Subject: Brown Field Municipal Airport Master Plan
Hazardous Materials Technical Study
San Diego, California

Dear Ms. Dramko,

We are pleased to submit our Hazardous Material Technical Study for the Brown Field Municipal Airport in San Diego, California. This report identifies potential environmental concerns at the Site in respect to proposed redevelopment described in the Airport Master Plan.

Respectfully submitted,

THE BODHI GROUP, INC.

Sree Gopinath, P.E.
Principal Engineer

Brianne Cortright
Project Geologist

1. INTRODUCTION

The Bodhi Group, Inc. (Bodhi Group) has completed a Hazardous Materials Technical Study (HMTS) of the Brown Field Municipal Airport Master Plan (Site) in support of the Brown Field Municipal Airport Master Plan (Master Plan). The Site is owned and operated by the City of San Diego (City) and is currently occupied by the Brown Field Municipal Airport (SDM or Airport), vacant land, and an auto auction (Figure 1).

The purpose of the Master Plan is to determine the extent, type, and schedule of development needed. The Master Plan presents the community and Airport's vision for a 20-year strategic development plan based on the forecast of activity.

Proposed improvements involve both landside and airside components. The primary landside improvement is a new 14,000 square foot terminal building which includes demolition of the existing building with the exception of the existing historic control tower. The Master Plan also includes proposed construction of up to 87 new hangars, an aircraft wash rack, and approximately 65 new automobile parking spaces. Airside improvements proposed at the Airport include a new runway pad and reconfiguring several taxiways to bring them into compliance with current Federal Aviation Administration (FAA) design standards.

This HMTS addresses the presence and levels of hazardous chemicals that could have potentially adverse effects to the proposed land uses of the Site. Locations within the Site where hazardous chemicals and petroleum have been used, stored, conveyed, and/or dispensed, and properties where there have been spills or unauthorized releases of hazardous chemicals or petroleum to the subsurface will be identified and assessed based on the degree of potential adverse effects to human health, the environment, and groundwater resources. The HMTS was prepared in compliance with Compensation, and Liability Act (CERCLA), Section VIII 'Hazards and Hazardous Materials' of (Environmental Checklist Form) of the California Environmental Quality Act (CEQA) Statute and Guidelines and closely follows the American Society for Testing and Materials (ASTM) standard for preparing Phase I Environmental Site Assessment (ESA) reports, discussed below (ASTM, 2013).

Consistent with the requirements of a Phase I ESA, this study identified locations on or adjacent to the Site where hazardous chemicals and petroleum have been used, stored, conveyed, or dispensed, and locations where there have been documented spills or unauthorized releases of hazardous chemicals or petroleum to the subsurface.

We have reviewed properties in the Site and Site vicinity, screened those properties with the potential to have adverse effects to future land use, evaluated the types of hazardous chemicals present, medium affected, and potential adverse effects and presented our opinion regarding the potential exposure pathways, and possible mitigation measures.

This study did not identify any adverse environmental effects from the implementation of the proposed Master Plan that cannot be avoided, reduced to an acceptable level of risk, or reduced below a level of significance through conformance with applicable regulatory requirements and mitigation measures recommended in Section 9 of this report.

Intrusive investigation, including the collection and analysis of subsurface media samples, was beyond the scope of this evaluation. Intrusive investigations (referred to as Phase II ESAs) may be required as properties are redeveloped to confirm or revise the findings of this study of the presence of hazardous materials and petroleum constituents below ground and to assess the adverse effects at the individual property-level of detail.

1.1. Significant Assumptions

Documentation and data referred to in the preparation of this assessment are assumed to be complete and correct and have been used and referenced with the understanding that the Bodhi Group assumes no responsibility or liability for their accuracy. The conclusions contained herein are based upon such information and documentation that was available at the time of preparation of this report. Because the Site and subsurface conditions may change significantly over time and additional data may become available, conclusions drawn in this report are limited to current conditions and may not be relied upon on a significantly later date or if changes have occurred at the Site that were not known at the time of report preparation.

1.2. Limitations and Exceptions

Reasonable efforts were made to identify potential adverse effects from hazardous materials. “Reasonable efforts” are limited to information gained from recorded database information and regulatory records readily-accessible to the public. Such methods may not identify contaminant sources that are not listed in information readily-accessible to the public. While some observations and discussion in this report may address conditions and/or operations that may be regulated, the regulatory compliance of those conditions and/or operations is outside the scope of this evaluation. Nothing in this report constitutes a legal opinion or legal advice.

This evaluation does not address the following:

- asbestos-containing materials (other than those in shallow soil),
- radon,
- lead in drinking water,
- wetlands, protected environments and habitat,
- threatened or endangered species, industrial hygiene concerns,
- human health risk assessment,
- indoor air quality,
- high voltage power lines,
- geotechnical conditions,
- cultural and historical resources,
- health and safety, and
- mold.

Monetary valuation was not performed for this assessment. In some instances, we may provide opinion on the potential for adverse health effects from the intrusion of volatile chemicals from the subsurface into indoor air.

1.3. User Reliance

This report was prepared for the use solely and exclusively by Helix Environmental Planning, Inc. and the City of San Diego. The report is not for the use or benefit of, nor may it be relied upon by, any other person or entity for any purpose without the advance written consent of the Bodhi Group. In the preparation of this report, the Bodhi Group has used the degree of care and skill ordinarily exercised by a reasonably prudent environmental professional in the same community in the same time frame given the same or similar facts and circumstances.

2. SITE DESCRIPTION AND SETTING

2.1. Location and Description

The Site is comprised of approximately 900-acres of property occupied by Brown Field Municipal Airport, a wrecking yard/auto auction, and vacant land. The Airport property is addressed 1424 Continental Street and the wrecking yard is addressed 7310 Pogo Road, San Diego California. The Site is bounded by Pogo Row and vacant land to the north, La Media Road to the east, Otay Mesa Road to the south, and Heritage Road to the west. The Airport, originally named East Field in honor of Army Major. Whitten J. East, opened in 1918 when the U.S. Army established an aerial gunnery and aerobatics school in order to relieve congestion at North Island. Operation of SDM was transferred to the Navy in 1943 and then ownership was transferred to the City in 1962. Today, Brown Field is a busy general aviation airport.

The majority of the Site sits at an elevation of between 490 and 520 North American Vertical Datum of 1988 in feet (NAVD 88) sloping gently to the south and southeast. Two small canyons are located in the north portion of the Site and represent the lowest Site elevation of 320 feet NAVD 88. Photographs of the Site are provided in Appendix A.

2.2. Site Use and Occupancy

The majority of the Site is currently used as an airport, and consists of two runways, and four taxiways, a helicopter landing area, and various navigational aids (NAVAIDS), aircraft parking areas, hangars, and an FAA Airport Traffic Control Tower (ATCT), administrative offices, a restaurant, a fire station, a Border Patrol station, and support facilities. Support facilities include fueling facilities, aircraft maintenance, and flight training (City of San Diego, 2019). Vacant Land and a wrecking yard/auto auction are located north of the Airport beyond Pogo Road.

2.3. Site Geology and Regional Hydrogeology

The following sections describe the geology and the hydrogeology at the Site.

2.3.1. Site Geology

In increasing order of age, soils in the Site consist of the Lindavista Formation, the San Diego Formation, and the Otay Formation (Todd and Alvarez, 2004). Descriptions of the general characteristics of these units are presented below.

- Q1 – Lindavista Formation (Pleistocene or Pliocene). The Lindavista Formation consists predominantly of reddish-brown interbedded sandstone and conglomerate.
- To – Otay Formation. The Otay Formation consists of Massive sandstone and claystone. Light gray and light brown, moderately well sorted, poorly indurated. The claystone is waxy and composed almost exclusively of bentonite.

2.3.2. Regional Hydrogeology

According to the Regional Water Quality Control Board (RWQCB) San Diego Basin Plan (RWQCB, 1994), the Site lies within two separate hydrologic basins. The north portion of the Site is located in the Otay Valley Hydrologic Subarea (HSA) in the Otay Valley Hydrologic Area (HA) of the Otay Hydrologic Unit (HU), and the southern portion of the Site is located in the Water Tanks Hydrologic HSA in the Tijuana Valley HA of the Tijuana HU. The Otay Valley HSA has existing beneficial uses for municipal, agricultural, industrial service supply, and the Water Tanks HSA has potential beneficial uses for municipal, agricultural, and industrial service supply.

Because the Otay Valley HSA (**Figure 2**) has existing beneficial use and the Water Tanks HSA has potential beneficial use for municipal supply, the water quality should meet California Code of Regulations Maximum Contaminant Levels (MCLs) for drinking water requirements at properties in the Site within this hydrologic basin (RWQCB, 1994).

Based on a review of previous environmental investigation reports and monitoring well data collected from State Water Resources Control Board-managed GeoTracker website (Geotracker), groundwater levels were recorded in the eastern portion of the Site ranging from approximately 63 to approximately 188 feet below ground surface (bgs) in 2015 and flowed generally to the east. Localized groundwater flow direction and groundwater levels can influence the potential adverse effects caused by hazardous chemicals present in groundwater. The general effects of chemicals in groundwater are discussed in Section 4.

3. SITE HISTORY

The following sections present a general overview of the historical uses of the Site as documented through our review of available online historical aerial photographs and historical topographic maps. The purpose of the aerial photograph and topographic map review is to observe historical use that may have impacted the subsurface at the Site or surrounding areas that may have left residual contamination.

3.1. Historical Aerial Photographs and Topographic Maps

The Bodhi Group reviewed aerial photographs from 1953, 1964, 1966, 1968, 1971, 1981, 1989, 1994, 1996, 2002, 2003, 2005, 2009, 2010, 2012, and 2014 from Historical Aerials online resources. Topographic maps were also reviewed for years 1943, 1957, 1958, 1961, 1963, 1973, 1982, 2002, 2012, and 2015.

- The 1943 topographic map, the Site is depicted as vacant; however, historical research indicates the Site was occupied by the United States Army and used as an airfield as early as 1918.
- In the 1953 aerial photograph and 1957 and 1958 topographic maps, the Site is developed with an airfield and is labeled Brown Field Naval Auxiliary Air Station in the topographic maps. The majority of the runways and taxiways appear to be unpaved. Multiple structures are located in the southwest portion of the Site and an above ground storage tank (AST) is identified in the southwest corner of the

Site in both, the aerial photograph and topographic map. A structure located in the southeast portion of the Site is visible in the aerial photograph and is labeled as “Alta School” in the topographic map. The area north of the Site is vacant and areas east, south, and west appear to be used for agriculture with associated structures and reservoirs throughout. Otay Mesa Road, Heritage Road, and La Media Road are present east, south, and west of the Site respectively.

- Aerial photographs and topographic maps between 1964 and 1973 are similar to the previous historical documents with the exception of the runway appears to be paved, fewer structures are located on the southwest portion of the Site, and multiple aircraft are visible north of the structures.
- The 1981 aerial photograph and 1982 topographic map are similar to the previous historical documents, with the addition of two circular berm features north of the runway in the aerial photograph.
- In the 1989 aerial photograph, the AST and multiple structures previous present is in the southwest corner of the Site are no longer visible. The remainder of the Site is similar to the previous photograph.
- By 1994, the Site appears to be generally in its current configuration, including multiple hangars and structures located in the southwest portion of the Site, the Fire Station 43 structure in the southeast corner of the Site, and the auto auction/wrecking yard in the north portion of the Site. The airport runways, taxiways, and aprons are also in their present-day configuration. The area south of the Site appears to be under development and the areas north, east, and west remain vacant and agricultural.
- In the late 1990’s through early 2000’s, the areas surrounding the Site appear to have increased development. A gas station is located to the southwest of the Site and multiple automotive storage and repair facilities are present to the west and northwest.
- The properties surrounding the Site appear to be generally in their current configurations since the late 2000’s and are significantly developed with residential, industrial and commercial properties including gas stations on the southeast and southwest corners, and the auto service facilities mentioned previously. Agricultural properties are no longer observed.

3.2. Fire Insurance Maps

There is no Fire Insurance Map coverage for the Site.

4. TYPES OF HAZARDOUS CHEMICALS AND EXPOSURE PATHWAYS

Past and present land use at the Site and adjacent properties (historical uses summarized in Section 3.1), including industrial, agricultural, and waste disposal, may have resulted in releases of hazardous chemicals to the environment. In addition, spills and leaks of fuel from locations where fuel was stored and dispensed could have impacted the subsurface. Releases of hazardous substances along transportation corridors and deterioration of building materials that contained hazardous chemicals could also have impacted the environment.

Releases of these hazardous chemicals can leave residual contamination in soil, soil vapor, and groundwater within the Site. These chemicals are classified based on their properties, persistence in the environment, and general adverse effects, as described below.

4.1. Total Petroleum Hydrocarbons

Total petroleum hydrocarbons (TPH) is a term used to describe a large family of chemical compounds that originate from crude oil and are used to make petroleum and other industrial products. Benzene,

toluene, ethylbenzene, naphthalene, and xylenes are part of the more volatile fractions of TPH (gasoline mixture) and polynuclear aromatic hydrocarbons (e.g., benzo(a)pyrene) are part of the less volatile fractions (diesel and heavier mixtures). Both groups, volatile organic compounds (VOCs) and fractions that are non-volatile, can have adverse health effects based on the type of chemical, routes of exposure (inhalation, direct contact, ingestion), and the mass of chemical available for exposure.

Relative to other classes of hazardous substances, petroleum hydrocarbons will degrade in aerobic conditions (in the presence of oxygen). If present in significant quantities in groundwater, TPH can exist in its own phase (as product) and will float on the surface of the water table (EPA, 2012).

The most common pathways for exposure to the volatile fraction of TPH is inhalation, followed by direct contact (if the pathways of exposure are complete). The most common pathway of exposure to the non-volatile fractions of TPH is direct contact. The inhalation exposure pathway to the non-volatile fraction is incomplete (with the exception of TPH-impacted dust particles that can be inhaled in areas of soil disturbance).

4.2. Chlorinated Volatile Organic Compounds

Chlorinated volatile organic compounds (CVOCs) were commonly used for cleaning and degreasing and were associated with dry cleaning, manufacturing, automobile maintenance, and at former military facilities. Some common CVOCs that can be found in the environment are tetrachloroethylene (PCE), trichloroethylene (TCE), and their breakdown products, such as cis-1,2-dichloroethene, trans-1,2-dichloroethene, and vinyl chloride. Exposure to CVOCs can result in adverse health effects. CVOCs are generally more persistent and can remain in the environment (soil, groundwater, soil vapor) for extended periods of time. CVOCs can migrate into indoor air from soil vapor and result in adverse health effects from inhalation exposure (EPA, 2012).

4.3. Lead

Lead is a heavy metal with multiple industrial and other applications. Exposed shallow soil may have been contaminated with aerielly-deposited lead (ADL) along well-traveled transportation road corridors, aircraft runways, and taxiways, and along the aircraft flight paths, prior to the phasing out of leaded gasoline in the late 1970s. The ADL is caused by historical emissions from vehicle and aircraft exhausts (tetraethyl lead was mixed with gasoline from the 1920s to the 1970s as an anti-knock agent).

Lead-based paint (LBP) can be found on structures built before 1978 (when it was banned in paint). Deteriorating LBP can contaminate shallow soil around the structures. Soil contaminated lead (e.g., from ADL and LBP), when disturbed, can become airborne in dust. Exposure to lead, either through direct contact, inhalation of dust containing lead, or through ingestion (can be a problem in younger children who may ingest deteriorating LBP or soil contaminated with lead) at significant concentrations can result in adverse health effects (lead is a known neurotoxin).

4.4. Other Metals

Metals can be found in manufacturing and industrial facilities and landfills (e.g., arsenic, chromium, mercury, and copper). Although metals can be naturally occurring, in higher concentrations they can be toxic to human health. If released to the environment in significant quantities, metals are more likely to be present in shallow soil. Exposure to metals in soil can occur through direct contact and inhalation of dust

containing metals. Some chemicals used in industrial processes, such as hexavalent chromium can contaminate groundwater and threaten drinking water sources.

4.5. Contaminants of Emerging Concern

Because of the many chemicals in commerce, improved methods for detecting chemicals in environmental and biological media, and the increased interest by scientists and the public in understanding the types of toxicity that chemicals may pose, scientists and toxicologists are identifying “emerging chemicals of concern,” or ECCs. Recent studies have shown that some of these ECCs can act as endocrine disruptors, disrupting normal hormone function, and can produce effects at the parts per billion or parts per trillion level (EPA, 2017a). Also, effects of some ECCs can be transgenerational - when animals are exposed in utero, effects are transmitted not only to the offspring, but are inherited for many generations thereafter.

Some examples of ECCs include bis-phenol-A, phthalates, Per- and polyfluoroalkyl substances (PFAS) arsenic, perchlorate, nonylphenols, synthetic musks and other personal care product ingredients, nitrosodimethylamine, brominated flame retardants, nanoparticles, pharmaceutical wastes, and industrial chemical additives, stabilizers and adjuvants (EPA, 2017a). Areas within the Site may contain ECCs especially where firefighting foams and suppressants have been used (firefighting training areas, aircraft or vehicle crashes, or other areas where fires occurred) or stored. Cases under regulatory oversight may not have been tested for ECCs. ECCs may be present in the subsurface and can be harmful to human health through ingestion, direct contact, and by inhalation.

4.6. Asbestos

Asbestos is a fibrous mineral that occurs naturally in rock and soil (EPA, 2017b). It has been used in a wide variety of building materials such as insulation, roofing materials, and tiles. It has also been commonly used in automobile parts such as brakes and transmissions. Asbestos is likely present in structures within the Site and may be present in shallow soil near buildings and near busy right-of-way corridors (ROW). The most common route of exposure is through inhalation of tiny particles of deteriorated (friable) asbestos containing materials. Exposure to asbestos is harmful to human health.

4.7. Pesticides

Pesticides are chemicals used for agricultural purposes. Pesticides are commonly found in shallow soil in areas where agricultural use is or was historically present. Pesticides are potentially harmful to human health through direct contact, and through inhalation. According to historical reviews (Section 3 and Section 5), Site and adjacent properties have a history of agricultural use and it is possible that residual pesticides remain in shallow soil in these areas.

4.8. Polychlorinated Biphenyls

Polychlorinated Biphenyls (PCBs) belong to a broad family of man-made organic chemicals and were manufactured from 1929 to 1979 (when manufacturing was banned). PCBs are chemically stable and have a high boiling point and electrical insulation and because of these properties, were used in a wide range of industrial and commercial applications. PCBs were commonly used in electrical and hydraulic equipment, as a plasticizer in paints, plastics and rubber manufacturing, and may be found in transformers and capacitors, electrical equipment, hydraulic systems, fluorescent light ballasts, cable installation, oil-based paint, plastics caulking, adhesives, and floor finishes (EPA 2018). Even though they are no longer

manufactured, PCBs can be released into the environment from past applications, and from the disposal or storage of PCBs wastes. The EPA, International Agency for Research on Cancer, and the National Toxicology Program have concluded that PCBs are a probable human carcinogen (EPA, 2018). If released to the environment, PCBs are more likely to be in soil (relative to other media) and building materials and can be harmful to human health through ingestion and direct contact.

5. ENVIRONMENTAL DATABASE SEARCH AND REGULATORY INFORMATION

In order to assess the significance of properties on and in the vicinity of the Site with documented hazardous waste impacts, a search and review of federal, state, local, and regional environmental regulatory agency databases was conducted for facilities located within the Site and adjacent properties within a 1/8 mile radius of the Site. The following sections summarize the results of searches of federal, state, and local databases by Environmental Data Resources Inc (EDR), regulatory agency records, and online database searched. The EDR Database Report is provided in Appendix B.

5.1. Standard Environmental Record Sources

Multiple properties/businesses that operated at the Site and Site vicinity were listed in the EDR Environmental Database Report. To supplement the information in the EDR Database Report, the State Water Resources Control Board (SWRCB) GeoTracker database, County of San Diego Department of Environmental Health (DEH) Envirostor database and regulatory records were reviewed. Facilities of potential concern to the Site are discussed below and their approximate locations are depicted on Figure 2.

Name/Address	Database	Summary
Lancair Corp/City of San Diego – Brown Field Airport Underground Storage Tanks 1424 Continental Street	FINDS UST LUST LOP ECHO SLIC FINDS SAM CORTESE NPDES CIWQS AST	The former underground storage tank (UST) farm is located on the southwestern portion of the Site, north of Sikorsky Street and west of Fairchild Street. The former fuel farm is associated with six unauthorized release cases (H10618-016, -017, -018, -09, -022, and -023) relating to removal of six USTs between 1990 and 1991. The cases have been consolidated to one (H10618-016). The USTs ranged in capacity from 25,000 gallons to 220,000 gallons and contained aviation gas and jet fuel. Between 1997 and 2013, twenty soil borings, twelve groundwater monitoring wells, and two extraction wells were installed to assess petroleum hydrocarbon impacts to soil and groundwater from a release discovered during the tank removals. Soil, groundwater, and soil vapor have been impacted from the release; however, the consultant for the case performed a soil vapor study and reported a human health risk for commercial use is not present and recommended groundwater remediation by natural attenuation. The case was closed by the DEH in 2018 and the existing groundwater wells have been destroyed. The Site address is also listed in the EDR Database Report for storage and disposal of oxygen, unspecified oil-containing waste, unspecified aqueous solution, waste oil, aviation fuel, propane, and diesel fuel. Violations on file were minor and not of environmental concern at this time. According to Geotracker and the EDR Database Report, additional USTs have been removed from various locations throughout the Airport property and are listed under the general Airport address. The USTs were removed between 1989 and 1991 and are associated with multiple closed unauthorized release cases (H10618). The cases affected soil

Name/Address	Database	Summary
		only and were closed in 2003. The majority of the former USTs were documented to be in the west portion of the Site between Fairchild Street and Balchen Way, north of Otay Mesa Road. Impacted soil, soil vapor, and groundwater may be present in the areas of the former USTs. Approximate locations of former USTs are included in Appendix D.
First Flight Corporation 6810 Curran Street	AST HMMD HAZNET	The Site address is listed on the AST database for operation of ASTs containing aviation gas and jet fuel. The property was also listed on the EDR Database Report for use and disposal of aviation gas, jet fuel, nitrogen, lubricating oils, solvents, gasoline additives, parts washer, unspecified oil containing waste, used batteries, used oil filters, waste oil, hydrocarbon solvents, and used oil filters. Violations were minor and not an environmental concern to the Site at this time.
Paladin Aeronautics/HM Aeronautics 7060 Curran Street	HAZNET HMMD UST	The Site address is associated with four 10,000-gallon aviation fuel USTs that were reportedly closed in place and/or removed in 1992 and 1999. Unauthorized release cases associated with the tank removal are not on file. The property is also listed in the EDR Database Report for storage and disposal of inorganic solid waste and hydrocarbon solvents. Violations were minor and not of environmental concern at this time.
Bearden Aviation 1424 Continental Street	HIST UST HAZNET HMMD LUST	The property is associated with one closed unauthorized release case (H10618-024). The case was opened in 1999 when two 10,000-gallon USTs containing jet fuel and aviation gas were removed from the former filling station in the west portion of the Site. According to the DEH Closure Letter, soil impacted with TPH in the diesel range and TPH in the gasoline range remains in the area of the former tanks; however, the DEH Closure Report also states the results of a vapor study indicated no risk to human health and groundwater was likely not impacted. The case was closed in June 2012.
Industrial Park 1424 Continental Street	LUST HMMD UST SQG SWEEPS	The property is located north of Curran Street on the southwest portion of the Site and is associated with one closed unauthorized release case (H10618-024). The case was opened in 1989 when a 12,000-gallon aviation gas and a 500-gallon waste oil UST were removed. According to the DEH Closure Letter, the majority of impacted soil was removed. Remaining soil reportedly contains low concentration of TPH, and chromium; however, was not anticipated to impact groundwater or human health and the case was closed in 2011 with land use restrictions. Land use changes require notification to regulatory agencies (DEH and RWQCB).
Piper Ranch Business Park 6464 Otay Mesa Road	HMMD SWEEPS UST HIST UST LUST	Three unauthorized release cases (H26521-001, -002, and -003) are on file for the former Site address. According to the DEH Closure Letter, high levels of pesticides were detected at the property; however, were not at levels to present a threat to human health and the case was closed in 1996. A 500-gallon gasoline UST was reportedly removed from the property in 1992 and impacted soil was excavated and disposed of off-Site.
US Border Patrol/Brown Field 7060 Boeing Street/7020 Curran Street	LOP HAZNET HMMD	The Border Patrol facility is located in the south-central portion of the Site and is associated with one closed unauthorized release case (H21496-001) related to removal of a 10,000-gallon gasoline UST. The case was closed in 1987. The facility was also listed on the EDR Database Report for storage and disposal of aqueous solution, unspecified organic mixture and metal sludge. Violations reported were minor and not of environmental concern at this time.

Name/Address	Database	Summary
Contract Systems Associates 1352 Fairchild Street	HIST UST	The Site address is listed on the UST database for operation of one 1,350-gallon diesel UST. A Hazardous Substance Storage Container Information Documents dated 1988 is on file with the State Water Resources Control Board; however, documentation of UST removal was not found.
Rohr Inc., Engine Test Facility 1500 Heritage Road	FINDS LUST HAZNET" UST SLIC HMMD SAM	The property is located north of the Airport runways and has two closed unauthorized release cases (H19053-001, and -002). According to the EDR Database Report, the facility was an industrial property associated with aircraft parts. The unauthorized release cases were related to soil impacts only and were closed in 1988 and 1992. Documents on file with the DEH indicate five USTs (one 6,000-gallon, one 10,000-gallon and two 7,500-gallon, and two 12,000-gallon USTs were removed between 1986 and 1987 resulting in a release of jet fuel and the EDR Database Report indicates 16.85 tons of contaminated soil from a property clean-up was disposed of in 2002. The potential for soil containing fuel-related contaminants in the area of the former USTs exists.
Quality Craft 6710 Sikorsky Street	HMMD HIST UST SWEEPS UST	The facility is listed in the HIST UST database for one 4,200-gallon diesel UST removed in 1986. An unauthorized release case was not found; however, the potential for residual soil contamination exists in the area of the former tank.
Steck Aviation Inc. 6949 Curran Street Brown Field	UST	The facility is listed in the HIST UST database for removal of four USTs ranging in capacity from 10,500 gallon to 12,500 gallons containing aviation fuel. An unauthorized release case was not found; however, the potential for residual soil contamination exists in the area of the former tanks.
Brown Field Sludge Storage Facility Brown Field	SWAT	According to the EDR Database Report, the facility is a Class III Solid Waste Site and accepts only non-hazardous wastes. The Database Report states the facility represents a moderate threat to water quality. A specific Site address is not listed, and the facility is not listed in the CalRecycle Solid Waste Information System database.
Fire Station 43 1590 La Media Road	HMMD HAZNET UST	The fire station is located in the southeast corner of the Site and is listed in the EDR Database report for the removal of one 1,000-gallon UST in 2000 and storage and disposal of aged or surplus organics, diesel fuel, and medical waste. Violations were minor and not of environmental concern at this time. The potential for residual soil contamination in the area of the former UST exists.
R&B Auto Part Import and Export/Quik Auto Body Work/Proclub Auto Service/Don TJ Towing 7310 Pogo Row	CIWQS FINDS	The Site address is listed in the FINDS Database under multiple names. Unauthorized release cases are not on file for the facilities however the potential for undocumented or unreported releases from facility activities (scrapyard, auto body work, auto service) exist. Multiple Notice of Violations (NOV)s and inspection reports were on file with the DEH for the Site address. Multiple NOV's were issued for expired Hazardous Material Permits and bookkeeping violations. Inspection reports indicated that the facilities stored oil, antifreeze, and used oil filters and documented minor violations including improper labeling.
Off-Site Properties of Potential Concern to the Site		
INS Former Brown Field Firing Range/U.S. Border Patrol Pistol Range/Brown Field	SWEEPS HMMD CHMIRS LUST HAZNET	The property is located adjacent to the east of the north portion of the Site and is a former small-arms firing range. The property is associated with two closed unauthorized release cases on Geotracker (H37776-001 and 2093900) and one active case on Envirostor (60001020). The databases indicate lead and heavy metals and PAHS have impacted

Name/Address	Database	Summary
NAAS 1481 Heritage Road	SLIC ENVIROSTOR	shallow soil. Envirostor records indicate the small arms range was operational between 1944 and 1987 and the canyons in the area may contain PAH concentrations at levels unacceptable to human health. According to the RWQCB Closure Letter, approximately 11 acres of impacted soil were removed. The Geotracker cases were closed by the RWQCB in 2004 and administratively closed by the DEH in 2012. One case remains active on Envirostor and states remediation of impacted soil by excavation and disposal in the canyon area was scheduled for 2018; however, a review of available documents indicates the soil removal has not occurred at the time of this report. Land Use Controls are currently in place for the property.
Multiple Auto Wrecking and Automotive Maintenance and Sales Facilities 981, 1502, 1510, 1522, 1524, 1530, and 1560 Heritage Road, and 6801 Sikorsky St.	NPDES CWIQS HMMD HAZNET WDS	Multiple auto mechanics, scrapyards, and automobile maintenance facilities are located adjacent to the west and northwest of the Site. The facilities are listed on the EDR Database Report for storage and disposal of oxygen, lubricating oil, propane, contaminated soil, waste oil, diesel, hydrocarbon solvents, used batteries and used batteries. Multiple NOV's were on file for the property addresses relating to hazardous waste storage. Although unauthorized releases are not on file for the properties the potential for release into the subsurface that may migrate to the Site exists.
Multiple Auto Service and Gasoline Stations 1599 La Media Road 8395 Otay Mesa Road 1625 Heritage Road	UST Hist Auto AST HMMD EMI	Gasoline service stations are located adjacent to the southwest and southeast corners of the Site. The Gasoline stations are listed on the UST Database; however, are not associated with any unauthorized release cases at the time of this report. The potential exists for undetected or unreported releases of fuel constituents into the subsurface that may impact, soil, soil vapor, or groundwater at the Site.
Note: Addresses listed above may be associated with historical or current facility locations and differ from areas of potential concern.		

Additional Site and off-Site properties were listed in the EDR Database Report and/or had records on file with regulatory agencies; however, based on the nature of the database, or nature of the infraction, the facilities are not considered an environmental concern to the Site at this time. Multiple aircraft maintenance facilities and fueling stations have historically operated and currently operate at the Site, some of which are discussed above. Releases of petroleum products and solvents may have occurred in the areas of current and historical Airport support operations (fueling and maintenance).

5.2. Regulatory Records Review

In addition to the EDR Database Report, properties regulated for unauthorized releases of chemicals were identified through a search of the SWRCB-managed Geotracker website, the California Environmental Protection Agency Department of Toxic Substances Control (DTSC)-managed EnviroStor website (Envirostor), DEH file review, CalRecycle records, and EDR Database reports. Information relating to areas of potential concern at the Site has been included in Table 1 above. Select files from the regulatory records review are included in Appendix C.

6. SITE RECONNAISSANCE

The objective of the Site reconnaissance was to identify areas within the Site of potential environmental concern. Ms. Brianne Cortright, conducted the reconnaissance on March 22, 2019. Ms. Cortright was

escorted by Mr. Wayne Reiter, Airports Program Manager. A Site Plan is provided as Figure 3 and photographic documentation is provided in Appendix A. The Site reconnaissance consisted of driving along accessible portions of the Site to view areas of potential hazardous material storage, disposal, or applications.

6.1. General Site Setting

At the time of the Site reconnaissance, the majority of the Site was developed with an airport. The airport was comprised of paved runways, taxiways, and multiple structures utilized as aircraft hangars, offices, maintenance facilities, an air traffic control tower, and a terminal. The majority of the areas north and east of the runways and taxiways are currently vacant, unpaved, and covered with brush.

Areas observed during the Site reconnaissance of potential environmental concern include the following:

- Former Naval Fuel Farm and Former Filling Station (West portion of Site) – Mr. Reiter stated the area was formerly occupied by a fuel farm and an automobile filling station. Numerous USTs were previously removed and are associated with multiple unauthorized released cases. The area is currently a grass field and indications of the former releases were not observed. The closed unauthorized release cases associated with the tank removals are discussed in Section 5.
- First Flight Corporation (6810 Curran Street) – First Flight is a Fixed Based Operator (FBO) located in the southwest portion of the Site, north of Curran Street (**Figure 2**). The facility operates a fueling station which includes a fuel dispenser, a 12,000-gallon Jet-A fuel AST, a 10,000-gallon aviation gas AST, and fuel trucks containing Jet-A fuel, aviation gas, and 100-low-lead. The dispenser and ASTs appeared in good condition, were on concrete secondary containment, and staining or evidence of releases were not observed.
- Altitude Helicopters (7060 Curran Street) – Altitude Helicopters is a flight school located in the south-central portion of the Site, north of Curran Street. The facility operates one 20,000-gallon jet fuel AST and multiple fuel trucks. The ASTs and fuel trucks were observed to be in good condition and evidence of releases were not observed.
- San Diego Jet Center (1424 Continental Street) – San Diego Jet Center is another Fixed Based Operator (FBO) located in the south/central portion of the Site, at the terminal building. The facility operates a fueling station which includes fuel dispensers, a 10,000-gallon Aviation Gas AST, a 10,000-gallon and a 20,000-gallon Jet fuel AST, and fuel trucks containing Jet-A fuel, Aviation Gas. The dispensers and ASTs were on concrete secondary containment and staining or evidence of releases were not observed.
- Former Fire Truck storage - Mr. Reiter also stated a fire truck was previously stored in a shed located northeast of the terminal building (**Figure 2**). Mr. Reiter was unsure of the firefighting fluid stored in the truck. Based on previous research by the Bodhi Group regarding aqueous film forming foam (AFFF), it was likely water in the tank, and is possible that AFFF was stored separately on the truck and mixed with the water when needed for a petroleum fire, as class B fire equipment is more commonly used at airports. Staining or evidence of a release was not observed near the shed.
- San Diego Fire Department, Fire Station 43 (1590 La Media Road) – The Fire station is located on the southeast corner of the Site at the intersection of La Media and Otay Mesa Roads. According to Mr. Reiter the firefighters may have performed training in an unpaved area west of the station (Figure 2) and may have practiced with water/AFFF foam.
- Wrecking Yard/Auto Auction (7310 Pogo Road) – The auto auction is located in the north portion of the Site, beyond Pogo Road. The property was only viewed from the perimeter due to access

issues; however, vehicle parts and wrecked automobiles were visible in piles and on shelves throughout the Site. It is likely that surficial staining is present in the locations of vehicle storage and maintenance.

7. INTERVIEWS

Interviews were conducted to identify current and/or historical Site use that may have contributed to environmental spills or releases at the Site.

Mr. Reiter completed the Owner Questionnaire on March 12, 2019. According to Mr. Reiter the Site has been owned by the City of San Diego since 1962 and stated that previous Site uses include an airport and a farm. Mr. Reiter was aware of a UST tank farm formerly located on the west portion of the property and is unaware of any environmental cleanup liens at the Site. He stated it is possible that PFAS products were released during firefighter training in the east portion of the Site.

8. EVALUATION OF HAZARDOUS MATERIALS

Based on the Site history, and review of regulatory records, online databases, and the database report, sources of contamination within and near the Site with the potential for adverse effects on Project construction and/or land use changes include the following:

- Unauthorized releases of petroleum from storage systems such as USTs and ASTs can result in impacts from petroleum hydrocarbons, which can contain chemicals of concern in the volatile and non-volatile fractions as discussed previously;
- Unauthorized releases of petroleum products, waste oil, and solvents from vehicle/equipment maintenance and storage that can result in impacts from petroleum hydrocarbons, CVOCs, and metals;
- Unauthorized releases of solvents, metals, and PCBs from industrial processes,
- Lead in shallow soil from ADL and LBP;
- Asbestos from building material;
- Unauthorized releases of PCBs from electrical equipment, including transformers, waste oil, and building materials that may have contained PCBs.
- Pesticides in shallow soil from former agricultural use within the Site;
- Releases of ECCS into soil and groundwater from firefighting training or storage (AFFF can result in PFAS impacts).

The five potentially complete pathways of exposure of contaminants to receptors from land use changes and/or redevelopment are listed below.

The five potentially complete pathways of exposure of contaminants to receptors from planned land use changes and redevelopment are listed below.

- Long term exposure and potential risks to human health from vapor intrusion of volatile chemicals into occupied structures.
- Long-term exposure to hazardous chemicals in groundwater that may be a source of drinking water and other beneficial municipal use.
- Long-term direct exposure of residents to hazardous chemicals in soil through dermal contact.

- Short-term direct exposure of construction workers to hazardous chemicals in soil through dermal contact.
- Short-term inhalation exposure of construction workers and the public to potential chemicals in dust generated by construction. Dust is an irritant on its own, but could also carry contaminants, such as lead, asbestos, polynuclear aromatic hydrocarbons, PCBs, and organochlorine pesticides (ATSDR, 2001).

Additionally, standards for evaluating risks to human health are evolving and new emerging contaminants are being discovered that may not have been evaluated in the past. Cases with closed regulatory status may need to be re-evaluated based on evolving standards or new information.

9. HAZARD EVALUATION

The properties determined to be a potential hazard to proposed future redevelopment or future land use change within the Site were evaluated with respect to the classes of hazardous chemicals and potential exposure pathways described in Sections 4 and 8.

The mitigation measures recommended for the impacted medium based on the type of hazardous chemicals potentially present are described in the table below. Areas and facilities of potential concern are illustrated on Figure 2.

Table 1 – Hazard Summary and Mitigation Measures

Mitigation Measures	Medium Affected			Types of Hazardous Chemical						
	Ground-water	Soil	Soil Vapor	Non-Volatile fraction of TPH	Petroleum VOCs	CVOCs	Lead and other metals	PCBs	Pesticides	Asbestos
Construction-Related Measures: health and safety plans, risk management plans, environmental monitoring, waste management and disposal.	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Properties located within groundwater basins designated for current or potential municipal beneficial uses may require remediation of impacted groundwater to drinking water standards.	✓			✓	✓	✓	✓			
Vapor intrusion study and appropriate response action may be required.	✓	✓	✓		✓	✓				
Investigation of soil impacted with ADL, LBP, and other hazardous building materials and appropriate response action may be required.		✓					✓	✓		✓

As discussed in Section 4.5, Emerging Contaminants may be present at the Site in areas where firefighting materials were stored or training using AFFF occurred; however, releases of AFFF have not been confirmed or documented. ECCs, such as PFAS, may not have been documented. ECCs may affect soil, groundwater, and soil vapor.

10. CONCLUSIONS AND RECOMMENDATIONS

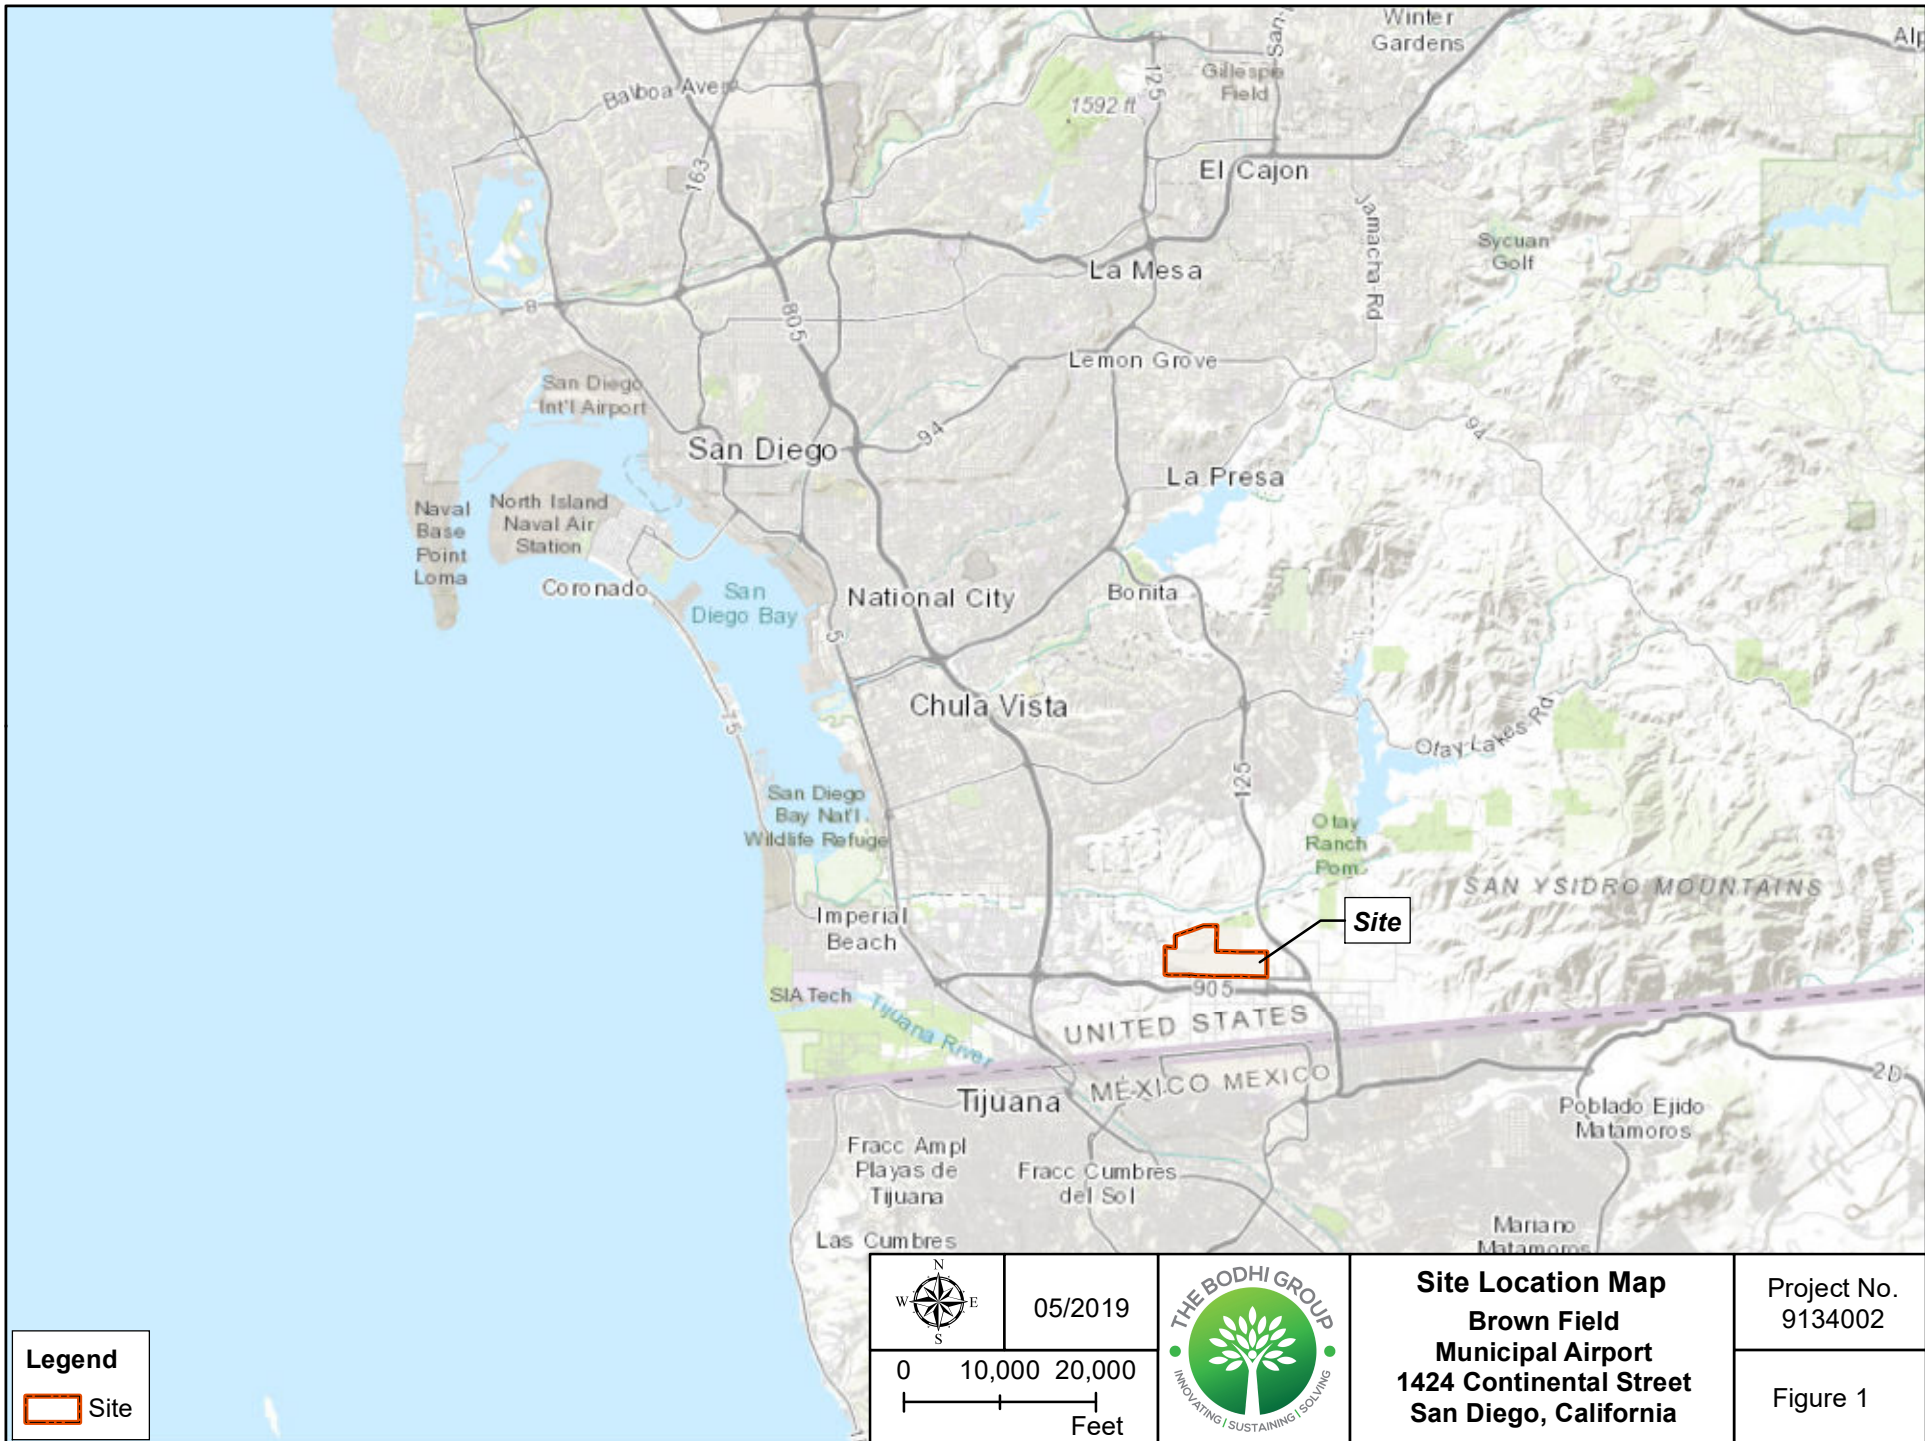

In support of the Brown Field Municipal Airport Master Plan, the Bodhi Group evaluated properties at the Site and immediate vicinity for potential hazards to the Site with respect to proposed redevelopment and land use changes. Information was gathered through multiple sources (EDR, Geotracker, Envirostor, and CalRecycle) to evaluate the potential environmental hazards. Properties of potential concern were evaluated based on the types of chemicals anticipated to be present, the medium affected, and potentially complete exposure pathways to receptors. Mitigation measures based on the potentially complete exposure pathways are discussed in Section 9.

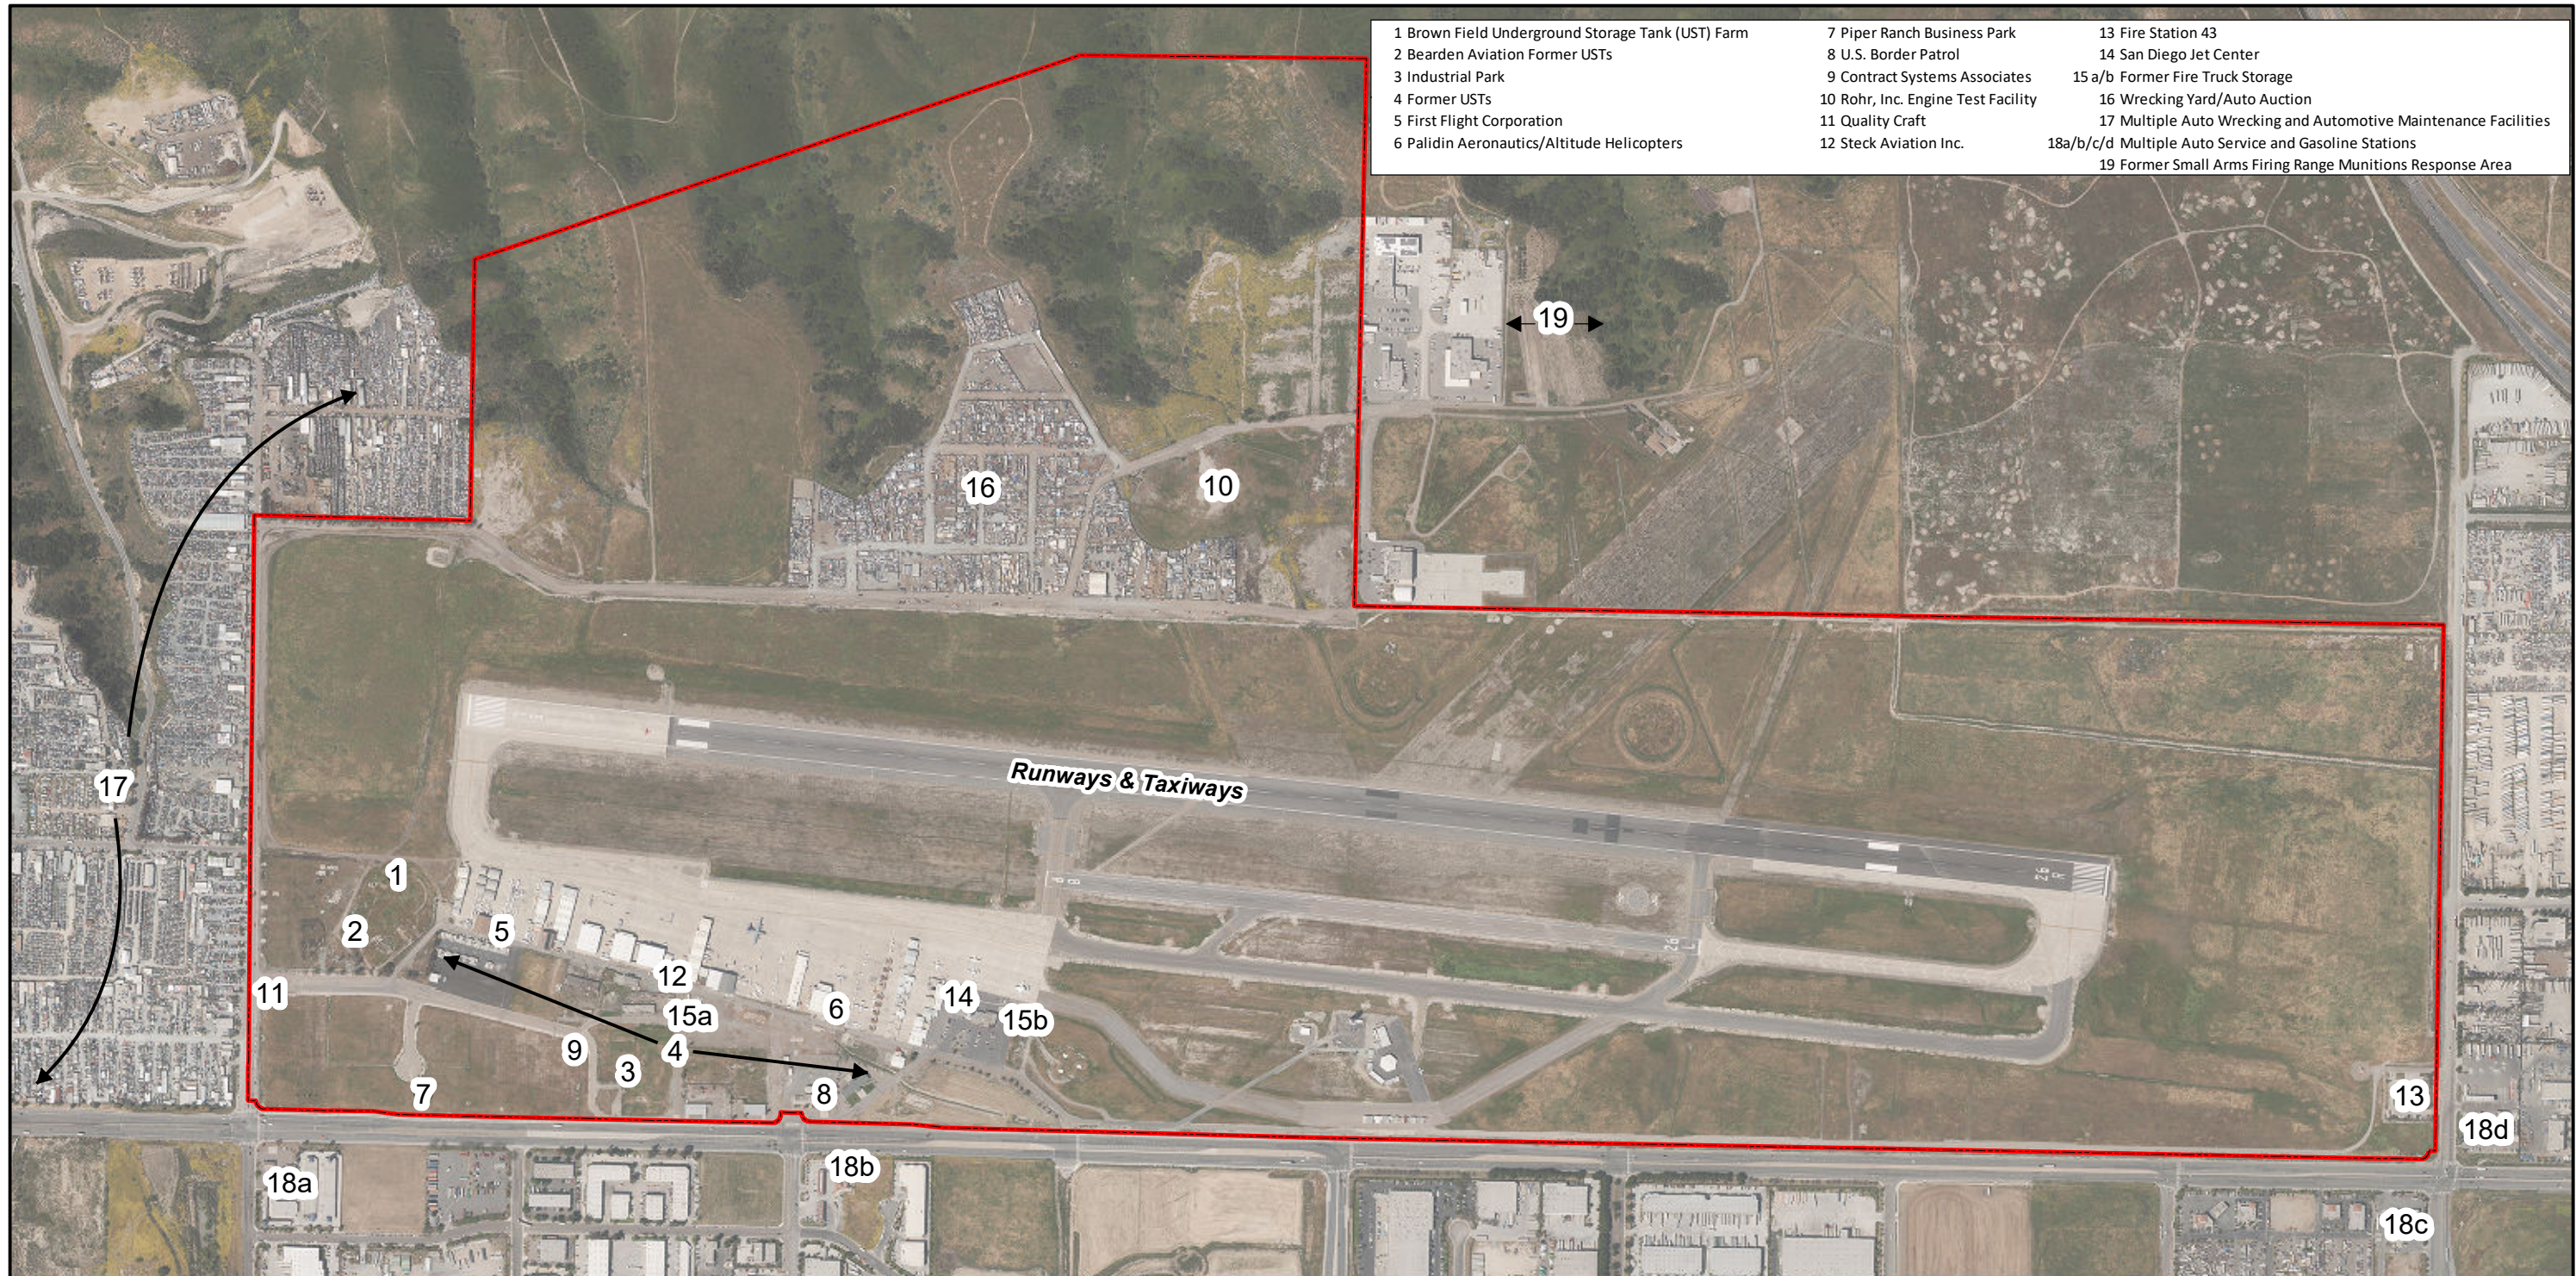

Based on the historical use of the Site the possibility of chemical contamination, especially related to ECCS, at the Site exists; however, no adverse effects were identified that cannot be avoided, reduced to an acceptable level of risk, or reduced below a level of significance through conformance with applicable regulatory requirements and mitigation measures recommended in Section 9 of this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

WDS:

Facility ID: San Diego 371012513
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 9
Facility Telephone: Not reported
Facility Contact: Not reported
Agency Name: FORDS FOREIGN AUTO DISMANTLE
Agency Address: Not reported
Agency City,St,Zip: 0
Agency Contact: Not reported
Agency Telephone: Not reported
Agency Type: Private
SIC Code: 0
SIC Code 2: Not reported
Primary Waste Type: Not reported
Primary Waste: Not reported
Waste Type2: Not reported
Waste2: Not reported
Primary Waste Type: Not reported
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

Inventory Active Permits (not SQG Medical):

Permit Number: 128716
Update Date: 11/02/2012
Case Number: 68476-34-6
Name: DIESEL FUEL
Other Information: Not reported
Material Waste: Material
Hazardous Categories 1: FIRE
Hazardous Categories 2: ACUTE

Permit Number: 128716
Update Date: 11/02/2012
Case Number: 8002-05-9
Name: OIL: MOTOR, LUBRICATING, FLUIDS, ATF
Other Information: Not reported
Material Waste: Material
Hazardous Categories 1: FIRE
Hazardous Categories 2: ACUTE

Permit Number: 128716
Update Date: 11/02/2012
Case Number: Not reported
Name: WASTE 135 UNSPECIFIED AQUEOUS SOL'N
Other Information: ANTIFREEZE
Material Waste: Waste
Hazardous Categories 1: Not reported
Hazardous Categories 2: Not reported

Permit Number: 128716
Update Date: 11/02/2012
Case Number: Not reported
Name: WASTE 221 WASTE OIL & MIXED OIL
Other Information: Not reported
Material Waste: Waste
Hazardous Categories 1: Not reported
Hazardous Categories 2: Not reported

Permit Number: 128716
Update Date: 11/02/2012
Case Number: Not reported
Name: WASTE 444 USED BATTERIES
Other Information: ECOLOGY AUTO WRECKING ST. FE SPRINGS
Material Waste: Waste
Hazardous Categories 1: Not reported
Hazardous Categories 2: Not reported

Permit Number: 128716
Update Date: 11/02/2012
Case Number: Not reported
Name: WASTE 611 CONTAMINATED SOIL
Other Information: WM-KETTLEMAN
Material Waste: Waste
Hazardous Categories 1: Not reported
Hazardous Categories 2: Not reported

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

 POTW: Not reported
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

LUST:

Lead Agency: SAN DIEGO COUNTY LOP
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0607300589
Global Id: T0607300589
Latitude: 32.56879
Longitude: -116.9855062
Status: Completed - Case Closed
Status Date: 01/26/2010
Case Worker: TS
RB Case Number: 9UT1797
Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H10618-018
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Aviation
Site History: Note: Case #H10618-018 is being administratively consolidated with case #H10618-016 (both aviation gasoline releases in the Fuel Farm Area of the Brown Field airport) in January 2010, and release -018 is being administratively closed by DEH. The Fuel Farm releases, including -018, will be investigated and closed under release -016. Please see case #H10618-016 (Global ID T0607300601) for additional case information. Release -018 refers to one leaking underground storage tank (UST #13) located within the former Fuel Farm portion of Brown Field Airport. UST 13 was a 25,000 gallon capacity concrete tank that formerly contained jet fuel/aviation gas- built in the 1940s. The results of initial assessment activities for release -018 and additional releases (-016, -017, -019, -022, -023, -024) from 7 other leaking tanks in the Fuel Farm area are provided in the Subsurface Assessment Report, dated May 11, 2007, and prepared by SCS Engineers (SEE REPORT UNDER RELEASE -016). The USTs, which all contained aviation fuel, were removed from the Fuel Farm on October 10, 1990. Approx. 150 cubic yards of contaminated soil was removed and stockpiled from the UST #13 excavation. Release -018 is included in the overall investigation of the Fuel Farm site. A soil vapor study was conducted at the site in November 2008 to assess potential health risks. Additional investigation of the extent of soil and groundwater petroleum contamination in the Fuel Farm area will be conducted as funding becomes available to the City of San Diego.

Site History:

Please note that cases/releases H10618-024 (Bearden Aviation) and H10618-002 (Industrial Park) are not considered part of the Fuel Farm (see release H10618-16) and will be closed separately. Two 10,000-gallon capacity, single-walled steel underground storage tanks (USTs), Tank 10 and Tank 11, were removed from a common excavation located near the northern border of the former Brown Field Airport Fuel Farm on March 25, 1999. The USTs were misidentified in initial Brown Field environmental reports as Fuel Farm USTs 6 and 7. Tanks 10 and 11 were operated by Bearden Aviation, Inc., a fuel dispenser who leases property at the airport, and were formerly owned by Paladin Aviation, Inc. The unauthorized petroleum releases associated with the former Fuel Farm USTs are currently being addressed under DEH/SAM case #10618-016. Brown Field Airport is operated by the City of San Diego. UST 10 contained jet fuel, and UST 11 contained aviation gas. While heavy corrosion was noted on both tanks during the removals, no holes were observed. After the two tanks were removed, soil samples were collected from below the northern and southern ends of the tank

MAP FINDINGS

LANCAIR CORP (Continued)

1000437555

footprints at depths of 14 to 15 feet below ground surface (bgs). Total petroleum hydrocarbons in the gasoline range (TPH-g) and the diesel range (TPH-d) were not detected (less than 10 milligrams per kilogram [mg/kg]) in the northern UST 10 sample and the southern UST 11 sample. However, the soil sample collected below the southern end of UST 10 contained a TPH-g concentration of 18 mg/kg, and a TPH-d concentration of 42 mg/kg. The soil sample collected under the northern end of UST 11 contained a reported TPH-d concentration of 770 mg/kg, but TPH-g was not detected. In 2006, in accordance with a DEH/SAM approved workplan, one boring (B-15) was drilled in the vicinity of the former USTs to assess the vertical extent of petroleum hydrocarbon-bearing soil. On September 11, 2006, hollow-stem auger refusal was encountered in the boring at a depth of approximately 30 feet bgs. Installation of the boring was continued on October 19 and 20, 2006, using an air-rotary drilling rig, and the boring was advanced to a depth of approximately 90 feet bgs. Five soil samples were collected from the boring at depths of 15, 25, 60, 70, and 80 feet (no recovery at 90 feet bgs), and TPH-g and TPH-d were not detected in the samples. Groundwater was not encountered during advancement of the boring to 90 feet bgs. Based on reported depth to groundwater measurements in the Fuel Farm monitoring wells, groundwater in the vicinity of the former USTs is generally located at a depth between approximately 179 to 189 feet bgs. A soil vapor study was conducted in the former Fuel Farm area in November 2008 to assess potential health risks. One of the surveys twenty-five vapor samples (SV-19) was collected at a depth of 5 feet bgs near the former location of USTs 10 and 11. According to the Soil Vapor Survey Report, dated February 8, 2010, no volatile organic compounds were reported in the SV-19 sample, with the exception of a toluene concentration of 1.3 micrograms per liter. Based on vapor contaminant concentrations measured across the former Fuel Farm, the consultant concluded that there is no significant risk to human health under a commercial exposure scenario. In the May 2007 Subsurface Assessment Report for the former Fuel Farm site investigation, the consultant concludes that the extent of soil contamination related to USTs 10 and 11 has been delineated (by B-15 and other borings/wells in the Fuel Farm area), and groundwater has not been impacted. SAM concurs with the conclusion, and approves the City of San Diego's request for site closure.

Local Case Number: H10618-023
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel
Site History: Note: Case #H10618-023 is being administratively consolidated with case #H10618-016 (both aviation gasoline releases in the Fuel Farm Area of the Brown Field airport) in January 2010, and release -023 is being administratively closed by DEH. The Fuel Farm releases, including -023, will be investigated and closed under release -016. Please see case #H10618-016 (Global ID T0607300601) for additional case information. Release -023: USTs 16 and 17 were manifolded by an underground fuel transfer system which fed through a central pipe vault. Release -023 is referred to in the case files as the tank vault (between UST 16 and 17) and as UST #17, a leaking underground storage tank located within the former Fuel Farm portion of Brown Field Airport. UST 17 was a 220,000 gallon capacity concrete tank that formerly contained jet fuel/aviation gas- built in the 1940s. UST #17 and the vault were removed in March 1991. Approx. 2500 cubic yards of contaminated soil was removed and stockpiled from the combined UST #16 and UST#17 excavations. A soil sample collected at the bottom of the pipe vault excavation (48 ft. bgs) had a TPH concentration of 1,520 mg/kg. Sidewall samples ranged from 20 to 4,800 mg/kg TPH. TPH concentrations in samples collected at the bottom of USTs 16 and 17 excavations were below detection limits. Release -023 is included in the overall investigation of the Fuel Farm site. The results of initial assessment activities for release -023 and additional releases (-016, -017, -018, -019, -022, -024) from 7 other leaking tanks in the Fuel Farm area are provided in the Subsurface Assessment Report, dated May 11, 2007, and prepared by SCS Engineers (SEE REPORT UNDER RELEASE -016). A soil vapor study was conducted at the site in November 2008 to assess potential health risks. Additional investigation of the extent of soil and groundwater petroleum contamination in the Fuel Farm area will be conducted as funding becomes available to the City of San Diego.

Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H10618-016
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Aviation
Site History: Six underground storage tanks (USTs), including USTs #8, #9, #12, #13, #16, and #17, were removed from the former Fuel Farm area of the Brown Field Airport in 1990-1991. Six separate unauthorized release cases, #H10618-016 (UST #9), -017 (UST #12), -018 (UST #13), -019 (UST #8), -022 (UST #16), and -023 (UST #17) were initially opened, then the cases were consolidated into one case (#H10618-016) in 2010. The USTs ranged in capacity from 25,000 gallons to 220,000 gallons. Four of the tanks (UST #8, #9, #12, and #13) were concrete and stored aviation gas/ jet fuel. USTs #16 and #17 were 220,000-gallon steel diesel/ jet fuel tanks connected by an underground fuel transfer system which fed through a central piping vault. Elevated concentrations of total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tertiary butyl ether (MTBE) were detected in soil samples collected beneath product piping and from the six UST excavations. In addition, ponded light non-aqueous phase liquid (LNAPL or free product) was observed beneath the piping vault. The quantity and timeframes of the fuel releases are not known. A total of approximately 3,670 cubic yards of petroleum hydrocarbon-impacted soil was removed from the tank excavations. Soil with non-detectable concentrations of TPH were used as excavation backfill. The Regional Water Quality Control Board approved on-site reuse of treated (via bioremediation) and stockpiled soil as fill at various locations at the airport. From 1997 to 2013, twenty soil borings, twelve groundwater monitoring wells, and two extraction wells were installed to assess petroleum hydrocarbon impacts to soil and groundwater. Soils impacted with TPH in the gasoline range (TPH-g) and in the diesel range (TPH-d) were found at depths ranging from approximately 30 feet to 180 feet below ground surface (bgs). The highest TPH concentrations were located at sample depths ranging from approximately 60 feet to 75 feet bgs. This depth range generally corresponds to the lithologic contact between the coarser-grained San Diego Formation and the underlying finer-grained Otay Formation. A perched groundwater zone was identified around the contact area, and well screens in two of the monitoring wells and the two extraction wells were installed at depths ranging from 40 feet to 80 feet bgs to monitor the groundwater. Ten of the monitoring wells were screened at depths ranging from 175 feet to 217 feet bgs in the main aquifer. The site is located in the Water Tanks Hydrologic Subarea, where groundwater has potential beneficial uses for municipal, agricultural, and industrial supply. The site is located on a plateau, and historical groundwater flow directions at the site have ranged from the northeast, the southeast, and the east (most

LANCAIR CORP (Continued)

1000437555

recently). The highest concentrations of dissolved TPH and volatile organic compounds (VOCs), including BTEX, 1,2-dibromoethane (EDB), and 1,2-dichloroethane (EDC), were found in the on-site perched groundwater zone. EDB and EDC were added to aviation fuel to prevent the formation of lead compound deposits in the engine combustion chambers. Benzene is the only VOC above its Maximum Contaminant Level (MCL) in MW12B, the most downgradient perched zone well. Benzene concentrations in MW12B ranged from 2.29 micrograms per liter (a%g/l) in September 2013 to 60.8 a%g/l in December 2104. The consultant attributed the increase to a rising groundwater level in the perched zone and greater contact with residual soil contaminants. Approximately two inches of LNAPL was detected in monitoring wells MW4 and MW5 in October 1997, but measurable free product was not detected in the wells after 1997. In August 2011, an apparent thickness of 1.85 feet of LNAPL was measured in well MW7. A laboratory analysis identified the LNAPL as primarily aviation gas. Periodic LNAPL removal using a disposal bailer recovered approximately 6.5 gallons of product, and LNAPL was not detected in MW7 after June 2014. LNAPL was later measured in extraction well VEW-2 in January 2015, with an apparent thickness of 3.52 feet. Approximately 2.7 gallons of LNAPL and 13 gallons of mixed LNAPL/water were recovered from the well with a bailer between September 2015 and January 2016, and product was not present in September 2016, January 2017, or February 2017. Based on the absence of LNAPL in any of the site wells, the consultant concluded that free product had been removed to the extent practicable, and DEH concurred. A soil vapor study was conducted across the Fuel Farm site in November 2008 to assess potential health risks. Twenty-five borings were drilled across the site to a depth of 5 feet bgs, and soil samples were analyzed by a mobile laboratory. Based on the results, the consultant concluded that there is no significant risk to human health at the site under a commercial exposure scenario from potential exposure to BTEX vapors migrating from soil containing hydrocarbons at the site. The site is located in the service area of a public water system. There are no municipal or domestic wells in the area and the nearest irrigation wells are greater than 0.3 miles up-gradient and cross-gradient. Irrigation wells in the site vicinity are screened at depths of 500 feet and greater. Current site use is a vacant lot, and according to the City of San Diego Airports Division, the further use of the site is anticipated to be for aeronautical purposes (i.e., aircraft hangers and parking). In the Corrective Action Plan (CAP) and CAP Addendums prepared for the site, the consultant recommends mitigation of residual petroleum hydrocarbon-impacted soil and groundwater beneath the site through remediation by natural attenuation (RNA). The selection of RNA is based on the removal of the contaminant sources (USTs and piping), LNAPL removal to the extent practicable through remedial actions including soil excavation and product removal by bailing, the overall stable areal extent of the dissolved petroleum hydrocarbon plume, the delineation of the extent of soil and groundwater contamination, incomplete exposure pathways, and the less than significant human-health risks from soil vapors. Through RNA, contaminant concentrations are expected to decline over time to the respective MCLs. The DEH estimated timeframe for dissolved benzene to reach its MCL of 1 a%g/l at the site is approximately 62 years. The consultant recommends no further action (NFA) and case closure. A 60-day public notification period was completed to allow public review and comments

on the CAP and CAP Addendums and DEHs intent to close the case. Comments were only received by the City of San Diego Public Utilities Department (PUD), and DEH provided written responses to the comments. Wells associated with the site investigation will be destroyed under permit number DEH2017-LMWP-003196.

including -017, will be investigated and closed under release -016. Please see case #H10618-016 (Global ID T0607300601) for additional case information. Release -017 refers to one leaking underground storage tank (UST #12) located within the former Fuel Farm portion of Brown Field Airport. UST 12 was a 50,000 gallon capacity concrete tank that formerly contained jet fuel/aviation gas- built in the 1940s. The results of initial assessment activities for release -017 and additional releases (-016, -018, -019, -022, -023, -024) from 7 other leaking tanks in the Fuel Farm area are provided in the Subsurface Assessment Report, dated May 11, 2007, and prepared by SCS Engineers (SEE REPORT UNDER RELEASE -016). The USTs, which all contained aviation fuel, were removed from the Fuel Farm on October 10, 1990. Approx. 280 cubic yards of contaminated soil was removed and stockpiled from the UST #12 excavation. Overexcavation was continued to a maximum depth of 35 feet below grade. Total petroleum hydrocarbons (TPH) concentrations were still elevated in the NE and NW sidewalls, at 2,050 and 1,100 mg/kg, respectively. Release -017 is included in the overall investigation of the Fuel Farm site. A soil vapor study was conducted at the site in November 2008 to assess potential health risks. Additional investigation of the extent of soil and groundwater petroleum contamination in the Fuel Farm area will be conducted as funding becomes available to the City of San Diego.

RB Case Number: 9UT2388
Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H10618-002
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Aviation, Waste Oil / Motor / Hydraulic / Lubricating
Site History: Brown Field Airport is a civilian airport operated by the City of San Diego. Please note that releases -002 (Industrial Park Area) and -024 (Bearden Aviation) are not considered part of the Fuel Farm Area (see case H10618-016) of the airport and will be investigated and closed separately. Release 002: Underground storage tanks (USTs) 5 and 27 were located between Curran Street and the adjoining taxi apron in the Industrial Park area. The site is located in the Industrial Park Area of the Brown Field Airport, between Curran Street and the adjoining taxi apron. On March 17, 1989, two underground storage tanks (USTs), Tank 5, a 12,000-gallon steel UST that had stored aviation gas, and Tank 27, a 500-gallon steel waste oil UST, were removed from a common excavation on the site. Tank 5 had failed a precision test in November 1987. During the tank removal, holes were visible in both tanks, and visible soil contamination was observed under Tank #27. Based on these observations, an unauthorized release case (#H10816-002) was immediately opened for the site. Subsequent analyses of soil samples collected on March 21, 1989 below Tank 5 showed a maximum total petroleum hydrocarbons (TPH) concentration of 95.5 milligrams per kilogram (mg/kg), and indicated contamination by weathered gasoline. On March 22 to March 30, 1989, the Tank 5/Tank 27 excavation pit was overexcavated to a depth of approximately 14 to 15 feet below ground surface (bgs) in the former Tank 27 area, and as deep as 25.5 feet bgs in the former Tank 5 area. Fifteen confirmation soil samples were collected from the side walls, end walls, and bottom of the excavation after the soil removal. A maximum TPH concentration of 71.2 mg/kg was reported in one of ten soil samples collected in the vicinity of the former aviation gas UST (Tank 5), and organic lead was not detected in the sample. Five soil samples were collected in the waste oil UST (Tank 27) area. The highest reported Total Recoverable Petroleum Hydrocarbons (TRPH) concentration was 325 mg/kg, and total chromium was reported at a maximum level of 6 mg/kg. Organic lead and chlorinated solvents were not detected in the sample. According to the environmental consultants March 1990 report (which documented the 1989 overexcavation activities), material that was excavated from above a depth of approximately 14 or 15 feet bgs was presumed to be clean, and was stockpiled. The tank excavation was later partially backfilled with this stockpiled soil (which had a maximum sample TPH concentration of 44.5 mg/kg), then clean imported fill was used to complete the excavation closure. Excavated soil below approximately 14 or 15 feet (a total of approximately 320 to 384 cubic yards) was presumed to be contaminated and was transported to the Brown Field Fuel Farm contaminated soil storage area and stockpiled. The Fuel Farm contaminated soil storage area also contained impacted soil from other UST removal locations at Brown Field. The soil stockpiles were allowed to attenuate naturally until sampling results indicated that the soil could be re-used at Brown Field. In 2009, approximately 100 cubic yards of remaining stockpiled soil was sampled by an environmental consultant and approved for on-site reuse by DEH/SAM. On September 25, 1997, in accordance with a DEH/SAM approved workplan, one boring, B-18, was placed in the Tank 5/Tank 27

1000437555

excavation. According to the Site Assessment Report, dated March 3, 1998, B-18 was drilled to a depth of 36.5 feet bgs in a location between former Tanks 5 and 27. Soil samples were collected from the boring at depths of 5, 10, 15, 25, 30, and 35 feet bgs. TRPH was only detected in the soil sample collected at 15 feet bgs, with a reported concentration of 14 mg/kg. Groundwater was not encountered in the boring at 36.5 feet bgs. Based on reported depth to groundwater measurements in wells located in the nearby Fuel Farm area, groundwater is present at a depth of approximately 179 to 189 feet bgs in the vicinity of the site. The 1998 Site Assessment Report states that the primary sources of contamination (USTs and approximately 350 cubic yards of impacted soil) have been removed and that the extent of impacted soil has been assessed by the overexcavation activities and the soil boring in the tank excavation. The consultant concludes that the concentrations of residual petroleum hydrocarbons in remaining soil do not support the possibility of contaminant migration that could affect human health, groundwater, or surface water, and, therefore, recommends no further action at the site.

Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0607300588
Global Id: T0607300588
Latitude: 32.56879
Longitude: -116.9855062
Status: Completed - Case Closed
Status Date: 01/26/2010
Case Worker: TS
RB Case Number: 9UT1796
Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H10618-019
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Aviation
Site History: Note: Case #H10618-019 is being administratively consolidated with case #H10618-016 (both aviation gasoline releases in the Fuel Farm Area of the Brown Field airport) in January 2010, and release -019 is being administratively closed by DEH. The Fuel Farm releases, including -019, will be investigated and closed under release -016. Please see case #H10618-016 (Global ID T0607300601) for additional case information. Release -019 refers to one leaking underground storage tank (UST #8) located within the former Fuel Farm portion of Brown Field Airport. UST 8 was a 50,000 gallon capacity concrete tank that formerly contained jet fuel/aviation gas- built in the 1940s. The results of initial assessment activities for release -019 and additional releases (-016, -017, -018, -022, -023, -024) from 7 other leaking tanks in the Fuel Farm area are provided in the Subsurface Assessment Report, dated May 11, 2007, and prepared by SCS Engineers

(SEE REPORT UNDER RELEASE -016). The USTs, which all contained aviation fuel, were removed from the Fuel Farm on October 10, 1990. Approx. 40 cubic yards of contaminated soil was removed and stockpiled from the UST #8 excavation. Release -019 is included in the overall investigation of the Fuel Farm site. A soil vapor study was conducted at the site in November 2008 to assess potential health risks. Additional investigation of the extent of soil and groundwater petroleum contamination in the Fuel Farm area will be conducted as funding becomes available to the City of San Diego.

Historical Generators:

Date form received by agency: 04/27/2010
 Site name: ENVIROCON INTERNATIONAL
 Classification: Not a generator, verified

. Waste code: D001
 . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
 . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D008
 . Waste name: LEAD

Violation Status: No violations found

Environmental Interest/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LUST REG 9:
Region: 9
Status: Case Closed
Case Number: 9UT3356
Local Case: H26521-002
Substance: Gasoline
Qty Leaked: 0
Abate Method: Excavate and Dispose - remove contaminated soil and dispose in approved site
Local Agency: San Diego
How Found: Not reported
How Stopped: Not reported
Source: Not reported
Cause: Not reported
Lead Agency: Local Agency
Case Type: Soil only
Date Found: 08/29/1988
Date Stopped: 09/24/1994
Confirm Date: / /
Submit Workplan: Not reported
Prelim Assess: 09/27/1994
Desc Pollution: Not reported

FINDS:

Registry ID: 110002906008

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

- . Waste code: D004
- . Waste name: ARSENIC

- . Waste code: D005
- . Waste name: BARIUM

- . Waste code: D006
- . Waste name: CADMIUM

- . Waste code: D007
- . Waste name: CHROMIUM

- . Waste code: D008
- . Waste name: LEAD

- . Waste code: D035
- . Waste name: METHYL ETHYL KETONE

- . Waste code: D039
- . Waste name: TETRACHLOROETHYLENE

- . Waste code: F001
- . Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Site name: ARCO FACILITY NO 05770
Classification: Small Quantity Generator

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018
. Waste name: BENZENE

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/12/2018	Source: EPA
Date Data Arrived at EDR: 12/28/2018	Telephone: N/A
Date Made Active in Reports: 01/11/2019	Last EDR Contact: 02/15/2019
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/15/2019
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/12/2018	Source: EPA

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 01/04/2019
Number of Days to Update: 92	Next Scheduled EDR Contact: 04/15/2019
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/12/2018	Source: EPA
Date Data Arrived at EDR: 12/28/2018	Telephone: 800-424-9346
Date Made Active in Reports: 01/11/2019	Last EDR Contact: 02/15/2019
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/29/2019
	Data Release Frequency: Quarterly

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/13/2018	Source: EPA
Date Data Arrived at EDR: 12/28/2018	Telephone: 800-424-9346

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895

Number of Days to Update: 86	Next Scheduled EDR Contact: 04/08/2019
	Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 07/31/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/28/2018	Telephone: 703-603-0695
Date Made Active in Reports: 09/14/2018	Last EDR Contact: 02/04/2019
Number of Days to Update: 17	Next Scheduled EDR Contact: 06/10/2019
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 07/31/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/28/2018	Telephone: 703-603-0695
Date Made Active in Reports: 09/14/2018	Last EDR Contact: 02/04/2019

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent NPL

CA RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 01/28/2019	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 01/29/2019	Telephone: 916-323-3400
Date Made Active in Reports: 03/05/2019	Last EDR Contact: 01/29/2019
Number of Days to Update: 35	Next Scheduled EDR Contact: 05/11/2019
	Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

CA DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

CA HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

CA WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CA WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

SITE ASSESSMENT AND MITIGATION DIVISION

February 28, 1996

Colette Temmink
TCW Land Fund I Holding Co
865 South Figueroa St., Suite #3500
Los Angeles. CA 90017-2543

Dear Ms. Temmink:

PESTICIDE CONTAMINATION IN SOIL ON PIPER RANCH PROPERTY
6464 OTAY MESA ROAD, SAN DIEGO COUNTY
#H26521-003

The San Diego County Department of Environmental Health (DEH), Site Assessment and Mitigation Division has reviewed the "Review of Environmental Conditions" prepared by Environ Corporation on October 10, 1995.

Problems addressed in this report relate to residual pesticide contamination (DDT and breakdown products) in soil. Environ has concluded that: investigation is adequate, remaining DDT levels do not present a threat to human health, additional cleanup of DDT contaminated soil is not needed, and that an evaluation of worker exposure should be done. DEH concurs with these conclusions.

Please be aware of the following:

- If soil containing more than 1 mg/kg DDT is removed from the property, it will be classified as a hazardous waste.
- The issues involved in conversion of pesticide-contaminated land to nonagricultural use are still being researched. We cannot predict what (if any) requirements will result from this research.
- The above information is based on requirements of DEH. Other regulatory agencies may have requirements for this property at time of development. Call David Felix at (619) 338-2258 if you desire more information.

Sincerely,

CHUCK PRYATEL, Division Manager
Site Assessment and Mitigation Division

DEH/SAM FILE: H26521-003 T75 DATE: 2-22-96
RESPONSIBLE PARTY: TCW LAND FUND I HOLDING COMPANY
SITE/FACILITY NAME: PIPER RANCH BUSINESS PARK
SITE/FACILITY ADDRESS: 6464 OTAY MESA RD, SAN DIEGO, CA.

OFF SITE IMPACTS? NO
BENEFICIAL USE GROUND WATER? YES
GROUND WATER AFFECTED? NO
FULL DELINEATION ACHIEVED? YES

CONCURRENCE WITH SA/M HYDROGEOLOGIST: *KMA* DATE: *2/23/96*
CONCURRENCE WITH SA/M SUPERVISOR: *OP* DATE: *2-27-96*

DISPOSAL AND REMEDIATION SUMMARY

CAUSE AND TYPE OF RELEASE: DDT, LEGAL APPLICATION AND SPILLAGE
TYPE OF REMEDIATION USED AT SITE: EXCAVATION OF 10-15 YDS SOIL FROM PESTICIDE STORAGE AREA IN 1988 (UPPER 2.5 FEET).
QUANTITY OF SOIL/PRODUCT DISPOSED: 15 YDS MANIFESTS PROVIDED? NO
DISPOSAL LOCATION: UNKNOWN
CLEANUP LEVELS ESTABLISHED: NONE
MAXIMUM CONCENTRATIONS REMAINING ON SITE: 6600 ug/kg DDTr(DDT+DDE+DDD) IN A SET OF 10 SAMPLES TAKEN FROM FIELDS. 1180 ug/kg DDTr IN A SET OF 20 SAMPLES TAKEN FROM FIELDS AND OTHER AREAS.

ADDITIONAL COMMENTS: Verification samples from excavated storage area had maximum DDTr of 74 ug/kg. Consultant proposed no health risk evaluation because remaining levels of DDTr were below those given in the Preliminary Remediation Goals published by USEPA Region IX (19,100 ug/kg for industrial site soil), and below those used by the EPA for a Superfund cleanup in residential area of Torrance CA (26,000 ug/kg for children). The rationale and assumptions used in both EPA documents have been reviewed and found to be applicable to this property. In addition, previous DDT risk assessments submitted to DEH show similar residual DDTr values in soil and human cancer risk of less than 10^{-6} .

July 2, 2012

Mr. Craig Fergusson
City of San Diego, Environmental Services Department
9601 Ridgehaven Court, Suite 310
San Diego, CA 92123

Dear Mr. Fergusson:

UNAUTHORIZED RELEASE #H10618-024
CITY OF SAN DIEGO – BROWN FIELD AIRPORT, BEARDEN AVIATION, INC.
1424 CONTINENTAL STREET, SAN DIEGO, CA 92173

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code, and that no further action related to the petroleum release at the site is required.

Please be advised that claims for reimbursement of corrective action costs submitted to the State Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

Mr. Craig Fergusson

- 2 -

July 2, 2012

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact Teresa Sherman at (858) 505-6797, if you have questions regarding this matter.

Sincerely,

A handwritten signature in black ink, appearing to read "Jack Miller". The signature is fluid and cursive, with the first name "Jack" and last name "Miller" clearly distinguishable.

Comments:

Two 10,000-gallon capacity, single-walled steel underground storage tanks (USTs), Tank 10 and Tank 11, were removed from a common excavation located near the northern border of the former Brown Field Airport Fuel Farm on March 25, 1999. The USTs were misidentified in initial Brown Field environmental reports as Fuel Farm USTs 6 and 7. Tanks 10 and 11 were operated by Bearden Aviation, Inc., a fuel dispenser who leases property at the airport, and were formerly owned by Paladin Aviation, Inc. The unauthorized petroleum releases associated with the former Fuel Farm USTs are currently being addressed under DEH/SAM case #10618-016. Brown Field Airport is operated by the City of San Diego.

UST 10 contained jet fuel, and UST 11 contained aviation gas. While heavy corrosion was noted on both tanks during the removals, no holes were observed. After the two tanks were removed, soil samples were collected from below the northern and southern ends of the tank footprints at depths of 14 to 15 feet below ground surface (bgs). Total petroleum hydrocarbons in the gasoline range (TPH-g) and the diesel range (TPH-d) were not detected (less than 10 milligrams per kilogram [mg/kg]) in the northern UST 10 sample and the southern UST 11 sample. However, the soil sample collected below the southern end of UST 10 contained a TPH-g concentration of 18 mg/kg, and a TPH-d concentration of 42 mg/kg. The soil sample collected under the northern end of UST 11 contained a reported TPH-d concentration of 770 mg/kg, but TPH-g was not detected.

In 2006, in accordance with a DEH/SAM approved workplan, one boring (B-15) was drilled in the vicinity of the former USTs to assess the vertical extent of petroleum hydrocarbon-bearing soil. On September 11, 2006, hollow-stem auger refusal was encountered in the boring at a depth of approximately 30 feet bgs. Installation of the boring was continued on October 19 and 20, 2006, using an air-rotary drilling rig, and the boring was advanced to a depth of approximately 90 feet bgs. Five soil samples were collected from the boring at depths of 15, 25, 60, 70, and 80 feet (no recovery at 90 feet bgs), and TPH-g and TPH-d were not detected in the samples.

Groundwater was not encountered during advancement of the boring to 90 feet bgs. Based on reported depth to groundwater measurements in the Fuel Farm monitoring wells, groundwater in the vicinity of the former USTs is generally located at a depth between approximately 179 to 189 feet bgs.

A soil vapor study was conducted in the former Fuel Farm area in November 2008 to assess potential health risks. One of the survey's twenty-five vapor samples (SV-19) was collected at a depth of 5 feet bgs near the former location of USTs 10 and 11. According to the *Soil Vapor Survey Report*, dated February 8, 2010, no volatile organic compounds were reported in the SV-19 sample, with the exception of a toluene concentration of 1.3 micrograms per liter. Based on vapor contaminant concentrations measured across the former Fuel Farm, the consultant concluded that there is no significant risk to human health under a commercial exposure scenario.

In the *May 2007 Subsurface Assessment Report* for the former Fuel Farm site investigation, the consultant concludes that the extent of soil contamination related to USTs 10 and 11 has been delineated (by B-15 and other borings/wells in the Fuel Farm area), and groundwater has not been impacted. SAM concurs with the conclusion, and approves the City of San Diego's request for site closure.

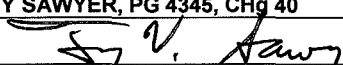

Case Closure Summary
Leaking Underground Fuel Storage Tank Program

IV. CLOSURE

H10618-024

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? YES		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? YES		
Does corrective action protect public health for current land use? YES		
Case oversight completed based upon the following site use: COMMERCIAL		
Site Management Requirements: ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.		
Should corrective action be reviewed if land use changes? YES		
Monitoring Wells Decommissioned: N/A	Number Decommissioned: N/A	Number Retained: N/A
List Actions Taken: NOTICE OF REIMBURSEMENT / LOCAL		
List Enforcement Actions Rescinded: NONE

AMY HARBERT
ASSISTANT DIRECTOR

March 13, 2018

Mr. Craig Fergusson
City of San Diego, Environmental Services Department
9601 Ridgehaven Court, Suite 310
San Diego, CA 92123

Dear Mr. Fergusson:

UNDERGROUND STORAGE TANK (UST) #H10618-016
CITY OF SAN DIEGO- BROWN FIELD AIRPORT
1424 CONTINENTAL STREET, SAN DIEGO, CA 92173

This letter confirms the completion of a site investigation and corrective action for the underground storage tank systems formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code, and that no further action related to the petroleum release at the site is required.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Please contact Colleen Hines, at (858) 505-6874, if you have questions regarding this matter.

Sincerely,

A handwritten signature in blue ink that reads "Elise Rothschild". The signature is written in a cursive, flowing style.

ELISE ROTHSCHILD, REHS
Director, Department of Environmental Health

Closure Criteria Met: The Low-Threat UST Case Closure Policy (LTCP) Checklist is attached.

Site Maps: Five maps are attached, including a location map, a vicinity map, a site plan, soil sample results, and groundwater sample results.

UST Case Closure Summary Form

CASE# H10618-016

March 13, 2018

Additional Information:

Six underground storage tanks (USTs), including USTs #8, #9, #12, #13, #16, and #17, were removed from the former Fuel Farm area of the Brown Field Airport in 1990-1991. Six separate unauthorized release cases, #H10618-016 (UST #9), -017 (UST #12), -018 (UST #13), -019 (UST #8), -022 (UST #16), and -023 (UST #17) were initially opened, then the cases were consolidated into one case (#H10618-016) in 2010. The USTs ranged in capacity from 25,000 gallons to 220,000 gallons. Four of the tanks (UST #8, #9, #12, and #13) were concrete and stored aviation gas/ jet fuel. USTs #16 and #17 were 220,000-gallon steel diesel/ jet fuel tanks connected by an underground fuel transfer system which fed through a central piping vault.

Elevated concentrations of total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tertiary butyl ether (MTBE) were detected in soil samples collected beneath product piping and from the six UST excavations. In addition, ponded light non-aqueous phase liquid (LNAPL or free product) was observed beneath the piping vault. The quantity and timeframes of the fuel releases are not known. A total of approximately 3,670 cubic yards of petroleum hydrocarbon-impacted soil was removed from the tank excavations. Soil with non-detectable concentrations of TPH were used as excavation backfill. The Regional Water Quality Control Board approved on-site reuse of treated (via bioremediation) and stockpiled soil as fill at various locations at the airport.

From 1997 to 2013, twenty soil borings, twelve groundwater monitoring wells, and two extraction wells were installed to assess petroleum hydrocarbon impacts to soil and groundwater. Soils impacted with TPH in the gasoline range (TPH-g) and in the diesel range (TPH-d) were found at depths ranging from approximately 30 feet to 180 feet below ground surface (bgs). The highest TPH concentrations were located at sample depths ranging from approximately 60 feet to 75 feet bgs. This depth range generally corresponds to the lithologic contact between the coarser-grained San Diego Formation and the underlying finer-grained Otay Formation. A perched groundwater zone was identified around the contact area, and well screens in two of the monitoring wells and the two extraction wells were installed at depths ranging from 40 feet to 80 feet bgs to monitor the groundwater. Ten of the monitoring wells were screened at depths ranging from 175 feet to 217 feet bgs in the main aquifer.

The site is located in the Water Tanks Hydrologic Subarea, where groundwater has potential beneficial uses for municipal, agricultural, and industrial supply. The site is located on a plateau, and historical groundwater flow directions at the site have ranged from the northeast, the southeast, and the east (most recently). The highest concentrations of dissolved TPH and volatile organic compounds (VOCs), including BTEX, 1,2-dibromoethane (EDB), and 1,2-dichloroethane (EDC), were found in the on-site perched groundwater zone. EDB and EDC were added to aviation fuel to prevent the formation of lead compound deposits in the engine combustion chambers. Benzene is the only VOC above its Maximum Contaminant Level (MCL) in MW12B, the most downgradient perched zone well. Benzene concentrations in MW12B ranged from 2.29 micrograms per liter ($\mu\text{g/l}$) in September 2013 to 60.8 $\mu\text{g/l}$ in December 2104. The consultant attributed the increase to a rising groundwater level in the perched zone and greater contact with residual soil contaminants.

Approximately two inches of LNAPL was detected in monitoring wells MW4 and MW5 in October 1997, but measurable free product was not detected in the wells after 1997. In August 2011, an apparent thickness of 1.85 feet of LNAPL was measured in well MW7. A laboratory analysis identified the LNAPL as primarily aviation gas. Periodic LNAPL removal using a disposal bailer recovered approximately 6.5 gallons of product, and LNAPL was not detected in MW7 after June 2014. LNAPL was later measured in extraction well VEW-2 in January 2015, with an apparent thickness of 3.52 feet. Approximately 2.7 gallons of LNAPL and 13 gallons of mixed LNAPL/water were recovered from the well with a bailer between September 2015 and January 2016, and product was not present in September 2016, January 2017, or February 2017. Based on the absence of LNAPL in any of the site wells, the consultant concluded that free product had been removed to the extent practicable, and DEH concurred.

A soil vapor study was conducted across the Fuel Farm site in November 2008 to assess potential health risks. Twenty-five borings were drilled across the site to a depth of 5 feet bgs, and soil samples were analyzed by a mobile laboratory. Based on the results, the consultant concluded that there is no significant risk to human health at the site under a commercial exposure scenario from potential exposure to BTEX vapors migrating from soil containing hydrocarbons at the site.

The site is located in the service area of a public water system. There are no municipal or domestic wells in the area and the nearest irrigation wells are greater than 0.3 miles up-gradient and cross-gradient. Irrigation wells in the site vicinity are screened at depths of 500 feet and greater. Current site use is a vacant lot, and according to the City of San Diego Airports Division, the further use of the site is anticipated to be for aeronautical purposes (i.e., aircraft hangers and parking).

UST Case Closure Summary Form

CASE# H10618-016

March 13, 2018

Additional Information (continued):

The maximum and residual concentrations of contaminants of concern and LNAPL are summarized below:

Maximum Concentrations	TPH - Gasoline	TPH - Diesel	Benzene	Toluene	Ethyl-benzene	Total Xylenes	EDB	EDC	MTBE
Groundwater (µg/l)	53,000	732	5,700	6,200	670	3,100	3,070	540	ND (<0.5)
Soil (mg/kg)	43,000	6,000	95	1,700	130	660	54	0.041	1,100

Residual Concentrations	TPH - Gasoline	TPH - Diesel	Benzene	Toluene	Ethyl-benzene	Total Xylenes	EDB	EDC	MTBE
Groundwater (µg/l)	17,400	732	3,590	3,100	342	1,775	2,100	500	ND (<0.5)
Soil (mg/kg)	43,000	6,000	95	1,700	130	660	54	0.041	1,100

Free Product Thickness	Feet
Maximum	3.52 VEW-2
Current	0.0

SCM Corrections:

MOST RECENT CONCENTRATIONS OF PETROLEUM CONSTITUENTS IN GROUNDWATER

The values for TPHg and Xylenes in the report have displayed "other" rather than the measured values. This is because the data were not in the format that the report uses. The following are the values that were not displayed:

Field Point	TPHg (µg/l)	Xylenes (µg/l)
MW-4	4,020	34.3
MW-5	1,660	140.0
MW-6	111	1.33J
MW-7	1,240	7.6
MW-7A	1,720	151.9
MW-7B	17,400	1,775
MW-8	50.3	ND (<0.5)
MW-9	ND (<5)	ND (<0.5)
MW-10	ND (<5)	ND (<0.5)
MW-11	ND (<5)	ND (<0.5)
MW-12A	ND (<5)	ND (<0.5)
MW-12B	354	5.13
QCTB	ND (<5)	ND (<0.5)

In the Corrective Action Plan (CAP) and CAP Addendums prepared for the site, the consultant recommends mitigation of residual petroleum hydrocarbon-impacted soil and groundwater beneath the site through remediation by natural attenuation (RNA). The selection of RNA is based on the removal of the contaminant sources (USTs and piping), LNAPL removal to the extent practicable through remedial actions including soil excavation and product removal by bailing, the overall stable areal extent of the dissolved petroleum hydrocarbon plume, the delineation of the extent of soil and groundwater contamination, incomplete exposure pathways, and the less than significant human-health risks from soil vapors. Through RNA, contaminant concentrations are expected to decline over time to the respective MCLs. The DEH estimated timeframe for dissolved benzene to reach its MCL of 1 µg/l at the site is approximately 62 years.

The consultant recommends no further action (NFA) and case closure. A 60-day public notification period was completed to allow public review and comments on the CAP and CAP Addendums and DEH's intent to close the case. Comments were only received by the City of San Diego Public Utilities Department (PUD), and DEH provided written responses to the comments.

DEH concurs with the consultant's NFA recommendation and approves case closure. Wells associated with the site investigation will be destroyed under permit number DEH2017-LMWP-003196.

SITE HISTORY

Six underground storage tanks (USTs), including USTs #8, #9, #12, #13, #16, and #17, were removed from the former Fuel Farm area of the Brown Field Airport in 1990-1991. Six separate unauthorized release cases, #H10618-016 (UST #9), -017 (UST #12), -018 (UST #13), -019 (UST #8), -022 (UST #16), and -023 (UST #17) were initially opened, then the cases were consolidated into one case (#H10618-016) in 2010. The USTs ranged in capacity from 25,000 gallons to 220,000 gallons. Four of the tanks (UST #8, #9, #12, and #13) were concrete and stored aviation gas/ jet fuel. USTs #16 and #17 were 220,000-gallon steel diesel/ jet fuel tanks connected by an underground fuel transfer system which fed through a central piping vault.

Elevated concentrations of total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tertiary butyl ether (MTBE) were detected in soil samples collected beneath product piping and from the six UST excavations. In addition, ponded light non-aqueous phase liquid (LNAPL or free product) was observed beneath the piping vault. The quantity and timeframes of the fuel releases are not known. A total of approximately 3,670 cubic yards of petroleum hydrocarbon-impacted soil was removed from the tank excavations. Soil with non-detectable concentrations of TPH were used as excavation backfill. The Regional Water Quality Control Board approved on-site reuse of treated (via bioremediation) and stockpiled soil as fill at various locations at the airport.

From 1997 to 2013, twenty soil borings, twelve groundwater monitoring wells, and two extraction wells were installed to assess petroleum hydrocarbon impacts to soil and groundwater. Soils impacted with TPH in the gasoline range (TPH-g) and in the diesel range (TPH-d) were found at depths ranging from approximately 30 feet to 180 feet below ground surface (bgs). The highest TPH concentrations were located at sample depths ranging from approximately 60 feet to 75 feet bgs. This depth range generally corresponds to the lithologic contact between the coarser-grained San Diego Formation and the underlying finer-grained Otay Formation. A perched groundwater zone was identified around the contact area, and well screens in two of the monitoring wells and the two extraction wells were installed at depths ranging from 40 feet to 80 feet bgs to monitor the groundwater. Ten of the monitoring wells were screened at depths ranging from 175 feet to 217 feet bgs in the main aquifer.

The site is located in the Water Tanks Hydrologic Subarea, where groundwater has potential beneficial uses for municipal, agricultural, and industrial supply. The site is located on a plateau, and historical groundwater flow directions at the site have ranged from the northeast, the southeast, and the east (most recently). The highest concentrations of dissolved TPH and volatile organic compounds (VOCs), including BTEX, 1,2-dibromoethane (EDB), and 1,2-dichloroethane (EDC), were found in the on-site perched groundwater zone. EDB and EDC were added to aviation fuel to prevent the formation of lead compound deposits in the engine combustion chambers. Benzene is the only VOC above its Maximum Contaminant Level (MCL) in MW12B, the most downgradient perched zone well. Benzene concentrations in MW12B ranged from 2.29 micrograms per liter (µg/l) in September 2013 to 60.8 µg/l in December 2104. The consultant attributed the increase to a rising groundwater level in the perched zone and greater contact with residual soil contaminants.

Approximately two inches of LNAPL was detected in monitoring wells MW4 and MW5 in October 1997, but measurable free product was not detected in the wells after 1997. In August 2011, an apparent thickness of 1.85 feet of LNAPL was measured in well MW7. A laboratory analysis identified the LNAPL as primarily aviation gas. Periodic LNAPL removal using a disposal bailer recovered approximately 6.5 gallons of product, and LNAPL was not detected in MW7 after June 2014. LNAPL was later measured in extraction well VEW-2 in January 2015, with an apparent thickness of 3.52 feet.

Approximately 2.7 gallons of LNAPL and 13 gallons of mixed LNAPL/water were recovered from the well with a bailer between September 2015 and January 2016, and product was not present in September 2016, January 2017, or February 2017. Based on the absence of LNAPL in any of the site wells, the consultant concluded that free product had been removed to the extent practicable, and DEH concurred.

A soil vapor study was conducted across the Fuel Farm site in November 2008 to assess potential health risks. Twenty-five borings were drilled across the site to a depth of 5 feet bgs, and soil samples were analyzed by a mobile laboratory. Based on the results, the consultant concluded that there is no significant risk to human health at the site under a commercial exposure scenario from potential exposure to BTEX vapors migrating from soil containing hydrocarbons at the site.

The site is located in the service area of a public water system. There are no municipal or domestic wells in the area and the nearest irrigation wells are greater than 0.3 miles up-gradient and cross-gradient. Irrigation wells in the site vicinity are

screened at depths of 500 feet and greater. Current site use is a vacant lot, and according to the City of San Diego Airports Division, the further use of the site is anticipated to be for aeronautical purposes (i.e., aircraft hangers and parking).

In the Corrective Action Plan (CAP) and CAP Addendums prepared for the site, the consultant recommends mitigation of residual petroleum hydrocarbon-impacted soil and groundwater beneath the site through remediation by natural attenuation (RNA). The selection of RNA is based on the removal of the contaminant sources (USTs and piping), LNAPL removal to the extent practicable through remedial actions including soil excavation and product removal by bailing, the overall stable areal extent of the dissolved petroleum hydrocarbon plume, the delineation of the extent of soil and groundwater contamination, incomplete exposure pathways, and the less than significant human-health risks from soil vapors. Through RNA, contaminant concentrations are expected to decline over time to the respective MCLs. The DEH estimated timeframe for dissolved benzene to reach its MCL of 1 µg/l at the site is approximately 62 years.

The consultant recommends no further action (NFA) and case closure. A 60-day public notification period was completed to allow public review and comments on the CAP and CAP Addendums and DEH's intent to close the case. Comments were only received by the City of San Diego Public Utilities Department (PUD), and DEH provided written responses to the comments. Wells associated with the site investigation will be destroyed under permit number DEH2017-LMWP-003196.

CLOSURE POLICY
THIS VERSION IS FINAL AS OF 6/20/2017
CHECKLIST INITIATED ON 5/17/2013
[CLOSURE POLICY HISTORY](#)

General Criteria - The site satisfies the policy general criteria - [CLEAR SECTION ANSWERS](#)
 YES

- a. Is the unauthorized release located within the service area of a public water system?
- YES NO
- b. The unauthorized release consists only of petroleum ([info](#)). YES NO
- c. The unauthorized ("primary") release from the UST system has been stopped. YES NO
- d. Free product has been removed to the maximum extent practicable ([info](#)). FP Not Encountered YES NO
- e. A conceptual site model that assesses the nature, extent, and mobility of the release has been developed ([info](#)). YES NO
- f. Secondary source has been removed to the extent practicable ([info](#)). YES NO
- g. Soil or groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15. Not Required YES NO
- h. Does a nuisance exist, as defined by [Water Code section 13050](#). YES NO

1. Media-Specific Criteria: Groundwater - The contaminant plume that exceeds water quality objectives is stable or decreasing in areal extent, and meets all of the additional characteristics of one of the five classes of sites listed below. - [CLEAR SECTION ANSWERS](#)
 YES

- EXEMPTION - Soil Only Case (Release has not Affected Groundwater - [Info](#)) YES NO
- Does the site meet any of the Groundwater specific criteria scenarios? YES NO
- 1.5 - The regulatory agency determines, based on an analysis of site specific conditions, that the site under current and reasonably anticipated near-term future scenarios, the contaminant plume poses a low threat to human health and safety and to the environment and water quality objectives will be achieved within a reasonable time frame. YES NO

2. Media Specific Criteria: Petroleum Vapor Intrusion to Indoor Air - The site is considered low-threat for the vapor-intrusion-to-air pathway if site-specific conditions satisfy items 2a, 2b, or 2c - [CLEAR SECTION ANSWERS](#)
 YES

- EXEMPTION - Active Commercial Petroleum Fueling Facility YES NO
- Does the site meet any of the Petroleum Vapor Intrusion to Indoor Air specific criteria scenarios? YES NO
- 2b - Petroleum Vapor Intrusion to Indoor Air - A site-specific risk assessment for the vapor intrusion pathway has been prepared that demonstrates human health is protected to the satisfaction of the regulatory agency. YES NO

3. Media Specific Criteria: Direct Contact and Outdoor Air Exposure - The site is considered low-threat for direct contact and outdoor air exposure if it meets 1, 2, or 3 below. - [CLEAR SECTION ANSWERS](#)
 YES

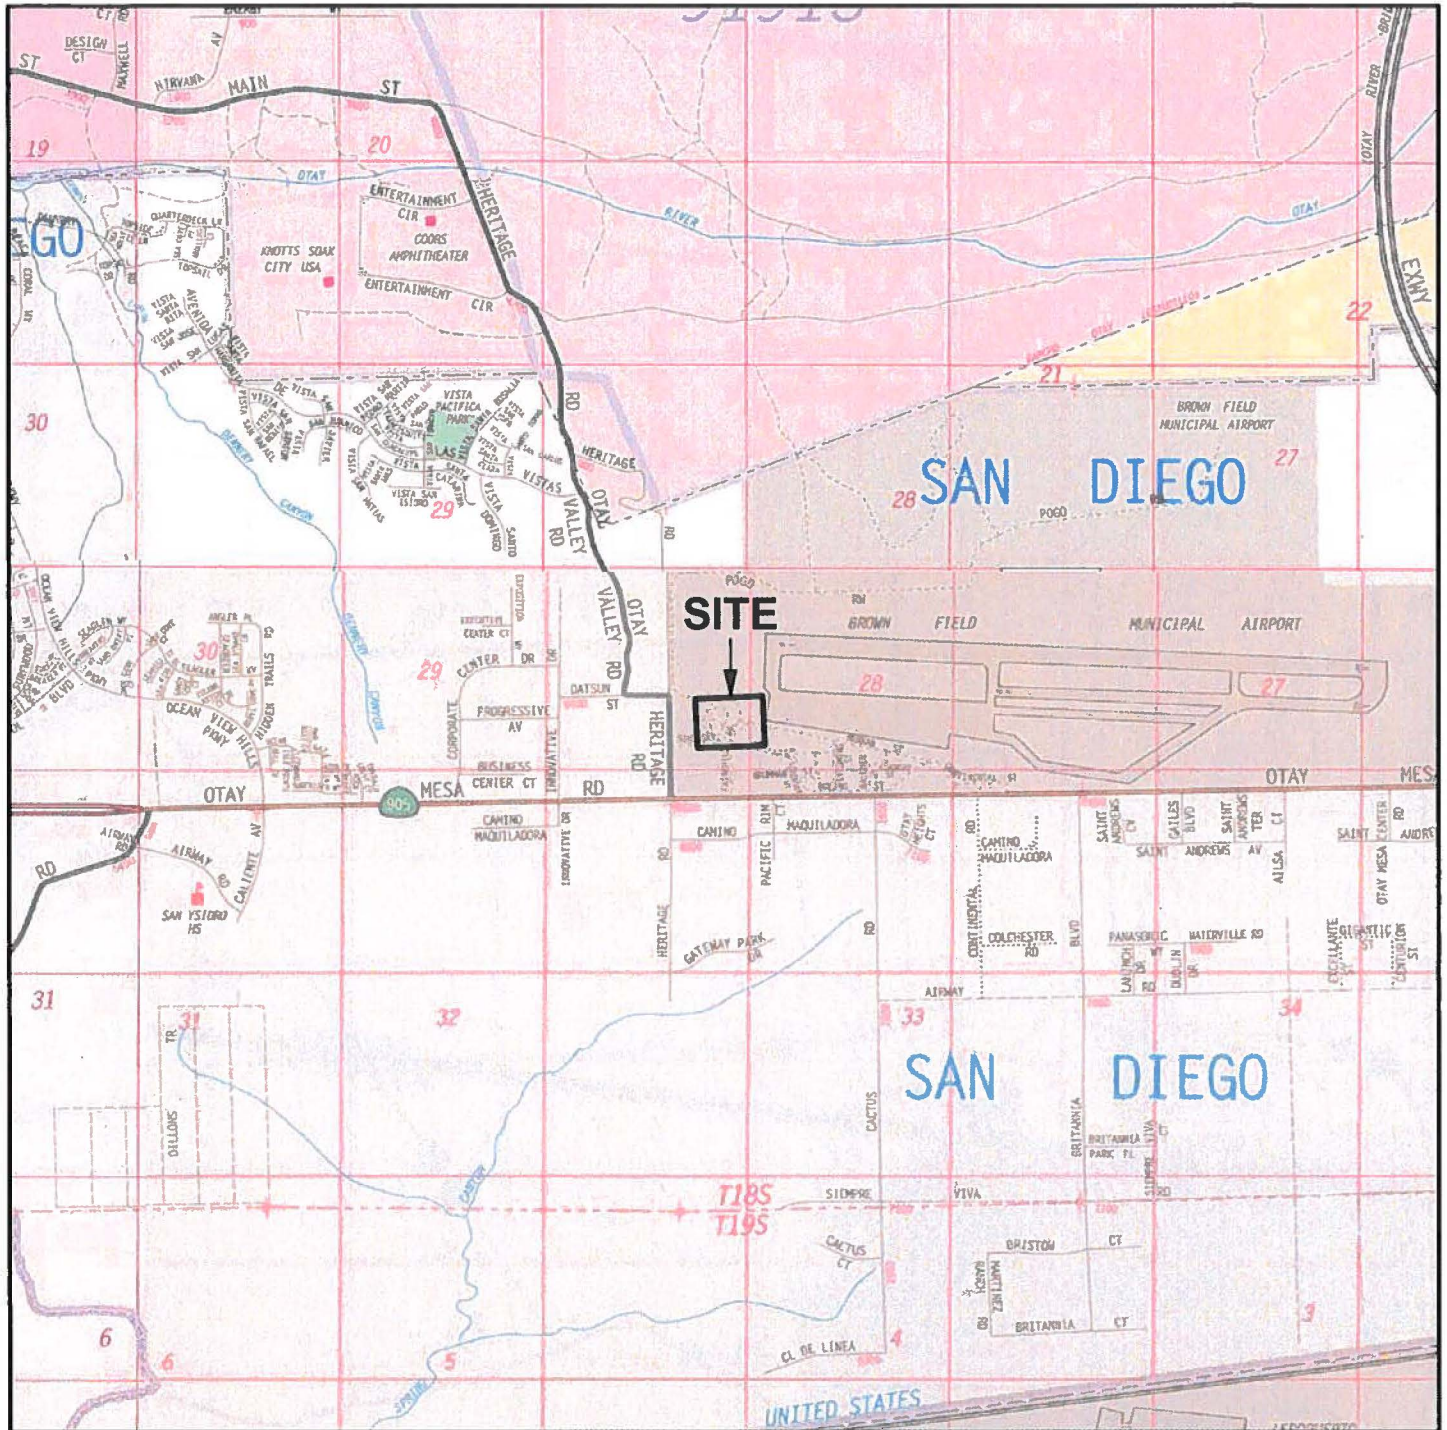

- EXEMPTION - The upper 10 feet of soil is free of petroleum contamination YES NO

Additional Information

This case should be kept OPEN in spite of meeting policy criteria. YES NO

Has this LTCP Checklist been updated for FY 17/18? YES NO

Memorandum

Herewith please find the following materials pertaining to the above-captioned project:

- Voluntary Assistance Program, Application for Assistance.
- Check for \$160.00 payable to County of San Diego for two hours staff review time.
- Sampling & Analysis Plan for Lead-Soils Investigation at Border Patrol Firing Range.
- Project Specific Health & Safety Plan for Border Patrol Firing Range Soils Investigation.

We have received clearance at the firing range to conduct soil sampling. October 15 & 16, 1998. We shall be reporting the findings of the investigation to you or your appointee as soon as we receive all of the results. HDR intends to prepare design plans to remediate soils that exceed a Site Action Level and/or that are classified as a California Title 22 Hazardous Waste using an on-site fixation process. We look forward to your consultation on this matter.

A Report of Site Assessment and a Site Remediation Plan, including a project-specific Health & Safety Plan, will be prepared for your review and comment. Please contact Susan Kline at: 714.940.8800 or 805.942.2755 at your earliest convenience.

Best Regards,

Susan

DEMOLITION NOTES

1. ALL FENCING, AT GRADE STRUCTURES, AND ABOVE GROUND STRUCTURES TO BE REMOVED SHALL BE DISPOSED OF OFF-SITE UNLESS APPROVAL FOR USE ON-SITE IS OBTAINED FROM THE OWNER. ALL BELOW GROUND STRUCTURES WITHIN PROPOSED CONSTRUCTION SHALL BE REMOVED TO TWO FEET BELOW PROPOSED GRADE.
2. FOR COMPACTING REQUIREMENTS IN VOID AREAS SEE PAVING AND GRADING NOTES ON SHEET C-4.
3. SAW CUT AT ALL LIMITS OF REMOVAL.

UTILITY NOTES

1. FOR GENERAL NOTES, SEE DRAWING C-1.
2. ALL MATERIALS, WORKMANSHIP, AND TESTING SHALL CONFORM TO CITY OF SAN DIEGO STANDARDS AND TO THE CALIFORNIA DEPARTMENT OF TRANSPORTATION (CALTRANS) STANDARD SPECIFICATIONS.
3. LOCATIONS FOR DRAINAGE STRUCTURES APPLY TO CENTER OF STRUCTURE.
4. MANHOLES SHALL CONFORM TO THE APPLICABLE PROVISIONS OF SECTIONS 70, 90, 65, AND 19 OF THE CALTRANS STANDARD SPECIFICATIONS.
5. PLASTIC DRAINAGE PIPE SHALL BE SDR 35 AND SHALL CONFORM TO THE APPLICABLE PROVISIONS OF SECTIONS 65 AND 68 OF THE CALTRANS STANDARD SPECIFICATIONS.
6. PIPE JOINTS SHALL CONFORM TO THE APPLICABLE PORTIONS OF SECTION 68 AND SECTION 6 OF THE CALTRANS STANDARD SPECIFICATIONS.
7. TRENCH BACKFILL SHALL CONFORM TO THE APPLICABLE PORTIONS OF SECTION 19 OF THE CALTRANS STANDARD SPECIFICATIONS.
8. EXCAVATION SHALL CONFORM TO THE APPLICABLE PORTIONS OF SECTION 19 OF THE CALTRANS STANDARD SPECIFICATIONS.
9. WHERE "VIF" IS INDICATED ON THE PLANS, VERIFY CRITICAL ELEVATIONS AND CONSTRUCTIBILITY PRIOR TO ORDERING MATERIAL. IN PARTICULAR, VERIFY THAT PROPOSED INVERT ELEVATIONS ARE CONSTRUCTIBLE.
10. THE STORM SEWER LEG FROM THE MANHOLE TO THE DITCH AT RANGE C SHALL BE CONSTRUCTED WITH A DIRECTIONAL BORE. THE PIT FOR THE BORE SHALL BE EXCAVATED AT THE MANHOLE. A RECEIVING PIT SHALL NOT BE EXCAVATED, TO MINIMIZE DISTURBANCE OF EXISTING SOILS NEAR THE RANGE BACKSTOP. IF A STEEL SLEEVE IS USED FOR THE BORE, THE VOID BETWEEN THE SLEEVE AND THE PLASTIC PIPE SHALL BE FILLED WITH GROUT.
11. CLEAN DRAINAGE PIPE, AS DIRECTED BY OWNER

COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH

VOLUNTARY ASSISTANCE PROGRAM

Review Conditions

- Sections A, B, C and D must be completed on the "Application for Assistance" form, along with the applicant's original signature.
- An initial fee of \$160 made payable to the "County of San Diego" is required at the time of application submittal, which allows up to two hours of staff review time. Payment for any staff time in excess of two hours will be invoiced to the applicant and must be paid within 30 days of receipt of the invoice. The current billing rate is \$80/hour.
- Submit all relevant documentation/reports with the application.
- Allow a minimum of thirty (30) days for staff review of the submitted environmental documentation.
- A copy of all correspondence from the Department of Environmental Health (DEH) will be sent to the applicant and to the legal property owner. Project files will be available to the public for review upon written request.

Additional Information

- The Voluntary Assistance Program is designed to provide staff consultation, overview and/or concurrence pertaining to properties suspected or known to be contaminated with hazardous substances.
- DEH will notify the Department of Toxic Substances Control (DTSC) and the Regional Water Quality Control Board (RWQCB) that the project has been submitted for review. DEH has the option of referring the case to the DTSC or RWQCB at any time during the review process.
- Senate Bill 1248 enacted the Health and Safety Code sections 512 through 512.4 authorizing DEH to enter into voluntary agreements with Responsible Parties to provide oversight of remedial actions at sites contaminated by wastes. The Site Assessment and Mitigation Division (SAM) will utilize current guidelines and policies of DEH and the RWQCB to reach site assessment and cleanup goals at those sites.

1.0 INTRODUCTION

1.1 PURPOSE AND SCOPE

HDR Engineering, Inc provided plans and specifications for improvements and alterations at the Brown Field Firing Range located in Otay Mesa, California, for the Immigration and Naturalization Services (INS). As a part of the design review process, HDR assessed on-site soils to determine the impacts of lead bullet discharge during target practice. HDR was also requested to make recommendations for lead soils disposition and/or remediation prior to initiation of the site improvement plan.

This report of lead soils investigation describes the methods and results of HDR's evaluation, and discusses the environmental regulatory implications. The findings of this investigation will be the basis for a site remediation plan that is being prepared under separate cover.

1.2 SITE DESCRIPTION

The Brown Field Firing Range occupies a northern portion of the former Brown Field Naval Auxiliary Air Station, located in the city of Otay Mesa, within the County of San Diego, California. Figure 1, (Boring Location & Analytical Results Plan), shows the site layout, including the configuration of the ranges and site appurtenances.

The Firing Range (site) has occupied its present location since 1989. The site is operational and consists of three adjacent outdoor firing ranges, each 40 yards in width. The "A" (west) and "B" (center) ranges are 50 yards in length, and the "C" (east) range is 100 yards long. The length of each range is measured from the bench rest area located at the front (south) end of each range to the target line located at the back (north) end of each range.

~~While the south end of each range is open, the east, west, and north sides are enclosed by earthen berms or backstops. These berms separate each range as well as enclose the extreme east and west sides. The berms form a continuous border along each side and back of each range. The height of the berms begins at 2 feet at the south end, and increases to approximately 16 feet adjacent to and behind the target lines of each range. Similarly, the width of the berms ranges from 10 to 20 feet.~~

Between the bench rest area and the target line of each range, the floor is covered by a 2- to 3-inch thick gravel blanket. The gravel of each range is dissected by 1-foot wide concrete walkways running east-west. These walkways mark the various firing line positions. Additionally, each range is bisected by a north-south

walkway running from the bench rest area to the target line. The bench rest area is covered and consists of benches, tables, and a control room placed on top of a concrete pad.

Within each range, the target line is situated approximately 15 feet in front of the rear berm. The exposed ground surface between the target line and the rear berm is lower than the area in front of the target line and serves as a drainage ditch. Surface drainage from the three ranges sheet flows into the ditch and is conveyed by 10-inch PVC pipes penetrating the berms. The drainage system is sloped from west-to-east and flows into an unlined drainage channel located northeast of Range C.

The remainder of the facility is comprised of an office in the south, storage buildings located on the southeast and southwest sides of the site and unpaved parking and access areas. A locking fence encloses the facility.

1.3 PREVIOUS INVESTIGATIONS

A cursory *Surface Soil and Stormwater Sampling Program* was conducted at the site during April and May 1998 by Ogden Environmental & Energy Services. The findings indicate that lead concentrations in site soils adjacent to the target berms and within the offsite drainage exceed the total threshold limit concentration (TTL) and soluble threshold limit concentration (STLC) values for classification as a hazardous waste according to the California Code of Regulations Title 22. HDR was requested to address the lead impacts within on-site soils; therefore, lead impacts within the off-site drainage were not considered.

by INS

2.0 FIELD ACTIVITIES

2.1 FIELD PROCEDURES

The project-specific Sampling and Analysis Plan (SAP) and Health and Safety Plan (HSP) include details of the procedures that were followed during field sampling at the Brown Field Firing Range. Incorporated here by reference, the SAP includes HDR Technical Procedures for Sample Handling, Labeling, and Chain of Custody and the HSP provides sampling procedure guidelines that provide worker protection.

Backstop berm samples were obtained using a hand auger with an inside diameter (ID) of 4.0 inches and with extensions driven horizontally into the berms. Samples were obtained from the surface to a maximum depth of 4 feet, 4 inches from the berm surface (fbs). Samples were screened using a #10 sieve to remove

large bullet fragments and plastic wads deposited from shot gun shells. These samples were placed in laboratory-clean glass jars using a clean sampling trowel. The glass jars were capped and labeled.

Profile samples were obtained from the range bays and behind the targets using a 2.0-inch ID AMS hammer barrel sampler. The 2-to-3-inch gravel cover was removed prior to sampling. Samples were obtained by driving the barrel containing two 3-inch high brass sleeves to a maximum depth of 1 foot, 2 inches below ground surface (bgs). After sample retrieval, the brass sleeves were capped and labeled. All samples were immediately placed on ice and later transported under chain of custody protocol to Apollo Analytics, Inc., Costa Mesa, California for analysis. Sampling equipment was cleaned as needed between samples using a Trisodium Phosphate/Water rinse.

Simple random sampling techniques, as outlined in SW-846, *Test Methods for Evaluating Solid Waste*, were employed during this sampling program. The number of samples taken was determined based on the potential for impact, and was increased in the areas in front of and behind the targets. Boring logs are included in Appendix A. A Boring Location and Sampling Plan is included as Figure 1.

2.11 Sampling Round No. 1

From October 15 to 17, 1998, Sampling Round 1 was conducted within Ranges B and C. A total of 113 samples were taken from 0-2.0 feet fbs at the berms and from 0-6 inches at the floors within the ranges. The analytical results indicated that significant lead concentrations are present in the berm soils at a depth of 2.0 feet fbs and in the floor soils immediately in front of and behind the target line to a depth of 6 inches bgs. The background samples taken from the sidestop berms contained lead concentrations in excess of 1,000 mg/kg, indicating that these areas had been impacted by deflected gunshot and are not representative of site background metals concentrations. Based on this initial sampling round, it was determined that additional samples from greater depths were needed to delineate the extent of lead soils at the site. Shot gun shell wads were found at all sample depths within the rear berms of the ranges sampled.

2.12 Sampling Round No. 2

On November 11, 1998, 18 additional samples were taken from the berms in Range C and from the floor in front of and behind the target line in Range B. Berm samples were taken to a maximum depth of 4.0-feet, 4 inches fbs, and profile samples were taken to a maximum depth of 1-foot, 2 inches bgs. A background sample (BFB-PS-111198-009A) was also taken from the front of the side berm, located northwest of the Range B Control Area. This area is behind the firing lines and assumed to be free of bullet impacts. Shot gun shell wads were also found at the deeper sample depths in the back berm of Range C.

2.2 SOIL PROFILE CHARACTERISTICS

2.21 Backstop Berm Soils

Berm soils consisted primarily of gravelly and sandy silts of low plasticity, reddish brown to dark brown in color. A layer of dark grayish brown gravelly fine sand (resembling foundry sand) was encountered within the berm soils of Range B.

2.22 Range Bay Soils

Soils encountered within the range bays consisted primarily of dark grayish brown sandy silt with gravel. The soils were hard and indurated.

3.0 ANALYTICAL RESULTS

3.1 METHODOLOGY

All samples were analyzed for the presence of Total Lead according to EPA Method 6010. The sample, from each chain of custody sheet, yielding the highest lead concentration was also analyzed for the presence of soluble lead. The soluble lead analysis was completed using EPA Method 7420, the WET (Waste Extraction Test). Selected Samples taken from "C" Range within areas of observed clay skeet remnants were also analyzed for the presence of semi-volatile compounds according to EPA Method 8270. One sample taken from a low-impact side berm area in each range was analyzed for Total Metals according to EPA Method 6010 to determine site background levels. One sample from the front of each berm was analyzed for Total Metals to determine if any other metals have impacted site soils. Analytical Results and completed Chain of Custody records from Apollo Analytics, Inc. are included in Appendix B.

3.2 LABORATORY (QA/QC)

QA/QC and standard operating procedures (SOPs) employed by Apollo Analytics, Inc., during sample handling and analysis are outlined in its QA/QC Manual, incorporated here by reference and available on file at HDR's Orange, California, office.

Field duplicates were included with the samples submitted to the laboratory and analyzed for the presence of total lead according to EPA Method 6010. A sample number ending with "Z" designates these samples.

3.3 SUMMARY OF FINDINGS

Table 3.1 presents the results of all lead analyses of soil samples taken from the site. Lead concentrations are reported in mg/kg or parts per million in excess of 25 mg/kg, the detection limit for this analysis. Figure 1 depicts the results of samples taken from each sampling location at depths A, B, C, D and E, as identified on the plan. In this discussion, "high concentrations" of lead refer to those exceeding the regulatory action level for classification of the soil as a hazardous waste of 1,000 mg/kg.

- The semi-volatile organic compound analyses (EPA 8270) of samples taken from lower surface berm soils in Range C do not indicate that the usage of clay skeet targets has negatively impacted site soils. No analytes were detected in excess of method detection limits in either of the samples analyzed (BFC-BS-101698-001A & BFC-BS-101798-005A).
- Total metals analysis of soil samples that exceed 1,000 mg/kg lead also contain relatively high concentrations of barium, molybdenum and copper. The background sample taken during Sampling Round 2 (BFB-PS-111198-009A) indicates that the berm soils are rich in zinc and nickel, and also can contain as much as 130 mg/kg of background lead.
- Berm sample results indicate that very high concentrations of lead are present in these soils to depths of 4 to 5 feet fbs. Sample BFC-BS-111198-002C, taken 4.0 feet - 4 inches from the surface, yielded 39,000 mg/kg lead.
- Profile samples taken from within 25 feet of the target lines indicate that high lead concentrations exist within the upper three inches of soil. Profile samples taken from within 15 feet of the target lines indicate that high lead concentrations are present to a depth of 1.0-foot bgs.
- Soil samples taken from the sidestops or side berms, adjacent to and 15 to 20 feet east/west of the target line, indicate that significant concentrations of lead are present in these soils to a minimum depth of 2.0-foot fbs. Berm sample BFB-BS-101798-016, taken from the west sidestop in Range B, yielded 12,000 mg/kg of lead at this depth.
- Duplicate analyses of selected soil samples indicate that variability of lead content exists in samples taken from the same location. Sample BFC-PS-101598-010A yielded 1,700 mg/kg lead and its duplicate, Sample BFC-PS-101598-010Z yielded 20,000 mg/kg lead. ~~This is an indication that more lead fragments were included in the latter analysis. Although samples were sieved prior to sample collection, visible lead fragments smaller than the sieve size appreciably affected the results.~~

- Analytical Results of soluble lead concentrations in site soils using the ~~WET~~ (STLC Extraction) indicate that the lead is highly soluble under acidic conditions. These results are included in Appendix B, following the 6010 analyses, and can be recognized by the units mg/L. All of the samples yielded concentrations exceeding the regulatory action level of 5 mg/L for classification as a hazardous waste. Sample BFC-PS-101598-002A contained 240 mg/kg total lead according to EPA Method 6010, the lowest lead concentration of the samples also analyzed for soluble lead content. The soluble lead result for this sample, using the ~~WET~~, was 69 mg/L; well above the hazardous waste action level.

ND: Not Detected in excess of 25 mg/kg

4.0 REGULATORY ASSISTANCE

4.1 REGULATORY ACTION LEVELS

Lead concentrations in soil, as well as other elemental metals, are classified as "hazardous" or "nonhazardous" by the California Code of Regulations (CCR) Title 22. Paraphrased, Title 22 states that in the case of elemental metals, the specified TTLC and STLC apply only if the metal is friable, powdered, or in a finely divided state. The acceptable TTLC for lead is 1,000 mg/kg and the acceptable STLC is 5.0 mg/L. The STLC analysis determines the amount of each analyte that is soluble in the WET leachate.

Lead-containing shooting range soils are not regulated under CCR Title 22 since their presence is accepted as a designated use of the property. In the event that the existing property usage changes, these soils may be regulated as hazardous waste under CCR Title 22.

4.2 REGULATORY ASSISTANCE PROGRAM

On behalf of the INS, HDR has requested oversight for this project from The County of San Diego, Department of Environmental Health Voluntary Assistance Program. Hazardous Materials Specialist David Felix is the County's assigned case worker for this project, and requested a copy of this report and an on-site meeting upon his review of its content. Mr. Felix has previously received a copy of the SAP and HSP for his review.

~~Recent conversation with Mr. Felix indicates that the County does not require any environmental regulation of on-site soils at the Brown Field Shooting Range at this time, and will not until the property usage changes. He is pleased that the INS has requested regulatory oversight to document the changed disposition of on-site lead soils previous to site reconstruction.~~

Since HDR has been informed that another Consultant was addressing issues relating to the off-site drainage, the presence of lead in said drainages resulting from site conveyance was not discussed with Mr. Felix. Based on existing SWRCB Storm Water Permit information and County of San Diego DOHS guidelines, these issues are subject to environmental regulation and may be of concern to Mr. Felix when he visits the Brown Field Firing Range.

5.0 CONCLUSIONS

Prior to completing the planned firing range upgrades and improvements, soils that contain high lead concentrations should be addressed. Based upon the field sampling program and the results of the laboratory analysis, there are at least 3,000 cubic yards (approximately 4,000 tons) of lead-containing soil within the site. However, as previously noted, plastic shotgun shell wads were present in the back berms, at all depths sampled. Because these plastic wads do not have the mass required to penetrate soil, it is assumed that the only way they could have been deposited at depth is through mechanical means. We conclude that the soil containing lead bullets and plastic wads at depth has been worked and redeposited during periodic maintenance and repair of the berms at various times throughout the past. Therefore, most if not all of the soil in each back berm may contain a significant amount of lead.

~~If the lead-containing soil is removed from the site, it must be treated as a hazardous waste; however, if it remains onsite, it is not subject to regulation. Since disposal of the soil at a hazardous waste facility could cost more than \$500,000.00, (based on \$150.00/ton disposal cost), the more economical approach would be to keep the soils onsite. Since allowing the soils to be exposed to moisture would result in soluble lead runoff, the easiest way to prevent the lead from becoming soluble is to place the lead-containing soil under a protective cap or to encapsulate the soil in a concrete matrix. Based on the results of this investigation that indicate that a large volume of lead containing soil is present at the site, HDR recommends that the soil be placed under a concrete cap.~~

6.0 RECOMMENDATIONS

To minimize the amount of movement of lead-containing soil, the back berms should be essentially left in place, and a sufficient amount of soil should be moved to accommodate the site improvements. Beginning at a distance of 15 feet in front of each target line, the top one-foot of lead-containing soil should be removed. Likewise, lead-containing soils adjacent to and behind each target line to the edge of the berms should be removed to a depth of 1.0-foot bgs within each range and transported to the back berm.

A concrete reinforced retaining wall should be placed around the perimeter of the back berm that is composed of the lead-containing soil. The height, length and width of the retaining wall should be adjusted to accommodate the entire amount of soil contained in the back berm. The ratio of height, to width, to length, should be adjusted to provide the most structurally sound and economical containment.

Upon completion of the construction of the retaining wall, the lead-containing soil should be adjusted and compacted within the retaining wall structure so as to develop a level surface across the top. After the retaining wall structure is filled, a reinforced concrete cap should be constructed on top of the lead-containing soil. The cap reinforcement should be tied into the retaining wall reinforcement for structural integrity. The thickness of the cap and retaining wall should be designed to withstand seismic events without cracking. In this manner, the lead-containing soil will be contained on site.

If the site usage changes in the future, under current regulations, all soils that contain elemental lead concentrations in excess of 1,000 mg/kg and soluble lead concentrations in excess of 5.0 mg/kg would be classified as hazardous. These soils might require analysis using the toxicity characteristic leaching procedure (TCLP), followed by their transportation to and disposal at a certified hazardous waste facility.

Attention: Susan Kline

Apollo Analytics Inc., has received the following sample(s):

<u>Date Received</u>	<u>Quantity</u>	<u>Matrix</u>
November 11, 1998	18	Soil

The sample(s) received were analyzed for total lead and CAM metals using EPA method 7000 series. The sample was subcontracted to Associated Laboratories for mercury. The subcontractor is an approved California Department of Health Services laboratory. For your reference, Associated Laboratories origina report is enclosed.

The results of these analyses and the quality control are enclosed. If you have any questions please do not hesitate to call (714) 751-3210.

Attention: Susan Kline

Apollo Analytics Inc., has received the following sample(s):

<u>Date Received</u>	<u>Quantity</u>	<u>Matrix</u>
October 19, 1998	113	Soil

The sample(s) received were analyzed for total lead and CAM metals using EPA method 7000 series, semi-volatile organics by GC/MS using EPA method 8270, the samples were extracted for STLC and analyzed for lead using EPA method 7000 series. The samples were subcontracted to Associated laboratories for mercury. The subcontractor is an approved California Department of Health Services laboratory. For your reference, Associated Laboratories original report is enclosed.

The results of these analyses and the quality control are enclosed. If you have any questions please do not hesitate to call (714) 751-3210.

COMMENTS

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods as indicated on the report. This cover letter is an integral part of the final report.

<u>Order No.</u>	<u>Client Sample Identification</u>
88778	9829204-032
88779	9829204-081
88780	9829204-56/57/58
88781	9829204-111/112/113

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

ASSOCIATED LABORATORIES by,

Edward S. Behare, Ph.D.

July 2, 2012

Mr. Craig Fergusson
City of San Diego, Environmental Services Department
9601 Ridgehaven Court, Suite 310
San Diego, CA 92123

Dear Mr. Fergusson:

UNAUTHORIZED RELEASE #H10618-024
CITY OF SAN DIEGO – BROWN FIELD AIRPORT, BEARDEN AVIATION, INC.
1424 CONTINENTAL STREET, SAN DIEGO, CA 92173

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code, and that no further action related to the petroleum release at the site is required.

Please be advised that claims for reimbursement of corrective action costs submitted to the State Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

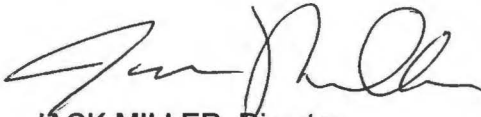

Mr. Craig Fergusson

- 2 -

July 2, 2012

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact Teresa Sherman at (858) 505-6797, if you have questions regarding this matter.

Sincerely,

A handwritten signature in black ink, appearing to read "Jack Miller", written in a cursive style.

JACK MILLER, Director
Department of Environmental Health

None observed

Comments:

Two 10,000-gallon capacity, single-walled steel underground storage tanks (USTs), Tank 10 and Tank 11, were removed from a common excavation located near the northern border of the former Brown Field Airport Fuel Farm on March 25, 1999. The USTs were misidentified in initial Brown Field environmental reports as Fuel Farm USTs 6 and 7. Tanks 10 and 11 were operated by Bearden Aviation, Inc., a fuel dispenser who leases property at the airport, and were formerly owned by Paladin Aviation, Inc. The unauthorized petroleum releases associated with the former Fuel Farm USTs are currently being addressed under DEH/SAM case #10618-016. Brown Field Airport is operated by the City of San Diego.

UST 10 contained jet fuel, and UST 11 contained aviation gas. While heavy corrosion was noted on both tanks during the removals, no holes were observed. After the two tanks were removed, soil samples were collected from below the northern and southern ends of the tank footprints at depths of 14 to 15 feet below ground surface (bgs). Total petroleum hydrocarbons in the gasoline range (TPH-g) and the diesel range (TPH-d) were not detected (less than 10 milligrams per kilogram [mg/kg]) in the northern UST 10 sample and the southern UST 11 sample. However, the soil sample collected below the southern end of UST 10 contained a TPH-g concentration of 18 mg/kg, and a TPH-d concentration of 42 mg/kg. The soil sample collected under the northern end of UST 11 contained a reported TPH-d concentration of 770 mg/kg, but TPH-g was not detected.

In 2006, in accordance with a DEH/SAM approved workplan, one boring (B-15) was drilled in the vicinity of the former USTs to assess the vertical extent of petroleum hydrocarbon-bearing soil. On September 11, 2006, hollow-stem auger refusal was encountered in the boring at a depth of approximately 30 feet bgs. Installation of the boring was continued on October 19 and 20, 2006, using an air-rotary drilling rig, and the boring was advanced to a depth of approximately 90 feet bgs. Five soil samples were collected from the boring at depths of 15, 25, 60, 70, and 80 feet (no recovery at 90 feet bgs), and TPH-g and TPH-d were not detected in the samples.

Groundwater was not encountered during advancement of the boring to 90 feet bgs. Based on reported depth to groundwater measurements in the Fuel Farm monitoring wells, groundwater in the vicinity of the former USTs is generally located at a depth between approximately 179 to 189 feet bgs.

A soil vapor study was conducted in the former Fuel Farm area in November 2008 to assess potential health risks. One of the survey's twenty-five vapor samples (SV-19) was collected at a depth of 5 feet bgs near the former location of USTs 10 and 11. According to the *Soil Vapor Survey Report*, dated February 8, 2010, no volatile organic compounds were reported in the SV-19 sample, with the exception of a toluene concentration of 1.3 micrograms per liter. Based on vapor contaminant concentrations measured across the former Fuel Farm, the consultant concluded that there is no significant risk to human health under a commercial exposure scenario.

In the May 2007 *Subsurface Assessment Report* for the former Fuel Farm site investigation, the consultant concludes that the extent of soil contamination related to USTs 10 and 11 has been delineated (by B-15 and other borings/wells in the Fuel Farm area), and groundwater has not been impacted. SAM concurs with the conclusion, and approves the City of San Diego's request for site closure.

Case Closure Summary

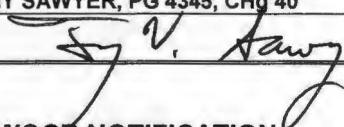

Leaking Underground Fuel Storage Tank Program

IV. CLOSURE

H10618-024

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? YES		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? YES		
Does corrective action protect public health for current land use? YES		
Case oversight completed based upon the following site use: COMMERCIAL		
Site Management Requirements: ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.		
Should corrective action be reviewed if land use changes? YES		
Monitoring Wells Decommissioned: N/A	Number Decommissioned: N/A	Number Retained: N/A
List Actions Taken: NOTICE OF REIMBURSEMENT / LOCAL		
List Enforcement Actions Rescinded: NONE

CITY/ZIP San Diego 92154

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC and the San Diego County Code of Regulatory Ordinances (SDCC). In accordance with the H&SC and the SDCC, a facility, business or property owner in San Diego County that handles, stores or disposes of hazardous substances, including medical wastes, or owns or operates an underground storage tank, must obtain a COUNTY OF SAN DIEGO UNIFIED PROGRAM FACILITY PERMIT on an annual basis. You are currently in violation of the law for not obtaining a Unified Program Facility Permit and may be subject to further legal action.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

- The facility above does not have a valid Unified Program Facility Permit for:
V0131 Generating, handling or storing a hazardous waste. SDCC 68.905, 65.102 & 65.104.
V1001 Handling or storing reportable quantities of a hazardous material. SDCC 68.905, 65.102 & 65.104.
V3101 Owning or operating an underground hazardous substance storage tank. SDCC 68.905, 65.102, 65.104, 68.1003, 68.1005, 68.1009. H&SC 25284.
V4201 Generating medical waste. SDCC 68.905, 65.102 & 65.104. H&SC 117705.

Non-Notification Fee: Per SDCC 68.907.1, a non-notification fee will be assessed if this box is checked.

OBSERVATIONS:

Today we conducted an inspection to determine compliance in the handling, storing, and disposal of hazardous. Evan Delgadillo, granted consent for Kaelyn Malone and Luke Campanella, HMD Inspectors, to do the inspection and do a facility walkthrough.

This facility performs oil changing services, car washing, and auto sales.

The following hazardous materials and hazardous wastes were observed today: drum
1- 55 gallon used oil
4- 55 gallon drums Electric Blue cleaning Fluid

CORRECTIVE ACTION(S):

- Pay all applicable Unified Program Facility Permit fees and penalties to the County of San Diego, Hazardous Materials Division within ten (10) calendar days of receipt of this Notice of Violation. Contact an Office Assistant at (858) 505-6661 to confirm the amount of permit fees and penalties to be paid. [Specialist: Use this corrective action for expired permits.]
Complete, sign and submit a Unified Program Facility Permit application within ten (10) calendar days of receipt of this Notice of Violation. [Specialist: Use this corrective action if a UPPF application is not on file.]
Pay all applicable Unified Program Facility Permit fees and penalties within ten (10) calendar days of receipt of an invoice from the County of San Diego, Hazardous Materials Division. [Specialist: Use this corrective action for new permits.]

A Unified Program Facility Permit will only be issued after the corrective actions marked above are complete. BE ADVISED THAT FAILURE TO OBTAIN A UNIFIED PROGRAM FACILITY PERMIT MAY RESULT IN FURTHER LEGAL ACTION. Any person who violates the Unified Program Facility Permit requirement specified above is guilty of a misdemeanor. Every day this violation occurs constitutes a separate offense.

Specialist should verify the identification of facility representative using a standard form of ID (e.g., CDL#, CA ID# or DOB).

PERMIT # _____
DATE 4, 2, 15.
PAGE 2 OF 3

FACILITY ADDRESS: 7310 Pogo Row #19 + #20

ZIP CODE: 92154

Notice to Comply: (Class II violations)

- ③ V1004: Hazardous Materials Business Plan not submitted to the CUPA in CERS.
- ④ V1020: Failed to submit Unified Program Facility Information in CERS to the CUPA for regulated activity or change in information.

VIOLATION: Unified Program Facilities are required to submit facility information through CERS per §25404(e)(4) of the California Health and Safety Code & CCR §15188. Failure to correct this violation could result in an enforcement action and significant penalties

OBSERVATION: The facility has not submitted information through the California Environmental Reporting System (CERS).

CORRECTIVE ACTION:

- Submit the facility information electronically at <https://cersbusiness.calepa.ca.gov> within 30 days of this inspection.
- Or; contact the HMD at 858-505-6990 within 10 days of this inspection for help in submitting your information electronically.

- ⑤ V0223: Failed to properly manage non-empty container.

Observations: During facility walkthrough 1- 55 gallon plastic open container was drum was observed holding used oil.

Corrective Action: Within 30 days manage the drum containing used oil properly with an authorized hazardous waste hauler. Provide the Hazardous Materials Division* with documentation that the drum was properly managed. Also ensure that containers holding hazardous wastes have a tight-fitting lid.

 ADDRESS: 7310 POGO ROW 50
 CITY/ZIP: SAN DIEGO /92154

OWNER'S NAME	<u>Richard Salinas</u>	CITY/ZIP	<u>San Diego</u>	<u>/92154</u>
ADDRESS	<u>1229 Pogo Row</u>	PHONE	<u>619-977-2615</u>	

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). The following statements describe significant violations. This notice requires a formal written response and corrective action within the times specified.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

CONSENT TO CONDUCT INSPECTION GRANTED BY: HILDA DEL CASTILLO REYES TITLE: OFFICE MANAGER

INTRODUCTION:

On 4/1/16, a status verification was conducted with Hilda Del Castillo Reyes, Office Manager to verify the status of the expired permit. Today, it was confirmed that business is still operating at the above address. Business has been operating with an expired permit since 9/30/15. A Notice of Violation (NOV) was issued today for operating with an expired permit.

NOTE: The permit was not renewed during the inspection. A copy of the invoice was provided to the Office Manager.

A copy of the NOV was sent by e-mail to the business and to the Office Manager. The box "refused to sign" was checked because nobody from the business was present during the inspection.

VIOLATION # 1

HMD1001 Unified Program Facility permit not obtained for hazardous materials. SDCC 68.905

Classification: Class I

Observations:

On 4/1/16, a status verification was conducted with Hilda Del Castillo Reyes, Office Manager to verify the status of the expired permit. Today, it was confirmed that business is still operating at the above address. Business has been operating with an expired permit since 9/30/15. A Notice of Violation (NOV) was issued today for operating with an expired permit.

NOTE: The permit was not renewed during the inspection. A copy of the invoice was provided to the Office Manager.

A copy of the NOV was sent by e-mail to the business and to the Office Manager. The box "refused to sign" was checked because nobody from the business was present during the inspection.

Corrective Action Due By: 04/11/2016

Within 10 days, renew the Unified Program Facility Permit (UPFP) to avoid enforcement action. Notify the area inspector once the invoice has been paid.

VIOLATION # 2

3010001 Unified Program Facility (UPF) permit not obtained for the generation of hazardous waste. HSC 25404.1; SDCC 68.905

Classification: Class I

Observations:

On 4/1/16, a status verification was conducted with Hilda Del Castillo Reyes, Office Manager to verify the status of the expired permit. Today, it was confirmed that business is still operating at the above address. Business has been operating with an

COUNTY OF SAN DIEGO

SUPPLEMENTAL NOTICE OF VIOLATION

expired permit since 9/30/15. A Notice of Violation (NOV) was issued today for operating with an expired permit.

NOTE: The permit was not renewed during the inspection. A copy of the invoice was provided to the Office Manager.

A copy of the NOV was sent by e-mail to the business and to the Office Manager. The box "refused to sign" was checked because nobody from the business was present during the inspection.

Corrective Action Due By: **04/11/2016**

Within 10 days, renew the Unified Program Facility Permit (UPFP) to avoid enforcement action. Notify the area inspector once the invoice has been paid.

You must submit a written response within 30 days (or as specified) addressing all violations noted. The written response must demonstrate all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. The County may initiate formal enforcement action including the imposition of substantial penalties for any significant violations addressed in this notice. Any violations that are not promptly corrected will result in liability for additional days in violation and additional penalties. Any failure to provide the information requested will also be a factor in determining penalties. For these purposes, "significant violations" include violations that represent a significant threat to human health or safety or the environment, chronic violations, violations committed by a recalcitrant violator and Class I hazardous waste violations (CCR 66260.10 and H&SC 25110.8.5).

 SPECIALIST: Rafaela Drummond
 INSPECTION CONTACT: RICHARD SALINAS
 TITLE: BUSINESS OWNER
 PHONE: (619) 977-2615
 E-MAIL: richardsal@yahoo.com

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC and the San Diego County Code of Regulatory Ordinances (SDCC). In accordance with the H&SC and the SDCC, a facility, business or property owner in San Diego County that handles, stores or disposes of hazardous substances, including medical wastes, or owns or operates an underground storage tank, must obtain a COUNTY OF SAN DIEGO UNIFIED PROGRAM FACILITY PERMIT on an annual basis. You are currently in violation of the law for not obtaining a Unified Program Facility Permit and may be subject to further legal action.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

The facility above does not have a valid Unified Program Facility Permit for:

- V0131 Generating, handling or storing a hazardous waste. SDCC 68.905, 65.102 & 65.104.
V1001 Handling or storing reportable quantities of a hazardous material. SDCC 68.905, 65.102 & 65.104.
V3101 Owning or operating an underground hazardous substance storage tank. SDCC 68.905, 65.102, 65.104, 68.1003, 68.1005, 68.1009. H&SC 25284.
V4201 Generating medical waste. SDCC 68.905, 65.102 & 65.104. H&SC 117705.

Non-Notification Fee: Per SDCC 68.907.1, a non-notification fee will be assessed if this box is checked.

OBSERVATIONS:

Business owner, Mario Lopez, buys and sells used cars. He changes the motor oil, anti-freeze and filters in some cars. According to statement provided by Mr. Lopez, very small amount of used oil / AF / filters are generated in this facility. He takes the waste to recycling centers. He has been operating without a UFPF for about a year.

CORRECTIVE ACTION(S):

- Pay all applicable Unified Program Facility Permit fees and penalties to the County of San Diego, Hazardous Materials Division within ten (10) calendar days of receipt of this Notice of Violation.
Complete, sign and submit a Unified Program Facility Permit application within ten (10) calendar days of receipt of this Notice of Violation.
Pay all applicable Unified Program Facility Permit fees and penalties within ten (10) calendar days of receipt of an invoice from the County of San Diego, Hazardous Materials Division.

A Unified Program Facility Permit will only be issued after the corrective actions marked above are complete. BE ADVISED THAT FAILURE TO OBTAIN A UNIFIED PROGRAM FACILITY PERMIT MAY RESULT IN FURTHER LEGAL ACTION. Any person who violates the Unified Program Facility Permit requirement specified above is guilty of a misdemeanor. Every day this violation occurs constitutes a separate offense.

Specialist should verify the identification of facility representative using a standard form of ID (e.g., CDL#, CA ID# or DOB).

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

- INITIAL INSPECTION -

The compliance inspection was conducted with Business owner, Mano Lopez. This inspection covered haz Materials / waste.

VIOLATIONS / NOTICE TO COMPLY.

- ① VO131. Unified Program Facility Permit (UPFP) not obtained for Hazardous Waste. See NOV issued today.

Corrective Action: Within 30 days, call CERS Help Desk and apply for a Permit.

Address:
5500 Overland Ave
San Diego, 92123

VIOLATION: Unified Program Facilities are required to submit facility information through CERS per §25404(e)(4) of the California Health and Safety Code & CCR §15188. Failure to correct this violation could result in an enforcement action and significant penalties

OBSERVATION: The facility has not submitted information through the California Environmental Reporting System (CERS).

CORRECTIVE ACTION:

- Submit the facility information electronically at <https://cersbusiness.calepa.ca.gov> within 30 days of this inspection.
- Or; contact the HMD at **858-505-6990** within 10 days of this inspection for help in submitting your information electronically.

The Hazardous Materials Business Plan (HMBP) is required by law to be certified online through the California Environmental Reporting System (CERS). For additional information about hazardous materials business plans and CERS, go to: <http://www.sdccounty.ca.gov/deh/hazmat/hmd-cers-info.html>

1. INTRODUCTION

Pursuant to Contract No. W19128F-15-D-0051, Delivery Order No. 0005, on behalf of the U.S. Air Force (USAF), Aerostar SES LLC (ASL) has completed this land use control implementation plan (LUCIP) for the restriction of soil exposure by limiting land use at Munitions Response Sites (MRS) SR901c and SR902d at the former San Diego Air Force Space Surveillance Station (AFSSS) located in San Diego, California (Figures 1-1 and 1-2). This document describes the procedures for implementing the institutional controls required by the final Records of Decision (RODs) for MRS SR901c and MRS SR902d, dated August 2015a and 2015b, respectively.

1.1 PURPOSE

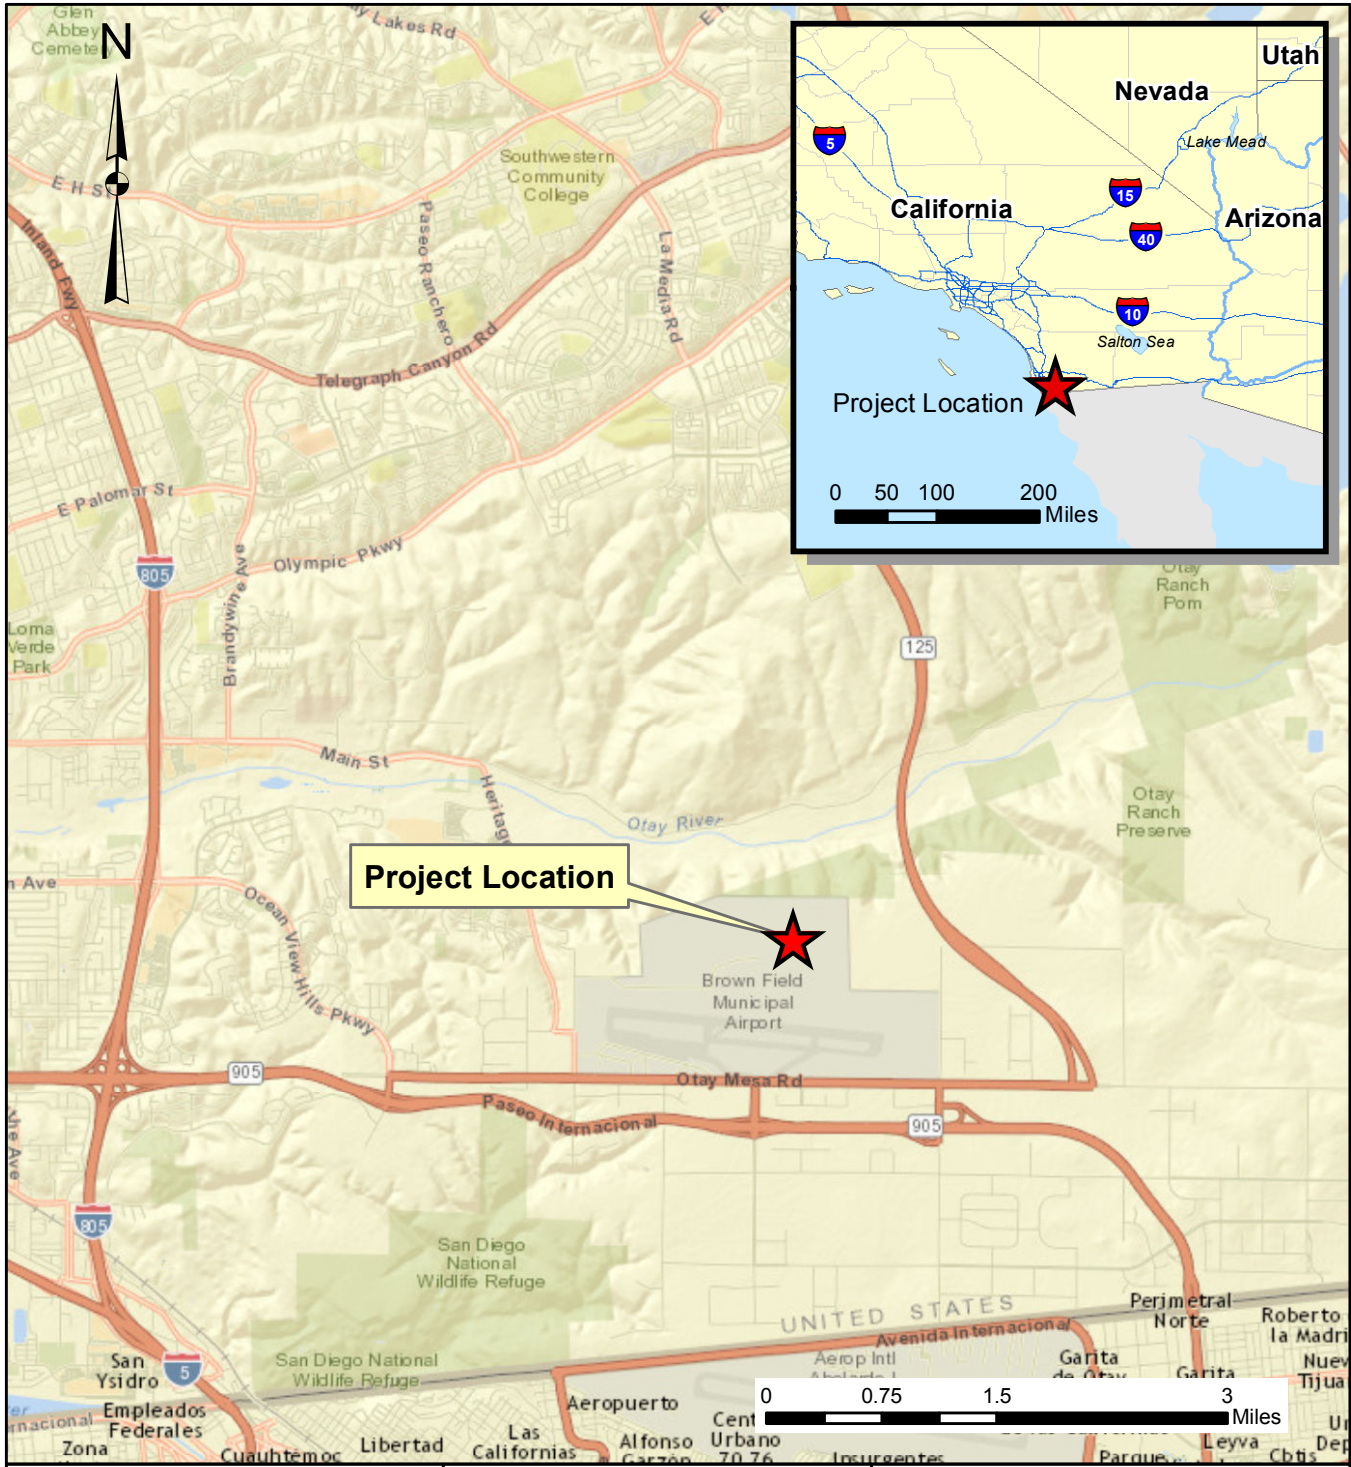

The purpose of this LUCIP is to document the responsibilities and procedures for maintaining, managing/tracking, enforcing and, when appropriate, modifying or terminating land use controls (LUCs). This LUCIP provides a framework for consistent and effective LUC implementation, management, and compliance tracking at the former San Diego AFSSS by the 21st Civil Engineering Squadron (CES) of the USAF. This LUCIP documents LUC implementation and management for the regulatory agencies overseeing Environmental Restoration Program activities at the San Diego AFSSS, primarily the California Department of Toxic Substances Control (DTSC). Future site tenants, owners, contractors, site workers, or members of the general public will use this plan as an information source.

1.1.1 Definition of LUCs

A LUC is a physical, legal, or administrative mechanism that restricts the use of, or limits access to, real property to prevent exposure to contaminants above permissible levels. The intent of these controls is to protect human health, the environment, and the integrity of engineering remedies by limiting the activities that may occur at a site.

The LUCIP contains the following:

- Brief description of MRSs SR901c and SR902d,
- Description of the LUCs required by the RODs for each MRS,
- Current maps of each MRS,
- Listing of LUC requirements and a designation of responsibility for meeting these requirements,
- Description of the mechanisms that will be used by the USAF to meet the LUC requirements, and
- Schedule and process for inspecting and reporting ongoing compliance with LUC requirements.

2. INSTALLATION BACKGROUND

The San Diego AFSSS is located approximately 25 miles southeast of San Diego, California, on a 108-acre, federally owned facility (Figure 1-1). The San Diego AFSSS installation property was initially developed by the army in 1918 as Major Killian East Field. The airfield was used for military and civilian aviation during the 1920s and 1930s. At the beginning of World War II (WWII) the Navy improved the airfield. The airfield was commissioned as Naval Auxiliary Air Station (NAAS) Otay Mesa on March 17, 1943 (later to become Brown Field), with a mission to operate as an auxiliary airfield to Naval Air Station (NAS) San Diego. In 1944, the Navy began construction of a gunnery range complex consisting of a bore site range, a Browning machine gun malfunction range, a pistol range, a skeet range, and a shotgun turret range. In addition, magazines were constructed north of the runway and stocked with ordnance. The small arms and skeet range activities during this period were the sole source of the contamination investigated under the Military Munitions Response Program (MMRP).

After WWII in 1946, NAAS Brown Field was decommissioned by the Navy, turned over to San Diego County, and rented for use as a chicken farm and a high school. However, the Korean War necessitated reopening the field in November 1951 and NAAS Brown Field was designated an auxiliary landing field to NAS San Diego (later renamed NAS Miramar). The original satellite tracking field station for Naval Space Surveillance Field Station (NSSFS) Brown Field was constructed in 1959. In 1960, the Navy relocated NSSFS Brown Field to a larger facility along the western boundaries of NAS Brown Field. In 1962, NAS Brown Field was closed and transferred for use by the City of San Diego and others (such as the Brown Field Municipal Airport and an Immigration and Naturalization Service [INS] field station). Activities related to NSSFS Brown Field continued after its closure. Due to rising lease costs and the deteriorated condition of the 25-year-old antenna system, the Navy again relocated NSSFS Brown Field when it built new facilities just north of the old runways at NAAS Brown Field in November 1992.

NSSFS Brown Field was transferred to the USAF in October 2004. San Diego AFSSS was the western-most of nine field stations associated with the USAF Space Surveillance System in the continental United States. The primary mission of San Diego AFSSS was to detect, catalog, and predict the orbital patterns of space objects (SKY, 2010). As of September 2013, the San Diego AFSSS mission ended and the installation is now closed but remains under 21st CES USAF administrative ownership.

2.1 CURRENT AND FUTURE LAND USE

The installation is currently non-operational and no personnel are located at the site, but is administratively managed by 21st CES. The installation was closed in 2013 and disposition of the property and future land use are pending. The surrounding land uses and zoning include an active INS training facility, various light industrial facilities, and the Brown Field Municipal Airport.

2.2 GEOLOGY

The geology underlying San Diego AFSSS consists of three formations: the Otay Formation, the San Diego Formation, and the Lindavista Formation. The Otay Formation usually consists of silty sandstone to claystone. This formation is visible on the canyon walls north of the range. The San Diego Formation consists of volcanic and quartzite cobbles, as well as sandstone and clay stone. This formation underlies the property. The Lindavista Formation consists of moderately well drained, deep gravelly clay loams. This formation is exposed at the surface of the mesa. The La Nacion Fault runs along the east side of Interstate 805, which is approximately six miles west of the San Ysidro Mountains. The Seismic Safety Study classifies the fault as “potentially active” (SKY, 2010).

3. SITE BACKGROUND

A preliminary assessment (PA) was conducted in 2005 and two Munitions Response Areas (MRAs) were identified and recommended for additional response actions: Small Arms Range MRA 901 and Skeet Range MRA 902.

3.1 SMALL ARMS RANGE MRS SR901C

LUCs were established as part of the final remedial actions for MRS SR901c in *Final Record of Decision for Small Arms Range (SR901c) Munitions Response Site, San Diego USAF Space Surveillance Station* (HDR Environmental, Operations and Construction, Inc. [HDR], 2015a).

3.1.1 Site Description and Use

Small Arms Range MRS SR901c comprises 0.55 acres located in the northern portion of the installation, (Figure 3-1). The MRS includes a portion of a canyon that bisects the installation and a seasonal depression. The U.S. Navy used the site as a boresight range from 1944 to approximately 1962. The INS used approximately 0.7 acres of the original 3.00-acre range as a small arms range from 1973 to 1987.

	0 100 200 Feet

The range is currently closed; however, remnants of the earthen target berm and concrete aircraft-staging pad are present. Clay target debris was scattered across the southwestern portion of the site, indicating that the site was also used for skeet shooting. Munitions used at MRA 901 likely included .22 caliber (cal), 9 millimeter (mm), .38 cal, and .45 cal from small arms pistols. There was also potential for .30 cal and .50 cal projectiles from smaller cal machine guns, and 20mm projectiles associated with the previous use of the site as a bore site range.

3.1.2 Site Contaminants and Risk Characterization

Multiple investigations have been completed at MRS SR901c and include a PA (Malcolm Pirnie, 2005), Comprehensive Site Evaluation (CSE) Phase II (SKY, 2010), and a remedial investigation (RI)/feasibility study (FS) (HDR, 2015c). Through these investigations, soil samples were collected and analyzed for lead and polycyclic aromatic hydrocarbons (PAHs). Multiple PAHs and lead were detected in surface and subsurface soil. The PAHs and lead concentrations in soil were attributed to historical use as a small arms range. The Small Arms Range MRS SR901c was created at the conclusion of the RI, and includes the upper canyon area formerly within MRS SR901a, the adjacent canyon slope, and the seasonal depression north of SR901a (Figure 3-1). Due to the steep slope, the MRS is inaccessible to heavy equipment that would be needed to perform a soil removal action. In addition, the canyon area contains plants that are sensitive habitat for the California gnatcatcher (CAGN) (*Poliopitila californica*, a federally listed threatened species).

3.1.2.1 Risk Evaluations

The RI and CSE Phase II sample results were evaluated in a Human Health Risk Assessment (HHRA) and Baseline Ecological Risk Assessment (BERA). Lead concentrations did not exceed the residential California Human Health Screening Level (CHHSL) in either surface or subsurface soil and was not considered a contaminant of concern (COC) for MRS SR901c. Regarding PAHs, non-cancer hazard quotients were not greater than 1 for any receptor; however, calculated cancer risks exceeded the upper bound of the risk management range (i.e., the range between the target risk threshold of 1×10^{-6} and 1×10^{-4}) for the residential receptors suggesting unacceptable human health risks. The BERA concluded that lead and PAH hazard quotients were not greater than 1, suggesting no unacceptable risk for ecological receptors.

A separate qualitative evaluation of risk to human and ecological receptors for the seasonal depression north of SR901c was performed as part of the RI data evaluation. A single lead x-ray fluorescence sample was collected in this area during the CSE Phase II. No samples were collected during the RI due to restricted access to protect the sensitive habitat. The limited data suggests that lead could be present at levels that pose a risk to human residential receptors.

3.1.3 Selected Remedy

The FS evaluated and compared remedial alternatives that would reduce or eliminate human health exposure risks associated with PAHs in soil. The terrain at MRS SR901c is too steep for heavy equipment to be safely deployed to remove contaminated soil and the MRS contains plants that are considered sensitive habitat for threatened and endangered (T&E) species. The U.S Fish and Wildlife Service has issued a Biological Opinion (BO) that prohibits disturbance of the seasonal depression within MRS SR901c. Therefore, the FS recommended the remedy of LUCs to protect public health from actual or threatened releases of hazardous substances or pollutants and contaminants. The recommendation was documented in the Proposed Plan (HDR, 2015d) and approved in the final ROD for MRS SR901c (HDR, 2015a). The following (Table 3-1) residential remedial action objectives (RAOs) were developed and presented in the ROD for each COC.

Table 3-1 Summary of Remedial Action Objectives for MRS SR901c

COC	Remedial Action Objective (mg/kg)
Benzo(a)anthracene	0.15
Benzo(a)pyrene	0.015
Benzo(b)fluoranthene	0.15
Chrysene	3.8
Dibenz(ah)anthracene	0.015
Indeno(1,2,3-cd)pyrene	0.15

mg/kg = milligram/kilogram

COC = contaminant of concern

The major components of the remedy are as follows:

- Planning activities to identify the type of use restrictions (such as prohibiting intrusive activities), responsible parties for conducting long-term institutional control and engineering control activities, and estimated costs and funding mechanisms. Planning activities include dig permits and National Environmental Policy Act (NEPA)/Environmental Impact Analysis Process (EIAP) construction reviews (Table 3-2).
- Implementation and monitoring activities for documenting and putting the selected LUCs in place and ensuring their continued effectiveness, including preparation of a LUCIP and updates following five-year reviews.
- Establishing a process to transfer the LUCs in the event the property is transferred to a non-federal entity or federal entity.

Site-specific LUCs are summarized in Table 3-2 and areas included under the LUCs are illustrated on Figure 3-1.

Table 3-2 Summary of Land Use Controls for Munitions Response Site SR901c.

LUC Purpose	COCs	Size (acres)	LUCs
Control direct exposure to contaminated soil	Benzo(a)anthracene Benzo(a)pyrene Benzo(b)fluoranthene Dibenz(ah)anthracene Indeno(1,2,3-cd)pyrene Lead	0.55	<p><u>Physical Controls</u></p> <ul style="list-style-type: none"> <i>Install signage.</i> Post signs surrounding the MRS to describe the restricted access and warning visitors or trespassers to avoid exposure to potentially contaminated soil. Signs will be prepared to include both English and Spanish text (example provided in Appendix A). <p><u>Administrative Controls</u></p> <ul style="list-style-type: none"> <i>Incorporate a dig permit process and NEPA/EIAP construction reviews.</i> No intrusive activity shall occur within the MRS without the knowledge and concurrence of the USAF. Any authorized intrusive activity will require an approved health and safety plan, use of appropriate personal protective equipment (PPE) and any other appropriate precautions to protect site workers from unacceptable occupational exposure to soil COCs. Shallow soil excavated from the MRS should not be disposed off-site unless proper procedures for disposal of contaminated material are followed. <i>Incorporate information about use or exposure limitations into planning documents and Geographical Information System (GIS) files prepared for the installation.</i> No changes in the type of land use shall be implemented within each MRS covered by LUCs without the knowledge and concurrence of the USAF and DTSC. Land use shall be limited to light industrial uses where personnel are onsite only intermittently. Site access for maintenance of security fencing is anticipated. Additional compliance with the established BO is required for all activities including general access. <p><u>Legal Controls</u></p> <ul style="list-style-type: none"> <i>Record land use covenants if property is transferred to a non-federal entity.</i> Should the property be transferred to a non-federal entity, the Air Force will ensure that a land use covenant will be recorded in San Diego County by the transferee. <i>Record land use covenants if property is transferred to another federal entity.</i> Should the property be transferred to a federal entity, the Air Force will ensure that a land use covenant will be recorded in the transfer documents.

BO = biological opinion
 EIAP = Environmental Impact Analysis Process
 MRS = munitions response site
 USAF = United States Air Force

COCs = contaminant of concern
 GIS = geographical information systems
 NEPA = National Environmental Policy Act

DTSC = Department of Toxic Substances Control
 LUCs = land use controls
 PPE = personal protective equipment

The USAF is responsible for implementing LUCs through the following:

- Planning activities to identify the type of use restrictions such as prohibiting intrusive activities, prohibiting future development for residential use, and identifying requirements for any site visitors to be informed of the hazard and escorted if there is a need to be on site.
- Identifying the language to be included on warning signs and the number and specific locations for signs. Signs will be bilingual to ensure that any potential site visitors will be informed of the restrictions.
- Identifying the location of any fencing determined necessary.
- Establishing routine inspection and maintenance requirements.
- Developing detailed costs, and identifying funding mechanisms and those responsible for obtaining and distributing the required funds for maintaining the LUCs.
- Documenting all of the LUC elements in an LUCIP.
- Identifying approximate schedules and funding requirements for ongoing five-year reviews and updates of the LUCIP if required.
- Establishing a process to transfer the LUCs in the event the property is transferred to a non-federal or federal entity.

The LUCs will remain in place as long as PAH concentrations in surface and subsurface soil exceed RAOs. PAHs are semivolatile organic compounds and natural attenuation will occur reducing concentrations over time. However, barring any active remediation such as excavating and removing the contaminated soil, the LUCs at this site could potentially remain in place for several decades.

3.2 SKEET RANGE MRS SR902D

LUCs were established as part of the final remedial actions for MRS SR902d in *Final Record of Decision for Skeet Range (SR902d) Munitions Response Site, San Diego USAF Space Surveillance Station (HDR, 2015b)*.

3.2.1 Site History and Land Use

Skeet Range MRS SR902d comprises 3.96 acres located in the northwestern portion of the installation (Figure 3-2). The MRS includes a portion of a canyon that bisects the installation and a vernal pool. The MRA was operated by the United States Navy from 1944 until the mid-1950s. Approximately 13.00 acres of the eastern portion of the skeet range is located on San Diego AFSSS property. The remaining acreage is heavily developed and occupied by the City of San Diego and the INS. Munitions used at MRA 902 (including SR902d) were limited to small arms.

Legend

- Occupied Vernal Pool
- Occupied Vernal Pool 50' Buffer
- MRS Boundary
- SR902d (3.96 acres)
- X - X Fence

Date: 12/30/2015

Service Layer Credits: Esri ArcGIS Online

R:\Projects\112027_0005.01-07 San Diego\Graphics\Small Arms Range SR902d.mxd

Contaminant sources included lead shot and shotgun shell casings, and skeet debris, primarily clay target debris and associated PAH contamination (PAHs are components of the asphalt materials used in the clay targets).

3.2.2 Site Contaminants and Risk Characterization

Multiple investigations have been completed at SR902d and include a PA (Malcolm Pirnie, 2005), CSE Phase II (SKY, 2010), and RI/FS (HDR, 2015c). Through these investigations, soil samples were collected and analyzed for lead and PAHs. Multiple PAHs and lead were detected in surface and subsurface soil. The PAHs and lead concentrations in soil were attributed to historical use as a skeet range. The Skeet Range MRS SR902d was created at the conclusion of the RI, and includes the upper canyon area formerly within MRS SR902a, the adjacent canyon slope, and the vernal pool associated with MRA 902 (Figure 3-2). The MRS is inaccessible to heavy equipment that would be needed to perform soil removal, and the canyon area also contains plants that are sensitive habitat for the CAGN (*Polioptila californica*, a federally listed threatened species). Based on the results of the RI, MRS SR902d (3.96 acres) was split from MRS SR902c and includes the vernal pool and canyon area where lead concentrations exceeded the residential CHHSLs.

3.2.2.1 Risk Evaluations

RI sample results were used to perform a HHRA and Ecological Risk Assessment to determine whether exposure to reported lead or PAHs would pose an unacceptable risk to human or ecological receptors. Quantitative human health and ecological risk evaluations were performed using the CSE Phase II data for the vernal pool.

Soils

Based on the RI sample results, there are no unacceptable hazards for workers and trespassers due to lead exposure in surface soils. There are predicted elevated blood lead concentrations only for the 90th percentile childhood exposure (or pica child) and above. There were no unacceptable cancer risks for exposure to surface soils for any other receptor.

Potential cancer risks to hypothetical future residents exposed to PAHs in surface and subsurface soil are greater than 1×10^{-4} , and exceed the risk management range of 1×10^{-4} to 1×10^{-6} . The risks are primarily driven by surface soil ingestion (HDR, 2015b).

Vernal Pool

Risk associated with the vernal pool was calculated based on data collected during the CSE Phase II. The maximum lead concentration of the three samples available exceeded the CHHSL. The limited PAH and lead results from three samples exceeded screening levels but do not support a conclusive determination of risk to human receptors. The reported concentrations would suggest low risk to human receptors based on a hypothetical, seasonal exposure to a very small area. This area is actively managed to protect the endangered species. Any human receptor exposure would be expected to be for a short duration within this small area.

3.2.3 Selected Remedy

The FS evaluated and compared remedial alternatives that would reduce or eliminate human health exposure risks associated with PAHs in soil. The terrain at MRS SR902d is too steep for heavy equipment to be safely deployed to remove contaminated soil and the canyon areas contains plants that are considered sensitive habitat for T&E species. The vernal pool has been confirmed to contain the San Diego fairy shrimp (*Branchinecta sandiegonensis*), a federally listed endangered species. The BO prohibits disturbance to this area. Therefore, the FS recommended the remedy of LUCs to protect public health and the environment from actual or threatened releases of hazardous substances or pollutants and contaminants. The recommendation was documented in the Proposed Plan (HDR, 2015d) and approved in the final ROD for MRS SR902d (HDR, 2015b). The residential remedial action objectives (Table 3-3) were developed and presented in the ROD for each COC:

Table 3-3 Summary of Remedial Action Objectives for MRS SR902d

COC	Remedial Action Objective (mg/kg)
Benzo(a)anthracene	0.15
Benzo(a)pyrene	0.015
Benzo(b)fluoranthene	0.15
Dibenzo(a,h)anthracene	0.015
Indeno(1,2,3-cd)pyrene	0.15
Lead	80

COC = contaminant of concern mg/kg = milligrams per kilogram

The major components of the remedy are as follows:

- Planning activities to identify the type of use restrictions (such as prohibiting intrusive activities), responsible parties for conducting long-term institutional control and engineering control activities, and estimated costs and funding mechanisms. Planning activities include dig permits and NEPA/EIAP construction reviews (Table 3-4).

Table 3-4 Summary of Land Use Controls for Munitions Response Site SR902d.

LUC Purpose	COCs	Size (acres)	LUCs
Control direct exposure to contaminated soil	Benzo(a)anthracene Benzo(a)pyrene Benzo(b)fluoranthene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene Lead	3.96	<p><u>Physical Controls</u></p> <ul style="list-style-type: none"> • <i>Install signage.</i> Post signs surrounding the MRS to describe the restricted access and warning visitors or trespassers to avoid exposure to potentially contaminated soil. Signs will be prepared to include both English and Spanish text (example provided in Appendix A). <p><u>Administrative Controls</u></p> <ul style="list-style-type: none"> • <i>Incorporate a dig permit process, NEPA/EIAP construction reviews.</i> No intrusive activity shall occur within the MRS without the knowledge and concurrence of the USAF. Any authorized intrusive activity will require an approved health and safety plan, use of appropriate PPE and any other appropriate precautions to protect site workers from unacceptable occupational exposure to soil COCs. Shallow soil excavated from the MRS should not be disposed off-site unless proper procedures for disposal of contaminated material are followed. • <i>Incorporate information about use or exposure limitations into planning documents and GIS files prepared for the installation.</i> No changes in the type of land use shall be implemented within each MRS covered by LUCs without the knowledge and concurrence of the USAF and DTSC. Land use shall be limited to light industrial uses where personnel are onsite only intermittently. Site access for maintenance of security fencing is anticipated. Additional compliance with the established BO is required for all activities including general access. <p><u>Legal Controls</u></p> <ul style="list-style-type: none"> • <i>Record land use covenants if property is transferred to a non-federal entity.</i> Should the property be transferred to a non-federal entity, the Air Force will ensure that a land use covenant will be recorded in San Diego County by the transferee. • <i>Record land use covenants if property is transferred to another federal entity.</i> Should the property be transferred to a federal entity, the Air Force will ensure that a land use covenant will be recorded in the transfer documents.

BO = Biological Opinion
 EIAP = Environmental Impact Analysis Process
 MRS = munitions response site
 USAF = United States Air Force

COC = contaminant of concern
 GIS = geographical information systems
 NEPA = National Environmental Policy Act

DTSC = Department of Toxic Substances Control
 LUC = land use controls
 PPE = personal protective equipment

- Implementation and monitoring activities for documenting and putting the selected LUCs in place and ensuring their continued effectiveness, including preparation of a LUCIP and updates following five-year reviews.
- Establishing a process to transfer the LUCs in the event the property is transferred to a non-federal entity.

Site-specific LUCs are summarized in Table 3-4 and areas included under the LUCs are illustrated on Figure 3-2.

The USAF is responsible for implementing LUCs through the following:

- Planning activities to identify the type of use restrictions such as prohibiting intrusive activities, prohibiting future development for residential use, and identifying requirements for any site visitors to be informed of the hazard and escorted if there is a need to be on site.
- Identifying the language to be included on warning signs and the number and specific locations for signs. Signs will be bilingual to ensure that any potential site visitors will be informed of the restrictions.
- Identifying the location of any fencing determined necessary.
- Establishing routine inspection and maintenance requirements.
- Developing detailed costs, and identifying funding mechanisms and those responsible for obtaining and distributing the required funds for maintaining the LUCs.
- Documenting all of the LUC elements in an LUCIP.
- Identifying approximate schedules and funding requirements for ongoing five-year reviews and updates of the LUCIP if required.
- Establishing a process to transfer the LUCs in the event the property is transferred to a non-federal or federal entity.

The LUCs will remain in place as long as the PAH concentrations in surface and subsurface soil exceed RAOs (Table 3-3). PAHs are semivolatile organic compounds and natural attenuation will occur reducing concentrations over time. However, barring any active remediation such as excavating and removing the contaminated soil, the LUCs at this site could potentially remain in place for several decades.

4. IMPLEMENTATION, MANAGEMENT, AND COMPLIANCE MONITORING

4.1 IMPLEMENTATION

4.1.1 Responsibilities

As the lead agency, the USAF, specifically the 21st CES, is responsible for ensuring the effectiveness of the LUCs until LUCs are no longer needed. The DTSC is responsible for regulatory review of LUC effectiveness.

The USAF will be responsible for the following:

- Planning and securing funding to support the LUC management;
- Planning and implementing a USAF dig permit process;
- Identifying LUC deficiencies or failures and planning and implementing corrective actions;
- Communicating with the DTSC and federal agencies as they pertain to LUC effectiveness, maintenance, and management (including notifications regarding any LUC failures, proposed corrective actions, and/or land use changes);
- Reviewing any planned actions, programs, or construction that will take place in areas at which LUCs have been implemented and specifying, by signature (including electronic signature on an email), compliance requirements or conditions for these planned actions, programs, or construction; and
- Planning, conducting, and reporting annual LUC inspections through issuance of an annual report to DTSC.

The DTSC will be responsible for the following:

- Timely review of annual LUC inspection reports, and
- Assistance to the USAF to address identified LUC deficiencies or failures.

4.2 MONITORING AND REPORTING

The USAF will perform annual inspections of the land areas associated with the remedy for the MRSs as described in the subsections below. Inspections will include field inspection, document review, and review of administrative controls in place, including but not limited to security procedures and records and the approval of projects for each area. The inspection will also document the land use at the time the inspection is conducted. Inspectors will take representative photographs to document site conditions and document visual evidence of LUC deficiencies or failures. Checklists will be used to guide inspectors and assist in the

capture of the data necessary to assess and report on the effectiveness of LUCs at the MRSs, and develop enhancements as appropriate.

The first LUC Report prescribed under this plan will be submitted to DTSC on or before the one year anniversary of DTSC review and comment of the LUCIP. Subsequent reports will be submitted annually. After the facility's LUC approach is established, and the facility has demonstrated its effectiveness, the frequency of future monitoring reports for the MRSs may be modified with approval by DTSC. The LUC monitoring report, at a minimum, shall contain the following:

- A description of how the facility is meeting the MRS-specific LUC objectives, including results of visual field inspections of all areas subject to specific restrictions;
- The frequency for each site that the dig permit or construction review process was triggered and used;
- An evaluation of whether or not the MRS specific LUC requirements are being met; and
- A description of any deficiencies and the efforts or measures that have been or shall be taken to correct problems.

As part of the of the LUC monitoring, the USAF will continually update the GIS to reflect any changes in areas with LUC restriction. The USAF GIS will be the definitive source of spatial data and maps for LUC implementation and reporting.

4.2.1 LUC Maintenance

Once LUCs are implemented, long term maintenance and monitoring will be conducted. Signs will be maintained in accordance with applicable regulations. The signs will be inspected to ensure they are visible, readable, and in good condition. Existing fencing, gates, and access roads will be inspected for signs of physical damage and the findings will be recorded. Locks and gates will be checked to ensure they are operable. Required maintenance activities identified during annual inspections will be documented in the annual LUC reports and action items addressed by the USAF.

Monitoring will include field LUC inspections, document review, and review of administrative controls in place such as the approval of projects for the area.

4.2.2 Lease Restrictions

There are currently no leases associated with the San Diego AFSSS. However, if there are any leases, the USAF will ensure, as appropriate, that any contractor, tenant, or other authorized occupant of the land subject to the LUCs is informed of the LUCs, and is made subject of the requirements of such LUCs.

4.2.3 Property Transfer Restrictions

The USAF will conduct an annual review of any property transfer plans at the installation. The annual review may involve interviews with USAF personnel involved with long-term planning. The USAF will document the results of the record review/interviews, including any failures of the controls, lessons learned, and corrective actions in the annual LUC Report to DTSC.

Whenever the Air Force transfers real property that is subject to institutional controls and resource use restrictions to a non-federal agency the Air Force shall advise the recipient of all obligations contained in the ROD/Remedial Action Plan, including the obligation that a State Land Use Covenant will be executed and recorded pursuant to Title 22 of the California CCR Section 67391.1.

Whenever the Air Force transfers real property that is subject to institutional controls and resource use restrictions to another federal agency, the transfer documents shall require that the federal transferee include the institutional controls and applicable resource use restrictions, in its resource use plan or equivalent resource use mechanism. The Air Force shall advise the recipient federal agency of all obligations contained in the ROD/Remedial Action Plan, including the obligation that a State Land Use Covenant will be executed and recorded pursuant to Title 22 of the California CCR Section 67391.1 in the event the federal agency transfers the property to a non-federal entity.

The Air Force will provide notice to DTSC at least 6 months prior to any transfer or sale of SR901c or SR902d so that DTSC can be involved in discussions to ensure that appropriate provisions are included in the transfer terms or conveyance documents to maintain effective institutional controls. If it is not possible for the facility to notify DTSC at least 6 months prior to any transfer or sale, then the facility will notify DTSC as soon as possible but no later than 60 days prior to the transfer or sale of any property subject to institutional controls. In addition to the land transfer notice and discussion provisions above, the Air Force further agrees to provide DTSC with similar notice, within the same time frames, as to federal to-federal transfer of property. The Air Force shall provide a copy of the executed deed or transfer documents to DTSC.

4.2.4 GIS Database Revisions

GIS data will be updated as needed if LUCs or boundaries change, and act as a tracking mechanism for land areas under restriction or control. The USAF GIS will be the definitive source of spatial data and maps for LUC implementation and reporting.

4.3 LAND USE CONTROLS ENFORCEMENT

If the USAF discovers any land use that is inconsistent with the MRS-specific LUC objectives or use restrictions or any activity that may interfere with the effectiveness of the LUCs, they will notify DTSC as soon as practicable but no later than 10 business days after discovery with a written description of the deficient land use. The USAF will work with DTSC to determine a plan of action to rectify the situation. The USAF will identify root cause, evaluate how to correct the process to avoid future LUC problems, and implement these changes after consulting with DTSC. The USAF will notify DTSC regarding how the facility has addressed, or will address, the activity within 10 days of sending DTSC notification of the activity.

4.4 MODIFICATION AND TERMINATION OF LAND USE CONTROLS

Modification or termination of a LUC established in an approved ROD can only be accomplished by a revision or a modification to the existing ROD. If conditions at the site change, a LUC is ineffective, or the cleanup objectives are met, then the USAF and DTSC may evaluate whether to modify, discontinue, or add LUCs. The determination to modify, discontinue, or add LUCs will be documented and placed in the Administrative Record file for the San Diego AFSSS. The USAF shall not make a modification to or terminate a LUC without DTSC concurrence. Likewise, the USAF will seek prior concurrence before any anticipated action that may disrupt the effectiveness of the LUCs or any action that may alter or negate the need for LUCs. In the case of an emergency action, the USAF will seek to notify DTSC orally before implementing the removal action. Where time allows and it is appropriate, the USAF will seek DTSC concurrence. The requirements for annual inspections will end when the USAF and DTSC determine that inspections are no longer needed to maintain the protectiveness of the remedy and that site conditions allow for unlimited use and unrestricted exposures based on the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 criteria.

4.5 FIVE-YEAR REVIEWS

Pursuant to the Superfund Amendments and Reauthorization Act (SARA) of 1986, five-year reviews are required for all remedial actions that meet both of the following criteria:

- Upon completion of remedial action at a site, hazardous substances, pollutants, or contaminants will remain above levels that allow for unlimited use and unrestricted exposure; and
- The ROD for the remedial action was signed on or after October 17, 1986 (the effective date of SARA).

The purpose of a five-year review is not to reconsider decisions made during selection of the remedy, as specified in the ROD, but to evaluate the implementation, protectiveness, and performance of the selected remedy. In the case of sites that are still undergoing remedial action, the purpose of the five-year review is to confirm that immediate threats have been addressed and that the remedy will be effective when complete. Five-year review for sites in long-term management or monitoring phases should confirm whether the selected remedy remains protective. Protectiveness is generally defined in the National Contingency Plan by the cancer risk range and non-cancer the hazard index. Evaluation of the remedy and the determination of protectiveness should be based on and sufficiently supported by data and observations. The five-year review process includes the following elements:

- Notification of potentially interested parties of start of review,
- Identification of five-year review team members,
- Components and schedule of the five-year review,
- Document review,
- Data review and evaluation,
- Community notification,
- Other community involvement activities,
- Site Inspection,
- Site interviews,
- Technical Assessment of Protectiveness,
- Issues and recommendations (as appropriate, and
- Protectiveness determination.

Detailed instructions and procedures for conducting five-year reviews are provided in the United States Environmental Protection Agency (EPA) document *Comprehensive Five-Year Review Guidance* (EPA, 2001) and *Recommended Evaluation of Institutional Controls: Supplement to the Comprehensive Five-Year Review Guidance*, Office of Solid Waste and Emergency Response Directive 9355.7-18 (EPA, 2011). The five-year review clock is triggered by initiation of remedial action construction at a site (i.e., the remedial action start date, typically the date of mobilization), or in the case of sites where the remedy does not include construction, the signature date of the ROD. Five-year reviews are no longer needed when no hazardous substances, pollutants, or contaminants remain on site above levels that allow for unlimited use and unrestricted exposure. The basis for this finding should be documented in the final five-year review report. The five-year reviews of LUC sites at the San Diego AFSSS will be conducted by the USAF beginning five years after the signature date of final RODs for MRS SR901c and SR902d.

Mr. Craig Fergusson
City of San Diego, Environmental Services Department
9601 Ridgehaven Court, Suite 310
San Diego, CA 92123

Dear Mr. Fergusson:

UNDERGROUND STORAGE TANK (UST) CASE #H10618-002
CITY OF SAN DIEGO, BROWN FIELD AIRPORT, INDUSTRIAL PARK
1424 CONTINENTAL STREET, SAN DIEGO, CA 92173

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code, and that no further action related to the petroleum releases at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact Teresa Sherman, at (858) 505-6797, if you have questions regarding this matter.

Sincerely,

JACK MILLER, Director
Department of Environmental Health

Comments:

The site is located in the Industrial Park Area of the Brown Field Airport, between Curran Street and the adjoining taxi apron. On March 17, 1989, two underground storage tanks (USTs), Tank 5, a 12,000-gallon steel UST that had stored aviation gas, and Tank 27, a 500-gallon steel waste oil UST, were removed from a common excavation on the site. Tank 5 had failed a precision test in November 1987. During the tank removal, holes were visible in both tanks, and visible soil contamination was observed under Tank #27. Based on these observations, an unauthorized release case (#H10816-002) was immediately opened for the site. Subsequent analyses of soil samples collected on March 21, 1989 below Tank 5 showed a maximum total petroleum hydrocarbons (TPH) concentration of 95.5 milligrams per kilogram (mg/kg), and indicated contamination by weathered gasoline.

On March 22 to March 30, 1989, the Tank 5/Tank 27 excavation pit was overexcavated to a depth of approximately 14 to 15 feet below ground surface (bgs) in the former Tank 27 area, and as deep as 25.5 feet bgs in the former Tank 5 area. Fifteen confirmation soil samples were collected from the side walls, end walls, and bottom of the excavation after the soil removal. A maximum TPH concentration of 71.2 mg/kg was reported in one of ten soil samples collected in the vicinity of the former aviation gas UST (Tank 5), and organic lead was not detected in the sample. Five soil samples were collected in the waste oil UST (Tank 27) area. The highest reported Total Recoverable Petroleum Hydrocarbons (TRPH) concentration was 325 mg/kg, and total chromium was reported at a maximum level of 6 mg/kg. Organic lead and chlorinated solvents were not detected in the sample.

According to the environmental consultant's March 1990 report (which documented the 1989 overexcavation activities), material that was excavated from above a depth of approximately 14 or 15 feet bgs was presumed to be clean, and was stockpiled. The tank excavation was later partially backfilled with this stockpiled soil (which had a maximum sample TPH concentration of 44.5 mg/kg), then clean imported fill was used to complete the excavation closure. Excavated soil below approximately 14 or 15 feet (a total of approximately 320 to 384 cubic yards) was presumed to be contaminated and was transported to the Brown Field Fuel Farm contaminated soil storage area and stockpiled. The Fuel Farm contaminated soil storage area also contained impacted soil from other UST removal locations at Brown Field. The soil stockpiles were allowed to attenuate naturally until sampling results indicated that the soil could be re-used at Brown Field. In 2009, approximately 100 cubic yards of remaining stockpiled soil was sampled by an environmental consultant and approved for on-site reuse by DEH/SAM.

On September 25, 1997, in accordance with a DEH/SAM approved workplan, one boring, B-18, was placed in the Tank 5/Tank 27 excavation. According to the Site Assessment Report, dated March 3, 1998, B-18 was drilled to a depth of 36.5 feet bgs in a location between former Tanks 5 and 27. Soil samples were collected from the boring at depths of 5, 10, 15, 25, 30, and 35 feet bgs. TRPH was only detected in the soil sample collected at 15 feet bgs, with a reported concentration of 14 mg/kg.

Groundwater was not encountered in the boring at 36.5 feet bgs. Based on reported depth to groundwater measurements in wells located in the nearby Fuel Farm area, groundwater is present at a depth of approximately 179 to 189 feet bgs in the vicinity of the site.

The 1998 Site Assessment Report states that the primary sources of contamination (USTs and approximately 350 cubic yards of impacted soil) have been removed and that the extent of impacted soil has been assessed by the overexcavation activities and the soil boring in the tank excavation. The consultant concludes that the concentrations of residual petroleum hydrocarbons in remaining soil do not support the possibility of contaminant migration that could affect human health, groundwater, or surface water, and, therefore, recommends no further action at the site.

DEH/SAM concurs and approves site closure.

EXECUTIVE SUMMARY

The following is a summary of the results and conclusions from this phase of assessment activities at former Tank No. 34, Brown Field Airport:

- On September 23 to 25, 1997, five soil borings (MW-2, B-14, B-15, B-16 and B-17) were advanced and sampled in the area of former Tank 34.
- Total petroleum hydrocarbons (TPH) as gasoline or diesel was not detected in any of the soil samples.
- Perched groundwater was encountered in well MW-2 and boring B-14 at approximately 4 feet below grade. Grab (no purge) groundwater samples were collected. TPH as diesel (3 milligrams per liter) was detected in the sample collected from boring B-14; TPH as gasoline was not detected. TPH as gasoline and diesel were not detected in the groundwater sample collected from well MW-2.
- The release appears to meet the criteria for a low risk soil and groundwater case.

Based on the findings and conclusions presented in this report and the previous assessment (Tetra Tech, 1992), EMCON recommends that this case be classified as requiring "no further action".

1 INTRODUCTION

EMCON has prepared this report to document site assessment activities at Brown Field Airport, San Diego, California (Figure 1). Specifically, this report describes the assessment of former Tank No. 34, Site Assessment/Mitigation (SA/M) No. T1427/H10618-015, located east of Lycoming Street, between Buildings 2050 and 2022 in the industrial park (Figure 2). Drilling and soil sampling activities were performed from September 23 to 25, 1997. The purpose of this work was to assess the extent of hydrocarbon-impacted soil detected during underground storage tank (UST) removal activities.

The following tasks were performed during this phase of the investigation:

- Preparation of a site specific Health and Safety Plan
- Preparation of a site specific Workplan
- Performance of an underground utility location survey
- Drilling and sampling of five soil borings
- Installation of one groundwater monitoring well
- Soil and groundwater sampling and analysis
- Preparation of this report documenting the investigation methods and the results

The site assessment activities were conducted consistent with the City of San Diego's April 23, 1997, Brown Field Airport Workplan (City of San Diego, 1997).

2 SITE DESCRIPTION

2.1 Site Background

Tank No. 34, a 4,000 gallon concrete diesel UST, was removed on June 6, 1989. Soil samples collected from the excavation at depths of 11 to 13 fbg contained concentrations of total petroleum hydrocarbons (TPH) ranging from <0.5 to 2,820 milligrams per kilograms (mg/kg). During August and September 1990, the tank pit was over-excavated to a total depth of 32 feet below ground surface (bgs). Samples collected from the sidewalls of the excavation contained concentrations of TPH ranging from <10 to 151 mg/kg. The sample collected from the bottom of the excavation contained 4,760 mg/kg TPH. Approximately 500 cubic yards of impacted soil was removed from beneath the former UST and transported to a temporary storage area to the west of the fuel farm. Clean soil excavated from the top of the tank was used to backfill the excavation. A background of former Tank No. 34 from the Brown Field Airport Workplan (City of San Diego, 1997) is attached as Appendix A.

2.2 Geology

The Brown Field Airport is located approximately 15 miles south of downtown San Diego and approximately 1 mile north of the international border, in the area known as the Otay Mesa. The Otay Mesa is a relatively flat-topped, steep-sided upland, bounded on the east by the San Ysidro Mountains, and on the north and west by the Otay and Tijuana Rivers, respectively. The mesa dips slightly to the south, creating a south-southwest surface flow gradient toward Mexico and the Tijuana Hills.

Specific to the subject site, the uppermost stratigraphic unit of the Brown Field Airport area consists predominately of 6 to 12 feet of silty clays underlain by the Linda Vista Formation. The Linda Vista Formation extends from approximately 10 to 40 feet bgs, and consists of moderate reddish-brown interbedded sandstone and conglomerate which are early Pleistocene or late Pliocene age (approximately 1 to 7 million years old) (Kennedy, 1977).

The Linda Vista is underlain by the San Diego Formation which appears intermittently through the geologic section. The San Diego Formation in this area consists of fine to medium grained sandstone, which is yellowish brown, and locally cemented (Kennedy,

1977). The San Diego Formation is dated middle to late Pliocene age (approximately 7 million years old).

The San Diego Formation is underlain by the Otay Formation which consists of light gray and light brown massive sandstone and claystone. The claystone is waxy and consists almost exclusively of bentonite. The Otay Formation is dated to be approximately Miocene-Pliocene age (approximately 7-10 million years old), and generally occurs at depths of approximately 40 feet bgs to approximately 200 feet bgs (Kennedy, 1977).

2.3 Hydrogeology

The Otay Mesa is situated in the Tijuana Hydrologic Unit. The Tijuana Hydrologic Unit has been divided into eight hydrologic areas which are divided into hydrologic subareas. The Brown Field Airport is located within the Tijuana Valley Hydrologic Area and the Water Tanks Hydrologic Subarea as defined by the California Regional Water Quality Control Board (CRWQCB) - San Diego Region (CRWQCB, 1994).

Surface water in the Tijuana Hydrologic Unit is designated for beneficial use in agricultural activities and potentially for industrial activities. However, there is no reported beneficial use of the groundwater. The groundwater in the Water Tanks Hydrologic Subarea is designated as having only potential beneficial use for municipal, agricultural, and industrial operations (CRWQCB, 1994).

The regional aquifer was encountered within the Brown Field project area at approximately 200 feet bgs. At former Tank No. 34, perched groundwater was encountered in borings MW-2 and B-14 at approximately 4 feet bgs. Total depth of the investigation at this tank was 120 feet bgs.

3 FIELD ACTIVITIES

From September 23 to 25, 1997, EMCON supervised the advancement of five soil borings by West Hazmat Drilling Corporation to evaluate the vertical extent of TPH-impacted soil at former Tank 34. Boring MW-2 was advanced to 20 feet bgs at the center of former UST and was converted into a groundwater monitoring well (Figure 3). Borings B-14, B-15, and B-16, were located to the south, west, and north, respectively, of the former UST and advanced to approximately 45 feet bgs. Boring B-17 was advanced to approximately 120 feet bgs east of the former Tank No. 34. Soil samples were collected at regular intervals for laboratory analysis, field screening, and logging in general accordance with the standard operating procedures outlined in Appendix B. During drilling of borings MW-2 and B-14, perched water was encountered at approximately 4 feet bgs. Upon completion of drilling, a grab groundwater sample was collected from well MW-2 and boring B-14 using a disposable bailer.

Soil and water samples were delivered to Mobile One, a State-certified mobile laboratory, for analysis by Environmental Protection Agency (EPA) Method 8015 modified for TPH as gasoline and diesel.

Groundwater monitoring well MW-2 was constructed using 2-inch diameter, schedule 80, poly vinyl chloride (PVC) piping. The well was screened with factory slotted, 0.020 inch perforations from 3.5 to 20 feet bgs. Blank riser pipe was placed from 3.5 feet bgs to the ground surface. A filter pack of #3 Monterey Sand was placed around the screened piping. A seal of bentonite was placed from 1 to 3 feet bgs. The cement grout surface seal was then poured from 1 foot bgs to ground surface. The well was completed with a traffic rated vault level with the ground surface.

After reaching the target depth, soil borings B-14, B-15, B-16, and B-17 were backfilled with bentonite grout and then capped with surrounding cover. The boring logs and well detail are included in Appendix C.

4 FINDINGS

4.1 Subsurface Conditions

Generally, the five soil borings encountered similar lithologies. Silty clay was present from approximately ground surface to 10 feet bgs. Sandy gravel was encountered from approximately 10 feet bgs to 35 feet bgs and is probably associated with the Linda Vista Formation. Clayey silt, most likely associated with the Otay Formation, was present from approximately 35 feet bgs to the total depth explored (120 feet bgs). Detailed descriptions of the soil types encountered during drilling activities are presented in the boring logs (Appendix C) and graphically presented in the geologic cross section (Figure 4).

Perched groundwater was encountered in MW-2 and B-14 at approximately 4 feet bgs. Groundwater was not encountered in the three other borings. It appears that the perched water originated from nearby surface irrigation.

4.2 Soil and Groundwater Analytical Results

A total of 48 soil samples and two groundwater samples were collected from the five borings and analyzed for TPH modified for gasoline and diesel utilizing EPA Method 8015. The following are the results of the investigation:

- TPH as gasoline or diesel was not detected in the soil samples from any of the borings.
- TPH as gasoline or diesel was not detected in the groundwater sample collected from well MW-2.
- 3 milligrams per liter (mg/L) TPH as diesel was detected in the groundwater sample collected from boring B-14; TPH as gasoline was not detected.

The analytical results and quality assurance/quality control documentation are included in Appendix D and summarized in Table 1. Figure 4 shows soil concentrations in cross section.

5 CONCLUSIONS AND RECOMMENDATIONS

A Supplemental Interim Guidance memorandum from the CRWQCB - San Diego Region issued on April 1, 1996 regarding the UST cleanup program, discusses the criteria in determining a low risk soil and groundwater case (CRWQCB, 1996). The following are the criteria for a low risk soil and groundwater case:

1. The leak has been stopped and ongoing sources of contamination, including free product, have been removed or remediated to the extent practicable.
2. The site has been adequately characterized.
3. The site is located in a Basin without designated Municipal/Domestic Use and no current uses of water resources are known to exist.
4. The site is located in a Basin with Municipal/Domestic Beneficial Use (outside of a Sensitive Aquifer Boundary).
5. The dissolved hydrocarbon plume is not migrating.
6. No water wells, deeper drinking water aquifers, surface water, or other sensitive receptors are likely to be impacted.
7. The site presents no significant risk to human health.
8. The site presents no significant risk to the environment.

Former Tank No. 34, SA/M Case No. T1427/H10618-015, meets the criteria for a low risk soil and groundwater case, as demonstrated by the following:

- The primary sources of contamination, the former UST and 500 cubic yards of TPH-impacted soil, have been removed. No floating free-product was observed on the perched groundwater.
- Impacted soil has been adequately assessed vertically and laterally by soil samples from the excavation and five soil borings.
- A sample of the perched groundwater at approximately 4 feet bgs in boring B-14 contained 3 mg/L TPH as diesel; TPH as gasoline was below the detection limit. TPH as gasoline and diesel was not detected in the water sample collected from well MW-2. Elsewhere on the site, the regional aquifer is 200

feet bgs. The perched water appears to have originated from nearby surface irrigation.

- The site is located in a Basin with only potential Municipal/Domestic Beneficial Use, and is outside of a Sensitive Aquifer Boundary (CRWQCB, 1997).
- The regional geology and results from other investigations at the Brown Field Airport suggest that the perched groundwater is separated from the regional aquifer by approximately 195 feet of silts and clays and, therefore, is not hydrologically connected with the regional aquifer. *See H 10618-916*
- The results of the assessment do not suggest the possibility of contamination migration which could affect the regional aquifer, surface water, and other sensitive receptors.
- The vicinity is used for non-residential purposes, thereby limiting human exposure to soil.

Based on the findings and conclusions presented in this report and the previous assessment, the release appears to be low risk. EMCON therefore recommends that this case be classified as requiring "no further action".

LIMITATIONS

The services described in this report were performed consistent with generally accepted professional consulting principles and practices. No other warranty, express or implied, is made. These services were performed consistent with our agreement with our client. This report is solely for the use and information of our client unless otherwise noted. Any reliance on this report by a third party is at such party's sole risk.

Opinions and recommendations contained in this report apply to conditions existing when services were performed and are intended only for the client, purposes, locations, time frames, and project parameters indicated. We are not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of services. We do not warrant the accuracy of information supplied by others, nor the use of segregated portions of this report.

The purpose of an environmental assessment is to reasonably evaluate the potential for or actual impact of past practices on a given site area. In performing an environmental assessment, it is understood that a balance must be struck between a reasonable inquiry into the environmental issues and an exhaustive analysis of each conceivable issue of potential concern. The following paragraphs discuss the assumptions and parameters under which such an opinion is rendered.

No investigation is thorough enough to exclude the presence of hazardous materials at a given site. If hazardous conditions have not been identified during the assessment, such a finding should not therefore be construed as a guarantee of the absence of such materials on the site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

Environmental conditions may exist at the site that cannot be identified by visual observation. Where subsurface work was performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at unsampled locations.

Except where there is express concern of our client, or where specific environmental contaminants have been previously reported by others, naturally occurring toxic substances, potential environmental contaminants inside buildings, or contaminant concentrations that are not of current environmental concern may not be reflected in this document.

TANK NO. 34 BROWN FIELD

SA/M CASE NO. T1427/H10618 - 015

4,000 GALLON CONCRETE DIESEL UNDERGROUND STORAGE TANK

DESCRIPTION

Tank No. 34 was an approximately 4,000 gallon concrete diesel underground storage tank located to the east of Lycoming Street and to the north of Building 2050. The tank was demolished in place and completely removed by June 6, 1989. Prior to removal the tank was triple rinsed and its waste manifested. It is estimated that 220 gallons of product were contained in the soil removed during mitigation activities. An unauthorized release report was subsequently filed on June 23, 1989.

PAST ACTION

On June 6, 1989 after tank removal and prior to over excavation, five soil samples were taken from the excavation at a depth of 11 to 13 feet below grade. The Total Petroleum Hydrocarbon (TPH) level from the sample taken from the bottom of the tank excavation at a depth of 13 feet below grade was 2,820 mg/kg. The TPH levels of the samples taken from the north and west walls were 18.8 mg/kg and 22.8 mg/kg respectively. The level of the samples taken from the east and south walls were both below the method detection limit (<0.5 mg/kg). A formal unauthorized release report was filed on June 23, 1989.

Excavation mitigation was performed during August and September 1990. This consisted of over excavating the tank pit to a final depth of 32 feet below grade, the end of the reach of the Cat 225 Excavator digging from a 10' below grade bench. Five verification soil samples were taken following over excavation. On September 16, 1990 a sample was taken from the south wall at a depth of 25 feet below grade. The TPH level was 151 mg/kg. On September 19, 1990 a sample was taken from the north wall at a depth of 28 feet below grade, the TPH level was 40.0 mg/kg. On September 21, 1990 a sample was taken from the south wall at a depth of 28 feet below grade. The TPH level was below detection limits (<10.0 mg/kg). On September 24, 1990 a sample from bottom of excavation, and one from the east wall, were taken at depths of 32 and 31 feet below grade. The TPH level of the samples were 4,760 mg/kg and below detection limits (<10.0) respectively. Final excavation dimensions were approximately 15 feet north-south, 19 feet east-west, with an average depth of 32 feet. There was also a 9 foot wide by 19 foot long ramp constructed to a 10 foot below grade bench adjacent to the tank pit area.

An estimated 500 cu yd of contaminated soil was removed from the tank excavation.

Tank No. 34
Page two

An additional approximate 500 cu yd of over burden and soil removed to construct ramps and platforms was excavated. The overburden was taken from above 13 feet below grade and was considered clean and stock piled for later use as backfill. Green stained soil below 13 feet below grade removed from the tank excavation was presumed contaminated and transported to a temporary storage area to the west of the fuel farm.

FUTURE ACTION

Five additional borings will be placed in the vicinity of the tank excavation to further define the extent of the contamination remaining in the soil and gather additional lithological data. Four borings will be located on the perimeter of the former tank excavation. One additional boring will be placed above the former pipe vault. This additional boring will be advanced to a minimum depth of 80 feet bgs and terminated if three successive non-detect samples below the last known contaminant level have been recovered. Should groundwater be contacted the boring will be converted into a groundwater monitoring well. The stockpiled soil has been characterized for on-site use pursuant to RWQCB directives. See attached RWQCB letter dated March 17, 1994.

GENERAL FIELD PROCEDURES

Soil Borings

Exploratory Soil Borings drilled using Hollow-Stem Auger Drilling Equipment

Exploratory soil borings were drilled using CME-75, CME-85, CME-95, or LAR-75, continuous flight, hollow-stem auger drilling equipment. The 7 and 9-inch diameter auger flights were steam cleaned prior to drilling each borehole. To assess soil conditions (environmental and/or geotechnical), drive samples were collected at selected depth intervals using a 2.0, or 2.5-inch outside diameter, modified California split-spoon sampler equipped with stainless steel or brass liners. The sampler was driven 18 inches into the soil ahead of the lead auger using a standard 140-pound slide hammer. The lower and/or middle sample sleeve at selected depth intervals was sealed with Teflon tape and plastic end caps, and placed in chilled containers within the state-certified analytical laboratory along with appropriate chain-of-custody documentation. A detailed log for each exploratory boring was recorded by an EMCON geologist from the soil samples and/or auger return material using the Unified Soil Classification System (ASTM D1586) (Appendix C).

Hand Auger Soil Borings

Shallow exploratory soil borings (≤ 5 feet bgs) were drilled using hand auger equipment consisting of a 4-inch diameter earth auger attached to a 5-foot long T-bar that is turned by hand. For retrieval of soil samples, the auger cutting were collected with a 4 oz. sampling jar. The sample jar was sealed with Teflon tape and stored in chilled containers for delivery to a state-certified analytical laboratory along with appropriate chain-of-custody documentation. A detailed log for each exploratory boring was recorded by an EMCON geologist from the soil samples and auger return material using the Unified Soil Classification System (ASTM D1586) (Appendix C). The hand auger and sampling equipment was washed in a nonphosphatic cleaning solution and rinsed with deionized water prior to each sampling episode.

Groundwater Sampling Procedures

A Teflon® bailer attached to nylon-braided line was used to collect groundwater samples. The Teflon® bailer and the nylon-braided line were only used once and then discarded. Sample labels with time, date, sample identification, sampler's initials, and analysis required were filled out prior to sampling. Samples were collected in 250 milliliter glass bottles and delivered directly to the mobile laboratory. These bottles were filled completely to prevent air from remaining in the bottle.

Boring Backfill Procedures

Upon reaching the total depth in each hollow-stem auger boring, the borings were backfilled with bentonite grout to within two (2) feet of the ground surface and capped with surrounding surface material or soil to match the existing surface cover. The shallow hand auger borings (≤ 5 feet bgs) were backfilled with bentonite grout and surrounding surface material or soil.

Sample Analysis

Selected soil samples were collected from the exploratory soil borings and analyzed for one or more of the following chemical compounds: total recoverable petroleum hydrocarbons (TRPH); total petroleum hydrocarbons-fuel characterization (TPH); benzene, toluene, ethyl benzene, and xylenes (BTEX), by EPA Methods 418.1, 8015 modified, and 8020, respectively. In addition, selected soil samples from the soil borings were also submitted for specific geotechnical/other testing, moisture content, dry density, total porosity, grain size analysis, total organic carbon, and native state air permeability for determination of the Synthetic Precipitation Leaching Procedure (SPLP). Certified analytical reports and chain-of-custody documentation are presented in Appendix D.

Selected individual drive samples (typically the middle or upper sample sleeve) were also field screened for VOCs using headspace analysis and a PID calibrated at the beginning of each field day to 100 parts per million by volume (ppmv) isobutylene gas. For each drive sample, approximately 200 grams of soil were sealed in a plastic resealable bag. After the soil was allowed to stabilize for approximately 15 to 20 minutes, the probe tip of the PID was inserted through the plastic. The highest measured concentrations of VOCs within the headspace of the bag were recorded for each sample interval on the boring log (Appendix C).

Decontamination Procedure

Soil cuttings and rinseate from steam cleaning the hollow-stem augers was contained or stockpiled onsite in 55-gallon Department of Transportation (DOT) 17-H drums or in visqueen covered stockpiles. The drums were labeled with material contents, date

generated, and boring number, and were stored on the Brown Field Fuel Farm site pending final characterization for disposal.

NOTICE: You are hereby notified that on 11/16/87 C. Ryan, Hazardous Materials Specialist of County Department of Health Services, conducted an inspection for the removal and/or abandonment of underground storage tanks of hazardous substances. A summary of conditions found is noted as follows:

- No indication of soil or groundwater contamination apparent this date. Excavation may be backfilled.
 - The conditions noted below must be reported and corrected in accordance with Chapters 6.5 and 6.7 of the California Health and Safety Code and Chapters 9 and 10 of the San Diego County Code.
 - Hazardous substance/waste is ponded in the excavation. Immediately take steps to remove the ponded hazardous liquid from the excavation. This liquid is a hazardous waste that shall be properly transported, under manifest, by a licensed hazardous waste hauler to a licensed recycling or disposal facility.
 - Contaminated soil and/or contaminated groundwater is suspected in the excavation. Determining the extent and impact of this contamination and completing any required clean-up is the responsibility of the tank owner/operator. Within 5 work days, the tank owner/operator or his agent must submit a written UNAUTHORIZED RELEASE REPORT to the Department of Health Services including all of the following information that is known at the time of filing the report:
 - a. Describe the type, quantity and concentration of the hazardous substance released.
 - b. Provide the results of all investigations completed at this time to determine the extent of soil, groundwater, or surface water contamination due to the release.
 - c. Describe the method of cleanup implemented to date, proposed cleanup actions, and approximate costs of actions taken to date.
 - d. Indicate the method and location of disposal of the released hazardous substance and any contaminated soils or groundwater or surface water. (If any contaminated soil/water is hauled off-site, include copies of the hazard waste manifests).
 - e. Include the tank operator's name and telephone number, the name and telephone number of any consultants retained, and a projection of proposed activity schedule.
- Subsequent mitigation actions will be discussed upon review of the submitted Report and consultation with other appropriate agencies.

- REFER TO REVERSE SIDE FOR ADDITIONAL INFORMATION/REQUIREMENTS -

E. APPLICATION SUBMITTAL, PLAN APPROVAL, PERMIT ISSUANCE, AND REQUIRED INSPECTIONS:

Submit three (3) copies of this application package, including plan drawings, with the required fee to the Department of Health Services, Hazardous Materials Management Unit, Room 311, 1700 Pacific Highway, San Diego, CA 92101. Checks should be made payable to the County of San Diego.

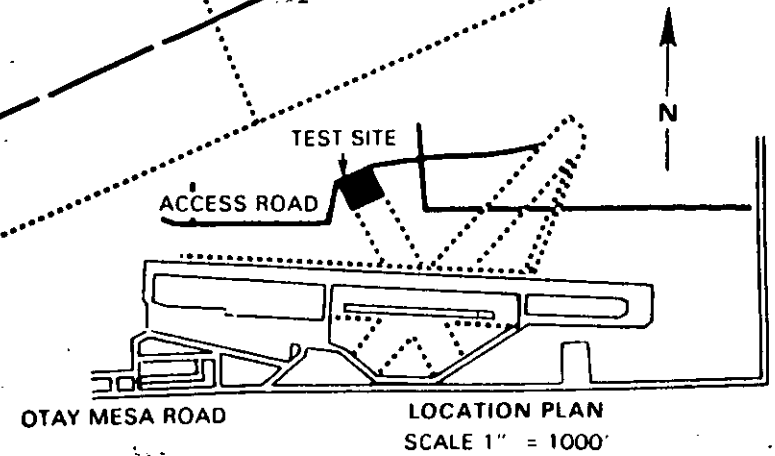

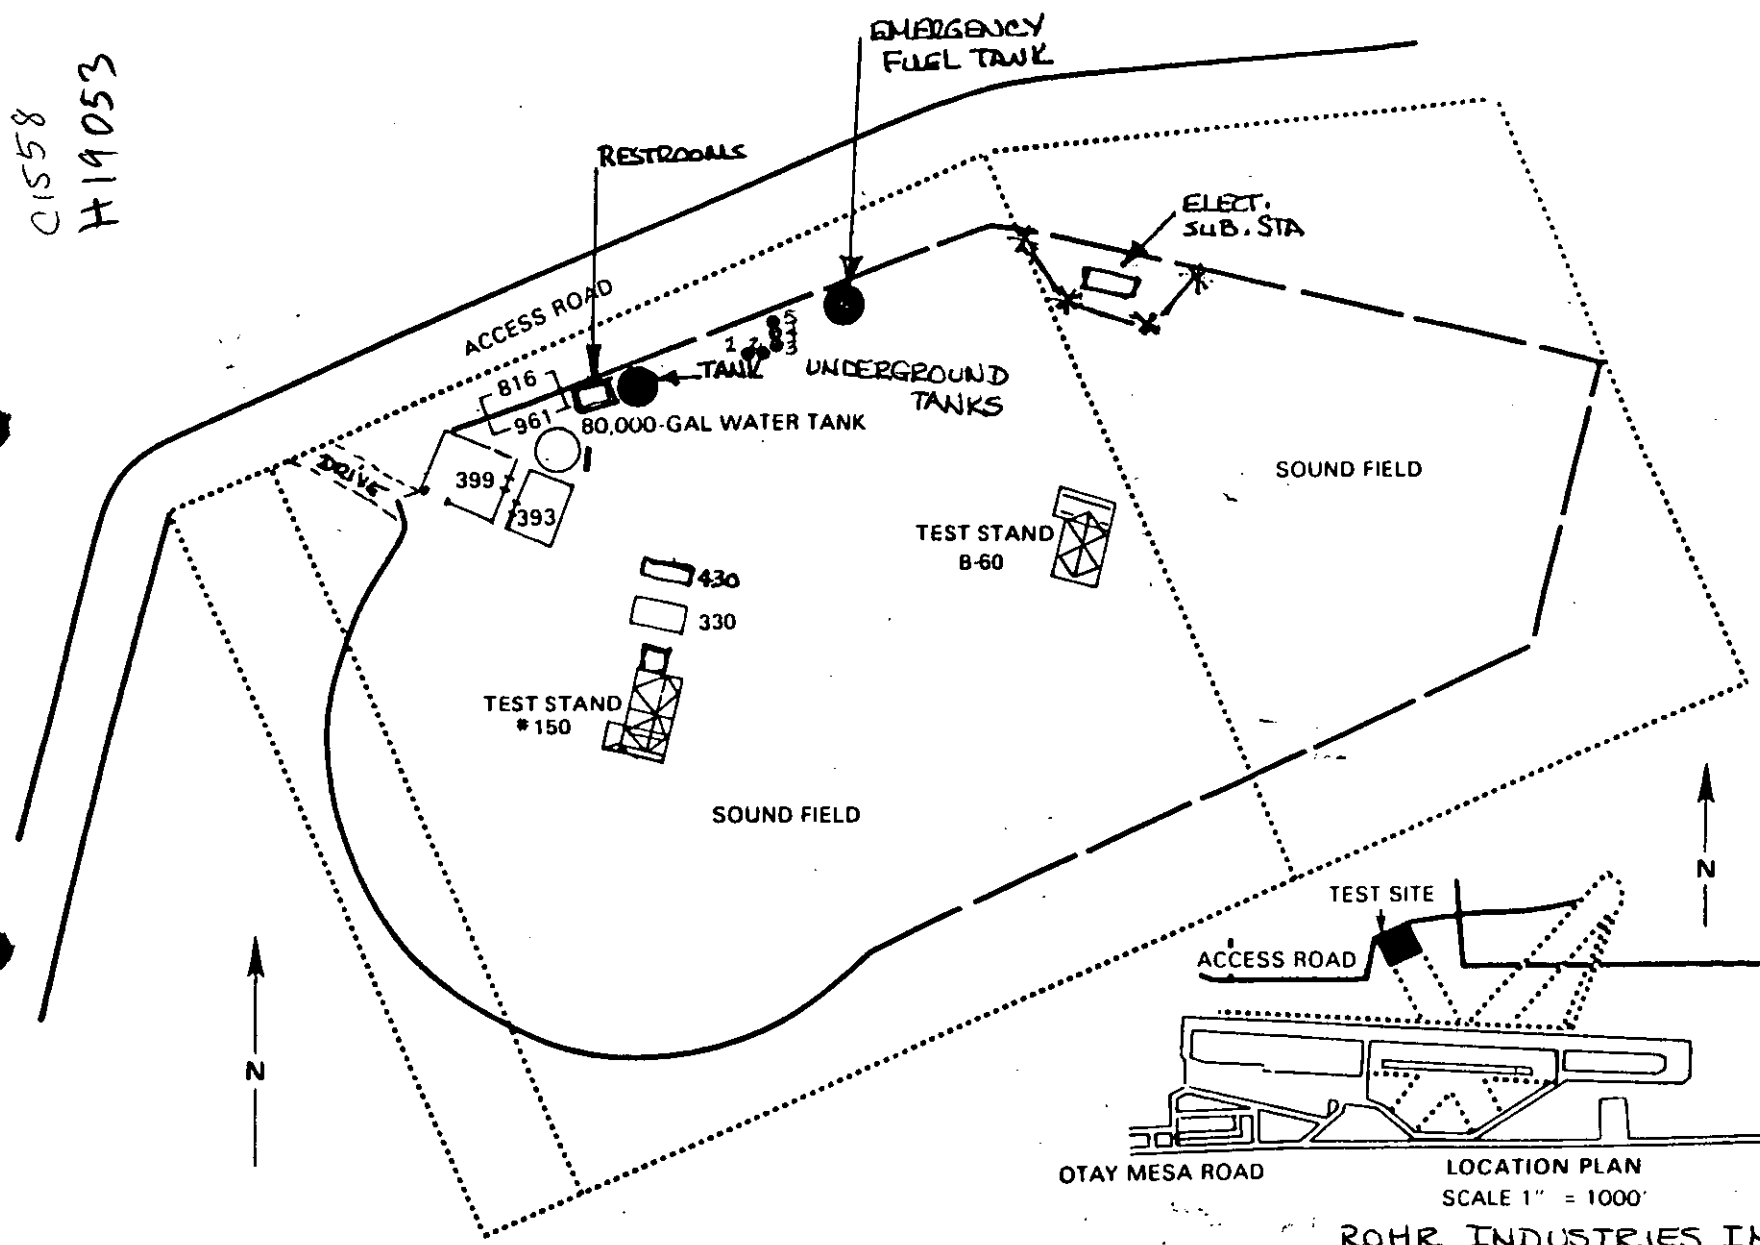

A permit will be issued by the Department of Health Services (DHS) upon review and approval of the application and plans. The required fees must be submitted with the application package. Information in addition to that presented in this application package may be needed in order to obtain final approval. No work is to begin on the proposed project until a permit has been issued. The required inspections cannot be scheduled until a permit has been issued.

Once the permit has been issued, it is the permittee's responsibility to notify the DHS at least two (2) working days in advance to schedule each required inspection.

Construction stages at which inspections are required are indicated in each subpart of this application form (i.e., Part II, III and IV).

IMPORTANT: CONTACT THE DEPT. OF HEALTH SERVICES AT 236-2222 AT LEAST TWO WORKING DAYS BEFORE STARTING CONSTRUCTION TO SCHEDULE THE FIRST REQUIRED FIELD INSPECTION. MAKE APPOINTMENT 2/14/87

Mr. Carlos Bejar
County of San Diego
Hazardous Materials Management Unit
1700 Pacific Highway
San Diego, CA 92101

Dear Mr. Bejar;

RE: PC #NT0623

On April 16 five underground tanks were removed at Brown Field as authorized by Permit #NT0623. These tanks were precision tested for leaks on December 18 and 19, 1985 and determined to be tight.

The tanks stored Jet A fuel. Contamination was detected at the site. The quantity of release was unknown. The depth to groundwater at this location is 100+ feet.

The following remedial action was taken immediately. Excavation was started at the site of the release. Soil was removed to two feet into virgin subsoil. Samples were taken at the invert of the tank (#2189-87), at the lowest depth of the excavation (#2187-87) and of undisturbed soil at the perimeter of the excavation site (2191-87). Laboratory results are attached.

✓ Clean-up procedures will continue to remove all contaminated soil above 500 mg/l Total Extractable Hydrocarbons. Sampling will continue to document the cleanup. The results of this sampling will be forwarded to you.

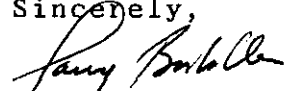

Disposal of all excavated contaminated soil will be as per Title 22 regulations. You will be advised of the disposition.

We will continue with the tank replacement project once the clean-up is complete. New backfill will be used to surround the new tanks.

Bonnie Rondelli of the Regional Water Quality Control Board was contacted on April 17, 1987. The Board will be kept advised of the clean-up of the site by receiving copies of all communications to your office.

Please contact me at 691-2471 with any questions you may have.

Sincerely,

Larry Borbolla
Manager, Environmental Affairs

RE: UNAUTHORIZED RELEASE #T0621/H19053
BROWN FIELD SAN DIEGO

Dear Ms. Horton:

The site remediation report submitted to this Department by Rohr Industries summarizing the site characterization and mitigation activities at the above referenced location has been reviewed. This report has also been discussed with staff of the Regional Water Quality Control Board (RWQCB). The RWQCB concurs with the determination of this Department that this site has been adequately mitigated. Based on current requirements and policies, no further action is indicated at this time.

Please be advised that if the current use of the site changes, additional site characterization and mitigation activity may be required. As the property owner, it is your responsibility to notify this Department prior to any such changes.

Thank you for your efforts in resolving this matter. Contact the Hazardous Materials Management Division at (619) 236-2222, if you require any additional assistance.

Sincerely,

Sincerely,

GARY R. STEPHANY, Deputy Director
Environmental Health Services

RE: FUEL CONTAMINATED SOIL T0621
ROHR INDUSTRIES, BROWN FIELD, SAN DIEGO

Rohr Industries, the generator, has requested to dispose of fuel contaminated soil at a Class III landfill. Both the County Department of Health Services, Hazardous Materials Management Division (HMMD) and the San Diego Regional Water Quality Control Board (RWQCB) have reviewed this proposal and accompanying data.

Upon review of all the information submitted, the 191 cubic yards of soil does not contain concentrations greater than 89 mg/kg, Total Extractable Hydrocarbons. Based on the available data, both the HMMD and the RWQCB consider this waste to be suitable for disposal at the Otay landfill.

RE: UNAUTHORIZED RELEASE #T0621
ROHR INDUSTRIES, BROWN FIELD, SAN DIEGO

Dear Mr. Borbolla:

The supplemental report to update the Unauthorized Release Report at the above referenced location has been received.

The Department of Health Services has determined that disposal of the Jet-A Fuel contaminated soil at Otay Sanitary Landfill would be acceptable provided both the San Diego Regional Water Quality Control Board (RWQCB) and the San Diego County Department of Public Works (DPW) concur. (Ref: Dept. of Health Services letter to Rohr Industries, August 14, 1987, copy enclosed)

For purposes of transporting the Jet-A Fuel contaminated soil under the criteria established for diesel fuel contaminated soil, please provide laboratory data in accordance with the requirements of the Fuel Contaminated Soil Policy, March 3, 1987, Section A, one through four. (Ref: Dept. of Health Services letter to Rohr Industries, August 14, 1987, copy enclosed)

Before transporting the Jet-A Fuel contaminated soil to the Otay Sanitary Landfill, provide this office with:

1. Letter of concurrence from the RWQCB
2. Letter of concurrence from the DPW
3. All laboratory data specified in Section A, one through four, of the Fuel Contaminated Soil Policy, March 3, 1987.

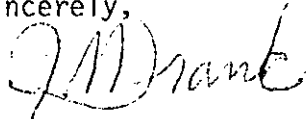

September 10, 1987

Of the above necessary documentation, only number one, Section A has been provided to date to this office. To complete the laboratory data for the Section A requirement, please provide determinations on the Jet-A Fuel contaminated soil that is to be transported to Otay Sanitary Landfill as follows:

- a) Benzene, Toluene, Xylene (BTX) using EPA Method 8020.
- b) Flashpoint, using Pensky-Martens Closed Cup Method.
- c) Organic Lead, using EPA Method 7421

Please contact me if you have any questions concerning the policy requirements.

Sincerely,

JAMES M. FRANK
Hazardous Materials Specialist

RE: UNAUTHORIZED RELEASE #T0621
ROHR INDUSTRIES, BROWN FIELD, SAN DIEGO

Dear Mr. Borbolla:

Your letter of July 24, 1987 proposes to dispose of the contaminated soil, resulting from unauthorized release remediation activities at the above referenced site, at the Otay sanitary landfill. It is also proposed that the Jet-A fuel contaminated soil be classed and treated the same as diesel fuel contaminated soil in regards to the Hazardous Materials Management Division's Fuel Contaminated Soils Policy.

Disposal of the Jet-A fuel contaminated soil at Otay sanitary landfill would be acceptable to this office, provided both the Regional Water Quality Control Board and the San Diego County Department of Public Works concur.

For purposes of transporting the Jet-A fuel contaminated soil under the criteria established for diesel fuel contaminated soil, please provide laboratory data in accordance with the requirements for the Fuel Contaminated Soil Policy, March 3, 1987, Section A, one through four.

An option you may wish to consider is to petition this office and the Regional Water Quality Control Board to utilize the contaminated soil on-site. The statement in your letter of June, 11, 1987, stated that the virgin subsoil consists of a mixture of clay and gravel provides an effective barrier preventing migration of contamination, will have to be substantiated by a registered geologist. A geologists would probably provide such a statement in a report commonly called a geological reconnaissance.

Please feel free to contact me to discuss these options.

Sincerely,

JAMES M. FRANK
Hazardous Materials Specialist

RE: UNAUTHORIZED RELEASE #T0621
ROHR INDUSTRIES, BROWN FIELD, SAN DIEGO

Dear Mr. Borbolla:

The supplemental report dated May 1, 1987 for the unauthorized release for the above referenced site has been reviewed.

Based on available information, the excavation appears adequately mitigated. However, the information concerning the excavated soil is not adequate. Within two weeks of receipt of this letter, please address the following items:

- 1) What is the volume of the excavated soil?
- 2) What is the current fate of the excavated soil; held on-site? or transported off-site?
- 3) Describe the procedure used to sample the excavated soil, i.e. one sample point or composite.
- 4) Address whether sample 2439-87 representing the excavated soil (2439-87) includes soils from the area represented by 2189-87, as corrected.

As a matter of clarification, this office considers soil containing any amount of a hazardous substance to be contaminated. The cleanup level for this site was established at 100 mg/kg (ppm) of Total Petroleum Hydrocarbon (TPH). This does not mean that soil containing less than 100 ppm TPH is not contaminated. However, such soil may be kept on-site without further cleanup, or moved off-site under approval of this office and the Regional Water Quality Control Board.

Please contact me if you have any questions.

Sincerely,

JAMES M. FRANK
Hazardous Materials Specialist

Chula Vista, CA 92012-0878

RE: UNAUTHORIZED RELEASE # T0621
ROHR INDUSTRIES, BROWN FIELD, SAN DIEGO

Dear Mr. Borbolla:

The initial Unauthorized Release Report submitted by you for Rohr Industries dated April 24, 1987, for the site referenced above conforms to the reporting requirements, as prescribed in the California Health and Safety Code, Chapter 6.7 and the California Administrative Code, Title 23, Chapter 3, Subchapter 16, Article 5, Section 2652.

For the duration of the site mitigation process, you are required to provide periodic written supplemental reports to this Department to update the Unauthorized Release Report pursuant to the California Administrative Code, Title 23, Chapter 3, Subchapter 16, Article 5, Section 2652. Since Brown Field is located in a beneficial use water area, the soil cleanup level for this site has been established at 100 parts per million Total Petroleum Hydrocarbons.

Please submit a written supplemental report to update the Unauthorized Release Report every six weeks. The report should include a summary of the investigation and mitigation progress accomplished to date, along with the projected accomplishments for the next reporting period. The update report is due by June 12, 1987.

If during the site mitigation process any significant situation is encountered that was not known nor anticipated at the time of the initial Unauthorized Release Report, please provide a written statement describing the situation in order to amend the Unauthorized Release Report.

As a reminder, a copy of each manifest for hauling any hazardous waste generated as a result of the site characterization and mitigation procedure must be included with the written supplemental reports.

If you have any questions on this matter please contact me at (619) 236-2222.

Sincerely,

JAMES M. FRANK
Hazardous Materials Specialist

OFFICIAL NOTICE

April 21, 1987

Larry Barbolla, Manager

Environmental Affairs

Rohr Industries

PO Box 878, MZ 29C

Chula Vista, CA 92012-0878

RE: UNAUTHORIZED RELEASE #T0621

Rohr Industries, Brown Field, San Diego

Dear Mr. Barbolla:

Information provided to this Department by observation during tank removal indicates that the underground hazardous substance storage facility at the location referenced above has experienced an Unauthorized Release (leak).

The conditions created by the Unauthorized Release must be reported and corrected in accordance with Sections 25295 and 25297 of Chapter 6.7 of the California Health and Safety Code (H&SC) and Section 2652, Subchapter 16, Chapter 3, Title 23 of the California Administrative Code (CAC), and Chapter 6.5 of the H&SC and Title 22 of the CAC.

As the owner/operator of the underground storage tank, it is your responsibility to:

1. Take immediate action to prevent further unauthorized release;
2. Determine the extent and impact of the unauthorized release;
3. Submit a written Unauthorized Release Report to this Department within five work-days of receipt of this Notice;
4. Complete and distribute within five workdays the enclosed State Water Resources Control Board's "Underground Storage Tank Unauthorized Release(Leak)/Contamination Site Report";
5. Submit supplemental report as required to update the initial report; and,
6. Complete any site mitigation (cleanup) required.

The Unauthorized Release Reports must address all six Elements listed on the reverse side of this Official Notice, to the extent of the best information known at this time. Additional information and responsibilities are also listed. Please note Item 6 concerning responsibility for payment for staff time expended on the investigation.

Subsequent site characterization and mitigation actions will be determined upon evaluation of the written report and consultation with the Regional Water Quality Control Board and other appropriate regulatory agencies.

Please call me at (619) 236-2222 if you have any questions regarding this Official Notice.

Sincerely,

James M. Frank

Hazardous Materials Specialist

Enclosure

DHS:HM-9046 (12/86)

UNAUTHORIZED RELEASE REPORTING ELEMENTS

Each of the following must be addressed in the Unauthorized Release Report (CAC, Title 23, Chapter 3, Subchapter 16, Section 2652):

1. Describe the type, quantity and concentration of the hazardous substance released.
2. Describe the extent of the soil, groundwater, and/or surface water contamination due to the release based on the results of all investigations completed at the time the report is submitted.
3. Describe the method of clean-up implemented to date, proposed clean-up actions, and approximate costs of actions taken to date.
4. Indicate the method and location of disposal of the released hazardous substance and any contaminated soils or groundwater or surface water. (If any contaminated soil or water is removed from the site, include copies of the hazard waste manifests).
5. Describe the proposed method of repair or replacement of the underground tank/piping.
6. Include the tank operator's name and telephone number, the name and telephone number of any consultants retained, and a projection of proposed activity schedule.

NOTE: The completed SWRCB Form (enclosed) with appropriately detailed "comments" will usually suffice as meeting the requirements for the initial Unauthorized Release Report. You must distribute the completed form to all agencies as specified on the back of the form.

ADDITIONAL INFORMATION/RESPONSIBILITIES

- A. Notify the local Fire Department immediately whenever a fire hazard or explosion hazard is present.
- B. Notify the Regional Water Quality Control Board at (619) 265-5114 within 24 hours regarding this Unauthorized Release.
- C. Cease the unauthorized release immediately by removing the hazardous substance from the system's leaking component(s), as necessary. Give careful consideration to proper tank ballast in areas of high groundwater. Ballast should be inert and compatible with tank residues (i.e., water).
- D. Maintain the site in a safe and secure manner. The excavation, if any, may be back-filled in the interim for safety until site decontamination activities commence.
- E. Obtain necessary permits for repair or removal of the underground tanks/piping from this Department, and other agencies, as appropriate.
- F. Issuance of a permit to install new tanks at a site does not imply that any unauthorized release at the site has been mitigated to the satisfaction of this Department or any other regulatory agency.
- G. The property owner/operator is subject to billing for staff time expended on the Unauthorized Release investigation at the rate of \$40 per hour. The owner/operator will be billed at the completion of the investigation, or every quarter, whichever occurs sooner. The owner/operator must pay the investigation fee in full within 30 days of receipt of the billing. (San Diego County Code Section 68.1008)

RE: UNAUTHORIZED RELEASE #T2287/H19053
BROWN FIELD TEST FACILITY

The written report received September regarding a failed precision, 1992 test of an Underground Storage Tank System at the above referenced site has been reviewed by the Hazardous Materials Management Division (HMMD). Based on the information provided, the situation has been resolved to the satisfaction of the HMMD and no further action regarding the suspected Unauthorized Release is required at this time. The Underground Storage Tank System has been re-tested and certified tight by NDE Environmental on April, 1992 after only minor adjustments to the system.

Should any information come to light in the future to indicate that an Unauthorized Release (leak) has occurred at this site, please be advised that the Unauthorized Release must be reported to the HMMD within 24 hours in accordance with Section 25295 of the California Health and Safety Code.

Please do not hesitate to call me at (619) 338-2207 you have any questions regarding this matter.

Chula Vista, CA 91914

Dear Mr. Granata:

**RE: CLOSURE REPORT FOR FORMER INS BROWN FIELD FIRING RANGE,
SECTOR SUPPORT/AIR OPERATIONS FACILITIES, 1481 HERITAGE ROAD,
SAN DIEGO, CA (DACA09-99-D-0020, TO#004)**

This letter confirms the completion of a site investigation and remedial action for the former INS Brown Field Firing Range located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning this site are greatly appreciated.

Based on the information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, **no further action** related to the former INS Brown Field Firing Range is required.

This notice is issued pursuant to Section 13307.1(a) of the Porter Cologne Water Quality Control Act.

Please contact John Anderson of our office at (858) 467-2975 if you have any questions regarding this matter.

Sincerely,

/s/

JOHN H. ROBERTUS
Executive Officer

Case Closure Summary

SPILL, LEAK, INVESTIGATION AND CLEANUP (SLIC) PROGRAM

I. CASE INFORMATION**DATE:** May 11, 2004

<i>Site Name:</i> INS Sector Support Facility – Former INS Brown Field Firing Range		
<i>Site Address:</i> 1481 Heritage Road		
<i>Responsible Party Name:</i> US Immigration & Naturalization Service	<i>RP Phone Number:</i> (619) 662-7218	
<i>Responsible Party Address:</i> 1481 Heritage Road, San Diego, CA 92154		
<i>Current Land Use:</i> Industrial		
<i>RWQCB File Number:</i> 20-0535.03	<i>Local Case Number:</i> NA	<i>RWQCB Staff:</i> JPA
<i>Basin Number:</i> 910.20	<i>Basin Uses:</i> Agr, Ind, Rec1&2, Warm, Wild & Rare	

II. RELEASE AND SITE CHARACTERIZATION INFORMATION

<i>Description of the unauthorized release (cause, release date, source[s]):</i> Site was a former small arms target practice range for ~11 yrs. The range occupied an area of about 187,000 sq ft. Shooting direction was to the North, targets were mounted on or in front of backstops built of bermed soil.	
<i>Contaminant[s] identified and amount leaked:</i> Unknown amount of Lead and other metals. Lead is the predominant contaminant of concern and the driver for cleanup.	
<i>Description of the soil/geology:</i> Surficial soils consist of stiff, moist to very moist, green clay with high plasticity overlying marine terraces. These soils are developed on Linda Vista Fm, moderate reddish-brown interbedded Sandstone & conglomerate overlying the San Diego Fm and Otay Fm.	
<i>Is soil contamination completely delineated (to what levels)?</i> Yes, to 17 mg/kg	
<i>Areal extent?</i> Approximately 11 acres	
<i>Vertical extent?</i> 0.5 foot	
<i>Est. Volume of contaminated soil left on site and concentration:</i> 9,290 cubic yards (distribution of the contaminated soil was graded evenly across the area containing the new buildings and parking lot on the north side of the property).	
<i>Is groundwater contamination completely delineated (to what levels)?</i> NA	
<i>Monitoring wells installed, properly permitted?</i> NA	<i>Number of monitoring wells:</i> NA
<i>Depth to groundwater:</i> Estimated >56 ft. bgs	
<i>Seasonal or tidal fluctuation:</i> NA	
<i>Groundwater flow direction:</i> NA	<i>Gradient:</i> NA
<i>Is groundwater or surface water impacted?</i> No	
<i>Is groundwater contamination contained on site?</i> NA	
<i>Nearest receptor (Inland Surface Water, Bay, Drinking Water Wells, etc.):</i> Otay River	

III. MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATION

<i>Contaminant</i>	<i>Soil (mg/kg) Initial</i>	<i>Soil (mg/kg) Current</i>	<i>Water (ug/l) Initial</i>	<i>Water (ug/l) Current</i>	
Lead	64,100 mg/kg	208 mg/kg ¹	NA	NA	
Antimony	NA	38.4 mg/kg ²	NA	NA	
Arsenic	NA	15.2 mg/kg ²	NA	NA	
Copper	NA	320.4 mg/kg ²	NA	NA	
Molybdenum	NA	142 mg/kg ²	NA	NA	
Zinc	NA	238.1 mg/kg ²	NA	NA	

¹Maximum Pb value left beneath buildings and hardscape. Background concentrations established at 17 mg/kg Pb for disturbed soil. ² Average concentrations. NA = Not Analyzed

IV. TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

<i>Material</i>	<i>Amount (include units)</i>	<i>Action (treatment or disposal)</i>	<i>Concentration</i>	<i>Date</i>
Soil	37,898 tons	Excavated, treated and disposed of at Kettleman Hills & Bradley Landfills	17 mg/kg to >350 mg/kg	3/19/2001 thru 10/1/2001
Groundwater	NA	-	-	-
Free Product	NA	-	-	-
Barrel(s)	NA	-	-	-
Tank(s)	NA	-	-	-
Piping	NA	-	-	-

V. CLOSURE

<i>Does completed corrective action protect beneficial uses per the RWQCB Basin Plan?</i> YES		
<i>Should corrective action be reviewed if land use changes?</i> YES		
<i>Monitoring wells decommissioned?</i> NA	<i>Number decommissioned:</i> NA	<i>Number retained:</i> NA
<i>Enforcement actions taken:</i> None		
<i>Enforcement actions rescinded:</i> None

Title: Program Manager
Date: March 12, 2019

- 1.) Who are the current owners of the Site parcels and when were the parcels purchased?
City of San Diego, 1962
- 2.) Who are the past owners of the property and years of ownership (if available)?
US Government, San Diego County, 1918 - 1962
- 3.) What was the past use of the subject property?
Airport, farm
- 4.) Are you aware of any environmental cleanup liens that are filed or recorded against the subject property?
I am not aware.
- 5.) Are you aware of any activity and land use limitations that are in place on the property that have been filed or recorded in a registry?
Not aware.
- 6.) Are you aware of any specialized knowledge or experience related to the property or nearby properties that is pertinent to potential adverse environmental conditions?
No, not aware.
- 7.) Are you aware of commonly known or reasonably obtainable information that would help us to identify conditions indicative of releases or threatened releases of hazardous wastes/materials at the property? Such information includes knowledge of specific chemicals that are present or were once present on the property, spills or other chemicals releases that may have occurred, underground or aboveground storage tanks and environmental cleanups that have been conducted on the property.
Underground fuel farm
- 8.) Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?
No.

9.) Based on your knowledge and experience related to the Site, are you aware of any areas where Per- and polyfluoroalkyl substances (PFAS) including Aqueous Film Forming Foam (AFFF) may have historically been or are currently being used. Examples include, landfills, electronics manufacturing, chrome plating, firefighting training, firefighting equipment storage or disposal, and areas of major crashes or accidents where fire suppressants were used? If AFFF was stored or used when (general time periods), and whom was the substance purchased or acquired from?

Possible sites.

1.1 Introduction

The City of San Diego (City) owns and operates two General Aviation (GA) airports in San Diego County (County) – the Brown Field Municipal Airport and Montgomery-Gibbs Executive Airport. The City is preparing an Airport Master Plan for each of the facilities in order to establish a long-term plan by determining the extent, type and schedule of development needed. The Federal Aviation Administration (FAA) offers a number of objectives as a guide in the preparation of a master plan:

- Understand the issues, opportunities and constraints of the airport
- Consider the impact of recent national and local aviation trends
- Identify the capacity of airport infrastructure
- Determine the need for new improvements
- Estimate costs and identify potential funding sources
- Develop a schedule for implementation of proposed projects
- Comply with federal, state, and local regulations

The Airport Master Plan will include a report of existing and future conditions, an Airport Layout Plan (ALP) and a schedule of priorities and funding sources for proposed improvements. This Working Paper documents the first step in the Airport Master Plan for Brown Field Municipal Airport (hereafter referred to by its FAA identifier of “SDM” or “the Airport”), which involves gathering and organizing information on existing conditions of the Airport and the surrounding community. The Working Paper provides a summary of existing Airport facilities, air traffic activity and the surrounding airspace environment. Additionally, general information regarding the Airport’s setting in the community and the larger aviation network is provided. This includes local economic and development characteristics, weather and environmental conditions, and the demographics of the surrounding area. The information obtained in this first step of the master planning process will provide a foundation for subsequent analysis.

1.2 Background

Airport System Planning Role

Airport planning occurs at the national, state, regional, and local levels. The following section identifies Brown Field Municipal Airport's role at the national, state and regional levels based on previous reports, with the goal of the master planning process to guide planning practices at the local level.

The Airport is included in the National Plan of Integrated Airport Systems (NPIAS), which identifies airports that are significant to national air transportation and therefore eligible for grant funding under the FAA's Airport Improvement Program (AIP) funding. The NPIAS 2017-2021 Report, produced by the U.S. Department of Transportation (DOT) FAA, includes 3,332 existing and eight proposed airports eligible for funding and documents projected facility improvement needs of these facilities. The current report estimates that \$32.5 billion is eligible for federal aid and will be necessary over the next five years to meet the needs of all segments of civil aviation. In administering the AIP, the FAA uses the NPIAS, which supports the FAA's strategic goals for safety, system efficiency, and environmental compatibility by identifying the specific airport improvements that will contribute to the achievement of those goals.

Brown Field Municipal Airport is classified in the NPIAS as a national, GA, reliever airport. National airports are located in metropolitan areas near major business centers and support flying throughout the Nation and the world. National airports average about 250 total based aircraft¹, including 30 jets, making Brown Field Municipal Airport small for a national airport (based aircraft numbers will be discussed later in this Working Paper). Approximately three percent or 89 of the airports in the NPIAS are classified as national and account for 5.4 percent of the cost of the AIP. Brown Field Municipal Airport is one of 65 national airports classified as a reliever to a primary airport (San Diego International Airport [SAN]). For the first five years of the planning period (through 2021), SDM is projected to remain a national reliever. The estimated cost of developments at the Airport totals \$14,622,904² over the next five years.

In the California Aviation System Plan 2010 System Needs Assessment, Brown Field Municipal Airport was identified as a regional GA airport. This Assessment noted that the Airport could be elevated to a metropolitan GA airport with the installation of a Visual Approach Slope Indicator (VASI). Since the preparation of the document, the Airport has installed Precision Approach Path Indicators (PAPIs) on both ends of Runway 8L/26R. Presumably, in a future update to the California Aviation System Plan the Airport will be elevated to a metropolitan, GA airport.

The San Diego County Regional Airport Authority developed the Regional Aviation Strategic Plan (RASP) in 2010 and 2011 to take a comprehensive look at the civilian airports in the San Diego County region. The RASP identified Brown Field Municipal Airport as a reliever and explored three scenarios involving Brown Field Municipal Airport as opportunities to meet air service demand in the region. These scenarios were: Introducing Commercial Passenger Service at Brown Field Municipal Airport, Enhancing Brown Field Municipal Airport for High-end/Corporate General Aviation, and Introducing Air Cargo Services at Brown Field Municipal Airport. The introduction of commercial passenger service was deemed "fatally flawed" per the FAA's determination that precision instrument approaches are infeasible at the Airport due to terrain and airfield complications; making commercial service highly unlikely. The introduction of air cargo services was also deemed "fatally flawed." This

¹ Based aircraft are defined as those stored at an airport and not transient.

² United States of America. U.S. Department of Transportation. Federal Aviation Administration. National Plan of Integrated Airport Systems (NPIAS) Report Airports 2017-2021. N.p., n.d. Web. 14 Mar. 2017.

was due to the infeasibility of precision instrument approaches at SDM, an unwillingness by air cargo carriers to operate facilities south of SAN, and anticipated public and political opposition. The enhancement of high-end/corporate GA would provide facilities and amenities necessary to shift aviation activity from SAN to SDM. This scenario was assessed and the resulting redistribution of GA operations would delay the capacity constraint at SAN by approximately two years at an estimated cost of \$63 million³.

Airport History

The U.S. Army opened Brown Field Municipal Airport in 1918. Today it continues as a busy GA airport. Some of the highlights of the Airport's history are presented on **Figure 1.1**.

³ San Diego Regional Airport Authority, (2010) Regional Aviation Strategic Plan

East Field in 1918 - Brown Field today. Named for Major K. East, USAS, killed in 1918.

The U.S. Navy took over and renamed it Naval Auxiliary Air Station (NAAS) Otay Mesa. That same year, the name was again changed to NAAS Brown Field in honor of Navy Commander Melville S. Brown. Brown Field was used for training by the Army and Navy.

On sept. 1, 1962 the Navy transferred ownership of Brown Field to the City of San Diego with the condition that it remains an airport for the use and benefit of the public.

Brown Field Municipal Airport was opened by the U.S. Army, as an aerial gunnery and aerobatics school. The airport was originally named East Field in honor of Army Maj. Whitten J. East.

The Navy reopened Brown Field for Korean War activity.

EAST FIELD AIR SERVICE FLYING SCHOOL

In the mid-to-late 1960s Pacific Southwest Airlines (PSA) trained its pilots at Brown Field. PSA also had a contract to train Lufthansa pilots at Brown Field, until they moved in 1970.

The City of San Diego issued a Request For Proposal resulting in the proposed development of the Metropolitan Airpark at Brown Field Municipal Airport.

The Navy decommissioned it and leased it to San Diego County as surplus.

Brown Field was again declared surplus in 1954, and was assigned to support fleet aircraft, missile programs, and fleet carrier landing practice.

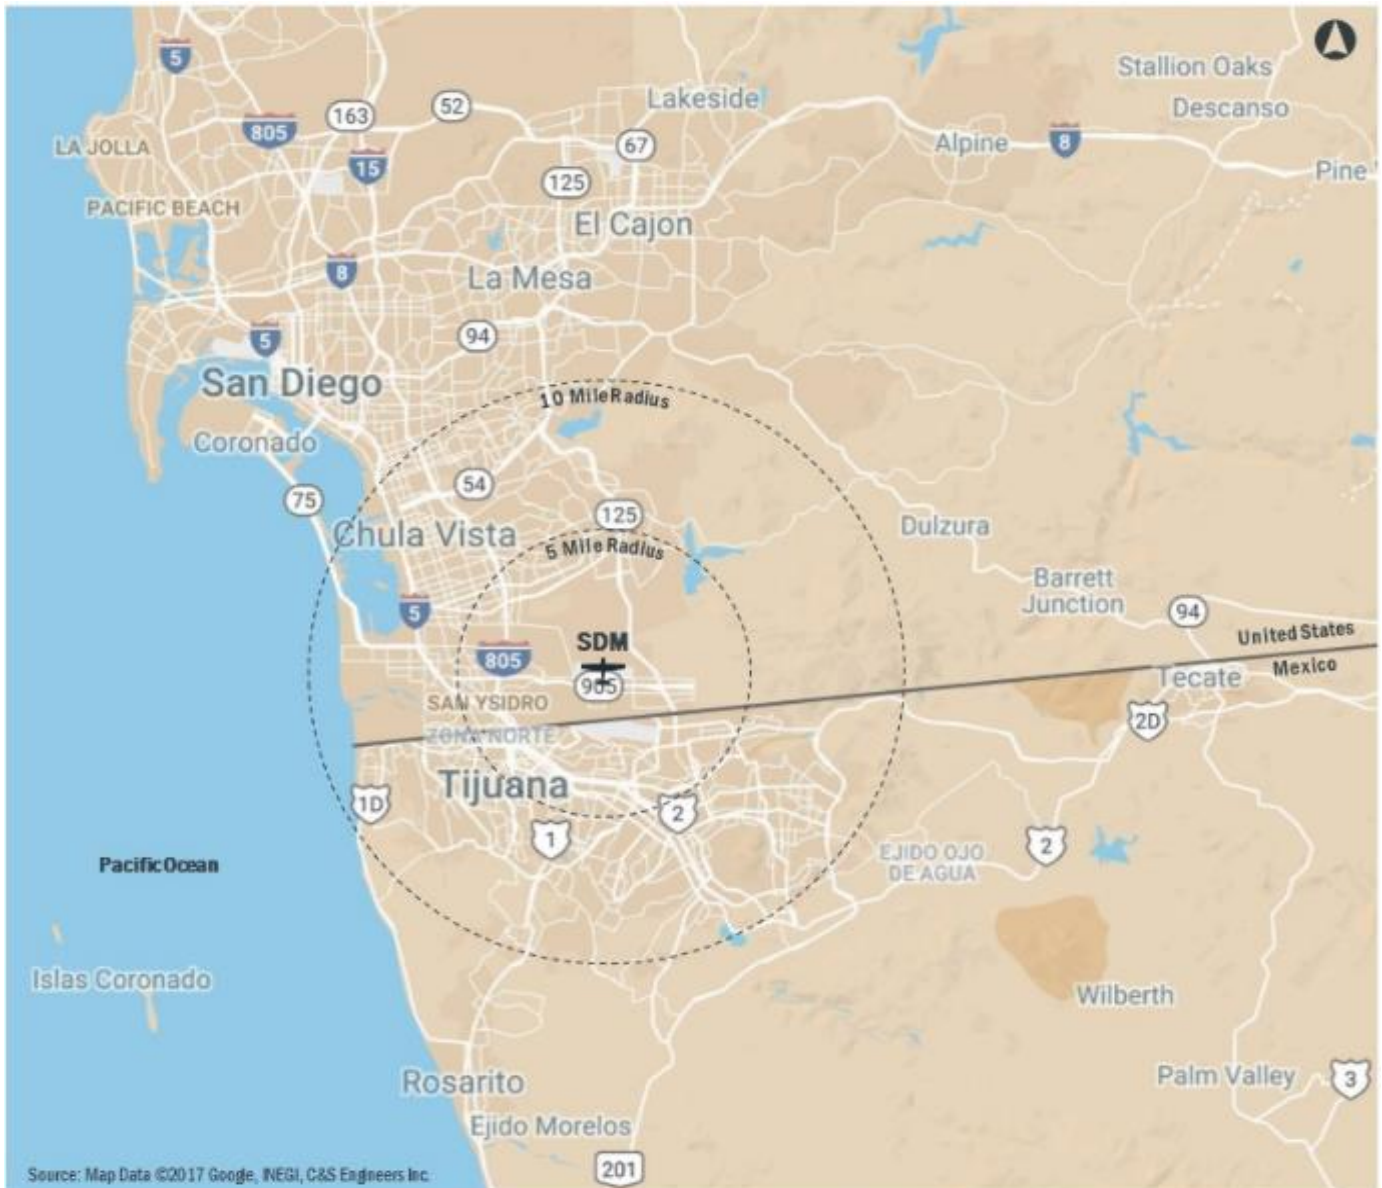

This Page Intentionally Left Blank

Airport Setting

Brown Field Municipal Airport is located approximately 1.5 miles north of the Mexican border (two miles from Tijuana International Airport), five miles northeast of Tijuana, Mexico, 14 miles southeast of San Diego, California, and seven miles southeast of Chula Vista, California. The Airport is located in southwest San Diego County, in the Otay Mesa community area. The local setting is depicted on **Figure 1.2**

Figure 1.2 – Airport Local Setting

Brown Field Municipal Airport is the closest airport to the Mexican border and is accessible via the Otay Mesa Freeway (the 905) from the south and the South Bay Expressway (the 125) from the east. A few miles west of the Airport is Interstate 805. The regional access routes are depicted on **Figure 1.3**. The Airport is bound by Otay Mesa Rd. to the south, Heritage Rd. to the west, La Media Rd. to the east, and open space to the north. Otay Mesa Rd. is the main road providing access to the Airport. The main entrance is located at Curran St. There is an additional entrance from Heritage Rd. The local access routes are depicted on **Figure 1.4**.

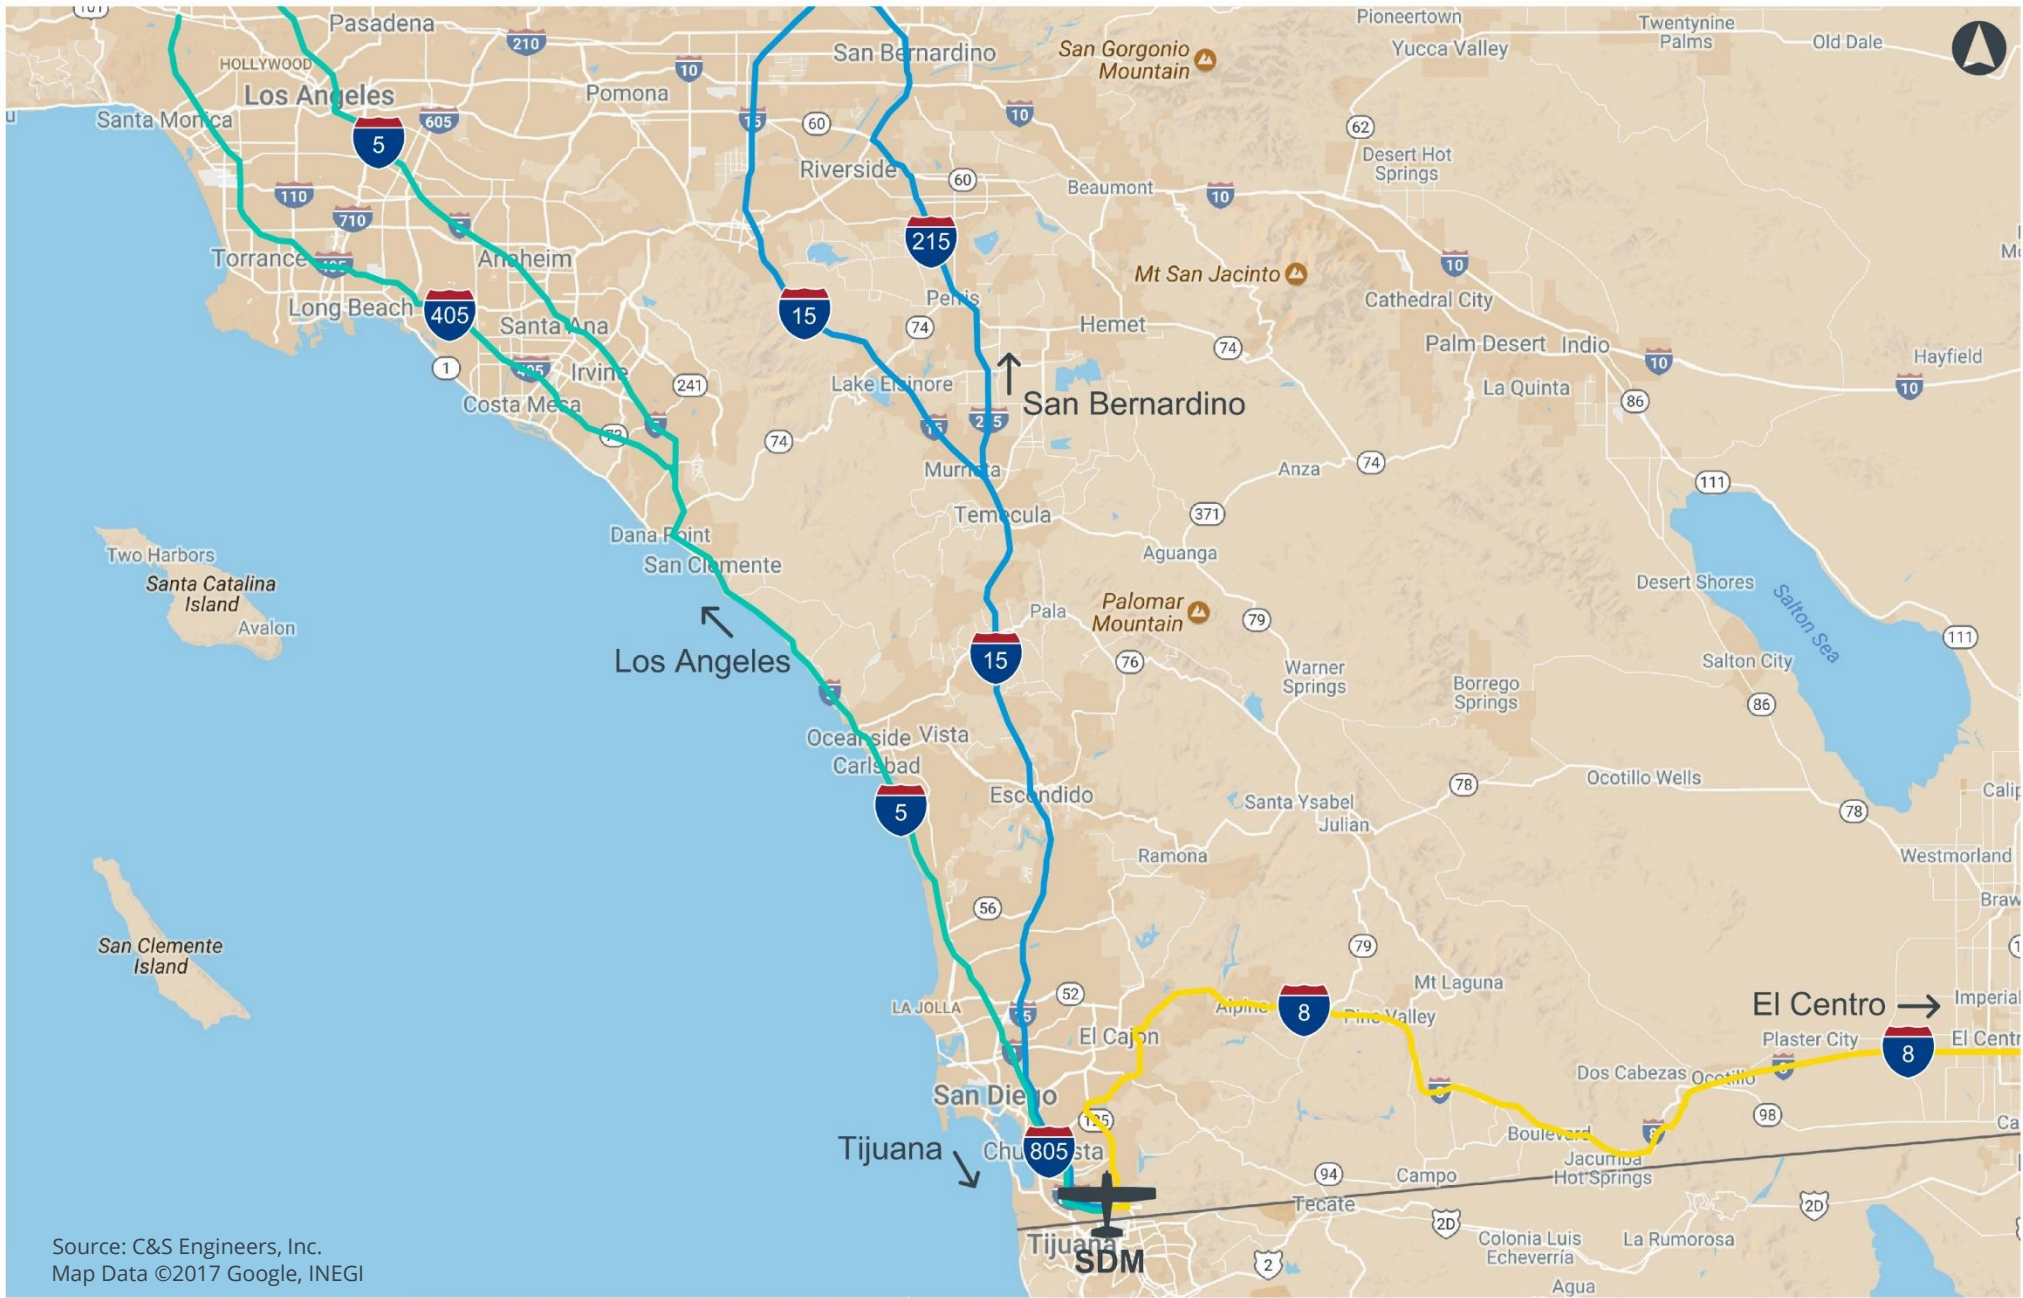

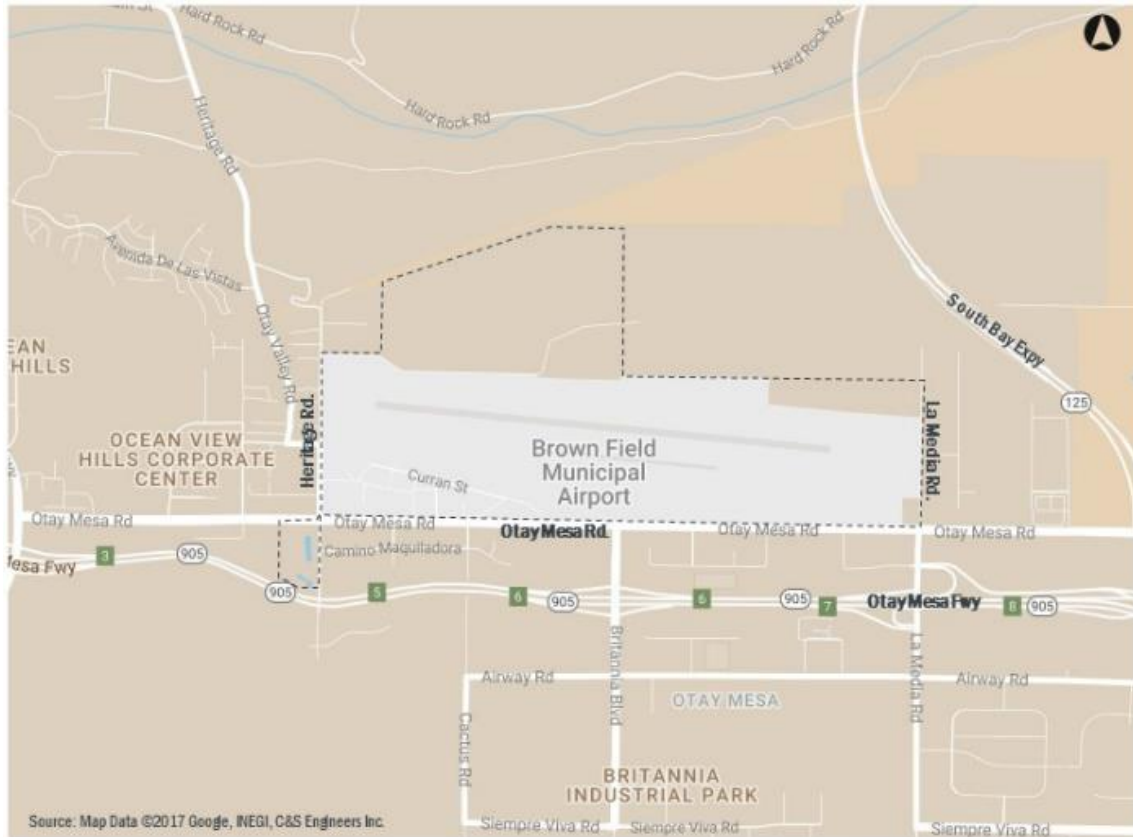

Figure 1.3
Regional Access Routes

This Page Intentionally Left Blank

Figure 1.4 – Local Access

Airport Overview

The Airport sits on approximately 889 acres and consists of numerous facilities that fall into the following categories:

Airside Facilities – The airside components consist of two, parallel runways (Runways 8L/26R and 8R/26L) and four taxiways, including a full parallel taxiway. In addition to the runways and taxiways, there are several aircraft run-up areas and various navigational aids (NAVAIDS). The airside also includes aircraft parking aprons, tie-downs, T-hangars, conventional hangars, and the Airport Traffic Control Tower (ATCT).

Landside Facilities – Landside facilities at Brown Field Municipal Airport include the administration building and various facilities owned and/or operated by tenants. The administration building houses offices for Airport staff, some tenants, and a restaurant. Additional information is provided in subsequent sections of this Working Paper.

Support Facilities – Support facilities include those relating to aircraft maintenance, refueling, and flight instruction; the two Fixed Base Operators (FBO) at SDM mostly provide these services.

Surrounding Airports

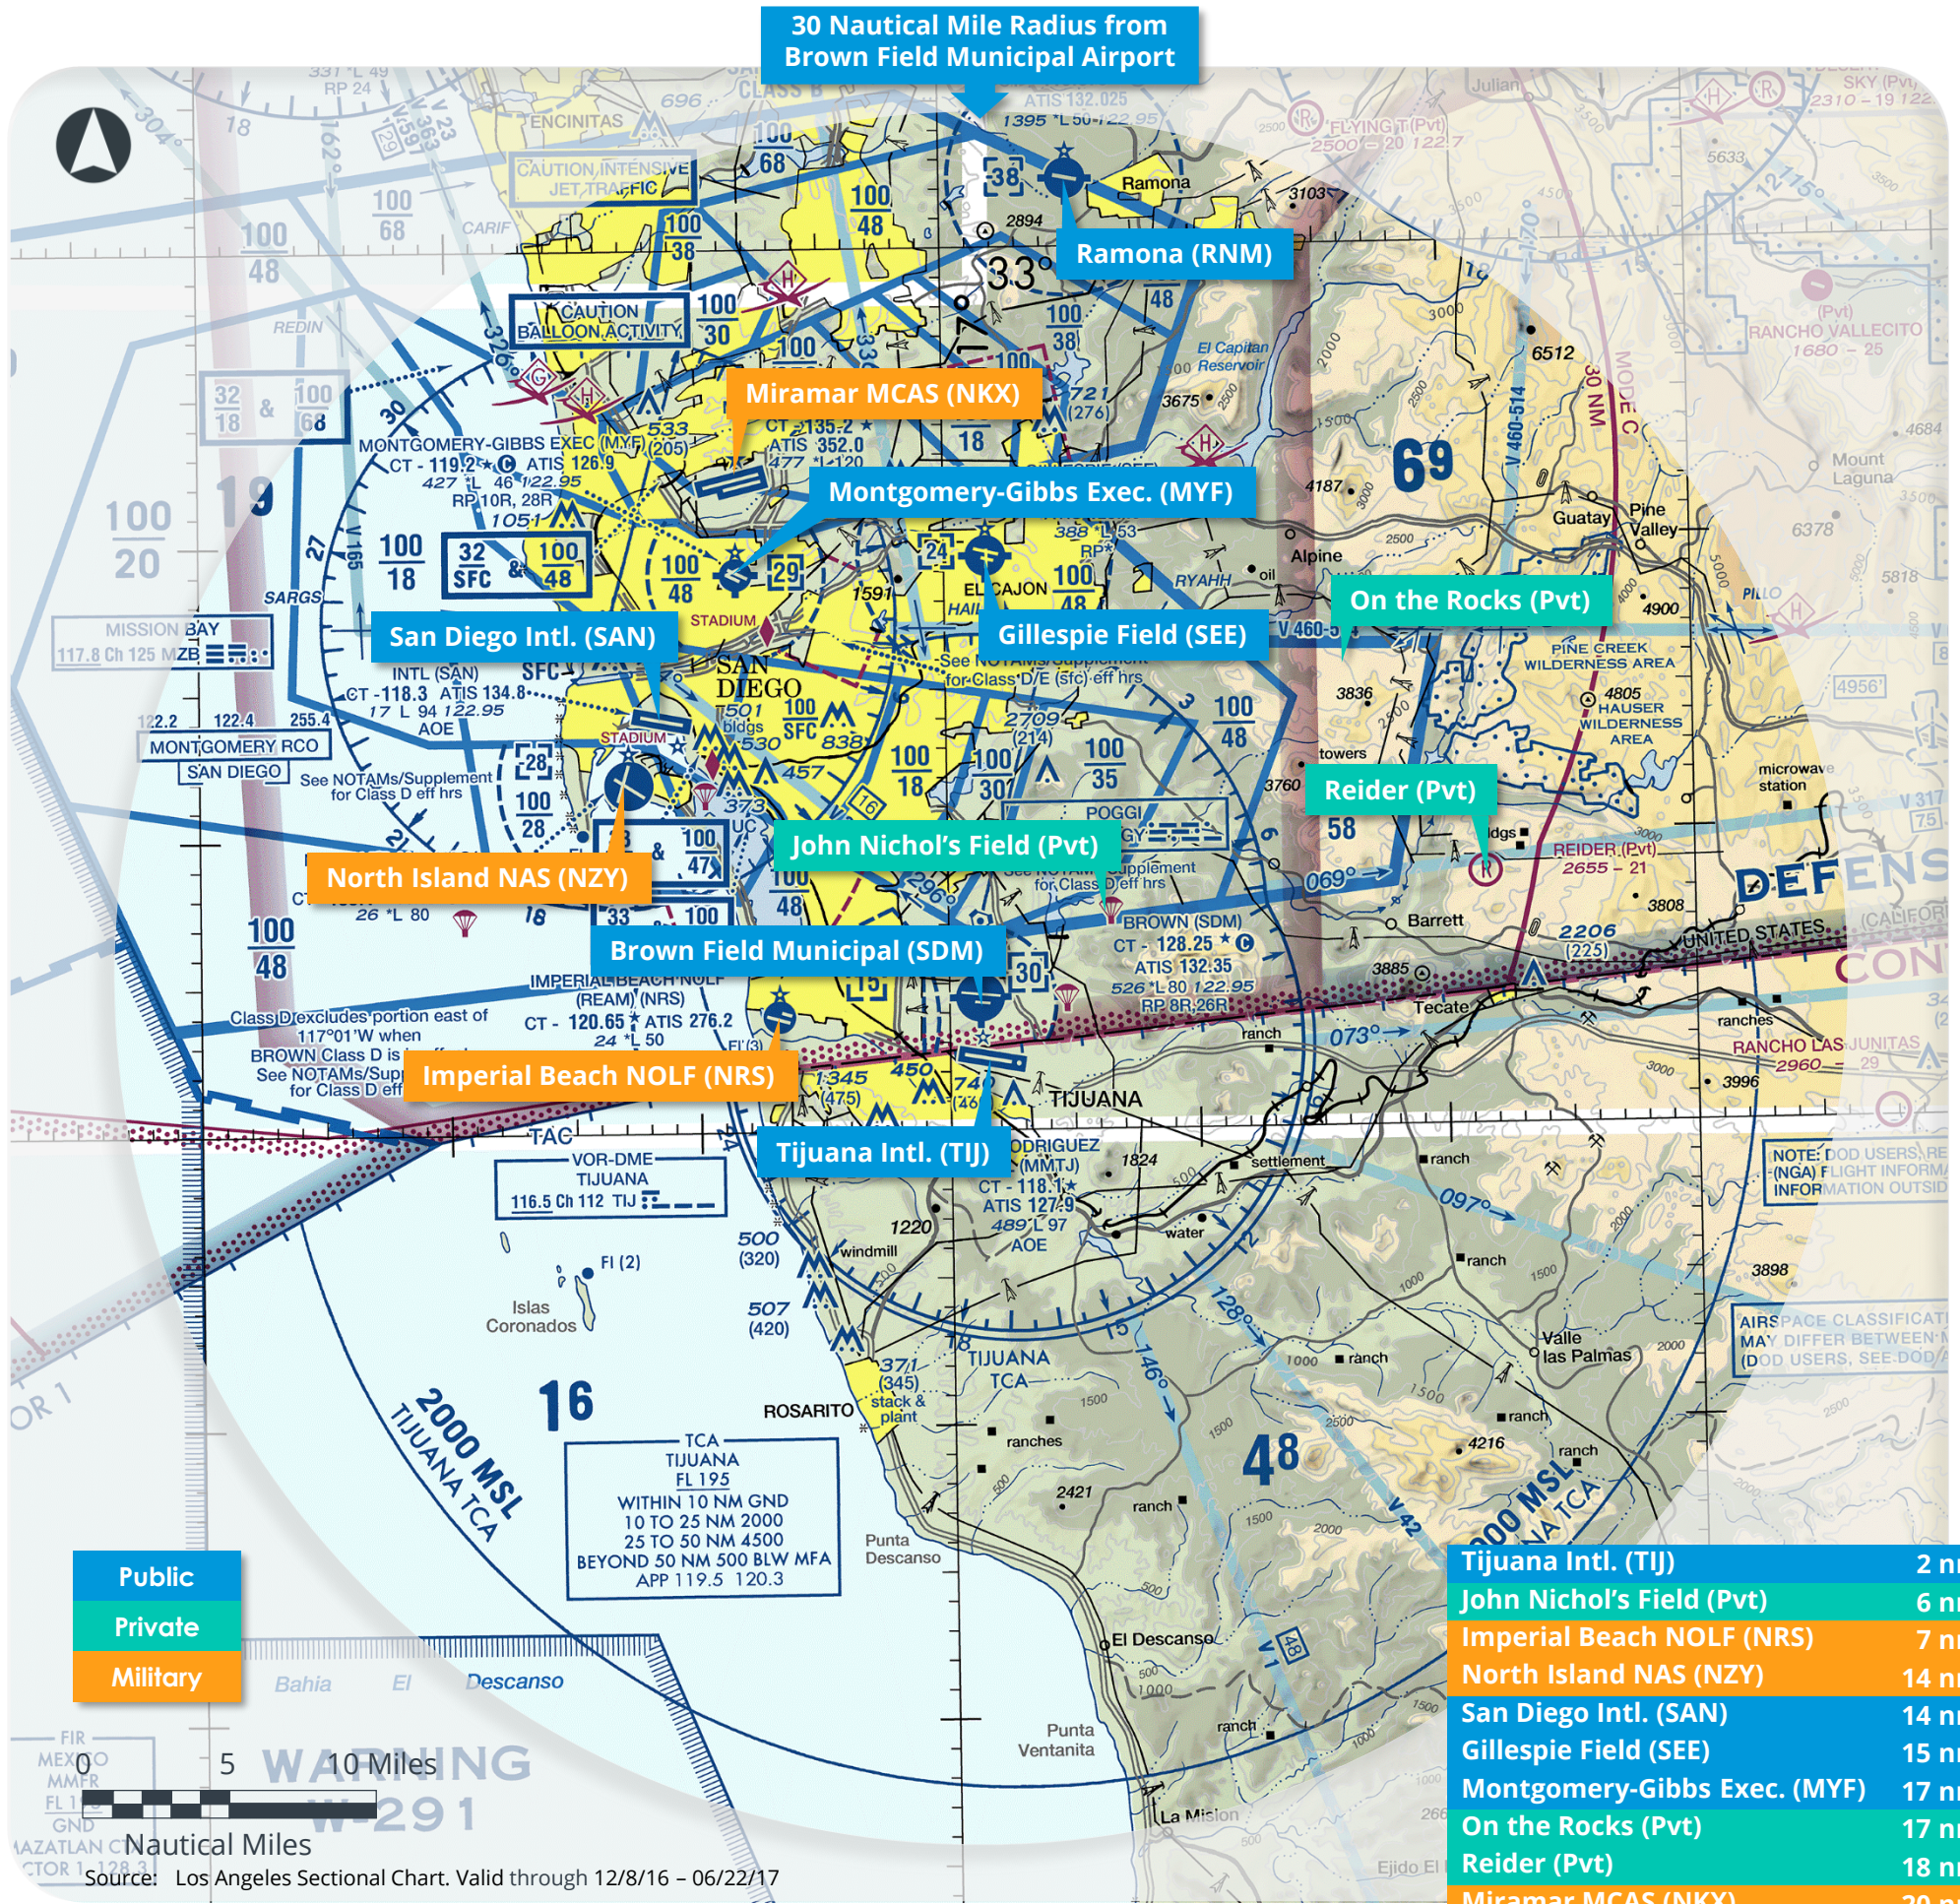

There are three military, one private, and five public use airports within a 30-nautical mile (NM) radius of the Airport. The locations of the surrounding airports and associated airspace are depicted on **Figure 1.6**. Descriptions of the surrounding public use and military airports are included in **Table 1.1**. The nearest medium- to large-hub commercial service airports outside of the 30-NM radius are John Wayne Airport, 79 NM to the northwest, and Los Angeles International Airport 109 NM to the northwest.

Table 1.1 – Surrounding Public-Use and Military Airports

Airport Name (Location Identifier) Ownership	Location Distance from SDM	NPIAS Classification	Runway Heading: Runway Dimensions (Surface Type)	Instrument Approaches
Miramar MCAS (NKX)* Marine Corps Air Station	San Diego, CA 19 NM northwest	N/A (Military)	6L/24R: 12,000' x 200' (Concrete) 6R/24L: 8,001' x 200' (Porous European Mix)	ILS, LOC/DME, RNAV (GPS), TACAN, HI-TACAN
San Diego International (SAN) San Diego County Regional Airport Authority	San Diego, CA 14 NM northwest	Primary Service/Large Hub	9/27: 9,400' x 200' (Asphalt-Concrete)	ILS/LOC, RNAV (GPS)
North Island NAS (NZY)* Naval Air Station	San Diego, CA 14 NM northwest	N/A (Military)	18/36: 8,001' x 200' (Porous European Mix) 11/29: 7,501' x 200' (Porous European Mix)	LOC/DME, RNAV (GPS), VOR, TACAN, HI-TACAN
Gillespie Field (SEE) County of San Diego	El Cajon, CA 15 NM northeast	National/ Reliever	9L/27R: 5,342' x 100' (Asphalt) 17/35: 4,145' x 100' (Asphalt) 9R/27L: 2,738' x 60' (Asphalt)	RNAV (GPS), LOC
Imperial Beach NOLF (NRS)* Naval Outlying Field	Imperial Beach, CA 7 NM west	N/A (Military)	8/26: 2,240' x 151' (Concrete) 9/27: 4,997' x 336' (Porous European Mix)	TACAN
Montgomery-Gibbs Executive (MYF) City of San Diego	San Diego, CA 17 NM north	Regional/ Reliever	10L/28R: 4,577' x 150' (Asphalt) 10R/28L: 3,401' x 60' (Asphalt) 5/23: 3,400' x 75' (Asphalt)	ILS/LOC, RNAV (GPS), VOR-A

Tijuana International (TIJ) Mexico	Tijuana, Mexico 2 NM south	N/A	9/27: 9,711' x 148' (Asphalt)	ILS, DME, LOC, VOR

* Military facility, non-public-use

Source: FAA Airfield Facility Directory (AFD), NPIAS (2016), Approach plates

Airports having Control Towers are shown in Blue, all others in Magenta. Consult Airport/Facility Directory (AFD) for details involving airport lighting, navigation aids, and services. All times are local. For additional symbol information refer to the Chart User's Guide.

AIRPORTS

- Other than hard-surfaced runways
- Hard-surfaced runways 1500 ft. to 8069 ft. in length
- Hard-surfaced runways greater than 8069 ft. or some multiple runways less than 8069 ft.
- Open dot within hard-surfaced runway configuration indicates approximate VOR, VOR-DME, or VORTAC location.
- All recognizable hard-surfaced runways, including those closed, are shown for visual identification. Airports may be public or private.

AIRPORT DATA

Box Indicates FAR 93 Special Air Traffic Rules & Airport Traffic Patterns. Runways with Right Traffic Patterns (public use) shown outside contiguous U.S. RP * Special conditions exist - see AFD.

ADDITIONAL AIRPORT INFORMATION

- Private ("Pvt") - Non-public use having emergency or landmark value
- Military - Other than hard-surfaced; all military airports are identified by abbreviations AFB, NAS, ANF, etc. DoD users, for complete airport information consult DoD FLIP.
- Helipad Selected
- Unverified
- Abandoned - paved having landmark value, 3000 ft. or greater
- Rotating airport beacon in operation Sunset to Sunrise
- OBJECTIONABLE - Airport may adversely affect airspace use.

AIRPORT TRAFFIC SERVICE AND AIRSPACE INFORMATION

Only the controlled and reserved airspace effective below 18,000 ft. MSL are shown on this chart.

- Class B Airspace
- Class C Airspace (Mode C - see FAR 91.215/AIM)
- Class D Airspace
- Class E Airspace
- Class G Airspace

COMMUNICATION BOXES

Underline indicates no voice on frequency. Crosshatch indicates Shutdown status. * - Operates less than continuous or On-Request. A - ASOS/AWOS. H - HIWAS. FSS radio providing voice communication. Heavy line box indicates Flight Service Station (FSS). Frequencies 121.5, 122.2, 243.0 and 255.4 (Canada - 121.5, 128.7 and 243.0) are available at many FSSs and are not shown above boxes. All other frequencies are shown. Certain FSSs provide Airport Advisory Service, see AFD. R - Receive only. Frequencies above thin line box are removed to NAVDAG sites. Other FSS frequencies providing voice communication may be available as determined by altitude and terrain. Consult Airport/Facility Directory for complete information.

RADIO AIDS TO NAVIGATION

- VHF OMNI RANGE (VOR)
- VORTAC
- Non-Directional Radio Beacon (NDB)
- VOR-DME
- Other facilities, i.e., FSS Outlet, RCO, etc.
- NDB - DME

OBSTRUCTIONS

- 1000 ft and Higher AGL
- Below 1000 ft AGL
- Group Obstruction
- Obstruction with high-intensity lights may operate part-time
- Wind Turbine
- Wind Turbine Farm
- Elevation of the top above mean sea level
- Height above ground
- Under construction or reported; position and elevation unverified
- NOTICE: Guy wires may extend part-time from structures.

MISCELLANEOUS

- Hang Glider Activity
- Parachute Jumping Area (See Airport/Facility Directory)
- Isogonic Line (2010 VALUE)
- Ultralight Activity
- VPXYZ
- VFR Waypoints (See Airport/Facility Directory for latitude/longitude)
- Unmanned Aircraft Activity
- NAME (VPXYZ)

TOPOGRAPHIC INFORMATION

- Power Transmission Line
- Aerial Cable
- Lookout Tower
- Mountain Pass
- Pass symbol does not indicate a recommended route or direction of flight and pass elevation does not indicate a recommended clearance altitude. Hazardous flight conditions may exist within and near mountain passes.

Population Data

This section provides background on the population trends of the area surrounding the Airport. Additional information regarding the County's socioeconomic data will be provided in Working Paper 2 – Forecasts of Aviation Demand.

San Diego is the second most populous county in California, second only to Los Angeles County. Population levels in 2016, estimated by the United States Census Bureau for both San Diego County and the surrounding counties, are presented on **Figure 1.7**.

Figure 1.7 – San Diego and Surrounding County Populations

Source: U.S. Census Bureau (2010), C&S Engineers, Inc.

The San Diego County Economic Forecast produced by the California Department of Transportation estimates that the population of San Diego County would increase by 597,740 people in the 20-year period from 2017 to 2037. This would bring the total population to 3,936,040. The forecasted increase is presented on **Figure 1.8**.

Figure 1.8 – San Diego County Population Forecast

Source: California Department of Transportation, (2016) *San Diego County Economic Forecast*, C&S Engineers, Inc.

Ownership and Operations

Brown Field Municipal Airport is a public use airport owned and operated by the City of San Diego. The Airports Division is a branch of the City's Real Estate Assets Department and oversees the operations at both Montgomery-Gibbs Executive and Brown Field Municipal Airports. A number of tenants own and lease facilities at the Airport, providing a variety of services such as fueling, aircraft maintenance, flight training, hangar rentals, customs and skydiving. **Table 1.2** lists the current tenants at the Airport as well any services they provide.

Table 1.2 – Airport Tenants and Services Provided

Tenant Name	Service Provided
First Flight Corp (FBO)	Fixed Base Operator, fuel, aircraft maintenance, tie-down, hangar, flight training, aircraft rental
San Diego Jet Center (FBO)	Fixed Base Operator, fuel, aircraft maintenance, tie-down, hangar, car rental, pilot lounge, crew services, cargo handling
Baja Airventures	Mexico eco-adventures, whale watching, kayaking, surfing
Experimental Aircraft Association Chapter 14	Experimental aircraft, weekly fly-in, Young Eagles Program (free flights for children), aviation safety education and library
Pacific Coast Skydive	Skydiving
Tactical Air Operations	Military skydiving activities
Altitude Helicopters	Flight training and tours
The Landing Strip	Restaurant
U.S. Customs	Customs and other federal inspection services
U.S. Border Patrol Search Trauma and Rescue (BORSTAR)	Border patrol and rescue services
City of San Diego Fire Station 43	Fire protection to City of San Diego

Source: City of San Diego

As shown above, the tenants at the Airport offer a number of valuable services. Flight instruction accounts for a large portion of the operations at SDM (flight schools at the Airport include First Flight and Altitude Helicopters). Additionally, flying clubs offer an affordable alternative to aircraft ownership that allows more pilots to stay in the air. They generally charge a monthly membership fee and an hourly rate and give members access to a fleet of aircraft to choose. Experimental Aircraft Association (EAA) is the only flying club at Brown Field Municipal Airport. A large portion of EAA's activity involves the selection, construction, and flight-testing of experimental aircraft.

Several of the above tenants occupy space in the administration building including:

1. San Diego Jet Center
2. U.S. Customs
3. The Landing Strip

Policies and Plans

To enhance operational efficiency, the Airport should develop, maintain, and implement a number of management documents. **Table 1.3** identifies the documents currently in place at Brown Field Municipal Airport as well as the date they were published.

Table 1.3 – Airport Management Documents

Document	Year
Master Plan Update	2012
Real Estate Assets Department Airports Division: Business Plan (FY 2017)*	2015
City of San Diego Airports: Operations, Policies, and Procedures	2015
City of San Diego Airports Division: Minimum Operating Standards (DRAFT)	2017
Hangar Policies	2017

*Business Plan (FY 2018) in development
Source: City of San Diego, C&S Engineers, Inc.

The following is a brief description of the purpose and content of the documents listed above.

Master Plan: See introduction at the beginning of this Working Paper. The previously prepared Airport Master Plan for Brown Field Municipal Airport was never brought to the City Council for approval. However, this effort did result in an FAA-approved ALP.

Real Estate Assets Department Airports Division: Business Plan (FY 2017): The plan is designed to ensure that the City’s Airports System is operated safely and efficiently. That it complies with all appropriate regulations, is financially self-sufficient, encourages airport business growth and opportunities, customer focused both internally and externally, maximizes the City’s Return on Investment for airport property, and is managed by professional airport management staff. This plan is meant to be a “living and working” document that adapts as conditions change.

City of San Diego Airports: Operations, Policies, and Procedures: Intended to guide day-to-day operations of the City-owned airports. It is used by airport management to conduct the daily business of the City-owned airports in an efficient manner, consistent with the policies of the FAA, state of California, and the City.

City of San Diego Airports Division Minimum Operating Standards (DRAFT): To provide the threshold entry requirements (qualifications, levels of service, facilities, and insurance minimums) for those desiring to provide commercial aeronautical services to the public and to ensure that those who have undertaken to provide commodities and services as approved are not exposed to unfair or irresponsible competition. They contain the minimum levels of service, facilities, staffing, insurance, and environmental compliance that must be met by the prospective service provider. The uniform application of these standards relates primarily to the public interest by discouraging substandard entrepreneurs and mandating insurance coverage levels, thereby protecting the Airport, airport patrons, and established aeronautical activities.

Hangar Policy: Published responses to common hangar ownership questions including insurance requirements, waiting list rules, applicable fees, and hangar subleases.

Airport Economic Benefits

Airports provide an economic benefit to their communities through direct and indirect impacts, in addition to serving as a vital community asset. Direct impacts include those related to on-airport businesses and government agencies and those attributed to visitor spending and tourism. Indirect impacts mainly include the re-circulation of employees spending their earnings locally and the on-

airport businesses purchasing goods and services locally.

As a whole, the air transportation sector in San Diego County was directly responsible for 1,926 jobs⁴ in 2015. This includes a combination of scheduled air transportation, nonscheduled air transportation, and both freight and passenger transport. Countywide, air transportation generates total direct economic activity valued at about \$742.6 million in industry output. In addition, air transportation directly accounts for over \$130.8 million in labor income (both employee compensation and proprietor income). This total does not account for other jobs that are supported and facilitated by air transportation. This would include suppliers, business-to-business vendors, and industries that rely on air transportation to bring customers and products into the San Diego regional market.

Airport-specific information will be provided under a subsequent section of the Airport Master Plan.

Metropolitan Airpark

In 2007, the City of San Diego issued a Request for Proposal (RFP) for a large-scale FBO operation and support facilities development at SDM. The City selected Brown Field International Business Park (BFIBP), also known as DPC-Brown Field, for the project. The proposed development is known as the Metropolitan Airpark (MAP) (the developer has taken on the same name) and occupies most of the airport property south and north of the airfield and apron. **Figure 1.9** shows the Metropolitan Airpark master site plan. The project is divided into 16 Development Areas and four phases that will be developed over 20 years with an estimated build-out year of 2038. According to the Metropolitan Airpark Master Plan and Design Guidelines, the following key elements will be included:

1. A Jet Aviation Business Center FBO and related support facilities
2. A GA Center with hangars, tie-downs, a fuel station and maintenance area
3. A Corporate Aviation Center with hangars, offices, a fuel station and maintenance facilities
4. A rotorcraft Business Center FBO with hangars, a heliport, and potential City of San Diego Fire Department or other user aviation hub
5. A six- to eight-megawatt solar photovoltaic (PV) energy generation facility
6. A commercial center and two business hotels to serve airport patrons and the general public
7. A public transit station along Otay Mesa Road
8. An Industrial Park with an emphasis on light Industrial aviation and non-aviation (research and development) uses

The project has been unanimously approved by the City Council. The Environmental Impact Report was completed to address requirements under the California Environmental Quality Act (CEQA). Due to the potential degree of the environmental impact of the project, National Environmental Protection Agency (NEPA) documentation is also being prepared before the project moves forward and is currently under FAA review.

Existing and Historical Aircraft Operations

Historical aviation activity at the Airport was gathered using the FAA’s Operations Network (OPSNET). **Figure 1.10** breaks down Aircraft operations, from the 2016 calendar year, by user class. General Aviation operations continue, by a large margin, to make up the majority of activity at 93.1 percent of the total 2016 traffic, while Military and Air Taxi operations make up a combined 6.9 percent. Blimps and additional light aircraft also periodically make use of SDM. Historical activity levels are summarized on **Figure 1.11** for GA and **Figure 1.12** for Air Taxi (which includes Air Carrier operations due to their negligible levels [less than 150 per year]) and Military. The operations indicate an overall decrease in total aviation activity since 2007. Military operations reached a 10-year peak in 2011; but have decreased every year since.

Historical aviation activity is documented in detail as part of the forecast of aviation demand chapter of this Master Plan.

Historical and Existing Based Aircraft

Current based aircraft information was gathered from the FAA National Based Aircraft Inventory Program, while historical based aircraft data was collected from the FAA Terminal Area Forecast (TAF). **Figure 1.13** shows the number of based aircraft at Brown Field Municipal Airport each year from 2007 to 2016. Based aircraft numbers reached a 10-year peak in 2014 with 209 aircraft. The current based aircraft number and fleet mix is presented in **Table 1.4**. As of April 27, 2017, the Airport had a total, verified aircraft count, excluding duplicates and aircraft not found in FAA Aircraft Registration data, of 197. Single-engine aircraft make up approximately 80 percent of aircraft at the Airport.

Figure 1.13 – Historical Based Aircraft

Note: 2016 data is estimated. Source: FAA TAF 01/01/2007 to 12/31/2016

Fleet Mix and Critical Aircraft

The selection of the appropriate FAA airport design standards is based upon the critical aircraft, sometimes referred to as the design aircraft. The FAA defines the critical aircraft as the most demanding aircraft or grouping of aircraft based on similar characteristics that performs 500 annual operations at the airport facility. The previous ALP identified a composite of the characteristics of the Gulfstream 550 and the Lockheed C-130 as the critical aircraft for Runway 8L/26R. Runway 8R/26L is only 75 feet wide and not suitable for use by aircraft the size of the Gulfstream 550 or C-130. It has been assigned a separate critical aircraft, the Beechcraft Baron 58.

Table 1.4 – Existing Based Aircraft

Aircraft Type	Aircraft Count
Single Engine	157
Multi Engine	22
Jet	12
Helicopter	6
Total	197

Source: National Based Aircraft Inventory Program, 04/27/2017

Aircraft Characteristics

The Gulfstream 550 has an approach speed of 145 knots, classifying it in AAC D (approach speeds 121 knots or more but less than 141 knots). The Lockheed C-130 has a wingspan of 132.6 feet, classifying it as ADG IV (aircraft with wingspans up to 118 feet but less than 171 feet). A sampling of the characteristics of both the based and itinerant aircraft fleet mix are presented below in **Table 1.5** and **Table 1.6**. Characteristics include the aircraft type, Maximum Takeoff Weight (MTOW) in pounds (lbs.), approach speed in knots (kts.), wingspan in feet (ft.), AAC and ADG.

Table 1.5 – Based Aircraft Characteristics

Aircraft	Type	MTOW (lbs.)	Approach Speed (kts.)	Wingspan (ft.)	AAC	ADG
Cessna 172	Single-Engine	2,450	61	36.1	A	I
Beechcraft Bonanza	Single-Engine	3,650	77	33.5	A	I
Experimental Aircraft	Single-Engine	900	90	25	A	I
De Havilland Twin Otter	Turboprop	12,500	75	65	A	II
Gulfstream III	Jet	69,700	125	77.8	C	II

Table 1.6 – Transient Aircraft Characteristics

Aircraft	Type	MTOW (lbs.)	Approach Speed (kts.)	Wingspan (ft.)	Approach Category	Airplane Design Group
Lockheed C130	Turboprop	155,000	138	132.6	C	IV
Pilatus PC-12	Turboprop	10,500	86	53.3	A	II
Hawker 800	Jet	28,000	137	54.0	C	II
Gulfstream IV	Jet	74,600	149	77.1	D	II

Source: FAA Aircraft Characteristics Database, TFMSC (2016). C&S Engineers, Inc.

Although not fully reflected in the FAA Traffic Flow Management System Count (TFMSC) data, military aircraft are responsible for nearly five percent of the annual operations at the Airport. The most regularly occurring military aircraft include F-18s, C-130s, and rotocraft, such as the Sikorsky SH-60 Seahawk. Additional information regarding the Airport's fleet mix will be included in Working

Paper 2 – Forecasts of Aviation Demand.

1.3 Regional Setting and Land Use

The following sections provide information regarding land use, zoning, land use compatibility, consistency with other plans, and the Airport’s climatological setting.

Land Use

Land uses surrounding the Airport were inventoried to understand existing compatibility. **Figure 1.14** depicts the variety of land uses surrounding the Airport. Land use shape files were retrieved from the San Diego Regional Planning Association’s website. Immediately to the east, west and south is primarily a mix of commercial, industrial, and open space land use. North of the Airport, there is also industrial and open space, as well as a block of military use. Residential use begins to encroach off the northwest end of the Airport.

As indicated by guidance provided in FAA Advisory Circular (AC) 150/5070-6B, *Airport Master Plans*, public facilities within the vicinity of the Airport were identified and are presented in **Table 1.7**.

Table 1.7 – Public Facilities within ½ Mile of SDM

Place of Worship	East
World Harvest Church of San Diego	

Source: San Diego Regional Planning Association

Zoning

The City of San Diego General Plan classifies the Airport as “unzoned” indicating that it falls under a separate set of rules than other land uses. Guidance relating to off-airport land use compatibility is contained in the Airport Land Use Compatibility Plan (ALUCP). Zoning surrounding the Airport is depicted on **Figure 1.15**.

Brown Field Municipal Airport ALUCP

Airport land use compatibility plans are established in order to promote compatibility between airports and the surrounding land uses. In San Diego County, the Board of the San Diego County Regional Airport Authority (SDCRAA) is responsible for producing these plans for all public-use and military airports. The purpose of the plan is to provide for the orderly growth of the airport, the surrounding area, and to safeguard the general welfare of the inhabitants within the vicinity of the airport as well as the public in general⁵. The plan identifies Airport Influence Areas (AIA) with specific requirements to be followed by local agencies when development is proposed within these areas. The plan is based on the ALP most recently approved by the FAA (in SDM’s case, 2011). Any changes to the ALP occurring as a result of this master planning process will be reviewed by the Airport Land Use Commission to determine potential impacts to the ALUCP.

Community Plans

The City of San Diego is broken up into various communities, each with their own planning group,

⁵ 2010, *Brown Field Municipal Airport Land Use Compatibility Plan*

community plans, and/or regulations. The Airport is discussed in the Otay Mesa Community Plan, but not in the plans of the adjacent San Ysidro or Otay Mesa–Nestor communities.

Otay Mesa Community Plan

One of the goals of the Otay Mesa Community Plan is to ensure a land use pattern that is compatible with existing and planned airport operations. The plan recognizes the potential for the Airport to be a major economic driver for the area due to its size and proximity to both the border and downtown San Diego. It also notes the importance of the non-aviation industrial uses surrounding the Airport that economically support its continued operation. The plan therefore seeks to ensure that these industrial uses are retained as the area is developed. The plan recognizes that land use policies for the Airport Influence Areas are contained in the ALUCP and implemented by the Airport Land Use Compatibility Overlay Zone of the San Diego Municipal Code. The plan acknowledges that noise generated by the Airport is a concern of the community and emphasizes that the guidance found in the ALUCP should be followed when planning future development in order to ensure compatible land use and minimize the impact to residential areas.

Climate and Topography

The Airport is situated in the City of San Diego's Otay Mesa community, which is characterized by relatively broad, flat topography and a temperate climate. The Airport sits at an elevation of 526.3 feet above mean sea level (MSL). The landscape consists of the Otay Mesa River Valley to the north, flat areas, various canyons, and grades to the south and west, and a relatively flat mesa with the San Ysidro mountain range rising to the east. This range includes Otay Mountain, which rises to 3,566 feet.

There is an Automated Surface Observing System (ASOS) based at the Airport that gathers basic, minute-by-minute, 24-hour weather information to be used for weather reporting. According to the National Climatic Data Center's (NCDC) Summary of Monthly Normals from 1981-2010, the mean maximum temperature of the hottest month, August, is 79.9°F while the mean minimum temperature is 43.3°F in the coldest month of the year, December. January, the wettest month, sees an average of 2.48 inches of precipitation and accounts for 20 percent of the average annual precipitation of 12.51 inches. See **Table 1.8** for a summary of the temperature and precipitation averages.

Table 1.8 – Temperature and Precipitation

Hottest Month	August (79.9 °F mean maximum temperature)
Coldest Month	December (43.3 °F mean minimum temperature)
Mean Annual Temperature	61.9 °F
Wettest Month	January (average 2.48 inches rainfall)
Mean Annual Precipitation	12.37 inches

Source: NOAA NCDC Summary of Monthly Normals from 1981-2010

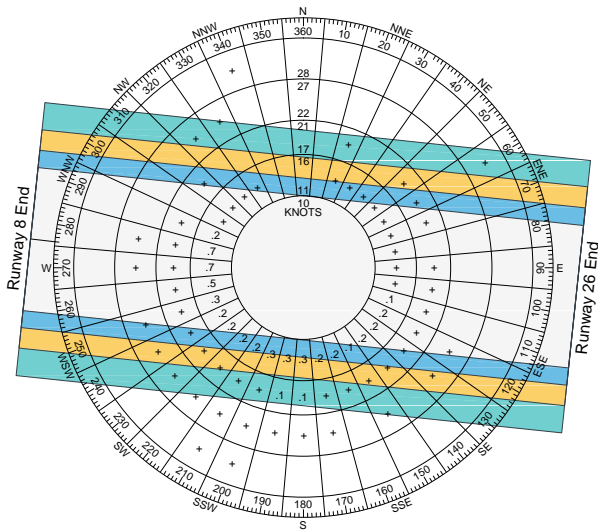

Wind Coverage

The FAA provides guidance in FAA AC 150/5300-13A, *Airport Design*, on determining whether the existing runway orientation is sufficient for the fleet mix. The following process was completed.

A wind analysis was conducted using historical wind data obtained from the National Oceanic and Atmospheric Administration (NOAA) NCDC. Observations for this data were taken at the Airport over the previous 10 years (2006 to 2016). The Airport Reference Code (ARC) dictates maximum crosswind components. The ARC signifies the design standards to which an airport is built. The ARC at the Airport is a D-IV, which has a maximum allowable crosswind component of 20 knots. The wind roses for the Airport as well as the percent coverage for each weather condition are presented on **Figure 1.16**. There is a wind rose presented for three weather conditions; All Weather, Instrument Flight Rules⁶ (IFR), and Visual Flight Rules⁷ (VFR). The numbers in each box indicate the number of wind readings that were registered at that speed and direction. If there is a plus sign, it indicates that less than 100 readings have been recorded at that specific speed and direction. A crosswind runway is recommended when an airport's primary runway orientation provides less than 95 percent wind coverage. As shown, the percent wind coverage is sufficient under All Weather, VFR, and IFR conditions.

⁶ IFR apply when visibility is poor and cloud ceilings are low

⁷ VFR apply when weather is clear (cloud ceiling greater than 3,000 feet AGL and visibility greater than five statute miles)

All Weather Wind Coverage	
Crosswind Component	Percent Coverage
10.5 Knots	97.90%
13 Knots	98.80%
16 Knots	99.60%
20 Knots	99.86%

IFR Wind Coverage	
Crosswind Component	Percent Coverage
10.5 Knots	97.97%
13 Knots	98.67%
16 Knots	99.41%
20 Knots	99.77%

VFR Wind Coverage	
Crosswind Component	Percent Coverage
10.5 Knots	98.95%
13 Knots	99.43%
16 Knots	99.84%
20 Knots	99.95%

This Page Intentionally Left Blank

1.4 Airside Facilities

Airside facilities include those that directly support airport operations including runways, taxiways, NAVAIDs, and apron areas. A diagram of SDM’s runways and taxiways is shown in **Figure 1.17**. **Table 1.9** provides a summary of the existing airside facilities that are described in the subsequent text.

Runways

The airfield consists of two paved runways, one 7,972-foot runway and a parallel, 3,180-foot runway. The details and characteristics of each runway are described in **Table 1.9**.

Table 1.9 – Runway System Characteristics

Characteristics	Runway 8L/26R	Runway 8R/26L
Use	Primary	Secondary
Length x Width (feet)	7,972 x 150	3,180 x 75
Displaced Threshold (feet)	N/A	N/A
Condition	Fair*	Fair*
Pavement Strength (pounds)		
Single Wheel	80,000*	14,000*
Dual Wheel	110,000*	-
Tandem	175,000*	-
Composition	Asphalt / Concrete	Asphalt
Wind Coverage (All Weather)		
10.5 knots	97.90%	97.90%
13 knots	98.80%	98.80%
16 knots	99.60%	99.60%
20 knots	99.86%	99.86%
Markings	Non-precision / Non-precision	Visual / Visual
Edge Lighting	HIRL	MIRL
Approach Lighting	PAPI, REIL / PAPI, REIL	N/A
Instrument Approaches	GPS, RNAV / VOR	GPS / VOR

*Pavement condition and strength will be provided/confirmed within the Pavement Maintenance Management Plan of this Airport Master Plan. According to the Airport Master Record Form for SDM, only up to 12,000 pounds is permitted on Runway 8R/26L.

Source: FAA Airport Master Record Form 5010 (AFD EFF 03/02/2017) and C&S Engineers, Inc.

The primary runway (runway 8L/26R) provides the longest landing distance available at any public-use airport in San Diego County. A portion of this runway was recently improved as part of the Runway 8L/26R Rehabilitation Project. The project involved pavement rehabilitation of the easterly end of the runway, approximately 2,000 feet, and minor surface and joint repairs at the westerly end. The project was completed in 2016 and the project design for the rehabilitation of the rest of runway 8L/26R is approximately 100 percent complete. A Pavement Maintenance Management Plan (PMMP) was completed for SDM in February 2018 that provided an analysis of the current pavement condition.

According to the PMMP report, the average pavement condition index (PCI) for the runways at SDM is 64. The PCI is a numerical pavement condition rating that ranges from 0 (poor pavement) to 100 (good condition). Both runways are in overall fair condition with a portion of Runway 8L/26R in poor condition (see Figure 3-4 2017 Pavement Condition Index Map in Appendix H).

Taxiways

Runways 8L/26R and 8R/26L share a full-length, parallel taxiway, Taxiway A. Taxiways A1, B, and C, perpendicular to Taxiway A, connect the hangars and support facilities to the airfield. The current taxiway designations are non-standard and will be re-designated as part of the upcoming runway rehabilitation project. With only one parallel taxiway serving both runways, the centerline separation has to accommodate all aircraft at the Airport. The D-IV designation requires a 254-foot separation, at 329 feet; the separation between Taxiway A and Runway 8R/26L is adequate. The taxiways are equipped with Medium Intensity Taxiway Lighting (MITL). The configuration for both the taxiways and runways can be viewed on **Figure 1.17** while **Table 1.10** lists the widths of each taxiway. According to the 2018 PMMP report, the average PCI rating for the taxiway system at SDM is 51. A PCI rating of 0-55 represents pavement that is in poor condition.

Figure 1.17 – SDM Airfield

Table 1.10 – Taxiway Width

Taxiway	A	A1	B	C
Width (feet)	75	50	75	75

Source: Brown Field Municipal Airport Master Plan Update, 2012, and Google Earth, 2016

Safety Areas and Object Free Areas

Runways and taxiways are surrounded by imaginary, rectangular areas known as “safety areas” and “object free areas”. The purpose of these areas is to minimize the probability of serious damage to aircraft accidentally entering the area as well as to provide greater accessibility for firefighting and rescue equipment during such incidents. These areas are required to be graded between one to five percent and remain free of obstructions to enhance the safety of aircraft that undershoot, overrun, or veer off a runway or taxiway.

Runway design standards applicable to each runway are specified by the RDC. The RDC consists of three components related to the operational demands of aircraft:

- AAC – approach speed
- ADG – wingspan and tail height
- Runway Visibility Range (RVR) – visibility minimums

The current ALP for the Airport was last revised in 2011, prior to the update to FAA AC 150/5300-13A, which established the definitions for RDC. Therefore, the ALP presents only the first two components of the RDC for each runway. Runway 8L/26R was designated as D-IV and Runway 8R/26L as B-I (small). Combining this information with the approach visibility minimums to make up the RDC helps determine the dimensions of the Runway Safety Area (RSA) and Runway Object Free Area (ROFA). The dimensions of the Taxiway Safety Area (TSA) and Taxiway/Taxilane Object Free Areas (TOFA) are determined by the ADG of the critical aircraft, in this case, ADG IV.

Table 1.11 lists the dimensions of the RSA, ROFA, TSA, and TOFA. The Facility Requirements chapter of this report will look at each of these areas in detail to determine compliance with the most up-to-date FAA standards.

Table 1.11 – Runway and Taxiway Area Dimensions (per Standards)

	Runway 8L/26R	Runway 8R/26L
Runway Safety Area (RSA)		
Length Beyond Runway End	1000'	240'
Length Prior to Threshold	600'	240'
Width	500'	120'
Runway Object Free Area (ROFA)		
Length Beyond Runway End	1000'	240'
Length Prior to Threshold	600'	240'
Width	800'	250'
Taxiway Safety Area		
Width	171'	171'
Taxiway Object Free Area		
Width	259'	259'
Taxilane Object Free Area		
Width	225'	225'

Source: FAA AC 150/5300-13A, *Airport Design*, C&S Engineers, Inc.

Runway Protection Zones

As defined by FAA AC 150/5300-13A, the function of the Runway Protection Zone (RPZ) is to enhance the protection of people and property on the ground. This is best achieved by airport sponsor acquisition of property located within the RPZ and clearing it of incompatible land use and obstructions. The RPZ is a trapezoidal shape centered on and extending out from the runway centerline. The type of aircraft that the runway accommodates as well as the approach visibility minimums determines the dimensions of an RPZ. Each runway has a separate approach and departure RPZ whose dimensions are identical unless visibility minimums are lower than one mile (which is the case for SDM). RPZ dimensions for each runway end are outlined in **Table 1.12**.

Table 1.12 – SDM Runway Protection Zones (RPZ) (per Standards)

Runway 8L/26R		Runway 8R/26L	
Approach	Departure	Approach	Departure

Length	1,700	1,700	1,700	1,000
Inner Width	1,000	500	1,000	250
Outer Width	1,510	1,010	1,510	450

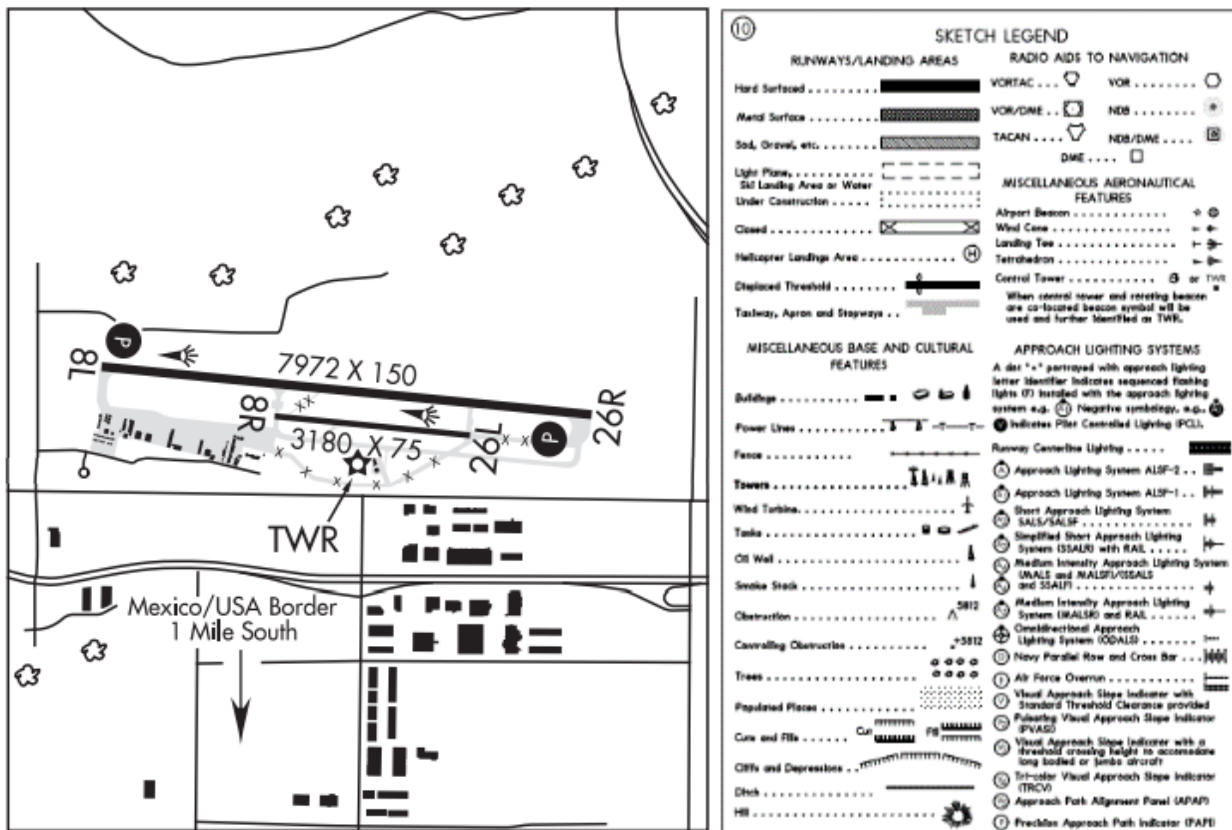

Source: FAA AC 150/5300-13A

Compliance with these standards, as well as the airfield separation standards documented in FAA AC 150/5300-13A, will be discussed under the Facility Requirements section of the Airport Master Plan.

Lighting and Navigational Aids (NAVAIDS)

Visual navigational aids are important for aircraft operating under VFR and Instrument Flight Rules⁸ (IFR). **Figure 1.18** is a diagram showing the location of visual aids at the Airport. The visual NAVAIDS at the Airport are documented on the following pages.

Figure 1.18 – SDM NAVAIDS

Source: FAA Airfield Facility Directory (AFD)

⁸ The term IFR refers to a set of rules governing the conduct of flight under instrument meteorological conditions (IMC) where pilots rely on instrumentation to navigate.

Wind Sock

C&S Engineers, Inc. 03/07/2017

Wind Cone

A conical textile tube that provides pilots with a visual indication of wind direction and velocity. The Airport has the following lighted wind cones:

- The primary wind cone is co-located with the segmented circle between Runways 8L/26R and 8R/26L.
- A secondary wind cone is located north of the approach end of Runway 8L.

Both wind cones are in good condition.

Segmented Circle

A segmented circle is a visual aid designed to provide information about the traffic pattern to aircraft overhead. It is often co-located with a wind cone, as is the case at SDM where it is located between Runways

8L/26R and 8R/26L. The segmented circle at SDM is in need of repainting.

Airport Beacon

A rotating beacon is installed to assist pilots in identifying the Airport at night. As a civilian airport, the beacon alternates between white and green flashing lights. The SDM beacon is operational and is located on the ATCT.

Runway End Identifier Lights

Runway End Identifier Lights (REILs) are installed at an airfield to provide rapid and positive identification of the approach end of a particular runway. The system consists of a pair of synchronized, flashing lights located laterally on each side of the runway threshold. Newly installed REILs exist on both the Runway 8L and 26R ends.

Precision Approach Path Indicators

Precision Approach Path Indicators (PAPIs) provide visual approach slope guidance during aircraft landing operations. The PAPI system consists of four light box units, located left of the runway edge and perpendicular to the runway centerline. PAPIs are installed on both the Runway 8L and 26R ends.

Edge Lighting

Runway 8L/26R is equipped with High Intensity Runway Lighting (HIRL) while Runway 8R/26L is equipped with Medium Intensity Runway Lighting (MIRL). All taxiways are equipped with MITL.

A summary of the runway-specific, visual NAVAIDS is provided in **Table 1.13**. Additional information on the condition of airfield lighting will be provided in Working Paper 3 - Facility Requirements.

Instrument Procedures and Electronic Aids to Navigation

An Instrument Approach Procedure (IAP) is a flight procedure that provides an aircraft transition from the en route flight environment to a point from which a safe landing may be accomplished. When cloud ceilings are low and visibility is poor, pilots must use IAPs in order to land. Electronic NAVAIDs are those that are utilized through instrumentation in the plane as a part of en route navigation and IAPs. **Table 1.14** lists the IAPs available at the Airport and the associated minimums. The electronic NAVAIDs available to pilots operating at the Airport include the following:

VOR

VHF (very high frequency) Omni Directional Radio Range (VOR) is an electronic, ground-based system that provides both lateral and vertical guidance to an aircraft approaching and landing on a runway during periods of low ceilings and/or reduced visibility.

RNAV (GPS) RWY 8L

Area navigation (RNAV), the precursor to Global Positioning System (GPS), uses a network of satellites and land stations to create reference points that allows users with the proper receivers to determine their position in the sky. As technology advanced, GPS navigation can now provide highly accurate navigational data based on satellites alone. This is hugely beneficial to airports because it allows them to set up an instrument approach without installing any expensive instrumentation on the ground. The Airport currently has one published straight-in RNAV (GPS) approach to Runway 8L.

Table 1.14 – SDM IAPs and Minimums

Procedure	Category	Aircraft Approach Category Altitude (feet MSL)-Visibility (statute miles)			
		A	B	C	D
VOR or GPS-A	Circling	1220-2 3/4			
	SAN DIEGO INTL ALTIMETER SETTING MINIMUMS				
RNAV (GPS) RWY 8L	Circling	1340-2 3/4

Additional Equipment

The following equipment supports the airfield:

Automated Surface Observing System: The Airport is equipped with an Automated Surface Observing System (ASOS), which is designed to serve aviation and meteorological observing needs for safe and efficient aviation operations, weather forecasting and climatology.

Airfield Electrical Vault: The airfield electrical vault is located on the apron, west of the ATCT.

Aircraft Hangars and Parking Areas

As documented in Section 1.2, Ownership and Operations, the Airport has several different leaseholders that offer both hangars and tie-down storage for based and transient aircraft use. The 21-acre apron contains 130 individual hangar facilities, approximately 100 tie-downs, and three helicopter parking spaces. **Table 1.15** provides a list of the different aircraft parking areas and the number of spaces available at each.

ASOS

*Estimate based on Google Earth imagery, accurate count to be determined with updated aerial imagery.

Source: Google Earth, City of San Diego and C&S Engineers, Inc.

Information about the specific lease areas, including challenges observed, can be found in Attachment 1, Lease Parcel Inventory. **Missing or incomplete information will be updated pending the provision of updated aerial imagery.**

Airfield Signage and Markings

Airfield signage and markings are used for navigational and safety purposes. Types of signage and markings located on the airfield include directional and informational signage.

Directional Signage

The Airport is equipped with lighted location signs on all taxiways, runway ends and runway crossings.

Informational Signage

Informational signage is in place to notify pilots and other users of important information such as ATCT or ground control frequencies, procedures, and hazards.

Airfield Markings

Airfield pavement markings provide information that is useful during aircraft takeoff, landing, and taxiing.

Taxiway Signage

C&S Engineers, Inc. 03/07/2017

Examples of airfield markings include runway hold positions, non-movement area boundaries, and taxiway edge markings.

The airfield signage is in good condition. Some markings require repainting, in particular the markings indicating the decommissioned sections of Taxiway C. Additional information on the condition and lighting of airfield signage and markings will be provided in the Facility Requirements section of this Airport Master Plan.

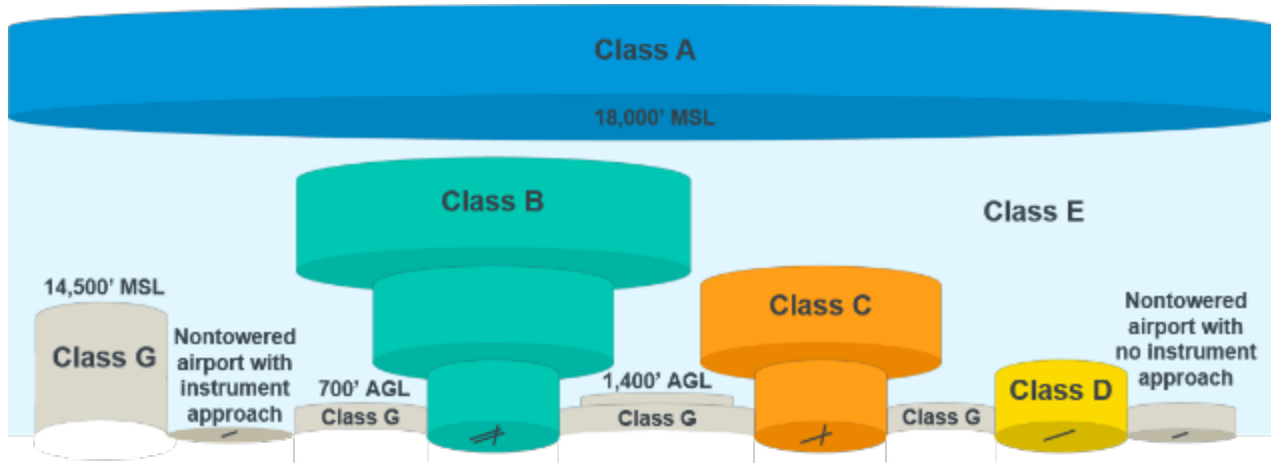

Airspace and Air Traffic Control

The ATCT is located on the south-central side of the airfield and provides Air Traffic Control (ATC) services at the Airport. The ATCT is FAA-owned but contracted out for operation. The current ATCT is operational from 8:00 a.m. to 8:00 p.m.

Pilots navigate under either VFR or IFR. VFR refers to the rules that govern flight procedures when weather is greater than FAA specified minimums. Minimums vary depending on the area and altitude. VFR conditions occur at or above 1,000 feet and at or greater than three statute miles (SM) visibility. Flights operated under VFR navigate using a mixture of visual clues and instrumentation. VFR flights are not required to contact ATC unless they are entering controlled airspace. The term IFR refers to the set of rules governing the conduct of flight under instrument meteorological conditions (IMC) where pilots rely solely on their instrumentation to navigate and are required to be in contact with ATC. IFR conditions are at 1,000 feet or less and/or below three SM visibility.

Whether a pilot flies under VFR or IFR depends on the weather conditions at the departure and arrival airports and the class(es) of airspace the pilot will be flying through. The National Airspace System (NAS) is run and maintained by the FAA and categorizes airspace into several classes (A, B, C, D, E, and G). Each class of airspace has specific requirements, restrictions, and various dimensions to best protect the airports across the country. See **Figure 1.19** for a simplified example of the different types of airspace.

Figure 1.19 – Airspace Classification

Source: FAAafety.gov, C&S Engineers, Inc.

The airspace surrounding SDM is designated as Class D when the ATCT is in operation. Class D airspace surrounds airports that have an operational ATCT. It begins at the surface, generally extends to 2,500 feet above the airport, and surrounds it with a five-SM radius. This class of airspace is referred to as being “controlled” because aircraft using it must establish and maintain two-way radio

communications with the ATCT before entering. The SDM Class D airspace extends from the surface to 3,000 feet above ground level (AGL) and has a 2.5-NM radius. When the ATCT is closed, the Airport operates under Class G (uncontrolled) airspace. SDM's airspace is very complicated. The Airport's airspace overlaps with NOLF Imperial Beach's to the west and abruptly stops at the United States/Mexican border to the south. Furthermore, the San Ysidro Mountains to the east rise above 3,000 feet, limiting the runway to visual approaches and instrument approaches with high landing minimums. The Airport's Class G (uncontrolled) airspace is from the surface to 700 feet AGL. Class E (controlled) airspace extends above the 700-foot surface to the overlaying Class A airspace at 18,000 feet AGL.

1.5 Support Facilities

Fixed Base Operators and Tenant Facilities

In addition to the aircraft storage facilities documented under Section 1.4, Aircraft Hangar and Parking Areas, the airport tenants and FBOs have a number of support facilities to accommodate maintenance and other aircraft-related activities at the Airport. These facilities are delineated by leasehold and described in Attachment 1, Lease Parcel Inventory. Support facilities include several nose docks, which are hangar-like facilities that only provide cover to the nose of the aircraft. Many of the nose docks at Brown Field Municipal Airport serve multiple purposes including, aircraft parking and tenant offices.

Aircraft Fueling

Figure 1.20 – Historic Fuel Sales by Type (Gallons)

Source: City of San Diego, C&S Engineers, Inc.

There are no City-owned or operated fueling stations at the Airport. These services are instead provided by the FBOs as documented in Table 1.2. Both First Flight Corp and San Diego Jet Center offer full-service Jet-A fuel; and 24/7, self-service 100-low-lead (LL) Aviation Gasoline (Avgas) fuel. San Diego Jet Center also provides full-service 100LL Avgas fuel.

San Diego Jet Center sells the greatest amount of Jet-A fuel while First Flight Corp sells the greatest amount of 100LL. Fuel flowage records were reviewed back to 2011 for each of the providers at the Airport

and the total amount of each type of fuel sold per fiscal year (July 1 – June 30) is presented on **Figure 1.20**.

Fire Station

San Diego Fire Department, Station 43, is located on the southeast corner of the airport property. Although not a designated Aircraft Rescue and Fire Fighting (ARFF) station for SDM, the station will respond to a call at the Airport if available. The station has one large hangar and an administration building, as well as a helicopter landing area.

1.6 Landside Facilities

The landside portion of an airport are those areas that do not play a direct role in the operation of aircraft. This includes areas such as the administration building, offices, parking lots, entrance roads, and the restaurant. All landside facilities are located on the south side of the Airport.

Airport Administration Building

The administration building is located at 1424 Continental St. The building houses the airport management offices, San Diego Jet Center offices, and the U.S. Customs office. It also houses the restaurant. The decommissioned ATCT, now used for storage, is part of the administration building and is considered historically significant.

Restaurant

The Landing Strip is the restaurant located in the eastern part of the administration building. The restaurant is broken into two spaces, a café and a bar/restaurant. The hours of operation are 8:00 am to 6:00 pm on Mondays, 8:00 am to 8:00 pm on Tuesdays, 8:00 am to 10:00 pm on Wednesdays and Thursdays, 8:00 am to 1:00 am on Fridays and Sundays, and 8:00 am to 4:00 pm on Saturdays.

Fleet Vehicles and Equipment

The fleet vehicles owned and operated by the City are listed in **Table 1.16**.

Table 1.17 – City-Owned Vehicles and Equipment

Year	Make	Model	Call Sign	Condition
2011	Ford	F-350 Super Duty	Ops 1	Good
2008	Ford	Explorer	Ops 2	Fair
2009	Ford	F-550	Maintenance 1	Good
2001	Ford	F-350 Super Duty	Maintenance 2	Poor
2008	Case	L740	Tractor	Good

Access, Circulation and Parking

Security

Perimeter fencing surrounds the Airport and controlled-access gates provide security.

Vehicle Access

Local and regional vehicle access routes to the Airport are identified in Section 1.2, Airport Setting.

Multi-modal Access

There are crosswalks along Otay Mesa Road and a bus stop at Otay Mesa Rd., Gales Bl., with bus service provided by San Diego Metropolitan Transit Service, Route 905.

On-Airport Circulation

The primary access roads to existing facilities are Curran and Continental St. Additional access roads on the airport property include Boeing St., Sikorsky St., Fairchild St., Lockheed St., and Lycoming St. A maintenance road runs along the inside of the perimeter fence.

Parking

The Airport has several free public parking areas available. There are two main public lots, one directly south, and one directly north of the administration building. Additional parking areas within the perimeter fence are available to tenants, their visitors, and employees.

Utilities

San Diego Gas and Electric (SDG&E) provide gas and electric services.

1.7 Stakeholder Feedback

As part of the airport inventory process, steps were taken in order to solicit feedback from the surrounding airport community, users and tenants. A public advisory committee (PAC) has been assembled that includes several airport tenants as well as representatives from the surrounding community. The PAC will hold seven meetings at regular intervals throughout the master planning process, the first of which took place on April 19, 2017. The PAC will act as a sounding board in the development of the Airport Master Plan, as well as be a conduit for information between various interest groups throughout the community. This interaction between the PAC and City is essential for the review and assessment of project information. The PAC meetings are also open to the public and have a period dedicated to hearing and acknowledging public comments. Separate Public Workshops will also be held throughout the master plan process.

1.8 Key Considerations

This section identifies some of the key considerations that the master planning process will review and attempt to resolve. The items summarized below were identified through an inventory of existing conditions as well as coordination with airport management, users, and other stakeholders.

Airside

- Deteriorating pavement
- Water issues on airfield
- Non-standard taxiway designations (will be resolved during upcoming project)
- ATCT provides a benefit to users
- Primary runway provides the longest landing distance available at any public-use airport in San Diego county

Airspace

- Terrain preventing an ILS approach
- Airspace is complicated by the international border and proximity to Tijuana International Airport

Landside

- Aging infrastructure and deteriorating condition of some facilities
- Plumbing issues

Environmental and Land Use Compatibility

- Vernal pools
- Wildlife concerns including the potential for burrowing owls
- Need to consider surrounding land uses
- City's Multi-Habitat Planning Area (MHPA) restrictions on development

A separate environmental baseline assessment effort is ongoing and will be documented in Working Paper 5 – Environmental Overview.

Economic Development

- Potential associated with the MAP
- Limited staff resources
- Limits created by historical significance of facilities

Additional Considerations, Opportunities and Constraints

The first PAC meeting was held on April 19, 2017, during which, several of the above key considerations were presented. PAC members were invited to provide additional input. Comments included the following:

- Incompatible activities on surrounding land uses
- Desire was expressed for continued support of GA facilities and users, in particular flight training
- There is concern regarding the potential for incompatible development on surrounding, undeveloped parcels
