SWMUs or AOCs and to determine the need for further action to be performed by GA if necessary. The facility address is 3550 General Atomics Court, San Diego, California 92121, and lies within San Diego County.

This assessment is based on information found in the files of U.S.EPA in Region IX, the U.S. Department of Energy field office in Oakland, the U.S. Nuclear Regulatory Commission field office in Walnut Creek, the Department of Toxic Substances Control (DTSC) regional office, the San Diego County Department of Health Services and the San Diego Fire Department.

GA conducts a broad scope of research and development projects, including product development of advanced power generation systems, energy conservation, and military applications. A privately owned technology research and development company GA is the site of multiple US DOE sponsored projects and privately sponsored research and development.

A total of eight SWMUs and one AOCs were identified and are described in Section 4.0 and Section 5.0 of this report. The SWMUs and AOCs identified were:

SWMU No. 1:	Building 25, NWPF 3
SWMU No. 2:	Building 41, Filtration Unit
SWMU No. 3:	Building 41, Mixer Unit
SWMU No. 4:	Building 41, Drying Oven
SWMU No. 5:	Building 41, Baler/Compactor
SWMU No. 6:	Building 41, Mixed/Hazardous Storage (Lower) Yard
SWMU No. 7:	SUUY, Upper Yard
SWMU No. 8:	Building 37N, Residual Contamination

RCRA Facility Assessment
General Atomics

AOC No. 1: Building 21, TRIGA Building

The first seven SWMUs are currently operating mixed waste treatment units. While subject to environmental reviews by Nuclear Regulatory Commission (NRC), California Department of Health Services (DHS) and Department of Energy (DOE), the area around Buildings 37 (SWMU 8) is listed and recommended for further corrective action due to possible groundwater contamination. GA has taken efforts to characterize the nature and extent of the trichoroethene near Bldg-37 and has notified appropriate agencies such as the San Diego Department of Environmental Health.

The NRC and DHS as agencies issuing GA's operating licenses and the DOE as part of its environmental restoration mission have been active in the remediation of Building 23. The NRC and DHS have been providing oversight of all D&D projects on GA's San Diego site. These buildings and the areas surrounding them have been identified as areas of concern. The restoration of these areas is in progress or nearing completion. No finding of unresolved contamination has been made. It is recommended that these areas are monitored until final decommissioning is completed.

1.0 INTRODUCTION:

The California Environmental Protection Agency (Cal/EPA), Department of Toxic Substances Control (DTSC) has conducted the RFA for the General Atomics site located at 3550 General Atomics Court, San Diego, California 92121. This report provides a summary of the preliminary review, the data evaluation, and the visual site investigation. Primary sources of information utilized in the review include inspection reports, correspondence and facility records found in the files of USEPA in Region IX, the U.S. Department of Energy field office in Oakland, the U.S. Nuclear Regulatory Commission field office in Walnut Creek (now closed), the DTSC Regional office, the San Diego County Department of Health Services and the San Diego Fire Department.

The 1984 Hazardous and Solid Waste Amendments to the Resource Conservation and Recovery Act (RCRA) provide EPA and authorized states with the authority to require comprehensive corrective actions on all solid waste management units (SWMUs) and other areas of concern (AOCs) where releases of hazardous constituents have occurred that potentially threaten human health or the environment. This authority applies to all facilities which currently treat, store and dispose of hazardous waste (or have done so in the past) as regulated under RCRA¹. The intent of this authority is to address releases of hazardous constituents to soil, groundwater, surface water, air and the generation of subsurface gas.

In order to accomplish this objective, a RCRA Facility Assessment (RFA) was performed. The RFA is the first phase in the RCRA corrective action program and consists of one or more of the following tasks: preliminary review and evaluation; visual site inspection; and, when necessary, a sampling visit and subsequent analysis. Other phases, if warranted, are the RCRA Facility Investigation (RFI) to characterize releases and the Corrective Action Measures phase that proposes actual cleanup measures. These two phases are performed by the facility owner/operator either under the RCRA permit, consent agreement or under an enforcement order.

The RFA is performed to determine if a release of hazardous waste or hazardous constituents has occurred from a SWMU. The main components of an RFA are to identify and gather information on releases at the RCRA facility, evaluate SWMUs for releases to all media (soil, groundwater, surface water, air, and subsurface gas) and make determinations regarding releases of concern and the need for further action and interim measures at the facility.

¹ By notice in the Federal Register, in 1987 and 1988, the USEPA elaborated on how regulated hazardous wastes extended to hazardous waste mixed with radioactive waste (mixed waste).

2.0 FACILITY DESCRIPTION

On July 18, 1955 the General Dynamics Corporation created the division known as "General Atomic" with the goals of commercializing nuclear reactor technology. In the following year construction of the facilities at Torrey Pines began. According to its use permit, GA was restricted to research and development on the mesa and manufacturing was permitted in the industrial zoned Sorrento Valley area. In October of 1967 the Gulf Oil Corporation announced the agreement to purchase General Atomic and a total of 415 acres. From 1973 to 1982 General Atomic was operated as a partnership between Royal Dutch Shell and Gulf Oil. Approximately 56 acres were deeded to Shell with the dissolution of the partnership. In 1983 Gulf Oil merged with the Chevron Corporation. On August 13, 1986 the Chevron Corporation announced the sale of its wholly owned subsidiary, GA Technologies Inc. to companies controlled by Neal and Linden Blue. Included in the sale were the 120 acres on which the GA Technologies' facilities were located, with the Chevron Land and Development Company (CL&D) retaining ownership of an additional surrounding 240 acres. GA Technologies, Inc. proceeded to obtain the release of the CL&D land from NRC and DHS licenses. CL&D obtained permits and regulatory approval for the development of this land and ultimate construction of buildings for light industry.

Operating today as General Atomics (GA) the company conducts a broad scope of research and development projects, including product development of advanced power generation systems, energy conservation, and military applications. On-going research activities include material science projects, fusion research and environmental projects such as the super-critical water oxidation project. The fusion projects involve the inertial confinement and the Doublet-IIID magnetic confinement fusion reactor. Further, GA has leased laboratory and office space (primarily in Building 2) to other commercial research entities.

2.1 Process Description

In support of GA's research and development activities, some of which generate mixed wastes, GA operates a treatment and storage facility, known as the Nuclear Waste Processing Facility (NWPF). Waste streams from projects sponsored by the U.S. Department of Energy (DOE) comprise approximately 90% of the total mixed wastes handled at GA and are generated predominantly from the decontamination and decommissioning of nuclear facilities at the site. The remaining 10% of the mixed wastes are generated from commercially-funded projects.

Much of the wastes stored at General Atomics resulted from the decommissioning of U.S. Department of Energy funded research and development activities. Among these was the fabrication of fuel for the High Temperature Gas-Cooled Reactor program which occurred in the Sorrento Valley "A" Building (SVA). The SVA fuel fabrication ceased operation in 1986.

RCRA Facility Assessment
General Atomics

Figure 1: Regional View of the General Atomics Site

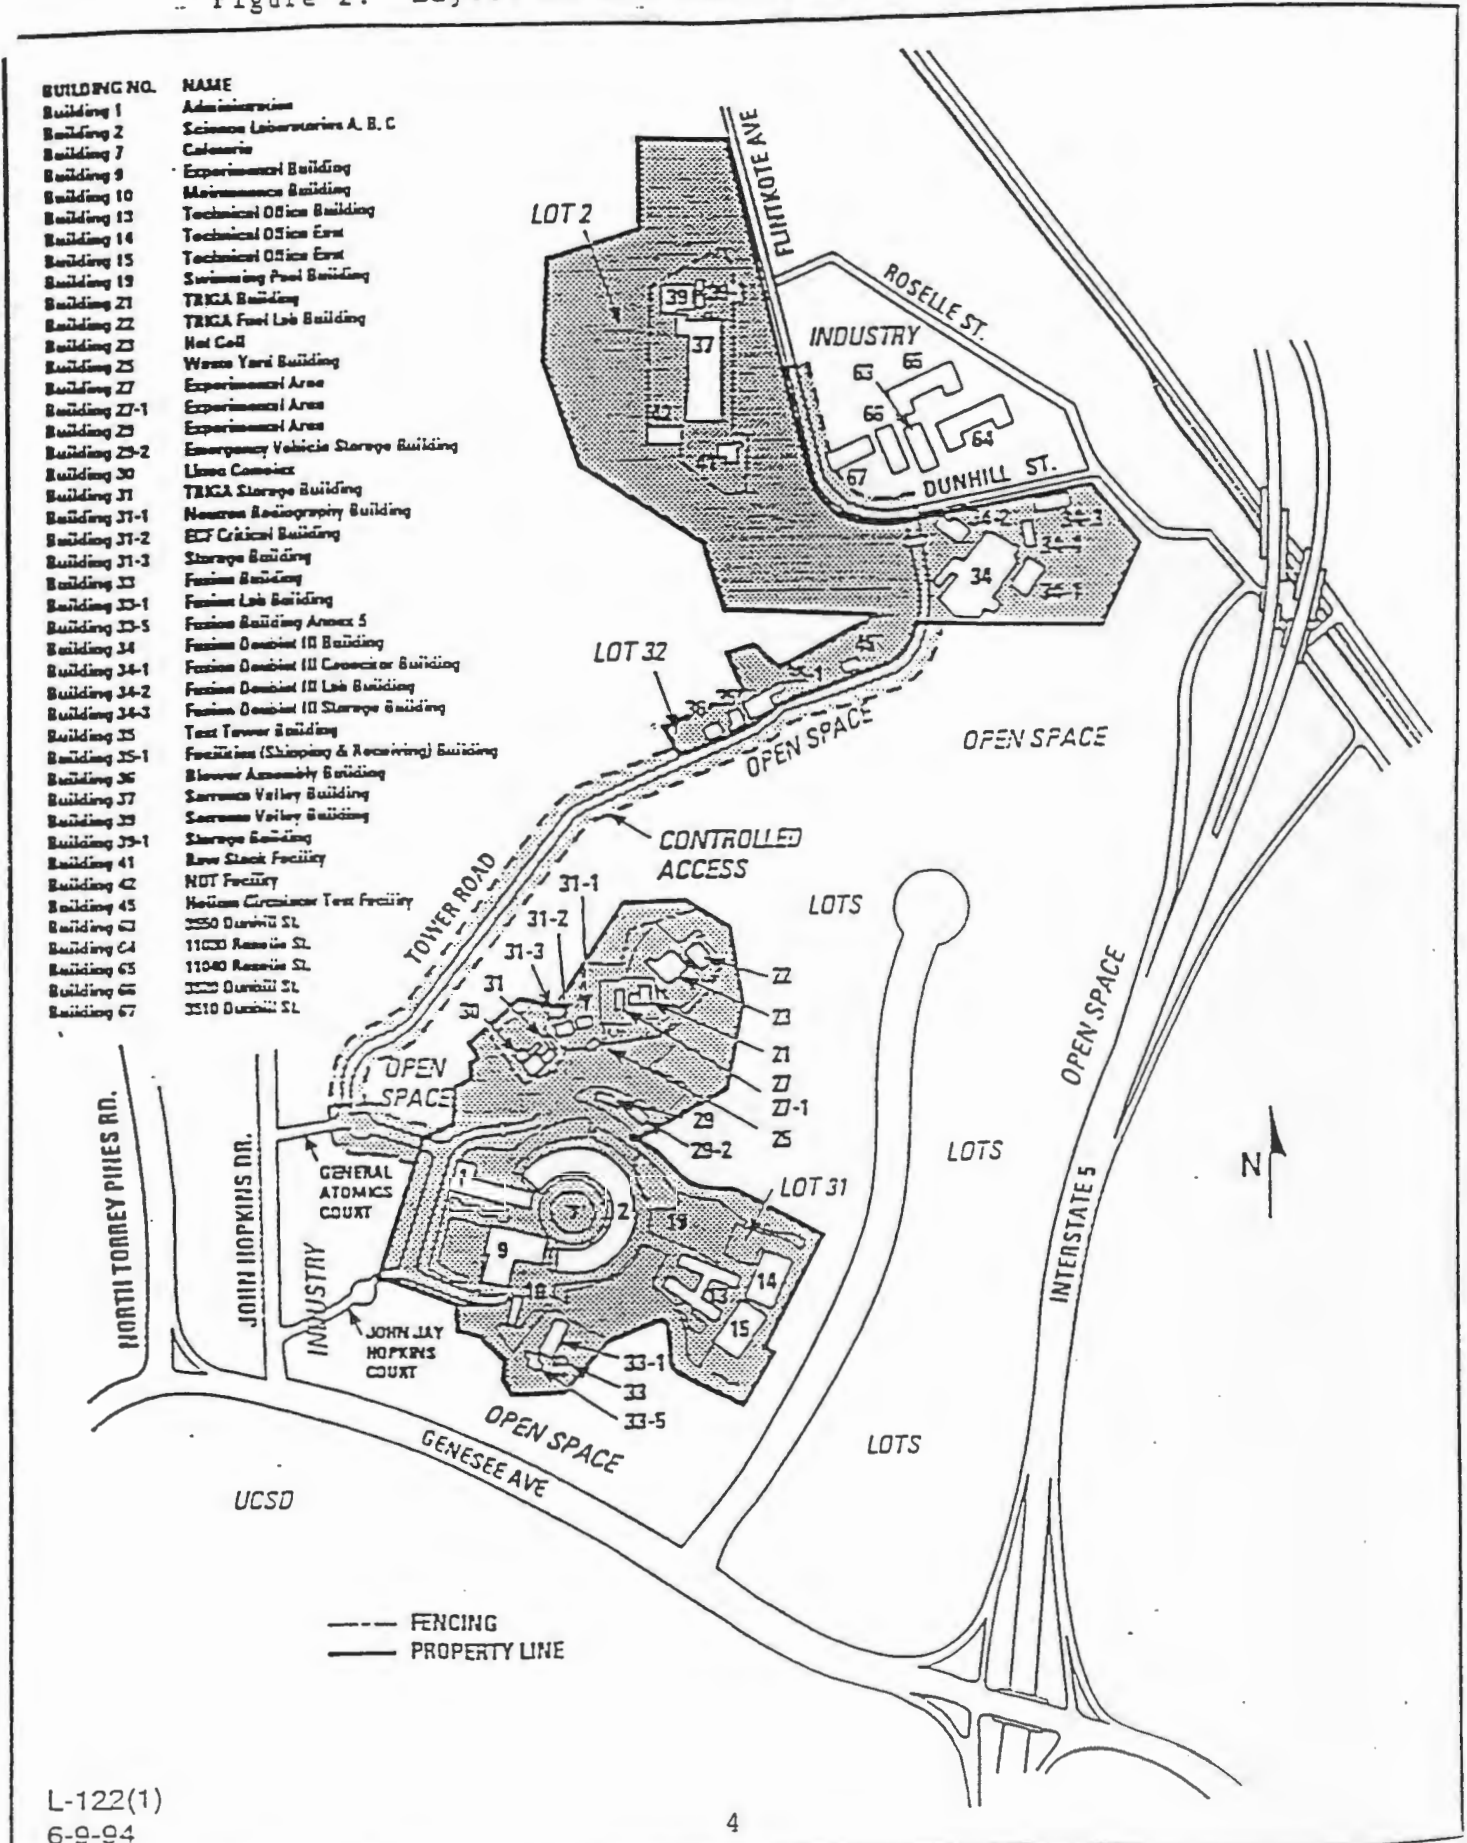

Figure 2: Layout of the General Atomics Facility

GA consolidates and ships its hazardous wastes off-site within the 90-day generator requirements. Mixed wastes are managed in one or more of three areas/buildings. These treatment units include: a Mixer Unit (TU41-2) for blending and chemical neutralization, two Neutralization/Filtration Units (TU41-1 and TU25-1), a Drying Oven and the Baler/Compactor.

After treatment, mixed wastes are stored until a full load is accumulated and/or an offsite facility is identified that is authorized by DOE and/or permitted to accept mixed waste. Mixed wastes are typically stored in closed drums. Building 41 and the lower storage yard is designated as NWPF-1, the Upper Storage Yard designated as NWPF-2 and Building 25 is designated as NWPF-3 in Figure 2.

GA had been the site of fuel fabrication operations involving the use of enriched uranium and the assembly of fuel elements. The fuels projects were primarily in support of the High Temperature Gas-Cooled Reactors and the TRIGA research reactors.

2.2 Decontamination and Decommissioning (D&D) Activities:

The D&D activities involve the facility shutdown, the notification of the pertinent regulatory agency or agencies, the surveillance and the maintenance of structures and equipment. This is followed by an assessment and characterization of the facility (the building and the fenced yard surrounding it) to determine the nature and scope of contamination. An evaluation, planning and engineering of D&D efforts and alternatives is initiated with the preparation of a D&D plan. This is submitted to the regulatory agencies (i.e. DHS, or the NRC) which approve implementation, or the modification of the plan. In some cases the D&D Plan is also submitted to the U.S. DOE. The plan may prescribe the removal of radioactive materials to other storage, or disposal facilities, as well as the decontamination, or disposal of contaminated equipment, building materials and surrounding soils. Confirmatory surveys of the decontaminated facility is included with the preparation of a final Survey Report. The completion of the D&D activities is signaled by the receipt of a facility release for unrestricted use from the NRC and DHS.

2.3 Buildings and Areas Awaiting D&D or Closure:

As part of its continuing assessment of facility needs, reuse and program funding options General Atomics has identified several facilities requiring decontamination and closure. Prior to the reuse, all wastes and residues (non-hazardous, hazardous, mixed or radioactive) are removed (to levels below release criteria) and disposed in an appropriate manner. The following is a summary of the current status and anticipated actions for decontamination and closure actions planned by General Atomics.

RCRA Facility Assessment
General Atomics

- **Building 21** -The two TRIGA Reactors located in this building are no longer in operation. The D&D activities are expected to generate some mixed waste. This facility was established in 1958/1960. Decontamination of the facilities have begun over the past few years. Fuel from the TRIGA Mark I has been moved into the TRIGA Mark F secure fuel storage canal. Similarly, the fuel from the Mark F reactor core has been placed in the Mark F secure storage canal. Materials held in reserve such as instrumentation and specialty metals have been sold or disposed of. Both reactors are destined for decontamination and dismantling.
- **Building 22** -Constructed in 1974, this building has housed the TRIGA Fuel Fabrication Facility. Fuel processing operations in this building were permanently ceased in 1995. The facility has undergone D&D and was released for unrestricted use on May 14, 1999 by the NRC. This building, concurrent with Bldg-23, has been systematically emptied, sampled, dismantled and partially demolished.
- **Building 23** (a.k.a. Hot Cell) -The D&D activities involved the removal of contaminated lead (shielding), asbestos matting in the roof and certain process areas, as well as radioactively contaminated concrete and other building materials. D&D is scheduled for completion in 1999. Building 23 no longer exists and the site is in the final phase of D&D.

The Hot Cell facility was built in 1958/59. The nuclear research conducted at the facility included machining of fuels, post-irradiation examinations and metallurgical studies. There was no longer a need to use the facility and DOE is supporting the D&D and the removal of contamination from this surplus facility in accordance with the DOE's environmental restoration mission. The D&D operations were evaluated in an Environmental Impact Appraisal prepared by the US NRC Office of Nuclear Materials Safety and Safeguards (NUREG-0994). No significant impact to health, safety or the environment was identified. Previous refurbishments of the facility were conducted in 1978 and 1979.

- **Building 27** -This building, built in 1965, represents one of the oldest areas of activity at the GA site. In 1994 Chemistry/Radiochemistry labs were being phased out of operation. The fume hoods in the building were permitted as Conditionally Exempted under the Tiered Permitting Program. D&D of this building has been completed. A release for unrestricted use by the NRC and DHS was issued on May 14, 1999 and May 7, 1999, respectively. The building will be converted to office, laboratory and/or meeting rooms.
- **Building 27-1** -This partially buried structure was known as the Radiochemistry Bunker. Radioactive materials were stored and processed in this building. The D&D activities for this structure have been completed pending final soil sampling and analysis. One wall of the structure, which serves as a retaining wall remains standing.

RCRA Facility Assessment
General Atomics

- **Building 29** -A fenced area near this building was used to temporarily store hazardous materials/waste (e.g. paints, thinners and solvents) prior to pick-up by a hazardous waste contractor. Remediation of soils resulted in excavation of 35 yd³ at three locations and included eight soil borings and 14 soil samples. Maximum concentrations encountered included TPH values at 10.4 ppm, 1,1,1-TCA and chloroform at 6 ppb. In 1990 five confirmatory samples indicated no residual contamination.
- **Building 30** -LINAC Complex. The linear accelerator and associated instrumentation was disassembled and removed in the 1980s. This facility has been completely emptied and is currently undergoing final D&D.
- **Building 35** -Known as the Test Tower, this structure is awaiting release for unrestricted use. This is a multi-store structure used to test or assemble long assemblies such as helium circulators or control rod systems. In 1997 a sump in this building was filled with concrete. The foundation and girder support has undergone radiological surveys with no significant findings reported.
- **Building 37 (a.k.a. SVA)** -A winter storm event in 1977 caused the lower portion of this building to be flooded with 2-3 ft of water. Portions of Bldg 37 were operated as a Machine Shop and for the nuclear fuel fabrication operations. In 1993 the areas previously used for the fuel fabrication operations were prepared for decommissioned and dismantled. This resulted in the partial dismantling of Building 37. The NRC and DHS released the areas designated as Bldg. 37N to unrestricted use. Environmental sampling included radiological surveys, sampling and analysis, as well as soil gas surveys, soil and groundwater sampling.
- **Building 39** -Site Characterization included the installation of six groundwater borings and at least nine soil samples. In at least three borings (GW-4, 5 and 6) trichloroethene (a.k.a. TCE) was found at 20 -30 ppb, tetrachloroethene was found at 5 -25 ppb. These concentrations in front of Bldg 39 were below those closer to Bldg 37.

2.4 Hazardous Waste Management

Through the 1960s and into the mid 1980s GA managed its hazardous wastes at the main site, at the foot of General Atomics Court, just northeast of Bldg 29 (see Figure 2). Low level radioactive waste hazardous waste recycling activities, waste incineration, solar evaporation ponds, storage areas and at least two waste burial areas have been found in historic documentation. This area, east of Bldg 22, was ultimately remediated and investigated with Phase I and II Assessments, contracted by the Chevron Land and Development Company (CL&D), to the satisfaction of current standards and the NRC and DHS in the early 1990s.

RCRA Facility Assessment
General Atomics

CL&D targeted this acreage for material to fill adjacent canyons as part of its Torrey Pines Science Center Development (see section 2.7). The areas that had supported past hazardous waste management activities were excavated by 40 to 100 feet and no longer exist as part of the current GA site.

Since March 23, 1989 GA has been authorized, by the US EPA and the DTSC, to operate mixed waste storage and treatment units. Additionally, GA operated 18 hazardous waste management units under the lower permit Tiers of Conditionally Authorized (CA) and three under the Tier of Conditionally Exempted (CE). Three (3) of these 18 CA units were incorporated into the Interim Status authorization on May 20, 1994.

With DTSC's adoption of the Laboratory Taskforce's recommendations, bench scale treatment of laboratory waste is no longer viewed as an activity requiring a permit. Similarly, fume hoods have also been dropped from regulation. Therefore, GA decided to close fourteen of the remaining 15 CA permits. These units have now been certified closed as of July 17, 1997. The final CA unit, located in Bldg 25 (NWPF-3) will be incorporated into the RCRA Permit upon approval. Of the two CE units, one will be incorporated into the RCRA permit upon approval. The second CE unit remains in operation at Bldg 34. Hazardous waste management has been restricted to the 90-day generator limits with a few buildings having satellite storage (e.g. B-34).

2.5 Mixed Waste Management

DOE mixed waste generated at General Atomics are primarily from six (6) present or past nuclear research and development activities:

1. SVA (Bldg 37) location where fabrication of fuel for the High Temperature Gas-Cooled Reactor program occurred. The fuel consisted of a mixture of uranium and thorium carbide-coated particles pressed into a graphite matrix. The SVA operations were shut down in 1986.
2. Until 1992 GA participated in the DOE New Production Reactor program with the GA operated Modular High Temperature Gas-Cooled Reactor (MHTGR). This unit, though not built, was designed to provide a source of tritium for the DOE complex.
3. The Hot Cell and HTGR fuel lab were established to perform inspections and testing of irradiated fuel and activated components. Under DOE, NRC and DHS oversight, the D&D activities for these facilities is now more than 90% complete.
4. Ongoing fusion research and development associated with the Doublet III facility. This research is expected to continue to generate small amounts of mixed waste as long as the

experiment is in operation.

5. Two TRIGA research reactors have performed irradiation services over the years. Both the TRIGA Mark I and Mark F reactors, have been permanently shut down and the NRC has withdrawn GA's authorization to operate the reactors. Future decommissioning and decontamination of these reactors may produce mixed waste.
6. Building 39 was used to manufacture nuclear fuel pellets and assemblies. These operations involved forming and coating the pellets and various remote handling and assembly operations.

2.6 Regulatory Permits

GA operates under a general possession license from the California Department of Health Services (DHS). The DHS license No. 0145-80 allows GA to maintain specific quantities of radioisotopes (source and by-product material). The license also mandates monitoring and environmental sampling. Areas where radioisotopes are kept must undergo radiation surveys and sampling prior to being released by DHS to unrestricted use. Each closure or D&D operation is treated as an amendment to the operating license.

Since the late 1950's GA has been operating under licenses from the Nuclear Regulatory Commission (NRC). The NRC license SNM-696 is a broad scope general license authorizing the possession and use of special nuclear material. The NRC, Nuclear Reactors Program, has issued separate operating licenses for two TRIGA fission reactors. Both licenses have been amended to authorize possession only. The authorization to operate the reactors was withdrawn following GA's request. The reactor licenses encompass the fuel storage, the reactor possession and the environmental monitoring. The NRC requires strict control and monitoring of access to these buildings and reviews all D&D activities prior to authorizing a "free release" for the land and the associated buildings. The site sampling procedures include radioactive and hazardous waste residues.

2.7 Site Location and Land Use

General Atomics is located approximately 13 miles north of downtown San Diego, just southwest of the convergence of Interstate 5 and 805 and one mile east of the Pacific Ocean, as shown on Figure 1. The original facility address was *10955 John Jay Hopkins Drive*. The street is named after the General Dynamics chairman credited for founding General Atomics on July 18, 1955.

After a series of developments and accompanying street construction and re-alignment

projects the physical address changed to **3550 General Atomics Court, San Diego, California 92121**. General Atomics Court is an eastwardly cross-street to John Jay Hopkins Drive that leads to GA's main gate. Mail and freight deliveries are received at 3483 Dunhill Street.

GA occupies two separate, but adjacent parcels of land each roughly 60 acres, for a total of approximately 120 acres. The upper parcel, referred to as the main or mesa property, is accessed from General Atomics Court, via John Jay Hopkins Drive, and includes the administrative, a majority of the research activities and the NWPF-3. The lower parcel, referred to as Sorrento Valley property may be accessed from the upper site via Tower Road (off of General Atomics Court), or alternatively from Roselle Street in the valley itself. Operations at the Sorrento Valley property include the Doublet III-D, the mixed waste storage and treatment, additional research space, and a third portion of properties that are leased to other commercial enterprises on Flintkote Avenue. The physical address of the mixed waste operations is **11222 Flintkote Street**. The area encompassing and surrounding the GA main property is zoned for Scientific Research (SR Zoned). The Sorrento Valley property is zoned for light industrial use.

The facility lies in census tract no. 83.17, San Diego Region, University Subregion. Based on the 1990 US census data, a total of 4,609 residents were estimated to be within a one (1) mile radius from the GA facility. Sensitive receptors within a two mile radius include several hospitals and two day care centers.

2.8 Chevron Land & Development

As mentioned in Section 2.1 above, GA was founded by the General Dynamics Corporation on virgin Torrey Pines land provided by the City of San Diego. Subsequently, the property changed ownership in a succession of corporate divestiture and merger related transactions. The last transaction involving the separate spin-off of up to 240 acres of formerly GA owned lands by the Chevron Corporation and the Chevron Land and Development Company (CL&D), in particular. It is noted that certain areas in the eastern portion of this acreage had been intensively used, by the earlier entity General Atomic, for its waste treatment and storage operations. These operations, among other things, included solar evaporation ponds, a recycling area and a chemical waste burning area.

Chevron, while divesting itself of a portion of its General Atomics site to its current owners, retained a significantly larger acreage (see Appendix VI) around the GA property upon which the "Torrey Pines Science Center" is currently being constructed. The development was to grow to include up to 304 acres in total. In addition to the road realignment and the preparation of 34 building lots the City required that four lots be set aside for open space. The development was to include 22 major buildings and the sale of property to other enterprises. Lots 31 through 34 (Appendix VI) constitute GA's main site of operation.

RCRA Facility Assessment
General Atomics

CL&D was charged with contracting for the necessary environmental, geophysical and engineering studies to acquire City approval for infrastructure and subdivision for future building activities. In October and November 1988 Harding Lawson Associates prepared a Phase I Environmental Assessment, which led to a more detailed Phase II assessment in April of 1987. In addition to a broad based soil vapor survey and asbestos survey the Phase II assessment focused on:

- o The formerly NRC and DHS decommissioned Rad Waste Processing/Treatment Area;
- o Asphalt burial site; and
- o Solar Evaporation Ponds and confirmed spill areas.

Maps of these areas are provided in Appendix VI. The Phase II identified 16 sites proposed for sampling. Records indicate that waste residues were removed and then subjected to severe earthmoving activities as authorized by the City of San Diego (see References 1, 2, and 3). The final excavation of this land resulted in no discernable trace of the referenced activities or the surrounding land.

The spin-off of up to 240 acres of formerly General Atomic owned lands by the Chevron Corporation and the Chevron Land and Development Company was accompanied with extensive environmental remediation and removal activities. The contracted Phase I and Phase II environmental assessments screened areas where past General Atomic activity had been noted. Identification and assessment for possible radiological or hazardous waste residues was carried out in much the same manner as the RCRA Corrective Action Program would with the RFA and the RFI Reports. These areas were also subject to NRC and DHS radiation surveys prior to being released to "unrestricted use". Selected areas in the eastern portion of this acreage had been extensively used, by General Atomic, for its former waste treatment and storage operations.

3.0 ENVIRONMENTAL SETTING:

The environmental setting is a coastal topography, with bluffs and mesas interspersed with steeply sloping canyons, cliffs and ravines. Operating units are split between an upper mesa, with storage areas in the lower Sorrento Valley property. Surface drainage from the site runs through the Soledad Valley into Los Penasquitos Creek, which flows to the northwest and empties into the Pacific Ocean. Prevailing wind is from the west-northwest with periods of flow from the east.

General Atomics is located in an area with typical San Diego County coastal topography, with bluffs and mesas interspersed with cliffs and ravines. Land uses surrounding the study area include existing scientific research and development parks to the north and the east across

Interstate 5, undeveloped land associated with the open space area of Torrey Pines State Park, research and development parks and a hospital to the west and the University of California San Diego campus to the south.

3.1 Surrounding Areas

The immediate area surrounding GA is subject to increasing commercial development. Efforts have been made to preserve and protect from hill side development. The surrounding mesas serve a variety of science and technology development enterprises.

There are two wildlife areas nearby to the GA site. These are the Torrey Pines State Reserve and the Los Penasquitos Lagoon. The Torrey Pines State Reserve was established to ensure protection of the rare Torrey Pine.

Lying just north and east of GA is the Soledad Valley. This is a northwesterly trending valley that discharges into the Pacific Ocean just north of the Torrey Pines State Reserve. Additional drainage areas include the Carmel Valley (northeast-southwesterly trending) to the north; the Penasquitos Canyon to the east; and, Carroll Canyon to the south. There are no lakes within the vicinity of GA to the north, south or west. Eight miles to the east of the GA site is the Miramar Lake Reservoir.

The land west of GA is characterized by a mesa lying 350 to 450 feet above mean sea level (MSL). To the east is Soledad Valley with steeply incised drainages. At one-half mile from the ocean it ranges 20 to 40 feet msl.

3.2 Geology

GS is located in the western portion of the Peninsular Ranges geomorphic province, which is characterized by northwest trending ridges and valleys separated by northwest trending lateral strike-slip faults. The western part of this province is underlain by a thick sequence of marine and nonmarine sedimentary rocks. According to published geologic maps, the subject site is underlain by the Ardath Shale, a weakly fissile olive-gray shale consisting of dense siltstones with some clay, and local concretionary beds. The Ardath Shale has been exposed during previous underground storage tank excavations.

The Sorrento Valley site consists of steep ridges and small narrow side canyons along the main track of the Sorrento Valley. Site specific geology consists of alluvium/slope wash and formational materials likely comprised of Eocene La Jolla Group. Older alluvium occurs at deeper depth east and west. Central deposits are nonhomogeneous. Aluvial fans occur at the mouths of the side canyons and extend into the Sorrento Valley. The site is underlain (in descending order) by: fill; recent alluvium primarily consisting of sand to clay sized stream

deposits; older alluvium composed of gravel to clay-sized particles; and, Eocene deposits of the La Jolla group. The La Jolla Group sediments consist of the Del Mar Formation and the Torrey Sandstone. The Del Mar Formation consists of sand with abundant interbedded clay and silt layers. The Torrey Sandstone contains sandstone with minor siltstone and conglomerate layers.

3.3 Hydrology

No major fresh water reservoirs exist within the local hydrogeological area. The regional aquifer in Sorrento Valley to the east occurs at an elevation of about 70 feet above mean sea level (MSL). The main GA facility is approximately 340 feet above MSL. In Sorrento Valley the Los Penasquitos Creek flows into Sorrento Slough, which is part of the Torrey Pines State Park. The Torrey Pines State Park is within one mile of the GA site. The slough is a game refuge and an area of tidal mud flats.

GA lies in the Penasquitos Hydrologic Unit, which is further defined as being within the Miramar Reservoir Hydrologic Subarea. The PHU encompasses 170 square miles and has no continuous streams. The MRH Subarea extends east of the Miramar Reservoir, north of Del Mar Heights Road/Black Mountain Road and south to Miramar Road. The hydrologic subarea discharges into the Sorrento Lagoon.

3.4 Climate and Meteorology

Prevailing wind is from the west-northwest with periods of flow from the east. The climate is temperate with an annual rainfall of 6 to 10 inches.

3.5 Surface Water

Surface drainage from the site runs through the Soledad Valley into Los Penasquitos Creek, which flows to the northwest and empties into the Pacific Ocean.

3.6 Surface Features

The general environmental setting is a coastal topography, with bluffs and mesas interspersed with steeply sloping canyons, cliffs and ravines. The main property is at an elevation of 300 to 360 feet above mean sea level. The lower 60 acres of the facility (a.k.a. Sorrento Valley property) is at an elevation of 50 to 75 ft above mean sea level. The two properties are connected by Tower Road, a private and gated road with open space and steep slopes on both sides.

Land uses surrounding the GA site include scientific research and development parks to the north and to the east across Interstate 5, undeveloped land associated with Torrey Pines State Park, research and development parks and a hospital to the west and the University of California at San Diego to the south. The main property is located within the Torrey Pines Mesa area and is currently zoned Scientific Research (SR). The University Community Plan designates open space and scientific research land uses. The immediate vicinity of the Sorrento Valley property is zoned for industrial use.

3.7 Windrose

Five miles to the east of the facility lies the Miramar Marine Air Station (MAS). The MAS operates the a National Climatic Center which is the closest available facility to General Atomics. Figure 3 is a copy of the Windrose obtained from the MAS. Prevailing wind is from the west-northwest with periods of flow from the east.

3.8 Ecology

The GA facility is located between La Jolla and Del Mar, in San Diego County, approximately 1.6 kilometers (1 mile) from the Pacific Ocean. There are two wildlife areas potentially affected. These are the Torrey Pines State Reserve and the Los Penasquitos Lagoon. The Torrey Pines State Reserve was established to ensure protection of the rare Torrey Pine. The Los Penasquitos Lagoon is a habitat for several federal or state listed birds, including the snowy plover, least tern and Belding's Savannah sparrow. Other bird species in the lagoon include the Blue Heron and Osprey. Major fish species (none rare or endangered) in the lagoon include the top smelt, mud sucker, arrow gobi, staghorn sculpin, mullet and opal eye.

Torrey Pine (*Pinus Torreyand* ssp. *Torreyand*) stands are located south and east of Del Mar (approximately three kilometers north of the GA site) and at the north end of the Torrey Pines State Reserve (approximately 1.6 km from GA). Some of the stands are overgrown with chaparral, which may have suppressed reproduction, while disease and insects are problems in other stands. For distribution of plant communities see Appendix VII.

3.9 Previous Site Assessments

Numerous environmental assessments (see Appendix IV) have been prepared in conformance with the U.S. DOE's Environmental Restoration mission, the DHS and NRC Nuclear Licenses and GA's collateral auditors. The governmental reviews include the Nuclear Regulatory Commission's "Environmental Impact Appraisal related to Special Nuclear Materials License No. SNM-696 (NUREG-0994)" of June 1983. Additional site assessments were prepared in the course of developing the area surrounding GA. The most notable of which was the development of the Torrey Pines Science Center which involved 304 acres.

Separate assessments for the Doublet DIII-D fusion reactor found no contamination. GA prepared the "Environmental Assessment for the Operation of DIII-D Facilities and Related Research", April 1994 (GA-C21729). DOE prepared the "Environmental Assessment for the Proposed Modification and Continued Operation of DIII-D Facilities", May 1995 (DOE-EA-1076).

GA prepared the "Environmental Assessment for the Decontamination and Decommissioning of the General Atomics Hot Cell", dated November 1993 (GA-C21425). The assessment for the D&D of the Hot Cell found elevated lead levels in a drain line.

US DOE, under its Environmental Restoration Program, is providing funding under a cost sharing agreement with GA to decontaminate and decommission (D&D) the GA Hot Cell facility site. The objective of this effort is to obtain from the NRC and DHS the release of the facility for unrestricted use. This has involved the dismantling and/or removal of equipment and materials, decontamination of the building structures, removal of the buildings, characterization and possible remediation of the soils.

Bechtel National, Inc. (Bechtel) prepared the "Final Report Findings for the General Atomics, Sorrento Valley Facility, Building 37N Focused Site Investigation" (FSI), dated November 1994. This focused site investigation was conducted to characterize shallow soil and groundwater conditions beneath the northern half of Building 37 (a.k.a. Sorrento Valley A, or SVA). This building actually consisted of several structures or parts of structures used for nuclear fuel production. Dismantlement of the northern half of the structure (also referred to as B-37N) was completed in 1994 as part of the Sorrento Valley, Building A (SVA) decommissioning project. The building was decontaminated to the maximum extent practical prior to demolition to bring radioactive contamination levels below release limits established by the NRC and DHS. The FSI focused on the southern portion of B-37N, where chemical contamination was found in soil samples collected from shallow depths during the Preliminary Site Investigation (PSI) performed by Bechtel in September 1993. The contaminated soil areas correspond to:

1. the former location of a small vaulted storage tank that previously contained

trichloroethene; and,

2. areas where environmental monitoring (HNU field screen) performed during slab removal indicated the presence of organic constituents.

General Atomics was responsible for the radiological analyses and the data interpretation. A former vaulted storage tank that contained trichloroethene (TCE) and piping were identified as potential contaminant sources. Using hand augers 24 soil samples were collected during this investigation. These samples indicated that TCE was present in the soil to a depth of at least 20 feet below the ground surface of the production floor. TCE in soils were found in a limited area around the former concrete vaults within the southern-half of the B-37N site. Lower concentrations of TCE were detected in soil samples collected from a wider area around the site. The groundwater samples collected to the east of the former tank storage area also contained TCE at levels up to 59 mg/L.

3.10 Corrective Action for Soil

Using hand augers, 24 soil samples were collected during the investigation of Building 37N. These samples indicated that TCE was present in the soil to a depth of at least 20 feet below the ground surface of the production floor. TCE in soils were found in a limited area around the former concrete vaults within the southern-half of the B-37N site. Lower concentrations of TCE were detected in soil samples collected from a wider area around the site. Recently submitted soil and groundwater data from two separate soil borings returned concentrations of TCE, on December 2, 1998, at 571 and 338 ug/kg at 35-35.5 ft bgl and 41-41.5 ft bgl, respectively. The corresponding TCE data for the groundwater was measured as 85.3 and 229 ug/L, respectively (see June 17, 1999 from GA to David Felix of San Diego County).

The investigation provided the following additional information about the vertical and areal extent of site-related chemicals in the soil and groundwater:

1. the highest TCE concentrations were found in soil samples collected from a depth of approximately 5 feet below the ground surface.
2. based on field monitoring, visual clues to soil strata that contain the highest levels of TCE contamination are areas that appear grayish and seem to hold more moisture than the surrounding soil from adjacent areas.
3. groundwater sampling east of the B-37N site indicated the presence of TCE contamination in the underlying aquifer.

4. soil pH was within normal limits expected for natural soils. There is no evidence of impact by acidic materials in soil samples analyzed for the FSI
5. no identifiable semi-volatile organic compounds were reported present in soil or water samples.

3.11 Corrective Action for Groundwater

In September 1994 Geocon installed seven monitoring wells to assess the extent of groundwater contamination around Building 37N. The following data was collected from the monitoring wells in February 1995.

Table 3.1: Groundwater Borings:

WELL No.	Depth to GW (ft)	GW Elevation (msl)	Casing Elevation (msl)
MW-102	37.92	21.03	58.95
MW-401	36.00	22.09	58.09
MW-901	13.47	20.98	34.45
MW-902	15.41	21.08	36.49
MW-903	24.49	23.20	47.69
MW-904	14.32	22.11	36.43
MW-905	18.00	21.39	39.39

The Barrett Consulting Group reported that sampling was conducted in accordance with the Standard Operating Practices that satisfy the guidelines presented in the 1995 County of San Diego Site Assessment and Mitigation (SAM) Manual. Groundwater samples collected by the Barrett Consulting Group in 1995, were analyzed for chlorinated volatile organics by EPA Method 8010 and for aromatic volatile organics by EPA method 8020. Groundwater samples collected by Geocon in 1994 were analyzed by EPA Method 8240.

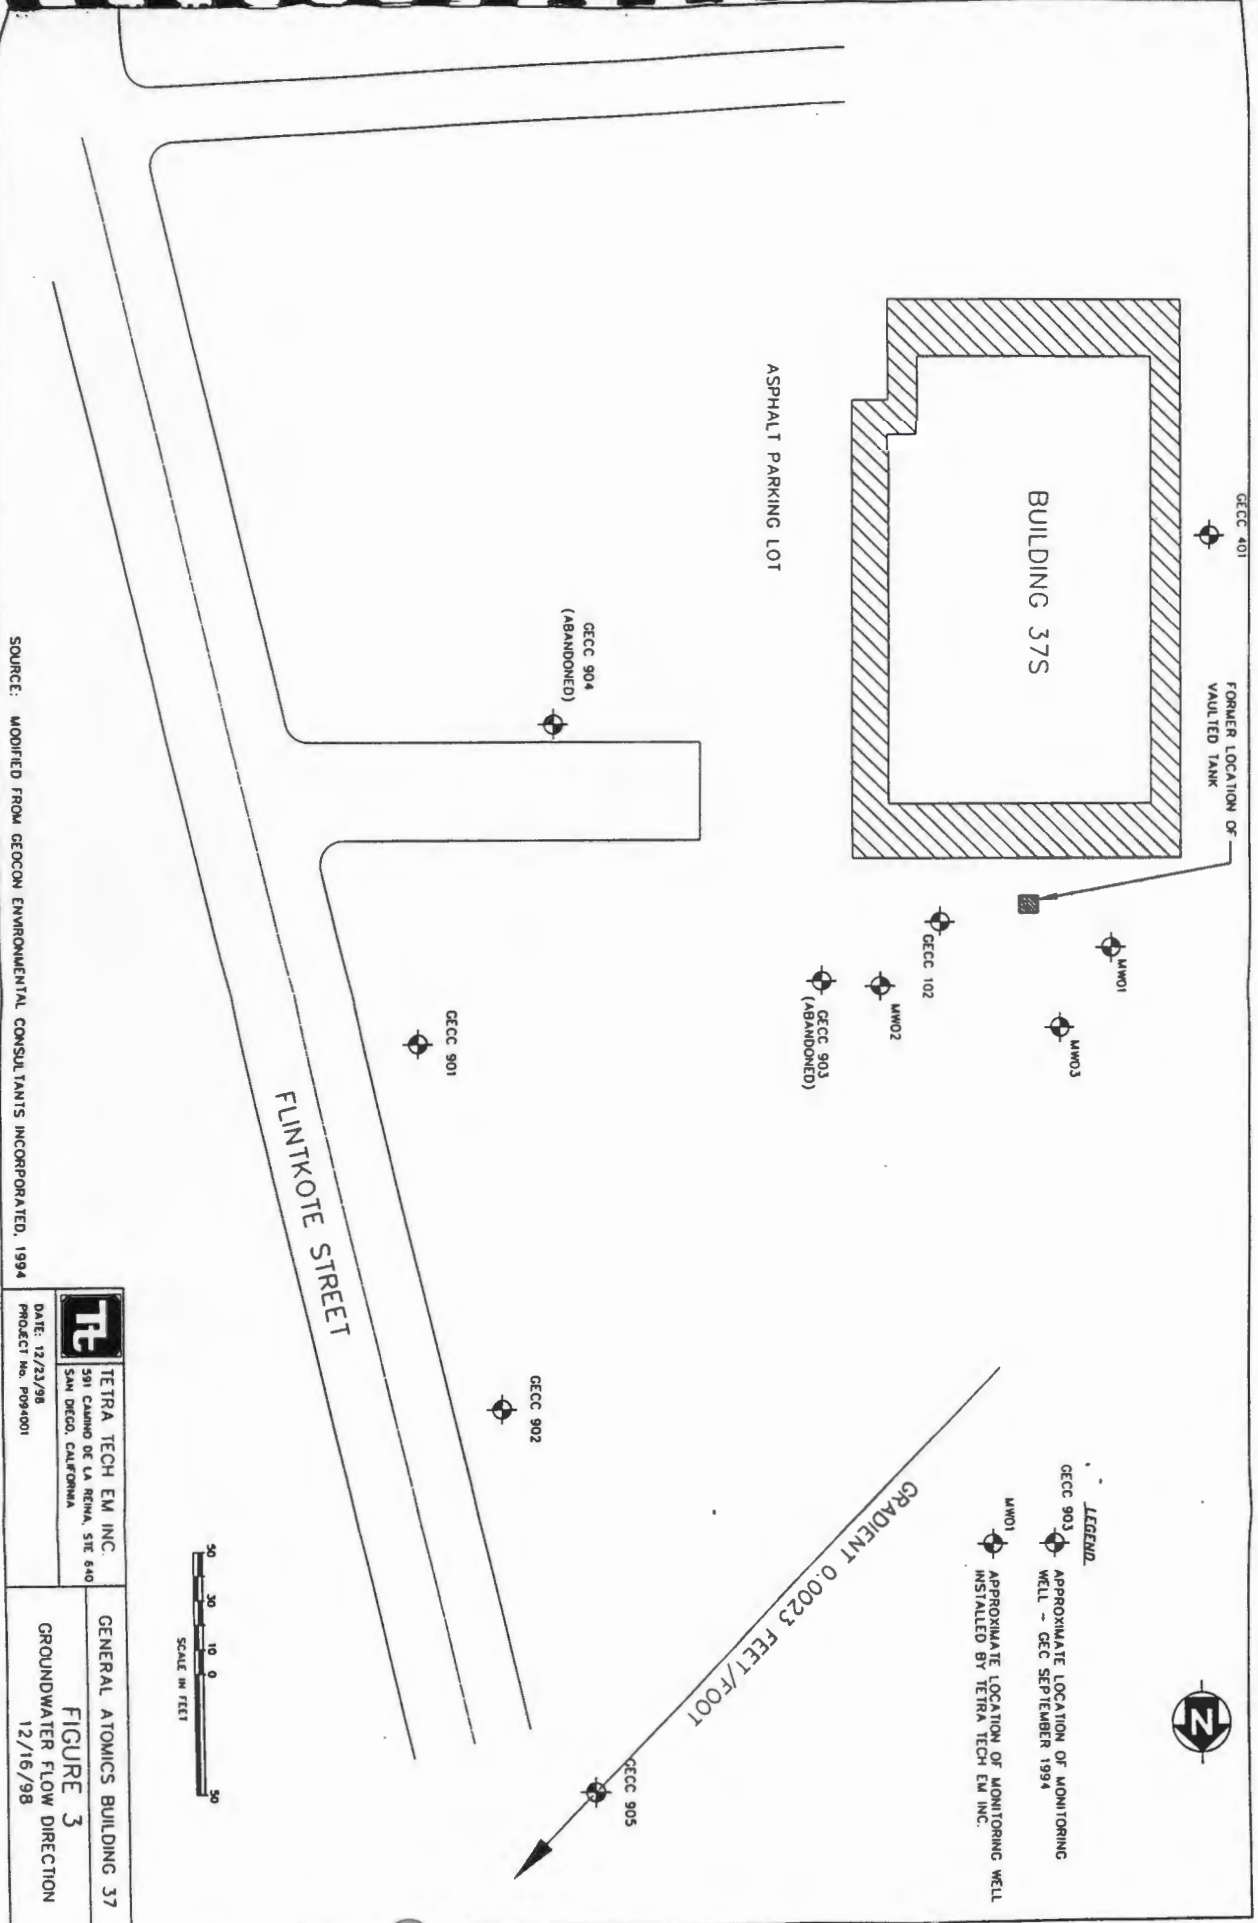

The following data is summarized from a May 13, 1999 report by Tetra Tech EM Inc. to GA:

TABLE 1. Summary of Analytical Results from Building 37 Groundwater Investigations
General Atomics, San Diego, California

RCRA Facility Assessment
General Atomics

Building 39:

Contracted by GA, from November 13 to 25, 1996 Strata-Tech, Inc. made six borings (GW 1 through 6) around Building 39. The borings were made with a hollow stem auger with a 2-inch diameter bore and reportedly extended 4 to 10 ft into the groundwater. Disposal balers were used to take a 4.58 liter and a 100 ml sample from each boring. No water quality parameters (eg. conductivity, turbidity or temperature) were reported. Subsequent to sampling the borings were backfilled with grout and sealed.

Table 3.3: Groundwater Borings:

Boring No.	Elevation Marker (ft)	Depth to GW (ft)	GW msl Elevation ^a	Depth of Boring (ft)	Observations Noted	Completion
GW-1	31.5	51.5	20	56.5	No caving	11/25/96
GW-2	33	53	20	58.5	No caving	11/25/96
GW-3	28.5	49	21.5	53	No caving	11/25/96
GW-4	8	27	19	38	-	11/14-15/96
GW-5	3.5	23.5	20	28.5	-	11/18/96
GW-6	0	20.9	20.9	29.5	-	11/13/96

Note: a -Calculated values.

The December 20, 1996 report by Strata-Tech noted that the samples were turned over to GA for hazardous and radiological sampling. GA had the groundwater samples sent to Ceimic Corp of San Diego for analysis. Laboratory reports for a metals scan, US EPA method 8081 (PCB), method 8240 (volatiles) and method 8270 (semivolatiles) were submitted as outlined below:

RCRA Facility Assessment
General Atomics

Table 3.4: Groundwater Results for B-39:

Boring No.	Sample Date	Analysis Date	Tetrachloroethene (ppb)
GW-1	11/25	11/26	<5
GW-2	11/25	11/26	<5
GW-3	11/25	11/26	<5
Trip Blank	11/25	11/26	<5
GW-4	11/15	11/27	25
GW-5	11/18	11/27	6
GW-6	11/14	11/27	15
Trip Blank	11/18	11/14	<5
Re-Extract of GW-6	11/18	12/5	<5

It was noted that the metals concentrations were all quite low, and significantly below the hazardous waste Soluble Threshold Limit Concentration (STLC). Similarly, the PCB results were below the 1 or 2 (Aroclor-1221) ppb detection limit. Although all groundwater-boring samples were subjected to analysis for semivolatiles only the re-extract of GW-6 reported a hit above the tens of ppb detection limits and that was for benzoic acid at 52 ppb.

RCRA Facility Assessment
General Atomics

Figure 4: SORRENTO VALLEY "B" SITE PLAN

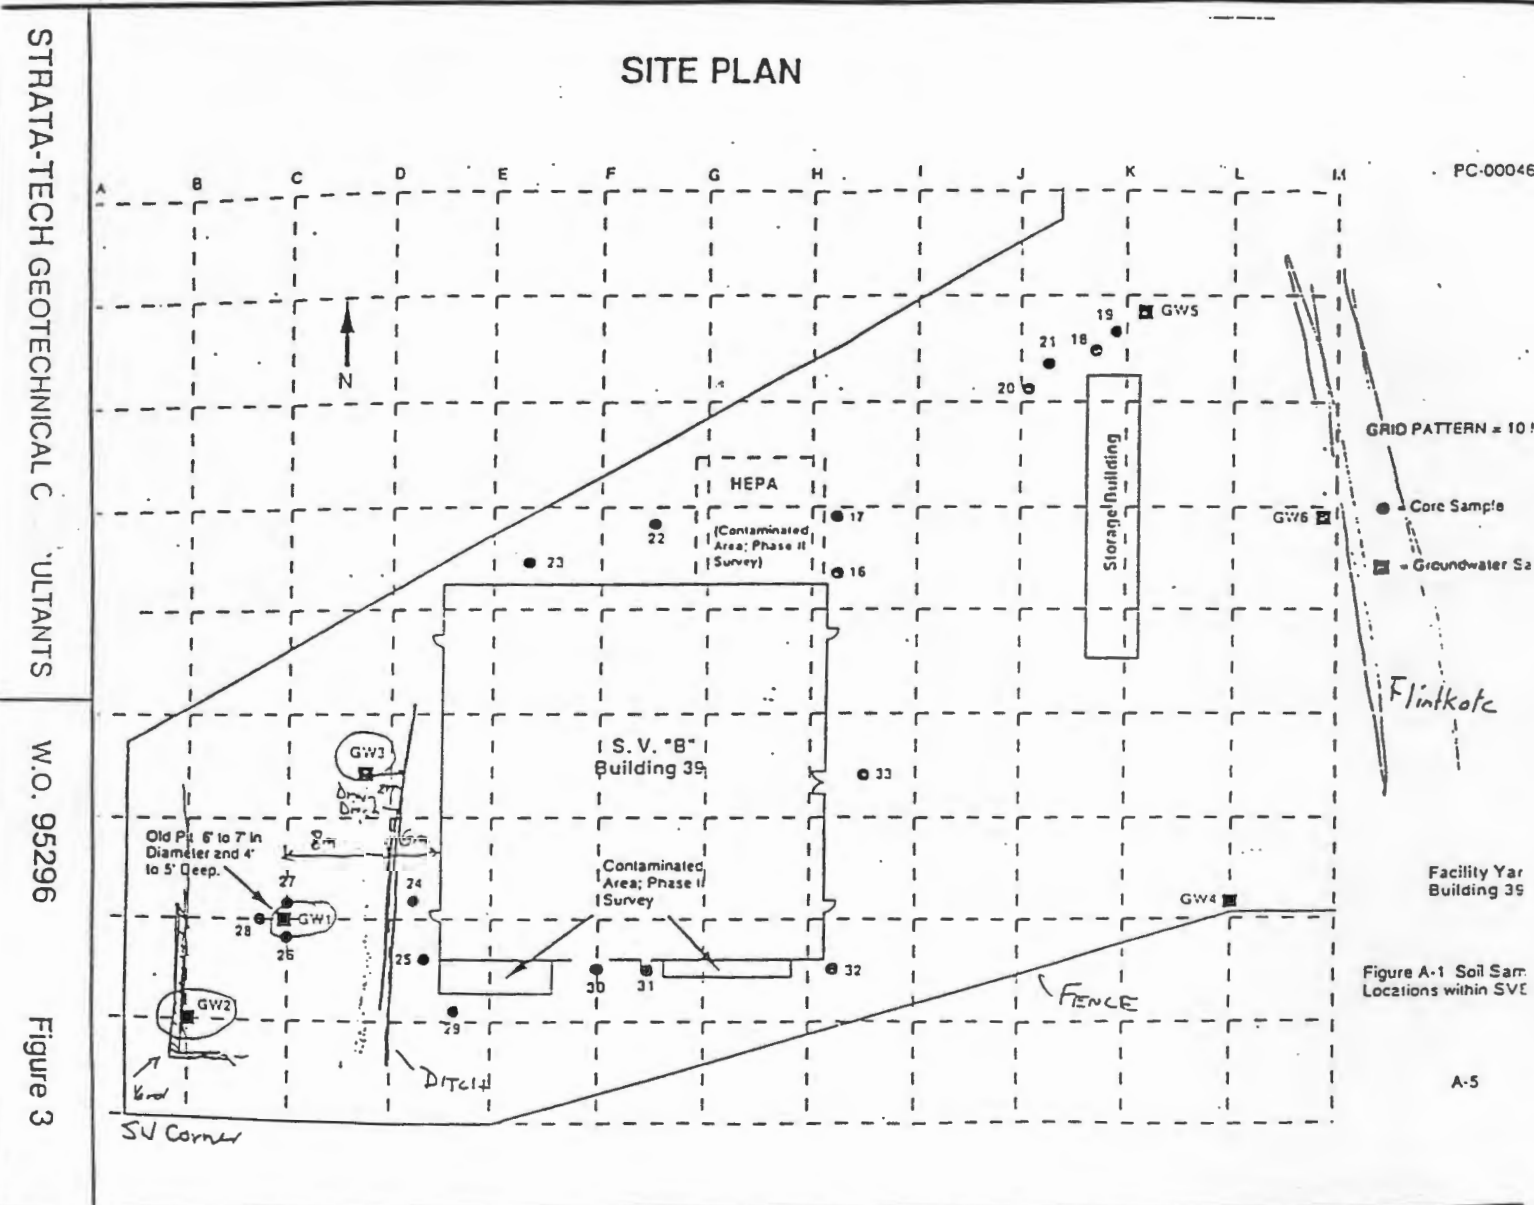

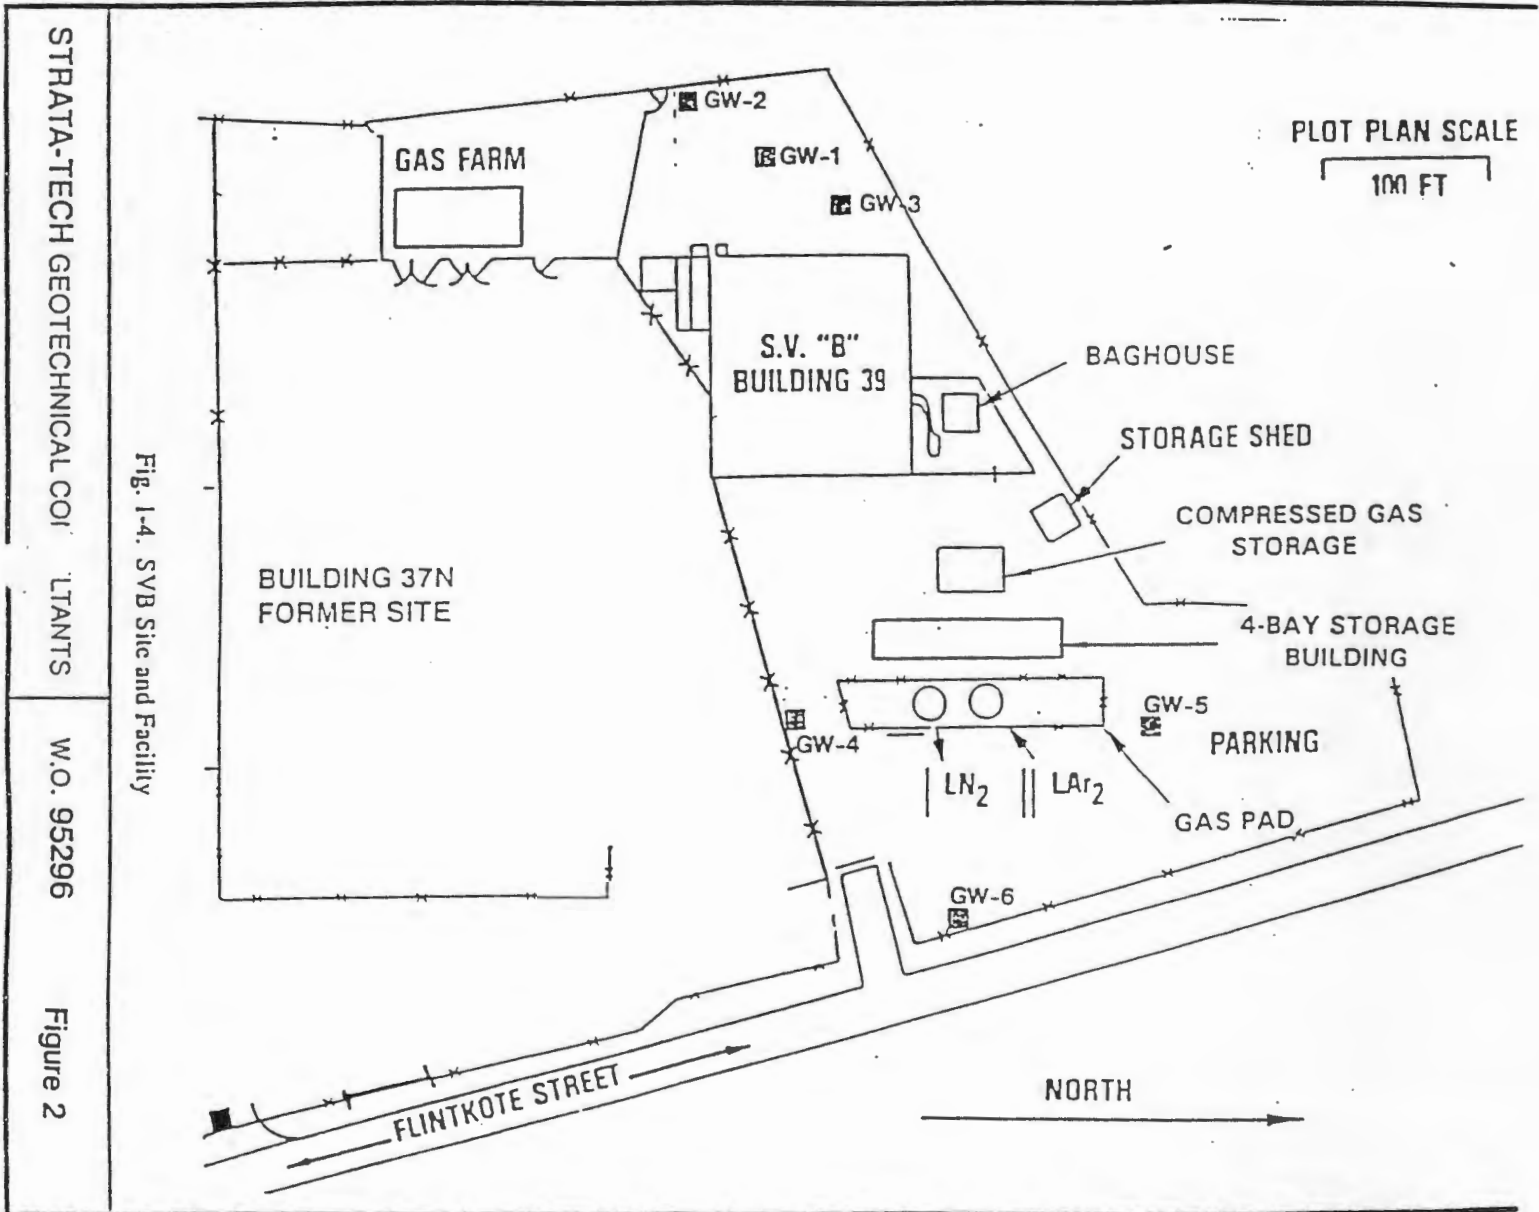

Figure 5: SVB Site Perspective by Strata-Tech

4.0 DESCRIPTION OF SOLID WASTE MANAGEMENT UNITS

Distinct Solid Waste Management Units (SWMUs) have been identified to evaluate potential on-site sources of releases to soil, groundwater, surface water, air, and subsurface gas. A SWMU is defined as any discernable waste management unit at a RCRA Facility from which hazardous constituent might migrate from, irrespective of whether the unit was intended for the management of solid and/or hazardous waste.

Eight units have been identified as SWMUs. They are described individually on the following pages. Descriptions of SWMUs include: date of start-up; date of closure; waste management; history of releases; results of visual site investigation; and conclusions regarding potential for soil and/or groundwater, surface water, air and subsurface gas releases.

4.1 SWMU No. 1: Building 25, Nuclear Waste Processing Facility 3

Description of the Unit: Radioactive and Mixed Waste Water Treatment

This structure is used to house treatment tanks and storage area for consolidating radioactive and mixed wastes. The building is made of corrugated metal with a sealed concrete floor and six inch berm. The structure itself is relatively small at 25'x25' and standing 18' high. There are three high density polyethylene treatment tanks of 100, 700 and largest of 1,900 gallon capacity. Treatment processes involve neutralization, precipitation, and filtration.

Date of Start-Up:

The building and its treatment tanks went into service in 1985.

Date of Closure:

Final facility closure expected in about the year 2001 (see RCRA Permit Closure Plan).

Waste Management:

Mop, sink and laboratory wastewater, decontamination solutions, inorganic caustics and acidic scrubber solutions are treated. Treatment consists of neutralization, precipitation and filtration so as to meet the Industrial Wastewater Discharge permit criteria. Hazardous waste residues are containerized and/or solidified for off-site disposal.

History of Releases:

No releases reported. However, given the nature of the waste, the possibility of soil settling and its affect on plumbing to the sewer main, it is suggested that soil sampling is advised. PVC piping was observed exiting the building foundation.

Results of Visual Site Investigation:

Visual inspection of the unit indicates a relatively clean operation. No major staining or areas of

RCRA Facility Assessment
General Atomics

standing liquids were noted. The area around the structure has been subject to shifting soils and the surrounding vegetation appears maintained.

CONCLUSIONS:

Soil/Groundwater Release Potential:

The potential for releases to soil and/or groundwater is limited due to the use of a secondary containment berm along the base of the building. The use of the area for staging or unloading operations is of potential concern. The PVC piping used both inside and below the soil surface might easily have been weakened by embrittlement or the shifting soils. There is further concern about residual radiation in the piping or equipment, the structure itself. No major cracks were observed in the secondary containment floor during the time of the VSI. The concrete containment floor was not coated with a chemical resistant coating.

Surface Water Release Potential:

There is low potential for releases to surface water since the building provides an adequate secondary containment.

Air Release Potential:

The potential for on-going release potential is low.

Subsurface Gas Release Potential:

Although this unit was built over fill material, ranging in depth from five to thirteen feet, the fill material is believed to be free of anthropogenic materials. Depending on the conditions of the underground piping, or leak tests thereon, there is a low possibility of gas releases to the soil and associated soil gas generation.

4.2 SWMU No. 2: Building 41, Filtration Unit

Building 41 is a one-story 14,354 square foot galvanized steel high-bay structure with a poured concrete floor. The floor is sealed with a non-reactive epoxy. The structure houses laboratory space, offices and the mixed waste processing areas. Included in this processing area is a 175 gallon high density polyethylene tank. The building is equipped with an exhaust system that uses a prefilter and HEPA filter prior to discharging air from the mixed waste storage and treatment area.

Date of Start-Up: April 10, 1984

Date of Closure:

Final facility closure expected in year 2001 (see RCRA Permit Closure Plan).

RCRA Facility Assessment
General Atomics

Waste Management:
Mixed waste staging and treatment.

History of Releases:
No releases or history of releases noted.

Results of Visual Site Investigation:
Visual inspection of the unit and the immediate area showed no sign of releases.

CONCLUSIONS:

Soil/Groundwater Release Potential:
The potential for releases to soil and/or groundwater is unknown because it is limited because of secondary containment provided. It is also noted that the floor was coated with a chemical resistant coating.

Surface Water Release Potential:
There is low potential for releases to surface water since the building provided secondary containment.

Air Release Potential:
There is no evidence indicating past releases to air; therefore, the potential is low due to the exhaust system and HEPA filter. With proper maintenance of the exhaust system there should be no releases from this unit.

Subsurface Gas Release Potential:
There are no subsurface structures (e.g. tanks) associated with this mixed waste treatment unit. However, there is a stormwater sump at the northwest end of Building 41. The potential for release is considered low.

4.3 SWMU No. 3: Building 41, Mixer Unit

The mixer is situated under an air emission hood that draws vapors and aerosols into the HEPA exhaust system. The mixer unit is used to promote neutralization and to solidify mixed waste streams. Further details of the mixer unit appear in the RCRA Part B application.

Date of Start-Up: April 10, 1984

Date of Closure:
Final facility closure expected in about the year 2001 (see RCRA Permit Closure Plan).

RCRA Facility Assessment
General Atomics

Waste Management:

Mixed waste are consolidated at Building 41. Compatible waste may be blended using the mixer unit, with reagents to promote neutralization and to solidify. Solidification involves the blending of waste with Portland cement, diatomaceous earth, polymer (e.g. STERGO) and clay absorbents such as Aquaset and Petroset. The blended waste is typically allowed to set for a given period of time in open head 55-gallon drums.

History of Releases:

No releases or history of releases noted.

Results of Visual Site Investigation:

Visual inspection of the unit and the immediate area showed no sign of releases.

CONCLUSIONS:

Soil/Groundwater Release Potential:

The potential for releases to soil and/or groundwater is unknown because it is not known if past operations were provided with secondary containment. The potential for release is considered to be low.

Surface Water Release Potential:

There is low potential for releases to surface water since the building provided an adequate secondary containment.

Air Release Potential:

There is no evidence indicating past releases to air; therefore, the potential is low. There is no on-going release potential due to the closure of this unit.

Subsurface Gas Release Potential:

This unit does not have a record of connections to the subsurface that might contribute to releases. Therefore, potential for release is considered low.

4.4 SWMU No. 4: Building 41, Drying Oven

Date of Start-Up: April 10, 1984

Date of Closure:

Final facility closure expected in about the year 2001 (see RCRA Permit Closure Plan).

RCRA Facility Assessment
General Atomics

Waste Management:

This unit is used to dry mop heads, rags, filters and similarly small quantities of mixed or hazardous wastes.

History of Releases:

There are no releases or history of releases noted.

Results of Visual Site Investigation:

Visual inspection of the unit and the immediate area showed no sign of releases.

CONCLUSIONS:

Soil/Groundwater Release Potential:

The potential for releases to soil and/or groundwater is unknown because it is not known if past operations were provided with secondary containment. The potential for release is considered to be low.

Surface Water Release Potential:

There is low potential for releases to surface water since the building provided an adequate secondary containment.

Air Release Potential

There is no evidence indicating past releases to air; therefore, the potential is low.

Subsurface Gas Release Potential

This unit does not have a record of connections to the subsurface that might contribute to releases. Therefore, potential for release is considered low.

4.6 SWMU No. 5: Building 41, Baler/Compactor

Date of Start-Up: April 10, 1984

Date of Closure:

Final facility closure expected in about the year 2001 (see RCRA Permit Closure Plan).

Waste Management:

Used to reduce the volume of wastes, this unit is used to crush solid materials contaminated with radioactive, or mixed waste.

RCRA Facility Assessment
General Atomics

History of Releases:

No releases or spills were noted.

Results of Visual Site Investigation:

Visual inspection of the unit found no obvious signs of releases or spillages.

CONCLUSIONS:

Soil/Groundwater Release Potential:

The potential for releases to soil and/or groundwater is unknown because it is not known if past operations were provided with secondary containment. The potential for release is considered to be low.

Surface Water Release Potential

There is low potential for releases to surface water since the building provided an adequate secondary containment.

Air Release Potential

There is no evidence indicating past releases to air; therefore, the potential is low.

Subsurface Gas Release Potential

This unit does not have a record of connections to the subsurface that might contribute to releases. Therefore, potential for release is considered low.

4.7 SWMU No. 6: Building 41, Lower Yard Storage Area

Adjacent and to the east of Building 41 is the Lower Yard low-level radioactive or mixed waste storage yard. The yard is paved asphalt sloping to a six inch berm. The yard is referred to as consisting of two areas. Area SU41-1 is a tarped storage shed with secondary containment pallets, while SU41-2 is an open area for boxes and other containers.

Date of Start-Up: April 10, 1984

Date of Closure:

Final facility closure expected in about the year 2001 (see RCRA Permit Closure Plan).

Waste Management:

This unit is used to store containerized wastes. Containers, primarily 55-gallon drums, are stored sealed on spill pallets, with plastic tarps or tents over them to protect against the elements.

RCRA Facility Assessment
General Atomics

History of Releases:

No releases were reported or noted during the file reviews.

Results of Visual Site Investigation:

Visual inspection of the asphalt paved unit showed that it sloped to the southeast. The existence of a berm provides limited protection from runoff. No obvious signs of spills or releases were observed.

CONCLUSIONS:

Soil/Groundwater Release Potential:

The potential for releases to soil and/or groundwater is limited because secondary containment was provided. No significant cracks were noted.

Surface Water Release Potential:

There is low potential for releases to surface water since the building provided an adequate secondary containment.

Air Release Potential:

There is no evidence indicating past releases to air; therefore, the potential is low. There is no on-going release potential due to the closure of this unit. An unpaved equipment storage area is to the east.

Subsurface Gas Release Potential:

This unit does not have a record of burial or disposal to the subsurface soil that might contribute to releases. Therefore, potential for release is considered low.

4.8 SWMU No. 7: Building 41, Upper Yard Storage Area

Located at the foot of the hillside, across from Building 37, this unit is a fenced area approximately 120 ft by 50 ft with a bunker for the storage of more highly radioactive materials.

Date of Start-Up: April 10, 1984

Date of Closure:

Final facility closure expected in about the year 2001 (see RCRA Permit Closure Plan).

Waste Management: Storage Area for Low-level Radioactive Waste and Mixed Waste.

The area is paved with asphalt and slopes downward to the south east. Immediately to the east is an equipment storage area that is also paved.

RCRA Facility Assessment
General Atomics

History of Releases:

No releases have been reported.

Results of Visual Site Investigation:

Visual inspection of the unit shows what appears to be a well weather asphalt surface with limited berms. This area is now used solely for the storage of solid, or solidified mixed or radioactive wastes.

CONCLUSIONS:

Soil/Groundwater Release Potential:

Like the Upper Yard, the Lower Yard is paved and bermed with asphalt. The Lower Yard asphalt appears to be well maintained and has been previously reapplied. The area slopes to the east with a six inch asphalt berm providing secondary containment. The potential for releases is considered to be moderate to low.

Surface Water Release Potential

There is low to no potential for releases to surface water.

Air Release Potential

There is no evidence indicating past releases to air; therefore, the potential is low. There is no on-going release potential due to the closure of this unit.

Subsurface Gas Release Potential

This unit does not have a record of connections to the subsurface that might contribute to releases. Therefore, potential for release is considered low.

4.10 SWMU No. 8: Building 37N, Residual Contamination

This unit (both walls and foundation), an appendage to B-37, has been fully dismantled and removed. A subsurface vaulted tank, suspected as a source of contamination, has been excavated and removed. The surface has been graded and covered with asphalt. Building 37 is also known as Sorrento Valley "A". What is designated as Building 37N is merely the dismantled northern half of the SVA or Building 37 structure, which is now a capped with asphalt and restricted from use as a parking lot.

During the decommissioning of Building 37N, under the oversight of the NRC and DHS, TCE was found in soil and groundwater samples. Monitoring wells were placed to the north and northwest of what remains as Bldg 37.

RCRA Facility Assessment
General Atomics

The site soils are primarily composed of alluvium formed from the weathering and transportation of older formations composed of sandstone, siltstone and limestone. The older alluvium contains a relatively large percentage of gravel up to boulder size material. The depth of compacted fill below B-37N ranges up to 18 feet below the existing grade at approximately 53 feet mean sea level (MSL).

A fenced area to the west of Bldg-37, with a concrete foundation, is still being used to store excess equipment and chemical such as paints and oils. Relatively minor staining was observed.

Date of Start-Up: 1959

The SVA facility was established in 1959 to foster the research and development of ceramic-based nuclear fuel materials and to fabricate high temperature gas-cooled reactor fuel assemblies. From 1962 to 1989 the SVA facility was used to fabricate enriched nuclear fuel for energy and defense related projects. B-37N and other structures were used for nuclear fuel production.

Date of Closure: 1995

Bldg-37N was demolished as part of the SVA Decommissioning Project between July 1993 and February 1994.

Waste Management:

Bldg-37N housed fuel fabrication process facilities, machine shops, laboratories, storerooms, a clean change room and an eating area. Principle wastes generated consisted of machine shop solvents.

History of Releases:

Facility was affected by storm water runoff from the hillside in the late 1970's.

Results of Visual Site Investigation:

Visual inspection of the unit was not feasible because the entire unit has been removed. This area is now covered with asphalt.

CONCLUSIONS:

Soil/Groundwater Release Potential:

The full extent of past releases to soil and/or groundwater is uncertain because it is not known.

Surface Water Release Potential:

Surface contamination is limited and significantly removed from surface water bodies.

RCRA Facility Assessment
General Atomics

Air Release Potential:

There is no evidence indicating past releases to air; therefore, the potential is low. There is no on-going release potential due to the closure of this unit.

Subsurface Gas Release Potential:

This unit does not have a record of connections to the subsurface that might contribute to releases. Therefore, potential for release is considered low.

5.0 AREA OF CONCERN

An Area of Concern (AOC) is defined as a unit which may not be a Solid Waste Management Unit, but still have the potential for releases of hazardous waste or hazardous constituent(s).

The following unit, because of its potential remediation needs has been identified as an AOC:

5.1 AOC No. 1: Building 21, TRIGA Building

This building is part of a complex of buildings to house and support development of the TRIGA reactor program. Completed in the 1960s, this structure currently houses the Mark I and Mark F non-power research reactors. GA no longer has need to use the facilities and is obligated to remove the contamination from this surplus facility in accordance with the NRC and DHS license requirements. The facility operations were evaluated in an Environmental Impact Appraisal prepared by the US NRC Office of Nuclear Materials Safety and Safeguards (NUREG-0994). No significant impact to health, safety or the environment was identified. Previous efforts to refurbish the facility were conducted in 1978 and 1979.

Date of Start-Up: 1959

Date of Closure: Scheduled for completion in 2001

Waste Management:

An asphalt paved and fenced service yard to the west of this building was used to store excess equipment, lead bricks and cadmium (used for shielding) and other maintenance related materials.

History of Releases:

No uncontained releases were reported.

RCRA Facility Assessment
General Atomics

Results of Visual Site Investigation:

Visual inspection/walk-through indicated that much of the operations had ended or were mothballed. The outer service yard contained quantities of salvagable metals and miscellaneous items. The asphalt was in poor shape with uneven surface and subsidence or sink-holes. The area was separately fenced and monitored.

CONCLUSIONS:

Soil/Groundwater Release Potential:

The potential for releases to soil and/or groundwater is unknown because little if any soil sampling has been undertaken. A separately fenced area behind the building was used for electrical transformer and cooling systems. The area is paved with asphalt, but in a very deteriorated state. It is not known if there were releases of hazardous waste constituents.

Surface Water Release Potential:

There is low potential for releases to surface water since the building provided an adequate secondary containment.

Air Release Potential:

There is no evidence indicating ongoing releases to the air; therefore, the potential from current operations is low and the reactors are no longer operating.

Subsurface Gas Release Potential:

This unit does not fall under one of the following areas of concern as specified in the EPA's RCRA Facility Assessment Guidance; an active or closed landfill or a unit which has been closed as a landfill. Therefore, potential for release is considered low.

6.0 VISUAL SITE INSPECTION:

To verify and clarify the status of facilities at GA several inquiries of employees' memories were made by telephone and in person during site visits. Site visits to GA were made on November 5, 6, and 7 1996 and on February 2 and 3, 1998. People interviewed included Dr. Keith Asmussen, Art Barsell, Paul Englert and others.

Laboratories housed within Building 2, the waste collection procedures and treatment practices were observed and discussed with facility personnel. GA has leased space to numerous separate companies engaged in a range of scientific research. Review of county files indicated no unusual incident report or violations warranting further investigation or remediation.

RCRA Facility Assessment
General Atomics

The main site operations also include office space, ground maintenance, tennis and volley ball courts and a swimming pool. Idle laboratory and manufacturing space such as that associated with Bldg 27, 23 and 22 were inspected. Associated with Bldg 27 a shielded radioactive materials storage bunker and a radioactive waste water storage tank were, respectively, entered and observed. Ongoing remediation efforts to D&D Bldgs 22 and 23 were observed and discussed with facility personnel.

Bldg 25 and its connection to the sanitary sewer system were noted. Bldg 25 lies on artificial fill material.

Historically, auxillary/emergency power supplies and winter heating for selected buildings were fueled from diesel tanks buried adjacent to occupied buildings. All USTs at GA have adequately met the closure requirements and oversight from the County of San Diego.

Connecting the main site, via General Atomics Court, with the Sorrento Valley site is Tower Road. Access to this road is controlled by GA, via a gate at General Atomics Court and a gate and guard booth at Dunhill Street in Sorrento Valley. A stormwater runoff culvert system, including holdup ponds run adjacent and to the east of Tower Road. The City of San Diego requires that the hill sides on either side of this roadway be maintained in a natural form as free space. The only exception are Bldgs 35 and 36 toward the bottom of the road. Bldg 35 is a multistory test tower originally used for exceptionally long assemblies and drop testing. This building has been surveyed for radiological contamination and has been shown to meet the criteria for release to unrestricted use. No hazardous waste residues or operations of concern were noted. Building 36 was being used for lab/pilot scale testing of a Supercritical Water Treatment system and aside from containerized waste little need for further investigation was noted.

Immediately adjacent to Dunhill Street is the Doublet III-D Fusion reactor experiment in Bldg 34. This is one of three fusion research reactors in the U.S. funded by the DOE. While principally drawing power from the local power grid this facility is capable of generating up to 2 megawatts of electricity for very short periods of time. This experimental reactor is unique in that it can operate fully enclosed and shielded. Hazardous waste operation included a mixed waste storage area in the southern end of the building and a waste oil/solvent collection point to the north.

Slab style commercial Buildings on Dunhill St and across from Bldg 34 are owned and leased out by GA, yet not part of its company operations.

Exiting the GA property at Dunhill Street and going west onto Flintkote Avenue brings one to the remaining GA operations. A controlled gate limits access to Bldgs 37, 39, 41 and 42. Buildings 37 and 39 have been or are being subjected to D&D activities. Bldg 41 and 42 house laboratory/research and testing operations. Most notable are the mixed waste treatment

RCRA Facility Assessment
General Atomics

operations in Bldg 41. To the east of Bldg 41 is the lower storage yard. This is an asphalted and bermed area where mixed and radioactive wastes are stored. This area also is used to store transport containers. Beyond this yard is a separate salvage area on native soils.

To the west of Bldg 41 is the Upper Storage Yard and a radiation storage bunker. This area is used to store the more highly radioactive materials awaiting disposal.

7.0 CONCLUSIONS:

This RCRA Facility Assessment was performed to identify and assess Solid Waste Management Units and other Areas of Concern (AOC) at the General Atomics facility. This assessment is based on information found in the files of USEPA in Region IX, the U.S. Department of Energy field office in Oakland, the U.S. Nuclear Regulatory Commission field office in Walnut Creek, the DTSC Regional office, Regional Water Quality Control Board (RWQCB) for San Diego, the San Diego Air Quality Management District, the San Diego County Department of Health Services, and the San Diego Fire Department. None of the agency files were found to be complete, however, together they gave a composite of historical efforts to manage environmental impacts.

A total of 8 SWMUs (seven of which are operating units) and one AOC were identified and are described in Section 4.0 and Section 5.0 of this report. The SWMUs and AOC identified were:

SWMU No. 1:	Building 25, NWPF 3
SWMU No. 2:	Building 41, Filtration Unit
SWMU No. 3:	Building 41, Mixer Unit
SWMU No. 4:	Building 41, Drying Oven
SWMU No. 5:	Building 41, Baler/Compactor
SWMU No. 6:	Building 41, Mixed Waste Storage (Lower) Yard
SWMU No. 7:	SUUY, Upper Yard
SWMU No. 8:	Building 37N, Residual Contamination

AOC No. 1: Building 21, TRIGA Building

Each of the SWMUs was evaluated for the potential to have released contaminants to the soil and groundwater, surface water, air and as subsurface gas. The release potential is divided into four categories: low potential, medium potential, high potential, documented and unknown releases. A summary of release potential from each of the SWMUs is listed in Table 7.1.

The overall route and potential impact of the identified SWMUs on the environmental media at GA is as follows:

Soil/Groundwater Releases:

Releases to groundwater have been established in the area around Bldgs 37 and 39. The full nature and extent of contamination has not been established despite numerous borings and monitoring wells. Concentrations of trichloroethylene in the groundwater have been noted to be above the USEPA Maximum Contaminant Level (MCL); indicating a need for further investigation.

RCRA Facility Assessment
General Atomics

There is a further concern about cumulative releases from Bldg 25. To date, there have been no documented releases. There is concern, however, for undocumented releases from activities surrounding the consolidation and handling of liquid wastes, as well as from cumulative activities, or releases from the discharge connection to the sanitary sewer. While all discharges are required to meet the Industrial Discharge Permit requirements any releases to the soil could result in an accumulation or hot spot.

The poor condition of the asphalted area outside Bldg 21 suggests that additional investigation for spills or releases is warranted. This area is subject to future D&D activities that might establish no further action necessary.

Because of its brackish nature and close proximity to the Pacific Ocean groundwater around the GA site is considered not suitable for drinking purposes. No major agricultural activities were noted and no active extraction wells were identified within a five mile radius.

Surface Water Releases:

Storm water discharge into the the lower lying Soledad Valley has the potential to connect with the seasonal Los Penasquitos Creek. This constitutes a migration route of potential concern, though no documented cases of unremediated surface water releases have been reported.

While a pump oil discharge to the storm drain system was witnessed during the August 1996 investigation/site visit it was remediated shortly thereafter. A stormwater run-off culvert behind Bldg 39 was noted and photographed. Although this culvert discharges north to the Soledad Valley no releases have been documented. Environmental sampling at the Bldg 39 culvert outfall point, however, would be advisable. It is reported that stormwater sampling identified no releases from the Sorrento Valley site.

Air Releases:

No sources of uncontrolled releases to the atmosphere have been noted. At Bldg-41 exhausts are vented through a HEPA filter system.

Subsurface Gas Releases:

No areas of subsurface gas generation potential have been identified. All land disposal units that might have contributed to subsurface gas generation have been excavated or otherwise remediated and no longer exist.

Human and ecological receptors include eight neighboring hospitals, two day care centers and the sensitive habitat areas in the Torrey Pines State Reserve and the Los Penasquitos Lagoon. Human exposure to uncontrolled gaseous, or particulate matter has been determined to be negligible. No impact on the Torrey Pines State Reserve and the Los Penasquitos Lagoon were noted.

RCRA Facility Assessment
General Atomics

Table 7.1: SUMMARY OF RELEASE POTENTIAL FROM EACH SWMU

Unit	Soil and Groundwater	Surface Water	Air	Subsurface Gas
SWMU No. 1: Building 25	Moderate	Low	Low	Low
SWMU No. 2: Building 41, Filtration Unit	Low	Low	Low	Low
SWMU No. 3: Building 41, Mixer Unit	Low	Low	Low	Low
SWMU No. 4: Building 41, Drying Oven	Low	Low	Low	Low
SWMU No. 5: Building 41, Baler/Compactor	Low	Low	Low	Low
SWMU No. 6: Building 41, Mixed/Hazardous Storage (Lower) Yard	Moderate	Moderate	Low	Low
SWMU No. 7: SUUY, Upper Yard	Moderate	Moderate	Low	Low
SWMU No. 8: Building 37N	High	Moderate	Low	Low

8.0 RECOMMENDATIONS:

The information gathered, tabulated and recorded for the General Atomics RCRA Facility Assessment (RFA) has been largely gathered from the records of other regulatory agencies such as the US DOE and the NRC. The locations and scale of historical and present day waste management activities were reviewed and compared. GA under the tenure of the past two owners, was found to be proactive in monitoring its environmental practices and assessing the impacts from past practices at the site. While there were certain gaps in the documentation, the overall effort to review and assess waste management practices and their impacts are adequate.

Historically, since the 1960s until early 1980s, the eastern portions of the original General Atomic property on the mesa had been used for the treatment, disposal and incineration of on-site wastes. These areas were investigated, remediated and documented, by third party contractors, as part of development efforts by the Chevron Land & Development Corp. The waste management areas ultimately were remediated, pursuant to Phase I and Phase II environmental assessments and the adjacent land was excavated and used to fill surrounding canyons in anticipation of a County approved land development project. Today, no trace of either the waste management operations, the foundations nor the land remains. The spin-off of up to 240 acres of formerly GA owned lands by Chevron was accompanied with reconfiguration of GA's waste treatment and disposal operations. Today, the only form of disposal on site is via the industrial discharge permit into the sanitary sewer system.

Existing mixed waste treatment units constitute the practices of GA since its divestiture by Chevron in 1986. These units were reviewed for system integrity and spill control. If properly operated, they should pose little if no impacts. If properly operated and closed under the RCRA permit there should not be a need for further corrective action. Nonetheless, pursuant to Department guidelines all permitted units have been cited as SWMUs with the potential for future corrective action.

The subsurface areas around Buildings 37N and 39, appear to be contaminated with the chlorinated solvent trichloroethylene and its breakdown products. Of most concern are the difficulties GA has encountered to adequately characterize the hydrology, or the extent of groundwater contamination. Recordkeeping and the lack of clear objectives (as witnessed by the loss of a monitoring well) have contributed to spotty information, inconsistencies and inadequate picture of the environmental impact. The soil boring and monitoring well data suggest contamination in excess of the MCL standards. No formal corrective action plan has been initiated to remediate the groundwater. Neither the RWQCB, nor the San Diego County Department of Health have directed specific corrective action measures to control or remediate the groundwater. It is for these reasons these areas are identified as SWMUs and are being recommended for further corrective action.

Since 1980 thirteen underground storage tanks (UST) have been identified and closed.

RCRA Facility Assessment
General Atomics

Based on County oversight and reporting by GA, all USTs on the GA property are deemed to require no further corrective action.

Separately, the closure of older nuclear research and manufacturing facilities, such as those in Buildings 21, 22, 23, 31 and 39 have proceeded with proactive sampling programs and systematic material removals to ascertain that no environmental contamination remains after the D&D activities have been conducted. These projects are funded in part by US DOE under its Environmental Restoration Mission. The closure of these nuclear operations are subject to the review and approval by DHS, NRC and/or US DOE.

Appendix 1: Summary of Buildings:

Building #	Name	Status	Potential Contamination
1	Administration	office space	none
2	Science Laboratories A,B,C	Active (tenant occupied)	none
7	Cafeteria	Active	none
9	Experimental	offices & laboratories (tenant occupied)	none
10	Health Physics	Active	none
13	Technical Office	Active	none
14	Technical Office East	Active	none
15	Technical Office East	Active	none
19	Swimming Pool	Recreational use	none
21	TRIGA (2 reactors)	pending closure	future D&D
22	TRIGA Fuel Fab	Ogden Environmental, Inc. hazardous waste storage closed June 1992 under USEPA and DTSC oversight.	none
23	Hot Cell	pending remediation	D&D
25	Waste Water Treatment Building	RCRA permitted	SWMU
27	Radiochemistry	closed	D&D
27-1	Radiochemistry Bunker	closed	D&D
29	Office Space/Meeting Area	Active	none
29-2	Gardening Services	Active	none
30	LINAC Complex	R&D Linear Accelerator closed	none
31	TRIGA Storage Vault	Active	future D&D
31-1	Neutron Radiography	closed, now office space	none
31-2	ECF Critical Building	closed, now office space	none
31-3	Storage	Active	none
33	ICF Fusion	Inertial Confinement	none

11	Bldg 7	500 fuel oil	1984	1997	October 1997
12	Bldg 23	1,100 diesel fuel	1984	1997	October 1997
13	Bldg 37	10,000 diesel fuel	1984	1997	October 1997

Appendix IV: Site Assessment and Remediation under US DOE:

The following is a summary of some of the reports prepared for the US DOE, by GA, in the course of planning and executing the D&D activities at the Hot Cell:

January 1998	General Atomics Hot Cell Facility Decommissioning Plan”, PC-000423/4
August 1997	“HTGR/RERTR Fuel Materials Characterization and Packaging Report”, PC-000384/1.
August 1995	“Final Environmental Assessment for Decontaminating and Decommissioning the General Atomics Hot Cell Facility”, DOE/EA-1053
December 1995	“General Atomics Hot Cell Characterization Report”, PC-000456/0.
November 1993	“Environmental Assessment for the Decontamination and Decommissioning of the General Atomics Hot Cell”, GA-C21425.
April 1994	“Environmental Assessment for the Operation of DIII-D Facilities and Related Research”, GA-C21729. Note: Latest in support of contract renewal; each five years.

Appendix V: Third Party - Real Estate Assessments:

For the past several years GA has contracted with third parties to conduct Environmental Assessments or Remedial Investigations. In September 1997 and 1996 Pilko Associates, Inc. prepared "Environmental Assessment Updates of General Atomics". These assessments of the facility's physical condition have been performed as a condition of GA's financing institution.

Procedures followed by these real estate assessments closely follow the regulatory procedures for environmental assessments. The procedures include interviews of facility personnel, file and record reviews. Visual inspection was made of Buildings 2, 7, 10, 13, 14, 27 and 30, as well as the exterior of all buildings and the perimeter of the site. Buildings 21, 23 and 27 are apparently excluded from the collateral.

The preliminary site investigation consisted of:

- (1) a general review of historical operating practices;
- (2) the location of underground facilities from site plans;
- (3) the collection of soil samples for radiological and chemical analyses; and,
- (4) data interpretation.

The objectives of the final site investigation were to:

- (1) assess the extent of soil contamination identified by the PSI; and
- (2) determine whether chemical contamination is present in groundwater underlying the site.

Key findings in the 1996 Pilko assessment were that there are no adverse impacts on real property or on GA operations. Recognition was given to the decision to remove underground storage tanks and associated piping and the existence of PCB-containing or PCB-suspected equipment owned by GA. Pilko also noted that GA was cautious to avoid "operational responsibility" over tenants operating on the property. In 1997 GA had 18 tenants operating on the GA site. A reference was made to a hydrogen sulfide gas release from a laboratory experiment [see August 17, 1998 corrections from GA] that had occurred in 1995. No liability was attributed to GA for that incident.

Reaffirming the conclusions made in 1996, no key findings were made in Pilko's 1997 "Environmental Assessment Update of General Atomics".

Appendix VI: Chevron Land and Development Phase II Environmental Assessment

Chevron Land and Development (CL&D) was charged with contracting for the necessary environmental, geophysical and engineering studies to acquire City approval for infrastructure and subdivision for future building activities outside the GA property. In October and November 1988 Harding Lawson Associates prepared a Phase I Environmental Assessment, which lead to a more detailed Phase II assessment in April of 1987. In addition to a broad based soil vapor survey and asbestos survey the Phase II assessment focused on:

- o The formerly NRC decommissioned Rad Waste Processing/Treatment Area;
- o Asphalt burial site; and
- o Solar Evaporation Ponds and spill areas.

The Phase II² identified 16 sites proposed for sampling, however, it was not completely clear what these areas incorporated. These sites are described in the Harding Lawson assessments² and included the following: Site 1, Chemical Waste Burning Area; Site 2, Hazardous Waste Storage/Transfer Station; Site 3, Hazardous Waste Recycling Station; Site 4, Solar Evaporation Ponds; Site 9, Gas Storage/Bottle Storage; Site 11, Plywood and Paint Shops; Site 14, Building 11 Visitor Center/Credit Union (demolished); Site 15, SDGE&E Electrical Substation; Site 17, Vehicle Fueling Station/Garages (USTs). References were made to burial areas used to dispose of vegetation, or even asphalt burial site.

² Copies of this document were requested from GA and the City records.

Verbal Communications with Dr. Keith Asmussen, Director, General Atomics.

Existing Regulatory Controls:

Federal statutes that potentially affect General Atomics' management of mixed wastes include the Clean Air Act (CAA), Clean Water Act (CWA), the RCRA . NPDES 40 CFR Part 122 point source effluent discharges. Under both RCRA §7003 and CERCLA §104 and §106, the federal government can respond where the release of hazardous waste constituents may present an imminent and substantial danger to human health or the environment

The Safe Drinking Water Act (42 U.S.C. §300f-j) protects drinking water by setting maximum contaminant levels (MCLs) for toxic contaminants, including metals. However, drinking water standards are only protective at the point of consumption. Public water supply wells are protected through the wellhead protection program under the SDWA (41 U.S.C. §300h-7(e)).

California's water quality program includes long range resource planning, annual inspection of all facilities, and compliance with stringent surface water and groundwater quality standards. The hazardous waste programs set standards and requirements for: generator, treatment, storage and disposal facility (TSDF) standards, recordkeeping, reporting, remediation and closure.

Protection against potential releases to soil, groundwater and air will be provided through tailor-made requirements using RCRA Subtitle C.

'94 RCRA Implementation Plan (RIP) recommended the institution of an Environmental Priority Initiative ranking strategy. The strategy was based on the numerical '92 National Corrective Action Priority Ranking System (NCAPS). Three ranking categories scored were:

- ES = Environmental Significance
- EB = Environmental Benefit
- O = Other (eg. Political, administrative)

The federal and state authorities to issue corrective action orders for interim status facilities are provided in the Resource Conservation and Recovery Act, Section 3008(h) and Health and Safety Code, Section 25187. The corrective action orders may be issued on consent, or unilaterally. For permitted facilities the federal and state authorities to impose corrective via permit conditions are provided in the Resource Conservation and Recovery Act (RCRA), Section 3004(u) and Health and Safety Code, Section 25200.10. Section 7003, 3004(v) and 3013 of RCRA address imminent and substantial endangerment to health or the environment, allows corrective action to extend beyond the facility boundary, and provide information gathering authority, respectively. Regulations for the RCRA corrective action program are promulgated in 40 CFR Section 264.100.

RCRA Facility Assessment
General Atomics

Mixed wastes are composed of a combination of hazardous and radioactive wastes. Hazardous wastes are, by definition, ignitable, reactive, corrosive and/or toxic. Mixed wastes have at least one of these characteristics and are also radioactive.

State and federal Land Disposal Restrictions (LDRs) require treatment of hazardous waste, including mixed waste, to certain standards prior to land disposal and prohibits storage of LDR waste that do not meet the standards, except for purposes of accumulating sufficient quantities to facilitate proper recovery, treatment, and disposal of the waste. General Atomics is currently treating waste to meet LDR requirements where possible and storing mixed waste under Interim Status until off-site treatment and long-term storage capacity for their waste is available. The RCRA hazardous/mixed waste storage and treatment permit authorizes and assures that these activities are monitored.

The mixed waste that are generated and either treated onsite and/or shipped offsite for further treatment can be categorized into four groups:

1. Wastewater
2. Inorganic sludges/debris
3. Elemental lead
4. Organic liquids

Waste treatment methods are achieve volume, reactivity and/or toxicity reduction. Wastewaters may undergo neutralization, precipitation of metals and filtration (remove metals and radioactive particles). Remaining liquids are discharged to the public sewer system in accordance with the General Atomics Industrial Wastewater Discharge Permit. Inorganics sludges and debris are treated by stabilization or at the DOE facility in Hanford Washington. Stabilization is to immobilize hazardous and radioactive constituents in the waste by forming a lattice structure and/or chemical bond that binds the hazardous constituents to a solid matrix. This solid matrix is more amenable to disposal. The elemental lead waste is treated by macroencapsulation at an off-site facility. Macroencapsulation involves surface coating materials such as polymeric organics (i.e. resins and plastics) or with a jacket of inert inorganic material to substantially reduce surface exposure to potential leaching media. The process does not chemically change the waste or reduce the radioactivity, but simply isolates the waste. The organic liquids will be treated at an off-site treatment facility.

February 24, 2021

Mr. Anil Dharmapal
Licensing, Safety and Nuclear Compliance
3550 General Atomics Court
San Diego, CA 92121

Subject: Groundwater Sampling Methodology During Full-Scale Remediation by In-Situ Chemical Oxidation

Dear Mr. Dharmapal,

General Atomics (GA), in agreement with the Department of Toxic Substances Control (DTSC), is implementing corrective actions for the property located at 11222 Flintkote Avenue in San Diego, California (Site). The full-scale remedy includes in-situ chemical oxidation (ISCO) using 5% sodium permanganate to destroy volatile organic compounds (VOCs) and 1,4-dioxane in groundwater. The full-scale remediation plan is based on successful completion of an ISCO pilot study conducted at the Site between April 12, 2019 and June 3, 2020. The ISCO pilot study and full-scale implementation were approved by the San Diego Regional Water Quality Control Board (SDRWQCB) via Waste Discharge Requirement (WDR) permit numbers 9000003443 and 9000003586, respectively.

The scope of work for monitoring in accordance with the WDRs includes sampling a select set of Site monitoring wells for VOCs, 1,4-dioxane, general chemistry parameters, and metals. Prior to sampling, the monitoring wells are generally purged using low-flow methods using either dedicated or non-dedicated bladder pumps; however, grab samples are collected without purging when sodium permanganate is visually present in the well. Additionally, when sodium permanganate is present in groundwater samples, ascorbic acid is added to the sample in order to quench the permanganate oxidation reaction. The quenching is achieved by sample collection into sampling bottles pre-conditioned with 10 grams of ascorbic acid supplied by the analytical laboratory, Eurofins Calscience.

This method of sample quenching with ascorbic acid is the standard process for conducting VOC analysis in the presence of permanganate, and is necessary to prevent further degradation of the VOCs during transport to the laboratory. However, this procedure changes the pH of the sample which can impact certain analyses. For the suite of analyses required under the WDR permit, total organic carbon (TOC), alkalinity, and hexavalent chromium analyses are impacted by either the presence of permanganate or the quenching process. High permanganate content in samples (i.e., purple groundwater sample color) can damage analytical laboratory instrumentation used for the TOC analysis, and sample dilution to reduce permanganate concentration can result in non-

Mr. Dharmapal
February 24, 2021

representative TOC results. Therefore, in samples where permanganate is visually present even after quenching activities, the laboratory will not analyze for TOC. In addition, the quenching process increases the sample pH, which will have a direct impact on the alkalinity and hexavalent chromium results. Although these results are reported by the laboratory, the results are rejected during the data validation process as a result of the quenching process.

We understand that Dr. Charles Cheng from the SDRWQCB, is aware of the impacts of the quenching of Site groundwater samples on the analytical results, and accepts that certain data will be rejected during data validation as a result of the ISCO injection activities. As such, no changes to the sampling program are proposed and the collection methods will continue consistent with those previously performed at the Site under the WDR permits.

If you have any questions on the scope of work and limitations of analytical results for the scope of work conducted at the Site, please do not hesitate to contact the undersigned to discuss.

Sincerely,

Kevin Coffman, P.G.

**Subject: First Quarter 2021 Waste Discharge Requirements (WDR) Monitoring Report
WDID No. 9000003586:ccheng
General Order No. R9-2008-0081
General Atomics
11222 Flintkote Avenue
San Diego, California 92121**

Dear Mr. Alo:

Geosyntec Consultants (Geosyntec) is pleased to submit this First Quarter 2021 (1Q21) Waste Discharge Requirement (WDR) Monitoring Report (Report) on behalf of General Atomics (GA) for groundwater monitoring of the full-scale In-Situ Chemical Oxidation (ISCO) groundwater remediation activities occurring at 11222 Flintkote Avenue, San Diego, California (Property; **Figure 1**). The “Property” refers to the area owned by GA, and “Site” refers to the Property and the hydraulically downgradient areas, which includes an industrial park east of Flintkote Avenue and a riparian area northeast of the Property. GA is voluntarily performing the remediation of chlorinated volatile organic compounds (VOCs) in soil and groundwater at the Property under the oversight of the Department of Toxic Substances Control (DTSC).

This 1Q21 WDR Report presents the results of groundwater monitoring activities conducted for the period of January through March 2021 following startup of full-scale groundwater remediation activities in accordance with the WDR Order No. R9-2008-0081 issued for the Property, and additional DTSC requests to allow for the start of full-scale groundwater remediation (SDRWQCB, 2020b; DTSC, 2020; GA, 2020 b, c). Locations of Site wells are shown on **Figure 2a**.

1. BACKGROUND

An ISCO pilot study was conducted during the period of April 2019 through February 2020 to assess the effectiveness of the ISCO technology in addressing chlorinated VOCs and 1,4-dioxane in groundwater at the Property. GA submitted the Building 37 – Corrective Measures Study Report to the DTSC which identified the ISCO technology as the primary groundwater remedial technology to address contaminated groundwater at the Property [GA, 2019c, 2020b]. The ISCO pilot study was implemented in accordance with the Building 37 – Groundwater Pump Test and

In Situ Chemical Oxidation Bench Scale and Pilot Test Work Plan [GA, 2019a], and approved pilot study WDR permit application submitted to the San Diego Regional Water Quality Control Board (SDRWQCB) [GA, 2019b].

1.1. ISCO Pilot Study

The ISCO Pilot Study approved permit application included the following components:

- Injection of up to 45,000 gallons of a 5 percent (%) sodium permanganate (NaMnO_4) solution to reduce targeted chlorinated VOCs and 1,4-dioxane to non-toxic by-products¹,
- Injection using six existing wells (GECC-401, MW-3, MW-7, TW-3, SVE-1 and SVE-4), and
- Groundwater monitoring from five observation/monitoring wells (SVE-5, SVE-12, SVE-15, P-111, and MW-34), one upgradient Property well (MW-8) and three downgradient Property wells (GECC-901, GECC-902, and GECC-905).

A total of 12,500 gallons of 5% NaMnO_4 was injected during the Phase 1 program.

On July 9, 2019, GA submitted a Phase 2 request to use an expanded injection network of 13 wells to inject 10,000 gallons of 5% NaMnO_4 to gain a better understanding of the aquifer and injection characteristics prior to the next phases of the ISCO groundwater remedial activities [GA, 2019d]. Phase 2 injections were implemented in the seven (7) additional Property wells that included: MW-1, SVE-5, SVE-6, SVE-13, SVE-14, SVE-15, and SVE-16. Two additional wells, MW-17 and P-113, were added to the groundwater monitoring program. The ISCO injection program expansion request was approved by the SDRWQCB via email on July 18, 2019. The Phase 2 injection program, consisting of injecting 10,000 gallons of 5% NaMnO_4 , was completed on September 2, 2019 and reported in the third quarter 2019 (3Q19) WDR Monitoring Report [Geosyntec, 2019].

On September 30, 2019, GA submitted a Phase 3 expansion request to the SDRWQCB to allow for the successful closeout and use of the final 22,500 gallons of available capacity remaining on the original WDR permit of 45,000 gallons [GA, 2019e]. The Phase 3 Pilot Injection Program, which was approved by the SDRWQCB and DTSC, consisted of the following activities:

- Installation of eleven (11) 2-inch Schedule 40 PVC injection wells along Transect A-A'. The wells were approximately 45 feet deep, each containing 15 feet of slotted screen,
- Installation of twelve (12) 2-inch Schedule 40 PVC injection wells downgradient of the 11 Transect A-A' wells to serve as temporary observation wells for a period of 2 months, and,

¹ If necessary, the permit allowed for the replacement of up to 6,000 gallons of NaMnO_4 with PersulfOx to enhance destruction of 1,4-dioxane.

- Injection of 22,500 gallons of remaining capacity of 5% NaMnO₄ into a selection of the newly expanded network of 24 wells.

On November 4, 2019, the SDRWQCB approved the Phase 3 expansion request via email.

As part of the third phase of the pilot study ISCO injection program, GA injected a total of 22,500 gallons of 5% NaMnO₄ into eleven (11) injection wells (IW-1 through IW-11) from December 29, 2019 to February 4, 2020. The third phase was reported in the first quarter 2020 (1Q20) WDR Monitoring Report [Geosyntec, 2020].

A total of 45,000 gallons of 5% NaMnO₄ solution was injected at the Property as part of the pilot study ISCO injection program from December 29, 2019 to February 4, 2020. In addition to the quarterly SDRWQCB requirements, GA monitored the groundwater on a monthly basis through the Pilot Study to develop a better understanding of the groundwater flow dynamics. At the conclusion of the Pilot Study the overall TCE groundwater plume at the Property had shrunk more than 200 feet in the south/west portion of the Property, and more than 160 feet in the western portion of the Property (GA, 2020b). The injection quantities per well, total injection volumes, and cumulative volume injected to date are provided in **Attachment A**.

Additional details of the injection and groundwater monitoring and reporting plan (MRP) are provided in the WDR permit application and the ISCO injection program expansion request letters.

1.2. Full-Scale ISCO Implementation

On February 27, 2020 GA submitted a new ISCO WDR permit application to the SDRWQCB prior to the conclusion of the pilot study to accommodate full-scale groundwater remediation activities [GA, 2020]. The pilot study WDR permit was terminated and the full-scale WDR permit application was approved by SDRWQCB in letters dated June 3, 2020 [SDRWQCB, 2020a and b]. Based on the successful pilot-study injection program, the full-scale program consists of injection of 630,000 gallons of 5% NaMnO₄ to reduce chlorinated VOCs and 1,4-dioxane to non-toxic by-products. The full-scale WDR injection program consists of injecting oxidant into the following wells as shown on **Figure 2b**:

- Seventy (70) newly-installed ISCO injection wells located north, east, and northwest of Building 37 along transects A-A', B-B', C-C', D-D', E-E', F-F', G-G', H-H', I-I', and J-J',
- Twenty-three (23) existing wells located in areas of the previous pilot-study program adjacent and north of Building 37, and
- Available and accessible monitoring and Soil Vapor Extraction (SVE) wells within building 37 (MW-1, MW-3, MW-7, TW-3, MW-34, MW-35, MW-36, and SVE-1 through SVE-16).

This report covers ISCO monitoring activities performed during the first quarter 2021.

2. SUMMARY OF ISCO INJECTION ACTIVITIES DURING THE CURRENT MONITORING PERIOD

This section describes the activities performed during the monitoring period (January through March 2021) in accordance with the WDR Order. As noted in the November 30, 2020 Plan for Early Start of the ISCO system letter, GA agreed to conduct two additional monthly monitoring events in January and February 2021 from 10 Property monitoring wells located in the eastern parking lot. The analytes tested included VOCs, 1,4-dioxane, other field parameters, and NaMnO₄ concentrations. During the period of March 15 – 19, 2021, Blaine Tech on behalf of GA completed the 1Q21 groundwater monitoring activities from 38 Property wells.

2.1. Injection Activities During the Reporting Period

Following completion of the 4Q20 groundwater monitoring activities, full-scale ISCO injection activities commenced on a limited basis beginning on December 26, 2020. A summary of the WDR ISCO pilot study and full-scale injection quantities per well, total injection volumes, and cumulative volume injected to date are provided in **Attachment A**. A total of 74,800 gallons were injected into the aquifer during the 1Q21.

2.2. Groundwater Gauging and Monitoring

In accordance with the required MRP, depth to groundwater (DTW) measurements and groundwater monitoring activities were completed within 10 downgradient Property wells in the eastern parking lot in January and February 2021. For the March 1Q21 monitoring event, all 61 Property and Site wells were gauged prior to the collection of groundwater samples from 38 wells.

Prior to collecting groundwater samples, DTW was gauged using an electronic water level meter. The water level meter was decontaminated between wells using a non-phosphate detergent and deionized water. The DTW measurements for the January, February, and March sampling events are provided on the groundwater field forms included in **Attachment B** and in **Table 1**. Groundwater elevation contours for shallow-zone and deep-zone groundwater for the March 2021 monitoring event are provided on **Figures 3 and 4**, respectively.

During the groundwater sampling events, wells were typically purged with dedicated or non-dedicated bladder pumps; however, grab samples were collected without purging for wells where permanganate was observed. When permanganate was observed in a well, the samples were quenched with ascorbic acid to stabilize the sample for analysis by quenching the permanganate oxidation reaction. The quenching is achieved by sample collection into sampling bottles pre-conditioned with 10 grams of ascorbic acid supplied by the analytical laboratory, Eurofins Calscience.

Field parameters were monitored either with the pumps through a flow-through cell or via grab samples using a disposable bailer. During purging, field parameters including pH, temperature,

specific conductance, dissolved oxygen (DO), turbidity, total dissolved solids (TDS), salinity, and oxidation-reduction potential (ORP), were recorded and documented on the field forms. Field monitoring data are summarized in **Table 2** and field gauging and sampling logs are provided in **Attachment B**.

Groundwater samples were collected using laboratory-provided containers, placed in a cooler with ice, and delivered to Eurofins TestAmerica Laboratory in Irvine, California under proper chain-of-custody procedures. Groundwater samples collected during the 1Q21 monitoring events were analyzed for the following constituents.

- VOCs by United States Environmental Protection Agency (USEPA) Method 8260B;
- 1,4-Dioxane by USEPA Method 8270C SIM; and

Groundwater samples were also collected to evaluate NaMnO_4 concentrations in groundwater. Samples were collected using laboratory-provided containers, placed in a cooler with ice, and delivered to Prima Environmental, Inc. in El Dorado Hills, California under proper chain-of-custody procedures. Samples were analyzed via visible spectroscopy at 560 nanometers using a Hach DR 2800 spectrophotometer.

The laboratory analytical reports are provided in **Attachment C**. As part of the groundwater monitoring program, Quality Assurance/Quality Control (QA/QC) blind duplicates, equipment blanks and trip blanks were collected, and results were assessed during data validation. The method used to quench the samples with ascorbic acid is the standard process for conducting VOC analysis in the presence of permanganate and is necessary to prevent further degradation of the VOCs during transport to the laboratory. However, this procedure changes the pH of the sample which can impact certain analyses. For the suite of analyses required under the WDR permit, total organic carbon (TOC), alkalinity, and hexavalent chromium analyses are impacted by either the presence of permanganate or the quenching process. High permanganate content in samples (i.e., purple groundwater sample color) can damage analytical laboratory instrumentation used for the TOC analysis, and sample dilution to reduce permanganate concentration can result in non-representative TOC results. Therefore, in samples where permanganate is visually present even after quenching activities, the laboratory will not analyze for TOC. In addition, the quenching process increases the sample pH, which will have a direct impact on the alkalinity and hexavalent chromium results. Although these results are reported by the laboratory, the results are rejected during the data validation process as a result of the quenching process (noted in the data validation reports and indicated with a 'R' flag on the analytical results tables). Note that TOC, alkalinity, and hexavalent chromium analyses are not performed during each groundwater monitoring event in accordance with the MRP. Data validation reports are provided in **Attachment D**.

A summary of VOC and 1,4-dioxane analytical results is provided in **Table 3** and a summary of NaMnO_4 results is provided in **Table 4**.

3. GROUNDWATER MONITORING RESULTS

The TCE, PCE, and 1,4-dioxane concentration contours in shallow zone groundwater for the March 2021 groundwater sampling event are shown on **Figures 5, 6, and 7**, respectively. The results of the primary constituents-of-concern [trichloroethene (TCE), tetrachloroethene (PCE), and 1,4-dioxane] for the January, February, and March 2021 ISCO performance monitoring events are provided below:

January and February 2021

Monitoring Wells:

Groundwater samples were collected from ten (10) monitoring wells located in the eastern parking lot during the January and February 2021 monitoring events.

- TCE was detected in 8 of the 10 monitoring wells sampled at concentrations ranging from 4.4 µg/L (MW-33) to 1,100 µg/L (GECC-901). TCE was not detected above the laboratory reporting limit in monitoring wells MW-9 and P-114.
- PCE was detected in 5 of the 6 monitoring wells sampled at concentrations ranging from 24 µg/L (GECC-902) to 65 µg/L (P-112). PCE was not detected above laboratory reporting limits in monitoring wells MW-9, MW-33, GECC-901, P-113 and P-114.
- 1,4-Dioxane was detected in 9 of the 10 monitoring wells sampled ranging from concentrations of 1.4 µg/L (GECC-901) to 13 µg/L (MW-17, P-111 and P-112). 1,4-Dioxane was not detected above laboratory reporting limits in monitoring well MW-33.

March 2021

Monitoring Wells:

Groundwater samples were collected from 38 Property monitoring wells during the 1Q21 monitoring event. The TCE, PCE, and 1,4-dioxane concentration contours in shallow zone groundwater are shown on **Figures 5, 6, and 7**, respectively.

- TCE was detected in 12 of the 38 Property monitoring wells at concentrations ranging from an estimated concentration of 0.34 µg/L (MW-23) to 1,000 µg/L (GECC-901).
- PCE was detected in 8 of the 38 Property monitoring wells at concentrations ranging from an estimated concentration of 0.29 µg/L (MW-1) to 62 µg/L (MW-17). PCE was not detected above laboratory reporting limits in monitoring wells GECC-901 and P-113.
- 1,4-Dioxane was detected in 15 of the 38 Property monitoring wells ranging from a concentration of 1.3 µg/L (SVE-13) to 15 µg/L (MW-1). 1,4-Dioxane was not detected above laboratory reporting limits in monitoring well GECC-901.

A comparison of the 1Q21 and 4Q20 (Geosyntec, 2021) TCE, PCE and 1,4-dioxane contaminant plumes indicates the following:

- Further reduction/shrinking of the TCE, PCE and 1,4-dioxane contaminant plumes during 1Q21 beneath Building 37 in the direction of groundwater flow, and
- Disappearance of the localized TCE, PCE and 1,4-dioxane contaminant hotspots that were due to rebound and observed during the 4Q20 monitoring event.

Degradation Products:

Concentrations of PCE and TCE daughter products (i.e., cis-1,2-dichloroethene [cis-1,2-DCE] and/or 1,1-dichloroethene [1,1-DCE]) detected in monitoring wells GECC-901, GECC-902, GECC-905, P-111, and P-113 during the March 2021 sampling event indicate partial reductive dechlorination is occurring in areas not currently impacted by the ISCO injection activities.

- 1,1-DCE was detected in 2 monitoring wells at concentrations of 6.2 µg/L (GECC-905) and 6.3 µg/L (P-111).
- Cis-1,2-DCE was detected in 3 monitoring wells at estimated concentrations of 3.3 µg/L (GECC-902), 6.6 µg/L (GECC-901), and at a concentration of 4.8 µg/L (P-113).

Sodium Permanganate Laboratory Analysis:

There were no detections of NaMnO₄ in the 10 monitoring wells located in the eastern parking lot sampled during the January and February groundwater monitoring activities. This indicates that the NaMnO₄ has not yet reached these areas.

During the March 2021 groundwater monitoring event, samples were collected from all of the 38 quarterly MRP wells to evaluate the presence of NaMnO₄ concentrations in groundwater. NaMnO₄ concentrations ranged from an estimated concentration of 8 mg/L (MW-7) to 22,000 mg/L (MW-3). NaMnO₄ was not detected above the laboratory reporting limits in monitoring wells GECC-901, GECC-902, GECC-905, MW-8, MW-9, MW-10, MW-10D, MW-17, MW-23, MW-33, and P-111 through P-114. These wells, similar to the January and February monitoring event, are located in the eastern parking lot.

In samples with detected NaMnO₄ concentrations, primary constituents of concern (TCE, PCE, and daughter products) as well as 1,4-dioxane were detected at very low concentrations, or were not detected above the laboratory reporting limits (i.e., MW-1, MW-3, MW-7, MW-34, MW-35, MW-36, TW-3, SVE-1 through SVE-16, and GECC-401).

4. SUMMARY

With NaMnO₄ injections having occurred during each month of 1Q21, residual NaMnO₄ was observed in monitoring wells located on the upper portion of the Property including MW-1, MW-3,

MW-7, MW-34 through MW-36, TW-3, GECC-401, and SVE-1 through SVE-16. NaMnO₄ was not observed in upgradient well MW-08 or in any other Property monitoring wells in the Eastern parking lot.

Analytical results of the 1Q21 ISCO injection monitoring event are generally consistent with the first through fourth quarters of 2020 groundwater monitoring analytical results during the ISCO pilot study period. Where NaMnO₄ is injected or has migrated, significant reductions of VOC concentrations have been and continue to be observed.

The 1Q21 monitoring results indicate further reduction of the TCE, PCE and 1,4-dioxane contaminant plumes beneath Building 37 in the direction of groundwater flow, and, disappearance of the localized TCE, PCE and 1,4-dioxane contaminant hotspots in the south and west portions of Building 37. As outlined in Geosyntec's February 24, 2021 letter titled *Groundwater Sampling Methodology During Full-Scale Remediation by In-Situ Chemical Oxidation* and provided to the SDRWQCB, quenching of Site groundwater samples where permanganate is present is a necessary process to obtain valid VOC results. Despite impacts from sample quenching to other analytes, the sample collection methods will continue consistent with those previously performed at the Site under the approved full-scale WDR permit.

Upcoming monthly and quarterly monitoring in accordance with the full-scale WDR permit application and WDR Order will track further reductions in groundwater concentrations.

Abbreviations:

DTW - Depth to water
ft - feet
GECC - Geocon well
GW - Groundwater
MSL - Mean Sea Level

MW - Monitoring well
TOC - Top of casing
--- - Not applicable
SVE - Soil vapor extraction

Notes:

The estimated error associated with reading the sounder is plus/minus 0.01 feet.
The estimated error associated with calculation of change between measurements is plus/minus 0.02 feet.
* Well re-gauged at the end of the day.
Following the 2009 and 2018 survey of select wells, groundwater elevations for prior monitoring events were recalculated based on the surveyed TOC elevations.
After 1 August 2010, wells were vented at least 72 hours prior to gauging.
Change from Previous Measurement: comparison to the previous quarter's measurement. When replicate measurements are available for the previous quarter, the average of the replicates is used to
On 3 July 2014, shallow monitoring wells were re-gauged to confirm anomalous measurements in the southeastern area wells. For comparison to the original 2Q14 monitoring event in June, the groundwater elevations were compared to 1Q14 elevations to calculate the changes in measurements.

Abbreviations:

- | | |
|-------------------------------------|---|
| °C - degrees Centigrade | P - piezometer well |
| DO - dissolved oxygen | PSU - practical salinity units (parts per thousand) |
| Lab - laboratory analysis | pH - negative logarithm of the hydrogen ion concentration |
| µmhos/cm - micromhos per centimeter | Sal. - salinity |
| mg/l - milligrams per liter | SM - Standard Methods for the Examination of Water and Wastewater |
| mV - millivolts | TDS - total dissolved solids |
| MW - monitoring well | T - temperature |
| NTU - nephelometric turbidity units | Turb. - turbidity |
| ORP - oxidation/reduction potential | NaMnO ₄ - potassium permanganate |

Notes:

Parameters were measured after purging where grab samples were collected

Abbreviations:

- TCE - trichloroethene
- PCE - tetrachloroethene
- 1,1-DCE - 1,1-dichloroethene
- 1,1-DCA - 1,1-dichloroethane
- TCFM - trichlorofluoromethane (Freon 11)
- c-1,2-DCE - cis-1,2-dichloroethene
- BDCM - bromodichloromethane
- DBCM - dibromochloromethane
- µg/L - micrograms per liter

Notes:

All samples analyzed by Eurofins TestAmerica in Irvine, CA
 Analyses by 82608 for standard VOC analysis and 8270D SIM for 1,4-dioxane.
 Results for grab samples, samples from decommissioned well, and samples collected before installation of dedicated bladder pumps are compiled in previous annual groundwater monitoring reports.
 Dashes (-) indicate analysis was not conducted or analysis was not possible to do high permanganate concentration.
 * Indicates well was not purged due to permanganate; non-purge sample collected
 ** Indicates duplicate sample for the primary sample listed above it.
 *** Indicated sample was re-analyzed

J - The compound was positively identified; however, the associated numerical value is an estimated concentration only.
 < Result is not detected above the listed laboratory reporting limit (RL)
 Ded. B. Pump - Dedicated bladder pump
 Non-Ded. B. Pump - Non-dedicated bladder pump
 A - Instrument related QC outside of acceptance limits
 NA - Constituent not analyzed
 R - Data results are rejected due to significant laboratory quality control (QC) issues as indicated in the data validation reports.
