Subject: Phase I Environmental Site Assessment
Mercado Apartments
2001 Newton Avenue
San Diego, California 92113
Partner Project No. 19-262105.1

Dear Mr. Suarez:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (619) 925-9672.

Sincerely,

Mark Lambson
Principal

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by MAAC for the property located at 2001 Newton Avenue in San Diego, San Diego County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide MAAC with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located west of the Newton Avenue and South Evans Street intersection within a mixed residential-light industrial area of San Diego County. Please refer to the table below for further description of the subject property:

Subject Property Data

Address:	2001 Newton Avenue, San Diego, California
Additional Addresses:	2017, 2021, 2029, 2041, 2045, 2051, 2057, 2061, 2065, 2079, 2085, and 2097 Newton Avenue and 2008, 2014, 2024, 2030, 2044, 2050, 2058, 2068, 2074, 2086, 2090, and 2094 Main Street
Historical Addresses:	1102, 1110, 1146, 1154, 1118, 1162, 1170, 1180, and 1190 South Evans Street and 2005, 2009, 2011, 2015, 2019, 2023, 2027, 2031, and 2035 Newton Avenue
Property Use:	Multi-family residential
Land Acreage (Ac):	4.34 Ac
Number of Buildings:	24
Number of Floors:	2
Gross Building Area (SF):	135,048 SF
Date of Construction:	1993
Assessor's Parcel Number (APN):	538-672-0400
Type of Construction:	Wood-framed on concrete slab
Current Tenants:	Mercado Apartments consisting of 144 residential units
Site Assessment Performed By:	Aapris Medzhibovsky of Partner
Site Assessment Conducted On:	November 12, 2019

The subject property is currently occupied by Mercado Apartments for residential use. The subject property also operates the Mercado Early Learning Academy daycare facility, located adjacent to the leasing office. Onsite operations consist of routine apartment maintenance activities and childcare education services. In addition to the current structures, the subject property is also improved with asphalt-paved parking areas near the southeastern and northwestern portions, landscaping features throughout, and three electric vehicle charging stations located near the north-central parking lot.

According to available historical sources, the subject property was formerly developed with private residences as early as 1906. The subject property included both residential and commercial/industrial tenants between at least 1928 and the late 1940s, including Glasson Lumber Mill (circa 1930s) and San

Diego Gas & Electric (mid 1940s to late 1980s). The subject property was redeveloped with the Mercado Apartments in 1993.

The immediately surrounding properties consist of the Caltrans District 11 Coronado Bay Bridge staging facility to the northwest across Dewey Street; single-family residences and Vault Auto Storage to the southeast across South Evans Street; single-family residences and Tum Yeto skateboard distribution company, industrial warehouses, a light-manufacturing facility, and vacant parcel used for storage to the northeast across Newton Avenue; and Dennis Covey Art Gallery, RB San Diego, EQ Studios, light-industrial facilities, and a vacant parcel used for San Diego Gas & Electric equipment storage to the southwest across Main Street.

According to a subsurface investigation conducted on the subject property (Case Number H32282-001), the depth of groundwater underlying the subject property is inferred to be between approximately 3.5 to 7.7 feet (ft) below ground surface (bgs) with a groundwater flow toward the southwest.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- According to historical and regulatory documents reviewed in support of this assessment, San Diego Gas & Electric (SDG&E) occupied portions of the subject property between the mid-1940s until the late 1980s. During this period, SDG&E operated a vehicle maintenance facility, personnel training center, and general storage yard. Various chemicals were stored on the subject property during this period, including chlorinated and non-chlorinated solvents, polychlorinated biphenyls (PCBs) in transformers, paints, vehicle maintenance supplies, and pesticides and herbicides. Glasson Lumber Mill reportedly occupied the subject property in the 1930s and maintained a 280-

gallon underground storage tank (UST) located at the northern corner of the subject property, south of the Dewey Street and Newton Avenue intersection, in at least 1938. Environmental investigations were initiated at the subject property in 1989 in support of property redevelopment with low-income housing.

The first subsurface site investigation was conducted at the subject property in January 1993. Hydrocarbon contamination at levels of potential regulatory concern and low levels of PCBs were identified in soils. A 280-gallon UST system, presumed to be the Glasson Mill UST installed in 1938, was also discovered during this investigation, which was severely corroded and empty upon discovery. The UST system was removed from the subject property and remedial excavation was performed in February 1993, which removed total petroleum hydrocarbon (TPH) impacts to levels below laboratory detection limits. The excavation was subsequently backfilled and compacted.

An intensive soil and groundwater investigation was conducted between April and May 1993 to address potential contamination at the subject property originating from historic land use. Five groundwater monitoring wells were installed and sampled for TPH, organic lead, purgeable halocarbons, purgeable aromatics, PCBs, and organochlorine pesticides (OCPs). Following well installation, SDG&E storage buildings, concrete pads, and asphalt-parking areas were demolished and the materials incorporated into the upper 18 to 24 inches of soil. Soil samples were collected in a grid pattern at 5 ft bgs in formational material across the subject property, resulting in 200 total grid soil samples. Two soil samples were also collected from each of the five groundwater monitoring wells. All soil samples were analyzed for TPH as gasoline and diesel. Any soil sample with TPH detections were analyzed for benzene, toluene, ethyl benzene and xylenes (BTEX). Soil samples collected from the demolished SDG&E warehouse were additionally analyzed for chlorinated solvents. Composite soil samples were prepared from discrete soil samples collected from either side of the demolished warehouse and analyzed for polycyclic aromatic hydrocarbons (PAHs), OCPs, and semi-volatile organic compounds (SVOCs). Additionally, composite samples were collected from the vicinity of the former concrete slab associated with the Glasson Lumber Mill and analyzed for OCPs.

No detections of contaminants above the laboratory detection limit were reported for groundwater samples collected and analyzed. The monitoring wells were subsequently closed in June 1993.

Of the 200 discrete soil samples collected, one sample contained 1,526 milligrams per kilogram (mg/kg) petroleum hydrocarbons and 4,400 micrograms per kilogram (ug/kg) benzo(a)pyrene. No BTEX, OCPs, or PCBs were detected. A trench was excavated near the sample location and discolored soil was observed, sampled, and analyzed. Upon analysis, it was determined that the discoloration and elevated TPH concentrations were due to the presence of tar asphalt inclusions in the sample collected.

One composite soil sample contained 66 mg/kg total recoverable petroleum hydrocarbons (TRPH). However, due to the low concentrations detected, additional soil sampling was not considered warranted.

During the investigation, a blind sump was discovered. A soil sample was collected from the bottom of the sump at 6 ft bgs and analyzed for TPH, OCPs, PCBs, and PAHs. No constituents were detected above the laboratory detection limit. The bottom of the sump was deepened by one foot and one sample was collected and analyzed for TRPH. The sample contained 132 mg/kg TRPH. The sump was demolished and removed and soil surrounding the sump was excavated by an additional foot. Six confirmation soil samples were collected and analyzed for TRPH and no detectable concentrations were reported.

Aside from the detections associated with the single discrete soil sample, single composite soil sample, and sample collected from the blind sump, no concentrations of any contaminants analyzed during the site investigation were detected. The areas associated with the detections were further investigated and/or remediated by over-excavation during the investigation.

Approximately 180 cubic yards of soil containing between non-detectable concentrations and 26 mg/kg TPH were generated from site investigation activities. An additional three cubic yards of soil were generated containing an average concentration of 2,061 mg/kg TPH. During demolition of the building, concrete pads, and asphalt-parking lot, the demolition contractor inadvertently incorporated the contaminated soil into the top 18 to 24 inches of soil across the subject property. However, given the absence of BTEX detections during the sampling program and relatively small volume spread over a large 18,000 SF area, the distribution of the contaminated soil was not considered a human health risk. The regulatory case was issued closure by the San Diego County Department of Environmental Health (SDCDEH) in April 2001 without contingencies or land use restrictions.

The subject property is associated with an unauthorized release (H32282-001) that has received regulatory case closure without contingencies or land use restrictions. Based on removal of the former UST, reduction of soil contamination to levels deemed acceptable by the SDCDEH, and case closure without contingencies or land use restrictions, the release associated with the subject property is considered an historical recognized environmental condition.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Minor to moderate mold or mildew growth was observed in several bathrooms surveyed during the site reconnaissance.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 2001 Newton Avenue in San Diego, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- The mold/mildew growth observed on the subject property should be remediated as part of routine maintenance.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 2001 Newton Avenue in San Diego, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in

order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

MAAC engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of MAAC. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect,

indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment.
- Partner was not able to document the historical use of the subject property prior to 1904. The following sources were reviewed during the course of this assessment and found to be limited: aerial photographs were not available prior to 1928; city directories were not available prior to 1921; topographic maps prior to 1904 were not reasonably ascertainable from local agencies; and fire insurance maps were not available prior to 1906. This data failure is not considered critical and does not change the conclusions of this report, as the 1906 Sanborn map revealed the subject property to be residential. In addition, the adjacent and surrounding areas are also shown to be primarily residential or vacant.
- Partner was unable to determine the property use at 5-year intervals, which constitutes a data gap. Information concerning historical use of the subject property was unavailable from 1906-1921 and 1921-1927. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, Partner reviewed all standard historical sources and conducted appropriate interviews.
- Partner observed approximately 10% of all interior units and all common areas. Based on the size and nature of use of the unobserved units (residential), this limited method of survey is not expected to alter the overall findings of this assessment.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 2001 Newton Avenue in San Diego, California is located west of the Newton Avenue and South Evans Street intersection. According to the San Diego County Assessor, the subject property is legally described as PM17172 PAR 1, and ownership is currently vested in Mercado Apartments, LP since 2011.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by the Mercado Apartments for residential use, which is comprised of 24 two-story apartment buildings containing a total of 144 units. The subject property also operates the Mercado Early Learning Academy daycare facility, located adjacent to the leasing office. In addition to the current structures, the subject property is also improved with asphalt-paved parking areas near the southeastern and northwestern portions, landscaping features throughout, and three electric vehicle charging stations located near the north-central parking lot.

The subject property is designated for residential development by the City San Diego.

The subject property was identified as a San Diego County Site Assessment and Mitigation Program (SAM), San Diego County Local Oversight Program (LOP), San Diego County Hazardous Materials Management Division (HMMD), California Environmental Reporting System (CERS), Leaking Underground Storage Tank (LUST), and Historic Cortese Hazardous Waste & Substances Sites List (HIST CORTESE) site in the regulatory database report, as further discussed in Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed-use area of San Diego County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties

- Northwest:** Dewey Street followed by Caltrans District 11 Coronado Bay Bridge staging facility (1995 Newton Avenue)
- Southeast:** South Evans Street followed by Vault Auto Storage (2102-2120 Main Street) and single-family residences
- Northeast:** Newton Avenue followed by Tum Yeto skateboard distribution company (2096 Newton Avenue), an industrial warehouse (2046 Newton Avenue), a light-manufacturing facility (2022 Newton Avenue), a vacant parcel used for storage (2002-2004 Newton Avenue), and single-family residences
- Southwest:** Main Street followed by Dennis Covey Art Gallery (1991 Main Street), RB San Diego (1995 Main Street), EQ Studios (2001-2009 Main Street), light-industrial buildings (2011-2049 Main Street), and a vacant parcel used for San Diego Gas & Electric equipment storage (no legal address).

The following adjacent properties were identified in the regulatory database report and are discussed in Section 4.2.3:

- The northwest-adjacent property (1995 Newton Avenue) is identified as a Solid Waste Facility/Landfill (SWF/LF), Facility Index System (FINDS), CERS, CERS Hazardous Waste (CERS HAZ WASTE), and Resource Conservation and Recovery Act (RCRA)-Large Quantity Generator (LQG) site.
- The northwest-adjacent property (1990 Main Street) is identified as a LUST, SAM, HMMD, Statewide Environmental Evaluation and Planning System Underground Storage Tank (SWEEPS UST), HIST CORTESE, LOP, and CERS site.
- The southwest-adjacent property (1991 Main Street) is identified as a RCRA-Small Quantity Generator (SQG), HMMD, FINDS, ECHO, and Hazardous Waste Facility and Manifest Data (HAZNET) site.
- The southwest-adjacent property (2001 Main Street) is identified as a Historic Underground Storage Tank (HIST UST), SWEEPS UST, HIST CORTESE, CERS, LOP, LUST, SAM, and HMMD site.
- The southwest-adjacent property (2005 Main Street) is identified as an Aboveground Storage Tank (AST) site.
- The southwest-adjacent property (2015 Main Street) is identified as a RCRA-Very Small Quantity Generator (VSQG), FINDS, and ECHO site.
- The southwest-adjacent property (2035 Main Street) is identified as an Environmental Data Resources (EDR) Historical Auto Station (HIST AUTO) site.
- The southwest-adjacent property (2049 Main Street) is identified as an AST, HMMD, CERS, CERS HAZ WASTE, CERS Tanks (TANKS), California Hazardous Waste Transporters (HWT), and RCRA-Non-Generator/No Longer Reported (NonGen/NLR) site.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Point Loma, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 43 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the southwest. The subject property is depicted on the 2018 map as located within an area of general urbanization.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to a subsurface investigation conducted on the subject property (Case Number H32282-001), the depth of groundwater underlying the subject property is inferred to be between approximately 3.5 to 7.7 feet (ft) below ground surface (bgs) with a groundwater flow toward the southwest.

The nearest surface water in the vicinity of the subject property is the San Diego Bay located approximately 0.25-mile southwest of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the San Diego Public Utilities Department serves the subject property vicinity. According to the 2018 Annual Water Quality Report, the sources of public water for the City of San Diego include imported water from the San Diego County Water Authority (Colorado River Aqueduct and the State Water Project). No irrigation wells or private drinking water wells were observed at the subject property.

2.4.3 Geology/Soils

The subject property is situated within the Peninsular Ranges physiographic province of the State of California. This province is characterized by a series of ranges that are separated by longitudinal valleys, trending northwest to southeast, subparallel to faults branching from the San Andreas Fault. The trend of topography is similar to the Coast Ranges, but the geology is more like the Sierra Nevada, with granitic rock intruding the older metamorphic rocks. The Peninsular Ranges extend into Lower California and are bound on the east by the Colorado Desert. The Los Angeles Basin and the island group (Santa Catalina, Santa Barbara, and the distinctly terraced San Clemente and San Nicolas islands), together with the surrounding continental shelf (cut by deep submarine fault troughs) are included in this province.

The uppermost geologic formation underlying the soils at the subject property is the Quaternary alluvium and marine deposits of the Pliocene to Holocene age. This formation consists of Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly non-marine, but includes marine deposits near the coast.

Based on information obtained from the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey online database, the subject property is mapped as urban land. Urban Land complex describes soils where the original structure and content have been so altered by human activities it has lost its original characteristics and is thus unidentifiable. Urban soils consist of nearly level to moderately steep areas where the soils have been altered or obscured by urban works and structures.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06073C1885G, dated May 16, 2012, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

A copy of the reviewed flood map is not included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	Source	Description/Use
1906-1921	Sanborn Maps	Residential
1928-1949	Aerial Photographs, City Directories, Sanborn Maps, Prior Reports	Residential and Commercial/Industrial
1949-1989	Aerial Photographs, City Directories, Prior Reports, Sanborn Maps	Commercial/Industrial
1993-Present	Aerial Photographs, Building Records, Onsite Observations	Residential

Tenants on the subject property have included private residences (1906-late 1940s); Glasson Lumber Mill (circa 1930s); San Diego Gas & Electric (mid 1940s to late 1980s); and the Mercado Apartments (1993-Present).

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from EDR on October 21, 2019. The following was observed on the subject property and adjacent properties during the aerial photograph review:

Date:	1928, 1949	Scale:	1"=500
Subject Property:	Appears to be developed with residential dwellings on the southeastern portion and commercial/industrial structures on the northwestern portion. By 1949, the residential buildings appear to have been demolished and the southeastern portion of the subject property appears to be vacant graded land		
Northeast:	Appears to be a road followed by residential dwellings		
Southwest:	Appears to be a road followed by vacant land. By 1949, multiple commercial and/or industrial buildings appear to have been developed		
Southeast:	Appears to be a road followed by residential dwellings and vacant land used for container storage		
Northwest:	Appears to be a road followed by residential dwellings on the northern portion and commercial or industrial buildings on the southern portion. By 1949, the southern portion appears to be vacant		

Date:	1953, 1964, 1970, 1979, 1985, 1989	Scale:	1"=500
Subject Property:	Appears to have been redeveloped into an industrial property with the main building and several small structures located along the southeastern perimeter fronting (present-day) South Evans Street, an industrial yard, and yard building near the northeastern portion of the property.		
Northeast:	Appears to be residential dwellings and commercial/industrial buildings		
Southwest:	No significant changes visible		
Southeast:	Appears to be residential dwellings and a large industrial building on the southern end		
Northwest:	Appears to be residential dwellings on the northern portion and a large industrial		

Date: 1953, 1964, 1970, 1979, 1985, 1989 **Scale:** 1"=500

building on the southern portion. By 1970, the San Diego Coronado Bridge appears to be constructed and view of the northwest-adjointing properties in the aerial photograph is obstructed

Date: 1994, 2005, 2009, 2012, 2016 **Scale:** 1"=500

Subject Property: Appears to be developed with a multi-family residential complex
Northeast: No significant changes visible
Southwest: No significant changes visible
Southeast: No significant changes visible
Northwest: No significant changes visible. By 2005, the site appears to be vacant. By 2012, the site appears to be developed with a large commercial/industrial building

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from EDR on October 21, 2019. The following was observed on the subject property and adjacent properties during the fire insurance map review:

Date: 1906

Subject Property: The southwestern portion of the subject property is unmapped. The northeastern portion is depicted as vacant parcels and one residential dwelling near the eastern corner with no address depicted
Northeast: Depicted as Newton Avenue followed by residential dwellings and vacant parcels
Southwest: Unmapped
Southeast: Depicted as a road followed by vacant parcels
Northwest: The southwestern portion of the adjacent property is unmapped. The northeastern portion is depicted as a road followed by a residential dwelling.

Date: 1921

Subject Property: Depicted as residential dwellings on the southeastern portion and vacant land on the northwestern portion
Northeast: No significant changes depicted
Southwest: Depicted as Main Street followed by vacant parcels
Southeast: Depicted as South Evans Street followed by a residential dwelling and vacant parcel
Northwest: Depicted as Dewey Street followed by H.G. Fenton Contractor

Date: 1950, 1956

Subject Property: Depicted as an auto warehouse and residential dwelling
Northeast: No significant changes depicted. By 1956, a glazing facility is depicted at 2002 Newton Avenue
Southwest: Depicted as Main Street followed by Safeway Stores, Inc. operating an ammonia tank and various retail stores with lumber yards
Southeast: Depicted as South Evans Street followed by a gasoline station and residential dwellings. By 1956, the gasoline station is no longer depicted, and a liquor warehouse is depicted in its place
Northwest: Depicted as Dewey Street followed by a junk yard and vacant parcel. By 1956, the site is depicted as an auto service facility and parts department and private garage

Date: 1959, 1960, 1962, 1965, 1970, 1971

Subject Property: Depicted as general storage and auto warehouse and residential dwelling. The southwestern half of the subject property is depicted as vacant. By 1962, the general storage is labeled as San Diego Gas & Electric General Storage

Northeast: Depicted as Newton Avenue followed by residential dwellings, auto truck repair facility, wood door manufacturing facility, and electrical contractors' warehouse

Southwest: No significant changes depicted. By 1962, the site is depicted as Main Street followed by Mayfair Markets, Inc., Wholesale Produce Warehouse and Glasson Mill & Lumber Company

Southeast: No significant changes depicted

Northwest: No significant changes depicted

Copies of reviewed Sanborn Maps are included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR on October 21, 2019 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for 2001 Newton Avenue (Subject Property)

Year(s)	Occupant Listed
1921, 1927, 1933, 1938, 1943, 1945, 1948	Residential (2045 Newton Avenue, 2069 Newton Avenue, 1102 South Evans Street, 2082 Main Street)
1961, 1966, 1970	San Diego Gas & Electric (SDG&E) Construction Department Warehouse (2001 Newton Avenue)
1975	Vacant (2001 Newton Avenue)
2000, 2006	Residential (2074 Main Street)

According to the city directory review, the subject property was occupied by private residences between 1921 and 1948 and was occupied by SDG&E Construction Department Warehouse between 1961 and 1970.

According to the city directory review, multiple commercial and/or light industrial properties have operated adjacent to the subject property between 1921 and 2010. City directory listings of environmental interest are included in the table below:

City Directory Search for Adjacent Properties

Year(s)	Occupant Listed
1938, 1945, 1948	Dickenson Auto Parts and Bay Auto Wrecking (2104 Main Street)
1952, 1955, 1960, 1961, 1966	International Harvester Motor Truck Sales and Service (1990 Main Street)
1975	Bay City Marine Incorporated Steel Fabricators (2046 Newton Avenue); Advanced Diesel Injection (2035 Main Street)
1980	Bay City Marine Incorporated Steel Fabricators (2046 Newton Avenue); Advanced Diesel Injection (2035 Main Street); Carlino Iron Works (2002 Newton Avenue)
1984	Carlino Iron Works (2002 Newton Avenue); Advanced Diesel Injection (2035 Main Street)

City Directory Search for Adjacent Properties

Year(s)	Occupant Listed
1989, 1992	Advanced Diesel Injection (2035 Main Street)

According to the city directory review, the adjacent properties have operated as a steel manufacturing facility and various automotive-related facilities, including automotive wrecking, sales, and repair. Records associated with these facilities were requested from the SDCDEH and are discussed in Section 4.2.3. No records associated with 2035 or 2046 Newton Avenue or 2104 Main Street were on file with the SDCDEH. Based on the city directory review, no other environmentally significant listings were identified for the adjacent property addresses.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from EDR on October 21, 2019. The following was observed on the subject property and adjacent properties during the topographic map review:

Date:	1904, 1930
Subject Property:	Depicted as developed with residential dwellings around the perimeter of the subject property
Northeast:	Depicted as a road followed by apparent residential dwellings
Southwest:	Depicted as a road followed by apparent residential dwellings
Southeast:	Depicted as a road followed by apparent residential dwellings
Northwest:	Depicted as a road followed by vacant land

Date:	1942, 1944, 1953, 1967, 1975, 1991, 1994, 1996, 2012
Subject Property:	Depicted with shading indicating urban development
Northeast:	Depicted as a road followed by shading indicating urban development
Southwest:	Depicted as a road followed by shading indicating urban development. The road is depicted as Main Street in the 1953 topographic map. By 1967, three commercial or industrial-type structures are depicted as developed
Southeast:	Depicted as a road followed by shading indicating urban development. The road is depicted as Evans Street in the 1967 topographic map.
Northwest:	Depicted as a road followed by shading indicating urban development. The road is depicted as Dewey Street in the 1953 topographic map. By 1967, the San Diego Coronado Bay Bridge is depicted as developed.

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data

Name of Agency:	San Diego County Department of Environmental Health (SDCDEH)
Point of Contact:	Edwin Andrus
Agency Address:	5500 Overland Ave #170, San Diego, CA 92123
Agency Phone Number:	(858) 505-6848
Date of Contact:	October 22, 2019
Method of Communication:	Email
Summary of Communication:	Records for the subject property were on file with the SDCDEH and are summarized below. Records for adjacent properties were on file with the SDCDEH and are summarized in Section 4.2.3.

Former San Diego Gas & Electric Maintenance Yard, Case Number H32282-001, 2043 Newton Avenue, San Diego, California 92113 (Subject Property)

According to documents reviewed, SDG&E occupied portions of the subject property between the mid-1940s until the late 1980s. During this period, SDG&E operated a vehicle maintenance facility, personnel training center, and general storage yard. Various chemicals were stored on the subject property during this period, including chlorinated and non-chlorinated solvents, PCBs in transformers, paints, vehicle maintenance supplies, and pesticides and herbicides. Glasson Lumber Mill reportedly occupied the subject property in the 1930s and maintained a 280-gallon UST located at the northern corner of the subject property, south of the Dewey Street and Newton Avenue intersection. Environmental investigations were initiated at the subject property in 1989 in support of property redevelopment with low-income housing.

The first subsurface site investigation was conducted at the subject property in January 1993. Hydrocarbon contamination at levels of potential regulatory concern and low levels of PCBs were identified in soils at the subject property. A 280-gallon UST system, presumed to be the Glasson Mill UST installed in 1938, was also discovered during this investigation, which was severely corroded and empty upon discovery. The UST system was removed from the subject property and remedial excavation was performed in February 1993, which removed TPH impacts to levels below laboratory detection limits. The excavation was subsequently backfilled and compacted.

An intensive soil and groundwater investigation was conducted between April and May 1993 to address potential contamination originating from historic land use at the subject property. Five groundwater monitoring wells were installed and sampled for TPH, organic lead, purgeable halocarbons, purgeable aromatics, PCBs, and organochlorine pesticides (OCPs). Following well installation, SDG&E storage buildings, concrete pads, and asphalt-parking areas were subsequently demolished and the materials incorporated into the upper 18 to 24 inches of soil. Soil samples were collected in a grid pattern at 5 ft bgs in formational material across the subject property, resulting in 200 total grid soil samples. Two soil samples were also collected from each of the five groundwater monitoring well locations. All soil samples were analyzed for TPH as gasoline and diesel. Any soil sample with TPH detections were analyzed for BTEX. Soil samples collected from the demolished SDG&E warehouse were additionally analyzed for

chlorinated solvents. Composite soil samples were prepared from discrete soil samples collected from either side of the demolished warehouse and analyzed for PAHs, OCPs, and SVOCs. Additionally, composite samples were collected from the vicinity of the former concrete slab associated with the Glasson Lumber Mill and analyzed for OCPs.

No detections of contaminants above the laboratory detection limit were reported for groundwater samples collected and analyzed. The monitoring wells were subsequently closed in June 1993.

Of the 200 discrete soil samples collected, one sample contained 1,526 mg/kg petroleum hydrocarbons and 4,400 ug/kg benzo(a)pyrene. No BTEX, OCPs, or PCBs were detected. A trench was excavated near the sample location and discolored soil was observed, sampled, and analyzed. Upon analysis, it was determined that the discoloration and elevated TPH concentrations were due to the presence of tar asphalt inclusions in the sample collected.

One composite soil sample contained 66 mg/kg total recoverable petroleum hydrocarbons (TRPH). However, due to the low concentrations detected, additional soil sampling was not considered warranted.

During the investigation, a blind sump was discovered. A soil sample was collected from the bottom of the sump at 6 ft bgs and analyzed for TPH, OCPs, PCBs, and PAHs. No constituents were detected above the laboratory detection limit. The bottom of the sump was deepened by one foot and one sample was collected and analyzed for TRPH. The sample contained 132 mg/kg TRPH. The sump was demolished and removed and soil surrounding the sump was excavated by an additional foot. Six confirmation soil samples were collected and analyzed for TRPH and no detectable concentrations were reported.

Aside from the detections associated with the single discrete soil sample, single composite soil sample, and sample collected from the blind sump, no concentrations of any contaminants analyzed during the site investigation were detected. The areas associated with the detections were further investigated and/or remediated by over-excavation during the investigation.

Approximately 180 cubic yards of soil containing between non- detectable concentrations and 26 mg/kg TPH were generated from site investigation activities. An additional three cubic yards of soil was generated containing an average concentration of 2,061 mg/kg TPH. During demolition of the building, concrete pads, and asphalt-parking lot, the demolition contractor inadvertently incorporated the contaminated soil into the top 18 to 24 inches of soil across the subject property. However, given the absence of BTEX detections during the sampling program and relatively small volume spread over a large 18,000 SF area, the distribution of the contaminated soil was not considered a human health risk. The regulatory case was issued closure in April 2001 without contingencies or land use restrictions.

Copies of pertinent documents are included in Appendix B of this report.

4.1.2 Fire Department

Regulatory Agency Data

Name of Agency:	San Diego Fire Rescue/CRRD (SDFD)
Point of Contact:	Not applicable
Agency Address:	600 B Street, Suite 1300, San Diego, California 92102
Agency Phone Number:	619-533-4867
Date of Contact:	Not applicable

Regulatory Agency Data

Method of Communication: Not applicable
Summary of Communication: The Hazardous Materials Division (HMD) of the SDCDEH is the Certified Unified Program Agency (CUPA) for San Diego County and is responsible for regulating facilities that: handle or store hazardous materials; are part of the California Accidental Release Prevention Program; generate or treat hazardous wastes; generate or treat medical waste; store at least 1,320 gallons of aboveground petroleum; or own or operate USTs. Please see Section 4.1.1 for a discussion of relevant regulatory documentation obtained for the subject property.

4.1.3 Air Pollution Control Agency

Regulatory Agency Data

Name of Agency: San Diego County Air Pollution Control District (APCD)
Point of Contact: Cynthia Gould
Agency Address: 10124 Old Grove Road, San Diego, California 92131
Agency Phone Number: (858) 586-2600
Date of Contact: October 22, 2019
Method of Communication: Email
Summary of Communication: No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the APCD.

4.1.4 Regional Water Quality Agency

Regulatory Agency Data

Name of Agency: Regional Water Quality Control Board (RWQCB)
Point of Contact: GeoTracker Data Management System
Agency Address: 2375 Northside Drive, Suite 100, San Diego, California 92108
Agency Phone Number: (619) 516-1990
Date of Contact: October 22, 2019
Method of Communication: Online
Summary of Communication: The subject property is identified on the GeoTracker Data Management System as a LUST Cleanup Site (H32282-001). Records pertaining to this case are summarized in Section 4.1.1.

4.1.5 Department of Toxic Substances Control

Regulatory Agency Data

Name of Agency: Department of Toxic Substances Control (DTSC)
Point of Contact: EnviroStor and Hazardous Waste Tracking System (HWTS) Data Management Systems
Agency Address: 5796 Corporate Avenue, Cypress, California 90630-4732
Agency Phone Number: (714) 484-5337
Date of Contact: October 22, 2019
Method of Communication: Online
Summary of Communication: No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on

Regulatory Agency Data

file with the DTSC.

4.1.6 Building Department

Regulatory Agency Data

Name of Agency: San Diego City Development Services Department (SDDSD)
Point of Contact: Open DSD Data Management System and Records Clerk
Agency Address: 1222 First Avenue, 2nd Floor, San Diego, California 92101
Agency Phone Number: (619) 446-5300
Date of Contact: October 21, 2019
Method of Communication: In Person and Online
Summary of Communication: Records were available for review, as further discussed in the following table.

Building Records Reviewed for 2001 Newton Avenue (Subject Property)

Year(s)	Owner/Applicant	Description
1993	Metropolitan Area Advisory Committee	Building Permit for 24 6-unit apartment buildings

Copies of pertinent documents are included in Appendix B of this report.

4.1.7 Planning Department

Regulatory Agency Data

Name of Agency: San Diego County Planning & Development Services (PDS)
Point of Contact: County of San Diego Public Web Map Gallery
Agency Address: 5510 Overland Avenue, San Diego, California 92123
Agency Phone Number: (858) 565-5920
Date of Contact: October 22, 2019
Method of Communication: Online
Summary of Communication: According to records reviewed, the subject property is zoned BLPD-REDEVLP-SUBD for residential development by the City of San Diego.

4.1.8 Oil & Gas Exploration

Regulatory Agency Data

Name of Agency: California Division of Oil, Gas and Geothermal Resources (DOGGR)
Point of Contact: DOGGR Well Finder Mapping Application
Agency Address: 801 K Street, MS 24-01, Sacramento, California 95814
Agency Phone Number: (916) 322-1080
Date of Contact: October 22, 2019
Method of Communication: Online
Summary of Communication: According to DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.9 Assessor's Office

Regulatory Agency Data

Name of Agency: San Diego County Assessor and Tax Collector

Regulatory Agency Data

Point of Contact: Zoning & Property Information Website and Tax Collector Website
Agency Address: 1600 Pacific Highway, Suite 103, San Diego, California 92101
Agency Phone Number: (619) 236-3771
Date of Contact: October 22, 2019
Method of Communication: Online
Summary of Communication: According to records reviewed, the subject property is identified by Assessor Parcel Number (APN) 538-672-0400 and is currently owned by Mercado Apartments, LP since 2011. The current buildings were constructed in 1994 and total approximately 135,048 square feet on a 4.34-acre lot.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data

Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSD Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	N	N	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	N	N
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	Y	N

4.2.2 Subject Property Listings

The subject property (2043 Newton Avenue) is identified as a LUST, SAM, HMMD, HIST CORTESE, LOP, and CERS site in the regulatory database report for an unauthorized release of gasoline that impacted the underlying soil in 1993 (Case Number H32282-001). Details pertaining to this listing are discussed in Section 4.1.1.

4.2.3 Adjacent Property Listings

The adjacent properties were identified in the regulatory database report, as discussed below:

Caltrans District 11 – Coronado Bay Bridge, 1995 Newton Avenue, San Diego, California, 92113 (Northwest-Adjacent Property)

Caltrans currently operates a staging facility hydrologically cross-gradient and northwest-adjacent to the subject property across Dewey Street. This facility is identified as a SWF/LF, FINDS, CERS, CERS HAZ WASTE, and RCRA-LQG site. According to the regulatory database report, the facility is permitted as of 1993 to generate inert, mixed municipal waste that is transferred offsite and processed at an authorized recycling facility. The facility is subject to quarterly inspections by the SDCDEH.

Partner obtained Compliance Inspection Reports prepared for this facility between 1996 and 2017 from the SDCDEH. According to the reports, hazardous wastes stored and/or generated at the facility include paints, sandblast waste, cleaners/degreasers, patching compound, acetylene, mineral spirits, oxygen, paint sludge, abrasives, and spent copper blast media. Hazardous waste generated is managed by Clean Harbor Environmental Services. Several minor violations pertaining to record keeping, labeling, and storage of hazardous wastes have been issued to the facility between 1996 and 2017.

Based on the relatively small quantities of hazardous materials stored on this site, the hydrologically cross-gradient position of the site relative to the subject property, and the lack of releases or significant violations reported for the facility, this listing is not expected to represent a significant environmental concern.

A.O. Reed, 1990 Main Street, San Diego, California 92113 (Northwest-Adjacent Property)

This facility is located hydrologically down-gradient and northwest-adjacent to the subject property across Dewey Street. The facility is identified as a LUST, SAM, HMMD, SWEEPS UST, HIST CORTESE, LOP, and CERS site in the regulatory database report. Former uses and occupancy of the property include International Truck Sales and Service, a staging area for construction of the Coronado Bridge, a pipe welding and assembly facility for A.O. Reed Plumbing, and automotive repair, paint shop, and construction storage area under operation as K.I.B Auto. According to the regulatory database report, the

site is associated with an unauthorized release of waste oil that impacted the underlying soil only that was discovered during tank removal in December 1988.

Partner reviewed records pertaining to the case obtained from the SDCDEH. According to records reviewed, the property formerly operated a 550-gallon steel waste-oil tank that was removed in December 1988. Soil samples were collected from the former tank excavation and soil stockpile in December 1988 and January 1989 following UST removal and analyzed for TPH. Laboratory analytical results indicated a maximum concentration of 54 mg/kg in soil samples collected and maximum concentration of 1,050 mg/kg in stockpile samples collected during the investigation. BTEX was not detected in any sample analyzed. The regulatory case (H00841-001) was subsequently issued closure without further investigation in March 1989.

Based on the hydrologically down-gradient location of the site respective to the subject property, removal of the contamination source, and only residual concentrations left remaining in the soil, this listing is not expected to represent a significant environmental concern to the subject property.

Rankin Industries, Inc., 1991 Main Street, San Diego, California 92113 (Southwest-Adjacent Property)

This facility is located hydrologically down-gradient and southwest-adjacent to the subject property across Main Street and is identified as a RCRA-SQG, HMMD, FINDS, ECHO, and HAZNET site. According to the regulatory database report, the facility was formerly permitted for handling of hazardous materials and hazardous waste generation, including metal sludge. The facility was subject to regular compliance inspection evaluations, the last of which was conducted in 1992. No violations are reported for the facility.

Based on the hydrologically down-gradient position of the site relative to the subject property, absence of reported unauthorized releases or significant violations, and regulatory oversight of hazardous materials and waste, this listing is not expected to represent a significant environmental concern to the subject property.

P&L Trucking Company, 2001 Main Street, San Diego, California 92113 (Southwest-Adjacent Property)

This facility is located hydrologically down-gradient and southwest-adjacent to the subject property across Main Street and is identified as a Historic HIST UST, SWEEPS UST, HIST CORTESE, CERS, LOP, LUST, SAM, and HMMD site. According to the regulatory database report, the facility was formerly equipped with an 8,000-gallon diesel UST and a 550-gallon gasoline UST that were removed in December 1987. The facility is associated with an unauthorized release of gasoline that was discovered to have impacted the underlying soil during tank removal.

Partner reviewed records pertaining to the case obtained from the SDCDEH. According to records reviewed, a site investigation was conducted in June 1989 to determine the presence of soil impacts from the former USTs. Laboratory analytical results indicated the presence of TPH at a maximum concentration of 12,100 mg/kg in samples collected from the eastern excavation bottom at approximately 8.5 ft bgs. An additional site investigation was conducted in September 1989 to perform remedial excavation and soil sampling activities. Approximately 250 cubic yards (CY) of soil were excavated to a maximum depth of 20 ft bgs and 12 soil samples were collected from within the excavation. Four soil samples collected from the eastern side wall of the tank excavation indicated the presence of TPH in excess of regulatory screening levels. Due to concerns of excavation stability and the possibility of caving, the excavation was backfilled

with approximately 215 CY of the excavated soil and the excavation was left open until March 1991. The excavation was backfilled with imported soil from 8 ft bgs to ground surface in March 1991 and paved to permit vehicle access to the site.

Composite soil samples were collected from the stockpile and analyzed for petroleum impacts. The highest TPH concentration detected was 33.9 mg/kg. BTEX were not detected at or above the laboratory detection limit.

One groundwater monitoring well was installed at the subject property in April 1991 to evaluate the presence of petroleum impacts to the underlying groundwater. The groundwater monitoring well was developed and sampled in December 1993. Groundwater samples were analyzed for TPH as gasoline and diesel, BTEX, and total lead. Laboratory analytical results did not indicate the presence of TPH, BTEX, or total lead above the laboratory detection limit. The case was subsequently issued closure in June 1994.

Based upon the hydrologically down-gradient location of the site relative to the subject property and removal of the contaminant source, this listing is not expected to represent a significant environmental concern to the subject property.

National Petroleum, Inc., 2005 Main Street, San Diego, California 92113 (Southwest-Adjacent Property)

This site is located hydrologically down-gradient and southwest-adjacent to the subject property and is identified as an AST site in the regulatory database report. The contents of the AST are not reported. Based on no reported spills, leaks, or unauthorized releases, this listing is not expected to represent a significant environmental concern to the subject property and review of agency records was not considered warranted.

Performance Contracting, Inc., 2015 Main Street, San Diego, California 92113 (Southwest-Adjacent Property)

This facility is located hydrologically down-gradient and southwest-adjacent to the subject property across Main Street and is identified as a RCRA-VSQG, FINDS, and ECHO site. According to the regulatory database report, the facility is permitted as a conditionally-exempt small quantity generator of hazardous waste. The facility is subject to quarterly compliance inspections by SDCDEH. No violations are reported for the facility.

Based on no reported unauthorized releases, spills, or violations, this listing is not expected to represent a significant environmental concern to the subject property.

Advance Diesel Injection, 2035 Main Street, San Diego, California 92113 (Southwest-Adjacent Property)

This facility is located hydrologically down-gradient and southwest-adjacent to the subject property across Main Street and is identified as an EDR HIST AUTO site. According to the regulatory database report, the facility operated as Apollo Oil Company between 1969 and 1972, which is characterized as a toys and hobby good supply company. The facility operated as Advanced Diesel Injection automotive repair facility between 1975 and 1982. No violations are reported for the facility.

Based on no reported unauthorized releases, spills, or violations, this listing is not expected to represent a significant environmental concern to the subject property.

California Marine Cleaning, 2049 Main Street, San Diego, California 92113 (Southwest-Adjacent Property)

This facility is located hydrologically down-gradient and southwest-adjacent to the subject property across Main Street and is identified as an AST, HMMD, CERS, CERS HAZ WASTE, CERS TANKS, HWT, and RCRA-NonGen/NLR site. According to the regulatory database report, the facility retains an active permit for handling of hazardous materials and generation of hazardous waste, including aqueous film-forming foam, antifoam, antifreeze, nitrogen gas, paint thinner, waste oil and mixed oil, and sump waste, among others. The facility is subject to regular compliance inspection evaluations and received a violation in 2012 for handling hazardous materials without a permit and a violation pertaining to record-keeping in 2019. The facility is permitted to operate an AST. The contents and volume of the AST is not reported.

Based on no reported unauthorized releases or significant violations, and regulatory oversight of hazardous materials and waste, this listing is not expected to represent a significant environmental concern to the subject property.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

4.2.5 Orphan Listings

No orphan listings of concern are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from MAAC (User of this report).

User Responsibilities				
Item	Provided By User	Not Provided By User	Discussed Below	Does Not Apply
Environmental Pre-Survey Questionnaire			X	
Title Records, Environmental Liens, and AULs			X	
Specialized Knowledge			X	
Actual Knowledge			X	
Valuation Reduction for Environmental Issues			X	
Identification of Key Site Manager	Section 5.1.3			
Reason for Performing Phase I ESA	Section 1.1			
Prior Environmental Reports		X		
Other		X		

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property since 2011, identified as Mercado Apartments, LP, was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. Because the Report User (Client) is a lender/developer, it is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

Ms. Aurora Amaro, key site manager, indicated that she had information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to Partner for review during the course of this assessment. Previous subsurface investigation reports obtained from the SDCDEH are discussed in section 4.1.1.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data

Site Assessment Performed By: Aapris Medzhibovsky
Site Assessment Conducted On: November 12, 2019

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for 2001 Newton Avenue (Subject Property)

Name	Title/Role	Contact Number	Site Walk* Yes/No
Aurora Amaro	Key Site Manager	(619) 233-7990	No
Jesus Suarez	Assistant Project Manager	(619) 426-3595	Yes

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located near the northwestern and southeastern portions of the subject property. An independent solid waste disposal contractor, Waste Management, removes solid waste from the subject property. According to property personnel, only household trash is collected in the on-site solid waste dumpsters.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of San Diego services the subject property vicinity. No wastewater treatment facilities or septic systems were observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located throughout the subject property and in the public right of way. Site storm water from roofs, landscaped areas, and paved areas is directed to on-site concrete swales, which drain to the public right of way, and to on-site storm water drains. The subject property is connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and natural gas provided by San Diego Gas & Electric (SDG&E). The mechanical system is comprised of a split system with a central unit and rooftop-mounted packaged HVAC units. Hot water is provided by central natural gas boiler units.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Partner identified hazardous substances used, stored, and/or generated on the subject property as noted in the following table:

Hazardous Substances and/or Petroleum Products Noted Onsite				
Substance	Container Size	Location	Nature of Use	Disposal Method
Gasoline	1x5 gallon can	Maintenance Shed	Landscaping Equipment	N/A
Hydraulic fluid	1x5 gallon bucket	Elevator Equipment Room	Elevator Maintenance	N/A
Paints	Various 5- and 1- gallon cans	Maintenance Shed	Routine Maintenance	N/A

The gasoline and paints were found to be properly labeled and stored at the time of the assessment. The gasoline can was observed stored within a flammable storage cabinet. No secondary containment is provided for paints. Based on the nature of use, overall small quantities observed, and/or presence of secondary containment, these materials are not expected to represent a significant environmental concern.

The hydraulic fluid was observed stored in the elevator maintenance room located on the western portion of the subject property within a 5-gallon bucket with snap-on lid containing a pour hole. The bucket was approximately 80 percent full. The lid was observed to be only partially secured and the pour hole was observed to be open without an affixed stopper. No secondary containment is provided. Based upon the

relatively small quantities of hydraulic fluid stored on the subject property, the hydraulic fluid is not expected to represent a significant environmental concern at this time.

Partner reviewed the hydraulic maintenance records maintained by Team Service elevator maintenance company. According to the records, the elevator equipment is inspected on a quarterly basis. The last inspection was conducted in July 2019. No leaks or additions of hydraulic fluid are noted in the service records.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

A minor surficial spill of hydraulic oil was observed next to the 5-gallon bucket of hydraulic fluid located in the elevator equipment room. Based on the surficial nature of the release, the stain is considered *de minimus* and is not expected to represent a significant environmental concern at this time.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – “Non-PCB;” 2) 50 ppm-500 ppm – “PCB-Contaminated;” and, 3) Greater than 500 ppm – “PCB-Containing.” The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after July 2, 1979.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. Two pad-mounted transformers were observed on the subject property. The transformers are not labeled indicating PCB content. No staining or leakage was observed in the vicinity of the transformers. Additionally, the subject property is equipped with one hydraulic passenger elevator. No staining or leakage was observed in the vicinity of the elevator equipment. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

No other potential PCB-containing equipment (interior transformers, oil-filled switches, hoists, lifts, dock levelers, balers, etc.) was observed on the subject property during Partner’s reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. Construction materials including, but not limited to, thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building and that have not been appropriately tested may be considered "presumed asbestos-containing material" (PACM).

The subject property buildings were constructed in 1993. As such, an asbestos evaluation was not required by the scope of services.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm² (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

It is unlikely that LBP is present in buildings constructed after 1977. Therefore, due to the age of the subject property buildings, it is unlikely that LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones

EPA Zones	Average Predicted Radon Levels	Potential
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the San Diego Public Utilities Department serves the subject property vicinity. The sources of public water for the City of San Diego include imported water from the San Diego County Water Authority, which obtains its water from the Colorado River Aqueduct and the State Water Project. According to the San Diego and the 2018 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property buildings for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

The following indications of water damage or mold growth were observed during Partner's visual assessment:

Mold Observations

Location of area affected	Condition
Bathroom of Unit 202	Moderate
Bathroom of Unit 253	Moderate
Bathrooms of Unit 136	Minor

Mold Observations

Location of area affected	Condition
Bathrooms of Unit 270	Minor
Bathrooms of Unit 121	Minor

Minor to moderate mold or mildew growth was observed on shower ceilings and walls within five units observed during the field reconnaissance.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises.

6.4.1 *Hazardous Substances and Petroleum Products Used or Stored at the Site*

Five 55-gallon drums of unidentified materials were observed stored at the Caltrans District 11 staging facility located northwest-adjacent to the subject property. No secondary containment was provided for the materials. No spills or releases were observed within the vicinity of the stored materials. Based on regulatory oversight of hazardous materials, regular compliance inspections conducted, and no observed releases, these materials are not expected to represent a significant environmental concern at this time.

6.4.2 *PCBs*

One pad-mounted transformer was observed on the adjacent properties. No staining or leakage was observed in the vicinity of the transformer. Based on these observations, the presence of adjacent transformers is not expected to represent a significant environmental concern.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- According to historical and regulatory documents reviewed in support of this assessment, San Diego Gas & Electric (SDG&E) occupied portions of the subject property between the mid-1940s until the late 1980s. During this period, SDG&E operated a vehicle maintenance facility, personnel training center, and general storage yard. Various chemicals were stored on the subject property during this period, including chlorinated and non-chlorinated solvents, polychlorinated biphenyls (PCBs) in transformers, paints, vehicle maintenance supplies, and pesticides and herbicides. Glasson Lumber Mill reportedly occupied the subject property in the 1930s and maintained a 280-gallon underground storage tank (UST) located at the northern corner of the subject property, south of the Dewey Street and Newton Avenue intersection, in at least 1938. Environmental investigations were initiated at the subject property in 1989 in support of property redevelopment with low-income housing.

The first subsurface site investigation was conducted at the subject property in January 1993. Hydrocarbon contamination at levels of potential regulatory concern and low levels of PCBs were identified in soils. A 280-gallon UST system, presumed to be the Glasson Mill UST installed in 1938, was also discovered during this investigation, which was severely corroded and empty upon discovery. The UST system was removed from the subject property and remedial excavation was performed in February 1993, which removed total petroleum hydrocarbon (TPH) impacts to levels below laboratory detection limits. The excavation was subsequently backfilled and compacted.

An intensive soil and groundwater investigation was conducted between April and May 1993 to address potential contamination at the subject property originating from historic land use. Five groundwater monitoring wells were installed and sampled for TPH, organic lead, purgeable halocarbons, purgeable aromatics, PCBs, and organochlorine pesticides (OCPs). Following well installation, SDG&E storage buildings, concrete pads, and asphalt-parking areas were demolished and the materials incorporated into the upper 18 to 24 inches of soil. Soil samples were collected in a grid pattern at 5 ft bgs in formational material across the subject property, resulting in 200 total grid soil samples. Two soil samples were also collected from each of the five groundwater monitoring wells. All soil samples were analyzed for TPH as gasoline and diesel. Any soil sample with TPH detections were analyzed for benzene, toluene, ethyl benzene and xylenes (BTEX). Soil samples collected from the demolished SDG&E warehouse were additionally analyzed for chlorinated solvents. Composite soil samples were prepared from discrete soil samples collected from either side of the demolished warehouse and analyzed for polycyclic aromatic hydrocarbons (PAHs), OCPs, and semi-volatile organic compounds (SVOCs). Additionally, composite samples were collected from the vicinity of the former concrete slab associated with the Glasson Lumber Mill and analyzed for OCPs.

No detections of contaminants above the laboratory detection limit were reported for groundwater samples collected and analyzed. The monitoring wells were subsequently closed in June 1993.

Of the 200 discrete soil samples collected, one sample contained 1,526 milligrams per kilogram (mg/kg) petroleum hydrocarbons and 4,400 micrograms per kilogram (ug/kg) benzo(a)pyrene. No BTEX, OCPs, or PCBs were detected. A trench was excavated near the sample location and discolored soil was observed, sampled, and analyzed. Upon analysis, it was determined that the discoloration and elevated TPH concentrations were due to the presence of tar asphalt inclusions in the sample collected.

One composite soil sample contained 66 mg/kg total recoverable petroleum hydrocarbons (TRPH). However, due to the low concentrations detected, additional soil sampling was not considered warranted.

During the investigation, a blind sump was discovered. A soil sample was collected from the bottom of the sump at 6 ft bgs and analyzed for TPH, OCPs, PCBs, and PAHs. No constituents were detected above the laboratory detection limit. The bottom of the sump was deepened by one foot and one sample was collected and analyzed for TRPH. The sample contained 132 mg/kg TRPH. The sump was demolished and removed and soil surrounding the sump was excavated by an additional foot. Six confirmation soil samples were collected and analyzed for TRPH and no detectable concentrations were reported.

Aside from the detections associated with the single discrete soil sample, single composite soil sample, and sample collected from the blind sump, no concentrations of any contaminants analyzed during the site investigation were detected. The areas associated with the detections were further investigated and/or remediated by over-excavation during the investigation.

Approximately 180 cubic yards of soil containing between non-detectable concentrations and 26 mg/kg TPH were generated from site investigation activities. An additional three cubic yards of soil were generated containing an average concentration of 2,061 mg/kg TPH. During demolition of the building, concrete pads, and asphalt-parking lot, the demolition contractor inadvertently incorporated the contaminated soil into the top 18 to 24 inches of soil across the subject property. However, given the absence of BTEX detections during the sampling program and relatively small volume spread over a large 18,000 SF area, the distribution of the contaminated soil was not considered a human health risk. The regulatory case was issued closure by the San Diego County Department of Environmental Health (SDCDEH) in April 2001 without contingencies or land use restrictions.

The subject property is associated with an unauthorized release (H32282-001) that has received regulatory case closure without contingencies or land use restrictions. Based on removal of the former UST, reduction of soil contamination to levels deemed acceptable by the SDCDEH, and case closure without contingencies or land use restrictions, the release associated with the subject property is considered an historical recognized environmental condition.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Minor to moderate mold or mildew growth was observed in several bathrooms surveyed during the site reconnaissance.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 2001 Newton Avenue in San Diego, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- The mold/mildew growth observed on the subject property should be remediated as part of routine maintenance.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 2001 Newton Avenue in San Diego, San Diego County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

E. APPLICATION SUBMITTAL, PLAN APPROVAL, PERMIT ISSUANCE, AND REQUIRED INSPECTIONS

Submit three (3) copies of this application package, including plan drawings, with the required fee to the Department of Health Services, Hazardous Materials Management Division, 1255 Imperial Ave., San Diego, CA or mail to P.O. Box 85261, San Diego, CA 92138-5261. Checks should be made payable to the County of San Diego.

A permit will be issued by the HMMD upon review and approval of the application and plans. The required fees must be submitted with the application package. Information in addition to that presented in the application package may be needed in order to obtain final approval. No work is to begin on the proposed project until a permit has been issued. The required inspections cannot be scheduled until a permit is issued.

Once the permit has been issued, it is the responsibility of the permittee to notify the HMMD at least two (2) working days in advance to schedule each required inspection.

Construction stages at which inspections are required are indicated in each subpart of this application form (i.e., Part II, III, IV, and V).

**COUNTY OF SAN DIEGO
HAZARDOUS MATERIALS MANAGEMENT DIVISION
INFORMATION BULLETIN
AUGUST 1991**

**LICENSING REQUIREMENTS FOR THE INSTALLATION, REPAIR, REPIPE OR
CLOSURE OF UNDERGROUND STORAGE TANKS IN SAN DIEGO COUNTY**

**TO: UNDERGROUND STORAGE TANK CONTRACTORS AND OTHER
INTERESTED PARTIES**

FROM: HAZARDOUS MATERIALS MANAGEMENT DIVISION (HMMD)

As of January 1, 1992, all underground storage tank contractors performing work in San Diego County, must have a Hazardous Waste Certification on file with HMMD.

Due to changes in State law, the Contractors State Licensing Board (CSLB) has amended their licensing policy for underground storage tank (UST) contractors. Beginning January 1, 1992 all UST contractors bidding on or performing the installation, repair, repipe or closure of an UST, must have a valid Hazardous Waste Certification issued by the CSLB. Senate Bill 2004 added the certification requirements by amending the provisions of the Business & Professions Code Section 7058.7. All contractors applying for the certification must maintain a General Engineering (A), Grading and Paving (C12) Plumbing Contractor (C-36), Limited Specialty Contractor (C-61-D-40) or General Building (B) license which is current and in good standing.

Examinations will be offered every month in Pasadena and Sacramento. You will be scheduled for the examination approximately 45 days from the time you submit your application. You will receive your certificate approximately three weeks after passing the examination. To receive an application and a study guide to prepare for the exam, write to:

Contractors State License Board
P.O. Box 26000
Sacramento, CA 95826

All contractors must submit a copy of their Hazardous Waste Certification to this office, where it will be maintained on file. After January 1, 1992, permits for underground storage tank work in San Diego County will not be approved if a copy of the contractors certification is not on file with HMMD.

If you have any questions regarding the Hazardous Waste Certification requirements, please contact the Licensing Staff of CSLB at (916) 366-5205 or Mary Peters at (619) 338-2207.

F. PROJECT WORK TO BE COMPLETED: Check Applicable Box	COMPLETE APPLICATION PARTS	FEE CODE TABLE G.
<input type="checkbox"/> Installation/Construction of new tank(s) only (without closing any existing tanks)	I & II	1
<input type="checkbox"/> Closure of existing tank(s) with installation of new tanks (tank replacement)	I, II & III	1 & 2
<input checked="" type="checkbox"/> Closure of existing tank(s) with no new tank installation	I & III	2

PART III

APPLICATION FOR PERMIT TO CLOSE UNDERGROUND STORAGE TANKS

A. TOTAL NUMBER OF TANKS TO BE CLOSED 1

B. DESCRIPTION OF TANKS TO BE CLOSED:

TANK NO.	CAPACITY	DATE INSTALLED	TANK COMPOSITION	TANK PRESENTLY IN USE?	MATERIALS STORED IN TANK
1	~280 GAL.	UNKNOWN	STEEL	DISCOVERED 12/11/92 -NOT IN USE-	EMPTY UPON DISCOVERY ~ UNKNOWN USE

required to do 418.1 since no historical available

C. HAS THE TANK SYSTEM EVER FAILED OR LEAKED? YES NO

D. REASON FOR TANKS TO BE CLOSED:

- Meet current state/federal requirements
- Replacement of existing tanks
- Tank system failure, briefly describe _____
- Other, briefly describe TO REMOVE RECENTLY DISCOVERED ABANDONED TANK

E. PREVIOUS OWNERS AND OPERATORS OF THE TANKS:

DATES	_____	OWNER/OPERATOR	_____
	_____		_____
	_____		_____

SAMPLING PROTOCOL

Tank owner/authorized representative responsible for all sampling analyses and associated costs.

- for tank systems that are to be removed. The excavation shall be exposed prior to the scheduled inspection and sampling points identified by the HMMD inspector. Sampling is required for both tank and piping. The tank must remain in the excavation until the HMMD inspector approves the removal.
- tank systems to be closed in place. Submit an alternate plan which must include soil sampling, reason for closing the tank system in place and type of material to be used to fill the tank. Soil sampling and/or hydrostatic testing is also required for piping closures. Tank system closure in place will only be considered after evaluating the risks and hazards if the tank system were removed.

G. DISPOSAL SITE OF TANK: GRAPE SALES, 10215 CHANNEL RD, LAKESIDE, CA. 92040

Note: You must inform the HMMD of the address of where the tank is to be disposed. Plans will be disapproved without this information.

H. ATTACH THREE COPIES OF PLANS SHOWING THE FOLLOWING:

1. Property lines, site address, scale, north arrow.
2. Location of all existing structures.
3. Location of all existing underground storage tank facilities.
4. Location of underground storage tanks and piping to be closed.
5. Location of underground utility lines and vaults.

I. REQUIRED INSPECTION-PERMIT TO CLOSE

A representative from the HMMD must be on site at the time the tank(s) are closed.

- 1. TANK SYSTEM CLOSURE BY REMOVAL:**
 - excavation shall be exposed prior to the scheduled inspection. The tank owner/authorized representative on site must submit a uniform hazardous waste manifest demonstrating that the tank has been properly decontaminated. A combustible gas instrument and soil sampling equipment must be on site. The HMMD inspector will identify sampling points. The tank must remain in the excavation until the HMMD approves the removal.
- 2. TANK SYSTEM CLOSURE IN PLACE:**
 - after approval of the alternate plan, the tank owner/authorized representative on site shall submit a uniform hazardous waste manifest demonstrating that the tank has been properly decontaminated. The HMMD inspector shall verify that the tank system has been properly emptied and will witness the filling with an approved inert substance. Piping approved to be closed in place by hydrostatic testing shall also be witnessed by the HMMD.

J. DECLARATION

I declare that to the best of my knowledge and belief the statements and information provided are correct and true. I understand that information in addition to that provided above may be needed in order to obtain final approval by the Hazardous Materials Management Division.

I understand that tests and procedures that may be required by other departments and agencies to demonstrate adequate site safety or suitability for further development (e.g. soil compaction testing) are in addition to the requirements of the Hazardous Materials Management Division.

I will notify the Hazardous Materials Management Division at least two working days (48 hours) before work is to begin in order to schedule the required inspections. I understand that site and worker safety are solely the responsibility of the property owner or his agent and that this responsibility is not shared or assumed by the County of San Diego.

WORKPLAN
 FOR
 UNDERGROUND STORAGE TANK CLOSURE

1. Site Name SDG&E MAIN STREET YARD
2. Site Address 2043 NEWTON AVENUE
SAN DIEGO, CA 92113
3. Describe the existing land use in the surrounding area, i.e. residential, commercial, schools.
MIXED COMMERCIAL AND RESIDENTIAL UTILIZATION
4. Explain how the excavation will be secured. At a minimum, secured fencing is required.
THE SITE IS FENCED WITH AN 8' CHAIN LINK FENCE AND A "ROVING" PATROL REGULARLY INSPECTS THE SITE DURING NONWORK HOURS.
5. If soil is to be stockpiled, describe the location and method of containment.
SOIL TO BE STOCKPILED AT SITE FOR LABORATORY ANALYSIS ON ASPHALT, COVERED WITH PLASTIC SHEETING IN A MANNER TO DIVERT SITE SURFACE WATER RUNOFF AROUND THE STOCKPILE.
6. If you discover an Unauthorized Release, do you plan to conduct site assessment or remedial work beyond what is necessary to remove the underground storage tank(s) and perform the mandatory soil sampling required by the HMMD?
 Yes No

If Yes, you must submit an additional workplan which includes the following:

1. What additional work do you plan on performing?
2. How will you protect the surrounding community?

RE: Follow up to Response from Tetra Tech's Request to Dispose of
 Approximately 35 to 40 Cubic Yards of Contaminated Soil on the Mercado
 Apartments Project Located at 2043 Newton Avenue

Dear Mr. Porter:

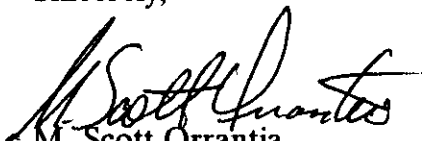

After speaking with you and Phil Rosenberg of Tetra Tech, I am respectfully
 submitting this narrative of the procedures used to acquire and transport the
 contaminated soil sample at the above referenced project site.

Using a shovel and work gloves, I spent approximately 45 minutes sorting
 through the pile of contaminated soil on a shovel-by-shovel basis. I located
 what I determined to be a piece of black, "tar-like" substance similar to the
 one that Dr. Valentine showed me during the initial site sampling procedure.

Once the sample had been identified, I used a hand shovel to pick up and
 place the sample, approximately the size of a quarter, into a clean, zip-locked
 plastic bag. I placed the plastic bag in a padded, oversized envelope and
 delivered the sample to Dr. Valentine.

Should you need any further details on how the sample was acquired, please contact
 me at 687-7380.

Sincerely,

 M. Scott Oarrantia
 President

Attention: Mr. Mike Porter

Subject: Review of Site Assessment and Mitigation Reports, Unauthorized Release T2509/H32282-001, MAAC Project- Mercado Apartments, Former SDG&E Main Street Maintenance Facility, 2403 Newton Avenue, San Diego, California

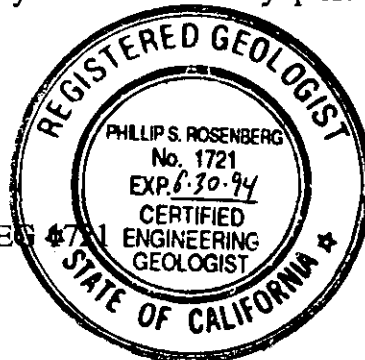

- References:
- o Site Assessment and Mitigation Report, Unauthorized Release T2509/H32282-001, MAAC Project (Mercado Apartments), SDG&E, 2403 Newton Avenue, San Diego, CA, by Tetra Tech, Inc., dated March 5, 1993
 - o Final Site Assessment & Remediation, MAAC Project-Mercado Apartments, Former SDG&E Main Street Maintenance Facility, 2403 Newton Avenue, San Diego, CA, by Tetra Tech, Inc., dated June 30, 1993

Gentlemen:

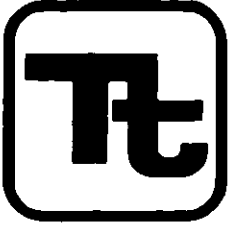

The undersigned has reviewed the above-referenced reports and Tetra Tech, Inc.'s in-house files for the subject project, and is in general agreement with the findings, conclusions and recommendations as presented. If you should have any questions, please feel free to contact our office at your convenience.

Respectfully Submitted,

Phillip S. Rosenberg, RG 5536, EG 4721
Senior Geologist

Subject: Additional Responses in Support of
Disposal Request for 35 to 40 Cubic Yards of
Hydrocarbon Contaminated Soil
Former San Diego Gas & Electric Maintenance Yard
Future MAAC Low Income Housing Project
2043 Newton Avenue
San Diego, CA 92113

Dear Mr. Porter:

Yesterday we finally had an opportunity to discuss my 30 August 1993 letter and laboratory data submittal. You stated that additional information was central to making a determination as to what might be done with the soil even though the laboratory stated that the "black unknown substance is a tar or an asphalt type of product".

You first requested that we somehow document that the material submitted to a laboratory on 19 August 1993 was the same as that submitted for analysis on 24 May 1993. This request is impossible to comply with. I took the first sample and saw the second. They look similar, if not identical, to one another.

You next requested that a description of how and where the second sample was taken be supplied. This information must be provided by Mr. Orrantia since I did not take the sample. I did request that the soil pile be examined as it was being moved from one location to another to accommodate site construction needs. It is my understanding you specifically need to know where the pile was prior to removing the tar sample, where it was moved to, how the sample was obtained and how much additional highly contaminated soil might have been observed. I ?

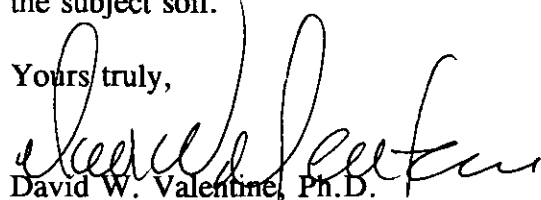

Received
9-21-93

Why didn't TT take
this environmental sample?
Is the contractor qualified to take
samples for a site assessment?

Mr. Porter
21 September 1993
Page Two

suggest that Mr. Orrantia contact you directly (338-2539) to supply the additional information you require to complete your site assessment and determine the appropriate disposal location for the subject soil.

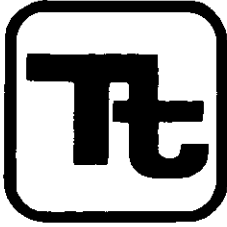

Yours truly,

David W. Valentine, Ph.D.
Senior Program Director

Subject: Additional Analytical Data in Support of
Disposal Request for 35 to 40 Cubic Yards of
Hydrocarbon Contaminated Soil
Former San Diego Gas & Electric Maintenance Yard
Future MAAC Low Income Housing Project
2043 Newton Avenue
San Diego, CA 92113

Dear Mr. Porter:

On 21 June 1993 I made a request on behalf of the MAAC project to dispose of 35 to 40 cubic yards of hydrocarbon contaminated soil from the subject property. The final report for this site was issued on 30 June 1993. This report contains all of the background data which was summarized in our previous June request and, as such, will not be repeated.

Several weeks ago you called to inform us that the original disposal request had been denied primarily because of the presence of what we called an "inclusion" thought to be tar. You stated that the RWQCB would not allow the material to remain on site or be disposed at the Miramar landfill as long as the identification of this material was in doubt.

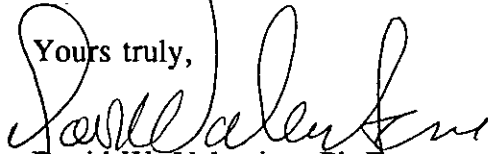

I contacted Mr. Steve Orrantia of the Cuatro Corporation and requested that when the stockpile in question was moved that he make an effort to find the "inclusion", excise it and then provide a sample of this material to me. The pile was subsequently moved and the material obtained and sent to me. Mr. Orrantia stated that what he sent was essentially all of the suspect material that he had seen. A sample of this material was sent to Analytical Chemists, Inc., for analysis. The conclusion of this laboratory report is

Mr. Porter
30 August 1993
Page Two

"We believe that the physical as well as the chromatographic pattern indicate that the black unknown substance is a tar or asphalt type of product."

This description mirrors that provided in our 21 June letter. We, therefore, again respectfully request that the 35 to 40 cubic yards of soil be allowed to remain on site and used as subbasement material for parking lots. Barring this it is requested that the soil be disposed to the Miramar Landfill.

Yours truly,

David W. Valentine, Ph.D.
Senior Program Director

LABORATORY REPORT : 448-93
DATE OF REPORT : August 23, 1993
DATE RECEIVED : August 19, 1993
DATE SAMPLED : August 19, 1993
IDENTIFICATION : Project #9450, Location 9A
REQUEST : Characterize the black substance

METHOD

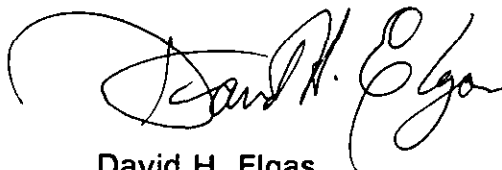

The sample is several hard black chunks with an appearance resembling tar or asphalt. It was extracted with dichloromethane in an attempt to determine the insoluble content. The presence of many stones and sand grains made filtration impossible. The filtrate that was captured was evaporated gently to dryness on a hot plate. An aliquot of the dried deposit was used to prepare a 10,400 ug/cc solution; this solution was analyzed by high temperature gas chromatography.

RESULTS

Residue appearance: the black film from the drying of the extract was soft and sticky when hot, and gave off an odor characteristic of tar. When cool, the residue became hard. The chromatographic data which covers the region of C16 to greater than C50 reveals a slightly bimodal pattern. This pattern suggests a small amount of oil in a predominately tar matrix. Gasoline and Diesel type fuels were absent. The chromatograms are enclosed.

CONCLUSION

We believe that the physical as well as the chromatographic pattern indicate that the black unknown substance is a tar or asphalt type of product.

RE: Mercado Apartments Project

Dear Mr. Porter:

I am writing this letter to express my regret for inadvertently moving approximately three yards of contaminated soil on the above referenced project site. Unfortunately, there were no clear barriers indicating that the soil was to remain untouched and as equipment was working on site, the pile was inadvertently moved and spread.

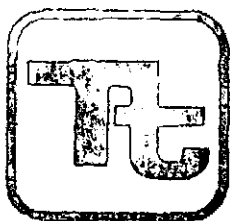

Should you have any further questions in this regard, please call me at (619) 421-6065.

Sincerely,

George McCarroll

Subject: Unauthorized Release T2509/H32282-001
 Former San Diego Gas & Electric Maintenance Yard
 2043 Newton Avenue
 San Diego, CA 92113

wel, below the tank

Dear Mr. Skinner:

On 15 march 1993 we provided you with a SA/M report on the subject property. In this report we provided evidence that the subject unauthorized release had been mitigated. This resulted in the generation of approximately 180 cubic yards of soil. Of this quantity, 120 cubic yards was tested and found to be free of hydrocarbon contamination. This material was used to backfill the excavation to grade following the importation, and emplacement, of clean fill in the expanded excavation. An additional 60 cubic yards of soil contained an average total petroleum hydrocarbon concentration of 26 mg/kg TPH. Permission was requested to leave this material on site. ~~*two to three cubic yards of soil~~ with an average concentration of 2,061 mg/kg TPH was of potential regulatory concern. One soil sample tested from this waste pile using EPA Method 8020 failed to detect benzene. We initially proposed that this soil be disposed off-site as non-hazardous waste.

A demolition contractor was retained to remove an existing building as well as concrete pads and asphalt parking lots on the site. Sometime during the week of 10 May this contractor not only removed these items but moved all of the soil from the remediation as well, including the previously mentioned two to three cubic yards of contaminated soil. Where on-site this soil may have been moved is problematical. The entire site has been "ripped" to a depth of 18-24 inches and much of the overlying concrete, and some asphalt, worked into this disturbed layer. Therefore, this rather small quantity of soil has likely been well distributed throughout the property.

Mr. Porter
18 June 1993
Page Two

mag 10
when

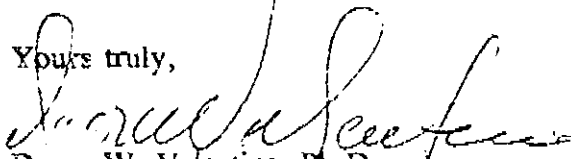

Immediately following demolition Tetra Tech conducted a rather extensive surface sampling program on this site. This program consisted of obtaining 200 discrete samples at approximately one feet deep into formational soil on a 30 foot grid over the entire property. Each of these 200 samples was tested for gasoline and diesel using the DOHS method. No TPH was detected in any of these samples. In addition, 50 composite samples were tested for total recoverable petroleum hydrocarbons (EPA Method 418.1), 36 for PCBs/DDT (EPA Method 8080), and 16 for PNAs (EPA Method 8100). No target compounds were detected except for two areas well removed from the original tank excavation. These two areas were a blind sump located almost exactly in the center of the property and a pit where asphalt was disposed. A complete report of these activities is in preparation.

need lab results

In summary, two to three cubic yards of soil with an average TPH concentration of 2,016 mg/kg was inadvertently disposed at the property (an 18,000 square foot parcel) by a demolition contractor. The location of disposal is not known and will likely never be because the entire surface of the property was reworked. The soil so disposed apparently either contained little or no benzene. A subsequent detailed site assessment entailing the analysis of 200 discrete samples for gasoline and diesel failed to detect any petroleum hydrocarbons. Therefore, no health threat will likely result from this disposal.

Closure of this unauthorized release is respectfully requested.

Yours truly,

David W. Valentine, Ph.D.
Senior Program Director

Subject: Final Site Assessment and Remediation Report
MAAC Project - Mercado Apartments
Former SDG&E Main Street Maintenance Facility
2403 Newton Avenue
San Diego, CA 92113

Dear Mr. Juarez:

Attached is a copy of the Final Site Assessment and Remediation Report (including original attachments) for the subject site. The purpose of investigations discussed in this report was to address outstanding concerns regarding both soil and groundwater contamination as expressed by lending institutions. These were addressed with the installation of five groundwater monitoring wells and sampling a 200 point grid.

Three areas of potential regulatory concern were found during the course of investigations conducted by Tetra Tech personnel during 1993. The first was an underground storage tank which was removed and the excavation remediated. The remaining two locations, a construction rubble disposal area and a blind sump, were likewise remediated. Five groundwater monitoring wells were installed. No target toxicants were detected in soil or groundwater. There are no additional known or suspected locations on this property which might have harbored hazardous materials or contain hazardous wastes.

Please do not hesitate to contact me should you have questions regarding our report.

Yours truly,

David W. Valentine, Ph.D.
Senior Program Director

Mr. Juarez

FINAL SITE ASSESSMENT & REMEDIATION

MAAC Project - Mercado Apartments
Former SDG&E Main Street Maintenance Facility
2403 Newton Avenue
San Diego, CA 92113

1. EXECUTIVE SUMMARY

San Diego Gas & Electric (SDG&E) occupied portions of the subject property since the mid-1940's. During this approximately 50 year period the site was used as a vehicle maintenance facility, personnel training center, and a general storage yard. Various types of chemical compounds associated with such a facility, including chlorinated and non-chlorinated solvents, PCBs (in transformers), paints, vehicle maintenance supplies and pesticides and herbicides were stored on the site.

One of the previous occupants, Gleason Lumber and Mill Company, maintained an underground storage tank on the site (installed in 1938) and may have treated wood using chemicals such as creosote containing pentachlorophenol. The acquisition of the property by the MAAC Project for the intended purpose of building low cost housing raised concerns about the potential risk to future occupants posed by chemical contamination.

The first known property assessment was performed by LeRoy Crandall and Associates in 1989. Many of the above issues were raised in this site assessment which did not involve chemical testing. SDG&E subsequently completed their own assessment and expanded greatly on the information contained in the first report. SDG&E, like LeRoy Crandall, did not perform any analytical testing.

The first documented limited sampling program to specifically examine questions related to previous transformer storage (PCBs), solvents, underground storage tanks, *and surface and subsurface hydrocarbon contamination was undertaken by Tetra Tech* in January 1993. Hydrocarbon contamination at levels of potential regulatory concern were documented. Very low levels of PCBs were also found. An underground storage tank was also discovered, presumably the tank which was installed by Gleason Lumber and Mill Company in 1938. Tank removal and additional investigations were suggested

On 27 January 1993 San Diego Gas & Electric removed the underground storage tank and encountered soil contamination. The Site Assessment and Mitigation Division, San Diego County Department of Health Services, declared that the tank had leaked and ordered site cleanup. On 25 February 1993 Tetra Tech conducted site mitigation.

The excavation was remediated to below the method detection limit for total petroleum hydrocarbons. Site closure was requested.

The purpose of the final assessment presented in this document was to address outstanding concerns regarding both soil and groundwater contamination at the site. These were addressed with the installation of five groundwater monitoring wells on 13 and 14 April 1993 and the establishment and sampling of a 200 point grid on 30 foot centers on 17, 18 and 19 May 1993. Several near surface areas of potential concern were located, including a blind sump. These two areas were fully mitigated on 21 May 1993. Remediation at these two locations generated approximately 35 to 40 cubic yards of soil contaminated primarily with heavy molecular weight hydrocarbons thought to be road tar or bits of asphalt. Permission has been sought to use this soil as subbasement material for parking lots. No other areas were discovered which contained contaminants at levels of existing regulatory concern. There are no known locations remaining at this site which have not been addressed by the sampling programs conducted to date which historically may have contained hazardous materials or hazardous wastes.

In summary, three areas of potential regulatory concern were found during the course of investigations at this site. The first was an underground storage tank which was removed and the excavation remediated. The remaining two locations, a construction rubble disposal area and a blind sump, were likewise remediated. Five groundwater monitoring wells were installed, No target toxicants were detected in soil or groundwater. There are no additional known or suspected locations on this property which might harbor hazardous materials.

3. SITE HISTORY

The site, as purchased by the MAAC Project, consists of a city block of land measuring approximately 300 by 600 feet (Figure 1). The parcel is bounded by Evans, Main and Dewey Streets and Newton Avenue (Figure 2). The last owner was San Diego Gas & Electric (SDG&E) who acquired, and developed, the site over a number of years (San Diego Redevelopment Agency [personal communication], San Diego Gas & Electric [1990]; LeRoy Crandall and Associates [1989]). According to San Diego Gas & Electric (1990):

San Diego Gas & Electric Company acquired the entire "Main Street" block (some 48 lots by individual purchases) during 1945-1966 for undisclosed purposes. Records reveal, however, that the site may have been acquired for an additional "gas holder," storage, parking, or for use as a "staging area" for other construction activities.

Prior to its purchase, the site was occupied with a mix of residential and commercial structures. Gleason Lumber and Mill Company occupied much of, what may be described as, the northwesterly portion (this area of San Diego was extensively utilized by the lumber industry because of its access to the bay and "rafts" of lumber shipped from the north). Residential single family dwellings occupied the remainder of the block.

A LeRoy Crandall report (1989) stated:

Based on 1927 photographs, several large buildings were located in the western portion of the block, with many smaller buildings located in the eastern portion of the block. The Sanborn maps indicate that the western portion of the site had been occupied by the Gleason Lumber Company, as well as by several storage buildings. The smaller buildings in the eastern area were indicated as dwellings, garages and stables.

This same report (LeRoy Crandall, 1989) mentions City of San Diego Fire Department tank installation records showing a permit for the installation of one (1) 280 gallon underground storage tank at the Gleason Lumber and Mill Company in 1938. A 280 gallon tank, assumed to be the same 280 gallon tank mentioned by LeRoy Crandall (1989), was found by Tetra Tech (1993a) situated between a concrete building pad in the northern most corner of the property, and a concrete driveway accessing Dewey Street. This tank was subsequently removed, found to have leaked, and the site remediated (Tetra Tech, 1993b; Figure 3).

4. PRIMARY CONTAMINANT CONCERNS AND KNOWN SOURCES

Tetra Tech, Inc., was retained by the City of San Diego Redevelopment Agency to perform a limited assessment of potential subsurface soil contamination at the subject site (Tetra Tech, 1993a). The purpose of the investigation was to test surface and shallow subsurface soils for the presence of petroleum hydrocarbons, polychlorinated biphenyls (PCBs) and various chlorinated solvents commonly encountered in areas where vehicle maintenance and transformer storage reportedly occurred. This preliminary assessment included a coordinated soil sampling and laboratory analysis program. The investigation included near surface trenching and authoritative sampling to determine the presence of various contaminants (Figure 4).

Based on observations made by Tetra Tech (1993a), most of the contamination seemed to be coincident with the former presence of electrical transformers or parked vehicles. This suggested that minor surface contamination might be encountered beneath a large portion of the site. The presence of a large concrete slab beneath a significant portion of the site was suggested by SDG&E personnel and later confirmed during geotechnical investigations conducted by Geocon, Inc. (1993; Figure 5) This slab was situated beneath most of the site believed to have previously been used for transformer storage. It was believed that this pad served as the slab on which the Gleason Lumber and Mill Company sales buildings were situated. The Geocon trench was visually inspected by Tetra Tech personnel for signs of contamination and evidence of fill materials or unusual buried structures. No visual evidence of soil contamination was observed.

On 27 January 1993 one 280 gallon gasoline tank and associated piping was removed from the MAAC Project site by Pacific Treatment personnel working under the direction of SDG&E personnel. An unauthorized release was subsequently filed based on the detection of elevated levels of total petroleum hydrocarbons (TPH) in the excavation. A regulatory cleanup level of 100 mg/kg as TPH was assumed (Tetra Tech, 1993b). Laboratory data suggested that the tank originally contained gasoline which had since undergone significant weathering.

The former tank excavation was remediated on 25 February 1993 after which eighteen soil samples were taken from the sidewalls and bottom of the excavation. TPH was not detected in any of these soil samples (method detection limit <10.0 mg/kg TPH; Figure 6). The excavation was remediated, backfilled, and compacted. Closure of this unauthorized release was requested (Tetra Tech, 1993b).

In summary, the chemicals which were or may have been stored, used, or generated on this site included the following:

- o Waste oil
- o Diesel, including "weed" oil
- o Gasoline
- o PCBs (from transformer storage)
- o Pesticides (unspecified)
- o Herbicides (unspecified)
- o Paints and thinners
- o Non-halogenated solvents (unspecified)
- o Halogenated solvents (unspecified)
- o Creosote (particularly pentachlorophenol)
- o General cleaning solutions, including acids and bases

5. GEOLOGY/HYDROLOGY

Site geology plays an important role in how a given contaminant may be distributed. If soils contain considerable quantities of clay then contamination is generally localized. If a formation is unconsolidated and contains significant quantities of sand or gravel then contamination may preferentially migrate vertically. This is particularly important in areas with shallow groundwater.

"Geology of National City, Imperial Beach and Otay Mesa Quadrangles, Southern San Diego Metropolitan Area California" (1977), indicates that the subject site is underlain by the Bay Point Formation and unnamed, nearshore, marine sandstone deposits. The following is a quote from this document:

The Bay Point Formation (Qbp) is widespread and well exposed in much of the area adjacent to San Diego Bay. The formation is composed of marine, lagoonal, and nonmarine, poorly consolidated, fine- and medium-grained, pale-brown, fossiliferous sandstone. The Bay Point Formation was laid down on a marine cut terrace (Nestor Terrace) during the late Pleistocene, Sangamon interglacial high sea stand. The marine part of the Bay Point Formation interfingers with unfossiliferous, fine-grained, pale-brown and light-gray, nonmarine sandstone that lies generally more than 30 m but less than 60 m above sea level.

The unnamed, nearshore marine sandstone deposits (Qn) are mostly nearshore marine deposits composed of light-brown, fine-grained, well sorted, and poorly sorted sandstone. The formation is similar in composition and appearance to the Bay Point Formation and in much of the area is indistinguishable from it. The contact between these deposits and the underlying older rocks is an unconformity of low relief that is usually nearly planar in character though locally has up to 10 m of associated relief.

Soil observations made during the installation of five monitoring wells to depths of up to 45 feet confirmed the presence of the Bay Point Formation.

The MAAC property is located to the east of San Diego Bay at a maximum elevation of approximately 43 feet above mean sea level (MSL) in the far southern corner (Evans Street and Newton Avenue) to a minimum of about 34 feet MSL in the western corner (intersection of Dewey and Newton Streets). Topography on this site, as well in the general site area, descends towards the west.

The closest permanent surface water is San Diego Bay located 500 yards to the southwest (Figure 1). The site is located in the San Diego Mesa Subunit of the Coronado Hydrographic Unit. Depth to groundwater varied from 7.65 feet MSL in Monitoring Well 5 to 3.49 feet MSL in Monitoring Well 4 (five wells were installed, and removed, in support of the this final site investigation). Groundwater flow is towards the southwest, based on data from monitoring wells installed for hazardous assessment purposes during this investigation.

6. INVESTIGATION OBJECTIVES

Questions addressed by the final assessment program were:

- o Are there hazardous chemicals present on the site?
- o Are these chemicals present in concentrations which require removal?
- o Where are these chemicals (if any), located?
- o How deep into the ground do they penetrate?

The question of location addressed both soil and groundwater issues. The latter might have been particularly thorny if off-site sources contributed to contamination under this site. Therefore, groundwater contamination issues were addressed by installing five monitoring wells and rigorously sampling both soil and groundwater.

There are a number of ways in which a property, such as the MAAC property, may be sampled. Simple random sampling may be used if one is interested in determining the mean (average) concentration of a given substance across the property as a whole. This is not an appropriate initial sampling method because a toxicant is deemed hazardous not by its mean concentration but rather by the maximum. Similarly, stratified random sampling would be the method of choice if strata (different sampling environments) could be established *a priori*. This was generally impractical in the present instance because the site history suggested that at least hydrocarbon contamination should be general rather than localized. The sole exception was contamination associated with a previously removed underground storage tank which was previously addressed.

Authoritative sampling was employed during the January 1993 sampling effort (Tetra Tech, 1993a), during excavation remediation (Tetra Tech, 1993b), and again on 21 May to verify the cleanliness of two contaminated sites which were found, and remediated, during the present investigation. Authoritative sampling is, however, not applicable as a general screening procedure since to use this method the toxicant should leave easily visible surface cues, such as staining. The toxicants which might have been disposed on this property do not necessarily discolor soil. The sampling method used, a predetermined grid pattern, was selected to sample as much of the

property as economically as possible. Sampling was conducted after both the existing SDG&E structure as well as concrete pads and asphalt had been removed. The removal contractor, Willert Construction Co., partially pulverized both concrete and asphalt. Considerable quantities of both were worked into the upper foot or more of the site. The asphalt, in particular, would have resulted in analytical problems because there is no readily available method of differentiating between asphalt (considered non-hazardous) and other higher molecular weight hydrocarbons. Therefore, all grid sampling was conducted at least a foot below the obviously disturbed surface layer.

7. SITE INVESTIGATION METHODS

Soil and groundwater sampling was conducted in accordance with United States Environmental Protection Agency publication SW-846 (USEPA, 1986) and local regulatory guidance documents (County of San Diego Department of Health Services, 1993). These documents provide guidance for both sample matrices. Monitoring wells were installed prior to site demolition. The remaining sampling program, as detailed below, was conducted following the removal of the SDG&E storage buildings, preexisting concrete pads, and asphalt parking areas. Much of this material, including bits of asphalt and concrete, were worked into the upper 18 to 24" of soil.

a) Groundwater

Prior to monitoring well installation the most probable direction of groundwater flow was thought to be directly toward San Diego Bay. This, combined with the location of known unauthorized release sites, suggested that a five monitoring well field would be sufficient to detect both off-site contamination from known sources and also address potential on-site sources. The well field, as installed, is shown on Figure 7 and described below.

Monitoring Well 1:

Close to the remediated tank excavation. This is also close to a known off-site unauthorized release towards the north.

Monitoring Well 2:

Westernmost corner of the property, the site of the former Gleason Lumber and Mill Company building pad which was purportedly used for transformer storage.

Monitoring Well 3:

Just south of the SDG&E storage building which was subsequently removed. Any releases of solvents, hydrocarbons, or other chemicals of concern should have been detected by this well if the release impacted groundwater. This central well also forms equilateral triangles with the other four wells.

Monitoring Well 4:

Southernmost corner of the property.

Monitoring Well 5:

Easternmost corner of the property. In the general location where LeRoy Crandall (1989) reported removal of several underground storage tanks (this report has never been confirmed). Also closest to a known unauthorized release at 2183 National Avenue (corner of National and Sampson Avenues).

The average elevation of this site was initially thought to be approximately 40 feet MSL. Therefore, well completion was initially scheduled at a depth of 50 feet below grade. Final completion depths actually varied between 40 and 45 feet below ground surface, as shown in Table 1.

The wells were installed with an 11" hollow stem auger. The casing consisted of 4" diameter PVC pipe designed and constructed solely for use in monitoring wells. The pipe was constructed with screw fittings to avoid the use of solvents. The bottom 10 feet of each well consisted of 0.02" factory slotted casing. Installation was in accordance with the most recent local guidance documents (January 1993, San Diego County Department of Health Services). Boring logs are provided in Attachment 1.

In accordance with the well permit, one soil sample was taken for each five feet of boring commencing at a depth of 5 feet below grade using a modified California (split barrel) sampler with 2 - 1/2 inch stainless steel sleeves. Samples were not taken below the groundwater table. Each sample was tested for TPH using the DOHS Method. Two samples from each well with the highest TPH level were initially to be tested for chlorinated solvents (EPA Method 8010), volatile organics (EPA Method 8020), PCBs and DDT (EPA Method 8080) and polynuclear aromatic hydrocarbons (EPA Method 8100/8270). However, no detectable TPH was encountered in any of the soil samples. Therefore, these additional tests were run on the soil samples at five feet and the sample immediately above the water table. These are the two horizons most likely to be contaminated by on- and off-site contamination sources. Additional tests, such as organic lead and flashpoint, were also run on single samples for profiling purposes.

After the wells were installed they were surveyed and levelled to MSL (see Figure 7 and Table 1). Thereafter the wells were developed by surging with a 4" diameter surge block for an hour after which approximately 50 gallons of water was removed with a submersible pump and stored in DOT 17H barrels. All of the wells were fast recharging based on local guidance documents, The wells were then purged, and

sampled in accordance with previously referenced guidelines for fast recharging wells. Water samples were obtained with pre-cleaned teflon bailers and tested using the DOHS methods for TPH and organic lead and with EPA Methods 601, 602, 608. PNAs were to be tested for only if PNAs were detected in soil samples from monitoring well installation. None were detected. Hence, this test was not run on water samples. One water sample was also tested for chlorides to determine potential potability and whether the underlying groundwater may be classified as non-beneficial based on this criterion. Boring logs and analytical results were submitted to regulators on 26 May 1993 in accordance with well installation permit requirements.

b) Soil

The size of the parcel is 300 feet wide (along Evans/Dewey Street)) by 600 feet long (along Newton Avenue/Main Street). A grid with sampling points on 30 foot centers was established on this parcel. The outer sampling points were 15 feet from each of the property boundaries. The Evans/Dewey grid lines (rows) were labelled A through J. The corresponding Newton/Main grid lines (columns) were numbered 1 through 20. This yielded 200 sampling points (Figure 8, Photograph 1). One discrete sample was taken at each of these grid intersection points approximately one foot below the construction disturbed layer in formational material. There were areas where considerable poor quality import construction debris had been disposed on-site. Such disposal may represent a geotechnical problem but should be of no concern from a hazardous waste point of view. Areas where construction debris was encountered will be found in Attachment 2 (Photograph 2). All grid samples were taken at least a foot below this type of material to ensure that only formational material was being sampled.

The method used to establish the sampling grid was as follows. First, a piece of fluorescent orange plastic "flagging" tape was tied on the Newton Avenue property fence 15 feet from the juncture of Newton Avenue and Evans Street. Pieces of flagging were then tied at 30 feet intervals thereafter along the Newton Avenues fence moving towards Dewey Street until the juncture of the Dewey Street property fence was reached. The same procedure was repeated along the Main Street property fence. This resulted in 20 flags on both fence lines and established row numbers 1 through 20. A similar procedure was followed for the fence lines along both Evans and Dewey Street fences. Next, a nylon line was stretched between the two main fence lines. Each end was secured with metal eyes and stretched until the nylon line

was taught. Plastic flagging was then placed on the nylon corresponding to the Newton Avenue fence marks and secured to prevent slippage. A similar flag was then permanently affixed every 30 feet moving towards Main Street. This defined the vertical (column) sampling points A through J.

Two foot high wooden surveyor stakes were marked with a letter (A through J) representing the column and a number (1 through 20) representing the row along which the marking line was stretched. Only ten stakes, a sufficient number to stake a single column, were marked at a time to avoid possibly mislabelling sampling points. A single row of stakes was then laid out in alphabetical order by one of the site personnel, the appropriateness of the "lay-out" checked by the other, and the stakes driven into the ground. The nylon line was then moved to the next column and the staking process repeated.

Discrete grid samples were taken by removing overburden with a backhoe, removing slough, and driving a 2 -1/2 inch diameter by 6 inch long new (pre-cleaned) brass sleeve into the soil with a mallet (Photograph 2). After the sleeve had been driven flush with the sampling surface it was retrieved, each end covered with a 4" square piece of teflon, and each end then capped with plastic caps.

Two sets of pre-printed sample labels with self adhesive backs were taken into the field. One label was placed on the plastic cap from the bottom of the sleeve (the deepest point of sleeve penetration) and the other on the brass sleeve immediately under the same cap. These represented the portion of the sample from which the soil for analysis was to be taken. Two labels were used so that the laboratory could store the samples either upright or horizontally or in case either label became lost. Each label identified the company (Tetra Tech), project name (Barrio Logan), and the sample identification number. Samples were delivered to Transglobal Environmental Geochemistry's (TEG, Photograph 3) mobil laboratory immediately after collection. Chain of custody documents were completed prior to commencing sampling because the sample grid system and identification numbers were established before entering the field.

Sample points (row/column intersections) were used for sample identification purposes on both the samples themselves and on chain of custody documents. Depth information was not included on the label because this was not known until the

sample was taken. Rather, this information was maintained as a separate field log which is provided as Attachment 2.

All 200 discrete samples were analyzed using the Department of Health Services method for total petroleum hydrocarbons (DOHS TPH - for both gasoline and diesel). Any sample which contained TPH was to be tested for benzene, toluene, xylene(s) and ethylbenzene using EPA Method 8020 (modified for BTX&E only).

Discrete samples surrounding the removed SDG&E warehouse (5F, 6F, 7F, 8F, 9F, and 5G, 5H, 5I and, 5J, 6J, 7J, 8J, 9J and 9G, 9H, 9I which form a rectangle, see Figure 9) were tested for chlorinated solvents using EPA Method 8010. Analyzing discrete samples for chlorinated solvents negates any questions regarding volatilization of lower molecular weight compounds.

Additional analyses were run on discrete samples which were composited in groups of four. These composites were numbered by sample cell, the designation of which is given in Attachment 3 and shown on Figure 10. Sample cell identifiers were used for data tracking and reporting to minimize potential confusion. All composite samples were tested using EPA Method 418.1 (total recoverable petroleum hydrocarbons, TRPH). If TRPH levels of potential regulatory concern were detected in any of the composite samples then the discrete samples which formed a given composite would have been run to localize the contamination. All compositing was performed by laboratory personnel from the discrete samples which formed a given composite.

In addition, individual composite samples from either side of the previously removed SDG&E storage building (which included the SDG&E pole yard) were analyzed for polynuclear aromatic hydrocarbons and semi-volatile organics using EPA Method 8100 (composites 32, 33, 35, 36, 42, 43, 45 and 46, see Figure 11).

Finally, EPA Method 8080 was run on composites from around the removed SDG&E storage shed and from under, and around, the concrete slab which once supported the Gleason Lumber and Mill Co. buildings and the SDG&E transformer storage area (composites 1, 2, 3, 4, 11, 12, 13, 14, 21, 22, 23, 24, 33, 34, 35, 43, 44, 45, see Figure 12).

Sample compositing was used for the above tests for a number of different reasons. First, method detection limits for individual toxicants are generally 10 to at least 100

times less than regulatory action levels. Thus, if a toxicant of regulatory concern was detected at any level (even below the action level) then the individual discrete samples would have been run to determine which sample contained the highest toxicant level and additional samples taken at, or adjacent to, this sampling location. This would have localized areas of potential concern. Second, compositing allows a larger number of samples to be taken which, in turn, allows a more thorough areal coverage than if fewer samples were taken and analyzed. Finally, this method reduces overall analytical costs without sacrificing the main objective of determining if contamination is present on site and, if so, where it is located. The question of absolute concentration would have been addressed by reanalyzing the individual discrete samples used to make a given composite and additional discrete sampling.

Authoritative sampling was used only in two areas identified as containing toxicant levels of potential regulatory concern. These samples were placed in wide mouth glass jars and sealed with teflon lined screw tops. This was done to easily differentiate discrete grid samples from discrete authoritative samples.

Preservation and Transport

Soil samples from the drilling of monitoring wells and water samples from these same wells were placed in an ice chest with "blue" ice and maintained in a chilled condition. Transportation to the laboratory was conducted under chain of custody.

Soil samples from the grid sampling program were immediately delivered to TEGs on-site mobil laboratory. The subsequent transfer of these samples to other laboratories for analysis was performed by the receiving laboratory.

Analysis Summary

The following analyses were run.

<u>Method</u>	<u>Method Description</u>
EPA	
418.1	Total Recoverable Petroleum Hydrocarbons (TRPH)
8010/601	Halogenated Volatile Organics (soil/water_
8020/602	Aromatic Volatile Organics (soil/water)
8080/608	Organochlorine Pesticides and PCBs (soil/water)
8100	Polynuclear Aromatic Hydrocarbons
TPH	Total Petroleum Hydrocarbons (TPH, Department of Health Services- soil/water)
Lead	Organic, DOHS Method

8. SITE INVESTIGATION RESULTS

Results are described separately for monitoring well investigations and grid samples.

a) Groundwater

A summary table showing the results for the soil samples obtained from the drilling program is provided in Table 2. None of the target chemicals was found at levels above the method detection limit for the analysis used. The laboratory data and chain of custody documents are provided in Attachment 4.

A summary table showing the results for water samples from each of the five monitoring wells is provided in Table 3. Again, none of the target compounds were detected in these samples. Note that water samples were not analyzed for PNAs because no PNAs were detected in the soil samples submitted for analysis. This omission was by prior agreement. These data are provided in Attachments 5 and 6.

The only chemical detected in the well water was chloride. The chloride content of water from MW-1 was 190 mg/l. This test was run to determine the potential potability of the water underlying the site. For comparative purposes, the chloride content of sea water is approximately 17,500 mg/l. Water is considered potable with a chloride content (listed as total dissolved solids) of about 2,000 mg/l. The groundwater underlying this site should, then, be considered potable and the aquifer would probably be considered beneficial by the Regional Water Quality Control Board.

All monitoring wells were closed under permit on 11 June 1993 by over drilling each well and filling each such boring with six sack concrete (Attachment 7)

b) Soil

Discrete Samples

Results for the 200 discrete soil samples tested for TPH are provided in Table 4. Only sample 9A detected any TPH, and this was in the diesel range. Sample location 9A was the subject of a remediation and additional testing which will be covered elsewhere. No BTX&E was detected in any of the soil samples run for these compounds (Attachment 8).

Table 5 presents results for the 16 discrete samples analyzed using EPA Method 8010 for halogenated volatile organics. No such compounds were detected. Note that the BTX&E data provided in Table 4 were obtained from this test. The laboratory data area provided in Attachment 8.

Composite Samples

Results for the 50 composite samples tested for TRPH are provided in Table 6. Note that sample 9A was not included in composite 5 since it was thought to be a piece of tar or similar material. Inclusion of this sample would have knowingly skewed the results. This sample was tested as a discrete sample and is discussed elsewhere.

Composite 25 contained 66 mg/kg TRPH. Discrete samples were not tested individually since this level of contamination did not seem to be worthy of note. The entire burden of contaminants may well have been derived from sample 10E, which was taken from the bottom of the blind sump found at this location. The sump was subsequently remediated and shown to be clean. This, too, is discussed elsewhere. These data are provided in Attachment 8.

Data for composite samples tested pesticides and PCBs is provided in Table 7. No target compounds were detected. These data are provided in Attachment 9.

Composite samples tested for PNAs are summarized in Table 8. No compounds were detected above the method detection limits. These data are provided in Attachment 9.

Remediation

Two areas were encountered which warranted additional investigations. These were found at sample points 9A and 10E.

Disposal Pit at Sample Point 9A

Grid trench 9A encountered a black, extremely viscous, substance thought to be tar. A sample of this material was obtained and submitted for analysis. The material contained no gasoline or BTX&E but did contain 1,526 mg/kg hydrocarbons in the diesel and above range using the DOHS TPH method for analysis (Table 9). The

sample was also run for TRPH using EPA Method 418.1 and found to contain 277,000 mg/kg (27 percent). This same sample was also tested for DDT and PCBs using EPA method 8080 with negative results (Table 10) and PNAs using EPA Method 8100; 4,400 ug/kg (4.4 mg/kg) benzo(a)pyrene was detected (Table 11). However, matrix interference was reportedly severe and high dilutions had to be employed. Therefore, a great deal of confidence cannot likely be placed in this concentration estimate. These data suggest, though, that the tar like substance contained approximately 0.0016 percent benzo(a)pyrene.

A second, parallel, trench (9A-1) was dug approximately two feet to the west of the original trench. Soil discoloring was noted and a sample taken of this material and submitted for analysis. This soil sample (9A-1) contained no TPH, 129 mg/kg TRPH, no PNAs, no DDT, but did reportedly contain 220 ug/kg (0.22 mg/kg) PCB-1260 (Tables 9, 10 and 11). An area approximately 18 feet wide, 24 feet long, and 3-1/2 to 4 feet deep was subsequently excavated based on visual cues (Figure 13). The excavated soil (30-35 cubic yards) was stockpiled on plastic adjacent to the excavation. Following excavation, four samples were taken in the bottom of the excavation and tested for TRPH. No hydrocarbons were detected. Two samples were also obtained from the waste pile and likewise tested for TRPH (listed as samples 9WPA and B, for Waste Pile, samples A and B). In this instance 581 and 278 mg/kg TRPH were found.

It is important to note that the initial sample submitted for analysis (9A) was a relatively small "inclusion" about the size of a clenched fist. A significant quantity of this was removed and placed in a wide mouth jar for testing. The adjacent trench (from which sample 9A-1 was taken) did not encounter this same type of material, which had the consistency asphalt tar. Discarded asphalt was observed when remediating the area. Therefore, it is assumed that the tar like substance encountered was, in fact, tar from asphalt which is a non-hazardous substance.

Blind Sump at Sample Point 10E

The discovery of a blind sump (concrete structure with no bottom) initially caused a certain amount of consternation since such structures are normally used for the disposal of liquids (Photograph 4). The first sample taken from this sump was from the very bottom at a depth of about 6 feet. This was tested for TPH (gasoline and diesel). None was detected. This sample was not tested for BTX&E because the

chromatogram did not yield evidence of any peaks up to a carbon range of 22, the upper end of the diesel range. The same sample was also tested for DDT and PCBs and PNAs. No compounds were detected.

The bottom of the sump was deepened and an additional foot under the assumption that some evaporation may have occurred and a second sample taken (10E-1). Another sample was then taken a foot directly under this (10E-2). Both samples were analyzed for TPH and TRPH. No TPH was detected in either sample but 132 mg/kg TRPH was found in the shallower sample. The deeper sample (10E-2) did not contain any detectable TRPH.

The sump concrete was broken up, removed, and a foot of soil removed from around each edge of the sump and the bottom extended to the depth of sample 10E-2 (Photographs 5 and 6). Six soil samples were then taken. The first four soil samples were taken at a depth of 5 feet below the top of the sump (not from grade). These samples were taken approximately a foot beneath the termination of the sump sidewalls. These samples were taken at this depth under the assumption that any hydrocarbons would have spread laterally at this point if, in fact, the sump was used for hydrocarbon disposal. These four samples (listed as "SUMP" N-5, E-5, S-5 and W-5 in Table 9), and an additional two taken from the bottom of the extended excavation (listed as SUMP B-E and B-W, for Bottom East and West, see Table 9) were tested for TRPH. No TRPH was detected in any of these six samples. Therefore, no detectable TRPH remained in the blind sump excavation following soil removal. The soil so removed for mitigation (~ 5 cubic yards) was stockpiled with the soil generated from remediation activities at point 9A.

We estimated that between 35 to 40 yards of soil is contained in the waste pile generated during remediation work at both locations. It is further proposed that the tar like substance was a small inclusion, sufficiently small to not have been detected during mitigation (originally about the size of a fist). Therefore, including the sample results from this authoritatively obtained sample tends to skew the level of hydrocarbons contained in the remaining 35 to 40 cubic yards of soil. Omitting this sample, but including all of the remaining samples which were taken directly from this pile (9WPA, 9WPB [+duplicate]) and from authoritatively obtained soil which was subsequently disposed to this pile (9A-1 and 10E-1), it is estimated that the mean TRPH content of this soil should not exceed 260 mg/kg TRPH. Therefore, permission

was requested to leave this material on-site for use as subbasement material for parking lots.

9. SUMMARY

Previous investigations (Tetra Tech 1993a, b, c) suggested the possibility that contamination at levels of potential regulatory concern might be present. These chemicals included gasoline and component compounds (such as BTX&E) which, except for benzene, were detected in the excavation from which the 280 gallon underground storage tank was removed, elevated levels of heavier molecular weight hydrocarbons detected as TRPH by EPA Method 418.1 (perhaps asphalt, highest level detected, 358 mg/kg), and PCBs (highest level detected 1.02 mg/kg). The distinct possibility existed that these, as well as other as yet unidentified compounds, could have been present on the site at levels which exceeded those previously found.

Potential problems associated with a gasoline release from the previously removed underground fuel tank were resolved. The only remaining source of contamination was several cubic yards of gasoline contaminated soil removed from the excavation. This material was apparently inadvertently spread on the 180,000 square foot site during demolition activities as this, as well as the other soil removed from this excavation, no longer exist as recognizable entities. Regardless, this material has now been spread on the site and was not detected in our sampling program. One must then, assume, that this soil is unrecoverable.

The question of differentiating among potential hydrocarbons using EPA Method 418.1 was, fortunately, not central to this investigation. The only sample where such a test might have proven useful was for sample 9A, an authoritatively obtained sample of a small tar ball which contained about 27 percent hydrocarbons. This sample also contained a small quantity of a compound identified as benzo(a)pyrene but whether this identification is reasonable is problematical. Extremely high dilution factors had to be employed to run this sample for PNAs which introduces potentially large errors into any chemical analysis. It is suggested that this small tar inclusion, roughly the size of a fist, was essentially removed when it was sampled and should be omitted from further discussion. No additional such tar balls were observed when site 9A was remediated via over excavation though an effort was made to do so.

The use to which the blind sump was originally put is unknown. Only low levels of TRPH were detected during authoritative sampling and these were easily removed. None of the other tests run on sump samples detected any chemical which was tested

for during this investigation. Therefore, the likelihood that hazardous materials were historically disposed in this sump seems extremely remote.

In summary, three areas of regulatory concern were found during the course of investigations conducted on this site during early to mid-1993. The first discovery was of an underground storage tank. This tank was removed and the excavation remediated. The remaining two locations, a construction rubble disposal area and a blind sump, were likewise remediated. None of the five monitoring wells installed detected target toxicants in soil or groundwater. There are no additional known or suspected locations on this property which might harbor hazardous materials.

Dear Ms. Collins, Mr. Crockett and Mr. Braun:

UNDERGROUND STORAGE TANK (UST) CASE #H32282-001
FORMER SDG&E SITE (2403) NEWTON AVENUE, SAN DIEGO, CA 92113
2043

This letter confirms the completion of a site investigation and corrective action for the underground storage tank formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.77 of the Health and Safety Code. No further action related to the petroleum releases at the site is required.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code. Please contact Scott Weldon at (619) 338-2539 if you have questions regarding this matter.

Sincerely,

GARY W. ERBECK, Director

Comments: A 280 gallon UST was installed at this site by Gleason Lumber in 1938. In the mid 1940's, SDG&E purchased the property and the UST was subsequently abandoned. This UST was re-discovered in 1992.

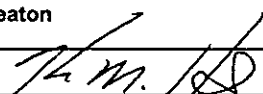

Petroleum hydrocarbon contamination was found in soil beneath the UST during the tank removal. Approximately 40 cubic yards of impacted soil then was excavated to non-detect levels around and beneath the former UST. This soil was then spread across the lot by the grading contractor during grading activities.

Six wells were installed at the site. Water samples taken from these wells were analyzed for petroleum hydrocarbons, and all sample results were less than detection levels. Soil and water samples were never screened for MTBE at this site, however this UST was abandoned prior to the introduction of MTBE to gasoline.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan?		Yes
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan?		Yes
Does corrective action protect public health for current land use?		Yes
Case oversight completed based upon the current site use as an apartment complex.		
Site Management Requirements:		
Any contaminated soil excavated as part of subsurface construction work must be managed in accordance with the legal requirements at that time.		
Should corrective action be reviewed if land use changes? No		
Monitoring Wells Decommissioned: Yes	Number Decommissioned: 6	Number Retained: 0
List Enforcement Actions Taken: Notice of Corrective Action and Reimbursement Responsibility		
List Enforcement Actions Rescinded: None

N/A	N/A	340 as discrete sample; 470 as upper mean stockpile characterization

ORGANIC LEAD	418.1 - TRPH	
ND on 340 ppm sample	N/A	

COMMENTS:

On January 27, 1993, Robert Rapista witnessed the closure of a 280 gallon underground storage tank and associated piping (UST) through removal. The UST was discovered during a property transfer. The City condemned the property last year and SDG&E was forced to sell the property to the City, who in turn, sold/gave the property to the Metropolitan Area Advisory Committee (MAAC) Corporation. MAAC intends to build low income apartments at this site.

The UST was located on a former SDG&E storage yard. SDG&E never knew about the existence of the UST while they owned the property. The UST may have stored gasoline. Reportedly, SDG&E acquired the property from a lumber company in the 1930's, 1940's, or 1950's.

This release was mitigated through excavation and characterization. The soil below the UST was excavated and sampled until the soil sample results showed non-detect (ND) as gasoline. Through laboratory analysis, it was determined that gasoline had been released. The excavated soil was segregated into three stockpiles and characterized. The characterization revealed that

Stockpile 1 (120 cubic yards) was ND, Stockpile 2 (60 cubic yards) had an upper mean of 60.7 ppm, and Stockpile 3 (2-3 cubic yards) had an upper mean of 470.2 ppm. Stockpiles 1 and 2 were backfilled into the excavation with approval from this Division.

Stockpile 3 was mistakenly spread over the entire city block by a separate demolition contractor. Subsequently, the lending institution required additional sampling over the city block. A grid system was used to locate 200 sample points. No gasoline or BTEX was discovered with this additional soil sampling, but a hot-spot was discovered, containing some long-chain hydrocarbons, heavier than diesel.

This hot spot is located on the south side of the block, opposite of the former UST location. The site assessment for this hot spot will be investigated under the non-tank program as a separate release. This separate release appears to extend several feet in to the ground. Therefore, this hot spot cannot be from the spreading of Stockpile 3, which was only 2-3 cubic yards in volume.

The lending institution also required that groundwater be sampled at the site. Five monitoring wells were installed on the city block. One of the wells, MW-1, was installed in the former UST location. MW-1, in addition to the four other monitoring wells, was ND for every analysis. The suite of analyses screened for gasoline, diesel, organic lead, BTEX, halogenated, semi-volatile, PCB, and pesticide compounds. Groundwater occurs 33 to 34 feet below ground surface and flows toward the Bay.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

2001 NEWTON AVENUE
SAN DIEGO, CA 92113

COORDINATES

Latitude (North): 32.6977560 - 32° 41' 51.92"

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/19/2019 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
MASTER PLATING Site ID: 0905947 EPA Id: CAN000905947	2109 NEWTON AVE	ESE 0 - 1/8 (0.025 mi.)	C19	81

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/19/2019 has revealed that there are 10 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/24/2019 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

EXECUTIVE SUMMARY

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/24/2019 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are 13 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are 21 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/29/2019 has revealed that there

EXECUTIVE SUMMARY

are 24 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there is 1 CA SWF/LF site within approximately 0.5 miles of the target property.

CA SAN DIEGO CO. SAM: The listing contains all underground tank release cases and projects pertaining to properties contaminated with hazardous substances that are actively under review by the Site Assessment and Mitigation Program.

A review of the CA SAN DIEGO CO. SAM list, as provided by EDR, and dated 03/23/2010 has revealed that there are 53 CA SAN DIEGO CO. SAM sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 52 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 22 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/24/2019 has revealed that there are 23 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CA HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the CA HWT list, as provided by EDR, and dated 07/08/2019 has revealed that there are 3 CA HWT sites within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

PACIFIC TUGBOAT SERV Registration Number: 6516	1444 CESAR E CHAVEZ	W 1/8 - 1/4 (0.229 mi.)	S167	1041

EXECUTIVE SUMMARY

CA Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the CA Notify 65 list, as provided by EDR, and dated 06/17/2019 has revealed that there are 13 CA Notify 65 sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAN DIEGO GAS WORKS	9TH STREET BTWN IMPE	NW 1/2 - 1 (0.848 mi.)	254	1636

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk

EXECUTIVE SUMMARY

Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110002803789

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002686969

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Contaminants of Concern: Not reported
Site History:

The subject Site is located at 2109 Newton Avenue in the Barrio Logan in San Diego, CA. The Site occupies approximately 7,000 square feet of land, and is developed with a 5,000 square foot two-story building. Since 2003, the building has been occupied by Party Hats, Inc., an event planning business. Prior to the current occupants, the building was occupied by Master Plating from 1973 until 2003. The surrounding area consists of mixed residential and commercial use. In 2003, after Master Plating had ceased operations, the United States Environmental Protection Agency (USEPA) conducted a Time Critical Removal and Assessment at the facility to remove remaining hazardous waste. Several governmental agencies had been conducting air monitoring and clinical studies in the area since 1999, related to hexavalent chromium (hex chrome) emissions believed to have been coming from Master Plating. Hexavalent chromium is known to cause cancer. Removal of hazardous materials under the concrete slab and on the interior of the building was performed under the direction of USEPA. Two 20-cubic yards roll-off bins of heavy metal impacted soil/concrete were transported off-site for disposal. Soil sampling was conducted after the removal to assess the cleanup and potential impacts to the adjacent residential properties. Results were determined to be below the EPA Region 9 Residential Preliminary Remediation Goals (PRG) action levels for all contaminants of concern. USEPA determined that all imminent and substantial threats to human health and the environment had been alleviated. The Site was referred to the California Department of Toxic Substances (DTSC) since residual contamination remains on site. On June 8, 2004, the DTSC issued a Limited Site Assessment Work Plan, to assess the potential for residual contaminants underlying the building. The DTSC Work Plan proposed eight soil borings to depth of 3 feet below ground surface (bgs). A voluntary assistance program (VAP) application was submitted by Party Hats Inc., to review the additional assessment activities that were recently conducted in accordance with the 2004 DTSC Work Plan. DEH designated the VAP project as DEH2017-LSAM-000441. Between October and December 2016, eight soil

borings were advanced using a hand auger to three feet bgs. The boring SB7 was advanced to a depth of 10 feet bgs, following review of the initial analytical results. In February 2017, using a drill rig, two additional soil borings were advanced to depths of 17.5 and 19 feet bgs to delineate the extent of hex chrome contamination. Additional samples, obtained in April 2017 at additional step out locations to a maximum depth of 15 feet bgs, were required to delineate the lead and hex chrome laterally from boring SB9. Based on the soil samples collected from SB6, SB7, SB8, SB9, and SB10, there is an area of shallow soil that exceeds the industrial EPA Regional Screening Levels (RSLs), and San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ELS) for chromium and hex chrome. The area of impacted soil is limited to 15 feet bgs and the consultant has estimated there is 222 cubic yards of chromium and hexavalent chromium impacted soil with concentrations remaining above industrial use action levels. A soil vapor assessment was also performed in October 2016, prior to collecting soil samples at the Site. Each of the four locations was co-located with a soil sampling location. A limited health risk assessment was prepared based on the current site use as a commercial property. The report states that the property is not currently planned for redevelopment and is to remain as a two-story warehouse building. The highest concentrations of volatile organic compounds (VOCs) found in the soil vapor samples were inputted in the SAM Vapor Risk Assessment Model and the calculated model results were all below the allowable risk of 1×10^{-6} . The chlorinated VOCs were also inputted into the DTSC Vapor Intrusion Screening Model and the results were less than 1×10^{-6} . The consultant has recommended no further action based on the current industrial use of the property. The current work completed went beyond the scope of work that DTSC directed. DEH concurs with the consultants recommendation based on the current industrial use, as current conditions indicate there is no increased health risk to occupants. However, if the site use changes, or if any excavation or grading activities is proposed in the future, it will require government oversight to manage the contaminated soil. Reentering of the VAP program is required prior to future redevelopment activities. The soil contains elevated metals with chromium and hexavalent chromium concentrations above the Total Threshold Limit Concentration (TTL) criteria, and would be characterized as a California-Hazardous Waste if disposed. Workers coming in to contact with the contaminated soil must be properly protected from exposure to heavy metals.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Longitude: -117.145264148712
Case Type: Cleanup Program Site
Case Worker: KK
Local Agency: SAN DIEGO COUNTY LOP
RB Case Number: Not reported
File Location: Local Agency
Potential Media Affected: Soil
Potential Contaminants of Concern: Lead, Other Metal, Diesel, Waste Oil / Motor / Hydraulic / Lubricating
Site History: The site property consists of approximately 6.43 acres and encompasses two full blocks bound by National Avenue, Main Street, Cesar Chavez Parkway and the Coronado Bridge Right-of-Way in the City of San Diego. The site was originally acquired by Mercado Alliance LLC and slated for redevelopment with regulatory oversight by the County of San Diego, Department of Environmental Health (DEH), Voluntary Assistance Program (VAP) under case number H39637-001. When remediation and redevelopment plans fell through, the Redevelopment Agency of the City of San Diego took control of the property and subsequently transferred it to Shea Properties for remediation and redevelopment. The proposed site use is slab on grade commercial with residential units above some of the commercial buildings. Remediation activities related to hydrocarbon- and metals-impacted soil were overseen in the VAP under case number H39637-002. This closure addresses both VAP cases, H39637-001 (assessment only) and -002 (assessment and remediation). Due to the size and location of the site, there have been numerous historical land uses, including a wrecking yard, lumber yard, vehicle repair and painting facilities, oil storage and distribution, recycling center, junk yard, etc. Most recently, prior to development, the site was a vacant lot. During the course of remediation activities, three underground storage tanks (USTs), likely associated with historical land uses, were discovered and removed under permit and oversight of the County of San Diego, Department of Environmental Health. The majority of observed soil impacts were related to heavy metals found to be nearly ubiquitous across the site in the upper four feet of soil, likely associated with undocumented fill or other historical land uses. In addition, a number of historical features were identified before and during excavation activities, including in-ground hydraulic lifts, cisterns, debris pits, USTs, etc, which contained undocumented fill (with heavy metals), hydrocarbons, and other volatile organic compounds (VOCs). The majority of these features were generally observed in the upper 12 feet with a few exceptions extending up to 25 feet below grade. Assessment and remediation of these features were conducted concurrently. Concentrations of total petroleum hydrocarbons as gasoline, diesel, and oil in soil were detected up to 53, 690, and 2,700 milligrams per kilogram (mg/kg), respectively. VOCs were largely absent from the site or observed at relatively low concentrations with a few notable exceptions including trichloroethylene (TCE) and 1,2,4-trimethylbenzene at 4.1 and 3.2 mg/kg, respectively. The majority of Title 22 metals were observed above mitigation criteria in one or more locations, including lead, the primary metal constituent of concern, which was observed in soil up to 8,340 mg/kg. Depth to groundwater at the site was observed in a few open boreholes between 32.5 and 39 feet below grade. Groundwater

MERCADO DEL BARRIO (Continued)

S110656443

analytical data is limited to a few groundwater samples collected during assessment activities associated with case H39637-001. Only a few chemicals were detected in groundwater above laboratory reporting limits, most notably tetrachloroethene (PCE) and TCE, detected up to 59 and 600 micrograms per liter, respectively, as well as their associated breakdown products. Cleanup goals for metals-impacted soil located within the construction envelop were based on San Diego Regional Water Quality Control Board Resolution R9-2007-0104, Tier 1 Soil Reuse guidelines utilizing a 90% upper confidence level (UCL). Cleanup goals for hydrocarbon- and VOC-impacted soil were determined to be concentrations below laboratory reporting limits. The majority of soil which exceeded established cleanup goals was stockpiled and reused in the northern portion of the site. Approximately 22,439 cubic yards of impacted soil was consolidated and capped with at least three feet of clean soil. Impacted soil with metal concentrations which exceeded California hazardous waste criteria, detectable levels of VOCs, or total petroleum hydrocarbon impacts in excess of 5,000 mg/kg was excavated, stockpiled, characterized, and disposed offsite at approved facilities. Approximately 604 tons (or approximately 400 cubic yards) of impacted soil were determined not to meet soil reuse requirements and was subsequently disposed offsite at approved facilities. Soil which met the aforementioned reuse criteria was placed beneath commercial buildings and paved parking areas in the northern portion of the site at an elevation ranging from approximately 21 to 31.5 feet above mean sea level. With a maximum placement depth of 21 feet above mean sea level, a minimum of 15 feet was determined to separate impacted soil from observed non-beneficial groundwater elevations at the site. In addition, a minimum of three feet of un-impacted soil separates all structures, above and below grade, from impacted soil, minimizing the potential for incidental exposure. There were a few minor variances from the aforementioned cleanup goals as identified below: 1. Four soil samples were collected beneath the sidewalk on National Avenue at 0.5 fbg with lead ranging from 3.62 to 394 mg/kg. Prior to implementation of remediation activities, the City of San Diego disturbed this material during utility upgrades. The consultant subsequently removed, stockpiled, and collected five samples from the soil stockpile. Analysis of these samples indicated lead ranging from 1.28 to 29.3 mg/kg and this material was subsequently placed in the soil reuse area. 2. The consultant utilized a 90% UCL to evaluate grid confirmation samples as proposed in the Soil Reuse Plan, dated October 8, 2010, and subsequently approved by DEH in a letter dated February 17, 2011. The consultant also utilized this approach in a few situations associated with the aforementioned features and in areas not initially available for remediation, such as soil beneath Newton Avenue and some of the sidewalks adjacent to the site. In each case, a statistical evaluation was conducted in accordance with standard industry practice and associated soil was determined to meet the cleanup goals established for the site. 3. Feature 9, a debris pit (Figure 4 of the Property Closure Report, dated December 6, 2011), contained several Title 22 metals above both mitigation and reuse criteria. As a result, this feature was excavated for offsite disposal to approximately 21 fbg, the maximum depth of the soil reuse area to which it was adjacent, and the maximum possible depth of excavation without undermining the soil reuse area. A sidewall confirmation sample at 19 fbg indicated that arsenic remained at a concentration of 4.84 mg/kg, slightly above the mitigation criteria

S110656443

of 3.5 mg/kg. In addition, lead and zinc were detected in the feature base confirmation sample at 21 fbg at a concentration of 950 mg/kg and 464 mg/kg, respectively, above the mitigation criteria of 15 and 149 mg/kg, respectively. Since further excavation in this area was not feasible due to sidewall stability concerns, and considering that remaining metals-impacted soil was at or near the maximum depth of the soil reuse area, further excavation was not conducted for Feature 9. 4. Feature 10 (Figure 4 of the Property Closure Report, dated December 6, 2011) consisted of approximately 100 cubic yards of relatively minor hydrocarbon-impact soil observed up to a depth of 25 fbg. Low levels of naphthalene (140 micrograms per kilogram [%g/kg] in one sample), ethylbenzene (31 %g/kg in one sample), and seven other VOCs not considered to be carcinogenic were observed in feature material. The consultant reused this feature material at the site due to the relatively minor concentrations of VOCs observed in a limited number of samples. 5. In three instances (Feature 12, Feature 15, and Feature 19 - Figure 4 of the Property Closure Report, dated December 6, 2011), metal-impacted soil slightly above the mitigation criteria was left in place following the complete removal of soil identified to be feature material. In each case, impacted soil associated with confirmation samples consisted of native material, as determined by a California Professional Geologist, that was located between six and 12 fbg. Due to the depth, location, and relatively minor concentrations of impacts, the potential for human or ecological exposure is low. A vapor risk assessment was conducted at the site and included the collection and analysis of soil gas from 22 locations across the site in areas where slab on grade buildings were proposed. Low levels of VOCs were observed in five of the 22 sampling locations as identified above. The resulting vapor risk evaluation indicted a cumulative human health risk less than the threshold of concern of one in a million. Based on this evaluation, the consultant concluded that the potential for human health risk associated with VOCs at the site is low. The consultant concluded that the proposed site use as slab on grade commercial is protective of human health and the environment and that the likelihood of completing a potential exposure pathway, including potential vapor risk, is low. It is the consultants opinion that no further action is necessary at the site. Based on the provided data, the County of San Diego, Department of Environmental Health agrees with this conclusion.

Site History: The Site is located on the southern corner of Main Street and Cesar E. Chavez Parkway in the city of San Diego, California. The San Diego Community College District (SDCCD) proposed to redevelop the Site with the future Cesar Chavez continuing education facility, which will consist of an approximately 53,000-square foot classroom facility and an approximately 150-space underground parking structure. A Phase I ESA report was prepared for the Site, dated January 9, 2009. The Site is associated with a Voluntary Assistance Program (VAP) regulatory case (H11046-001) under the jurisdiction of DEH that was issued closure in January 2002. The VAP case was associated with two below grade concrete sumps, located in the southwestern portion of the site, and previously used by a former Site occupant (i.e., National Pump & Injector) to receive wash water from a parts washer or steam cleaning rack. Concentrations of arsenic, total petroleum hydrocarbons as gasoline (TPH-g) and diesel, volatile organic compounds (VOCs), and semi-volatile organic compounds were detected in soil samples collected from beneath the sumps in 2001. The VAP case was issued closure by the DEH because, according to the consultant, the laboratory results indicated the soil underlying the sumps did not contain metallic or organic compounds at concentrations warranting further action for the

FUTURE CESAR CHAVEZ CAMPUS (Continued)

S121475981

intended use of the site at that time. VAP Case H11046-002 was opened in August 2009 to provide oversight and regulatory concurrence with the assessment, risk evaluation, proposed soil excavation, waste management, and waste disposal activities for the proposed continuing education facility. On May 4, 2009, three borings were advanced and were converted to groundwater monitoring wells MW-1, MW-2, and MW-3. TPH-g was detected in the groundwater samples collected from MW-1 and MW-3 at concentrations of 5,000 and 5,600 milligrams per liter (a%g/l), respectively. A health risk evaluation was conducted to evaluate potential excess carcinogenic risk (ECR) and systemic toxicity to site receptors based on the proposed future use of the site. The risk calculations were performed using the groundwater analytical data collected on May 13, 2006. The results of the risk analysis indicate that vapors from the maximum detected concentrations of COCs detected in groundwater present a cumulative ECR to an adult of approximately 1 in 4.16 million. Because the ECR is less than the threshold cancer risk of 1 in 1 million (SAM Manual) the risk is considered less than significant. DEH only evaluated risk related to residual VOCs and did not provide oversight of soil management. No soil management report was provided to DEH to document soil removal activities associated with the construction of the parking structure. The SDCCD is responsible for all waste management and waste disposal activities associated with the Site. DEH cannot comment on or confirm whether waste management/disposal activities were handled correctly. If there is a change in land use in the future, regulatory oversight through the VAP may be warranted. Based on the results of the health risk evaluation, DEH is closing VAP Case H11046-002.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

. Waste code: D000
. Waste name: Not Defined

. Waste code: D008
. Waste name: LEAD

Violation Status: No violations found

FINDS:

Registry ID: 110002678996

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

space and fire-safety equipment repairs. The remainder of the site is an asphalt and concrete-paved lot used for storage of fire trucks, rescue vehicles, and equipment. The closest residential structures are located approximately 240 feet northeast, and 400 feet northwest of the site. The site operated as a gasoline service station between 1946 and 1968. Subsequent business operations included United Parcel Service, a dairy association, and an automobile repair trade school. Cleaning Dynamics Inc., a marine industrial tank-cleaning operation occupied the site from 1978 until 1985. In August 1985, Cleaning Dynamics Inc. changed its name to Pacific Treatment Corp., which occupied the site until 1992, and used the facility for hazardous waste storage and treatment under Department of Toxic Substance Control Board (DTSC) permit. American Kelp Company used the site for storage and shipping from 1997 to 2001, before the current occupant, Fire Etc. In May 1986, when Pacific Treatment was the tenant, four underground storage tanks (USTs) that reportedly stored diesel were removed. An unauthorized release case, H01225-001 was opened based on a tar-like product observed in the excavation when the tanks were removed. Soil sampling conducted after the tank removal showed low concentrations of petroleum hydrocarbons and the release case became inactive due to the future investigations required by DTSC to close the onsite waste treatment facility. In 1991, soil and groundwater investigations were conducted at the site for DTSC. Sample concentrations of soil up to 8,000 mg/kg total petroleum hydrocarbons (TPH-diesel), and a grab groundwater sample GW-1 at 30,000 a%g/l TPH-gasoline were observed. In January 1996, DTSC issued conditional closure of the waste management unit. The investigations required for the waste treatment facility closure are not included in this UST release closure summary. Thirty three borings were drilled or advanced, and a total of 15 monitoring wells were installed to delineate petroleum impacts to soil and groundwater. Groundwater monitoring was conducted from June 1996 until June 25, 2015. Free product at thickness of 4.13 feet was first observed on top of the groundwater in July 1998 in monitoring well MW/DMB-1. The free product was profiled and found to be mainly diesel-range hydrocarbons with lower concentrations of gasoline-hydrocarbons. The free product plume was found to be migrating in the groundwater flow direction. A second dissolved contaminant profile was characterized by higher concentrations of degraded gasoline and diesel hydrocarbons which contained chlorinated hydrocarbon carbons along the southeast portion of the site. Later on, it was determined the chlorinated hydrocarbons were from an upgradient offsite source. Impacted soil at the site was primarily investigated from 1996 to 2001. Three areas of impacted soil were found at the site with a concentration greater than 100 mg/kg TPH: 1. Former UST excavation 6,000 cubic yards 2. Former pump islands 516 cubic yards 3. Former waste oil UST 100 cubic yards total recoverable petroleum hydrocarbon (TRPH) impacted soil, with the highest concentration at 16,000 mg/kg In 2003, a health risk evaluation was submitted based on the dissolved benzene concentrations in the groundwater plume. The risk calculations determined there was no increased risk to occupants of the on-site building. Due to the reappearance of measurable free product levels at the site, a soil gas survey was conducted in September 2007, which included 16 soil vapor samples. The analytical data detected concentrations of benzene, toluene, vinyl chloride, Freon-113, Trichloroethene (TCE), Tetrachloroethene (PCE), Methyl tert-butyl ether (MTBE), and Tert-butyl alcohol (TBA). Contaminants of concern

were inputted in the SAM vapor risk model, and the model results were less than the threshold cancer risk of 1 in a million. The consultant submitted Correction Action Plans (CAPs) with requests for closure several times; however the information in the CAPs was incomplete and the data did not support the conclusion that the free product plume was stable. Free product removal methods conducted at the site have included: purging with a bailer, purging with a vacuum truck, absorbent socks, passive and active skimmers, and dual phase vapor extraction. None of these methods were effective. In February 2011, free product was first observed in the most down gradient monitoring well, MW-26. DEH requested a more aggressive free product remediation approach since the plume was migrating off site into Main Street. In 2013, upgradient monitoring well GP-23 showed an increase in PCE concentrations (1,800 a%g/l to 17,000 a%g/l) and TCE concentration (590 a%g/l to 8,660 a%g/l) from 2001 2013. DEH met with the Regional Water Quality Control Board (RWQCB) to discuss the issue and make a formal referral, as the volatile organic compounds (VOCs) are coming from an unknown off-site source. DEH also agreed to have the consultant stop monitoring this well due to the greatly increased costs for groundwater disposal due to the high VOCs concentrations. The next free product removal method initiated was Bioslurping, which combines vacuum assisted product removal with soil vapor extraction to simultaneously remove product and remediate soil vapor. This method removes relatively small amounts of groundwater as the bioslurp tube is installed just above the interface between the free product and groundwater. A full scale bioslurping work plan was approved in January 2014, using the existing monitoring well network. By March 2015, bioslurping had reached diminishing returns after the five successive times it was conducted. In May 2015, DEH requested one more event, and following the event, monitoring wells MW/GP-22 and MW-26, the two most downgradient wells, were monitored once a month for three months to determine if product removal has achieved asymptotic conditions. The consultant had calculated there was 710 gallon of recoverable product remaining at the site in 2011. Approximately 263 gallons of product had been removed by bioslurping. The consultant concluded in their November 2015 letter report that free product thickness is at an asymptotic condition, and has been removed to the extent practicable. DEH concurred with the consultant, and a 60 day public notification period of the proposed closure was concluded on April 29, 2016. Two monitoring well applications, DEH2016-LMWP-002377 and DEH2016-LMWP-002526 have been submitted to DEH for the destruction of the remaining wells.

FINDS:

Registry ID: 110002664830

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 22469

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 8538

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 550

Waste code: D005
Waste name: BARIUM
Amount (Lbs): 17552

Waste code: D006
Waste name: CADMIUM
Amount (Lbs): 16999

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TSCA SUBMITTER

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

OSHA ESTABLISHMENT

US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.

HAZARDOUS AIR POLLUTANT MAJOR

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-03-2016
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Met with John Breese, Morgan Day, and Rey Marin. Almost all runoff from the industrial areas are captured by system of trenches that discharges to City of San Diego sanitary sewer. Runoff from parking lot, adjacent property to northwest, and Coronado Bridge run on and through CP Kelco property. No violations observed during inspection.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

OSHA ESTABLISHMENT

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History: A parcel (APN 538-270-39-00) located on the northeast corner of the intersection of National Avenue and Cesar Chavez Parkway in San Diego is currently owned by the San Diego Community College District (the District). The District is in the process of constructing a multi-level parking garage to serve its adjoining Cesar Chavez campus. The parcel formerly included two properties: 1902 - 1934 National Avenue and 1936 National Avenue, both of which were used for commercial purposes in the past. 1902 - 1934 National Avenue ARCO leased the property in July 1968, constructed a service station, and installed an underground storage tank system. ARCO operated the station until its lease expired in December 1978. The property was subsequently leased by a bus storage and repair facility (Southwest Coaches, Inc.) from 1980 to September 1990. The bus company reportedly stored diesel in one of the former stations fuel UST for servicing its fleet; also, the former stations waste oil tank

remained in service. A portion of the property was used for storage of motor vehicles in 1991. The ARCO UST system included four 6,000-gallon capacity, underground storage tanks (USTs) that had contained gasoline, one 550-gallon waste oil tank, three dispensers, and piping. Station features also included an oil/water separator and an equipment wash area. The UST system was removed on November 8, 1990 under DEH permit. Analytical results for soil samples collected at the base of the two UST excavations indicated a maximum petroleum hydrocarbon concentration of 5,280 milligrams per kilogram (mg/kg). The maximum detected petroleum hydrocarbon concentration in a soil sample collected beneath a former dispenser island was 11,300 mg/kg. Based on these results, DEH opened an unauthorized release case (#H10432-001) on November 28, 1990. A preliminary site assessment was performed under the #H10432-001 case in January 1990. Four borings were advanced to a maximum depth of 14 feet below ground surface (bgs). Three soil samples from the borings were analyzed and indicated trace petroleum hydrocarbon impacts. Groundwater was not encountered in the borings. Further assessment of the site in November 1991 and May 1992 revealed petroleum hydrocarbon impacts proximal to elements of the former UST system. The service station building and dispensers were demolished between the field investigations. Assessment and removal of impacted soil created six excavations of varying dimensions. Confirmation samples were collected at the base of the excavations, which were advanced to a maximum depth of approximately 20 feet bgs, where a thick clay layer was encountered. Excavated soil was stockpiled to segregate impacted soils removed from the separate excavations. Impacted soil characterized with lower concentrations was reportedly re-used to backfill the excavations. Approximately 60 cubic yards of soil with elevated petroleum hydrocarbons were designated for off-site disposal. Analytical results for confirmation samples and stockpile samples indicated that diesel impacts were most prevalent at the site. Gasoline impacts were observed south of the former fuel USTs. DEH Case # H10432-001 was closed on May 3, 1996. Assessment of the property resumed following its purchase by the District. DEH Case #H10432-002 was opened under the DEH Voluntary Assistance Program on April 7, 2008. A soil vapor survey was performed on February 22, 2005. Twelve vapor probes were installed to a depth of approximately five feet bgs and sampled. Benzene, toluene, and xylene were detected in one or more of the vapor samples. The analytical results were input into the SAM vapor model to evaluate potential human health risk. The calculated cumulative carcinogenic risk was 5.64×10^{-8} , which is less than the threshold value of 1×10^{-6} . The cumulative hazard risk was calculated to be 0.005, which is less than the threshold value to 1.0. Based on these results, the consultant concluded that subsurface contaminants did not pose a risk under a commercial adult scenario. During grading activities at the property in April 2014, a highly-corroded, 550-gallon UST was discovered. Analytical results for soils samples collected beneath the tank indicated detection of diesel and gasoline at concentrations of 500 and 140 mg/kg, respectively. Due to the low total petroleum hydrocarbon concentrations, an unauthorized release case was not opened. 1936 National Avenue The property immediately east of the former service station/bus storage and repair facility was historically used as a junkyard and may have been occupied by manufacturing facilities. A building used as a precision parts cleaning facility occupied the property before it was purchased by

the District. The property was not investigated under DEH Case #H10432-001. However, as part of assessment activities under DEH VAP Case #H10432-002, soil samples were collected at four locations along an abandoned floor drain system. TPH was detected in one soil sample at a concentration of 110 mg/kg. Metals were not detected at levels exceeding regulatory thresholds. Closing Impacted soil and non-impacted soil generated by grading activities for the Districts parking garage was transported to Otay Landfill for disposal under manifest. Based on the findings of the human health risk assessment and soil sampling activities performed in 2005 and the soil removal, the consultant has recommended no further action and case closure. DEH concurs with these recommendations.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

CAMDBS (Clean Air Markets Division Business System) is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed reduce the transport of ozone. These emissions trading programs allows regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Units that reduce their emissions below the number of allowances they hold -- each allowance is equivalent to one ton of sulfur dioxide or nitrogen oxides -- may trade allowances with other units in their system, sell them to other utilities on the open market or through EPA auctions, or bank them to cover emissions in future years. CAMDBS functions include registering responsible officials, establishing allowance accounts, reporting hourly emissions data, and transferring allowances between accounts.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
